1965 Proposal to Inform President Johnson. -- In 1965, the Long Subcommittee hearings on the use of mail covers and other investigative techniques by federal agencies caused the Agency serious concern about possible Congressional discovery and revelation of the project. It is noted above that in September 1965, as a result of this concern, CIA officials briefly considered informing Postmaster General Gronouski of the project. When this proposal was rejected, presumably because Gronouski had cooperated extensively with the Subcommittee, Thomas Karamessines, then Acting Deputy Director for Plans, "suggested that, in his opinion, the President would be more inclined to go along with the idea of the operation." 139 Karamessines "gave instructions that steps should be taken to arrange to pass through McGeorge Bundy to the President after the Subcommittee has completed its investigation." 140 Apparently, however, this was not done. Mr. Bundy does not recall ever having been informed of the project; 140a neither Thomas Karamessines nor Richard Helms knew of any attempt to inform Bundy so that he could in turn inform the President; 141 and there is no documentary record of such an attempt.

The Helms-Johnson Meeting: 1967-1968. -- Although it does not appear that President Johnson was contemporaneously informed about the mail project after the 1965 recommendation to do so, Richard Helms claims that he may have advised him about it in 1967 or 1968. Toward the end of President Johnson's term in office, the President instructed Helms to prepare a report detailing the truth or falsity of columnist Drew Pearson's allegation about CIA assassination attempts. Helms recalls that the President also asked him whether the CIA was engaged in any other operations that "might be regarded as sensitive." 142 It is Helms' belief that they then "discussed two or three items, ... [and] it was at that time that I think I mentioned [the New York project]." 143 When asked whether or not he indicated to the President that mail was opened in connection with the project, Helms said that "[i]f I discussed this with President Johnson I would not have deluded him by using one terminology to convey something else. I would have said, 'We are getting into Russian mail,' or something. I was not that kind of fellow with people." 144 There are no CIA documents relating to this discussion, however, and Helms himself is not positive that it in fact occurred, only that "there was a possibility that I discussed ... this letter opening thing on that occasion." 145

Huston Plan: 1970. -- During the summer of 1970, the so-called "Huston Plan" meetings and report presented the CIA with a clear opportunity to inform the President of their mail opening project. 146 But this opportunity was apparently never taken.

As a result of his perceived need for more effective domestic intelligence, Richard Nixon instructed representatives of the major federal intelligence agencies to meet under the guidance of Tom Charles Huston and to prepare a series of options designed to achieve this goal. One of the options subsequently discussed at the four meetings that summer was the use of "covert mail coverage" (i.e. mail opening) directed against both foreign and domestic targets. Although the CIA's New York project was ongoing at the time, the CIA representatives at these meetings, James Angleton and Richard Ober, did not advise this group of intelligence experts about its existence, and the final report -- to which Angleton and Ober contributed and which Richard Helms signed -- was submitted to the President containing the statement that "covert coverage has been discontinued." 147 At no time was either Huston, the President's representative, or the President himself informed that the CIA was then opening mail.

According to Angleton, the New York project was not revealed to the group because it was considered to be compartmented knowledge and such a revelation would serve "no useful purpose," especially in light of the security considerations which had been articulated by the National Security Agency's representative. 148 But he also conceded that neither Huston nor the President himself were told about the project in private. 149

Of the statement in the final report that all covert mail coverage had been discontinued, Richard Helms said:

... the only explanation I have for it was that this applied entirely to the FBI and had nothing to do with the CIA, that we never advertised to this Committee or told this Committee that this mail operation was going on, and there was no intention of attesting to a lie . . .

And if I signed this thing, then maybe I didn't read it carefully enough.

There was no intention to mislead or lie to the President. 150

Helms agreed, however, that on the face of the report the President could not have known that covert mail coverage in fact continued, 151 and he stated that at no time did he personally ever inform President Nixon about the CIA's use of this technique in the New York project. 151a The President, in short, was given a report -- signed by Helms -- which explicitly said mail opening had been discontinued when it had not.

On July 23, 1970, Tom Charles Huston wrote Director Helms that the President had approved the relaxation of restrictions on a number of the investigative techniques discussed in the final report. 152 For the first time in the history of the CIA's mail project, the Agency had what appeared to be Presidential authorization for "covert mail coverage," although not specifically for the New York program, about which the President remained ignorant. 152a But five days after Huston informed Helms of the President's approval, the authorization was withdrawn and Helms was asked to return the memorandum reflecting the original approval. 153 Now the situation was reversed: a President had addressed the issue of the use of mail opening as an investigative technique and ultimately refused to endorse it. Despite the withdrawal of Presidential approval, however, the CIA did not terminate the New York project. The project continued for nearly three years after these events, and the CIA continued to open mail within the United States in the face of an apparent Presidential prohibition of this technique.

President Nixon's "General Awareness" of CIA Mail Covers but Not of Mail Openings. -- Former President Nixon recently stated that he was aware of the CIA's use of mail covers but not of its mail opening operations. He explained:

While President, I remember being generally aware of the fact that the Central Intelligence Agency, acting without a warrant, both during and prior to my Administration, conducted mail covers of mail sent from within the United States to:

A. The Soviet Union; or

B. The People's Republic of China

However, I do not remember being informed that such mail covers included unauthorized mail openings. 153a

He also noted that he did "not recall receiving information, while President, that any agency or employee of the United States Government, acting without a warrant, opened mail" in any program that would fit the description of the CIA's New York mail opening project or any other CIA or FBI mail opening project. 153b

There is no claim in the documentary record or in the testimony of any CIA official that the Agency ever informed President Nixon about any aspect of the New York project. Nor is there any claim that the President ever indicated to the CIA his approval of any aspect of this particular project, even the use of mail covers. Richard Helms, for example, testified in 1975 that he "never recall[ed] discussing [the New York mail opening project] with President Nixon," 153c and added (before the former President made the comments quoted above) that "What President Nixon knew about it, I don't know to this day." 153d

Dissemination of Information to the White Home. -- According to a March 1971 CIA memorandum, sanitized information generated by the New York mail opening project was disseminated to the White House even after the President's July 1970 rejection of the use of this technique. This memorandum lists the types of information accumulated through the project, including data about "peace activists, anti-government groups, black radicals and other militant dissidents." 154 It continues: "In all the above, HTLINGUAL provides the White House ... coverage of overseas contacts and activity of persons within the United States who are of critical concern from the viewpoint of internal national security, including bombing and terrorism." 155

At least one former White House official -- John D. Ehrlichman -- has testified that from his reading of the intelligence reports provided to the White House he was able to determine that mail was being intercepted. When asked whether he knew of a program of intercepting mail between the United States and Communist countries, Ehrlichman replied: "I knew that was going on because I had seen reports that cited those kinds of sources in connection with this, the bombings, the dissident activities" 156 He stated that he "assumed," 157 but was not positive, that this was a CIA operation: "Maybe the way the things is [sic] couched, it is always obscurely put as to what the sources are, but it could have been the FBI for all I know." 158 He did not know whether the President was aware of this program, 159 however, and could not recall ever personally discussing the matter with him. 160

Ehrlichman added that he did not know of any conversation within the White House about the legality or propriety of such a program nor of any inquiry made by the White House. 162

The lack of a formal approval structure for HTLINGUAL outside, as well as inside the CIA, is plain: Cabinet officers were sometimes briefed, but much more frequently ignored (sometimes consciously so) ; no documentary record reflects the one possible "mention" of the project to a President; another President was misled; and the closest resemblance to a Presidential policy directive prohibiting mail opening went unheeded.

It is difficult to generalize from an inconsistent record, but these are among the conclusions that may be tentatively offered in regard to external authorization for the project: the agency desired external authority but was reluctant to ask for it, either for fear of refusal, out of concern with security, or simply because it was less complicated to maintain the status quo. If Cabinet officers were informed of mail openings, it was done so circuitously; only the minimum knowledge necessary to secure their approval was imparted. The officers who were briefed, for their part, apparently did not want to know the details, did not want to be held accountable, and deferred to the Agency on national security matters.

#### *E. Termination of the Project*

##### *1. Proposed Termination: The 1969 Inspector General's Report*

Four years before the actual termination of the project, the Inspector General's staff formally recommended that consideration be given to discontinuance. Its 1969 survey of HTLINGUAL had revealed that:

The principal customer is and has been the FBI ... [which] several years ago initiated a similar program to cover mail to and from Bloc countries. It discontinued the program because of the inherent sensitivity, but would dislike having us discontinue a similar one. We are sympathetic to the Bureau's position, but question whether their interest is sufficient justification for our assuming risk of most serious embarrassment. 163

This finding, coupled with the conclusion that the project was "of little value to this Agency," 164 led the Inspector General's staff to recommend that the Director should negotiate with the FBI to take over the project or, in the event that the FBI should decline to assume responsibility, he should discontinue it.

Informally, the author of the 1969 report, John Glennon, had already discussed the possibility of an FBI takeover of the project with Sam Papich, Bureau liaison to the FBI, and he knew that there was virtually no chance the FBI would assume responsibility for it. According to Glennon, Papich told him "that the Bureau would not run it . . . and he implied that they just would not want to be involved in opening mail. I suppose because of the flap potential." 165 Glennon was not surprised by the Bureau's attitude. He testified:

[I]t was fine of the Bureau not to take it over because we should not be doing it in the first place. If somebody else is foolish enough to do it, I can see the Bureau wanting to take advantage of it . . . [and] if the Agency got egg on its face, the Bureau would not get egg on its face." 166

Because he knew the FBI would not take over the project, Glennon acknowledged that the recommendation in the 1969 report was, in effect, a straight recommendation to abandon HTLINGUAL. 167

When the 1969 report was presented to the Director, however, Helms did not attempt to engage the FBI in negotiations over responsibility for the project. Rather, he "asked to have the FBI contacted to find out their feeling about the value of this operation [and was] told that they thought it was valuable and would hate to see it terminated." 168 In balancing the perceived value to the FBI on the one hand, and the stated lack of value to several Agency components on the other, Helms decided in favor of continuing the project. 169

## *2. Increasing Security Risks: 1971*

The question of terminating or turning over the project to the FBI came to the fore again in the spring of 1971, after Chief Postal Inspector William Cotter had received the letter from Dr. Jeremy Stone on behalf of the Federation of American Scientists inquiring whether the Post Office permitted any federal agencies to open mail. For reasons described above, Cotter viewed the letter as a genuine threat to the security of the New York project and believed his own position as Chief Postal Inspector would be seriously compromised if knowledge of the project were publicized. When he communicated his concern to Director of Security Howard Osborn, Osborn relayed it to Helms. Prompted by this new security risk, and possibly by additional security problems inherent in the imminent reorganization of the Post Office, Helms convened a meeting of top CIA officials on May 19, 1971, to discuss the future of HTLINGUAL.

On the agenda were such security problems as the Stone letter, the postal clerk who brought the mail to the CIA's "interceptors" at JFK Airport, and Cotter's inability to testify truthfully before a Congressional committee that he had no knowledge of CIA mail opening. The subject of FBI exploitation of the project was also discussed. 170 Thomas Karamessines, the Deputy Director for Plans, forcefully argued that in light of these security risks CIA involvement in the project should cease, and the FBI should assume responsibility for it. According to the minutes of the meeting:

On the question of continuance, the DDP [Karamessines] stated that he is gravely concerned, for any flap would cause the CIA the worst possible publicity and embarrassment. He opined that the operation should be done by the FBI because they could better withstand such publicity, inasmuch as it is a type of domestic surveillance. The D/S [Howard Osborn] stated that he thought the operation served mainly a Bureau requirement. 171

James Angleton contended that the project should be continued by the Agency: "The C/CI [Angleton] countered that the Bureau would not take over the operation now, and could not serve essential CIA requirements as we have served theirs; that, moreover, CI Staff sees this operation as *foreign* surveillance." 172 When Helms asked whether or not the project should be continued "in view of the known risks," Angleton replied "that we can and should continue to live with them." 173

Apparently Helms was not entirely convinced by Angleton's arguments. At one point during the meeting, according to Howard Osborn, he turned to Angleton and asked, "If this project is so . . . important to the FBI, why . . . don't they take it over?" 174 Osborn testified that Angleton responded by noting that the FBI could not do so under the stringent limitations on investigative techniques imposed by J. Edgar Hoover. 175

The course of action that Helms finally decided upon has been recited above: he met with Cotter personally and was urged to inform the Postmaster General; before informing Mr. Blount, he also called on Attorney General Mitchell. Since Helms believed that both of these Cabinet officers had assented to the mail opening operation, he again supported its continuance. When he reported the favorable results of these briefings to the same group of CIA officials at a subsequent meeting on June 3, the minutes of that meeting show that "all present were gratified". 176 The only instruction Helms gave to those in charge of the project was to tighten security measures, and the project continued.

## *3. William Cotter's Continuing Concern*

The Secrecy Agreement and Cotter's Dilemma. -- After Helms briefed Blount on the New York project, William Cotter recalls that he received a telephone call from Blount, who informed him that the briefing had occurred and instructed him, in effect, to "carry on with the project." 177 He was informed that the Attorney General had been advised of the project as well. Cotter's anxiety decreased with the knowledge that Blount and Mitchell had been briefed and apparently supported the project, 178 but his peace of mind proved to be shortlived: in the latter part of 1971, Blount resigned as Postmaster General, and Mitchell stepped down as Attorney General shortly thereafter. Cotter was again the highest ranking Government official outside of the CIA and FBI who knew of the CIA's mail opening project.

From the first days of his tenure as Chief Postal Inspector, Cotter had been concerned about the New York mail project. He testified:

I was aware that when I assumed the capacity of Chief Postal Inspector I became responsible for enforcing the Postal laws, [and I also] became aware of the high, high sensitivity of Postal Inspectors with regard to violations of Section 1702 [of Title 18 of the United States Code, which prohibits tampering with the mail]. We arrest people every day for ... opening mail, stealing, and so forth, and so I was very, very uncomfortable with [knowledge of this] project. 179

Entrusted with this responsibility, Cotter had felt constrained by the letter and the spirit of the secrecy oath, which he had signed when he left the CIA in 1969, "attesting to the fact that I would not divulge secret information that came into my possession during the time that I was with the CIA." 180 "After coming from eighteen years in the CIA," Cotter said, "I was hypersensitive, perhaps, to the protection of what I believed to be a most sensitive project . . ." 181 For this reason, he had written a response to the Jeremy Stone letter that by his own admission was untrue, explaining later that, "If I responded . . . accurately to Mr. Stone, it would have blown the whole operation for the CIA . . ." 182 For the same reason, he had never informed Postmaster General Blount about the project, although, as noted above, he encouraged Helms to do so after he had been Chief Postal Inspector for two years. The minutes of the May 19, 1971, meeting in Director Helms' office aptly summarized Cotter's situation: ". . . in an exchange between the DCI and the DDP it was observed that while Mr. Cotter's loyalty to the CIA could be assumed, his dilemma is that he owes loyalty now to the Postmaster General." 183

When Blount resigned, Cotter did not know whether the project had ever been described to Blount's former deputy and successor as Postmaster General, Elmer Klassen. He again chose not to raise the matter with the new Postmaster General directly, but began communicating his concern to Howard Osborn and Thomas Karamessines at the Agency. 184

Cotter's Ultimatum. -- Although Osborn and Karamessines were sympathetic to his position and were themselves convinced that the project should be stopped, Cotter's periodic expressions of concern resulted in neither a briefing of Postmaster General Klassen nor a termination of HTLINGUAL. "Since I wasn't getting any action on the part of the CIA," Cotter testified, "I suggested to Mr. Osborn that unless I received some indication that this project had been approved at an exceedingly high level in the United States Government, I was going to withdraw the Postal Service support." 185 Osborn recalls that Cotter specifically referred to authorization at the Presidential level -- he would no longer be satisfied by the Postmaster General's approval -- and that he set a deadline of February 15, 1973. 186

Effect Of Watergate. -- By the time Cotter presented the CIA with his ultimatum, the Watergate revelations had contributed to the creation of a national political climate vastly different from that during the project's infancy and growth. An increasing number of CIA officials connected with the New York operation believed that the time was ripe for its termination and welcomed Cotter's position as an opportunity to force the reexamination of its relative advantages and disadvantages. Howard Osborn testified that he "shared [Cotter's] concern. I thought it was illegal and in the Watergate climate we had absolutely no business doing this." 187 He discussed the matter with William Colby, newly appointed DDP, who, according to Osborn, agreed that the project was illegal and should not be continued, "particularly in a climate of that type." 188

#### *4. Schlesinger's Decision to Suspend the Project*

When James Schlesinger, who had succeeded Richard Helms as Director of Intelligence, learned of Cotter's ultimatum, he scheduled briefings by Colby and James Angleton about the future of HTLINGUAL. Colby argued that the "substantial ... political risk [of revelation was] not justified by the operation's contribution to foreign intelligence and counterintelligence collection." 189 Angleton, a strong supporter of the project in the past, attempted to persuade the new Director that the operation was valuable and still merited continuance. 190

According to a contemporaneous memorandum by William Colby, Schlesinger was unconvinced that "the product to the CIA [was] worth the risk of CIA involvement." 191 The Director decided on a two-pronged course of action. First, he "directed the DDCI [Deputy Director Vernon Walters] to discuss the activity with the Acting Director, FBI (L. Patrick Gray), with a view to offering the FBI the opportunity to take over the project, including the offer to detailing the CIA personnel involved to the FBI to implement it under FBI direction and responsibility." 192 Second, Schlesinger agreed, in light of Cotter's ultimatum, to suspend the operation "unless Mr. Cotter would accept its continuance for the time being under our assurances that the matter is being prosecuted at a very high level." 193

Cotter refused to extend his deadline, and William Colby authorized the suspension of the project on February 15, 1973. Colby notified Howard Osborn of the suspension and Osborn instructed the Office of Security's Manhattan Field Office to shut down the operation that afternoon. There is no evidence that any attempt was subsequently made to secure Presidential approval, and when the FBI refused to assume operational responsibility (for reasons discussed below), the suspension proved to be permanent.

#### *F. Legal Considerations and the "Flap Potential"*

Within the Agency, the legality of the New York mail opening project was perceived to be dubious at best. Among those agents and officers connected with it who considered its legal implications at all, some believed that the project would have been illegal but for the 'internal and external approvals which they assumed -- sometimes erroneously -- had been granted. Most simply recognized HTLINGUAL to be illegal but rationalized it nonetheless. The general reaction to the questionable legality of the project was neither to stop it nor to seek a definitive opinion as to its legal status; it was to tighten security in order to reduce the risk of exposure to Congress and the general public. The evidence regarding its termination, moreover, suggests that it was finally discontinued not so much because it was thought to be illegal per se, as because the so-called "flap potential" -- the risk of embarrassment to the CIA that stemmed from its dubious legality -- was seen to outweigh its foreign intelligence and counterintelligence value to the Agency.

### *1. Perceptions of Legal Issues Within the Agency*

Generally, those agents who served on the "front lines" of the New York project, the interceptors and the analysts, did not concern themselves with legal issues at all; they did not ask if what they were doing was within or outside the law, and they were not told. As one of the agents who opened the mail in the New York facility said, "We would speculate when an Attorney General or a Postmaster would change, or even a President, if they would be briefed, [but] this would be knowledge which would never concern us. We would never be told . . . [Our work] was something that one entered into and did." 194

Among those Agency officials in a policymaking position, a few have testified that while they knew the legality of the project to be questionable, they believed that prior approvals internally and externally made it at least arguably lawful. Thomas Karamessines, former Deputy Director for Plans, for example, stated that because he believed the project had been discussed with a Postmaster General and Chief Postal Inspector, both of whom, he understood, had approved of it, the project must have fallen within an exception of the general statutory prohibition against mail opening. 195 His belief was buttressed by the participation of the FBI, the chief law enforcement agency in the country, and by the fact that he was told -- erroneously -- that Post Office Department lawyers had participated in the briefings of Postal officials and that at least one President had approved it. 191 Richard Helms also testified that he did not assume the project was necessarily illegal. Since Allen Dulles, a former Director and eminent lawyer, knew of the project and presumably had "made his legal peace with [it]," Helms said that he never seriously questioned its legal status while it continued under his own tenure. 197 This testimony is partially contradicted, however, by the fact that in 1970 Helms signed the Huston Report, in which covert mail coverage (mail opening) was specifically described as illegal and without the "sanction of law." 198 Helms and the other signers of the Report presented the President of the United States with the option of authorizing a technique which they themselves characterized as unlawful.

Most of the, Agency officials who have testified on this subject simply assumed that mail opening was illegal. Gordon Stewart, who was appointed Inspector General by Richard Helms in 1968 and reviewed the Staff's role in the project in 1969, said flatly, "[0]f course we knew that this was illegal." 199 When he discussed the 1969 report with Helms, he believed it was "unnecessary" to raise the matter of its illegality "since everybody knew that it was [illegal] and it didn't seem to me that I would be telling Mr. Helms anything that he didn't know." 200 Howard Osborn agreed with this characterization of the project's legal status. He testified that at one point in the early 1970's, he approached Karamessines and "said this thing is illegal as hell." 201 Even James Angleton, the project's strongest supporter and, as Chief of the CI Staff, the official most directly responsible for its operation, testified that his understanding of its legality was simply: "That it was illegal." 202 When asked how he could rationalize conducting a program he believed to be illegal, he answered that in his opinion, the project's benefit to the national security outweighed legal considerations. 203

The documentary record of the project supports the views of those officials who testified that within the Agency the project was perceived as illegal. References to the lack of legal authority for mail opening in peacetime are found in internal memoranda written as early as 1955 204 and 1962. 205 An internal document dated September 26, 1963, explicitly states: "There is no legal basis for monitoring postal communications in the United States except during time of war or national emergency when the President creates an independent government agency called the Office of Censorship . . ." 206 It notes that "for the purposes of the above statement, the, word monitoring is given the meaning of examining the contents of postal communications without necessarily notifying addressee or sender that this is being done."

During the course of the project, there was only one documented attempt to develop a legal theory on which mail opening could be predicated; paradoxically, it was presented in the context of an argument for terminating, not continuing, the project. In the paper which William Colby used to brief James Schlesinger about the project in its final days, Colby wrote:

While the recording of the addresses and return address is totally legal, the opening of first-class mail is in conflict with 39 U.S. Code Section 4057. A contention can be made that the operation is nonetheless within the Constitutional powers of the President to obtain foreign intelligence information or to protect against foreign intelligence activities (powers statutorily recognized in 18 U.S.C. Section 119 [sic], with respect to bugging and wiretapping). 207

Two Postmasters General who were briefed on at least some aspects of the New York project -- Edward Day and Winton Blount -- testified that such an argument may have merit; for this reason, neither was certain that the CIA's New York project was plainly illegal. 208

The United States Supreme Court held in *United States v. United States District Court*, 407 U.S. 297 (1972), however, that the statutory section to which Colby apparently referred does not represent an affirmative recognition by Congress of Presidential power with regard to foreign intelligence and counterintelligence; it is, in effect, a statement of Congressional neutrality and deference to the judiciary in defining the scope of the President's power if any in this area. This section, moreover, relates to electronic surveillance only; those statutes which prohibit warrantless mail opening 209 contain no analogous "exception." Furthermore, even if the President may constitutionally authorize warrantless mail opening for national security reasons, no President ever clearly authorized this program specifically or (with one five-day exception in 1970 209a) the use of mail opening as an investigative technique generally.

Regardless of its merits, this first attempt at developing a legal theory to justify HTLINGUAL was not even set forth until February 14, 1973 -- one day before the suspension of the project. For twenty years prior to this date, the New York project had continued without the benefit of any perceived legal support.

## *2. Role of the General Counsel*

The CIA's General Counsel was not asked for a legal opinion on Colby's theory. At no time, in fact, was the General Counsel ever requested to evaluate the legal aspects of the New York project; all the evidence, including the statement of the holder of this office himself, 209b suggests that the General Counsel was never even aware of the project's existence.

Thomas Abernathy, who, as a member of the Inspector General's staff in the early 1960s had been in charge of the first review of the New York project, conceded that his review did not include consultations with the General Counsel, because legal matters were a matter for "top management." 210 The 1969 review, headed by Inspector General Gordon Stewart, also bypassed the Office of the General Counsel. Stewart testified to at least two reasons why the General Counsel had no input into the project evaluation. First, the Inspector General's line of authority ran only to the Director of Central Intelligence; he had no independent authority to consult the General Counsel directly. 211 Second, he believed that the security of the project precluded his broadening the circle of witting persons, even when the person to be included would be the Agency's own General Counsel. 212 He testified:

Well, I am sure that it was held back from him [the General Counsel] on purpose. An operation of this sort in the CIA is run-if it is closely held, it is run by those people immediately concerned, and to the extent that it is really possible, according to the practices that we had in the fifties and sixties, those persons not immediately concerned were supposed to be ignorant of it. 213

Richard Helms also testified that he never consulted the General Counsel with regard to the legality of the operation, nor did he know of any attempt by anyone else to do so. 214 He stated that in general, "sometimes we did [consult the General Counsel for statutory interpretations] ; sometimes we did not. I think the record on that is rather spotty, quite frankly." 215

## *3. The "Flap Potential"*

Because many Agency officials connected with the project viewed it as illegal, and because many of these officials also saw it as essentially domestic surveillance and therefore outside, the CIA's jurisdiction in any event, there was general concern over the project's so-called "flap potential." This term was used by Agency officials to describe the risk of embarrassment to the CIA that would result from the revelation of such a project to the general public and to Congress. It was this concern over the project's flap potential that led to a general tightening of security, to the creation of "cover stories," and other strategies in case of exposure, and, ultimately, to the termination of the project.

In the CI Staff's original proposal in November 1955 to expand the New York project to include large-scale mail opening, James Angleton recognized that "[t]here is no overt, authorized or legal censorship or monitoring of first class mails which enter, depart or transit the United States at the present time." 216 He noted, therefore, that "[i]n the event of compromise of the aspect of the project involving internal monitoring of the mails, serious public reaction in the United States would probably occur. Conceivably, pressures would be placed on Congress to inquire into such allegation ..." At this point, however, he was confident that such inquiries could be thwarted. He continued: "... but it is believed that any problems arising could be satisfactorily handled." 217 He wrote that the "cover story" was that the CIA interceptors were in fact "doing certain research work on foreign mail ..." 218

The review of the Office of Security's role in the project in the early 1960s raised the "flap potential" problem again. The Inspector General's report formally recommended that: "An emergency plan and cover story be prepared for the possibility that the operation might be blown." 219 In response to this recommendation, the Deputy Director of Security suggested that in case of a local compromise in New York, the "Office of Security would utilize its official cover to explain any difficulties," and noted that "high-level police contacts with the New York City Police Department are enjoyed, which would preclude any uncontrolled inquiry in the event police action was indicated." 220 If citizens complained about lost mail, he suggested that the proper course should be "referral to the Post Office Department for a normal official inquiry into lost registered mail." 221 Finally, if the project was revealed by a disgruntled Agency employee, the Deputy Director of Security wrote that the charge "may be answered by complete denial of the activity." 222

The Deputy Chief of the Counterintelligence Staff also responded to the Inspector General's recommendation for a cover story. He wrote that "a 'flap' will put us 'out of business' immediately and may give rise to grave charges of criminal misuse of the mails by government agencies," 223 and argued:

Since no good purpose can be served by an official admission of the violation, and existing Federal statutes preclude the concoction of any legal excuse for the violation, it must be recognized that no cover story is available to any Government Agency. Therefore, it is important that all Federal law enforcement and U.S. Intelligence Agencies vigorously deny any association, direct or indirect, with any such activity as charged ...

... Unless the charge is supported by the presentation of interior items from the Project, it should be relatively easy to "hush up" the entire affair, or to explain that it consists of legal mail cover activities conducted by the Post Office at the request of authorized Federal agencies. Under the most unfavorable circumstances. . . . it might be necessary after the matter has cooled off during an extended period of investigation, to find a scapegoat to blame for unauthorized tampering with the mails. Such cases by their very nature do not have much appeal to the imagination of the public, and this would be an effective way to resolve the initial charge of censorship of the mails. 224

The views of the Deputy Chief of the CI Staff were adopted by the Director of Security Sheffield Edwards in February 1962. 225

Three years later, the Long Subcommittee's investigation was believed to increase the risk of project exposure. An internal CIA memorandum dated April 23, 1965, states:

Mr. Karamessines [Assistant Deputy Director for Plans] felt that the dangers inherent in Long's subcommittee activities to the security of the Project's operations in New York should be thoroughly studied in order that a determination can be made as to whether these operations should be partially or fully suspended until the subcommittee's investigations are completed. 226

When it was learned that Chief Postal Inspector Henry Montague had been contacted about the Long investigation and believed that it would "soon cool off," however, it was decided to continue the operation. 227 No security changes were made, but Karamessines recommended that the program should be brought to the attention of President Johnson.

Although the Long subcommittee investigation did indeed "cool off" in 1966, the elevation of William Cotter to the position of Chief Postal Inspector in 1969 again raised the specter of discovery by Congress. A CIA internal memorandum written on the day that Cotter was sworn in shows that both Agency officials and Cotter himself recognized that whereas Henry Montague did not know of the mail opening aspects of the project and, therefore, could "testify under oath on the Hill in such a way as to -- in effect -- protect HTLINGUAL[.] Cotter will not be in such a position and will be particularly vulnerable in the event of a flap in view of his own past affiliation with the Agency." 228 The minutes of the meeting of top Agency officials in the Director's office on May 19, 1971, also make clear that their concern over the Jeremy Stone letter focused largely on the fact that Cotter "would be unable to [deny knowledge of mail opening] under oath" 229 before a congressional committee, as Mr. Montague had been able to do, if the letter created adverse publicity.

The various recommendations for terminating the project before 1973 were predicated not on the perceived illegality of the operation per se; but, to the extent legal factors were present at all, they were based on the "flap potential" stemming from its questionable legal status. The 1969 Inspector General's report, for example, cited lack of value to the Agency and "the continued flap potential inherent in this program" 230 as grounds for its formal recommendation to request the FBI to assume responsibility for the project or, if the Bureau refused, to consider its discontinuance. The report did not raise legal questions directly, even though the then-Inspector General testified that he believed the project to be illegal at the time. At the May 1971 meeting of Agency officials concerning the security of HTLINGUAL, Deputy Director for Plans Thomas Karamessines also recommended that CIA involvement be discontinued because "any flap would cause the CIA the worst possible publicity and embarrassment" 231 -- not because of the illegality of the project itself.

When the project was finally terminated in 1973, the evidence suggests that the decision did not turn on a determination that it was illegal -- indeed, for the first time it was suggested that it might be legal. Rather, Director James Schlesinger accepted William Colby's evaluation that "[t]he political risk of revelation of CIA's involvement in this project is in any case substantial ... [and] is not justified by the operation's contribution to foreign intelligence and counterintelligence collection." 232

In short, many of its major participants saw the New York project as illegal. While a few CIA officials believed that it was lawful, neither the General Counsel nor the Attorney General 232a was ever consulted for a legal opinion. Agency officials reacted to the project's generally perceived illegality, especially when it was threatened by congressional investigations, by focusing even more closely on the security precautions necessary to prevent exposure. Cover stories signed to obscure the CIA's true activities were fabricated, and, in recognition of the absence of any "legal excuse," it was ultimately agreed that the project's very existence should be flatly denied in the event of a serious "flap." "Admission" was a strategy that apparently was never considered. The project was finally terminated when, in a new political climate created by Watergate, it was decided that the political risk inherent in conducting such an operation clearly outweighed the project's minimal value to the Agency.

### III. OTHER CIA DOMESTIC MAIL OPENING PROJECTS

While the New York project was clearly the most massive one, the CIA also conducted at least three other domestic mail opening projects: in San Francisco, on four separate occasions between 1969 and 1971; in New Orleans, for three weeks in 1957; and in Hawaii, for approximately one year in 1954 and 1955. In addition, the domestic mail of twelve foreign nationals, CIA employees, and American citizens unconnected with the Agency was also opened during particular investigations.

These mail opening projects present many of the major themes of the New York project: the lack of authorization, both internal and external; the deception of postal officials; the random selection of mail for opening; the attention to the correspondence of American "dissidents", despite the stated foreign intelligence and counterintelligence purposes; and the lack of formal review and evaluation. Some of these other programs were more tightly administered than the New York projects, and others more successful in achieving their goals, but taken as a whole the same patterns emerge. In several cases -- such as the San Francisco mail project, for which internal approvals were secured through misrepresentation of its true nature; and the Hawaiian project, which was initiated by a sole field agent without any authorization from Headquarters -- these themes are even more clearly defined.

#### *A. The San Francisco Mail Intercept Project*

The San Francisco mail intercept project, known as WEST POINTER by the Office of Security and MKSOURDOUGH within the Plans Directorate, involved the exterior examination and opening of mail from an East Asian country to the United States. It was conducted jointly by the Far East Division (FE) and TSD, with the Office of Security providing cover and support. While referred to as a single project, it actually involved four separate trips, each of one to three weeks duration, by CIA personnel from Headquarters to the San Francisco area, in September 1969, February and May 1970, and October 1971. Only

envelope exteriors were inspected on the first trip, but mail was both opened and subjected to chemical tests on the latter three. Although authorizations were obtained from the Director and from the Deputy Director of Plans and the Director of Security, the record suggests that these authorizations were for a mail cover operation only -- not for mail opening. There is no evidence that any approval by Cabinet level officials or the President was ever secured for this project.

### *1. Operation of the Project*

The Initial Phase. -- In mid-1969, TSD personnel requested the Asian operations unit to assist them in determining the validity of TSD's assumption that mail from an East Asian country to the United States was subjected to intensive censorship. Originally, the mail stream was to be intercepted abroad: the CIA's East Asian stations undertook a survey of mail from the Asian country to the United States and conducted "dry runs" of possibilities for its interception. Because of the inherent risk and expense of an operation in Asia, however, and in light of TSD's experience with the New York project, it was decided that the project should be conducted in the United States after the mail had arrived but prior to its sorting and delivery.

In late August 1969, two TSD officers met with James Conway, Deputy Chief Postal Inspector in Washington, for the dual purpose of requesting information on mail entering the United States from this Asian country and to secure his permission for the exterior examination of such mail by CIA agents. Conway's response was favorable, 233 and, at a subsequent meeting in September, the mechanical details for the operation were arranged.

In late September, two agents from TSD traveled to California for a visual examination of incoming mail from this Asian country in the air mail facility at the San Francisco International Airport. In the company of a Postal Inspector, they received access to and examined approximately 1,600 letters in five days before returning to Washington. This trip constituted only a feasibility study to assess the potential of a full-scale operation prior to the commitment of Agency funds and personnel; no mail was opened.

The Second Trip. -- The results of the first trip were apparently successful, and in early October the Chief of TSD approved a second, larger scale survey of mail for the purpose of examining it for censorship techniques. 234 The Far East Division, recognizing the foreign intelligence potential of the project, also became involved in order to collect postal intelligence and positive intelligence. During the next two months, approvals for a joint TSD/FE operation in San Francisco were obtained from the Deputy Director for Plans, Thomas Karamessines; the Director of Security, Howard Osborn; and the Director, Richard Helms. 235

The Deputy Chief Postal Inspector was again contacted and, in January 1970, granted his permission for a second session of CIA access to incoming Asian mail. 236 Two TSD and two FE officers then flew to San Francisco and met with the Regional Postal Inspector in Charge, who had been notified of their appearance by Conway, to arrange for the mechanical details. Mail processing on this trip commenced on February 5, 1970, and continued for one week only, until February 12. The mail was picked up by a Postal Inspector at the San Francisco airport and delivered -- in the company of an armed Office of Security agent -- to a second Postal Inspector and the four TSD and FE personnel at a local Post Office. It was screened and the exteriors photographed during non-working hours at the Post Office, in the presence of the Postal Inspector. From 5 to 80 letters per day were selected for opening by the CIA agents and "lifted" 237 by surreptitiously placing them in their pockets while the Inspector was temporarily out of the room or had his back turned. These letters were taken, at the end of each day, to a TSD laboratory in a CIA facility nearby for opening and chemical testing. The opened letters would then be resealed and returned by the CIA agents to the mail stream within 48 hours. During the one week of operation, a total of 7,014 letters were screened and 133 opened. 231 The majority of these letters were incoming from the Asian country to the United States, but a CIA memorandum indicates that at least one bag of outgoing mail to that country was also made available to the agents. 239

The Third Trip. -- CIA records pertaining to the third trip to San Francisco are fragmentary. A handwritten "dairy" of a TSD officer, however, contains an entry on April 4, 1970, to the effect that a memorandum written (for planned destruction) about the second trip "justifies further such trips, both on FI [foreign intelligence] and CI [counterintelligence] grounds as well as TSD technical needs." 240 On April 28, this officer noted that the "next phase will include re-run of phase two, presumably in the same format. . . ." 241 He also noted that the random selection of a female TSD agent for the project was the "only significant flaw" of the planned trip, since some of the other agents felt that "the presence [of a female] on the team is inappropriate and that things of this sort have caused trouble in the past. . . ."

James Conway was contacted and approved the operation for a third time in early May 1970, 242 and TSD and FE representatives again traveled to San Francisco to process mail between May 4 and May 27. During these three weeks, a total of 2,800 letters were screened. While Agency memoranda show that a portion of these letters were surreptitiously removed "to the TSD laboratory for opening and testing (with the assistance of a large handbag of the female team member", 243 who apparently did make the trip), there are no precise figures as to the number of letters opened. In addition to airmail, some surface mail was also made available to CIA agents on this trip.

The Fourth Trip. -- A fourth trip was proposed in August 1971, in part "to take advantage of the impending visit of the President of the United States to Asia." 244 In addition to examination for censorship techniques and the collection of positive intelligence, which had been the purpose of the last two trips, it was anticipated that this fourth operation could also determine the "attitudes of Asians toward the present discussion between Mao and Nixon as expressed to close friends and relatives." 245 Internal authorizations were obtained in September from the Deputy Director for Plans, the Chief of the Far East Division, the Director of Security, and the Director, although Helms noted that the operation should be limited to two weeks. William Cotter, the Chief Postal Inspector, was contacted about the project but he referred the Agency to Conway, who was now the Regional Inspector in Charge in San Francisco. Conway approved the San Francisco operation for a fourth time 246 and screening and opening commenced on October 1, 1971. Between October 1 and October 15, when the fourth trip was terminated, three FE and two TSD agents processed a total of 4,500 items.

Although Agency documents state that mail opening did occur, it cannot be determined how many of the processed letters were actually opened.

## *2. Nature and Value of the Product*

Selection Criteria. -- According to an internal CIA memorandum, letters were selected for opening and testing on the basis of indications of censorship or operational interest: "Some [letters] would be chosen by the TSD team chief based upon heavy censorship or indicators that the letter should be more thoroughly examined at the Lab. Some would be chosen by CIA officers based on certain locations of mailings or possibly the individual to whom the letter was addressed or the kind of stationery that had been used." 247 As was the case in New York, there was a Watch List for the San Francisco project. While this list was destroyed after the fourth and final trip, it is possible to partially reconstruct the categories of persons of interest from the project justification sent to Thomas Karamessines in September 1971 and from the "Sourdough Capsule Summary" prepared after the last trip.

The former memorandum refers to the goal of intercepting mail from former residents of the United States who had been approached by the Agency while residing in the United States and who had since returned to Asia. 248 The "Sourdough Capsule Summary" reveals that among the persons whose mail was intercepted were many Americans living in an Asian country, including expatriots and former missionaries. It was also stated that the agents "saw several items" from a member of the Southern Christian Leadership Conference, and noted, "Black Panthers -- we saw nothing from this group." 249

Foreign Intelligence and Technical Value. -- The documentary record suggests that the San Francisco project was considered to be successful in achieving its foreign intelligence and technical objectives. The 1971 project justification sent to Thomas Karamessines by FE, for example, noted that "[t]he primary purpose of previous . . . SOURDOUGH efforts was the collection of [the Asian country's] postal intelligence but each effort produced useful positive intelligence, [such as] background information used as a basis for recruitment attempts and risk assessment of using U.S. letter drops for [foreign-based] agents." 250 The subsequent report on the fourth trip to San Francisco described it as a "highly successful mission" also. 251

According to the "Sourdough Capsule Summary," the positive intelligence collected during the final trip included information on such topics as the health and activities of the Asian country's leaders and its internal events. 252 TSD also considered the technical results of their examination for censorship techniques to be valuable because, as stated in a 1970 memorandum, "this was the first time it was possible to exert some measure of scientific control" in testing for the presence of censorship techniques. 253

Domestic Intelligence Value. -- In contrast to the New York project, the primary value of the San Francisco project does not appear to have been in the area of domestic intelligence or counterintelligence. Some essentially domestic intelligence information was nonetheless collected, however, as evidenced by the reference in the project summary to the "several items" of correspondence from a member of SCLC that the Agency personnel "saw." The project justification for the fourth trip also noted that the two SOURDOUGH operations in 1970 had provided "leads for domestic operations (Asian operations) and the FBI." 254

There is no evidence that the FBI levied any requests on -- or even knew of -- the San Francisco project. The Bureau apparently received sanitized domestic intelligence leads from Sourdough, but there was no formalized procedure for requesting or receiving such information from it. One of the agents involved in the project speculated that the strained relations between the FBI and the Agency during this period may have inhibited the CIA from advising the Bureau of SOURDOUGH's existence. 255

## *3. Termination of the Project*

The fourth trip to San Francisco in October 1971 proved to be the final visit, but exactly how the project was formally terminated is unclear. A December 1974 memorandum reads in part: "There is no information in the Office of Security's file on Project WESTPONTER concerning when or by whom the decision was made to terminate the project." 256 No other memoranda regarding the project shed any light on this question.

The reason for the termination is more apparent, however. According to a June 1973 memorandum to the Chief, East Asia Division (formerly the Far East Division) :

The operation achieved the objectives of (a) determining the extent of an Asian country's censorship of mail to the USA and (b) the nature of the mail itself. It was terminated since the risk factor outweighed continuing an activity which had already achieved its objectives.

Thus, the "risk factor" or "flap potential" was again a crucial factor in the decision to terminate a mail opening program.

## *4. Internal Authorizations and Controls*

Authorizations. -- The lax pattern of internal authorization that characterized the New York mail project was repeated in the San Francisco project. There is no documentary evidence of any authorization -- even by the Chief of TSD -- prior to the initial contact with the Post Office in August 1969 or the first San Francisco trip in September. On October 6, 1969, the TSD Chief gave his approval for the formalized institution of the project, but according to the handwritten "diary" of a TSD agent, the Chief of TSD insisted that at least Thomas Karamessines, and "possibly [the] Attorney General or even the President," must concur before the project could be fully implemented. 258

Superficially, the subsequent internal chain of oral approvals was complete, if somewhat complex. The TSD Chief personally contacted Karamessines, who "agreed in principle" but requested TSD to secure concurrences from the CI Staff and Howard Osborn (Director of Security) before he would approach the Director on this matter. The Deputy Chief of the CI Staff was briefed and concurred. (Despite a statement in the "diary" that the Deputy Chief of the CI Staff "will clear with C/CI [the Chief

of the CI Staff]," this apparently was never done: James Angleton cannot recall ever having been informed about this project. 259) On October 23, Osborn was also briefed by TSD and FE personnel; he approved, but conditioned his approval on clearance from the Director. Karamessines was told of Osborn's position on October 27, and together they briefed the Director. Helms reacted favorably and, on November 4, 1969, TSD was advised to proceed with the project. 260

The record does not reveal any specific authorization for the third trip, but a project justification memorandum for the fourth trip was signed by Thomas Karamessines on September 20, 1971. He recalled that this written authorization -- unique for SOURDOUGH -- was necessary to except the project from the suspension of certain types of Agency activities with respect to an Asian country during the President's Asian trip, which had been requested by the State Department to avoid possible embarrassment to the United States. 261 According to an October 1971 memorandum written shortly after the final trip, approvals had also been secured from Howard Osborn and Richard Helms. 262

Although the authorization chain appears to be relatively complete, the testimonial evidence suggests that in 1969, when Karamessines, Osborn, and Helms approved phase two of the project, all three of these officials believed they were approving a mail cover -- not a mail opening -- operation. Osborn testified that the TSD and FE personnel who briefed him on the project presented it as an operation "whereby they could inspect the exterior of envelopes to and from [an Asian country]." 263 He continued: "... I did not know that they were going to open it; I had no idea they opened the mail. And I found out socially and personally from one of the people involved about a year ago [i.e., 1974] that they opened the mail." 264

When asked whether or not he was misled in order to secure his approval, Osborn stated:

Yes, indeed -- I wasn't misled but perhaps it seemed when [they] got out there and found out how easy it was to get it but I don't know, I wasn't told that they were to open mail. That isn't the circumstances under which I briefed Mr. Helms.... [If I had known it involved mail opening] I would not have approved it. The Director might have approved it, but it wasn't the way I briefed it .... 165

Karamessines stated that the first time he can recall knowing that the project involved mail opening rather than a mail cover was in September 1971, when he signed the written authorization for the fourth San Francisco trip. He testified that when he approved the project in 1969 he, too, had been led to believe that it was simply a mail cover operation. 266

Richard Helms cannot recall whether he understood the project to involve mail opening or not, but stated that it is probable, in light of the testimony of Osborn and Karamessines, who were his only sources of information about SOURDOUGH, that he was unaware of its mail opening aspects. 267

Thus, after the initial phase of the operation was completed, approvals were secured from the Deputy Director of Plans, the Director of Security, and the Director, but it appears that these approvals, whether purposefully or inadvertently, were based on a fundamental misunderstanding about the nature of the project.

Administrative Controls. -- The documentary record reveals that five justification or summary memoranda were written for the project, four of which pertained to the last trip only. It is possible that more would have been written but for Howard Osborn's October 1969 admonition, reflected in the TSD agent's "diary," "to avoid preparing or exchanging any formal communications in writing re project." 268

There is no indication in the record that the San Francisco project was ever evaluated by the Inspector General's office.

##### *5. External Authorizations*

The pattern of external authorizations, or, more accurately, of the relative absence of external authorizations, also parallels that of the New York project. Those postal officials whose cooperation was necessary to implement SOURDOUGH were briefed, but none was told the true nature of the project. Although there are some suggestions in the record that the Attorney General and the President should be informed, and that the Postmaster General had been informed, there is no direct evidence that any of these briefings ever occurred.

Postal Officials. -- James Conway, Deputy Chief Postal Inspector during the first three trips and Regional Postal Inspector in Charge during the fourth trip, was contacted by CIA agents about, and subsequently approved, all four of these operations. His uncontradicted testimony, however, is that he was never informed that the project involved mail opening and, in fact, that he explicitly instructed the agents not to open mail or remove it from postal facilities. 269

At the first meeting between TSD personnel and Conway about the project on August 26, 1969, the Deputy Chief Postal Inspector was told that the CIA's "interest lay in the possible use of international mail channels from [an Asian, country] for private correspondence involving secret writing." 270 According to an internal Agency memorandum prepared shortly after this meeting, however, it had been explained to him that "the survey we hoped to be able to conduct did not involve opening envelopes or photographing letters, but the possibility that this might become desirable in the future, though not mentioned, was not foreclosed." 271 At the subsequent meeting in September between Conway and these officers, one of the officers "brought up the question of broadening the scope of the survey to be performed in San Francisco to include chemical testing of the mail . . ." 272 The memorandum on this meeting reads in part: "... he [Conway] acquiesced after brief deliberation when [the CIA officer] asked whether we could include this testing as part of the survey without going out of bounds. It was clear that, the key factor in this decision was the fact that the envelopes would not be opened." 273 Conway agrees with this characterization of the basis of his decision, and testified that he explicitly instructed these agents that no mail should be opened. 274

Conway approved the second stage of the project on January 13, 1970, after another meeting with Agency officials. In order to ensure his approval, these officials presented him with "an imaginative cover Story" 171 to the effect that the project was necessary for certain scientific reasons. 276 Conway nonetheless conditioned his approval on total Post Office control of the operations. According to the January 13 entry in the TSD "diary," Conway "approved in principal 'processing' of material but on P.O. premises and under P.O. control ... Opening has not been mentioned." 277 In fact, the cover story was inaccurate, letters were surreptitiously removed from postal premises, and mail was opened. While Conway's approval was sought and received for the final two operations as well, all of the evidence, including his own testimony, suggests that he never learned of the mail opening aspect of the project.

It is also the claim of the Regional Postal Inspector in Charge who worked out the local arrangements for the first three trips, that he was informed neither of the purpose of the project nor of the planned or actual mail openings. 278 This claim is supported by the agency's own documents. 278a

Chief Postal Inspector William Cotter, who played a central role in the story of the New York project, was also aware of SOURDOUGH, but, like Conway and the Regional Inspector, he has testified that he had no knowledge that it involved mail opening. 278b In November 1969, Howard Osborn spoke to Cotter about the San Francisco project. Osborn, who stated that he did not know that mail opening was contemplated himself, assured the Chief Postal Inspector that for the Agency's purposes exterior testing and surveying was sufficient and that mail would not be opened. 278c Cotter was not unreceptive but, according to an agency document explained that he wanted the project "to go slowly and develop gradually." 279 Because of his past CIA affiliation, Cotter also insisted that his assistant, Conway, should ultimately determine the degree of Postal Service Cooperation. 280 He testified that he did not alert Conway to the possibility that the CIA agents may attempt to open the mail because mail opening was not an aspect of the project as he understood it and because "one doesn't have to tell or admonish a seasoned Postal Inspector what his responsibilities are ..." 281

Cotter apparently had no further contact with the San Francisco project until the fall of 1971, when he was contacted about the planned fourth trip. According to an Office of Security trip report prepared in October 1971:

The Assistant Postmaster General for Inspection [Cotter] was contacted for his approval. He firmly indicated he did not know anything about the project, nor did he want to know. He stated, however, that he would advise James Conway, [now the] Regional Inspector in San Francisco, that I would be in touch with him on 27 September 1971, and that we should be guided by Conway's decision. 282

There is no evidence that Postmaster General Winton Blount, the only Postmaster General under whom the project was conducted, ever knew of or approved SOURDOUGH. A 1973 CIA document addressed to Howard Osborn stated that "TSD understands (but has no evidence) that Mr. Helms briefed Postmaster Blount. Is this so, do you know?" 283 But Helms has made no claim that he did brief Mr. Blount about this project, 284 and there is no testimonial or documentary indication that TSD's understanding on this matter was correct.

Attorney General and President. -- As noted above, when the Chief of TSD approved the formal institution of Sourdough on October 6, 1969, he stated that concurrences from the Deputy Director for Plans and "possibly [the] Attorney General or even the President" would be necessary prior to implementation. There is no evidence, however, that either Attorney General Mitchell or President Nixon, the only holders of these offices during the course of the project, were briefed about the San Francisco mail openings either before or after they occurred. President Nixon did state that he was "generally aware" of CIA mail covers "of mail sent from within the United States to . . . the Soviet Union . . . or the People's Republic of China," 284a but he disclaimed knowledge of any CIA mail opening program. 284b

Sourdough's record on external authorizations, in short, is even less complete than that of the New York project. Those postal officials who learned of the project in general terms were misled on the subject of opening and deceived on the subject of custody, and no Cabinet level official -- or the President of the United States -- apparently knew of the project at all.

#### *B. The New Orleans Mail Intercept Project*

A third CIA mail intercept project, encrypted "Project SETTER," was conducted in New Orleans for two and one-half weeks during 1957. This project, which was conducted by the CI Staff with cover and support functions provided by the Office of Security, involved the screening and opening of first class international surface mail transiting New Orleans enroute to and from South and Central America. Unlike the New York and the San Francisco projects, SETTER was operated with the cooperation of the United States Customs Service. There is no record of any internal authorization above the level of Deputy Director of Security and Deputy Chief of the CI Staff, and the only apparent external approval was by a Division head in the Customs Service, who stated that he was unaware the project involved the opening of mail. According to Agency documents, the project generated no useful intelligence information.

##### *1. Operation of the Project*

At the time of the New Orleans project, the Customs Service had Congressional authority under the Foreign Agents Registration Act, as amended by the Cunningham Act, to intercept and examine third and fourth class incoming mail from abroad which was suspected to contain Communist propaganda. In the early 1950's, Customs had established its first "control unit" designed to accomplish that purpose; additional "control units" were subsequently set up in at least nine other cities in the United States. Under pressure from certain members of Congress who were outraged at the "venomous propaganda" 285 passing through New Orleans, the Customs Service planned a feasibility survey in August 1957 to determine whether or not it would be possible to establish a "control unit" in that city as well.

The Agency learned of the planned survey and in mid-July a meeting, attended by the Deputy Chief of the CI Staff, the Deputy Director of Security, and Soviet Bloc Division personnel, was called to discuss its possible exploitation by the CIA. "Based on

experience with SRPOINTER [the New York project]," an Agency document reads, "CI Staff and O/S personnel ... agreed that CIA personnel would participate in the survey at New Orleans." 286

Even prior to this meeting, Irving Fishman, the head of the Customs Service's Restricted Merchandise Division, which maintained the "control units", had apparently agreed in principle to CIA participation in the survey. He was contacted in New York by the Assistant Special Agent in Charge of the Office of Security's Manhattan field office on July 18 "to discuss details of the operation." 287

Fishman and two of his associates left New York for New Orleans at the end of July to work out the arrangements for the Customs survey with the local postmaster. They were joined by four CIA agents during the first week of August, and the operation began on August 6. Each working day for the next two and one-half weeks, one of the Customs personnel went to the New Orleans mail dock to select approximately 25 bags of surface mail from various Central and South American locations that had been unloaded in New Orleans for transshipment to other points in Central and South America. These bags were brought to an office in the Parcel Post Annex of the Federal Building each morning for Customs and CIA scrutiny. While Fishman and the other Customs Service employees searched for communist propaganda by opening third and fourth class mail in the office itself, the CIA agents screened, opened, and photographed first class mail in an adjacent, walk-in vault. The agents' CIA affiliation was known to at least two of the Customs officials; postal employees who worked in the building, however, were informed that they were Customs Service personnel. At the end of each day, the mail would be re-sealed, rebagged, and returned to the mail dock.

Between August 6 and August 23, when the project was terminated, a total of 700 items were photographed and 60 items, mainly first class letters, were opened for examination and photographic reproduction of the contents. 288

## *2. Nature and Value of the Product*

Selection Criteria. -- The agents who participated in the New Orleans project were furnished a "Watch List" of names by the CI Staff to aid in the selection of items for opening. 289

Beyond the Watch List itself, however, it appears that the members of the interception team were given little guidance by their superiors. One member of this group stated that at no time was he instructed what types of items to select. 290

According to a project summary prepared in October 1957, an effort (was) made to obtain a representative sampling from the various countries available. Both business and personal mail was examined . . . " 291

Value of the Product. -- Agency memoranda indicate that SETTER resulted in the collection of no useful intelligence information. The project summary, for example, states: "On-the-spot check of items examined against CI Staff Watch List, and subsequent CI Staff examination of the material processed to date has developed no 'hits' on Watch List names, and, other than propaganda, no material having an intelligence value." 292

## *3. Termination*

The lack of any significant intelligence value, coupled with the stated impossibility of examining a representative sample of the 20,000 bags of mail that transited New Orleans weekly, 292a apparently led to the termination of Project SETTER. No formal termination of the project is recorded, however.

## *4. Authorizations*

Internal Authorizations. -- Both the Deputy Director of Security and the Deputy Chief of the CI Staff attended the July 1957 meeting at which CIA participation in the New Orleans survey was agreed upon. There is no evidence, however, of any internal authorization above the level of these officials. Although the CI Staff had sole operational responsibility for the project, James Angleton, the Chief of the CI Staff at the time, testified that he had no contemporaneous knowledge of it. 293

External Authorizations. -- The only documented approval by a government official outside the CIA was that of Irving Fishman, the head of the Restricted Merchandise Division of the Customs Service. Only through his cooperation, both before and during the period of activity, was the implementation of the project possible at all. According to the October 1957 project summary, Fishman and one of his two associates "were aware, prior to the inception of the operation, of the nature of the BANJO [mail opening] operation." 294 Both Fishman and the associate referred to in the memorandum, however, have stated that they cannot recall any opening of first class mail by the CIA agents. 295

There is no evidence that the Postmaster of New Orleans, who arranged for the Customs survey, knew of any mail opening by the CIA in connection with the project. The Customs survey itself, of which he was evidently aware, was entirely legal at the time.

## *C. The Hawaiian Mail Intercept Project*

A fourth CIA mail intercept project was conducted in the Territory of Hawaii for about one year during the mid-1950's. 295a It was initiated, without prior authorization from Headquarters, by the Agency's sole representative in Honolulu. Like the New Orleans project, it involved the cooperation of the Customs Service.

According to the agent who conducted the Hawaiian project, local personnel of the Customs Service approached him in late 1954 to request his assistance in identifying incoming political propaganda from Asia that had been intercepted by Customs officials acting under the Cunningham Act. 291 The CIA officer agreed and, after a short period of time, noticed the presence of censorship chemicals on a portion of the mail from one of the country's being covered. Less than a week after he began to assist the Customs personnel, he started surreptitiously removing packets of mail for further exterior examination. By early 1955, without the knowledge of Customs officials, the agent was both opening and photographing items he had removed from the Customs facility.

In March 1955, he sent a formal report of these activities to CIA headquarters, noting that he had photographed the contents of approximately six hundred communications and tested four hundred. Included in the report was an evaluation of the results to date; specifically, an analysis of the Asian country's censorship techniques and other postal and positive intelligence information he had collected. According to the CIA officer, his report was very favorably received and he was encouraged to continue.

The CIA officer stated that for approximately two months in early 1955, he was joined by an FBI agent as well. A local FBI agent in Honolulu, who had received instructions to concentrate on Asian counterintelligence matters, apparently learned from Customs officials that the CIA officer participated in their examination of incoming propaganda. He contacted the CIA officer, was informed of the project, and notified Bureau Headquarters. The CIA officer stated that with his concurrence, an FBI agent trained in mail opening techniques was assigned the task of assisting him in his interception effort. The Bureau can locate no documents pertaining to this operation, however.

The CIA officer continued the project on his own after FBI participation ceased. In November 1955, he was transferred to a station in the continental United States, and the Hawaiian project was terminated.

#### *D. Isolated Instances of CIA Mail Opening*

In addition to generalized mail intercept projects, the CIA has also targeted the mail of particular individuals within the United States. At least twelve such instances of mail opening, directed against foreign nationals, Agency employees, and American citizens unconnected with the CIA are recorded in Agency files. 297

### **PART III: PROJECT HUNTER**

#### **I. INTRODUCTION AND MAJOR FACTS**

"Project Hunter" was the cryptonym given by the FBI to the receipt of information from the CIA's New York mail intercept program. The FBI first became aware of this operation in January 1958, approximately three and one-half years after the CIA began opening mail between the Soviet Union and the United States. In February 1958, the Bureau began to levy requirements on the CIA's project and received product from it continually from that time until the discontinuance of the project. In total, copies or summaries of more than 57,000 items of intercepted correspondence were disseminated by the CIA to the FBI, either on the basis of general guidelines established by the Bureau or on the basis of particular names of individuals and organizations for which the Bureau desired coverage. While most of these names and categories could reasonably be expected to generate counterespionage information -- which was the stated purpose of the FBI's collaboration on the project -- Bureau targets also included peace organizations, antiwar leaders, black activists, and women's groups. When the New York mail intercept project was terminated in 1973 and the FBI declined the opportunity to assume responsibility for it, Project Hunter ceased after fifteen years of operation.

The most pertinent facts about Project Hunter may be summarized as follows:

(a) The FBI knew of and levied requirements on the CIA's New York mail intercept project from 1958 until the project was terminated in 1973.

(b) Although the collection of counterespionage information was the stated purpose of Project Hunter, the Bureau specifically requested information on numerous individuals and organizations in the antiwar, civil rights, and women's movements, and on such general categories as "government employees" and "protest organizations."

(c) The FBI received copies or summaries of more than 57,000 intercepted communications between 1958 and 1973. At the height of the project in 1966, the CIA disseminated 5,984 of the 15,499 items that had been opened to the Bureau -- more than were disseminated to any one customer component of the CIA itself.

(d) The product was moderately valuable in terms of the FBI's counterespionage mission, but much of the correspondence has been characterized as "junk" by FBI personnel familiar with the program. It provided no leads to the identification of foreign illegal agents.

(e) No consideration was given to terminating FBI involvement in the CIA's New York intercept program when the Bureau's own projects were terminated in 1966 because information from the project was received at no expense or risk to the FBI.

(f) FBI officials decided against assuming responsibility for the CIA's New York mail intercept project in 1958 and again in 1973 because of its complexity, expense, and the inherent security risks, not primarily because of legal considerations.

## II. FBI "DISCOVERY" OF THE CIA'S NEW YORK MAIL INTERCEPT PROJECT: 1958

### *A. A Proposed FBI Mail Opening Program for United States-Soviet Union Mail*

In 1957, FBI officials were extremely concerned about the presence of Soviet and other hostile illegal intelligence agents in the United States. 298 The FBI had recently uncovered Rudolph Abel and at least three other illegal agents, yet no effective methods of locating and identifying illegal agents generally were then known. Bureau officials did not feel that they had been entirely successful in their attempts in the past, and searched for a means by which the communication links between the illegal agents and their principals could be intercepted. 299

On January 10, 1958, an allied nation's counterintelligence agency informed the FBI that when Soviet illegal agents throughout the world wished to meet with their principals, they were under instructions to send a communication to a particular address in the Soviet Union. 300 Against the background of the Bureau's concern for locating and identifying illegal agents, the significance of this information was readily apparent: if the FBI could screen mail between the United States and the Soviet Union, it would be possible to intercept communications bearing this particular address and, it was hoped, trace the letter back to the illegal agent.

In 1958, mail between the United States and the Soviet Union was routed through air mail facilities in New York City and Washington, D.C. On the basis of its newly-acquired information, therefore, FBI Headquarters immediately instructed the New York and Washington Field Offices "to institute confidential inquiries with appropriate Post Office officials to determine the feasibility of covering outgoing correspondence from the U.S. to the U.S.S.R., looking toward picking up a communication dispatched to the aforementioned address." 301 On January 21, 1958, the Special Agent in Charge of the New York Field Office notified Headquarters that his preliminary inquiries indicated that covert mail coverage would be possible at LaGuardia airport.

This was not the FBI's first attempt to utilize mail opening as an investigative technique in the counterintelligence field: at the time these inquiries were being made, the Bureau was conducting two mail opening programs of its own in the cities of Washington, D.C. and San Francisco (see Part IV, p. 636), and in the case of the Washington, D.C. program, the cooperation of the Post Office Department had been enlisted in delivering mail to Bureau agents.

### *B. Referral to Post Office Headquarters in Washington, D.C.*

After the SAC in New York had made his preliminary inquiries, which made the prospects for successful implementation of the project appear favorable, he received a telephone call from the Chief Postal Inspector, David Stephens, in Washington, D.C., who informed him that he could not authorize Post Office cooperation after all because "something had happened in Washington on a similar matter." 302

He advised that FBI Headquarters should discuss the matter further with his office in Washington.

### *C. James Angleton's Initial Contact with Sam Papich Regarding HTLINGUAL*

The SAC in New York relayed the Chief Postal Inspector's advice to FBI Headquarters, but before Headquarters was able to initiate a meeting with Postal officials in Washington, James Angleton, then Chief of the Counterintelligence Staff of the CIA, contacted Sam J. Papich, FBI Liaison to the CIA, on the matter to which Stephens had apparently referred. 303 Angleton stated that it had come to his attention, through the Post Office, that the FBI was making inquiries into the possibility of covering mail between the United States and the Soviet Union, and that the CIA expected to be contacted by the FBI concerning this possibility. He then informed Papich "on a personal basis" 304 that the CIA was already conducting an extensive operation, based in New York, which involved the opening of mail to and from the Soviet Union. He stated that this project was one of the largest and most sensitive of all CIA covert operations, and that "the sole purpose for the coverage was to identify persons behind the Iron Curtain who might have some ties in the U.S. and who could be approached in their countries as contacts and sources for the CIA." 305

Alan Belmont, then Assistant Director for the Domestic Intelligence Division, was informed of this operation by Papich and noted in a memorandum to Mr. Boardman, then Assistant to the Director, that "[i]t would appear that our inquiries of the Post Office officials in New York have flushed out a most secret operation of the CIA." 306

### *D. Decision Not to Challenge CIA Jurisdiction*

Papich testified that FBI officials were greatly concerned over what was viewed as a possible intrusion by the CIA into the counterintelligence jurisdiction of the FBI, and he stated that he "anticipated all hell was going to break loose." 307 In fact, however, the jurisdictional dispute which Papich anticipated never occurred. Rather, the FBI decided to capitalize on the situation by receiving the benefits of the program without the expense and manpower requirements which would accompany a more active role in its operation. Belmont wrote to Boardman:

The question immediately arises as to whether CIA in effecting this coverage in New York has invaded our jurisdiction. In this regard, it is believed that they have a legitimate right in the objectives for which the coverage was set up, namely, the development of contacts and sources of information behind the Iron Curtain. At the same time, there is an internal security objective here in which, because of our responsibilities, we have a definite interest, namely, the identification of illegal espionage agents who may be in the United States. While recognizing this interest, it is not believed that the Bureau should assume this coverage because of the inherent dangers in the sensitive nature of it, its

complexity, size, and expense. It is believed that we can capitalize on this coverage by pointing out to CIA our internal security objectives and holding them responsible to share their coverage with us. 308

This memorandum was routed to the Director, and Hoover's approval -- the phrase "OK. H." -- appears on the last page.

#### *K. FBI Briefing at CIA*

On January 24, 1958. Sam Papich met with Janies Angleton, Sheffield Edwards, and a third CIA officer at the Agency. 309 Papich told the group that he had reason to believe, from the FBI inquiries of Post Office officials in New York (and without mentioning Angleton's admission two or three days earlier), that the CIA had a mail coverage project in New York. The CIA representatives then proceeded to give Papich a full briefing on the CIA's mail intercept program, and agreed to "handle leads" for the Bureau. 310 Papich was also told that Postmaster General Summerfield had approved the photographing of mail by the CIA but that the CIA did not have permission of the Post Office Department to open mail. 311 In addition, the address given the Bureau by the allied counterintelligence agency was supplied to the CIA for use in the New York project.

Neither Angleton nor anyone else in the CIA was told at this time of either of the FBI's own on-going mail opening programs. According to the testimony of William Branigan, former FBI Section Chief of a section dealing with espionage matters, there was no reason to inform CIA about the Bureau's own mail opening programs since both of the programs then involved "strictly a domestic situation involving persons in the United States . . . [and] solely within the jurisdiction of the FBI." 312.

### III. REQUESTS LEVIED BY THE FBI ON THE CIA'S NEW YORK MAIL INTERCEPT PROJECT

#### *A. The Procedure Established*

The "Hunter" procedure for requesting and receiving information was established in early February 1958. On February 6, James Angleton wrote the FBI Director to advise the Bureau of the form in which requests should be made and information would be disseminated. 313 Designating correspondence between the two agencies which related to the New York project as "Project Hunter", Angleton suggested that the Bureau number all requests for placing particular persons on the Watch List, in consecutive order as "Hunter Request Number --." Identifying data about the requested person should be placed on a three by five card, with instructions as to the duration of the person's name on the Watch List and the type of treatment desired ("e.g., photograph exterior only; open and photograph contents as well, etc."). General requirements based on letter content or the class of the sender or addressee, could also be accommodated by the CI Staff project analysts.

Correspondence from the CIA to the FBI which contained information derived from the project was to be labeled consecutively, "Hunter Report Number --".

#### *B. Categories of Correspondence for Requested Coverage*

At least five sets of categories of correspondence for which the Bureau desired coverage were transmitted to the CIA between 1958 and 1973. The focus of the original categories was clearly counterespionage, but subsequent general requirements became progressively more domestic in their focus and progressively broader in their scope. By the end of the project, one requirement simply asked for the intercepted correspondence of "New Left activists, extremists and other subversives." 314

The first set of categories of correspondence for which the FBI desired coverage was set forth in a memorandum from Alan Belmont to Mr. Boardman dated February 6, 1958. 315 This memorandum was approved by Hoover, and Sam Papich advised the CIA of the Bureau's interest in these categories on February 11. They were:

- (1) All correspondence of a suspicious nature, et cetera.
- (2) All correspondence indicating that the Soviets may be utilizing a hostage situation, i.e., correspondence indicating pressure being exerted on Soviet citizens who have close relatives in the U.S. or pressure being exerted on individuals in U.S.
- (3) Any information appearing in correspondence indicating weaknesses or dissatisfaction on the part of any Soviet presently in the United States so that the Bureau might give consideration to feasibility of approaching such individuals for defection or double agent purposes.
- (4) Any information appearing in correspondence indicating Soviet control or direction of the CPUSA. [Communist Party, USA.] 316

If the CIA Staff analysts were not certain whether a particular letter fit into one of these four categories, they clearly gave the Bureau the benefit of their doubt. In August 1961, these categories had to be refined because of the large percentage of valueless letters (95% by one informed estimate) 317 which the CIA disseminated to the Bureau in the first three and one-half years of the Hunter operation. 318 The FBI informed the CIA that it was not interested in correspondence involving general travel arrangements of Americans travelling to Russia, personal letters with no intelligence value, letters to and from exchange students, and "holiday greeting" traffic. 319 The Bureau stated, however, that it was specifically interested in receiving any correspondence in the following categories:

- (1) Any traffic in the above-mentioned non-desired categories wherein the translator feels there is some intelligence significance....

(2) Any traffic wherein it is revealed U.S. addressee or addressor is a U.S. Government employee or is employed in a sensitive industry, i.e., missile field.

(3) Any traffic wherein we have an obvious intelligence interest such as an open offer by an individual to assist Soviets, an indication an individual is going to Russia and wants to become a citizen or wherein an individual professes pro-Soviet or pro-communist sympathies. 320

Other categories relating to particular espionage cases were also set forth.

The reference to "U.S. Government employee[s]" in category (2) was intended to be limited to employees in sensitive positions, according to one of the Bureau officials who formulated these categories. 321 But such limitation is not evident on the face of the request. The Bureau literally requested all intercepted correspondence to or from all federal employees, from the lowest Civil Service level to, presumably, the level of the Cabinet, the Congress, and the President.

On February 13, 1962, an additional category was requested by the FBI. 322 This request was for any correspondence from the United States to the Soviet Union which contained any of the "indicators" on the outside of the envelope which suggested that the correspondence was from an illegal agent to his principal. The Bureau had acquired knowledge of these indicators in 1959 and used this knowledge in connection with several of its own mail opening programs in the period 1959 through 1966. Dissemination by the CIA to the FBI of correspondence which was opened on the basis of these indicators was code-named "Hunter-Don."

The categories were enlarged again on October 31, 1962. Among the new categories of correspondence desired by the FBI were the following:

- (1) All material emanating from Puerto Rico of an anti-U.S. nature and pro-Soviet.
- (2) Data re U.S. peace groups going to Russia and while in Russia.
- (3) Data indicating death of any U.S. Communist abroad.
- (4) Any traffic from or to U.S. students in Moscow or to U.S. persons who were former students in Moscow.
- (5) Any traffic between U.S. persons who are with a current exposition or a previous exposition in the USSR. 323

In addition, the CIA was informed that the FBI had no interest in the correspondence of Soviet-bloc immigrants desiring to repatriate to the Soviet Union, legitimate American tourists in the Soviet Union, and American professors in academic research who corresponded with their counterparts in the Soviet Union.

A final revision of the guidelines occurred in March 1972, when James Angleton was told that the following were among the types of traffic which continues to be of interest to the FBI:

1. Current and former Soviet exchange students, visitors, researchers and scientists.
2. Current and former Soviet official visitors.
- .....
4. U.S. exchange students, researchers, and persons who have been in the USSR with American exhibitions and delegations.
- .....
6. . . . [P]ersons on the Watch List; known communists, New Left activists, extremists and other subversives; suspected and known espionage agents; individuals known to be of interest to the Soviets because of their specialized knowledge or work on classified matters ...
7. Communist party and front organizations . . . extremist and New Left organizations.
8. Protest and peace organizations, such as People's Coalition for Peace and Justice, National Peace Action Committee, and Women's Strike for Peace.
9. Communists, Trotskyites and members of other Marxist-Leninist, subversive and extremist groups, such as the Black Panthers, White Panthers, Black Nationalists and Liberation groups, Venceremos Brigade, Venceremos organization, Weathermen, Progressive Labor Party, Worker's Student Alliance, Students for a Democratic Society, Resist, Revolutionary Union, and other New Left groups. This would include persons sympathetic to the Soviet Union, North Korea, North Vietnam and Red China.

10. Cubans and pro-Castro individuals in the U.S.

11. Traffic to and from Puerto Rico and the Virgin Islands showing anti-U.S. or subversive sympathies. 324

This final set of requirements clearly reflected the domestic turmoil of the late 1960's and early 1970's. The process that began fourteen years earlier as a means of discovering Soviet intelligence efforts in the United States had expanded to encompass detection of the activities of domestic dissidents of all types. Even those merely "sympathetic" -- in the opinion of CI Staff analysts -- to selected communist nations fell within the scope of the requirements.

#### *C. Individuals and Organizations Placed on the Watch List*

In addition to the general categories set forth above for which the FBI desired CIA mail coverage, the Bureau also submitted the names of particular individuals and organizations for inclusion on the CIA's Watch List. According to existing FBI records, "Hunter Request" numbers reached 286 by 1973, that is, the names of 286 individuals and organizations were submitted by the Bureau during the course of the Hunter Project. 325

The majority of these names were clearly in the counterespionage, area, but the specific requests also included: The National Guardian, Student Non-Violent Coordinating Committee, National Mobilization Committee to End the War in Vietnam, Students for a Democratic Society, Ramparts, Clergy and Laymen Concerned about Vietnam, the Liberation News Service, Jeremy J. Stone (Director of the Federation of American Scientists), Center for the Study of Public Policy, Linus Pauling, and the Institute for Policy Studies. 326

Aside from the 286 "Hunter Request" names submitted by the FBI for inclusion on the Watch List, about 180 more names were provided to the CIA for use in the special Latin America mail screening operation, known as Hunter Vince, which was run in conjunction with Hunter and which lasted for approximately one month in 1963. 327 On December 12, 1962, Liaison Agent Sam Papich had been informed by the CIA that because mail from the United States to a Latin America country was temporarily discontinued, all such mail would be shipped to that country from New York City, and the CIA intended to expand their coverage to include the screening and opening of a portion of this mail. 328 The FBI expressed an interest in sharing the benefits of this coverage and submitted approximately 180 names of American and foreign citizens who were on the Security Index. 328a

This aspect of the program, which commenced on February 21, 1963, was suspended on March 19, less than one month later.

#### IV. PRODUCT RECEIVED BY THE FBI FROM THE CIA's NEW YORK MAIL INTERCEPT PROJECT

*A. Volume* According to a CIA document dated January 23, 1975, a total of 57,846 separate items were disseminated to the FBI from the CIA project. 329 The yearly figures, from 1958 when the first product was disseminated to the Bureau, until the termination of the project, are as follows:

| Year | Total Items Opened | Items disseminated to FBI |
|------|--------------------|---------------------------|
| 1958 | 8,633              | 666                       |
| 1959 | 13,299             | 1,964                     |
| 1960 | 12,725             | 2,342                     |
| 1961 | 14,025             | 3,520                     |
| 1962 | 13,932             | 3,017                     |
| 1963 | 16,748             | 4,167                     |
| 1964 | 14,904             | 5,396                     |
| 1965 | 13,309             | 4,503                     |
| 1966 | 15,499             | 5,984                     |
| 1967 | 23,617             | 5,863                     |
| 1968 | 12,288             | 5,322                     |
| 1969 | 9,821              | 5,384                     |
| 1970 | 10,207             | 4,975                     |
| 1971 | 9,018              | 2,701                     |

|      |       |       |
|------|-------|-------|
| 1972 | 8,060 | 1,400 |
| 1973 | 2,273 | 642   |

#### *B. Administrative Processing of the Product Received*

After the FBI liaison agent picked up the Hunter reports at CIA Headquarters, he would bring them to a single desk within the Soviet Section of the Domestic Intelligence Division. The person in charge of this desk was responsible for reviewing all of the correspondence and routing it to interested supervisors in the Division. Copies of the correspondence would then be returned to the control desk and either destroyed, if deemed to be of no value, or filed in a secure area, separated from the rest of the FBI files. Due to the sensitivity of the project, copies of the correspondence never went into a case file directly, although a cross-reference in the case file allowed the retrieval of any relevant correspondence.

Knowledge of the project was limited to the operational sections within the Domestic Intelligence Division at Headquarters. Neither the Criminal Division nor any of the field officers were ever advised of the nature of the source. When significant information was developed from Hunter, it would be paraphrased to disguise the true source prior to dissemination to the field officers or other divisions: an informant symbol replaced the term "Project Hunter" on all such correspondence. Field offices would be informed that "[Informant symbol], a most sensitive and reliable source, advised that (individual or organization) of (address) was in contact with (individual or organization; address) during (month, year) .... According to the informant...." 332 The field offices were also warned that information from this source should not be disseminated outside the Bureau nor set out in any investigative report, and that information from the informant should be utilized for lead purposes only. 333

#### *C. Nature and Value of the Product Received*

During the fifteen years of Hunter's operation, the Bureau received information which was considered valuable in both its counterintelligence and its domestic intelligence efforts; it also received a significant volume of material that was valueless. Project Hunter revealed, for example, the location and future plans of a large number of individuals of investigative interest to the FBI, and the "pro-communist sympathies" of numerous American citizens, but it did not lead to the identification of any foreign illegal agents. 334

Typical counterintelligence information generated from the program, as stated in the annual FBI evaluation reports, included: "travel plans to the USSR of numerous Communist Party subjects; ... data indicating pro-Soviet sympathies of U.S. individuals; ... data indicating a U.S. person may be serving as a Soviet courier; ... data indicating the existence of particular Russian social and art clubs in the U.S.; ... data indicating a desire of U.S. students to study in USSR; ... contacts in this country of Security Index (SI) subjects vacationing and studying abroad; ... [d]ata regarding current and former U.S. exchange students show[ing] Soviet and U.S. contacts before and after return, romantic involvements, sympathies and difficulties encountered in Russia, ... plans of seven individuals to repatriate to the USSR; ... U.S. contacts with current and former known and suspected Soviet agents now in the USSR ... " 335

In addition, essentially domestic intelligence was received "regarding persons involved in the peace movements, anti-Vietnam demonstrations, women's organizations, 'teach-ins' . . . , racial matters, Progressive Labor Party, Students for a Democratic Society, DuBois Clubs, Students Non-Violent Coordinating Committee, and other organizations." 336 The fact that an aide to a United States Senator requested a Moscow dance company to perform in the United States was discovered through Hunter and duly filed, 337 as was the fact that the foreign-born wife of a man who would shortly become an aide to Secretary of Agriculture Orville Freeman expected to be in a position to become friendly with President Kennedy. 338

Information such as that listed above was considered to be valuable by the Bureau. 339 A 1966 evaluation of Hunter by the FBI's Domestic Intelligence Division stated that "[t]he value of this material is shown by the fact that there was an increase of 53% in the number of new cases opened on the basis of information furnished by the source. . . . More than 260 new cases were opened and 96 cases were reopened. The majority of new cases were opened on the basis of travel to the USSR and contacts of U.S. citizens, Latin Americans, and Cubans in the U.S. with individuals in the USSR." 340 A 1973 informational memorandum routed to Acting Director Patrick Gray noted that "[w]e have always considered the product from Project Hunter as valuable to our investigative interests." 341

As discussed in Part II above, however, this project was not as valuable to the FBI's counterespionage mission as CIA officials assumed it to be. Large numbers of intercepted communications were received from the Agency, but many of them -- 95 percent according to the FBI Special Agent 342 who was in charge of the administrative aspects of Hunter for five years -- were considered valueless, either because they contained nothing of counterintelligence value or because the information supplied merely duplicated information already in the Bureau case files. 343 William A. Branigan agreed that much of the product could be characterized as "junk," 344 and asserted that the relative value of this project must be evaluated in light of the fact that this source cost the Bureau nothing, either in terms of dollars or in terms of manpower. 345

### V. TERMINATION OF THE PROJECT

All of the FBI's own mail opening programs were discontinued in mid-1966, 346 yet Bureau officials gave no thought at that time to terminating the Hunter Project. As explained by Mr. Branigan, Hunter was considered to be a CIA operation. It was operated at no cost or risk to the Bureau. There was therefore no reason to cut off this source when the Bureau's own programs were terminated. 347 Thus, the FBI continued to receive the fruits of mail opening long after its own agents were prohibited from opening the mail themselves.

Project Hunter was also not terminated for approximately three years after J. Edgar Hoover wrote a footnote in the 1970 "Huston Report" which contained this language: "The FBI is opposed to implementing any covert mail coverage [i.e., mail

opening] because it is clearly illegal and it is likely that, if done, information would leak out of the Post Office to the press and serious damage would be done to the intelligence community." 348 The FBI Director, therefore, was apparently willing to allow the Bureau to receive information from a source that he himself described as "clearly illegal" and which he believed could seriously jeopardize the American intelligence community.

Project Hunter was only terminated when the CIA itself suspended the New York operation in mid-February 1973, for reasons which are discussed in Part II above. At that time, the FBI was approached by Agency representatives to determine whether or not the Bureau wished to assume responsibility for the project, since the Bureau had been the largest consumer of information developed from this source. 349 Lieutenant General Vernon A. Walters, Deputy Director of the CIA, scheduled a meeting with Acting FBI Director Gray on February 16, 1973 to discuss this possibility. 350 The Bureau, however, declined to assume responsibility for the project, primarily because of the attendant expense, manpower requirements, and security problems. According to William Branigan, legal considerations were not a factor in this decision; it was simply thought to be too large and risky an operation to be undertaken by Bureau agents. 351 The suspension of operations therefore proved to be permanent.

## VI. INTERNAL AUTHORIZATION AND CONTROLS

### *A. Initial Approval by and Continuing Knowledge of the Director*

It is clear that FBI Director Hoover personally approved Project Hunter from its inception. Hoover's initial and his written "OK" are signed on the first document in the Project Hunter policy file, the January 22, 1958, memorandum from A. H. Belmont to L. V. Boardman, which sets out the basic facts regarding CIA coverage and possible use of such coverage. 352 He also personally approved the first (1958) and the final (1972) guidelines that went to the Agency, 353 the initial policy memorandum dealing with the handling of Hunter material, 354 and informational memoranda regarding the "Hunter-Vince" (Latin American mail) aspect of the program. 355

In March 1961, the FBI was informed by James Angleton that the CIA had developed a laboratory capability in New York City to test intercepted correspondence for microdots and other secret writing techniques. 356 The CIA offered the use of this laboratory to the Bureau if Bureau agents should ever want to use it. (Apparently this was never used by the FBI.) 357 Hoover was informed of the laboratory and the CIA offer in a March 10, 1961, memorandum, on which he penned the phrase "Another inroad!" 358

Acting Director L. Patrick Gray was also made aware of Project Hunter by at least February 16, 1973, the date he initialed the February 15, 1973, memorandum from W. A. Branigan to E. S. Miller and was scheduled to meet with Lt. General Walters regarding the possible take-over of the project by the FBI. 359 This, however, was one day after the project was actually terminated.

### *B. Internal Controls*

Several of the internal controls which were developed for Project Hunter have already been noted. Knowledge of the true nature of this source was closely held to those sections within the Domestic Intelligence Division which had a need-to-know; dissemination of information outside Headquarters was always disguised and Field Offices were cautioned that the information could be used for lead purposes only. In addition, the project was evaluated at least annually by the Project Supervisor. These evaluations, which summarized the information received from the project during the previous year, were passed up through channels and generally were reviewed by at least an Assistant to the Director. 360

## VII. EXTERNAL AUTHORIZATION

### *A. Attorneys General*

There is no evidence that any Attorney General was ever informed by Bureau officials about the existence of Project Hunter. It was explained by one Bureau official that since the project was a CIA rather than an FBI project, there was no need to seek Justice Department approval or even to inform Justice Department officials about the fact that mail was being opened in the project. 361

### *B. Postmasters General*

There is also no evidence that any FBI official ever informed any Postmaster General or Chief Postal Inspector about Project Hunter. The February 15, 1973 memorandum from W. A. Branigan to E. S. Miller states that "[a]rrangements for the [CIA project] were obviously worked out between the Agency and Post Office officials and we are not privy to the details." 362

### *C. Presidents*

There is similarly no evidence that any President was aware of Project Hunter.

## PART IV: FBI MAIL OPENING

### I. INTRODUCTION AND MAJOR FACTS

The FBI, like the CIA, conducted several mail opening programs of its own within the United States. Eight programs were conducted in as many cities between the years 1940 and 1966; the longest was operated, with one period of suspension,

throughout this entire twenty-six year period; the shot-test ran for less than six weeks. FBI use of this technique was initially directed against the Axis powers immediately before and during World War II, but during the decade of the 1950's and the first half of the 1960's all of the programs responded to the Bureau's concern with communism.

At least three more limited instances of FBI mail opening also occurred in relation to particular espionage cases in the early 1960's.

Significant differences may be found between the FBI mail opening programs and those of the CIA. First, the stated purposes of the two sets of programs generally reflect the agencies' differing intelligence jurisdiction: the FBI programs were, in the main, fairly narrowly directed at the detection and identification of foreign illegal agents rather than the collection of foreign positive intelligence. Thus, no premium was placed on the large-scale collection of foreign intelligence information *per se*; in theory (if not always in practice), only information that might reasonably be expected to provide leads in counterespionage cases was sought. Because of this, the total volume of mail opened in Bureau programs was less than that in the CIA programs. An equally important factor contributing to the smaller volume of opened mail lay in the selection criteria used in several of the FBI's programs. These criteria were more sophisticated than the random and Watch List methods used by the CIA; they enabled trained Bureau agents to make more reasoned determinations, on the basis of exterior examinations of the envelopes, as to whether or not the communications might be in some sense "suspect." Third, the FBI mail opening programs were much more centralized and tightly administered than the CIA programs. All but one (which resulted in a reprimand from the Director) received prior approval at the highest levels of the Bureau. They were evaluated and had to be reapproved at least annually. Several of them -- unlike the CIA's New York project -- were discontinued on the basis of unfavorable internal evaluations. This high degree of central control clearly mirrored the organizational differences between the FBI and the CIA, and is not limited to mail opening operations alone. Finally, there is less evidence that FBI officials considered their programs to be illegal or attempted to fabricate "cover stories" in the event of exposure. Bureau officials, for the most part, apparently did not focus on questions of legality or "flap potential" strategies; they did not necessarily consider them to be legal or without the potential for adverse public reaction, they simply did not dwell on legal issues or alternative strategies at all.

In some respects, the Bureau's mail opening programs were even more intrusive than the CIA's. At least three of them, for example, involved the interception and opening of entirely domestic mail -- that is, mail sent from one point within the United States to another point within the United States. All of the CIA programs, by contrast, involved at least one foreign "terminal". The Bureau programs also highlight the problems inherent in combining criminal and intelligence functions within a single agency: the irony of the nation's chief law enforcement agency conducting systematic campaigns of mail opening is readily apparent.

Despite their differences, however, the FBI mail opening programs illustrate many of the same themes of the CIA programs. Like the CIA, the FBI did not secure the approval of any senior official outside its own organization prior to the implementation of its programs. While these programs, like the CIA's, involved the cooperation of the Post Office Department and the United States Customs Service, there is no evidence that any ranking official of either agency was ever aware that mail was actually opened by the FBI. Similarly, there is no substantial evidence that any President or Attorney General, under whose office the FBI operates, was contemporaneously informed of the programs' existence. As in the case of the CIA, efforts were also made to prevent word of the programs from reaching the ears of Congressmen investigating possible privacy violations by federal agencies. The record, therefore, again suggests that these programs were operated covertly, by virtue of deception, or, at a minimum, lack of candor on the part of intelligence officials.

Although the FBI relied on more sophisticated selection criteria in some of their programs, moreover, one again sees the same type of "overkill" which is inherent in any mail opening operation. These criteria, while more precise than the methods used by the CIA, were never sufficiently accurate to result in the opening of correspondence to or from illegal agents alone. Indeed, even by the Bureau's own accounting of its most successful program, the mail of hundreds of American citizens was opened for every one communication that led to an illegal agent. And several of the FBI programs did not employ these refined criteria: mail in these programs was opened on the basis of methods much more reminiscent of the CIA's random and Watch List criteria.

In the FBI programs one again sees the tendency of this technique, once in place, to be used for purposes outside the agency's institutional jurisdiction. While the Bureau has no mandate to collect foreign positive intelligence, for example, several of the programs did in fact result in the gathering of this type of information. More seriously, the record reveals for a second time the ease with which these programs can be directed inward against American citizens: the Bureau programs, despite their counterespionage purpose, generated at least some information of a strictly domestic nature, about criminal activity outside the national security area, and, significantly, about antiwar organizations and their leaders.

Perhaps the most fundamental theme illustrated by both the FBI's and the CIA's programs is this: that trained intelligence officers in both agencies, honestly perceiving a foreign and domestic threat to the security of the country, believed that this threat sanctioned -- even necessitated -- their use of a technique that was not authorized by any President and was contrary to law. They acted to protect a country whose laws and traditions gave every indication that it was not to be "protected" in such a fashion.

The most pertinent facts regarding FBI mail opening may be summarized as follows:

(a) The FBI conducted eight mail opening programs in a total of eight cities in the United States for varying lengths of time, between 1940 and 1966.

(b) The primary purpose of most of the FBI mail opening programs was the identification of foreign illegal agents; all of the programs were established to gather foreign counterintelligence information deemed by FBI officials to be important to the security of the United States.

(c) Several of these programs were successful in the identification of illegal agents and were considered by FBI officials to be one of the most effective means of locating such agents. Several of the programs also generated other types of useful counterintelligence information.

(d) In general, the administrative controls were tight. The programs were all subject to review by Headquarters semiannually or annually and some of the programs were terminated because they were not achieving the desired results in the counterintelligence field.

(e) Despite the internal FBI policy which required prior approval by Headquarters for the institution of these programs, however, at least one of them was initiated by a field office without such approval.

(f) Some of the fruits of mail openings were used for other than legitimate foreign counterintelligence purposes. For example, information about individuals who received pornographic material and about drug addicts was forwarded to appropriate FBI field offices and possibly to other federal agencies.

(g) Although on the whole these programs did not stray far from their counterespionage goals, they also generated substantial positive foreign intelligence and some essentially domestic intelligence about United States citizens. For example, information was obtained regarding two domestic anti-war organizations and government employees and other American citizens who expressed "pro-communist" sympathies.

(h) A significant proportion of the mail that was opened was entirely domestic mail, i.e., the points of origin and destination were both within the United States.

(i) Some of the mail that was intercepted was entirely foreign mail, i.e., it originated in a foreign country and was destined to a foreign country, and was simply routed through the United States.

(j) FBI agents opened mail in regard to particular espionage cases (as opposed to general programs) in at least three instances in the early 1960's.

(k) The legal issues raised by the use of mail opening as an investigative technique were apparently not seriously considered by FBI officials while the programs continued. In 1970, however, after the FBI mail opening programs had been terminated, J. Edgar Hoover wrote that mail opening was "clearly illegal".

(l) At least as recently as 1972, senior officials recommended the reinstitution of mail opening as an investigative technique.

(m) No attempt was made to inform any Postmaster General of the mail openings.

(n) The Post Office officials who were contacted about these programs, including the Chief Postal Inspector, were not informed of the true nature of the FBI mail surveys, i.e., they were not told that the Bureau contemplated the actual opening of mail.

(o) The FBI neither sought nor received the approval of the Attorney General or the President of the United States for its mail opening programs or for the use of this technique generally.

(p) Although FBI officials might have informed Justice Department attorneys that mail was opened in two or three particular espionage cases and might have informed an Attorney General of some mail screening operations by the Bureau, no attempt was made to inform the Justice Department, including the Attorney General, of the full extent or true nature of these operations.

(q) There is no evidence that any President of the United States ever knew of any ongoing FBI mail opening program.

## II. DESCRIPTION OF FBI MAIL OPENING PROGRAMS

The eight FBI mail opening programs are, summarized below.

### *A. Z-Coverage*

Z-Coverage, the first and the longest-running FBI mail opening program, originally involved the opening of mail addressed to the diplomatic establishments of Axis powers in Washington, D.C.; in later years, mail coming to similar establishments of several communist nations was targeted. The stated purpose of the program was "to detect individuals in contact with these establishments who might be attempting to make contact for espionage reasons, for purposes of defecting or who might be illegal agents." 363

This program was initiated in 1940, before the United States entry into World War II, with FBI agents who had been trained in the technique of "chamfering" (mail opening by representatives of an allied country's censorship agency). 364 It was suspended after the war but reinstituted in Washington, D.C. in the early or mid-1950's on the recommendation of the local FBI field Office. 365 For more than a decade, mail from both foreign and domestic points of origin was intercepted at the Main Post Office, brought to the FBI Laboratory for opening and photographing, and returned to the Post Office prior to

delivery. In 1959, Z-Coverage was extended to New York City as well. As implemented in New York, about 30 to 60 letters addressed to various diplomatic establishments in that city were intercepted at the Grand Central and Lenox Hill Post Offices each day for opening and photographing at the New York Field Office. 366 Some registered mail sent to these establishments was opened as well. 367

Despite its perceived success at both locations, Z-Coverage was terminated in July 1966.

#### *B. Survey No. 1*

Survey No. 1 operated in a total of six cities for varying lengths of time between 1959 and 1966. It involved the opening of certain outgoing mail to selected cities in Europe, Asia, and the Americas, and was considered to be the most successful of all the FBI's mail opening programs. Its purposes, as summarized in a 1961 FBI memorandum, were two: "(1) to identify persons corresponding with known espionage mail drops in Europe, and (2) to identify persons in the United States who are directing letters to possible mail drops in Europe and whose letters appear to be the product of an illegal agent." 368

Survey No. 1 was first instituted in New York City on October 1, 1959, as a direct result of knowledge the FBI had recently acquired about the means by which foreign illegal agents communicated to their principals abroad. Once in operation, Bureau agents, in a secure room at Idlewild Airport's Airmail Facility screened more than 425,000 letters from the United States to points in Western Europe each week. 369 Selected items -- a total of 1,011 in seven years -- 370 were returned to the New York Field Office for opening and photographing prior to reinsertion into the mailstream. In August 1961, after nearly two years of operation in New York, FBI officials believed that Survey No. 1 was so successful that it was extended to four additional cities -- Boston, Los Angeles, Seattle, and Washington, D.C. 371 -- where coverage included mail not only to European cities but to Asia and the Americas as well. Survey No. 1 was also extended to Detroit on a sixty-day trial basis in April 1962. 372

The expanded coverage in all cities but Washington did not prove to be as successful as the original effort in New York, however. After thirteen months of operation in Los Angeles, seventeen months in Seattle, one year in Boston, and four months in Detroit, a decision was made at Headquarters to terminate the program in these cities because of "unproductivity and manpower needs." 373 After February 1963, therefore, Survey No. 1 operated only in New York and Washington. In these two cities the annual evaluations 374 continued to praise the effectiveness of Survey No. 1 and it was continued to operate at both locations until all of the mail opening programs were terminated in mid-1966.

#### *C. Survey No. 2*

Survey No. 2 operated in New York City, Detroit, and San Francisco for varying lengths of time between March 1961 and March 1962; its purpose was again the location and identification of illegal agents. 375 No. 2 was, in essence, an inverse No. 1: incoming mail to urban postal zones in which illegal agents were believed likely to reside was screened and opened, on the basis of the same criteria used in Survey No. 1, in an attempt to intercept the other half of the communication link between illegal agents and their principals. Since mail coming into these postal zones was screened irrespective of the point of origin, much of the mail that was opened was entirely domestic mail. 376

Survey No. 2 originated as an outgrowth of No. 1. It was first implemented on March 8, 1961, in postal zones 23, 24, and 25 in New York City, with Post Office employees rather than Bureau agents screening the in-coming mail. 377 The Post Office personnel were briefed by the FBI as to the selection criteria but were not informed of the true nature of the program. When they discovered a suspect communication, it was turned over to the FBI and, without their knowledge, opened and photographed at the field office before being returned to the mailstream. On the basis of "test" letters sent by the Bureau, however, their performance was judged inadequate and, in September 1961, FBI agents replaced the postal workers in screening the mail. 378

In October 1961, the program was also extended to both Detroit (zone 31 and the Hamtramck area) 379 and San Francisco (all mail sent to that city from New York and Washington) on a trial basis. 380

Survey No. 2 was considered unsuccessful in all of these cities and was consequently discontinued in Detroit and San Francisco in February 1962, and in New York -- after a total of approximately 2,350 letters had been opened -- 381 on March 9, 1962. 381a

#### *D. Survey No. 3*

Survey No. 3 was conducted in New York City from June 1963 to June 1964, and involved the opening of mail (irrespective of point of origin) addressed to known or suspected intelligence agents employed at a diplomatic establishment. The purpose of Survey No. 3 was to detect contacts of an intelligence nature, with these agents, who, FBI officials believed, received such mail using the secure cover of their diplomatic employment. 382

This program was apparently an outgrowth of the Bureau's coverage of mail to various other diplomatic establishments in New York (Z-Coverage). Although its precise genesis is undocumented, one of the participants in the program recalled that the idea originated with another agent, then involved with Z-Coverage, who felt that existing coverage was inadequate and should be expanded. 383 Headquarters subsequently approved the idea, and, on June 25, 1963, Survey No. 3 was instituted in New York.

Each working day for the next year, a single agent from the New York office went to the Grand Central Post Office where a postal clerk brought him all the mail that was addressed to the Post Office box of the targeted diplomatic establishment -- approximately 200 letters per day, according to the agent who was assigned to this task. 384 On the basis of a list of about thirty diplomatic officials, which was compiled from public source information, the agent segregated the mail addressed to

these officials and carried the letters -- estimated by him to average five or six per day -- 385 to the New York office for opening and photographing.

Survey No. 3 was not considered to be successful by the Bureau and was discontinued on June 26, 1964.

#### *E. Survey No. 4*

Survey No. 4 was conducted in Miami, Florida, between January 1963 and July 1966. It involved the screening and opening of certain airmail from Miami and San Juan, Puerto Rico, to two Latin American countries for the purpose of locating clandestine communications in particular espionage cases. 386

Survey No. 4 developed from an espionage case in which the Bureau had learned that a Latin American intelligence agent who operated in the United States but whose true identity was unknown, was under instructions to transmit material to his country's intelligence service by mail. In order to intercept this agent's written communications, Bureau officials at Headquarters formulated a plan to screen and selectively open mail from San Juan and Miami to that country utilizing their knowledge of its intelligence correspondence, and on December 21, 1962, they authorized the Miami Field Office to implement the program. 387

While the program was initially instituted as a response to a single espionage case, it soon developed into a more generalized survey to detect clandestine communications from any suspected espionage agent working for the same country. Its scope was further broadened on December 9, 1963, when the Miami office was instructed to cover mail from that city to another Latin American country as well. 388

Bureau agents in Survey No. 4 screened between 12,000 and 20,000 letters per day at the Biscayne Annex Post Office in Miami. 389 A total of 400 letters were opened, 390 either in the Post Office itself, or, when secret writing or microdots were suspected, in the FBI Laboratory in Washington, to which they were flown for more sophisticated examination before reinsertion into the mailstream. 391

Survey No. 4 was considered to be successful but was terminated along with other FBI mail opening programs, in July 1966.

#### *F. Survey No. 5*

Survey No. 5 was the first of three FBI mail opening programs which were conducted in San Francisco and directed against Asian communists and their sympathizers. It began in September 1954 and continued until January 1966. This survey originally involved the physical inspection of third and fourth class propaganda from a Far East Asian country; after August 1956, incoming first class letter mail was selectively opened and photographed as well. The stated purpose of this program was to identify individuals in the United States who, because of the nature of their foreign contacts, were believed to constitute a threat to the internal security of the United States. 382

Like the CIA's New Orleans and Hawaiian mail intercept projects, Survey No. 5 was initially an extension of the Customs Service examination of propaganda material entering the United States from abroad. Customs Service cooperation ceased, however, on May 26, 1965, as a result of the Supreme Court's decision in *Lamont v. Postmaster General of the United States*, 381 U.S. 301 (1965), which invalidated the statutory authority under which Customs conducted its propaganda inspection. 393 Contact was subsequently made with officials of the Post Office and, with their assistance, No. 5 Survey recommenced at the Rincon Annex Post Office on July 7, 1965.

Approximately 13,500 items of mail were screened in two hour periods each day by Bureau agents who participated in this program. 394 A daily average of 50 to 100 of these letters were returned to the San Francisco Field Office for opening and photographing prior to their reinsertion into the mainstream. 395

Survey No. 5 was terminated on January 24, 1966, "for security reasons involving local changes in postal personnel." 396

#### *G. Survey No. 6*

Survey No. 6 was also conducted in San Francisco, operating from January 1964 until January 1966. This program involved the screening and opening of outgoing mail from the United States to the same Far East Asian country; it was essentially an inverse Survey No. 5. The stated purposes of Survey No. 6 were to obtain foreign counterintelligence information concerning Americans residing in the Far East Asian country; to detect efforts to persuade scientists and other persons of Asian descent residing in the United States to return to that country; to develop information concerning economic and social conditions there; and to secure information concerning subjects in the United States of a security interest to the Bureau who were corresponding with individuals in that Asian country. 397

In June 1963, the New York Field Office had extended its Survey No. 1 coverage to include airmail destined for Asia, which was then handled at the same location where European mail was processed. When Post Office procedures changed a few months later, and the Asian mail was routed through San Francisco rather than New York, Headquarters instructed the San Francisco office to assume responsibility for this coverage. The program operated, with one period of suspension, for two years until January 24, 1966, when it was terminated for the same security reasons as the Survey No. 5. 398 Figures as to the volume of mail screened and opened cannot be reconstructed.

#### *H. Survey No. 7*

Survey No. 7 was conducted in San Francisco from January to November 1961. It involved the screening and opening of mail between North Americans of Asian descent for the purpose of detecting Communist intelligence efforts directed against this country. 399

Survey No. 7 evolved from the Survey No. 5 and particular espionage cases handled by the San Francisco Field Office. Without instructions from Headquarters, that office initiated a survey of mail between North Americans of Asian descent in January 1961, and informed Headquarters of the program shortly after it was implemented. On February 28, 1961, Headquarters officials instructed San Francisco to terminate the program because the expected benefits were not believed to justify the additional manpower required by the FBI Laboratory to translate the intercepted letters. 400 The San Francisco Field Office was permitted to use this source when it was deemed necessary in connection with particular espionage cases, but even this limited use proved unproductive. It was terminated on November 20, 1961, after a total of 83 letters had been opened. 401

### *I. Typical Operational Details*

The specific operational details of the eight programs described above obviously varied from program to program. The New York Field Office's conduct of Survey No. 1 represented a pattern that typified these programs, however, in terms of mechanical aspects such as the physical handling of the mail itself. In August 1961, before the extension of Survey No. 1 to Boston, Los Angeles, Seattle, and Washington, D.C., the New York Office was instructed to describe the operational details of this Survey as implemented in that city for the benefit of field offices in the four additional cities. A memorandum was subsequently prepared for distribution to these cities, pertinent portions of which are reproduced below:

[Survey No. 1] in New York is located in a secure room at the U.S. Post Office Airmail Facility, New York International Airport, Idlewild, New York. ... This room ... measures approximately 9 feet wide by 12 feet long and ... is locked at all times, whether or not the room is in use ... Postal employees have no access to this room which is known to them as the Inspector's Room.

Seven Special Agents are assigned to [Survey No. 1] on a full-time basis. The survey operates 7 days a week and personnel work on rotating 8-hour shifts ... Personnel assigned to the survey work under the guise of Postal Inspectors and are known to Post Office personnel as Postal Inspectors working on a special assignment. ...

... [B]y arrangement with the postal officials, [mail] pouches to destinations in which we have indicated interest are not sealed but are placed in front of the [Survey No. 1] room. The [Survey No. 1] personnel then take the bag into the room, open the pouch, untie the bundles, and review the mail. Any suspect letters are held aside and the rest are rebundled and returned to the pouch. The pouch is then closed and placed outside the door to the room on a mail skid. Postal employees then take that pouch, seal it with a lead seal and place it aside for, or turn it over to, the carrier. ...

It should be noted that the mail must be turned over by the the Post Office Department to the carrier one hour before departure time ...

... Each day, one of the Agents is selected as a courier, and when the opportunity presents itself, he returns to the Field Office with the suspected communications. At the Field Office, he or another Agent who has been trained by the Bureau in certain techniques opens the communications. The envelope and its contents are photographed ... There will be instances where the Field Office, upon opening the communication, may deem it advisable to immediately notify the Bureau and possibly fly it by courier to the Bureau for examination by the Laboratory. Before making any arrangements to fly the communication to the Bureau, the Field Office should consider the time the examination will take and the time the suspected communication may be placed back in the mail without arousing any suspicion on the part of the addressee.

After the communication has been photographed and resealed, the courier returns to the airport and places the suspected communication in the next appropriate outgoing pouch examined in the [Survey No. 1] Room. If time permits, the pouch is held in the room until the suspected communication is returned. 402

A device developed by the FBI Laboratory and maintained at participating field offices facilitated the opening process. While this device was relatively simple, it was not as primitive as the kettle and stick method utilized by the CIA agents who opened mail in the New York project and allowed for greater efficiency: the FBI's opening process was reported to take only a second or two for a single letter, 403 in contrast to five to fifteen seconds for the CIA. According to one of the agents involved, special training in the use of this device was given at the field office rather than at Headquarters, and was only of one or two days duration, 404 in contrast to the week-long training sessions required of CIA mail openers.

Filing and internal dissemination procedures also varied somewhat from program to program. In Z-Coverage, the negatives of the photographic copies were filed at the field offices in New York and Washington for approximately one year after interception, after which time they were destroyed. 405 If the developed prints were believed to contain valuable counterintelligence information, they would be disseminated to appropriate supervisors within the field office for placement in a confidential central file or a particular case file. In the latter case, the true source would be disguised by an informant symbol, although, as one supervisor in the New York office noted, the nature of the source would be clear to those familiar with Bureau operations. 406

No index was maintained of the names of all senders and/or addressees whose mail was intercepted, as was maintained by the CIA in the New York project. In rare cases when a letter was considered to be of exceptional counterintelligence value, a photograph would be sent to Headquarters as well. As a general rule, however, there was no dissemination, either of the photographs themselves or of abstracts of the letters, to other field offices. 407 These procedures generally applied to Survey No. 1 and Survey No. 2 as well, but in these two surveys the photographs of intercepted letters were dated and numbered, and one copy or abstract was placed in a control file maintained by each participating field office.

In Surveys No. 5 and No. 6, the San Francisco Field Office was responsible for conducting "name checks" on all individuals sending or receiving mail that had been opened. If, on the basis of the name check or the text of the letter itself, it was determined that the intercepted letter had intelligence value, a copy of the letter (if written in English) or of the translation (if written in a foreign language) was placed in the main files of the San Francisco office. That office was also responsible for paraphrasing the contents of letters in which other field offices may have had an intelligence interest, and disseminating the information to them in a manner which would not reveal the true source of the information. Except for letters written in a foreign language, photographs of which were sent to Washington for translation, copies were not sent to Headquarters unless the letter was of particularly great intelligence value.

#### *J. Other Instances of FBI Mail Opening*

In addition to the eight mail surveys described in sections A through H above, it has also been alleged that a Bureau agent actively participated in the CIA's Hawaiian mail intercept project during the mid-1950s. The CIA representative in Honolulu who conducted this operation stated that an FBI agent assisted him in opening and photographing incoming mail from Asia for a period of two months in early 1955. 408 No supporting Bureau documents could be located to confirm this participation, however.

Aside from generalized surveys of mail, several isolated instances of mail opening by FBI agents occurred in connection with particular espionage cases. It was, in fact, a standard practice to attempt to open the mail of any known illegal agent. As stated by one former Bureau intelligence officer: "... anytime ... we identified an illegal agent ... we would try to obtain their mail." 409 FBI agents were successful in this endeavor in at least three cases, described below.

##### *1. Washington, D.C. (1961)*

One isolated instance of mail opening by FBI agents occurred in Washington, D.C., in 1961, preceding the local implementation of Survey No. 1. This case involved the opening of several items of correspondence from a known illegal agent residing in the Washington area to a mail drop in Europe. The letters, which were returned to the FBI Laboratory for opening, were intercepted over a period in excess of six months. 410

##### *2. Washington, D.C. (1963-64)*

A second mail opening project in regard to a particular espionage case occurred for approximately one and one-half years in Washington, D.C., in 1963 and 1964, in connection with the FBI's investigation of known Soviet illegal agents Robert and Joy Ann Baltch. This case was subsequently prosecuted, but the prosecution was ultimately dropped, in part, according to FBI officials, because some of the evidence was tainted by use of this technique. 411

##### *3. Southern California*

A third isolated instance of mail opening occurred in a southern California city for a one to two-month period in 1962. This project involved the opening of approximately one to six letters received each day by a suspected illegal agent who resided nearby. The suspected agent's mail was delivered on a daily basis to three FBI agents who worked out of the local resident FBI office, and was opened in a back room in that office. 412

### III. NATURE AND VALUE OF THE PRODUCT

#### *A. Selection Criteria*

Those FBI mail opening programs which were designed to cover mail to or from foreign illegal agents utilized selection criteria that were more refined than the "shotgun" method 413 used by the CIA in the New York intercept project. Mail was opened on the basis of certain "indicators" on the outside of the envelopes that suggested that the communication might be to or from an illegal agent. The record reveals, however, that despite the claimed success of these "indicators" in locating such agents, they were not so precise as to eliminate individual discretion on the part of the agents who opened the mail, nor could they prevent the opening of significant volumes of mail to or from entirely innocent American citizens. Mail in those programs which were designed for purposes other than locating illegal agents, moreover, was generally opened on the basis of criteria far less narrow and even more intrusive than these "indicators."

##### *1. The Programs Based on Indicators*

Before 1959, the FBI had developed no effective means to intercept the communication link between illegal agents and their principals. In Z-Coverage, selection was originally left to the complete discretion of the agents who screened the mail based on their knowledge and training in the espionage field. The focus was apparently on mail from individuals rather than organizations, and typewritten letters were considered more likely to be from foreign agents than handwritten letters. 414 In March 1959, however, the FBI was able to develop much more precise selection criteria through the identification and subsequent incommunicado interrogation of an illegal agent. During the course of his interrogation by Bureau agents, he

informed the FBI of the instructions he and other illegal agents were given when corresponding with their principals. 415 Particular characteristics on the outside of the envelope, he advised them, indicated that the letter may be from such an agent.

Armed with a knowledge of these "indicators," the FBI agents involved in Z-Coverage were capable of a more selective and accurate means of identifying suspect communications. Survey No. 1 and Survey No. 2 were expressly developed to exploit this knowledge. 416 While Survey No. 1 also utilized a Watch List which consisted of the addresses of known or suspected mail drops abroad, as well as the (generally fictitious) names of known or suspected foreign intelligence agents, 417 the primary selection criteria in both Surveys No. 1 and No. 2 were the "Indicators" about which the Bureau learned in early 1959. 418

By means of the "indicators," the Bureau did, in fact, identify three illegal agents through these programs. 419 But even by the Bureau's own accounting of the number of letters that were opened in the programs, it is clear that the mail of hundreds of innocent American citizens was opened and read for every successful lead obtained. 420 The random element in the selection process was never eliminated: although FBI officials at Headquarters instructed agents in the field to select only letters with multiple "indicators" on their face, 421 the field agents frequently opened letters with but one "indicator", which could often be of such a common nature that it could be found on most letters mailed in the United States. 423

One of the FBI agents who opened mail stated that he was trained in counterespionage work generally, and in the identification of the indicators specifically, but he conceded that in the final analysis "it was strictly my own judgment" as to which items would be selected for opening. 424 Perhaps as a result of such personal discretion on the part of participating agents, Survey No. 1 generated essentially domestic intelligence on at least two American antiwar organizations as well as genuine counterespionage information. 425

In short, knowledge of the indicators did enable the Bureau to be more precise in the selection of mail than was previously possible, but this knowledge was not so precise as to totally eliminate the discretion -- or bias -- of the agents involved.

## *2. The Latin American-Oriented Program*

In Survey No. 4, which involved the interception of mail to two Latin American nations, letters were selected for opening on the basis of lists of (a) known fictitious names used by illegal agents to address correspondence to their principals, and (b) accommodation addresses used by a foreign intelligence service for receiving clandestine communications. 426 The "indicators" discussed above were not utilized in this or the Asian-oriented mail opening programs.

## *3. The Asian-Oriented Programs*

Survey No. 5 and Survey No. 6 both employed seven general categories as selection criteria:

- (a) Letters to or from a university, scientific, or technical facility;
- (b) Letters to or from a doctor;
- (c) Letters to or from selected Security Index subjects residing in the United States;
- (d) Letters to or from an Asian country where certain scientific activities were reportedly taking place;
- (e) Letters to or from individuals who were known to be "turncoats" from the Korean conflict;
- (f) Letters believed to emanate from an Asian Communist intelligence service based on covers of which the FBI was aware; and
- (g) Letters indicating illegal travel of Americans to denied areas in Asia. 427

Even if one assumes that these guidelines were strictly observed by the agents opening the mail, (which, given some of the results of these programs as set forth below, 428 is not necessarily as accurate assumption) there was obviously ample room for the capture of large numbers of entirely personal communications with no counterintelligence value at all.

The selection criteria utilized in Survey No. 7 cannot be reconstructed.

## *B. Requests by Other Intelligence Agencies*

No large-scale requirements were levied upon the FBI's mail opening programs by any other intelligence agency. Bureau officials, in fact, severely restricted knowledge of their programs within the intelligence community; only the CIA knew of any of the Bureau's programs, and officers of that agency were formally advised about the existence of only one of the eight, Survey No. 1.

In July 1960, Bureau Headquarters originally rejected the recommendation of the New York Field Office to inform the CIA of Survey No. 1 in order to obtain from it a list of known mail drops in Europe for use in the program. 429 Headquarters then wrote: "Due to the extremely sensitive nature of the source ..., the Bureau is very reluctant to make any contacts which could

possibly jeopardize that source. Therefore, the Bureau will not make any contact with CIA to request from it [such a] list ... The Bureau will, however, continue to exert every effort to obtain from CIA the identities of all such mail drops in the normal course of operations." 430

Within six months of this rejection, however, Headquarters officers changed their minds: Donald Moore, head of the Espionage Research Branch and Sam Papich, FBI liaison to the CIA, met with CIA representatives in January 1961 to inform them of Survey No. 1 and to exchange lists of known or suspected mail drops. 431 CIA provided the Bureau with a list of 16 mail drops and accommodation addresses and the name and address of one Communist Party member in Western Europe, 432 all of which were subsequently furnished the New York office for inclusion in Survey No. 1 coverage. The exchange of this information did not evolve into a reverse Project Hunter, however. While the Agency may have contributed a small number of additional addresses or names during the next five years, no large scale levy of general categories or specific names was ever made by the CIA or solicited by the FBI. According to Donald Moore, the particularized nature and objectives of Survey No. 1, especially when contrasted with the CIA's New York project, precluded active CIA participation in the program. 433

While there is no other evidence that any members of the intelligence community knew of or ever levied requests on the Bureau's mail opening programs, they did receive sanitized information from these programs when deemed relevant to their respective needs by the Bureau. 434

### *C. Results of the Programs*

In terms of their counterespionage and counterintelligence *raison d'être*, several of the Bureau's programs were considered to be successful by FBI officials; others were concededly ineffective and were consequently discontinued before the termination of all remaining FBI surveys in 1966. Significantly, some of the surveys also generated large amounts of "positive" foreign intelligence -- the collection of which is outside the Bureau's mandate -- and information regarding the domestic activities and personal beliefs of American citizens, at least some of which was disseminated within and outside the FBI. The Bureau surveys did remain more focused on their original goal than did the CIA programs. But in them -- whether because the selection criteria were overbroad, or because these criteria were not scrupulously adhered to, or both -- one again sees the tendency of mail opening programs to produce information well beyond the type originally sought.

#### *1. Counterintelligence Results*

Five of the eight FBI mail openings programs -- Z-Coverage, Surveys 1, 4, 5, and 6 -- were clearly seen to have contributed to the FBI's efforts in the area of counterintelligence. The relative success of these programs, in fact, led many Bureau officials to conclude that mail opening -- despite its legal status -- was one of the most effective counterespionage weapons in their arsenal. 435 The primary value of these five programs to the Bureau is summarized below:

Z-Coverage. -- A lack of pertinent documentary and testimonial evidence prevents a meaningful evaluation of Z-Coverage during World War II, but a 1951 memorandum reflecting the Washington Field Office's recommendation for its reinstitution noted that "while Z-Coverage was utilized valuable information of an intelligence nature was obtained ..." 436

In evaluating the program during the 1950s and 1960s, Bureau officials have rated it highly in terms of the counterintelligence results it produced. W. Raymond Wannall, former Assistant Director in charge of the Domestic Intelligence Division, testified about two specific examples of mail intercepted in Z-Coverage which revealed attempts on the part of individuals in this country to offer military secrets to foreign governments. 437 In the first case, the FBI intercepted a letter in July 1964, which was sent by an employee of an American intelligence agency to a foreign diplomatic establishment in the United States. In the letter, the employee offered to sell information relating to weapons systems to the foreign government and also expressed an interest in defecting. The Defense Department was notified, conducted a potential damage evaluation, and concluded that the potential damage could represent a cost to the United States Government, of tens of millions of dollars. In the second case, which occurred in mid-1964, an individual on the West Coast Offered to sell a foreign government tactical military information for \$60,000.

Survey No. 1. -- Survey No. 1 was considered to be one of the most successful of all the Bureau mail opening programs. In New York and Washington, a total of three illegal agents -- the identification of which has been described by one senior FBI official as the most difficult task in counterintelligence work 438 -- were located through No. 1. 439 In addition, numerous letters were discovered which contained secret writing and/or were addressed to mail drops in Western Europe. Survey No. 1 in Boston, Los Angeles, Seattle, and Detroit was not successful, however, and as noted above, was discontinued in those cities on the basis of "unproductivity and manpower needs." 440

Survey No. 4. -- Survey No. 4 resulted in the identification of the illegal agent whose presence in the United States had originally motivated development of the survey. In addition, this program led to the detection of a second intelligence agent operating in this country and to the discovery of approximately 60 items of correspondence which contained secret writing either on the letter itself or on the envelope containing the letter. 441

Survey No. 5. -- FBI officials have testified that Survey No. 5 was a very valuable source of counterintelligence (and interrelated positive intelligence) information about an Asian country. W. Raymond Wannall stated that its "principal value probably related to the identification of U.S. trained scientists of [Asian] descent who were recalled or who went voluntarily back to [an Asian country]." 442 Because of this, he continued, the FBI was able to learn vital information about the progress of weapons research abroad. 443

Survey No. 6. -- Survey No. 6 was also believed to be a valuable program from the perspective of counterintelligence, although it was suspended for a nine-month period because the manpower requirements were not considered to outweigh the benefits it produced. Through this survey the FBI identified numerous American subscribers to Asian communist publications;

determined instances of the collection of scientific and technical information from the United States by a foreign country; and recorded contacts between approximately fifteen Security Index subjects in the United States and Communists abroad. 444

The Other Programs. -- Three of the FBI's programs were not believed to have produced any significant amount of counterintelligence information. Bureau officials testified that they "had very little success in connection with [Survey No. 3]," 445 and it was consequently discontinued after one year of operation. Similarly, no positive results were obtained through Survey No. 2 in any of the three cities in which it operated. Although the San Francisco office, for example, opened approximately 85 new cases as a result of Survey No. 2, all of these cases were resolved without the identification of any illegal agents, which was the goal of the program. 446 As one Bureau official stated in regard to Survey No. 2: "The indicators were good, but the results were not that good. 447 It, too, was terminated after approximately one year of operation.

Finally, the results of Survey No. 7, which was initiated without prior approval by Headquarters, were also considered to be valueless. Of the 83 letters intercepted in the program, 79 were merely exchanges of personal news between North Americans of Asian descent. The other four were letters from individuals in Asia to individuals in the United States, routed through contacts in North America, but were solely devoted to personal information. 448 As noted above, Headquarters did not believe that this coverage justified the additional manpower necessary to translate the items and the San Francisco Field Office was so advised.

## *2. "Positive" Foreign Intelligence Results*

Although the FBI has no statutory mandate to gather positive foreign intelligence, a great deal of this type of intelligence was generated as a byproduct of several of the mail opening programs and disseminated in sanitized form to interested government agencies. In an annual evaluation of Survey No. 5, for example, it was written:

This source furnishes a magnitude of vital information pertaining to activities within [an Asian country]; including its economical [sic] and industrial achievements . . . A true picture of life in that country today is also related by the information which this source furnishes reflecting life in general to be horrible due to the lack of proper food, housing, clothes, equipment, and the complete disregard for a human person's individual rights. 449

Another evaluation stated that this program had developed information about such matters as the "plans and progress made in construction in railways, locations of oil deposits, as well as the location of chemical plants and hydraulic works." 450 It continued: "While this is of no interest to the Bureau, the information has been disseminated to interested agencies." Survey No. 6 even identified, through the interception of South American mail routed through San Francisco to an Asian country, numerous "[Asian] Communist sympathizers" in Latin America. 451

W. Raymond Wannall, former head of the Bureau's Domestic Intelligence Division, explained that "as a member of the intelligence community, the FBI [was aware] of the positive intelligence requirements [which were] secularized within the community in the form of what was known as a current requirements list, delineating specific areas with regard to such countries that were needed, or information concerning which was needed by the community. So we contributed to the overall community need." 452 He conceded, however, that the FBI itself had no independent need for or requirement to collect such positive intelligence. 453 Just as the CIA mail opening programs infringed on the intelligence jurisdiction of the FBI, therefore, so the FBI programs gathered information which was without value to the Bureau itself and of a variety that was properly within the CIA's mandate.

## *3. Domestic Intelligence Results*

In addition to counterespionage information and positive foreign intelligence, the FBI mail opening programs also developed at least some information of an essentially domestic nature. The collection of this type of information was on a smaller scale and less direct than was the case in the CIA's New York project, for none of the FBI programs involved the wholesale targeting of large numbers of domestic political activists or the purposefully indiscriminate interception of mail. Nonetheless, the Bureau programs did produce domestic intelligence. An April 1966 evaluation of Survey No. 1, for example, noted that "organizations in the United States concerning whom informant [the survey] has furnished information include ... [the] Lawyers Committee on American Policy towards Vietnam, Youth Against War and Fascism ... and others." 454

An evaluation of the Survey No. 5 stated that that program had developed "considerable data" about government employees and other American citizens who expressed pro-Communists sympathies, as well as information about individuals, including American citizens, who were specifically targeted as a consequence of their being on the FBI's Security Index. 455 Examples of the latter type of information include their current residence and employment and "anti-U.S. statements which they have made." 456

Another evaluation of a Bureau program noted that that program had identified American recipients of pornographic material and an American citizen abroad who was a drug addict in correspondence with other addicts in the New York City area; 457 it indicated that information about the recipients of pornographic material was transmitted to other field offices and stated that "pertinent" information was also forwarded to other Federal agencies. 458

Given the ready access which Bureau agents had to the mail for a period of years, it is hardly surprising that some domestic intelligence was collected. Indeed, both logic and the evidence support the conclusion that if any intelligence agency undertakes a program of mail opening within the United States for whatever purpose, the gathering of such information cannot be avoided.

## **IV. INTERNAL AUTHORIZATION AND CONTROLS**

While the FBI and the CIA mail opening programs were similar in many respects, the issues of authorization and control within these agencies highlight their differences. The pattern of internal approval for the CIA mail opening programs was inconsistent at best: the New York project began without the approval of the Director of Central Intelligence; at least two Directors were apparently not even advised of its existence; and it is unclear whether any Director knew the details of the other mail opening programs. 459 Administrative controls in most of the CIA projects, especially the twenty-year-New York operation, were clearly lax: periodic reevaluation was non-existent and operational responsibility was diffused. 460

Probably as a function of the FBI's contrasting organizational structure, the mail opening programs conducted by the Bureau were far more centrally controlled by senior officials at Headquarters. With one significant exception, the FBI mail programs all received prior approval from the highest levels of the Bureau, up to and including J. Edgar Hoover, and the major aspects of their subsequent operation were strictly regulated by officials at or near the top of an integrated chain of command.

#### *A. Internal Authorization*

While the documentary record of FBI mail opening programs is incomplete, that evidence which does exist reveals J. Edgar Hoover's explicit authorization for the following surveys:

- The extension of Survey No. 1 to Los Angeles, Boston, Seattle, and Washington, D.C., on August 4, 1961; 461
- The re-authorization of Survey No. 1 in New York, on December 22, 1961; 462
- The re-authorization of Survey No. 1 in New York and Washington, D.C., on April 15, 1966; 463
- The extension of Survey No. 2 to three additional postal zones in New York and its implementation with FBI rather than Post Office employees, on August 31, 1961; 464 and
- The institution of Survey No. 6 in San Francisco, on November 20, 1963. 465

The documentary evidence also reveals authorizations from former Associate Director Clyde Tolson and/or the former Assistant Director in charge of the Domestic Intelligence Division, William C. Sullivan, for the, following surveys:

- The extension of Survey No. 1 to Detroit on April 13, 1962; 466
- The extension of Survey No. 12 to Detroit on October 4, 1961; 467
- The re-authorization of Survey No. 2 in New York on December 26, 1961; 468 and
- Administrative changes in the filing procedures for the Survey No. 5 on June 28, 1963. 469

Further, unsigned memoranda and airtels from Headquarters, "Director, FBI," authorized the extension of Survey No. 2 to San Francisco on October 18, 1961, 470 and the institution of Survey No. 4 on December 21, 1962. 471 Bureau procedures normally require that such memoranda and airtels must be seen and approved by at least an Assistant Director, and there is no reason to assume that this did not occur in these instances.

Despite the absence of some authorizing documents, witness testimony is consistent and often emphatic -- on the point that unwritten Bureau policy required J. Edgar Hoover's personal approval before the institution of a new mail opening program or even the initial use of mail opening as a technique in specific espionage cases. 472 The approval of at least the Assistant Director for the Domestic Intelligence Division, moreover, was required for the periodic re-authorization or the extensions of existing mail surveys to additional cities, as well as for their termination, upon the recommendation of the field office involved. The only surveys for which this policy was apparently violated were Survey No. 7 and possibly -- though this is unclear -- Survey No. 1.

The testimony of senior FBI officials conflicts on whether Hoover actually authorized the formal institution of Survey No. 1 in New York in 1959, or whether he merely approved the general concept of a mail opening program utilizing the recently acquired knowledge of the "indicators," but not Survey No. 1 in particular. The former heads of the Espionage Research Branch at Headquarters and of the Espionage Division at the New York Field Office both believe the former to be the case; 473 the Section Chief of the section at Headquarters out of which the program was run testified to the latter. 474 Even if Hoover only approved the general concept of such a project, however, he was soon aware of the program, and, as noted above, authorized its extension to four additional cities in August 1961.

Survey No. 7 was initiated by the San Francisco Field Office on its own motion without prior approval from Washington. When Headquarters was advised of the implementation of this program, 475 ranking FBI officials immediately demanded justification for it from the Field Office, 476 subsequently determined the justification to be inadequate, and ordered its termination as a generalized survey. 477 The last sentence of the instruction to end the program warns: "Do not initiate such general coverage without first obtaining specific Bureau authority." 478

Unlike most of their CIA counterparts, then, it appears that the Bureau's mail opening programs were -- with one clear exception -- personally approved by the Director before their implementation, and at the highest levels of the organization

before major changes in their operation. In the one certain case where prior Headquarters approval was not secured, the field office which implemented the programs was reprimanded.

#### *B. Administrative Controls by Headquarters*

FBI Headquarters exerted tight, centralized control over the mail opening programs in other ways as well. One manifestation of this control was found in the periodic evaluations of each program required of every participating field office for the benefit of Headquarters. In general, written evaluations were submitted semiannually for the first few years of the operation of a program in a city; and annually thereafter. 479 These evaluations frequently contained such headings as: "Origin;" "Purpose;" "Scope;" "Cost;" "Overall Value;" and "Operation of Source." Every field office was also obligated to determine whether the counterintelligence benefits from each program justified its continuation in light of manpower and security considerations; on the basis of this recommendation and other information supplied, Headquarters then decided whether to re-authorize the program until the next evaluation period or order its termination. The net effect of this system of periodic reexamination was that FBI officials were far better informed than were CIA officials of the true value of the programs to their organization. It was difficult for a program to continue unproductively without the knowledge of the highest ranking officials of the Bureau: as noted above, several programs -- Surveys No. 2, 3, and 7 -- were in fact discontinued by Headquarters before 1966 because the results as set forth in the evaluations were felt to be outweighed by other factors.

Also in contrast to the CIA mail opening programs, the Bureau programs were conducted at the field level with Special Agents who were experienced in intelligence work and given detailed instructions regarding the "indicators" and other selection criteria. 480 No control procedure could ever eliminate the individual discretion of these agents -- ultimately, selection was based on their personal judgment. But Headquarters ensured through the training of these agents that their judgment was at least more informed than that of the Office of Security "interceptors" in the CIA's New York project, who were neither foreign intelligence experts nor given guidance beyond the Watch List itself as to which items to select. 481 At both the Field Office and the Headquarters levels, moreover, responsibility for the operation of the programs was not diffused, as it was in the CIA's New York project but was centralized in the hands of experienced senior officials within a single chain of command.

#### *C. Knowledge of the Mail Opening Programs Within the FBI*

Officials of the Domestic Intelligence Division at Headquarters carefully controlled knowledge and dissemination procedures of their mail opening programs within the FBI itself. Knowledge of the operations was strictly limited to the Domestic Intelligence Division. The Criminal Division, for example, was never advised of the existence of (and so never levied requests on) any of these programs, but an internal memorandum indicates that it may have received information generated by the programs without being advised of the true source. 482 Some FBI witnesses assigned to espionage squads which were engaged in mail opening even testified that they were unaware of other mail opening programs being conducted simultaneously by other espionage squads in the same field office. 483

The direct dissemination of the photographic copies of letters or abstracts between field offices was prohibited, but Headquarters avoided some of the problems caused by restricted knowledge in the CIA programs by requiring these offices to paraphrase the contents of letters in which other field offices might have an intelligence interest and disseminate the information to them in sanitized form.

Thus, control over the major aspects of the programs was concentrated at the top of the FBI hierarchy to a degree far greater than that which characterized the CIA programs. With few exceptions, senior officials at Headquarters initially authorized the programs, maximized central influence over their actual operation, restricted knowledge of their existence within the Bureau, and regulated the form in which information from them should be disseminated.

### V. EXTERNAL AUTHORIZATIONS

Despite the differences between the FBI's and the CIA's mail opening programs with regard to internal authorization, the respective patterns of authorization outside the agencies were clearly parallel. There is no direct evidence that any President or Postmaster General was ever informed about any of the FBI mail opening programs until four years after they ceased. While two Attorneys General may have known about some aspect of the Bureau's mail interceptions -- and the record is not even clear on this point -- it does not appear that any Attorney General was ever briefed on the full scope of the programs. Thus, like the CIA mail opening programs, the Bureau programs were isolated even within the executive department. They were initiated and operated by Bureau officials alone, without the knowledge, approval, or control of the President or his cabinet.

#### *A. Post Office Department*

The FBI mail opening programs, like those of the CIA, necessitated the cooperation of the Post Office Department. But the record shows that the Bureau officials who secured this cooperation intended to and did in fact accomplish their task without revealing the FBI's true interest in obtaining access to the mail; no high ranking Postal official was apparently made aware that the FBI actually opened first class mail.

##### *1. Postmasters General*

There is no evidence that any Postmaster General was ever briefed about any of the FBI mail opening programs, either by the FBI directly or by a Chief Postal Inspector. Henry Montague, who as Chief Postal Inspector was aware of the mail cover (as opposed to the mail opening) aspect of several Bureau programs, stated that he never informed the Postmaster General because he "thought it was our duty to cooperate in this interest, and really, I did not see any reason to run to the Postmaster General with the problem. It was not through design that I kept it away from ... the Postmaster General. ... It was just that I did not see any reason to run to [him] because he had so many other problems." 485

## *2. Chief Postal Inspectors*

It is certain that at least one and probably two Chief Postal Inspectors were aware of the fact that Bureau agents received direct access to mail, and in one case permission may have been given to physically remove letters from the mailstream as well, but there is no direct evidence that any Chief Postal Inspector was ever informed that FBI agents actually opened any mail.

Clifton Garner. -- Clifton Garner was Chief Postal Inspector under the Truman administration during the period when Z-Coverage may have been reinstituted in Washington, D.C. No FBI testimony or documents, however, suggest that his approval was sought prior to this reinstitution, nor can he recall being contacted by Bureau officials about such a program. 486

David Stephens. -- Henry Montague testified that prior to the 1959 implementation of Z-Coverage in New York, when he was Postal Inspector in Charge of that region, he was instructed by Chief Postal Inspector David Stephens to cooperate with Bureau agents in their proposed program of special "mail covers." 487 As Montague recalls, Stephens approved the "mail cover" operation and left the mechanical arrangements up to him. Donald Moore has also testified that Stephens must have been contacted by Bureau officials in Washington prior to the implementation of Survey No. 1 in the same year, 487a although he did not participate in any such meeting himself, and no other FBI official who testified could shed any light on who might have made such contact. There is no evidence, however, that Stephens was ever informed that mail would actually be opened by Bureau agents in either program.

Henry Montague. -- As Postal Inspector in Charge of the New York Region, Montague followed David Stephens' instructions to cooperate with the FBI regarding Z-Coverage and made the necessary mechanical arrangements within his office. He stated, however, that he was told by the Bureau representatives who came to see him, including Donald Moore (whose testimony is consistent) 488 that this was a mail cover rather than a mail opening operation. 489 He was simply informed that the Bureau had an interest in obtaining direct access to particular mail for national security reasons and that his cooperation would be appreciated. While he realized that even this type of access was highly unusual, he agreed because "... they knew what they were looking for; we did not. ... [T]hey could not give any names to the Postal Service, as far as I knew, for mail to look for. ... [P]erhaps they knew who the agent might be, or something of this sort, which knowledge was not ours and which, at that time, I did not feel was in our province to question." 490 Montague also acknowledged that during his tenure as Postal Inspector in Charge of the New York Region, he may have known of an FBI operation at Idlewild Airport (Survey No. 1) as well, but stated that he had no "positive recollection" of it. 491

As Chief Postal Inspector from 1961 to 1969, Montague personally authorized Postal Service cooperation with the Bureau's programs in at least two instances, and in one case possibly approved the removal of selected letters by Bureau agents to a point outside the postal facility in which they worked. According to a 1961 FBI memorandum, it was recommended by Bureau officials and approved by Director Hoover that Postal officials in Washington should be contacted "to explore the possibility of instituting" Survey No. 2. 492 In February of that year, Donald Moore met with Montague about this matter, explaining only -- according to both Moore and Montague -- that the program would involve screening the mail and that it was vital to the security of the country. 493 The fact that the FBI intended to open selected items was apparently not mentioned. Because he "felt it was our duty to cooperate with the Agency which was responsible for the national security in espionage cases," 494 Montague agreed to assist the Bureau. On this occasion, however, he indicated that he would prefer to have postal employees rather than FBI agents conduct the "cover" since "it was our position that whenever possible ... the mail should remain in the possession of the Postal Service." 495

Less than two years later, Montague did allow Bureau agents to screen mail directly in Survey No. 4. A 1962 FBI memorandum noted that the FBI liaison to the Post Office approached him on December 19 to secure his approval for the Bureau's plan to cover mail from Miami to a Latin American country. 496 According to this memorandum, Montague did approve and authorized the removal of selected letters to the FBI laboratory as well. The former Chief Postal Inspector remembers approving the screening aspects of the project and knowing that mail left the custody of postal employees, 497 but cannot recall whether or not he specifically granted his permission for flying certain letters to Washington. 498 He testified, in any event, that he was not informed that mail would be opened. 499

In June 1965, Montague reconsidered his original approval of the project, possibly in light of Senator Edward Long's investigation into the use of mail covers and other techniques by federal agencies. A June 2 1965, FBI airtel from the Miami office to Headquarters reads in part: "[The Assistant Postal Inspector in Charge of the Atlanta Region] said that due to investigations by Senate and Congressional committees, Mr. Montague requested he be advised of the procedures used in this operation." 500 Montague had appeared before the Long Subcommittee and had testified on the subject of mail covers several times earlier that year, but he recalls that his concern in determining the procedures used in Survey No. 4 in June focused more on the new Postal regulations regarding mail covers that were issued about that time than on the Senate hearings. 501 Regardless of his motivation, Montague asked the Assistant Postal Inspector in Charge to ascertain the details of the Miami operation; the procedures were described to this postal official by representatives of the Miami Field Office, apparently without mention of the fact that mail was actually opened; and the Assistant Postal Inspector reported back to Montague, who found them to be acceptable and did not withdraw his support for the survey. 502

Montague has stated that he was never informed that FBI agents in Survey No. 4 or in any of the other Bureau programs intended to or actually did open first class mail. This testimony is supported by that of Donald Moore, who on at least two occasions was the Bureau representative who sought Montague's cooperation for the programs. Moore does not believe that he ever told Montague that mail would be opened; 504 he said, moreover, that it was "understood" within the Bureau that Postal officials should not be informed. 505 Of his meeting with Montague about Z-Coverage, for example, Moore stated: "I am sure I didn't volunteer it to him and, in fact, would not volunteer it to him" because of the belief that such information should be closely held within the Bureau. 506 He added that it was a general, though unwritten, policy that whenever Bureau agents contacted Postal officials concerning the mail programs "it was understood that they would not be told [that mail opening was contemplated]." 507

Montague, for his part, did not specifically warn FBI agents against tampering with the mail because they were Federal officers and he trusted them not to do so. He stated:

I do not recall that I asked [if they intended to open mail], because I never thought that would be necessary. I knew that we never opened mail in connection with a mail cover. I knew that we could not approve it, that we would not approve any opening of any mail by anybody else. Both the CIA and the FBI were Government employees the same as we were, had taken the same oath of office, so that question was really not discussed by me....

With regard to the CIA when they first started [in 1953], we did put more emphasis on that point that mail could not be tampered with, that it could not be delayed, because, according to my recollection, this was the first time that we had had any working relationship with the CIA at all. With the FBI, I just did not consider that it was necessary to emphasize that point. I trusted them the same as I would trust another Inspector. I would never feel that I would have to tell a Postal person that you cannot open mail. By the same token, I would not consider it necessary to emphasize it to any great degree with the FBI. 508

In short, it does not appear that any senior postal official knew that the FBI opened mail. Postal officials did cooperate extensively with the Bureau, but out of trust did not ask whether mail would be opened and because of a concern for security they were not told.

#### *B. Department of Justice*

The record presents no conclusive evidence that any Attorney General ever knew of any of the FBI mail opening programs. The evidence summarized below, does suggest that one and possibly two Attorneys General may have been informed of selected aspects of the Bureau's mail operations, but generally supports the view that no Attorney General was ever briefed on their full scope.

##### *1. Robert F. Kennedy*

New York Field Office Briefings. -- On April 5, 1962, and again on November 4, 1963, Attorney General Robert F. Kennedy visited the FBI's New York field office was briefed in foreign espionage matters. The person who briefed him on these occasions, the Assistant Special Agent in Charge for the Espionage Division, testified that he may have mentioned the mail intercept projects then being conducted by the New York field office to the Attorney General, but has no definite recollection whether he did or not. 509 Other participants at these briefings could not recall the technique of mail opening being discussed, 510 nor do the internal FBI memoranda relating to the briefings indicate that the topic arose. 511

The Baltch Case. -- It is also possible, though again the evidence is far from conclusive, that Robert Kennedy learned that mail opening was utilized in the Baltch investigation, which is described on page 648. On July 2, 1963, FBI agents arrested two alleged Soviet illegal agents who used the names Robert and Joy Ann Baltch; they were indicted for espionage on July 15. Several conferences were held between FBI representatives and Assistant Attorney General for Internal Security, J. Walter Yeagley, regarding this case and the possibility that some of the evidence was tainted. 512 Yeagley subsequently briefed Kennedy on the problems involved in prosecuting the Baltchs. 513 Donald E. Moore, who was one of the FBI representatives who discussed the Baltch case with Yeagley, testified that he believed, though he had no direct knowledge, that the fact of mail opening did come to the attention of the Attorney General in this context. 514 Yeagley, however, cannot recall being specifically advised that mail was opened (although he knew that a "mail intercept or cover" had occurred) and stated that he did not inform Kennedy about any mail openings. 515

Other Espionage Cases. -- Internal FBI memoranda concerning at least two other espionage cases that were considered for prosecution while Kennedy was Attorney General, also raise the possibility that Justice Department attorneys, including Yeagley, may have been advised of mail openings that occurred. 516 Yeagley cannot recall being so advised, however, and, as noted above, stated that he never informed the Attorney General of any mail openings. 517 There is no indication in the memoranda, moreover, that these matters were ever raised with Kennedy.

##### *2. Nicholas deB. Katzenbach*

The Baltch Case. -- The Baltch case did not come to trial until early October 1964, when Nicholas deB. Katzenbach was Acting Attorney General. At the time the trial commenced, FBI representatives, including Donald Moore, conferred with Thomas K. Hall, a Justice Department attorney who was assigned to the case, again on the subject of tainted evidence. 518 Hall then discussed the case with Katzenbach and, according to an FBI internal memorandum, "Katzenbach recognized the problems, but felt in view of the value of the case, an effort should be made to go ahead with the trial even if it might be necessary to drop the overt act where our tainted source is involved..." 519 Because he subsequently determined that the case "could not be further prosecuted without revealing national security information," 520 however, Katzenbach ordered the prosecution to be dropped entirely.

In fact, there were at least two sources of tainted evidence other than mail opening involved in the Baltch case -- a surreptitious entry and a microphone installation -- and it is only these which Katzenbach recalls. 521 He testified that although he did discuss the taint issues with both Hall and Joseph Hoey, the United States Attorney who originally presented the government's case, neither of them brought to his attention the fact of mail opening. 522 Hoey's recollection supports this contention: a Bureau memorandum suggests that Hoey may have learned of a "mail intercept" in the case, 523 but he recalls neither being informed of an actual opening nor conferring with the Acting Attorney General about any issue related to mail. 524 Assistant Attorney General Yeagley recalls discussing the case generally with Katzenbach also, and "may have informed him of the mail intercept or cover which had occurred," but Yeagley stated that he had no definite knowledge himself that the "intercept or cover" involved the actual opening of mail, and so would not have been in a position to advise him that it did. 525

Katzenbach has testified that he was never aware of the Bureau's use of mail opening in any espionage investigation. 526 He added:

Even if one were to conclude that the Bureau did in fact reveal that mail had been opened and that this fact was relayed by lawyers in the [Baltch] case to me, I am certain that that fact would have been revealed by the FBI -- and I would have accepted it -- as an unfortunate aberration, just then discovered in the context of a Soviet espionage investigation, not a massive mail-opening program. In that event, nothing would have led me to deduce that the Bureau was, as a matter of policy and practice, opening letters. 527

The Long Subcommittee Hearings. -- According to Donald Moore, he and Assistant Director Alan H. Belmont did inform Mr. Katzenbach at the time of the 1965 Long Subcommittee hearings that Bureau agents screened mail both inside and outside postal facilities as a matter of practice, although he does not claim that the subject of actual opening arose.

In February of that year, the Long Subcommittee directed Chief Postal Inspector Montague to provide it with a list of all mail covers, including those in the areas of organized crime and national security, by federal agencies within the previous two years. As a result of this and other inquiries by the Subcommittee, especially regarding electronic surveillance practices, President Johnson requested Katzenbach to coordinate all executive department matters under his investigation. 528

In executing this responsibility, Katzenbach met with Moore, Belmont, and Courtney Evans, a former FBI Assistant Director who had retired from the Bureau but was then working as a special assistant to the Attorney General, on February 27, 1965, to discuss problems raised by the Subcommittee which affected the FBI. 529 One of the subjects discussed at that meeting was the question of Bureau access to the mail. Four days earlier, the Chief Postal Inspector had testified before the Subcommittee that he had no knowledge of any case in which mail left the custody of Postal employees during the course of a mail cover. 530 At the time, Montague did know that this practice had occurred 531 -- indeed, as Chief Postal Inspector he had approved the direct screening of mail by FBI agents in Survey No. 4 532 -- but he believed that "there was an understanding ... that national security cases were not included within this particular part of the hearing." 533 According to Moore, Katzenbach had been made aware of the possible inaccuracy of Montague's testimony, and the Bureau officials consequently "pointed out [to the Attorney General] that we do receive mail from the Post Office in certain sensitive areas . . . ." 534 Moore believes moreover, that they informed him that this custody was granted in on-going projects rather than isolated instances. 535

Katzenbach acknowledged that he was aware, while Attorney General, that "in some cases the outside of mail might have been examined or even photographed by persons other than Post Office employees," 536 but he stated that he never knew the FBI gained custody to mail on a regular basis in large-scale operations. 537 He also testified that [at] the time of the February meeting he considered Montague's testimony to be "essentially truthful." 538 While the record shows that he spoke to Senator Long less than a week after this meeting, 539 Katzenbach stated that this was in regard to the requested list of all mail covers by federal agencies rather than the issue of mail custody. 540 The testimony of Courtney Evans, who was also present at the February 27 meeting, supports that of Katzenbach: at no time, Evans said, was he personally ever made aware that FBI agents received direct access to mail on an on-going basis. 541

Moore does not claim that he told Katzenbach that mail was actually opened by Bureau agents. According to him, this information was volunteered by neither Belmont nor himself and Katzenbach did not inquire whether opening was involved. 542 When asked if he felt any need to hold back from Katzenbach the fact of mail openings as opposed to the fact that Bureau agents received direct access to the mail, Moore replied: "It is perhaps difficult to answer. Perhaps I could liken it to ... a defector in place in the KGB. You don't want to tell anybody his name, the location, the title, or anything like that. Not that you don't trust them completely, but the fact is that anytime one additional person becomes aware of it, there is a potential for the information to ... go further." 543

Probably the strongest suggestion in the documentary evidence that Katzenbach may have been made aware of actual FBI mail openings at the time of the Long Subcommittee hearings is found in a memorandum from Hoover to ranking Bureau officials, dated March 2, 1965. This memorandum reads, in part:

The Attorney General called and advised that he had talked to Senator Long last night. Senator Long's committee is looking into mail covers, et cetera. The Attorney General stated he thought somebody had already spoken to Senator Long as he said he did not want to get into any national security area and was willing to take steps not to do this. The Attorney General stated that Mr. Fensterwald [Chief counsel to the Subcommittee] was present for part of the meeting and Fensterwald had said that he had some possible witnesses who are former Bureau agents and if they were asked if mail was opened, they would take the Fifth Amendment. The Attorney General stated that before they are called, he would like to know who they are and whether they were ever involved in any program touching on national security and if not, it is their own business, but if they were, we would want to know. The Attorney General stated the Senator promised that he would have a chance to look at the names if he wanted to, personally and confidentially, and the list would have any names involving national security deleted and he would tell the Senator how many but no more. 544

Katzenbach testified as follows concerning his passage:

[Even] assuming the accuracy of the memo, it is not consistent with my being aware of the Bureau's mail opening program. Had I been aware of that program, I naturally would have assumed that the agents had been involved in that program, and I would scarcely have been content to leave them to their own devices before Senator Long's committee. Moreover, it would have been extremely unusual for ex-FBI agents to be interviewed by the Senate committee staff without revealing that fact to the Bureau. In those circumstances both the Director and I would have been concerned as to the scope of their knowledge with respect to the very information about mail covers which the Senator was demanding and which we were refusing, as well as about any other matters of of a national security

nature. If the witnesses in fact existed (which I doubted strongly), then both the Director and I wanted to know the extent of their knowledge about Bureau programs, and the extent of their hostility toward the FBI. That is a normal concern that we would have had anytime any ex-FBI agent testified before any Congressional committee on any subject. 545

The most that can reasonably be inferred from the record on possible knowledge of FBI mail opening by Attorneys General is this: one or two Attorneys General may have known that mail was opened in connection with particular espionage investigations, and one Attorney General may have learned that the FBI regularly received mail from the Post Office and that five former FBI agents possibly opened mail. Evidence exists which casts doubt on the reasonableness of even these inferences, however. More significantly, there is no indication in either the documents or the testimony that the approval of any Attorney General was ever sought prior to the institution of any Bureau program, and despite a clear opportunity to inform Attorney General Katzenbach of the full scope and true nature of these operations in 1965, he was intentionally not told. In the name of security, the Bureau neither sought the approval of nor even shared knowledge of its programs with the Cabinet officer who was charged with the responsibility of controlling and regulating the FBI's conduct.

The first uncontroverted evidence that any Attorney General knew of the FBI mail opening programs is not found until 1970, four years after the programs were terminated. John Mitchell, upon reading the 1970 "Huston Report", learned that the Bureau had engaged in "covert mail coverage" in the past, but that this practice had "been discontinued." 546 While the report itself stated that mail opening was unlawful, 547 however, Mitchell did not initiate any investigation, nor did he show much interest in the matter. He testified:

I had no consideration of that subject matter at the time. I did not focus on it and I was very happy that the plan was thrown out the window, without pursuing any of its provisions further. ... I think if I had focused on it I might have considered [an investigation into these acts] more than I did. 548

### *C. Presidents*

There is no evidence that any President was ever contemporaneously informed about any of the FBI mail opening programs. In 1970, Bureau officials who were involved in the preparation of the "Huston Report" apparently advised Tom Charles Huston that mail opening as an investigative technique had been utilized in the past, for this fact was reflected in the report which was sent to President Nixon. 550

## VI. TERMINATION OF THE FBI MAIL OPENING PROGRAMS

### *A. Hoover's Decision to Terminate the Programs in 1966*

#### *1. Timing*

By mid-1966 only three FBI mail opening programs continued to operate: Z-Coverage in New York and Washington, Survey No. 1 in those same cities, and Survey No. 4 in Miami. Three of the programs -- No. 2, No. 3, and No. 7 -- and the extensions of Survey No. 1 to four cities other than New York and Washington had all been terminated prior to 1966 because they had produced no valuable counterintelligence information while tying up manpower needed in other areas. 551 Two of the programs -- Surveys No. 5 and 6 -- had been suspended in January 1966 for security reasons involving changes in local postal personnel and never reinstituted. As the San Francisco Field office informed Headquarters in May of that year in regard to both programs: "While it is realized that these sources furnished valuable information to the Federal Government, it is not believed the value justifies the risk involved. It is not recommended that contact with sources be re-instituted." 552

The remaining three programs were all terminated in July 1966 at the direct instruction of J. Edgar Hoover. Apparently this instruction was delivered telephonically to the field offices; 553 no memoranda explicitly reflect the order to terminate the programs. There is no evidence that the FBI has employed the technique of mail opening in any of its investigations since that time, although the FBI continued to receive the fruits of the CIA's mail opening program until 1973.

#### *2. Reasons*

Given the perceived success of these three programs the reasons for their termination are not entirely clear. While all FBI officials who testified on the subject were unanimous in their conclusion that the decision was Hoover's alone, none could testify as to the precise reasons for his decision.

At least three possible reasons are presented by the record. First, the Director may have believed that the benefits derived from mail opening were outweighed by the need to present espionage cases for prosecution which were untainted by use of this technique. Regardless of whether or not the mail opening in the Baltch case was actually a factor in Acting Attorney General Katzenbach's decision to drop the prosecution, for example, Bureau officials believed that their use of the technique in that case did in fact preclude prosecution. 554 On a memorandum dealing with the evidentiary issues in the Baltch case, Hoover wrote the following notation: "We must immediately and materially reduce the use of techniques which 'taint' cases." 555

Second, Hoover may have believed that the Attorney General and other high government officials would not support him in the FBI's use of questionable investigative practices. It is known that Hoover cut back on a number of other techniques in the mid-1960's: the use of mail covers by the FBI was suspended in 1964, 556 and in July 1966 -- the same month which saw the end of the mail opening programs -- Hoover terminated the technique of surreptitious entries by Bureau agents. 557 In a revealing comment on a 1965 memorandum regarding the Long Subcommittee's investigation of such techniques as mail covers and electronic surveillance, Hoover wrote:

I don't see what all the excitement is about. I would have no hesitation in discontinuing all techniques -- technical coverage [i.e. wiretapping], microphones, trash covers, mail covers, etc. While it might handicap us I doubt they are as valuable as some believe and none warrant FBI being used to justify them. 558

His lack of support from above had been tentatively suggested by some witnesses as a reason for this general retrenchment. Donald Moore, for example, surmised that:

There had been several questions raised on various techniques, and some procedures had changed, and I feel that Mr. Hoover in conversation with other people, of which I am not aware, decided that he did not or would not receive backing in these procedures and he did not want them to continue until the policy question was decided at a higher level. 559

While former Attorney General Katzenbach testified that he was unaware of the FBI mail openings, his views on this subject tend to support Moore's. He speculated that the reason the programs were terminated in 1966 may have related to the then-strained relations between Mr. Hoover and the Justice Department stemming from the case of *Black v. United States* 559a and the issue of warrantless electronic surveillance. 560 Hoover had wanted the Justice Department to inform the Supreme Court, in response to an order by the Court that the type of warrantless microphone surveillance that occurred in that case had been authorized by every Attorney General since Herbert Brownell. Katzenbach, not believing this to be so, approved a Supplemental Memorandum to the Court which simply stated that microphone installations had been authorized by longstanding "practice." According to Katzenbach, "this infuriated Hoover. . . . He was very angry, [and] that may have caused him to stop everything of this kind." 561

A third, related reason was suggested by W. Raymond Wannall, former Assistant Director in charge of the FBI's Domestic Intelligence Division. Wannall believed that there was a genuine "question in [Hoover's] mind about the legality" of mail opening, and noted that by at least 1970, as expressed in one of the Director's footnotes in the Huston Report, Hoover clearly considered mail opening to be outside the framework of the law. 562 This footnote also suggests that, like CIA officials, Hoover was concerned that the perceived illegality of the technique would lead to an adverse public reaction damaging to the FBI and other intelligence agencies if its use were made known. His note to President Nixon read:

The FBI is opposed to implementing any covert mail coverage [i.e., mail opening] because, it is clearly illegal and it is likely that, if done, information would leak out of the Post Office to the press and serious damage would be done to the intelligence community. 563

## *B. Recommended Reinstitution*

### *1. Within the Bureau*

Whatever the reasons for it, the FBI Director's decision to terminate all mail opening programs in 1966 was not favorably received by many of the participating agents in the field. As one official of the New York Field Office at the time of the termination testified:

... the inability of the government to pursue this type of investigative technique meant that we would no longer be able to achieve the results that I felt were necessary to protect the national security, and I did not feel that I wanted to continue in any job where you are unable to achieve the results that really your job calls for. ... That was a big influence on my taking retirement from the FBI. 564

Several recommendations came in from the field to consider the reinstitution of the mail opening programs between 1966 and the time of Hoover's death in 1972. 564a None of them was successful. A 1970 internal FBI memorandum, for example, reflects the recommendation of the New York office that the programs be reinstituted, 565 but Headquarters suggested that this course was "not advisable at this time." 566 Underlining the words "not advisable," Hoover noted: "Absolutely right."

There is no evidence that any recommendation to reinstitute these programs ever reached the desk of an Acting Director or Director of the Bureau after Hoover's death.

### *2. Huston Plan*

The only known attempt to recommend reinstitution of FBI mail by officials outside the FBI is found in the Huston Report in 1970. 567 The Report itself stated that mail opening did not have the "sanction of law," 568 but proceeded to note several advantages of relaxing restrictions on this technique, among them:

1. High-level postal authorities have, in the past, provided complete cooperation and have maintained full security of this program.
2. This technique involves negligible risk of compromise. Only high echelon postal authorities know of its existence, and personnel involved are highly trained, trustworthy, and under complete control of the intelligence agency.
3. This coverage has been extremely successful in producing hard-core and authentic intelligence which is not obtainable from any other source ... 569

Primarily because of the objections Hoover expressed in the footnote he added, which are discussed above, this aspect of the Huston Plan was never implemented, however.

## VII. LEGAL AND SECURITY CONSIDERATIONS WITHIN THE FBI

During the years that the FBI mail opening programs operated, Bureau officials attempted only once, in 1951, to formulate a legal theory to justify warrantless mail opening, and the evidence suggests that they never relied upon even this theory. At the same time, there is little in the record (until Hoover's comment in the 1970 Huston Report) to indicate that Bureau officials perceived mail opening to be illegal, as many CIA officials did. The FBI officials who directed the programs apparently gave little consideration to factors of law at all; ironically, it appears that of the two agencies which opened first class mail without warrants, that agency with law enforcement responsibilities and which was a part of the Justice Department gave less thought to the legal ramifications of the technique. Despite its inattentive attitude toward legal issues, the Bureau was at least as concerned as the CIA that disclosure of their programs outside the FBI -- even to its own overseer, the Attorney General, and especially to Congress -- would, as Hoover wrote in 1970, "leak ... to the press and serious[ly] damage" the FBI. 574 To avoid such exposure, the Bureau, like the CIA, took measures to prevent knowledge of their programs from reaching this country's elected leadership.

### *A. Consideration of Legal Factors by the FBI*

#### *1. Prior to the Commencement of Mail Opening Programs In the Post-War Period*

In June 1951, when the Washington Field Office recommended to Headquarters that consideration should be given to the reinstitution of Z-Coverage, it was specifically suggested that Bureau officials determine whether or not Postal Inspectors have the authority to order the opening of first class mail in espionage cases. 575 Headquarters conducted research on this possible legal predicate to the peacetime reinstitution of the program, and the results were summarized in a second memorandum on Z-Coverage in September 1951. 576 The basic conclusion was that Postal Inspectors had no authority to open mail; only employees of the Dead Letter Office and other persons with legal search warrants had such power. It was argued, however, that Postal Inspectors may have sufficient legal authority to open even first class mail whose contents were legally non-mailable under 18 U.S.C. Section 1717. This class of non-mailable items included, and includes today, "[e]very letter ... in violation of sections ... 793, 794 [the espionage statutes] ... of this title ..." Since it was a crime to mail letters whose contents violated the espionage statutes, it was reasoned, it may not be unlawful to intercept and open such letters, despite the general prohibition against mail opening found in 18 U.S.C. Sections 1701, 1702, and 1703. The study concluded:

... it is believed that appropriate arrangements might be worked out on a high level between the Department and the Postmaster General or between the Bureau and the appropriate Post Office officials whereby the mail of interest to the Bureau could be checked for items in violation of the espionage and other security statutes which are itemized in Title 18, U.S. Code Section. ... It is respectfully suggested that appropriate discussions be held on this matter. 577

This theory ignores the fact that the warrant procedure itself responds to the problem of non-mailable items. If, on the basis of an exterior examination of the envelope or on the basis of facts surrounding its mailing, there exists probable cause for a court to believe that the espionage statutes have been violated, a warrant may be obtained to open the correspondence. If the evidence does not rise to the level of probable cause, the law does not permit the mail to be opened. There is no indication, in any event, that discussions were ever held with any Postmaster General or Attorney General in an attempt to either test or implement this theory. While Z-Coverage was in fact reinstituted after this study was made, it was conducted with FBI personnel rather than Postal Inspectors, and its mail opening aspect was apparently unknown to any high-ranking Postal officials. In regard to the recommendation that "appropriate discussions be held on this matter," Assistant to the Director Alan Belmont penned the notation, "No action at this time. File for future reference." 578

#### *2. Post-1951*

After the mail opening programs were underway, there was apparently no further consideration by FBI officials of the legal factors involved in the operations. Unlike that regarding CIA mail opening, the documentary record on the FBI programs does not contain references (until 1970, four years after the programs ceased) to the illegality of mail opening; nor does it suggest that mail opening was considered legal. At most, the record reveals the recognition by Bureau officials that evidence obtained from their surveys was tainted and, hence, inadmissible in court, 579 but not the recognition that the technique was invalid per se. Indeed, after the Supreme Court decisions in *Nardone v. United States*, 302 U.S. 379 (1937) and 308 U.S. 338 (1939), this distinction was explicitly made in the area of electronic surveillance: while the *Nardone* decisions prohibited the admission in court of evidence obtained from wiretapping, the cases were not interpreted by the Bureau to preclude use of the technique itself, and the practice continued. 580

The testimonial record, moreover, clearly suggests that legal considerations were simply not raised in contemporaneous policy decisions affecting the various mail surveys: W. Raymond Wannall, William Branigan, and others have all so testified. 581 None of these officials has any knowledge that any legal theory -- either the one which was filed for "future reference" in 1951 or one based on a possible "national security" exception to the general prohibition against mail opening -- was ever developed by Bureau officials after 1951 to justify their programs legally, or that a legal opinion from the Attorney General was ever sought. To these officials, such justification as existed stemmed not from legal reasoning but from the end they sought to achieve and an amorphous, albeit honestly held, concept of the "greater good." As William Branigan stated: "It was my assumption that what we were doing was justified by what we had to do." 582 He added that he believed "the national security" impelled reliance on such techniques:

The greater good, the national security, this is correct. This is what I believed in. Why I thought these programs were good, it was that the national security required this, this is correct. 583

At least some of the agents who participated in the mail opening program have testified that they believed the surveys were legal because they assumed (without being told) that the programs had been authorized by the President or Attorney General, or because they assumed (again without being told) that there was a "national security" exception to the laws prohibiting mail opening. 584 Those officials in a policymaking position, however, apparently did not focus on the legal questions sufficiently to state an opinion regarding the legality or illegality of the programs, nor did they advise the field offices or participating agents about these matters.

Only in the 1970's, at least four years after the FBI mail opening programs ceased, is there any clear indication that Bureau officials, like those of the CIA, believed their programs to be illegal. As noted above, Hoover's footnote to the 1970 Huston Report described the technique as "clearly illegal;" and in the recent public hearings on FBI mail opening, W. Raymond Wannall testified that, as of 1975, "I cannot justify what happened. ..." 585

In light of the Bureau's major responsibilities in the area of law enforcement and the likelihood that some of the espionage cases in which mail opening was utilized would be prosecuted, it is ironic that FBI officials focused on these legal issues to a lesser degree than did their CIA counterparts. But the Bureau's Domestic Intelligence Division made a clear distinction between law enforcement and counterintelligence matters; what was appropriate in one area was not necessarily appropriate in the other. As William Branigan again testified:

In consideration of prosecuting a case, quite obviously [legal factors] would be of vital concern. In discharging counterintelligence responsibilities, namely to identify agents in the United States to determine the extent of damage that they are causing to the United States ... we would not necessarily go into the legality or illegality. ... We were trying to identify agents and we were trying to find out how this country was being hurt, and [mail opening] was a means of doing it, and it was a successful means. 586

#### *B. Concern with Exposure*

Although Bureau officials apparently did not articulate the view prior to 1970 that mail opening was necessarily illegal, they did believe that their use of this technique was so sensitive that its exposure to other officials within the executive branch, the courts, Congress, and the American public generally should be effectively prevented. This fear of exposure may have resulted from a perceived though unexpressed sense that its legality was at least questionable; it was almost certainly a consequence of a very restricted, even arrogant, view of who had a "need to know" about the Bureau's operations. But whatever its source, this concern with security clearly paralleled the CIA's concern with the "flap potential" of their projects and resulted in similar efforts to block knowledge of their use of this technique from reaching the general public and its leaders.

The reluctance of FBI officials to disclose the details of their programs to other officials within the executive branch itself has been described above: there is no clear evidence that any Bureau official ever revealed the complete nature and scope of the mail surveys to any officer of the Post Office Department or Justice Department, or to any President of the United States. It was apparently a Bureau policy not to inform the Postal officials with whom they dealt of the actual intention of FBI agents in receiving the mail, and there is no indication that this policy was ever violated. 587 When Attorney General Katzenbach met with Donald Moore and Alan Belmont on the subject of Bureau custody of mail, Moore testified that he did not inform the Attorney General about the mail opening aspect of the projects because of security reasons: "anytime one additional person becomes aware of it, there is a potential for the information to ... go further." 588 One Bureau agent at Headquarters who was familiar with the mail programs (but not in a policy-making position) also speculated that the questionable legal status of this technique may have been an additional reason for not seeking the Attorney General's legal advice. He testified as follows:

Q. Do you know why the opinion of the Attorney General was apparently or probably not sought?

A. Because of the security of the operation. I would imagine that would be the main reason. It was a program we were operating. We wanted to keep it within the Bureau itself -- and the fact that it involved opening mail.

Q. What do you mean by the last statement, "... the fact that it involved opening mail"?

A. That was not legal, as far as I knew. 589

With respect to the Justice Department generally, only the minimum knowledge necessary to resolve a specific prosecutive problem was imparted. Donald Moore said of his meeting with Assistant Attorney General Yeagley about the Baltch case, for example, that he did not disclose to him the FBI's general use of this technique: "I am sure it was confined to the issue at hand, which was anything at all which involved the prosecution of Baltch." 590 Even the term "mail opening" was avoided, and the more ambiguous term "mail intercept" was used: 591 while susceptible of only one meaning within the FBI, the latter term was apparently misinterpreted by Yeagley and other Justice Department officials with different assumptions about Bureau operations. 592

The FBI's concern with exposure extended to the courts as well. In an internal memorandum regarding the Baltch case, it was written that "under no circumstances is the Bureau willing to admit [to the court] that a mail intercept was utilized. ..." 593

Similarly, FBI officials, like their counterparts in the CIA, did not want their use of this technique known to Congress. One senior Bureau official testified that the FBI feared that the Long Subcommittee's 1965 investigation could publicly expose the mail programs ; 594 another that such Congressional exposure could "wrack up" the Bureau. 595 Attorney General Katzenbach had been requested by the President to coordinate executive branch responses to inquiries by the Subcommittee, but the FBI was apparently not content with his efforts in preventing the disclosure of "national security" information

generally. To ensure that their mail surveys, as well as certain practices in the area of electronic surveillance, remained unstudied, Bureau officials themselves directly attempted to steer the Subcommittee away from probing these subjects.

Alan Belmont's February 27, 1965, memorandum reflecting his meeting with the Attorney General about Henry Montague's testimony on mail custody, reads in part: "I told Mr. Katzenbach that I certainly agree that this matter should be controlled at the committee level but that I felt pressure would have to be applied so that the personal interest of Senator [Edward] Long became involved rather than on any ideological basis." 596 The memorandum continues: "I called Mr. DeLoach [an Assistant Director of the FBI] and briefed him on this problem in order that he might contact Senator [James O.] Eastland in an effort to warn the Long committee away from those areas which would be injurious to the national defense. (Of course, I made no mention of such a contact to the Attorney General.)" According to an FBI memorandum, J. Edgar Hoover himself subsequently contacted Senator Eastland, who, he reported, "is going to see Senator Long not later than Wednesday morning to caution him that [the chief counsel] must not go into the kind of questioning he made of Chief Inspector Montague of the Post Office Department." 597

The strategy worked. The Subcommittee never learned of the FBI's use of mail opening as an investigative technique. Despite the fact that in 1965 the FBI conducted a total of five mail opening programs in the United States -- and despite the fact that in that year alone more than 13,300 letters were opened by CIA agents in New York -- the Subcommittee, the general public, the Attorney General, and apparently even Henry Montague himself accepted as true Montague's testimony that year that:

The seal on a first-class piece of mail is sacred. When a person puts first-class postage on a piece of mail and seals it, he can be sure that the contents of that piece of mail are secure against illegal search and seizure. 598

130 Mitchell, 10/2/75, p. 13.

131 Mitchell, 10/2/75, p. 13. It should also be noted that John Mitchell was not involved in the preparation of the so-called "Huston Report," which is discussed at pp. 596-597. The "Huston Report" made no reference to continuing CIA mail opening programs. It did, however, state that federal agencies had employed this technique in the past and that its use had been discontinued -- a description which accurately fit only the FBI mail opening programs. When Mitchell learned of the proposal to sanction mail opening on a Presidential level, he urged President Nixon to withdraw his support for the plan. See Senate select Committee Report on the Huston Plan.

132 Angleton, 9/17/75, pp. 105-107.

133 Mitchell, 10/2/75, p. 9.

133a As noted below, President Nixon stated that he was aware of CIA mail covers on mail to the Soviet Union or Asia, although he was unaware of mail openings. The CIA makes no claim that he was directly advised by Agency officers of the mail covers or that he indicated his approval of the mail covers to the Agency. See pp. 597-598.

207 Blind memorandum, Subject: "Mail Intercept Program," 2/14/73. From the context of the second sentence, it appears that the correct statutory citation should be Title 18, Chapter 119, Sections 2510-20, rather than 18 U.S.C. Section 119. The specific section to which Mr. Colby apparently refers is 18 U.S.C. 2511 (3).

208 Edward Day, 10/22/75, Hearings, p. 53; Blount, 10/22/75, Hearings, p. 52. Day added that:

"If the CIA lawyers concluded that the CIA could not open mail to and from Communist countries in the early 1960's without violating the law, I think the CIA needs better lawyers.

"One can't answer such a unique legal question merely by reading from various postal statutes and citing court decisions relating to warrantless mail openings from the 19th century, which did not involve spying, cold war or subversive activities. A less simplistic approach to the problem is required.

"For example, statutes clearly say it is a crime to kill or attempt to kill someone with premeditation. These statutes, and others making felonies of arson, kidnapping, etc., do not say 'except in time of war.' But we all know that exception is read into these laws (even if the killing or arson was in a 'war' of doubtful legality ordered by Lyndon Johnson and Richard Nixon).

"In my opinion, the statutes relating to opening of mail must similarly have read into them an exception for opening mail to and from Communist countries by the CIA in time of cold war."

**CIA INTELLIGENCE COLLECTION ABOUT AMERICANS:  
CHAOS AND THE OFFICE OF SECURITY**

**I. INTRODUCTION**

One of the main controversies raised by recent practices of the Central Intelligence Agency is the question of intelligence collection about Americans. Unlike the FBI, the CIA was intended to focus on foreign intelligence matters. Charges have been made, however, suggesting that the CIA spied on thousands of Americans and maintained files on many more, all in violation of its statutory charter.

Senate Resolution 21, establishing the Select Committee, authorized inquiry into the extent of covert intelligence efforts against Americans and their legality under CIA's charter. It specifically authorized review of the need for new legislation to protect American citizens and to clarify the authority of CIA. This included the tension under present law between the authority of the Director of Central Intelligence to protect sources and methods of intelligence, on the one hand, and the prohibition on CIA exercising police powers and internal security functions, on the other.

This report discusses the results of a staff inquiry into the major CIA programs which involved collection of information about Americans: the CHAOS, MERRIMAC and RESISTANCE programs and the special security investigations undertaken by the Office of Security.

*A. Chaos*

The most extensive program of alleged "domestic spying" by CIA on Americans was the "CHAOS" program. CHAOS was the centerpiece of a major CIA effort begun in 1967 in response to White House pressure for intelligence about foreign influence upon American dissent. The CHAOS mission was to gather and evaluate all available information about foreign links to racial, antiwar and other protest activity in the United States. CHAOS was terminated in 1974.

The CHAOS office participated in the preparation of some half dozen major reports for higher authorities, all of which concluded that no significant role was being played by foreign elements in the various protest movements. This repeatedly negative finding met with continued skepticism from the White House under two administrations and pressures for further inquiry. In response to this skepticism CHAOS continued to expand its coverage of Americans in order to increase White House confidence in the accuracy of its findings.

A second major element of the CHAOS operation was to pursue specific inquiries from the FBI about the activity of particular Americans traveling abroad.

CHAOS received a great deal of information regarding Americans from CIA stations abroad, as well as from the FBI itself. In addition, CHAOS eventually received such information from its own agents who participated in domestic dissident activity in America in order to develop radical "credentials" as cover for overseas assignment. CHAOS also obtained information about Americans from other domestic CIA components, from the CIA mail opening project and from a National Security Agency international communications intercept program. <sup>1</sup>

In the process, the CHAOS project amassed thousands of files on Americans, indexed hundreds of thousands of Americans into its computer records, and disseminated thousands of reports about Americans to the FBI and other government offices. Some of the information concerned the domestic activity of those Americans.

#### *B. Merrimac and Resistance*

The MERRIMAC and RESISTANCE programs were both run by the CIA Office of Security, a support unit of the CIA charged with safeguarding its personnel, facilities and information.

Project MERRIMAC involved the infiltration by CIA agents of Washington-based peace groups and black activist groups. The stated purpose of that program was simply to obtain early warning of demonstrations and other physical threats to the CIA. The collection requirements, however, were broadened to include general information about the leadership, funding and activities and policies of the targeted groups.

Project RESISTANCE was a broad effort to obtain general background information for predicting violence which might create threats to CIA installations, recruiters or contractors and for security evaluation of CIA applicants. From 1967 until 1973, the program compiled information about radical groups around the country, particularly on campuses. Much of the reporting to headquarters by field offices was from open sources such as newspapers. But additional information was obtained from cooperating police departments, campus officials and other local authorities, some of whom, in turn, were using more active collection techniques such as informants.

In addition, both MERRIMAC and RESISTANCE supplied information for the CHAOS program.

#### *C. Special Security Investigations*

Finally, there was a group of specific security investigations undertaken either to find the source of newsleaks, or to determine whether government employees were involved in espionage or otherwise constituted security risks. Investigations were made of former CIA employees, employees of other government agencies, newsmen and other private individuals in this country. Physical surveillance, electronic surveillance, mail and tax return inspection, and surreptitious entry have been used on various occasions.

They were not part of a particularly organized program, and were conducted on a case-by-case basis. But they raise questions about what kinds of security investigations are within the CIA's lawful authority, and also about what kinds of techniques are permissible, even when such investigations are authorized.

#### *D. The Investigation*

The Committee staff investigation of each of these areas has included interviews, depositions, and documentary review of available files.

Each of these areas had been examined intensively by the Rockefeller Commission on CIA Activities within the United States before the Select Committee was given access to the files and to some of the persons involved. <sup>2</sup>

The Committee staff conducted an independent review of these programs. At the same time, an effort was made to avoid duplication of the extensive testimonial record already made by the Commission, and to take additional testimony only when necessary to clarify the record or to explore additional issues which arose. Hence, this report includes citation to both testimony given to the Select Committee and the Rockefeller Commission.

Part Two of this report reviews the evolution and operation of the CHAOS program. Part Three considers the questions which the history of CHAOS raises about future CIA programs. Part Four reviews more briefly the Office of Security programs and considers the questions which they raise.

#### *E. Summary of the Issues*

Before turning to the description of these programs, the remainder of this introduction summarizes the issues which these programs present for congressional decision.

Three themes are fundamental. First, to what extent did any of these activities exceed the lawful authority of the CIA under its charter in the 1947 National Security Act? The answer is not always clear; the statute's legislative history is often obscure at best.

Second, what should be the extent of the CIA's authority in the future? Whatever the limits of present law, now is the time to reassess which intelligence operations impinging upon Americans are appropriate for the CIA, and which best left to others.

Finally, in reviewing the CHAOS program, particularly, the Congress must look beyond judging past legality or reallocating functions among Federal agencies. For the American citizen, the fact that his Government keeps a file on his associations, or monitors his travel and his advocacy of dissent, is far more important than the question of which office in the bureaucracy is doing it. Ultimately the activity discussed in this report bears on the question of what kinds of intelligence operations are proper undertakings for any part of the Government.

### *1. Statutory Authority*

The legality of the CIA activity involves, first, the general positive statutory authority on which it can be based, and second, specific prohibitions which might supersede or limit the affirmative authority and responsibilities of the CIA.

(a) Counterintelligence. -- CIA's charter in the 1947 National Security Act speaks of "intelligence." The legislative history establishes that this means "foreign intelligence" in the case of the CIA. The only explicitly specified duties of the CIA are to "correlate and evaluate intelligence relating to the national security." However, the CIA's role as an intelligence gatherer was understood at the time of enactment; the provision that the National Security Council may assign CIA "other functions and duties" has been accepted as implied authority for clandestine foreign intelligence collection. In addition, the legislative history of the 1947 Act and the 1949 Central Intelligence Act recognize that the CIA would perform training and other functions in the United States in support of its overseas intelligence efforts. 2a

Like foreign intelligence, the term "counterintelligence" is not dealt with explicitly in the 1947 Act. In the broad sense, however, counterintelligence may be viewed as one facet of "foreign intelligence activities." Counterintelligence is the effort to learn about foreign intelligence activities and to thwart hostile attempts to penetrate our own intelligence activity or to conduct operations against us.

Organizationally, the CIA and other intelligence agencies distinguish positive intelligence collection from counterintelligence. It has long been assumed, however, that CIA's general charter in foreign intelligence includes authority for counterintelligence activity abroad. Although it was not expressly addressed by Congress during the passage of the 1947 Act, it is hard to imagine, for example, that foreign intelligence collection was implicitly authorized, but that Congress precluded CIA efforts abroad to ascertain hostile threats to the security of its own operations or to learn about enemy espionage.

Treating counterintelligence as part of "foreign intelligence" within the meaning of the 1947 Act, the Executive branch has viewed CIA as having statutory authority for the collection, collation and evaluation of counterintelligence. Pursuant to this authority National Security Intelligence Directive 5 designated the Director of Central Intelligence to coordinate all counterintelligence abroad. 3 The Directive defines counterintelligence comprehensively:

b. Counterintelligence is defined as that intelligence activity, with its resultant product, devoted to destroying the effectiveness of inimical foreign intelligence activities and undertaken *to protect the security of the nation and its personnel, information and installations against espionage, sabotage and subversion*. Counterintelligence includes the process of procuring, developing, recording, and disseminating information concerning hostile clandestine activity and of penetrating, manipulating or repressing individuals, groups or organizations conducting such activity. [Emphasis added.] 4

Under this directive the CIA was given primary responsibility for the conduct of counterintelligence operations abroad, and is also tasked with maintaining central counterintelligence files for the entire intelligence community. All agencies are directed to provide the CIA with any information appropriate for such a central file and such material maintained by the CIA is to be "collated and analyzed for appropriate dissemination." NSCID 5 does not purport to give the CIA authority to conduct counterintelligence activities in the United States. 5

It is this directive regarding CIA's counterintelligence responsibility that the director of CHAOS testified was the authority for the program. He claimed that the mission of determining and reporting on the extent and nature of foreign links to American dissident protest activity was an assignment within the CIA's counterintelligence responsibility. 6

(b) Protecting Sources and Methods of Intelligence. -- The MERRIMAC and RESISTANCE programs were premised on a more explicit provision of authority under the 1947 Act. The Act provides that:

The Director of Central Intelligence shall be responsible for protecting intelligence sources and methods from unauthorized disclosure. 7

The responsibility is given to the Director of Central Intelligence, rather than to the Central Intelligence Agency. However, the, Office of Security within the Agency has been the administrative arm to implement the Director's duty in this regard.

This authority has been read by the CIA to authorize protection of CIA personnel and facilities against any kind of "security threat" including the possibility of violent demonstrations by the public. That was the stated basis for undertaking the MERRIMAC and RESISTANCE programs. 8 The legislative history of this provision suggests it was included essentially to allay the concern of the military services that the new civilian agency would not itself operate with adequate safeguards to protect the services' intelligence secrets to which the CIA gained access. 9

The individual special security investigations examined in this report were also justified by a claim of authority derived from the Director's responsibility to protect intelligence "sources and methods."

## 2. Statutory Prohibitions

Juxtaposed to CIA's counterintelligence authority and the Director's charge to protect sources and methods, are specific constraints on the activity in which CIA may engage. The 1947 Act provides in Section 403 (d) (3) :

That the Agency shall have no police, subpoena, law enforcement powers or internal security functions.

Neither "internal security functions" nor "law enforcement powers" are defined in the statute. Nor is the scope of "internal security" for purposes of this ban directly discussed within the legislative history. The legislative history, however, does reflect the public concern at the time that the CIA might become a secret police agency, an American "Gestapo," spying on opponents of the government in power. <sup>10</sup> Moreover, "internal security functions" are distinguished in the statutory prohibition from law enforcement and police powers, suggesting that the "functions" limitation covered intelligence investigation and not merely arrest or prosecution.

Thus, one purpose of the section was to prevent this new foreign intelligence organization from investigating American citizens.

## 3. Questions Raised by CHAOS

When does CIA collection and use of information about Americans exceed its authority to engage in foreign intelligence work, including counterintelligence? And when does it violate the specific ban on the CIA performing internal security functions?

A review of CHAOS reveals the blurred line between permissible foreign counterintelligence and prohibited internal security. Traditionally, the concept of internal security has not been confined to groups which were considered purely domestic. It has included inquiry into the foreign connections of domestic groups considered to pose an internal security threat.

Indeed, the preeminent "internal security" concern of the late 1940s was Communist subversion of the Government aided or directed from abroad. <sup>11</sup>

Therefore, if the CIA's counterintelligence authority is broadly construed to include examining ties between domestic groups and foreign elements, there is a question whether such authority is consistent with the specific prohibition on internal security functions.

The CHAOS program presents these questions with respect to both the overall mission undertaken by the CIA, and the specific tasks which the CIA performed:

-- CIA received and maintained considerable information about the domestic activities and relationships of American individuals and organizations. Much of that material was collected in the first instance by the FBI, police or other confidential sources, who turned it over to the CIA. The Agency maintained it in files on those persons and groups and made use of it the CHAOS operation.

-- The CIA prepared several analyses of student dissent in America and other reports which included material of domestic protest activities.

-- Undercover agents of the CHAOS program, while in the United States in preparation for overseas assignment or between assignments, provided substantial information about domestic activities of dissident groups, as well as information providing leads about possible foreign ties.

-- In a few instances the CIA agents appear to have been encouraged to participate in specific protest activity or to obtain particular domestic information.

Even if the basic mission of CHAOS was appropriate for the CIA, the question remains whether the way in which the CIA implemented that mission should be permitted.

Another aspect of this issue is the degree to which the CIA assisted the internal security operations of the FBI. Much of the CHAOS arrangements for coverage of Americans abroad was in response to specific FBI requests. The CIA also gave the FBI considerable information about the activities of Americans here, not limited to evidence of crimes, which had been developed in the course of the CHAOS operation.

Thus, a separate question is the point at which CIA assistance to the FBI's internal security investigations may constitute participation in a forbidden function.

Finally CHAOS raises a fundamental question about the kind of intelligence investigations, by any Government agency, which are acceptable to a free society. Should investigating foreign control of domestic dissent be done through screening Americans to see if their international travel or contacts reflect hostile foreign direction? Or should the Government be able to investigate the "foreign connections" of Americans only when substantial indication of illegal conspiracy is acquired in the course of counterintelligence work against the hostile foreign elements themselves?

#### *4. Questions Raised by the Office of Security Programs*

The questions raised by the Office of Security activities are the scope and limits of the Director's authority to protect intelligence sources and methods.

Does that authority include a general mission to protect the physical security of the CIA against violent domestic disorder?

What are the Director's responsibilities and legal authority to safeguard intelligence activities through investigations of personnel from other government agencies, or private citizens? What is his proper role with respect to CIA employees? And what techniques may he employ to detect and counter those threats which are within that authority?

In addition, the "sources and methods" authority under the 1947 Act must be considered in conjunction with the restraints expressly imposed on the CIA. Is the Director's power to protect sources and methods limited by the denial to the CIA of law enforcement and police powers and internal security functions?

The MERRIMAC and RESISTANCE programs also raise the question of the relationship between the Director's authority to protect sources and the prohibition on internal security functions. Neither were limited to gathering information of imminent demonstrations which threatened the CIA. Both programs involved collection of intelligence on dissident activity generally and both suggest that the "protection of sources and methods," read broadly, can become a mandate to scour the society for possible threats to the CIA, thereby rendering meaningless the ban on performing internal security functions.

## **PART II: HISTORY AND OPERATION OF CHAOS**

### *A. Background*

Operation CHAOS was not an intelligence mission sought by the CIA. Presidents Johnson and Nixon pressed the Director of CIA, Richard Helms, to determine the extent of hostile foreign influence on domestic unrest among students, opponents of the Vietnam war, minorities and the "New Left." By all the testimony and available evidence, it was this pressure which led to the creation and expansion of a special office in the CIA to coordinate the efforts to respond.

The decisions to initiate the CHAOS program and, subsequently, to expand the effort, were made in the context of increasing domestic unrest in the United States.

The nonviolent policy of civil rights efforts in the first half of the Sixties was being challenged by militant "Black Power" advocates urging confrontation with the white majority. On July 29, 1967, following serious disturbances in the Nation's cities, which comprised the worst period of racial riots in American history, President Johnson had established the National Commission on Civil Disorders (the "Kerner Commission") to investigate their origins. 12

Organized demonstrations and international conferences protesting America's role in the Vietnamese war also became an increasing concern to the Government.

In April 1967, there were large antiwar demonstrations in San Francisco and New York. In May the International War Crimes Trials, sponsored by Bertrand Russell in regard to U.S. activity in Vietnam, began in Stockholm. In July 1967, there was a major international conference of peace groups in Stockholm. In September, a wide range of American activists in domestic peace groups, student and black organizations met with groups from other countries who were opposed to American involvement in Vietnam, including North Vietnam, in Bratislava, Czechoslovakia. Finally, on October 21, 1967, there were large scale protest activities in Washington, including a march on the Pentagon, and worldwide demonstrations of support for opposition to continued American involvement in Vietnam.

Government concern about domestic unrest continued throughout 1968, with riots following the death of Martin Luther King in April, continuing student violence at campuses from coast to coast, stepped-up antiwar protest activity, and violence at the National Democratic Party Convention in Chicago.

During the remaining five years for which the CHAOS program lasted, 1969-1974, racial disorders diminished but the intensity of antiwar demonstration and student violence increased and then subsided after 1972.

### *B. Authorization of CHAOS*

Against this backdrop of unrest, the CIA's systematic investigation of possible foreign involvement began with two assignments made by Director Richard Helms in the late summer and fall of 1967.

In August, Helms established a program to coordinate and improve the CIA's coverage abroad of American dissidents. Helms does not claim a specific presidential request for a new CIA program in this area. Rather, Helms testified that he was acting in general response to President Johnson's insistent interest in the extent of foreign influence on domestic dissidents. Helms testified that:

President Johnson was after this all the time. I don't recall any specific instructions in writing from his staff, particularly, but this was something that came up almost daily and weekly. 13

Helms summarized his response to the presidential overtures:

But what I am attempting to say is that when a President keeps asking if there is any information, "how are you getting along with your examination," "have you picked up any more information on these subjects," it isn't a direct order to do something, but it seems to me it behooves the Director of Central Intelligence to find some way to improve his performance, or improve his Agency's performance. And the setting up of this unit was what I conceived to be a proper action in an effort to see if we couldn't improve the Agency's performance in this general field. 14

The Deputy Director of Plans, Thomas Karamessines also testified to his understanding of the White House pressures precipitating CHAOS. 15

As a result, Helms sought to have the CIA try to pull together all the pertinent information already being received and to use the resources available for better intelligence coverage.

Within CIA, there is no written directive from Helms to Karamessines, his deputy for the Plans Directorate, to establish the CHAOS program. 16 The first recorded authorization is an August 15, 1967 memorandum from Karamessines to James Angleton, Chief of the Counterintelligence Staff.

Karamessines' memorandum refers to discussions earlier that day among himself, Angleton and Helms and asks Angleton to designate a staff officer to run the program. The memorandum contemplated the conduct of operations to collect intelligence. It also acknowledged the program's "domestic counterintelligence aspects," and the need for dissemination of the information obtained to domestic agencies. The memorandum requested:

- b. The exclusive briefing of specific division chiefs and certain selected officers in each division, on the aims and objectives of this intelligence collection program with definite domestic counterintelligence aspects.
- c. The establishment of some sort of system by Dick Ober (or whatever officer you select) for the orderly coordination of the operations to be conducted, with the responsibility for the actual conduct of the operations vested in the specific area divisions.
- d. The identification of a limited dissemination procedure which will afford these activities high operational security while at the same time getting the information to the appropriate departments and agencies which have the responsibility domestically. 17

Angleton chose Richard Ober to head what became the Special Operations Group within the Counterintelligence Staff. Ober had already been involved in a more limited inquiry into possible foreign links to American dissidents.

In the beginning of 1967, Ramparts magazine had published an expose of various CIA activities and relationships with private institutions in America. Ober had been investigating the possibility of ties between foreign intelligence services and persons associated with the magazine, or their friends. He had begun to build a computerized file on dissident activists in America with some connection to the Ramparts organization. By the time he was given the more general CHAOS assignment in August 1967, Ober estimates he had indexed several hundred Americans and had created perhaps fifty actual files. However, there was no indication that the Ramparts inquiry was expected to lead to a larger investigation of American protest. 18

Ober first sought to pull together the Agency's holdings and information readily available here and abroad which would be pertinent to his assigned inquiry.

The scope of that inquiry had not been defined in Karamessines' August 15 memorandum, which was simply entitled: "Overseas Coverage of Subversive Student and Related Matters." The first direct statement of the target was included in an August 31 cable to the field describing the collection requirement:

In light of recent and current events which of major interest and deep concern to highest levels here, Headquarters has established program for keeping tabs on radical students and U.S. Negro expatriates as well as travelers passing through certain select areas abroad. Objective is to find out extent to which Soviets, Chicoms and Cubans are exploiting our domestic problems in terms of espionage and subversion. High sensitivity is obvious. 19

The cable also advised that a special reporting channel had been established with a cryptonym limiting distribution at Headquarters of any traffic. The recipient chiefs of station were told to control knowledge of the program and the information collected and to destroy the cable itself after reading. Cable distribution was to be limited at Headquarters to the Division Chiefs controlling the station or base involved, Angleton and Karamessines or his deputy. 20

### *C. The November 1967 Peace Movement Study*

CIA's inquiry into foreign ties of American dissidents intensified at the end of October 1967. This time, responding to a specific White House request, Helms directed CIA to produce a study on the "International Connections of the U.S. Peace Movement." 21 Presumably, this request was precipitated by the October 21 demonstrations and arrests at the Pentagon and the worldwide antiwar demonstrations on the same day.

Ober testified that the scope of his own operation soon came to include antiwar activists, as well as student radicals and black nationalists. But it was his participation in the October CIA study for the President which firmly set Vietnam protest as a major target of the CHAOS office's efforts. 22

The study was written by the Intelligence Directorate of the Agency. 23 Ober coordinated the Plans Directorate contribution and the receipt of material from the FBI and other Federal agencies. 24

Both the "peace movement" and "foreign connections" were broadly defined. According to Ober's memorandum of his meeting with the Directorate of Intelligence officers in charge of the study, American organizations "affiliated with the overall Peace Movement" as well as peace organizations themselves, were to be included. "Foreign connections" were defined to include associations with the American Communist Party. 25

With the approval of Angleton, Karamessines and Helms, Ober sent a second reporting requirement to the stations, this time asking for information on foreign connections to the peace movement. The information was to be handled in another restricted channel separate from the one provided for responses to the August inquiry on radical students and black activists. The November 1967, cable to multiple addresses told the stations:

Headquarters is participating in high level interdepartmental survey of international connections of anti-Vietnam war-movement in U.S. For purposes this study, we are attempting to establish nature and extent of illegal and subversive connections that may exist between US organizations or activists involved and communist, communist front or other anti-American and foreign elements abroad. *Such connections might range from casual contacts based merely on mutual interest to closely controlled channels for party directives.* [Emphasis added.] 26

Since Director Helms had asked for the report within two weeks, the stations were asked only to furnish information on hand or readily available. 27

The conclusions of the review were essentially negative. The study noted that the diversity and loose structure of the peace movement in America permitted the more active leaders to coordinate some of the activities on an international scale and it cited the simultaneous demonstrations on October 21, both here and abroad. But the CIA found little evidence of actual foreign direction or control, or evidence that any international dialogue went beyond consultation and coordination. 28

However, these conclusions were explicitly tentative. Director Helms' letter of transmittal to the President states reservations about the adequacy of the intelligence community's coverage of the target:

From this intimate review of the bulk of the material on hand in Washington, we conclude that there are significant holes in the story. We lack information on certain aspects of the movement which could only be met by levying requirements on the FBI.

First we found little or no information on the financing of the principal peace movement groups. Specifically, we were unable to uncover any sources of funds for the costly travel schedules of prominent peace movement coordinators, many of whom are on the wing almost constantly.

Second we could find no evidence of any contact between the most prominent peace movement leaders and foreign embassies, either in the U.S. or abroad. Of course, there may not be any such contact, but on the other hand, we are woefully short of information on the day-to-day activities and itineraries of these men.

Finally, there is little information available about radical peace movement groups on U.S. college campuses. These groups are, of course, highly mobile and sometimes even difficult to identify, but their more prominent leaders are certainly visible and active enough for monitoring. 29

#### *D. Operation of the CHAOS Program and Related CIA Projects*

The assignment of responsibility to Ober in August 1967 and the CIA's study of the peace movement in November, set the initial pattern of the Agency's inquiry into foreign powers and American dissidents.

Ober's office served as the focal point and clearinghouse for Agency efforts on this question, and along with the analysts in the Intelligence Directorate, provided the expertise for Director Helms to respond to the White House interest.

As it developed, the CHAOS mission included three related tasks:

- (1) to coordinate and expand CIA's own collection of relevant information and to obtain pertinent material from other government agencies;
- (2) to process, control and retain the information as it became available;
- (3) to provide the results for dissemination by CIA to the White House, other high level offices and interested agencies.

At the same time, CHAOS performed a second role. It serviced the FBI's own requirements for information about foreign contacts and travel of Americans. Ober regarded responding to the Bureau's requests for coverage of Americans abroad as an accepted part of his responsibilities. 30

### *1. Gathering Information*

The two main sources of information received by CHAOS were the CIA's stations abroad, and the FBI at home. For example, the CIA received all of the FBI's reports on the American peace movement. 31

The material received from the FBI included information about foreign travel, contacts, and communications of Americans. Much of it was simply information about individual activists or groups and their domestic activities. In many instances, FBI reports would contain both kinds of information. 32

By June 1970, these FBI reports were pouring into CHAOS at the rate of over 1,000 a month. 33

The background information on individuals provided by the FBI served as a "data base" of names, and intelligence about the associations between different dissident elements. This background information could be used to develop leads, and to understand the significance of reports directly relating to foreign contacts. 34

The other basic source of information was the reporting from the CIA's overseas stations. Using the special reporting channel, the stations supplied reports from their own assets and also supplied whatever CHAOS information was obtained from the liaison with local intelligence services.

On June 25, 1968, a message was sent to various European stations advising that recent high level discussions had underscored the need for increasing the coverage of American black, student and antiwar dissidents abroad. The stations were asked to engage friendly foreign intelligence services more fully in that effort. Headquarters said that foreign intelligence services covering their own dissidents might be able to provide more information on the foreign contacts of American citizens. 35

This cable was followed shortly by another multi-station message which repeated the general reporting requirement as follows:

As many of you know, Headquarters is engaged in a sensitive high priority program concerning foreign contacts with US individuals and organizations of the "Radical Left." Included in this category are radical students, antiwar activists, draft resisters and deserters, black nationalists, anarchists and assorted "New Leftists." The objective is to discover the extent to which Soviets, ChiComs, Cubans and other Communist countries are exploiting our domestic problems in terms of subversion and espionage. Of particular interest is any evidence of foreign direction, control, training or funding. 36

The cable also directed even tighter control over the reporting procedures. The two previously separate channels for reporting information on antiwar and on black or student activists were combined into the single restricted handling cryptonym "CHAOS." 37

Information supplied CHAOS by the stations was of two types. First there was the general outstanding requirement for any intelligence pertinent to the CHAOS mission as defined in the basic cable instructions. Second, the stations were asked to respond to specific inquiries. Such requests from Ober might relate to an upcoming international conference or the activities of particular foreign person suspected of being involved in efforts to influence American unrest. Frequently these special inquiries were triggered by travel of particular Americans to the area and a CHAOS request for coverage of their activities and contacts. 38

### *2. Processing, Storage and Control of CHAOS Information*

As the material flowed into CHAOS from stations, domestic CIA components, and the FBI, it was analyzed, indexed and filed. Every name of individuals and organizations was extracted and referenced in the central CHAOS computer system known as "HYDRA." This system served as the reference index to all of the office's holdings. 39

If a report on one individual referred to others, their names would be indexed also. Any information which was received about an individual for whom CHAOS maintained a file, went into his file. 40 There was no winnowing of the material before its entry into the permanent record system of CHAOS. 41

Once the information was indexed and filed, the HYDRA computer system permitted its prompt retrieval. By checking a name in HYDRA, one could find all the cables, memoranda or other documents referring to that individual, whether he was the subject of the material or merely mentioned in passing. 42 It should be emphasized, however, that CHAOS did not maintain a separate file on every American whose name was indexed in the computer. In many instances the computer would refer a searcher to the file of another person, or some other CHAOS holdings in which the subject individual was mentioned, but there was not enough material to open a file. Thus, there were an estimated 300,000 Americans indexed in HYDRA, but only an estimated 7,500 Americans for whom actual files were maintained.

The tight control maintained over communication of CHAOS information from the CIA's stations was continued at Headquarters. The special reporting channel and restricted handling assured that the cable traffic would be seen only by a few high-level officials in the area divisions of the Plans Directorate, Karamessines, Angleton and their deputies or designees. 44

Tight security was maintained over the information deemed most sensitive, even within the CHAOS office itself. The information in the HYDRA computer system was compartmented into several layers of increasing sensitivity and correspondingly more restricted access. Only CHAOS officers cleared for access to the more restricted streams of information could retrieve the items on an individual which involved sensitive sources and methods or other tightly held intelligence. 45

### *3. Reporting by CIA*

CIA disseminated the information gathered on foreign ties of American dissidents in three forms: major studies prepared for the President; special reports for the White House and other senior officials on individual items of information; and routine reporting to the FBI.

(a) Studies. -- On November 20, 1967, at the request of Director Helms, the CIA began an investigation of "Demonstration Techniques" both here and abroad. 46

On December 21, 1967, Helms sent President Johnson a followup review of the November Study on the United States Peace Movement. 47

On January 5, 1968, Helms sent to the White House an interim study of "Student Dissent and Its Techniques in the U.S.," "which is part of our continuing examination of this general matter. It is an effort to identify the locus of student dissent and how widespread it is." 48 The forty-page paper dealt exclusively with American student activists and the bulk of it contained much the same kind of material on the Students for a Democratic Society (SDS) that formed the chapter of "Restless Youth," CIA produced a year later.

"Student Dissent" briefly noted that Communist front groups did not control the student organizations, and that American student groups had not forged significant links with foreign radicals. 49 The report concentrated on domestic matters and analyzed the makeup, strength, motivation, strategy and views of the American students. It concluded, for example, that

Except on the issue of selective service, the student community appears generally to support the Administration more strongly than the population as a whole. 50

The last analytical study prepared for President Johnson, "Restless Youth," was finished in the fall of 1968. "Restless Youth" is a detailed sociological and political analysis of student unrest throughout the world. 51 It found common sources of alienation and hostility to established institutions in many countries, but concluded that, in each nation, student dissent was essentially homegrown and not stimulated by an international conspiracy. 52

The version sent to the White House included a section on the SDS in the United States. Helms cover memorandum to the President stated:

Some time ago you requested that I make occasional roundup reports on youth and student movements worldwide. Responding to this request and guided by comments and suggestions from Walt Rostow, we have prepared the attached study. You will, of course, be aware of the peculiar sensitivity which attached to the fact that CIA has prepared a report on student activities both here and abroad. 53

Helms did not testify that the White House had requested the section on domestic student protest. Rather, he said that since the White House had wanted a study of possible international orchestration of protest activity, it did not seem sensible to leave out the American scene, so it was included. 54

The section on the United States was drawn largely from public sources. An updated, unabridged version was sent to Henry Kissinger for President Nixon in February of the following year. Helms stated his concern more explicitly in the transmittal letter for that version:

Herewith is a survey of student dissidence worldwide as requested by the President. In an effort to round out our discussion of this subject, we have included a section on American students. This is an area not within the charter of this Agency, so I need not emphasize how extremely sensitive this makes the paper. Should anyone learn of its existence, it would prove most embarrassing for all concerned. 55

This first series of studies for the White House were all prepared by the CIA's Intelligence Directorate, with continuing assistance from CHAOS in providing material from overseas stations, other CIA components, and the FBI. 56 The CHAOS office, itself, only began to produce the studies itself following further White House requests in the summer of 1969, discussed below. Copies of the material collected for the 1967 and 1968 studies on the Peace movement and on student dissent, however, were also indexed and retained by the CHAOS operation for its own files.

(b) Special Reports. -- In addition to the formal studies CIA prepared for the President, Ober prepared occasional reports, so-called "M," memoranda, of particularly sensitive or timely intelligence items for high level distribution to the White House, the Attorney General, Secretary of State, and similar officials. During the entire history of CHAOS there were 34 such M memoranda.

The content of M memoranda varied. They included, for example, information that a foreign government was making a grant to a dissident protest group in America, information regarding a reported kidnapping and murder plot against high government

officials; and information about speeches made by radical leaders while abroad. Essentially these were one-shot reports about some contact or cooperation between foreign elements and American radicals, rather than an analysis of such links. 57

One or two of the earliest memoranda did deal with plans for domestic protests.

In connection with the anticipated demonstrations in Washington at the end of October 1967, Helms had requested all available information to be furnished the administration:

In any event, I want to be sure that any information you gentlemen acquire through whatever channels, is promptly passed to appropriate Federal authorities, including the White House, the Secret Service, the FBI, and anyone else who counts. I am under the impression that this "do" may turn out to be a humdinger, and I want to insure that we have clean hands in passing along any information that we *turn up in the normal course of business.* [Emphasis added.] 58

On October 10, the CIA distributed a memorandum to the White House, recounting "unevaluated information" about alleged plans for racial disturbances at the time of the October 21 demonstrations and the alleged involvement of a particular black leader. 59

Richard Ober, at the request of Director Helms, also provided the Kerner Commission with a series of 26 reports. The Executive Order establishing the Commission had directed all agencies, to the extent permitted by law, to provide information and otherwise assist its efforts. 60 The material supplied by the CIA primarily consisted of reports on overseas travel and statements by American black leaders and allegations of foreign efforts to exacerbate racial unrest in America. However, they included some of the early memoranda on reported plans for domestic disorders, which appear to be from domestic sources and to have little relevance to the question of foreign links. 61

(c) Dissemination to the FBI. -- By far the main tangible product of CHAOS was extensive dissemination of raw reports to the FBI. Information deemed of interest to the Bureau was put in memorandum form and sent through special channels directly from the CHAOS office to the FBI. In many instances it was information about Americans which CHAOS had sought in response to a specific FBI request. Most typically, the Bureau would notify Ober that it wished coverage of Americans whose overseas travel it had learned about in advance. 62

In addition, CHAOS obtained information pursuant to its general collection requirements from stations abroad, and wholly domestic information about dissident activities obtained in the course of its operations. This, too, was disseminated to the FBI, if it was deemed pertinent to the Bureau's concerns about such Americans. Ober testified that he regarded any names in reports sent to CHAOS by the FBI as a standing requirement from the FBI for information which CHAOS obtained about those persons. 63

#### *E. 1969 Expansion of Chaos*

The CHAOS operation was expanded and given renewed impetus in 1969, when the new Nixon administration expressed the same concern about foreign influence on domestic unrest as had its predecessors.

##### *1. The Review of CHAOS for the President*

On June 20, 1969, Tom Huston, Staff Assistant to the President, asked the CIA for a review of its progress:

The President has directed that a report on foreign Communist support of revolutionary protest movements in this country be prepared for his study .... "Support" should be liberally construed to include all activities by foreign Communists designed to encourage or assist revolutionary protest movements in the United States.

On the basis of earlier reports submitted to the President on a more limited aspect of this problem, it appears that our present intelligence collection capabilities in this area may be inadequate. 64

Huston asked for both a substantive review and a survey of the effectiveness of resources the CIA was employing, and what gaps might exist "because of either inadequate resources or a low priority of attention." 65 This study was the first one actually produced by the CHAOS office.

The review was completed within 10 days. Deputy Director Cushman summarized the results in his letter of transmittal:

2. The information collected by this Agency provides evidence of only a very limited amount of foreign Communist assistance to revolutionary protest movements in the United States. There is very little reporting on Communist assistance in the form of funding or training and no evidence of Communist direction or control of any United States revolutionary protest movement. The bulk of our information illustrates Communist encouragement of these movements through propaganda methods.

3. Since the summer of 1967, this Agency has been attempting to determine through its sources abroad, whether or not there is any significant Communist direction or assistance to revolutionary groups in the United States. We have been collaborating closely in this effort with the Federal Bureau of Investigation and disseminating information to it. Existing Agency collection resources are being

employed wherever feasible and new sources are being sought through independent means as well as with the assistance of foreign intelligence services and the Federal Bureau of Investigation. Of course, the Katzenbach guidelines have inhibited our access to certain persons who might have information on efforts by Communist intelligence services to exploit revolutionary groups in the United States. 66

Two additional studies were prepared by CHAOS, which were essentially revisions of this 1969 review. In 1970, as part of the CIA contribution to the work of the Interdepartmental Committee on Intelligence which led to the so-called "Huston Plan," CHAOS prepared an update of the 1969 study. 67 A similar revised version was prepared in 1971.

The 1971 report, "Definition and Assessment of Existing Internal Security Threat -- Foreign," concluded that hostile foreign governments were committed to exploiting United States unrest as much as possible. But, apart from a few isolated instances, the study concluded that the main "assistance" was still in the form of exhortation and encouragement through international conferences and statements of support by foreign figures. The summary of foreign Communist influence on the New Left and radical student groups stated:

There is no evidence, based on available information and sources, that foreign governments, organizations, or intelligence services now control U.S. New Left movements and/or are capable at the present time of directing these movements for the purpose of instigating open insurrection or disorders; for initiating and supporting terrorist or sabotage activities; or for fomenting unrest and subversion in the United States Armed Forces, among government employees, or in labor unions, colleges and universities, and mass media.

In summary, foreign funding, training, propaganda, and other support does not now play a major role in the U.S. New Left. International fronts and conferences help to promote New Left causes, but at present the U.S. New Left is basically self-sufficient and moves under its own impetus. 68

The conclusions with regard to black activists were the same.

Following the Huston memorandum of June 1969, questioning the adequacy of the CIA's efforts, the CHAOS program was expanded to develop better sources of information, and an improved capability to process it.

In September, Helms issued a memorandum regarding CHAOS to the heads of the Directorates. Helms told the Deputy Directors that he had:

recently reviewed the Agency's efforts to monitor those international activities of radicals and black militants which may affect the national security. I believe that we have the proper approach in discharging this sensitive responsibility, while strictly observing the statutory and de facto proscriptions on Agency domestic involvements. 69

The memo acknowledged overlapping interests of several CIA components in this area but made clear that Ober had the principal operational responsibility for coordinating collection efforts. Helms specifically requested that Ober be provided with trained analysts to process a large backlog of undigested data and skilled operations officers. 70

In the fall of 1969, CHAOS began to develop two additional programs to increase its sources of information. The first was a domestic collection program undertaken by the Domestic Contact Service. 71 In the second, CHAOS developed its own agents, who were trained in the United States and then sent on reporting missions abroad.

## *2. Domestic Contact Service*

In early 1969, Domestic Contact Service (DCS) was receiving an increasing volume of field reports on Black militant activity. Some of the material related to possible foreign association and had been routinely sent in by the field offices. On March 10, 1969, in order to channel and control this material, DCS opened a new case on "Activities of Black Militants" here and abroad. 72

Because of references to foreign contacts, DCS sent some of the reports to the Counterintelligence Staff and they were routed to Ober, who sought additional material. 73

In October 1969, Ober formally briefed DCS officials. A subsequent memorandum to DCS field offices, jointly drafted by DCS and CHAOS representatives, expanded projects to the same five subject categories used by CHAOS: black militants; radical youth groups; radical underground press; antiwar groups; and deserter/draft resister movements. The directive advised that:

CI's interest is primarily to ascertain the details, if any, of any foreign involvement/support/guidance/training/funding/or exploitation of above groups and movements, particularly through coverage of foreign travel, contacts and activities of the Americans involved. 74

Over 200 reports and other items were supplied by DCS to CHAOS between 1969 and 1973. Much of the material included information relating to foreign contacts of Americans; some contained "operational leads" to potential sources who might be willing to collect information when they went overseas. Other items consisted largely of information about domestic organization and activity. 75

DCS officials thought they were expected to supply domestic information about dissidents for use as background data, as well as any leads to foreign connections. 76

There was no express reference to a domestic information collection requirement in the directive sent to DCS field offices in December 1969. But the Deputy Chief of CHAOS testified that his office had indicated their appreciation to DCS for such material, which helped build the CHAOS data base. 77

Moreover, whatever the formal written requirements, CHAOS made specific requests for domestic materials and, in other instances, made follow up requests based on items which DCS field offices had sent in.

For example, CHAOS asked the Chicago Field Office for information on the "28 co-conspirators" of 12 SDS members who had been locally indicted for the Weathermen riots in Chicago the previous fall. This was supplied, as well as subsequent coverage of the legal proceedings. 78

Another CHAOS request resulted in a DCS field office obtaining from confidential sources a large report prepared by a state investigating commission on radical demonstrations in that state. 79

The CHAOS office thanked DCS for one early report on the domestic political activities of a black leader and asked for any additional information available. 80

In the beginning of 1971, however, after expressions of uncertainty about the program from the field, DCS officials sought a revised written requirement stating both a primary interest in foreign-related information and a secondary CHAOS interest in background information of a domestic nature.

DCS claimed this was merely intended to confirm the prior practice based on oral requests from CHAOS. 81

The draft directive stated that: ... The second type of information concerns the activities of US radical groups but does not contain any obvious foreign implications. Such information is considered of primary interest to the FBI under its domestic security charter. DCS however has been directed to collect both types of information, with the emphasis on that pertaining to foreign involvement. 82

Ober refused to approve the new directive. As a result, DCS closed the old case, and opened a new one under a narrower directive. DCS reporting was to be "focused exclusively upon the collection of information suggesting *foreign involvement* in U.S. radical activities." [Emphasis in original.] Purely domestic information was to be passed locally to the FBI. 83

Though nowhere near as voluminous as domestic reports received by CHAOS from the FBI, the DCS material was one of the main additional sources of "domestic intelligence" in the CHAOS files.

### 3. CHAOS Agents

The other main source of "domestic intelligence" about Americans which went into CHAOS' files came from agents being run by the CHAOS project and a few from a related foreign intelligence operation run in close coordination with CHAOS.

The effort to develop assets targeted fully on CHAOS information began right after the White House review of the Agency's CHAOS effort in the fall of 1969. Previously, overseas reporting had come from assets already working for the various stations on other assignments. Those station assets continued to supply CHAOS information even after Ober obtained his own agent program.

Over 40 potential recruits were evaluated. About half of these were referred by the FBI, for whom they had already worked. Most of those referred by the FBI ultimately were used on a single assignment. Seven recruits developed unilaterally by the CIA also were used as CHAOS agents. 84

CHAOS agents participated in radical activity here as part of their preparation for assignment overseas. In the process, they supplied detailed information on domestic activities of Americans.

While here, the agents spent at least several weeks, and, in some cases, much longer, immersed in the radical community. This not only enhanced their radical credentials and increased their familiarity with persons and groups they might be reporting on from abroad. It also afforded their case officer with an opportunity to train them, assess their progress, test the possibility they were a plant, and evaluate how CHAOS could best use them abroad. 85 This was done by extensive debriefing of the agents on a periodic basis. 86

According to Marcules, the agents in training were asked to report to him in detail on their activities, persons with whom they had been meeting and so forth. 87

In all of these instances, the information about individuals in dissident groups, the plans and policies of the organizations and other domestic information, as well as any leads to possible foreign connections went not only into the case file of the agent in training but also into the general CHAOS files on those individuals and groups.

### 4. Project 2

A separate intelligence project which also involved the use of radical credentials by American agents, furnished CHAOS with additional information about American dissidents. "Project 2" was developed in 1969 and implemented in 1970, by a particular area division at CIA. 88 It was designed ultimately to penetrate certain foreign intelligence targets through these agents, or to have them spot others who could accomplish such infiltration.

Most of the assets developed their leftist coloration by entering universities in the United States after an initial period of basic agent training. When in school, they participated in the radical community. While preparing for their future assignments, the agents filed detailed reports and were also debriefed by their case officer. In the process, they provided considerable information on their associates, dissident organizations, demonstration plans and sometimes personal information. 89 One asset submitted a 60 page report for a three week period which included detailed information on demonstrations, group meetings, and general accounts of such activity as Women's Liberation efforts in the area. 90

From the outset, the project's potential usefulness to CHAOS was recognized. All of the agent reports and debriefing contact reports were provided to CHAOS for its files. 91

Once abroad on their basic intelligence mission, moreover, the Project 2 agents were explicitly directed to acquire CHAOS information as well. One memorandum regarding the overseas assignment of a Project 2 agent, stated:

His mission will be to spot, assess and develop leftists in the Maoist spectrum.... He will also report on CHAOS developments in [the target country]. 92

One Project 2 agent became affiliated with an American dissident group in the foreign country which was directing its activities at personnel of American bases in that area. He began to report on both the native "radical left and the American radical left." 93

#### *5. Provision to CHAOS of NSA and Mail Intercepts*

When CHAOS was in full scale operation, it also was receiving information from the CIA's mail intercept program and the interception of international communications by the National Security Agency.

The CIA mail project was run by another unit within the Counterintelligence Staff. CHAOS supplied that office with a list of 41 individuals and organizations for specific inclusion in the so-called "watch list" used as one basis for intercepting international mail. 94 The names provided by CHAOS were to be sent to the point of interception in the field, and not merely to be used to screen mail which had independently been selected and had already arrived at the project office in Headquarters. 95

CHAOS also supplied lists of individuals and organizations to the National Security Agency for inclusion in its "watch list." In addition, CHAOS had access to more general distributions of communications intelligence involving Americans which were received by the CIA from NSA. 96

#### *F. Reduction, Limitation and Termination of CHAOS*

##### *1. Reduced Reporting Priority*

With the decline of student demonstrations and antiwar activity in the latter part of 1972, the intensity of the CHAOS effort declined. A cable to several stations advised that general reporting of information regarding foreign contacts of the New Left was no longer a high priority, although routine coverage was to be maintained in order to preserve a "residual counteraction capability for possible future use." The cable noted that a high priority would continue with regard to foreign connections of New Left individuals or groups advocating or engaging in violence. 97

##### *2. Reaction to Inspector General's Survey*

At the end of 1972, the CHAOS program was subject to a high level review. In the fall of 1972, an Inspector General survey of overseas stations for a particular region raised questions about CHAOS. The survey team was not permitted to review specific CHAOS files and operations, either in the field or at Headquarters. However, questions voiced to the team by station personnel in several countries resulted in a separate memorandum from the Inspector General, William Broe to the Executive Director. Broe summarized the policy concerns expressed about CHAOS:

Even though there is a general belief that CIA involvement is directed primarily at foreign manipulation and subversive exploitation of U.S. citizens, we also encountered general concern over what appeared to constitute a monitoring of the political views and activities of Americans not known to be or suspected of being involved in espionage. Occasionally, stations were asked to report on the whereabouts and activities of prominent persons ... *whose comings and goings were not only in the public domain but for whom allegations of subversion seemed sufficiently nebulous to raise renewed doubts as to the nature and legitimacy of the MHCHAOS program.* 98 [Emphasis added.]

On a practical level, the stations had complained about the burden of seeking information from the liaison service on behalf of the FBI when the local or nearby FBI representative had also requested the same information from the liaison directly. 99

Broe's memorandum caused a review of the CHAOS operation by Karamessines, Helms, William Colby, who was then the Executive Director/Comptroller of the CIA, and other senior officials. In addition to improving coordination with the FBI and briefing overseas officers with a misunderstanding of CHAOS, Helms also directed that thereafter:

A clear priority is to be given in this general field to the subject of terrorism. This should bring about a reduction in the intensity of attention to political dissidents in the United States not, or not apt to be, involved in terrorism. On a secondary level, continued discreet coverage will be maintained of counterintelligence matters, including the possible manipulation of American citizens by foreign intelligence services or their actions abroad of counterintelligence interest. 100

Ober had already taken on the additional duties of coordinating the CIA's efforts to combat international terrorism the previous summer. 101 In 1973, the CHAOS program was transferred from the Counterintelligence Staff to the newly formed Operations Staff within the Plans Directorate.

On May 9, 1973, CIA Director James Schlesinger requested an inventory of all "questionable activities" in which the CIA might have engaged. One such activity on which reports were sent to the Director was CHAOS. On August 29, 1973, William Colby, who had succeeded Schlesinger as Director, issued a series of instructions regarding the questioned programs and activities. His directive in regard to CHAOS limited the CIA's own operations to focus more narrowly on collecting information about foreign nationals and organizations, rather than the Americans with whom they might be in contact:

#### MEMORANDUM

*Subject: CHAOS*

CHAOS is restricted to the collection abroad of information on foreign activities related to domestic matters. *CIA will focus clearly on the foreign organizations and individuals involved and only incidentally on their American contacts. As a consequence, CIA will not take on the primary responsibility for following Americans abroad, although CIA can accept a request by the FBI to be passed to an appropriate liaison service in a foreign country for the surveillance of such an American and the transmission of the results back to the FBI.* It must be plainly demonstrated in each such transmission that the CIA is merely a channel of communication between the FBI and the appropriate foreign service and is not to be directly engaged in the surveillance or other action against the American involved. [Emphasis added.] 102

#### 3. Termination of CHAOS

CHAOS was terminated as a specified collection program in March 5, 1974, by order of Director Colby. The cable announcing this to the stations also stated guidelines for future activity involving Americans:

1. This message is to notify you of the termination of the CHAOS program and to provide guidelines under which HQS has been operating for some time on certain activities formerly included in CHAOS.

2. Guidelines: All collection takes place abroad. Collection is restricted to information on foreign activities related to domestic matters. CIA will focus clearly on the foreign organizations and individuals involved and only incidentally on their American contacts. In doing this, following will apply:

A. Whenever information is uncovered as a byproduct result of CIA foreign-targeted intelligence or counterintelligence operations abroad which makes Americans abroad suspect for security or counterintelligence reasons, the information will be reported by CIA in the following manner.

(1) With respect to private American citizens abroad, such information will be reported to the FBI.

(2) With respect to official U.S. personnel abroad, such information will be reported to their parent agency's security authorities, and to the FBI if appropriate.

In both such cases, under this sub-paragraph, specific CIA operations will not be mounted against such individuals; CIA responsibilities thereafter will be restricted to reporting any further intelligence or counterintelligence aspects of the specific case which come to CIA attention as a by-product of its continuing foreign targeted operational activity. If the FBI, on the basis of the receipt of the CIA information, however, specifically requests further information on terrorist or counterintelligence matters relating to the private American citizens involved in the specific case, CIA will respond according to the guidance in subparagraph B below. In performing these functions CIA will be discharging its responsibilities for primary foreign counterintelligence collection abroad, particularly as assigned it under paragraphs 1B and 3B of NSCID 5.

B. CIA may respond to written requests by the FBI for clandestine collection abroad by CIA of information on foreign terrorist or counterintelligence matters involving private American citizens. Such collection activity may involve both liaison services and unilateral operations. In the case of liaison services, whenever feasible it should be plainly demonstrated in the transmission of the request to such liaison services that CIA is acting as a channel of communication between the FBI and the appropriate foreign service. Any unilateral operational activity will require specific prior approval of

the DDO and the DCI will be advised thereof. Pertinent information obtained will be provided by CIA to the FBI. 103

A new restricted channel cryptonym was provided for the controlled reporting and handling of information relating to Americans which was furnished pursuant to these guidelines. 104

At the same time, domestic offices of the CIA were sent a copy of the cable to stations with the additional guidance that the cable was specifically restricted to information obtained abroad:

If as a byproduct of ongoing activities, incidental information is received on U.S. citizens and it is determined that such information is inimical to U.S. interests or the Base feels that the incidental information should be reported to Headquarters, they should do so via appropriate staff channels with [a priority] indicator. Headquarters will make the final determination as to disposition of any information which is received. 105

### **PART III. ISSUES RAISED BY CHAOS AND RELATED PROJECTS**

CHAOS and the related studies undertaken by the CIA for the White House sought to determine the role played by hostile foreign involvement in domestic unrest. Was that an appropriate task for the CIA under its charter?

#### *A. The Propriety of the CHAOS Mission*

The history of CHAOS raises a serious question whether the entire mission was a proper one for CIA. The inquiry into links between American dissidents and foreign elements inevitably involved the Agency not only in "foreign intelligence" but also in examining domestic affairs outside of its foreign intelligence jurisdiction, and, at the least, treading close to prohibited internal security functions.

Of course, the mission required "foreign intelligence" about the efforts of hostile governments or foreign groups. But it also involved acquiring and using information about the American dissidents and their activities. In order to detect and understand connections between foreign elements and the Americans, the CIA felt that it had to examine both sides of the connection -- the foreign and the domestic. As Ober put it:

Obviously, if you're talking about links between the foreign individuals or groups or people or groups in the United States, to understand any link you need some information on either end. So that a degree of information would have to be maintained against which you could measure your foreign information and understand whether it is relevant or not. 106

The inevitable involvement in the activities of Americans was increased by the fact that the scope of CIA's interest in domestic dissidents was sometimes defined in broad terms. While the emphasis was clearly placed on evidence of direct foreign funding or control, both the requested reporting and the studies provided for the President covered a much broader range of "foreign connections." As a result, CHAOS screened a wide range of individuals and groups.

For example, the CIA asked stations providing information for the 1967 study of the peace movement to report on "subversive connections" between Americans and foreign elements, but then explained that "such connections might range *from casual contacts based merely on mutual interest* to closely controlled channels for party directives." 107 [Emphasis added.] In that context, "subversive connections" to be reported meant no more than a possible basis for foreign powers to develop actual control or direction at some point in the future.

Similarly, the White House request in the summer of 1969 for a study of foreign communist support to American protest groups directed that "support should be liberally construed to include" encouragement by Communist countries, as well as assistance." Thus, mere expressions of sympathy and approval conveyed to an American group would constitute a "foreign link" and make the group a subject of the CHAOS examination of foreign influence.

In the fall of 1969, anticipating a new worldwide "peace offensive," CHAOS asked stations to report on "any foreign support, inspiration, and/or guidance" to such activities in the United States. 109

The studies produced by CIA on the peace movement, black activist groups, and the New Left included the efforts of foreign governments to exploit or stimulate unrest through propaganda and expressions of support. In the case of the peace movement, they also discussed international coordination of antiwar activity in various countries.

The attempt to ascertain and evaluate "foreign links" so broadly defined required more than background information on a few individuals suspected of actually being agents directed by a hostile power. In a period when there was considerable international communication and travel involving American dissidents, a study of "foreign links" which included expressions of common concern, contact at conferences, or encouragement came necessarily to include a substantial segment of the more militant protest groups in America.

Moreover, the CIA examined domestic dissident activity not only to determine the extent of foreign contracts, but also to evaluate the impact they had in the domestic arena.

Isolated reports of training, directions, and limited financial assistance provided to American dissidents by hostile foreign governments were found. Instances of mutual encouragement and international coordination were far more numerous. The studies prepared by the CIA sought to weigh the significance of such instances in the context of the domestic sources of support for the American dissident movements, in order to portray accurately the role played by foreign influence.

This was the theory on which Helms and the Directorate of Intelligence justified including the study by CIA of American student protest. Acknowledging that analysis of American student groups was sensitive, they felt that one could not test the proposition that there was an underlying international conspiracy manipulating the students in each country, without examining the origins and nature of the student protests here. 110

Yet Helms contemporaneously indicated his understanding that the section of the "Restless Youth" report by CIA analyzing American student unrest was beyond the CIA's authority. 111

Thus, whether or not the primary interest of the CHAOS mission is characterized as "foreign intelligence," the very nature of the inquiry can be said to have taken the Agency into domestic matters as well. The ultimate objective transcended any effort to limit CIA's role to "foreign intelligence." As Director Helms testified:

The jurisdiction is divided at the water's edge. When you are dealing with something that has both foreign and domestic aspects to it, I don't recall anybody having come down, I mean any President come down hard and say, all of this is for the FBI and all of this is for the agency. I mean the line has to be wavy. There is no other way to do it that I know of. It is like cutting a man down the middle. 112

Did the overall CHAOS program also inherently involve the CIA in prohibited internal security functions?

If the intent of the statutory prohibition is considered to limit active investigation of Americans by the CIA only in this country, then the answer is no. The specific ways in which CHAOS was implemented still raise a problem, but the task of determining the extent and impact of foreign links to domestic unrest did not inevitably require that the CIA do such investigation itself.

On the other hand, the general thrust of the statutory prohibition can be read as a more rigid limit to the CIA's entry into the internal security field at all -- not merely a geographical limitation on domestic CIA investigations. If the proscription is read that broadly, then the basic mission of CHAOS to determine the role played by foreign influence in domestic dissent violated the statutory charter.

This ambiguity was reflected in the study prepared for the White House by CHAOS in June 1971 on the extent of foreign links. 113 It was entitled:

Definition and Assessment of the *Internal Security Threat -- Foreign*. [Emphasis added.] 114

interestingly, the Rockefeller Commission concluded that with the exception of several particulars, the CHAOS mission undertaken by CIA was a proper foreign intelligence mission. But in its basic recommendation on the CHAOS program, immediately following that conclusion, the Commission advised that the President in the future not direct "the CIA to perform *what are essentially internal security tasks*." 115 [Emphasis added.]

Both the 1971 study title and the Rockefeller Commission recommendation implicitly recognize that the question of foreign influence on domestic unrest or subversion is an aspect of "internal security".

Ober suggested that CHAOS could be viewed as the foreign collection, collation, analysis, and dissemination of counterintelligence. In short, he justified CHAOS as a "vertical slice" of the CIA's counterintelligence responsibilities under NSCID 5. 116 But as the history of CHAOS shows, the inclusion of "subversion" in the definition of threats covered by "counterintelligence" under NSCID 5, meant that the effort by CIA to perform foreign collection of counterintelligence information and to produce analyses of foreign counterintelligence questions would involve it in internal security matters. Therefore, to the extent the specific prohibition of the statute applied, it superceded any general implied authority for counterintelligence work upon which NSCID 5 was predicated.

Whether or not the overall CHAOS program was proper under the CIA charter, the ways in which the project was implemented raise further questions about the limits of the CIA's authority to gather information about Americans.

#### *B. Domestic Intelligence Collection*

To what extent was the CIA involved in improper domestic intelligence collection?

In any ordinary sense of the word, the CIA had "collected" a great deal of information in the United States about Americans, which was systematically maintained in files on those persons and used in the CHAOS program.

The manner in which the CIA had acquired that information, however, varied considerably. Most of it was received from the FBI, partly in response to traces and general requests from the CIA, and partly through disseminations made routinely by the Bureau.

The CIA's own acquisition of information about dissident Americans in this country involved the reports by the Domestic Contacts Services, the CHAOS and Project 2 agents, and by the Office of Security sources in the MERRIMAC and RESISTANCE programs.

### *1. Domestic Contact Service*

The basic formal policy of the DCS aid to CHAOS precluded active collection efforts by the field offices. Information was to be accepted if volunteered in the course of other duties, or sent in if it was available in the local public media. 117

As a practical matter, however, information was provided by local officials or other "confidential sources" who became alerted to the field offices' interest in such material. And some of that information was obtained through local informants or undercover agents of police intelligence units.

In one city, for example, the DCS field office was obtaining from local authorities the coverage by informants of the meetings of local chapters of New Left dissident groups. 118 Another confidential report dealt with local funding sources for the Black Panther Party. 119 Thus, CIA's "passive" receipt sometimes was simply one step removed from active covert collection efforts by other public agencies. 120

The DCS involvement in CHAOS was questionable, even as to leads about foreign travel or possible contacts of Americans. The essential aspect was the intentional acquisition here by CIA of information about the political activities and associations of Americans. The argument such material was useful background for a "foreign intelligence" project does not answer the basic question of whether the CIA should leave such intelligence gathering here about Americans to other federal agencies, if, indeed, such information should be collected at all.

### *2. Domestic Reporting by CIA Agents*

The CIA was most directly involved in clandestine gathering of domestic intelligence as a result of the reporting by CHAOS and Project 2 agents while they were in the United States. Both sets of agents participated in the radical milieu here in order to develop or improve their leftist credentials and, consequently, their access to information in their overseas assignments.

The CHAOS case officer who debriefed the CHAOS agents in this country sought a complete account of the agents' activities and associates. He frequently amazed the FBI in the degree of information he could extract from the agents' experience; he was "like a vacuum cleaner." 121

Since the extensive debriefings about their associates in the United States served a variety of training, assessment, and counterintelligence purposes, any information reported to the CIA in the process can be viewed as the byproduct of overseas operations. At times, however, the CHAOS agent program and, to a lesser extent, Project 2 went beyond incidental collection.

(a) CHAOS Agents. -- Generally, the CHAOS agents under development were not directed to acquire information about particular targets. But the case officer would sometimes put specific questions to them, asking what they had learned about particular persons or events. Sometimes the questions had been provided by the FBI. 122 Ober agreed that an agent trying to perform well would thereby be sensitized and implicitly directed toward obtaining information on those subjects or persons when he returned to the radical community. 123

In addition, not all of the CHAOS agent debriefings on domestic matters was tied to their preparation and development. When agents returned to America and reentered the radical community here pending reassignment, they continued to report on the activities of their domestic associates. 124 According to Ober, agents were sometimes expressly brought back from their overseas assignment to cover a target in the United States of particular interest to the FBI. 125

Three cases illustrate this range of circumstances in which domestic information was collected by CHAOS agents.

The first instance involved a recruit who was under assessment and not formally hired for over half a year, during which time he was debriefed on his knowledge of domestic radical activity. 126

In April 1971, after consultation with the case officer and at the time he was formally recruited as a CHAOS agent, he attended the spring demonstrations against the Vietnam war in Washington. 127

Prior to this time, the agent had not been directed to try to acquire information about domestic radicals, but had done so as a result of his continuing association with them. In the case of the Washington demonstrations, however, he was briefed in advance by the case officer, Marcules, on a number of individuals in whom the FBI was interested, as well as being asked to report any advance information about plans for the demonstrations. 128 Marcules testified it was not practical to turn Finch over to the Bureau during this period because of problems with compartmenting his identity. He also said it provided a good training opportunity. 129

The second instance of intensive domestic reporting involved another CHAOS agent with particularly good entree into the highest levels of a segment of the domestic radical community. He made several trips abroad and reported CHAOS information obtained overseas. 130 In addition, both during his preparation period and in between his overseas assignments, this asset reported a great deal of detailed information, some extremely personal, about individuals in this segment of the radical community and about their personal relationships. 131 In the fall of 1969 it was determined that he would not be used on an overseas assignment for many months and, in the meantime, would continue to be debriefed as a source of information

about his associates, in part because he did not wish to deal with the FBI. 132 But there is no indication in the file that the personal information of an intimate nature was requested by CIA or was disseminated to the Bureau.

A third CHAOS asset had already been working for the CIA abroad. At the time he was recruited for the CHAOS effort, the agent had an opportunity to attend antiwar demonstrations in this country. He was encouraged to attend by CHAOS, which assisted his arrangements. 133 The agent attended a series of activities in the United States and was debriefed extensively. The information was the basis for numerous reports to the FBI on domestic antiwar efforts and plans. 134

(b) Project 2 Agents. -- The Project 2 agents developing their credentials in this country were not directed to participate in particular dissident activities. But the principal case officer for the agents' preparation stated there was a sense of urgency to get the maximum amount of information for CHAOS from the credential building process in the United States. 135

The Deputy Chief of CHAOS testified that he briefed Project 2 agents while they were in this country. He could not recall asking the agents to collect any specific information. But he testified that the CHAOS office had requested the Project 2 case officers to ask their agents specific questions about the persons and activities they were reporting upon. 135a

A cover memorandum written by the Project 2 case officer attached to a debriefing report of an agent prior to his departure overseas read:

A part of the substance herein is in response to questions posed by CHAOS before I went to the West Coast. Especially the part on factionalism in the New Left and the organizational activity. Am sending a copy of this to CHAOS as per usual practice. (The attachments were collected by the asset for CHAOS at our request.) 136

### *3. Propriety of Domestic Reports by Agents During Preparation*

In those situations when CHAOS agents were directed to cover specific activity in the United States or to find out about a particular person, CIA was engaged in domestic clandestine intelligence collection about Americans.

Whether the information was sought for CHAOS' own use or at the request of the FBI, should the CIA ever be involved in domestic collection targeted against United States citizens?

It can be argued, for example, that where CHAOS and Project 2 agents were not directed to collect specific information, and were reporting domestic intelligence as a by-product of their preparation for overseas operations, that CIA was not involved in improper domestic operations.

Thus, Deputy Director Karamessines felt that the general preparation of agents through participation in domestic dissident activity, and their debriefing by CIA, was consistent with his policy that CHAOS would not engage in domestic intelligence operations. Karamessines understood that the agents would report to their case officer information which included domestic matters which would be available to CHAOS and which might be disseminated to the FBI. But he explained that CHAOS was not to conduct operations "for the purpose" of acquiring domestic information about targeted groups. 137

Such narrow definitions of the intelligence trade differ from the general public understanding of what constitutes "domestic intelligence collection" by CIA. Under this narrow definition of "domestic operations," if the ultimate purpose of the covert reporting is preparation for a foreign operation, then even the conscious acquisition of detailed domestic intelligence in the process, its systematic retention and dissemination, would be appropriate for CIA. That standard poses a potential loophole in any guidelines which purport to restrict the CIA's collection of information about Americans here in the United States. It is particularly dangerous when, as was true for CHAOS, the overseas mission itself includes reporting on Americans abroad.

If it is to be continued, does CIA use of such credential building and training techniques require strict controls on the use of any information acquired during such preparation?

### *C. Assistance to FBI Internal Security Investigations*

A third issue is raised by the extensive pattern of assistance CHAOS provided to the FBI. Apart from the mission Helms had the CIA undertake for the White House, and the specific ways in which CHAOS sought to implement that mission, a major focus of the actual CHAOS operation became its servicing of the FBI's internal security investigations. Did the extent of that assistance bring the CIA into the realm of forbidden internal security work?

As just noted, the most directed use of CHAOS agents to collect domestic information in the United States was done on behalf of the FBI.

Abroad, the bulk of the CHAOS requests for coverage of specific Americans by CIA stations, foreign liaison services, or both, also resulted from FBI requests.

Both Karamessines and Ober acknowledged that the CIA through CHAOS was assisting the FBI in its performance of internal security functions. 138

They characterized that assistance as a proper part of the CIA's counterintelligence responsibility.

Karamessines testified that, as the foreign operational arm of the American counterintelligence effort, CIA has always accepted the responsibility to meet the FBI's collection requirements abroad. 139 But, collection of intelligence about Americans abroad, whether the CIA's own agents or from liaison services, can be done for internal security purposes, just as much as can intelligence operations at home.

This issue was reviewed in a different context by the Rockefeller Commission when it considered the propriety of the CIA's mail interception program. The Commission found that it exceeded CIA authority wholly apart from the statutory ban on any government agency opening mail without a warrant. The Commission concluded that:

The nature and degree of assistance given by the CIA to the FBI in the New York mail project indicate that the primary purpose eventually became *participating with the FBI in internal security functions*. Accordingly, the CIA's participation was prohibited under the National Security Act. [Emphasis added.] 140

In contrast to the relatively small number of formal studies and special memoranda CIA provided the White House, the CHAOS office disseminated thousands of reports to the FBI.

All told, in its seven years of operation, CHAOS sent well over 5,000 reports to the Bureau; approximately 4,400 memoranda, and some 1,000 cable disseminations. 141

Reviewing the degree to which the product of the CHAOS operation was internal security intelligence sent to the FBI, as well as the testimony that targeted operations abroad against Americans were largely the result of specific FBI requests, one can draw a similar conclusion paralleling that analysis of the mail project: a major purpose of CHAOS activity in actual practice became its participation with the FBI in the Bureau's internal security work.

On the other hand, because CHAOS generated information of interest to the FBI in the course of pursuing its own mission, the dissemination figures combine production requested by the Bureau and also the byproduct of CHAOS which was made available to the FBI.

Moreover, insofar as CHAOS watched Americans abroad at the FBI's request, CIA participation in the Bureau's internal security work, unlike the mail program, did not involve domestic CIA operations, the primary concern underlying the prohibition of international security functions to the CIA.

For the future, the question remains which intelligence agency will be the operational arm for the United States to collect information about Americans outside the country. Even if all collection of information about Americans undertaken in the United States were reserved to the FBI, there might be situations in which surveillance of Americans abroad was sought as part of an internal security or counterterrorism investigation initiated pursuant to approved criteria. In such cases, unless the FBI or some new agency had adequate capability to cover the subject's activities abroad, it would be necessary either to permit the CIA to do it, or to request coverage by the local intelligence service through an FBI legal attache or a State Department representative. And, of course, the second course would not be open unless America had a cooperative relationship with the liaison service in the foreign country.

The solution of this issue may lie less in determining what to deem the performance abroad of internal security functions than in setting restraints on the investigation of Americans by the FBI and applying those restraints to surveillance of Americans overseas, by any arm of the government.

#### *D. Maintenance of Files on Americans*

The mechanics of the CHAOS operation, both in performing the mission undertaken by the CIA and in servicing the FBI's needs, involved the establishment of files and retention of information on thousands of Americans.

To the extent that information related to domestic activity, its maintenance by the CIA, although perhaps not itself the performance of an internal security function, is a step toward the dangers of a domestic secret police against which the prohibition of the charter sought to guard. Specific standards are required for the retention of such material when its direct availability in the CIA's own files is necessary for legitimate foreign intelligence purposes and the Agency has acquired it properly. In addition, the CIA can be required to purge existing files in conformity with the new standards, and where appropriate, to purge name indexes as well.

#### *F. Approaches to Determining Foreign Direction of Domestic Dissent*

Beyond the questions CHAOS raises about the scope of CIA's authority under its charter, CHAOS also suggests the more general problems of controlling efforts by any intelligence agency to determine the nature of foreign connections to domestic unrest.

The most systematic and the quickest way to look for foreign direction of domestic unrest is to start at both ends of the suspected connection. One tries to learn what hostile intelligence services are doing, by coverage of them. But one can also begin to investigate those Americans thought most likely to have such ties. Thus, CHAOS sought to sift through the leaders and more active segments of domestic protest movements in order to learn of travel and other foreign contacts and then to investigate the possibility that those Americans were supported or controlled by foreign powers.

The more traditional CIA policy has been to monitor hostile intelligence services and then, only if it thereby learns of their involvement with particular Americans, to investigate those Americans abroad or request an inquiry here. Generally, CIA has not tried to work backward from a surveillance of traveling Americans who seemed likely prospects in order to see what kinds of connections could be found.

The present Assistant Deputy Director of CIA for Operations, David Blee, summarized the distinction:

We have always said that we did not operate that way, but that we went about it much more inefficiently, which is by penetrating the foreign government or foreign subversive operation and finding if that led us to an American, rather than trying to see what Americans were doing, and seeing if they were in touch with those groups.

In this, we operate very differently from practically all of the other security and intelligence services, which typically watch their own citizens to see what they are doing. 142

The CHAOS program took the more "efficient" approach; it acquired information from coverage of foreign elements, but also worked back from the American end by screening foreign contacts of dissidents. As Ober testified:

At some point perhaps it should be explained that one of the reasons for having so many files on so many people was that the estimates and assessments required of the Agency in terms of possible foreign involvement with domestic activities were such that one could only give a responsible answer if one knew, of this group of people, how many had any sort of connection of significance abroad. What I am getting at indirectly, I think, is that to respond with any degree of knowledge as to whether there is significant foreign involvement in a group, a large number of people, one has to know *whether each and every one of those persons has any such connection. And having checked many, many names and coming up with no significant connections, one can say with some degree of confidence that there is no significant involvement, foreign involvement with that group of individuals.* But if one does not check the names, one has no way of evaluating that, without a controlled penetration agent of the FBI by that group, or a control penetration agent of the KGB abroad who works on the desk which deals with these matters through us. [Emphasis added.] 143

The former Deputy Director for Plans, Thomas Karamessines, testified that, in this regard, CHAOS reflected a general increase throughout the intelligence community in the use of such a screening approach on American dissidents as opposed to more traditional counterintelligence efforts targeted directly at hostile foreign elements. 144

CHAOS suggests the dangers of any intelligence agency starting from such an investigation of Americans to find illegal or subversive foreign ties. It particularly shows how the broad impact of that approach is amplified by the dynamics of counterintelligence work, and the likely national setting of such efforts.

### 1. The Nature of Counterintelligence Work

Counterintelligence investigations of this type start from a data base of background information necessarily broader than the ultimate target of the inquiry. The foundation of such counterintelligence efforts is to build up a reference collection of names and organizations against which one can check information reported about possible ties between foreign elements and Americans. 145 Hence, the extraction of every name from materials received about domestic dissidence.

Along with the identities, the data base requires developing background information about the individuals and groups their relationships, the status of particular individuals, their views and policies. The Deputy Chief of CHAOS testified that such background information was needed to understand the significance of the "tidbits," i.e., specific items relating to foreign connections which came to CHAOS. 146

As Ober explained:

I think that is significant in any counterintelligence operation, that the meaning of information in the abstract, it is very difficult to determine. You have to measure it against other information and put it into context. 147

Moreover, in counterintelligence work, the credo is that every bit of information about associations and activities might prove relevant -- a piece of the puzzle. Thus, when CIA responded to the Rockefeller Commission's conclusions that too much information was maintained by CHAOS on wholly domestic activity, it stated:

this was due in part to the paucity of information pertinent to its foreign intelligence objectives which the operation had been able to collect *and also to the uncertainty over how much of the accumulated data might not eventually prove relevant to these objectives.* [Emphasis added.] 148

The bias is toward inclusion, not selectivity, in collecting information and maintaining files. Other agencies and components of the CIA, alike, were not encouraged to be selective in their provision of material to CHAOS.

The request to NSA for materials on persons CHAOS sought to have watchlisted indicated the widest possible scope. In a memorandum to NSA, Ober indicated that he should be sent any material obtained on those targets "regardless of how innocuous the information may appear." 149 Ober testified this was not indicative of his pursuit of domestic intelligence, but

rather his view that NSA was not competent to judge what bits of seemingly irrelevant information might be meaningful to CHAOS. Therefore, he wanted NSA to turn everything over and let CHAOS personnel sift through it for whatever might prove fruitful to their interests. 150

The Director of the Office of Security, Howard Osborn, testified that Ober requested he provide all information about dissident groups obtained through Projects MERRIMAC and RESISTANCE, and not merely specific items suggesting foreign connections. According to Osborn, Ober explained that only the CHAOS office, not the Office of Security, was competent to judge what might be relevant to the CHAOS mission. 151

## *2. Political Setting of Investigations*

The other main source of expansive pressures on intelligence operations such as CHAOS is the political setting in which they are undertaken. Such inquiries are most likely to be pursued in times of turbulent protest and dissent from official policy. Intense Government concern about the source of that opposition is inevitable and the possibility of foreign involvement is ever present. Moreover, the administration in power may find it difficult to accept the fact that domestic opposition to policy is really indigenous. 152

In the case of CHAOS, two successive presidents were reluctant to accept the CIA's conclusions that the dissident activity against the Government was indigenous.

Director Helms testified that the White House was dissatisfied with these reports and studies because they did not show "enough foreign money and foreign influence in these dissident movements.... They just said you aren't doing your job, you aren't finding it out, its got to be there." 153

Ober testified that Helms never pressured him as to the findings reported by the CIA. But a steadfast determination to provide unbiased analyses, itself, creates pressure to expand an operation such as CHAOS. The dynamic is present in any effort to establish the validity of a negative finding -- no substantial foreign influence -- to the satisfaction of skeptical Government leaders. Only by increasing the coverage of American dissidents with any kind of foreign contact could the CIA hope to satisfy the White House that if there were significant links of direction and support, CHAOS would find them. Both Helms and Ober testified that the White House pressure for redoubled efforts was a significant factor in the continued expansion of CHAOS. 154

The expansive pressures created by the nature of counterintelligence work and by the difficulty of "proving a negative" to the White House, of course, are not peculiar to the CIA. They increase the danger that any intelligence agency's effort to find hostile foreign ties to domestic dissent by working back from surveillance of Americans will sweep within its scope many citizens engaged only in lawful activity.

The alternative would be to prohibit such investigations of the activity of an American dissident unless, in the course of counterintelligence efforts against hostile foreign elements, a reasonable basis was established for suspecting the American was acting illegally on behalf of the foreign power.

## **PART IV. OFFICE OF SECURITY PROGRAMS**

The concerns about domestic unrest which led to the CHAOS program, also caused the CIA to undertake other programs through the Office of Security, the support unit of the CIA charged with protecting its personnel, facilities and operations. The Office of Security has responsibility for both physical security measures and questions of personnel security.

The Office conducts routine background investigations of prospective personnel. It has also developed files on individuals and organizations in the course of investigating individual security cases of alleged penetration or attempted penetration of CIA employees.

In 1967, the Office began two efforts which were not focused on particular security cases. Rather, they were designed to collect information about groups which might pose a threat to the Agency's physical security through violent demonstrations or other disruptive activities.

By the mid-1960s, student unrest had led to increased harassment of government recruiters, including those of CIA, at campuses throughout the country. In the fall of 1968, the CIA recruiting office at the University of Michigan was destroyed by a bomb.

### *A. Project Resistance*

Project RESISTANCE developed out of a narrower program designed to provide direct support to CIA recruiters visiting college campuses. In February 1967, the Office of Security had directed its field offices to report on the possibilities of violence or harassment at those schools which CIA recruiters planned to visit. Subsequently, pursuant to this directive, the field offices provided information on expected opposition to government recruiting, or to CIA in particular, and made appropriate security arrangements with campus officials if the recruitment effort took place.

The broader RESISTANCE program was initiated by the Deputy Director of the CIA for support, whose directorate included the Office of Security who previously had been a Director of Security, himself. In December 1967, he requested the Office of Security to study campus dissidence on a systematic basis. The Deputy Director suggested that there was an increased pattern of similar activity among student protest movements and directed the Office to examine their aims, causes, attitudes and the extent of their support among the Nation's students. 155 The collection requirement sent to the field officers in a telegram from headquarters asked for local news clippings about campus demonstrations related both to local grievances or to national issues such as the Vietnam War. 156

Because of the volume of material reported by the field offices, a special unit, the Targets Analysis Branch, was established in May 1968, to process and digest the information.

The testimony and the files indicate no use of infiltrations by CIA in connection with this program. The overwhelming bulk of the information continued to be press clippings passed on to headquarters. However, the field offices also obtained information from confidential sources in the local community such as campus officials and police authorities.

For example, one field office indicated that it had already obtained information from the local law enforcement authorities and advised of additional opportunities to obtain from other police departments reports of their informants with local dissident groups. 157 Headquarters advised the office to utilize such sources when the information was offered to CIA. 158

On some occasions, the field offices were specifically requested to obtain information about particular activities or individuals, through information obtained directly by CIA personnel and material developed through confidential sources. 159

The analyses provided by the RESISTANCE project were criticized at one point by the Office of Security analyst who had initiated the program for primarily focusing on publicly available information:

The RESISTANCE output should not attempt to duplicate or compete with the media on such reporting. Rather it should draw on such open sources for material needed to link together the data acquired from other sources. 160

By the end of 1970, the Director of the Office of Security felt that some of the field offices might be going too far in developing information from cooperating confidential sources. 161 At the beginning of 1971, limiting instructions to the field offices directed restraint in the development of information:

No attempts should be made to recruit new informants or sources such as campus or police officials for the express purpose of obtaining information regarding dissident groups, individuals, or activities. No new requirements for information should be levied on existing sources.

The above limitations do not preclude acceptance of information gratuitously offered by informants or sources and field personnel should continue to be on the alert for nonsolicited information which might contribute to the protection of the Agency personnel, projects or installations. 162

The Targets Analysis Branch also received FBI reports. 161

Although the initial impetus for RESISTANCE was an effort to evaluate campus activities, the Targets Analysis Branch broadened its inquiry to include analyses of protest activities in Washington and other centers of protest.

The incoming material was digested and indexed. Eventually the project developed an estimated 600-700 files and indexed an estimated 12,000 to 16,000 names. 164 Apart from specific spot reports and evaluations of particular groups requested by other components of the Office of Security, the main product of the operation was weekly Situation Reports, summarizing and analyzing past events and projecting a calendar of upcoming events which might involve violence or disruption directed at government facilities. 165

The knowledge of organizations was also made available to the Personnel Office for purposes of evaluating membership in such groups by prospective employees. 166

The project was terminated at the end of June 1973. 167

#### *B. Project Merrimac*

The second general effort by the Office of Security to protect the CIA from threats posed by domestic disorder was Project MERRIMAC. MERRIMAC involved the participation of CIA assets in dissident groups in the Washington metropolitan area in order to obtain advance warning of demonstrations which posed a threat to CIA facilities and also to collect other intelligence about the groups and their members.

There is no record of MERRIMAC having been authorized at the outset by Director Helms. The Director of the Office of Security, Howard Osborn, testified that Helms had indicated his concern about the security of the CIA facilities in the face of dissident activities in the period prior to the formal commencement of MERRIMAC in early 1967. 168 And Helms believes that he approved the project at some point. 169

In February 1967, Osborn inquired whether a proprietary company used by the Office of Security could monitor the activity of certain groups in Washington in order to provide advance information about demonstrations directed against CIA properties. 170

Shortly thereafter, the proprietary was directed to obtain such information. At the beginning of April, it was specifically asked to have its assets collect intelligence on the April antiwar demonstrations in Washington, D.C. 171

The Office of Security initially chose four "indicator organizations" --- the Women's Strike for Peace, the Washington Peace Center, the Congress of Racial Equality, and the Student Nonviolent Coordinating Committee -- deemed to be bellweathers of the likely nature of protest activity and the potential threat it might pose to the CIA. 172

The proprietary used only a few assets at first, including one regular employee and several others hired on a part-time basis. None of the assets were sophisticated agents, although they eventually received some training. They were construction workers or persons in similar trades and their relatives. Most of their work continued on a part-time basis, in addition to their regular employment, throughout the duration of MERRIMAC. 173

Initially, the assets were asked to monitor the organizations in order to report information only about planned demonstrations which might threaten the Agency. In June, however, the collection requirement was expanded to include information about the organizations' financial operations and sources of support. 174

In the fall of 1967, in anticipation of the peace demonstrations in Washington, MERRIMAC sought to obtain information about the leadership and plans of organizations participating in the National Mobilization Committee to End the War, as well as information about all the participant organizations. 175

The scope of the information requested continued to increase. The assets were asked to report any information about the plans and attitudes of groups revealed at meetings, their associations with other groups, sources of support, and an account of what was said at the meetings, in addition to information specifically relating to threatened action against the CIA. 176 In addition, other organizations were added to the list of covered groups. By August 1968, ten groups were targeted by MERRIMAC for such coverage. 177 Thus, although the primary purpose remained advance warning of threats to the Agency, the program expanded into a general collection effort whose results were made available to other components in the CIA, and in many instances, to the FBI. As Osborn put it:

Now I would be less than candid and less than honest with you to say that over the course of this project we reported pretty much of everything we got. [sic] I am not going to try to kid you. But the primary purpose of the project was self protection physical security and I think we probably exceeded that. 178

In some instances the agents conducted surveillance of particular dissident leaders and activists of special interest to the CIA. Photographs were taken of persons attending meeting, or license plates, and persons were trailed home in order to identify them. Some of the assets also made contributions to the organizations at a low level necessary for credible participation. 179

Information obtained from MERRIMAC agents was made available to CHAOS. Osborn testified that the broadening scope of MERRIMAC was due in part to the requests from the CHAOS office to the Office of Security for general information about dissident groups.

I think it started out legitimately concerned with the physical security of installations and I think it expanded as these things often do, in light of the intense interest in the requirements by Mr. Ober and by a lot of other people. I think it just kind of grew in areas that it perhaps shouldn't have. 180

Osborn testified that most of the requests for specific information beyond the threat of immediate situations, came from inquiries by the CHAOS office. 181

The last reports from MERRIMAC agents found in CIA files were gathered in late 1968. However, CIA has confirmed that the program lasted until September 1970. 182

In August 1973, Director Colby issued a directive as part of the Agency's review of "questionable activities" regarding the activity which had involved MERRIMAC. The Directive stated:

It is appropriate for the Office of Security to develop private sources among CIA employees. It is not appropriate for CIA to penetrate domestic groups external to CIA, even for the purpose of locating threats to the Agency. Notice of such threats should be reported to the appropriate law enforcement bodies and CIA will cooperate with them in any action required which does not involve direct CIA participation in covert clandestine operations against U.S. citizens in the United States. 183

### *C. Special Security Investigations*

Since the inception of the CIA, the Office of Security has conducted routine background investigations of prospective CIA employees and agents, as well as employees of contractors and other persons being considered as cooperative sources of information or assistance. Periodic reinvestigation of CIA employees is also performed.

In addition, the Office of Security has conducted numerous special investigations of persons affiliated with the CIA and others who were the subject of a particular security case. In some instances the investigations involved efforts to determine the source of news leaks thought to compromise the security of intelligence sources and methods, including news leaks for which there was no particular reason to suspect that CIA personnel were responsible, as opposed to other government employees with access to intelligence material.

More frequently, however, the investigations involving Americans were conducted as a result of allegations or suspicions that individuals had become the target of an effort to penetrate the CIA, or had become involved in espionage, or had developed personal difficulties which created risks that intelligence sources and methods might be compromised. The subjects of these investigations have included former and present CIA employees, employees of other government agencies, and private citizens who were in contact with the subject of an investigation.

In the course of these investigations, various covert techniques have been employed, singly and in combination, against American citizens in this country: physical surveillance, electronic surveillance, unauthorized entry, inspection of mail and of income tax records.

In January 1975, the Inspector General of the CIA initiated a survey of all special security investigations and other activity undertaken by the Office of Security since the inception of the CIA in 1947 which involved the use of any such special investigative techniques against persons in the United States.

A team of officers from the Inspector General's staff and the Office of Security conducted such an examination, with complete access to all records in the Office of Security and in other source records throughout the CIA which might reflect such use of these investigative techniques. Knowledgeable personnel were interviewed as well. 184

The examination resulted in a compendium of every identifiable instance in which physical surveillance, telephone tapping, electronic surveillance, mail cover and opening, access to tax information, unauthorized entry and other special investigative procedures had been employed against persons in the United States. 185

Each instance was analyzed in terms of the techniques, the target and the circumstances involved in the investigation. Specifically, the survey detailed whatever information was available concerning:

- the background of the investigation.
- the level and nature of authorization within the CIA.
- coordination with other agencies.
- the methods used to implement the surveillance.
- reporting and the results of the operation.
- and the authority and reasons for terminating the operations. 186

The Committee staff reviewed the methods and results of this survey of domestic surveillance compiled by the Inspector General's office. In addition, the Committee staff reviewed in their entirety the original files of selected cases involving physical surveillance, electronic surveillance and unauthorized entry which occurred within the last ten years, and has also taken testimony regarding the use of such techniques in America from present and former officials of the Office of Security and other CIA components.

The result of this review by the Committee essentially confirms the summary of the Inspector General's survey provided in the Rockefeller Commission Report. 187

However, the records of authorization, scope and results of these investigations are sometimes incomplete. This is particularly true for the earlier history of the CIA, at a time when the use of covert investigative techniques against Americans affiliated with the CIA or other persons in the United States was more widespread than it has been in the past decade.

Even in recent years, however, most authorizations and approvals at the highest levels within the CIA have not been accompanied by a written record.

Howard Osborn testified that during his ten year service as Director of the Office of Security he regularly sought approval from Helms for physical surveillance or any more intrusive technique, with the exception of two minor instances of brief physical surveillance of CIA personnel allegedly involved in irregular personal activities or financial difficulties. In those instances, Osborn testified, approval was obtained from the Deputy Director of CIA for support. However, Osborn added that such authorizations from the CIA Director were handled orally with a minimum of paperwork because of the sensitivity of the allegations. 188

#### *D. Issues Raised by the Office of Security Programs and Investigations*

##### *1. Protecting CIA from Potential Violence*

The MERRIMAC and RESISTANCE programs represent an overly ambitious view of the CIA's authority to act on behalf of the Director of Central Intelligence to protect intelligence sources and methods.

While the special security investigations raise questions about the propriety of targets and techniques in some cases, they reflected a common concern -- the threat of unauthorized disclosure by CIA personnel, or in a few instances other government employees with access to intelligence material. This common denominator was present whether the particular case involved news leaks, suspected penetration by hostile intelligence services or simply personal situations making employees vulnerable, and thus security risks. The possibility of such security problems developing within the CIA's own organization was at least the basic concern expressed when the Director of Central Intelligence was charged with protection of intelligence sources and methods.

MERRIMAC and RESISTANCE, however, take the concept of such protection a step further. They were premised on the assumption that the responsibility for protecting sources and methods includes the general mission of safeguarding CIA -- its personnel, facilities and operations -- from domestic unrest in the larger society.

Is the protection of the CIA from disruption by domestic violence part of the intended responsibility to protect sources and methods? And if it is, how far would that authority extend?

Presumably all government agencies, but particularly those doing sensitive tasks, may undertake measures at their installations to prevent physical disruption by outsiders, for example by maintaining a guard force at entrances.

Beyond this, does the "sources and methods" mandate authorize the CIA to go out into the community and covertly investigate protest activity in order to detect potential threats, rather than relying on the FBI and local police for advance warning? Little in the legislative history suggests such an open-ended reading of that provision. But even if the mandate is presently so vague that it might be read that broadly, the programs would be questionable under the prohibition on CIA exercising law enforcement powers or performing internal security functions.

Both programs involved the CIA in examining domestic dissident activity, which, insofar as it actually threatened the government or particular agencies was a matter of internal security or law enforcement.

In RESISTANCE, the collection technique was less intrusive; even where covert sources supplied information, no CIA personnel became involved with the domestic groups. Its scope, however, was broad and the in depth analysis of political organizations and their leaders went beyond indications of specific threats to the CIA.

MERRIMAC, while more narrowly focused, took the CIA into actual penetration with the dissident groups. And to the extent the collection requirement was broadened from warning of imminent attacks on CIA to general information about the groups' finances and policies, it brought the Office of Security even closer to performing essentially internal security functions.

In addition, a common theme running through the explanation of the MERRIMAC and RESISTANCE programs is the claim that local police and federal law enforcement agencies were unwilling or unable to provide adequate warning to permit safeguarding CIA facilities and personnel. 189 If the CIA, therefore, took on what would normally be responsibilities of law enforcement agencies, did it violate the letter, or the spirit, of the 1947 Act?

The CIA did undertake to supplement the public safety work of law enforcement agencies, whatever the CIA's parochial purpose for such activity.

Moreover, the FBI was providing the entire government with both intelligence about expected demonstrations and information about the propensity of particular groups and individuals toward violence. The FBI did not assess the threat posed to each particular agency by every group or expected activity. But to let each agency run its own investigation of how domestic unrest might threaten its operations would be a dangerous invitation to multiply the opportunity for excessive surveillance of protest activity.

In any event, the CIA's perception, whether correct or not, that law enforcement agencies were incapable of providing adequate warning and countering any threat did not increase the CIA's authority to take action inconsistent with its own statutory limitations. To what extent should the CIA be permitted to engage in such activity in the future?

Director Colby's regulations on MERRIMAC-type activity indicated his view that the CIA should not be involved in any clandestine operations directed against domestic groups which might threaten the CIA. If the CIA is forbidden to infiltrate such groups, should it still be permitted to monitor public rallies and demonstrations, or should that, too, be reserved to law enforcement authorities? Although such monitoring is less intrusive on the participants' expectations of privacy, the general purpose of minimizing the CIA's involvement in domestic affairs suggests that the CIA should engage in no investigations beyond its own premises which are directed at domestic dissidents.

What, then, could the CIA do, short of such efforts, to help protect itself from external threats of public disorder? Anticipated violence would justify analysis of information received from the FBI or local police with direct responsibility for the jurisdiction in which CIA facilities are located. Such information and analysis would permit the CIA to take security precautions, such as notifications to employees and disposition of its own security forces, without engaging in covert operations like MERRIMAC or RESISTANCE.

Finally, if the CIA requires some information about dissident organizations in order to assess the significance of membership in them for security clearance of CIA applicants, should it rely on the FBI and the Civil Service Commission for such information? It might be argued that the CIA would undertake a more sophisticated analysis, and, in fact, hold mere

membership less a disqualification than might some other government agencies. But that small benefit must be weighed against the risk of providing license for a foreign intelligence agency to scrutinize domestic political activity.

## *2. Sensitive Security Investigations*

The power of the Director of Central Intelligence to take action to protect intelligence sources and methods in particular security cases has been viewed differently by recent directors.

Richard Helms testified that, in his view, the CIA could be asked to take any reasonable investigative steps, with no covert technique precluded, in order to protect sources and methods. 190

While Helms explained that the FBI had been unwilling to undertake many of the investigations which the CIA performed, he testified that, independent of the Bureau's availability, he regarded those investigations as a legitimate exercise of his responsibility as director to protect intelligence sources and methods. 191

Helms did recommend that the charge to protect sources and methods which he termed an "albatross" around the neck of the Director, be removed from the statute and given to the FBI, at least with regard to investigation of any Americans who were not affiliated with the CIA. 192

William Colby, on the other hand, did not view the statutory mandate to be accompanied by actual extraordinary investigative authority:

It gives me the job of identifying any problem of protecting sources and methods, but in the event I identify one it gives me the responsibility to go to the appropriate authorities with that information and it does not give me any authority to act on my own. So I really see less of a gray area in that regard. I believe that there is really no authority under that act that can be used. 193

His directives in response to the CIA's review of questionable practices reflect this position. Thus, the directive addressing past instances of investigating newsmen to determine the source of intelligence leaks stated:

### MEMORANDUM

SUBJECT: [Cases Involving Investigation of Newsmen]

No surveillance, telephone tap, surreptitious entry or other action will be taken by Agency personnel in the United States against United States citizens not connected with CIA, under the claimed authority of "protection of intelligence sources and methods." This provision of the law lays a charge and duty on the Director and the Agency to act so as to protect intelligence sources and methods. It does not give it authority to take action with respect to other American citizens. If a threat or exposure of intelligence sources and methods occurs, the Agency can appropriately assemble its information on the topic and conduct such steps within its organization as may be appropriate. With respect to outsiders, the appropriate lawful authorities must be approached for assistance on the matter, e.g., the FBI or local police. 194

In addition, Colby's directive concerning the use of covert investigative techniques against the CIA's own employees off the Agency's own premises stated:

### MEMORANDUM

SUBJECT: [Cases Involving Surveillance of CIA Employees and Ex-employees]

No surveillance, telephone tap, or surreptitious entry will be conducted against employees or ex-employees of the Agency outside Agency property. In the event that threats to intelligence sources and methods appear from Agency employees or ex-employees, the appropriate authorities will be advised, and the Agency will cooperate with the appropriate authorities in the investigation of possible violation of law. 195

On its face, the director's statutory charge to protect sources and methods does not authorize the use of the CIA, as opposed to other agencies, for active investigation in the United States. The legislative history is also unclear in this regard.

An additional ambiguity is the tension between this responsibility, if it is deemed to authorize implementation by the CIA, and the restriction upon the CIA's exercising law enforcement or police powers.

Not all of the special security investigations undertaken in the past involve suspected criminal violations. For example, not all news leaks may be subject to prosecution. Yet if surveillance reveals the source, then he would be subject to administrative sanction or loss of clearances. Similarly, when investigations are in response to allegations that the subject's personal situation makes him a bad security risk, there may be no suggestion that he is yet involved in any unauthorized disclosure of information. It is merely a question of whether the subject should continue to have access to sensitive information or be given assistance in regard to his problems.

On the other hand, the more intrusive investigation techniques, at least in recent years, have usually been employed by the CIA only when there was a significant possibility of illegal activity, at which point there is a law enforcement aspect to the investigation.

Moreover, some of the investigative techniques, such as electronic surveillance and unauthorized entry, are tools which normally require warrants as an exercise of the police power. And to the extent their future use in national security matters is regulated by Congress under warrant procedures, CIA participation in such activity would present an even sharper question under the charter prohibition.

Most important, whatever the propriety of these special investigations has been under the 1947 charter, the ultimate question before the Congress is the degree to which a secret foreign intelligence agency should conduct clandestine operations in the United States directed at Americans.

Centralizing these special security investigations (as opposed to routine background investigations) as much as possible within one agency under tight controls would not only minimize the potential opportunities for misuse of the more intrusive techniques. It would also enable the CIA to reduce its own involvement in any covert activity in the United States. The CIA's security role outside of its own premises would be held to the minimum, with respect to both the permissible subjects of such investigations and the techniques employed.

In the case of investigating newsmen to uncover intelligence leaks, Helms and Howard Osborn both agreed that the responsibility should be given to the FBI. Such a restriction on the CIA could be extended to any American not employed by the Agency. If the subject was suspected of being involved in efforts to procure improper disclosure of sources and methods, the same consideration of avoiding CIA involvement with private citizens suggests that the subject be investigated by the FBI.

What should the CIA's role be with respect to its own employees? The CIA could be permitted to conduct some preliminary investigations of its own employees outside of CIA premises, including interviews and other routine checks, before calling the FBI into every case in which a question of security risk has arisen. If some physical surveillance is also permitted as part of this preliminary investigation, it might be limited in duration and, more importantly, careful guidelines provided concerning the authority of the CIA to investigate other persons with whom the CIA employee comes in contact.

#### **Footnotes:**

10 General Vandenberg, who was then head of the Central Intelligence Group, the CIA's predecessor, testified as one of the main witnesses for the legislation. In the Senate hearings, he commented on the directive setting up the Group, from which the prohibition was taken:

"One final thought in connection with the President's directive: It includes an express provision that no police, law enforcement, or internal security functions shall be exercised. These provisions are important, for they draw the lines very sharply between the CIG and the FBI. In addition, the prohibition against police powers or internal security functions will assure that the Central Intelligence Group can never become a Gestapo or security police." (Hoyt Vandenberg testimony, Armed Services Committee, Hearings on S. 758, Pt. 3, 1947, p. 497.)

Another witness for the bill, Dr. Vannevar Bush, was asked during the House hearings to comment on the concern the new agency might become a "Gestapo." Dr. Bush testified:

"I think there is no danger of that. The bill provides clearly that it is concerned with intelligence outside of this country, that it is not concerned with intelligence on internal affairs...."

"We already have, of course, the FBI in this country, concerned with internal matters, and the collection of intelligence in connection with law enforcement internally."

(Vannevar Bush testimony, House Committee on Expenditures in the Executive Departments, Hearings on H.R. 2319, 1947 p. 559.)

11 The concern about wholly "domestic" internal security threats from groups deemed completely independent of any foreign influence is a fairly recent development.

40 Chief, International Terrorism Group, CIA, Rockefeller Commission, 3/10/75, pp. 1488-1489.

41 Eatinger testimony, 10/14/75, pp. 11-12.

42 Chief, International Terrorism Group, CIA, Rockefeller Commission, 3/10/75, pp. 1485-1489.

43 Chief, International Terrorism Group, CIA, Rockefeller Commission, 3/10/75, pp. 1488-90.

In addition to the distinction between files and names indexed, the varying figures as to the number of CHAOS files reflect other ambiguities. For example, the "file" on many individuals and groups ran several volumes, sometimes ten or more for the active leaders and organizations. Thus the Rockefeller Commission cites 1,000 "files" on private organizations, while the CIA notes that these multiple files actually were maintained on only 107 groups. (Letter from Director William Colby to Vice President Rockefeller with attachment of CIA comments on the Rockefeller Commission Report, 6/25/75, attachment, p. 8.)

126 Bob Finch deposition, Rockefeller Commission, 4/16/75, pp. 5-6. (For security reasons, this agent testified under the alias "Bob Finch".)

127 The case officer testified that Finch had raised the possibility and that from a security viewpoint, it would have seemed suspicious if Finch had not come. (Marcules, Rockefeller Commission, 3/10/75, p. 1550), Finch testified he could not recall whether he or Marcules first suggested his participation at the demonstrations. (Finch, Rockefeller Commission, 4/16/75, pp. 14-15.) However, a memorandum prepared by the case officer states that Finch was "willing to go" to D.C. (Marcules contact report, 4/5/71). In addition, the circumstances of his being formally recruited just in time for the assignment, and the juggling of his training schedule, strongly suggest the reporting was more planned as a collection opportunity than it was merely a fortuitous coincidence.

**SUPPLEMENTARY DETAILED STAFF REPORTS  
ON INTELLIGENCE ACTIVITIES AND THE  
RIGHTS OF AMERICANS**

---

**BOOK III**

---

**FINAL REPORT  
OF THE  
SELECT COMMITTEE  
TO STUDY GOVERNMENTAL OPERATIONS  
WITH RESPECT TO  
INTELLIGENCE ACTIVITIES  
UNITED STATES SENATE**

APRIL 23 (under authority of the order of April 14), 1976

**NATIONAL SECURITY AGENCY SURVEILLANCE AFFECTING AMERICANS**

**1. INTRODUCTION AND SUMMARY**

This report describes the Committee's investigation into certain questionable activities of the National Security Agency (NSA).  
1 The Committee's primary focus in this phase of its investigation was on NSA's electronic surveillance practices and capabilities, especially those involving American citizens, groups, and organizations.

NSA has intercepted and disseminated international communications of American citizens whose privacy ought to be protected under our Constitution. For example, from August 1945 to May 1975, NSA obtained copies of many international telegrams sent to, from, or through the United States from three telegraph companies. In addition, from the early 1960s until 1973, NSA targeted the international communications of certain American citizens by placing their names on a "watch list." Intercepted messages were disseminated to the FBI, CIA, Secret Service, Bureau of Narcotics and Dangerous Drugs (BNDD), and the Department of Defense. In neither program were warrants obtained. 2

With one exception, 3 NSA contends that its interceptions of Americans' private messages were part of monitoring programs already being conducted against various international communications channels for "foreign intelligence" purposes. This contention is borne out by the record. Yet to those Americans who have had their communications sent with the expectation that they were private -- intentionally intercepted and disseminated by their Government, the knowledge that NSA did not monitor specific communications channels solely to acquire their messages is of little comfort.

In general, NSA's surveillance of Americans was in response to requests from other Government agencies. Internal NSA directives now forbid the targeting of American citizens' communications. Nonetheless, NSA may still acquire communications of American citizens as part of its foreign intelligence mission, and information derived from these intercepted messages may be used to satisfy foreign intelligence requirements.

NSA's current surveillance capabilities and past surveillance practices were both examined in our investigation. The Committee recognizes that NSA's vast technological capability is a sensitive national asset which ought to be zealously protected for its value to our common defense. If not properly controlled, however, this same technological capability could be turned against the American people, at great cost to liberty. This concern is compounded by the knowledge that the proportion of telephone calls and telegrams being sent through the air is still increasing.

In addition to reviewing facts and issues relating to electronic surveillance, the Committee also examined certain questionable activities of the NSA's Office of Security. See pp. 777-783.

## *A. NSA's Origins and Official Responsibilities*

NSA does not have a statutory charter; its operational responsibilities are set forth exclusively in executive directives first issued in the 1950s. One of the questions which the Senate asked the Committee to consider was the "need for specific legislative authority to govern the operations of ... the National Security Agency." 4

According to NSA's General Counsel, no existing statutes control, limit, or define the signals intelligence activities of NSA. Further, the General Counsel asserts that the Fourth Amendment does not apply to NSA's interception of Americans' international communications for foreign intelligence purposes. 5

### *1. Origins*

NSA was established in 1952 by a Top Secret directive issued by President Truman. 6 Under this directive, NSA assumed the responsibilities of the Armed Forces Security Agency, which had been created after World War II to integrate American cryptologic efforts. 7 These efforts had expanded rapidly after World War II as a result of the demonstrated wartime value of breaking enemy codes, particularly those of the Japanese.

### *2. Responsibilities*

(a) Subject Matter Responsibilities. -- The executive branch expects NSA to collect political, economic, and military information as part of its "foreign intelligence" mission.<sup>8</sup> "Foreign intelligence" is an ambiguous term. Its meaning changes, depending upon the prevailing needs and views of policymakers, and the current world situation. The internal politics of a nation also play a role in setting requirements for foreign intelligence; the domestic economic situation, an upcoming political campaign, and internal unrest can all affect the kind of foreign intelligence that a political leader desires. Thus, the definition constantly expands and contracts to satisfy the changing needs of American policymakers for information. This flexibility was illustrated in the late 1960s, when NSA and other intelligence agencies were asked to produce "foreign intelligence" on domestic activists in the wake of major civil disturbances and increasing antiwar activities.

NSA's authority to collect foreign intelligence is derived from a Top Secret National Security Council directive which is implemented by directives issued by the Director of Central Intelligence. 9 These directives give NSA the responsibility for "Signals Intelligence" (SIGINT) and "Communications Security" (COMSEC). SIGINT is subdivided into "Communications Intelligence" (COMINT) and "Electronics Intelligence" (ELINT). COMINT entails the interception of foreign communications and ELINT involves the interception of electronic signals from radars, missiles, and the like. The COMSEC mission includes the protection of United States Government communications by providing the means for enciphering messages and by establishing procedures for maintaining the security of equipment used to transmit them.

NSA's interception of communications -- the area on which the Committee focused -- arises under the COMINT program. The controlling NSCID defines COMINT in broad terms as "technical and intelligence information derived from foreign communications by other than the intended recipients." 10 The same NSC directive also states that COMINT "shall not include (a) any intercept and processing of unencrypted written communications, press and propaganda broadcasts, or censorship." 11

The specific exclusion of unencrypted written communications from NSA's mandate would appear to prohibit NSA's interception of telegrams. NSA contends that this exclusion is and always has been limited to mail and communications other than those sent electronically. 12

The same NSCID which discusses foreign communications also states that NSA is to produce intelligence "in accordance with objectives, requirements, and priorities established by the Director of Central Intelligence with the advice of the United States Intelligence Board." USIB was composed of representatives from the FBI, CIA, Treasury Department, Energy Research and Development Administration, State Department, and Defense Department. 13 Since 1966, NSA annually received general requirements from USIB for the collection of foreign intelligence. These requirements ordinarily identified broad areas of interest, such as combating international terrorism, and were supplemented by more specific "amplifying requirements" periodically submitted to NSA by other USIB members.

(b) Geographic Responsibilities. -- Although none of the applicable executive directives explicitly prohibit NSA from intercepting communications which occur wholly within the United States, internal NSA policy has always prohibited such interceptions. In practice, NSA limits itself to communications where at least one of the terminals is in a foreign country. This means that when Americans use a telephone or other communications link between this country and overseas, their words may be intercepted by NSA.

(c) Jurisdiction with Respect to Nationality. -- Although the controlling NSCID contains no limitation relating to the citizenship of persons whose "foreign communications" may be intercepted, the relevant DCID does exclude messages "exchanged among private organizations and nationals, acting in a private capacity, of the U.S." This restriction is designed to prevent NSA from processing communications between two Americans, regardless of their location.

In the late 1960s and early 1970s, however, NSA did intercept and disseminate some messages exchanged between two Americans where one of the terminals was foreign. NSA does not now knowingly process or disseminate messages where both the sender and recipient are American citizens, groups, or organizations.

## *B. Summary of Interception Programs*

The Committee's hearings disclosed three NSA interception programs: the "watch lists" containing names of American citizens; "Operation SHAMROCK," whereby NSA received copies of millions of telegrams leaving or transiting the United States, and the monitoring of certain telephone links between the United States and South America at the request of the Bureau of Narcotics and Dangerous Drugs. In addition, the Committee's investigation revealed that although NSA no longer includes the names of specific citizens in its selection criteria, it still intercepts international communications of Americans as part of its foreign intelligence collection activity. Information derived from such communications is disseminated by NSA to other intelligence agencies to satisfy foreign intelligence requirements.

### *1. Watch Lists Containing Names of Americans*

From the early 1960s until 1973, NSA intercepted and disseminated international communications of selected American citizens and groups on the basis of lists of names supplied by other Government agencies. In 1967, as part of a general concern within the intelligence community over civil disturbances and peace demonstrations, NSA responded to Defense Department requests by expanding its watch list program. Watch lists came to include the names of individuals, groups, and organizations involved in domestic antiwar and civil rights activities in an attempt to discover if there was "foreign influence" on them. 14

In 1969, NSA formalized the watch list program under the codename MINARET. The program applied not only to alleged foreign influence on domestic dissent, but also to American groups and individuals whose activities "may result in civil disturbances or otherwise subvert the national security of the U.S." 15 At the same time, NSA instructed its personnel to "restrict the knowledge" that NSA was collecting such information and to keep its name off the disseminated "product." 16

Prior to 1973, NSA generally relied on the agencies requesting information to determine the propriety and legality of their actions in submitting names to NSA. 17 NSA's new director, General Lew Allen, Jr., indicated some concern about Project MINARET in August 1973, and suspended the dissemination of messages under the program. In September 1973, Allen wrote the agencies involved in the watch lists, requesting a recertification of their requirements, particularly as to the appropriateness of their requests.

In October 1973, Assistant Attorney General Henry Petersen and Attorney General Elliot Richardson concluded that the watch lists were of "questionable legality" and so advised NSA. 18 In response, NSA took the position that although specific names had been targeted, the communications of particular Americans included on the watch lists had been collected "as an incidental and unintended act in the conduct of the interception of foreign communications." Allen concluded:

[NSA's] current practice conforms with your guidance that "relevant information acquired [by NSA] in the routine pursuit of the collection of foreign intelligence information may continue to be furnished to appropriate government agencies. 19

### *2. Obtaining Copies of Messages from International Telegraph Companies: Operation SHAMROCK*

From August 1945 until May 1975, NSA received copies of millions of international telegrams sent to, from, or transiting the United States. Codenamed Operation SHAMROCK, this was the largest governmental interception program affecting Americans, dwarfing CIA's mail opening program by comparison. Of the messages provided to NSA by the three major international telegraph companies, it is estimated that in later years approximately 150,000 per month were reviewed by NSA analysts.

NSA states that the original purpose of the program was to obtain the enciphered telegrams of certain foreign targets. Nevertheless, NSA had access to virtually all the international telegrams of Americans carried by RCA Global and ITT World Communications. 20 Once obtained, these telegrams were available for analysis and dissemination according to NSA's selection criteria, which included the watch lists.

The SHAMROCK program began in August 1945, when representatives of the Army Signals Security Agency approached the commercial telegraph companies to seek post-war access to foreign governmental traffic passing over the facilities of the companies. Despite advice from their attorneys that the contemplated intercept operation would be illegal in peacetime, the companies agreed to participate, provided they received the personal assurance of the Attorney General of the United States that he would protect them from suit, and that efforts be immediately undertaken to legalize the intercept operation. Apparently these assurances were forthcoming, because the intercept program began shortly thereafter. 20a

In 1947, representatives of the companies met with Secretary of Defense Forrester to discuss their continued participation in SHAMROCK. Forrester told them that the program was "in the highest interests of national security" and urged them to continue. 21 The companies were told that President Truman and Attorney General Tom C. Clark approved and that they would not suffer criminal liability, at least while the current Administration was in office. Those assurances were renewed in 1949, when it was again emphasized that future administrations could not be bound. There is no evidence that the companies ever sought such assurances again.

Throughout the operation NSA never informed the companies that it was analyzing and disseminating telegrams of Americans. Yet the companies, who had feared in 1945 that their conduct might be illegal, apparently never sought assurances that NSA was limiting its use to the messages of the foreign targets once the intercept program had begun.

### *3. Monitoring of South American Links for Drug Traffic Control Purposes*

From 1970 to 1973, at the request of the Bureau of Narcotics and Dangerous Drugs, NSA monitored selected telephone circuits between the United States and certain countries in South America to obtain information relating to drug trafficking.

The BNDD was initially concerned about drug deals that were being arranged in calls to a South American city from public telephone booths in New York City. The Bureau determined that it could not legally tap the public telephones and enlisted NSA's help to monitor international communications links that carried these telephone calls. Thus, instead of intercepting calls from a few telephone booths, as the BNDD would have done with a wiretap, NSA had access to international calls placed from, or received in, cities all over the United States that were switched through New York. 22

In addition, BNDD submitted the names of 450 Americans to NSA for a "drug" watch list. This list resulted in the dissemination of about 1,900 reports on drug traffickers to BNDD and CIA.

The CIA began to assist NSA's monitoring effort in late 1972, but later determined that the program served a law enforcement function and terminated its participation in February 1973. 23 NSA was affected by the CIA decision, as it had come to view this program as possibly serving a law enforcement function and thus beyond the scope of its proper mission. NSA terminated this activity in June 1973, but continued to monitor some of the same United States South American links for foreign intelligence purposes until July 1975.

#### *4. "Incidental" Intercepts of Americans' Communications*

Although NSA does not now target communications of American citizens, groups, or organizations for interception by placing their names on watch lists, other selection criteria are used which result in NSA's reviewing many communications to, from, or about an American. The initial interception of a stream of communications is analogous to a vacuum cleaner: NSA picks up all communications carried over a specific link that it is monitoring. The combination of this technology and the use of words to select communications of interest results in NSA analysts reviewing the international messages of American citizens, groups, and organizations for foreign intelligence.

The interception and subsequent processing of communications are conducted in a manner that minimizes the number of unwanted messages. Only after an analyst determines that the content of a message meets a legitimate requirement will it be disseminated to the interested intelligence agencies. In practically all cases, the name of an American citizen, group, or organization is deleted by NSA before a message is disseminated.

Internal NSA guidelines ensure that the decision to disseminate an intercepted communication is now made on the basis of the importance of the foreign intelligence it contains, not because a United States citizen, group, or organization is involved. This procedure is, of course, subject to change by internal NSA directives.

In short, NSA's pursuit of international communications does result in the incidental interception and dissemination of communications which the American sender or receiver expected to be kept private. This issue of the latitude NSA should be given in disseminating incidental intercepts must be dealt with if we are to resolve the dilemma between the need for effective foreign intelligence and the need to protect the rights of American citizens. 24

#### *C. Issues and Questions*

Pursuant to its mandate, the Committee has studied whether NSA's jurisdiction and operations should be governed and controlled by a legislative charter. The facts discovered by the Committee with respect to NSA's programs and capabilities suggest that the following questions should be posed for legislative resolution:

1. Should NSA, which like the CIA has vast powers intended for "foreign" purposes, be barred from using those powers domestically?
2. Should NSA, like the CIA, be prohibited from exercising "law enforcement powers" or "internal security functions"?
3. Should NSA be permitted specifically to target the international communications of Americans? If so, for what purposes and should a warrant be required?
4. Should NSA be permitted to disseminate information derived from the "incidental" interception of Americans' messages obtained by monitoring an international communications link for foreign intelligence purposes? If so, to whom, for what use, and under what controls?

## **II. NSA'S MONITORING OF INTERNATIONAL COMMUNICATIONS**

#### *A. Summary of the Watch List Activity*

Lists of words and phrases, including the names of individuals and groups, have long been used by the National Security Agency to select information of intelligence value from intercepted communications. These lists are referred to as "watch lists" by NSA and the agencies requesting intelligence information from them, such as the Federal Bureau of Investigation, Central Intelligence Agency, Bureau of Narcotics and Dangerous Drugs, Secret Service, and Department of Defense. The great majority of names on watch lists have always been foreign citizens and organizations.

The Committee examined two types of watch lists which included Americans. One focused on domestic civil disturbances, the other on drug trafficking. Messages selected on the basis of these watch lists were analyzed and forwarded to other Federal agencies, including the FBI, CIA, BNDD, and DOD. The Secret Service also received information from NSA regarding potential threats to persons under its protection.

Between 1967 and 1973, NSA received watch lists from these agencies which included the names of Americans as well as foreign citizens and organizations. These lists were used to select messages from intercepted traffic and to discover whether there was foreign influence on, or support of, domestic antiwar and civil rights activities. From 1970 until 1973, similar lists were used to gather intelligence on international drug traffic.

NSA itself added names to the watch lists to enhance the selection criteria used to support the requirements levied by other agencies. 25 NSA's Office of Security also added names to the lists for counterintelligence and counterespionage purposes. 26

Between 1969 and 1973, NSA disseminated approximately 2,000 reports (e.g., the text or summaries of intercepted messages) to the various requesting agencies as a result of the inclusion of American names on the watch lists." No evidence was found, however, of any significant foreign support or control of domestic dissidents.

Information generated by the watch list activity was the product of collection conducted against channels of international communications ("links") with at least one terminal in a foreign country. Nevertheless, the messages NSA intercepted and disseminated were sometimes between two American citizens, one in the United States and one abroad. With one exception, NSA intercepted messages only from "links" it was already monitoring as part of its foreign intelligence mission.

This exception occurred in 1970, when the Bureau of Narcotics and Dangerous Drugs asked NSA to provide intelligence on international drug trafficking. NSA began to monitor certain international communications links between the United States and South America to acquire intelligence on drugs entering the United States. The BNDD also supplied NSA with the names of Americans suspected of drug trafficking for inclusion on a watch list. Reports on drug-related activities of American citizens were disseminated to both the BNDD and CIA.

Both the drug and "nondrug" watch lists of United States citizens were discontinued in 1973 as a result of questions concerning their legality and propriety, raised by the Justice Department and by NSA itself.

## *B. History*

### *1. Early Period: 1960-1967*

The exact details of the origin of the watch list activity are unclear. Testimony from NSA employees indicates that the early 1960s marked the beginning of watch lists and the inclusion of names of American citizens. According to a senior NSA official, "the term watch list had to do with a list of names of people, places or events that a customer would ask us to have our analysts keep in mind as they scan large volumes of material." 28

Originally these lists were used for two purposes: (1) monitoring travel to Cuba and other communist countries; and (2) protecting the President and other high Government officials. According to NSA, neither of these tasks involved a regular program for including American names on the lists: requests from other agencies were infrequent and generally *ad hoc*. 29 Prior to 1962, NSA did not have an office specifically in charge of interagency dealings, which also limited the number of requests for information from other agencies.

In the early 1960s requesting agencies, usually the FBI, submitted names of United States citizens and business firms having dealings with Cuba to NSA. In turn, NSA provided the FBI with intelligence on American commercial and personal communications with Cuba. A May 18, 1962, internal FBI memorandum from Raymond Wannall, Chief of the Nationalities Intelligence Section of the Domestic Intelligence Division, to Assistant Director William Sullivan reported on a meeting with NSA officials concerning Cuba. The purpose of the meeting was to devise a way for the FBI to make better use of NSA intercepts relating to "commercial and personal communications between persons in Cuba and in the United States." 30 The memorandum stated:

of the raw traffic now available, the material which would be most helpful to us would consist of periodic listing of firms in the U.S. which are doing business with individuals in Cuba and the Cuban government.... With regard to personal messages, we feel that those relating to individuals travelling between Cuba and the U.S. would be the most significant.... *We will furnish NSA a list of persons in whom we have an investigative or an intelligence interest.* [Emphasis added.] 31

The second area of concern in the early 1960s was protection of the President. According to NSA, the Secret Service submitted the names of the Presidents and others under its protection, possibly as early as 1962. 32 This activity, however, was not instituted for the purpose of acquiring the communications of the protectees, but to determine possible threats to their well-being. After President Kennedy was assassinated in November 1963, interest in presidential protection naturally intensified, and NSA's joint efforts with the Secret Service were expanded.

This early activity was not directed against American citizens; no intelligence program called for the systematic inclusion of American citizens on a watch list. The evidence indicates, however, that NSA did intentionally monitor certain international activities of some American citizens as early as 1962. These objectives, which began as legitimate concerns for the life of the President, expanded when the watch list activity intensified in 1967.

### *2. Systematic Inclusion of American Names: 1967*

The major watch list effort against American citizens began in the fall of 1967. In response to pressures from the White House, FBI, and Attorney General, the Department of the Army established a civil disturbance unit. An area of special interest was possible foreign involvement in American civil rights and antiwar groups. General William Yarborough, the Army Assistant Chief of Staff for Intelligence (ACSI), directed the operations of this unit. 33

On October 20, 1967, Yarborough sent a message to the Director of NSA, General Marshall Carter, requesting that NSA provide any available information concerning possible foreign influence on civil disturbances in the United States. Yarborough specifically asked for "any information on a continuing basis" concerning:

A. Indications that foreign governments or individuals or organizations acting as agents of foreign governments are controlling or attempting to control or influence the activities of U.S. "peace" groups and "Black Power" organizations.

B. Identities of foreign agencies exerting control or influence on U.S. organizations.

C. Identities of individuals and organizations in U.S. in contact with agents of foreign governments.

D. Instructions or advice being given to U.S. groups by agents of foreign governments. 34

A senior NSA official knowledgeable in this area testified that such a request for information on civil disturbances or political activities was "unprecedented. . . . It is kind of a landmark in my memory; it stands out as a first." 31 The initial request was also vague; it did not discuss the targeting of American citizens, or what specific organizations or groups were of interest. The Army was "interested in determining whether or not there is evidence of any foreign action to develop or control these anti-Vietnam and other domestic demonstrations." 36

The following day, Carter sent a cable to Yarborough, Director of Central Intelligence Richard Helms, and each member of the United States Intelligence Board, informing them that NSA was "concentrating additional and continuing effort to obtain SIGINT" in support of the Army request. 37 Although USIB members were notified of this new requirement, there is no record of discussion at USIB meetings of the watch list, nor did USIB ever validate a requirement for monitoring in support of the civil disturbance unit. 38

Watch list names were submitted directly to NSA by the FBI, Secret Service, Defense Intelligence Agency, the military services, and the CIA. These same agencies received reports of intercepted communications pertaining to their areas of interest. The State Department also received some reports on international terrorism and drug activities, but it is unclear whether they submitted any American names. 39

Between 1967 and 1973, a cumulative total of about 1,200 American names appeared on the civil disturbance watch list. The FBI submitted the largest proportion, approximately 950. The Secret Service's list included about 180 American individuals and groups active in civil rights and antiwar activities. The DIA submitted the names of 20 American citizens who traveled to North Vietnam, and the CIA submitted approximately 30 names of alleged American radicals. The Air Force Office of Special Investigations, the Naval Investigative Service, and the Army Assistant Chief of Staff for Intelligence all submitted a small number of names to NSA. In addition, NSA contributed about 50-75 names to support the watch list activity.

At its height in early 1973, there were 600 American names and 6,000 foreign names on the watch lists. 40 According to NSA, these lists produced about 2,000 reports that were disseminated to other agencies between 1967 and 1973. NSA estimates 10 percent of these reports were derived from communications between two American citizens. 41

### *3. Increasing Security and Concealment of Programs Involving American Citizens*

The watch list activity was always a highly sensitive, compartmented operation. 42 The secrecy was not due to the nature of the communications intercepted (most were personal and innocuous) but to the fact that American citizens were involved. NSA requested that some of the agencies receiving watch list product either destroy the material or return it within two weeks. 43 This procedure was not followed with even the most sensitive of NSA's legitimate foreign intelligence product.

When NSA intercepts, analyzes, and disseminates a foreign communication, the regular procedure is for the communication to be classified, given a serial number, and filed. From 1967-1969, much of the watch list material was treated in this manner, and given the same classification as the most sensitive NSA intercepts. As a senior NSA official testified:

During the 1967-1969 period, communications that had a U.S. citizen on one end and a foreigner on the other were given [a high level security classification] . . . and went out as serialized product, through a limited by name only distribution. 44

Other material was even more highly classified. Whenever communications between two Americans were intercepted, they were classified Top Secret, prepared with no mention of NSA as the source, and disseminated "For Background Use Only." 45 No serial number was assigned to them, and they were not filed with regular communications intelligence intercepts. This effectively limited access to the material and prevented its use in any official study or report. As Benson Buffham, Deputy Director of NSA, testified:

first it is true that we maintain permanent type records of all of our product. However, it is my understanding that this material was dealt with separately. It was not serialized and put out in regular distribution lists. These items were produced as display items, show-to items and thus the normal

procedures that would be followed for our serialized product were not followed. So as best as I know, there would not be any record of this material held in other places within the Agency in the permanent files. 46

The project's sensitivity was due to a number of factors. The requirements -- protection of the President, terrorism, civil disturbances, drug activities -- involved sensitive subjects. NSA also wanted to ensure protection of the SIGINT source and of other intercept operations, which could be jeopardized by unauthorized release of the watch list material. 47 Finally, American citizens, firms, and groups were involved, and this was "different from the normal mission of the National Security Agency." 48

The fact that NSA did not serialize and file the intercepted communications between Americans indicates they did not view this activity as part of their "normal" mission. Buffham stated that he believed the interception and dissemination of communications between American citizens to be outside NSA's mission, as defined in applicable executive directives. 49

#### *4. Project MINARET: Further Expansion and Increased Secrecy*

The civil disturbance watch list program became even more compartmented in July 1969, when NSA issued a charter to establish Project MINARET.

MINARET established more stringent controls over the information collected on American citizens and groups involved in civil disturbances. To enhance security, MINARET effectively classified all of this information as Top Secret, "For Background Use Only," and stipulated that the material was not to be serialized or identified with the National Security Agency. Prior to 1969, only communications between two Americans were classified in this manner; with the adoption of MINARET, communications to, from, or mentioning United States citizens were so classified.

The MINARET charter established tighter security procedures for intercepted messages which contained:

a. information on foreign governments, organizations, or individuals who are attempting to influence, coordinate or control U.S. organizations or individuals who may foment civil disturbance or otherwise undermine the national security of the U.S.;

b. information on U.S. organizations or individuals who are engaged in activities which may result in civil disturbances or otherwise subvert the national security of the U.S. *An equally important aspect of MINARET will be to restrict the knowledge that such information is being collected and processed by the National Security Agency.* [Emphasis added.] 50

This charter was prepared within NSA and issued by an NSA Assistant Director. According to testimony given the Committee, the charter was discussed with NSA Deputy Director Louis Tordella and probably with the Director, but other agencies involved in the watch list activity were not informed of the new procedures until the charter had been adopted. 51

In addition to regulating the distribution and format of watch list product, MINARET also initiated a more formal procedure for submission of names. No longer were names accepted over the telephone or by word of mouth. 52 According to NSA, the watch list "was handled less systematically prior to 1969 ... some watch lists entered NSA during that time via direct channels, including secure telephone." 53 NSA maintains, however, that the regular procedure was for agencies submitting names by secure telephone, or in person to confirm them with written requests. A senior NSA official testified: "From 1969 on [the watch list] was handled in a very careful, reviewed and systematic way." 54

The MINARET charter was an effort both to restrict knowledge of the watch list program and to disguise NSA's participation in it. NSA maintains that its concern for the security of SIGINT sources, i.e., NSA's intercept operations, was the primary reason for initiating these measures. 55 NSA further maintains that it was concerned with the privacy of U.S. communications and, by imposing the MINARET restrictions, sought to ensure that dissemination was made exclusively to those outside NSA who had a legitimate need for the information. It is apparent that the MINARET restrictions also protected NSA's role from exposure. Dissemination of foreign communications to domestic agencies was obviously a sensitive matter. It involved considerable risk of exposure which would increase if the number of people within the intelligence community who were aware of the activity grew. Therefore, NSA placed more restrictive security controls on MINARET material than it placed on other highly classified foreign intercepts in order to conceal its involvement in activities which were beyond its regular mission.

#### *C. Types of Names on Watch Lists*

The names of Americans submitted to NSA for the watch lists ranged from members of radical political groups, to celebrities, to ordinary citizens involved in protests against their Government. Names of organizations were also included; some were communist front groups, others were nonviolent and peaceful in nature.

The use of names, particularly those of groups and organizations, to select international communications results in NSA unnecessarily reviewing many messages. There is a multiplier effect: if an organization is targeted, all its member's communications may be intercepted; if an individual is on the watch list, all communications to, from, or mentioning that individual may be intercepted. These communications may also contain the names of other "innocent" parties. For example, a communication mentioning the wife of a U.S. Senator was intercepted by NSA, as were communications discussing a peace concert, a correspondent's report from Southeast Asia to his magazine in New York, and a pro-Vietnam war activist's invitations to speakers for a rally. According to testimony before the Committee, the material that resulted from the watch lists

was not very valuable; most communications were of a private and personal nature, or involved rallies and demonstrations that were public knowledge. 56

#### *D. Overlapping Nature of Intelligence Community Requests*

As noted above, the primary purpose of the watch lists on Americans from 1967-1973 was to collect intelligence on civil disturbances. NSA also responded to a requirement from BNDD to monitor for illegal drug trafficking from 1970-1973. In addition, NSA supplied information to Federal agencies (FBI, CIA, Secret Service, and Department of Defense) on possible terrorist activity, and disseminated reports to the Secret Service which related to the protection of the President. The demarcations between these categories, however, was not always clear.

Secret Service officials, for example, have told the Committee that presidential and executive protection includes "providing a secure environment" for the White House for foreign embassies within the United States and in areas where high Government officials travel. According to the Secret Service, this requires "information regarding civil disturbances and anti-American or anti-U.S. Government demonstrations in the U.S. or overseas, as these demonstrations may affect the Secret Service's mission of protecting U.S. and foreign officials." 57 After the October 20, 1967, Yarborough cable, the Secret Service began submitting names of individuals and organizations active in the antiwar and civil rights movements to NSA. Although these individuals and groups were not considered a direct threat to protectees, it was believed they might participate in demonstrations against United States policy which would endanger the physical well-being of Government officials. 58 Intercepted communications to, from, or mentioning these individuals and groups were always disseminated by NSA to the Secret Service and the CIA, and often to the FBI.

There was considerable overlap among various agencies in submissions for watch list coverage and requests for material. For example, the CIA was interested in:

*The activities of U.S. individuals involved in either civil disorders, radical student or youth activities, racial militant activities, radical antiwar activities, draft evasion/deserter support activities, or in radical related media activities, where such individuals have some foreign connection by virtue of: foreign residence, foreign travel, attendance at international conferences or meetings and/or involvement or contact with foreign governments, organizations, political parties or individuals; or with Communist front organizations. [Emphasis added.]* 59

The FBI was interested in similar kinds of information, as illustrated by excerpts of two memoranda from J. Edgar Hoover to the Director, NSA:

This is to advise you that this Bureau has a continuing interest in receiving intelligence information obtained under MINARET regarding the targets previously furnished you. . . . Information derived from this coverage has been helpful in determining the extent of international cooperation among New Leftists and has been used for lead purposes. 60

The purpose of this communication is to advise of general areas of interest to this Bureau in connection with racial extremist matters and to request your assistance in such matters.

*There are both white and black racial extremists in the United States advocating and participating in illegal and violent activities for the purpose of destroying our present form of government. Because of this goal, such racial extremists are natural allies of foreign enemies of the United States. Both material and propaganda support is being given to United States racial extremists by foreign elements. The Bureau is most interested in all information showing ties between United States racial extremists and such foreign elements. [Emphasis added.]* 61

These requests reflect an underlying similarity of interests among agencies, despite the differing needs which are expressed in their requirements. To some extent the DIA, FBI, CIA, and the Secret Service received information on Black activists and groups, and on the antiwar movement. All were concerned with how civil disturbances and antiwar demonstration were affecting the internal security of the United States. Although their general area of concern was the same, each agency used the information for its own particular purposes. The DIA was interested in travel to North Vietnam; the CIA kept files on alleged antiwar radicals for its Project CHAOS; the FBI used the information to develop "leads" on new left activists, at the same time it was conducting COINTELPRO efforts against alleged radicals; 62 and the Secret Service was concerned with protecting the President. Despite slight variations in focus, the different agencies' requests reflected the overriding fear that the nation was being undermined internally and externally. It was this perception which produced the watch list program directed against Americans.

#### *E. Drug Watch Lists: United States -- South American Intercepts*

##### *1. Initial Monitoring: 1970*

An unofficial requirement to collect and disseminate international communications concerning drug trafficking was levied on NSA by the Bureau of Narcotics and Dangerous Drugs on April 10, 1970. BNDD Director John Ingersoll sent a memorandum to NSA Director Noel Gayler requesting "any and all COMINT information which reflects illicit traffic in narcotics and dangerous drugs." NSA initiated its monitoring in June 1970, but a general requirement to obtain foreign intelligence on drug trafficking was not validated by the United States Intelligence Board until August 1971.

The Ingersoll memorandum specified that BNDD was interested in individuals and organizations involved in illegal drug activities, information on production centers, and all violations of United States laws pertaining to narcotics and dangerous drugs. In order to assist NSA in fulfilling the requirement, BNDD stated that they would provide NSA lists of individuals and organizations which had a history of involvement with illegal drug activities. According to the Ingersoll memorandum, "this watch list will be updated on a monthly basis and additions/deletions will be forwarded to NSA." 63

NSA implemented this request by monitoring international communications traffic. The first intercepts began in June 1970. 64 Telephone traffic carried on circuits between the United States and certain South American cities was first monitored in September 1970. Unlike other watch list monitoring, the United States-South American effort required NSA to devote additional resources to intercepting communications over this specifically targeted link. 65

This link included the telephone circuits between New York City and a South American city. BNDD was initially concerned about drug deals that were being arranged in calls from public telephone booths in New York City to South America. According to a senior NSA official:

BNDD had some information that led them to believe that arrangements were being made by telephone from New York City, a Grand Central Station telephone booth, to some individuals in [a South American city]. 66

BNDD felt that it could not legally tap the public telephones and thus enlisted NSA's help to cover the international link that carried these telephone calls. At BNDD's request, NSA began to intercept telephone conversations carried over this link in September 1970. Additional United States-South American links were soon added. BNDD also supplied NSA with code names for drugs and names of individuals, including American citizens.

The telephone monitoring was conducted from one NSA site until December 1970, when that intercept station was closed. An NSA East Coast facility, operated by the military, began monitoring United States-South American links in March 1971. According to NSA, 19 United States-South American links were monitored for voice traffic at the two sites between 1970 and 1973. 67 Six South American cities were of primary interest, in addition to New York and Miami. 68

During this period, BNDD submitted 450 American names to NSA for inclusion on the drug watch list. At the high point, in early 1973, 250 Americans were on the active list.

Of the calls intercepted at the East Coast site, less than 10 percent were sent to NSA headquarters, and less than 10 percent of these were disseminated. 69 Yet it is clear that many personal and business calls of Americans were reviewed during this operation. This results from the lack of an effective method for avoiding the incidental interception of calls involving American citizens when a link with one terminal in the United States is monitored.

## 2. CIA/NSA Drug Activity

In October 1972, NSA requested CIA assistance in monitoring United States-South American communication links to collect intelligence on illicit drug traffic. According to Buffham, NSA made this request

because we felt that this was a sensitive matter, and that *greater security would be achieved by utilizing the career intercept operators of the CIA to perform the activity*, and, in addition, they could be more selective in providing items because *we would be able to give the CIA operators the specific names on the watch list, and we did not feel that we could or should provide those names to the* [East Coast military station]. [Emphasis added.] 70

NSA's concern about the security of American names being provided to the East Coast station stemmed from the fact that the operators were young military personnel on short tours of duty. They were not professional intelligence officers, and NSA felt that monitoring American citizens was too sensitive a task for them. The use of CIA career operators satisfied NSA that targeting of American citizens would not be disclosed.

The Rockefeller Commission also investigated this activity, but found no evidence that the CIA directly targeted American citizens. The Rockefeller Commission report stated:

For a period of approximately six months, commencing in the fall of 1973 [sic], the Directorate monitored telephone conversations between the United States and Latin America in an effort to identify foreign drug traffickers. . . .

A CIA intercept crew stationed at an East Coast site monitored calls to and from certain Latin American telephone numbers contained on a "watch list" provided by NSA. While the intercept was focused on foreign nationals, it is clear that American citizens were parties to many of the monitored calls. . . .

*The Commission's investigation disclosed that, from the outset of the Agency's involvement in the narcotics control program, the Director and other CIA officials instructed involved personnel to collect only foreign intelligence and to make no attempt -- either within the United States or abroad -- to gather information on American citizens allegedly trafficking in narcotics.* [Emphasis added.] 71

The evidence examined by the Select Committee directly contradicts this finding. An internal CIA memorandum of November 17, 1972, to the Director of Communications from the Chief, Special Programs Division, reveals that the CIA was receiving the names of U.S. citizens.

NSA had tasked [the East Coast site] with this requirement [to monitor for drug traffic] but were *unwilling to provide the site with the specific names and U.S. telephone numbers of interest on security/sensitivity grounds ...* to get around the problems mentioned above NSA requested the Agency undertake intercept of the long lines circuits of interest. *They have provided us with all information available (including the "sensitive") and the [CIA] facility is working on the requirement.* [Emphasis added.] 72

This memorandum and subsequent testimony by NSA officials revealed that the CIA was monitoring these circuits to intercept the calls of American citizens suspected of illegal drug trafficking. During this period, NSA continued to monitor the same circuits at its East Coast site, but that site did not have the specific BNDD "sensitive" watch lists of American names which were supplied to the CIA. Thus, the conclusion reached by the Rockefeller Commission that CIA intercepts were not undertaken for the purpose of gathering intelligence on American citizens -- is not supported by the evidence.

### *3. Termination of Drug Activity*

Three months after the CIA monitoring was initiated, CIA General Counsel Lawrence Houston issued an opinion which stated that the intercepts may violate Section 605 of the Communications Act of 1934. 73 This law, as amended in 1968, prohibits the unauthorized disclosure of any private communication of an American citizen to another party, unless undertaken pursuant to the President's constitutional authority to collect foreign intelligence, which is crucial to the security of the United States. 74 Since intercepted messages were provided to BNDD, Houston concluded that the activity was for law enforcement purposes, which is also outside the CIA's charter. As a result of this memorandum, the CIA suspended its collection. NSA, which has no charter, continued to monitor these links for drug information.

NSA officials have testified that they were told in early 1973 that the CIA was terminating collection because it was concerned about operating an intercept station within the United States. This concern is completely different from the one expressed in Houston's memorandum. NSA officials have told the Committee that questions concerning the legality of the activity were either not mentioned by the CIA, 75 or else mentioned secondarily. 76

NSA Deputy Director Buffham testified that after the CIA decided to stop the United States-South American drug monitoring, NSA began to review the legality and appropriateness of its efforts in support of BNDD. Although NSA is not prohibited by statute or executive directive from disseminating information that may pertain to law enforcement, it has always viewed its sole mission as the collection and dissemination of foreign intelligence. A senior NSA official testified: "We do not understand our mission to be one of supporting an agency with a law enforcement responsibility." 77

Although BNDD clearly was a law enforcement agency, NSA initially held that the intelligence it was supplying BNDD was a part of a legitimate USIB-approved effort to prevent drugs from entering the United States. 78 This international aspect of the requirement was interpreted by NSA as sufficient justification for classifying the activity as part of its "foreign intelligence" mission.

After discussions with the General Counsel's office at NSA and within the Office of the Secretary of Defense, the Director of NSA terminated the activity in June 1973. 79 All of NSA's drug materials product, internal memoranda, and administrative documents -- were destroyed in late August or early September 1973. Ordinarily, NSA keeps material for five years or more. According to a senior NSA official: "it wasn't thought we would get back into the narcotics effort anytime soon. There didn't seem to be any point in keeping them." 80

### *4. Continuation of NSA's United States-South American Monitoring*

In June 1975 the Committee received information that NSA continued to monitor United States-South American telephone calls after the June 1973 termination of the drug watch list activity. NSA officials confirmed that the same links targeted for the purpose of curbing illegal drug traffic were monitored by NSA for foreign intelligence after June 1973. Certain of these links were monitored until July 9, 1975. 81

According to NSA, this activity was terminated when "it did not prove productive." 82 While this effort was underway, NSA states that it did not collect or disseminate any information on narcotics traffic from the United States-South American links. A senior NSA official stated: "Nothing ever came. No by-product. The problem was dead." 83

### *5. Current Internal Policy Concerning Telephone Monitoring*

No statute or executive directive prohibits NSA's monitoring a telephone circuit with one terminal in the United States. 84 An internal NSA instruction was issued on August 7, 1975, that requires the personal approval of the chief of a major element within the Agency before monitoring of voice communications with a terminal in the United States is initiated. According to Deputy Director Buffham, "It is obvious that no such collection will be undertaken unless it is extremely important and is properly reviewed within the Agency." 85

### *F. Termination of the Civil Disturbance Watch List Activity*

The watch list activity involving civil disturbances was officially terminated in the fall of 1973. This was due to a combination of factors: growing concern within NSA regarding the program's vulnerability and propriety; the fact that courts were beginning to require the Government to reveal electronic surveillance conducted against particular criminal defendants; and

the questions, raised by the drug watch list activity, about NSA's authority to engage in monitoring for law enforcement purposes. What follows is a description of events leading to the termination of the watch lists.

The only Supreme Court case addressing the issue of electronic surveillance purportedly undertaken for national security purposes is *United States v. United States District Court*, commonly referred to as the Keith case. 85a The Supreme Court's decision was handed down on June 19, 1972, over a year before the watch list activity was terminated.

The case involved warrantless wiretaps on three U.S. citizens who were subsequently indicted for conspiracy to destroy Government property. There was no evidence of *foreign* participation in the alleged conspiracy.

After examining logs of the wiretaps in camera, the District Court judge had held that the surveillance on the defendants was unlawful and required that the overheard conversations be disclosed. 85b The Supreme Court affirmed the District Court's ruling.

While recognizing the President's constitutional duty to "protect our Government against those who would subvert or overthrow it by unlawful means," 85c the Court held that the power inherent in such a duty does not extend to the authorization of warrantless electronic surveillance deemed necessary to protect the nation from subversion by domestic organizations. The Court declared that the Fourth Amendment warrant requirement for electronic surveillance developed in two 1967 cases 86 applied, and that the electronic surveillances employed in the instant case were found to be unlawful. The Court did not reach the issue of whether the Executive has the constitutional power to authorize electronic surveillance without a warrant in cases involving the activities of foreign powers or agents.

Although the Keith ruling involved wiretaps and did not apply specifically to NSA, it did have a bearing on NSA's activities. Operation MINARET did entail warrantless electronic surveillance against certain domestic organizations. If there was no evidence to show that these domestic organizations were acting in concert with a foreign power, the Keith case would seem to cast doubts upon the legality of intercepting their messages without a warrant.

The watch list activity was never disclosed in a court proceeding; thus its legality has never been judicially determined. A 1973 criminal case did result in the Government's disclosure that some of a defendant's communications had been subject to a "foreign intelligence intercept." Some of the defendants in this 1973 case were members of a group which had been included on an NSA watch list by the Secret Service and FBI in mid-1971, and NSA had distributed some of their international communications to these agencies. 87 The propriety of these actions was never considered by the court, because the Government moved to dismiss the case rather than reveal the specifics of the watch list activity.

General Lew Allen, Jr. became the Director of NSA on August 15, 1973. In the course of familiarizing himself with his new responsibilities, he was fully briefed on the watch list activity.

According to Allen, the BNDD watch list activity had been terminated just prior to his arrival at NSA because the Agency feared "that it might not be possible to make a clear separation between requests for information submitted by BNDD as it pertained to legitimate foreign intelligence requirements and the law enforcement responsibility of BNDD." He also stated that the activity in support of the FBI, CIA, and Secret Service was suspended when NSA "stopped the distribution of information in the summer [August] of 1973." 88 Deputy Director Buffham told the Committee this dissemination was terminated due to three concerns: (1) NSA could not be certain as to what uses were being made of the information it was providing other agencies; (2) it feared that broad judicial discovery procedures might lead to the disclosure of sensitive intelligence sources and methods; and (3) NSA wanted to be "absolutely certain that we are providing information only for lawful purposes and in accordance with our foreign intelligence charter." 89

During July and August 1973, meetings were held between NSA and Justice Department representatives. According to NSA, these discussions influenced the Agency's decision to suspend the dissemination of watch list material. 90 As Buffham testified:

I believe although I am not positive, that Dr. Tordella, the Deputy Director, had discussions with people at Justice regarding the legality of our activities, and that these could have influenced then the determination in NSA to cease the activities in August, even though we had not yet received any formal statements from Justice. 91

At a meeting on August 28, 1973, NSA officials informed Assistant Attorney General Henry Petersen that communications involving the defendants in the 1973 criminal case had been intercepted and that NSA opposed "any disclosure of this technique and program." 92 Petersen apprised Attorney General Richardson of these events in a memorandum of September 4, 1973. On September 7, 1973, Petersen sent a memorandum to FBI Director Clarence Kelley, requesting to be advised by September 10 of:

the extent of the FBI's practice of requesting information intercepted by the NSA concerning domestic organizations or persons for intelligence, prosecutorial, or any other purposes ... [and] any comments which you may desire to make concerning the impact of the Keith case upon such interceptions. . . . 93

Kelley responded three days later that the FBI had requested intelligence from NSA "concerning organizations and individuals who are known to be involved in illegal and violent activities aimed at the destruction and overthrow of the United States Government." 94 He continued that the FBI did not view the materials supplied it by NSA, or the watch list activity in general as inconsistent with the Keith decision: the information "cannot possibly be used for any prosecutive purpose" and "we do not consider the NSA information as electronic surveillance information in the sense that was the heart of the Keith decision." The FBI's position was that the information supplied by NSA did not result from specific targeting of an individual's communications in the same sense as a wiretap; therefore, it was not "electronic surveillance." Kelley maintained

We do not believe that the NSA actually participated in any electronic surveillance, per se of the defendants for any other agency of the government, since under the procedures used by that agency *they are unaware of the identity of any group or individual* which might be included in the recovery of national security intelligence information. 95 [Emphasis added.]

This position is difficult to defend since intelligence agencies, including the FBI, submitted specific American names for watch lists which resulted in the interception of Americans' international communications.

On September 17, Allen wrote FBI Director Kelley and the heads of other agencies receiving information from NSA regarding continuation of the watch list activity. Noting that "the need for proper handling of the list and related information has intensified, along with ever-increasing pressures for disclosure of sources by the Congress, the courts, and the press," Allen requested, "at the earliest possible date," that Kelley and the other agency heads "review the current list your agency has filed with us in order to satisfy yourself regarding the appropriateness of its contents. . . ." 96

After receiving Kelley's September 10 memorandum, Petersen advised the Attorney General that the current number of individuals and organizations on NSA watch lists submitted by the FBI was "in excess of 600." 97 Petersen pointed out many legal problems arising from this program and recommended that

the FBI and Secret Service be immediately advised to cease and desist requesting NSA to disseminate to them information concerning individuals and organizations obtained through NSA electronic coverage and that NSA should be informed not to disclose voluntarily such information to Secret Service or the FBI unless NSA has picked up the information on its own initiative in pursuit of its foreign intelligence mission. 98

He also recommended that the standards and procedures which applied to "cases where the FBI seeks to acquire foreign intelligence or counterespionage information by means of its own listening devices" be extended to apply to the watch list activity. 98a These procedures included obtaining prior written approval by the Attorney General.

On October 1, Richardson sent memoranda to FBI Director Kelley and the Director of the Secret Service, instructing them to cease requesting information obtained by NSA "by means of electronic surveillance." 99 The Attorney General also requested that his approval be sought prior to either agency's renewing requests to NSA for foreign intelligence or counterespionage information.

On the same day, Richardson sent a letter to Allen, stating that he found the watch list activity to be of questionable legality in view of the Keith decision, and requesting that NSA "immediately curtail the further dissemination" of watch list information to the FBI and Secret Service. Although Richardson specified that NSA was not to respond to "a request from another agency to monitor in connection with a matter that can only be considered one of domestic intelligence," he stated that "relevant information acquired by you in the routine pursuit of the collection of foreign intelligence information may continue to be furnished to appropriate Government agencies." 100

Kelley responded to Richardson's memorandum on October 3 and agreed to comply with the Attorney General's "instructions to discontinue requests to NSA for electronic surveillance information and to obtain approval prior to any future inquiries to NSA for such information." 101 There was apparently some confusion at this point whether Richardson's instructions meant that NSA was prohibited from disseminating any information to FBI. After further consultations, it was determined that the caveats Richardson placed on dissemination applied only to information on American citizens and organizations, and not to foreign intelligence and counterespionage matters.

Allen replied to Richardson's letter on October 4, stating that he had "directed that no further information be disseminated to the FBI and Secret Service, pending advice on legal issues." 102 Although Allen had agreed to suspend dissemination, NSA's position remained that these communications had always been collected "as an incidental and unintended act in the conduct of the interception of foreign communications." Allen thus asserted that NSA's "current practice conforms with your [Richardson's] guidance that, 'relevant information acquired [by NSA] in the routine pursuit of the collection of foreign intelligence information may continue to be furnished to appropriate government agencies.'" 103

As a result of these and other exchanges between officials at NSA and Justice, the Agency officially terminated its watch list activity involving American citizens and organizations in the fall of 1973. It would no longer accept such names from other agencies for the purpose of monitoring their international communications.

To a substantial degree, this decision was prompted by the legal implications of the Keith case and by NSA's fear that criminal prosecutions of persons on the watch lists would inevitably lead to disclosure of its intelligence sources and methods. Indeed, the 1973 criminal case referred to above posed the threat that the watch list activity might have to be disclosed for the first time in a public forum.

It is important to note that the decision to terminate the watch list was ultimately the administrative decision of an executive agency. There is no statute which expressly forbids such activity, and no court case where it has been squarely at issue. Without legislative controls, NSA could resume the watch list activity at any time upon order of the Executive.

#### *G. Authorization*

Authorization of the watch list activity must be viewed in the context of how NSA operates. It is a service agency which provides foreign intelligence information at the request of consumer agencies. Specific requirements are levied on NSA, although the Agency also engages in collection activities that are not responsive to specific tasking. For example, many USIB

requirements -- such as those aimed at terrorist activities, gathering economic intelligence, or discovering foreign links to civil disturbances -- were so broad that NSA was given wide discretion for selecting not only the communications channels to be monitored, but also what information was disseminated. 104 While this is often appropriate because only NSA has the knowledge and expertise to make these decisions, it also allows NSA considerable flexibility in carrying out its mission.

NSA also responds to specific requests from other Federal agencies. Indeed, it is no exaggeration to state that NSA's operations are undertaken almost entirely to satisfy the intelligence needs of other agencies. The watch list activity was no exception.

### *1. Knowledge and Authorization Outside NSA*

In the case of the 1967-1973 watch list activity, NSA clearly received instructions from the Army in 1967 to look for possible foreign influence on, or control of, American peace and Black power activists. NSA subsequently received the names of American and foreign citizens and groups from other intelligence agencies.

This activity was not formally approved by USIB. Although NSA notified USIB members that it was responding to the Army's request, the inclusion of American names on an NSA watch list was never discussed at subsequent USIB meetings. Although there were official USIB requirements for information concerning international drug activity, presidential protection, and terrorism, there was no approval or discussion of targeting American citizens. NSA officials contend that the submission of American names by USIB members constituted approval. 105

The desire for tight security over the watch list program resulted in limiting participation to those "with a need to know." Therefore, it was not in NSAs best interests to have formal USIB approval of a requirement since knowledge would have been more widely spread.

According to documents supplied to the Committee and testimony of NSA officials, Defense Secretaries Melvin Laird and James Schlesinger, as well as Attorneys General John Mitchell and Richard Kleindienst, were informed that NSA was monitoring Americans. Former NSA Director, Admiral Noel Gayler sent a Top Secret "Eyes Only" memorandum to Laird and Mitchell on January 26, 1971, which outlined ground rules for "NSA's Contribution to Domestic Intelligence." In this memorandum, Gayler refers to a discussion he had earlier that day with both men on how NSA could assist them with "intelligence bearing on domestic problems." The memorandum mentioned the monitoring for drug trafficking and foreign support of subversive activities, but did not discuss "watch lists" specifically. 106

NSA Deputy Director Buffham supplied the Committee with a Memorandum for Record which indicated that he had personally shown the Gayler memorandum to Mitchell and had been told by the Military Assistant to Secretary of Defense Laird that the Secretary had read and agreed to the memorandum. 107 In a handwritten note made available to the Committee, Gayler recalls that he personally showed the January 26, 1971, memorandum to Kleindienst on July 1, 1972.

Finally, former NSA Deputy Director Tordella testified that he accompanied General Samuel C. Phillips, Gayler's successor as Director of NSA, to brief Secretary of Defense Schlesinger on the watch list in the summer of 1973. 108

In summary, a number of Federal agencies were aware of NSA's watch lists and used them. It is clear that the United States Intelligence Board, which ordinarily set the intelligence requirements to which NSA responded, never gave its formal approval for the watch list activity. It also appears that at least two Attorneys General and two Secretaries of Defense were generally aware that NSA was monitoring the international communications of American citizens, but none took measures to halt the practice.

### *2. Knowledge and Approval Within NSA*

There is a discrepancy in the testimony of knowledgeable NSA staff members and a former NSA Director with regard to his knowledge of the watch list activity. When asked whether NSA had included the names of American citizens or organizations on its watch lists, Admiral Noel Gayler (who was Director of NSA during the height of the activity) responded:

I don't know that I even knew that in that specific way. I knew that communications of one foreign terminal sometimes concerned doings of interest of people, including American citizens, yes. And when I became aware of that, I can't tell you, I guess it was a year or so after I got there. 109

Gayler became NSA Director in August 1969. He maintains that he first became aware of the watch list activity about the time of the June 1970 Huston plan for domestic surveillance, ten months after his arrival and eleven months after the MINARET Charter was issued.

Gayler was one of the original participants in the Huston plan deliberations and in the Intelligence Evaluation Committee (early 1971). Both of these efforts were designed to use the resources of NSA and other intelligence agencies to gather information on internal security matters. In fact, part of the Huston plan called for the expansion of the watch list activity. Buffham told the Committee that if the plan had been implemented he assumed "other intelligence agencies would then increase the numbers of names on their lists" and NSA would possibly target specific communications channels to obtain the international traffic of American citizens. 110 NSA was particularly concerned that the executive branch directives would have had to be changed to permit such an expansion. The alternatives outlined in the Huston plan included the recommendation that the controlling NSCID and the relevant DCID be changed to allow NSA to target international communications links carrying the messages of American citizens.

NSA was already engaged in watch list activity which although it did not involve targeting of specific communications links, did involve targeting Americans by name. The Huston Plan states:

NSA is currently doing so on a restricted basis, and the information it has provided has been most helpful. Much of this information is particularly useful to the White House .... 111

As discussed earlier, the July 1, 1969, MINARET charter was designed to restrict knowledge of the watch list activity. It was released about a month before Gayler arrived at NSA and, according to a senior NSA official, Gayler "knew everything that was in it, what was going on, and endorsed it." 112 Gayler recalls that his first knowledge of the watch list came during the Huston Plan deliberations, almost a year later. Another senior NSA official testified that Gayler "*review every piece of MINARET product*" and maintained that "the Director kept a close eye on this activity and reviewed the requirements." [Emphasis added.] 113 This employee also testified that Gayler was shown the product of the watch list activity and was kept fully informed.

#### *H. Conclusions*

NSA's monitoring of international communications comprises only a portion of its total mission, but the examination of this capability to intrude on the telephone calls and telegrams of Americans represents a major part of the Committee's work on NSA. The watch list activities and the sophisticated technological capabilities that they highlight present some of the most crucial privacy issues facing this nation. Space age technology has outpaced the law. The secrecy that has surrounded much of NSA's activities and the lack of Congressional oversight have prevented, in the past, bringing statutes in line with NSA's capabilities. Neither the courts nor Congress have dealt with the interception of communications using NSA's highly sensitive and complex technology.

The analysis presented here, of the deliberate targeting of American citizens and the associated incidental interception of their communications demonstrates the need for a legislative charter that will define, limit, and control the signals intelligence activities of the National Security Agency. This should be accomplished both to preserve and protect the Government's legitimate foreign intelligence operations, and to ensure that the constitutional rights of Americans are safeguarded.

The next section describes a recently terminated NSA collection program which also involved United States citizens -- Operation SHAMROCK. This program did not require any special technology; international telegrams were simply turned over to NSA at the offices of three cable companies.

### **III. A SPECIAL NSA COLLECTION PROGRAM: SHAMROCK**

SHAMROCK is the codename for a special program in which NSA received copies of most international telegrams leaving the United States between August 1945 and May 1975. Two of the participating international telegraph companies -- RCA Global and ITT World Communications -- provided virtually all their international message traffic to NSA. The third, Western Union International, only provided copies of certain foreign traffic from 1945 until 1972. SHAMROCK was probably the largest governmental interception program affecting Americans ever undertaken. Although the total number of telegrams read during its course is not available, NSA estimates that in the last two or three years of SHAMROCK's existence, about 150,000 telegrams per month were reviewed by NSA analysts. 115

Initially, NSA received copies of international telegrams in the form of microfilm or paper tapes. These were sorted manually to obtain foreign messages. When RCA Global and ITT World Communications switched to magnetic tapes in the 1960s, NSA made copies of these tapes and subjected them to an electronic sorting process. This means that the international telegrams of American citizens on the "watch lists" could be selected out and disseminated.

#### *A. Legal Restrictions*

##### *1. The Fourth Amendment to the Constitution of the United States*

Obtaining the international telegrams of American citizens by NSA at the offices of the telegraph companies appears to violate the privacy of these citizens, as protected by the Fourth Amendment. That Amendment guarantees to the people the right to be "secure ... in their papers ... against unreasonable searches and seizures." It also provides that "no Warrants shall issue, but upon probable cause." In no case did NSA obtain a search warrant prior to obtaining a telegram.

##### *2. Section 605 of the Communications Act of 1934 (47 U.S.C. 605)*

As enacted in 1934, eleven years before SHAMROCK began, section 605 of the Communications Act provided:

No person receiving, assisting in receiving, transmitting, or assisting in transmitting, any interstate or foreign communication by wire or radio shall divulge or publish the existence, contents, substance, purport, effect, or meaning thereof....

Section 605 was amended in 1968 by the addition of the phrase: "Except as authorized by chapter 119, Title 18, no person . . ." The import of this 1968 addition, however, is not clear, and the Supreme Court has yet to rule on the point. 116

The relevant provision in chapter 119, section 2511 (3), provides that "nothing contained in this chapter or in section 605 of the Communications Act of 1934. . . shall limit the constitutional power of the President ... to obtain foreign intelligence

information deemed essential to the security of the United States. . . ." 117 Yet the Supreme Court, in the Keith decision (1972), held that this section "confers no power" and "merely provides that the Act shall not be interpreted to limit or disturb such power as the President may have under the Constitution." 118

It is thus uncertain what the phrase in the 1968 amendment to section 605 -- "except as *authorized* by chapter 119, title 18" [Emphasis added.] -- means. The Supreme Court has held that the relevant section of chapter 119 does not *authorize* any activity. The applicability of section 605 to the interception of international telegrams for foreign intelligence purposes is therefore unclear. It would appear that where such telegrams are intercepted for other than foreign intelligence purposes (e.g., the watch list activity), section 605 would be violated.

### *3. The Controlling National Security Council Intelligence Directive*

Since 1958, this executive directive has authorized NSA to conduct communications intelligence activities. 119 These have been defined as excluding "the intercept and processing of unencrypted written communications." It would appear that if copies of international telegrams are "written communications," NSA has exceeded its authority under the executive's own internal directives.

#### *B. The Committee's Investigation*

The SHAMROCK operation was alluded to in documents furnished to the Committee by the Rockefeller Commission in May 1975. They indicated that CIA had provided "cover" for an NSA operation in New York where international telegrams had been copied. 120

In early June 1975, an oral inquiry regarding the operation was made to NSA officials, but no confirmation of the project was forthcoming. In July, the Committee sent written interrogatories to NSA, and was told that this subject was so sensitive that it would be disclosed only to Senators Church and Tower. No such briefing was immediately arranged, however.

In July and August, news stories were published which appeared to reveal small parts of the SHAMROCK operation. 121

The Committee continued to press the matter with NSA, and in early September the agency gave the Committee its first detailed information. This briefing was followed by interviews with present and former NSA employees who had been responsible for the program and by examinations of documents at NSA and the Department of Defense. NSA assured the Committee at the time that it had examined all NSA documents which pertained to SHAMROCK. On September 23, the full Committee was briefed by an NSA official in executive session. Following this briefing, the Committee interviewed officials in the telegraph companies which had participated in the SHAMROCK program.

On the basis of this investigation, the Committee prepared a report which it submitted to NSA for review. NSA had no specific comments regarding the accuracy of the report, but expressed its general objection to public disclosure of the operation on the grounds that the report was based on classified information. 122

On November 6, 1975, in a public session of the Committee, Chairman Frank Church read the report on SHAMROCK into the record. Due to the refusal of the executive branch to provide witnesses in public session, no other public record was made. 122a

At this point, the Committee's active investigation ceased. The Committee presumed that it had exhausted all sources of information about SHAMROCK.

On March 25, 1976 as the Committee was about to send this report to press, it was informed by the Department of Defense that NSA had "discovered" a file containing various documents and memoranda about SHAMROCK. An NSA official explained that the file had been held by a lower-level employee at NSA until around March 1, 1976, when he brought it to the attention of his superiors. Since this occurred several months after the Committee's public report, and, in the opinion of NSA, did not substantially alter the Committee's findings, it was not immediately reported to the Committee.

After examining the documents, the Committee decided that the final NSA report should incorporate this new information. Although it does not alter the basic findings reported in November 1975, it does change some of the details. 123

#### *C. The Origins of SHAMROCK*

During World War II, under the wartime censorship laws, 124 all international message traffic was made available to military censors. 125 Copies of pertinent foreign traffic were turned over to military intelligence. With the cessation of the War in 1945, this practice was to end.

In August 1945, the Army sought to continue that part of the wartime arrangement which had allowed military intelligence access to certain foreign traffic. 126 At that time, most of this traffic was still conveyed via the facilities of three carriers. 127

On August 18, 1945, two representatives of the Army Signal Security Agency were sent to New York

to make the necessary contacts with the heads of the Commercial Communications Companies in New York, secure their approval of the interception of all Governmental traffic entering the United States,

leaving the United States, or transiting the United States, and make the necessary arrangements for this photographic intercept work. 128

They first approached an official at ITT, who "very definitely and finally refused" to agree to any of the Army proposals. The Army representatives then approached a vice president of Western Union Telegraph Company, who agreed to cooperate unless the Attorney General of the United States ruled that such intercepts were illegal. 129

Having succeeded with Western Union, the Army representatives returned to ITT on August 21, 1945, and suggested to an ITT vice president that "his company would not desire to be the only non-cooperative company on this project." The vice president decided to reconsider and broached the matter the same day with the president of the company. The ITT president agreed to cooperate with the Army, provided that the Attorney General decided that the program was not illegal. 130

These Army representatives also met with the president of RCA on August 21, 1945. The RCA president indicated his willingness to cooperate, but withheld final approval until he, too, had heard from the Attorney General. 131

After their trip, the Army representatives reported to their superiors that the companies were worried about the illegality of their participation in the program:

Two very evident fears existed in the minds of the heads of each of these communications companies. One was the fear of the illegality of the procedure according to present FCC regulations. In spite of the fact that favorable opinions have been received from the Judge Advocate General of the Navy and the Judge Advocate General of the Army, it was feared that these opinions would not hold in civil court and, as a consequence, the companies would not be protected. If a favorable opinion is handed down by the Attorney General, this fear will be completely allayed, and cooperation may be expected for the complete intercept coverage of this material. The second fear uppermost in the minds of these executives is the fear of the ACA which is the communications union. This union has reported on many occasions minor infractions of FCC regulations and it is feared that a major infraction, such as the proposed intercept coverage, if disclosed by the Union, might cause severe repercussions. 133

Later memoranda by another Army representative who was present indicate that the companies had consulted their corporate attorneys during these three days of discussions, and that their attorneys uniformly advised against participation in the proposed intercept program. 134 The company executives were apparently willing to ignore this advice if they received assurances from the Attorney General that he would protect them from any consequences. 135

The new documentary evidence made available to the Committee did not reveal that the Attorney General at that time, Tom C. Clark, actually made the assurances that the companies desired. It is clear, however, that the program began shortly after the August meetings: ITT and Western Union began their participation by September 1, 136 and RCA by October 9, 1945. 137

In a letter from the Army Signals Security Agency to the Army Chief of Staff on March 19, 1946, the writer indicates that SHAMROCK was well underway, but that concerns about its legality had not vanished:

It can be stated that both [Western Union and RCA] have placed themselves in precarious positions since the legality of such operations has not been established and has necessitated the utmost secrecy on their part in making these arrangements. Through their efforts, only two or three individuals in the respective companies are aware of the operation. 138

April 26, 1976, while this report was being printed, DOD informed the Committee that nine additional documents relating to SHAMROCK had been found in the National Archives. The documents revealed that the Office of Secretary of Defense James Forrestal attempted unsuccessfully in June 1948 to have Congress pass an amendment to relax the disclosure restrictions of Section 605 of the Federal Communications Act of 1934. Agencies designated by the President would have been allowed to obtain the radio and wire communications of foreign governments. If the amendment had passed, the SHAMROCK program, as it was originally conceived, would have been authorized by law.

The proposed amendment sought to allay concerns of the companies on the legality of their participation in SHAMROCK. The companies were demanding assurances in 1947 not only from the Secretary of Defense and the Attorney General, but also from the President that their participation was essential to the national interest and that they would not be subject to prosecution in the Federal Courts. Secretary Forrestal, who stated he was speaking for the President, gave ITT and RCA representatives these assurances at a December 16, 1947, meeting in Washington, D.C. 139 Forrestal warned, however, that the assurances he was making could not bind his successors in office. 140

Representatives of Western Union were not present at this meeting. Documents made available to the Committee indicate that the President and Operating Vice President of Western Union were briefed in January 1948 on the earlier meeting with RCA and ITT. 141

In early June 1948, the Chairmen of the Senate and House Judiciary Committees were informed of the Government's need for a relaxation of Section 605 and of its position with the telegraph companies. The delicacy of the problem and the top secret nature of the information were made clear to these two Chairmen. The amendment was considered in an executive session of the Senate Judiciary Committee on June 16, 1948, and approved. Since support for the bill was not unanimous, however, the Committee voted to leave it to the Chairman's discretion whether or not to release the bill to the Senate floor. The representative of the Secretary of Defense then told the Senate Judiciary Chairman that "we did not desire an airing of the whole matter on the Floor of the Senate at this late date in the session." The bill apparently was not reported out.

A Defense Department official expressed the view that he thought a great deal had already been accomplished and that the administration had sufficient ammunition to be able to effect a continuation of the present practices with the companies. Apparently no other statutory attempts were made to authorize the companies' participation in SHAMROCK.

The companies sought renewed assurances from Forrestal's successor, Louis Johnson, in 1949. Johnson told them that the President and Attorney General had been consulted and had given their approval. 144 To the knowledge of those interviewed by the Committee, this was the last instance in which the companies such assurances from the Department of Defense. 145

Dr. Louis Tordella, who was NSA Deputy Director from 1958 until 1974 and the NSA official with chief administrative responsibility for SHAMROCK, testified that to the best of his knowledge, no President since Truman knew of the program. He "was not sure" whether any Attorney General since Tom Clark had been informed of it, or if succeeding Secretaries of Defense were aware of it. Tordella stated he briefed former Secretary of Defense Schlesinger about the SHAMROCK operation in the summer of 1973. 146

The Army Signals Security Agency controlled the collection program until 1949, when the Armed Forces Security Agency was formed. Responsibility for the program passed from AFSA to the National Security Agency when it was created in 1952. 147

#### *D. The Participation of the Companies*

None of the telegraph companies could find any record of an agreement with NSA or its predecessors wherein the companies would provide copies of telegrams to the Government, 148 or which reflected anything about arrangements with NSA. No one interviewed by the Committee had any recollection or knowledge that the Government had given the companies specific assurances to ensure their cooperation in 1945, 1947, 1949, or at any time thereafter. 149

Apparently only a few people in each company -- apart from those who physically turned over the materials -- had any knowledge of the NSA arrangement. 150 These were primarily mid-level executives charged with the operational aspects of the companies' business. All assumed that the arrangement was valid when it was made and thus continued it. No witness from the telegraph companies recalled that there had ever been a review of the arrangements at the executive levels of their respective companies.

Furthermore, none of the participating companies was apparently aware that information other than foreign traffic was extracted from the messages they were providing. 151 Yet no official at any of the three companies could recall his company asking NSA what it was doing with the information it was furnished and, specifically, whether NSA was reading the telegrams of the companies' American customers. 152

Finally, both the telegraph companies and NSA deny that the companies ever received anything for their cooperation in SHAMROCK, whether in the form of compensation or favoritism from the Government. All claim they were motivated by purely patriotic considerations.

If there were similarities as to their involvement in SHAMROCK, the participation of each company varied in practice.

*1. RCA Global* According to a memorandum prepared by Army representatives, RCA (the parent company of RCA Global) agreed in August 1945 to allow Army personnel, who were to be dressed in civilian clothes, to photograph foreign traffic passing over its facilities in New York, Washington, and San Francisco. The memorandum further provided that "only the desired traffic will be filmed." 154

The company official at RCA Global who was charged with implementing the SHAMROCK program testified that several alternatives were discussed with Army representatives. He stated that the Army had first proposed tapping into the company's overseas lines, but the official rejected this idea as unfeasible. The Army representatives then proposed that company employees sort out pertinent traffic and turn it over to them; the official rejected this because he did not want company employees involved. The RCA official finally agreed to provide paper tapes of all international message traffic. It was understood that these messages would be sorted manually by persons from the Army Signals Security Agency on the company's premises, and that only certain foreign traffic would be selected. There was never a written agreement to this effect, however, according to the former official. 155

In New York, Army representatives were given office space in the area where the paper tapes of RCA Global's international message traffic were sorted manually for foreign traffic. Messages of interest were transmitted over teletype machines located in that office space. 156

In Washington and San Francisco, Army agents were permitted to pick up copies of foreign messages, which they took to another office for microfilming. 157 By 1950, a Recordak (microfilm) machine was placed in the New York office and was used to film messages of intelligence interest. 158

This arrangement continued without substantial disruption until 1963, when RCA Global began to store its message traffic on magnetic tapes. NSA made arrangements to obtain copies of these tapes from the RCA Global facilities in New York -- they were taken "on loan," copied, and returned, the same day if possible. Gradually, magnetic tapes began to supercede paper tapes and microfilm as a means of storing messages. By 1966, the New York office was turning over only magnetic tapes to NSA. 159 The offices in Washington and San Francisco, however, continued to furnish copies of international message traffic for microfilming by NSA. RCA Global employees in Washington, D.C. were under the impression they were providing information only to the FBI. 160

## *2. ITT World Communications*

In August 1945, ITT agreed to allow the Army access to all incoming, outgoing, and transiting messages passing over the facilities of its subsidiaries involved in international communications. It was agreed that "all traffic will be recorded on microfilm, that all Governmental traffic will be recorded on a second microfilm in addition to the original one, that these films will be developed by the SSA [Signals Security Agency], and the complete traffic will be returned to ITT." 161

It is not clear whether these arrangements, agreed to at the outset, were actually implemented in the manner described. The ITT official with the earliest recollections of the program could recall only that by the early 1950s, ITT World Communications was providing NSA representatives with copies of the company's international message traffic, which NSA then sorted and microfilmed. 162

When ITT World Communications began to use paper tapes to transmit its messages, these were turned over to NSA as well. 163 It is not clear whether these tapes were transmitted from the premises of ITT World Communications to another location (as with RCA Global) or whether they were simply transported to NSA for sorting.

When ITT World Communications began to use magnetic tapes to store its incoming and outgoing messages -- the best recollection of this change places it around 1965 164 -- the magnetic tapes were turned over to NSA for duplication. They were returned to the company on the same day. By 1968, ITT World Communications was turning over only its magnetic tapes to NSA. 165

The Washington and San Francisco offices of ITT World Communications participated in a similar fashion. In Washington, however, company officials believed that they were providing the telegrams to the FBI, rather than NSA. 166 It is clear from the information made available to the Committee that the Washington messages were sent to NSA. 167

## *3. Western Union International*

At the August 1945 meeting between Army representatives and the Western Union Telegraph Company (the parent company of Western Union International), the company stated that it

desired that Western Union personnel operate the [microfilm] camera and do all the actual handling of the messages. It was agreed that [the Army Signal Security Agency] would furnish the necessary cameras and film for the complete intercept coverage of Western Union traffic outlets. The film, after exposure, will be delivered [to the office of a company vice-president], at which place an officer from the Signal Security Agency, in civilian clothes, will pick it up. 168

The company agreed to implement this arrangement at its New York, San Francisco, Washington, and San Antonio facilities. 169

This arrangement was apparently implemented as originally agreed. In New York, at least, company employees segregated such messages and processed them through a microfilm machine on the transmission room floor. 170 At approximately 4:00 each morning, an NSA courier would come to the floor to pick up the microfilm cartridge. In San Antonio, an Army signal officer from Ft. Sam Houston was tasked with picking up the microfilm each day. 171

It appears that Western Union turned over to NSA only its telegraph traffic to one foreign country. Approached in 1959 by persons who identified themselves as being from Ft. Holabird, Maryland (Army intelligence), Western Union agreed to allow them to duplicate the traffic going to a particular country. 172 In 1970, the company also began to provide copies of messages going to a particular city within that country which were not being duplicated as part of the previous arrangement. 173 These messages were apparently sorted by NSA personnel in space provided by Western Union at its New York offices. 174

Western Union International (which was formed in 1963) continued to microfilm certain foreign traffic for NSA until about 1965, when a company executive discovered the existence of the microfilm machine on the transmission room floor. After ascertaining its purpose, he demanded that NSA renew its request to have this information in writing. He recalled that instead of submitting such a request, NSA simply had the machine removed. 175 This recollection, however, was not borne out by documents furnished by NSA. The documents showed that on February 2, 1968, a company vice president (not the one referred to above) had discovered the existence of NSA's Recordak (microfilm) machine in the Western Union transmission room. The machine was reported to the company president, who directed his employees to find out to whom the machine belonged and what the basis for the arrangement was. The NSA courier, when asked these questions by a Western Union International official on February 9, 1968, replied that he was from the Department of Defense and did not know what the basis for the arrangement was or what was being done with the microfilm being furnished. 176 Yet the documents do not reflect whether the Recordak machine was removed, either in 1965 or in 1968.

It is clear that NSA continued to receive duplicates of all messages to the foreign country referred to above until 1972; when again as a result of "discovery" by company officials, this procedure was halted. Although the original request for this intercept procedure had been made by "Holabird people" (Army intelligence), when the company attempted to contact someone regarding its termination, it was ultimately referred to NSA. 177

Finally, Western Union International, unlike its competitors, never utilized magnetic tapes to store its message traffic. Accordingly, none was ever provided NSA. 178

In effect, Western Union International's participation in SHAMROCK ended by 1972. 179

## *E. NSA's Participation*

### *1. Origins and Early Development*

From 1952 (when NSA first inherited the SHAMROCK sources) until 1963, microfilm and paper tapes originating with the sources were brought to NSA's headquarters at Ft. Meade, Maryland several times a week. 180 As noted above, some of these had undergone initial screening, either by NSA operatives or company employees. Even with this preliminary screening, however, the volume of messages which reached NSA daily was apparently quite large. 181

Several witnesses have told the Committee that during this period the sheer volume of traffic would have likely prohibited the selection of messages on the basis of content. 182 Messages which were selected out were passed on to NSA analysts, who screened them further.

### *2. The Switch to Magnetic Tape*

The character of the SHAMROCK operation changed markedly with the use of magnetic tape. RCA Global was the first company to begin using such tape in the early 1960s. 183 NSA was notified of the changeover in early 1963 and, by 1964, was able to sort electronically the information provided by RCA Global against its selection criteria. This is significant because it meant that the telegrams of citizens whose names were on NSA's "watch list" could be selected for processing by NSA analysts.

From 1964 until 1966, magnetic tapes from RCA Global were brought to Ft. Meade daily and returned to New York the same day. 184 By 1965, ITT World Communications had also begun its changeover to magnetic tapes and was beginning to provide traffic in this form to NSA messengers.

### *3. CIA Cover Support*

To alleviate the administrative burden entailed by these daily roundtrips, NSA in 1966 sought to find a place in New York City where the tapes could be duplicated. 186 NSA Deputy Director Tordella requested that the CIA provide "safe" space where this operation could be conducted. The CIA agreed to rent office space in lower Manhattan, under the guise of a television tape processing company, where the tape duplication process could be carried out. 187 CIA designated this project "LPMEDLEY."

The cover support began in November 1966 and lasted until August 1973, when CIA terminated its part of the program. 188 Tordella was told that the CIA General Counsel was "concerned about any kind of operation in which the CIA was engaged in the continental United States. Regardless of whether CIA was doing anything so small as renting an office, he said 'get out of it.'" 189 NSA subsequently moved its duplicating operation to new office space in Manhattan, where it remained until SHAMROCK was terminated in 1975. 190

### *4. Control of the Program*

Numerous NSA employees were aware of SHAMROCK, but responsibility for its conduct rested only with the Director, Deputy Director, and one lower-level managerial employee. 191 Throughout the program's existence, only two individuals occupied this lower-level managerial position: the first between 1952-1970; the other from 1970-1975. 192

The manager was instructed to report directly to the Deputy Director of NSA regarding any problems with the companies. As a routine matter, this individual was in charge of the NSA couriers who traveled between New York and Ft. Meade; he usually received information regarding the SHAMROCK operation from these couriers rather than from the companies. The individual who held this position between 1952-1970 told the Committee that he met with company officials on only two occasions during this time, and both meetings were perfunctory. 193

Both of the NSA employees who acted as liaison with the companies confirmed to the Committee that the companies had never asked what NSA was extracting from the materials provided, and that NSA had never volunteered this information. Neither of the lower-level employees knew what NSA did with the materials; they stated that the messengers who worked under them also had no knowledge of what was sorted from the telegrams. 194 It seems clear, therefore, that the companies never learned that NSA sorted anything except foreign traffic from the telegrams that the companies provided NSA.

Since none of the companies (treating them as separate from their parent corporations) engage in domestic communications, they could not have provided NSA with domestic traffic. The Committee has no evidence to show that NSA has ever received domestic telegrams from any source.

### *5. Consideration of SHAMROCK in Connection with the Huston Plan*

Former NSA Deputy Director Tordella told the Committee that in 1970, in connection with the Huston plan, 195 the principals involved in this project -- Helms of CIA, Sullivan of the FBI Bennett of DIA, and Gayler of NSA -- discussed the feasibility of the FBI's taking over the SHAMROCK program in order to obtain more information on internal unrest. The FBI did not want the responsibility, according to Tordella, and NSA did not want to jeopardize its own working relationship with the companies. 196 The idea was therefore dropped.

## *F. Termination of SHAMROCK*

Operation SHAMROCK terminated on May 15, 1975, by order of Secretary of Defense James Schlesinger. 197 NSA claims that the program was terminated because (1) it was no longer a valuable source of foreign intelligence, and (2) the risk of its exposure had increased. 198

#### IV. NSA PERSONNEL SECURITY AND RELATED MATTERS

The Committee investigated the NSA Office of Security to examine personnel security activities which may have been conducted in an overzealous and, possibly, unlawful manner. These activities are not part of NSA's two primary missions -- the collection of signals intelligence and the protection of United States communications. Although this subject area is more narrow than others investigated by the Committee, there are similarities involving the protection of both the rights of citizens and the national security.

##### *A. Background*

The NSA Office of Security is responsible for safeguarding the security of NSA facilities, operations, and personnel, and for protecting classified materials from unauthorized disclosure. This Office also administers NSA's security clearance program and investigates suspected breaches of security by NSA employees. The CIA's Office of Security performs the same functions for that Agency.

Personnel in the NSA Office of Security are quick to point out that substantial intangible differences exist between the role of the CIA and NSA Offices of Security. In recent years, the NSA Office has not enjoyed the same high status within NSA that the CIA Office has had within its own organization. At least two factors appear to contribute to this difference. First, the work of an Office of Security investigator bears no similarity to that performed by the professionals conducting signals intelligence and communications security activities, which comprise the heart of NSA. Second, during the 1950s and 1960s, personnel security programs at NSA suffered some widely publicized failures, resulting in both prosecutions for espionage and actual defections to the Soviet Union by NSA employees.

These factors have impelled the Office in conflicting directions. On the one hand, its personnel are not expected, and ordinarily do not tend to take actions on their own initiative that would exceed the normal bounds of keeping the Agency reasonably secure. On the other hand, failures in personnel security have occasionally generated intense public pressure (especially from the House Committee on Un-American Activities) to take extraordinary measures to protect that security.

A fair analysis of the incidents listed below, all of which are of dubious legality or propriety, requires an awareness of these dynamics. Like other Government officials, personnel in the Office of Security must be held responsible for their actions. Yet, like most people in the United States, they have been greatly sensitized by the Watergate scandal and the recent congressional investigations of the intelligence community to the need to protect civil liberties against dangerous encroachments in the name of "national security." In this section we disclose certain aberrations from that sensitivity, in the confidence that this disclosure will encourage its growth.

##### *B. Questionable Activities*

###### *1. NSA Office of Security: Access to Files on American Citizens*

From NSA's inception in 1952 until October 1974, a unit of the Agency outside the Office of Security maintained a large number of files on American citizens. At the time of the destruction of these records, approximately 75,000 United States citizens were included. Unlike CIA's Operations CHAOS, these files were not created for the purpose of monitoring the activities of Americans, but for carrying out NSA's legitimate foreign intelligence mission. 199

Many circumstances could contribute to the creation of such a file, perhaps the most frequent being the mere mention of an American citizen's name in a communication intercepted by NSA. The files also included reports from other intelligence agencies, such as the CIA and military intelligence units, which mentioned the name of the citizen and were routinely forwarded to NSA. Materials from open sources, such as newspapers, were also in the files.

Until the files were destroyed, the Office of Security was often supplied with information from them when it was conducting background investigations on applicants for employment at NSA or when other persons were being considered for clearances to receive intelligence gathered by NSA. In effect, this meant that the Office of Security was a beneficiary of the vast communications intelligence apparatus of the entire Agency, a resource which is on an entirely different order of sophistication than the wiretapping capability of any police or security force in the nation.

(a) CIA Access to NSA Files. -- The NSA files contained entries on many prominent Americans in business, the performing arts, and politics, including members of Congress. Although the Committee has no reason to believe that any person at NSA used them improperly, it has learned that for at least 13 years, one or more employees of the CIA worked full-time in these files, retrieving information for the CIA without any supervision from NSA. One of these CIA employees recalled, with varying degrees of certainty, checking in these files for the names of various well-known civil rights, antiwar, and political leaders.

It is likely, although the Committee is not in a position to so state, that some of the information obtained from NSA found its way into Operation CHAOS. 200

NSA did not develop these files for any sinister reason. They were useful in many ways to conducting successfully NSA's legitimate communications intelligence functions. Nevertheless, the fact that CIA personnel used the files without NSA supervision to gather information on American citizens -- during a period when the CIA was engaged in unlawful domestic

activities aimed against many of those same citizens -- illustrates the danger of maintaining such files. The massive centralization of this information creates a temptation to use it for improper purposes, threatens to "chill" the exercise of First Amendment rights, and is inimical to the privacy of citizens.

(b) Destruction of Files. -- The Committee was informed by NSA that the files on American citizens were destroyed in 1974. At that time, a centralized information storage system for foreign names was set up in the intelligence community. This reorganization provided the impetus for a re-evaluation of the files on American citizens, and a consensus was reached that their usefulness did not justify the costs in time, money, and storage space.

## *2. Failure to Purge "Suitability Files"*

Like other Federal agencies, NSA maintains "suitability files" concerning its employees. These files, which are held by the Office of Civilian Personnel, constitute an interface between that Office and the Office of Security. The latter provides information to these files and has access to them. These files contain highly personal information which might show the kind of unreliability or vulnerability of an employee which could lead to compromises of classified information. According to NSA, the purpose of these files is to aid the Agency in providing counseling and other forms of assistance to individuals with personal problems, not to threaten or damage such employees. The Committee has no reason to believe that the information in these files has been misused. During its investigation, the Committee reviewed 50 of these files, selected on a random basis, with the names of all individuals deleted.

Since the information stored in these files is so personal, it seems reasonable to expect that its retention would be kept to the minimum necessary for the purposes of these files. Unfortunately, this policy does not seem to have been observed in the past. Much of the information is either many years old or simply irrelevant to the suitability of an individual for employment.

If a systematic effort had been made periodically to review these files and purge them of inappropriate or dated information, such notations would probably have been eliminated long ago. The establishment of such a system has now been undertaken by NSA. Although persons in sensitive positions at agencies such as NSA may be expected to sacrifice some degree of privacy to the need to protect national security, that sacrifice must be kept within reasonable bounds.

A related question is the access of employees to their own files. NSA regulations provide: "In no instance will employees be given access to their own Suitability File." 201 Nevertheless, with the recent implementation of the Privacy Act, employees may ask for, and be granted, access to their files. Since the Committee found that these files sometimes contain unsolicited and unsubstantiated statements from neighbors, spouses, and others, the Privacy Act should result in much of this information being purged.

## *3. Files on Nonaffiliates of NSA Who Publish Writings Concerning the Agency*

The Office of Security maintained files on two individuals who have published materials describing the work of the National Security Agency. In one case, the relevant writings were published in the late 1960s; in the other case, much more recently.

By the time of the second case, NSA had gained some experience in dealing with publicity. The file on this person consisted mainly of checks with other Federal agencies to determine what information they possessed concerning the author, and the results of various internal NSA inquiries as to where the author might have obtained information. Nevertheless, the Office of Security did submit the author's name for inclusion on the NSA watch list. There is no evidence that this submission resulted in the dissemination of any international messages sent or received by the author.

In the earlier case, the Agency appears to have overreacted. NSA had learned of the author's forthcoming publication and spent innumerable hours attempting to find a strategy to prevent its release, or at least lessen its impact. These discussions extended to the highest levels of the Agency, including the Director, and resulted in the matter being brought to the attention of the United States Intelligence Board.

In the course of these discussions, possible measures to be taken against the author were considered with varying degrees of seriousness. The Director suggested planting disparaging reviews of the author's work in the press, and such a review was actually drafted. Also discussed were: purchasing the copyright of the writing; hiring the author into the Government so that certain criminal statutes would apply if the work were published; undertaking "clandestine service applications" against the author, which apparently meant anything from physical surveillance to surreptitious entry; and more explicit consideration of conducting a surreptitious entry at the home of the author. To the credit of those involved, none of these measures were carried out.

Other steps, however, were taken. The author's name was placed on the NSA watch list and various approaches were made to his publisher. The publisher submitted a manuscript of the work to the Department of Defense, apparently without the author's permission. Despite requests from NSA to halt publication or to make extensive deletions, publication took place with only minor changes, to which the author had agreed.

The most remarkable aspect of this entire episode is that the conclusion reached as a result of NSA's review of this manuscript was that it had been written almost entirely on the basis of materials already in the public domain. It is therefore accurate to describe the measures considered by NSA and USIB as an "overreaction."

## *4. Other Files Maintained by the Office of Security*

Although the Office of Security does not maintain files today on persons not affiliated with the Agency, it has done so in the past. The Agency describes these files in the following terms:

The maintenance of these files began in the late 1950s. In early 1974, approximately 2800 files concerning nonaffiliated organizations and personnel were destroyed in accordance with DOD Directive 5200.27. The files consisted of reports from the FBI and other intelligence, security and federal agencies as well as state and municipal agencies who maintained such records. Information was also obtained from the congressional records of the House Committee on Un-American Activities, and open source, commercial publications. These files were retained primarily as a reference source for security education purposes, as an aid to our personnel security process and to provide assessment regarding the vulnerability of this Agency to foreign intelligence activities and extremists activities which posed a threat to the NSA mission, functions and property.

Of the 2800 files which were accumulated, the great majority concerned foreign controlled and subversive organizations cited by the Attorney General of the United States. These organizations were those advocating the overthrow of the U.S. Government, and the violent disruption of the orderly process of government, etc. The small percentage of files maintained on individuals concerned suspected espionage agents, extremists, anarchists, etc. These persons were both U.S. and foreign citizens. 202

DOD Directive 5200.27 was first issued in March 1971, and it greatly restricted the discretion of Department of Defense units to retain such files. The Directive stated, however, that it was "not applicable to the acquisition of foreign intelligence information or to activities involved in ensuring communications security." 203 NSA's General Counsel interpreted this language as exempting NSA from the coverage of the Directive, and was supported in this opinion by a Deputy General Counsel in the Department of Defense. 204 Only in 1973 was NSA informed by the Defense Investigative Review Council (DIRC) that some of its activities were subject to the Directive. Once this was established, NSA took steps to comply, which included destruction of the 2800 files. 205

In April 1975, the DIRC conducted an unannounced inspection of the NSA Office of Security to ascertain its compliance with DOD Directive 5200.27. Although substantial compliance was found, the DIRC did note that the Office still maintained three files with some questionable entries. These files concerned "threats" to NSA functions and property; characterizations of organizations; and unsolicited inquiries and "cranks." 206 Since the time of the DIRC report, NSA has drastically reduced the amount of materials in these files.

The Committee did obtain from NSA copies of the files as they existed at the time of the DIRC inspection. As the DIRC report noted, the first two of these files contained some questionable entries. At the time of the inspection, the "threat" file still contained extensive information on a peaceful demonstration of less than 40 persons near NSA headquarters in 1974. Similarly, the "characterizations" file reflects the fact that in the past the Office of Security would prepare a characterization of almost any organization that an NSA employee wanted information about before joining it or otherwise becoming involved. The characterizations were prepared largely on the basis of NSA's own files and from information supplied by other agencies.

It appears that DOD Directive 5200.27 and its enforcement through the DIRC mechanism are functioning effectively at this time to prevent the excessive accumulation of files on American citizens.

##### *5. Office of Security Participation in Watch List Activity.*

In his testimony before the Committee, NSA Director, General Lew Allen, Jr., detailed the efforts made by the Agency to intercept communications to and from certain American citizens from the late 1960s until 1973. 207 Not all of the names "watch listed" under this program were submitted to NSA from the outside. The Office of Security also submitted approximately 13 names for monitoring.

Of these names, 11 had some present or past affiliation with NSA. Each of these 11 individuals had either defected to the Soviet Union, been convicted of espionage, were suspected of some other connection to an unfriendly power, or had made threats against NSA or its Director. Two of the names were of American citizens not affiliated with NSA. As described earlier, these two persons had published writings in this country about the Agency's activities, causing the Office of Security concern about the possible compromise of classified information.

The Government does have a continuing legitimate interest in the communications of defectors and suspected enemy agents, and should be permitted to intercept such communications if the proper procedures (e.g., a warrant or approval of the Attorney General) are established. The danger in allowing the Office of Security to place names on a watch list is that the decision as to whether the activities of a particular individual are sufficiently suspicious to justify intrusion into the privacy of his communications is left in the hands of an interested party: the Office of Security itself. The inclusion of the names of two persons not affiliated with the Agency -- neither of whom was seriously suspected of any intent to aid a foreign power and each of whom was directly exercising First Amendment freedoms -- illustrates the tendency of limited infringements of privacy to be extended to an ever-widening scope. Only the involvement of a neutral third party can help safeguard against such extensions.

##### *6. Conventional Electronic Surveillance and Surreptitious Entries*

For many years, the Office of Security has scrupulously avoided the use of conventional electronic surveillance off NSA premises. It has neither tapped any telephones nor engaged in any bugging of rooms outside the Agency since 1958.

In the late 1950s, four instances of electronic surveillance without a court order did take place. Three of these incidents transpired at the residences of present or former NSA employees. The fourth occurred in a New York City hotel room occupied by one of those same persons. The subjects of surveillance ranged from persons convicted of espionage activities to

persons friendly with diplomatic personnel of unfriendly foreign powers and/or homosexuals. The duration of the coverage varied from a few days to three months.

The technology of the bugging devices used by the Office of Security in the late 1950s was such that they could only be installed by trespassory means. Each of the above instances thus involved a surreptitious entry at the place being bugged. Moreover, the devices were battery operated; in the case of a surveillance lasting three months, periodic re-entries were necessary to charge the batteries powering the device. 208

In addition, the Office of Security conducted four surreptitious entries in the early 1960s which were unrelated to electronic surveillance and which did not involve warrants. The entries involved two defectors to the Soviet Union (Martin and Mitchell), an employee suspected of taking classified documents out of NSA, and an employee who had contact with an embassy of an unfriendly foreign power.

With the passage of many years since these relatively isolated incidents, it is difficult to ascertain the levels at which they were approved. Both past and present Directors of Security at NSA have stated that they would not have taken place without the approval of the person holding that position, and that at the time of these incidents the Director of Security enjoyed such a close working relationship with the Director of NSA that the surveillance would not likely have occurred without the Director's knowledge. 209

#### *7. "External Collection Program"*

In 1963, after a review of the Office of Security's counterintelligence program by the Office and the Director of NSA, several steps were taken to strengthen the program. Among these was the establishment in October 1963 of an "External Collection Program." 210 It appears that this "program" was, from its beginning, highly informal. Office of Security personnel had only vague and conflicting recollections as to what it had consisted of or how long it had lasted.

Most did recall that the program included brief periodic visits to bars, restaurants, and other establishments in the vicinity of NSA headquarters by Office of Security personnel. These visits were made to determine where NSA employees gathered after hours, whether they discussed classified information, and whether agents of hostile intelligence services also frequented these locations. The program also involved an effort to encourage persons working in these establishments to report any suspicious incident to NSA and to make the local police aware of the sensitivity of NSA's mission.

Since the relevant documents were destroyed in 1973, the Committee has been unable to establish whether the External Collection Program was used to gather information on persons other than NSA employees and foreign agents. The Office of Security, in fact, soon discovered that it lacked the personnel to carry on such a program, and it died quietly "in approximately 1966-1967." 211

#### **Footnotes:**

1 See the Committee's Foreign Intelligence Report for an overview of NSA's legal authority, organization and functions, and size, and capabilities.

2 Since the NSA programs involving American citizens have never been challenged in court, the necessity of obtaining a warrant has not yet been determined. Although there have been court cases that involved NSA intercepts, NSA's activities have never been disclosed in open court. See pp. 765-766 of this Report and the Committee's Report on Warrantless FBI Electronic Surveillance for a discussion of warrant requirements for electronic surveillance.

3 Between 1970 and 1973, NSA intercepted telephone calls between the United States and various locations in South America to aid the BNDD (now the Drug Enforcement Administration) in executing its responsibilities. See pp. 752-756.

4 Senate Resolution 21, Section 2 (8).

5 Roy Banner deposition, 2/4/76, pp. 13,16,39.

Banner stated that signals intelligence activities are authorized by the President under Article II of the Constitution and "the Fourth Amendment does not restrict these signals intelligence activities" if the "purpose is solely to obtain foreign intelligence." (Ibid., p. 39.)

6 Memorandum from President Harry S. Truman to Secretary of State and Secretary of Defense, "Communications Intelligence Activities," 10/24/52.

7 NSA exercises technical control over the three Service Cryptologic Agencies: the Army Security Agency, Naval Security Group Command, and Air Force Security Service. NSA's Director is always a military officer of at least three star rank. He reports to the Secretary of Defense, but responds to requests from other intelligence agencies for intelligence information.

8 "The purpose [of forming NSA] was to maintain and improve this source of intelligence which was considered of vital importance to the national security, to our ability to wage war, and to the conduct of foreign affairs. This mission of NSA is

directed to *foreign intelligence*, obtained from foreign electrical communications and also from other foreign signals such as radars." [Emphasis added.] Lew Allen, Jr. testimony, 10/29/75, Hearings, Vol. 5, p. 6.

9 These are referred to as NSCIDs (National Security Council Intelligence Directives) and DCIDs (Director of Central Intelligence Directives).

10 The effect of the "other than intended recipients" language is to make clear that the communication is intercepted by someone other than a party to the communication -- in this case, the Government.

11 The relevant DCID contains the same definition. The exclusion is the same, except that after "communications" the words "except written plaintext versions of communications which have been encrypted or are intended for subsequent encryption" have been added.

12 Banner disposition, 2/4/76, p. 71.

The "written communications" exclusion was added in 1958; the CIA's New York mail opening project had been underway since the early 1950s. See the Committee's Report on CIA and FBI Mail Opening Programs. The exclusion of "press and propaganda broadcasts" may reflect the fact that CIA had been granted responsibility for intercepting, analyzing, and disseminating such foreign press broadcasts under its Foreign Broadcast Information Service (FBIS) program. In support of NSA's contention that "unencrypted written communications" refers to mail, it might be argued that the exclusion was designed to ensure that NSA would not engage in mail opening, which was under the CIA's jurisdiction.

13 USIB was formally abolished by Presidential directive of February 18, 1976. No comparable group was established to replace it, but the directive authorized the Director of Central intelligence to create such a body.

14 Although the agencies submitting names to NSA were members of the United States Intelligence Board, USIB never approved a watch list requirement on civil disturbances, or discussed the monitoring of American citizens' communications.

15 MINARET Charter, 7/1/69, Hearings, Vol. 5, Exhibit No. 3, pp. 149-150.

16 Ibid.

17 Allen, 10/29/75, Hearings, Vol. 5, pp. 31-32.

18 Letter from Elliot Richardson to Lew Allen, Jr., 10/1/73, Hearings, Vol. 5, Exhibit No. 7, pp. 160-161.

Petersen reported to Richardson that he had discovered the watch list program ("of which we had no previous knowledge") as a result of inquiries made to the FBI and other intelligence agencies with respect to possible electronic surveillance undertaken by such agencies in connection with a criminal prosecution. In one case in which NSA reported that it had conducted such surveillance, the Government elected to drop the prosecution. See pp. 757-758, 761. Memorandum from Henry Petersen to Elliot Richardson, 9/4/73.

19 Letter from Lew Allen, Jr. to Elliot Richardson, 10/4/73, Hearings, Vol. 5, Exhibit No. 8, pp. 162-163.

20 Western Union International provided NSA only with copies of the messages of the foreign targets, except for messages to one country, where it provided everything.

20a A letter, dated August 24, 1945, from the Army officer responsible for making the arrangements with the companies states that ITT would begin participation in SHAMROCK the last week in August. Another letter, dated October 9, 1945, from RCA to the Army states that it would begin participation immediately. See pp. 768-769.

21 Testimony of Robert Andrews, Special Assistant to the General Counsel, Department of Defense, 9/23/75, p. 34.

22 According to the International Telephone and Telegraph Company, calls from American cities to South America are routinely switched through New York.

23 CIA's participation in this activity violated provisions of its charter, the National Security Act of 1947, which prohibit the Agency from exercising law enforcement powers. NSA does not have a charter prohibiting such activity, but recognizes that it has no law enforcement function.

24 The establishment of guidelines relating directly to this issue poses an ongoing problem. Some may argue that NSA's current policy to disguise the identity of an American corporation in a communication is misguided. It could be held that, in the case of companies, their right to privacy does not extend as far as with individual citizens. For example, if an intercepted communication indicates that an American company executive is negotiating with a foreign government for the sale of large quantities of a crucial material, should the Federal Government be entitled to know the identity of the company? If NSA discovered that an American firm is exporting material to a foreign country that is prohibited by law, should the Government be allowed to know the name of that company? Or, does NSA violate the Fourth Amendment rights which protect Americans from unreasonable searches and seizures by disseminating such messages without deleting the names? Should special

procedures be instituted -- such as approval of the Attorney General or acquisition of a warrant -- before messages containing U.S. names can be disseminated?

A discussion of these issues of interception and dissemination occurred in an open session of the Committee between Attorney General Edward H. Levi and Professor Philip B. Heymann. Levi supported the dissemination by NSA of incidentally intercepted foreign intelligence information involving Americans without a warrant; Heymann maintained that dissemination should require a warrant. See Edward H. Levi and Philip B. Heymann testimonies, 11/6/75, Hearings, Vol. 5, pp. 66-143.

25 General Lew Allen, Jr. said this process "was a matter of adding aliases ... of adding addresses in some cases where an organization had been specified, and it would assist picking up messages of that organization, the names of officials of the organizations [were thus] added to enhance the selection process." Allen, 10/29/75, Hearings, Vol. 5, p. 27.

Another NSA official later advised the Committee that names were added by NSA in its amplification of watch lists and that this "was usually done either by adding the name of an executive officer of an organization, or by adding the organization name associated with a person who was placed on the watch list by another agency." (Letter from NSA to Senate Select Committee, 11/6/75.)

26 NSA response to Senate Select Committee interrogatories, 8/22/75, pp. 3-6. (Cited hereinafter as NSA Response, 8/22/75.) See pp. 781-782.

27 The material collected between 1967 and the fall of 1969 was destroyed by NSA which only retains documents less than five years old. The approximately 2,000 reports are only for the post-1969 period.

28 Senior NSA official No. 1 testimony, 9/16/75, p. 47.

29 Ibid., pp. 47-49; senior NSA official No. 2 testimony, 9/18/75, p. 13.

30 Memorandum from Raymond Wannall to William Sullivan, 5/18/62.

31 Ibid.

Wannall testified that names were, in fact, sent to NSA by the FBI in the early 1960s. Raymond Wannall testimony, 10/3/75, p. 18.

32 NSA Response 8/22/75, p. 12.

33 William Yarborough testimony, 9/10/75, p. 8.

"Question: Did you ever have the feeling that these instructions were coming from the President or somebody else in the White House?

"General YARBOROUGH: There was a lot of evidence to indicate that the President was deeply interested, as were the Attorney General and the Director of the FBI. There was a great deal of public interest. In other words, the interest was not just within the military at all.

"Question: But you don't have any evidence or knowledge of a direct order from the President to the Secretary of Defense with regard to setting up a civil disturbance unit within the Department of the Army?

"General YARBOROUGH: I would not have a way to know about that direct relationship unless I found it out by chance. I did not know.

A complete examination of the U.S. military's participation in collecting intelligence on domestic dissidents is contained in the Committee's Report: "Improper Surveillance of Private Citizens by the Military."

40 Allen, 10/29/75, Hearings, Vol. 5, p. 12.

41 Ibid.

42 In an effort to prevent disclosure of the program, NSA "compartmented" the activity by restricting the number of officials within the agencies who had access to the material. General Allen stated: "in my judgment the controls which were placed on the handling of the intelligence were so restrictive that the value was significantly diminished." Allen, 10/29/75, Hearings, Vol. 5, p. 13.

43 Staff summaries of Michael Mastrovito (secret Service) interview, 10/17/75; and of Philip Smith and Gerald Strickler (Drug Enforcement Administration) interviews, 10/7/75.

52 Senior NSA official No. 9/16/75, p. 78.

53 NSA Response, 8/22/75, p. 12.

In this written response, NSA confirmed reports the Committee had received from other agencies that prior to 1969 watch list requests were occasionally communicated to NSA by telephone or in person. See Mastrovito (staff summary), 10/17/75; Wannall, 10/3/75, p. 32; Smith and Strickler (staff summary), 10/7/75.

54 Senior NSA official No. 2, 9/18/75, p. 19.

55 Senior NSA official No. 1, 9/16/75, p. 69.

56 Wannall, 10/3/75, p. 13. He stated: "the feeling is that there was very little in the way of good product as a result of our having supplied names to NSA."

General Allen, however, told the Committee in public session: "we are aware that a major terrorist act in the U.S. was prevented. In addition, some large drug shipments were prevented from entering the U.S. because of our efforts on international narcotics trafficking." Allen, 10/29/75, Hearings, Vol. 5, pp. 12-13.

60 Memorandum from J. Edgar Hoover to Director, NSA 6/3/70.

61 Memorandum from J. Edgar Hoover to Director, NSA, 11/6/70.

62 For a detailed discussion of the Bureau's program against the New Left, see the Committee's report on COINTELPRO.

63 Memorandum from John Ingersoll to Noel Gayler, 4/10/70, Hearings, Vol. .5, Exhibit No. 4, pp. 153, 154.

64 NSA was covering links for international traffic prior to and during the drug watch list activity. However, the monitoring of certain United States-South American circuits for telephone traffic was initiated in September solely to cover drug traffickers. Senior NSA official No. 2, 9/18/75, pp. 107, 108.

Although NSA collected intelligence from communications intercepted in other areas of the world to support the drug watch list, the Committee's investigation centered on the United States-South American monitoring due to the specific targeting of American citizens.

65 Senior NSA official No. 2, 9/18/75, p. 99.

66 Ibid.

67 Senior NSA official No. 2, 9/18/75, p. 106.

68 According to ITT, many of these cities are transit points -- calls are routed through them to other cities. For example, by monitoring one New York-South American city link, NSA could pick up calls originating in other South American cities to other cities in the United States. The call would simply be routed through New York and the South American city. Senior NSA official No. 2, 9/18/75, pp. 108-109.

Most telephone calls from the United States to South America are, in fact, routed through New York City.

73 Memorandum from Houston to Acting Chief, Division D, 1/29/73.

74 18 U.S.C. 2511 (Omnibus Act, 1968) states: "nothing contained in ... Section 605 ... shall limit the constitutional power of the President to take such measures as he deems necessary to protect the nation against actual or potential attack or other hostile acts of a foreign power, to obtain foreign intelligence information deemed essential to the security of the United States .....

However, the Keith case (407 U.S. 297 (1972) ) held that the Omnibus Act was simply a congressional recognition of the President's constitutional powers to protect the nation's security and did not grant the Executive additional powers. The Act did not further define the 1934 statute or provide the Executive with any additional authority to conduct foreign intelligence.

75 Senior NSA official No. 2, 9/18/75, p. 117.

76 Buffham, 9/12/75, pp. 23, 71.

See also former NSA Deputy Director Louis Tordella's testimony of 9/21/75, p. 77: "it was in their General Counsel's opinion beyond CIA's charter to monitor radio communications on U.S. soil and I was told that if they could move a group of Cubans up to Canada it would be quite all right, but they would not do it in the United States."

93 Memorandum from Henry Petersen to Clarence Kelley, 9/7/73, p. 1.

94 Memorandum from Clarence Kelley to Henry Petersen, 9/10/73, p. 2.

Kelley is clearly overstating his case when he says Americans are "known" to be involved in illegal activities. Many of the individuals were protesters speaking out against the Government's policies, not urging the overthrow of the Government.

J. Edgar Hoover discusses the necessity of obtaining information "determining the extent of international cooperation among New Leftists" in a memorandum to NSA of June 5, 1970, which is much broader than targeting individuals who are attempting the violent overthrow of the Government.

95 Kelley memorandum, 9/10/73, pp. 3-5.

98a Ibid.

99 Memorandum from Elliot Richardson to Clarence Kelley, 10/1/73.

100 Letter from Elliot Richardson to Lew Allen, Jr., 10/1/73, Hearings, Vol. 5, Exhibit No. 7, pp. 160,161.

101 Memorandum from Clarence Kelley to Elliot Richardson, 10/3/73.

102 Letter from Lew Allen, Jr. to Elliot Richardson, October 4, 1973, Hearings, Vol. 5, Exhibit No. 8, p. 163.

103 Allen letter, October 4, 1973, Hearings, Vol. 5, Exhibit No. 8, pp. 162, 163.

104 Wannall (FBI), October 3, 1975, p. 12: "I would say that by far the majority of the product that I saw would have been information that would have been disseminated to us by NSA, based upon the knowledge of that Agency of our responsibilities, as opposed to a specific request for any information that might come to NSA's attention, that we ourselves initiated."

105 Allen, 10/29/75, Hearings, Vol. 5, p. 28.

106 "Memorandum from NSA Director Noel Gayler to the Secretary of Defense and the Attorney General, "NSA Contribution to Domestic Intelligence," 1/26/71, Hearings, Vol. 5, Exhibit No. 5, pp. 156-157.

This memorandum responded to the interests of the Intelligence Evaluation Committee (IEC), a Justice Department working group set up to carry out domestic intelligence-gathering activities. The IEC was an outgrowth of the Huston Plan and is detailed in the Committee's report on the Huston Plan. Suffice it to say that NSA sent a representative to that group and Gayler was providing them with a statement of NSA's capabilities and procedures for supplying intelligence.

107 Memorandum for the Record, Benson K. Buffham, 2/3/71.

When questioned by the Committee, neither Mitchell, Laird, nor Kleindienst recalled the watch list activity. Mitchell does not recall NSA's involvement in monitoring the communications of American citizens or the meeting with Buffham. He stated, however, that "he may have" had such a meeting, but cannot recall. John Mitchell testimony, 10/2/75, pp. 47-48.

108 Tordella, 9/21/75, p. 74.

109 Noel Gayler testimony, 6/19/75, p. 64.

110 Buffham, 10/29/75, Hearings, Vol. 5, p. 45.

In addition, the Huston Plan report sent to the participants was classified "Top Secret, Handle Via COMINT Channels Only," the classification placed on NSA intercept information. This caveat was designed to limit the distribution of the report and prevent disclosure of the illegal activities suggested by Tom Charles Huston. For a further explanation, see the Committee's report, "National Security, Civil Liberties, and the Collection of Intelligence: A Report on the Huston Plan."

**SUPPLEMENTARY DETAILED STAFF REPORTS  
ON INTELLIGENCE ACTIVITIES AND THE  
RIGHTS OF AMERICANS**

---

**BOOK III**

---

**FINAL REPORT  
OF THE  
SELECT COMMITTEE  
TO STUDY GOVERNMENTAL OPERATIONS  
WITH RESPECT TO  
INTELLIGENCE ACTIVITIES  
UNITED STATES SENATE**

APRIL 23 (under authority of the order of April 14), 1976

**IMPROPER SURVEILLANCE OF PRIVATE CITIZENS BY THE MILITARY**

**I. INTRODUCTION AND SUMMARY**

The Department of Defense maintains agents and investigators abroad and within the United States to gather foreign intelligence and to perform a variety of investigative tasks. 1 This report describes how these agents and investigators have been used in the past to gather information on the political beliefs and activities of "private citizens" 2 in violation of their rights or in violation of the legal and traditional restraints which separate the military and civilian realms. It does not cover the monitoring of international communications by the National Security Agency. 3

*A. Traditional and Legal Restraints*

The authors of the American Constitution sought to establish and preserve a clear separation of the military from the civilian realms. An express provision of this effect was suggested by one of the delegates to the Constitutional Convention, 4 but it was not included in the final version since the Founders considered separation assured by other provisions, such as those which made the Armed Forces subordinate to a popularly-elected President 5 and left it to a popularly-elected legislature to "raise and support" them. 6 As James Madison later wrote: "The Union itself, which [the proposed Constitution] cements and secures, destroys every pretext for a military establishment which could be dangerous." 7

The Bill of Rights to the Constitution, adopted in 1791, established additional restraints applicable to all government authority, including the military, by forbidding any exercise of governmental power which infringes upon certain rights of the people, 8 among them, the right to privacy and the rights to freedom of speech, of the press, of religion, of association, and the right to petition the government. 9

Despite the separation of the military and civilian realms secured by the Constitution and the guarantee of personal liberties found in the Bill of Rights, Congress has enacted no statute which expressly provides how the military may be used in the civilian community, or more specifically, whether it is prohibited from investigating private citizens and private organizations. Congress did enact the Posse Comitatus Act in 1878 10 which forbade using the Army to "execute the law," but this was done to prevent federal marshals from commandeering military troops to help enforce the law, and not to prohibit investigations of civilians by the military. 11 Apart from the Posse Comitatus Act, only the Privacy Act of 1974 12 appears to serve as a restraint upon military investigators, but even the impact of this statute is uncertain. 13 It prohibits all federal agencies, including the military, from maintaining records which reflect "how any individual exercises rights guaranteed by the First Amendment." 14 While the Act does not prohibit investigations per se, its proscription against maintaining records may, as a practical matter, inhibit them.

This report describes certain past investigative activities of the military which may have exceeded these limitations. It also identifies instances in which military investigators may have violated specific statutes because of the tactics employed in investigations of civilians. It does not attempt to evaluate the foreign intelligence and other investigative activities of the Department of Defense in terms of their efficiency or usefulness.

#### *B. Summary of Improper Surveillance Activities*

After conducting an investigation of both the foreign and domestic intelligence and investigative activities of the Department of Defense, the Committee identified four types of surveillance, or investigative activity, which have involved the collection of information on the activities of private citizens and private organizations and which may have violated the traditional and legal restraints mentioned above: (1) the collection of information on the political activities of private citizens and private organizations in the late 1960s; (2) monitoring of domestic radio transmissions; (3) investigations of private organizations which the military considered "threats"; and (4) assistance to other agencies engaged in surveillance of civilian political activities. In each case, the Committee attempted to focus upon those activities which are improper in themselves, and those which are improper because it is the military which is engaging in them.

1. Collecting Information about the Political Activities of Private Citizens and Private Organizations in the Late 1960s. -- The President is authorized by statute to use the militia (the National Guard), the Armed Forces, or both, to "suppress" domestic violence. 15 Prior to the 1960s, the President's exercise of this authority had been relatively infrequent.

In the early 1960s, however, the Army and National Guard were called upon with increasing frequency to control civil rights demonstrations, prompting the Army to prepare for possible future disturbances and to begin systematic collection of information concerning civilians and organizations who might be involved.

Initially the Army relied, for the most part, on obtaining information from local police authorities, the FBI, and the news media, rather than assigning its own personnel to investigate. However, as the frequency and severity of urban riots and antiwar demonstrations grew in the late 1960s, the Justice Department and the White House pressed the Army to obtain information on individuals and groups, and the Army's response was to direct its investigators to report on civilian political activities throughout the country.

Elaborate collection plans were issued, calling for the collection of information on the most trivial of political dissent within the United States. 16 As part of this collection program, massive operations were undertaken by Army intelligence agents to penetrate major protest demonstrations. In addition, political dissent was routinely investigated and reported on in virtually every city within the United States. These reports were circulated, moreover, to law enforcement agencies at all levels of Government, and to other agencies with internal security responsibility. In all, an estimated 100,000 individuals were the subjects of Army surveillance. The number of organizations which were the subjects of an Army file was similarly large, encompassing "virtually every group engaged in dissent in the United States." 17

Techniques employed to carry out this surveillance included the covert infiltration of private organizations by military agents at demonstrations and meetings; Army agents posing as newsmen; covert photography; and use of civilian informants.

The Department of Defense ended the nationwide collection program as a matter of policy in 1971, after the program had been exposed in the press, and on the eve of a congressional investigation.

2. Monitoring Private Radio Transmissions in the United States. -- Section 605 of the Communications Act of 1934 prohibits anyone from intercepting and publishing the content of a private radio transmission. Despite this statutory prohibition the Army Security Agency, primarily a foreign intelligence-gathering agency, monitored and recorded domestic radio transmissions of U.S. citizens on six occasions in the late 1960s.

Some of the radio monitoring was done during demonstrations or urban riots where Army troops had been committed. On occasion, it was undertaken in advance of, or in the absence of, any troop commitment.

After its radio monitoring activity had begun, the Army sought approval from the Federal Communications Commission. The FCC, after receiving an opinion from the Attorney General, advised the Army that such monitoring was illegal. Nevertheless, the Army continued its domestic radio monitoring without informing the FCC until 1970, when the Department of Defense ordered the Army to discontinue such monitoring.

3. Investigations of Private Organizations Considered "Threats," by the Military. -- Although they are not expressly authorized by law, each of the military services investigates civilian groups, both within and without the United States, which it considers "threats" to its personnel, installations, and operations.

In the late 1960s all of the services were engaged in monitoring civilian antimilitary groups within the United States. This activity was conducted concurrently with the civil disturbance collection effort described above and continued after it stopped. Most of the information gathered about these antimilitary groups was collected from law enforcement agencies and the news media, but the services also quite commonly inserted their own undercover agents and informants into the groups.

Penetrations of groups which are hostile, or might be hostile, to the military continues today in the United States, although it has been greatly reduced. Overseas, military intelligence is more active, largely because it does not have civilian law enforcement agencies to rely upon.

In West Germany and West Berlin, the Army has actively conducted surveillance of activities of American citizens and groups of American citizens whom it considered "threats" since World War II. Until 1968, the authority to target such individuals and

groups for surveillance rested solely with the commanders of occupying Army forces, and authorized techniques included opening mail, wiretaps, and covert penetrations. In 1968, the West German Government placed restrictions on the use of mail opening and wiretaps, and forbade the Army from employing such techniques any longer. The use of covert penetrations, however, was not affected by the new restrictions and continued to be employed. Furthermore, the new restrictions did not apply to West Berlin, where an Army commander governs the American sector of the city as part of a special tripartite agreement with the British and French. Here, mail opening and wiretaps continued to be employed after 1968 against Americans and groups of Americans considered to be "threats" to the military without the Army's having to obtain the approval of the West German Government.

In Japan, the Navy has carried out similar operations in three cities against groups of American civilians thought to pose "threats" to the Navy, employing covert penetrations and informants, but not mail opening or wiretapping.

"Threat" investigations are still conducted at present, but under internal controls of the Department of Defense.

4. Assisting Law Enforcement Agencies in Surveilling Private Citizen and Organizations. -- The Posse Comitatus Act (18 U.S.C. 1385) prohibits the military from "executing the law." 18 Nevertheless, military intelligence has frequently provided assistance to civilian law enforcement agencies. In Chicago during the late 1960s, military intelligence agents turned over their files on civilians and civilian organizations to the Chicago police, were invited to participate in police raids, and routinely exchanged intelligence reports with the police. In Washington, D.C. Army intelligence participated in an FBI raid in a civilian rooming house and provided funds for the police department's intelligence division.

The military was also called upon by the Justice Department to assist in analyzing intelligence information received during the 1972 national political conventions. Further, it joined other intelligence agencies in drafting the so-called Huston Plan in 1970, and later participated in the Intelligence Evaluation Committee, an interdepartmental committee established by the Justice Department to analyze domestic intelligence information. 18a

#### *C. Effect of 1971 Departmental Directive*

In March 1971, during congressional hearings on the Army's civil disturbance collection program, the Department of Defense announced the issuance of a new directive to govern the collection and retention of information by the military on "unaffiliated" persons and organizations. 19

In general, the new directive prohibited, as a matter of policy, the collection of any information whatsoever on "unaffiliated" persons and organizations, except for limited "military" purposes. It also established the policy that any information which was collected by the military would be obtained through liaison with law enforcement agencies rather than through military operatives. Finally, it required the destruction of all current holdings of the department which were found to violate the provisions of the directive.

This directive is discussed later in this report as it bears on issues regarding possible legislative restraints upon future investigative activities of the department. 20 But an awareness of its existence and a general understanding of its impact is crucial to the case studies which follow.

#### *D. Issues Presented*

Each of the four types of activity summarized above involve investigations by military intelligence of the political activities of private citizens, and thus, to the extent they survive today, threaten to violate the traditional and legal restraints which govern the use of military forces in the civilian community. This situation gives rise to two major questions: First, should these activities in the civilian community be permitted at all? If so, should they be restrained to prevent their overstepping traditional and legal bounds? Second, are the present DOD directives sufficient for the task? Should Congress enact new legislation?

Beyond these basic questions is the matter of what the restraints which govern these activities should be:

(1) Should the military be prohibited from collecting or maintainin any information regarding "private citizens?" If not, where should the line between permissible and impermissible information be drawn?

(2) Should the military be prohibited from using its own operatives to collect information in the civilian community? Are there collection techniques that might be authorized for some federal agencies (e.g., wiretaps) that should be denied to the military?

Finally, there are issues of oversight and control:

(1) Should there be a special mechanism established to control and oversee activities by the military within the civilian community?

(2) How should congressional oversight of this area be achieved?

#### *E. Conduct and Scope of Investigation*

The Committee's inquiry, as summarized above, is divided into four parts. One recognizes at the outset that the first of these -- the Army's domestic surveillance program of the late 1960s -- has heretofore been the subject of a congressional investigation. 21 The Select Committee determined, however, that it could not ignore this largest of military intelligence abuses, even though

its inquiry must necessarily overlap the previous investigation in some respects. The Army program of the late 1960s, besides being the worst intrusion that military intelligence has ever made into the civilian community, resulted in new departmental restrictions being drawn, and other intelligence activities against American citizens being curtailed or eliminated. Thus, current use of military intelligence agents in the civilian community can not be fully understood without some knowledge of the Army program and how it was curtailed.

The Select Committee inquiry does go well beyond the earlier inquiries. In particular, it represents the first attempt to analyze the origins and termination of the Army program. The Committee had access to former Army intelligence officers, who were not permitted to testify in the earlier investigations, and it had access to documents not previously available to Congress.

After initial briefings from pertinent elements within the Department of Defense, the Committee staff interviewed 35 past and present employees of the Department, and 13 other individuals regarding some aspect of this inquiry. The investigation generally covered the period from 1967 through 1975, although some events of prior years are described to provide historical background.

#### *F. Organization of Report*

Parts II through V of the following Report describe in detail the activities which have been summarized above. In Parts VI and VII, the issues posed above are considered. The effect of recent Departmental restrictions and the effect of the Privacy Act of 1974 are given particular consideration.

## **II. THE COLLECTION OF INFORMATION ABOUT THE POLITICAL ACTIVITIES OF PRIVATE CITIZENS AND PRIVATE ORGANIZATIONS: 1963-1970**

### *A. Legal Authorities*

There is no statute which authorizes military intelligence to collect information on the political activities of private citizens and private organizations, but the Army claimed in 1971 that it needed such information in the late 1960s to enable it to prepare for situations in which it was called upon to put down civil disturbances. 22

Article IV, Section 4 of the United States Constitution provides that "the United States shall ... protect each [State] ... against domestic violence."

Congress first passed a statute to implement this constitutional provision in 1795, 23 and, although amended, its provisions remain virtually intact today. 24 In essence, the President is authorized to use the militia of any state, or the Armed Forces, or both, to "suppress insurrection." 25

The President has occasionally exercised this authority and called out the National Guard or the Lined Forces to put down unrest or enforce the law where such enforcement proves to be beyond the capability of civil authorities. According to a 1922 study by the War Department, the President exercised this authority thirty times between 1795 and 1922. 26 In recent times, while commitment of federal troops in the civilian community has been more frequent, 28 an extraordinary exercise of executive authority. 28

There is no explicit authority in sections 331-334 of title 10, United States Code, for the National Guard, or the Armed Forces, to make any "preparations" for future deployments upon order of the President. In 1971, however, the Department of Defense argued before Congress that such authority could be implied, and would justify the collection of information on persons and organizations in the civilian community:

In order to carry out the President's order (under the statute) and protect the persons and property in an area of civil disturbance with the greatest effectiveness, military commanders must know all that can be learned about the area and its inhabitants. Such a task obviously cannot be performed between the time the President issues his order and the time the military is expected to be on the scene. Information gathering on persons or incidents which may give rise to a civil disturbance and thus commitment of Federal troops must necessarily be on a continuing basis. Such is required by sections 331, 332, and 333 of title 10 of the United States Code, since Congress certainly did not intend that the President utilize an ineffective Federal force. 29

The Senate Subcommittee on Constitutional Rights subsequently rejected this assertion, however, stating that it was "unwilling to imply the authority to conduct political surveillance of civilians from the role assigned by statute to the military in the event of civil disturbance." 30 It cited the traditional separation of the military and civilian realms as a reason for refusing to imply such authority, 31 and it questioned the use of military rather than civilian authorities to gather information about pending civil disturbances. 32 Finally, it observed that even if the military had implied authority to collect some information on areas of potential civil disturbance, this authority did not include the collection of information on how citizens exercise their First Amendment rights. 33

### *B. Origins and Development of the Army's Domestic Surveillance Program*

Army intelligence began collecting information on private citizens and organizations in the early 1960s as part of furnishing information to military commanders whose units were dispatched to control racial situations in the South. In the late 1960s, however, as the volume of civil disturbance and protest demonstrations grew, the Army came under increasing pressure from civilian authorities to provide information on persons and organizations involved in domestic dissent. It responded by sending over 1200 of its investigators into civilian communities to report on all vestiges of political activity.

(1) Limited Beginnings. -- Despite the lack of clear legal authority to "prepare" for deployments in civil disturbance situations, the Army in the early 1960s initiated formal efforts to plan for its troops being committed in future civil disturbances. Prompted by a rash of troop commitments to control racial situations and enforce court orders in the South, 34 the Joint Chiefs of Staff in 1963 designated the Chief of Staff of the Army as its "Executive Agent" for civil disturbance matters, and the Continental Army Command was made responsible for the selection and deployment of Army troops in such situations. 35 Formal contingency plans were drawn.

It was at this time that Army intelligence began collecting information on individuals and organizations, without any express authorization, as part of its overall mission to support military commanders with information regarding possible deployments in civil disturbances. 36 The Army's collection, however, was ordinarily confined during this period to those areas where civil disturbances were likely or had already taken place, and information on civilians was ordinarily obtained through liaison with law enforcement and use of public media. 37 Any covert use of military intelligence agents within the civilian community still had to have the approval of the Department of the Army. 38

In the following three years, the number of riots and disorders within the United States increased dramatically. In 1965, there were four major riots, including Watts, California; in 1966, there were 21 major riots and disorders; and in 1967, there were 83. 39 These had necessitated the deployment of National Guard forces 36 times during this period. 40

The Army, while being deployed only once during the period, 41 was nevertheless affected by events. Frequently, Army troops had been alerted, and occasionally, they had been "pre-positioned" in the event they were called upon. 42 Army intelligence stepped up its own collection efforts in support of military commanders still relied, for the most part, on their contacts with local police and the public media. 43 Army investigators in the United States were still spending most of their time doing security clearance investigations for Army employees. 44

(2) The Army's Involvement Intensifies. -- In 1967, the character of the investigative program began to change. In July of that year, the Army was placed on alert for riot duty in Newark, New Jersey, and later in the month was actually deployed for eight days in Detroit, Michigan. 45 It was the most extensive use of Army troops since 1962.

In the post-mortems which followed the Detroit riots, the lack of adequate intelligence prior to moving into the city was a sore point. But the focus of the criticism was the lack of "physical intelligence" about the area in which troops were being committed. Cyrus Vance, sent by the President to make an after-action assessment, specifically cited the need for this type of information:

In order to overcome the initial unfamiliarity of the Federal troops with the area of operations, it would be desirable if the several continental armies were tasked with reconnoitering the major cities of the United States in which it appears possible that riots may occur. Folders could then be prepared for those cities listing bivouac areas and possible headquarters locations, and providing police data, and other information needed to make an intelligence assessment of the optimum employment of federal troops when committed. 46

The Army reacted to Vance's recommendation by appointing a special task force in the fall of 1967 to study the civil disturbance situation and make recommendations as to what its role should be. 47

In the meantime, the Army was preparing for a unique sort of civil disorder, one announced in advance and directed against the military establishment. The so-called March on the Pentagon was scheduled for late October 1967.

For the first time in its history, 48 the Army authorized a massive covert intelligence operation to be undertaken in connection with a civilian demonstration. In all, 130 Army intelligence agents were used in connection with the demonstration. 49 Some were used to penetrate protest groups coming to Washington: some were used to penetrate the groups in Washington who were planning the March, and still others were used to penetrate and report on the line of march. 50 Army agents, moreover, took still and motion pictures of the crowds, and secretly monitored amateur radio bands to learn of the demonstrators' plans. 51

Even after this large covert operation, the Army apparently was still relying primarily on civilian authorities and the media for information on civilian "dissenters." 52 In a memorandum to the Undersecretary of the Army from the Army Assistant Chief of Staff for Intelligence in late 1967, the Under Secretary was told:

Army intelligence is not engaged in any concerted investigative effort to determine the routes of domestic discontent or the channels it will follow. The quantity and quality of third agency reports is sufficient to allow proper and timely analysis of the domestic situation so that commanders in the field will be properly informed at all times. 53

But if the Army had refrained from widespread use of its own operatives, it was nonetheless increasingly relied on by the White House and the Justice Department to provide information on civil unrest. In a meeting at the White House on January 10, 1968, for example, Attorney General Ramsey Clark told those present 54 that "every resource" must be used in the domestic intelligence effort and he criticized the Army for not being more selective in the reports that it was sending to the Justice Department. 55 According to former Army Chief of Staff Harold K. Johnson, this was but one of several meetings at the White House where the Army was urged to take a greater role in the civil disturbance collection effort. 56

The Army was looked to, first, because it had approximately 1200 agents scattered across the country who were young and could easily mix with dissident young groups of all races. 57 Second, the Army was virtually the only agency apart from the FBI which had an independent teletype network nationwide which could be used to transmit data on civil unrest. 58 The FBI had such a network but it was used for other purposes, and could not handle the voluminous amount of data generated by civilian political protests.

The pressure on the Army to produce information was rapidly mounting in the winter of 1967, and it began to have its effect. The Army task force, appointed to study the Army's role in civil disturbances, recommended among other things, that "continuous counterintelligence investigations are required to obtain factual information on the participation of subversive personalities, groups or organizations and their influence on urban populations to cause civil disturbances." 59 It also recommended that the Army develop new criteria to apply to the collection of domestic intelligence which would "serve to indicate potential areas of civil disturbance." 60

Chief of Staff Harold K. Johnson approved these recommendations in late November 1967, and directed that a plan be prepared formally directing the Army to collect civil disturbance information on a nationwide scale. 61

### *C. The Army's Domestic Surveillance Program*

The collection requirements were set out in an annex to the Department of Army Civil Disturbance Plan, promulgated on February 1, 1968. 62 The plan identified as "dissident elements" the "civil rights movement" and the "anti Vietnam/anti-draft movements," and stated that they were "supporting the stated objectives of foreign elements which are detrimental to the USA." 63 It furthermore directed Army commands to provide information on the "cause of civil disturbance and names of instigators and group participants," as well as information on the "patterns, techniques, and capabilities of subversive elements in cover and deception efforts in civil disturbance situations." 64 The terms "civil disturbance," "instigators," "group participants," and "subversive elements" were not defined.

While this new collection plan was being implemented across the country, the Army was in the midst of planning its second concerted domestic operation in preparation for a civilian demonstration -- the so-called Washington Spring Project. Martin Luther King, Jr. had announced his intention of bringing the nation's poor to Washington in April 1968 in a massive protest demonstration. Antiwar groups had also indicated their intent to use the occasion to protest the war.

The Washington Spring Project did not proceed as scheduled, however, because Dr. King was assassinated in Memphis on April 4th. Extensive rioting broke out in numerous cities across the country causing simultaneous commitments of Army troops in Washington, D.C., Baltimore, and Chicago. Other Army troops were placed on alert in Pittsburgh and Kansas City. 65

This had never happened before, and it had a profound effect upon the Pentagon. In a meeting with the Secretary of Defense on April 10, 1968, it was agreed that the Army would set up a permanent "task force" to plan for civil disturbances, and that it would operate upon the theory that the Army may have to deploy as many as 10,000 soldiers in 25 cities simultaneously. 66

Three days later, the Under Secretary of the Army directed the Chief of Staff to establish the Directorate of Civil Disturbance Planning and Operations (DCDPO) which he instructed to "maintain an around-the-clock civil disturbance operations center to monitor incipient and on-going disorders ... and develop intelligence reporting procedures to provide information on civil disturbances occurring or imminent." 67

Two other changes were brought on by the King assassination riots. The Secretary of the Army was formally designated Executive Agent for the DOD on civil disturbance matters, 68 and it was decided that the intelligence requirements of the Army Civil Disturbance Plan of February 1 were inadequate for the Army's purposes.

A new, more detailed, collective plan, classified CONFIDENTIAL, was thus issued on May 2, 1968. 69 The new plan expanded the criteria to be used for collecting information and directed that information on political activities be gathered in cities where there was a "potential" for civil disorder. 70 Former Assistant Secretary of Defense Froehle told the Ervin subcommittee that demands of the collection plan for information were sweeping:

The requirements of the plan were both comprehensive and detailed, and, in the light of experience, substantially beyond the capability of military intelligence to collect. They reflected the all-encompassing and uninhibited demand for information directed at the Department of Army.... So comprehensive were the requirements levied in the civil disturbance information collection plan that any category of information related even remotely to people or organizations active in a community in which the potential for a riot or disorder was present, would fall within their scope. Information was sought on organizations by name or by general characterization. Requirements for information were even levied which required collection on activities and potential activities of the public media, including newspapers and television and radio stations. 71

The May 2nd Collection Plan was distributed to the White House, the Department of Justice, the Federal Bureau of Investigation, and the Department of Defense, among others. 72 While it is not clear whether officials in any of these agencies actually read the plan, it is clear that they had begun to press the Army by this time for information on individuals and organizations involved in domestic dissent. 73 While the Army was routinely disseminating its intelligence reports to the FBI, it also frequently received verbal tasking from high-ranking officials on the outside for information on particular incidents or individuals. 74 Their demands were insistent, and were conveyed down the Army chain of command with a similar degree of intensity. 75

According to former Army intelligence officials, this led to a situation where restraints on collection in the civilian community were ignored. 76 Lower-ranking intelligence officers considered the fact that demands were coming from their superiors as sufficient authority to obtain it by whatever means necessary. 77 Secondly, it led Army intelligence agents in the field to collect as much information as possible so they would not be caught short when demands for timely and comprehensive information came down through channels. 78

Thus, there developed, as former Assistant Secretary of Defense Robert Froehlke described it, "a practical inconsistency between the level of demand for information imposed and the methods of collection authorized." 79

Army agents were dispersed into civilian communities across the country and tasked to report on any vestige of political dissent.

#### *D. Questionable Activities on the Part of Army Agents*

About 1500 Army intelligence agents were engaged in monitoring civilian protests in 1968. 80 These agents routinely monitored civilian political activities in the communities to which they were assigned, and occasionally were used as part of concerted intelligence operations undertaken by the Army during the major political protests of the late 1960s. The following discussion thus encompasses activities undertaken both under "routine" circumstances and during major protest demonstrations.

(1) The Covert Penetration of Civilian Groups. -- Army agents covertly penetrated the organizational structure of civilian political groups, attended their meetings, and participated in their private and public activities. They also were inserted into public demonstrations of all dimensions. A sampling of these activities follows:

-- Army agents penetrated the Poor Peoples' March to Washington in April, 1968, as well as the subsequent encampment which became known as "Resurrection City;" 81

-- Army agents were also inserted into groups coming from Seattle, Washington to the Poor Peoples' Campaign; 82

-- Army agents infiltrated the National Mobilization Committee; 83

-- The Army monitored protests of a welfare mothers organization in Milwaukee, Wisconsin; 84

-- Army agents infiltrated a coalition of church youth groups in Colorado Springs, Colorado; 85

-- Army agents were routinely used to penetrate antiwar groups in Chicago; 86

-- Army agents attended a Halloween party for elementary school children in Washington, D.C., where they suspected a local "dissident" might be present; 87

-- Army agents posed as students to monitor classes in "Black Studies" at New York University, where James Farmer, former head of the Congress on Racial Equality, was teaching; 88

-- 58 Army agents were inserted into the demonstrations which took place in Chicago during the Democratic National Convention of 1968 ; 89

-- Army agents attended the October 1969 and November 1969 Moratorium marches in various locations around the country; 90

-- Army agents attended a conference of priests in Washington, D.C., which had convened to discuss birth control measures; 91

-- Army agents were routinely assigned to cover speeches made at the major universities in New York City from 1968 to 1970. 92

-- Army agents attended meetings of a sanitation workers' union in Atlanta, Georgia, in 1968; 93

-- An Army agent infiltrated the Southern Christian Leadership Conference in 1968; 94

-- Army agents infiltrated a Yippie commune in Washington, D.C., prior to the 1969 Inauguration; 95

-- Army agents attended an antiwar vigil at the Chapel of Colorado State University; 96

-- Army agents monitored the weekend activities of college fraternities in White, South Dakota, which allegedly had been responsible for previous damage to town property; 97

-- An Army agent attended an antiwar meeting at St. Thomas Episcopal Church in Washington, D.C.; 98 and

-- 107 Army agents monitored the protest activities surrounding the Presidential inauguration in Washington, in January 1969. 99

(2) Posing as Newsmen/Covert Photography. -- Army intelligence agents frequently posed as newsmen in order to photograph and interview "dissident" personalities. Photographing participants in political activities itself became a widely used intelligence technique.

During the Democratic National Convention of 1968, the Army, for the first time, sent undercover agents, disguised as television news reporters from a nonexistent television news company, to videotape interviews with leaders of the demonstrations. 100 This technique was repeated during subsequent demonstrations in Atlanta, Washington, D.C., San Francisco, and Baltimore. 101

A representative of the Reporter's Committee on Freedom of the Press also stated in congressional testimony that Army agents, posing as newsmen, interviewed H. Rap Brown and Stokely Carmichael in New York in 1967; interviewed staff of the Southern Christian Leadership Conference in 1968; and covered the 1969 Inaugural parade. 102

The Army began using photographers to take still and motion pictures of the participants in political demonstrations in 1967 during the March on the Pentagon. 103 This rapidly became an accepted collection technique for Army agents across the country. 104

(3) Harassment/Disruptive Conduct. -- Army agents generally refrained from aggressive activities against civilian protestors, but occasionally they engaged in conduct designed to harass or confuse such groups. Typically, this sort of activity was carried out at the "grass roots" level by lower-level military intelligence agents, who neither sought nor received authorization for such activity. The Committee found no evidence of any concerted program of harassment, analogous to the COINTELPRO operations of the FBI. 105 Nonetheless, some of the techniques employed by Army agents were similar.

A former intelligence agent stated that he had posed as a bus driver during a demonstration in Chicago, collected the bus tickets of departing demonstrators, and then sent them off to find a nonexistent bus. 106 This same agent also recalled having posed as a parade marshal during the 1969 Inaugural, and, as such, provided misinformation to demonstrators. 107

Another recalled making harassing telephone calls and sending orders of fried chicken to the offices of the Chicago 7 defense team. 108 Another admitted having torn notices of rallies and demonstrations from school bulletin boards, 109 and still another recalled agents having heckled speakers in order to cause a disruption. 110

Another former agent stated in a newspaper account that he was given blank postcards which had been confiscated by the FBI from the headquarters of a protest group in Washington, D.C. The cards were to be sent in by Washington residents who were willing to house demonstrators during the inaugural demonstrations. The agent stated that he filled out the cards with the names of fictitious persons and sent them in. 111

The Select Committee also investigated the relationship of military intelligence with a right-wing terrorist group in Chicago known as the Legion of Justice. Former members of the terrorist group told the Committee that from 1968 until 1970 "military intelligence" had directed and helped finance their activities against left-wing groups in Chicago. 112 They also alleged that the Army had supplied tear gas, grenades, and bugging devices to be used against left-wing groups. 113 Finally, they suggested that Army intelligence had received a film and various documents stolen by the Legion from left-wing organizations. 114

The Committee's investigation did not substantiate any of these allegations. 115 It did, however, show that Army intelligence agents had been in contact with the leader of the Legion on several occasions in regard to obtaining information on left-wing groups. 116 Army agents insisted, however, that they did not realize that their source was a leader of the terrorist group, nor that the information he was offering the Army had been stolen. 117

(4) Maintenance of Files on Private Citizens and Private Organizations. -- All of the information collected by Army agents on civilian political activity was stored in "scores" 118 of data banks throughout the United States, some of which the Army had computerized. 119 The reports were routinely fed to the FBI, the Navy, and the Air Force, and were occasionally circulated to the Central Intelligence Agency and the Defense Intelligence Agency. 120

In all, the Army probably maintained files on at least 100,000 Americans from 1967 Until 1970. 121 Among them were: Dr. Martin Luther King, Jr., Whitney Young, Julius Hobson, Julian Bond, Arlo Guthrie, Joan Baez, Major General Edwin Walker, Jesse Jackson, Walter Fauntroy, Dr. Benjamin Spock, Rev. William Sloane Coffin, Congressman Abner Mikva, Senator Adlai Stevenson III, 122 as well as "clergymen, teachers, journalists, editors, attorneys, industrialists, a laborer, a construction worker, railroad engineers, a postal clerk, a taxi driver, a chiropractor, a doctor, a chemist, an economist, a historian, a playwright, an accountant, an entertainer, professors, a radio announcer, business executives, and authors" 123 who became subjects of Army files simply because of their participation in political protests of one sort or another.

In addition, one witness told the Ervin subcommittee that "it was no exaggeration to state that (the Army's files) covered virtually every group engaged in dissent in the United States." 124 Cited as examples were the American Civil Liberties Union, the National Association for the Advancement of Colored People, the Ku Klux Klan, the Congress on Racial Equality, the Urban League, the Womens Strike for Peace, the American Friends Service Committee, the Citizen's Coordinating Committee for Civil Liberties, the Southern Christian Leadership Conference, Ramparts, The National Review, Anti-Defamation League of B'nai B'rith, National Committee for a Sane Nuclear Policy, the John Birch Society, Young Americans for Freedom, Clergy and Laymen Concerned About the War, Business Executives Move to End the War in Vietnam, and the National Organization for Women, among others. 125

#### *E. Termination of the Army's Civil Disturbance Collection Program*

The Army did not decide to terminate its domestic collection program until the summer of 1970, after it had been exposed in the press and Congress had announced its intentions to investigate. There had, nevertheless, been reservations within the Army regarding the scope of its domestic effort as early as the fall of 1968.

The first indication that anyone at the Department of Defense had qualms about the Army's domestic program came in September 1968, when Deputy Secretary of Defense Paul Nitze disapproved an Army request for 167 additional spaces for Army intelligence agents citing "reservations regarding the extent of Army involvement in domestic intelligence activities."<sup>126</sup>

Three months later Army Under Secretary David McGiffert also expressed concern that the Army's domestic collection program might not be "worth the effort," and expressed his desire that the "civil disturbance collection effort be more sharply focused on essential requirements and the mission be more precisely delineated."<sup>127</sup>

This concern apparently led McGiffert in February 1969 to attempt to curtail the Army's program. In a memorandum to the Vice Chief of Staff, he expressed concern that the Army was, in furtherance of the civil disturbance mission, collecting detailed information on persons, organizations, and movements. Citing expediency rather than principle, he stated that "our limited assets should not be expended in developing such detailed information on these matters as part of the process of assigning priorities to particular metropolitan areas."<sup>128</sup> He expressed the opinion that such information, to the extent it was necessary, could be gathered from civilian law enforcement agencies. The memorandum also required that he be apprised on a quarterly basis of all covert and overt collection activities.

The Under Secretary's memorandum met with stiff resistance from the Army staff and was not fully implemented.<sup>129</sup> The Under Secretary did not press his demands, in part because he was about to leave, and in part because the Army General Counsel had initiated negotiations with the Department of Justice to reach an agreement which would relieve the Army of its domestic intelligence-gathering role.<sup>130</sup> However, the agreement which eventually resulted from these discussions -- the Interdepartmental Action Plan on Civil Disturbances -- left the domestic role of Army intelligence as ambiguous as before.<sup>131</sup> Nevertheless, the initiative of the General Counsel had served to forestall the implementation of McGiffert's memorandum until his successor had taken office, and could be prevailed upon to continue the Army's collection activities.

McGiffert's successor, Thaddeus R. Beal, did nonetheless retain the requirement that the Army's collection activities be reported to him on a quarterly basis. In the first of these reports, filed on April 15, 1969, the Army indicated that 35 percent of its 3219 intelligence reports were based on operations conducted by Army agents.<sup>132</sup> This figure caused some alarm at the Department of Army level,<sup>133</sup> but did not engender any formal attempts to limit such operations.

It was only in January 1970, when a former Army intelligence officer, Christopher H. Pyle, wrote an article for the Washington Monthly exposing the extent of the Army's domestic program, that serious efforts to curb the Army's domestic activities were undertaken.<sup>134</sup> Pyle's article drew substantial attention in the press, and two congressional committees in the spring of 1970 announced their intentions to hold hearings on the matter.<sup>135</sup>

In response to the growing public pressure, the Army on June 9, 1970, rescinded its May 2, 1968 collection plan and issued an order stating that:

Under no circumstances will the Army acquire, report, process, or store civil disturbance information on civilian individuals or organizations whose activities cannot, in a reasonably direct manner, be related to a distinct threat of civil disturbance exceeding the law enforcement capabilities of local and State authorities.<sup>136</sup>

The matter did not end there, however. Congressional hearings were still in the offing,<sup>137</sup> and in December, NBC News reported that the Army had had files on Illinois Senator Adlai Stevenson, III and Congressman Abner Mikva.<sup>138</sup>

These disclosures brought on renewed criticism which led Secretary of Defense Melvin R. Laird on December 23, 1970, to direct that new regulations be proposed which would ensure that "these [intelligence activities] be conducted in a manner which recognizes and preserves individual human rights."<sup>139</sup>

On March 1, 1971 the day the Senate was to begin hearings on the Army surveillance program, DOD formally issued the new regulation called for by Secretary Laird. The new directive in general prohibited military personnel from collecting information on "unaffiliated" persons and organizations, except where "essential" to the military mission. It also required that all information which violated the new directive, and was currently being held by the military, must be destroyed. While as a practical matter implementation of the directive did not occur immediately,<sup>141</sup> the Army's nationwide collection effort against civilians had officially come to an end.

### III. MONITORING PRIVATE RADIO TRANSMISSIONS IN THE UNITED STATES: 1967-1970

During the late 1960s, when the Army was being called upon to control civil disturbances, an element of the Army, the Army Security Agency (ASA), normally used to intercept international communications for foreign intelligence purposes, was used to monitor radio transmissions in the United States. At times it was authorized not only to monitor radio transmission, but to "jam" radio broadcasts or transmit false information over the air, if such techniques were thought necessary.

At first, ASA conducted its monitoring activity in support of Army troops committed in civil disturbances. Later, however, ASA monitored radio communications in situations where Army troops had not been deployed, and were not expected to be. Indeed, on two occasions, ASA ordered its units, in violation of standing instructions, to conduct general searches of the radio

spectrum without regard to the source or subject matter of the transmissions. ASA did not report these incidents to the Army, even when specifically asked to do so as part of the Army's preparations for the Ervin subcommittee hearings in 1971.

In this report, the domestic use of the Army Security Agency is treated separately from the Army's civil disturbance collection program for several reasons. First, ASA is an agency whose primary mission is to gather foreign intelligence. In this respect, it differs from the other Army collectors in the field in the late 1960s, who were there primarily to conduct security clearance investigations. Second, ASA has unique capabilities for surveillance that other Army investigators do not possess. The fact that these capabilities were turned inward upon private citizens is uniquely ominous. Finally, this type of surveillance activity is bound by particular legal restraints which do not apply to other types of investigative activity.

#### *A. Legal Authorities and Restrictions*

(1) Mission of the Army Security Agency. -- ASA carries out communications intercepts for both national and tactical intelligence purposes. 142 It also develops techniques of electronic warfare -- "jamming" and "deceptive transmitting" -- to support tactical Army operations. 143

While it does maintain operational units within the United States in both mobile and fixed-station configurations -- the domestic mission of these units is limited primarily to support of Army training exercises and to determine the vulnerability of Army tactical communications to interception by hostile intelligence agents. 144

(2) Section 605 of the 1934 Communications Act Prohibits Monitoring. -- Section 605 of the 1934 Communications Act provides, in pertinent part:

No person not being authorized by the sender shall intercept any radio communication and divulge or publish the existence, contents, substance, purport, effect, or meaning of such intercepted communication to any person. 145

The statute thus makes the interception and publication of radio transmissions a crime. While anyone with the appropriate radio receiver may intercept the radio communication of another, Congress has decided that the interceptor must not publish it. The law thus assures persons using radios to communicate that their transmissions will not be intercepted and divulged.

#### *B. Origins of Domestic Radio Monitoring by ASA*

Prior to 1963, there had been no explicit Army policy which had either authorized or prohibited domestic use of the ASA. In 1963, however, the Army was forced to decide the issue when it received requests for ASA support from two Army task forces assigned to deal with civil disturbances brewing in Alabama and Mississippi. The commander of one of these task forces requested on June 7, 1963, that ASA units be used to monitor police, taxi, amateur, and citizens band radio, and that ASA be authorized to "jam" transmissions emanating from a Ku Klux Klan net in Tuscaloosa, Alabama, if such action were found desirable. 146

But the Department of Army said "no." In a message to the task force commander, it prohibited the domestic use of ASA resources:

United States Army Security Agency organizations or elements thereof are prohibited from engaging in USASA-type operational roles (e.g., monitoring or jamming of civil and amateur telecommunications) in support of U.S. Army forces committed to maintain or enforce law and order during civil disturbances and disorders within the states and territories of the United States of America. 147

This policy remained in effect for the next four years, until the pressure of events caused the Army to reverse its position.

#### *C. Domestic Radio Monitoring by ASA : 1967-1970*

(1) The March on the Pentagon. -- In October 1967, preparations were underway for the so-called March on the Pentagon, scheduled for late in the month. As part of this planning, a "high-level" decision was made in the Army to allow ASA units to support Army units which would be used to control the demonstration. 148 Accordingly, on October 14, 1967, a message went from the Army to ASA expressly rescinding the 1963 ban, and directing that ASA participate in "Task Force Washington," the Army force created to handle the demonstration. 149 The Army directed not only that ASA monitor civilian communications during the March, but that it have the capability to "jam" radio transmissions and to undertake "deceptive transmitting," in the event that either became necessary. 150

According to an after-action report later filed by ASA after the March, this was the first time that ASA resources had ever been used in support of the Army domestically. 151

During the weekend of the March, ASA units monitored citizens band, police band, taxi band, and amateur radio bands from a total of 36 listening posts. 152 Twenty-three of these were located at the Pentagon; nine at ASA headquarters in Arlington, Virginia; and four at an ASA fixed station facility near Warrenton, Virginia. 153 The after-action report of ASA also recites the fact that while it did have the capability to "jam" and undertake "deceptive transmitting" during the March, none was actually carried out. 154

Despite its participation in the "March," ASA's potential usefulness in civil disorders was not widely recognized, even in the Army. The Army's Civil Disturbance Collection Plan of February 1, 1968, contained no mention of ASA's role in such activities. Moreover, the message of October 14, 1967, which had rescinded the 1963 ban, had been sent only to ASA. 155 Presumably, the rest of the Army was not on official notice of ASA's potential support capability.

On March 31, 1968, official notice was provided in a classified message sent to all domestic commands of the Army. 156 The message stated that ASA would participate in the Army's Civil Disturbance Collection Plan and could be used to monitor domestic communications and conduct jamming and deception in support of Army forces committed in civil disorders and disturbances. All such operations were required to have the approval of the Army Chief of Staff. It also provided that ASA personnel were to be "disguised" either in civilian clothes or as members of other military units. None were permitted to be used as liaison with civilian authorities. The 1963 ban was expressly rescinded.

(2) The King Assassination Riots. -- Four days after the message was sent authorizing use of ASA units in civil disturbances, Dr. Martin Luther King, Jr. was assassinated in Memphis, and rioting erupted in Washington, D.C. On April 5, even though Army forces had not officially been brought on the scene, ASA units were directed by the Army to begin monitoring civilian radio transmissions as part of the riot control operation. 157 They were instructed to report directly to the Army Operations Center until an Army Task Force had been officially committed. On April 9, in anticipation of further demonstrations in Atlanta, the site of the King funeral, ASA elements were again requested to conduct radio monitoring operations, in advance of any troop commitment. 158

In all, the monitoring lasted from April 5 until April 17, 1968. ASA units at the Arlington, Virginia, headquarters, at the Treasury Building in Washington, and at a fixed station facility near Warrenton, Virginia, participated in the Washington area monitoring. 159 ASA units at Fort McPherson, Georgia, performed similar tasks for the Atlanta area. Citizens band, police band, taxi band, military band, and amateur bands were monitored. 160 On April 23, after the monitoring had ceased, ASA sent a message to the National Security Agency, informing it that ASA had participated in the domestic operations surrounding the King death. The message further advised: "Similar tasking by DA expected in future whenever Federal troops committed in civil disturbance operations." 161 This is the only indication found by the Committee staff that NSA had ever been officially apprised of the domestic activities of ASA.

After the King funeral, on April 29, 1968, persons from the Office of the Army Assistant Chief of Staff for Intelligence met with representatives of the FCC for the purpose of obtaining the FCC's approval of future Army monitoring broadcasts during civil disturbances. 162

The FCC asked that the Army put its request in writing. 163

(3) The Poor People's Campaign in Washington, D.C. -- Despite its failure to achieve any immediate approval from the FCC, the Army proceeded with plans to monitor civilian radio communications as part of its surveillance of the Poor People's March and Campaign in Washington, D.C. ASA began radio monitoring on May 8, 1968, although no formal authorization of these activities appears to have come from the Army until May 21, 1968. 164 In any case, some form of radio monitoring took place from May 8 until June 26, 1968. 165 Two mobile vans were located for this purpose at the 13th Police Precinct in Washington. 166 Other locations included ASA headquarters, the Treasury Building, and (from June 6 until June 26) the ASA fixed station facility near Warrenton, Virginia. 167

It was not until after the Poor People's Campaign that the Army renewed its initiative to the FCC in a June 25, 1968, letter from Acting Assistant Chief of Staff MG Wesley Franklin to Rosel Hyde, the FCC Chairman. 168 The letter suggested, first of all, that the FCC itself monitor civilian radio broadcasts in these situations to obtain information useful to the Army. Alternatively, it was suggested that the Army be allowed to monitor on its own.

The FCC referred the Army's letter to the Department of Justice for a legal opinion. 169 However, by August 6, when the Republican National Convention opened in Miami Beach, the FCC had taken no formal action.

(4) The National Political Conventions of 1968. -- Senior officers at ASA were unaware of the initiative to the FCC being taken by the Army Assistant Chief of Staff for Intelligence. 170 Thus, the fact that the FCC was preparing a response to the Army's query with respect to its domestic radio monitoring had no bearing on ASA deciding, on its own, to resume radio monitoring in connection with the Republican National Convention in Miami Beach.

On August 6, 1968, without the required approval of the Army Chief of Staff, ASA ordered its fixed stations in Virginia and Florida to begin general searches of the amateur radio bands to determine if there were dissident elements which were planning to disrupt the GOP Convention. 171 It ordered the monitoring to continue through August 10. 172

ASA had no reports from its fixed stations regarding the convention, and thus cannot state with certainty that such monitoring was, in fact, carried out. 173 The incident is significant, however, because (1) it illustrates that such monitoring could be ordered, and was ordered, without the required clearance of the Department of Army; 174 and (2) it involved "general searches" -- scanning of incoming radio signals without regard for their source or subject matter.

In any case, while the Miami Beach convention had occasioned relatively little disruption, Army intelligence predicted that the forthcoming Democratic National Convention, scheduled to begin on August 22 in Chicago, would occasion violent confrontations between protestors and civilian authorities.

Prompted by fears that Army troops might have to be committed, and that the Army Security Agency might once again be deployed, representatives of the Army Assistant Chief of Staff for Intelligence again pressed the FCC for a response to the earlier inquiry regarding domestic radio monitoring. At a meeting held on August 15, 1968, the FCC gave its reply: such monitoring would be illegal under section 605 of the Communications Act of 1934. 175 FCC representatives told the Army

that the matter had been brought up with the Attorney General and that he had disapproved the Army request. 176 The FCC agreed, however, to submit a written reply to the Army stating that it could not "provide a positive answer" to the Army's proposal, rather than a letter which branded the proposal as "illegal." 177

The FCC's formal reply to the Army was sent on August 19, 1968. 178 By this time however, the pressures on the Department of Army to authorize deployments of ASA in Chicago had grown. On August 12, 1968, the ASA had itself requested Army approval to send radio monitoring teams to Chicago. 179 This was followed by a request from the Army Commander at Fort Sheridan, on the outskirts of Chicago, asking for ASA support. 180 He anticipated his own troops being called upon.

Thus, on August 21, in obvious disregard of the FCC's opinion that civil disturbance radio monitoring by the Army would be illegal, the Army ordered ASA to send monitoring teams to Chicago from Fort Hood, Texas, and Fort Bragg, North Carolina. 181 These teams were positioned at three locations in the downtown area and, while no Army troops were actually called out during the demonstrations, these teams did monitor citizens, police, and commercial bands from August 22 to August 31. 182

(5) The Huey Newton Trial. -- Less than two weeks after the close of the Democratic Convention in Chicago, Black Panther leader Huey Newton was brought to trial in Alameda, California. Again ASA, without the approval of the Army Chief of Staff, ordered as required by the message of March 31, 1968 its fixed stations near Warrenton, Virginia, and Monterrey, California, to monitor domestic radio communications to determine if there were any groups around the country which might be planning demonstrations in support of Newton. 183 The order, in this case, called for a "general search" of all amateur radio bands from September 6 through September 10, 1968. 184 This meant that ASA elements were given free reign to listen in on radio transmissions across the country, without regard to point of origin or subject matter.

ASA could produce no record which showed what monitoring, if any, actually took place. 185 The order to monitor is, nevertheless, significant since it was given without authorization, and in a situation where the use of Army troops was not contemplated.

(6) Cafe Zipper. -- There is no record of any further domestic radio monitoring by ASA until March 1969. On March 17, 1969, during a civil disturbance exercise at Fort Hood, Texas, ASA units, who were monitoring radio transmissions of the participating forces to determine their vulnerability, intercepted transmissions of unidentified persons using citizens band radios who appeared to be monitoring the conduct of the exercise. ASA requested Army permission to continue monitoring the net -- designated Cafe Zipper Net 2 -- and permission was given. 186

It was subsequently decided by ASA that the net was a nationwide net probably comprised of members of the Citizens Band Radio Operators of America. In a message from the Department of Army to the Fort Hood commander, the net was cryptically described as being "devoted to the illegal use of citizens band for hobby purposes. It is not believed to represent a threat to the United States Army." This conclusion was reached on April 21, 1969, over a month after the monitoring had begun.

The significance of this incident is that the monitoring was not undertaken for any authorized purpose. Although there was never any indication that a civil disturbance would develop, requiring the use of Army troops, the monitoring continued for more than a month.

#### *D. The Termination of Domestic Radio Intercepts*

While there were no further domestic intercepts actually undertaken after "CAFE ZIPPER," the Army continued to debate ASA's support role in civil disturbance operations. The Army's civil disturbance office proposed in the fall of 1969 that the ASA role be formalized in regulation. 188 This prompted the Office of the Army Assistant Chief of Staff for Intelligence (ACSI) (which had been told a year earlier that such activity was illegal) to ask for another legal opinion from the Army Judge Advocate General. 189 On October 2, 1969, Army JAG responded that such activity was probably illegal. 190 Relying on this opinion, the ACSI "nonconcurred" in the proposal of the civil disturbance office. 191

Shortly thereafter, Army ACSI sent a memorandum to the Army General Counsel recommending that the Army seek legislative authority to engage in future radio monitoring. 192 In the same memorandum, however, it was stated that previous ASA operations had been of little value:

No compromise of any covert operation has occurred to date. However, it should be pointed out that the intelligence obtained was of marginal value. Existing laws prohibit monitoring civilian radio transmissions and for the USASA to continue covert monitoring could prove harmful to the United States Army if compromised. Continued use of the USASA in this effort does not appear justified considering the risks involved. 193

In spite of the Army ACSI's apparent decision in October 1969 that further domestic use of ASA was not justified, he took no formal action to put an end to such use. ASA itself sought guidance from ACSI regarding its domestic support role on two occasions in 1970, 194 but ACSI responses were ambiguous. On December 1, 1970, for example, the Army told ASA that while it would no longer have a formal support role in civil disturbances, "in the event intelligence estimates of civil disturbance threats change to indicate a requirement for ASA support in civil disturbances operations, ASA will again be asked to provide support." 195

In fact, as was the case with the Army's civil disturbance collection program, ASA domestic intercepts were not formally terminated until they were exposed in the press. On December 1, 1970, NBC News reported that ASA units had been used to monitor civilian radio broadcasts during the 1968 Democratic National Convention. 196 This led the Army, on December 10, 1970, to rescind the March 31, 1968 message which had authorized the use of ASA resources in support of civil disturbance operations. 197

No subsequent authorization has been issued.

#### **IV. INVESTIGATING CIVILIAN GROUPS CONSIDERED "THREATS" TO THE MILITARY: A CONTINUING PROGRAM**

There is no express statutory authority for the military to investigate persons or groups whom the military considers as "threats." The services cite only the general authority of the National Security Act of 1947 which authorizes each service secretary to undertake those functions "necessary or appropriate for the training, operations, administration, logistical support and maintenance, welfare, preparedness, and effectiveness of (their particular service)." 198

Each of the military departments has traditionally maintained that the services required such authority in order to defend themselves. 199 Their argument has been that within the United States the FBI does not provide sufficient information for this purpose, and, outside the United States, there is no law enforcement agency upon which they can rely at all for such information.

The restrictions, imposed by the DOD in 1971 upon the collection of information on "unaffiliated" persons and groups, expressly excepted the collection of information on "threats" from its general prohibition. 201 But the 1971 restrictions do not define what a "threat" is, apart from listing examples such as "subversion of the loyalty, discipline, or morale, of Department of Defense military or civilian personnel," which lend themselves to broad interpretations. 202

##### *A. Investigations of Civilian Groups Within the United States*

(1) Investigations Undertaken Prior to the 1971 Directive. -- In the late 1960s and early 1970s military investigators from each of the three services conducted investigations and maintained files on civilian groups whose activities were directed against the military. The Army reported to Congress that it "maintained files" on eleven such civilian groups during 1969 and 1970. 203 Furthermore fourteen military groups (designated as "Resistance in the Army" -- RITA) were subjects of Army investigations. 204

Of particular interest to all the services were offpost coffeehouses, operated by these civilian groups, and "underground" newspapers, published by the same groups. Typically, both were designed to attract military personnel. The primary means of obtaining information on both the coffeehouses and the underground newspapers was to penetrate them with either a military intelligence agent or a military informant, who would report back on the group's activities. These reports were typically shared with the FBI and local law enforcement agencies.

Again, Army representatives told Congress that the Army had conducted "investigations" of 17 such coffeehouses, 205 and "maintained files" on 53 "underground" newspapers 206 during 1969 and 1970; but that as of March 1970, the number of coffeehouses, as well as the number of "underground" newspapers, was "drastically declining." 207

(2) Investigations of Civilian Groups After the 1971 Directive. -- As mentioned above, in March 1971, an internal directive was issued which generally limited the military's collection of information about private groups and individuals. It allowed for the collection of information on "threats," however, and it permitted the military to penetrate covertly civilian groups so long as such penetrations were approved by a special DOD-level board-the Defense Investigative Review Council (DIRC). 208 The directive set no standards, however, upon which the DIRC would base its decision. 209

Since the date of the directive, nine requests have been made by the military services (none of which were made by the Army) for DIRC approval of covert penetrations directed against civilian groups. Summaries of these requests follow. 210

(a) Antiwar Group in San Diego, California. -- On March 25, 1971, Navy Secretary John Warner requested DIRC approval for three ongoing penetrations of civilian groups being carried out by agents of the Naval Investigative Service (NIS). On May 24, 1971, he amended the request by asking for permission to continue only one of the three.

This entailed the penetration of an antiwar organization in San Diego whose membership was predominantly comprised of military personnel. NIS reported that it had several sources within the group, including one in the "inner circle" of the group's headquarters. DIRC was also informed that the FBI had declined to conduct its own penetration, but had been informed of the NIS operation and its plans to continue.

DIRC approved the request on May 24, 1971. In November 1971, it revalidated the penetration at the request of the Navy.

On June 30, 1972, the Navy terminated the operation on its own initiative. It reported to DIRC that it had succeeded in identifying 189 military personnel who were members or had some contact with the group (NIS had obtained a copy of the membership list), and had obtained extensive information on its financial and political connections. NIS also indicated that it had filed a total of twenty-one reports on the group, all of which had been distributed to the, FBI, DIA, the Air Force, and the Army. The operation terminated because the group had disbanded.

(b) Peace Group to Hanoi. -- The Air Force had recruited an antiwar activist who was scheduled to go to Hanoi as part of a peace group to report on the conditions of prisoners-of-war in North Vietnam. DIRC approval was sought since the operation involved the penetration of a civilian group.

DIRC gave its approval on September 24, 1971, but the Air Force source did not make the contemplated trip to North Vietnam, and no information was obtained.

(c) Underground Newspaper Near Travis Air Force Base. -- On October 1, 1971, Air Force Secretary John McLucas requested DIRC permission to penetrate the staff of an underground newspaper which was published near Travis Air Force Base in California. He stated that the newspaper had encouraged insubordination by Air Force personnel, and that a penetration was necessary to determine whether there was any conscious effort to disrupt Air Force activities or damage Air Force property. DIRC approved the request on October 6, 1971.

The operation lasted until October 1972. DIRC was informed that the Air Force Office of Special Investigations had not succeeded in planting a source on the newspaper staff, but that it had identified fifty Air Force personnel and fifteen civilians who were active in the newspaper's operations. No evidence of any conscious effort to damage Air Force property or disrupt Air Force activities was found.

(d) Peace Group in San Diego, California. -- On May 30, 1972, Navy Under Secretary Frank Sanders requested DIRC approval for the penetration of a second antiwar group in San Diego, California. Members of the group were thought to have been instrumental in protesting the deployment of certain ships to South Vietnam. DIRC was informed that both the FBI and local police had declined to place a source in the group.

DIRC approved the operation on June 5, 1972. A year later, NIS filed a progress report and requested revalidation of the operation. It cited the fact that the operation had succeeded in identifying military personnel who were members of the group, and had learned of "discussions" regarding plans to sabotage U.S. ships, 211 to encourage insubordination within the Navy, and to reveal military secrets. NIS also stated that it had received warnings of public demonstrations against the war as a result of the penetration. The DIRC revalidated the penetration. It continued until May 1974, when the group no longer focused upon military problems.

(e) Antiwar Group in Charleston, South Carolina. -- On October 20, 1972, the Navy requested DIRC approval to penetrate an antiwar group in Charleston, South Carolina. It cited FBI reports which showed the group planned to protest the departure of certain ships to South Vietnam, and was contemplating acts of sabotage against a Navy vessel. NIS reported that the FBI already had a source within the group, but that the source did not provide sufficient information regarding military personnel and military targets. DIRC approved the penetration.

The operation lasted until May 1973, when it was determined that the group no longer represented a significant threat to the Navy. NIS reported that as a result of the penetration it had learned of one incident in which Navy personnel had attempted to damage the boilers on a U.S. vessel.

(f) White Racist Group in Charleston, South Carolina. -- On April 23, 1973, the Air Force Office of Special Investigations requested DIRC approval of a penetration of a white racist group in Charleston, South Carolina. Members of this group had apparently been responsible for encouraging racial unrest at Charleston Air Force Base. Furthermore, the Air Force had information that the group had contacted an Air Force sergeant for the purpose of obtaining ammunition from the airbase. DIRC approved the penetration.

This penetration never took place because the military source was transferred before his application for membership in the group was approved.

(g) Dissident Group in Long Beach, California. -- On March 15, 1973, the Navy requested DIRC approval for the penetration of a dissident group with antimilitary objectives in Long Beach, California. DIRC was informed that the FBI did not have a source within this group.

DIRC disapproved the request on the grounds that the group did not represent "a direct and palpable threat" to the Navy. It suggested, however, that the Navy might provide a source which could be placed under FBI control.

In fact, a Navy agent was "loaned" to the FBI in September 1973, with DIRC approval. It lasted until July 1974, when the FBI decided to terminate.

(h) Servicemen's Counseling Center in San Diego. -- On June 7, 1974, the Navy requested DIRC approval for a penetration of a servicemen's counseling center in San Diego, California. It stated that it had reason to believe that the center was under communist influence and encouraged insubordination among Navy personnel.

DIRC took no action on the request, and it was formally withdrawn in August 1974.

(i) Antimilitary Group in Charleston, South Carolina. -- On March 14, 1975, the Navy requested DIRC approval to penetrate a group that was offering advice to dissident sailors in Charleston, S.C. It cited evidence it had obtained from the FBI that the group intended to encourage a sit-down strike aboard a Navy vessel. NIS indicated that it already had someone within the group that would cooperate.

DIRC approved this penetration to last for a period of 90 days only.

On May 1, 1975, the Navy reported that the penetration had been terminated. NIS had learned of plans for a sit-down strike but it never materialized because the ringleader had been administratively discharged for drug-related reasons. Apparently, the Navy informant had provided information which formed the basis for the discharge.

#### *B. Investigations of Civilian Groups Overseas*

Overseas, in the absence of the FBI, the military services have in the past been more active in investigating civilian groups which they consider "threats." In many cases, these groups have, been composed entirely or in part of American citizens living abroad.

Until August 1975, there were no departmental restrictions on investigations of U.S. citizens living abroad. 212 DOD Directive 5200.27, which restricted such investigations in the United States, did not apply overseas. Hence, the only restrictions which did apply were the laws of the host country and the Status of Forces treaties which normally govern the relationship between American occupying forces and the host country. As a practical matter authority to conduct operations against civilian groups has rested largely with local military commanders. 213

(1) Army Operations in West Germany and West Berlin. -- The Army has had troops stationed in West Germany and West Berlin since the conclusion of World War II. As part of the occupation agreements negotiated between the United States and West Germany, the German Government agreed to provide security for American forces stationed in West Germany. 214 In satisfaction of this obligation, the West German government has allowed the U.S. Army to conduct counterintelligence operations within its boundaries. While such operations were undertaken, for the most part, to detect the activities of hostile intelligence agents or to recruit sources for foreign intelligence purposes, they were occasionally undertaken to identify persons or groups which sought to undermine the discipline or morale of U.S. troops.

Until 1968, the decision to conduct such operations rested largely with the commanders of intelligence units scattered throughout the country. 215 They were guided for the most part by operational necessity. While no figures are available for this period, it is clear that American citizens were occasionally targeted by these operations, and that relationships between foreign groups and individuals, and American citizens were routinely scrutinized. 216

A variety of intelligence-gathering techniques were employed: wiretaps, mail opening, covert penetrations, photography, and personal surveillances. All were performed apparently with the knowledge of the West German authorities, and, in the case of mail and telephone intercepts, with their cooperation. 217

In 1968, the Federal Republic of Germany (FRG) brought the most sensitive surveillance activities-mail opening and wiretaps under its exclusive control. It created a parliamentary commission to pass upon all requests for both mail and telephone intercepts, and required that all such intercepts be performed by FRG authorities. 218 The requirements of this law were incorporated in a supplemental agreement to the Status of Forces Agreement, referred to above.

Thus, the Army has been required to request mail opening and wire surveillance from the West German commission in conformity with the requirements of the new law since 1968. On one occasion, in fact, a wiretap was requested on a foreign national who was working closely with an American political group in Heidelberg. 219 It resulted in the Army's obtaining considerable information regarding the personal and political activities of American citizens who were living and traveling in the Heidelberg area. 220

Insofar as other types of surveillance are concerned -- penetrations, photographic or covert observation -- U.S. Army intelligence officers continued to have approval authority.

In fact, Army intelligence has conducted surveillance operations against civilian groups, comprised in part of American citizens, in West Germany since 1968. In Heidelberg, for instance, the Army in 1973 attempted to penetrate the staff of an "underground" newspaper, Fight Back, which was directed at military personnel in the area. 221 It also penetrated a civilian legal counseling group in Heidelberg which was offering free counsel to servicemen. 222

In Mainz, another West German city, the principal target of Army operations in 1973 was a meeting house jointly sponsored by the U.S. National Council of Churches, the World Council of Churches, and the German Evangelische Kirche, which attracted servicemen allegedly engaged in "dissident" activities within the military. 223 The Army photographed persons going into the meeting house, wrote down license plate numbers, and sent their own agents inside to report, back on the group's activities. 224

Similar operations were carried out by the Army in West Berlin where the laws of the Federal Republic of Germany did not apply. Hence, the 1968 law, which placed strict restrictions on the Army's ability to employ unilaterally mail openings and wiretaps, had no effect there.

In West Berlin, under a special tripartite agreement with the British and the French called the Allied Kommandatura, the Army commander is made the governing authority for the American sector of West Berlin. 225 The Kommandatura contains no restrictions on intelligence gathering of any kind: On the contrary, it requires each of the three governments to provide information to the others regarding security in their respective sectors of the City. 226 An active intelligence operation thus appears to have been contemplated.

In fact, such an operation has been carried out by the Army since World War II, not simply for its own purposes, but for the other Allied commands as well. The Army has engaged in wiretapping and mail openings as part of this program, as well as a variety of other surveillance techniques. 227 Further, in West Berlin, as in other cities in West Germany, the Army has occasionally turned this intelligence apparatus against civilian groups (composed largely of American citizens) who were considered by the Army to be "threats." 228

In August 1972, the Army focused its attention on a group called "Americans in Berlin for McGovern," an organization which reportedly had petitioned the National Democratic Party in the United States for official affiliation. 229 After the election, the group changed its name to Concerned Americans in Berlin, and attempted to interest military men in joining. Members of the group were connected to an "underground" newspaper called Forward, which made direct appeals for support to military personnel in West Berlin.

As part of its surveillance of the group's activities, the Army opened mail addressed to the newspaper, and penetrated its staff. 230 It also sent informants or agents into Concerned Americans in Berlin to report on its activities. 231 Surveillance of the group continued until 1974.

(2) Navy Operations in Japan. 232 -- Beginning in 1973, the Naval Investigative Service (NIS) conducted special counterintelligence operations (covert penetrations) in three Japanese cities -- Okinawa, Iwakuni, and Yokosuka -- against targets similar to those investigated by the Army in West Germany. In each case, the targets were private meeting places operated by a coalition of political groups, comprised predominantly of Americans living in Japan. The groups attempted to attract military personnel -- often they provided legal counseling and representation; and in some cases they published newspapers designed to appeal to the military.

Mail opening and wiretaps were not used by the Navy against these groups, as the Army had done in West Germany. The Navy's method of operation in Japan was confined to using its own personnel as informants. NIS records show that these informants made frequent -- in some cases, almost daily -- reports to their case officers. Usually, the reports described the activities of the members of each group, and what had taken place in discussions and programs at the meeting places. Any military personnel who frequented the meeting places were reported, as were any "outsiders" who came as guests. NIS frequently ran FBI and DOD checks on such "outsiders," and occasionally requested copies of passport and visa applications from U.S. and foreign authorities.

Navy informants also obtained copies of letters and envelopes found at the meeting houses, and took copies of subscription lists, financial records, and "contact" lists maintained by the groups under surveillance. In most cases, they also provided copies of photographs taken of group members to NIS.

Information regarding the participation of Navy personnel was reported by NIS to local Navy commanders, and on at least two occasions, Navy personnel who became active participants in the groups were transferred to other locations.

None of the three penetrations were coordinated with the FBI, CIA, or DOD counterintelligence agencies as they would have been if the agents of a hostile intelligence service had been involved. Nonetheless, NIS did disseminate reports on the three groups to all of the agencies mentioned.

In none of the three cases did NIS have information prior to conducting the penetration that the groups were, in fact, engaged in, or planning to engage in, illegal activities. The penetrations were undertaken to determine if the groups posed any threat to the Navy, and, if so, to enable the Navy to prepare for it.

All of these operations were instituted by the Director of the Naval Investigative Service. Since they involved overseas operations, they did not, at that time, require the approval of the Defense Investigative Review Council.

## **V. ASSISTING LAW ENFORCEMENT AGENCIES IN SURVEILLANCE OF PRIVATE CITIZENS AND ORGANIZATIONS**

Military intelligence is rather frequently called upon, or undertakes on its own initiative, to provide information or support to law enforcement agencies at all levels of government, as well as the Secret Service.

### *A. Legal Authority*

The extent to which the military can legally be used to "assist" law enforcement agencies in the performance of their duties is not clear. On the one hand, the *Posse Comitatus Act* of 1878 prohibits the military from "executing the law ... except in cases and under circumstances expressly authorized by the Constitution or act of Congress." 233

One such statutory exception, which Congress recognized in its debates on the 1878 Act, 234 was the power of the President to use the armed forces to enforce the laws, in times of insurrection. 235 Such use, however, was conditioned upon the President's issuing a formal proclamation calling for the insurgents to disperse. 236

In the years following the Civil War, federal marshals had relied on Army troops to help them enforce federal election laws in the South. 237 By enacting the *Posse Comitatus Act* in 1878, Congress sought to end the practice, or at least ensure, that federal troops could not be used without a formal proclamation from the President. 238 This suggests, therefore, that the *Posse Comitatus Act* was intended to limit the ability of law enforcement agencies, in the absence of a presidential proclamation, to task federal troops for support.

Insofar as military intelligence is concerned, it seems clear that the Act would prevent its being tasked by civilian law enforcement to perform criminal investigations of civilians. The extent to which the military intelligence can otherwise be required to support such activity is not so clear, but the *Posse Comitatus Act* undoubtedly serves to restrain such cooperation.

### *B. Nature of Assistance*

(1) Collection and Exchange of Information. -- In Chicago, Army intelligence in the late 1960s received a copy of virtually all police intelligence reports. 239 The military, in turn, provided the Chicago police with their own reports, and in some cases, with military personnel records. 240 In addition, Army intelligence frequently responded to police and Secret Service requests for information. 241

When the DOD restrictions came into effect in 1971 calling for the destruction of all files on "unaffiliated" persons and organizations, several Army intelligence units turned over their intelligence files on dissident individuals and organizations to local police authorities rather than having them destroyed: the Chicago Police Department received the files of the 113th Military Intelligence Group; 242 the Pennsylvania State Police obtained the files on "personalities" of the 109th Military Group; 243 the Cuyahoga County Sheriff's office received the 109th's files on dissident organizations in the Cleveland, Ohio, area; 244 and the Washington, D.C. Police Department reviewed and retained certain files of the 116th Military Intelligence Group. 245

In 1972, an Air Force counterintelligence unit in San Diego began maintaining files on dissident individuals and groups in the San Diego area. This activity was in anticipation of receiving tasking from the Secret Service to collect such information in preparation for the 1972 Republican National Convention, which was scheduled for San Diego at that time. 246

(2) Transfer of Money and Equipment. -- In 1968 after the riots following the assassination of Martin Luther King Jr., a meeting was held at the White House. At this meeting Mayor Walter Washington, of Washington, D.C., expressed concern that the Intelligence Division of the Metropolitan Police Department did not have sufficient resources to predict future riots and disorders.

Shortly thereafter, at the order of the White House, the Army arranged for a transfer of \$150,000 from its intelligence funds to the D.C. Police Department to be used for intelligence purposes. 248 In the summer of 1968, the Army also agreed to furnish the Justice Department with tear gas grenades for distribution to local police departments, but the plan was never implemented. 249

(3) Participation in Law Enforcement Operations. -- On January 14, 1969, shortly before the inauguration of President Nixon, two Army intelligence agents participated in an FBI search of the evacuated premises of an underground newspaper in Washington, D.C. 250 The FBI obtained a key from the landlord to gain entry, and subsequently removed documents which they found on the premises. These were turned over to the Army agents. 251

In Chicago, two Army intelligence agents were invited to "observe" a 1970 police raid on a meeting place of the Chicago 7 defense team. 252 Another Army agent in Chicago stated that he had been invited to participate in several raids by the Chicago police, including the raid on the apartment of Black Panther leader Fred Hampton in November 1969. 253 He denied having participated in any of the raids, however.

During the Democratic Convention of 1968, Army intelligence agents in Chicago were also detailed to support the U.S. Secret Service. One of the agents who was involved was assigned at various times to monitor personally the activities and whereabouts of Ralph Abernathy, Lester Maddox, and Jesse Jackson. 254

In 1974, at the request of the FBI, Army investigators were used to take down the license numbers of cars in a parking lot at West Point, New York. 255 The lot was being used to park the cars of demonstrators in town for a protest demonstration.

Also in 1974, a special agent of the Defense Investigative Service was asked to assist with an investigation of the U.S. Customs Bureau by interviewing a friend suspected of having knowledge of the case. 256

(4) Participation in Interagency Intelligence Projects. -- Representatives of the military were among those involved in drafting the so-called Huston plan in the summer of 1970. 257 This plan was developed for the President and proposed numerous alternatives for the expansion of domestic intelligence capabilities. The military representatives, however, succeeded in keeping the military out of further domestic responsibilities. As White House aide Huston put it in his recommendations to the President: "The intelligence community is agreed that the risks of lifting these restraints (on military intelligence) are greater than the value of any possible intelligence which could be acquired by doing so." 258

In December 1970, however, six months after the Huston Plan had been rescinded, the Department of Defense agreed to participate in an interagency committee on domestic intelligence. Designated the Intelligence Evaluation Committee, the group operated under the aegis of the Justice Department. 259 Its objectives were to prepare analyses and reports on domestic unrest. The DOD furnished one representative to the Committee which lasted from January 1971 until June 1973. 260 It also furnished a Navy ensign who was assigned to the IEC working staff. 261

In 1972, the Under Secretary of the Army approved a Justice Department request to furnish three Army intelligence analysts to the Justice Department's Information Evaluation Center in Miami Beach. 262 The purpose of these agents was to analyze intelligence coming into a Justice Department communications center regarding possible demonstrations during the Democratic and Republican National Conventions of 1972. These agents were on duty from July 15 to July 25, 1972; and from August 15 to August 25, 1972. 263

## **VI. CURRENT DEPARTMENTAL RESTRAINTS UPON SURVEILLANCE OF CIVILIANS**

As discussed above, after the Army's civil disturbance collection program had been exposed in the press, the Department of Defense in March 1971 issued a new directive 264 which, in general:

-- forbade the military from collecting and maintaining information on "unaffiliated" persons and organizations, except for that "essential" to the military mission;

-- required that all information being held in violation of the directive be destroyed;

-- permitted the military to continue investigating civilian groups which it considered as "threats";

-- permitted the military to conduct both covert and overt surveillance of civilian political activities if permitted by high level DOD officials;

-- did not prevent military intelligence from continuing to supply assistance to civilian law enforcement agencies.

The discussion now turns to a more detailed account of what the directive requires and how it has worked. We begin by noting the impact the directive has had on intelligence activities undertaken for the purposes identified in Parts II-V above. The report then discusses the remaining provisions of the directive as restraints upon military surveillance in the future.

One must keep in mind throughout, however, that it is an administrative directive being considered. No matter how effective it may have been in the past, the directive can be rescinded or changed at the direction of the Secretary of Defense.

#### *A. Curbing Past Abuses*

Although the new directive places relatively strict restraints on the collection and retention of information regarding "unaffiliated" persons and organizations, it leaves military intelligence free to engage in collection activities for each of the purposes described in parts II-V.

(1) Preparing for Civil Disturbances. -- The directive states that the Attorney General of the United States is the chief civilian officer for purposes of coordinating activities relating to civil disturbances. Furthermore, it gives the Secretary of Defense or his designee -- in this case, the Secretary of the Army -- the authority to order that information be acquired to meet the Department's "operational requirements," if "there is a distinct threat of a civil disturbance exceeding the law enforcement capabilities of state and local authorities." 165

The directive does not state from whom the Department is authorized to obtain the information relating to its "operational requirements," or whether it may use its own personnel to collect such information. Moreover, by reciting that the Attorney General is the chief official responsible for coordinating civil disturbance operations, it implies that if the Attorney General were to task the DOD for information regarding civil disturbances, the Department would have no choice but to comply. This is, of course, precisely what took place in 1967.

Thus, while the directive requires that any civil disturbance collection effort using military operatives or otherwise be "turned on" at a high level of the Department, it does not forbid the military from collecting information for this purpose.

As a matter of fact, the Secretary of the Army has exercised his authority under the directive by designating a small element at the Department of Army level -- the Division of Military Support -- to maintain contact with the Justice Department and acquire information from it regarding "distinct threats of civil disturbances." None of this information is currently disseminated within DOD but, presumably, it would be in the event Army troops were deployed.

It would seem that while the directive appears to authorize the collection of information on potential civil disturbances on a case-by-case basis, in fact the Army has decided to authorize continuous, albeit limited, collection.

The Committee's investigation also revealed that this portion of the directive has been violated. As late as 1975, the National Security Agency, a foreign intelligence collection agency of the Department of Defense, was maintaining information on potential civil disturbances on the grounds that it was helpful to NSA recruiters who may be entering such "troublespots." 267 DOD put an end to the practice.

(2) Monitoring Domestic Radio Transmissions. -- The directive contains no direct reference to radio monitoring. Rather, it has a general prohibition against the use of electronic surveillance "except as authorized by law."

It is noted, in this regard, that the monitoring and publication of radio transmissions are outlawed by section 605 of the Communications Act of 1934, but that did not prevent the Army Security Agency from engaging in such intercepts from 1967 to 1970. 268 The Army, in fact, continued such monitoring even after being told by the FCC that it was illegal.

(3) Investigating "Threats" to the Military. -- The directive expressly provides that "information may be acquired about activities threatening defense military and civilian personnel and defense activities and installations ...." One example of a "threatening" activity cited in the directive is the subversion of loyalty, discipline or morale of Department of Defense military or civilian personnel by actively encouraging violation of law, disobedience of lawful orders or regulations, or disruption of military activities."

This exception for "threats" is, on its face, ambiguous. The phrase "subversion of the loyalty, discipline, or morale of DOD personnel," is not defined, nor is the phrase "encouraging ... disobedience ... or disruption of military activities." Conceivably, these exceptions could encompass any form of protest activity against the established order in the civilian community.

The Committee has noted in the course of its investigation that there are differing interpretations of what constitutes a "threat" among the military services. For example, the Navy considered the fact that its personnel were members of a "dissident" civilian group sufficient grounds to treat the group as a "threat," and thereby justify retaining information about the group. The Army and Air Force, however, did not consider the membership of their personnel in such a group sufficient grounds to collect

information on the group. They would retain information regarding such a group only if it could otherwise be shown to be a "demonstrable threat" to their respective services.

These differences in interpretation are also reflected in the services' requests to the DIRC for approval of covert penetrations. In the one case where the DIRC turned down such a request, it did so on the basis that the civilian group against which a penetration was proposed, although presumably antimilitary, did not represent a "direct and palpable" threat. The directive, of course, makes no such distinction.

We have also seen in practice that what the military views as "threats" are not always perceived as such by the FBI which, when approached by the military, declines to initiate an investigation of the civilian group in question.

(4) Assisting Law Enforcement Agencies. -- The directive states that DOD will place "maximum reliance" upon domestic law enforcement agencies to satisfy its informational needs regarding civilians. It also provides that the directive shall not be construed to prevent the Department from reporting threats to life and property, or violations of the law, to local law enforcement.

It makes no reference, however, to DOD's being tasked by law enforcement or other Federal agencies to perform intelligence duties in the civilian community. In practice, DOD has taken the position that all operations within the civilian community must be carried out in accordance with the directive, whether they are done at the request of other agencies or not.

Nevertheless there is a discernible tendency for DOD to agree when asked by other agencies to undertake intelligence activities which it would otherwise forbid to itself. For example, DOD participation in the Intelligence Evaluation Committee and its support to the Justice Department at the 1972 political conventions are cases where DOD undertook domestic intelligence activities at the request of other agencies, which it presumably would not have undertaken on its own initiative.

In short, the activities of the Department of Defense which have led to abuses in the past are still within its jurisdiction, although the use of military personnel to collect such information has been restricted. The nature of these restrictions is the subject of the next section.

#### *B. Preventing Surveillance in the Future*

Although DOD Directive 5200.27 does seek to prohibit the "collecting, reporting, processing, or storing information on individuals or organizations not affiliated with the Department of Defense," it allows for exceptions and its terms are so ambiguous that future surveillance activities in the civilian community might be undertaken consistent with the directive.

(1) Scope. -- Until August 20, 1975, DOD Directive 5200.27 applied only to military personnel located in the 50 states, and the territories and possessions of the United States. 271 Furthermore, it did not apply to the acquisition of "foreign intelligence information," even if such information involved unaffiliated persons and organizations.

As noted previously, the Army undertook operations against civilian groups in West Germany and West Berlin, and the Navy undertook operations against similar groups in Japan, without seeking exceptions to the DOD directive.

There has also been confusion over the meaning of the exclusion of foreign intelligence information. Until August 1973, two years after the directive had been in effect, the National Security Agency, a foreign intelligence collection agency within the Department of Defense, considered itself to be exempted by this clause from the provisions of the directive. 272

Moreover, NSA was found to have been violating the restrictions of the directive. Its Office of Security was told in 1973 to destroy 40 cubic feet of files on "unaffiliated" individuals and organizations being held in violation of the directive. 273

(2) Permitted Exceptions. -- In addition to designating what information on unaffiliated individuals and groups maybe collected and retained, the directive also provides how such information shall be collected. It begins by stating as a matter of "policy," that "maximum reliance" will be placed upon local law enforcement authorities. It, nevertheless, allows military personnel to be used to collect "essential" information if authorized by various high-level persons within the military.

(a) Covert Surveillance. -- The directive provides that "there shall be no covert or otherwise deceptive surveillance or penetration of civilian organizations unless specifically authorized by the Secretary of Defense or his designee." In this case, the "designee" is the Chairman of the Defense Investigative Review Council, the special board, referred to earlier, established to monitor the implementation of the directive. 274

It should be noted, however, that the directive provides no criteria to guide the judgment of those officials who must decide whether covert surveillance should be employed. Assistant Secretary of Defense Robert F. Froehlke, in an exchange with Senator Edward M. Kennedy during the 1971 hearings, conceded that the directive may be deficient in this respect:

KENNEDY. And you are not maintaining any information then on any individual at the present time who is involved in protests?

FROEHLKE. Only under the policy that we have now. It does allow it under certain circumstances, but in all cases a civilian official would first have to give his approval. . . .

KENNEDY. And what criteria does he use?

FROEHLKE. Judgment, his judgment.

KENNEDY. Completely a subjective determination?

FROEHLKE. As of this moment, yes. . . .

KENNEDY. Don't you think criteria ought to be set?

FROEHLKE. Yes. Short of having criteria, you are going to be arbitrary. 275

As noted above, this authority has been exercised nine times since 1971 by the Chairman of the DIRC, all for the purpose of conducting penetrations of civilian groups considered "threats." The Committee's investigation revealed only one minor "deceptive surveillance" which appears not to have been authorized by the DIRC in accordance with the directive. This occurred at Pawnee, Oklahoma, near Fort Sill, where on two occasions in the spring of 1973 the Provost Marshal of Fort Sill ordered Army personnel to conduct reconnaissance flights to determine if members of the American Indian Movement were marching on the Army post, or were building fortifications near Fort Sill. 277

(b) Overt Surveillance. -- The directive also provides that "no DOD personnel will be assigned to attend public or private meetings, demonstrations, or other similar activities for the purpose of acquiring information the collection of which is authorized by this Directive without specific prior approval by the Secretary of Defense or his designee." The designees in this case are the Secretaries and Under Secretaries of each military department. Local commanders may also authorize such surveillance on their own initiative to collect information on "direct and immediate threats," but this must subsequently be reported to the Secretary of Defense or his designees.

Again, the Committee investigation revealed only one probable violation of this provision. Army investigators attended a protest rally in West Point, New York, in May, 1974, without the required authorization of the Secretary or Under Secretary of the Army.

(c) Electronic Surveillance. -- As mentioned previously, the directive provides only that the department will not conduct electronic surveillance of any unaffiliated persons or organization "except as authorized by law." This would seem to mean that insofar as nonconsensual wiretaps and eavesdrops are concerned, DOD must obtain the approval of the Attorney General in accordance with section 2516 of title 18, United States Code. Consensual eavesdrops (one party consents) must also have the approval of the Attorney General; 179 consensual wiretaps, however, may be approved within the Department of Defense, but only for the investigation of crimes. 280

It should also be noted that since electronic surveillance would also be covert or deceptive, presumably its use would also require the approval of the Secretary of Defense or the Chairman of the Defense Investigative Review Council.

The Committee found no evidence that DOD had employed electronic surveillance against any unaffiliated person or organization in the United States since 1971.

(d) Retention of Files. -- The directive prohibits the "storage" of information which violates its provisions. It further provides that any information gathered under its provisions shall be destroyed within 90 days, "unless its retention is specifically required by law, or unless its retention is specifically authorized under criteria established by the Secretary of Defense or his designee." The designee in this case is the Chairman of the Defense Investigative Review Council.

The Chairman of the DIRC did exercise this authority soon after the directive was issued to permit the military departments to maintain "dead storage" files, so long as procedures were employed to screen any such files prior to disseminating information from them. 281 This decision was made in order that the military departments would not have to screen literally millions of files in "dead storage." It did, nonetheless, result in a technical violation of the directive since much of this information was not retainable.

A second violation of these provisions was the Army's retention of microfilm files in a counterintelligence analysis unit in Washington, D.C. Secretary of the Army Howard H. Callaway announced in January, 1975, that the microfilm files contained substantial information on the political activities of persons and organizations unaffiliated with the Department of Defense and should have been destroyed.

Subsequent investigation by DOD disclosed that the microfilm contained 160,000 documents, 24,000 of which were added since March 1, 1971, the date of the departmental directive. Of the 136,000 documents dated prior to the directive, approximately 6,900 were found to be held in violation of the directive's retention criteria. Of those 24,000 added after the date of the departmental directive, 175 were identified in a preliminarily screening as being in possible violation of the directive. Twenty-three were then determined by DOD to be in definite violation of its directive.

The Army explained that the microfilm files had, in fact, been screened in December 1970, in accordance with an Army order preceding the promulgation of the DOD directive. At that time, those who screened the files apparently considered the exception made for "threats" to the Army to be broader than the current interpretation. Due to the negligence of subsequent commanders of the Army unit which maintained the files, the annual screening required by the departmental directive did not occur.

A similar explanation was given for the accumulation of twenty-three documents, obviously in violation of the directive. After the date such directive was issued, the Army suggested that those who had placed such documents in the files had a different interpretation of the term "threat" than was currently acceptable.

The Select Committee also investigated news reports that the Army's civil disturbance files, the retention of which was not authorized by the directive, were transferred in 1972 from Fort Holabird, Maryland, to the Massachusetts Institute of Technology via a Defense Department computer network. 283 The Committee investigation, however, did not substantiate the news report.

(3) Implementation and Enforcement. -- The task of implementing and enforcing the departmental restrictions is delegated primarily to the Defense Investigative Review Council (DIRC), the Chairman of which reports directly to the Secretary of Defense on such matters. 284

The DIRC carries out its work by issuing guidance to subordinate elements of the department on how the basic directive should be implemented. It also conducts unannounced inspections of DOD installations to determine whether they are in compliance with the departmental restrictions. As of May 29, 1975, the DIRC had conducted 19 such inspections, covering a total of 82 DOD installations. 285

In general, the Committee investigation found that implementation of the departmental restrictions has been vigorous and effective. The Committee reached this judgment only after its staff inspected the files and key operational personnel of every major domestic intelligence headquarters of the Department. It found that the Department of Defense now maintains little information on private citizens and organizations in its current files. Of that which is maintained, all has been carefully segregated and is systematically screened prior to disclosure outside the particular agency which holds them.

Moreover, as indicated above, violations of the directive have been rare and relatively minor. They do not demonstrate widespread or systematic misconduct. Furthermore, exceptions permitted by the Department to the general prohibition of the directive do not appear, in the Committee's view, to represent egregious abuses of discretion on the part of authorizing officials.

(4) Prospects for the Future. -- While the current departmental directives have succeeded in limiting military surveillance activities against private citizens and organizations, these limitations remain only in the form of an internal regulation, which can be rescinded or amended by the Secretary of Defense. Although the Department assures the Committee that it has no intention of doing either, it cannot dispute the fact that such a possibility remains. Several former Army officials told the Committee staff that if America returned to a period of perceived crisis, such as the late 1960s, the new controls may be scrapped. 286 Assistant Secretary of Defense Robert F. Froehlke conceded as much in his testimony before the Ervin committee in 1971:

The Army, in such situations (civil disturbances), is really the only unit of Government that has the resources today. Whether or not it should be that way I think is very debatable, but that is now the fact, and when you get crisis situations, you need information. Responsible officials fear cities are going to bum. Where do they look? They look to that unit of Government that has the resources available, and it is always the Army. 287

Indeed, the current directives have such great flexibility that renewed surveillance activity could easily be undertaken if permitted by high level officials of the Department. Again, one might consider the following exchange between Senator Edward M. Kennedy and Assistant Secretary Froehlke at the 1971 Ervin hearings:

KENNEDY. Are we going to assume now at the end of these hearings that the Department of Army is going to continue to involve itself (in collecting information on civilians)?

FROEHLKE. The Army is out of it....

KENNEDY. Of course, they are out of it unless your council [the DIRC] decides they are back in it.

FROEHLKE. Yes, Sir .... 288

## VII. CURRENT STATUTORY RESTRICTIONS UPON MILITARY SURVEILLANCE

There is no statute which expressly prohibits the investigation of private citizens by the military.

As noted above, the *Posse Comitatus Act* (18 U.S.C. 1385) which prohibits the military from being used to "execute the law," would probably prevent the military from conducting criminal investigations of civilians, but that this would not bear upon other types of investigations. 289

Other than this, only the Privacy Act of 1974 290 appears to bear indirectly upon the matter. The Privacy Act imposes general restrictions on all agencies of the Federal Government that "maintain systems of records" insofar as the maintenance and dissemination of records on individuals are concerned.

One of these general restrictions, which applies to the Department of Defense, as an agency which "maintains a system of records," is:

Each agency that maintains a system of records shall ... maintain no record describing how any individual exercises rights guaranteed by the First Amendment unless expressly authorized by statute or by the individual about whom the record is maintained or unless pertinent to and within the scope of an authorized law enforcement activity. 291

Thus, the Act prohibits the maintenance of certain files, and not investigations per se. Obviously, if an agency is prohibited from maintaining records of investigations, it will ordinarily not be disposed to conduct them.

Nevertheless, the impact of the Privacy Act, insofar as preventing military investigations in the civilian community, is far from certain. The Act itself has received no authoritative judicial interpretation, 292 and section 552a (e) (7), cited above, is, on its face, ambiguous. It is unclear, for example, what a record "describing how any individual exercises rights guaranteed by the First Amendment" might consist of. Would attendance at a protest demonstration, for example, be an activity which could not be recorded under the Act? If the military expected to be deployed during the demonstration, would taking note of an individual's attendance be permissible under the Act? Whether an individual act represents the exercise of First Amendment rights or is conduct which justifies government investigation often depends upon the facts of the case.

Further, section 552(e) (7) allows a government agency to maintain information on an individual's exercise of First Amendment rights if (1) the agency is expressly authorized by statute to maintain such information; (2) if the maintenance of such record is authorized by the individual concerned; or (3) if such information is pertinent to and within the scope of an authorized law enforcement activity." 293

These exceptions would appear to allow the military to maintain records on private citizens and organizations for certain purposes of its own, and to permit the use of these records by other federal agencies which themselves fall within one of the excepted categories.

For example, the military is charged with enforcement of the Uniform Code of Military Justice, a law enforcement function. Thus, criminal investigators would probably be able to maintain information on the political activities of private citizens which was pertinent to their investigations. Similarly, the military conducts security clearance investigations to which subjects give their consent. Presumably, this would enable military investigators to maintain information on the political activities of such individuals.

Insofar as assisting other agencies is concerned, the reader has also seen that the military intelligence [sic] has frequently been employed by agencies with law enforcement purposes (the Justice Department and FBI), and by an agency "expressly authorized by law" to maintain such information (the Secret Service). 294 It would appear, therefore, that the military is not foreclosed by the Privacy Act from providing intelligence assistance to other agencies.

In summary, the Privacy Act falls short of providing adequate assurance that the military will not engage in surveillance of private citizens in the future. The statute is written as applying generally to all government agencies; its particular application to the military is unclear. It is also sufficiently ambiguous and contains enough exceptions to raise doubts as to its effectiveness as a future restraint on military investigative activity against private individuals and organizations.

#### Footnotes:

1 Within the United States, the Select Committee estimates that there are approximately 5000 DOD personnel involved in the conduct of security clearance, criminal, and counterintelligence investigations. For a discussion of the organization and activities of DOD foreign intelligence and investigative elements, see the Select Committee's Foreign and Military Intelligence Report, Department of Defense, pp. 355-359.

2 The term "private citizen," as used in this report, refers to persons and groups of persons, who are neither military nor civilian employees of the Department of Defense, nor employees of civilian contractors of the Department of Defense. How the constitutional rights of this special group of citizens are infringed by the intelligence activities of the Department is, however, a matter deserving of congressional attention and the Select Committee, by this omission, does not intend to discourage such an inquiry in the future.

3 The use of military personnel to monitor international communications to obtain information on civilians and civilian organizations is discussed in the Select Committee's Report on National Security Agency Surveillance Affecting Americans.

4 Recommendation of Charles Pickney, submitted August 20, 1787, printed in The Records of the Federal Convention of 1787, ed. by Max Farrand (New Haven: Yale University Press, 1966), Vol. 2, p. 340.

148 None of the documents examined by the staff identified the particular individual who approved the ASA deployment in connection with the March on the Pentagon. In a report made by the Army Inspector General to the Secretary of the Army, 1/3/72, Subject: Report of Investigation into the Failure to Provide Mr. Froehlke with Full and Accurate Information Prior to his Appearance Before the Ervin Subcommittee, the Inspector General simply refers to this decision as having been made "at a high level." (p. 25.)

This investigation of the Army Inspector General was undertaken because ASA had failed to provide Assistant Secretary of Defense Robert F. Froehlke, the DOD witness at the Ervin subcommittee hearings, with information regarding its orders, issued without Army approval, to conduct general searches of the radio spectrum in connection with the Republican National Convention of 1968 and the Huey Newton trial in September 1968. 182 Brust letter, 12/15/70.

Press allegations were made two years afterward that during this period ASA agents had bugged the campaign headquarters of Democratic Presidential candidate Eugene McCarthy. (See "Military Agents Had Secret Role at 1968 Conventions," Washington Evening Star, 12/2/70.) An ASA after-action report of the Chicago operation made no mention of the bugging, but it did mention that the most productive of the radio nets being monitored was a radio net set up between medical aid stations serving demonstrators in the Loop area. The net control station, ASA learned, had been located in a room of the Conrad Hilton Hotel, which was assigned to a member of the McCarthy campaign staff. (See Army Security Agency Report. 7/29/69, Subject: USASA Support to DA Civil Disturbance in Chicago, Illinois.) This may have been the source of the press story.

183 Message from ASA to subordinate field stations, 9/6/68, Subject: Operation Rancher III.

184 Ibid.

185 The investigation of the Army Inspector General included searches of ASA files and interviews with ASA operational personnel. The investigation did not uncover any documentary evidence, however, showing the results of the "general search" which had been ordered in connection with the Newton trial.

207 Ibid., p. 163.

208 DOD Directive 5200.27, para. V (E).

209 The deficiency in the DOD Directive is discussed in detail at pp. 828-833. It should be noted, however, that the DIRC has issued instructions to guide the individual services in submitting their requests for approval of covert penetrations. Presumably, these same standards would govern the DIRC's decision.

210 All of the following summaries are the product of staff review of DIRC files.

211 The "plans" referred to in the files apparently were never carried out.

212 On August 20, 1975, the Defense Investigative Review Council voted to extend DOD Directive 5200.27 overseas. This change has subsequently been incorporated in the directive.

In a case currently pending before the United States District Court for the District of Columbia (Berlin Democratic Club et al. v. Schlesinger et al., Civil Action No. 310-74, filed 2/29/74), the government does not argue that U.S. citizens who live or travel in foreign countries lose their constitutional rights vis-a-vis the United States Government agencies, i.e., the Army, which might be present in such countries. It does argue, however, that the Government has additional security needs abroad against which the exercise of constitutional rights must be balanced. The Government further argues that certain constitutional safeguards, e.g., the warrant requirement of the Fourth Amendment, are not applicable in foreign contexts. See Memorandum of Law in Support of Motion to Dismiss, or, in the Alternative, for Summary Judgment, filed 6/7/74, pp. 46-48, 66-76, 105-107.

## **INTELLIGENCE ACTIVITIES AND THE RIGHTS OF AMERICANS**

### **BOOK II**

#### **FINAL REPORT OF THE SELECT COMMITTEE TO STUDY GOVERNMENTAL OPERATIONS WITH RESPECT TO INTELLIGENCE ACTIVITIES UNITED STATES SENATE TOGETHER WITH ADDITIONAL, SUPPLEMENTAL, AND SEPARATE VIEWS**

APRIL 26 (legislative day, April 14), 1976

#### **THE INTERNAL REVENUE SERVICE: AN INTELLIGENCE RESOURCE AND COLLECTOR**

##### **INTRODUCTION AND SUMMARY**

The Internal Revenue Service functions as an intelligence agency in two respects. First, through its Intelligence Division, it both collects general intelligence about possible tax violators and investigates specific allegations of tax fraud to secure evidence for criminal prosecution. Second, the IRS accumulates vast amounts of information about the financial and personal affairs of American citizens from the tax returns and supporting information which Americans voluntarily submit each year. As a rich deposit of intelligence and an effective intelligence gatherer, the IRS is a powerful tool which other agencies of government, including Congress and the executive branch, have periodically sought to employ for purposes other than tax law enforcement. This report is primarily an exploration of the reasons these uses of the IRS have led to serious and illegal abuse of IRS investigative powers and to a compromise of the privacy and integrity of the tax return.

##### *1. Intelligence Collection*

The IRS Intelligence Division, with 2,800 special agents trained to gather financial data, unlimited access to tax returns, and the power to issue summonses requiring the production of financial information without probable cause to believe a crime has been committed, represents a great investigative capability. Because of this capability, Congress, the Federal Bureau of Investigation, and even the White House have sought, sometimes successfully, to direct the efforts of IRS against certain groups or individuals, many of whom would not have been investigated under normal IRS criteria. In part because of the absence of any statutes which meaningfully limit IRS authority to gather general intelligence, IRS had little basis for resisting pressure when it was applied. In any event, IRS did not always attempt to resist. In the late 1960s and early 1970s, many groups and persons were selected for investigation by the Special Service Staff essentially because of their political activism rather than because specific facts indicated tax violations were present. The evidence suggests the IRS readily acceded to the congressional and White House pressure which led to the formation of the Special Service Staff, and that the targets of the Staff's activities were, in practice, largely determined by input from the FBI for reasons unrelated to tax enforcement.

Special Service Staff is the principal instance of the use of the IRS for a fundamentally improper non-tax purpose: selective enforcement of the tax laws against dissenters. However, the use of IRS to achieve even laudable non-tax objectives has also generally resulted in serious abuse of IRS power.

The use of IRS intelligence collection capability to achieve desirable non-tax objectives has resulted in loss of control over investigative techniques, and a loss of the capacity to limit the scope and nature of information gathered to that which is related to tax enforcement. Operation Leprechaun, for example, was an effort to employ IRS investigative power to combat political corruption. The operation led to the collection of details on the personal and sexual lives of certain Florida political figures and to illegal acts on the part of IRS informants.

Abuses such as Operation Leprechaun and others discussed in this report have resulted from a combination of factors which have generally accompanied the use of the IRS for non-tax purposes. The IRS system of organization and control over investigative activities has not proved compatible with the pursuit of non-tax objectives. The IRS was decentralized in 1952 in an effort to end widespread political influence congressional investigators had discovered. Under this decentralized structure, the intelligence chief in each of the fifty-eight IRS districts largely controls and supervises investigations. The essence of decentralization is heavy reliance upon the professional, independent judgment of agents at the field level, subject to the setting of general policy by the National Office. Under these general guidelines, agents and supervisors in the field apply tax related criteria in making decisions concerning the identification of targets of investigations, and the initiation and scope of investigations. The result has generally been that investigative resources are applied to particular taxpayers or categories of taxpayers in proportion to the tax compliance problems they present, based upon the IRS experience of prior years. This system is generally known as "balanced tax enforcement."

The use of the IRS for non-tax purposes requires "unbalanced enforcement," where the target group is selected for reasons other than the significance of the tax compliance problem it presents. Unbalanced tax enforcement has given rise to a combination of elements which have produced abuse: (1) the subordination of tax criteria to achieve a concentration of enforcement resources creates an atmosphere within the IRS which encourages excessive zeal and departure from other normal criteria of IRS operation; (2) the pursuit of non-tax objectives through selective tax enforcement by the IRS Intelligence Division has historically involved the use of techniques such as paid informants, electronic surveillance, and undercover agents, all of which are prone to abuse; (3) because the IRS decentralized organizational structure is designed to achieve tax objectives and is, by design, resistant to pressure from above, in order to bring about the desired imbalance in the enforcement program, the IRS has generally found it necessary to bypass its normal organizational structure; (4) in doing so, the IRS has bypassed the normal administrative mechanisms which check excess and abuse at the lower levels.

The loss of control over investigative techniques, over the scope and nature of information gathered, and over the identification of proper targets has not proved to be a function of whether the particular non-tax objective the IRS has been called upon to pursue is right or wrong. The Committee's investigation strongly suggests that more effective oversight and new controls over IRS intelligence gathering are necessary if the IRS is to be used for any non-tax purpose.

## *2. IRS as an Intelligence Resource*

Because the information submitted by taxpayers and gathered by the Intelligence Division is so extensive, IRS has often been viewed by other governmental intelligence and investigative agencies as a data bank on which these agencies could draw for their own purposes unrelated to enforcement of tax laws. Both the FBI and the CIA have had virtually unrestricted access to any tax information they sought for any purpose.

The dissemination of tax returns and related information ("disclosure") is governed by statutes and regulations designed to limit access to and use of the information. These restrictions, however, have often failed to protect the information, in some cases because the laws themselves were inadequate and in others because they were circumvented. Moreover, the uses to which the information was later put were often questionable. In some cases, such as the FBI's COINTELPRO, the uses were clearly illegal.

## **SUMMARY OF RESULTS OF INVESTIGATION**

The Committee's investigation of abuses of IRS intelligence was divided into two parts: (1) a study of abuses of IRS because of the uncontrolled access which other federal intelligence agencies have had to tax returns and other tax information, and (2) a study of alleged abuses in the IRS' own intelligence gathering.

### *Part I. Access of Federal Intelligence Agencies to Tax Return Information*

The extent to which other federal agencies should have access to tax information for non-tax purposes has been under study by several congressional committees. This Committee, however, is the only committee studying the question of disclosure, which was authorized and directed to investigate all intelligence agencies and their interaction. Senate Resolution 21 specifically directed this Committee to study:

The nature and extent to which Federal agencies cooperate and exchange intelligence information and the adequacy of any regulations or statutes which govern such cooperation and exchange of intelligence information. 1

The committee staff reviewed every request by a federal intelligence agency for a tax return of which there is a record either in IRS or in the requesting agency. Most of these requests were from the Department of Justice on behalf of the FBI. In selected cases, the staff obtained the initiating documents from the requesting agency to determine the purpose for which the information was desired, compared this purpose with the reason or lack of reason given in the request, then traced the tax information back into the requesting agency to determine what use was actually made of it. As a result of its access to the records of other intelligence agencies, this Committee has had a unique opportunity to evaluate the problems of disclosure of tax returns to intelligence agencies.

The most important facts the staff found were:

- (1) The IRS has not required either the CIA or the FBI to state the specific purpose for which it needed tax return information.
- (2) In the absence of such a specific statement, the IRS could not judge whether the request met the regulatory criteria for release of the information. In effect, IRS had delegated the determination of the propriety of the request to the requesting agency.
- (3) Further, in the absence of a statement of the specific, reason the tax return is needed, there is no basis upon which to limit the subsequent use of the return to the purpose for which it was initially released.
- (4) As a result of these weaknesses in the disclosure mechanism, the FBI has had free access to tax information for improper purposes. The FBI obtained tax returns, for example, in an effort to disrupt the lives of targets of its COINTELPRO operations, by causing tax audits. The FBI used as a weapon against the taxpayer the very information the taxpayer provided pursuant to his legal obligation to assist in tax collection and, in many cases, on the assumption that access to the information would be restricted to those concerned with revenue collection and used only for tax purposes.

Because of the importance of the disclosure problem and its potential impact on all United States citizens, the Committee culminated its investigation into the matter by holding a public hearing on October 2, 1975, calling the Commissioner of the Internal Revenue Service, Donald C. Alexander, as the witness.

## *Part II. Abuses in Intelligence Gathering*

A. Areas of Inquiry. -- The Committee's investigation of possible abuses of IRS' own intelligence gathering required a selective approach. First, the Committee lacked both the time and resources necessary to investigate the activities of the Intelligence Division in each of the fifty-eight districts. Second, numerous allegations of abuse appeared in the press in the early and middle portion of 1975, the very period of this Committee's active investigation into IRS. Some of these allegations were fully investigated by other congressional committees having specific oversight responsibilities over IRS, and this Committee decided not to duplicate those investigations. Others were investigated preliminarily by this Committee but determined to be unfounded, in which case they are not discussed in detail in this report.

The Committee focused most of its efforts on reviewing major projects which represented systematic rather than isolated abuses and which illustrated problems of control common to other IRS projects. The Committee therefore examined:

- (1) The causes of the breakdown of controls which permitted improper electronic surveillance and other abuses of IRS intelligence gathering in the drive against organized crime (1960-1964), as documented by the Subcommittee on Administrative Practice and Procedure of the Committee on the Judiciary, United States Senate, 89th Cong., 1st Sess. (1965) (the Long Committee).
- (2) The origins and function of the Special Service Staff (SSS) (1969-1973) and the Ideological Organizations Audit Project of the early 1960s, whereby politically active groups were targeted for investigation.
- (3) The operation of the Information Gathering and Retrieval System (IGRS) used to collect and index general intelligence (1973-1975) and, on occasion, personal information.
- (4) Operation Leprechaun in the Jacksonville, Florida, district which involved improperly controlled informants who unjustifiably collected personal and sexual information on some targets (1969-1972), and committed a burglary.
- (5) IRS actions, including use of undercover agents to monitor meetings, against groups known as "tax protesters" which refused to pay taxes as a form of protest against the tax system or against certain government policies.

B. Method Of Investigation. -- The Committee's investigation of intelligence gathering abuses included: (1) reviewing reports of IRS internal investigations; (2) corroborating the findings of those IRS investigations on which the Committee relied, through independent investigation; (3) intensively investigating intelligence operations in six IRS district offices, including reviewing thousands of documents relating to the Information Gathering and Retrieval System and the Special Service Staff, as well as other special projects; interviewing numerous special agents charged with intelligence-gathering functions, particularly those concerned with IGRS; interviewing most of the principals and reviewing IRS Inspection Division summaries of interviews as well as key documents in Operation Leprechaun; interviewing Audit and Collection personnel who handled Special Service Staff field referrals; reviewing tax protester intelligence files; and interviewing special agents in charge of tax protester projects in three districts.

Throughout its investigation, the Committee staff received full and willing cooperation from all IRS officials in both the National Office and the field. It had full access to all documents it requested and to all employees it wished to interview. 2

C. Summary of Results. -- As the criminal investigative arm of IRS, the Intelligence Division normally investigates tax fraud allegations. Because the scope of such an inquiry is self-defining, it has been practical for IRS to give the agent assigned to a case wide discretion in selecting investigative techniques and the kinds of information collected. The same inherent limitation upon the scope of the inquiry made local supervision of such investigations practical. But, as the following cases reveal, abuses inevitably arose when IRS intelligence powers were employed to collect general intelligence rather than to investigate specific tax fraud allegations, and to target groups for purposes other than "balanced enforcement" under programs directed from the National Office.

### *1. IRS Use of Electronic Eavesdropping Techniques -- The Long Committee Findings*

In 1965, the Long Committee 3 discovered a number of cases of unlawful electronic surveillance by IRS agents, mostly in the course of investigating organized crime figures under the aegis of the Nationwide Organized Crime Drive. The Long Committee hearings indicated that the normal system of control over intelligence investigations was inadequate for those which, unlike ordinary tax fraud investigations, involved the use of abuse-prone investigative techniques, such as electronic surveillance.

The IRS had established a National Office Coordinator for the Organized Crime Drive. In a number of the cases of improper electronic surveillance uncovered by the Long Committee, the testimony established that the agents performing the surveillance were operating either under the authority or general guidance of the Coordinator, with the knowledge of the Intelligence Division personnel in the district in which the operation was taking place. The effect of creating the Coordinator was to bypass normal administrative controls without introducing effective new controls.

## *2. Special Service Staff (SSS) : 1969-1973*

The Special Service Staff was formed in 1969 in response to congressional and White House criticism of inadequate IRS efforts against "activism" and "ideological" organizations and individuals. The critics believed IRS had a special responsibility to determine the sources of funds of large activist groups and their leaders and to assure their adherence to the tax laws.

The Special Service Staff was a special National Office organization designed to concentrate IRS attention on "activists" and "ideologies" in order to preclude criticism of the adequacy of IRS attention in that area. In part because of the probable resistance of the decentralized IRS structure to selective enforcement on a political basis, the National Office deemed it necessary to act through a National Office organization to achieve the desired imbalance in the enforcement program. The Special Service Staff, using lists of political activists, including lists supplied by the FBI and the Department of Justice, proceeded to "unbalance" the enforcement program against "dissidents" and "extremists." By deciding what cases to bring to the field's attention, it bypassed normal screening procedures and focused audit efforts on groups and individuals selected for their political activities and beliefs. In a few cases, SSS employed its position in the National Office to bypass the district's normal structure and influence the handling of individual cases.

The effect was that SSS reviewed the tax status of groups and individuals in the absence of specific evidence of tax violations because they exercised First Amendment rights. SSS targets included 8,000 individuals and 3,000 groups. Some of these groups historically had not engaged in illegal activity of any kind, much less tax violations. For example, targets included the Ford Foundation, the Head Start Program, and fifty branches of the National Urban League.

The Special Service Staff, which had operated in secrecy, was abolished by Commissioner Alexander when he learned of its existence shortly after taking office in 1973.

Although the purpose of SSS differed fundamentally from that of the Organized Crime Drive, both were efforts to employ tax weapons for essentially non-tax purposes. Both required the creation of a special National Office structure to achieve the desired emphasis in the enforcement program. While IRS participation in the Organized Crime Drive represented the pursuit of a laudable government objective, in both cases, the special structure resulted in the bypassing of normal administrative controls and permitted abuse to occur.

## *Ideological Organizations Audit Project*

The Special Service Staff was not the first IRS effort directed at groups and individuals because of their political ideologies and actions. In 1961, the IRS initiated a test audit of right-wing organizations which had drawn stern criticism from the President. The test audit grew into a planned attempt by IRS to conduct intensive investigations of 10,000 tax-exempt organizations in order to determine whether or not they engaged in political activities, which are impermissible for tax-exempt organizations. The plan also called for investigation of non-exempt right-wing organizations through reviews of the contributors' returns for improper deductions.

While IRS efforts directed at these political action groups were not as extensive as the coverage given organizations by the Special Service Staff, the efforts did result in a significant departure by IRS from a balanced enforcement program, and a concentration of tax enforcement on certain individuals and groups because of their political beliefs. The efforts IRS directed at these ideological organizations established a foundation and precedent for the later Special Service Staff.

The Committee did not find abuses of the normal IRS functions beyond the abuse which inheres in concentration of audits on organizations and individuals selected for political reasons (and in part by the White House). The program illustrates responsiveness of the IRS to the subtle pressures of other government agencies, and demonstrates the need for close scrutiny of any IRS activities the primary purpose of which is to achieve non-tax objectives.

## *3. Information Gathering and Retrieval System (IGRS)*

Partly as a result of its participation in the Organized Crime Drive, the IRS Intelligence Division perceived a need to improve its ability to gather and retrieve intelligence beyond the scope of investigations of specific allegations of tax fraud. The Information Gathering and Retrieval System, which IRS developed between 1963 and 1975, was an effort to increase the collection of such "general" intelligence and to index and store this intelligence efficiently. Ultimately, it included information about 465,442 persons or groups.

The gathering of general intelligence differs from the investigation of alleged tax violations in two fundamental respects: (1) there is no inherent standard of relevancy by which to determine what kinds of information to collect, and (2) there is no clear standard for deciding who should be investigated. In the absence of such standards, normal IRS reliance upon agent discretion

presents dangers. Nevertheless, the creators of IGRS failed to supply any meaningful criteria for target selection or for the relevancy of the information to be gathered. The results were tremendous overbreadth and a glut of largely useless information gathered under IGRS. For example, the system contained information not only about persons suspected of ties with organized crime, but also individuals who had routine commercial business transactions, such as selling a restaurant, with these persons. In addition, in some districts, intelligence was collected about political groups. IGRS became so encumbered by irrelevant data that it was not effective for the purposes for which it was created. It was terminated in 1975.

#### *4. Operation Leprechaun -- Collection of Personal Information 1969-1972.*

The perceived need to gather general intelligence, and thus to establish IGRS, was largely a result of IRS participation in efforts against organized crime and political corruption. Operation Leprechaun was part of a drive against political corruption and involved the worst examples of abuse of any project associated with IGRS. The evidence indicates:

(a) that the special agent in charge of Operation Leprechaun, operating through informants, collected an excessive amount of information on the sex and drinking habits of some of the targets of the operation;

(b) that he engaged in electronic surveillance contrary to IRS regulations;

(c) that two of his informants burglarized the office of a congressional candidate, apparently without the Special agent's knowledge or consent, and stole a filing cabinet containing tax-related information, some of which they then delivered to the special agent; and

(d) that the special agent's string of thirty-four informants were not under effective control.

The agent's ability to gather highly personal information on the targets which was not tax related, is a reflection of the absence of meaningful written standards establishing criteria for relevancy of information gathered under IGRS. The failure was less that of the agent or of his superiors than of the creators of IGRS, who failed to recognize that reliance upon agent discretion in general intelligence gathering required more stringent, specific guidelines for relevancy than ordinary tax investigations.

Similarly, the agent's inability to control his informants represented a failure of the IRS structure within which the agent's actions took place rather than of the agent himself. IRS lacked a system under which supervisors, rather than agents, could make key decisions on recruitment and handling of informants. Instead, such decisions were left to the agents, unassisted by clear guidelines.

In 1975, after analyzing the deficiencies of IGRS and investigating the Leprechaun abuses, IRS management began to impose restrictions upon intelligence gathering designed to assure that non-tax-related information would not be gathered, that targets of information-gathering operations would not be selected by the agent's personal predilections, and that agents and management would have greater control over informants. If fully implemented, they will reduce the likelihood of recurrence of abuses such as those associated with Operation Leprechaun.

Many of the controls which are necessary to avoid a repetition of the abuses of Operation Leprechaun and IGRS might not be necessary if IRS confined its activities to a balanced tax enforcement program. Many of these necessary controls may actually impede the special agent in the performance of the normal IRS intelligence mission. The price of the continued use of the IRS for purposes such as Operation Leprechaun will either be continued abuse in the absence of stringent controls or the imposition of controls which are necessary to prevent abuse in the area of selective enforcement but may be excessive for traditional tax collection activities.

### **INTRODUCTION AND DISCLOSURE**

The data Americans voluntarily provide the IRS every year make it the largest, potential source of information about the personal lives of Americans. 4 The raw data which IRS holds and its special capability for obtaining financially related information in addition to that which taxpayers voluntarily furnish, including the power to issue a summons for records without a showing of probable cause, constitute an intelligence resource which is of great potential usefulness to other intelligence agencies pursuing non-tax objectives.

This Committee has studied the means by which federal intelligence agencies have gained access to tax information, the stated purposes for which they have obtained the information, and the uses they have made of the information they obtained. The Committee has not attempted to develop a comprehensive set of criteria for access to tax returns, though its findings show that current regulations, as applied, have permitted access for purposes which should be excluded. The Committee has examined the current system of controls over access in light of the uses intelligence agencies have made of the information to which they have gained access under that system of controls. It has found that the mechanism through which disclosure criteria are enforced has serious weaknesses. An effective mechanism for enforcement of disclosure criteria is as crucial to protection against access for improper purposes as the criteria themselves.

Under the current system, the FBI has obtained returns for purposes for which they should not have been released even under existing, liberal standards for release of tax information. 5 The FBI was able to do so because the IRS failed to apply existing regulations to require the requesting agency to state the reason for its request so that the IRS could determine whether the purpose of the request fell within the limits for permissible disclosure. The failure to require a specific statement of purpose in the request for tax information has also resulted in an absence of effective limitations upon the uses to which the FBI could put the information it obtained.

Proposed legislation to narrow the purposes for which investigative agencies can obtain tax information will not eliminate the potential for repetition of the kinds of abuse the Committee has uncovered unless the disclosure mechanism is also overhauled to assure that those limitations are more effectively enforced than the broader limitations have been enforced in the past. The purpose of this report is to analyze those weaknesses in the present control mechanism which are responsible for the abuses which have occurred.

## I. THE STATUTORY AND REGULATORY SETTING

Under section 6103 of the Internal Revenue Code, "returns made with respect to taxes . . ." are open to inspection "only upon order of the President and under rules and regulations prescribed by the Secretary or his delegate and approved by the President." "Returns" are not defined in the statute, but are defined by regulations [Treasury Regulation Sec. 301. 6103 (a) -1 (a) (3) (i)] to include both actual returns and

Other records, reports, information received orally or in writing, factual data, documents, papers, abstracts, memoranda, or evidence taken, or any portion thereof, relating to [returns].

The present regulations provide that the Department of Justice shall have access to "returns", stating:

[a] return in respect of any tax shall be open to inspection by a United States attorney or by an attorney of the Department of Justice *where necessary in the performance of his official duties*. The application for inspection shall be in writing and *shall show ... (4) the reason why inspection is desired*. 26 C.F.R. § 6103 (g). [Emphasis added.]

This regulation differs from those applicable to other agencies (such as the CIA), which are covered by the blanket provisions of section 6103 (f) :

... if the head of an executive department ... or of any other establishment of the Federal Government desires to inspect a return in respect of any tax ... in connection with some matter officially before him, *the inspection may, in the discretion of the Secretary of the Treasury or the Commissioner of Internal Revenue ... be permitted upon written application. ... The application shall ... set forth ... (4) the reason why inspection is desired . ... 6* [Emphasis added.]

Section 6103 (a) -1 (a) (3) (i), *supra*, which, by defining "tax return" broadly, has the effect of broadening the information the IRS is obliged 7 to furnish to the Justice Department upon proper request to include the results of IRS audits and intelligence investigations. In the course of some of these audits and investigations, the IRS develops information through the use of strong powers given it to determine and collect the revenue (principally the power to obtain financial information by means of a summons without any showing of probable cause) which neither the Justice Department nor the FBI could legally obtain on its own without demonstrating probable cause. The regulations contain no requirement that the Justice Department establish probable cause to obtain this information from the IRS even where it is to be used for criminal investigatory purposes unrelated to enforcement of the tax laws.

## II. IRS PRACTICE

### A. Before 1968

Until 1968, the FBI obtained tax returns and other tax information directly from the IRS Intelligence Division, under a procedure which the Chief of the IRS Disclosure Branch termed "illegal" upon learning of it in 1968. 8 Under that procedure the IRS failed to exercise vigilance to determine the purposes for which the FBI obtained returns. 9

In one case, for example, in order to develop information "discrediting or embarrassing to the United Klans of America" 10 or to a Klansman who was the subject of FBI interest, the FBI field office recommended obtaining the Klansman's returns in order to attempt to determine whether he was reporting income from the Klan as income from other sources. The recommendation was approved by FBI headquarters in November 1964. The returns were obtained from the IRS through its Intelligence Division.

One of the express purposes of this operation was, in part, to "expose [the Klansman] within the Klan organization, publicly or by furnishing information to the Internal Revenue Services." 11 Thus, the planned operation envisaged the illegal public disclosure of tax information.

On November 20, 1964, the FBI requested the returns of the Klansman for the years 1959 through 1963 and for the Klan organization for 1961 and 1963, and received the returns from IRS in January 1965. 12 Although FBI documents do not indicate whether or not the planned disruptive action was ever carried to fruition, the returns had left IRS, to be used by the FBI for whatever purpose it deemed necessary.

Because of the lapse of time and the absence of records, the precise nature of the procedure by which the FBI obtained returns before 1968 is not determinable. A review of FBI administrative files in the Bureau's Liaison Section and the testimony of the FBI agent responsible for liaison with IRS, 13 however, indicates that the essential steps in the process were as follows:

1. The FBI would decide to request a particular return or set of returns on the basis of a memorandum setting forth the reasons for the request in some detail;

2. The FBI would prepare a form letter for signature by the Assistant Attorney General, Internal Security Division, Department of Justice, setting forth that the returns were necessary in connection with an official investigation, but stating no specific reason;
3. The Assistant Attorney General was not given the detailed memorandum stating the reasons for the request;
4. Liaison Section (the FBI Section responsible for liaison with other agencies and the White House) delivered the signed form letter to someone in IRS Intelligence, who obtained the requested information; 14
5. IRS Intelligence Division kept no record of the transmittal of the information; 15
6. IRS Intelligence did not consult anyone outside the Intelligence Division (including the Disclosure Branch -- which was theoretically charged with the responsibility for disclosure of this kind of tax information) regarding action on the request. 16

*B. After 1968*

In 1968, the Chief of the Disclosure Branch learned that the Intelligence Division had been handling FBI requests for returns, branded the practice "illegal" in a memorandum to his superior, 17 and effected the transfer of all FBI requests to his jurisdiction. 18

Though FBI requests for tax information were thereby regularized after 1968, there is scant indication the IRS subjected them to more meaningful scrutiny than it had while the Intelligence Division handled the requests even though the regulations arguably required such scrutiny. The regulation (26 C.F.R. § 6103 (g) ) requires that the return be "necessary in connection with the official duties" of the requesting attorney, and also requires that the "reason" for the request be given in writing.

After 1968, the Internal Security Division of the Department continued to obtain returns by means of a form letter which recited the conclusion that the regulatory criteria were met. It stated that the return was "necessary in connection with an official matter before this office involving the internal security ...," i.e., that it was "necessary in connection with the official duties of the requesting attorney," but contained no separate statement of a "reason" for the request. 19 On the basis of these letters, 20 the IRS could make no independent evaluation of whether the reason for the request was in fact within the official duties of the requesting attorney, or of whether the return was "necessary". In short, the IRS delegated to the Justice Department -- and in reality to the FBI -- the administration of the disclosure regulations with respect to the FBI's requests. Former Deputy Assistant Commissioner (Compliance) Leon Green advised the Committee: "I do not think we ever questioned their need for a tax return." 21 Mr. Green, whose duties included broad supervisory responsibility over the Services disclosure activities testified as follows:

A. Any of the Assistant Attorney Generals could request access to specific tax returns by name and generally they were granted access without any questioning of the background or the need for them.

Q. You say without any questioning of the background?

A. I do not think we ever questioned their need for a tax return. If an Assistant Attorney General signed a letter saying in the course of their own operations they required access to certain returns, they were given access ...

Q. As a general rule, what kind of a reason would the Internal Security Division give?

A. I do not think they would give any reason other than to state in connection with a matter that they had under consideration the Department of Justice required access to specific returns.

Q. So, in effect, the judgment as to whether the tax return was necessary was left to the Justice Department?

A. The Assistant Attorney General who signed the letter, right.

Q. In fact, the determination of whether the ... need for the tax return was actually in connection with their official duties was also left to the Justice Department?

A. Yes. 22

The FBI requests and IRS responses invariably contained language to the effect that the use of the return would be limited to the purpose stated in the request. There is no specific regulation imposing such a limitation in 26 CFR 6103 (g), 23 but the limitation upon use is implicit in the requirement that the "reason why inspection is desired" be stated in the application. The release of the return is predicated upon the reason given, and therefore made only for the stated purpose. This limiting language is meaningless where the reason given is simply a recitation that the regulatory criteria are met. The absence of any meaningful limitation on use of returns has led to serious abuse. 24

### III. FBI USE OF RETURNS IN COINTELPRO

Between 1966 and 1974, the FBI (either directly or through the Internal Security Division of the Justice Department) made approximately 200 requests to the IRS for tax returns. 25 Of the 200 requests, approximately 40 (20%) involved foreign intelligence matters; 26 30 (15%) involved criminal matters; and 130 (65%) were for domestic intelligence or "counterintelligence" (COINTELPRO) 27 purposes. Although records are not complete, Mr. Green's belief that IRS "never questioned their need for a return" indicates that virtually all requests were honored.

The major portion of the 130 domestic intelligence requests were part of two FBI "counterintelligence" programs, one directed at the "New Left" (anti-Vietnam War) movement and the other at the so-called "Black Nationalist" movement. 28 Each of these two programs had two components:

1. Targeting of individuals in either movement for intensive intelligence-gathering activity.
2. Targeting of the same individuals for so-called COINTELPRO operations. 29

FBI COINTELPROs (counterintelligence programs) were designed to:

*expose, disrupt and otherwise neutralize* the activities of [the target organizations and their leadership]. [Emphasis added.]

#### *A. Use of Tax Returns in FBI Key Activist Program*

1. Program Purposes and Tax Returns. -- The "Key Activist" program was established in January of 1968 for the purpose of "intensive investigations" of the leaders of the New Left movement. 31 Four months later, on May 9, 1968, a COINTELPRO was recommended against the New Left and the "Key Activists" of that movement, on the following basis:

The New Left has on many occasions viciously and scurrilously attacked the Director and the Bureau in an attempt to hamper our investigation of it and to drive us off the college campuses. With this in mind, it is our recommendation that a new Counterintelligence Program be designed to *neutralize* the New Left and the Key Activists. The Key Activists are those individuals who are the moving forces behind the New Left and on whom we have intensified our investigations. 32 [Emphasis added.]

The next day the Director established the program. 34

Two weeks later, on May 24, 1968, the FBI requested tax returns of 16 Key Activists for the years 1966 and 1967. 35 These returns were requested under the new procedure initiated in 1968 following IRS Disclosure Branch's discovery that returns had previously been furnished the FBI by the Intelligence Division. On October 24, 1968, the Key Activist program was enlarged. 36 On December 6, 1968, the FBI requested returns on 19 additional Key Activists. 37 According to the authorizing memorandum:

As part of our overall intensive investigation designed to neutralize these individuals in the New Left movement, inquiry into their financial status has proved productive. 38

All of these returns were requested by form letters. 39 In no case did the IRS inquire further into why the returns were necessary or for what precise purpose. The actual purpose of the requests is reflected in a February 3, 1969, Headquarters memorandum in which the Bureau reported upon the success of the return requesting effort:

We have caused a survey to be made by Internal Revenue Service (IRS) concerning Key Activists. We have found a number where no record exists for payment of taxes in 1966, 1967. Included in this group are [names deleted], IRS has initiated appropriate investigations as a result of our inquiries. It is anticipated the IRS inquiry will cause these individuals considerable consternation, possibly jail sentences eventually. We now have sent requests on 35 Key Activists to IRS and anticipated many will have filed no returns. This action is consistent with our efforts to obtain prosecution of any kind against Key Activists to remove them from the movement. 40

The purpose of the requests was at least in part to develop ways of using tax information as a COINTELPRO weapon. 41

The February 3 memorandum reflects a by-product of the disclosure mechanism which enhanced its attractiveness to the Bureau. A simple request for information was in and of itself a means of directing IRS attention at the COINTELPRO target, resulting in an IRS investigation if no return was found for a particular year. The FBI documents suggest that the requests for Key Activists returns were not selective, and were not predicated upon any specific information suggesting the individual Key Activists were delinquent in their tax obligations. The IRS response was also all inclusive, and constituted unknowing IRS cooperation in the COINTELPRO effort. 42

2. An Example of the Use of Tax Information in a COINTELPRO Operation. -- One of the Key Activists who was the subject of a May 24, 1968, FBI request to IRS for 1966-1967 tax returns was a professor at a midwestern university who the Bureau anticipated would be a leader in demonstrations at the forthcoming Democratic National Convention in Chicago. 43 A detailed analysis of the means by which the FBI obtained his returns and the COINTELPRO use the FBI was able to make of them demonstrates a key weakness of present disclosure statutes and regulations.

The FBI presented to J. Walter Yeagley, Assistant Attorney General in the Internal Security Division, a form letter addressed to the Commissioner of the Internal Revenue Service 44 listing six Key Activists whose returns were "necessary in connection with an official matter before this office (i.e., the Internal Security Division) involving the internal security of the United States." Assistant Attorney General Yeagley signed the letter. Yeagley has stated that the FBI did not advise him that a purpose of the request was to use the tax information as a tool for taking disruptive action against the subjects, and that he was unaware that any COINTELPRO program existed. 45 The FBI does not claim the contrary. 46 Yeagley apparently did not inquire into the purpose of obtaining the return, stating that he generally assumed the purpose of such a request was to develop investigative leads. 47

This letter was forwarded to the IRS, where it was determined that the regulatory criteria, were satisfied since the letter recited that the returns were "necessary in connection with the official duties" of the Assistant Attorney General. IRS inquired no further into the specific purpose for which the returns were to be used, but relied upon the Assistant Attorney General's statement that the purpose met the regulatory criteria. 48 The Assistant Attorney General, in turn, relied upon the FBI. The IRS furnished the returns.

Upon receiving the returns of Professor X, the FBI forwarded them to its local office in the city where the professor taught, for examination for COINTELPRO potential. 49 In examining the returns, the local office was acting pursuant to the memorandum establishing the Key Activist COINTELPRO program:

The purpose of this program is to expose, disrupt, and otherwise neutralize the activities of the various New Left organizations, their leadership and adherents. It is imperative that the activities of these groups be followed on a continuous basis so we may take advantage of all opportunities for counterintelligence and also inspire action in instances where circumstances warrant. ... In every instance, consideration should be given to disrupting the organized activity of these groups and no opportunity should be missed to capitalize upon organizational and personal conflicts of their leadership. 50

The local office examined Professor X's returns and found some questionable deductions which "at the very least, provide a basis for questioning by IRS," and requested the authority of the FBI Director to call these questionable deductions to the attention of the local office of the IRS. The express purposes of doing so, according to the Airtel by which the request was made, were:

1. Due to the burden upon the taxpayer of proving deductions claimed, [Professor X] could be required to produce documentary evidence supporting his claims. This could prove to be both difficult and embarrassing particularly with respect to validating the claim for home maintenance deductions when, in fact, he doubtless has only the usual type of study found in many homes rather than actual office space. Validations of contributions to SNCC, SDS, and the [privacy deletion] Counseling Service may also be productive of embarrassing consequences.
2. If [Professor X] is unable to substantiate his claims in the face of detailed scrutiny by IRS, it could, of course, result in financial loss to him.
3. *Most importantly*, if IRS contact with [Professor X] can be arranged within the next two weeks their demands upon him *may be a source of distraction during the critical period when he is engaged in meetings and plans for disruption of the Democratic National Convention*. Any drain upon the time and concentration which [Professor X], a leading figure in Demcon planning, can bring to bear upon this activity can only accrue to the benefit of the Government and general public. [Emphasis added.]

51

The recommendation was approved, and the local office supplied the information to the local IRS office, but did not advise the IRS contact that the information came from a tax return the FBI had previously obtained from IRS. 52 The FBI merely stated it "had reason to believe that Professor X had claimed deductions for contributions" to certain organizations which would not normally be deductible. 53 As a result of the information the FBI furnished, IRS initiated an audit of Professor X's return.

Because of IRS liberality in granting delays in audits to suit taxpayers' convenience, the audit of Professor X did not achieve the desired purpose of disrupting his planning for demonstrations at the Convention. The audit did result in the imposition of an additional \$500 in tax liability for the two years in question, as a result the local FBI office deemed it a COINTELPRO success. 54 While taxpayers should pay taxes which are due, the fact that taxes are due does not justify use of the tax laws to harass demonstrators.

#### *B. Use of Tax Returns in the FBI Key Black Extremist Program*

The Key Black Extremist (KBE) Program was established on December 23, 1970, because of the perceived success of the Key Activist Program. The documentary history of the establishment of the Key Black Extremist Program and inclusion of requests for tax returns as a standard technique are contained in the Committee files and described briefly in the report on COINTELPRO.

According to the Committee staff's review of FBI files, the FBI requested the returns of at least 72 of the 90 designated Key Black Extremists. As in the case of the requests for Key Activists' returns, one of the FBI's purposes in obtaining returns of Key Black Extremists was to use the returns as weapons in its campaign to "neutralize" them. All the Key Black Extremist requests were made on the same forms as the Key Activist requests. There is no evidence the IRS inquired into the specific purpose of any of the requests. All were honored. 55

*C. Disclosure of Identity of Contributors to Ideological Organizations*

The IRS routinely receives from tax exempt organizations lists of their contributors either on tax returns or on exemption applications. The information is given to IRS in order to enable it to enforce the tax laws with respect to those organizations. The IRS also develops contributor lists of non-exempt organizations during audits, especially if there is reason to believe the contributors may be improperly deducting the contributions. These contributor lists are available to the FBI and other federal investigative agencies by simple request to the Internal Revenue Service, even in cases where those agencies could not legally obtain the information directly.

1. Dr. Martin Luther King and the Southern Christian Leadership Conference. -- One of the organizations the FBI designated a "Black Nationalist-Hate Type Organization" was the Southern Christian Leadership Conference. 56 As part of an earlier intensive investigation of this organization and of its leader, Dr. Martin Luther King, the FBI, in 1964, obtained from the Internal Revenue Service "all available information" concerning Dr. King and the SCLC. 57 This information included tax returns of both Dr. King and the SCLC as well as certain IRS investigative files. The FBI studied IRS audits and investigations of both Dr. King and the SCLC, and discussed with certain IRS employees future IRS action to check on Dr. King's and SCLC's compliance with the tax laws. The information received regarding Dr. King and SCLC was forwarded to the FBI Atlanta office "for further review and coordination with the investigation relating to Dr. King himself." 58 On April 14, 1964, the Atlanta, office responded with a suggestion for disruptive action against SCLC. 59

After noting that SCLC was tax exempt in the sense that it was not subject to income taxation (though contributions to it were not deductible on the returns of the donors), and that its enjoyment of this status required it to file a petition disclosing the names of contributors, the Atlanta office recommended that the following action be taken with respect to the contributors so disclosed: 60

It is believed that donors and creditors of SCLC present two important areas for counterintelligence activities. In regard to the donors it is suggested that official SCLC stationery bearing King's signature, copies of which are available to the Atlanta Office and will be furnished by separate communication to the Bureau Laboratory for reproduction purposes, be utilized in advising the donors that Internal Revenue Service is currently checking tax records of SCLC and that King through this phony correspondence wants to advise the donor insuring that he reported his gifts in accordance with Internal Revenue requirements so that he will not become involved in a tax investigation. It is believed such a letter of this type from SCLC may cause considerable concern and eliminate future contributions. From available information it is apparent that many of these contributors to SCLC are doing so in order to claim tax deductions and in order to be eligible for such deductions, the contribution is being made to the (privacy deletion -- name of a church), which in turn is forwarded to King or the Southern Christian Leadership Conference. 61

The suggestion was considered by FBI Headquarters and was categorized, along with some other suggestions

as not appearing desirable and/or feasible for direct action by the Bureau at this time . ... 62

2. The Students for a Democratic Society. -- In the course of auditing would-be exempt organizations, the IRS will often seek to identify contributors to the organization in order to determine whether the contributors are deducting contributions. 63 Under current disclosure regulations, the results of such audits, including the contributor lists generated in the course of the audit, are available to other federal agencies upon request. Thus, the potential use of IRS as a source of contributor lists is not limited to exempt organizations, such as SCLC. Moreover, such lists have in fact been obtained from the IRS.

In 1968, the IRS was conducting an audit of the Students for a Democratic Society. The audit was initiated in New York, and was subsequently referred to the Chicago District of IRS. An FBI letter from Director, FBI, to SAC, Chicago, dated June 10, 1968, states:

It is noted IRS is presently conducting an audit of SDS funds at the Bureau's request.

The IRS files do not reflect a specific request from the FBI for such an audit, but do reflect considerable input from the FBI in the form of reports suggesting that certain activists (including SDS members) were probable tax violators. 64 The FBI at least sought to direct IRS attention to SDS. 65

Since the SDS exemption application had been denied, it was appropriate for IRS in the course of the audit to identify contributors to the organization, and it did so. The FBI obtained the list which IRS had developed. Later, IRS passed the list on to the White House. According to an April 8, 1970, internal IRS memorandum:

Paul Wright of AOC 66 and Joe Hengemuhle of the FBI called to ask whether the FBI could furnish the White House the list of SDS contributors which was furnished to the FBI by IRS. The FBI has been requested by the White House to furnish a report on the funding of various militant organizations.

...

I advised that from a disclosure standpoint, if the White House staff wanted this on behalf of the President, there was no disclosure problem; but in view of the sensitive nature of the matter and of other investigations and problems, I wanted to check this with Mr. Green to get his approval. 67

Permission was granted and the list was furnished to the White House.

#### IV. DISCLOSURES TO THE CENTRAL INTELLIGENCE AGENCY

With three possible exceptions, there is no evidence the CIA has ever obtained tax return information through official disclosure channels. 68 Between 1957 and 1972, however, the CIA obtained tax return information on at least thirteen occasions through unofficial channels.

##### *A. Means of Obtaining Returns*

The CIA obtained return information informally from IRS employees in the Compliance Branch who had other CIA liaison responsibilities. 69 It has been possible to identify taxpayers on whom the CIA obtained return information, but since there are no records of these disclosures, it has not always been possible to establish which employees released which information. 70 That responsibility has been established in at least two cases. In one case, an IRS employee stated he was authorized to release returns by his superior, but his superior can recall giving no such authority. 71 In one other case, the IRS employee stated he had disclosed return information to a CIA agent who carried the credentials of another U.S. Government agency as a cover. 72 There was no written authority for the informal disclosure of tax return information to the CIA, and, according to the IRS, there is no basis upon which any of the disclosures could be considered legal.

##### *B. Effect of Illegality*

Although the purposes of the requests varied, it is clear that all but one of the disclosures would have been legal had the CIA followed legal procedures. The bulk of the requests arose in connection with either CIA investigations of its own employees or other CIA investigations within its charter. 73 Thus, with one possible exception, the illegal practice did not result in the CIA's obtaining information it could not have obtained legally. Like the practice of the FBI prior to 1968 of obtaining returns from the Intelligence Division and bypassing official channels, the CIA's informal, illegal access to return information demonstrates not a weakness in disclosure regulations, but a failure of IRS to apply those regulations.

The atmosphere of extra-legal cooperation between intelligence agencies out of which the CIA's illegal access to returns arose did lead to at least two serious breaches of IRS responsibility for impartial, even-handed enforcement of the tax laws. In one case, the CIA obtained information from the returns of Victor Marchetti, the author of a book, publication of which the CIA sought to prevent. An unidentified IRS source, referred to in a CIA memorandum 74 as "Confidential Informant," supplied the return information on April 5, 1972, and advised the CIA that he:

was extremely interested in the fact that [Marchetti] had authored and published a book but still only reported a total income of [amount deleted] for 1970 and 1971. In this regard, our source would be ready to conduct, *at our request*, a routine audit of [Marchetti's] income tax for the past three years. [Emphasis supplied.]

Either information the IRS possessed concerning Marchetti justified an audit or it did not. Since no formal relationship existed between the two agencies, the CIA's interest in the matter should not have affected IRS action.

The second case involved Ramparts magazine. A February 2, 1967, internal CIA memorandum of a conversation between the Assistant General Counsel of the CIA, the Assistant to the Commissioner, IRS, and two other IRS executives, including the Deputy Assistant Commissioner for Compliance, indicates a basic willingness on the part of the IRS participants to tailor their treatment of Ramparts to the desires and concerns of the Central Intelligence Agency. The memorandum 75 recites that the CIA Assistant General Counsel:

Told them of the information and rumors we have heard about RAMPARTS' proposed exposes with particular reference to USNSA [U.S. National Student Association] and [an organization]. I impressed upon them the Director's concern and expressed our certainty that this is an attack on CIA in particular, and the administration in general, which is merely using USNSA and [an organization] as tools.

One of the IRS executives advised the CIA of the status of the USNSA application for tax exempt status. The CIA Assistant General Counsel then

suggested that the corporate tax returns of Ramparts, Inc. be examined and that any leads to possible financial supporters be followed up by an examination of their individual tax returns. It is unlikely that such an examination will develop much worthwhile information as to the magazine's source of financial support, but it is possible that some leads will be evident. The returns can be called in for review by the Assistant Commissioner for Compliance without causing any particular notice in the respective IRS districts. The proposed examination would be made by Mr. Green who would advise if there appeared to be any information on the returns worth following up. The political sensitivity of the case is such that if we are to go further than this, it will be necessary for the agency to make a formal request for the returns under a procedure set forth in government regulations. If such a request is made, the Commissioner will not be in a position to deny our interest if questioned later by a member of congress or other competent authority.

#### V. ANALYSIS

The cases described in this report reveal that more than privacy is at stake in the disclosure of tax returns and tax return information to federal agencies. It is apparently necessary to devise means to prevent disclosure for improper purposes, and to prevent the subsequent misuse of returns disclosed initially for proper purposes. The Justice Department's failure to prevent

FBI abuse of access to returns suggests strongly that the control device must be in the hands of the IRS, and not only in the hands of the requesting agency or of its parent agency.

The case of Professor X, in which information supplied by IRS was used in an FBI counterintelligence program, raises a fundamental question concerning the use of IRS for non-tax purposes: whether the selection of a taxpayer for audit or investigation for essentially political criteria is justified by the subsequent discovery of some tax liability. This question is fundamental, and applies whether the non-tax use is through the unwitting manipulation of the IRS because of a weakness in its disclosure laws, or whether the political motivation emanates from the IRS itself. If one underpays his taxes, one argument goes, one takes his chances. One's political opponent, disgruntled neighbor, or disenchanted employee can report the underpayment for the crassest of motives, and will be rewarded 76 for his efforts; therefore, motive is irrelevant as a matter of policy -- all motives, however crass, enhance tax enforcement, and are therefore desirable springboards for audits or investigations. If violation of the tax laws inhibits one's freedom by increasing one's exposure to audit or prosecution, the result is a salutary incentive to comply with those laws.

There is an essential difference, however, between a government enforcement program along ideological lines and any individual effort to bring the IRS down upon an enemy: the government is constitutionally required to be neutral to politics; individuals are not. When the IRS responds to an allegation it receives, the motive underlying the transmission of the allegation is irrelevant. When the IRS selects taxpayers for a tax compliance review because of their politics, the government is employing its power for political purposes. Whether the IRS performs the selection, as in the case of Special Service Staff, or the FBI does, as in the case of Professor X, the fortuitous discovery of a tax liability does not justify the repression inherent in the practice.

Professor X was audited only because he was the target of a COINTELPRO operation in which the FBI, through the use of the disclosure regulations, sought to manipulate the IRS into "neutralizing" Professor X by means of a tax audit. 77 Every IRS witness questioned regarding this case has agreed that Professor X's returns would not have been knowingly disclosed for the purpose for which they were used. 78

The law and practice of disclosure of tax returns made this operation possible. The law requires the IRS to turn over returns to the Justice Department only where they are "necessary" in connection with "official duties." However, the IRS has not, in practice, administered these two requirements, but has delegated their administration to the requesting Assistant Attorney General, who in turn has delegated it to the FBI. As a result, no one outside the FBI made any determination of the actual reason for the request for Professor X's return, or of the compatibility of the reason with the regulatory criteria.

Even if the FBI's initial reason for requesting Professor X's return had been proper, the disclosure procedures provided no safeguard against a subsequent misuse of the return in an operation unrelated to the reason for the request. The letter requesting Professor X's return recited:

Documents furnished in response to this request will be limited in use to the purpose for which they are requested . . . 79

But the "purpose" for which they were requested was stated so generally as to permit any subsequent use. IRS failure to insist upon Justice Department compliance with the requirements that the application for the return state the reason why inspection is desired permitted the FBI to legally obtain Professor X's return to later improperly use the return as a COINTELPRO weapon.

Unrestricted FBI access to contributor lists the IRS compiles in the course of enforcing the tax laws has threatened both the integrity of the tax system and the constitutional rights of the contributors. The identity of members of organizations such as SCLC and the NAACP is privileged to protect members in their right to freedom of association by forestalling the potentially chilling effect which revelation of membership could have. The same reasons justify application of this protection to the identity of contributors to such organizations except to the extent that the act of contribution itself is properly discoverable because of potential tax consequences. It is for this latter purpose that the IRS is empowered to elicit contributors' identities. Presumably, if the FBI were investigating an allegation of criminal tax fraud to which contributors' identities were relevant, it would be entitled to the same information. There is no suggestion in any of the relevant FBI documents that the FBI sought to supplant the IRS in any investigation of the potential tax liability of SCLC contributors. 80 Rather, the FBI contemplated using the list as a means of disrupting SCLC and discouraging contributions, a purpose which constitutes a direct attack on the very interest which the right to anonymity protects, and a purpose for which the FBI could not have obtained a list of SCLC contributors from any court.

That the FBI did not implement the suggestion does not affect the basic point that FBI Headquarters furnished the tax information, including the list of contributors, to the local office in order to enable the local office to devise disruptive actions. COINTELPRO policy (as evidenced in other cases which are discussed in the report on COINTELPRO) makes it clear that the suggestion was not rejected because of concern for the legality of so using the contributor list.

In NAACP v. Alabama 81 the Supreme Court ruled that, even though the specific purpose of a law empowering the government to obtain the identities of members of a political group is legitimate, the court will weigh against that purpose the probability that a consequence of disclosure will be to interfere with the members' exercise of their right of freedom to associate. If the reason for disclosure is not "constitutionally sufficient" to outweigh the danger to freedom of association, the law is unconstitutional. Given the existence of a COINTELPRO policy of using all intelligence for disruptive purposes whenever feasible, disclosure to the FBI of contributor lists of target organizations violated the Constitution the moment the disclosure occurred even if, in the particular case, the FBI failed to devise a feasible means of making disruptive use of the information, and even if the FBI also had a legitimate purpose in obtaining the information.

Obtaining contributor lists for purposes of "counterintelligence" action to discourage contributions is unconstitutional under the NAACP v. Alabama rule. In NAACP v. Alabama, the state was denied access to contributors' lists because an incidental consequence of publication would be non-governmental harassment of the membership. In the case of SCLC, where the FBI

sought the list in part for the purpose of developing schemes for government-sponsored disruption, the illegality of obtaining the list is apparent. The case demonstrates the importance of (1) requiring a statement of the purpose of requests for returns; and (2) limiting their use to the stated proper purpose.

The case of FBI access to an IRS list of contributors to SDS further demonstrates that inadequate IRS controls have led to its becoming an agent of a non-tax investigatory agency. It is not clear in this case whether the SDS audit was initiated because of FBI interest. It is clear that the FBI sought to direct the IRS intelligence gathering capability at SDS and then, through the disclosure mechanism, obtained information it could not legally have obtained on its own.

The case demonstrates how the disclosure procedures followed by the IRS makes it possible for an intelligence-gathering power the Congress has bestowed upon IRS for the purpose of tax collection -- the power to obtain the identity of contributors -- to become an investigative power of a non-tax agency, bent upon non-tax purposes. The SDS case also demonstrates that lax disclosure procedures provide an incentive for other agencies to attempt to interfere in IRS selection of taxpayers for audit. 82 An IRS audit is a financial vacuum cleaner. Other governmental agencies have a powerful intelligence gathering capability when they can exert influence over who the IRS selects for an audit and then have uncontrolled access to information gathered during the audit.

While it is clear that on occasion agencies performing intelligence functions will have a legitimate need for tax returns and return-related data, the need for a written record of the reasons supporting an agency's request for the information is also clearly demonstrated by the Ramparts and Marchetti cases in which the CIA informally obtained tax-related information for questionable purposes. The CIA was apparently unwilling to risk requesting tax return information with respect to Ramparts and its supporters unless, through an informal disclosure, it could first learn whether there was information on the returns that would be of interest to them in their effort to stifle Ramparts criticism of a CIA-sponsored organization.

The Ramparts and Marchetti cases demonstrate the dangers of informal exchanges of information between the IRS and other intelligence agencies. These informal exchanges both encourage illegal disclosure and provide the other intelligence agency with a lever by which to manipulate or persuade the IRS into action directed against certain taxpayers for reasons having no bearing upon compliance with the tax laws. In the Marchetti case, the unidentified IRS source offered to conduct an audit of Marchetti at the CIA's request, an offer which arose out of the atmosphere of extralegal cooperation which informal access to tax return information creates.

The existence of informal disclosure channels is dangerous even if the only tax return information that passes along those channels is information that could have been properly disclosed under IRS regulations. The existence of such channels fosters an atmosphere in which those charged with liaison are tempted to place their desire to be cooperative above their obligation to enforce the tax laws neutrally. The unofficial character of the disclosure makes it possible to insulate these acts of improper cooperation from outside scrutiny. It is far too important that taxpayers have confidence in the confidentiality of the returns they file and in the integrity of the tax system to permit individuals within the IRS to exercise unreviewable judgment regarding the propriety of disclosing tax return information to other Federal agencies.

## SELECTIVE ENFORCEMENT FOR NON-TAX PURPOSES

### *Introduction*

Because the investigation of the Internal Revenue Service encompassed several abuses of the rights of American citizens of which some details had previously been studied and revealed to the public by the Congress (e.g., Special Service Staff, Ideological Organizations Project), the staff was able to devote some of its investigation to an analytical evaluation of those abuses. This analysis revealed that many abuses of the IRS intelligence functions occurred when enforcement of the tax laws became an ancillary instead of the primary factor in determining IRS actions.

The Internal Revenue Service, since it was reorganized in 1952, has had a decentralized structure, with each of the 58 districts operating autonomously and being generally responsible for its day-to-day operations while the National Office is primarily responsible for policy decisions. When the IRS participated in an activity in which targets had been chosen on the basis of criteria which included factors in addition to those involved in routine tax law enforcement, it was often necessary for the IRS to impose centralized controls on its basic decentralized structure in order to accommodate the special requirements created by the additional criteria. This has had the practical effect of creating a new structure which has in the past been incompatible with the original decentralized IRS structure and has often resulted in abuse. The investigation revealed that this result occurred regardless of the purpose of the IRS endeavor. For example, abuses attributable to structural anomalies occurred in IRS participation in the Organized Crime Drive, a valuable effort beneficial to the well-being of the country, as well as in the Special Service Staff, where IRS improperly targeted individuals because of their political beliefs.

Part Two of this report, "Selective Enforcement for Non-Tax Purposes," reports on the historical development of the intelligence operations of the Internal Revenue Service since its reorganization in 1952 and discusses the relationship between those abuses addressed and their setting: the decentralized structure of IRS.

## I. THE HISTORICAL DEVELOPMENT OF IRS INTELLIGENCE ACTIVITIES

### *A. Function and Structure of IRS Intelligence*

1. Introduction. -- The Intelligence Division of the Internal Revenue Service performs those criminal investigative activities the IRS must perform in order to collect the taxes, i.e., gathering that information beyond what taxpayers normally provide IRS which is necessary to determine the truth of allegations of criminal tax violations and, if necessary, to prepare evidence for prosecution of such violations. These activities are usually lumped under the IRS rubric, the "General Enforcement Program" ("GEP").

In addition to this normal function, the IRS Intelligence Division has engaged in "Special Enforcement Programs" ("SEP"), where it targets major criminal figures for general intelligence collection.

The element of targeting makes the SEP distinct in several important ways from GEP. In the General Enforcement Program, IRS does not single out a taxpayer and seek to develop a case against him, whereas the very purpose of the SEP is to develop tax cases against persons who have been classified as participants in, for example, organized crime. The purpose is a "nontax" purpose in the sense that in most cases the motivation for selecting the investigative target is not to achieve balanced tax enforcement but to seek to develop a tax case against the target because he is believed to be a participant in other criminal activities. The GEP target is investigated because there is reason to believe he has committed a specific act of tax fraud. The SEP target may be investigated in the hope such an allegation can be developed.

This difference in targeting leads to differences in attitudes and technique. Pursuit of SEP figures requires use of many of the techniques of general law enforcement (paid, regular informants; electronic and other forms of surveillance; raids; nationally organized and coordinated enforcement efforts) which the GEP does not require to the same degree. Further, the policy of the SEP is essentially one of consciously "unbalanced" tax enforcement. <sup>83</sup> Balanced tax enforcement is an effort to allocate enforcement resources to achieve the highest degree of compliance with the tax laws. <sup>84</sup> Balanced enforcement does not imply that all classes of taxpayers will be equally subject to tax investigation, but that the criteria for resource allocation will be designed to maximize tax law enforcement. In the SEP, these criteria do not control. Resources may be allocated to SEP targets because they are perceived to be dangers to society in many ways, even though the tax compliance benefits of successful prosecution would not alone have justified allocation of investigative resources. This difference may lead to a different attitude on the part of the agents tasked to "get" the SEP target from the attitude they bring to GEP investigations, and aggravate the difficulties of controlling the agent's exercise of discretion in the field.

The organization of the IRS Intelligence Division and its devices for control of agents reflect the primacy of the "classical" IRS Intelligence function: the investigation of specific allegations of tax fraud in a balanced enforcement program. Unlike any other Federal law enforcement agency, the Internal Revenue Service's Intelligence Division is a decentralized organization. Local and regional offices make virtually all operational decisions. The National Office hierarchy is designed to be a policy-setting organization which seldom interferes with field activities -- and, except in the case of major projects, is unaware of specific activities. This arrangement contrasts strikingly with the organization of the FBI, for example, which has closer control over day-to-day field operations because of its centralized structure, with the chain of authority emanating from the center.

The IRS was decentralized to meet certain needs of tax collection and tax law enforcement. The high degree of local autonomy and agent discretion which accompanied decentralization have made the IRS an effective tax enforcement agency. It has, however, proved to make difficult the effective control of nontax law enforcement activities. To the extent that a nontax emphasis may serve the national interest -- as with the drive against organized crime -- it is apparent that effective control and oversight by the necessarily different organizations is required.

2. Origins of Decentralization. -- The organization of IRS Intelligence parallels the organization of the rest of the IRS. Both are products of an effort in the early 1950s to correct widespread abuses which congressional investigators had uncovered in IRS operations. While the reorganization of 1952 did not arise primarily from abuses by the then functional equivalent of the Intelligence Division, the reasoning which underlay the changes applied equally to all areas of IRS activity. <sup>85</sup>

Prior to the reorganization, the IRS collected the revenue through 64 "Collectors," who were Presidential appointees. Congressional investigators found that the Collectors had been susceptible to political influence and to other forms of improper pressure. Commissioners had found they were unable to control the independently-appointed Collectors. <sup>86</sup>

The problem was perceived in part as one of excessive centralization, which made the IRS a powerful tool of political forces and threatened public confidence in the tax system. <sup>87</sup> The solution was an effort to readjust the perpetual tension between the need for central direction and the dangers of central control.

The Treasury commissioned a management consulting firm to study how to structure the IRS to insulate it from improper influence while retaining the degree of central direction it needed to perform the mushrooming task of collecting the revenue. The consulting firm's recommendations were ultimately embodied in Reorganization Plan No. 1 of 1952. <sup>88</sup> In broad outline, the Plan called for two changes in IRS structure which, on the surface, appear inconsistent but which were designed to work in tandem to produce greater efficiency and independence from political influence. Under the preexisting system, while the National Office in theory directed field activities, in practice, since the Collectors were Presidential appointees, the Commissioner's authority over the field was in doubt. Further, the field was susceptible to political pressure since the Collectors' job security depended upon political favor. The Reorganization Plan sought to correct both deficiencies by abolishing the Collectors' positions and creating not more than 25 district commissioners who would be civil servants, promoted according to merit, and answerable directly to the Commissioner. At the same time, however, the plan called for a decentralization of most IRS operations and a consequent reduction in National Office authority over day-to-day field operations. The introduction of professionalism into the highest levels of field organization would permit a high degree of field autonomy; the elimination of patronage appointments would create an environment in which field autonomy would not mean field politics. <sup>89</sup>

Under the plan, the primary function of the reduced National Office staff would be to advise the Commissioner on questions of broad policy. The Commissioner was to be the only political appointee in the IRS and, as such, he was not to have the bureaucratic muscle necessary to control field operations, but was to have the staff necessary to engage in those activities for which a political orientation was appropriate: setting broad policy. Congressman Cecil R. King of California, Chairman of the Subcommittee on Administration of the Internal Revenue Laws of the Ways and Means Committee, expressed the philosophy underlying the Plan:

Political selection for positions which are primarily policy forming has obvious justification. Where the job is primarily a technical administrative post these are almost entirely lacking. <sup>90</sup>

The reorganization of the Intelligence Division paralleled the pattern for the Service. 91 The effect of the Plan was to increase the Commissioner's ability to exercise his general authority over intelligence activities in the field organization by eliminating the politically independent Collectors and streamlining the field organization while, at the same time, minimizing direct National Office control over day-to-day operations by bestowing greater autonomy upon the professional field staff.

With minor differences, the organization envisioned by the 1952 Plan is that which exists today. Intelligence activities in each district (of which there are 58) are run by a Chief, Intelligence, who reports to the Regional Commissioner who reports to the Commissioner. The Intelligence Division in the National Office is not in this chain of command and, therefore, generally has no line authority over the Chief, Intelligence, in the district. It performs its function of assisting the Commissioner in setting policy for all IRS Intelligence activities by issuing rules and guidelines which are to be implemented by the Regional Commissioners and the District Directors, in whom authority to direct actual operations reposes. 92

The Plan did not call for unqualified reliance upon the professionalism of the field organization to achieve independence from influence and high performance. It called for the transfer of responsibility for investigating employee malfeasance from the Intelligence organization to a newly created inspection service which would both police impropriety and continuously audit field performance. 93 The current Inspection Service is the sole exception to the regionalized organization. It was necessary to make Inspection independent of those it would inspect. Inspection personnel in the field therefore work out of the Regional Offices and report to the Regional Inspector, who reports to the Assistant Commissioner (Inspection) in the National Office, who reports to the Commissioner. This structure makes Inspection independent of the District Directors and the Regional Commissioners. 94

The creation of Inspection amounted to the substitution of retrospective evaluation and investigation for direct supervision of field activities. One of Inspection's key tasks is to determine the origins of impropriety or inefficiency and to recommend new systems of organization or new guidelines to eliminate these causes. 95 Its function is consistent with the idea of a decentralized system in which the National Office sets guidelines for performance and evaluates the field's adherence to the guidelines, but does not control current operations. 96

In 1952 the main job of IRS Intelligence was its classical task of investigating allegations of tax fraud. 97 The organization which was created in 1952 promised effective and controlled intelligence operations as long as this classical intelligence function remained paramount.

Investigation of specific allegations of tax fraud inherently limits the scope of an agent's discretion because of the narrow scope of the inquiry. The inherent limitation makes it possible to rely to a high degree upon agent initiative and spontaneous cooperation at the field level with general guidance from the center when Special Agents investigate specific allegations of tax violations. The inherent controls of the classical IRS intelligence task permitted the architects of 1952 to minimize central control, and thus minimize the chances of influence through the center without risking wholesale local abuse by unrestrained special agents.

The story of abuse of the IRS Intelligence function since 1952 is largely the story of the strains which the attempt to divert IRS resources from its classical investigative function placed upon the organizational structure which had been designed for that classical function -- the investigation of specific allegations of tax fraud. Every time the IRS has made a concerted effort to participate in tax law enforcement activities with nontax objectives, it has found it necessary to deviate in some way from its normal organization. The resulting hybrid organizations created to participate in other than strict tax enforcement activities have been responsible for many of the abuses of which IRS Intelligence has been guilty during the last twenty-three years.

The purpose of this report is to explore how changing objectives and practices in IRS intelligence gathering have strained the Intelligence organization the IRS established in 1952. Such an assessment is a prerequisite to answering a major question facing those charged with guiding IRS: whether the objectives which dictated the 1952 reorganization remain paramount, and, if so, whether there are means of avoiding the abuses which have accompanied past efforts to reshape the IRS tool for different purposes. 98

#### *B. IRS Intelligence 1952-1965: The Shift Toward Organized Crime*

Between 1951 and 1960, IRS intelligence stepped into and out of the fight against organized crime. In 1960, the government-wide Organized Crime Drive began. IRS was drafted into the effort. The result was the "unbalancing" of the tax enforcement effort: the key criterion for the decision whether to investigate was no longer predicated on tax-related criterion alone. In order to make certain the habits of bureaucracy would not negate this shift in emphasis, central "coordination" of the effort was superimposed on the IRS's decentralized structure. The resulting vagueness in lines of authority, the increased use of the abuse-prone intelligence gathering technique of electronic surveillance, and the accompanying atmosphere of a crusade resulted in abuses in the use of electronic surveillance between 1960 and 1965, which the Long Committee 99 exposed. These abuses appear to be a direct result of the structure created to handle the IRS activities and do not reflect on the stated desirable purpose of the IRS action: to combat the nationwide growth of organized crime. 100

1. 1951-1960. -- Before 1951, the classical function of IRS intelligence was virtually its only function, 101 but a change began at about the same time reorganization plans were stirring. In February 1951, the Kefauver Committee criticized IRS failure to enforce the tax laws with sufficient vigor against organized crime. This and other criticism and encouragement by the Kefauver Committee led to the creation in 1951 of a racketeer program in IRS. 102

In 1951 and 1952, the IRS assigned a large proportion of its intelligence forces to racketeer work. The peak number of investigators so assigned was 2,290 in January 1952. 104 In that year 12,879 racketeer cases were investigated. 105 On November 1, 1951, a wagering tax became effective, the purpose of which was to curb a primary source of organized crime revenue. The Intelligence Division began to enforce the tax through police-type intelligence gathering techniques. While many in the IRS, including some of the accounting oriented personnel of the Intelligence Division, resisted this work as an

inappropriate use of their training, 106 for a short time between the Kefauver hearings and the beginning of the Eisenhower administration, this police work represented an increasing part of IRS intelligence work.

The shift toward the Special (Organized Crime) Enforcement Program reversed itself during the Eisenhower administration, which consistently declined to provide special funds for racketeer work. 107 As a result, from 1952 on, Intelligence increasingly concentrated on its "classical" function. In contrast to 10,041 racketeer cases investigated in FY 1953, by FY 1955 total racketeer cases developed had declined to 1,039; by FY 1960, to 125. 108

Following the 1957 Appalachian meeting of prominent organized crime figures and the accession of Commissioner Latham in November 1958, however, IRS once again began to emphasize enforcement efforts against racketeers as part of a national program mounted by the federal government against major racketeers. 109 A November 6, 1959, Manual Supplement 14R-17 stated:

Achievement of the goal of balanced enforcement ... does not take precedence over the recognition of investigative requirements arising from flagrant localized situations, including racketeering or other illegal activity. 110

2. Acceleration of IRS Intelligence Activities. -- An April 1960 Manual Supplement established a renewed special enforcement effort against racketeers. 111 The National Office was to maintain a file of all information on major racketeers, even though, in theory, the National Office did not direct investigation of such figures. The reemphasis accelerated rapidly with the start of the Organized Crime Drive (OCD) in February 1961. The Commissioner ordered that all necessary manpower:

be made available to the extent necessary to promptly and thoroughly conduct those investigations requested by the Department of Justice. 112

The OCD was accompanied by a revamping of IRS intelligence organization which had not accompanied earlier racketeer programs. Attorney General Kennedy had expressed the view that the decentralized structure of the Intelligence Division with its layers of non-law-enforcement personnel was not apt for the intensive, nationwide program he envisioned against organized crime. 113 In response to this view, the IRS carved out a new structure for OCD intelligence work which bypassed the District Directors and created lines of authority strictly within the law enforcement branch of IRS. The National Director of the Intelligence Division assumed responsibility for "coordinating" the OCD program. He established a "coordinator" in the National Office who would work through similar "coordinators" in each region. The system would bypass the main IRS organization. The District Directors lost effective operational authority over OCD investigations (but retained administrative control over the personnel conducting the investigations and operational control over them to the extent their work fell within the GEP).

The transformed organization carried out transformed intelligence activities. Use of general law enforcement techniques of all kinds, including paid informants and electronic surveillance, increased sharply. While no separate statistics are available for each technique, the table set forth below reflects increases in the use of intelligence gathering techniques which paralleled the increased participation of the IRS in the OCD.

*Expenses of securing evidence*

| Fiscal year:  | [In thousands] |
|---------------|----------------|
| 1960 (actual) | \$159          |
| 1961          | 241            |
| 1962          | 432            |
| 1963          | 653            |
| 1964          | 827            |
| 1965          | 819            |
| 1966          | 790            |
| 1967          | 751            |
| 1968          | 459            |
| 1969          | 479            |
| 1970 (181) *  | 490            |

|              |     |
|--------------|-----|
| 1971 (127) * | 523 |
| 1972 (211) * | 723 |
| 1973         | 425 |
| 1974         | 597 |
| 1975         | 354 |
| 1976 (plan)  | 327 |

\* The majority of funds expended for intelligence gathering in the years 1970-1972 were spent by AT&F: \$309,000 (1970), \$396,000 (1971) and \$512,000 (1972). Figures through 1972 include expenses incurred by the Division of Alcohol, Tobacco and Firearms (AT&F) when it was a part of IRS. AT&F became a Separate Bureau in 1972. The figures in parentheses for FYs 1970, 1971 and 1972 indicate the amounts expended by IRS in those years, exclusive of that allocated to AT&F.

While no further breakdown of expenses for particular techniques is available, testimony at the Long hearings supports the surmise that the sharp increase in expenditures in FY 1961-1963 reflects changes in intelligence techniques more frequently used during the period.

The reemphasis upon major crime figures also altered the personnel profile of the Intelligence Division. In 1959, in partial response to this reemphasis and the accompanying changes in the investigative skills needed to perform the work, the IRS cut in half the accounting training required of prospective special agents, reducing it from 24 to 12 semester hours. 114 The impact of this change was multiplied by a corresponding increase in hiring of Intelligence Division personnel. According to its May 1961 Long-Range Plan, the IRS anticipated increasing its intelligence field personnel from 1,998 in 1961 to 2,560 by the end of 1964, with fifty percent of the total performing some form of organized crime or racketeering work. 115

#### *C. Abuses in IRS Intelligence 1960-1965: The Long Hearings*

Unprecedented charges of the improper use of investigative techniques resulting in the abuse of citizens' rights were made against IRS Intelligence following the first five years of the Organized Crime Drive. 116

Senator Edward V. Long's Subcommittee on Administrative Practice and Procedure uncovered widespread abuse of electronic surveillance by IRS Intelligence -- abuses the IRS had neither prevented nor discovered on its own -- in a series of hearings in July and August of 1965. 117 In response to the Committee's allegations of IRS abuse of wiretap capabilities, Commissioner Cohen acknowledged the various forms of surveillance and explained their origin as follows:

A valid starting point is the 1957 Appalachian meeting of the crime overlords which focused national concern on the cancer of organized crime. February 1961 saw the onset of a drive on organized crime unprecedented in terms of resources, intensity, and -- thankfully -- results. The success of this program has been reflected in a tenfold increase of convictions secured in organized crime cases.

.....

Briefly, we have completed 3,130 full scale investigations in the rackets area from February 1961 through March 31, 1965. Prosecution has been recommended in 2,452 of these. So far from these cases 1,214 convictions have resulted. A number of others are still pending. We presently have 664 cases under investigation. From the Internal Revenue standpoint, taxes and penalties of more than \$219 million have been recommended for assessment against OCD subjects. It is noteworthy that where criminal prosecution has been recommended, we have still been properly able to assess civil taxes and penalties. It seems fair to say that without the wholehearted efforts of the Internal Revenue Service there could have been no organized crime drive nearly resembling that sponsored and endorsed by the Administration and the Congress since February of 1961. Over 60 percent of the cases prosecuted in the organized crime field during this period have been developed by Internal Revenue Service investigation.

In order to effectively combat organized crime the Service recognized that the furtive, underground activities which go hand in hand with organized crime could often be uncovered only through resort to special techniques and equipment. The extraordinary nature of organized crime compelled extraordinary effort by the Service.

The Service early tooled up appropriately for its efforts. Under the impetus of the organized crime drive, the Service expended allotted funds -- representing still but a minute fraction of its investigative expenditures -- for the purchase of modem, miniaturized electronic transmitting and receiving equipment.

.....

With respect to the difficulty of controlling special agents once they had been furnished the investigation tools, Commissioner Cohen testified:

Insuring adherence (to restrictions on use of the electronic devices) is not a simple matter. The Service has approximately 3,000 criminal investigators working throughout the country. They constitute an elite group. While we must temper their zeal with controlled judgment, we cannot categorically deprive them of tools and training with legitimate, exemplary uses.

For many of the abuses the Long Committee uncovered the immediate cause of the breakdown in controls may have been the confusion of lines of authority which resulted from a hybrid organizational structure, the changed structure merely reflected the underlying and unanticipated problems which accompany subordinating tax enforcement, with its inherent restraints, to a non-tax goal.

The Long hearings resulted in no change in IRS structure. The IRS did, however, issue directives expressly forbidding all wiretaps, including those considered legal. It required very high level approval of any electronic surveillance and imposed strict controls upon access to the tools of the eavesdropping trade.

#### *D. Undercover Agent Abuses and IRS Organizational Weaknesses*

The same administrative weaknesses which led to abuses of the electronic surveillance capability have also led to abuse of a second major IRS investigative tool; the undercover agent.

The Special Agent Undercover Program, which has existed in varying forms since the IRS began investigating tax fraud, intensified with the beginning of the OCD. In 1963, in a pattern which paralleled that for the entire OCD, the Undercover Agent Program

was centralized under the direct control of the National Office Intelligence Division. This action was taken as the result of an Intelligence Division task force study that found a centralized program would be more effective and economical than the separate undercover projects that were then operated by individual regions or district offices. 118

The result of this action paralleled the results of the centralization of other OCD efforts; neither the Districts nor the National Office exercised control over the undercover agents.

In a major study in 1975, 119 IRS Inspection found widespread abuse in the undercover agent program, and traced the abuse to administrative anomalies remarkably similar to those which underlay the electronic surveillance abuses which the Long Committee had unearthed. An undercover agent in New York, who was to develop intelligence regarding organized crime figures, had engaged in extortion, sale of stolen property and fraudulent business schemes; an agent in Birmingham had been arrested for violations of Alabama gambling and prohibition laws; other undercover agents who had not committed any illegal acts had been largely unsupervised in their undercover careers. In the case of the New York agent, the study found that:

National Office advised that field managers were responsible to ensure that the Manhattan Strike Force's objectives were achieved by the undercover agent. However, the Manhattan Strike Force representative (i.e., a "field manager") advised that only the National Office had authority to approve and direct the undercover agent's activities. 120

In the case of the Birmingham agent, the study found:

National Office and district responsibilities for direction and control of the undercover project were not clearly defined. 121

The Committee staff also discovered instances of improper and excessive use of undercover agents. In its efforts directed at organized groups which refuse to file returns and pay taxes as a means of protesting the constitutionality of the internal revenue laws, the IRS often uses local and national office-supervised undercover agents, as well as informants, to infiltrate the groups. The undercover agents, often posing as husband and wife, attend open meetings of these protesters, identifying all individuals in attendance, 122 and in some cases become trusted members of the protest organization. One such instance was described as follows:

After several months of getting acquainted with the movement, we decided we would attempt to infiltrate one of our agents into the inner circle of the [protest group]. Despite foreboding warnings from other districts that infiltration was extremely difficult, by November 1973 one of our agents had gained the trust, confidence and money of the [protest group] by being selected as treasurer. This coup also gained us the entire mailing list of the [organization]. 123

The staff also learned of instances in which the undercover operatives, because of their positions of trust within the organizations, were privy to legal strategy sessions of tax protesters who had been indicted for violations of the tax code and had legal actions pending against them in court.

In one case, a National Office undercover agent who had infiltrated a tax protest organization gained access to a draft of a legal brief of a protester which had been prepared by his attorney and was to be used in the protester's defense in his trial for willful

failure to file tax returns. The agent turned the brief over to his contact in the Los Angeles office, who then gave it to the U.S. Attorneys prosecuting the case. 124

The two projects in the IRS study which were found to be the most effective and the most free of abuse were projects in which the districts simply moved into the control vacuum and assumed control of the project, directing it in the manner in which the IRS' decentralized intelligence system was designed to function. In most cases, however, the districts failed to exercise this initiative in the face of theoretical National Office responsibility for the project; loss of control and overuse resulted.

The IRS was unwilling to change its entire organization to meet the special needs of the OCD because the decentralized structure was best adapted to its classical function. A decentralized structure yielded effective audit and collection action. Since the classical intelligence function depended upon close coordination with Audit and Collection, a balanced enforcement program at the district level required that the intelligence function be similarly organized. The requirements of the intensive effort apparently necessitated a different, more centralized structure. The "coordinator" system and the centralization of the undercover program reflected these requirements. The result of these attempts to change an organizational structure designed only to control classical IRS intelligence activities into a hybrid capable of performing both classical and police-type work was loss of control. 121

## II. SELECTIVE ENFORCEMENT AGAINST POLITICAL ACTIVISTS: SPECIAL SERVICE STAFF

### *A. Introduction*

The Special Service Staff was a centralized effort to gather intelligence on a category of taxpayers defined by essentially political criteria for the purpose of developing tax cases against them. While perceptions of the program's purpose varied, many in IRS and the few outside IRS who knew (e.g., FBI, White House) of the program regard it as an attempt to suppress a group which threatened the country's security. A centralized effort was deemed necessary because the balanced enforcement programs of the districts had not led to sufficient efforts against "activists" to satisfy IRS' critics, and because the threat was nationwide and involved some national organizations.

The Special Service Staff was not an Intelligence Division project 126 but it was an information-gathering project in which some of the information gathered was transmitted to the field for appropriate action. The creators of SSS have uniformly testified that they did not intend that it would result in enforcement of the tax laws along ideological lines; that SSS was simply to gather information and disseminate it to the field where the normal decentralized controls of the tax system would assure that the information would result in no disproportionate enforcement effort. 127 Districts, it was presumed, would resist referrals which did not meet normal IRS criteria for tax investigations. In fact, focusing intelligence collection on ideologically-selected groups inevitably resulted in disproportionate enforcement efforts against them. Even had the decision whether to refer a particular case to the field been wholly objective, SSS targets would have shouldered a concentrated burden of tax enforcement because of the disproportionate increase in the gathering of information on them. Additionally, the structure created to accomplish the purposes of SSS were the controls normally present in district operations.

A detailed documentary and transactional history of the origins of SSS is contained in two prior Congressional reports 128 on the subject.

Its origins will merely be summarized here. 129

### *B. Congressional Influence*

During the six months prior to the formation of SSS, staff members of the permanent Subcommittee on Investigations of the Senate, Committee on Government Operations (Permanent Subcommittee) had been reviewing IRS files on activist organizations, both in the field and in Washington. 130 As a result of this review, the Permanent Subcommittee became aware of the extent of IRS activity in its area of interest, and expressed criticism that the IRS had not been more active. At a hearing on June 25, 1969, the Permanent Subcommittee "raked over the coals -- organizationally, not individually" 131 Mr. Leon C. Green, Deputy Assistant Commissioner (Compliance) for the lack of IRS activity in the area of ideological or activist organizations. As Mr. Green interpreted the Committee's criticism, it related purely to the likelihood that the organizations and individuals associated with them were escaping tax liabilities.

### *C. White House Influence*

There is evidence of a direct White House interest in SSS, as contrasted with the more generalized interest of the Permanent Subcommittee, in IRS policy toward activists. 132

1. White House General Criticism and Encouragement. -- Tom Charles Huston in early 1969 recommended to President Nixon that the IRS examine left-wing tax exempt organizations to be sure they were complying with the tax laws. 133 President Nixon reportedly concurred, and Dr. Arthur Burns was asked to speak with the Commissioner of Internal Revenue about the President's concern. 134 According to Commissioner Thrower's memorandum of the subsequent (June 16, 1969) conversation with Dr. Burns, the latter expressed the President's concern.

According to Commissioner Thrower, he may have expressed the President's general concern to Assistant Commissioner (Compliance) Bacon, who had responsibility for the Audit, and Intelligence Divisions, but did not recommend or discuss the establishment of an organization such as SSS.

about enforcement in the area of exempt organizations. The President had expressed . . . great concern over the fact that tax-exempt funds may be supporting activist groups engaged in stimulating riots both on the campus and within our inner cities. 135

Four days after the meeting between Messrs. Burns and Thrower, Mr. Huston advised Roger Barth (Assistant to the Commissioner) by memorandum that the

President is anxious to see some positive action taken against those organizations which are violating existing regulations, and I have assured him that I will keep him advised of the efforts that are presently underway. 136

On July 1, 1969, Eddie D. Hughes, a special agent in the Alcohol, Tobacco and Firearms (AT&F) Division of IRS 137 and an expert in militant organizations, gave a briefing on militant organizations to the staff of the Assistant Commissioner (Compliance) Mr. Bacon. Mr. Hughes had been summoned to Washington, D.C., by the head of AT&F, who, according to Mr. Hughes, advised him he was to help prepare a report for the White House. 138 Following the briefing, Mr. Hughes helped Bernard Meehan, the Chief of Staff of the Assistant Commissioner (Compliance) prepare a report 139 on ideological organizations to Mr. Barth. 140 The report begins:

In furtherance of the recent high level interest shown in the activities of ideological organizations ...

and discusses current IRS activity in the area of ideological organizations. Mr. Huston has stated he believes he saw the memorandum and that Mr. Barth had sent it to him.

2. Evidence of Early White Home Interest in SSS. -- An early meeting of the organizers of SSS occurred on July 24, 1969. Mr. Meehan of the Compliance Division attended the meeting at the direction of Mr. Bacon, the Assistant Commissioner (Compliance), and, according to Donald Virdin (who took the minutes) ran the meeting. Mr. Virdin stated that he received a call during the afternoon of July 24 from someone in the Compliance Division directing him to hasten his preparation of the minutes, and that as a result, he had no time to correct several typing errors in the draft. 141 Mr. Virdin wrote the following memorandum regarding an early morning telephone conversation with Mr. Meehan (who had run the July 24 meeting for the Compliance Division) in which Mr. Meehan complained of being bypassed by the newly-appointed head of the SSS (initially called the Activist Organization Committee):

DISC "ON NEED-TO KNOW BASIS ONLY"

CP:C:D  
July 31, 1969.  
8:30 a.m.

Memorandum for file:

Subject: Activist Organizations Committee.

Mr. Meehan called. We were very upset because Mr. Wright [head of SSS] had discussed this matter with Mr. Green [deputy to Mr. Bacon] yesterday. Mr. Meehan said he wondered what was going on and why it was necessary for Mr. Wright to discuss this with Mr. Green.

Mr. Meehan said that the creation of this organization had been discussed with Mr. Bacon [Assistant Commissioner (Compliance) and Mr. Green's and Mr. Meehan's superior] that Mr. Meehan represented Mr. Bacon at the meetings creating this organization; and that the instructions given by Mr. Meehan were those of Mr. Bacon. The reason why Mr. Meehan sat in the meetings is because Mr. Green was absent.

Mr. Meehan's concern is that there may be conflicting instructions; thus, even though Mr. Green is thoroughly familiar with the matter, the original instructions were those of Mr. Bacon. *A copy of the minutes of the meeting which he had prepared were forwarded to Mr. Barth in the Commissioner's office, and Mr. Meehan says now they are over at the White House. Thus, he is most distressed that we might be taking some action contrary to our original commitments.* [Emphasis added.]

-- D.O. VIRDIN. 143

Mr. Huston has stated he had no discussion with Mr. Barth regarding establishing SSS. 144 There is no evidence that the White House ordered or specifically suggested its establishment. The evidence does suggest, however, that because SSS was in part a response to White House interest in the IRS' acting against ideological organizations, the White House was kept advised of the specific action IRS was taking and that there was some feeling within IRS that the Service had made a "commitment" to the White House to proceed with SSS. 145

*D. Establishment of SSS*

Deputy Assistant Commissioner (Compliance) Leon C. Green recommended establishing the organization which became SSS on June 25, 1969, immediately following his testimony before the Permanent Subcommittee, and apparently as a direct consequence of his "raking over the coals." Mr. Green's thought, shared by his superior, Mr. Bacon, was that the SSS would gather information on activist and ideological groups, analyze the information to determine if tax questions or violations were present and refer the information to the field for whatever action the field deemed appropriate. 146 The organization was to have no authority to initiate investigations or audits, but was merely to gather and disseminate information. One of the main reasons for not giving the organization line authority was the concern that the members of the organization would develop a non-tax orientation as a result of the considerable contact it was anticipated it would have with the FBI, the Internal Security Division of the Justice Department, and other intelligence organizations concerned with subversives.

#### *E. Administration of SSS*

SSS was originally a committee [the "Activist Organizations Committee"] composed of representatives of the three IRS Compliance Divisions, Audit, Collection and Intelligence, and of Alcohol, Tobacco and Firearms (AT&F). 147 It was directly under the Assistant Commissioner (Compliance); its work was to be supervised by the staff of the Assistant Commissioner, in particular, the Deputy Assistant Commissioner (Compliance), Mr. Leon Green. In this respect, SSS administrative position was analogous to that of the OCD National Office coordinator with the exception that the National Office Coordinator was under the Director, Intelligence Division, and was thus one step further removed from the Assistant Commissioner.

#### *F. Secrecy of SSS*

The IRS decided very early to keep the existence of SSS a secret from those inside and outside of IRS who had no "need to know" of SSS. In a "talking paper" written before a meeting during the formative stages of SSS, the author commented:

In another area we must be particularly careful. At least one or more of these organizations apparently consider themselves to be political organizations. This is an extremely delicate and sensitive area and the Chief Counsel will have to provide guidance. We certainly must not open the door to widespread notoriety that would embarrass the Administration or any elected officials. This is one of the reasons why we are not publicizing this Committee except as such publicity may be necessary within the Service. 148

Because of the classified documents SSS handled, all its members had to have top secret clearances. While the existence of SSS was disclosed in the Internal Revenue Manual in 1972 when word regarding its operations appeared in the press, 149 the entry did not disclose its functions. The Joint Committee on Internal Revenue Taxation did not learn of SSS functions until sometime in 1973 following press stories regarding the activities. 150

#### *G. Operation of SSS*

The Special Service Staff did not function in accordance with the limited, tax-oriented purpose for which Mr. Green and Mr. Bacon established it. In practice, Special Service Staff: (1) believed its mission included saving the country from subversives, extremists, and anti-establishment organizations and individuals; (2) reviewed for audit or collection potential organizations and individuals selected by other agencies, such as the Internal Security Division of the Justice Department and the FBI, on bases having no relation to the likelihood that such organizations or individuals had violated the tax laws; (3) after reviewing information regarding such organizations and individuals, referred cases to the field for action, some of which did not meet IRS criteria for audit or collection action; (4) at times used its status as a National Office organization in a partially successful effort to pressure the field into proceeding further with audits and collection action than the field would have done in the absence of pressure from the National Office.

Both Mr. Bacon and Mr. Green testified they recognized the danger that SSS would develop a mentality similar to that of the intelligence organizations with which it dealt on a daily basis. Mr. Green testified that he perceived that Mr. Wright soon felt he was "participating in an effort to save the country from dissidents and extremists" 151 and that Mr. Wright had a tendency to inflate the importance of the SSS function through identifying with the larger fight against extremists. 152 Mr. Green usually read Mr. Wright's bi-weekly reports, several of which contained clear indications that tax considerations were not always paramount in SSS decisions to refer cases to the field. In one such report, 153 Mr. Wright complained of one of the "very few" SSS referrals the field had rejected.

The Detroit District has submitted a memorandum report stating they have reviewed the information submitted to them in our proposal for possible Audit action, but have concluded that enforcement action will not result in additional tax liability of "Material compliance consequence." This is one of the *very few declinations* we have received on [SSS] cases.

We are not questioning the District decision or its right to make the decision, as our referral letters (see copy attached) leave broad options. However, the information available indicates the individuals involved may be underreporting their income and *they are notorious campus and anti-draft activists having arrest records under antiriot laws. They are the principal officers in the Radical Education Project, an offshoot of the Students for Democratic Society, and have been identified as members of certain Communist front organizations.*

This matter is cited in this report only for the purpose of suggesting that while revenue potential might not be large in some cases, *there are instances where enforcement against flagrant law violators would have some salutary effect in this overall battle against persons bent on destruction of this government.*" [Emphasis added.]

Both Mr. Bacon and Mr. Green also testified that, while they made some efforts to check this tendency on the part of SSS, they relied largely upon the independence of the decentralized field organization to prevent any abuses from actually occurring. 154 The evidence is that this reliance was misplaced. On the basis of interviews of field personnel who handled some SSS referrals, the staff believes that, in practice, except in the "very few" cases referred to by Mr. Wright in his memorandum, the field honored the National Office referrals even where it believed the recommended action was not justified by the tax merits of the case. 155

The attitude reflected in the bi-weekly report quoted above resembles the attitude of the OCD. This time, however, the targets were not major criminals. The position of the SSS in the IRS structure was as anomalous as that of the OCD Coordinator and rendered ineffective existing mechanisms for checking abuse -- in this case the abuse of ideologically-motivated tax enforcement. These analogies of motive and organization were apparent to the creators of SSS. A July 2, 1969, memorandum of an SSS organizational meeting alluded to the administrative resemblance:

The Chairman of the task force [SSS] will establish liaison with the Assistant Attorney General, Internal Security Division, Department of Justice, and will coordinate matters with that Division in the same fashion that the Intelligence Division now coordinates OCD matters with the Criminal Division of Justice.

A July 22, 1969 memorandum alluded to the analogy of purpose:

In effect, what we will attempt to do is to gather intelligence data on the organizations in which we are interested and to use a strike force concept whereby all Compliance Divisions and all other service functions will participate in a joint effort in our common objective.

While it is contended by those who established SSS that it was not intended that activists receive any more attention than normal tax compliance criteria would dictate, the creation of a special National Office bureaucracy to focus on activists is inconsistent with this view. SSS was created because the application of normal enforcement criteria by the field was not yielding enough results to satisfy congressional and White House critics. What began as a bureaucratic effort to still criticism by focusing special attention on the problem became, in the minds of the SSS group, a crusade against alleged threats to the national security.

1. Special Service Staff Target Selection Criteria. -- The basic modus operandi of SSS was; 1) to establish files on individuals and organizations falling within its purview; 2) to engage in a routine examination of a variety of sources of information to determine the likelihood that any of the organizations or individuals were not in compliance with the tax laws. 156 In a very general sense, this procedure parallels "compliance" programs the IRS engaged in regularly. An IRS district will often identify an area of probable non-compliance and engage in an intensive investigations of taxpayers falling within the category. On occasion, the IRS initiates random compliance programs, such as conducting mass interviews of all employees in a certain business district to see whether employers are complying with withholding laws, or checking whether all attorneys in a particular area are filing tax returns. The element which distinguishes all these programs from the SSS program is that the criteria for selecting the targets in normal compliance programs are related to enforcement of the tax laws. Even in the cases of random checks, the taxpayers selected are generally those with high incomes where nonfiling of returns can lead to a significant revenue loss. 157 The Selection criteria of SSS were neither random nor directly tax related. 158

Most individuals and organizations that became targets of SSS did so by virtue of becoming targets of one of the agencies from which SSS obtained information. 159 The reason for this selection of tax enforcement targets by nontax agencies was set forth in the following passage from the minutes of an early SSS organizational meeting.

Since the Department of Justice Internal Security Division has a primary responsibility of determining what organizations might fall in this category (ideological organizations), it will be necessary to determine from that Department additional information as needed. 160

It is apparent that the IRS had doubts about its competence to determine what an ideological organization was, and would largely leave that determination and thus the determination of the targets of its enforcement program to agencies with greater expertise. This feeling of inadequacy on the part of IRS is a direct reflection of the absence of a relationship between the selection criteria and tax issues. 161

The FBI was the largest source of SSS targets. While still in its formative days, SSS was placed on the FBI's distribution list in response to a request from Assistant Commissioner (Compliance) Bacon for information regarding

various organizations of predominantly dissident or extremist nature and/or people prominently identified with those organizations. 162

The FBI, perceiving that SSS would "deal a blow to dissident elements" 163 decided to supply reports relating to the category of individuals and organizations identified by Mr. Bacon.

SSS felt that it had no authority to destroy FBI reports. 164 It had nowhere to keep them except in files, so it established files on the subjects of the FBI reports. Once a file was established routine SSS procedures swung into effect and, except for those which were not checked because of shortage of manpower, the files were reviewed; IRS master files were checked to determine if the subjects had filed returns; if they had not, investigations were initiated in the field; if they had, the returns were reviewed for audit potential. 165 The FBI did not select the reports it forwarded on the basis of the presence of a probable tax violation, but on the basis of the criteria Mr. Bacon had supplied; yet the furnishing of the report resulted in establishment of an SSS file and, subject to resource limitations, to a review of possible tax liability.

Among the other lists of "extremists," "subversives" and dissidents SSS received was a list of 2,300 organizations the FBI categorized as "Old Left," "New Left," and "Right Wing". The bi-weekly report for the week of June 15, 1970, describes SSS plans for this list:

Through the cooperation of the FBI we have received a listing of 2300 organizations categorized as "Old Left," "New Left," and "Right Wing." Many of these have tax exempt status. We propose to screen the entire list against the Exempt Organization Master File and the Business Master File and establish files on these organizations where noncompliance with filing requirements is indicated.

The SSS also received the printouts of the Inter-Divisional Information Unit (IDIU) of the Department of Justice, which varied between 10,000 and 16,000 names. 166 In the August 29, 1969 bi-weekly report acknowledging receipt of the printout, Paul Wright stated:

As a major assist in this Committee's effort, we received on August 26, 1969, subject data sheets (hard copy computer printout) containing about ten thousand names of officers, members and affiliates of activist, extremist and revolutionary organizations.

By the time SSS was disbanded in 1973, it had reviewed more than half the lists and established files on those persons on whom it did not yet have a file. In addition to containing the names of known activists, the IDIU printouts also contained the names of many prominent citizens whom the Justice Department thought could be of assistance in quelling a civil disturbance in a particular locality should one occur. 167 SSS personnel were unaware that the IDIU printout contained the names of these persons and indiscriminately established files on them.

Under the above procedures, even if SSS had adhered strictly to established IRS criteria for determining whether audit or collection action was justified, SSS subjected its targets to a systematic, disproportionate degree of tax enforcement. The criteria which determined the targets of this special enforcement effort were not tax-related IRS criteria, but the criteria of the FBI and the Internal Security Division of the Department of Justice. The special enforcement effort was applied to the "dissidents" on whom Assistant Commissioner (Compliance) Bacon had requested FBI reports, on the "Old Left", "New Left" and "Right Wing" organizations the ISD chose to list, and to the subjects of the IDIU printout. The criteria the FBI applied in selecting reports for dissemination to SSS are indicated by the reason for which the FBI decided to comply with Assistant Commissioner Bacon's request: that SSS would "deal a blow to dissident elements"; the criteria were not related to probable noncompliance with tax laws. They were selected because of their political and ideological beliefs and activities. Since SSS routinely reviewed the names on the lists for tax compliance, politics became the criteria for an IRS tax review.

The routine procedures of SSS thus focused a unique enforcement effort on a category of organizations and individuals defined by political criteria. Whether the criteria were blind to the particular political stripe of the organization or individual is not as important as the concentration of tax enforcement efforts against dissidents as a group.

The result was to employ the enormous power of IRS attention to dissent on both sides of center. That SSS knew what it was doing and intended to accomplish non-tax goals through the application of the tax laws is apparent from the writings of its Chief, Mr. Wright:

There appears to be high acclaim that the charter of this committee will lead to enforcement actions needed to help control an insidious threat to the internal security of this country. Obviously, we will receive excellent field cooperation and assistance now that our mission is understood. 168

Review is underway on this organization [It] ... produces and distributed motion pictures relevant to individuals engaged in movements advocating radical change in American Society. Organizations with which they do business include the Black Panther Party and the Students for Democratic Society. 169

We assisted Inspection (Internal Security Division) by providing information about war tax resistance organizations and Federal employee peace action groups. 170

We have received from the FBI a listing of all known underground newspapers in the United States and also a list of known editors. We are currently checking these lists against (Business Master File and Individual Master File) registers for possible tax violations. The first case checked out (Free Press of Louisville) will become a field collection referral for delinquent employment taxes. We anticipate the total list will develop a substantial number of similar referrals. 171

Last week we noticed that on an "official only" bulletin board in this building a notice appeared from the Institute for Policy Studies inviting individuals to apply for a new PhD program ... Since IPS has been described by the media as a "Radical New-Left Think Tank" and the Baltimore District will soon propose revocation of its exempt status, we brought the matter of this notice appearing on an official IRS bulletin board to the attention of Internal Security. 172

2. SSS Field Referrals. -- SSS activity went beyond gathering information on subjects selected for reasons not strictly related to tax enforcement. SSS referred some cases to the field for action which did not qualify for referral according to normal IRS criteria, and used its National Office position to effect field action in these cases. Messrs. Green and Bacon believed the decentralized, independent field organization would check any such tendency on the part of SSS. Mr. Green testified that some cases referred to the field "would not have qualified for a referral but for the ideological category in which they fell," 173 that he was relying on the field to reject the file referrals which were not justified on tax merits and to use the same criteria for determining its course of action in the referred cases as it would in determining whether to investigate any other case. 174 Green also stated that while the field closed out many cases referred to it because of the lack of tax grounds upon which action

could be initiated, the fact that cases were referred from the National Office sanctioned by the Special Service Staff probably did result in some cases being examined despite the lack of adequate grounds. 175

Interviews with field employees who handled SSS referrals indicate that SSS' position, as an adjunct of the Assistant Commissioner's office, sometimes effectively negated the built-in check of decentralized field operations. As in the case of the OCD, the IRS had established an extraordinary National Office entity with sufficient authority to short-circuit normal organizational controls without establishing extraordinary controls to replace the normal ones.

The case discussed below is an example of an SSS field referral which appeared to lack an adequate tax basis upon which any IRS action could be based. This judgment was confirmed by the field agent who was asked to handle the case. Yet the field took the action SSS sought to achieve. 176

*a. Meikeljohn Civil Liberties Library*

The Meikeljohn Civil Liberties Library was a San Francisco based organization which provided legal materials to attorneys involved in civil liberties cases. It was a tax exempt organization. SSS received FBI reports 177 indicating that the Library was to sponsor the "Thomas Paine Summer Law School", which in 1970 had given instruction to leftist lawyers. The FBI documents also indicated that three of the instructors at the school would be individuals formerly associated with the National Lawyers Guild and the Communist Party. On the basis of these reports, SSS referred the case to the field on March 16, 1971, 178 recommending that an audit be conducted:

It appears that this organization may be supporting various causes not related to tax exempt purposes. It may be advocating an action which is not allowable, or engaging in paid services to specific lawyers rather than acting as a library. 179

The referral also stated with respect to the instructors at the Thomas Paine Law School which MCLL was allegedly to sponsor:

[One instructor] was on May 3 1967, a member of the National Lawyers Guild. [The SSS referral to the field was dated March 16, 1971.] The House Committee on Un-American Activities ... cites the National Lawyers Guild as a Communist front which ... has failed to rally to the legal defense of the CP and individual members thereof. ...

During April 1969 the President of the NLG spoke at an NLG banquet held in New York City stating that the NLG has organized young people to work in a radical movement which is seeking to destroy a corrupt violent society and replace it with one which will benefit all. He also stated that the purpose of the NLG is to advance the "social revolution" taking place in this country. ...

[Name deleted] is listed as President of MCLL. She was issued "Daily Worker" Press Club subscription 2825 on January 2, 1948.

Press Club subscriptions ... were only issued to CP members at that time.

Section 501 (c) (3) of the Internal Revenue Code governs the exempt status of organizations. An organization can lose its exempt status by engaging in political activity, or advocating one side of an issue. It cannot lose exempt status by reason of the political leanings of its members if those leanings are not reflected in political action by the organization. In the case of MCLL, the SSS referral stated that certain MCLL personnel had had communist affiliations in the past; that MCLL was sponsoring a school some of whose instructors were also affiliated with the National Lawyers Guild, which engaged in political activities. None of these statements established that MCLL was involved in any political activity.

An interview with the auditor who handled the MCLL referral indicates that he conducted the audit even though he believed the information provided by SSS was not an adequate basis for an audit:

The purpose of the Meikeljohn Civil Liberties Library was to make an index of legal materials on civil liberties cases. Some but not all of the information provided by Special Service Staff in its referral was that one or more of the principals of the organization was a Communist. That allegation standing alone would not be sufficient to trigger an audit. 180

The auditor also said:

In this case, however, even if the referral had contained no allegations, an audit might nonetheless have been conducted because no one in the exempt organization branch had ever heard of MCLL. 181

This reaction demonstrates that dissident groups which attracted the attention of SSS were subject to being audited merely because of that attention, notwithstanding the lack of tax-related criteria upon which an audit is normally based.

In this case, the field conducted the audit of MCLL despite the failure of the allegations in the referral to establish or suggest noncompliance. The result of the audit was a determination that there was no evidence MCLL had had any relationship with the Thomas Paine Summer Law School or engaged in any other activity which would jeopardize its exemption. 182

*b. Collection Referrals*

In the face of collection referrals, the field reaction was completely submissive. Collection personnel often treated SSS referrals as orders. A revenue officer in Los Angeles described his reaction to an SSS collection referral on a taxpayer who had filed no returns for several years but had earned only a small income subject to a withholding more than adequate to meet his tax obligation: 183

The SSS had a report from an unidentified organization that [taxpayer] had been employed in 1969 and 1970, and had earned from \$2,000 to \$3,000 in both years *subject to withholding*, and the individual master file showed no returns from him in those years. A compliance check was requested. [I] ... found that in 1968 [taxpayer] was a student and had no income, in 1969 and 1970, he had income, but filed no returns, but had he filed returns, he would have been entitled to a refund. [Emphasis added]

There is no element of discretion on the part of the Revenue Officer on whether to conduct a compliance check once one is requested by the proper Form 2990. There is discretion in closing the file without effecting compliance under the de minimus rule. 184

A second case corroborates the view that Collection did not question SSS referrals. A revenue officer signed the following summary of his interview: 185

This was a case of mistaken identity. SSS was interested in the wife of an activist, and the lady to whom the referral related happened to have the same name. *The referral contained no information indicating the basis to believe the taxpayer was not in compliance* with the tax law, but was merely a request for a "compliance check", which is an investigation of whether the individual filed tax returns and, if not, whether they are required to do so.

*... A revenue officer would not normally question the reason for a compliance check. ...* In this case, it was determined there was full compliance, and, as a result of the investigation it was also determined that the taxpayer being investigated was not actually the one in which SSS was interested.

3. SSS Pressure on Field Personnel. -- SSS file material does not tell the whole story of SSS influence over the subsequent handling of referrals. 186 Much of this influence was by telephone and was not reduced to writing, at least not in detail. 187 In a few cases the field personnel were able to recall the impact which SSS contact had on the handling of the case. In a case in St. Louis involving an organization which advocated resistance to the "war tax", the revenue agent who was the "case reviewer" (whose job is to determine whether to accept the recommendation of the field agent who actually conducted the investigation) recalled how a telephone conversation with an SSS member influenced his review of the case. The field agent had filed three reports, each recommending that the case be closed and giving reasons. Under normal procedures, according to the revenue agent, he would simply have closed out the cases in accordance with the field agent's recommendations. However, because of the "special procedures" applicable in this Special Service Staff case, 188 he first called the National Office, SSS, to discuss the matter. SSS criticized the field agent's recommendations, saying, *inter alia*: 189

Although it's the District's decision on type of closing he [SSS member] hates to see this happen since they want to get [the organization] and [individuals] on filing records (for comparisons, etc.). At any rate, they will review and return to District with suggestions if applicable. Viet Nam being over is not a valid reason for closing as the [organization] will (and is) redirecting their attention to other problems.

As a result of this conversation, the reviewing revenue agent returned the case to the field agent for further work. 190 Thus, the organization received more prolonged attention than the field would have accorded it on its own.

4. Tax Results of SSS Actions. -- The perception which resulted in the establishment of Special Service Staff, that activists and dissidents posed a significant problem of noncompliance with the tax laws, was not validated by the results of SSS compliance checks. The number of cases SSS referred to the field was small in comparison to the number of files it established and reviewed. 191 Only 225 cases were referred -- after SSS had made a compliance check on about 5,000 of the 10,000 taxpayers on its list.

As of the date of publication of the Joint Committee Report, June 5, 1975, the four-year SSS project had resulted in assessment of a total of \$622,000 (\$82,000 against organizations, \$580,000 against individuals), \$501,000 of which was attributable to four cases. Thus, SSS success in focusing greater than normal IRS attention upon its target group did not have a widespread tax impact on dissidents and activists.

### III. THE IDEOLOGICAL ORGANIZATIONS PROJECT

The IRS reaction to Congressional and White House pressure in establishing the Special Service Staff was not unique. In 1961, the IRS, in direct response to statements made by President Kennedy at a news conference, selected 18 organizations for concentrated tax enforcement activity. The "Ideological Organizations Project", although smaller in scope than the Special Service Staff, reflected as clearly IRS a response to pressures to enforce the tax laws against targets selected for it by others according to political criteria.

#### *A. Origins of the Ideological Organizations Project* 192

On November 16 and 18, 1961, President John F. Kennedy made two speeches critical of right-wing extremists. At a news conference on November 29, 1961, in response to a question concerning reportedly "sizable financial contributions to the sort of right-wing extremists groups you criticized last week," the President stated:

As long as they meet the requirements of the tax laws, I don't think that the Federal Government can interfere with the right of any individual to take any position it wants. The only thing we should be concerned about is that it does not represent a diversion which might be taxable -- for nontaxable purposes. But that is another question *and I'm sure the Internal Revenue System examines that.* [Emphasis added.]

The next day, the Assistant Commissioner (Compliance), William Loeb, sent a memorandum to Dean J. Barron, Director of the Audit Division, calling his attention to the President's news conference and directing that the Audit Division secure from the Attorney Advisor to the Commissioner, Mitchell Rogovin, a list of organizations to be examined for possible tax liability by the IRS. 193 On December 20, 1961, Rogovin forwarded to Barron a list of 18 organizations partially compiled from the December 4 and 8 issues of Newsweek and Time magazines, respectively, for the sample checks. 194

During the next month a single left-wing organization was added to the list, bringing the total of targeted groups to 19. 195 Apparently, none of the organizations were chosen on the basis of any information that they were not in compliance with tax laws.

#### *B. IRS Initial Investigative Action*

After the organizations which were to be the subject of the sample compliance checks had been designated to the Audit Division, normal IRS machinery became operational, with the sample checks being conducted as a National Office project. The Director of the Audit Division, in a March 9, 1962, memorandum to the Assistant Commissioner (Compliance), stated that the Audit Division had requested examinations of six large corporate taxpayers who were alleged to be financial backers of extremist groups in New York and San Francisco. 196 It had also requested examinations of the activities of three large extremist groups in New York and San Francisco and was soon to send memoranda to the Assistant Regional Commissioners (Audit) supervising audit activities in regions which seven of the other 19 organizations were based. 197

While the Audit Division was looking at the activities of the organizations for possible tax consequences, it is apparent that its concentrated efforts were related to the criteria that initially caused the organizations to become IRS targets: their public political activities. In the March 9, 1962, memo, the Audit Director stated:

We think it advisable to examine the organizations listed in the memorandum to the Assistant Regional Commissioner (Audit), San Francisco, since these organizations appear to be among the largest and most publicized groups.

Although the IRS was aware that the activities, and not possible tax liabilities, of the target organizations were the reasons they were selected, it attempted to place its actions within the proper scope of IRS enforcement activities, stating:

[W]e have used the term "political action organizations" rather than "right-wing organizations" throughout this discussion. This has been done to avoid giving the impression that the Service is giving special attention to returns filed by taxpayers or organizations with a particular political ideology." 198

Indeed, on April 2, 1962, almost five months after the initial effort was begun, the Commissioner's Office forwarded to the Audit Division a list of 19 organizations considered by the Assistant to the Commissioner to be "left of center." 199 In an interview with committee staff, 200 Mr. Rogovin could not recall the sources he used to compile the list of left-wing organizations, but stated he may have gotten some of them from the FBI.

Rogovin's memorandum adding the left-wing organizations, while attempting to make IRS activities balanced in that organizations on both sides of center were to be checked, did not in fact accomplish that purpose. In a memorandum from the Commissioner to the Under Secretary of the Treasury, the Commissioner acknowledged IRS' primary interest in right-wing organizations, stating: 201

The activities of so-called extremist *right-wing political action* organizations have recently been given a great amount of publicity by magazines, newspapers and television programs. This publicity, however, has made little mention of the tax status of these organizations or their supporters. *Nevertheless, the alleged activities of these groups are such that we plan to determine the extent of their compliance with Federal tax laws.* In addition, we propose to ascertain whether contributors to these organizations are deducting their contributions from taxable income. [Emphasis added.]

The following is a list of the largest and most publicized extremist groups whose activities we have directed our field offices to examine: ...

.....

Inasmuch as we are not certain any of these organizations or their benefactors are failing to comply with the tax laws, we believe it prudent to avoid any possible charges that the Service is giving special attention to a group with a particular ideology. In furtherance of this goal, we are planning to examine the returns of a representative group of alleged left-wing organizations.

On the next day, the Commissioner informed Attorney General Robert Kennedy of the new program, noting that previous interest had been expressed in the tax status of right-wing groups by John Seigenthaler, Special Assistant to the Attorney General. 202

On February 8, 1963, the Assistant Commissioner (Compliance) provided the Commissioner of IRS with a status report 203 of the "Test Audit Program of Political Action Organizations" in which he summed up IRS efforts directed at 12 allegedly right-wing organizations and 11 allegedly left-wing organizations. At that time,

... nine allegedly right-wing organizations have been audited, including four exempt organizations. Revocation of exempt status was recommended in two of these cases. ... No changes in tax liabilities were recommended upon examination of the five taxable organizations. ...

Only four of the allegedly left-wing groups have -been examined, including two exempt organizations. No changes were recommended as a result of these examinations ...

Additionally, the Assistant Commissioner stated that no evidence had been found that individual taxpayers were claiming deductions for contributions to non-exempt political action organizations. The memo also contained a summary of the results of IRS actions which had been undertaken at that point and noted that IRS would concentrate on exempt political action organizations in the future. 204 In July of 1963, the White House was brought up-to-date on IRS activities directed at ideological organizations and expressed renewed interest in the project. 205

#### *C. The Planned Expansion of Project to Audit of 10,000 Organizations*

A status report from the IRS Commissioner to the Deputy Special Counsel to the President detailed IRS' findings with respect to seven of the right-wing organizations, and stated that it had completed nine audits of left-wing organizations with one requiring further study. 206 The report also announced IRS' plans for "10,000 examinations of exempt organizations of all types including the extremist groups" in 1964. White House pressure intensified upon receipt of this report. On July 23, and in response to the report, President Kennedy called the Commissioner, urging IRS to proceed with an aggressive program on both sides of center and mentioning that Congressional hearings were scheduled for January 19, 1964. 207 Within the next month, IRS officials met twice with White House representatives and once with the Attorney General. 208

The IRS response to the interest of the White House and Attorney General again intensified 209 and plans to initiate the new surveys were drawn up. 210 A list of right- and left-wing organizations was to be prepared with the survey to first concentrate on the examination of right wing groups exempt under the provisions of section 501 (c) (3) of the Internal Revenue Code. All cases which had been begun as a result of President's initial remarks were to be absorbed into and completed during this second operational phase. 211 Files of all target organizations were to be checked to see if prior allegations had been made against them and if they affected the exempt status of the organizations. A procedural outline for field action in examining the organizations was adopted. 212 On August 2, 1963, the task force responsible for conducting the examinations met again and decided to begin the survey of well-known organizations already identified and adopted procedures to ensure meeting the October 1, 1963, deadline which had been established at the last meeting. 213

Mitchell Rogovin, Attorney Assistant to the Commissioner, continued to act as IRS liaison with the White House and Justice Department during this period of intensive IRS activity. On August 20, 1963, at the Attorney General's request, he briefed the Attorney General on the progress of the program. 211 On August 21, Rogovin was requested to and met with Myer Feldman at the White House, where he briefed Feldman on the expanded audit program and went over the names of the 24 organizations then included in the program. Feldman expressed his desire that the program be completed by the October 1 deadline and suggested that two organizations on Rogovin's list be deleted. 215 Feldman also stated he would make available to Rogovin an "extensive confidential memorandum he had prepared for the President touching on both exempt and non-exempt organizations." 216 On August 29, 1963, Rogovin, in a letter to a member of the task force, suggested the deletion from the current list of the two organizations mentioned by Feldman, suggested the addition of two organizations which were associated with an organization already on the list, and recommended the addition of three other organizations. 217

The IRS plan to audit 10,000 exempt organizations never materialized. Pursuant to the plan devised at the meeting, IRS employees began to draw up a list of target organizations. A list of 24 organizations was eventually prepared, with 19 of them being categorized as "right-wing". During this phase of the program, field personnel were responsible for compiling information in the field and transmitting it to the National Office, where the task force which had been handling the Ideological Organizations Project analyzed the information and informed the field as to what action should be taken. Procedures were later adopted which required review by the Chief Counsel of all revocation recommendations by the task force. Of the 15 cases in which the task force recommended revocation (14 right-wing), only 4 were approved (3 right- and one left-wing). 218 The remaining recommendations were either rejected or sent back to the field for further Study. 219

IRS efforts directed at the ideological organizations apparently waned as White House interest decreased. The last status report to the White House was sent on March 23, 1964. 220 Later status reports to the Treasury Under Secretary indicate that in 1966 three organizations lost their exempt status and four exemptions were revoked in 1967 (of these seven, six were right-wing). 221 The program was apparently completed and surveys of organizations labeled as ideological were integrated into normal IRS enforcement procedures after 1967.

#### *D. Analysis of Ideological Organizations Project*

The Ideological Organizations Project resembled the Special Service Staff in ways other than the selection of targets based on their ideological beliefs. Although IRS justified the project as an effort to strengthen its exempt organization laws, the IRS perceived the need to initiate the tax enforcement methods only after, and in direct response to, statements of the President. As in the case of the Special Service Staff, the IRS was not totally unaware of the possibility that an area of potential revenue

existed in the exempt organizations area and had considered the tax exempt status of political action groups prior to the President's remarks. It had, however, based on its previous experience, decided that the area was one which bore little potential for revenue. In his July 11, 1963 memorandum to the President's Deputy Counsel, the Commissioner of IRS stated:

In the past, examinations of exempt organizations were held to a minimum since these difficult and time-consuming audits were rarely productive of revenue. Also, for every man year spent on such examinations there is a potential loss of approximately \$175,000 otherwise produced from income tax audits.

Despite this reasoning and these statistics, the IRS response to the President's expressed interest was an attempt, although never carried out, to increase the examination to 10,000 during fiscal year 1964.

Just as the Organized Crime Drive had brought about a reduction in the accounting training required of special agents, the Ideological Organization Project necessitated a similar change in the areas of concentration of audit personnel assigned these cases: the analyses of contents of literature and activities of the target organizations. The Commissioner stated:

The examination and administrative processing involved in revoking exempt status of ideological organizations is complex. An "educational" organization may advocate a particular point of view, but, under our regulations, the agent must analyze all publications, speeches, and seminars to determine that there has been a full and fair exposition of pertinent facts to allow formation of independent opinion by the public. The same detailed analyses is required on whether more than an insubstantial part of a charitable organization's activities are the carrying on of propaganda to influence legislation.

## **IRS INFORMATION GATHERING PROCEDURES**

### **I. THE INFORMATION GATHERING AND RETRIEVAL SYSTEM**

#### *A. Introduction*

In May, 1973, the IRS established the Information Gathering and Retrieval System. The IGRS was a new approach to intelligence gathering, and to the storage and retrieval of so-called "general" intelligence, as contrasted with intelligence developed in the course of an investigation of a specific tax case. Under the system, significant intelligence resources were to be diverted from investigation of specific tax cases and allocated to gathering general intelligence. The purpose of this allocation of manpower was to develop tax cases which the existing IRS procedures missed. A crucial element in the system was computerization of the storage and retrieval of general intelligence. The computer, it was thought, would make it possible to retrieve masses of data by category -- e.g., by subject name, by illegal activity category -- and would thus make gathering vast quantities of general intelligence fruitful.

Within a year of the formal establishment of IGRS, the system came under fire in the press as an alleged secret IRS "hit list" and an index of dossiers on the personal lives of Americans containing data unrelated to tax law enforcement. Allegations linked the system to the so-called Nixon Enemies List. It was alleged IGRS was part of a vast Federal data bank to which other agencies, such as the FBI, had unlimited access. The Committee has investigated these allegations in the course of studying the origins, purpose and operation of IGRS.

IGRS fell short of its goals of enhanced case development and improved intelligence retrievability. In general, more "intelligence," most of it of little or no value, was input into IGRS than the computer could effectively retrieve. In a number of districts, IGRS fostered unrestrained, unfocused intelligence gathering and permitted targeting of groups for intelligence collection on bases having little relationship to enforcement of the tax laws. While there were no "dossiers" of personal information (with the possible exception of Operation Leprechaun) in the districts the Committee investigated, there were the beginnings of politically motivated intelligence collection in at least one district; and evidence that the fruits of similar investigative efforts in two districts had been destroyed. The lack of adequate control on the system resulted in the ultimate inclusion of 465,442 names on the IGRS index. IRS traditional reliance on agent discretion combined with this new, broad intelligence collection effort to produce a dangerous machine which, had it continued unchecked for a long period, could in some districts have approached the monster some newspaper accounts described.

#### *B. Origins of IGRS*

Before IRS implemented the Information Gathering and Retrieval System during the early 1970's, its devices for the storage and retrieval of general intelligence in a typical district consisted of two basic filing systems: (1) an "information item" system, and (2) investigative files. 222 The information item system was in theory a file of information the IRS received (e.g., through an agent's investigative efforts, an unsolicited informant's letter, a referral from another law enforcement agency) amounting to an allegation of tax fraud. 223 Some information items would lead to intelligence investigations; some would result in audit or collection action; those of questionable value would simply repose in the files. 224 These files were indexed according to subject and were not cross-indexed to related files and subjects.

An investigative file 225 consisted of all the information collected in determining the validity of a specific allegation of tax fraud. The IRS indexed these files only by the name of the subject of the investigation. There was no formal system of cross-indexing information between agents; informal systems for information exchange were at best intra-district systems. Intelligence of potential value in several investigations would normally simply repose in the file in which it was basically developed.

A third, informal information storage system existed: the "squirrel" file. 227 Since there was no designated repository for information which did not amount to an allegation of tax fraud, but was of potential future value, treatment of such

information varied widely between districts and between agents. 228 Some districts had local filing systems which made the information available to some extent to all agents in the district. Some districts improperly used Information Item Files. In most districts the information reposed in the agents' drawers, as they were primarily considered an individual special agent's private files. In no case was the information readily available outside the district in which it was collected, and no means existed for determining its potential value to other districts. 229

Before IGRS and the information item system, intelligence gathering (as contrasted with the passive receipt of unsolicited information) was generally restricted to active investigations of specific allegations. The collection of "general" intelligence -- information of potential value but not needed for a specific case occurred only incidentally to specific investigations, and, because of the absence of any filing system for such information, was largely not retrievable except by the agent who ran across it.

In September, 1963, the National Office Intelligence Division expressed a need to improve the retrievability of the information the district Intelligence Division collected. 230 While decentralized intelligence operations meant fragmented information, organized crime was both widespread and monolithic. The flagrant tax violator was becoming more sophisticated in his efforts to avoid payment of taxes. The Intelligence Division wanted to devise means to aggregate the information each of 58 districts had gathered on organized crime. National Office Intelligence Division planners proposed a mechanized cross-indexing system which would make the intelligence retrievable nationwide without altering the scope of intelligence gathering.

The result was the Central Index of Racketeer and Wagering Investigations (CIRWI), which would contain all intelligence on organized crime figures, cross-indexed so that information from one district would be available to other districts concerned with related investigative targets. 231

The CIRWI was to be a prototype system restricted to the "limited and identifiable universe" of organized crime, a pilot project to gauge the usefulness of a nationwide retrieval capacity. 232 However, although improvements in the system were under constant study, the thought of extending the system beyond the organized crime area was not pressed for several years. 233

In March 1968, the Planning and Procedures Branch reported the interim results of a study of the CIRWI and of possible improvements in it. 234 It found the system had been a "valuable and effective tool in identifying racketeer subjects and their interrelationships." The report recommended further study of the operation of the system and exploration of possible improvements with those districts with most experience in its use.

As the National Office reconsidered its approach to intelligence gathering and retrieval, several districts were experimenting on their own with new systems of retrieval and new approaches to collection. In 1968, the Los Angeles District created a special intelligence-gathering unit, 235 denominated a "Case Development Unit", comprising two special agents who were to devote their time to systematically gathering intelligence calculated to lead to the initiation of actual "numbered" investigations. 236 The unit was expected to concentrate on organized crime figures. 237 This unit was the earliest forerunner of the case development units which would be created under the Information Gathering and Retrieval System. Its function was distinct from any previous IRS intelligence operation in that the gathering of general intelligence was its sole objective, whereas under prior practice the IRS gathered general intelligence only incidentally to specific investigations.

The unit was created at a time when improved data processing and information retrieval systems were becoming available, suggesting a possible combination between gathering general intelligence and storing it in a computerized retrieval system. General intelligence is by definition intelligence the relevancy of which is unclear; it is potentially relevant to as yet unconceived investigations of as yet unidentified taxpayers. For general intelligence to be of value, a system must exist which permits it to be cross-indexed to every category of potential usefulness.

At the same time the Los Angeles District created this unit whose function was to gather intelligence of potential, but undetermined, value, it evaluated and eventually implemented a mechanized microfilm retrieval system called Miracode, which, to some extent, enabled the case development unit to cross-index information to those intelligence gathering targets of potential interest, and to retrieve that information more rapidly than a manual system permitted. 238 The Chicago District established a somewhat similar system with individual agents becoming responsible for case development. The indexing system in Chicago was not as advanced as that in Los Angeles. 239

The remainder of the history of the development of IGRS is a story of the interaction of district experimenters and National Office policy makers. The study group which the Planning and Procedures Branch had recommended studied existing information gathering and retrieval systems and reported on June 25, 1969: 240

We considered the various systems now in use in different districts and the Central Index in operation in the National Office. It is our opinion that the Central Index has not been effective because it has failed to provide the special agent with current useful information. The districts' systems have not been effective due to lack of uniformity, lack of a prescribed formal system and lack of sufficient resources.

We conclude, therefore, that a serious need exists for a formal uniform system, operated by the district offices, that will provide current and useful information.

As in the case of the Central Index, the need for the proposed new system was said to emanate from the threat of organized crime. The report explained:

In recent years the growing menace of organized crime, racketeering and corruption has been recognized as a critical national problem. ... The techniques being used by syndicated crime to infiltrate legitimate businesses and to corrupt public officials have reached new heights of

sophistication. Some of these same techniques are also being adopted by various major subversive and radical elements to further breakdown [sic] the basic fibres of our society. 241

.....

The Intelligence Division has reached the point where it can no longer rely on haphazard, outdated methods to identify those of the criminal element who are evading taxes. Nor can it continue to allow files to be almost irretrievable. Instead, it must meet the demands of the President and the Service and devise a uniform effective system of information gathering, evaluation, dissemination and retrieval to allow it to fulfill this essential element of its mission. 242

The success of the [proposed] program will depend almost entirely upon the full cooperation of every District Director, Chief, Intelligence Division [District Intelligence Division heads], and Special Agent to assure its full implementation and acceptance since the system is basically a district operation.

The reference foreshadows a fundamental problem of the "general" intelligence gathering approach IGRS represented: the lack of objective criteria for target selection, and the resulting tendency to select targets on the basis of the personal predilection of the agent or someone in the National Office. The proposed system included the following key elements: (1) case development units similar to the Los Angeles model; (2) a uniform system for encoding entries into the system for flexible retrieval; (3) a non-automated retrieval system; (4) limitation to organized crime figures.

The IRS did not establish the formal, nationwide system until May, 1973. In the meantime, the districts experimented with a variety of systems. Because of the high degree of local autonomy in IRS intelligence, the variations covered the spectrum from a continuation of the former practice of gathering general intelligence only as part of specific investigations or on a sporadic individual basis to the forward-looking Los Angeles system. 243 Districts tried various methods of automated retrieval of information. Los Angeles experimented with "weighting" data for its potential tax consequences so that when data about a particular subject reached a given weight, his file would automatically be reviewed. 244

Los Angeles also, gained practical experience with the collection efforts of its "case development" unit. The district found that two special agents who devoted full time to gathering intelligence outside the scope of specific investigation gathered an enormous mass of material. By the time IGRS supplanted it, the Miracode retrieval system contained 40,000 documents. 245 This practical lesson in volume in Los Angeles apparently strongly influenced the decision to computerize the IGRS retrieval system.

In May 1973, the National Office issued a directive creating the formal Information Gathering and Retrieval System (IGRS). 246 The system as modified in March, 1974, 247 had two key features not included in the June 25, 1969, recommendations of the study group: (1) the storage and retrieval system was to be computerized; (2) *the targets of general intelligence gathering* were not to be limited to the organized crime figures whose "sophisticated" methods and nationwide operations had been the basis for the study group's recommendations, but were *to include all subjects of the General Enforcement Program*, i.e., all taxpayers who came to the attention of the case development units. 248

The reason for the computerization of the general intelligence input is clear. By the time IGRS was formally implemented, the Los Angeles lesson had been learned: case development units amassed tens of thousands of pieces of information. This practical experience in intelligence gathering since the issuance of the June 25, 1969, study had made it apparent that the computer was the only means of retrieving that data which turned out to be of use in a subsequent investigation, or which, when related to other information, justified opening an investigation. 249 To establish case development units nationwide would result in the collection of so much data that the relatively unsophisticated automated retrieval systems available to the individual districts would be insufficient. All indexing of all general intelligence would have to be performed at the IRS' national computer center in Detroit.

The origin of the decision to extend general intelligence gathering to the General Enforcement Program is less clear than the reasons for computerization, but may be related. Businesses and sophisticated taxpayers employed devices similar to those employed by organized crime to escape IRS detection of tax evasion, so the same logic which justified the new approach to general intelligence gathering for organized crime figures justified it in the General Enforcement Program. A manual system could not handle the mass of additional data that would result from extension of the program to the GEP. The Data Center's computer could handle this information. The decision to extend general intelligence gathering to the GEP, therefore, reinforced the choice to computerize general intelligence. 250

Under the new system, the information-collection functions of a "typical" district Intelligence Division were to be divided into three categories: (1) the former Information Item system; (2) specifically assigned intelligence-investigations and projects; (3) the Information Gathering and Retrieval Unit (IGRU). The first category was the classic Intelligence Division activity: investigation of an allegation of tax fraud involving a specific taxpayer or group of taxpayers. In this classical function the allegation had to have sufficient probability of truth to justify opening an investigation and allocating manpower to corroborating or disproving the allegation. The second category was the long-standing system for handling any information which amounted to an allegation of tax fraud.

The function of the IGRU was to gather information which did not qualify as information items (i.e., which did not amount to allegations of tax fraud) and which was not relevant to any pending case to evaluate this data for its potential future value, 251 and to "input" the valuable information into IGRS.

The new system called for the creation of IGRU's (case development units) in large districts, and for the allocation of manpower to the case development function in others. In general, during the existence of IGRS, approximately 10 percent of

total Intelligence manpower was to be allocated to the general intelligence gathering and retrieval effort. A new Manual section spelled out the duties of the IGRU in a district:

(a) Evaluation of newly received information.

(b) Preparation and submission of input documents for information entering the background files to determine if any investigative action should be taken, and to ensure that subjects and documents no longer of interest to the Intelligence Division are purged from the files.

(c) *Establishment, development and coordination of liaison contacts with other law enforcement agencies and other organizations and information sources* as directed by the Chief, Intelligence Division. 252 [Emphasis added.]

Thus, the IGRU was not to be a passive recipient of information. Its function was to actively seek information which would lead to a tax investigation. 253 This tasking encouraged cultivation of regular informants.

However, IGRS altered the informant pattern in one important way. IGRS was not restricted to organized crime figures. While the OCD was not known for clarity of targeting, IGRS had virtually no targeting criteria. The districts were instructed to cultivate sources, but were left largely free to select their own targets within the following general guidelines: 254

#### *9393.1 Criteria for Inclusion in District Background Files*

(1) Documents entering the district background files must relate to specific subjects or entities. They must involve financial transactions with potential tax consequences; illegal activities with tax potential; or other illegal activities which fall within our investigative jurisdiction.

The guidelines thus gave their blessing to intelligence gathering regarding illegal activities without potential tax consequences ("other illegal activities"), subject only to a limitation that the illegal activity had to fall within "our investigative jurisdiction."

The heart of IGRS was to be the retrieval system. The system contemplated using the Data Center computer to generate an index to documents physically filed in the districts. 255 When the IGRU evaluator 256 decided that a particular document merited inclusion in IGRS, a clerk was to fill out an input card containing all the references under which that document would be indexed for retrieval, including the persons mentioned in it in relationship to the information which had caused the document's selection, the area of business activity involved, the area of illegal activity, the source of the information, and a forty-character description of the content of the document. The computer would then turn these cards into a print-out listing alphabetically all the persons listed for each document in IGRS, and identifying every document (by number) in which that person's name appeared. The computer would also produce an index by document number showing the same of each person listed in connection with that document. Both indexes would also show, as to each document, the source, the illegal activity, the business, and the 40-character document description. 257

The computer stored and updated the index to the documents, but was not to be a repository of data about the subjects. If, for example, a 30-page report of the debriefing of an informant contained statements the informant had spontaneously made about the sex life of the subject, that information would not be "in" the computer unless the agent chose to include it in the forty-character document description. The document would be referenced in the index, as would the subject's name, business, illegal activity coding, and a code indicating the document source was an informant. But the detailed information would remain in the district's files, retrievable only by reading the report. As envisioned, the system would ultimately permit nationwide identification of every document in any district's IGRS pertaining to a particular individual, a particular illegal activity, or a particular business. Districts had available optional local codings which they could use to categorize their information by geographical area or in any other way they choose. New input was to be provided to the Data Center monthly so that the indices the Data Center returned to the districts would be current. 258

#### *C. IGRS in Practice*

1. Introduction. -- A principal deficiency of IGRS was the misplaced reliance upon the computer's retrieval capability. This was a natural result of the lack of controls over input. The districts' normal discretion in selecting targets is inherently limited by the general requirement that there exists a probability of a specific tax violation; the discretion is in selecting the most fruitful of such allegations to investigate. The agents' discretion in how to investigate is inherently limited by the narrow scope of the information which is relevant to the suspected violation.

However, the IGRS granted the districts total discretion in determining whom to investigate. It was not intended that a specific allegation would precede intelligence gathering; rather, it would follow. For the same reason, agents were given total discretion to collect whatever information they chose, as long as it related in some way to IRS' "investigative jurisdiction". The only control which IGRS left intact was the judgment of the agents, the chiefs, intelligence, and the district directors. 259

IGRS was an intelligence collection system. It did not bypass the decentralized control system for initiation of actual criminal investigations. Therefore, no actual investigation could result from the intelligence-gathering in the absence of a basis for believing a tax violation was present.

IGRU "case development" agents gathered massive quantities of information having no bearing on tax enforcement. In at least one district an agent amassed huge quantities of intelligence on militant groups without adequate tax justification; in other, militants were also targeted without good reason, but to a lesser degree.

IGRS became an information catch-all from which useful information retrieval was almost impossible even with the computer's aid. However, the abuses of IGRS were largely potential in the sense that they consisted only of the gathering of intelligence. Because of the basic requirement of probable cause to believe a tax violation had occurred before a criminal investigation could begin remained intact, IGRS did not result in criminal tax investigations of improperly selected targets. However, had the system worked more effectively, it would have resulted in selective enforcement against groups chosen for investigation by agent predilection rather than by tax enforcement criteria. Concentration of information gathering will ultimately result in concentration of enforcement since information is the key to commencing an investigation. The overbreadth of IGRS led to the glut of data which made IGRS ineffective. Overbreadth was thus the cure for the very evils it created.

2. The Los Angeles Example. -- The uniform, nationwide IGRS the Internal Revenue Manual prescribed never came into existence. The Committee staff studied the systems in six districts: Los Angeles, San Francisco, Jacksonville, Chicago, St. Louis, and Baltimore. By January, 1975, the Los Angeles IGRS has amassed 80,000 documents; Baltimore had 39 files filling two small file drawers containing approximately 3,000 documents. These statistics reflect the two poles. They indicate that at the time of its termination on June 23, 1975, the IGRS described in the Internal Revenue Manual was not a reflection of a uniform reality.

Since Los Angeles had the longest experience with an IGRS-type intelligence gathering system, its experience epitomizes the problems the system entailed: 1) lack of controls over targeting; 2) inadequate screening of information gathered for its relationship to tax enforcement; 3) as a corollary of the first two, ineffectiveness in producing the anticipated crop of high quality cases for investigation.

The Los Angeles information gathering experiences predated the formal establishment of IGRS by four years. However, the guidelines set forth in the Manual were essentially the informal guidelines under which the Los Angeles general intelligence gathering operation had functioned since its inception: any target was an appropriate subject for general intelligence gathering as long as it was within the IRS investigative jurisdiction. 260 The largest single category of targets as organized crime, 261 a concentration which reflects the rationale for devising an improved information-gathering system. However, Los Angeles also focused its intelligence gathering on activists and militants, particularly black militants.

During July, 1975, the Committee staff searched the last IGRS print-out for Los Angeles and found many references to documents in the IGRS files relating to militants and activists. The "illegal activity" code for these groups was code 509, which has carried both the designation "subversives" and the designation "sabotage." The Staff was able to learn very little about the contents of these files, however, as the Los Angeles Intelligence Division had destroyed them (not in keeping with any routine document destruction schedule) in approximately December 1974. 262

The initial decision to target militants for intelligence gathering in Los Angeles was made by the Chief, Intelligence Division, in early 1969. 263 An employee in the Audit Division had a personal interest in militant groups and felt since they "violated the Constitution they were likely to be violating other laws as well, including the Internal Revenue Code. 264 He also felt that the IRS should be checking on their tax compliance because of the large sums of money which passed through their hands. The auditor recommended to his Chief that he be permitted to transfer to Intelligence to work on this problem. Following a meeting with the Chief, Intelligence, the auditor joined the new "case development" unit in Los Angeles and began to gather intelligence on militants from public sources, other law enforcement agencies and informants. 265 The auditor stated that the information he had gathered was strictly limited to tax-related financial information about the groups. 266

There is no way of knowing how extensive the Los Angeles project would have been had the National Office not developed a similar interest in activists a short time after the Los Angeles project began. This National Office interest, which had its origin in criticism of IRS by congressional committees and ultimately led to the establishment of SSS, initially found expression in a request to all the districts on March 25, 1969 and again on July 18, 1969, for all existing file information on certain activist organizations. 267

Los Angeles chose to read this request as a reason to redouble their efforts. The auditor spent the ensuing nine months preparing a comprehensive report for what was to be the Special Service Staff. 268 In preparing the report, he gathered large amounts of material on various groups including militants and activists, but the material was destroyed.

The auditor amassed roughly one file drawer of documents concerning militants. When the Los Angeles District created an automated retrieval system for microfilmed intelligence documents he selected some of this material for inclusion in that system. The material was not actually microfilmed, however, but, unlike all the other intelligence documents, was merely referenced in the microfilm system, while the auditor retained personal control over the documents themselves. When he was transferred in 1972 he destroyed the documents which were not referenced in the automated system but retained the ones which were. 269 With the establishment in 1973 of the IRS-wide intelligence retrieval system known as IGRS, the Los Angeles microfilm system was entered on the IGRS computerized index, including the references to the auditor's documents. As of that date (May 1973), under IRS document destruction rules, the documents acquired a new filing date, and destruction was not permitted for seven years thereafter. 270

In approximately December 1974, at a time when it was common knowledge that the Congress was preparing to examine intelligence agencies, the auditor's documents were apparently destroyed. The Chief (Intelligence), Los Angeles, ordered a subordinate to retrieve the documents from the auditor and to provide them to a second subordinate whose function was to review incoming documents to determine whether they should be retained or destroyed. The latter individual does not specifically recall whether he destroyed the documents, but believes he may have done so. 271 A thorough search of the Intelligence Division, Los Angeles District, has failed to produce the documents.

The Chief (Intelligence) has stated that the retrieval of the documents was pursuant to a short-lived directive from the Western Region to clean out intelligence files. However, the Chief also stated that no general review was made of intelligence files, and that the only specific action he can recall taking pursuant to the directive was to order the retrieval of the auditor's file materials on militants and activists. 272

In St. Louis, the staff discovered a folder denominated "Militants" and a second folder denominated "Subversives" in the intelligence files. The "Militants" file had been checked out to the Chief (Intelligence) in January 22, 1975. The Chief stated that at some time during December or January he ordered the file destroyed because he believed it was inappropriate for it to be in the intelligence files as it had no bearing on tax matters. 273 The "Subversives" file contained only material on the Church of Scientology. No employee of the Intelligence Division could recall that it had ever contained any other material. 274

3. Overbreadth. -- Reports on the IGRS have suggested that the presence on the subject index in certain districts of many names of reputable citizens indicates that the IRS was unjustifiably spying on such people and seeking to develop tax cases against them or other discrediting information about them. However, a thorough review of the IGRS files in six districts disclosed no evidence that any of the Intelligence Divisions employed their Intelligence Gathering Unit for this purpose.

Few IGR Units adequately screened the documents which they placed on the index. Virtually none of the Units screened those documents it selected to eliminate insignificant names. The result can best be demonstrated by an example. If the Special Agent screening documents selected for inclusion a newspaper article which mentioned that a known racketeer was investing money in a restaurant, alluded to the former owners, and contained interviews with several patrons, the IGRS index would contain a numbered reference to that document under the name of each of the persons mentioned in the article, including the randomly interviewed patrons and the former owners. This collection of useless data resulted from the use of clerks to prepare the input cards who were not permitted to exercise any judgment about which names in a document were important, and therefore included them all. In effect, the function of evaluators was being bypassed. The name J. Edgar Hoover appears in many IGRS indices because he often made statements on subjects dealing with organized crime. Newspaper articles reporting his statements were often filed in IGRS. The name Internal Revenue Service often appeared on the indices, as did the names of the present and most former Commissioners of Internal Revenue.

The presence of a name on the IGRS index therefore did not mean that individual had been selected by the IRS as a subject of intelligence gathering. It meant the individual was mentioned in some document which an agent had selected for filing in IGRS. Further, none of the districts investigated had complied with manual provision providing for the review and purging of unnecessary names and information from IGRS. 275 The wholesale inclusion of names in the system, coupled with the failure to screen material adequately at the inception of IGRS and the failure to purge the files pursuant to standing instructions explains why the nationwide total of IGRS "subjects" is 465,442.

The presence of thousands of names of prominent, reputable people, and of tens of thousands of names of less well-known but apparently reputable people on the IGRS index does not demonstrate that IGRS was targeting innocents but that it was choking on its own data.

4. IGRS Ineffectiveness. -- Statistical evidence suggests that IGRS did not succeed in producing a large number of high quality cases for investigation. In Los Angeles, by January 1975, the system contained 85,387 subjects. Between July 1, 1973, and October 31, 1974 Los Angeles attributed the initiation of 45 intelligence investigations to IGRS. Chicago had 89,417 subjects and attributed four investigations to IGRS. 276 Nationwide, investigations were started against only 350 of the 465,108 "subjects".

The table shows comparable results in 45 districts.

Because Operation Leprechaun is the focal point of the most serious claims of abuse connected with IGRS, the staff's conclusions regarding IGRS follow the discussion of the Leprechaun allegations.

#### IGRU DATA <sup>1</sup>

| <b>District</b> | <b>Number of entities (names) Jan. 15, 1975</b> | <b>Intelligence division investigations initiated July 1, 1973 through Dec. 31, 1974</b> |
|-----------------|-------------------------------------------------|------------------------------------------------------------------------------------------|
| Augusta         | 955                                             | 1                                                                                        |
| Portsmouth      | 961                                             | 1                                                                                        |
| Burlington      | 574                                             | 5                                                                                        |
| Boston          | 1,42                                            | 4                                                                                        |
| Providence      | 3,511                                           | 0                                                                                        |

<sup>1</sup> This information in this table was furnished the Director Intelligence Division in response to directive issued by IRS Commissioner suspending the operation of IGRS in January 1975.

## II. OPERATION LEPRECHAUN

"Operation Leprechaun" was an intelligence gathering project directed at political corruption and participated in by both the Internal Revenue Service and the Justice Department. Because of the sensitive character of the intelligence gathering effort, it occurred outside the framework of the normal intelligence administrative structure. The staff's investigation revealed that most of the allegations which comprised Operation Leprechaun were unfounded. Those of the alleged acts of wrongdoing which actually occurred are attributable to a combination of circumvention of normal supervision over intelligence gathering and informant control, and the inadequacy of IRS guidelines for control and payment of informants. 277

### A. Background of Operation Leprechaun

In late 1971, a local investigation by the Miami Police Department and the Dade County Department of Public Safety uncovered certain information concerning political corruption and bribes of political figures in Miami-Dade County. This investigation came to be known as the "Market Connection". The attorney in charge of the Justice Department's Organized Crime Strike Force located in Miami, Mr. Dougald McMillan, cooperated with the local authorities and received information from them concerning allegations about those political figures. McMillan became interested in initiating a federal strike force investigation and in securing the aid of the IRS and other law enforcement agencies in such an effort. In several conferences with the Justice Department and IRS officials, he vigorously solicited their support. 278 At about the same time, the IRS chose the Jacksonville District, of which Miami is a part, to be one of the pilot districts in an intelligence gathering and retrieval experiment. 279 The Miami Intelligence Division chose Special Agent John T. Harrison as the principal IRS agent to work on the Market Connection intelligence-gathering effort, and later assigned him to feed the resulting intelligence into the new information gathering and retrieval system.

The purpose of a Justice Department Strike Force Program is to achieve a coordinated effort by all federal law enforcement agencies against organized crime in a particular locality. A Justice Department attorney headed the Strike Force effort in Miami as elsewhere. The Audit and Intelligence Divisions of the Miami IRS District each assigned a representative to the Strike Force whose function was to (1) concentrate tax enforcement efforts on Strike Force targets; (2) exchange information with other agencies represented on the Strike Force to the extent disclosure regulations permitted; (3) participate in identifying new targets. These Strike Force representatives were to remain under both the operational and administrative control of the District. 280 The Strike Force concept did not call for the bypassing of normal administrative controls.

Agent Harrison, though not the Miami Intelligence Division's Strike Force representative, was assigned to work closely with the Strike Force attorney. 281 His assignment was to seek to develop tax cases against public figures suspected of accepting bribes or otherwise participating in corruption through the use of informants and other intelligence-gathering method. 282 On the basis of memoranda of meetings between the Strike Force attorney and members of the Intelligence Division in Miami, it appears that the Strike Force attorney contributed names of individuals and other information to IRS, some of which was subsequently used by the Target Selection Committee, an IRS group charged with final approval of targets for information gathering. 283 In any event Harrison generally did not select his own targets. The Chief, Intelligence Division, ordered that Harrison be removed from the normal chain of command. 284 Harrison's nominal superior, his Group Manager, was to be advised of Harrison's activities only on a "need-to-know" basis. 285 As a result, Harrison's IRS superior lost effective control of his activities.

Agent Harrison chose the name "Operation Leprechaun" to describe his efforts. He picked that name because he used green ink for his informant files and green ink caused him to think of leprechauns.

... I looked up the definition of a leprechaun and found, in essence, the meaning to refer to the "wee mysterious people" who could reveal many secrets. 286

### B. Allegations About Operation Leprechaun

Allegations of improprieties within the IRS Intelligence Division in Miami first appeared in a series of articles in the Miami News beginning in March 1975 alleging serious abuses by IRS intelligence in Operation Leprechaun. The source of most of the allegations was an informant used by Harrison, Elsa Gutierrez. 287 Among the principal allegations concerning Operation Leprechaun were the following:

- that the IRS recruited Gutierrez and other informants for the purpose of gathering information on the sex lives and drinking habits of thirty public officials in the Miami area;
- that two IRS operatives burglarized the Miami campaign office of a congressional candidate;
- that the IRS made improper use of electronic listening devices;
- that Special Agent Harrison threatened Gutierrez with fatal accidents and imprisonment if she revealed her IRS activities;
- that personal information gathered in the course of Operation Leprechaun about enemies of the White House was funneled to the White House by the IRS;
- that following publication of the newspaper articles on Operation Leprechaun, IRS audited the tax returns for each of eleven years of a reporter who was the principal author of the Leprechaun stories; and
- that IRS agents promised Gutierrez \$20,000 per year for life and eventually a home outside the country in return for her spying on public officials.

### *C. Operation Leprechaun Improprieties*

While evidence gathered by IRS Inspection and corroborated by the staff indicates that many of the allegations of Elsa Gutierrez about Operation Leprechaun were unfounded, several improprieties were discovered. 288 Of these, some apparently are directly related to the environment in which special agent Harrison conducted the project and these further illustrate the increased potential for abuse of individual rights when the normal IRS structure and its inherent controls on IRS activities are circumscribed to meet the needs of a special program which has, as its objective, a set goal in addition to enforcement of the tax laws. The principal improprieties occurring in Operation Leprechaun include improper special agent supervision, improper informant usage, including unauthorized electronic surveillance, and useless and improper material being gathered and stored by the IRS. These areas are discussed below.

1. Improper Special Agent Supervision. -- From its inception, the project which became Operation Leprechaun placed Special Agent Harrison in a position inconsistent with normal IRS operating procedures. The then Chief of the Jacksonville District Intelligence Division has stated that in response to the request of the Miami Strike Force Chief, Dougald McMillan, information gathered concerning political corruption in the Miami area was sensitive and should be disseminated on a "need-to-know" basis only. 289

John McRae, Harrison's Intelligence Division Group Manager, has stated that he, upon receiving a listing of targets from the Intelligence Chief, instructed Harrison to first develop initial files on the targets. McRae further stated that Harrison was to consult directly and closely with Mr. McMillan regarding this investigation and that he (McRae) was to learn of Harrison's intelligence gathering activities on a "need-to-know" basis only. 290

McMillan, in an affidavit to IRS Inspection, stated that Harrison was at no time the official IRS representative to the Miami Strike Force, and at no time did he in any way supervise Harrison. 291 McMillan stated, however, that in response to a request by Harrison, and because Harrison was always in a hurry, he (McMillan) told Harrison that he could stop dealing with the IRS Intelligence Division Representatives to the Miami Strike Force and deal directly with McMillan on Strike Force related matters. 292

While the evidence cited above does not conclusively define the exact nature of the relationship between the IRS and the Strike Force during Operation Leprechaun, it does indicate lines of communication were unclear and that the normal IRS organizational structure had been changed to meet the needs of the specialized, sensitive project. This hybrid structure necessarily diminished the effectiveness of built-in controls over special agent investigation activity and apparently was a primary contributing factor to other improprieties in Operation Leprechaun.

2. Informant Recruitment and Development In Operation Leprechaun. -- Special Agent Harrison had for several years advocated the need for a network of confidential informants to obtain information on organized crime, corruption and racketeering. 293 This view apparently was a major factor in the decision to place him in charge of the Operation Leprechaun intelligence gathering activities, which were targeted at political corruption.

Harrison began to recruit informants to develop intelligence for the project. Since Harrison would have to purchase the information, the Chief, Intelligence, applied to the National Office to establish an "imprest fund" of \$30,000 to finance the project. In his application, he stated it was understood that:

Expenditures from these funds will not be made unless the information received warrants compensation. The informants who will be utilized as the opportunity arises will be guaranteed no compensation or operating expenses but will be paid for value received only. 294

The Director, National Office Intelligence Division, approved the fund. 295

Harrison 296 developed his informants through fellow agents, other law enforcement agencies, state agencies, and through his own personal contacts. 297 He also instructed some informants to develop other confidential sources. 298 According to Harrison's statement, a total of 42 confidential informants were involved in some aspect of Operation Leprechaun. 299

Of twenty informants used by Harrison during the project and interviewed by IRS Inspection during its investigation, five advised that they had been requested to gather sexual information, two advised they had been requested to research public records or develop background files; five advised they had been requested to gather political information, one advised she had been instructed to gather drinking habit information and 4 advised they had been involved in electronic surveillance. 300

#### *D. Informant Activities During Operation Leprechaun*

1. Breaking and Entering. -- The conduct of informants during the course of Operation Leprechaun ranged from the performance of activities which were clearly illegal to those which were at least questionable. Although they do not necessarily reflect on the wisdom or integrity of Special Agent Harrison, they do indicate an inadequacy in the system of informant control utilized during Operation Leprechaun.

Two Leprechaun informants, Nelson Vega and Roberto Novoa, according to Vega's admission, burglarized the office of Evelio Estrella, a candidate for Congress on November 14, 1972. 301 Vega (Novoa is deceased) stated in an affidavit to IRS Inspector that he was hired to work on "Operation Leprechaun" for \$100 per week and was given the assignment of getting information on people who were running for office to determine where they were getting their money for parties and other activities. 302 Vega stated that he and Novoa burglarized the office of Estrella and took from it a filing cabinet which they thought contained certain information which would be useful to the Internal Revenue Service. 303 Vega emphasized that Harrison was unaware of the burglary at the time it was committed, and that, although he and Novoa later turned over some of the stolen material to Harrison, they advised him someone had given them the material. 304

Harrison stated he was unaware of the burglary at the time it was committed and became aware of it only when he read Vega's newspaper statement. 305 Harrison also stated that he emphatically told each informant that they were not IRS employees and that their relationship with him was not a license to violate the law. 306

Harrison's informants' files contained a manila envelope with the name Evelio S. Estrella written on the outside containing originals and copies of State Campaign Treasury Pre-Election Reports, including itemized receipts and expenditures, invoices and similar items relating to Estrella. Roberto Novoa's wife, who confirmed that her husband and Vega had brought the filing cabinet to the Novoa home, stated that about three days following the theft Harrison asked Novoa and Vega if they knew who had broken into Esterella's office and, upon being advised Novoa and Vega did not know, told them that whoever had done it would go to jail regardless of the motive for the burglary. 307

2. Unauthorized Electronic Eavesdropping. -- Although consensual non-telephone electronic surveillance (i.e., where one party to the conversation consents to eavesdropping) is not illegal, the IRS has established regulations to safeguard against abuse of the technique. Internal Revenue Manual section 9389.3, entitled Consensual Monitoring of Non-Telephone Conversations, requires prior Justice Department approval of all such monitoring providing that:

Consensual monitoring is to be approved in writing by the Attorney General of the United States or any designated Assistant Attorney General as follows: a) all requests for approval must be submitted through channels and may only be signed by the Director Intelligence Division or Acting Director; when time is a factor a telephone request may be made to the Director. If an emergency exists approval may be granted by the Director, or Assistant Director, Intelligence Division. Additionally, as soon as practicable, after monitoring the non-telephone conversation, a report will be filed with the Chief showing how the equipment was used and summarizing the intelligence or evidence obtained by such use; this report should complement the information set forth in the original request.

Elsa Gutierrez stated 308 that on August 23, 1972, she was present when a Leprechaun informant (9th-28) outfitted with a radio transmitter, entered the home of a former judge, Harrison, Novoa and another special agent sat in Harrison's car which was equipped with receiving equipment, and listened to the ensuing conversation. Harrison, in an affidavit, 309 has stated that Elsa Gutierrez was present when another agency, either the Miami Police Department or the Dade County Sheriffs' Department, placed a concealed transmitter on one of Harrison's confidential informants, but that the investigation was not an IRS investigation. Harrison stated that the Miami Strike Force Attorney had become interested in a possible state charge against the judge and had solicited the aid of the Miami Police Department and Dade County Public Safety Department, and arranged for the Miami Police to use the equipment. He further stated that he was asked only to supply an informant to be wired for the surveillance, that he had provided the other agency with the confidential informant, and that Elsa Gutierrez was there because she had recruited the informant and might have been able to lend moral support. 310

Harrison's confidential informant files contain two documents signed by 9th-28 authorizing police officers to place electronic eavesdropping devices on his person; both forms are signed by Harrison as a witness. The files also contained an affidavit by 9th-28, regarding a conversation he had with the judge in question while wearing the transmitter, in which 9th-28 stated that he had permitted an associate of Harrison to wire him for sound and that he had obtained bad checks from the judge which the judge wished him to collect for him and that 9th-28 had given the checks to Harrison. 311

Major Herbert Breslow of the Miami Police Department has furnished an affidavit 312 stating that on August 9, 1972, the Chief Attorney for the Miami Strike Force requested that he furnish technical assistance to Harrison and that a state case could result from the investigation in which the technical assistance was needed. Breslow stated that he accompanied Harrison to a location near the judge's home where Breslow equipped 9th-28 with a transmitter and that 9th-28 then entered the judge's home. While 9th-28 was in the judge's home, Harrison, Breslow and certain other persons unknown to Breslow, listened to the conversation in Harrison's car at a distance of 300 yards from the judge's house. In addition, Breslow's affidavit states that the monitoring had nothing to do with any Miami Police Department investigation. Breslow recalled that he either kept the tape of

the conversation or received it from Harrison shortly after the event and kept it until Harrison advised him it was no longer needed and that Harrison supervised and coordinated the activity. Finally, Breslow stated that he assumed that the eavesdropping was in aid of an IRS investigation. Other affidavits of members of the Dade County Department of Public Safety indicate that similar requests for technical assistance from Harrison were honored on two other occasions. 313

Both Harrison and the police assign a key role in the initiation of the surveillance on the former judge to the Miami Strike Force Attorney, who has stated in substance that although he could not recall his exact conversations with Major Breslow and Captain Bertucelli, he felt sure they were aware that the sole purpose of wiring the informant was to determine if state law was being violated since obviously there was no tax violation. 314 He advised that Major Breslow and Captain Bertucelli may have assumed the incident was part of a Federal investigation. He emphasized, however, the whole purpose was a possible state charge.

Whether Harrison was assisting state or local police or vice versa, his participation in the electronic surveillance appears to have violated the IRS regulations requiring Attorney General authorization for consensual electronic surveillance, since the regulation does not require that the surveillance have a Federal purpose before Attorney General permission is required.

#### *E. Results of Operation Leprechaun*

The intelligence gathering efforts of Operation Leprechaun, by tax enforcement standards, were successful. Full-fledged Intelligence Division investigations, which can be initiated only upon the probability that criminal tax fraud has occurred, as well as IRS Audit Division investigations, which indicate the probability that a substantial delinquent tax liability exists, were opened as a result of the project. Out of 42 joint Intelligence and Audit Division investigations of taxpayers who were the subject of Leprechaun documents, 22 were opened directly as a result of allegations furnished by either the Strike Force or information gathered during Operation Leprechaun, or both. Further, five of eight separate Audit Division investigations of Leprechaun subjects were opened as a result of information obtained from the Strike Force, Leprechaun informants, or both. Much of the information gathered, however bore little or no relationship to tax law enforcement and some of the information was concerned with the sex and drinking habits of Operation Leprechaun targets.

Examination of 594 debriefing documents of Harrison's confidential informants indicate 135 (23%) contained references to the sexual and/or derogatory drinking activities of the subjects. Of these 135 documents, 70 also contained tax related information, but 65 did not. 315 By comparison, out of 3,719 confidential informant debriefing documents prepared by all other Special Agents in the Jacksonville District, only 255 (7%) contained references to sexual or derogatory drinking activities of the subjects. 316

The above evidence, in addition to statements of some of his informants, suggests that Harrison encouraged his informants to collect personal, non-tax-related information about the subjects of Operation Leprechaun, either through specific instruction to the informants or through displaying particular interest in the information upon debriefing the informants. Since the informants' continued employment depended upon their providing information which interested Harrison, they would naturally be alert for information which interested him, despite the lack of specific instructions to gather it.

It does not appear, however, that the targets of Operation Leprechaun were selected because of any interest Harrison may have had in their personal lives. The responsibility for target selection lay with the Target Selection Committee. Harrison's influence was primarily over the nature of the information gathered about the targets, rather than the selection of the targets. And, as indicated by the positive tax enforcement results of Operation cited above, Harrison's apparent interest in personal information did not cause the collection of such information to become the main focus of the intelligence gathering operation. The statistics cited indicate that a substantial amount of the information gathered was tax-related, and that collection of personal information, while excessive in relation to other tax investigations, remained subsidiary to the main purpose of the operation, the effort to develop tax cases against the targets.

#### *F. Causes of Leprechaun Abuses*

The system of controls over intelligence gathering activities failed in the case of Operation Leprechaun. Special Agent Harrison's collection of personal information was not detected and arrested. He recruited some informants of extreme unreliability and poor judgment without his superiors' realizing it. He allowed informants to recruit and to pay other informants whom, in some cases, Harrison never met. 317 Harrison engaged in unauthorized electronic surveillance without its being detected by his superiors. Harrison paid many of his informants on a regular salary-like basis instead of paying them according to the value of the information received. Even though his superiors knew of the practice none prevented it. 318

Each of the abuses of Operation Leprechaun can be traced to failure of Harrison or his superiors to meet responsibilities. The evidence suggests that Harrison conducted the unauthorized electronic surveillance, without his superiors' approval, and was able to do so because, as in the case of the electronic surveillance abuses the Long Committee studied, he was outside the normal chain of command. Harrison's superiors had an opportunity, however, to curb potential abuse in Harrison's employment of informants. In a September 13, 1972, memorandum from Harrison to the Chief, Intelligence Division, Harrison advised that he had 34 paid informants, many of whom he had never met; that these unknown informants had been developed by other informants; and that some of his informants were paying others. Harrison expressly acknowledged in this memorandum that the arrangement was unusual and risky. The memorandum also advised the Chief that Harrison had learned that Elsa Gutierrez was a "double agent" and had plans to expose his activities and dispose of him.

While the Leprechaun abuses can, therefore, be explained as individual failures to detect potential abuse, there is a pattern to the failures which indicates that the abuses have a general cause. The IRS failed to prevent, or to curtail, the serious misdeeds of Operation Leprechaun for three principal reasons:

1. IRS guidelines or the recruitment and use of informants were not sufficiently stringent;

2. IRS reliance upon retrospective detection of abuse followed by corrective action is inadequate to achieve control of intelligence gathering of the type necessitated by projects such as Operation Leprechaun activities;

3. Agent Harrison's anomalous position outside the normal administrative structure seriously aggravated the existing deficiencies in the system of controls. In particular, the limited controls the IRS had over the use of informants were largely deactivated by the decision to place Harrison out of the effective reach of the IRS chain of command.

**Footnotes:**

1 Senate Resolution 21, section 2(8). 2 During the course of the investigation the staff did not request or did it review any individual's tax returns or tax related information.

3 The Subcommittee on Administrative Practice and Procedure of the Committee on the Judiciary, U.S. Senate, 89th Cong., 1st Sess., 1965, Hon. Edward Long, Chairman.

4 Testimony of Donald C. Alexander, Commissioner of the IRS, 10/2/75, hearings, Vol. 3, pp. 25, 26.

5 Shortly after the Senate Select Committee's hearing at which the abuses which have arisen from weaknesses in the disclosure mechanism came to light, the IRS changed its practice under the current regulations. Beginning in the middle of October 1975, the IRS has required that all requests from United States Attorneys and attorneys of the Department of Justice for tax return information under 26 CFR 301.6103 (a) -1(g) and (h) must include a sufficient explanation which will permit the IRS to determine that there is an actual need for all the requested information, and that it will be properly used by the requestor. This change in practice is, however, not a result of any change in the regulations, and is itself subject to change.

6 Except where indicated, the regulations have been substantially as summarized above during all periods discussed in this report.

7 On their face, the regulations seem to restrict access by the Department of Justice to cases where returns are "necessary" in connection with its official duties while heads of other agencies may obtain them when they "desire" them in connection with their official duties. As a practical matter, however, IRS has not applied the criterion of "necessity" to Department of Justice requests, so the apparent distinction has had no practical consequence.

8 Memorandum from D. O. Virdin for Harold E. Snyder, "Inspection of Returns by FBI," 5/2/68.

9 There is little documentary evidence of the pre-1968 procedures since, according to Ms. Margaret Sampson of IRS Disclosure Branch, all IRS records of pre-1968 disclosures to the FBI were destroyed in the Disclosure Branch in a space-saving drive in about 1972 (the records having been transferred from Intelligence to Disclosure in 1968). The only records which apparently ever existed were the incoming request, in contrast to the practice in Disclosure of forwarding material (or permission to review it) by letter to the requesting agency, signed by an authorized IRS employee.

10 Memorandum from F. J. Baumgardner to W. C. Sullivan, 5/10/65.

11 Memorandum, Baumgardner to W. C. Sullivan, 5/10/65.

12 Memorandum, Midwest City Field Office, to FBI Headquarters, undated.

13 Bernard Rachner testimony, 9/25/75 pp., 7-18.

14 See, e.g., memorandum, Baumgardner to W. C. Sullivan, 11/18/64.

15 See Note \*\*, p. 25. [sic]

16 Memorandum from D. O. Virdin for Harold Snyder, 5/2/68.

17 Ibid.

18 During this same period, the CIA was apparently obtaining returns in a manner similar to the FBI (though in much smaller numbers), yet no one in the Intelligence Division or elsewhere in the Compliance Division thought to examine that practice in light of the change being made in the practice with respect to the FBI. See testimony of Donald O. Virdin, 9/16/75, pp. 69-73.

19 Since the request could not even be properly made unless the return was necessary in connection with the requesting attorney's official duties, it is an improbable interpretation that the statement of "reason" called for by the regulations was to be simple recitation that the return was necessary in connection with those duties. Further, in the absence of a statement of the specific reason, the IRS could not meaningfully apply the regulatory criteria to the request.

20 A sample letter appears at note 44,p. 852.

21 Leon Green deposition, 9/12/75, p. 6.

22 Ibid., pp. 6-8.

23 The following subsection, 6103(h), dealing with the "use of returns in Grand Jury proceedings and In litigation," does specifically provide that any return furnished pursuant to that paragraph shall be "limited in use to the purpose for which it is furnished ..." but 6103(g) does not so provide.

24 The IRS has freely disseminated tax returns to agencies of the government no intelligence function. In 1974, more than 29,000 tax returns of more than 8,200 individuals were requested by and disseminated to governmental agencies including the Departments of Agriculture, Commerce, and Labor, Interstate Commerce Commission, Federal Home Loan Bank Board and Federal Deposit Insurance Corporation. (Alexander, 10/2/75, Hearings, Vol. 2, pp. 31, 32.)

25 A request normally sought several returns, often of several taxpayers.

26 Presumably, these returns would be those of Individuals identified as being agents of, or working in collaboration with, hostile foreign intelligence services.

27 See COINTELPRO Report.

28 FBI Requests for tax returns, 1966-1975.

The following data is based on a staff review of materials in the FBI's administrative file labeled "Income Tax Returns Requested."

|                                            | 1966 | 1967 | 1968 | 1969 | 1970 | 1971 | 1972 | 1973 | 1974 | 1975 | Total |
|--------------------------------------------|------|------|------|------|------|------|------|------|------|------|-------|
| Foreign intelligence                       | 4    | 7    | 4    | 6    | 3    | 3    | 9    | 1    | 1    | 1    | 39    |
| Criminal investigation                     | 0    | 0    | 1    | 6    | 4    | 6    | 10   | 4    | 0    | 0    | 31    |

29 Memorandum from FBI Headquarters to Field Offices, 1/30/68.

30 omitted in original.

31 See e.g., Memorandum C. D. Brennan to W. C. Sullivan, (Now Left); memorandum F. J. Baumgardner to W. C. Sullivan 6/27/04,

32 Memorandum from FBI Headquarters to Field Offices, 1/30/68.

33 omitted in original.

34 Memorandum from FBI Headquarters to various Field Offices, 5/10/68.

35 Memorandum from C. D. Brennan to W. C. Sullivan, 5/24/68.

36 Memorandum from FBI Headquarters to various Field Offices, 10/24/68.

37 Memorandum from C. D. Brennan to W. C. Sullivan, 12/6/68.

38 Ibid.

39 The form letter is virtually identical to that set out in note at page 38.

40 Memorandum from C. D. Brennan to W. C. Sullivan, 2/3/69, captioned "NEW LEFT MOVEMENT, IS -- MISCELLANEOUS."

41 In addition, the returns were requested as part of an effort to determine sources of funds, Ibid.

42 According to a June 30, 1969, IRS memorandum, there were then in progress 21 investigations or other administrative action involving individuals connected with "ideological organizations." Virtually all of these actions had resulted from FBI-originated requests for tax returns. See June 30, 1969, memorandum from Collection Division to Assistant Commissioner (Compliance) ; June 27, 1969, memo from Collection Division to Assistant Commissioner (Compliance) ; June 25, 1969, memo from Assistant Commissioner (Compliance) to all IRS Divisions; deposition of Donald Virdin at pp. 15-16; deposition of Leon Green, pp. 16-17.

43 The Committee is aware of the professor's identity but has withheld his name for privacy reasons.

44 Commissioner of Internal Revenue, May 31, 1968.  
Washington, D.C.

DEAR MR. COMMISSIONER: In connection with an official matter before this office involving the internal security of the United States it is necessary to obtain the following described income tax returns and related data:

| Name and address Of taxpayer: | Tax year      |
|-------------------------------|---------------|
| John Doe -----                | 1966 and 1967 |
| John Doe -----                | 1966 and 1967 |
| Professor X -----             | 1966 and 1967 |
| Jane Doe -----                | 1966 and 1967 |
| Jane Doe -----                | 1966 and 1967 |
| John Doe -----                | 1966 and 1967 |

This request is made pursuant to section 301.6103(a), Title of CFR.

Documents furnished in response to this request will be limited in use to the purpose for which they are requested and will under no condition be made public except to the extent that publicity necessarily results if they are used in litigation.

Access to these documents, on a need-to-know basis, will be limited to those attorneys or employees who are actively engaged in the investigation or subsequent litigation. Persons having access to these documents will be cautioned as to the confidentiality of the information contained therein and of the penalty provisions of section 7213 of the Internal Revenue Code and section 1905, Title 18, U.S.C., regarding the unauthorized disclosure of such information.

Sincerely,

J. WALTER YEAGLEY,  
Assistant Attorney General.

45 The signed statement of Judge Yeagley is in the Committee files.

46 Robert Shackelford and Bernard Rachner testimony, 9/15/75, pp. 12-30.

47 Statement of J. Walter Yeagley, September, 1975.

48 Donald O. Virdin testimony, 9/16/75, pp. 88-91.

49 Memorandum from FBI Headquarters to a Midwest City Field Office, 7/19/68.

50 Memorandum from FBI Headquarters to various Field Offices, 5/10/68.

51 Memorandum from Midwest City Field Office to FBI Headquarters, 8/1/68.

52 A signed statement dated 8/13/75 of the IRS Inspector who received Bureau information is in the Committee files.

53 Memorandum from FBI headquarters to Midwest City field office, 8/6/68. One apparent reason for not disclosing the source of the information was the injunction in the memorandum initiating the Key Activist COINTELPRO: "you are cautioned that the nature of this new endeavor is such that under no circumstances should the existence of the program be made known outside the Bureau. ..."

54 Memorandum from Midwest City Field Office to FBI headquarters undated.

55 Donald D. Virdin testimony, 9/16/75, p. 89.

56 Memorandum from FBI Headquarters to various Field Offices, 8/25/67.

57 The returns and other information were obtained during the period prior to 1968 when the FBI was obtaining information directly from the IRS Intelligence Division. See memorandum from Baumgardner to W. C. Sullivan, 5/6/64.

58 Memorandum from Baumgardner to W. C. Sullivan, 3/25/64; memorandum from FBI Headquarters to Atlanta Field Office, 4/1/64.

59 Memorandum from Atlanta Field Office to FBI Headquarters, 4/14/64. Although the suggestion (and other suggestions contained in the same letter) was a COINTELPRO-type suggestion, it was not so denominated by the FBI.

60 It is not entirely clear from the Atlanta Office's letter whether it already had the contributor list or was recommending that it be obtained. The point is clarified by an internal memorandum of FBI Headquarters (Baumgardner to W. C. Sullivan, 5/6/64) in response to the Atlanta suggestion which notes: "We have already obtained all available information from IRS concerning King and the SCLC."

61 Memorandum from Atlanta Field Office to FBI Headquarters, 4/14/64, p. 8.

62 Memorandum from Baumgardner to W. C. Sullivan, 5/6/64, p. 3.

63 Contributions to non-exempt organizations are generally not deductible.

64 Eg., Memorandum from FBI Headquarters to Cleveland Field Office, 6/10/68; memorandum from Cleveland Field Office to FBI Headquarters, 8/1/68; memorandum from FBI Headquarters to Cleveland Field Office, 8/6/68.

65 That the FBI sought to direct IRS attention at SDS is apparent from the statement in the June 10, 1968, memorandum to Chicago Field Office, "... IRS is presently conducting an audit of SDS funds at the Bureau's request." While this statement does not conclusively demonstrate that the Bureau was the cause of the audit, it does demonstrate that the Bureau sought to bring the audit about and believed it was responsible for it.

66 AOC is the Activist Organization Committee, later known as Special Service Staff; Mr. Wright was its head.

67 Memorandum for File by D. O. Virdin, dated 4/8/70. Mr. Virdin was then head of the IRS Disclosure Branch.

68 The Committee staff reviewed IRS files of requests for tax returns and return information from intelligence agencies.

69 These included liaison concerning audits of CIA proprietaries, a subject which will be discussed in the Committee's final report on the subject of CIA proprietaries.

70 Because of the informal nature of CIA access to returns, no records of the disclosures were maintained by IRS.

71 IRS Inspection Report, CIA access to tax related Information.

72 Ibid. p. 1.

73 Letter from CIA General counsel to IRS Assistant Commissioner, Inspection, 8/4/75.

74 A copy of the memo, which was captioned "Subject: Victor Marchetti," is in the Committee's files.

75 The 2/2/67 CIA memorandum was captioned, "IRS Briefing on Ramparts."

76 Section 7623 of the internal Revenue Code permits the Internal Revenue Service to pay a reward to anyone who provides it with information that leads to the detection and punishment of anyone guilty of violating the Internal Revenue laws.

77 The Assistant Chief of Audit in the IRS District at the time has stated: "My best recollection is that the return was a type which would not normally be identified by the computer as having audit potential. ... There was no routine procedure in effect at that time for manual screening of returns for questionable deductions. Therefore, without some impetus from outside the normal, routine system, Professor X's return would in all probability not have been selected for classification and audit." (Interview, 8/13/75.)

78 See deposition of Donald Bacon former Assistant Commissioner (Compliance) with broad supervisory authority over disclosure pages 13, 14; deposition of Donald Virdin, former Chief, Disclosure Branch, pp. 78, 79.

79 Letter from Walter J. Yeagley to Commissioner, IRS, 5/31/68.

80 The FBI generally does not conduct such investigations. They are the basic task of the IRS Audit Division.

81 NAACP v. Alabama, 357 U.S. 449, 78 S.Ct. 1163 (1957). The court held that whether membership lists are constitutionally available to the state depends upon whether the "reasons advanced" for the publication of the lists are "Constitutionally sufficient to justify its possible deterrent effect" upon the freedom to associate. The Court found that the NAACP had made:

"An uncontroverted showing that on past occasions revelation of the identity of its rank-and-file members has exposed those members to economic reprisal, loss of employment, threat of physical coercion."

and that

"... compelled disclosure ... is likely to affect adversely the ability of petitioner and its members to pursue their collective effort to foster beliefs in that it may induce members to withdraw from the Association and dissuade others from joining it because of fear of exposure of their beliefs shown through their associations and of the consequences of this exposure."

82 A later case specifically shows FBI awareness of the advantages of directing IRS attention at an intelligence target. In 1969, the Special Agent in Charge in a Midwest City recommended furnishing certain information to the IRS in order to effect an audit of a local Communist Party officer. (Memorandum from Midwest City Field Office to FBI Headquarters, 1/22/69.) Authority was granted in a communication from the Director which also noted:

"After audits have been effected by the Internal Revenue Service, copies of the audits can be obtained through liaison at the Bureau. Should you desire copies, submit your request at the appropriate time." (Memorandum from FBI Headquarters to Midwest City Field Office, 3/4/69.)

83 See Manual Supplement 14R-17, November 6, 1959, discussed at page 870, *infra*.

84 IRS Policy Statement p. 9-18.

85 Statement of John B. Dunlop, Commissioner of IRS, "Meaning of Reorganization Plan No. 1 of 1952," 5/20/52.

86 John W. Snyder, Secretary of Treasury, "The Reorganization of the Bureau of Internal Revenue," Public Administration Review, 1952, p. 221 et seq.

87 The House Committee on Expenditures in the Executive Departments held hearings on the Plan during January 1952, pursuant to the Reorganization Plan of 1949, under which such reorganization plans were automatically ratified if not disapproved by the Congress within 90 days. For the text of the plan, see Reorganization Plan No. 1, Submitted to the Congress by the President, 1/14/52.

88 John W. Snyder, "The Reorganization of the Bureau of Internal Revenue," p. 229.

"The Plan also called for the consolidation of field activities into administrative groupings according to the function being performed (Investigative -- including Audit and Intelligence -- Collection, Settlement, etc.) rather than according to the kind of tax being collected as a means of achieving clearer lines of responsibility and authority. Previously, for example, special agents engaged in intelligence work had been divided into distinct administrative groups depending upon whether they worked on excise, income, or other taxes.

90 Testimony of the Hon. Cecil R. King before the Committee on Expenditures in the Executive Departments, House of Representatives, 82d Cong., 2d Sess., Jan. 23, 1952, at p. 228.

91 According to a June 23, 1961, IRS internal memorandum, at the time of the reorganization there was much discussion of whether the District Directors (local office administration) should have operational direction over intelligence operations or whether the contemplated District Commissioners (regional administrators -- now called Regional Commissioners) should. The plan adopted was the former except for New York, where (presumably because of the presence of several districts in a small geographic area with cases cutting across district lines) the District Commissioner was to have operational control.

92 See generally Internal Revenue Manual, § 9300; this discussion of IRS Organization is based in part upon interviews with many National Office and district office intelligence executives. There are some exceptions to the rule of National Office aloofness. Where problems of national scope require the application of Intelligence resources, the National Office may initiate a National Office project and coordinate it out of the National Office. Also, the Commissioner has the authority, if he wishes, to seize control of any operation; however, he lacks the bureaucratic capacity to do so on a large scale, and further, for the National Office to interfere in a case could and sometimes does, provoke objection and, thus, attention from the IRS Inspection Service.

93 Reorganization Plan of 1952.

94 Interview, Warren Bates, Assistant commissioner-inspection, 9/75.

95 *Ibid*.

96 During its investigation the committee found the Inspection Division to be remarkably objective in its approach to investigation of allegations of IRS wrongdoing. While the IRS system has its limitations, mainly in the mechanism for

identifying areas where investigation is necessary as contrasted with conducting an impartial investigation once it is begun, the ingredients of Inspection's objectivity appear to merit study as an example of relatively successful self-investigation.

97 IRS Organization Study, Interim Report on Internal Revenue Service's Intelligence Organization, September 1961.

98 For a discussion of this issue see e.g., IRS Organizational Study Supplemental Report, "A Contemporary View of the Criminal Law Enforcement Function in the IRS," 1/12/70.

99 Hearings before the Subcommittee on Administrative Practice and Procedure of the Committee on the Judiciary, United States Senate, 89th Cong., 1st Sess., pt. 3, pp. 1126-27, Hon. Edward Long, Chairman.

100 IRS efforts directed at organized crime have resulted in the prosecution and conviction of known criminals who successfully avoided conviction for other crimes, the most notable being Al Capone. There are, however, differing views on the question whether the concentration on organized crime figures can be justified purely from a revenue enforcement viewpoint. See e.g., testimony of Louis Obderdorfer, p. 2, and Robert Blakey, p. 25, before the Subcommittee on Administration of the Internal Revenue Code of the Senate Committee on Finance on "The Role of the Internal Revenue Service in Law Enforcement," 1/22/76.

101 Interim Report on Internal Revenue Service's Intelligence Organization, September 9, 1961, pp. 1-3 (hereinafter referred to as "Interim Report"). Intelligence also investigated employee malfeasance, job applicants, and similar matters.

102 Special Committee of the United States Senate to Investigate Organized Crime in Interstate Commerce, established May 3, 1950.

103 Then called the "Bureau". Reference throughout will be the internal Revenue Service.

104 See Interim Report, p. 12.

105 Ibid., Table 3. During the 15-month period, April 1951 through June 1952, 430 cases were recommended for prosecution. During the same period, convictions were obtained in 133 cases involving 229 defendants. Interim Report p. 12.

106 See Interim Report, pp. 13-14.

107 Ibid., p. 5.

108 Interim Report, Table 3.

109 Statement of Robert K. Lund, former Director, Intelligence Division, before the Subcommittee on Commerce, Consumer and Monetary Affairs of the House Committee on Government Operations, 7/29/75.

110 MS 14R-17, November 6, 1959.

111 MS 94G-4, The program partially centralized IRS intelligence activities, calling for a special review of returns of major racketeers in each district and requiring either an audit or an intelligence investigation of each major racketeer at least every two years. It created a National Office Master File of racketeer figures.

112 MS 14ROD-1, February 24, 1961.

113 Statement of Robert K. Lund before the Subcommittee on Commerce, Consumer and Monetary Affairs of the House Committee on Government Operations, 7/29/75.

114 Interim Report, pp. 79-83.

115 Interim Report, p. 80.

116 Not all of the abuses the Long hearings uncovered were products of the OCD. However, the vast majority of the abuses discussed in testimony before the Long Committee occurred in the course of OCD investigations.

117 Long Committee hearings, pp. 126-27; Letter, Commissioner, IRS to Senator Long, 7/11/67.

118 IRS Internal Audit Report of the Review of the National Office Intelligence Division Special Agent Program and Investigative Imprest Fund, 4/21/75, Attachment 2, p. 1.

119 Ibid. The report covered the period 1971-1975. Because the same administrative system for undercover operations had existed since 1963, however, there is every reason to believe this period is representative of the 12-year span.

A copy of the report is in the Committee files.

120 Ibid., Attachment 3, p. 4.

121 Ibid., Attachment 5, p. 1.

122 Memorandum of telephone conversation between Richard B. Worker, IRS Special Agent, Chicago, and Brian Wellesley, IRS Group Supervisor, Intelligence Division, Los Angeles, 4/3/73.

123 Memorandum, IRS Special Agent Neuhauser, Chicago to Assistant Regional Commissioner -- Intelligence, Midwest Region, undated, p. 2.

124 All personnel in the Los Angeles district interviewed by the staff denied turning over results of undercover work to U.S. Attorneys on any occasion. An unsigned district memorandum, however, discovered by IRS Inspection Service during its investigation of the intelligence functions of the district, praises the work of the undercover agent in gaining access to the legal brief.

125 Senator Long also concluded there was a close connection between IRS organization and abuse. On October 5, 1966, Senator Long wrote to commissioner Cohen:

"If control could be once again centered in the National Director of Intelligence in Washington (as is the case with IRS' Inspection Service) and if the Division could return to its normal job of checking on large tax evaders rather than bookies and numbers operators, things would be greatly improved at IRS."

126 Until February, 1972 SSS was under the Assistant Commissioner (Compliance), who also supervises the Intelligence and Audit Divisions.

127 Leon Green testimony, 9/12/75, pp. 65, 66.

128 "Investigation of the Special Service Staff of the IRS," by the Staff of the Joint Committee on Internal Revenue Taxation, June 5, 1975, hereinafter referred to as "Joint Committee Report;" Political Intelligence in the IRS: The Special Service Staff. A Documentary Analysis Prepared by the Staff of the Subcommittee on Constitutional Rights of the Committee on the Judiciary, United States Senate, Ninety Third Congress, Second Session, December, 1974.

129 The Committee has relied heavily upon the work of the Joint Committee in its inquiry into SSS. The Senate Select Committee's contribution to the problem of the origins of the Special Service Staff has been limited to that new material which came to light in depositions. In general, this Committee's investigation has corroborated the Joint Committee's findings regarding SSS origins. This Committee plowed new ground in two principal areas: (1) investigation of the criteria for referral of subjects to the intelligence agents to the Special Service Staff; (2) interviews of field personnel who handled SSS cases to determine if SSS influenced action on cases after the referral. Except where indicated, all statements regarding the origins of SSS are based upon pp. 33-44 of the Joint Committee's Report.

130 The Subcommittee's authority to do so was by virtue of an Executive Order pursuant to 26 USC 6103 (a).

131 Leon C. Green Testimony, 9/12/75, p. 36.

132 On the other hand, following the formation of SSS, the staff of the Permanent Subcommittee was quite directly involved in its work in contrast to the White House, which exhibited little interest for over eighteen months after its formation.

133 Joint Committee Report, pp. 16, 17.

134 For the detailed account of these transactions, including Dr. Burns' inability to recall most of what others claim occurred, see the Joint Committee Report at pp. 17-18.

135 Memorandum [to file] from Commissioner Thrower, 6/16/69.

136 Memorandum from T. C. Huston to Roger Barth, 6/20/69.

According to the Joint Committee Report, Mr. Barth may have shown this memo to the Commissioner and to Mr. Bacon, but Mr. Barth cannot recall doing either for certain. (Joint Committee Report, p. 20.)

137 Alcohol, Tobacco and Firearms was a division of IRS until 1972 when it became a separate branch of the Treasury Department.

138 Mr. Hughes' recollection is corroborated by his expense voucher, which recites: "My presence in Washington, D.C. is necessary to assist the National Office with a report on militant organizations and the financial funding thereof, as it relates to violations of the Internal Revenue Code. The report was requested by and will be submitted to the White House." (Joint Committee Report, p. 20.)

139 Memorandum, Assistant Commissioner, Compliance, to Roger Barth, July 1, 1969.

140 Career IRS people questioned unanimously named Mr. Barth as a conduit to the White House of information about the inner workings of the IRS. Mr. Hughes stated he never prepared a report addressed to the White House. See Donald O. Virdin testimony, 9/16/75, pp. 31, 32. The pressure to complete the minutes is significant in view of later events indicating the minutes went to the White House. This raises the possibility someone in the Compliance Division was aware of specific White House interest in Special Service Staff.

141 Joint Committee Report, p. 22, e.g. Leon Green testimony, pp. 20, 21.

142 omitted in original.

143 Mr. Bacon, Mr. Green and Mr. Meehan have all testified they were unaware of any White House interest in the Special Service Staff as such. Mr. Virdin has testified:

By that time [July 31, 1969], Mr. Meehan had told me that the White House had the minutes, and the White House was interested. And he was upset, maybe because there was at that time, he knew, such a high level interest in it [i.e. SSS]. Virdin Deposition p. 62.

144 Joint Committee Report, p. 23.

145 D. O. Virdin, Memorandum for the File, "Activist Organizations Committee," July 31, 1969; D. O. Virdin, Memorandum to Mr. [Harold E.] Snyder, "Activist Organizations Committee," May 2, 1968.

146 Green testimony, 9/12/75, p. 65.

147 Memorandum for File by D. O. Virdin 7/29/69.

148 Unsigned memorandum composed by D. O. Virdin 7/24/69. See also Memorandum of meeting by D. O. Virdin 7/24/69.

149 Deposition of former Commissioner Walters, p. 51, 9/19/75.

150 Interview with Joint Committee staff representative, June, 1975.

151 Leon Green testimony, p. 68, 9/12/75.

152 Ibid., p. 66. Mr. Green said one of the few serious disagreements he and Mr. Bacon ever had was over the appointment of Mr. Wright to head SSS.

153 SSS Bi-weekly Report, 11/2/70.

154 Leon Green testimony, p. 65; Donald Bacon testimony, pp. 98-102.

155 See, e.g., Discussion of Meikeljohn Civil Liberties Library, pp. 887-889.

156 See Joint Committee Report, p. 7.

157 Leon Green testimony 9/12/75, pp. 58, 59.

158 Some SSS selections were directly tax-related. To the extent SSS examined exempt organizations which were engaging in political action; or inquired into the deductibility of contributions to non-exempt organizations; or reviewed the possible unreported siphoning of funds of activist organizations by their leaders, its activities were tax-oriented and reflected the legitimate concerns the White House and the Congress had expressed. However, SSS Activities went far beyond these inquiries, as the discussion below will demonstrate.

159 "Q: Was the identity of the organizations and individuals that came to the attention of the Special Service Staff for review pretty much determined by the nature of the input that they received from the FBI and the Justice Department?"

Mr. Green: No question. (Deposition of Leon C. Green, p. 56.)

160 D. O. Virdin, Memorandum for Files, "Ideological Organizations," 7/2/69.

161 The IRS did not wholly rely upon other agencies, but it did so to an unprecedented degree in comparison to other IRS compliance programs in which target selection is based solely upon tax compliance criteria in which the IRS is expert. SSS reviewed the tax compliance of persons and organizations about which its critical information was simply that their names

appeared on material supplied by other agencies in response to an IRS request for help on identifying "dissidents" or "extremists". See note 166.

162 Memorandum from D. W. Bacon to Director, FBI 8/8/69.

163 Memorandum from D. J. Brennan, Jr., to W. C. Sullivan 8/15/69.

164 Joint Committee Report, p. 58.

165 SSS Bi-weekly Reports, 6/15/70; Donald Bacon testimony, pp. 91-95, 9/16/75.

166 SSS Bi-weekly Report, August 29, 1969.

167 Memorandum from Attorney General Clark to Assistant Attorneys General John Doar, Fred Vinson, Roger W. Wilkins, and J. Walter Yeagley, 12/28/67.

168 Biweekly report of August 22, 1969.

169 Biweekly report of December 15, 1969.

170 Biweekly report of April 19, 1971.

171 Biweekly report of June 28, 1971.

172 Biweekly report of November 15, 1971.

173 Leon Green testimony, p. 65.

174 Ibid., pp. 65, 66.

175 Ibid., pp. 73-75.

176 The Committee was unable to determine the number or percentage of all SSS referrals which resulted in investigation even though the facts referred did not establish a tax related basis for investigation.

177 The FBI documents were discovered in the Meikeljohn Civil Liberties Library file in the Special Service Staff vault at IRS.

178 Letter, Paul Wright, Director of SSS, to Chief, Audit Division, March 16, 1971.

179 The latter statement appears to be without any basis in the file.

180 Statement of Auditor, San Francisco District, 7/30/75, p. 1.

181 Ibid

182 Ibid.

183 Statement of Revenue Agent, Collection Division, Los Angeles District, 8/75.

184 The revenue officer need not actually obtain the delinquent return if the result will be a refund.

185 Statement of Cardone. Collection Division, Los Angeles District, 8/3/75, p. 2. Mr. Cardone also stated: "It is true that the [person requesting a Compliance check] does not have to provide reasons for the check, but this is the exception and not the rule. Generally the originator will give reasons and also supply any information and/or material which would be of assistance. ..." (Ibid., p. 2.) SSS was apparently an exception in this case, but the absence of any stated basis for the check did not lead to the field's questioning the propriety of proceeding.

186 The Select Committee staff interviewed IRS representatives who handled SSS field referrals in several of the districts investigated.

187 SSS bi-weekly reports refer to telephone conversations with the field on many occasions. See e.g. Bi-Weekly Report 10/5/70.

188 In a memorandum dated March 30, 1972, the Assistant Commissioner (Compliance) directed District Directors to investigate individuals designated as "War Tax Resisters" and:

"Whatever action is taken, or deemed appropriate, in these cases should be documented sufficiently to provide a memorandum of actions taken and results obtained to the following address:

Mr. Paul H. Wright  
P. O. Box 14197  
Benjamin Franklin Station  
Washington, D.C. 20044."

The address is that of the Special Service Staff.

189 Statement of Chief, Review Staff, Audit Division, St. Louis District, 8/7/75. See also Memorandum, Chief, Review Staff, Audit Division, to Revenue Agent Ross Howard, 7/12/73.

190 Memorandum, Chief Review Staff, St. Louis, 7/12/73.

191 According to the Joint Committee Report, SSS referred a total of 225 cases to the field for Audit, Collection, or Intelligence action out of a total of 11,458 files. Of the 11,458 files, SSS had reviewed the IRS Individual Master File for 3,658 and the Business Master File for 832, and thus had made some assessment of the taxpayer's compliance with the tax laws in a total of 4,490 cases, and in addition, checked the Exempt Organization Master Files for 437 organizations 192 The history and operations of the Ideological Organization Project are detailed in the June 5, 1975, report prepared by the staff of the Joint Committee on Internal Revenue Taxation, entitled, "Investigation of the Special Service Staff of the Internal Revenue Service." Documents examined and interviews conducted by the Select Committee corroborated and expanded the findings of the Joint Committee's staff. See pp. 101-110 of the Joint Committee's report for its discussion.

193 The November 30, 1961, memorandum from Loeb to Barron, with a copy to Rogovin, read as follows:

"The attached clipping reporting on the President's meeting with the press contains comments regarding financial contributions to so-called "right-wing extremist groups". You will note the President's reference to the fact that "As long as they meet the requirements of the laws," etc. I think it behooves us to be certain that we know whether the organizations are complying with the tax law as a matter of fact.

"I have asked Mr. Rogovin to ascertain the names of some of the organizations which we might use for a sample check. Please have someone contact him to secure the same in order that appropriate audits may be made."

194 Memorandum from Mr. Rogovin, Attorney Assistant to Commissioner, to D. J. Barron, Director, Audit Division, 12/20/61.

195 Memorandum from Commissioner, IRS, to Surrey, Assistant Secretary of the Treasury, 1/18/62. The left wing organization added to the list was the Fair Play For Cuba Committee.

196 Memorandum, D. J. Barron, Director, Audit Division, to Assistant Commissioner (Compliance), "Examination of Returns Filed by Certain Political Action Organizations", March 9, 1962.

197 The memo stated: "We intend to send similar memorandum [sic] to Assistant Regional Commissioners (Audit) requiring that examination be made of the following organizations. ..." [Emphasis added.]

198 Memorandum, Director, Audit Division, to Assistant Commissioner (Compliance), March 9, 1963.

199 Memorandum, Attorney Assistant to the Commissioner, to Director, Audit, April 2, 1962.

200 interview with Mitchell Rogovin, former Attorney Assistant to Commissioner, IRS.

201 Memorandum to the Under Secretary from Commissioner, IRS, 5/14/62.

202 Letter, Commissioner of IRS to Attorney General Robert Kennedy, May 15, 1962. This letter places Seigenthaler's initial expression of Concern in November of 1961, at about the same time the President made his open attacks on right-wing extremist organizations.

203 Memorandum, Assistant Commissioner (Compliance) to Commissioner, IRS, 2/8/63.

204 The Committee attempted to ascertain why non-exempt organizations were included in the initial phases of the project. The following exchange took place during the Committee's deposition of former IRS Commissioner Caplin:

Q. Do you know why non-exempt organizations were included in the test audit?

A. Well, I would think then because they went into ideological organizations. And there were all kinds of ideological organization. ...

Q. What would [be] the purpose of doing a test on It in order to study exemptions, and selecting non-exempt organizations?

A. Well, I think that they were looking for a standard that could be applied in separating what was an educational organization from an ideological or political action organization. And the regulations were inadequate. ...

See testimony of Commissioner Caplin, 9/22/75, pp. 40, 41.

205 Memorandum, Assistant Commissioner (Compliance), to Commissioner, IRS, 2/8/63.

206 Memorandum, Commissioner, IRS, to Myer Feldman, Deputy Special Counsel to the President, 7/11/63.

207 Handwritten notes on 7/11/63 memorandum from Commissioner to Feldman. Testimony of Caplin, Commissioner, IRS, 9/22/75, p. 44. The hearings were to be before the Senate Committee, chaired by Senator Yarborough.

208 Handwritten notes on 7/11/63 memorandum from Commissioner to Feldman.

209 There is also evidence that Congressional interest also served as a catalyst to the IRS response. IRS documents note that two Congressional committees had held hearings on political activities of exempt organizations. Memorandum, Commissioner to Feldman, 7/11/63.

210 Conference report, Political Action Organizations, July 26, 1963.

211 The IRS referred to the examinations of the first 22 organizations as a "test audit program" of political action organizations.

212 Under the contemplated procedure, a task force was set up to coordinate field response to the program. The field was to check its files for allegations concerning the organizations to see if they affected the organizations exempt status, the field was to report the results of its investigation back to the National Office task force which would take appropriate action (revocation, no change, etc.) through the Assistant Regional Commissioner (Audit) for the region in which the organization was located.

213 Conference Report, Political Action Organization, 8/2/63.

214 Rogovin memorandum, Political Action Organization File, 8/21/63.

215 Rogovin memorandum, Political Action Organization File, 8/21/63.

216 Ibid.

217 Letter, Rogovin to Chapper entitled, "Ideological Organizations Proposed for First Phase of Audit Program," 8/29/63.

218 Memoranda, commissioner, IRS, to Under Secretary of Treasury, 12/4/64, 2/8/65, 3/8/65.

219 Ibid.

220 Joint Committee Report, p. 112.

221 Memoranda to IRS Commissioner, 4/66, 11/67.

222 Internal Revenue Manual, Sec. 9300, et seq.

223 See. 9311.1 of the Internal Revenue Service Manual defines information item as: "... any communication or Information received by Intelligence alleging or indicating a violation within the investigative jurisdiction of Intelligence..."

224 The staff obtained much of the information about the practical operation of IRS district intelligence systems through personal observation of six districts (Los Angeles, San Francisco, Baltimore, St. Louis, Chicago, and Jacksonville) and interviews of many special agents in those districts. To assure the accuracy of the staff's observations, the Committee requested that IRS intelligence specifically review the IGRS section of this report for accuracy. Footnotes to support statements herein which are based upon staff observations and upon review by IRS Intelligence will state: "Staff observations of District Intelligence operations."

225 Investigative files, or numbered case files, are generally established after the Intelligence Division has received and evaluated a referral from the Audit or Collection Division or after information items relating to a specific taxpayer have been evaluated and the evaluation support the opening of an Intelligence investigation. See IRS Manual, Sec. 932D et seq.

226 omitted in original.

227 "Squirrel" files is not the official IRS name given to these files, but a name the files had come to be called in one district investigation. Generally, they consisted of information which was not a part of a particular investigation and which had been privately developed by the special agent in whose files they were usually kept.

228 Ibid.

229 The above description of the filing systems maintained in the IRS Intelligence Division is drawn from IRS documents, as noted above, and from the actual methods used to file information observed by the Committee staff during its investigation of IRS districts.

230 Memo from Intelligence Division to Assistant Commissioner (Compliance), dated September 27, 1963.

231 Manual Supplement 94G-19, April 9, 1964; Manual Supplement 94G-20, September 18, 1964.

232 Memo from Intelligence Division to Assistant Commissioner (Compliance), September 27, 1963.

233 Memo for file, INFORMATION RETRIEVAL, Visit to Detroit District Intelligence Office by M. J. House, April 15, 1966.

234 Memorandum, 3/28/68, Acting Chief, Planning and Procedures Branch, to Acting Director, Intelligence Division. The report contained no hint of extension of the system beyond organized crime, but did hint at an expansion of Intelligence gathering (as contrasted with mere improved retrieval) in its suggestion that the question of what sources of information to explore and the nature and volume of information to be gathered should be part of the recommended study.

235 Staff interview with Chief, Los Angeles Intelligence Division, 7/24/75.

236 Section 9570-400 of the Internal Revenue Service Manual provides: "When the Chief, Intelligence Division, determines that an information item has intelligence potential, he will assign it the next case number in the District sequence."

237 The Committee staff's review of the files of this unit indicates it did generally concentrate on organized crime-with at least one important exception.

238 Staff Observations of District Intelligence Operations, Los Angeles, 7/75.

239 The St. Louis District had a case development unit whose function was in theory akin to that in the Los Angeles District. However, in St. Louis no mechanized retrieval system existed. In fact, St. Louis is one of the few districts which never adopted the IGRS. Its case development unit is, therefore, not really a precursor of IGRS. A pilot program was also initiated in the Jacksonville District.

240 Letter, John J. Olzewski, Chairman, Task Force on Intelligence Gathering and Retrieval System, to William A. Kolar, Director, Intelligence Division, 6/25/69.

241 Report of Task Force on Intelligence Gathering and Retrieval System, June 25, 1969, Internal Revenue Service Intelligence Division.

242 The reference to "subversive and radical elements" is an early indication that these groups were regarded as suitable targets for IRS intelligence.

243 Staff observations of district intelligence operations, Los Angeles, 7/75.

244 Memorandum, Assistant Regional Commissioners -- Intelligence (Western Region) to all District Intelligence Chiefs (Western Region), 4/29/71.

245 Staff interview with special agent in charge of pre-IGRS system, Los Angeles, 7/75.

246 Manual Transmittal 9300-40, May 4, 1973.

247 Manual Transmittal 9300-47, March 4, 1974.

248 Ibid.

249 Memorandum, Assistant Regional Commissioner Intelligence, Western Region, 4/29/71.

250 Memorandum to Chief, Intelligence (Manhattan), Information Retrieval System in the Manhattan District, 10/29/71.

251 For example, if a special agent in the IGRU read in the newspaper that a known organized crime figure had invested \$40,000 in a restaurant, that newspaper article would be filed and indexed in IGRS for two basic reasons: (1) so that any agent working on an investigation of that individual would have that information available, and (2) so that, at some future time, someone in the IGRU could pull all information on that individual to determine whether a basis existed for opening an investigation -- a basis which, conceivably, would never have been detected but for the gathering of many pieces of information none of which alone would have triggered an investigation.

252 May 5, 1973, MT 9300-40, section 9392 (5).

253 For example, in discussing the establishment of an Intelligence Gathering and Retrieval Unit in Birmingham, the Chief, Intelligence Division, stated, "All special agents are encouraged to develop, for the purpose of receiving useful information in relation to tax violations in all walks of life, confidential informants who can provide meaningful information in this regard." Memo from Chief, Birmingham Intelligence Division, to Special Agents, dated February 20, 1974.

254 Sec. 9393.1, IRS Manual, 3/4/74.

255 IRS manual Transmittal 9300-40, May 4, 1973.

256 Evaluators were part of the case development team. Their function was to evaluate material gathered by the special agents assigned to case development and to decide whether it should be included in IGRS.

257 See IRS Manual Transmittal 9300-40, May 4, 1973.

258 IRS Manual Transmittal 9300-40, May 4, 1973.

259 In one district, the problem of what information was to be input in the system was clearly stated in a memo from a District Director to all Division Chiefs in the division. The District Director stated:

"I request that each agent or officer under your supervision be alert to such unusual items and submit them to our Information Gathering and Retrieval Unit. While it is difficult to establish criteria concerning what to submit, each agent can at least ask himself whether a particular item would be of value to him now or in the future if he were assigned a case on an entity named in a given item of information." Memorandum, District Director, Greensboro District, to All Division Chiefs, Branch Chiefs, and Managers, March 4, 1974.

260 In a January 18, 1971, memorandum discussing consolidation of various features of the Los Angeles IGRS with similar systems in San Francisco and Reno, it was stated that "Los Angeles [IRS Intelligence Division] is interested in anything and everything. . . ." Memorandum, Special Agent David D. Gehrt to Chief, Intelligence Division, Reno, 1/18/71.

261 Staff statistical review of contents of Los Angeles IGRS files.

262 The story of their destruction is set forth later in this section, as is a description of the destruction of a similar file in the St. Louis Intelligence Division in January 1975.

263 Staff interview of Robert Handley, Audit Division, Los Angeles, 8/1/75.

264 Ibid.

265 The informants were, according to the auditor, not members of the groups, but people in positions to learn of their activities through their own informants, including one person alleged to be an investigator in the employ of the Office of the Governor of the State of California. Ibid.

266 The destruction of the material this agent gathered was not quite complete. The few remaining documents dealing with militants the staff located in the IGRS files, were, for the most part, not related to financial transactions and of no apparent value in tax enforcement. They related to such subjects as changes in leadership in the groups, arrests for violence, meetings, and surveillance reports by other law enforcement agencies as well as minutes of meetings of law enforcement associations concerned with militants. In the absence of the complete files the auditor created, there is no means of verifying the means of information gathering employed or the kind of information gathered.

267 Memorandum, Assistant Commissioner (Compliance) to All Regional Commissioners, March 25, 1969. Memorandum, Assistant Commissioner (Compliance) to Assistant Commissioners (Data Processing, Technical), Chief Counsel, and All Compliance Division Directors, July 18, 1969.

268 For a discussion of Special Service Staff, see p. 876.

269 Staff interview of Robert Handley, 8/1/75.

270 Internal Revenue Manual Transmittal 1(15)59-101 (8/12/69) (Records Control Schedules).

271 Statement of Jerry Baker, Intelligence Division, Los Angeles District, 8/1/75.

272 Statement of Chief, intelligence Division, Los Angeles District, 8/1/75. That the staff detected the destruction of the Los Angeles material demonstrates a benefit which results from computerization of intelligence: a record of the material gathered exists outside the control of the gatherers. Such a record is of particular importance where control of intelligence-gathering depends upon retrospective review and revision of guidelines rather than upon day-to-day direction of operations.

273 Statement of Chief, Intelligence Division, St. Louis District, 8/6/75.

274 Staff observations of district intelligence operations.

275 Staff observations of district intelligence operations.

276 The relatively large quantity of material in some districts' IGRS is the result of their having intelligence gathering systems prior to the formal establishment of IGRS. In the case of Los Angeles, the numbers are particularly high because of an apparent error by the regional data center in following the district's instructions regarding the input of the material the district had gathered under the Miracode system. The district apparently screened the material and asked to have a program written which would result in the automatic selection of that material from the Miracode data most likely to be of continuing value. Through an oversight the program was not used, and all of the Miracode data was included in IGRS. The result of this mass inclusion of the Miracode data is that the IGRS in Los Angeles gives a picture of intelligence gathering practices in the district over a period of six years, and of the results of this long experience with an IGRS-type system in relation to the amount of data accumulated.

277 Two members of the committee staff spent ten days in Miami investigating the allegations. For much of its information about the allegations, however, the Committee relied upon the work of the 91 investigators IRS Inspection Division assigned to investigate the allegations of Operation Leprechaun. The Committee's independent investigation of cases which Inspection also investigated has convinced the Committee of the thoroughness and independence of Inspection Division inquiries into alleged IRS wrongdoing. The Committee staff has also read or attended the hearings of the Oversight Subcommittee of the House Ways and Means Committee and the Government Operations Subcommittee on Commerce, Consumer and Monetary Affairs on the subject of Operation Leprechaun. The Committee also devoted a portion of its public hearing on IRS intelligence to Operation Leprechaun.

278 See, e.g., Memorandum of Meeting of IRS Target Selection Committee attended by Strike Force Attorney prepared by Thomas Eaton, June 28, 1972.

279 See discussion of the development of the Information Gathering and Retrieval System at p. 900.

280 Memorandum of IRS Inspection Interview with Dougald D. McMillan, 4/5/75, p. 22.

281 Affidavit of John McRae to IRS Inspection, 3/19/75, p. 3. McRae, in a later affidavit, modified some of the statements contained in the affidavit of 3/19/75. His later statements indicate that there was some misunderstanding within IRS concerning the exact status of Special Agent Harrison.

282 Ibid, pp. 3-5.

283 See memorandum dated June 28, 1972, summarizing a meeting with the Strike Force attorney; memorandum dated September 6, 1972; minutes of Target Selection Committee meeting, dated May 15, 1973.

284 McRae affidavit, 3/19/75. McRae, in his affidavit, states, "At a subsequent meeting a short time later Chief Register directed that Special Agent John T. Harrison be relieved of his present assignment and given the task of perfecting the case development files on the individuals identified on Dougald McMillan's list. It was Chief Register's further direction that S/A Harrison would consult directly and closely with Dougald McMillan about the corruption in Dade County. Chief Register advised me that I would learn of S/A Harrison's activities on a need-to-know basis. Mr. Register asked me if I could work with S/A Harrison under such an arrangement and I told him I saw no problem." See also, Transcript of IRS Miami meeting, 3/25/75. Register, in subsequent statements, has denied ever removing Harrison from the effective control of his supervisors. The staff concluded that his later statements, as was McRae's statement, are indicative of the misunderstanding within IRS as to Harrison's exact status.

285 McRae affidavit to IRS Inspector, 3/19/75, p. 3.

286 Affidavit, John T. Harrison, 3/18/75, p. 2.

287 The staff, in its Investigation by Operation Leprechaun, did not attempt to determine Gutierrez' motives for exposing Operation Leprechaun. As previously noted, many of her allegations appear now to have been unfounded.

288 Operation Leprechaun always had as its goal the enforcement of the tax laws.

289 IRS Report on Relationship between Miami Strike Force and IRS Miami Strike Force Personnel, p. 4; Affidavit, McRae to IRS Inspection, 3/19/75.

290 Affidavit of John McRae to IRS Inspection, 3/19/75, p. 3.

291 McMillan, statement to IRS Inspection, 4/5/75. p. 3.

292 Ibid.

293 Harrison affidavit, 3/18/75.

294 Letter from G. T. Register, Jr., to Assistant Regional Commissioner, Intelligence, 3/30/72. This limitation on informant payments is set forth in Internal Revenue Manual section 9372.1(3), as follows: "When practicable, direct payments to informants should be made only after the information or evidence has been obtained, evaluated, and determined to be worthy of compensation." Other regulations govern accountability for imprest funds, including the requirement that advances from the funds be made only by "class A cashiers". As administered, Operation Leprechaun violated all these regulations.

295 He later (April 22, 1973) approved a \$17,000 addition to the fund.

296 Harrison affidavit, 3/15/75, p. 1.

297 Harrison affidavit, 3/15/75, p. 1.

298 Ibid, p. 2.

299 Ibid. The IRS Inspection Report on Operation Leprechaun states that

"... during the time Harrison was identifying his expenditures to informants with the code name "Operation Leprechaun," Harrison was obtaining information from 41 informants; 29 of whom were paid and 12 unpaid." See IRS Inspection Report Sec. 2.

300 IRS Inspection Report, Operation Leprechaun, Sec. 2.

301 The police report on the Estrella burglary indicates that a "heavy instrument was used to smash and completely remove glass from front door;" that an employee of Estrella's campaign office discovered the break-in on the morning of November 13, 1972, and found that a beige filing cabinet about 48" high containing all their campaign records had been stolen.

302 Affidavit, Nelson Vega to IRS Inspector, 4/16/75.

303 Ibid.

304 Vega affidavit, 4/16/75.

305 Harrison affidavit, 4/8/75.

306 Ibid.

307 Affidavit, Marina Novoa to IRS Inspection.

308 E. Gutierrez Affidavit to IRS Inspection.

309 Harrison Affidavit, 4/10/75.

310 9th-28 Affidavit to IRS Inspection.

311 9th-28 Affidavit to IRS Inspection. The files also contained memoranda to the file from Harrison dated August 22, 1974, and August 24, 1974, respectively, in which Harrison states that 9th-28 had given him information regarding the judge; and that Harrison (or 9th-28?) had paid informants Novoa and Vega for the information they had supplied concerning the judge. Neither memorandum alludes to any electronic surveillance.

312 Affidavit, Major Breslow to IRS Inspection.

313 The Miami Intelligence Division files contained handwritten and typewritten versions of memoranda regarding informants which differed in significant respects. The typewritten version of one memorandum did not contain a section from the handwritten version of the same memorandum describing a meeting between 9th-28 and the judge during which a "microphone was taped to 9th-28's body." A second handwritten memorandum described a second recorded meeting between 9th-28 and the judge and indicated the informant and 9th-28 dealt with a "voice recording technical." The typed version of this memorandum omitted the references to these events. In his affidavit, Harrison stated the first omission was a typing error. As to the second, he said, "It appears from checking back the dates that had erroneously included that material on August 22,

1972, which could have been on Tuesday, whereas the written material assuming it to be correct should have been referred to on Wednesday which was August 23, 1972." A four page memorandum in the Miami Intelligence office files, dated August 15, 1972, prepared by Harrison, contained the following statement:

"On August 9, I met with (informants) together with Capt. Herb Breslow ... (Informant) consented for an electronic transmitter to be placed on his person. He had made an appointment to see (judge) at his home ... At approximately 5:55 p.m., (informant) commenced his conversation with (judge) inside (judge's) home. The conversation was monitored and taped by use of a KEL KIT supplied and operated by Capt. Breslow in my presence. Upon completion of the conversation ..., Capt. Breslow presented me with the tape. A transcript of the tape will be forwarded once it has been typed."

The same memorandum appeared in 9th-28's file, but it lacked the above paragraph. Harrison, in his April 10, 1975, affidavit, stated that he could only speculate that he received instructions to omit the paragraph from the second memorandum and that such instruction could only come from the Chief, Intelligence. The apparent reason for the omission, according to Harrison, was to prevent a casual reader from being misled into thinking that the IRS had engaged in electronic surveillance. The Chief, Intelligence, has no recollection of giving such instructions. (Affidavit, Chief, Intelligence, Jacksonville District.)

314 IRS Inspection Interview with Dougald McMillan, 7/29/75.

315 Ibid., p. 18. Copies of some of these documents are in the Committee files.

316 Ibid. It is possible to quibble with the criteria applied to determine whether a given document contains sex or drinking related information. A subsequent reevaluation of the documents by IRS using different criteria resulted in a smaller percentage classified as being related to the sex and drinking habits of the targets. However, since the criteria applied to Harrison's debriefing documents and those applied to those of other agents were uniform, the comparison is valid. The Committee files contain some of Harrison's debriefing documents. They clearly contain sex and drinking related information with no relevance to tax enforcement.

317 In his March 18, 1975, statement, Harrison said he had one informant who

"... did recruit one individual from the Cuban community who, in turn, recruited three or four other confidential informants."

318 Memorandum, Harrison to Chief, Intelligence Division, Jacksonville, 9/13/72.

**FINAL REPORT  
OF THE  
SELECT COMMITTEE  
TO STUDY GOVERNMENTAL OPERATIONS  
WITH RESPECT TO  
INTELLIGENCE ACTIVITIES  
UNITED STATES SENATE**

APRIL 23 (under authority of the order of April 14), 1976

**NATIONAL SECURITY, CIVIL LIBERTIES, AND THE COLLECTION OF INTELLIGENCE: A REPORT ON  
THE HUSTON PLAN**

**I. INTRODUCTION**

*A. The Scope of the Investigation*

On January 27, 1975, the United States Senate, meeting early in the 1st Session of the 94th Congress, established through Senate Resolution 21 a Select Committee to Study Governmental Operations with Respect to Intelligence Activities. The Select Committee on Intelligence was given a broad mandate to investigate the extent, if any, to which "illegal, improper, or unethical" activities were engaged in by the intelligence agencies of the Federal Government.

Falling within this mandate was the specific charge in Section 2(3) of the Resolution to reveal "the full facts" with respect to "the origin and disposition of the so-called Huston Plan to apply United States intelligence agency capabilities against individuals or organizations within the United States." 1 This report presents the results of the Select Committee inquiry into this controversial intelligence plan.

In June 1970 President Nixon requested a review of those intelligence collection practices which might lead to better information on domestic dissenters. In response, the intelligence community produced a 43 page Special Report on the subject. The Huston Plan, written soon thereafter by presidential assistant Tom Charles Huston, was a set of recommendations-for-action derived from the options presented in this Special Report.

The following commentary on the Special Report and the Huston Plan is organized, first, to reveal the background events which led to the presidential request for an intelligence review. It then explores in detail the views and activities of the men who wrote the Special Report, as well as the reaction of the President to its controversial spin-off, the Huston Plan. The effect of this episode upon the ongoing activities of the intelligence agencies is examined next. Pursuant to Senate Resolution 21, special attention was devoted throughout the inquiry to the question of whether illegal, improper, or unethical acts had been carried out by the President or those preparing the intelligence report for him.

The Committee investigation into the Huston Plan began in April 1975. During the course of the inquiry over 40 interviews were conducted. These included all major -- and most minor -- participants in the intelligence agencies who helped draft the intelligence report for the President. The documents relevant to an understanding of the case were obtained by the Committee, including those from the papers of President Nixon.

Plans were made early in the investigation to interview the former President regarding his views on the Huston Plan episode; but, after lengthy negotiations, the conditions set for the interview by his lawyer proved to be unacceptable to the Committee Members, who favored an examination before the full Committee and on the record. The Select Committee did decide, however, to send the former President a set of written interrogatories on the Huston Plan. His responses are included in this report.

Supplemented by this presidential retrospect, the extensive documentation now available -- as well as the existence of views from virtually every other major participant still living -- provides a reasonably full understanding of the events which transpired in the summer of 1970, now encapsulated in the phrase, "The Huston Plan." These events are summarized briefly in the following précis. 2

#### *B. A Précis*

Richard M. Nixon won his first Presidential election in 1968 by less than one percent of the total popular vote. The Presidential campaign that year had been accompanied by some of the most violent street demonstrations in the history of American elections.

His first year in office provided the President with ample further evidence of the mood of revolt in the country. In March and April 1969, student riots erupted in San Francisco, Cambridge, and Ithaca; and in Chicago, ghetto blacks battled the police in the streets. By October and November, the anti-war movement was sufficiently well organized to bring to the nation's capital the largest mass demonstrations ever witnessed in the United States. The magnitude of the unrest was immense and, just as the nation was obsessed by Vietnam, so, too, the White House grew increasingly preoccupied with the wave of domestic protest sweeping the countryside.

Presidential assistant Tom Huston and others in the White House believed that better intelligence on the plans of domestic protesters would enable the President to take more decisive action against violence-prone dissenters. In their view, serious deficiencies in intelligence collection had resulted from the decision in the mid-1960s by J. Edgar Hoover, the Director of the Federal Bureau of Investigation, to curtail certain collection techniques (particularly surreptitious entry and electronic surveillance). This view was shared widely by intelligence officers throughout the Government. Hoover went so far as to sever formal liaison ties between the FBI and the CIA in March 1970 and later with the other intelligence agencies, adding further to the widespread disenchantment with his leadership in the intelligence area.

Tom Huston grew more frustrated by the inability of the White House to anticipate the plans of domestic dissenters. He was also encouraged by William C. Sullivan, Assistant Director for Domestic Intelligence, FBI, to help remove Hoover's restraints on intelligence collection. By the spring of 1970, Huston decided to urge senior White House personnel to have the President request a thorough review of intelligence collection methods. The President, himself greatly concerned about domestic unrest, agreed to the proposal.

On June 5, 1970, President Nixon held a meeting in the White House with the leaders of the intelligence community. The purpose of the meeting was to establish a special committee which would review methods for improving the quality of intelligence particularly on the New Left and its foreign connections. Specifically this Interagency Committee on Intelligence (Ad Hoc) was charged with the preparation of a report for the President on existing intelligence gaps, how to close them, and how to enhance coordination among the intelligence agencies.

Assigned a tight deadline, the Ad Hoc Committee staff prepared the study in a fortnight. The final report was entitled "Special Report Interagency Committee on Intelligence (Ad Hoc)" and, on June 25, 1970, it received the signatures of the four top intelligence directors: Hoover (FBI), Helms (CIA), Bennett (DIA) and Gayler (NSA). 3

The enterprise was unique. It pooled the resources of the foreign-oriented CIA, DIA, and NSA with those of the domestic-oriented FBI. Many of the participants endorsed the enterprise enthusiastically, not because of an interest in better data on the New Left but because they sensed an opportunity to remove various restrictions on the collection of strictly foreign intelligence. Others participated only hesitantly and briefly, fearful of breaking through the membranes of law and propriety.

Drawing upon the Special Report, Tom Huston prepared a memorandum in early July for Presidential advisor H. R. (Bob) Haldeman under the heading "Operational Restraints on Intelligence Collection." In this memorandum Huston, who had been the White House representative at the Ad Hoc Committee meetings, recommended that the President select for implementation those options in the Special Report which would have relaxed dramatically the current restrictions on intelligence collection. The set of options recommended by Huston is defined in this particular report known as the Huston Plan, although the phrase has been generally applied to the Special Report from which Huston selected his options. 3a

Presidential approval of the options recommended by Huston would have given intelligence and counterintelligence specialists within the intelligence community authority to:

- (1) monitor the international communications of U.S. citizens;
- (2) intensify the electronic surveillance of domestic dissenters and selected establishments;
- (3) read the international mail of American citizens;
- (4) break into specified establishments and into homes of domestic dissenters; and,

(5) intensify the surveillance of American college students.

Thus, in the summer of 1970, Tom Charles Huston believed the law had to be set aside in order to combat forces which seemed to be threatening the fabric of society. Apparently the President agreed, for on July 14, 1970, Haldeman wrote a memorandum back to Huston to inform him the President had approved his options to relax collection restraints. This decision later formed the core of Article 11 in the Impeachment Articles framed by the Judiciary Committee of the House of Representatives in 1974.

To implement the presidential decision, Huston next wrote a memorandum to each of the intelligence agency directors, dated July 23rd, informing them that certain restraints on intelligence collection were being removed. Writing under the heading "Domestic Intelligence," Huston invoked the authority of the President and outlined exactly which restrictions were to be lifted. This document is the second version of the Huston Plan and is similar to the first sent to the President for his approval via Haldeman in early July.

Four days later on July 27th, the Huston Plan sent to the intelligence directors was recalled by the White House "for reconsideration."

Most of these bare facts have been in the public domain since 1973, when the Senate Watergate investigation first brought to light the history of the Huston Plan. What is new as a result of this inquiry conducted by the Senate Select Committee on Intelligence is the discovery of a much more extensive degree of impropriety in the intelligence community than was initially revealed in 1973. Moreover, the Committee found instances of duplicity between the intelligence agencies and the President, and among agencies themselves.

Despite the request of the President for a complete report on intelligence problems, the Special Report of June 1970 failed to mention an ongoing CIA program that involved opening the international mail of American citizens or an on-going NSA program to select from intercepted international communications of American citizens contained on "watch lists" submitted by other agencies. The CIA mail program was clearly illegal, and the NSA program was of questionable lawfulness. Not only were laws violated, but the President was asked to consider approving the CIA mail opening program apparently without ever being told of its existence.

Furthermore, despite the ultimate decision by the President to revoke the Huston Plan, several of its provisions were implemented anyway. The intelligence agencies contributed an increasing number of names of American citizens to the NSA "watch list" so that NSA would provide the contents of any intercepted international communications of those citizens to the other intelligence agencies.

The number of Americans on this watch list expanded to a high point in 1973. The CIA continued its illegal program of mail opening. After the Huston Plan, the FBI lowered the age of campus informants, thereby expanding surveillance of American college students as sought through the Plan. In 1971, the FBI reinstated its use of mail covers 3b and continued to submit names to the CIA mail program. In December 1970, the intelligence community established -- at the request of the White House -- a permanent interagency committee for intelligence evaluation called the Intelligence Evaluation Committee (IEC), an entity highly comparable to one outlined in the Special Report. Finally, several of the principals involved in the Huston Plan episode continued to seek the full implementation of its provisions. Admiral Gayler and Richard Helms, for instance, urged Attorney General Mitchell on March 22, 1971, to relax the restrictions on key intelligence collection operations previously barred by the President in his ultimate rejection of the Huston Plan.

Placed in perspective, the Huston Plan must be viewed as but a single example of a continuous effort by counterintelligence specialists to expand collection capabilities at home and abroad often without the knowledge or approval of the President or the Attorney General, and certainly without the knowledge of Congress or the people. As a commentary on accountability, the lesson of the Huston Plan is obvious: often there was no accountability at all, beyond the intelligence agencies themselves. The result was a neglect of civil liberties by the intelligence collectors.

#### *C. Issues*

The case of the Huston Plan has been of particular significance because it raises a host of central issues about the American intelligence community that reappear throughout the broad range of the Committee investigation. Among these are the issues of accountability, authority, lawlessness, the quality of intelligence, and the problem of intelligence coordination.

**Accountability and Authority.** -- Did the intelligence agencies conceal operations from the President in June 1970? From the representative of the President, Tom Huston? From the Attorney General? From the Congress? From each other? What review procedures existed to evaluate and approve the various collection techniques discussed in the Special Report? Were these procedures used?

**Lawlessness.** -- Has the White House or the intelligence service acted in disregard for the law? Why did the intelligence community list for the President in the Special Report options which were illegal? Why did the President approve for implementation in the Huston Plan recommendations which were, in some cases, plainly illegal and, in other cases, of dubious legality? Did the intelligence professionals or Tom Huston seek legal consultation with the Justice Department, Congress, the courts, or their own legal counsel in drafting the intelligence plan?

**Quality and Coordination of Intelligence.** -- How justified was the dissatisfaction expressed by the Nixon Administration with the quality and coordination of intelligence on domestic dissenters in 1969 and 1970? Did the raising of barriers to intelligence collection by Hoover in the mid-1960's significantly reduce the quality of counterintelligence information? How badly were intelligence functions impaired by the severance of formal liaison ties between the FBI and the other intelligence entities in 1970?

An inquiry into the Huston Plan permits an analysis of answers to such issues found in the writings of the intelligence specialists who prepared the Special Report for the President in June 1970. Their views, reflected in the Report and subsequent memoranda, are provocative stimuli for thought, debate, and reform on the scope and method of intelligence activities within the United States.

## II. BACKGROUND: A TIME OF TURBULENCE

### *A. Frustrations in the White House*

The antiwar protests and the incidents of violence and civil disobedience which occurred throughout the country in 1969 and 1970 greatly concerned the Nixon Administration, much as it had the Johnson Administration before it. Among the responses of both administrations was the belief that hostile foreign powers must somehow be responsible for, or at least influencing, the domestic unrest. President Johnson often asked the intelligence agencies to probe the possibility of linkages between the antiwar movement and foreign influence. 4 Not long after entering the White House, President Nixon took up the refrain.

In April 1960 the President asked his aide, John Ehrlichman, to have the intelligence community help him prepare a report on foreign Communist support of campus disorders. Evidence of a foreign connection was insubstantial; but the President and Ehrlichman were dissatisfied with the intelligence provided by the agencies, believing it to be inconclusive. 5

Two months later, Ehrlichman assigned a young White House Counsel on Pat Buchanan's Research and Speech Writing staff to prepare a second and more thorough report on foreign support of campus disturbances. Tom Charles Huston, lawyer and recently discharged Army intelligence officer, drew the assignment chiefly because he was interested in the subject and seemed to know more about New Left politics than anyone else on the White House staff. 6

On June 19, 1969, Huston paid his first visit to William C. Sullivan of the FBI. 7 Sullivan had served as the FBI's Assistant Director for Domestic Intelligence since 1961. In this position, he was responsible for counterintelligence, that aspect of intelligence activity designed to discover and destroy the effectiveness of hostile foreign intelligence services. Huston related to Sullivan the substance of a recent meeting he had with the President. Concerned about revolutionary activities by the New Left, the President wanted to know the details on the radical movement -- "especially," Sullivan remembers Huston emphasizing, "all information possible relating to foreign influences and the financing of the New Left." 8 (To at least one intelligence official the line seemed extremely thin between the interest of President Nixon in this kind of information for the purposes of national security, on the one hand, and his interest for strictly political purposes, on the other hand.) 9

Sullivan, replying to the White House inquiry for assistance from the FBI, told Huston that his request would have to be put in writing to Mr. Hoover, the FBI Director. 10 On the next day, June 20, 1969, Huston prepared the request to be sent to Hoover. With the earlier report which the FBI had prepared for Ehrlichman in mind, Huston told the Director that the available intelligence data on Communist influence over radicals was "inadequate." 11 On behalf of the President, Huston wanted to know what gaps existed in intelligence on radicals and what steps could be taken to provide maximum possible coverage of their activities. Unwilling to accept earlier intelligence results which did not fit their preconceptions, the White House policy-makers began to apply increased pressure on the FBI to try additional collection techniques.

Huston also gave this same assignment to the CIA, NSA, and DIA. Each of the agencies submitted its report to Huston on a June 30th deadline, with the NSA feeding its contribution through the DIA presentation. The FBI report showed a "strong reliance upon the use of electronic coverage", according to C. D. Brennan, an assistant to William Sullivan who helped prepare the response to the White House request. 12 Brennan concluded that increased coverage would be necessary "as it appears there will be increasingly closer links between [the New Left and black extremist movements] and foreign communists in the future."

The quality of the intelligence supporting these reports apparently failed to satisfy Ehrlichman and others in the White House, especially the FBI data, and the disenchantment with the intelligence agencies continued. 13

### *B. The Huston-Sullivan Alliance*

Throughout the rest of 1969, Huston was assigned to receive and disseminate FBI intelligence estimates sent to the White House. Contempt for these estimates was voiced by Ehrlichman, Haldeman, and Huston's colleague, Egil Krough. 14 Huston himself adopted more moderate views on the quality of Bureau intelligence reports, especially after he became more acquainted with Sullivan. Listening to the counterintelligence specialists made Huston sympathetic to the difficulties of intelligence collection under the restraints imposed upon the FBI by its Director. Sullivan often complained to Huston about the "question of coordination, the lack of manpower, the inability to get the necessary resources, the problems of the various restraints that were existing." 15

From June 1969 to June 1970, the important relationship between Huston and Sullivan deepened into a working alliance devoted to the lowering of intelligence collection barriers. As a Central Intelligence Agency officer wrote in a memorandum for the record, "By way of background, it should be noted that Mr. Sullivan and Mr. Huston had been in frequent contact on these matters before [June 1970], because Mr. Sullivan was extremely displeased by the number of restrictions which had been placed on the FBI by Mr. Hoover." 16 The two had numerous meetings and telephone conversations during this period, beginning with dialogues on the report prepared for the President in June 1966 and followed by preparations to deal with protest activity in the Washington, D.C., area.

As Huston recalls, it was during this period that he became close to Sullivan and his assistant, Brennan. "I think I had their confidence, in that I think they thought I understood a little bit about who the players were and what was going on in the country in internal security matters," Huston has testified. "And they certainly had my confidence. In fact, I do not think there was anyone in the government who I respected more than Mr. Sullivan." 17

Though far different in temperament, age, and experience, Huston and Sullivan found themselves in agreement on several points. Both viewed the spiraling unrest in the country with alarm; both believed in the need for greater interagency coordination among the intelligence agencies; both thought the quality of data on domestic radicals could be vastly improved; and both agreed that most of the intelligence deficiencies could be remedied if the intelligence agencies -- and particularly the FBI -- would reinstate collection methods common "in the good old days," such as the use of electronic surveillance, to obtain intelligence data. 18

### *C. The "New" Hoover*

Counterintelligence specialists throughout the government were dismayed when undercover FBI operations important to them, and carried out for several years, were suddenly suspended by Hoover in the 1960s. 19 The new emphasis in the Kennedy Administration on investigations into organized crime and civil rights had already drained manpower from security and intelligence operations, according to an experienced FBI counterintelligence specialist. 20

Then by the mid-1960s, Hoover began to terminate specific security programs. In July 1966, for example, Hoover wrote on a memorandum that henceforth all FBI break-ins -- or "black-bag" jobs -- were to be cut off. 21 By its refusal to use rigorously a full array of intelligence collection methods, Huston strongly believed the FBI was failing to do its job. This belief was shared widely among intelligence professionals. Helms, Bennett, and Gayler all expressed this view, as did -- privately -- key intelligence officers within the FBI itself. 22

Intelligence professionals were dismayed by Hoover's reluctance now to order what he had allowed before on a regular basis. Some suggested that the wiretap hearings held by Senator Edward V. Long in 1965 had turned public opinion against the use of certain intelligence-gathering techniques, 23 and that the Director was merely reading the writing on the wall. One seasoned CIA intelligence officer recalls:

Mr. Hoover's real concern was that during the Johnson Administration, where the Congress was delving into matters pertaining to FBI activities, Mr. Hoover looked to the President to give him support in terms of conducting those operations. And when that support was lacking, Mr. Hoover had no recourse but to gradually eliminate activities which were unfavorable to the Bureau and which in turn risked public confidence in the number one law enforcement agency. 24

Others pointed to the increased risks involved in break-ins because of new and sophisticated security precautions taken by various Bureau targets. Hoover, according to this theory, was unwilling to engage in past practices when faced with the new dangers of being caught. 25

The fact that Hoover reached age 70 in 1965 was also significant in the view of still others, since he then came within the law which required mandatory retirement. Henceforth, he served each year in a somewhat vulnerable position, as his Directorship was now reviewed for renewal on an annual basis. So he became, according to an FBI official, "very conscious of the fact that any incident which, within his understanding might prove an embarrassment to the Bureau, could reflect questionably on his leadership of the Bureau." 26

Several highly-placed observers in the intelligence community also believed the Director was simply growing old and more wary about preserving his established reputation -- a wariness nurtured by the protective instincts of his close friend and professional colleague, Clyde Tolson, who held the second highest position in the FBI. Dr. Louis Tordella, the long-time top civilian at NSA, speculated in conversations with William C. Sullivan in 1969 that Tolson probably had told Hoover something to the effect: "If these techniques ever backfire, your image and the reputation of the Bureau will be badly damaged." 27

Tordella, Sullivan, and others in the intelligence world grew increasingly impatient with the "new" Hoover and with what they considered to be his obstinance on the question of intelligence collection. If they were to expand their collection capabilities, as they and the White House wished, the new restrictions would have to be eased. Yet no one was willing to challenge Hoover's policy directly.

Tordella and General Marshall Carter, when he was Director of NSA, tried in 1967 and failed. 28 Their 15-minute appointment with Mr. Hoover in the spring of that year stretched into two-and-a-half hours. The communications experts first heard more than they wanted to about John Dillinger, "Ma" Barker, and the "Communist Threat." Finally, they were able to explain to Hoover their arguments for reinstating certain collection practices valuable to the National Security Agency. Hoover seemed to yield, telling the NSA spokesmen their reasoning was persuasive and he would consider reestablishing the earlier policies.

The news came a few days later that Hoover would allow FBI agents to resume the collection methods desired by NSA. Tordella and Carter were surprised, and gratified. Then three more days passed and the FBI liaison to NSA brought the word that Hoover had changed his mind; his new stringency would be maintained after all. William Sullivan called to tell Tordella that "someone got to the old man. It's dead." That someone, Sullivan surmised, was Tolson.

Hoover added a note to his message for Carter and Tordella, indicating that he would assist the National Security Agency in its collection requirements only if so ordered by the President or the Attorney General. Tordella, however, was reluctant to approach either. "I couldn't go to the chief law enforcement figure in the country and ask him to approve something that was

illegal," he recently explained (despite the fact that he and General Carter had already asked the Director of the FBI to approve an identical policy). As for the President, this was "not a topic with which he should soil his hands." For the time being, Tordella would let the NSA case rest.

Nor was Richard Helms going to be the man to urge Hoover to relax the newly imposed restrictions. He and Hoover had little patience for one another for several years. Hoover distrusted the "Ivy League" style of CIA personnel in general; according to Sullivan "Ph.D. intelligence" was a term of derision Hoover liked to use against the Agency. 29 Gayler and Bennett, newcomers to the intelligence community, were warned immediately by their assistants not to challenge the Director of the Bureau directly on matters relating to domestic intelligence. 30

It would take the pressure of events, skillful maneuvering by a group of FBI counterintelligence specialists, and Huston's strategic position on the White House staff to focus the attention of the President on the problem of intelligence collection.

#### *D. The Pressure of Events*

Events encouraged action. Riots and bombings escalated throughout the country in the spring of 1970. In his official statement on the Huston Plan, issued while he was still in the White House, President Nixon recalled that "in March a wave of bombings and explosions struck college campuses and cities. There were 400 bomb threats in one 24-hour period in New York City." 31 The explosion of a Weatherman "bomb factory" in a Greenwich Village townhouse in March particularly shocked Tom Huston and other White House staffers. 32 The response of the President was to send anti-bombing legislation to the Congress.

Moreover, in the spring of 1970 the FBI severed its formal liaison to the CIA in reaction to a CIA-FBI dispute over confidential sources in Colorado. 33 Though hostility between the two agencies had surfaced before with some frequency over matters such as disagreement regarding the bona fides of communist defectors, this particular dispute was "the one straw that broke the camel's back." 34 The incident in Colorado, now known as the Riha Case, involved a CIA officer who received information concerning the disappearance of a foreign national on the faculty of the University of Colorado, a Czechoslovak by the name of Thomas Riha.

The information apparently came from an unnamed FBI officer stationed in Denver. Hoover demanded to know the identity of the FBI agent; but, as a matter of personal integrity, the CIA officer refused to divulge the name of his source. Hoover was furious with Helms for not providing the FBI with this information and, "in a fit of pique," 35 he broke formal Bureau ties with the Agency. 36 To many observers, including Huston and Sullivan, the severance of these ties contributed to the perceived inability of the Bureau's intelligence division to perform their task adequately.

In this context, a special meeting was called on April 22, 1970, in Haldeman's office. In attendance were Haldeman, Krogh, Huston Alexander Butterfield (who had responsibility for White House liaison with the Secret Service), and Ehrlichman. The purpose of this gathering was to improve coordination among the White House staff for contact with intelligence agencies in the government and, more importantly, as Huston remembers, to decide "whether -- because of the escalating level of the violence -- something within the government further needed to be done." 37

A decision was made. The President would be asked to meet with the directors of the four intelligence agencies to take some action that might curb the growing violence. The intelligence agencies would be asked by the President to write a report on what could be done. The meeting was planned for May. In addition, Tom Huston was given a high staff position in the White House; henceforth, he would have responsibilities for internal security affairs. 38 He was now in a strategic position to help Sullivan reverse existing Bureau policies.

The meeting between President Nixon and the intelligence directors was not held in May, because plans for, and the reaction to, the April 29 invasion of Cambodia in Southeast Asia disrupted the entire White House schedule. In the aftermath of this event, the meeting "became even more important," recalls Huston. 39 The expansion of the Indochina war into Cambodia and the shootings at Kent State and Jackson State had focused the actions on antiwar movement and civil rights activists.

As soon as the reaction to the Cambodian incursion had stabilized somewhat, the meeting between President Nixon and the intelligence directors was rescheduled for June 5th. It was to start a chain of events that would culminate in the Huston Plan.

### **III. THE MEETINGS: THE WRITING OF THE SPECIAL REPORT**

#### *A. Who, What, When and Where*

Throughout June 1970 a series of seven important meetings on intelligence were held in Washington. They began on June 5th in the Oval Office with a conference between the Chief Executive and the intelligence directors, at which President Nixon requested the preparation of an intelligence report; and they ended twenty days later in Hoover's office where the directors gathered to officially sign the report for the President. In between these two meetings came a preliminary planning session in Hoover's office on June 8, and four subsequent staff meetings held at CIA Headquarters in Langley, Virginia. It was at these staff meetings that the intelligence report was formulated. (See Table 1.)

**TABLE 1. SUMMARY OF THE MEETINGS FOR THE PREPARATION OF AN INTELLIGENCE REPORT FOR THE PRESIDENT, JUNE 1970**

| Date of meeting | Location    | Principal Participants                                                                                                        | Purpose of meeting            |
|-----------------|-------------|-------------------------------------------------------------------------------------------------------------------------------|-------------------------------|
| June 5 (1)      | White House | President Nixon, Hoover (FBI), Helms (CIA), Admiral Gayler (NSA), Bennett (DIA), Ehrlichman (WH), Haldeman (WH), Huston (WH). | Request for Intelligence Plan |
| June 8          | FBI         | Hoover, Helms, Gayler, Bennett, Buffham (NSA), Sullivan (FBI), G. Moore(FBI)                                                  | Planning Session              |
| June 9 (2)      | CIA         | Helms, Angleton (CIA), Buffham.                                                                                               | Agenda Setting                |
| June 12 (2)     | CIA         | Cregar (FBI), Lieutenant Colonel Downie (Army), Huston.                                                                       | Review of Working Papers      |
| June 17 (2)     | CIA         | Colonel Koller (AF), D. Moore (FBI), Captain Rifenburgh (Navy).                                                               | 1st Draft                     |
| June 23 (2)     | CIA         | Stilwell (DIA), Sullivan, G. Moore (FBI).                                                                                     | 2d draft                      |
| June 25         | FBI.        | Hoover, Helms, Gayler, Bennett, Sullivan, Huston, Brennan.                                                                    | Signing ceremony              |

*B. At the White House, June 5th: The President Requests an Intelligence Report*

Huston was responsible for arranging the conference between President Nixon and the intelligence leaders, and had briefed the President in advance. The briefing was based on a two-page working paper that Huston prepared, relying on his conversations with the considerably more experienced Sullivan. As Sullivan's assistant, C. D. Brennan, recalls: "Mr. Huston did not have that sufficient in-depth background concerning intelligence matters to be able to give that strong direction and guidance," and therefore Sullivan was the "principal figure" behind the preparations leading to the Huston Plan. 40 Sullivan's role seemed to be to tell Huston what were desirable changes in the intelligence services; Huston was to try to make what was desirable possible, through his position as the White House man charged with responsibility for domestic intelligence.

The two-page working paper outlined for the President items he might discuss with the intelligence directors: the increase in domestic violence; the need for better intelligence collection; a report to be prepared for the President on radical threats to the national security and gaps in current intelligence on radicals; and the use of an interagency staff to write the report. 41

Before the meeting, the President telephoned Huston to say he wanted Hoover to be the chairman of the committee responsible for the intelligence report. (The President had met privately with the FBI Director the day before. 42) Huston took the opportunity to urge the President to appoint Sullivan as the chairman of the staff subcommittee. 43

The June 5th meeting in the Oval Office lasted less than an hour. Reading from a talking-paper prepared for the session by Huston, the President first emphasized the magnitude of the internal security problem facing the United States. The paper read:

We are now confronted with a new and grave crisis in our country -- one which we know too little about. Certainly hundreds, perhaps thousands, of Americans -- mostly under 30 -- are determined to destroy our society. They find in many of the legitimate grievances of our citizenry opportunities for exploitation which never escape the attention of demagogues. They are reaching out for the support -- ideological and otherwise -- of foreign powers and they are developing their own brand of indigenous revolutionary activism which is as dangerous as anything which they could import from Cuba, China, or the Soviet Union. 44

Among the chief factors complicating the internal security problem, according to the paper, were the people of the United States: "Our people -- perhaps as a reaction to the excesses of the McCarthy era -- are unwilling to admit the possibility that 'their children' could wish to destroy their country.... This is particularly true of the media and the academic community." The solution to the problem of domestic instability could be found in better intelligence: "The Government must know more about the activities of these groups, and we must develop a plan which will enable us to curtail the illegal activities of those who are determined to destroy our society."

The President then expressed his dissatisfaction with the quality of intelligence he had been receiving on the protest movement. 45 "Based on my review of the information which we have been receiving at the White House," read his prepared notes, "I am convinced that we are not currently allocating sufficient resources within the intelligence community to the collection of intelligence data on the activities of these revolutionary groups." 46 To obtain the "hard information" he wanted, the President told the directors they were to serve on a special committee to review the collection efforts of the intelligence agencies in the internal security area. Based on this review, they were expected to recommend steps which would strengthen the capabilities of the government to collect intelligence on radicals. 47

Departing from his prepared notes, the President next mentioned a meeting he had had with President Calder of Venezuela earlier that morning. 48 President Calder had complained to him about the high degree of violence and unrest in the Caribbean, noting that some Latin American nation believes U.S. nationals -- specifically black radicals -- were fomenting this unrest. President Nixon asked Helms if he had any information on the relationship between black militancy in the United States and unrest in the Caribbean. Helms said he did not, but that he would investigate the matter for the President. (The CIA gave the President a report on this subject, via Huston, on July 6, 1970. 49)

The President paused at this point in the meeting to ask Hoover and Helms if there were any problems in coordination between their respective agencies. Both assured him there were not. 50 Neither, apparently, wished to discuss the Riha Case with other disagreements.

President Nixon concluded the meeting by directing the intelligence directors to work with Tom Huston on the report they were to prepare. Huston would "provide the subcommittee with detailed information on the scope of the review which I have in mind," said the President. 51 He also asked Hoover to serve as chairman of the committee, which was to be known as the Interagency Committee on Intelligence (Ad Hoc). Finally, he recommended that Hoover name his Assistant Director for Domestic Intelligence, William Sullivan, to be responsible for the staff workgroup for the actual drafting of the Special Report. Hoover agreed to be chairman and to place Sullivan in charge of the interagency committee staff. 52

The meeting in the Oval Office took place on a Friday. Sullivan's first assignment from Hoover was to set up a preliminary planning session to be held in Hoover's office the following Monday.

#### *C. In Hoover's Office, June 8th: A Premonitory Disagreement*

At the Monday meeting, Hoover reminded the other intelligence directors that the President was dissatisfied with the current state of intelligence on domestic radicals, and stressed his own alarm at links between protestors in this country and Cuba, China, and the Iron Curtain countries. 53 He said that President Nixon wanted an historical summary of unrest in the country up to the present, and he spoke of the establishment of an interagency staff committee to meet the President's objectives. Sullivan would be chairman of the staff group, and its first meeting would occur the next afternoon, Tuesday, June 9th, at the Central Intelligence Agency.

Hoover asked Richard Helms first, and then the others, if they had anything to add; none of the intelligence directors did. Then came Tom Huston's turn to respond. The Director had misunderstood the intent of the President, said the White House aide. The report was not to be an historical summary at all. It was to be a current and future threat assessment, a review of intelligence gaps, and a summary of options for operational changes. 54

Admiral Gayler of NSA then spoke up: it was his understanding, too, that the committee was to concentrate on the shortcomings of current intelligence collection. General Bennett, Gayler, Helms, and Huston proceeded to discuss their impressions of what the President really meant. 55 President Nixon wanted the pros and cons of various collection methods spelled out clearly in the form of an options paper, emphasized the young White House staffer. The President preferred reports presented in this form to assure that decisions were not made at a lower level, with the President merely the recipient of a fait accompli. All the intelligence directors, except Hoover, supported the objectives articulated by Huston.

Hoover -- who was apparently irritated by this turn of events 56 finally agreed and the meeting ended abruptly. He asked the other directors to give this matter the highest priority and to assign their top experts to the project. After the meeting, Hoover confided to William Sullivan that he believed Huston was a "hippie intellectual." 57 Sullivan's own views on the importance of this undertaking were reflected in a statement which he prepared for Hoover as background information for this meeting. "Individually, those of us in the intelligence community are relatively small and limited," he wrote. "Unified our own combined potential is magnified and limitless. It is through unity of action that we can tremendously increase our intelligence gathering potential, and, I am certain, obtain the answers the President wants." 58

#### *D. The Langley Meetings: Drafting the Intelligence Report*

The Ad Hoc Committee staff met the next day at CIA Headquarters in Langley, Virginia, for the first of four drafting discussions. 59

##### *The First Langley Meeting: Setting the Agenda*

At the first staff meeting Huston summed up for the participants the objectives of the President, using a "Top Secret" outline he had prepared. 60 Under "Purposes," the outline noted that the Committee was to prepare an analysis on the internal security threat; identify gaps in the present collection efforts; recommend steps to close these gaps; and review the status of interagency coordination. Under "Procedures," Huston had written: "Operational details will be the responsibility of the chairman. However, the scope and direction of the review will be determined by the White House member." In other words, Sullivan would provide the guiding expertise to lay out what collection barriers the counterintelligence experts wanted removed; Huston would make sure the Committee did not stray from the goal of suggesting options to remove these barriers. The "Objectives" of the Committee included "maximum use of all special investigative techniques. . . ."

After the staff members had read the outline, Huston stressed to the group the President's deep concern about New Left anarchism and whether the intelligence agencies were doing all they could to cope with the problem. He said, as he had in Hoover's office the day before, the President wanted to see the pros and cons of any restraints so that he could decide what action to take.

Following the presentation by Huston on the President's requirements for the Committee, Sullivan asked for comments regarding the level of classification for papers or reports prepared by the Committee. The classification "Top Secret" was adopted. Helms also recommended the maintenance of a "Bigot List" reflecting the names of all persons who would have knowledge of the work of the Committee.

The Committee turned next to the heart of the matter: the methodology of intelligence collection. Going around the table, the various representatives discussed restraints upon the ability of their agencies to develop the intelligence necessary to satisfy the concern of the President over "New Left" dissent and its possible foreign support. It was agreed that members would bring to the next session a list of those restrictions which hampered their intelligence collection activities. Again Huston urged them to remember the President's interest in the pros and cons of each restriction.

Buffham of NSA called attention to the outline circulated by Huston. In its first paragraph the outline called upon the Committee "to define and assess the existing internal security threat." The NSA representative said that such a study would require immediate attention from the counterintelligence specialists from each member organization. Huston suggested the FBI prepare a threat assessment from the domestic point of view and CIA from the foreign point of view. All members concurred, and Sullivan asked the FBI and CIA to have the papers ready for distribution at the next meeting to allow consideration by the full committee as soon as possible.

Thus, the agenda was set. The work-group would begin by examining restraints on intelligence collection and preparing a threat assessment. Members were cautioned to maintain tight security to conceal the existence and activities of the Committee. To assist this objective, the group agreed to continue meeting at CIA Headquarters. The Committee adjourned until the following Thursday, June 12th. (See the Chronology in the Appendix.)

#### *The Second Langley Meeting: Early Discussions*

At the next gathering of the work-group at CIA Headquarters on Friday of the same week, agreement was reached to follow an outline prepared by Huston and the FBI to guide the writing of the report for the President. 61 The report would cover three specific areas: (1) an assessment of the current internal security threat and the likelihood of future violence; (2) a listing of the current restraints on intelligence collection; and (3) an evaluation of interagency coordination within the intelligence community.

Just as he had reminded Hoover that Monday in the Director's office, Huston again made the point that the threat assessment was not to be merely an exercise in history writing. The President wanted an up-to-date analysis of the "New Left" threat and an estimate on future problems posed by the radicals.

For the meeting each agency had prepared a paper on intelligence collection restraints. Huston found the preliminary drafts "totally unacceptable," according to CIA representative James Angleton, and said that the group "was not being responsive to the President's needs." 62 As exemplified by the FBI submission, Huston wanted the restraints clearly identified, the pros and cons listed, and a format provided whereby the President could indicate whether he wished the restraints to be maintained, relaxed, or that he required more information to make a decision. The entire range of collection options were to be listed, whether the Committee thought they were preposterous or desirable. The representatives were asked by Huston to follow the FBI model for their subsequent drafts.

As for the third portion of the report, opinion among the participants was generally in favor of the establishment of a permanent interagency committee on intelligence. It would evaluate intelligence, coordinate operations, prepare ongoing threat assessments on domestic protest, and develop new policies.

The idea of a permanent committee was strongly endorsed by Huston, who said the President would probably favor its creation. Privately, Huston thought this was "the most important recommendation." 63 Among the participating agencies only the CIA questioned the need for a permanent committee, recommending instead the establishment of a temporary group first to see if it would work. 64 The Agency's hesitancy may have reflected a reluctance to confront Hoover with such a blatant entry into the domestic intelligence area, largely the private preserve of the FBI in the past.

The FBI threat-assessment paper, entitled "Defining and Assessing the Existing Internal Security Threat -- Domestic," was circulated at this second meeting and, at Huston's suggestion, was tabled to allow each member time to review its contents carefully for discussion at the third session. The CIA paper, captioned exactly like the Bureau's except for the substitution of "Foreign" for "Domestic," was not yet ready; but Richard Ober, the primary CIA drafter, said it would be circulated in time for review by everyone before the third meeting. 65

The Committee agreed to have the FBI prepare a first draft of the entire report to be circulated on June 16th. T. J. Smith and Richard Cotter of the Bureau Research Division were assigned by Sullivan to write the drafts; 66 everyone was to provide the Bureau with inputs on or before June 15th. The third meeting of the Committee was set for Wednesday, June 17th.

#### *The Third Langley Meeting: Reviewing the First Draft*

This third session of the Ad Hoc Committee staff was the most important. From it emerged the specific options which the group would lay before the President. The first two sessions had been preparatory; now the Committee was ready to examine

thoroughly a first draft of the report. 67 The members dissected the draft in minute detail, spending all afternoon and part of the evening going over it. The FBI and CIA reports on "Defining and Assessing the Existing Internal Security Threat" had been incorporated into the draft, as had the pros and cons of various restraints inhibiting intelligence collection.

Starting at the beginning of the draft, the Committee first went step-by-step through the section on the internal security threat facing the United States. The military representatives criticized the CIA and FBI data and interpretations on militant "New Left" groups, black extremists, the intelligence services of Communist countries, and other revolutionary groups (like the Puerto Rican nationalist extremists). Eventually, however, virtually unanimous agreement was reached on this threat assessment section.

The next section of the report on restraints was much more complex and open to controversy. Huston made it clear early in the review of this "Restraints" section that no individual agency would be allowed to make a separate recommendation, conclusion, opinion, or observation. The report had to be a joint effort, and only options were to be listed for the President. The sole exception would be the possibility of recommending to the President the establishment of a permanent interagency group or committee to evaluate intelligence problems related to internal security. While the discussion on the options was lengthy and punctuated by disagreements, the end result was a first draft of the intelligence report which had the support of all the participating agencies.

#### *The Fourth Langley Meeting: The Final Draft*

The fourth and final meeting of the ICI staff was held on June 23rd and was devoted to improving the first draft and polishing it into a final report. 68 Between the third and fourth sessions, Sullivan and the other representatives from the various agencies showed the first draft to their superiors. While the other directors saw no significant problems with the draft, Hoover balked. He would not sign the report, he informed Sullivan. It would have to be completely rewritten to eliminate the extreme options in the "Restraints" section and the recommendation for the permanent interagency committee would have to be removed also. 69

Hoover explained his objections, as Sullivan recalls, in this way:

For years and years and years I have approved opening mail and other similar operations, but no. It is becoming more and more dangerous and we are apt to get caught. I am not opposed to doing this. I'm not opposed to continuing the burglaries and the opening of mail and other similar activities, providing somebody higher than myself approves of it. . . . I no longer want to accept the sole responsibility -- the Attorney General or some high ranking person in the White House -- then I will carry out their decision. But I'm not going to accept the responsibility myself anymore, even though I've done it for many years.

Number two, I cannot look to the Attorney General to approve these because the Attorney General was not asked to be a member of the ad hoc committee. I cannot turn to the ad hoc committee to approve of these burglaries and opening mail as recommended here. The ad hoc committee, by its very nature, will go out of business when this report has been approved.

That leaves me alone as the man who made the decision. I am not going to do that any more . . . I want you to prepare a detailed memorandum and set forth these views . . . 70

Sullivan pointed out to Hoover that it would not be entirely fair or reasonable to rewrite completely a report which had been approved already by everyone else. Instead the Director might wish to note his objections in the form of footnotes to the report, if he felt he needed to as was commonly done on interagency intelligence papers. Hoover finally agreed. Sullivan personally added the footnotes to the draft, as requested by Hoover, and had his secretary type up the new version to be presented at the fourth Langley meeting. 71

Sullivan distributed this second draft of the report at the final Langley meeting. It bore Hoover's footnotes conspicuously, and the participants realized that Hoover had intervened. 72 (The first draft had been written in the Bureau Research Section and brought to the third Langley meeting without being shown to Hoover. 73) Col. Downie, the Army representative, remembers smiling as he read the second draft; he found it amusing that Sullivan had "eaten humble pie." Hoover had "put the brakes on," Downie figured, and now the Committee was "back to square one." 74

Only one day separated the last meeting at Langley from the official signing of the Special Report, which was to take place in Hoover's office on June 25th. It left little time for the directors of CIA, DIA, and NSA to react to the footnotes. 75 Certainly, Hoover did not call to forewarn them of his action. When their representatives brought news of what the FBI Director had done, Gayler and Bennett were furious. Both called Huston immediately. 76

They were "mad as the dickens," Huston recalls. The White House aide tried to calm them and urged them to "live with" Director Hoover's additions to the Report.

The military intelligence director persisted. Hoover had no right to add his own personal observations; and if he could do it, so could they. Bennett and Gayler were particularly annoyed that Hoover had objected to specific operations, when what was listed were options for the President, not recommendations. Hoover's critical footnotes made the options appear to be recommendations which the other directors automatically supported. "They either wanted another meeting among the Directors [to] demand that the footnotes be withdrawn, or else they wanted to insert their own footnotes saying they favored certain things," recalls Huston. 77 The White House staffer was:

... very much interested in not creating any difficulties with Mr. Hoover that could, at all, be avoided, and I told both General Bennett and Admiral Gayler that I thought it was unnecessary for them to take such action; that in my cover memorandum to the President, I would set forth their views as they had expressed them to me, and that I would appreciate it if they would not raise the question with the Director. 78

Helms has testified that he does recall the episode. 79

At the time, Huston appeared unconcerned about Hoover's notations. One participant at the final session thought Huston would achieve his ends anyway. "He seemed to exude the attitude that 'What the White House wanted, the White House would get,'" recalls a Navy observer. "If Hoover didn't want to play, it would be played some other way." 80

Tordella of NSA, too, remembers that Sullivan was not particularly upset by Hoover's move. With Helms, Bennett, and Gayler still in support of the Special Report, Sullivan believed President Nixon would accept the options on relaxing restraints anyway. 81

The final meeting at Langley was thus spent in the review of this second draft. In addition to the footnotes, some changes were made. Diction which Hoover had found perjorative was removed ("procedures" replaced "restrictions" in one segment, for instance) ; and references to CIA-FBI liaison difficulties was excised, as was the concept of a full time working staff for the recommended permanent interagency committee. The essential alteration, however, was the addition of Hoover's footnotes. 82 The next step was to have the intelligence directors sign the report.

#### *E. The Signing Ceremony*

The meeting to review and sign the Special Report began at 3:00 promptly on the afternoon of June 25th. 83 The Director of the FBI opened the meeting by commending the members for their outstanding effort and cooperative spirit displayed in preparing the Special Report. Hoover went through his normal routine on such occasions. He started with page one of the Report and said "Does anyone have any comment on Page 1?" He then proceeded to go through the 43-page document, page by page, in this fashion.

For each page, Hoover addressed his question to each Director and to Tom Huston. Hoover displayed his contempt for Huston by addressing him with different names: "Any comments, Mr. Hoffman? Any comments, Mr. Hutchinson?" and so on, getting the name wrong six or seven different ways. 84

Huston hoped the meeting would end before Gayler or Bennett raised the subject of the footnotes. "We got down to about 'X' number of pages and, finally, it was just too much for Admiral Gayler," Huston recalls, "and so, sure enough, there he goes. He started in about a footnote, I think." 85 Bennett joined Gayler in querying the Director about the footnotes. 86

Hoover was surprised. It was not customary to respond critically during the FBI Director's pro forma readings. Huston looked toward Helms, who spoke up and managed to smooth the waters to some degree. 87 However, Hoover was clearly upset, 88 and hurried through the rest of the Report. The four directors then signed the document. Hoover reminded them to have all working copies of the Report destroyed, thanked them for their participation, and dismissed the Committee. The Interagency Committee on Intelligence (Ad Hoc) had completed its assignment.

### **IV. AN INTELLIGENCE REPORT FOR THE PRESIDENT: THE OPTIONS**

The next day, June 26th, the Special Report was delivered to Huston at the White House for the President. For each of the intelligence collection methods, the President was presented the option of (1) continuing the present restrictions, (2) asking for more information, or (3) accepting one of the relaxations listed below. 89 Hoover's notes were typed in beneath the options for each collection technique.

The first category of options written into the report dealt with communications intelligence.

#### *A. Category One: Communications Intelligence 90*

-- Present interpretation should be broadened to permit and program for coverage by NSA of the communications of U.S. citizens using international facilities.

-- Present interpretation should be broadened to permit and program for coverage by NSA at the request of the FBI of the communications of U.S. citizens using international facilities. [Original emphasis. No footnotes were added to this section.]

The National Security Agency pressed for the inclusion of these options in an effort to obtain a clarification of their role in targeting against communications traffic involving U.S. revolutionary readers and organizations. 91 At the time, NSA believed that its authority precluded production and dissemination of intelligence from international communications between U.S. citizens and barred specific targeting against the communications of U.S. nationals. 92

At the heart of this option lay the NSA "Watch List." In 1967, the NSA began to receive from the FBI, the CIA, and the Secret Service the names of individuals whom these agencies viewed as threats to American security. The NSA was supposed to select, from international communications, messages which were sent to or from these individuals -- approximately 1,650 of whom were U.S. citizens. 93 (The present director of the NSA does not know whether or not the President knew about the NSA Watch List. 94) Unsure about the legality of the practice, the June meetings were viewed by NSA as a chance to obtain more explicit approval to do what, in fact, they were already doing; that is, selecting the international messages of specified U.S. nationals for transcription and dissemination to other intelligence agencies. Explicit approval from the President for this practice would have permitted an expansion of the American names on the Watch List.

#### *B. Category Two: Electronic Surveillances and Penetrations*

-- Present procedures should be changed to permit intensification of coverage of individuals and groups in the United States who pose a major threat to the internal security.

-- Present procedures should be changed to permit intensification of coverage of foreign nationals [classified] of interest to the intelligence community.

Note: The FBI does not wish to change its present procedure of selective coverage on major internal security threats as it believes this coverage is adequate at this time. The FBI would not oppose other agencies seeking authority of the Attorney General for coverage required by them and thereafter instituting such coverage themselves.

As the Special Report stated: "NSA has been particularly hard-hit by this limitation." 95

The CIA had a strong interest in this option, too. In the mid-1960s, Helms had approached Hoover to increase the number of telephone taps to assist the CIA in its Missions. 96 For similar reasons, the CIA now joined the NSA in its quest for increased electronic coverage. As a former high-level CIA counterintelligence officer has noted, "Thousands of man-hours would have been saved if the Bureau had been willing to place taps on [selected] telephones." 97

Among the arguments presented in the Special Report in favor of the increased use of this technique was that "every major intelligence service in the world, including those of the Communist bloc, use such techniques as an essential part of their operations; and it is believed the general public would support their use by the United States for the same purpose." 98 Yet, five years earlier, Hoover had cut back on these forms of surveillance in large part for the very reason that he believed the American public would no longer tolerate their broad use. 99

#### *C. Category Three: Mail Coverage*

-- Restrictions on legal coverage should be removed.

-- Present restrictions on covert coverage should be relaxed on selected targets of priority foreign intelligence and internal security interest.

Note: The FBI is opposed to implementing any covert mail coverage because it is clearly illegal and it is likely that, if done, information would leak out of the Post Office to the press and serious damage would be done to the intelligence community. The FBI has no objection to legal mail coverage providing it is done on a carefully controlled and selective basis in both criminal and security matters.  
100

As the draft explained, two types of mail coverage exist: routine coverage, which involves recording information from the face of envelopes, and covert (or "sophisticated") coverage which entails the examination of contents within a sealed envelope. The former is legal, the latter is not. "*Covert coverage has been discontinued*," the President was told in the Report, and one option placed before him read: "Present restrictions on covert coverage should be relaxed on selected targets of priority foreign intelligence and internal security interest." [Emphasis added.] 101

In fact, "covert coverage" had *not* been discontinued. The CIA had used covert mail programs to examine mail sent between the United States and Communist countries since 1953. It was the judgment of some Agency officials that, although warrantless mail opening was illegal, the good that flowed from them in terms of anticipating threats to the United States made it worthwhile. 102 The objective was "to try to uncover foreign involvement in this country," 103 but, in the retrospective view of the CIA officer in charge of the program, the covert mail programs were "very much an error." 104 Since 1958, the FBI had also known of these programs and, in fact, had contributed names to the CIA's "Watch List". 105

#### *D. Category Four: Surreptitious Entry*

-- Present restrictions should be modified to permit procurement of vitally needed foreign [classified] material.

-- Present restrictions should also be modified to permit selective use of this technique against other urgent and high priority internal security targets.

Note: The FBI is opposed to surreptitious entry . . . [classified].

This option reflected the use of breaking and entering, and burglary, by Government agents. Of all the agencies involved in these meetings, NSA was the most interested in removing the restraints on surreptitious entries. 107 Millions of dollars could be saved by such operations, Buffham argued at the Langley meetings. 108

One option for the President proposed that "present restrictions should also be modified to permit selective use of this technique against other urgent and high-priority internal security targets." 109 In short, entries were to be made against the "New Left" subversives discussed in the Special Report -- if the President gave his approval to this option.

#### *E. Category Five: Development of Campus Sources*

-- Present restrictions should be relaxed to permit expanded coverage of violence-prone campus and student-related groups.

-- CIA coverage of American students (and others) traveling abroad or living abroad should be increased.

Note: The FBI is opposed to removing any present controls and restrictions relating to the development of campus sources. To do so would severely jeopardize its investigations and could result in charges that investigative agencies are interfering with academic freedom. 110

The intelligence professionals complained at the drafting sessions that it was difficult to gather data on student subversives when no secondary school students and no one below the legal age in colleges and universities were allowed to work for the intelligence agencies as sources." Among other reasons for relaxing these restraints was the argument that campus violence occurs quickly and with little planning. To anticipate this kind of disorder, the intelligence community had to have youthful informants. Hoover had taken the position, however, that using informants below age twenty-one was too risky; they were less reliable, and legal complications could arise with their parents and the school administration. 112

According to Huston, the FBI members of the ICI ad hoc staff hoped to reduce the age level of informants to eighteen through the Special Report; but, if they said so directly and explicitly, "it would make Mr. Hoover mad." Therefore, they "couched this recommendations in terms that 'campus informant coverage shall be expanded'" 113 The Special Report noted that, in this area, "the military services have capabilities which could be of value to the FBI." 114

#### *F. Category Six: Use of Military Undercover Agents*

-- The counterintelligence mission of the military services should be expanded to include the active collection of intelligence concerning student-related dissident activities, with provisions for a close coordination with the FBI.

-- No change should be made in the current mission of the military counterintelligence services; however, present restrictions should be relaxed to permit the use of trusted military personnel as FBI assets in the collection of intelligence regarding student-related activities.

Note: The FBI is opposed to the use of any military undercover agents to develop domestic intelligence information because this would be in violation of the Delimitations Agreement. The military services, joined by the FBI, oppose any modification of the Delimitations Agreement which would extend their jurisdiction beyond matters of interest to the Department of Defense.

The only specific views on intelligence operations which Huston's superiors at the White House discussed with him before the June meetings had to do with the military. Haldeman expressed to Huston the President's belief that "we should use the military services in collection of domestic intelligence." 115 The vast resources of the military, it was felt, could effectively supplement the intelligence gathering capabilities of the other agencies.

At the third Langley meeting, Huston therefore told the group that the President wanted a list of options on the use of the military for domestic intelligence collection. The military voiced its opposition to the idea, however, and the FBI was also against it. 116 The Committee wanted to eliminate the option from the report. Huston himself thought the proposal was inappropriate, but he insisted the option be included, since Haldeman and the President had explicitly requested it. 117

The response of the Committee, in Huston's opinion, was to write a set of options in favor of using the military which were "very flimsy and they would not convince anyone." In the Report, six "Advantages of Maintaining Restrictions" were listed, compared to just three "Advantages of Relaxing Restrictions." 118 The military representatives stressed, in their discussion of these options, that disclosure of military involvement in this kind of counterintelligence work "would certainly result in considerable adverse publicity." 119

In fact, at that time Army officials were preparing for their appearance before the Senate Subcommittee on Constitutional Rights, 120 which was then investigating the question of military surveillance of civilians in the United States. This investigation serves as an important backdrop for understanding the marked caution of the military intelligence representatives during the sessions at Langley.

The Special Report included two more sets of options for the President's consideration:

*G. Category Seven: Budget and Manpower*

-- Each agency should submit a detailed estimate as to projected manpower needs and other costs in the event the various investigative restraints herein are lifted.

-Each agency must operate within its current budgetary or manpower limitations, irrespective of action required as result of this report.

*H. Category Eight: Permanent Interagency Committee*

-- An ad hoc group consisting of the FBI, CIA, NSA, DIA, and the military counterintelligence agencies should be appointed and should serve as long as the President deems necessary, to provide evaluations of domestic intelligence, prepare periodic domestic intelligence estimates, and carry out the other objectives indicated above.

-- A permanent committee consisting of the FBI, CIA, NSA, DIA, and the military counterintelligence agencies should be appointed to provide evaluations of domestic intelligence, prepare periodic domestic intelligence estimates, and carry out the other objectives indicated above.

Note: The FBI is opposed to the creation of a permanent committee for the purpose of providing evaluations of domestic intelligence, however the FBI would approve of preparing periodic domestic intelligence estimates.

In the first draft of the Report, the following options were also included, though both were removed in the writing of the final draft: 121

*I. Category Nine (Removed) : Surreptitious Optical Surveillance*

According to intelligence specialists, this phrase simply refers to taking photographs of people without their knowledge. The discussion of options under this heading was finally discarded from the report, evidently because the members knew it was already being done and saw no point in asking the President for his views on the subject. 122

*J. Category Ten (Removed): Investigations of Diplomatic Personnel*

When conducting "investigations" of foreign diplomats (often a euphemism for recruiting an agent) within the United States, the FBI traditionally clears the probe with the State Department before proceeding. This is done to make sure the Bureau is not entering into a case that, for some reason, might be peculiarly sensitive, and disclosure could have international repercussions detrimental to U.S. interests.

On occasion, some members of the Bureau have had investigations blocked or delayed by the State Department for reasons which they viewed as unsatisfactory. The question was consequently raised at the Langley meetings as to whether these clearances from State were really useful, or merely represented a further obstacle to intelligence work. This was a subject of great interest to many of the counterintelligence specialists who viewed the State Department skeptically. As one remarked candidly, "Our roles are often conflictual: they're always trying to 'build bridges' -- detente and all that stuff -- while we're trying to catch spies." 123 On balance, though, opinion within the group favored keeping the clearance procedure and avoiding a dispute with State.

These first eight categories of options, then, constituted the vital core of the special intelligence report for the President, from which the Huston Plan would be extracted. Behind them lay a variety of forces and pressures which had preceded and shaped the Report, but which were nowhere revealed in its formal language. (These hidden dimensions are explored in Section VII below.)

In the weeks that followed the official signing of the Special Report, Tom Charles Huston recommended to the President those options from the Report which promised to eliminate most thoroughly the existing restrictions on intelligence collection. These recommendations became known as the Huston Plan.

## **V. THE HUSTON PLAN**

*A. Huston Plan, Phase One: Advice for the President*

For several weeks after the signing of the Special Report on June 25th, it appeared to the intelligence agencies that their efforts had come to nothing. No response had come from the White House, and Sullivan began to believe the whole idea had "died aborning." 124

Yet, in the White House, Huston was working toward the next step. He had succeeded in obtaining the four signatures from the chiefs of the intelligence community, even Hoover's. Now he wanted to get the President to approve the strongest options

in the Special Report designed to remove the existing restrictions on intelligence collection. If he were successful here, the intelligence collectors would then have all the authority they desired.

Soon after the June 26th delivery of the Special Report to the White House, Huston began to prepare carefully a memorandum addressed to Haldeman on what the President ought to do with the Report. The memo, dated simply "July 1970" but written in the early days of July, was entitled "Domestic Intelligence Review." It was a synopsis of the Ad Hoc meetings held during the month of June. Huston began with a sharp diatribe against Hoover, the "only stumbling block" in the proceedings (in contrast, Helms had been "most cooperative and helpful"). 125 The FBI Director "refused to go along with a single conclusion drawn or support a single recommendation made," until Huston successfully opposed Hoover's attempt to rewrite the Report. (In this description of the confrontation with Hoover, Sullivan was never mentioned.)

Hoover then "entered his objections as footnotes to the report," Huston wrote further. These objections were "generally inconsistent and frivolous." 126 To avoid "a nasty scene" between the military directors and Hoover over the footnotes, Huston assured Admiral Gayler and General Bennett that their objections "would be brought to the attention of the President." Turning to the substantive work of the Ad Hoc group, Huston emphasized to Haldeman that everyone who participated was dissatisfied with current intelligence collection procedures except Hoover. Even the FBI participants, according to Huston, "believe that it is imperative that changes in operating procedures be initiated at once." Furthermore, all members felt it "imperative" to establish a permanent interagency committee for intelligence evaluation -- again with the exception of the FBI Director.

Should the President decide to lift the current restrictions, Huston recommended a face-to-face "stroking session" with Hoover in which the President explained his decision and indicated "he is counting on Edgar's cooperation...." In this way, Huston continued, "We can get what we want without putting Edgar's nose out of joint." Though the Director was "bullheaded as hell" and "getting old and worried about his legend," he would "not hesitate to accede to any decision the President makes," predicted Huston. Attached to this optimistic appraisal were Huston's specific recommendations on the decisions Nixon should make concerning the lifting of operational restraints.

#### *The Recommendations*

The recommendations in this first version of the so-called Huston Plan were written under the heading "Operational Restraints on Intelligence Collection." 127 Huston offered advice on each operational section of the Report, and each recommendation was buttressed by a one-to-several paragraph rationale. The recommendations comprising Huston's plan, as presented to the President, are outlined below with the exception of the rationales which concluded chiefly that (1) coverage was inadequate, and (2) all the methods had been used before with great productivity.

##### *Communications Intelligence. Recommendation: 128*

Present interpretation should be broadened to permit and program for coverage by NSA of the communications of U.S. citizens using international facilities.

##### *Electronic Surveillances and Penetrations. Recommendation:*

Present procedures should be changed to permit intensification of coverage of individuals and groups in the United States who pose a major threat to the internal security.

ALSO, present procedures should be changed to permit intensification of coverage of foreign nationals [classified].

##### *Mail Coverage. Recommendation:*

Restrictions on legal coverage should be removed.

ALSO, present restrictions on covert coverage should be relaxed on selected targets of priority foreign intelligence and internal security interest.

##### *Surreptitious Entry. Recommendation:*

Present restrictions should be modified to permit procurement of vitally needed foreign [classified] material.

ALSO, present restrictions should be modified to permit selective use of this technique against other urgent and high priority internal security targets.

##### *Development of Campus Sources. Recommendation:*

Present restrictions should be relaxed to permit expanded coverage of violence-prone campus and student-related groups.

ALSO, CIA coverage of American students (and others) traveling or living abroad should be increased.

*Use of Military Undercover Agents.* Recommendation:

Present restrictions should be retained.

Beyond the lowering of specific operational restraints, Huston made two further recommendations.

*Manpower and Budget.* Recommendation:

Each agency should submit a detailed estimate as to projected manpower needs and other costs in the event the various investigative restraints herein are lifted.

*Measures to Improve Domestic Intelligence Operations.* Recommendation:

A permanent committee, consisting of the FBI, CIA, NSA, DIA, and the military counterintelligence agencies should be appointed to provide evaluations of domestic intelligence, prepare periodic domestic intelligence estimates, and carry out the other objectives specified in the report.

In his discussion of these methods, Huston raised -- and quickly dismissed -- questions about the legality of two collection techniques in particular: covert mail cover and surreptitious entry. "Covert [mail] coverage is illegal, and there are serious risks involved," he wrote. "However, the advantages to be derived from its use outweigh the risks." 129

As for surreptitious entry, Huston advised: "Use of this technique is clearly illegal: it amounts to burglary. It is also highly risky and could result in great embarrassment if exposed. However," he concluded, "it is also the most fruitful tool and can produce the type of intelligence which cannot be obtained in any other fashion." 130

In brief, the President's aid was asking the highest political figure in the nation to sanction lawlessness within the intelligence community. This attitude toward the law was not his alone; it was shared by certain representatives of the intelligence community as well. The recommendations made to the President, says Huston, reflected what I understood to be the consensus of the working group." 131 Huston agreed with this consensus.

Sullivan has explained his view -- not necessarily shared by others -- that he and the rest of the intelligence officers attending the Langley meetings "had grown up 'topsy-turvy' during the War -- a time when legal aspects were far less important than getting a job done against the enemy." Moreover, they shared the belief that intelligence work is "something different," somehow falling outside the normal realm of the law. The business required one to engage sometimes in activities that would not always be acceptable to others. That many of the men had served in the agencies operating overseas, unfettered by the legal system of the United States, may have contributed to a disregard for the "niceties of the law" in discussions of intelligence collection against alleged subversives. Besides, the KGB did not play by a legal rulebook. 132

For Huston, the only Ad Hoc Committee member too young to have grown up "topsy-turvy" during the War, the reasons for government lawlessness were different. Viewed as a conservative intellectual of sorts among his colleagues in the White House, he had spun a theory on the New Left which led him inexorably toward helping to unbridle the intelligence collectors. Huston believed that the real threat to internal security was repression. The New Left was capable of producing a climate of fear that would bring forth every repressive demagogue in the United States. These demagogues were not in the government, but out in the country; the intelligence professionals, if given the chance, could protect the American people from these latent forces of repression by monitoring the New Left and providing information to stop the violence before it began. The Huston Plan would halt repression on the Right by stopping violence on the Left.

Huston saw his own role as the Administration's coordinator of all internal security matters. After writing his recommendations for the President, he sent a memorandum to Richard Helms, dated July 9. All future matters relating to domestic intelligence or internal security were to be sent to the "exclusive attention" of Tom Huston, since "the President is anxious to centralize the coordination at the White House of all information of this type. . . ." Huston ended: "Dr. Kissinger is aware of this new procedure." 134

Huston then waited expectantly for the decision of the President. It came via Haldeman on July 14: The President had approved the recommendations. 135 Former President Nixon has since stated, "My approval was based largely on the fact that the procedures were consistent with those employed by prior administrations and had been found to be effective by the intelligence agencies." 136

Huston was pleased. There was only one problem: President Nixon had told Haldeman he was too busy to meet again with Hoover and the other intelligence directors on this subject, as Huston had recommended. He preferred "that the thing simply be put into motion on the basis of this approval." Huston felt a certain uneasiness. He particularly wanted the President to invite Hoover in to give him the decision directly, "because it seemed to me it would be easier maybe to get him to accept it." 137 Nevertheless, Huston proceeded to draw up the official memorandum which would carry the news to the intelligence directors. The "Huston Plan" was now presidential policy.

*B. Huston Plan, Phase Two: The President's Policy*

Just over a week later, on July 23, 1970, Huston finished the official version of this presidentially-ratified plan and sent it on its way via courier to Hoover, Helms, Bennett and Gayler. 138 With only minor changes, this official intelligence plan repeated the recommendations made by Huston to the President earlier in the month. Now it began with the preface: "The President has carefully studied the special report of the Interagency Committee on Intelligence ... and made the following decisions." Huston had selected the most extreme options posed by the counterintelligence experts and the President of the United States had agreed with those recommendations.

Henceforth, with presidential authority, the intelligence community could at will intercept and transcribe the communications of Americans using international communications facilities; eavesdrop from near or afar on anyone deemed to be a "threat to the internal security;" read the mail of American citizens; break into the homes of anyone tagged as a security threat; and monitor in various ways the activities of suspicious student groups. Only the restraints on military intelligence collection were preserved, no doubt because the military was dead set against further involvement in the face of pending Congressional hearings on military surveillance of civilians.

The official memorandum to the intelligence directors further noted that on August 1, 1970, the permanent inter-agency committee on intelligence evaluation would be established, with the FBI Director as chairman (a palliative, according to Huston, to the defeated Hoover, meaning little, since he could easily be outvoted in the Committee). Huston would be the "personal representative to the President," with complete White House staff responsibility for domestic intelligence and internal security affairs. By September 1, 1970, just before the reconvening of students on campuses across the country, the agencies were expected to report on the steps they had taken to implement these decisions.

Reaction to the Huston Plan was mixed among the intelligence directors, ranging from surprise to shock and rage. Admiral Gayler was "surprised" that the President had selected the most extreme options. 139 General Bennett was pleased to hear about approval of a permanent committee for intelligence evaluation (he thought the FBI needed help in this area), but thought everything else in the memorandum was largely irrelevant to the mission of the Defense Intelligence Agency. 140 According to his assistant, James Stilwell, the two joked about Huston's signature on the plan. "They passed that one down about as low as it could go," they agreed, concluding that President Nixon and Haldeman "didn't have the guts" to sign it themselves. To them, the use of Huston as a possible scapegoat indicated "what a hot potato it was." 141

The Director of the FBI "went through the ceiling," Sullivan recalls. 142 Hoover and his assistant, Cartha DeLoach, walked immediately to Attorney General Mitchell's office nearby. Mitchell was totally surprised. It was the first time he had heard of the Ad Hoc Committee, let alone the Special Report or Huston's memorandum. His immediate reaction was to agree with Hoover: the illegalities spelled out in the memorandum could not be presidential policy. As Mitchell noted in Select Committee public hearings, individual items in the Huston Plan had been suggested to him before July 1970, and had been turned down. With the Huston Plan, "the aggregate was worse than the individual parts that had been suggested." 143 Moreover, he was "very much opposed to the thought of surreptitious "entry, the mail covers, and all of the other aspects of it that were involved at the particular time." 144 Hoover later told Sullivan that the Attorney General was angry he had been bypassed by Huston and others in the White House on this whole affair. 145

Mitchell told the Director to "sit tight" until President Nixon returned from San Clemente, the Attorney General would then discuss the whole affair with the President. 146 Hoover returned to his office and wrote a memorandum to Mitchell, re-emphasizing his strong opposition to the recommendations in this Huston Plan. In the memo, the FBI Director said he would implement the Plan but only with the explicit approval of the Attorney General or the President.

Despite my clear-cut and specific opposition to the lifting of the various investigative restraints referred to above and to the creation of a permanent interagency committee on domestic intelligence, the FBI is prepared to implement the instructions of the White House at your direction. Of course, we would continue to seek your specific authorization, where appropriate, to utilize the various sensitive investigative techniques involved in individual cases. 147

Richard Helms eventually went to see the Attorney General about the matter on July 27, 1970. The Director of Central Intelligence was greatly surprised to discover the Attorney General had heard of the Special Report and the Huston Plan only in the last couple of days from Hoover. "We had put our backs into this exercise," Helms told Mitchell, "because we had thought [the Attorney General] knew all about it and was behind it," 148 As Mitchell had advised Hoover, so too he told Helms to sit tight. 149

## **VI. RECISION OF THE HUSTON PLAN: A TIME FOR RECONSIDERATION**

### *A. The President Takes a Second Look*

When President Nixon returned from the Western White House, one of his first conversations on July 27 was with the Attorney General. The message Mitchell delivered was, according to his testimony, that "the proposals contained in the [Huston] Plan, in toto, were, inimical to the best interests of the country and certainly should not be something that the President of the United States should be approving." 150

As former President Nixon now recalls, "Mr. Mitchell informed me that Mr. Hoover, Director of the FBI and Chairman of the Interagency Committee on Intelligence, disagreed with my approval of the Committee's special report." 151 President Nixon was surprised by Hoover's objections because he had not voiced any reservations to the President when the Committee met "a few days earlier." 152 The Attorney General told the President that Hoover believed "initiating a program which would permit several government intelligence agencies to utilize the investigative techniques outlined in the Committee's report would significantly increase the possibility of their public disclosure," former President Nixon recalls. "Mr. Mitchell explained to me

that Mr. Hoover believed that although each of the intelligence gathering methods outlined in the Committee's recommendations had been utilized by one or more previous administrations, their sensitivity would likely generate media criticism if they were employed." 153

Mitchell also indicated, according to the former President, it was his opinion that "the risk of disclosure of the possible illegal actions, such as unauthorized entry into foreign embassies to install a microphone transmitter, was greater than the possible benefit to be derived." 154 Based on his conversation with Mitchell, President Nixon decided to revoke his approval originally extended to the Committee's recommendations.

Warned by Sullivan of the chain of events between Hoover and Mitchell and the impending visit to the President by the Attorney General, Huston was expecting a call from Haldeman, which came later that day. 155 The Attorney General had come to the White House to talk about Huston's decision memorandum, Haldeman said. The President had decided to revoke the memorandum immediately, so that he, Haldeman, Mitchell, and Hoover could "reconsider" the recommendations.

The Attorney General did not take it upon himself to investigate the past illegalities referred to in the Huston Plan memorandum brought to his attention by Hoover. The following exchange ensued on this point during public hearings:

Q. You do agree, do you not, that looking at the document, dated June 1970, it does reveal that in the past, at least, mail had been opened, does it not?

Mr. Mitchell. I believe that is the implication, yes.

Q. And it does state in the document that the opening of mail is illegal, does it not?

Mr. Mitchell. I believe that with reference to a number of subjects were illegal and I think opening of mail was one of them.

Q. All right. Then based upon your knowledge from an examination of the document, that in the past at least illegal actions involving the opening of mail that had taken place, did you convene a grand jury to look into the admitted acts of illegality on behalf of some intelligence services?

Mr. Mitchell. I did not.

Q. And why not?

Mr. Mitchell. I had no consideration of that subject matter at the time. I did not focus on it and I was very happy that the plan was thrown out the window, without pursuing any of its provisions further.

Q. Are you now of the opinion that if you had had time to focus on the matter then it would have been wise to convene some investigation within the Department to determine what had happened in the past?

Mr. Mitchell. I believe that that would be one of the normal processes where you would give it initial consideration and see where it led to, what the statute of limitations might have been and all of the other factors you consider before you jump into a grand jury investigation.

Q. Excepting those point, do you agree that you should have at least considered the matter?

Mr. Mitchell. I think if I had focused on it I might have considered it more than I did. 156

Upset, angered, and embarrassed about having to recall his memorandum, Tom Huston walked to the White House Situation Room. 157 The Sit Room, "mailbox" of the White House, was the location where, among other things, couriers came and went. Huston went directly to the Chief of the White House Situation Room with the presidential order to rescind the decision memorandum of July 23, which had gone through there on its way to the intelligence directors. Huston was intense and agitated, the manager of the Sit Room recalls, and mentioned something about Hoover having "pulled the rug out" from under him. 158 The Sit Room Chief contacted the CIA, NSA, DIA, and the FBI to have the memoranda returned. By the close of business on the next day, July 28, each agency had complied. From markings on the memoranda, it was clear the agencies had removed the staples and photocopied the document for their records. 159

Though Huston had suffered a major setback, he was not going to yield easily. On August 3, he went to Haldeman's office and tried to persuade him to convince the President that the objections raised by Hoover had to be overridden. He urged a meeting between Haldeman, Mitchell, and Hoover. 160 Two days later in anticipation of this meeting, Huston put his views down on paper for Haldeman.

The memorandum, written under the title "Domestic Intelligence," ran five pages and was extremely critical of the FBI Director. 161 Huston first reminded Haldeman that all the agencies and all of Hoover's own staff on the ICI (Ad Hoc) supported the options selected by the President. Only Hoover dissented. "At some point, Hoover has to be told who is President," Huston wrote. "He has become totally unreasonable and his conduct is detrimental to our domestic intelligence operations.... If he gets his way it is going to look like he is more powerful than the President."

Huston further warned that "all of us are going to look damn silly in the eyes of Helms, Gayler, Bennett, and the military chiefs if Hoover can unilaterally reverse a presidential decision based on a report that many people worked their asses off to prepare and which, on its merits, was a first-rate, objective job." Tom Charles Huston was "fighting mad," for "what Hoover is doing here is putting himself above the President."

Two more days elapsed and, on August 7, 1970, Huston sent a second, terser note to Haldeman. 162 The FBI Director had left for the West Coast on vacation just as the new school year was about to open; across the country student violence loomed as a real possibility. Huston again urged Haldeman to act: "I recommend that you meet with the Attorney General and secure his support for the President's decision that the Director be informed that the decisions will stand, and that all intelligence agencies are to proceed to implement them at once." However, by this time, Huston recalls, "I was, for all intents and purposes, writing memos to myself." 163 Haldeman took no action. Hoover had won the battle.

The reasons for Hoover's victory were many but, Huston believes, having the support of the Attorney General was a large plus. 164 The President had a high regard for John Mitchell. When both Mitchell and Hoover agreed in their strong objections to the Plan, Nixon no doubt saw little point in continuing the effort.

Looking back, Sullivan sees other factors which worked in Hoover's favor as well. He believes the Chief Executive buckled under the pressure of the FBI Director partly because President Nixon and Hoover went back a long way, considered themselves old friends, and still socialized together frequently; and partly because the President owed his 1950s reputation as a staunch anti-Communist to Hoover. "Of course," Sullivan adds, "Hoover had his files, too." 165 The Director had another ace in the hole: he could always have had the Huston recommendations leaked, bringing the enterprise to a sudden halt.

Moreover, Huston notes that the opinions of Helms, Gayler, and Bennett were far less weighty than Hoover's. 166 Neither President Nixon nor Haldeman were well acquainted with Gayler or Bennett; and Helms' relationship with the White House tended to be precarious, Huston believes, "in view of the problems that he had with Mr. Kissinger on foreign intelligence estimates." Finally, Huston recalls, "neither the President nor Mr. Haldeman had, in my judgment, any sensitivity to the operational aspects of intelligence collection." 167

#### *B. Huston Leaves the White House*

The memoranda written by Huston went unanswered throughout the month of August. Shortly after writing his August 7th memorandum, Huston was informed by Haldeman that John Dean was taking over his responsibilities at the White House for domestic intelligence. Huston would be on Dean's staff. As Dean recalls, "Huston was livid." 168

John Dean had come to the White House on July 27th from the Justice Department, where he had worked with and impressed Mitchell for his skillful handling of negotiations with demonstrators for parade permits and other matters. He had no intelligence experience.

Dean realized that Huston was in an awkward situation. He asked Huston on August 10, 1970, what he wished to do while on Dean's staff. "Well, I'm a speechwriter," Huston replied. 169 In the following months, Huston would do practically whatever he felt like doing: 170 sending an occasional memo to the President or Haldeman on intelligence matters; 171 writing speeches for Pat Buchanan; continuing to circulate the daily FBI intelligence reports in the White House; reviewing conflict-of-interest clearances; prodding the Internal Revenue Service to investigate New Left organizations and their supporters; 172 and writing a lengthy history of Vietnam bombing negotiations.

Huston often spoke to his counterintelligence associates on a special scrambler phone which he kept hidden in his office in a safe. 173 Not until February 2, 1971, did Dean inform the CIA that, henceforth, he would be the White House contact on domestic intelligence matters, rather than Huston. 174

Huston occasionally sent further memoranda to Haldeman, again urging him to encourage the President to relax intelligence collection restraints. On August 17, 1970, for example, Huston complained that Hoover "has made no effort to remove the restrictions on development of informant coverage which currently exist," despite the President's oral request to Hoover on August 16 175 to intensify the investigation of extremist organizations. "We need changes at the operating level, not merely at the FBI," concluded Huston, "but throughout the intelligence community." 176 Finally, Huston found time to relate briefly to his new supervisor the saga of the Huston Plan. Dean had the distinct impression that Huston wanted to become the domestic equivalent of Henry Kissinger. 177

Growing ever more disenchanted with his position and with Nixon's policies, Huston resigned from the White House staff on June 13, 1971, and returned to Indiana to practice law. 178 He continued to serve as a consultant to the White House, finishing his study of Vietnam negotiations. On October 7, 1972, he was named a member of a Census Bureau Advisory Committee on privacy and confidentiality.

Huston's original ally, William Sullivan, managed to remain on good terms with J. Edgar Hoover, at least for a few months -- he was reprimanded by the Director for letting the Ad Hoc staff get out of hand, 179 but nonetheless was promoted to Number 3 man in the FBI.

Sullivan's fall from power began several months after the Huston Plan, with his October 12, 1970 speech at Williamsburg, Virginia, where his answers to questions were critical of Hoover's ability to understand the changing nature of the U.S. internal security threat. Sullivan told his audience that the race riots and student upheaval had nothing to do with the Communist Party. Rather, they were attributable to problems within the American social order and to the Vietnam War. When he returned to Washington, Sullivan remembers, "all hell broke loose." 180 Hoover told him he had given "the wrong answers.... How do you expect me to get my appropriations," said the Director of the FBI, "if you keep downgrading the [Communist] Party." The breach widened, and finally, a year later on October 1, 1971, Hoover had Sullivan literally locked out of his office for good.

## VII. THE HIDDEN DIMENSIONS OF THE HUSTON PLAN

### *A. Duplicity*

Looking back on the summer of 1970, Tom Huston observes that the atmosphere of duplicity was the most astonishing aspect of the meetings at Langley. On June 5, the President had sat across the table from the directors of the major intelligence agencies and asked them for a comprehensive report on intelligence collection methods against domestic radicals. Instead, President Nixon and his representative were victims of deception. "I didn't know about the CIA mail openings, I didn't know about the COINTELPRO Program [an FBI internal security operation]," Huston says. "These people were conducting all of these things on their own that the President of the United States didn't know about.... In retrospect, we look like damned fools." 181 In interrogatory answers, the former President stated that he had no knowledge the CIA mail-opening program was already in existence before June 1970; he was aware, however, that the intelligence community read the outside of envelopes of selected mail. 182

Huston believes that part of the problem was bureaucratic gameplaying: "... the Bureau had its own game going over there. They didn't want us to know; they didn't want the [Justice] Department to know; they didn't want the CIA to know." And, across the Potomac, "the CIA had its own game going. They didn't want the Bureau to know." 183

Agencies concealed programs from one another partly out of "interagency jealousies and rivalries," Huston speculated. 184 They did not want to have revealed the fact that they were working on each other's "turf." For example, "Mr. Hoover would have had an absolute stroke if he had known that the CIA had an Operations CHAOS going on." 185 Huston has suggested another possible motivation for concealment:

I think the second thing is that if you have got a program going and you are perfectly happy with its results, why take the risks that it might be turned off if the President of the United States decides he does not want to do it; because they had no way of knowing in advance what decision the President might make. So, why should the CIA ... the President may say hell no, I don't want you guys opening any mail. Then if they had admitted it, they would have had to close the thing down. 186

The unfortunate end result of these concealments between agencies was the fact that the President did not know what his intelligence services were doing either.

The language in the Special Report concerning the CIA covert mail project is a clear example of the concealment of an illegal intelligence collection operation from the President. The section of the Report dealing with mail plainly stated that "covert coverage has been discontinued." 187 In truth, however, the CIA program to read the international mail of selected American citizens and foreigners was continuing to operate at the time of the Langley meetings.

Director Helms thinks he told Attorney General Mitchell about the CIA mail program; and he is uncertain whether President Nixon knew about it -- he personally never informed the President. 188 Mitchell has denied that Helms told him of a CIA mail-opening program, 189 and has testified further that the President had no knowledge of the program either, "at least not as of the time we discussed the Huston plan." 190

Helms' suggested that Huston may not have been told about the mail-opening program at any of the working group meetings because he was the White House contact man for "domestic intelligence. We thought we were in the foreign intelligence field." Whatever the explanation, however, it is clear that the President was given a misleading document.

James Angleton, who served as Chief of the CIA Counterintelligence Staff from 1954 to 1974 and was in charge of the CIA covert mail program from 1955 to its termination in 1973, had other explanations for the misleading language on the mail program in the Special Report.

Angleton testified: "It is still my impression ... that this activity that is referred to as having been discontinued refers to the Bureau's activities in this field ... it is certainly my impression that this was the gap which the Bureau was seeking to cure." 193 The language of the Report itself, however, does not reflect such a distinction.

Angleton also stated that the CIA would never discuss such a sensitive topic as their mail program in large meetings like the ICI Ad Hoc sessions at Langley, "The possibilities for leaks were too great for one thing," he observes. 194 One of Angleton's assistants has referred to the Langley meetings as "a fish bowl." 195 Delicate matters, if they required Presidential approval, "would have been raised either by the Director of the FBI or the Director of Central Intelligence," Angleton stressed. 196 Yet, insofar as the record indicates, neither of the Directors did raise this topic with the President.

During public hearings, Angleton stated that the concealment from the President was not deliberate:

Mr. Angleton: Mr. Chairman, I don't think anyone would have hesitated to inform the President if he had at any moment asked for a review of intelligence operations.

Senator Church: That is what he did do. That is the very thing he asked Huston to do. That is the very reason that these agencies got together to make recommendations to him, and when they made their recommendations, they misrepresented the facts.

Mr. Angleton: I was referring, sir, to a much more restricted forum.

Senator Church: I am referring to the mail, and what I have said is solidly based upon the evidence. The President wanted to be informed. He wanted recommendations. He wanted to decide what should be done, and he was misinformed.

Not only was he misinformed, but when he reconsidered authorizing the opening of the mail five days later and revoked it, the CIA did not pay the slightest bit of attention to him, did it, the Commander-in-Chief, as you say?

Mr. Angleton: I have no satisfactory answer for that.

Senator Church: You have no satisfactory answer?

Mr. Angleton: No, I do not.

Senator Church: I do not think there is a satisfactory answer because having revoked the authority the CIA went ahead with the program. So that the Commander-in-Chief is not the Commander-in-Chief at all. He is just a problem. You do not want to inform him in the first place because he might say no. That is the truth of it. And when he did say no you disregard it, and then you call him the Commander-in-Chief. 197

Questioning Tom Huston on the subject of mail openings, the Chairman of the Select Committee summarized the Huston Plan exercise as follows:

Senator Church: So we have a case where the President is asked to authorize mail openings, even though they are illegal. And quite apart from whether he should have done it, and quite apart from whether or not the advice of the Attorney General should have been asked, he acceded to that request, thinking that he was authorizing these openings -- not knowing that his authority was an idle gesture, since these practices had been going on for a long time prior to the request for his authority. And after he revoked that authority, the practices continued, even though he had revoked it.

That is the state of the record, based on your testimony?

Mr. Huston: Yes, I think it is. 198

In retrospect, Huston reasons that if he and others in the White House had known these intelligence options were being exercised already and had not produced results significant enough to curb domestic unrest, "it conceivably would have changed our entire attitude toward the confidence we were willing to place in the hands of the intelligence community in dealing with this problem." 199

Huston now points to the irony in the fact that intelligence is supposed to provide policymakers with information upon which to make decisions, but in June 1970 the top policymaker in the government was kept unaware that certain sources of information were even available. 200 Part of the problem seemed to be excessive compartmentation in the intelligence agencies.

The failure of the CIA participants to tell Tom Huston of their mail-opening program was not the only example of dissimulation during this episode. Sullivan attempted to give Hoover the impression that he was not a part of the efforts to relax the restraints on intelligence collection. He wrote in a memorandum to Cartha DeLoach -- his immediate supervisor and the Number 3 man in the FBI in June 1970 -- that Benson Buffham (the NSA representative at the Langley meetings) was taking a particularly active role in the review of the "restraints" section of the draft. "Admiral Noel Gaylor (sic) of the National Security Agency," wrote Sullivan, "may have been a moving force behind the creation of this committee." [Emphasis added.] 202 Sullivan was indeed in a good position to know. He and Tordella of NSA (Gaylor's deputy) had viewed these meetings since the beginning as, in Tordella's words, "nothing less than a heaven-sent opportunity for NSA . . . ." 203 Yet, Sullivan ended his memo for the FBI leadership with the admonition: "Contingent upon what the President decides, it is clear that there could be problems involved for the Bureau." 204

This was the first written example of Sullivan's apparent strategy to impress upon Hoover, Tolson, and DeLoach his disassociation with attempts to relax restraints which Hoover wanted maintained. Two days later on June 20, Sullivan took a definitely pro-Hoover position in a memorandum for the Director. He recommended that the FBI oppose "the relaxation of investigative restraints which affect the Bureau." 205 Everything he had been working for with Huston, Tordella, and the others was denied. For the Director's consumption, he portrayed himself as the arch-defender of the Bureau's image, protecting Hoover and the FBI against the excesses of Huston's committee. The memorandum was written on the same day Sullivan's rival, Cartha DeLoach, made a decision to leave the FBI to become a business executive, thereby clearing the pathway to higher office in the Bureau for Sullivan.

As for the proposed interagency committee -- an idea for which both he and Huston had expressed strong commitment and lively interest 206 -- Sullivan concluded on the eve of his promotion to the Number 3 spot in the FBI: "I do not agree with the scope of this proposed committee nor do I feel that an effort should be made at this time to engage in any combined preparations of intelligence estimates." 207

Huston suspected that the opposition of the FBI's representatives was ambivalent. "I am sure that, tactically, the people in the Bureau probably were telling Hoover that 'the other fellows are pushing this stuff,'" Huston has testified. "If I had to gamble, that would be my bet. Probably 'Huston over there with a black snake whip,' or Helms or somebody else which didn't bother me, I mean tactically, if that is the way the people figured that they had to push the Director to get done what they wanted to do. 208

There is little doubt, however, that Huston and the Sullivan group of the FBI set the agenda and shaped the format of the Special Report. Huston, Sullivan, and Brennan had discussed the direction the Committee ought to take many times over. 209 They worked closely together during the June meetings; and before formal meetings, Huston, Sullivan and the Bureau representatives were in frequent contact over the telephone or talking together directly. Members of the FBI contingent would pick up Huston at the White House on the way to Langley and bring him back after the ICI meetings. Often they lunched together.

Huston saw himself acting, in part, in the capacity of a sympathetic White House staffer passing on to the President what the professionals wanted. "And I agreed with them," he emphasizes. "I say 'agreed.' After you work with somebody and you are convinced that what they want to do is right, you agree with them." 210 There was no doubt in Huston's mind that FBI, CIA, and NSA professionals were pushing hard for expanded intelligence collection operations. They "clearly wanted me to recommend to the President that these operations be adopted," he remembers. 211 To conclude that Huston dominated and manipulated the intelligence community is an error. The relationship was symbiotic. As Huston has explained,

... the entire intelligence community, in the summer of 1970, thought we had a serious crisis in this country. I thought we had a serious crisis in this country. My attitude was that we have got to do something about it. Who knows what to do about it. The professional intelligence community? The professional intelligence community tells me, "you give us these tools; we can solve the problem." I recommended those tools. 212

The duplicity went beyond the CIA mail program and Sullivan's dissembling. A subsequent section of this commentary reveals that the intelligence agencies greatly expanded their collection programs after President Nixon revoked his authority for the Huston plan, without obtaining presidential approval for their actions.

#### *B. Lawlessness*

Several of the techniques discussed in the drafting of the Special Report were of questionable legality. For example, covert mail cover and surreptitious entry were, in Huston's words, "clearly illegal." 213 And, the legitimacy of other intelligence collection methods, such as placement of American names on the NSA watch list, was highly questionable. 214 Yet, former President Nixon does not recall "any discussion concerning the possible illegality of any of the intelligence gathering techniques described in the report during my meeting with the [ICI] Committee [on June 5, 1970]." 215

During public hearings, Senator Walter Mondale asked Huston whether any one of the ICI staff members had objected "during the course of making up these options to these recommendations which involved illegal acts":

Mr. Huston: At the working group level, I do not recall any objection.

Senator Mondale: Do you recall any of them ever saying we cannot do this because it is illegal?

Mr. Huston: No.

Senator Mondale: Can you recall any discussion whatsoever concerning the illegality of these recommendations?

Mr. Huston: No.

Senator Mondale: Does that strike you as peculiar that top public officers in the most high level and sensitive positions of government would discuss recommending to the President actions which are clearly illegal and possibly unconstitutional without ever asking themselves whether that was a proper thing for them to be doing?

Mr. Huston: Yes, I think it is, except for the fact that I think that for many of those people we were talking about something that they had been aware of, had been undertaking for a long period of time.

Senator Mondale: Is that an adequate justification?

Mr. Huston: Sir, I am not trying to justify, I am just trying to tell you what my impression is of what happened at the time.

Senator Mondale: Because if criminals could be excused on the grounds that someone had done it before, there would not be much of a population in any of the prisons today, would there?

Mr. Huston: No. 216

Legal advice was not sought, several important legal matters were involved in preparing the report for the President. The CIA General Counsel was not included or consulted, since, as Angleton had testified, "the custom and usage was not to deal with General Counsel, as a rule, until there were some troubles. He was not a part of the process of project approval." 217

Avoidance of legal and constitutional matters was, apparently, not uncommon throughout the intelligence community. William Sullivan has testified:

During the ten years that I was on the U.S. Intelligence Board, a Board that receives the cream of intelligence for this country from all over the world and inside the United States, never once did I hear any body, including myself, raise the question: "Is this course of action which we have agreed upon lawful, is it legal, is it ethical or moral?" We never gave any thought to this realm of reasoning, because we were just naturally pragmatists. The one thing we were concerned about was this: will this course of action work, will it get us what we want, will we reach the objective that we desire to reach? 218

Sullivan attributes much of this attitude concerning the law to the molding influence of World War II upon young FBI agents who have since risen to high position. In a deposition, Sullivan noted that during the 1940s there was "a war psychology. Legality was not questioned. Lawfulness was not a question; it was not an issue."

Senator Mondale: That carried on, unfortunately, after the war.

Mr. Sullivan: Senator, you are right. We could not seem to free ourselves either at the top or bottom, could not free ourselves from that psychology with which we had been imbued as young men, in particular, most all young men when we went into the Bureau.

Along came the Cold War. We pursued the same course in the Korean War, and the Cold War continued, then the Vietnam War. We never freed ourselves from that psychology that we were indoctrinated with, right after Pearl Harbor, you see. I think this accounts for the fact that nobody seemed to be concerned about raising the question, is this lawful, is this legal, is this ethical. It was just like a soldier in the battlefield. When he shot down an enemy he did not ask himself is this legal or lawful, is it ethical? It is what he was expected to do as a soldier.

We did what we were expected to do. It became a part of our thinking, a part of our personality. 219

Neither the Attorney General nor anyone in his office was invited to the sessions at Langley, or consulted during the proceedings. During public hearings on the Huston Plan, Huston was asked about the absence of consultations with the Attorney General.

Senator Church: And it never occurred to you, as the President's representative, in making recommendations to him that violated the law, that you or the White House should confer with the Attorney General before making those recommendations?

Mr. Huston: No, it didn't. I should have, but it didn't. 220

The Attorney General knew nothing of the preparation of an intelligence report for the President until so informed by Hoover on July 27, 1970, several weeks after Hoover had signed the June "Special Report." 221 One reason for the absence of Attorney General John Mitchell, Huston explains, is that this was an intelligence matter to be handled by the intelligence agency directors. 222 Mitchell, the head of Justice, was not included, just as Laird, the head of Defense, was not included. Huston now claims, though, that he naturally thought Hoover would check with Mitchell or his Deputy before signing the Special Report, just as General Bennett cleared with his superior, Deputy Secretary of Defense David Packard, and informed the Secretary of Defense, Melvin Laird. 223

Another reason for the exclusion of Mitchell might have been the institutional animosity which existed between the professional intelligence establishment and the Office of the Attorney General. The former was primarily interested in the collection of intelligence and the protection of sources; the latter suffered, in Huston's view, from "prosecutor's mentality" -- an interest in the collection of evidence for its use in securing prosecution. Huston states that there are "two approaches" to handling the problem of violence-prone demonstrators:

One is the intelligence-collection approach where you try to keep tabs on what is going on and stop it before it happens. The other approach, which is perhaps the only tolerable one in a free society, from a perfectly legitimate point of view, is you have to pay the price of letting a thing happen, and then follow the law and hope you can apprehend the person responsible and prosecute him according to the law. 224

Considerable tension existed between these two approaches in 1970.

The enmity between some members of the White House staff (notably Huston) and the Justice Department stretched back to preparations for the antiwar demonstrations in Washington in 1969. The Justice Department, Huston believes, saw the violence which occurred as premeditated and leaned toward seeking indictments under the Federal Anti-riot Act. In contrast, Huston and Sullivan saw the problem from the perspective of an intelligence officer. The answer rested in mobilizing the intelligence agencies, not the law enforcement community. 221 As Huston has testified: "I frankly did not have a whole lot of confidence in the Justice Department sensitivity with respect to distinguishing between types of protest activity." 226 So the

Justice Department continued to seek more stringent criminal sanctions to deal with the problem of subversives, and the intelligence collectors pursued the expansion of their methodology as a better solution.

In his March 1976 interrogatory answers, former President Nixon took the position that "there have been -- and will be in the future -- circumstances in which presidents may lawfully authorize actions in the interests of the security of this country, which if undertaken by other persons, or even by the president under different circumstances, would be illegal." 227 As an example, the former President drew upon the example of mail opening. "The opening of mail sent to related priority targets of foreign intelligence, although impinging upon the individual," said the former President, "may nevertheless serve a salutary purpose when -- as it has in the past -- it results in preventing the disclosure of sensitive military and state secrets to the enemies of this country." 228

The White House staffer who recommended the use of illegal and highly questionable intelligence gathering techniques in 1970 had decided five years later that, in the end, the growth and preservation of a free society depended upon a reliance on the law. 229 For Huston, the sanctions of criminal law had replaced his earlier faith in unrestricted intelligence collection as the more appropriate response to the threat of violence in our Society. 230 The risk inherent in the latter approach was too great. In Huston's words:

The risk was that you would get people who would be susceptible to political considerations as opposed to national security considerations, or would construe political considerations to be national security considerations, to move from the kid with a bomb to the kid with a picket sign, and from the kid with the picket sign to the kid with the bumper sticker of the opposing candidate. And you just keep going down the line. 231

### *C. Mixed Motives*

Also hidden behind the events of June 1970 were the reasons for ardent participation -- or lack thereof -- in the writing of the intelligence report. Reaction to the first gathering of the ICI (Ad Hoc) work-group was mixed. Some participants were delighted by the turn of events. For years, a group of counterintelligence specialists within the FBI had favored reinstatement of collection procedures taken away from them by the Director and viewed the request from the White House for a Special Report as a unique opportunity. The CIA, NSA, and most of the FBI representatives shared an enthusiasm for the project, with varying degrees of optimism that the planning would actually be approved by Hoover.

Not everyone, however, was sanguine about the proceedings. "What a bucket of worms!" observed Richard Ober, Angleton's backup man from the CIA, to Col. Koller of the Air Force after the meeting. 234 Koller thought it was worse than that. "I wouldn't have touched what they were talking about with a 10-foot pole," he noted recently. "The things they were talking about were illegal, and certainly beyond our interest and capability." 235 Koller dropped out after the first meeting, warning his boss, General Triantafeller, not to get the Air Force involved. The Air Force kept a representative at the meeting, Col. Demelt "Gene" Walker, but only as an observer who had been cautioned to keep a safe distance from the planning and to protect the Air Force. 236

This reaction was typical of all the military representatives. The Army member, Col. John Downie, was the most outspoken. At the first gathering he made it clear that "the Army would keep the hell out" of domestic intelligence collection, since it was already in deep trouble over the recent exposure of Army surveillance of civilians. 237 Downie and others were at that moment preparing for hearings before the Senate's Constitutional Rights Subcommittee on that very subject. Downie now states that the Army would have been far less resistant to Sullivan's efforts to draw them in had they not been on the "hot seat" at the time. 238

Stilwell of DIA was also told by Gen. Bennett to proceed with extreme caution; he was supposed to help out where he could, but Bennett felt the DIA had little to contribute to the effort. Huston recalls the DIA role as being minimal. 239 "B." Willard, the Navy civilian observer, remembers that the dominant feeling of the military representatives was: "Don't try to draw us into this." 240 The attitude of the Air Force and the Navy, was, in Stilwell's opinion: "We haven't been involved in domestic intelligence collection, and we're not going to start now." And for the Army the attitude seemed to be: "We may have been stupid enough to stick our nose in once, but we're not going to get burned twice." 241

Among the FBI participants at Langley, Donald E. Moore was an exception. After Sullivan, he was the senior Bureau representative on the ICI staff. He had been involved in intelligence work for the Bureau since 1956, and in June 1970 was the Inspector-in-Charge, Espionage Research Branch. He was greatly troubled by the opening meeting at Langley. "I felt very uneasy about the direction the work group was taking," he remembers. "Their views were contrary to what Mr. Hoover would have liked. I wanted out." 242

A Hoover "loyalist," Moore went to Sullivan after the meeting and asked to be excused from subsequent sessions. "Suit yourself," Sullivan replied, and Donald Moore faded from the scene, except for desultory comments made on the threat portions of a draft Sullivan asked him to review a week later. 243

Even among the ICI enthusiasts, not all were pursuing the same goal. Ostensibly, the Ad Hoc Committee was established to provide better intelligence to the President, primarily, on New Left activities, and, secondarily, on foreign influence over the New Left. The radical protesters were clearly Tom Huston's main interest. Data collection on the New Left and black militancy was of great interest to others as well, such as George Moore, who was the Bureau Section Chief with responsibilities in this area. However, several of the participants saw the concern of the President over domestic intelligence chiefly as a way to ride piggyback through the White House approval process their own primary goal of knocking down obstacles to foreign intelligence collection. As one FBI observer at the Langley meetings has commented:

Hoover put us out of business in 1966 and 1967 when he placed sharp restrictions on intelligence collection. I was a Soviet specialist and I wanted a better coverage of the Soviets. I felt -- and still feel -- that we need technical coverage on every Soviet in the country. I didn't give a damn about the Black Panthers myself, but I did about the Russians. I saw these meetings as a perfect opportunity to get back the methods we needed . . . and so did Sullivan. 244

Huston was aware that Gayler and others were in the venture for reasons other than strictly to improve domestic intelligence. "The whole question of surreptitious entry . . . was an issue going into this thing I didn't know anything about, and didn't understand really what it had to do with the subject underhand," Huston recalls. "It was really clear to me that it was a foreign intelligence matter. . . . It just seemed to me that if these people felt so strongly about it, why should I say no? And so it went in [to the report for the President]." 245

Huston remembers another example of the approach used by NSA: the modification of its authority for the collection of communications intelligence. "For all I know that [directive] could have authorized people to have free lunch in the White House mess," he says. "In other words, Admiral Gayler said, 'This is what needs to be done' and that's what I did." 246

Those focusing on domestic intelligence objectives and those on foreign intelligence, those committed to relaxing collection restraints and those reluctant to be involved -- these were the central cleavages in the staff of the Interagency Committee on Intelligence (Ad Hoc).

#### *D. "Credit Card Revolutionaries"*

Just as hidden from the President and Tom Huston as the CIA mail program -- though more from reasons of their own selective perception than from duplicity -- was the reality of the antiwar movement which helped spur the writing of the intelligence report in the first place. The threat assessment section of the Special Report was not too different from earlier assessment prepared for Ehrlichman and Huston in April and June of 1969. Though more thorough, it also failed to produce much concrete evidence of foreign influence over domestic unrest. During the public hearings on the Huston Plan, C. D. Brennan, the FBI witness, said that the Bureau was never able to find evidence indicating the antiwar protesters in the United States were financed by external sources. "I felt that the extremist groups and the others who were involved in antiwar activities and the like at that time were of the middle- and upper-level income," stated Brennan, "and we characterized them generally as credit-card revolutionaries." 247

Despite the lack of any substantial evidence of foreign involvement, the White House under both Johnson and Nixon had persistently tasked the Bureau to discover evidence of foreign funding. 248 As in earlier reports, however, the assessment section of the Special Report pointed to the danger of foreign connections developing in the future. Consensus here was high. Like those in the White House, the intelligence officers writing the Report walked a slippery slope when they began to speak of the need to expand intelligence collection more because of potential rather than actual findings.

These were among the main forces, not immediately visible, which were particularly important in shaping the Special Report and the Huston Plan. Those who had sought to obtain presidential authority to broaden intelligence collection methods had ultimately failed; but they remained committed to their objective of expansion nonetheless. The intelligence collectors were not to be dissuaded by the simple absence of presidential or congressional authority.

### **VIII. AFTERMATH: THE END -- OR THE BEGINNING?**

Two events of particular significance followed in the close wake of the Huston Plan. One was the creation of the Interagency Evaluation Committee (IEC), and the other was a secret meeting involving Hoover, Helms, Gayler, and Mitchell.

The IEC has become controversial, since it was similar in some respects to the permanent interagency group recommended in the Huston Plan. Questions have thus been raised concerning whether the IEC became the instrument for carrying out the provisions of the Huston Plan, possibly even serving as the precursor of the "Plumbers" group which broke into the Democratic National Headquarters in the Watergate building in 1972.

A review of the IEC history by the Committee, summarized below, suggests that the Committee did resemble the interagency committee outlined in the Huston Plan; however, the IEC amounted to little more than a research group, with no operational dimension and no ties to the "Plumbers" unit. The IEC, however, did bring to fruition the Huston Plan concept of an interagency intelligence committee.

#### *A. The Intelligence Evaluation Committee*

Within a month of John Dean's arrival in the White House, he had learned -- chiefly through conversations with Huston -- the basic details about the work of the Ad Hoc Committee on Intelligence and the collision with Hoover. By late August, Haldeman had approached Dean on the Huston Plan, instructing him "to see what I could do to get the plan implemented." 251 Dean has testified that he had found the plan "totally uncalled for and unjustified." 252

Eventually, on September 17, 1970, Dean went to see John Mitchell about the Huston Plan and Haldeman's request for its implementation. Mitchell explained to him some of the details of the Plan. As Dean now recalls, his reaction was to think: "You've got to be kidding. This sounds like something the people on Mission Impossible would dream up." 253

The Attorney General reiterated his position against the Plan -- with one exception. Unlike Hoover, Mitchell now thought that a permanent interagency committee for intelligence evaluation might be useful. As Dean testified in 1973: "After my conversations with Mitchell, I wrote a memorandum requesting that the evaluation committee be established, and *the restraints could be removed later*. I told Mr. Haldeman that the only way to proceed was one step at a time and this could be an important first step. He agreed." [Emphasis added.] 254

This memo of September 18th from Dean to Mitchell read in part: "A key to the entire operation will be the creation of a (sic) interagency intelligence unit for both *operational* and evaluation purposes ... and then to proceed to remove the restraints as necessary to obtain such intelligence." [Emphasis added.] 255 Echoing Huston's recommendation to Haldeman of a month before, the memo bore the postscript: "Bob Haldeman has suggested to me that if you would like him to join you in a meeting with Hoover he will be happy to do so."

Looking back on this memorandum, Dean pointed out that, although he was against the intelligence collection methods in the Huston Plan, he knew Haldeman supported them and would be reading the memo, too. Dean recalls that to keep his rapport with Haldeman -- and his job -- he included the operational language in the memorandum, actually believing, he claims, that the permanent evaluation committee would be as far as the undertaking would ever go. He and Mitchell were in agreement that "the enthusiasts" in the White House would require some kind of pacifier and this memorandum would give them at least a sense of action and commitment. 256

Whatever the truth may be about the later intentions of Dean, Mitchell, or Haldeman, an interagency Intelligence Evaluation Committee was planned and set up by Dean and Robert Mardian (Assistant Attorney General in charge of Internal Security) during the waning weeks of 1970. The IEC held its first meeting in Dean's EOB office on December 3rd, with Mardian in charge. 257 The meeting represented the fulfillment of one Huston Plan objective: the creation of a permanent interagency intelligence committee.

At this opening session of the IEC were several old hands from the earlier ICI Ad Hoc Committee: Angleton of CIA, George Moore of FBI, Buffham of NSA, and John Downie of DOD. At the subsequent meetings the group would be supplemented by staff aides, many of whom (like Richard Ober of CIA) had also seen duty at the Langley meetings in June. The focus of the IEC, it was decided at the meeting, would be on intelligence in the possession of the United States Government respecting revolutionary terrorist activities in the United States and to evaluate this intelligence to determine (a) the severity of the problem and (b) what form the Federal response to the problem identified should take. 259

Though Dean had received a special security clearance at CIA on September 30th and had immersed himself, at Haldeman's request, into the details of the Special Report and the Huston Plan, his participation in IEC meetings soon came to an end. The IEC began meeting in the Justice Department under Mardian's tutelage, and by January of the new year Dean had stopped attending the sessions. 260 Thereafter, the IEC was chiefly operated by Mardian and Bernard A. Wells, his deputy.

One of the military staffmen assigned to the Intelligence Evaluation Committee was Army counterintelligence specialist Col. Werner E. Michel. His views on the IEC are shared by virtually everyone familiar with its activities. Michel observes that (1) the IEC did very little and nothing of an operational character; (2) what little it did do (chiefly, prepare intelligence reports) was not done very well; and (3) its leadership -- specifically, Mardian -- was inexperienced when it came to intelligence work. 261

The principal representatives to the IEC, experts like Angleton, Buffham, Downie, and George Moore, dropped out of the proceedings by July 20, 1971, leaving behind subalterns to observe and participate. General Bennett has said, for example, that an enlisted man was assigned to the IEC staff "to make sure Mardian wasn't trying to drag the military into something unwarranted." 262

The IEC prepared about thirty staff reports and fifty-five "intelligence calendars" on radical events which were distributed to Dean in the White House and to the heads of participating agencies (including Treasury and the Secret Service). These reports were considered to be of low quality by experienced intelligence specialists. 263 The singularly most questionable document to emerge from the IEC files was a memorandum appearing on January 19, 1971. Typed on Justice Department stationery and addressed to Mitchell, Ehrlichman, and Haldeman, the unsigned memorandum purported to speak unanimously for the IEC participants. It asked for the implementation of the Special Report of June 1970; obviously, from the text, the memorandum actually sought the adoption of Tom Huston's recommendations. "All those who have been involved in the project firmly believe," read the memorandum, "that the starting point for an effective domestic intelligence operation should be the implementation of the Special Report of the Interagency Committee on Intelligence." The anonymous author, or authors, added that "there is considerable doubt as to how significant a contribution the proposed committee [the IEC] would make to existing domestic intelligence *operations* without implementation of the Ad Hoc Committee Report. . . ." [Emphasis added.] 264

Dean has stated that Mardian was responsible for this memorandum. 265 Mardian, however, denies he made any attempt or suggestion to implement provisions of the Huston Plan or the Special Report of June 1970. In his view, the IEC was strictly an effort "to increase formal liaison among the intelligence agencies, since Hoover had broken it off the previous summer.... The IEC was only for analysis." 266

The Committee does not appear to have done anything more than try to evaluate raw intelligence data, over 90 percent of which was generated by the FBI. 267 Like the Huston Plan itself, this interagency effort also failed in large part because of Hoover's truculence toward it. At one point, Hoover wrote to Mardian concerning a proposed charter for the IEC: "... it is requested that an appropriate change be made in the wording of paragraph IV entitled 'Staff' to clearly show that the FBI will not provide personnel for the proposed permanent intelligence estimation Staff." 268

Mardian later complained to the Attorney General on February 12, 1971 that the content of the intelligence estimates would be of insufficient quality "to warrant continuing without [FBI] cooperation." 269 Eventually, Hoover did send over two analysts;

but they were considered to be less than satisfactory by most other participants. 270 The Director of the FBI clearly was not interested in the success of the IEC, no more than he had cared for the concept of an interagency committee as outlined in the Huston Plan.

According to various sources, the secrecy of the IEC stemmed from its handling of secret documents; its desire to avoid publicity and criticism which might come to an interagency intelligence group, regardless of how innocuous its works; and, Mardian's attempt to make the IEC appear to be more important than it really was. 271

In early June 1973, the IEC was finally abolished by Assistant Attorney General Henry E. Petersen. He concluded in a memorandum to participating agencies: "Now that the war in Vietnam has ended, demonstrations carrying a potential for violence have virtually ended; therefore, I feel that the IEC function is no longer necessary." 272 Behind this smoke screen lay the real reason, according to IEC staff member, James Stilwell: IEC leaders feared the mounting criticism of the recently revealed Huston Plan (a copy of which appeared in the New York Times) would lead the "jackals of the press" to their door. 273 It was time to close shop. Some members of the IEC staff argued that it would be a mistake to abolish the IEC at this time because people would conclude wrongly that it was in some way an extension of the Huston scheme. This viewpoint was overridden. 274

#### *B. Secret Meeting with Hoover*

On March 25, 1971, an FBI counterintelligence officer wrote a memorandum for Hoover's information regarding a request from Attorney General Mitchell which asked the Director to meet with him, Helms, and Gayler on March 31. The officer did not know the agenda for the meeting, but speculated that it would cover the subject of foreign intelligence as it related to domestic subversives. 275

The NSA, noted the memorandum, was already sending intelligence to the CIA and the FBI "on an extremely confidential basis" on the international communications of American citizens, but only as byproduct from NSA's communications monitoring responsibilities. This information was not developed in any systematic way. The memorandum suggested that Helms and Gayler might have an interest in increasing intelligence output of this type.

The memorandum stated that the principal source of Bureau data on subversive activities was electronic surveillance and live informants. To supplement these collection techniques, Hoover was advised to "take advantage of any resources of NSA and CIA which can be tapped for the purpose of contributing to the solution of the problem." The memorandum sounded like a fragment of conversation from the Langley meetings the previous June.

The meeting in Mitchell's office actually occurred on March 29. Later, Hoover prepared a memorandum for the files which indicated that Helms was primarily responsible for the gathering. The purpose of the meeting was to discuss "a broadening of operations, particularly of the very confidential type in covering intelligence both domestic and foreign." Gayler was "most desirous" of having the Bureau reinstate certain intelligence collection programs; and Helms spoke of "further coverage of mail."

These approaches were rebuffed by Hoover, who told Helms and Gayler (according to his memorandum) that he "was not at all enthusiastic about such an extension of operations insofar as the FBI was concerned in view of the hazards involved." Mitchell then intervened, according to Hoover's memorandum, and asked Helms and Gayler to prepare "an in-depth examination" of exactly what collection methods they desired. After reading the report, Mitchell said he would convene the group again "and make the decision as to what could or could not be done." According to the Hoover memo, Helms agreed and said he would have the report prepared "very promptly." 276

The Huston Plan battle had been fought again, this time with the inclusion of the major missing participant: Attorney General Mitchell. The results were similar to the earlier outcome: a victory for Hoover. Yet, clearly, the war was not over. While neither Helms nor Gayler nor Mitchell recall this meeting, or the outcome of the Helms-Gayler report, and while it is unclear whether such a report was ever actually prepared, one thing is certain: *efforts to implement provisions of the Huston Plan persisted. The unlawful CIA mail-opening program continued; the list of names of American citizens on the NSA Watch List expanded during the years 1970 to 1973; the age limit on FBI campus informants was lowered from 21 to 18; and the Bureau intensified its investigations in the internal security field.* 277

The intensified intelligence activities of the FBI included surveillance of "every Black Student Union and similar group, regardless of their past or present involvement in disorders." [Emphasis added.] 278 This involved the opening of 4,000 new cases. Also, members of the Students for a Democratic Society (SDS) were placed under investigation accounting for an additional 6,500 new cases. 279

The FBI witness during the Huston Plan public hearings did not believe the President was ever told about this increased Bureau activity. 280 Nor, according to other witnesses, was he told about the instances of expanded intelligence collection by other agencies. Speaking of the CIA mail program, former Attorney General John Mitchell suggested that "the old-school-tie boys, who had been doing it for 20 years, just decided they were going to continue to do it." 281

Looking back on the Huston Plan, President Nixon said in an official statement in 1973: "Because the approval was withdrawn before it had been implemented, the net result was that the plan for expanded intelligence activities never went into effect." 282 It was not that simple, however. As a former CIA Chief of Counterintelligence, James Angleton, noted:

The Huston Plan, in effect, as far as we were concerned, was dead in five days and therefore all of the other matters of enlarging procurement within the intelligence community were the same concerns that existed prior to the Huston Plan, and subsequent to the Huston Plan. The Huston Plan had no impact whatsoever on the priorities within the intelligence community. 283

"People are reading a lot into the Huston Plan," Angleton continued, "and, at the same time, are unaware that on several levels in the community identical bilateral discussions were going on." 284 Angleton stated that, since the creation of the CIA in 1947, "there has been constant discussion of operations and improvement of collection, so there is nothing unusual in time .... There were a number of ongoing bilateral discussions every day with other elements within the intelligence community which may or may not have duplicated the broad, general plan that Huston brought about." 286

The fact that the President approved the Huston Plan -- if only briefly -- is deeply troubling in itself, as some of its provisions contravened the law. That some of the intelligence agencies could continue these programs after the President revoked his authority -- and, in fact, expand them -- is cause for great alarm. These facts raise serious questions about the sensitivity of the White House and the intelligence agencies to the law and the Constitution.

## IX. SUMMARY AND CONCLUSIONS

The Huston Plan episode is a story of lawlessness and impropriety at the highest levels of government. It is also a story of high-level deception, for some of the intelligence agencies concealed illegal programs from the President and his representatives, from the Congress, and from one another. The findings in this investigation are similar to those disclosed in other phases of the Select Committee inquiry into the American intelligence community, namely: a lack of accountability, unclear lines of authority, and frequent disregard for the law.

### *A. Accountability, Authority, and the Law*

On June 5, 1970, the President ordered the intelligence community to provide the White House with a complete and factual review of selected intelligence collection procedures, restraints upon these procedures, and options for relaxing the restraints. Instead, his representative, Tom Charles Huston, was deceived. The intelligence report for the President failed to disclose an ongoing illegal mail-opening program conducted by the CIA (with the cooperation and knowledge of the FBI). It also failed to mention the improper domestic intelligence activities of the CIA and the FBI, now known respectively as "Operation CHAOS" and "COINTELPRO." 290 In short, the authority of the President's order for a candid report carried little weight.

Later, on July 23, 1970, when the President revoked his authority to implement the Huston Plan provisions, his action again had little effect upon the intelligence services. The CIA mail-opening continued; Operation CHAOS and COINTELPRO went on; NSA selection of international communications involving Americans was expanded (apparently, largely as a result of names contributed to the NSA "Watch List" by the Bureau of Narcotics and Dangerous Drugs, BNDD); the FBI opened thousands of new cases on domestic dissenters and intensified its campus surveillance by lowering the age of informants to 18; the intelligence agencies formed a permanent interagency committee for intelligence, as envisaged in the Huston Plan; and, the intelligence directors from the CIA and the NSA continued to seek the full implementation of certain Huston Plan provisions.

The intelligence officers conducted illegal and questionable collection programs apparently partly because they concluded the good that flowed from them in terms of anticipating threats to the United States made the programs worthwhile, and partly because of the pressure for results from the White House. In addition, the threats of civil strife faced by the nation in 1970 seemed to justify to the intelligence collectors the use of extraordinary methods. Few of the counterintelligence experts who prepared the report leading to the Huston Plan objected to the inclusion of illegal options for the President. They did not consult the Attorney General; they did not consult the Congress; and they did not consult their own legal counsels.

### *B. The Quality and Coordination of Intelligence*

The Huston Plan is a story not only of impropriety and duplicity in the nation's intelligence community, but also of frustration over the quality and coordination of intelligence. The frustration came from several sources and took many forms. The White House was dissatisfied with the information available on domestic dissenters and their foreign supporters, and was concerned about the disintegration of liaison ties between the FBI and the other intelligence agencies. Within the intelligence agencies themselves various degrees of dissatisfaction over the quality and coordination of intelligence were also expressed. In particular, J. Edgar Hoover was viewed widely as an obstacle to the expansion of intelligence collection methods, especially for the acquisition of foreign intelligence.

Most of the counterintelligence experts involved in the Huston Plan episode did not share the White House view that domestic dissenters were receiving substantial foreign funding. Despite considerable attention to this matter, at the request of the White House, the intelligence agencies were unable to discover evidence of such a link. Nonetheless, the President's men insisted upon still further investigation of possible foreign ties and complained about the poor quality of intelligence data in this area.

Reactions to the break-down of formal liaison coordination between the FBI and the other intelligence agencies was also viewed from different perspectives by various participants in 1970. William C. Sullivan of the FBI and Tom Huston saw the severing of formal ties by Hoover as another manifestation of paralysis in the conduct of Bureau intelligence affairs. Others viewed the development as an unfortunate inconvenience, but one that was soon surmounted by sundry informal methods of communication. Severing formal liaison, in other words, did not terminate cooperation between the intelligence agencies and the FBI; rather, it forced the establishment of different channels of communication, chiefly through increased telephone conversation and the exchange of memoranda. No one, however, thought the situation was as good as before formal ties were broken; and everyone looked upon the general lack of communication between Hoover and the other directors -- especially Helms-as unfortunate.

### *C. Public Policy Implications*

The case of the Huston Plan provides a tragic commentary on the state of American democracy in the summer of 1970. Tom Charles Huston, the top White House adviser for internal security affairs, advised the President of the United States, in effect, [to] authorize the violation of to the Constitution and specific federal statutes protecting the rights of American citizens. The President, Richard M. Nixon, accepted the advice and gave his brief approval to the unlawful intelligence plan which now bears the name of his adviser. Throughout the episode, some of the intelligence agencies concealed projects from the White House and from one another; and, after the President took back his authority from the intelligence plan, certain agencies continued to implement the provisions anyway.

The conclusion to be drawn from this case is that: no longer can the intelligence agencies be exempted from the law or from lines of higher authority. The final report of the Senate Select Committee on Intelligence sets forth a series of recommendations to help prevent this from happening again. Central to each of the issues of accountability, authority, lawlessness, and the quality and coordination of intelligence is the question of control. The provisions in the Final Report would tighten control over the intelligence community.

Yet to avoid the dangers of tyranny inherent in greater control in the government, the authority and responsibility for this increased supervision must be shared among the intelligence agencies themselves, the President, the Justice Department, the Congress, and the courts.

If shared and closer control is one answer emerging from this investigation into the Huston Plan, another is the need for more frequent dialogue on intelligence problems among responsible individuals in each branch of the Government. The Huston Plan arose because well-meaning and intelligent people wanted solutions to pressing questions of intelligence quality and coordination. The solutions arrived at in June 1970 were inappropriate and have been rightly criticized, but the original problems have not been completely resolved. And they will not be until leaders in the Congress and the Executive Branch face them, discuss them, and decide upon appropriate courses of action. The objective of the Select Committee has been to contribute to this vital process.

## APPENDIX

### "CHRONOLOGY OF HUSTON PLAN AND INTELLIGENCE EVALUATION COMMITTEE" PREPARED BY SENATE SELECT COMMITTEE STAFF

| Date          | Central event                                                                                     | Related developments                                                                |
|---------------|---------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------|
| 1965          |                                                                                                   | As a result of Senator Long's wiretap hearings, Hoover terminates "black bag" jobs. |
| December 1966 | FBI terminates break-ins.                                                                         |                                                                                     |
| 1967-68       | Capt. Thomas Charles Huston, U.S. Army, works at DIA in the area of covert aerial reconnaissance. |                                                                                     |
| 1968          | Huston works part time in the Nixon campaign.                                                     |                                                                                     |

| December 1969  | Huston asks Sullivan to have the Bureau prepare a report on the November moratorium, showing that the Weathermen were to blame for the violence not the New Mobilization (a conclusion agreed upon by Huston and Sullivan and contrary to the position of the Department of Justice).                                       |                                                                                                                                                                                                                       |
| January 1970   |                                                                                                                                                                                                                                                                                                                             | Army domestic surveillance program is revealed; Ervin begins investigation; Huston continues responsibilities for monitoring and disseminating FBI intelligence to the White House; student dots at UC Santa Barbara. |
| March 1970     |                                                                                                                                                                                                                                                                                                                             | Explosion of Greenwich Village townhouse "bomb factory;" Weathermen bombings of corporation offices In Now York; Increase In bombing incidents throughout the United States.                                          |
| March 19, 1970 |                                                                                                                                                                                                                                                                                                                             | Executive Protection Service established, placing a heavier guard around embassies.                                                                                                                                   |
| Apr. 4, 1970   |                                                                                                                                                                                                                                                                                                                             | 40 000 march down Pennsylvania Ave. in Washington, D.C.                                                                                                                                                               |
| Apr. 22, 1970  | Meeting in Haldeman's office: Huston is told to meet regularly with intelligence agencies on questions of domestic violence and report to the White House; decision that Nixon should meet with intelligence community principals regarding intelligence gaps; Cambodian incursion prevents meeting from being held in May. |                                                                                                                                                                                                                       |
| May 1970       |                                                                                                                                                                                                                                                                                                                             | Kent State and Jackson State shootings; antiwar demonstrations; Hoover terminates FBI liason to CIA; Army phases out domestic surveillance program.                                                                   |
| June 4, 1970   | Huston recommends to Nixon that Sullivan be named chairman of work group for Special Report; earlier, Huston and Sullivan had met together                                                                                                                                                                                  |                                                                                                                                                                                                                       |

|               |                                                                                                                                                                                                                                       |                                                                                                                                      |  |
|---------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------|--|
|               | to outline the restraints on intelligence collection which Huston could show to Nixon in order to persuade him to establish the Interagency Committee on Intelligence (ICI) (ad hoc).                                                 |                                                                                                                                      |  |
| June 5, 1970  | Nixon holds meeting in White House to create ICI (ad hoc); Hoover named chairman; present at the meeting with Nixon are: Hoover, Helms, Bennett, Gayler, Haldeman, Ehrlichman, Finch, and Huston.                                     |                                                                                                                                      |  |
| June 8, 1970  | Hoover convenes meeting of intelligence principals to plan the writing of a Special Report for the President; names Sullivan work group chairman; meeting attended by Helms, Hoover, Gayler, Bennett, Huston, Sullivan, and G. Moore. |                                                                                                                                      |  |
| June 9, 1970  | First meeting of ICI (ad hoc) work group at Langley; discussion on the purpose of the assembled group; each agency assigned task of preparing a list of restraints hampering intelligence collection.                                 |                                                                                                                                      |  |
| June 10, 1970 |                                                                                                                                                                                                                                       | Sullivan is promoted to No. 3 man in the Bureau, succeeding DeLoach as Assistant to the Director; De Loach retires on July 20, 1970. |  |
| June 12, 1970 | Second meeting of work group                                                                                                                                                                                                          |                                                                                                                                      |  |
| June 17, 1970 | Third meeting of work group                                                                                                                                                                                                           |                                                                                                                                      |  |
| June 23, 1970 | Fourth and final meeting of the work group                                                                                                                                                                                            |                                                                                                                                      |  |
| June 23, 1970 |                                                                                                                                                                                                                                       | Hoover terminates all FBI formal liaison with NSA, DIA, Secret Service, and the military services.                                   |  |
| June 25, 1970 | Principals meet in Hoover's office to sign the Special Report.                                                                                                                                                                        |                                                                                                                                      |  |
| June 26, 1970 | A copy of the Special Report delivered to Huston at the White House.                                                                                                                                                                  |                                                                                                                                      |  |

|                 |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                                                                                                                                                                                   |
|-----------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| July 1970       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | John Dean transfers to the White House from Justice, where he had often represented the Government in discussions with protest leaders about demonstration permits for the Washington, D.C. area. |
| Early July 1970 | In a memo to Haldeman entitled "Operational Restraints on Intelligence Collection," Huston recommends that Nixon select most of the options relaxing restraints on intelligence collection; his recommendation, he says, reflects the consensus of the ICI (ad hoc) not just his own viewpoint. Huston writes a separate memo encouraging Nixon to implement the Special Report options in a face-to-face meeting with the Agency chiefs; otherwise, thought Huston, Hoover might not accept the relaxations.                        |                                                                                                                                                                                                   |
| July 9, 1970    | In a memo, Huston proclaims himself the "exclusive" contact point at the White House on matters of domestic intelligence or internal security.                                                                                                                                                                                                                                                                                                                                                                                       |                                                                                                                                                                                                   |
| July 14, 1970   | Haldeman writes memo to Huston saying that Nixon had approved Huston's plan, though he did not agree to the face-to-face announcement of the decision. Nixon tells Haldeman, who tells Huston, that he did not want to take the time to call the Agency Directors in.                                                                                                                                                                                                                                                                |                                                                                                                                                                                                   |
| July 23, 1970   | Huston prepares a memo on Nixon's approval of the extreme options, has the memo approved by Haldeman and sends it to Helms, Hoover, Gayler, and Bennett. Sullivan calls Huston soon thereafter to say that Hoover was furious about the memo and intended to see Mitchell; Hoover calls and writes Mitchell to complain (the first time Mitchell hears about the Special Report). Hoover goes to Mitchell's office to object to the removal of restraints on intelligence collection methods; Mitchell supports Hoover's objectives. |                                                                                                                                                                                                   |

|                  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                                            |
|------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------|
| July 27,<br>1970 | Mitchell confers with the President. Haldeman calls Huston to say that Mitchell has talked to Nixon about the Huston Plan, and the July 23, decision memo was being recalled so that Nixon, Hoover, Mitchell, and Haldeman could reconsider the plan. David McManus of the White House Situation Room telephones each agency to request the return of the decision memo and the Special Report.                                                                                               |                                                            |
| July 28,<br>1970 | The agencies return the decision memorandums to the White House Situation Room.                                                                                                                                                                                                                                                                                                                                                                                                               |                                                            |
| Aug. 3,<br>1970  | Huston and Haldeman "hassle" verbally about whether Nixon should let Hoover's objections to the Huston Plan prevail.                                                                                                                                                                                                                                                                                                                                                                          |                                                            |
| Aug. 5,<br>1970  | Huston writes a memo to Haldeman urging implementation of the Presidential decision reflected in the July 23, memo.                                                                                                                                                                                                                                                                                                                                                                           |                                                            |
| Aug. 7,<br>1970  | In a memo to Haldeman, Huston advises (1) that Haldeman meet with Mitchell to secure his support for the President's decision; (2) that the FBI Director be informed the decision will stand; and (3) that all intelligence agencies are to proceed to implement them at once.                                                                                                                                                                                                                |                                                            |
| Aug. 10,<br>1970 | Huston is shifted to a subordinate position under John Dean, who is charged with assuming Huston's intelligence responsibilities in the White House. Henceforth, Huston's main responsibilities related to conflict of interest clearances and the review of Executive orders, though he occasionally prepared intelligence reports for Haldeman and continued to be the liaison in the White House for FBI information. Huston also worked on a White House history of Vietnam negotiations. |                                                            |

| Late August    | Haldeman shows Dean the Huston Plan and asks him to implement it.                                                                                                                                                                                                                                                                                                                                                           |                                                                                                                                                                                                                                                                          |
| Aug. 25, 1970  |                                                                                                                                                                                                                                                                                                                                                                                                                             | In a memo to Haldeman, Huston urges White House expansion of Subversive Activities Control Board via an Executive order.                                                                                                                                                 |
| Sept 10, 1970  |                                                                                                                                                                                                                                                                                                                                                                                                                             | Huston writes a memo to Haldeman on the subject of air hijacking in which he states the need for improved intelligence community coordination, referring to Hoover as the chief obstacle.                                                                                |
| Sept. 17, 1970 | Mitchell has lunch at CIA to discuss possibility of improved interagency coordination; meets with Dean in the afternoon and says that he opposes Huston Plan but (unlike Hoover), approves of an interagency evaluation committee to improve intelligence coordination. In a memo to Haldeman, Dean recommends the establishment of such a committee as a first step toward implementing the Huston Plan. Haldeman concurs. |                                                                                                                                                                                                                                                                          |
| Sept. 18, 1970 | In a memo to Mitchell, Dean recommends the creation of an Intelligence Evaluation Committee (IEC) for the improved coordination and evaluation of domestic intelligence. The Interdivisional Information Unit in the Department of Justice would provide cover for IEC. (The IDIU monitored information on civil disturbances for the AG.)                                                                                  |                                                                                                                                                                                                                                                                          |
| Sept. 21, 1970 |                                                                                                                                                                                                                                                                                                                                                                                                                             | In a memo to Haldeman, Huston complains that the IRS has failed to take any notable actions against ideological organizations. In a memo to IRS, Huston recommends that agents to use information gleaned from tax records "to harass or embarrass" certain individuals. |

**Footnotes:**

<sup>1</sup> Senate Resolution 21, January 27, 1975, Sec. 2 (3).

<sup>2</sup> See the main text for documentation of facts presented in the précis.

3 J. Edgar Hoover, Director, Federal Bureau of Investigation (FBI) and Chairman of the Ad Hoc Committee; Richard Helms, Director, Central Intelligence Agency (CIA); Lt. General Donald V. Bennett, USA, Director, Defense Intelligence Agency (DIA); Vice Admiral Noel Gayler (pronounced GUY-ler), USN, Director, National Security Agency (NSA).

3a Since the Senate Watergate Committee revealed Nixon White House relations with the intelligence community, the term "Huston Plan" has been generally used in reference to recommendations and options described in both the Special Report of the Interagency Committee on Intelligence (Ad Hoc), June 1970, and in the memorandum from Tom Charles Huston to H. R. Haldeman, July 1970. In this report, "Special Report" refers only to the Special Report of the Interagency Committee on Intelligence (Ad Hoc), and "Huston Plan" refers to the recommendations outlined in the memorandum from Huston to Haldeman, July 1970.

3b A "mail cover" involves a request to the Postal Service to examine the exterior of mail addressed to or from a particular individual or organization.

28 Tordella (staff summary), 6/16/75.

29 Sullivan (staff summary), 6/10/75.

30 Gayler deposition, 6/19/75, p. 28; staff summary of General Donald Bennett interview, 6/5/75.

31 President Nixon statement, 5/22/73, Presidential Documents, Vol. 9, No. 21, May 28, 1973, p. 694.

32 Huston deposition, 5/23/75, p. 21.

33 Hoover issued an order that "direct liaison" with CIA Headquarters "be terminated" and that "any contact with CIA in the future" be "by letter only." Henceforth, the position of FBI "liaison agent" to the CIA was eliminated. See also Hoover's handwritten notes on a letter from Richard Helms to J. Edgar Hoover, 2/26/70 and Sam Papich deposition, 9/22/75, p. 3.

34 Angleton, 9/24/75, Hearings, pp. 83-84.

35 Staff summary of [CIA intelligence officer], 2/9/76.

36 By midsummer, formal Bureau liaison ties with all other intelligence agencies had been terminated as well, leaving only a staff linkage between Sullivan in the Bureau and Huston in the White House.

37 Huston deposition, 5/23/75, p. 22. H. R. Haldeman's appointment calendar for April 22, 1970, includes a list of participants at this meeting.

38 Memorandum from John R. Brown III to H. R. Haldeman, 4/30/70.

39 Huston deposition, 5/23/75, p. 26.

40 Brennan, 9/25/75, Hearings, pp. 105-106.

Huston stated that the paper for the President "clearly reflected Bill's [Sullivan's] views." (Huston deposition, 5/23/75, p. 32.)

41 Huston deposition, 5/23/75, p. 32.

42 Attachment to memorandum from J. Bruce Whelihan to Ron Ziegler, 1/29/74, p. 2, from the Nixon Papers.

43 Huston deposition, 5/23/75, p. 33.

44 Talking Paper prepared for President Nixon, 6/5/70.

45 General Bennett recalls that "the President chewed our butts." [Bennett (staff summary), 6/5/75.] The Director of DIA took notes on the meeting, and thought he remembered President Nixon turning on a tape recorder sitting on his desk at the beginning of the session. No other participant recalls this taping, and no such tape was found in the search through the papers of President Nixon by his lawyers, at the request of the Select Committee.

46 Talking Paper prepared for President Nixon, 6/5/70. In fact, however, this matter had received considerable attention from the intelligence agencies. See, for instance, the testimony of FBI intelligence officer Brennan, 9/25/75. Hearings, Vol. 2, pp. 104, 107, 135; and the Select Committee Report on CIA Project CHAOS.

47 Talking Paper prepared for President Nixon, 6/5/70.

48 Huston deposition, 5/23/75, pp. 35-36.

49 Report to the President by the Commission on CIA Activities within the United States, June 1975, p. 122, note.

50 Huston deposition, 5/23/75, p. 36.

51 Talking Paper prepared for President Nixon, 6/5/70.

52 Huston deposition, 5/23/75, p. 34.

53 Sullivan (staff summary), 6/10/75.

54 Huston, 9/23/75, Hearings, p. 4.

55 Sullivan (staff summary), 6/10/75.

56 William C. Sullivan deposition, 11/1/75, p. 121.

57 Sullivan (staff summary), 9/23/75.

58 Attachment to William Sullivan memorandum to Cartha DeLoach, 6/6/70. (Hearings, Vol. 2, Exhibit 9.)

59 The FBI served as secretariat for these meetings, with William Creegar keeping the minutes. Summaries of the sessions are found in a series of FBI memoranda: Memorandum from William Sullivan to Cartha DeLoach, 6/10/70 (Hearings, Vol. 2, Exhibit 11) ; Memorandum from William Sullivan to Cartha DeLoach, 6/15/70 (Hearings, Vol. 2, Exhibit 13); Memorandum from William Sullivan to Charles Tolson, 6/29/70 (Hearings, Vol. 2, Exhibit 17) ; Memorandum from William Sullivan to Charles Tolson, 6/26/70 (Hearings, Vol. 2, Exhibit 18) ; and Interagency Committee on Intelligence (ICI) minutes, 6/19/70 (Hearings, Vol. 2, Exhibit 14).

60 Memorandum, "USIB Subcommittee on Domestic Intelligence," undated. A summary of the first session is found in Sullivan memorandum, 6/10/70.

61 The second Langley meeting is summarized in Sullivan memorandum, 6/15/70.

62 Angleton, 9/24/75, Hearings, p. 57.

63 Huston (staff summary) 9/22/75.

64 Huston, 9/23/75, Hearings, pp. 18-19; staff summary of James Angleton interview, 9/12/75.

65 Ober was also in charge of the controversial CIA "Operation CHAOS" to investigate foreign contracts with American dissidents. See the Select Committee Report on Operation Chaos.

66 Staff summary of Richard Cotter interview, 9/15/75; Sullivan (staff summary), 6/10/75.

67 For a review of the third ICI meeting, see the Interagency Committee on Intelligence minutes, 6/19/70.

68 The last meeting of the ICI staff is summarized in the Sullivan memorandum, 6/24/70.

69 Sullivan (staff summary), 6/10/75.

70 Sullivan deposition, 11/1/75, pp. 122-24.

71 Sullivan deposition, 11/1/75, pp. 124-125.

72 Sullivan (staff summary), 6/10/75. Sullivan also remembers the presence of an Intelligence Review Board in the draft, which was designed to monitor problems within the intelligence side of government. He remembers Hoover demanding its removal at this stage, and Sullivan complied. No one else remembered this Review Board concept.

73 Cotter (staff summary), 9/15/75.

74 Staff summary of Col. John Downie interview, 5/13/75.

75 The footnote aspect of the Special Report remains a mystery. A Sullivan memorandum dated June 24, 1970, discussing the results of the final ICI staff meeting, notes that the Hoover footnotes were included in the final draft distributed on June 23rd to all the participants. (Sullivan memorandum, 6/24/70.) Yet, Adm. Gayler now denies knowing about these notes until the actual signing ceremony in Hoover's office on June 25th. [Gayler (staff summary) 6/19/75.] Gen. Bennett goes so far as to claim the footnotes were added after the signing ceremony. [Bennett (staff summary) 6/5/75.] Going still further, Col. Downie, the Army representative, believes the directors signed an innocuous report, then the signature page was attached later -- without the knowledge of the other directors -- to a report which included all the extreme options appearing in the Special Report as we know it today. [Downie (staff summary) 5/13/75.] This extreme version was then sent to the President via Tom Huston.

What seems most likely to have happened regarding the footnotes is as follows: Sullivan had told Huston early in the sessions at CIA Headquarters that it would be a major error to show Hoover the final draft of the report at the same time the other directors saw it. He would just "whack it away, and will have no chance," Sullivan said. (Houston deposition, 5/23/75, p. 65.)

Instead, Sullivan decided to have the Ad Hoc staff first approve a draft (which they did at their third meeting). The members were then to get their respective agency hierarchies to approve it, also. This was accomplished directly after the third meeting. Helms, Bennett, and Gayler reviewed this first draft and found it generally acceptable. Bennett had it approved by his and Gayler's superiors at the Defense Department. Finally, once the representatives of the various agencies had reported back that their directors had given their approvals (around June 20th) Sullivan approached Hoover, saying: "Here is the report that has been approved by all the other agencies, and we need your approval." [Sullivan (staff summary), 6/10/75.]

Sullivan hoped that, faced with this united front, Hoover would go along. [Sullivan (staff summary), 6/10/76, Huston deposition, 5/23/75.]

76 Huston deposition, 5/23/75, p. 67.

77 Huston, 9/23/75, Hearings, p. 7.

78 Huston, 9/23/75, Hearings, p. 7.

121 Sullivan memorandum, 6/24/70. Another option -- to permit the use of truth serum -- went into an early rough draft in the Bureau. It was devised by Bureau staffers in hopes that Hoover would remove it from the final report but, as a compromise, keep in all the other options. Sullivan, however, decided to remove this option before the first draft ever left the Bureau to be read by the 101 staff at Langley. [Cotter (staff summary), 9/15/75.]

122 Staff summary of [FBI counterintelligence expert], 8/20/75.

123 [FBI counterintelligence expert] (staff summary), 8/20/75.

124 Sullivan (staff summary), 6/10/75.

125 Memorandum from Tom Charles Huston to H. R. Haldeman, 7/70. (Hearings, Vol. 2, Exhibit 2). See footnote 3a.

126 By "inconsistent," Huston is apparently referring to Hoover's willingness to permit the exercise of collection techniques in the past which he would not permit in 1970.

127 Attachment to Huston memorandum, 7/70.

128 The "and" instead of "a" error from the Special Report is repeated in Huston's recommendation.

129 Attachment to Huston memorandum, 7/70, p. 2.

130 Attachment to Huston memorandum, 7/70, p. 3. In using the word "burglary." Huston sought to "escalate the rhetoric ... to make it as bold as possible." He thought, that as a staff man, he should give the President "the worst possible interpretation of what the recommendation would result in." (Huston deposition, 5/22/75, p. 69.)

131 Huston deposition, 5/22/75, p. 8.

132 Sullivan (staff summary), 6/10/75.

133 Omitted in original.

148 Helms memorandum, 7/28/70.

149 Richard Helms testimony, 10/22/75, Hearings, Vol. 4, p. 89.

150 Mitchell, 10/24/75, Hearings, p. 123.

151 Answer of Richard M. Nixon to Senate Select Committee Interrogatory 17, 3/9/76, p. 11.

152 Apparently the former President is referring to the June 5, 1970 meeting with the intelligence directors in the White House; if so, his statement is puzzling, since the recommendation had not been drafted at the time. If he is referring to another meeting with Hoover, no other record of such a meeting after June 5 has been found. Most likely the former President had the June 5 meeting in mind where Hoover indeed made no objections, for there were no recommendations to object to at that time.

153 Answer of Richard M. Nixon to Senate Select Committee Interrogatory 17, 3/9/76, p. 11.

265 Dean (staff summary), 8/7/75.

266 Staff summary of Robert Mardian telephone interview, 1/13/76.

267 Michel (staff summary), 5/12/75. The FBI did have, however, the benefit of NSA data, the CIA mail opening product, and information from the CIA/CHAOS project.

268 Memorandum from J. Edgar Hoover to Robert Mardian, 1/3/71.

269 Memorandum from Robert Mardian to John Mitchell, 2/12/71. (Hearings, Vol. 2, Exhibit 27).

270 For example, Michel (staff summary), 5/12/75; Stilwell, (staff summary), 5/21/75.

271 For example, Downie (staff summary), 3/13/75; Stilwell (staff summary), 5/21/75.

272 Memorandum from Henry E. Petersen to Col. Werner E. Michel, 6/11/73.

273 Stilwell (staff summary), 5/21/75.

274 Stilwell (staff summary), 5/21/75.

275 Memorandum from W. R. Wannall to C. D. Brennan, 3/23/75. (Though W. R. Wannall is the name on the memorandum, it may have been actually dictated by a subordinate in the FBI Intelligence Division.) In January 1971 the NSA Director had written a memorandum to the Secretary of Defense and the Attorney General on how his Agency could assist with "intelligence bearing on domestic problems." See memorandum from Noel Gayler to Melvin Laird and John Mitchell, 1/26/71. Benson Buffham of NSA personally showed the memorandum to John Mitchell. (Memorandum for the record by Benson K. Buffham, 2/8/71).

276 Memorandum for the files by J. Edgar Hoover, 4/12/71. (Hearings, Vol. 2, Exhibit 31). Subsequent to the meeting with Mitchell, "the Attorney General reversed the FBI decision" against a proposed CIA electronic surveillance, according to Angleton, and in May 1971 "all the devices which had been installed . . . were tested and all were working." See Memorandum for the record by James Angleton, 5/18/73, p. 5. (Hearings, Vol. 2, Exhibit 61).

277 For the detailed documented evidence on these points, see the Select Committee Reports on the CIA mail program, the NSA, and the FBI internal security programs. Information on the incidents of surreptitious entry remains classified but the cases are limited to foreign targets. See also Brennan testimony, 9/25/75, Hearings, p. 100, on the extent of the FBI internal security investigation.

278 Memorandum from Executives Conference to Clyde Tolson, 10/29/70. (Hearings, Vol. 2, 10/29/70). The Executives Conference was an occasional gathering of senior officials in the FBI.

279 Executives Conference memorandum, 10/29/70.

280 Brennan, 9/25/75, Hearings, pp. 138-139.

281 Mitchell, 10/24/75, Hearings, p. 141. On the apparent lack of presidential awareness of the NSA watch list expansion, see Allen, 10/29/75. Hearings, pp. 28-29 and Nixon's answers to interrogatories, 3/9/76. p. 1.

282 President Richard Nixon, Presidential Documents, 5/22/73, pp. 693-695.

283 Angleton, 9/24/75, Hearings, pp. 70-71.

284 Angleton, 9/24/75, Hearings, p. 82.

285 Omitted in original.

286 Angleton, 9/24/75, Hearings, p. 83.

287-289 Omitted in original.

290 Although these two programs were not strictly within the intelligence collection mandate of the ICI Ad Hoc Committee, they did deal with matters of internal security and, in the case of CHAOS, with the connection between domestic dissent and foreign powers; therefore, the CIA and FBI were being far from candid with one another -- and with the President's representative -- by concealing these programs at the Langley meetings.

## **CIA's Harassment Techniques**

### **(or, The Birth of Current Day Psycho-Harassment)**

**"Search For The Manchurian Candidate"**

**John D. Marks - ISBN: 0393307948**

---

The quote below illustrates so perfectly how the non-electronic harassment we involuntary psycho-electronic experimentees experience daily was born. Apparently, it originated in a "PAS" or "personality assessment system" for new agents, performed by the "TSS" or "technical services staff" of projects BLUEBIRD and ARTICHOKE on agent candidates.

So for whatever John D. Marks' supposedly non-fictional information is worth here's how our situation got it's start.

Guess what's 'good' and works never goes out of style. Here's the excerpt:

---

Page 174:

Keehner became disgusted by the picking-at-scabs aspect of Technical Services Staff assessment work. Once the Personality Assessment System had identified a target as having mental instabilities, staff members sometimes suggested ways to break him down, reasoning that by using a ratchetlike approach to put him under increased pressure, they might be able to break the lines that tied him to his country, if not his sanity. Keehner stated, "I was sent to deal with the most negative aspects of the human condition. It was planned destructiveness.

"First, you'd check to see if you could destroy a man's marriage. If you could, then that would be enough to put a lot of stress on the individual, to break him down.

"Then you might start a minor rumor campaign against him. Harass him constantly. Bump his car in traffic. A lot of it is ridiculous, but it may have a cumulative effect."

Agency case officers might also use this same sort of stress-producing campaign against a particularly effective enemy intelligence officer whom they knew they could never recruit but whom they hoped to neutralize.

MK RADIO 1 - Colin Ross lecture part 1  
MK RADIO 2 - Colin Ross lecture part 2  
MK RADIO 3 - Colin Ross lecture part 3

A lecture by Dr. Colin Ross entitled "The CIA and Military Mind Control Research: Building the Manchurian Candidate" given April 18, 1996 in Orange County, California. Dr. Ross gives a thorough overview of the documented history of US CIA and military mind control experimentation, particularly creating mind controlled agents using hypnosis and trauma-based dissociation (or multiple personalities). He talks about extensive bizarre experimental projects and the many CIA mind control contracts with top psychiatrists, psychologists and institutions. He discusses Canadian doctor George Estabrooks and his role in developing Manchurian Candidate agents for military, intelligence, and police agencies using hypnosis, drugs, brain implants, and trauma-based dissociation.

MK RADIO 4 - interview with Colin Ross - 1  
MK RADIO 5 - interview with Colin Ross - 2

Wayne Morris interviews Dr. Colin Ross about dissociation and the many CIA mind control projects including those that involved creating dissociation or multiple personalities in children. We discuss Canada's involvement in the mind control projects, the involvement of doctors, universities, hospitals, prisons, and other institutions across Canada and the U.S. in CIA mind control experiments. We also discuss the documented history of U.S. government mind control experiments on children including LSD and electronic brain implant experimentation.

MK RADIO 6 - Claudia Mullen and radiation hearings mind control testimony

Claudia Mullen describes the experience of giving testimony at the Presidential hearings on human radiation experiments as a survivor of government radiation and mind control experiments. Side B of this tape is the actual testimony given on March 15, 1995 to President Clinton's Advisory Committee on Human Radiation Experiments by Claudia Mullen, Chris DeNicola and their therapist Valerie Wolf regarding government mind control experimentation. This historic testimony broke the silence about government sponsored mind control experiments on children.

MK RADIO 7 - Ronald Howard Cohen 1  
MK RADIO 8 - Ronald Howard Cohen 2

Ronald Howard Cohen, writer and activist, tells his experience of being abducted while hitchhiking in the late 60's to a military base in Maryland and being severely drugged there. Ronald wrote a book about this experience and the transcripts of this book and his life's writings were stolen by the US government. Agents of CIA, FBI, and US Army Intelligence informed Ronald that his book would not be published and offered him a job at the New York Times to keep him quiet to which he refused. He has since rewritten the book.

MK RADIO 9 - Overview of Mind Control - Bowart, Schefflin, Noblitt

A panel presentation at the Cult and Ritual Abuse, Trauma-Based Mind Control and Dissociation symposium. Walter Bowart, author of "Operation Mind Control" talks about his research into mind control, the CIA's and military's use of mind control. Alan Schefflin addresses therapists dealing with clients with recovered memories of abuse in today's atmosphere of intimidation with the false memory movement. Schefflin states that therapists now must recognise therapy as a social influence setting and must be knowledgeable about social influence and police interrogation literature. Randy Noblitt speaks about cult and satanic ritual abuse and the use of trauma in religious ritual.

MK RADIO 10 - History of Mind Control - Alan Schefflin - 1  
MK RADIO 11 - History of Mind Control - Alan Schefflin - 2

Alan Schefflin presents "The History of Mind Control - What We Can Prove and What We Can't" which documents the several centuries of history of mind control from the use of the Malleus Malificarum in the Inquisition to the CIA's extensive mind control projects. He talks about the use of hypnosis, trauma-based dissociation, drugs, sensory deprivation, electroshock, and other methods of mind control experimentation. Alan Schefflin is a lawyer and is one of the world's foremost researchers of mind control as well as an authority in legal aspects of trauma/dissociation therapy. He has written such books as "The Mind Manipulators", "Trance on Trial", and most recently co-authored the encyclopaedic "Memory, Trauma Treatment and the Law".

MK RADIO 12 - Interview with Valerie Wolf, Claudia Mullen, Chris Ebner

Immediately after giving the historic testimony of mind control experimentation to the Presidential Advisory Committee on Human Radiation Experiments, Will Snodgrass interviews Valerie Wolf, Claudia Mullen, Chris Ebner. They expand on their testimonies with information about the CIA doctors and locations involved in their experimentation and abuse, the CIA's use of children for mind control, the training of children for mind controlled sexual slavery and assassination.

MK RADIO 13 - Interview with Claudia Mullen - 1

MK RADIO 14 - Interview with Claudia Mullen - 2

MK RADIO 15 - Interview with Claudia Mullen - 3

Wayne Morris interviews Claudia Mullen about her experience as a mind controlled slave for the US government. Claudia alleges that doctors at primarily Tulane University, New Orleans had experimented on her starting when she was 8 years old and trained her to be a sex slave for political blackmail purposes. She talks of being used to compromise military officers, politicians and other prominent officials in sex situations which was videotaped by CIA including being used to compromise Senator Frank Church during the time of the Church Committee Hearings looking into CIA wrongdoings. We discuss her testimony at the radiation hearings and her memories of experimentation including drugs, electroshock, severe traumatisation and abuse by CIA doctors such as Robert Heath, Martin Orne, Ewen Cameron, Sidney Gottlieb and others.

MK RADIO 16 - Valerie Wolf presentation - 1

MK RADIO 17 - Valerie Wolf presentation - 2

Valerie Wolf, MSW presents "Assessment and Treatment of Survivors of Sadistic Abuse" at the Believe the Children conference in April, 97. Valerie gave testimony at the U.S. government radiation hearings about mind control experimentation with her clients. In this presentation, Valerie describes her methods and approach to treating survivors of mind control. She explains important factors in the healing process along with her own experiences. She also describes the different mind control programs used and how she deals with them in a therapy session. She explains her belief that in trauma-based conditioning, remembering what caused the trauma breaks the control of that

conditioning. This presentation contains very valuable information for professionals working with mind control and abuse survivors.

MK RADIO 18 - Jon Rappoport lecture - 1

Investigative journalist Jon Rappoport gives a talk entitled "The CIA, Mind Control and Children" about the CIA's abuse of children to create mind control agents. Author of "U.S. Government Mind Control Experiments on Children", he talks about the impact of the mind control testimony submitted to the Presidential hearings on radiation experiments. Jon speaks about the mindset of those responsible for these horrors, the Nazi connections with the mind control doctors and the implications of mind control on society.

MK RADIO 19 - Jon Rappoport - 2, Valerie Wolf interview - 1

MK RADIO 20 - Valerie Wolf interview - 2

Wayne Morris interviews Valerie Wolf, MSW about her experiences giving mind control testimony at the radiation hearings and treating mind control survivors. We discuss dissociation, healing processes, ritual abuse aspects of mind control, and her therapeutic approaches that have enabled survivors to overcome the devastating effects of trauma-based mind control. We also discuss the effect of the activities of the False Memory Syndrome Foundation on therapy and access to survivors and the public's changing perception of these issues.

MK RADIO 21 - Jeanette Westbrook presentation - 1

MK RADIO 22 - Jeanette Westbrook presentation/ interview - 2

Jeanette Westbrook, MSW talks about her experiences in how to prosecute a perpetrator of ritual abuse and mind control. She had laid legal charges against her father alleging that he sexually abused and ritually tortured her as a child and throughout her teen years. Her father was a high ranking Freemason, a deacon in the Mormon church, and was the Executive Director of the organization responsible for inspecting all nuclear power stations in the U.S. After refusing a plea bargain of \$50,000 and an admission to "facilitating child sexual abuse" by her father, Jeanette began proceedings to extradite him to stand charges in court. Just before he was due to appear in court, he suddenly died.

MK RADIO 23 - Dr. Stephen Kent interview - 1

MK RADIO 24 - Dr. Stephen Kent interview - 2, Judy Steed interview, Peter Tooley interview

Dr. Stephen Kent is a professor of sociology at U. of Alberta, Edmonton who specializes in controversial religious cults and the allegations of ritual abuse against these groups. We discuss the alleged involvement of elements of Freemasonry in ritual abuse, issues regarding police investigations of ritual abuse crimes, and the backlash against people coming forward with abuse accounts by the False Memory Syndrome Foundation. In an interview with CBC, Freemason Peter Tooley rebuts allegations of child sexual abuse and ritual abuse by Masons in the Thunder Bay area. Toronto Star journalist Judy

Steed, in an interview with CBC Thunder Bay, talks about cases involving ritual and sexual abuse such as the Prescott, Ontario case.

MK RADIO 25 - interview with Lynne Moss-Sharman - 1

MK RADIO 26 - interview with Lynne Moss-Sharman - 2

Lynne Moss-Sharman is the Canadian coordinator of ACHES-MC (Advocacy Committee for Human Experimentation Survivors of Mind Control) and the Stone Angels, a ritual abuse support group in Thunder Bay. Lynne alleges she was experimented on by CIA MKULTRA doctors Jose Delgado and Ewen Cameron among others in horrific experiments. She also alleges that she was sexually and ritually abused by her father and other Freemasons. We discuss her experiences in organizing conferences for ritual abuse survivors and professionals dealing with these issues and with ACHES-MC's current campaign to call for U.S. government hearings on mind control experimentation.

MK RADIO 27 - interview with Kathleen Sullivan - 1

MK RADIO 28 - interview with Kathleen Sullivan - 2

MK RADIO 29 - interview with Kathleen Sullivan - 3

In this extraordinary interview, Kathleen tells her story of being used for assassination, bodyguarding, smuggling and other illegal activities for the Whitehouse, CIA, NASA, and the Mafia. She alleges that her father, a CIA agent, had tortured and programmed her starting in her childhood. She describes the types of operations and project codenames she was used for and names some of the people involved in her abuse as a mind controlled operative, particularly George Bush and Henry Kissinger. We discuss the mind control techniques that were used on her, the kinds of operations that she was controlled to do, the involvement of the entertainment industry in mind control, and the mind control connections to the implementation of a fascist "New World Order".

Tape MK 30 - Blanche Chavoustie - 1

Tape MK 31 - Blanche Chavoustie - 2

Blanche Chavoustie is the U.S. coordinator of ACHES-MC (Advocacy Committee for Human Experimentation Survivors of Mind Control) and a survivor of experiments in hypnosis, brain implants, and synthetic telepathy. Her accounts speak of a variety of experiments at sites that have been documented to be involved in the CIA's MKULTRA mind control project such as Penn State, Syracuse University, and Cornell University.

Tape MK 32 - Alan Schefflin - Risk Management in Dissociative Disorder and Trauma Therapy

This address was given at a joint conference of Int'l Society for the Study of Dissociation (ISSD) and Int'l Society for Traumatic Stress Studies (ISTSS) in Montreal, Nov. 9/97. Alan talks to therapists and the legal issues around trauma treatment that they must be aware of in this climate of intimidation and

lawsuits by the FMSF. This talks comes just after the U.S. government has moved to criminalize psychotherapy, a main healing resource for victims of mind control. Alan Schefflin is one of the world's foremost authorities on mind control.

Tape MK 33 - Walter Bowart - The Secret History of Mind Control - 1

Tape MK 34 - Walter Bowart - The Secret History of Mind Control - 2

Walter Bowart delivers "The Secret History of Mind Control" at the Ritual Trauma, Child Abuse and Mind Control conference in Atlanta, Oct.2/97. In this slide presentation, Walter talks of the history of mind control and the accompanying technologies from crude lobotomies to high-tech brain implants and nanotechnology. Walter Bowart is a writer and researcher of mind control, author of "Operation Mind Control" and founder and director of the Freedom of Thought Foundation.

Tape MK 35 - interview with Fritz Springmeier - 1

Tape MK 36 - interview with Fritz Springmeier - 2

Tape MK 37 - interview with Fritz Springmeier - 3

Tape MK 38 - interview with Fritz Springmeier - 4

Tape MK 39 - interview with Fritz Springmeier - 5

In this interview, Fritz Springmeier talks about how the Illuminati comprised of super international finance capitalists families such as Rockefeller and Rothchild have developed total mind control and have been using it to gain and consolidate power. The mind control techniques have been developed into the sciences of trauma, electroshock, drugs, hypnosis, deception and structured programming. Fritz speaks of how Nazi doctor Josef Mengele was used by the Illuminati to develop trauma-based mind control by experimenting on Jewish victims in the Holocaust and after the war being smuggled to the U.S. to put mind control into practice as one of the CIA's main mind control programmers. Fritz also speaks of the involvement of Hollywood and the music industry in mind control slavery, the corporate world's use of mind control, and of the government, military, and intelligence use of mind controlled slaves. Fritz has helped Cisco Wheeler, an Illuminati family mind control victim, gain freedom from her programmers. Fritz Springmeier is a researcher of the Illuminati families, minister to mind control victims and co-author of such books as "The Top 13 Illuminati Bloodlines" and "The Illuminati Method Used to Create an Undetectable Total Mind Controlled Slave".

Tape MK 40 - interview with Cisco Wheeler - 1

Tape MK 41 - interview with Cisco Wheeler - 2

Cisco Wheeler is a former Illuminati family mind control slave and co-author of "The Illuminati Method Used to Create an Undetectable Total Mind Controlled Slave" and "Deeper Insights" books about trauma-based mind control. She had escaped from her family's control with three other women after her main programmer, her father, died. Cisco claims that she was programmed by Nazi Doctor Josef Mengele and her father, who was trained by Mengele in mind control techniques. Cisco's family's military and political

connections run deep and is a descendant of U.S. President Ulysses S. Grant. Her father, an Illuminati and Masonic grandmaster and mind control programmer conditioned Cisco from infancy with sexual abuse and severe trauma. She was trained to sexually service the political elite including mayors, governors and presidents starting with President Eisenhower when she was a child. Cisco talks about her struggles in healing and the continued harassment she faces.

Tape MK 42 - interview with Brice Taylor - 1

Tape MK 43 - interview with Brice Taylor - 2

Brice Taylor is a former "Presidential model" mind controlled slave for the Whitehouse having been abused by a number of presidents, high ranking officials and famous entertainers. She has survived horrific abuse by her father and family since infancy including ritual trauma and sexual abuse and has been programmed at military bases, medical centres, and NASA facilities. She has been used to sexually service politicians, foreign officials, and other power brokers while under the influence of mind control. She was also used to photographically remember secret project documents and New World Order plans and store them in her "mind files" for retrieval for those that had access to her.

Tape MK 44 - interview with Gail Fisher-Taylor - 1

Tape MK 45 - interview with Gail Fisher-Taylor - 2

Gail Fisher-Taylor is a psychotherapist working with survivors of trauma. We discuss issues about the nature of memory, "false memories", and the differences in how the mind processes traumatic experience from non-traumatic experience and how that relates to implicit and explicit memory. We also discuss the criminal nature of the context in which cult ritual abuse occurs and how this is often forgotten in the sensationalisation of ritual abuse, particularly in the media. Cults and organized crime are involved in child pornography (including child snuff films), child prostitution, drug trafficking, and money laundering. We also discuss the effects groups like the False Memory Syndrome Foundation have had on access and quality of resources available to abuse survivors.

Tape MK 46 - Panel Discussion on Ritual Abuse with Caryn Stardancer and Gail Fisher-Taylor

In this discussion we open the phone lines to questions and comments by listeners about ritual abuse. Caryn Stardancer is a ritual abuse survivor and advocate and publisher of SurvivorShip, an excellent resource for abuse survivors. Gail Fisher-Taylor is a Toronto-based therapist for trauma survivors. We discuss the use of ritual abuse in cults, the prevalence of criminal activity such as pornography, prostitution, and drug trafficking in abusive cults and the role of belief systems. We also discuss the history of ritual abuse, the social status of cult leaders, abuse survivor resources, and the backlash against survivors and therapists.

Tape MK 47 - Panel Discussion on Mind Control with Don Gilmour

Don Gilmour is the author of "I Swear By Apollo" a book documenting the CIA-funded mind control experiments done at McGill University in Montreal by Dr. Ewen Cameron. We discuss the CBC's television production "The Sleep Room" about Dr. Ewen Cameron and his experiments, the use of human subjects for government experimentation, and ongoing abuses of psychiatry in general with overuse of electroshock and drugs. We take questions from the listening audience about mind control, psychiatry, electroshock, the mainstream media's lack of coverage on mind control and media's ridiculing of survivor issues.

## COINTELPRO Original Documents

The original FBI/CIA COINTELPRO crimes of the 1950s-60s are powerful evidence which show that when "mind control" victims complain they are being harassed by conventional means (break-ins, thefts, sabotage and massive character assassination) there is unimpeachable evidence that the U.S. government has performed such crimes in the RECENT past. With the exposure of the COINTELPRO crimes in Congressional hearings in the 1970s, no longer can skeptics argue that "government wouldn't do that".

<http://www.cointel.org> WAS another site but as of January 2010 that site is not found.

<http://www.icdc.com/~paulwolf/cointelpro/cointel.htm> is, as of February 2010, Paul Wolf's collection of COINTELPRO documents.

## **Psychiatrist Is Working On It**

Scan courtesy of Cheryl Welsh, <http://www.calweb.com/~welsh>

OBVIOUS QUESTION: If there's no such thing as mind control, why is a widely published psychiatrist working on it?

A 1995 letter from Dr. Colin Ross backing us up:

Sept. 5, 1995  
John Wolf  
1000 Poydras Street  
New Orleans, LA 70118

[Note: a copy of this letter will be mailed tomorrow]

Dear Ms. Wolf,

Re: CIA and Military Mind Control.

Further to our recent telephone conversation, I am writing to support your presentation to the Presidential radiation committee and your request that an inquiry be made into the overlapping subject of CIA and military mind control.

I am a psychiatrist with over 100 publications in professional journals. My area of specialty is dissociative identity disorder (DID) (formerly called multiple personality disorder), a topic on which I have published two books, one with John Wiley and Sons, and one with the University of Toronto Press. I have another book on the subject in press with the University of Toronto Press. Another book recently published by Wiley, of which I wrote about one third, deals partly with DID. I was the 1994 President of the International Society for the study of Dissociation, which has about 3000 members.

I became interested in CIA and military mind control when patients with DID began describing involvement in mind control research occurring on military bases and in hospital settings. Since there is no way to tell clinically whether these memories are real, I began to do background reading and research on mind control in 1992. I enclose a reading list of the materials I have read.

In an article in the April 1971 issue of *Science Digest* G.H. Estabrooks describes using hypnosis to create artificial DID in military personnel during World War II. The purpose of the DID was for infiltration and courier operations - the amnesia involved created a layer of security from defection and interrogation inside the subject's mind. Estabrooks describes inserting specific code phrases used to call out the alter personality holding the classified information, of which the main part of the person was unaware. Estabrooks also wrote a textbook on hypnosis that went through a series of editions.

Declassified materials describe a large mind control research program conducted by the CIA and the military from 1951 - 1973 under cryptonyms including MKNAOMI, BLUEBIRD, ARTICHOKE, MKULTRA, and MKSEARCH. I have in my possession about 80 of the 149 MKULTRA Subproject files, which I obtained through the Freedom

An excerpt from Dr. Ross' letter naming some gruesome practices which happened under the guise of the CIA's MKULTRA projects:

transmitter, a specific electrode fired, and the boy would state that he was unsure whether he was male or female, and that he wanted to marry Dr. Delgado. This behavior occurred only when a specific brain electrode was stimulated.

I mention this research to underline how sophisticated and destructive much of the documented mind control has been. MKULTRA alone included four Subprojects on children - one was conducted at the International Children's Summer Camp in Maine by an unwitting investigator. The MKULTRA Subproject file in my possession for this project states that the CIA's interest in this research was in establishing contact with foreign nationals of potential future operational use by the CIA - the children who served as subjects in the project were as young as 11 years old.

DID patients in treatment throughout the United States and Canada are describing involvement in mind control research that is much more sophisticated than MKULTRA and MKSEARCH. It includes deliberate sexual abuse of children to make them more dissociative. Although the reality of this research is not documented, the possibility that it is real is so serious that a formal investigation is warranted. Although some or many of

## Legislators slam door shut on Columbine probe

*March 8, 2002*

"How do we [heal] with the truth still hidden, rewritten, destroyed and covered up?"  
-- Dawn Anna, whose daughter, Lauren Townsend, was killed in the Columbine shooting.

"Our window to find answers is dissipating. We've asked the questions. We have no answers."  
-- Al Velasquez, whose son, Kyle, was killed in the rampage.

"A House committee voted 7-2 Thursday against a proposal to launch a commission with subpoena power to look into a possible cover-up by law enforcement authorities during their investigation of the deadliest school shootings in U.S. history," said The Denver Post. Jefferson County officials claim they have already released all the information they have and there is nothing more to say on the case, despite the fact that much of the information released contradicts their own claims. Read the full article titled, "[Legislators opt against probe of Columbine](#)" Also see a detailed [article](#) by The Rocky Mountain News on the matter.

Not surprisingly, it was revealed on March 9 that the Jefferson County Sheriff's Office actively lobbied lawmakers not to proceed with a Columbine inquiry. Please see The Denver Rocky Mountain News article titled, "[Jeffco pressured lawmakers](#)"

Stirring, emotional transcripts of testimony from family members -- Betty Shoels, Brian Rohrbough, Ann Kechter, et al. -- who testified during the meeting is available on our [Message Forum](#) or at this [link](#). Please read this testimony and find out why they believe the truth remains covered up.

---

See the explosive half-dozen page article from The Westword, written by Alan Prendergast, dated March 7, 2002, "[There Ought to Be a Law: Ten questions for the legislature's Columbine committee](#)"

---

Leaked [crime scene photos](#) are causing a stir, as the Jefferson County Sheriff's Office scrambles to plug the holes of a Columbine case riddled with controversy that, to their chagrin, won't go away. See [The Rocky Mountain News](#) for extensive coverage of the leaked crime scene photos.

---

See "[Columbine motion accuses cop of killing](#)" from The Denver Post on December 27, 2001 for up-to-date information on the Rohrbough claim that a law enforcement officer killed an innocent student. (CRTF does not hold an opinion either way regarding this claim).

---

## New book released

### Too High A Price For Harmony : A Perspective on School Shootings By Diane M. DeMiro

"In 1992, after re-certification as a Professional Teacher in Colorado and upon my re-entry into the world of education, I knew that there was something desperately wrong. The things that one avoids in order to maintain an independent status as a free individual were present in the dynamics of the classroom. In my usual style of protest, I wrote a prophetic poem from the perspective of a student that was a portent of the violence that was to occur several years later. After the Columbine Massacre, the murder and suicide of High School students and a teacher on April 20, 1999, I knew I had to delve deeply into the reason why I wrote that 'poem.' This manuscript is a result of three summers and eight to ten hours a day of analysis and research into the causes of rage and the will of school violence."

(CRTF is a neutral party in providing information on this book).

**\*\* She has stated that her interest is in objective reports only - not victim testimonials.\*\***

---

Eleanor White's comments: This hard hitting article by Judy Wall, who is NOT a mind control victim and in fact avoids victim testimonials in favour of only factual objective material, contains some POWERFUL items not widely known among involuntary mind control experimentees. These items in her article below have had the font size increased a notch so that the visitor can scroll down and see just those items if time or interest is short.

**WAY TO GO, Judy!**

---

USAF COMMANDO SOLO: AERIAL MIND CONTROL BROADCASTS

The United States Air Force uses aerial mind-control broadcasts against civilian population as well as enemy troops. Some of these actions against civilians are done with the intent of influencing public opinion and the outcome of elections.

In a previous article, we examined mind-control technology, especially that utilizing Silent Sound [TM], in which radio-frequency broadcasts carry subliminal patterns that entrain the listener's brainwaves into a pre-selected emotional state. According to ITV wire service reports, this technology was used during Operation Desert Storm in 1991, as part of the US Psychological Operations (PsyOps) directed against Iraqi troops. [1,2]

To the Desert Storm offensive we can now add several other incidents. Alex Horvat, editor of The Probe, calls to our attention the 1998

video, *Exotic Weapons of Mass Control*, produced by Bob Fletcher.

"The excerpt played on Fletcher's video is from TLC (The Learning Channel) and clearly states that Commando Solo was used in Haiti for what was called Operation *Uphold Democracy*. As the general populace was violently opposed to Aristide and most in favor of his ouster, it took nearly a year of this clandestine counter-programming to get them to change their minds. Instead of butchering a population physically, we can no manipulate them mentally, virtually enslaving their thoughts with a criss-cross pattern of flights by an EC-130 (which is just a C-130 heavily laden with electronic hardware.) [3]

We were not at war with the citizens of Haiti, yet the U.S. Government directed military weapons against this friendly, or at least neutral, civilian population. The U.S. Government sanction the "rigging" of the Haitian election by mental control of the people, programming them to cast their votes for the Americans' favored candidate. And they had the nerve to call it "Operation *Uphold Democracy*". Some sense of humor! Stalin would have loved it. Hitler would have loved it. Why is the U.S. Government doing this? Who is behind this flagrant violation of civil liberties? Is it the U.S. Central Intelligence Agency (CIA) which has a long history of interfering in foreign government politics? Or has this become standard military procedure?

The rationale is always the same: "to make the world safe for democracy". Yet what is democracy if not freedom? Freedom to think your own thoughts; freedom to express your own opinions; freedom to vote for the candidate of your own choice.

Fletcher's video also mentions that the same technology was used against the Bosnia population for a week to influence their election. [4] This was probably done during Operation *Joint Guard* in 1995. [5]

The questions arise: If they have used mind-control broadcasts against foreign civilian populations to influence elections, will they use them against American citizens -- or have they already? What other countries may be the recipients of this innovative technology?

Just what is this EC-130E Commando Solo? The United States Air Force has helpfully published a fact sheet that describes the Lockheed built aircraft. [6] This 1995 bulletin states that the "unit flyaway cost" is more than US \$100 million each, and that there are eight in the inventory. Its primary function is "Psychological operations broadcasts". The crew consists of four officers (pilot, copilot, navigator, control chief/EWO) and seven enlisted members (flight engineer, loadmaster, five mission crew.)

According to the fact sheet:

"Air Force Mission: Commando Solo conducts psychological operations and civil affairs broadcast missions in the standard AM, FM, HF, TV and military communications bands. Missions are flown at maximum altitudes possible to ensure optimum propagation patterns. The EC-130 flies during either day or night scenarios with equal success, and is air refueable. A typical mission consists of a single ship orbit which is offset from the desired target audience. The targets may be either military or civilian personnel.

"Secondary missions include command and control communications counter-measures (C3CM) and limited intelligence gathering.

"Air Force Features: Highly specialized modifications have been made to the latest version of the EC-130. Included in these modifications are enhanced navigation systems, self-protection equipment, and the capability of broadcasting color television on a multitude of world-wide standards throughout the TV VHF/UHF ranges.

"Air Force Background: Air National Guard EC-130 aircraft flown by the

193rd Special Operations Group were deployed to both Saudi Arabia and Turkey in support of Desert Storm. Their missions included broadcasts of 'Voice of the Gulf' and other programs intended to convince Iraqi soldiers to surrender.

"The EC-130 was originally modified using the mission electronic equipment from the EC-121, known at the time as the Coronet Solo. Soon after the 193rd SOG received its EC-130s, the unit participated in the rescue of US citizens in Operation Urgent Fury, acting as an airborne radio station informing those people on Granada of the US military action.

"Volant Solo, as the mission is now known, was instrumental in the success of coordinated psychological operations in Operation Just Cause, again broadcasting continuously throughout the initial phases of the operation."

Operation *Just Cause*? this is another propaganda name, applied to the U.S. invasion of Panama to take out that country's leader, General Noreiga, the CIA's erstwhile partner in drug smuggling. Apparently the General had made someone mad -- how else to account for the massive invasion of this tiny tourist country? To wit: "A superpower whipped the poop out of 10 percent of the police force of a Third World nation. You are supposed to be able to do that. It was done well, and I credit those who did it. But it is important that we draw the right lessons from it" according to an anonymous US Marine. [7]

Our Commander-in-Chief had another point of view: "...the roll call of glory, the roster of great American campaigns -- Yorktown, Gettysburg, Normandy, and now Panama."

--President George Bush, March 1990 [8]

#### MILITARY PSYOPS AGAINST CIVILIANS

In a phone call to the USAF Special Operations Command Public Affairs Office, I questioned the legitimacy of using these subliminal broadcasts against civilian populations. [9]

[Judy Wall's article on [Silent Sound](#) for details.]

I was told that it was all perfectly legal, having been approved by the U.S. Congress (!). It may be okay by Congress, but I sincerely doubt that it would be approved by the recipient populations.

That conversation also elicited more information concerning the Commando Solo units. For instance, **the Air National Guard of the individual states in the U.S. can also operate Commando Solo aircraft, should the Governor of a state request assistance. That means the PsyOps mind-control technology can be directed against U.S. citizens.**

The Commando Solo aircraft have participated in the following missions--possibly more, as the early missions of Volant Solo 1 were not known to this spokesperson:

- Operation *Urgent Fury* (Grenada, Oct-Nov 1983, Jan-Jun 1985)
- Operation *Just Cause* (Panama, late December 1989)
- Operation *Desert Shield* (Kuwait, Iraq, from August 1990)
- Operation *Desert Storm* (Saudi Arabia, Turkey, Iraq, 1991)
- Operation *Uphold Democracy* (Haiti, 1994-1995)
- Operation *Joint Guard* (Part of a UN operation in Bosnia-Herzegovina, 1995)
- Operation *Desert Thunder* (part of a UN operation in Iraq)
- Operation *Desert Fox* (Iraq, 2 to 3 days in December 1998)

Other countries are known to have a similar aircraft, but the PR officer declined to identify them, suggesting that I check out *Jane's Defence Weekly* for such information. Not having access to that particular publication, I searched through my copy of *Jane's Radar and Electronic*

*Warfare Systems 1993094*. [10] The Commando Solo unit was not listed, but a browse through the book was informative as to the numerous types of electronic offence and defence systems available. These include stationary and mobile land units (many housed in large trucks), shipboard and airborne models as well as space-based technology. If the military is spending US \$100 million per airborne unit (times eight, we're talking US \$800 million here), I think it is safe to assume that they have tried out mind control equipment with less expensive, roving land units (trucks), but use the airplanes to cover wider areas and hard-to-reach locations of the world.

And I might add, we can assume that they have tried out the efficacy of this mind-control technology. Even the US military would not waste \$800 million on something unless it has been proven to work, and work effectively, even under the adverse situation of military combat. This is an important point.

The initial research into mind control in the USA was conducted under the auspices of the CIA. The flagrant abuse of human rights in experimenting on unsuspecting persons was based on the supposition that the veracity of experiments would be compromised if a subject knew that he was participating in an experiment. In the case of mind-control technology, this supposition might very well be true. But that does not justify its use -- or so said the Nuremberg Code, the tenets of which were used as a legal basis to prosecute Nazi scientists for war crimes. However the US seems to have excused its own military and scientific community from adhering to that Code. [11]

#### MANIPULATING MIND AND BODY BY SATELLITE

The next logical step in mind control would be to incorporate this technology into satellite communications. Since other countries are known to have similar capabilities, there could occur a situation in which electronic mind control warfare is waged against a civilian population, receiving conflicting mental manipulation from both sides. What would be the mental state of individuals so targeted? Would it cause a rise in mental aberrations and schizophrenia? And what are the limits of mind manipulations? Can people be forced to commit suicide? Can physical ailments or psychosomatic illnesses be induced?

A March 1990 report from Bosnia-Herzegovina in the former Yugoslavia suggests the latter may have already happened. The report concerns 2,990 ethnic Albanians who were admitted to hospital with complaints of lung and skin problems for which doctors could find no physical cause. [12]

It is not a far step from manipulating a person's emotional state to influencing bodily functions. Indeed, much of the literature on documenting microwave effects on biological systems deals with precisely this phenomenon. In fact, studies of the physical effects of microwave exposure (including radio frequencies) generally preceded studies of mental effects.

A meeting sponsored by *Defense & Foreign Affairs* and the International Strategic Studies Association was held in Washington DC in 1983. High-level officials from many countries met for this conference. They discussed psychological strategies related to government and policymaking. A summary of the agenda reads: "The group will be discussing the essence of future policymaking, for it must be increasingly clear to all that the most effective tool of government and strategy is the mind... If it's any consolation to the weapons-oriented among defense policymakers, the new technologies of communications -- satellites, television, radio, and **mind-control beams** -- are 'systems' which are more tangible than the more philosophically based psychological strategies and operations.

*[Eleanor White's comment: Anyone know where to get a copy?]*

"But we should make no mistake; it will be the 'psychologically based' systems which determine the world's fate in coming years: the condition of the minds of populations and leaders. And we should not ignore the fact

that the USSR [*this was in 1983*] is working on electronic systems to 'beam' messages directly into the brain. What good, then, are conventional systems if these types of weapons are not countered? And, on a more basic level, what good is a weapon system if public opinion or political constraints prohibit its deployment?" [13]

It is obvious that they found the answer to that last question. If the public does not know about a weapon system, it cannot prohibit its deployment. This is the situation that applies to mind-control technology.

#### MIND CONTROL AGAINST 'POTENTIAL' ENEMIES

The US military is aware that certain actions or procedures may not be acceptable to the American public. Metz and Kievit express these concerns in their paper, "The Revolution in Military Affairs and Short Conflict War." [14] "The use of new technology may also run counter to basic American values. Information age -- and in particular, information warfare -- technologies cause concerns about privacy... American values also make the use of directed-energy weapons ... morally difficult, perhaps unacceptable. The advantage of directed-energy weapons over conventional ones is [Judy Wall's article on [Silent Sound](#) for details.]

The HAARP facility could be used to broadcast global mind-control messages, or such messages could simply be inserted into existing systems.

Dr. Igor Smirnov, of the Institute of Psycho-correction in Moscow, says in regard to this technology: "It is easily conceivable that some Russian 'Satan', or let's say Iranian [or any other 'Satan'], as long as he owns the appropriate means and finances, can inject himself [intrude] into every conceivable computer network, into every conceivable radio or television broadcast, with relative technological ease, even without disconnecting cables. You can intercept the [radio] waves in the aether and then [subliminally] modulate every conceivable suggestion into it. If this transpires over a long enough time period, it accumulates in the heads of people. And eventually they can be artificially manipulated with other additional measurements, to do that which this perpetrator wants [them to do]. This is why [such technology] is rightfully feared." [20]

#### A WORLDWIDE MIND CONTROL MISSION

To return to the USAF Fact Sheet, it concludes: "In 1990 the EC-130 joined the newly formed Air Force Special Operations Command and has since been designated Commando Solo, with no change in mission. This one of a kind aircraft is consistently **improving its capabilities**.

The next few years should see continued enhancements to the EC-130 and its worldwide mission."

Awakening News >>> Concentration Camp Locations

## CONCENTRATION CAMPS ON U.S. SOIL

Police State >>> Internment Camps

Source: <http://c0balt-com/egg/insane.shtml>

### ALABAMA

**Opelika** - Military compound either in or very near town.

**Aliceville** - WWII German POW camp - capacity 15,000

**Ft. McClellan** (Anniston) - Opposite side of town from Army Depot; Maxwell AFB (Montgomery) - Civilian prison camp established under Operation Garden Plot, currently operating with support staff and small inmate population.

**Talladega** - Federal prison "satellite" camp.

### ALASKA

**Wilderness** - East of Anchorage. No roads, Air & Railroad access only. Estimated capacity of 500,000

**Elmendorf AFB** - Northeast area of Anchorage - far end of base. Garden Plot facility.

**Eielson AFB** - Southeast of Fairbanks. Operation Garden Plot facility.

**Ft. Wainwright** - East of Fairbanks

### ARIZONA

**Ft. Huachuca** - 20 miles from Mexican border, 30 miles from Nogales.

Rex '84 facility.

**Pinal County** - on the Gila River - WWII Japanese detention camp. May be renovated.

**Yuma County** - Colorado River - Site of former Japanese detention camp (near proving grounds). This site was completely removed in 1990 according to some reports.

**Phoenix** - Federal Prison Satellite Camp. Main federal facility expanded.

**Florence** - WWII prison camp NOW RENOVATED, OPERATIONAL with staff & 400 prisoners, operational capacity of 3,500.

**Wickenburg** - Airport is ready for conversion; total capacity unknown.

**Davis-Monthan AFB** (Tucson) - Fully staffed and presently holding prisoners!!

**Sedona** - site of possible UN base.

### ARKANSAS

**Ft. Chaffee** (near Fort Smith, Arkansas) - Has new runway for aircraft, new camp facility with cap of 40,000 prisoners

**Pine Bluff Arsenal** - This location also is the repository for B-Z nerve agent, which causes sleepiness, dizziness, stupor; admitted use is for civilian control.

**Jerome** - Chicot/Drew Counties - site of WWII Japanese camps

**Rohwer** - Descha County - site of WWII Japanese camps

**Blythville AFB** - Closed airbase now being used as camp. New wooden barracks have been constructed at this location. Classic decorations - guard towers, barbed wire, high fences.

**Berryville** - FEMA facility located east of Eureka Springs off Hwy. 62.

**Omaha** - Northeast of Berryville near Missouri state line, on Hwy 65 south of old wood processing plant. Possible crematory facility.

#### CALIFORNIA

**Vandenberg AFB** - Rex 84 facility, located near Lompoc & Santa Maria. Internment facility is located near the oceanside, close to Space Launch Complex #6, also called "Slick Six". The launch site has had "a flawless failure record" and is rarely used.

**Norton AFB** - (closed base) now staffed with UN according to some sources.

**Tule Lake** - area of "wildlife refuge", accessible by unpaved road, just inside Modoc County.

**Fort Ord** - Closed in 1994, this facility is now an urban warfare training center for US and foreign troops, and may have some "P.O.W. - C.I." enclosures.

**Twentynine Palms Marine Base** - Birthplace of the infamous "Would you shoot American citizens?" Quiz. New camps being built on "back 40".

**Oakdale** - Rex 84 camp capable of holding at least 20,000 people. 90 mi. East of San Francisco.

**Terminal Island** - (Long Beach) located next to naval shipyards operated by ChiCom shipping interests. Federal prison facility located here. Possible deportation point.

**Ft. Irwin** - FEMA facility near Barstow. Base is designated inactive but has staffed camp.

**McClellan AFB** - facility capable for 30,000 - 35,000

**Sacramento** - Army Depot - No specific information at this time.

**Mather AFB** - Road to facility is blocked off by cement barriers and a stop sign. Sign states area is restricted; as of 1997 there were barbed wire fences pointing inward, a row of stadium lights pointed toward an empty field, etc. Black boxes on poles may have been cameras.

#### COLORADO

**Trinidad** - WWII German/Italian camp being renovated.

**Granada** - Prowers County - WWII Japanese internment camp

**Ft. Carson** - Along route 115 near Canon City

#### CONNECTICUT, DELAWARE

No data available.

#### FLORIDA

**Avon Park** - Air Force gunnery range, Avon Park has an on-base "correctional facility" which was a former WWII detention camp.

**Camp Krome** - DoJ detention/interrogation center, Rex 84 facility

**Eglin AFB** - This base is over 30 miles long, from Pensacola to Hwy 331 in De Funiak Springs. High capacity facility, presently manned and populated with some prisoners.

**Pensacola** - Federal Prison Camp

**Everglades** - It is believed that a facility may be carved out of the wilds here.

#### GEORGIA

**Ft. Benning** - Located east of Columbus near Alabama state line. Rex 84 site - Prisoners brought in via Lawson Army airfield.

**Ft. Mc Pherson** - US Force Command - Multiple reports that this will be the national headquarters and coordinating center for foreign/UN troop movement and detainee collection.

**Ft. Gordon** - West of Augusta - No information at this time.

**Unadilla** - Dooly County - Manned, staffed FEMA prison on route 230, no prisoners.

**Oglethorpe** - Macon County; facility is located five miles from Montezuma, three miles from Oglethorpe. This FEMA prison has no staff and no prisoners.

**Morgan** - Calhoun County, FEMA facility is fully manned & staffed - no prisoners.

**Camilla** - Mitchell County, south of Albany. This FEMA facility is located on Mt. Zion Rd approximately 5.7 miles south of Camilla. Unmanned - no prisoners, no staff.

**Hawkinsville** - Wilcox County; Five miles east of town, fully manned and staffed but no prisoners. Located on fire road 100/Upper River Road

**Abbeville** - South of Hawkinsville on US route 129; south of town off route 280 near **Ocmulgee River**. FEMA facility is staffed but without prisoners.

**McRae** - Telfair County - 1.5 miles west of McRae on Hwy 134 (8th St). Facility is on **Irwinton Avenue off 8th St.**, manned & staffed - no prisoners.

**Fort Gillem** - South side of Atlanta - FEMA designated detention facility.

**Fort Stewart - Savannah area** - FEMA designated detention facility

## HAWAII

**Halawa Heights area** - Crematory facility located in hills above city. Area is marked as a state department of health laboratory.

**Barbers Point NAS** - There are several military areas that could be equipped for detention / deportation.

**Honolulu** - Detention transfer facility at the Honolulu airport similar in construction to the one in Oklahoma (pentagon-shaped building where airplanes can taxi up to).

## IDAHO

**Minidoka/Jerome Counties** - WWII Japanese-American internment facility possibly under renovation.

**Clearwater National Forest** - Near Lolo Pass - Just miles from the Montana state line near **Moose Creek**, this unmanned facility is reported to have a nearby airfield.

**Wilderness areas** - Possible location. No data.

## ILLINOIS

**Marseilles** - Located on the Illinois River off Interstate 80 on Hwy 6. It is a relatively small facility with a cap of 1400 prisoners. Though it is small it is designed like prison facilities with barred windows, but the real smoking gun is the presence of military vehicles. Being located on the Illinois River it is possible that prisoners will be brought in by water as well as by road and air. This facility is approximately 75 miles west of Chicago. National Guard training area nearby.

**Scott AFB** - Barbed wire prisoner enclosure reported to exist just off-base. More info needed, as another facility on-base is believed to exist.

**Pekin** - This Federal satellite prison camp is also on the Illinois River, just south of Peoria. It supplements the federal penitentiary in Marion, which is equipped to handle additional population outside on the grounds.

**Chanute AFB** - Rantoul, near Champaign/Urbana - This closed base had WWII - era barracks that were condemned and torn down, but the medical facility was upgraded and additional fencing put up in the area. More info needed.

**Marion** - Federal Penitentiary and satellite prison camp inside Crab

**Orchard Nat'l Wildlife Refuge**. Manned, staffed, populated fully.

**Greenfield** - Two federal correctional "satellite prison camps" serving Marion - populated as above.

**Shawnee National Forest** - Pope County - This area has seen heavy traffic of foreign military equipment and troops via Illinois Central Railroad, which runs through the area. Suspected location is unknown, but may be close to Vienna and Shawnee correctional centers, located 6 mi. west of Dixon Springs.

**Savanna Army Depot** - NW area of state on Mississippi River.

**Lincoln**, Sheridan, Menard, Pontiac, Galesburg - State prison facilities equipped for major expansion and close or adjacent to highways & railroad tracks.

**Kankakee** - Abandoned industrial area on west side of town (Rt.17 & Main) designated as FEMA detention site. Equipped with water tower, incinerator, a small train yard behind it and the rear of the facility is surrounded by barbed wire facing inwards.

## INDIANA

**Indianapolis / Marion County** - Amtrak railcar repair facility (closed); controversial site of a major alleged detention / processing center. Although some sources state that this site is a "red herring", photographic and video evidence suggests otherwise. This large facility contains large 3-4 inch gas mains to large furnaces (crematoria??), helicopter landing pads, railheads for prisoners, Red/Blue/Green zones for classifying/processing incoming personnel, one-way turnstiles, barracks, towers, high fences with razor wire, etc. Personnel with government clearance who are friendly to the patriot movement took a guided tour of the facility to confirm this site. This site is located next to a closed refrigeration plant facility.

**Ft. Benjamin Harrison** - Located in the northeast part of Indianapolis, this base has been decommissioned from "active" use but portions are still ideally converted to hold detainees. Helicopter landing areas still exist for prisoners to be brought in by air, land & rail.

**Crown Point** - Across street from county jail, former hospital. One wing presently being used for county work-release program, 80% of facility still unused. Possible FEMA detention center or holding facility.

**Camp Atterbury** - Facility is converted to hold prisoners and boasts two active compounds presently configured for minimum security detainees. Located just west of Interstate 65 near Edinburgh, south of Indianapolis.

**Terre Haute** - Federal Correctional Institution, Satellite prison camp and death facility. Equipped with crematoria reported to have a capacity of 3,000 people a day. FEMA designated facility located here.

**Fort Wayne** - This city located in Northeast Indiana has a FEMA designated detention facility, accessible by air, road and nearby rail.

**Kingsbury** - This "closed" military base is adjacent to a state fish & wildlife preserve. Part of the base is converted to an industrial park, but the southern portion of this property is still used. It is bordered on the south by railroad, and is staffed with some foreign-speaking UN troops. A local police officer who was hunting and camping close to the base in the game preserve was accosted, roughed up, and warned by the English-speaking unit commander to stay away from the area. It was suggested to the officer that the welfare of his family would depend on his "silence". Located just southeast of LaPorte.

**Jasper-Pulaski Wildlife Area** - Youth Corrections farm located here. Facility is "closed", but is still staffed and being "renovated". Total capacity unknown.

**Grissom AFB** - This closed airbase still handles a lot of traffic, and has a "state-owned" prison compound on the southern part of the facility.

## UNICOR.

**Jefferson Proving Grounds** - Southern Indiana - This facility was an active base with test firing occurring daily. Portions of the base have been opened to create an industrial park, but other areas are still highly restricted. A camp is believed to be located "downrange". Facility is equipped with an airfield and has a nearby rail line.

**Newport** - Army Depot - VX nerve gas storage facility. Secret meetings were held here in 1998 regarding the addition of the Kankakee River watershed to the Heritage Rivers Initiative.

**Hammond** - large enclosure identified in FEMA-designated city.

#### IOWA

No data available.

#### KANSAS

**Leavenworth** - US Marshal's Fed Holding Facility, US Penitentiary, Federal Prison Camp, **McConnell Air Force Base**. Federal death penalty facility.

**Concordia** - WWII German POW camp used to exist at this location but there is no facility there at this time.

**Ft. Riley** - Just north of Interstate 70, airport, near city of Manhattan.

**El Dorado** - Federal prison converted into forced-labor camp, UNICOR industries.

**Topeka** - 80 acres has been converted into a temporary holding camp.

#### KENTUCKY

**Ashland** - Federal prison camp in Eastern Kentucky near the Ohio River.

**Louisville** - FEMA detention facility, located near restricted area US naval ordnance plant. Military airfield located at facility, which is on south side of city.

**Lexington** - FEMA detention facility, National Guard base with adjacent airport facility.

**Manchester** - Federal prison camp located inside Dan Boone National Forest.

**Ft. Knox** - Detention center, possibly located near Salt River, in restricted area of base. Local patriots advise that black Special Forces & UN gray helicopters are occasionally seen in area.

**Land Between the Lakes** - This area was declared a UN biosphere and is an ideal geographic location for detention facilities. Area is an isthmus extending out from Tennessee, between Lake Barkley on the east and Kentucky Lake on the west. Just scant miles from Fort Campbell in Tennessee.

#### LOUISIANA

**Ft. Polk** - This is a main base for UN troops & personnel, and a training center for the disarmament of America.

**Livingston** - WWII German/Italian internment camp being renovated?; halfway between Baton Rouge and Hammond, several miles north of Interstate 12.

**Oakdale** - Located on US route 165 about 50 miles south of Alexandria; two federal detention centers just southeast of Fort Polk.

#### MAINE

**Houlton** - WWII German internment camp in Northern Maine, off US Route 1.

#### MARYLAND, and DC

**Ft. Meade** - Halfway between the District of Criminals and Baltimore. Data needed.

**Ft. Detrick** - Biological warfare center for the NWO, located in Frederick.

#### MASSACHUSETTS

**Camp Edwards** / Otis AFB - Cape Cod - This "inactive" base is being converted to hold many **New Englander patriots**. Capacity unknown.

**Ft. Devens** - Active detention facility. More data needed.

#### MICHIGAN

**Camp Grayling** - Michigan Nat'l Guard base has several confirmed detention camps, classic setup with high fences, razor wire, etc. Guard towers are very well-built, sturdy. Multiple compounds within larger enclosures. Facility deep within forest area.

**Sawyer AFB** - Upper Peninsula - south of Marquette - No data available.

**Bay City** - Classic enclosure with guard towers, high fence, and close to shipping port on **Saginaw Bay**, which connects to Lake Huron. Could be a deportation point to overseas via St. Lawrence Seaway.

**Southwest** - possibly Berrien County - FEMA detention center.

**Lansing** - FEMA detention facility.

## MINNESOTA

**Duluth** - Federal prison camp facility.

**Camp Ripley** - new prison facility.

## MISSISSIPPI

These sites are confirmed hoaxes.

**Hancock County** - NASA test site

**De Soto National Forest**. "These two supposed camps in Mississippi do not exist. Members of the Mississippi Militia have checked these out on more than one occasion beginning back when they first appeared on the Internet and throughout the Patriot Movement." - Commander D. Rayner, Mississippi Militia

## MISSOURI

**Richards-Gebaur AFB** - located in Grandview, near K.C.MO. A very large internment facility has been built on this base, and all base personnel are restricted from coming near it.

**Ft. Leonard Wood** - Situated in the middle of Mark Twain National Forest in Pulaski County. This site has been known for some UN training, also home to the US Army Urban Warfare Training school "Stem Village".

**Warsaw** - Unconfirmed report of a large concentration camp facility.

## MONTANA

**Malmstrom AFB** - UN aircraft groups stationed here, and possibly a detention facility.

## NEBRASKA

**Scottsbluff** - WWII German POW camp (renovated?).

**Northwest, Northeast corners of state** - FEMA detention facilities - more data needed.

**South Central part of state** - Many old WWII sites - some may be renovated.

## NEVADA

**Elko** - Ten miles south of town.

**Wells** - Camp is located in the O'Neil basin area, 40 miles north of Wells, past Thousand Springs, west off Hwy 93 for 25 miles. Pershing County - Camp is located at I-80 mile marker 112, south side of

the highway, about a mile back on the county road and then just off the road about 3/4mi.

**Winnemucca** - Battle Mountain area - at the base of the mountains.

**Nellis Air Force Range** - Northwest from Las Vegas on Route 95. Nellis AFB is just north of Las Vegas on Hwy 604.

**Stillwater** Naval Air Station - east of Reno . No additional data.

## NEW HAMPSHIRE / VERMONT

**Northern New Hampshire** - near Lake Francis. No additional data.

#### NEW JERSEY

**Ft. Dix / McGuire AFB** - Possible deportation point for detainees. Lots of pictures taken of detention compounds and posted on Internet, this camp is well-known. Facility is now complete and ready for occupancy.

#### NEW MEXICO

**Ft. Bliss** - This base actually straddles Texas state line. Just south of Alomogordo, Ft. Bliss has thousands of acres for people who refuse to go with the "New Order".

**Holloman AFB** (Alomogordo)- Home of the German Luftwaffe in Amerika; major UN base. New facility being built on this base, according to recent visitors. Many former USAF buildings have been torn down by the busy and rapidly growing German military force located here. Fort Stanton - currently being used as a youth detention facility approximately 35 miles north of Ruidoso, New Mexico. Not a great deal of information concerning the Lordsburg location. White Sands Missile Range - Currently being used as a storage facility for United Nations vehicles and equipment. Observers have seen this material brought in on the Whitesands rail spur in Oro Grande New Mexico about thirty miles from the Texas, New Mexico Border.

#### NEW YORK

**Ft. Drum** - two compounds: Rex 84 detention camp and FEMA detention facility.

**Albany** - FEMA detention facility.

**Otisville** - Federal correctional facility, near Middletown.

**Buffalo** - FEMA detention facility.

#### NORTH CAROLINA

**Camp Lejeune / New River Marine Airfield** - facility has renovated, occupied WWII detention compounds and "mock city" that closely resembles Anytown, USA.

**Fort Bragg** - Special Warfare Training Center. Renovated WWII detention facility.

Andrews - Federal experiment in putting a small town under siege. Began with the search/hunt for survivalist Eric Rudolph. No persons were allowed in or out of town without federal permission and travel through town was highly restricted. Most residents compelled to stay in their homes. Unregistered Baptist pastor from Indiana visiting Andrews affirmed these facts.

#### NORTH DAKOTA

**Minot AFB** - Home of UN air group. More data needed on facility.

#### OHIO

**Camp Perry** - Site renovated; once used as a POW camp to house German and Italian prisoners of WWII. Some tar paper covered huts built for housing these prisoners are still standing. Recently, the construction of multiple 200-man barracks have replaced most of the huts.

**Cincinnati, Cleveland, Columbus** - FEMA detention facilities. Data needed.

**Lima** - FEMA detention facility. Another facility located in/near old stone quarry near Interstate 75. Railroad access to property, fences etc.

#### OKLAHOMA

**Tinker AFB (OKC)** - All base personnel are prohibited from going near civilian detention area, which is under constant guard. Will Rogers World Airport - FEMA's main processing

center for west of the Mississippi. All personnel are kept out of the security zone. Federal prisoner transfer center located here (A pentagon-shaped building where airplanes can taxi up to). Photos have been taken and this site will try to post soon!

**El Reno** - Renovated federal internment facility with CURRENT population of 12,000 on Route 66.

**McAlester** - near Army Munitions Plant property - former WWII German / Italian POW camp designated for future use.

**Ft. Sill** (Lawton) - Former WWII detention camps. More data still needed.

## OREGON

**Sheridan** - Federal prison satellite camp northwest of Salem.

**Josephine County** - WWII Japanese internment camp ready for renovation.

**Sheridan** - FEMA detention center.

**Umatilla** - New prison spotted.

## PENNSYLVANIA

**Allenwood** - Federal prison camp located south of Williamsport on the Susquehanna River. It has a current inmate population of 300, and is identified by William Pabst as having a capacity in excess of 15,000 on 400 acres.

**Indiantown Gap Military Reservation** - located north of Harrisburg. Used for WWII POW camp and renovated by Jimmy Carter. Was used to hold Cubans during Mariel boat lift.

**Camp Hill** - State prison close to Army depot. Lots of room, located in Camp Hill, Pa.

**New Cumberland Army Depot** - on the Susquehanna River, located off Interstate 83 and Interstate 76.

**Schuylkill Haven** - Federal prison camp, north of Reading.

## SOUTH CAROLINA

**Greenville** - Unoccupied youth prison camp; total capacity unknown.

**Charleston** - Naval Reserve & Air Force base, restricted area on naval base.

## SOUTH DAKOTA

**Yankton** - Federal prison camp

**Black Hills Nat'l Forest** - north of Edgemont, southwest part of state. WWII internment camp being renovated.

## TENNESSEE

**Ft. Campbell** - Next to Land Between the Lakes; adjacent to airfield and US Alt. 41.

**Millington** - Federal prison camp next door to Memphis Naval Air Station.

**Crossville** - Site of WWII German / Italian prison camp is renovated; completed barracks and behind the camp in the woods is a training facility with high tight ropes and a rappelling deck.

**Nashville** - There are two buildings built on State property that are definitely built to hold prisoners. They are identical buildings - side by side on Old Briley Parkway. High barbed wire fence that curves inward.

## TEXAS

**Austin** - Robert Mueller Municipal airport has detention areas inside hangars.

**Bastrop** - Prison and military vehicle motor pool.

**Eden** - 1500 bed privately run federal center. Currently holds illegal aliens.

**Ft. Hood** (Killeen) - Newly built concentration camp, with towers, barbed wire etc., just like the one featured in the movie Amerika. Mock city for NWO shock- force training. Some footage of this area was used in "Waco: A New Revelation"

**Reese AFB** (Lubbock) - FEMA designated detention facility.

**Sheppard AFB** - in Wichita Falls just south of Ft. Sill, OK. FEMA designated detention facility.

**North Dallas** - near Carrollton - water treatment plant, close to interstate and railroad.

**Mexia** - East of Waco 33mi.; WWII German facility may be renovated.

**Amarillo** - FEMA designated detention facility

**Ft. Bliss** (El Paso) - Extensive renovation of buildings and from what patriots have been able to see, many of these buildings that are being renovated are being surrounded by razor wire.

**Beaumont / Port Arthur area** - hundreds of acres of federal camps already built on large-scale detention camp design, complete with the double rows of chain link fencing with razor type concertina wire on top of each row. Some (but not all) of these facilities are currently being used for low-risk state prisoners who require a minimum of supervision.

**Ft. Worth** - Federal prison under construction on the site of Carswell AFB.

## UTAH

**Millard County** - Central Utah - WWII Japanese camp. (Renovated?)

**Ft. Douglas** - This "inactive" military reservation has a renovated WWII concentration camp.

**Migratory Bird Refuge** - West of Brigham City - contains a WWII internment camp that was built before the game preserve was established.

**Cedar City** - east of city - no data available.

**Wendover** - WWII internment camp may be renovated.

**Skull Valley** - southwestern Camp William property - east of the old bombing range. Camp was accidentally discovered by a man and his son who were rabbit hunting; they were discovered and apprehended. SW of Tooele.

## VIRGINIA

**Ft. A.P. Hill** (Fredericksburg) - Rex 84 / FEMA facility. Estimated capacity 45,000.

**Petersburg** - Federal satellite prison camp, south of Richmond.

## WEST VIRGINIA

**Beckley - Alderson - Lewisburg** - Former WWII detention camps that are now converted into active federal prison complexes capable of holding several times their current populations. Alderson is presently a women's federal reformatory.

**Morgantown** - Federal prison camp located in northern WV; just north of Kingwood.

**Mill Creek** - FEMA detention facility.

**Kingwood** - Newly built detention camp at Camp Dawson Army Reservation. More data needed on Camp Dawson.

## WASHINGTON

**Seattle/Tacoma** - SeaTac Airport: fully operational federal transfer center

**Okanogan County** - Borders Canada and is a site for a massive concentration camp capable of holding hundreds of thousands of people for slave labor. This is probably one of the locations that will be used to hold hard core patriots who will be held captive for the rest of their lives.

Sand Point Naval Station - Seattle - FEMA detention center used actively during the 1999 WTO protests to classify prisoners.

**Ft. Lewis / McChord AFB** - near Tacoma - This is one of several sites that may be used to ship prisoners overseas for slave labor.

#### WISCONSIN

**Ft. McCoy** - Rex 84 facility with several complete interment compounds.

**Oxford** - Central part of state - Federal prison & satellite camp and FEMA detention facility.

#### WYOMING

**Heart Mountain** - Park County N. of Cody - WWII Japanese interment camp ready for renovation.

**Laramie** - FEMA detention facility

**Southwest** - near Lyman - FEMA detention facility

**East Yellowstone** - Manned internment facility - Investigating patriots

were apprehended by European soldiers speaking in an unknown language. Federal government assumed custody of the persons and arranged their release.

#### OTHER LOCATIONS IN THE UNITED STATES

There are many other locations not listed above that are worthy of consideration as a possible detention camp site, but due to space limitations and the time needed to verify, could not be included here. Virtually all military reservations, posts, bases, stations, & depots can be considered highly suspect (because it is "federal" land). Also fitting this category are "Regional Airports" and "International Airports" which also fall under federal jurisdiction and have limited-access areas. Mental hospitals, closed hospitals & nursing homes, closed military bases, wildlife refuges, state prisons, toxic waste dumps, hotels and other areas all have varying degrees of potential for being a detention camp area. The likelihood of a site being suspect increases with transportation access to the site, including airports/airstrips, railheads, navigable waterways & ports, interstate and US highways. Some facilities are "disguised" as industrial or commercial properties, camouflaged or even wholly contained inside large buildings (Indianapolis) or factories. Many inner-city buildings left vacant during the de-industrialization of America have been quietly acquired and held, sometimes retrofitted for their new uses.

#### CANADA

Our Canadian friends tell us that virtually all Canadian military bases, especially those north of the 50th Parallel, are all set up with concentration camps. Not even half of these can be listed, but here are a few sites with the massive land space to handle any population: Suffield CFB - just north of Medicine Hat, less than 60 miles from the USA.

**Primrose Lake** Air Range - 70 miles northeast of Edmonton.

**Wainwright CFB** - halfway between Medicine Hat and Primrose Lake.

**Ft. Nelson** - Northernmost point on the BC Railway line.

**Ft. McPherson** - Very cold territory ~ NW Territories.

**Ft. Providence** - Located on Great Slave Lake.

**Halifax - Nova Scotia.** Dept. of National Defense reserve.... And others.

#### OVERSEAS LOCATIONS

**Guayanabo, Puerto Rico** - Federal prison camp facility. Capacity unknown.

**Guantanamo Bay, Cuba** - US Marine Corps Base - Presently home to 30,000 Mariel Cubans and 40,000 Albanians. Total capacity unknown.

## Contact Information for RAVEN1.NET

Last Updated November 25, 2007

If this is your first contact with us, can you give us the specific search word or words you used to find this site?

Thanks.

The owner/editor of this raven1.net site is:

Eleanor White

I ask those who contact me, Eleanor White, to please follow these guidelines:

1. PLEASE don't send me large files, which are often images or sound files, unless you send me the size first, let me know what the file contains, and get my OK to send. My older PC's disk is full to a point where performance is slowed by more saved data.

It is always good Internet courtesy to ask your recipient before sending large files. I'd call large files, say, over 200K for modem users. Some harassment targets have to use library PCs so this is critically important for them.

2. I regret that I am UNABLE to answer hard copy letters. I do my best to answer EMAILS, but hard copy letters, sadly, will not be answered. The extra time to answer hard copy letters takes away from time available for important group-wide activism projects. Several other active activists have had to curtail one activity to push other activities - this situation is beyond our control. Important: See [How to set up an email account at your library](#).
3. To share your personal story, the site for that is not raven1.net:

Please start a BLOG. There are free blog space providers now on the Web.

4. Since April 2004, when I shifted my activism emphasis from the electronic harassment scenario to the organized stalking side, I have been under extremely heavy fatigue attacks which make it impossible to answer (or even read) every email I receive. I am receiving 100 or so emails a day, and if you receive no answer, either I read your email and had no comment, or I was simply too tired to get to it. On average, I can only read about one incoming email in ten.

I apologize, but this situation is not of my making.

**Eleanor White's Recommendation:**

**BUY**

**Definitely, for targets of organized stalking and electronic harassment, for public officials, doctors, and the general public, I urge a BUY.**

Just one favour I've already asked Dr. Begich: Please, make public awareness of not only the existence of microwave voice to skull transmission, but also the AGE, now 32 years, of the technology which was announced in 1974 at the University of Utah, top level priority?

Also, please not only mention, but STRESS the fact that this technology is simple and can be had by anyone

with upper middle class income?

Your [Lay Institute](#) mission should make this a natural fit within your other excellent work.

Why am I asking this? Thousands of targets of organized stalking and electronic harassment have had the torture of false diagnosis of mental illness heaped upon them at a time when the criminals misusing the equipment have destroyed just about every facet of their careers, relationships and health. If you would please prominently feature Dr. Joseph Sharp's now ancient voice to skull technology in your writings and speaking engagements, you could do more than all of our pleas to public officials, our web sites, our flyers, our picket signs, due to your having the credibility we have been falsely robbed of.

Please do this one thing, Dr. Begich?

=====

**Dr. Nick Begich** earned his degree in Traditional Medicine from the Open International University for Complementary Medicines, in 1994.

He has sought to bring information to light, particularly among the sciences, which points the way to having science applied for the maximum benefit of mankind. His books are gold mines of on point research, and include these:

- Angels Don't Play This HAARP; Advances in Tesla Technology (with Jeanne Manning)
- Earth Rising - The Revolution: Toward a Thousand Years of Peace (with James Roderick)
- Earth Rising II - The Betrayal of Science, Society and the Soul (with James Roderick)

As someone who has spent some years picketing the streets about the crime of organized stalking and electronic harassment, I owe thanks to Dr. Nick Begich for some of the awareness of electronic harassment which Dr. Begich's books and broadcasts have generated.

Dr. Begich currently (autumn 2006) hosts a once a week show on the Republic Broadcasting Network:

<http://www.rbnlive.com>

... and has appeared on numerous other radio and TV shows where the impact of science on the state and future of humankind is taken seriously.

Dr. Begich is currently the executive director of the Lay Institute on Technology:

<http://www.layinstitute.org>

... a not-for-profit corporation having the goal of educating the public on the impacts of technology in the 21st century and beyond. Dr. Begich's work there has resulted in a substantial database of technology information being placed on file.

**Mind Control** is one sub-category of the crime syndrome called organized stalking and electronic harassment. It is a particularly invasive sub-category, as various signal types, some taught in today's schools and some as yet not, can enter the mind from a distance, silently, through walls, and cause incredible pain, career destroying fatigue, career destroying sleep deprivation, "voices" and other distortions of perception all of which add up to the total destruction of a target's life.

More, today's electronic harassment devices can do this SELECTIVELY, so that one member of a married couple can be destroyed, while the spouse may experience nothing. The vicious

criminals responsible choose only silent, nearly impossible to prove technology, along with a campaign of lies which cause community members to add conventional harassment, break-and-entry, and sabotage to the target already struggling to avoid breakdown. These community members choose only exaggerated forms of "life's normal misfortunes", making it impossible for targets to convince others they are in fact being tortured. Even though the "normal misfortunes" happen DAILY, the average person will automatically discount reports that anything out of the ordinary is happening.

After this has happened for a time, almost always, the target is labelled as mentally ill and discredited, and forced to take dangerous pharmaceuticals even though the target in fact has no mental illness, but is simply reporting the truth.

"Mind control", then, is NO PARLOUR TRICK and deserves the keenest attention of the reading public. I, Eleanor White, pray all who read this review will go on to read this book.

In Chapter One, titled **The Root of The Technology**, Dr. Begich explains that electromagnetic signals can indeed affect biological processes. Because the public is immersed in all sorts of electromagnetic signals - radio, TV, sun/starlight, cosmic rays - that is often lost on the unaware public and skeptics need to be reminded of this. Just because we don't all go into convulsions when our neighbour with a CB transmitter keys up doesn't mean EM signals don't affect us.

In Chapter Two, titled **Controlling the Human Mind On the Way to 1984**, Dr. Begich has collected, for easy quick reference, many of the mind control techniques, and some of the mind control crimes, we often discuss, with an excellent collection of footnotes giving us the citations for many of them. This includes the MKULTRA crimes. This makes the book quite handy for preparing for encounters with skeptics, including family members, doctors, and police, three of the most skeptical groups on the planet.

One major benefit of this book, as I see it, is that it's portable, can be taken anywhere, and it collects pretty well everything posted among our many web sites, and even more, thanks to Dr. Begich's skill and hard work at gathering research. This should add both speed and factual dependability to the work of our many activists.

Another benefit is that, even if the Internet is ripped down and replaced with an extremely expensive and heavily censored "Internet II", having this book in hand, and better yet, having LIBRARIES equipped with copies too, will mean that the information is not totally lost.

Having said that, as an activist myself, I have to say that a great deal of what is posted on our sites, and presented in this book, does not work at significant (neighbour's home to yours) distances, through walls. Technologies requiring contact or close proximity, and/or which do not work through walls, are still useful, but I have to caution that most of what we experience happens through walls, at home to home distances or greater, even out in the wilderness. We can use close up technologies to POINT to eventual long distance, through wall capability, but not prove it actually exists now.

This extremely compact handy reference is not going to make it possible for us to convert all family members, doctors, and police into instant believers. We must not over reach the limitations of the many technology items presented in discussions with skeptics. But even

without proving long distance or through wall capability, the existence of the many influence technologies documented in this book is going to be dramatic news for many people!

One excellent feature of Chapter Two is that the electronic aspects of MKULTRA are listed.

Chapter Three, titled **New Initiatives**, starts out summarizing military officer John B. Alexander's work. It is very handy for targets to have material on John Alexander because his name often pops up when discussions of mind control are in progress.

Dr. Begich describes Alexander's interests as "in obscure science and parapsychology, connecting with Janet Morris, with whom he wrote a book on mind training techniques."

Begich goes on to say "The use of the technologies was apparently known by Alexander to be problematic, because some of the weapons systems would violate international agreements."

You'll hear the term "nonlethal weapons" often used in relation to John Alexander and Janet Morris. To cut to the quick, the writings and media appearances I'm familiar with by these two people were rock solid stonewalling by people regarded by non-targets as "non lethal weapons experts." They repeatedly deny the existence of any of the weapons which might cause the effects we report.

In fact, several of us targets were in email contact, back in the mid-1990s with Col. Alexander (he had an email address posted at that time.) We informed Col. Alexander of the [undeniable, available, and not secret mind-control-capable weapons](#), how they work, and stressed the fact that anyone with a good income can have them. Col. Alexander went on Coast to Coast AM shortly after that exchange and denied ANY such weapons exist.

Janet Morris has made similar statements on TV appearances.

Dr. Begich points out a 1980 statement by John Alexander which shows clearly that this man is a disinformation agent:

"Mind-altering techniques designed to impact opponents are well advanced." In other words, in 1980, such techniques were "well advanced", yet in the mid-90s on Coast to Coast AM, suddenly such techniques "don't exist?"

The reason I bring this up is because we who are fighting to expose and stop organized stalking and electronic harassment need to know about the people who are doing all they can to stifle our efforts. It is great Dr. Begich chose to mention them. It would have been even better if Alexander's later negative statements were included as well.

Also handy in this chapter is the mention of the European Parliament's lightly touching on mind control by recommending laws be written to carefully monitor and control the use of such techniques.

Dr. Begich's detective work turned up a company, Mankind Research Unlimited (MRU) which apparently investigated "psychic warfare, bioenergetic fields, and manipulation of energy in order to affect people." This company, dating from the 1960s through the 1980s, is listed as capable of thirty one program areas which are highly relevant to our experiences.

When you see terms like "psychic" and "bioenergetic", you are talking about effects which cannot be produced by signal types as taught in today's schools. As targets, we need to be EXTREMELY reluctant to express certainty about such advanced effects, because they are beyond the laws of science as taught in today's schools. But we do in fact experience things, such as penetration of top grade shielding which stops electromagnetic signals, which can't be explained by school-taught signal characteristics, and I feel it is good that Dr. Begich has included some material referencing such advanced signal characteristics.

My advice to targets is to be totally honest - if a discussion touches on experiences which are beyond school-taught science, say you don't know how it is done. I don't recommend using this book to "prove" the more advanced effects are "real." We know they are very real, but without an actual mainstream-acknowledged demonstration, we can't prove it to others.

Chapter three goes on to describe the work of Dr. Michael Persinger, HAARP, Dr. Jose Delgado the brain implant guy, the Woodpecker Signal, Dr. Andrija Puharich, Dr. Robert C. Beck, more detail about the Lida machine, Dr. Ross Adey, and government involvement in the mind control programs the public rarely hears about. He also mentions at length the work of Dr. Reijo Makela, a researcher in using electromagnetic (particularly laser) technology for healing.

Dr. Begich, in fact, has considerable interest in using technology for healing, and I'm grateful he has taken considerable trouble to research the MIS-use of technology as well.

Chapter Four, titled **Mind Wars**, provides some really handy references shoring up the very sobering reality of mind control. This book is an excellent pocket reference, and my experiences bringing out Carol Rutz' book "A Nation Betrayed" on the picket site show how powerful having a tangible book in your hand can be. Carol is a survivor of the brutal child physical and sexual abuse performed under the auspices of the U.S. government during the MKULTRA era.

Loud mouth hecklers were literally silenced when I raised Carol's book into view. I would expect Dr. Begich's book might work equally well, particularly if you find yourself in a debate with hostile family members, doctors or police.

Mind you, I'm not saying this or any book is guaranteed to work as a "get out of jail free card," just that the impact of an authoritative book, and this one clearly is, can be dramatic.

Ah, Chapter Five, **Auditory Effects**, does outline Dr. Joseph Sharp's voice to skull success, and it goes quite a bit further, providing some details of various conventional signals which generate acoustical phenomena in a subject's hearing sense.

It is with considerable regret that the paragraph mentioning Sharp's voice to skull includes a reference to 1995, but not the year of the original experiment's announced success, in 1974. This may seem like nit-picking, but to an organized stalking/electronic harassment target, who has been ridiculed by police, family, and may be taking antipsychotic medication involuntarily with very nasty side effects, this is NOT a minor issue.

It is essential in the fight to expose and stop all aspects of organized stalking and electronic harassment that the AGES of the proven beyond all doubt weapons be PROMINENTLY displayed. When a military weapon is discussed, say, in an article in Defense Electronics a

month ago, that's one thing. But when a technology is brutally invasive, as voice to skull is, and has been around for over THREE DECADES, and is relatively simple to be created by a senior radar technician or engineer, the public MUST be told that. Loud and often.

Availability over decades, and relatively easy access create a vivid picture of likelihood that the technology has been used, in the mind of the public.

Anything less simply isn't helping our cause to the maximum extent unclassified knowledge is capable of. This is why I have begged Dr. Begich in the message at the top of this review to consider really PROMOTING the age, simplicity, and availability of Sharp's voice to skull, so our members might eventually emerge from under the heavy and totally unjustified yoke of mental illness charges.

Dr. Begich has done us a great favour in his Chapter Six, titled **Other Patents - The Ethics of It All**. Our members love patents because they do give a very official aura to various proposed methods of mind control. I often serve as the chronic wet blanket when I have to remind our members that the issuance of a patent does not prove a given technology has actually been DEMONSTRATED. Big, big difference between a patent and a demonstration.

But even with that limitation on patents, it is terrific to have one handy place where mind control patents are not only gathered, but very well explained by Dr. Begich. Patents do have persuasive value in talking with the unaware public, I've found. All I urge is that we not say such-and-such mind control technology IS IN USE, when there is no separate documentation of an actual demonstration, acceptable to public officials.

One of the BIG open questions our members face is: Has there ever been a DEMONSTRATION of a technology which can at least READ the EEG (electroencephalographic) signals from the brain, at REAL WORLD distances (in our case, from a neighbour's home to ours), precisely enough that activity of subtask neuron clusters can be read independently?

This chapter talks about doing that, but I didn't see, on my relatively rapid read, any DEMONSTRATION of that capability. (Apologies, but I've been a target of this type of technology for 26 years now. I just can't force myself to read word by word by word, having read this material for years now. Mea culpa. I may have missed something, yes.)

Yes, we know that the LIDA machine and other more sophisticated transmitters can WRITE to and influence the brain to varying degrees of precision. Reading at real world distances, in real world unshielded environments is a very much more difficult task, because the power output of the brain is exceedingly tiny, and, other people and plants are busy outputting their own signals. Add to that non-biological electromagnetic noise, and you have a good case for doubting reading subtask-resolved EEG signals can be done using conventional signal types. We don't know yet what other, as yet not taught in school signal types may be capable of.

Bottom line, I urge our members to not use this chapter to try to "prove" remote thought reading, the ultimate use for remote EEG reading, can be done.

In chapters Seven through Nine, Dr. Begich goes into more detail about how the mind and body can be controlled, and the roles played by scientific and government organizations.

Again, a really handy collection of the articles posted in many places on the Internet, all in one tidy book.

**Part II** is devoted to Dr. Begich's original interest - positive uses for this technology. I sincerely hope that members of the public who read this book also read Part II, as not only is this important technology being used for criminal purposes, it is being denied to people who could benefit from it.

Chapter Ten is **Who Are The Victims?**. Dr. Begich demonstrates with this chapter that his studies of mind control, the history of its development and usage, are not strictly scholarly. He could have left this chapter out, and still have had a first rate book. I am personally very thankful that he remembered those of us for whom mind control has been an every day reality for years and decades.

I do have one small bone to pick with Dr. Begich for this statement, though:

"The problem is that it is difficult if not impossible to sort out which people might be victims and which are delusional."

I say that if some esteemed doctors would take the trouble to get to know some of our more experienced members, a panel of trusted targets could sort out who is a genuine target versus who is delusional. This goes contrary to the idea that anyone who hasn't gone through med school then psychiatric residency couldn't possibly do that. I know Dr. Begich must make the statement above to preserve his credibility, but I'm saying no, there actually is a way, if the psychiatric establishment were to accept assistance from targets.

And Dr. Begich does state he believes some of our stories do have a basis in fact, given that the U.S. Government has a track record of "people being exploited by scientists", MKULTRA being the best known example. For a non-target and increasingly a public figure to say that is a MAJOR boost for us!

Dr. Begich sees his role in assisting victims (most prefer the title "target", "targeted individual" or "TI" these days) ... as public education. Nick, this book is a major step in that direction, as have been your previous books! Well done!

---

# Psycho-Electronic Countermeasure Success Log

December 25, 2000

---

**AS OF THE DATE OF LAST REVISION, NO SUCCESSES HAVE MET MY CRITERIA FOR GENUINE, FULL-FLEDGED SUCCESS:**

- Provides **TOTAL** relief for at least one major effect
- Works for **EVERYONE** who tries it
- Works the **SAME WAY** for everyone who tries it
- Works the same way for everyone who tries it for **SEVERAL MONTHS**

This page is to record successes of countermeasures for psycho-electronic attacks. The credibility of the reports rests with the person making the reports. It must be kept in mind that short term successes stand a very good chance of being *decoys* used by the perpetrators to keep our group in a state of confusion.

The fact that any countermeasures work long term does **NOT** indicate that simple "microwave" or "acoustic" or "ELF" signals are the only ones in use on us. The reason is this: The **CLASSIFIED** signals **MUST** "dump their load" in or on us, in **THIS** three-dimensional familiar world, in order to work.

It is at the point of "dumping" that countermeasures work, if in fact they do work. A countermeasure must perform a neutralizing in-body counter -effect, since all observations are that the classified delivery signals themselves bypass all known shielding.

## SUBMISSION:

In order to register a success on this page, please email me with the following information:

- Your real name and permission to share your information with the group
- Description of countermeasure
- Date on which you started using the countermeasure
- Statement as to which symptoms are countered, and a rough guess as to percent effectiveness
- As time passes, updates to the information above including periods of failure

This applies to victims other than the originator who also try the same countermeasure.

1. BLANCHE CHAVOUSTIE - Use of magnets attached to a blanket with the North poles facing the body.

Started summer 2000

Mainly allows refreshing sleep. ALSO in Blanche's case allows her DOG to be more comfortable. Remember that Ed Light's dog was tortured until she died; the perps are known for their torture of victims' children and pets.

Effectiveness: Estimated at 100% - Blanche's comments follow:

The magnets are very effective. As I told you I made them twice as strong as they were but that meant moving the ones that had been on the other half of the bed onto my side and stacking them. Consequently, my husband had no magnets for these last few days and I did. This morning Matthew got up and I said, Just go back and try my magnets. Sure enough he fell sound asleep and stayed there for an hour and a half. Grace is still trying to get a spot for herself on the bed.

I guess I would say they are 100 % effective in helping me get to sleep and stay asleep at a very deep level. They DO NOT stop the perps, it is possible the magnets even help them tap into a person. However, they definitely help me sleep at a very deep and restful level.

Blanche's experience is corroborated in the book "Body Electric" by Dr. Robert O. Becker. Dr. Becker found that strong magnetic fields could put salamanders to sleep almost instantly.

2. FORREST THOMPSON - Use of radar absorption paint on bedroom

Date sent: Wed, 15 Nov 2000 14:30:45 -0800

Eleanor,

I have some great news for you. There is a paint called spraylat #z-1150 that is a copper emulsion based paint that shields against radio and EMF frequency. I bought a gallon from the company, and coated my bedroom with it. It blocked out all of the emf noise that has been plaguing me for so long. Please call me when you can at 415-225-5850 so I can fill you in with all of the details. At last a weapon against the perps !

Forrest Thompson

3. RONALD KRAYMARZ - Loop of copppe tubing (a "shading ring") around front of torso (closed loop)

My success using the copper coil started around July, 1999. It still relieves the harassment very well during the day, at night I have to use additional countermeasures, since

they have to be changed often to keep them working I won't mention them.

During the day, for the trunk of my body, it relieves harassment by 80%-90%.

What I use first is the material referred to as space blanket. I cut a piece to cover the front of my body, from below the neck to the navel. Don't wrap it completely around, just the front. For me this measures about 19"x19".

It goes in direct contact with the skin, I slip it under a T shirt to hold it in place. After in use for a day or two it gets crumpled and loses effectiveness so change it with a new piece then, it's fairly inexpensive.

Next I use 1/4" OD (outside diameter) copper flexible tubing.

I buy it at the Home Depot and for a 50' coil it cost about \$15. I form a coil of about 1-1/2 loops to run around the perimeter of this chest area where I have the foil. So for me it is an oval shape about 11"x13".

That gets slipped under the shirt also over the foil. Tucking the shirt in holds it in place. It's flexible so press it against the body so it is form fitting. Under a heavy shirt it is not noticeable in public. Under a heavier attack I add another coil on top of the first one to keep it working.

And that's it, very simple, placement doesn't have to be very precise. I have actually felt vibrations in that tubing when they were attempting heavy attacks on me.

# What Couples Are Reporting

## How the Perps Bust up Relationships

We think it is no accident that the rise in the divorce rate seems closely correlated with the increase in perp recruitment. The perps do not allow a targeted individual to have any relationships. This means friendships, family, and yes, marriages. The breaking up of a marriage brings a special reward to the perps. A wide variety of methods are used.

### The "no quality time" routine:

The spouse suddenly finds himself/herself with too much to do. There is no time left for the marriage. This method also works well on brothers, sisters, children, and friends. This lack of quality time is usually correlated with the arrival of a perp with big ideas, ie, the expansion of business, or luring the target to new leisure activities, or a new love interest. These perps are actually "handlers" who are assigned the task of breaking up the relationship. It is their job to influence the target into becoming involved in activities and business expansion that will eat up time and thus isolate the target from family. The handler will make sure that the target vacations in Missouri, Florida, and California, where the government mind control centers are located. The individual is progressively drugged and "programmed" until a personality change occurs, replacing old values with new ones dictated by the perps. Family is no longer a priority.

### The "let's fight" routine:

The spouse is programmed to become combative when questioned about the change in priorities. This prevents any meaningful discussion of the problem and assures the break up of the relationship. In some cases, even broaching a topic as benign as the weather will cause the spouse to explode in anger, thus preventing even the slightest chance of conversation. Efforts to avoid hot button topics often fail as the spouse will bring up the issues anyway in an effort to start an argument. At every opportunity for quality time, a vicious argument is ensured.

### The "I called-you-did-not-answer" routine:

The spouse stops calling, giving the excuse that they called and called and can never get an answer. When asked about when the calls were made, it is discovered that they were made when no one was home or during sleeping hours when the bell

was turned off. Even when the individual to be called is at home all day, the target will call when the individual cannot answer. When the spouse is asked why they continue to call at 9:00pm when no one is available, instead of 6:30pm when the phone can be answered, no answer is given. This is because the spouse does not know why. Perp programming kicks in every day and prevents the call from being made at 6:30pm.

The perps have a lot of different ways to mess up your phone calls. Recently, it was discovered that a continual busy signal on one end is actually a dead phone on the other end. Repeated attempts to call someone finally resulted in a completed call, whereupon the caller discovered the phone they were trying to reach had been dead the whole time, mysteriously fixing itself after about an hour, finally allowing the call to go through.

### The "I can't talk now" routine:

Frequently the spouse will add a caller ID to the phone so that when the beloved calls, the call can go unanswered. If the beloved does manage to get a call through, the target is silent, contributing nothing to the conversation. Of course, this is contrary to years of...

Frequently, the conversation will be interrupted by another phone call, whereupon the target

will mouth whatever the perp has instructed, usually meaningless drivel or something stupid.

### The "I loath you" routine:

Some couples report that they suddenly lose the desire for physical intimacy. This occurs as if someone "flipped a switch" and killed their longing for each other. The perps can do this to anyone and we suspect that is one of the reasons for the high divorce rate. This, in addition to the "I don't have time" method is what frequently kills a marriage. The perps get bonus points for breaking up a marriage. It is very important to communicate with each other at this point.

If either partner is feeling angry and non communicative, be honest enough to explore the real reason why. Be totally objective. When did this problem first occur? Was it after a new friendship, activity, hobby, interest, business expansion? Be honest! Which is more important? The marriage? Understand that only one will be salvaged!

### The "I'm too tired" routine:

The perps are unrelenting in their campaign to deprive the targets of sleep. This is done by very simple methods such as throwing baseballs against the targets house or by very complicated means such as electronic weapons used to overheat the body, cause itching, or even cause the target to hear voices. This makes the spouse too tired to spend time with the beloved. It is important to analyze the reason why sleep is being disturbed. Perhaps a change of bed is in order. See below.

## How couples are coping:

### Helpful hints from savvy partners

Wise up! Outside influences are tearing your marriage apart! Ignoring the problem will only ensure a divorce. Learn as much as possible about the evil forces at work here. There are some things that can be done to stop the damage and save the relationship.

#### Look before you leap:

Before taking on any additional work, investment, or business responsibilities, think about it!

Do you trust this person? Could there be a hidden agenda? How much extra time or financial risk is involved? Could this decision result in virtual slavery?

#### Think before you speak:

Avoid speaking in anger. Think. Compare your words with your history of values. What is actually happening here? Why the drastic change in wants, needs, interests? Do your words hurt your spouse? Why have your priorities changed? Is it really necessary? Are you putting monetary gain ahead of your marriage? Your family? Do your words sound like something someone else would say? Do you have tinnitus? When did this first occur? Does it correlate with your change in priorities?

#### Telephone Communications:

Is there no one at home when you get the impulse to call? Have you changed the time you usually call? Keep a tally of the time you called, the date, and make a chart to evaluate the effectiveness of your communications. Recognize that when you call repeatedly at the same time of day and the calls do not go through, the timing of the calls need to be changed. Do you find it impossible to change the time you make your calls? If so, what is preventing you from making these calls?

Perhaps the same few people are engaging you in conversation either in person or on the telephone at the very time you usually call your spouse. Keep a record and you will find the perps are at work.

It has been discovered that the perps are masters of impulse. That is, they can control when a person makes a phone call, interrupts a conversation, walks into a bathroom, etc. Thus, the person being controlled is not aware that he/she is being controlled. Life appears normal. The only clue to the control is that close observation proves the events are statistically impossible. That is, every time a phone call is made, the person being called is not at home, or every day the same time, two people walk into the bathroom or any particular area consistently.

Impulse control is a cinch for the perps to do on anyone. Those who think they cannot be controlled are in fact the very easiest to control. This is because the perps will not change what you do but when you do it. Thus, the target's false illusion of being in control is maintained. Therefore, it is necessary to become aware that an overabundance of synchronicity is a clear indication of perp interference.

### Physical intimacy:

Acknowledge that the perps can cut off your desire or even prevent org@sm. Be patient and don't give up too quickly. Some couples report better results by changing rooms, moving the furniture, or sleeping on the floor. Others report the van is the only way to go. At this point, it is very critical that the couple engage in non sexual touching, cuddling, and sleeping close. Remember why you married, why this person? Remember that the spiritual aspects of love are as important as the sexual aspects. These are the things that can help preserve a marriage through the tough times.

Understand that while sex may be pleasurable with a new partner, it is just part of the overall perp plan to break up your marriage. Realize that it is only through communication with your partner and mutual desire to continue the relationship that the marriage will survive.

### Sleeping arrangements:

All targets report sleep disturbances. Couples who share the same bed may find themselves switching to twin beds as the perps wake one or the other continually through out the night.

Partners who cannot abide being separated and still want to share the same bed will be able to do so by restructuring the bed itself. The modifications below will insulate each of the sleepers from the movement of the other through out the night.

### Stabilize the sleeping surface:

Get rid of that mattress and box spring! So too, the water bed! Any move on one side of the bed immediately transfers to the other side, disturbing the sleeping partner. Start with a solid foundation such as the floor or a rigid frame of 2X4's and plywood. Replace the mattress and box spring with an 8 inch thick foam mattress.

### Separate the covers:

This is essential to eliminate the tug-of-war over the covers during the night, as the perps will invariably use overheating on one person while the other person may feel cold. One person from need not be disturbed when the other needs to "fan" or throw off the covers during the night. Twin or double sized covers can be used, depending on how regularly the bed is to be made up. This is arrangement completely isolates the movement of tossing and turning, and getting up and down in the middle of the night.

### Dim the lights:

The use of very low night lights through out the home will eliminate the need to turn on the lights at night. This allows one spouse to access the kitchen, bathroom, or living room without waking the other. The small plug in lights with optical sensors are most efficient.

### Mask perp sounds:

A low volume radio or television is helpful to mask perp popping and snapping things. Separate pillow speakers for the TV are a good investment. A fan blowing across the bed is helpful for when the perps use overheating. The temp should be cool enough to allow the use of heavy covers so that when body overheating occurs, simply throwing the covers back will allow the person to go back to sleep. Some couples even turn the bell off on the phone to keep the perps from calling and hanging up during sleeping hours.

BOOK: Controlling the Human Mind by Dr. Nick Begich

REVIEW: <http://www.raven1.net/controlmind.htm>

EW: In this case, the saved copy is not the book itself but my review of the book. All I can add here is that Dr. Nick Begich is an excellent literature researcher and has gathered within the pages of that book a great deal of credible material supporting the claims of electronic harassment targets.

This is the first book by Dr. Begich that tells the important story of the pulsed microwave voice to skull success, carried out by researcher Dr. Joseph Sharp in the early 1970s.

Journalists and officials please note: In spite of the title, there are many aspects of the crime of organized stalking and electronic harassment beyond simply controlling the mind with electronics.

BOOKS: "Cause Stalking" and the earlier book "Terrorist Stalking in America" by private investigator

David Lawson

REVIEW: <http://www.multistalkervictims.org/lawson.htm>

(Includes ISBN information)

EW: These two very similar books report on David Lawson's 12-year investigation, (apparently part time, not part of his paid work,) into what he calls "cause stalking", and what targets of this crime call "organized stalking" or sometimes "gang stalking."

David Lawson discovered the organized stalking perpetrators on his business band radio scanner, and ultimately infiltrated some of their groups, apparently out of personal curiosity.

Lawson's OBSERVATIONS of these harassment groups are very accurate when compared with the experiences of OS targets.

However, Lawson's reporting of those responsible are NOT accurate, when compared with what OS targets experience and observe. Lawson implicates these groups as perpetrators:

- extremist groups (e.g. white supremacists)
- foreign terrorists
- "anti-government" groups, such as the U.S. Patriot Movement

It is very possible, given the large number of perpetrators nation and world-wide, that members of those groups named do engage in organized stalking. SOME members.

However, this reviewer has been on line for 12 years, in daily contact with OS targets. Much detailed testimony has been discussed. I have not heard descriptions of the perpetrators matching those groups named above. Instead, the typical harasser is usually an entirely normal member of the community. Some seem to be unemployed, but often, the harassers are fully employed and some use their positions to harass the targets.

Like the famous Milgram experiments (look that up on the web) apparently the stalking group organizers find it easy to recruit ordinary citizens. Lawson reveals why - vicious lies, up to and including faked police records - make recruiting easy.

The bottom line, then, is that journalists, activists and the general public should pay close attention to Lawson's observations, but not his conclusions as to what groups are responsible.

In my own reading of the Lawson books, his descriptions of the perpetrators do not match his assertions that extremists, foreign terrorists, and anti-government groups are responsible.

And as a post script, I am very familiar with the U.S. Patriot Movement through their broadcasts. Over the past 6 years I've heard regularly from perhaps 60 - 70 of their radio hosts, and many of their guests and callers as well. I have participated in their message boards.

I have not read or heard one single hint of any interest in acting as organized harassers from any of them. In fact, the Patriots have had a number of organized stalking targets on their shows to explain the crime to the public.

More than that, 20 of the hosts have either on air, or privately to me, stated they are receiving some organized stalking and electronic harassment attacks as well.

So my review awards a BRAVO to Lawson's OBSERVATIONS - and that is why I've included his books here.

ARTICLE: "Microwaves and Behavior" by Dr. Don Justesen published in the journal "American Psychologist" in the March 1975 issue

WEB SITE:

<http://www.raven1.net/v2success1.gif>

<http://www.raven1.net/v2success2.gif>

<http://www.raven1.net/v2success3.gif>

<http://www.raven1.net/v2success4.gif>

EW: In the electronic harassment arena, VOICE TO SKULL is the BIG ONE. It's the harassment experience that attracts journalists, for one thing, and it's the harassment experience that so often brings forth strong hints that electronic assault targets may be mentally ill.

What this article does is show that pulsed microwave voice to skull has been do-able, and not even a military secret, since it was announced at the University of Utah in August, 1974. That's more than three decades.

A recent Freedom of Information request shows that the U.S. military has an interest in developing voice to skull further:

<http://www.raven1.net/friedmanv2s.pdf>

Since the operating principle is simple, basically synthesizing voice from a stream of clicks, and a radar set can be modified to transmit the original voice to skull signal type, and since this technique has been available for over three decades, it is reasonable to not summarily assume targets of organized stalking and electronic harassment must be mentally ill.

Hopefully journalists will, in the future, clearly mention Dr. Joseph Sharp's success of the 1970s to give the public a balanced picture.

## Stalking

### **The Extent & Nature of Stalking: findings from the 1998 British Crime Survey**

Home Office Research Study 210 by *Tracey Budd* and *Joanna Mattinson* with the assistance of *Andy Myhill*

In recent years, stalking has increasingly been recognised as a social and legal problem. In England and Wales, the Protection from Harassment Act was introduced in 1997 to enable the criminal justice system to deal more effectively with cases of stalking and harassment.

Despite this there has been relatively little research conducted to assess the extent or nature of the problem.

This report defines stalking as experiences of persistent and unwanted attention. It presents the findings from an innovative self-completion questionnaire included in the 1998 British Crime Survey. The report provides the first reliable, national level data on how frequently stalking occurs. It also identifies those most at risk and what types of behaviour victims are subjected to.

The 1998 British Crime Survey included an innovative computerised self-completion questionnaire designed to provide the first reliable measure of the extent of 'stalking' in England and Wales. A nationally representative sample of 9,988 16 - to - 59 year-olds were asked whether they had been subject to 'persistent and unwanted attention' during their lifetime and during the preceding year. Those who had been subject to such incidents were asked details about their experience. The questionnaire was deliberately designed to capture a wide range of experiences that could potentially be regarded as incidents of stalking.

### **The extent of stalking**

Overall, 11.8 per cent of adults aged 16 to 59 could recall being subject to persistent and unwanted attention at some time in their lives. The figure was higher for women (16.1%) than men (6.8%). Three-quarters of those identified as being subject to persistent and unwanted attention were women. 2.9 per cent of adults aged 16 to 59 had been the subject of stalking in the 12 months prior to the interview. This equates to almost 0.9 million adults in England and Wales experiencing at least one episode of stalking during the previous year (0.61 million women and 0.27 million men had been victims).

These figures are based on a very broad definition of stalking – 'persistent and unwanted attention' – which captures a wide range of experiences.

### **The victims**

Women were twice as likely as men to have experienced any persistent and unwanted attention in the last year (4.0% compared to 1.7%). Young women were particularly at risk. 16.8 per cent of women aged 16 to 19 and 7.8 per cent of those aged 20 to 24 recalled being subject to persistent and unwanted attention during the previous year. Risks were also high among women who were single students living in privately rented accommodation, living in a flat or maisonette, or living in a lower income household. The nature of incidents experienced by men and women differed somewhat. Key results are discussed below.

### **The offenders**

The majority (79%) of incidents involved only one perpetrator. Incidents against male victims were more likely to have involved more than one offender. Overall, eight in ten (81%) incidents reported to the survey were perpetrated by men. Male offenders were involved in 90 per cent of incidents against women, and 57 per cent of incidents against men. In 29 per cent of incidents the perpetrator had an intimate relationship with the victim (current or former spouse, partner, girl/boyfriend or date) at the beginning of the incident. Strangers were responsible in 34 per cent of incidents. The remaining incidents involved close friends, relatives, household members or acquaintances.

Women were significantly more likely to be stalked by a stranger than male victims. Female victims were most likely to believe the perpetrator of the persistent and unwanted attention wanted to start or continue a relationship with them. Male victims were most likely to say the offender wished to annoy or upset them. The relatively high proportion of incidents against men perpetrated by men is particularly interesting. The majority of such incidents were committed by strangers (42%), though five per cent were carried out by a current or former partner. The most common reason given for male on male incidents was that the offender wished to upset or annoy the victim.

### **Experiences of stalking**

In about a third of cases reported to the survey the persistent and unwanted attention lasted less than a month, and in a further quarter (26%) between one and three months. However, for around one in five victims (19%) the persistent and unwanted attention lasted for a year or more. There were no differences between male and female victims.

Experiences of persistent and unwanted attention were wide ranging. The most common experience was being forced into talking to the offender, with almost a half of all incidents (49%) involving this. Other relatively common experiences, reported in a third or more of incidents, were:

- silent phone calls (45%)
- being physically intimidated (42%)
- being followed (39%)
- being touched or grabbed (34%)
- the offender waiting outside the victim's home (33%).

Female victims were more likely to experience almost all of the types of stalking behaviour asked about. However, male victims were more likely to say the offender had threatened or actually used violence.

The vast majority (78%) of victims had experienced more than one type of behaviour during their most recent episode. About a half of victims had been subjected to between two and five distinct types of behaviour and a further third to six or more. Women tended to experience more types of behaviour than men.

### **Impact upon the victims**

Ninety-two per cent of victims said they were very or fairly annoyed/irritated by their experience. Levels of distress or upset were lower, but still 75 per cent had found the experience very or fairly distressing/upsetting. Women were particularly likely to have been distressed or upset by their experience. Seventy-one per cent of those who had been the subject of persistent and unwanted attention said they had changed their behaviour in at least one of three ways:

- 59% had avoided certain places or people
- 35% went out less than they had previously
- 42% started taking additional personal security measures.

Seventy-six per cent of women had taken at least one of these measures compared to 59 per cent of men. Almost a third (31%) of victims were very or fairly afraid that violence would be used against them. A similar proportion (27%) were afraid violence would be used against a friend, relative or someone else they knew. Victims were less likely to fear a sexual offence, though 17 per cent did so.

### **Seeking help**

One-third of victims (33%) considered what had happened to be a crime and a further 37 per cent considered it to be 'wrong but not a crime'. A quarter felt it to be 'just something that happens'.

Thirty-three per cent of victims said the police were aware of their most recent episode of persistent and unwanted attention. Sixty-one per cent of victims who reported the incident said they were satisfied with the way the police handled the matter. There were few differences between male and female victims. Four-fifths of victims (82%) stated they had told someone. Over half (55%) of all victims had told their spouse, partner, boyfriend or girlfriend, 72 per cent had confided in a friend, relative or neighbour, eight per cent had informed a doctor, social worker or carer. Women were more likely to tell someone about their experiences than men.

Review posted November 21, 2008

"JOHN FLEMING: THE SHOCKING MENACE OF SATELLITE SURVEILLANCE"  
(Pravda Jul 14, 2001)  
<http://english.pravda.ru/main/2001/07/14/10131.html>

\*\* NOTE: The link above has changed and NO LONGER POINTS  
to John Fleming's article.

QUOTE: "Some satellites in fact can read a person's mind from  
space."

EW: To pick up the extremely weak electromagnetic activity of the brain has never been demonstrated to my knowledge at more than a short distance, a few feet at most. There is also the problem of separating EEG activity read from a subject from all the other environmental noise, including very similar emissions from all other living things in the area.

The author acknowledged, on a blog a couple of years ago, that what he really meant was the transmission of digital data from a ground based EEG machine, over satellite networks, just as is done with other digital data routinely.

QUOTE: "Also part of satellite technology is the notorious, patented 'Neurophone,' the ability of which to manipulate behavior defies description."

EW: The Patrick Flanagan neurophone is not "notorious." It comes in two types:

- Early version, capacitively coupled small electric currents induced in the body through insulated pad electrodes carrying simple audio frequency waveforms. No radio signals, contact with the body required.
- Later version, mechanically vibrating piezoelectric crystal held against the body, causes the sound from the crystal to be heard. No radio signals. Contact with the body required.

It is total nonsense to say this invention can work from a satellite. Fleming actually spoke of a radio signal version, and yes, pulsed microwave voice to skull has existed since the mid-1970s, but has nothing to do with the "Neurophone."

QUOTE: "A surveillance satellite, in addition, can detect human speech. Burrows observed that satellites can "even eavesdrop on conversations taking place deep within the walls of the Kremlin." Walls, ceilings, and floors are no barrier to the monitoring of conversation from space. Even if you were in a highrise building with ten stories above you and ten stories below, a satellite's audio surveillance of your speech would still be unhampered. Inside or outside, in any weather, anyplace on earth, at any time of day, a satellite "parked" in space in a geosynchronous orbit (whereby the satellite, because it moves in tandem with the rotation of the earth, seems to stand still) can detect the speech of a human target."

EW: There has been no demonstrated way a satellite, in the vacuum of space, can "hear" anything going on at ground level. There is no way for sound to travel to the satellite.

The only possibility for this, extremely dubious, would be for a satellite to aim a laser beam at a window and pick up the audio from the reflection. Given the angles involved, I would recommend readers discount this possibility unless some sort of verified demonstration is found.

The "in any weather" part of the claim above would prevent laser bouncing anyway.

As a retired engineer, in my opinion, the practical realities

of such a setup make this claim totally bogus.

The only way to be confident of technology claims is to have an article describing an actual DEMONSTRATION of the technology, published by, and under the name and logo of a mainstream organization. No such article, that claim must be regarded as someone's opinion.

Review posted November 21, 2008

Eleanor White rating: BOGUS (trivializes the crime)  
November 21, 2008

WEB SITE: <http://www.gangstalkingworld.com/Techniques.html>

SITE TITLE: Gang Stalking World

EW: This well-executed web site rates a BOGUS because it misleads the visitor from the public into believing that

targets of organized stalking and electronic harassment are worrying about things that are trivial and not serious, and in fact common occurrences of every day life.

The destruction of careers, lies told in the community, sleep deprivation, ongoing sabotage of belongings while the target is away, breakup of marriages because only one spouse is harassed, loss of child custody when the target complains to officials - these things are glossed over and silly things are fronted as top concerns.

Notice that prominently, at the top left, is a photo of a young mom pushing a stroller, talking on a cell phone. For theatrical effect, apparently, she is wearing a sort of "spy" outfit. This reviewer assures the reader that young moms with strollers do not send organized stalking targets into a tailspin.

Next notice the very first, most prominent technique this site describes. The first item is presumably the one that causes targets of organized stalking the most grief. It is listed as "Air Stalking." In other words, the site cries out against aircraft stalking targets on the ground!

That concern literally shouts "paranoia" to the world.

While in some cases aircraft may be part of the harassment, there is just no way anyone in urban or dense suburban areas can possibly know why an aircraft is flying over. I do believe that a few targets have had aircraft used to harass them, because it is an ideal way to get the target to sound insane.

However, "Air Stalking" is not a serious concern to the vast majority of organized stalking targets. It does NOT describe the experience of organized stalking accurately.

The second item is "Brighting," that is, aiming bright lights at a target. Car lights, or sometimes bright lights from one apartment towards an apartment on a building next door.

Here again, I've heard a few reports of "Brighting," but it's hardly a major concern for most targets. To prominently display "Brighting" as the second most grievous assault type is totally mis-representing organized stalking to the public.

(On another site, no longer posted, the site's author showed many photos of cars doing ordinary things, claiming that simply driving along, or in one case, parking at home with the car door open, was harassment.)

By the time a visitor to that site has seen the first three items, they could be forgiven for thinking organized stalking targets are crazy.

This reviewer does not know the motive behind web sites or articles which trivialize organized stalking and electronic harassment. However, it is clear that the motive is not to

assist in exposing and stopping the crime of organized  
stalking and electronic harassment.

Review posted November 22, 2008

Eleanor White rating: OK  
November 22, 2008

WEB SITE: <http://www.catchcanada.org>

SITE TITLE: Citizens Against Technological and Community-based Harassment

EW: This web site was established by Canadian target of

organized stalking and electronic harassment, Norma Lawrence.

The "CATCH" portion of the name refers to a now inactive organization of Toronto, Ontario, Canada targets named "Citizens Against Technological and Community-based Harassment." This small group made several well-received presentations about organized stalking and electronic harassment to area crisis support organizations.

Work responsibilities and other demands on personal time resulted in Norma Lawrence having to cease operating as a group, but as of the time of this review, she maintains the excellent information content on the web site itself.

I was a member of the CATCH group, and heard directly reports of local targets who found that this site's conservative, rational presentation of the crime resulted in a few family members and doctors taking the OS/EH crime seriously. As of the date of this review, I have heard of no other site which has played a part in convincing family members or doctors as to the reality of the OS/EH crimes.

Clearly this site richly deserves the "OK" rating.

Eleanor White's Recommendation:

**BUY**

Definitely, for targets of organized stalking and electronic harassment, for public officials, doctors, and the general public, I urge a BUY.

Just one favour I've already asked Dr. Begich: Please, make public awareness of not only the existence of

microwave voice to skull transmission, but also the AGE, now 32 years, of the technology which was announced in 1974 at the University of Utah, top level priority?

Also, please not only mention, but STRESS the fact that this technology is simple and can be had by anyone with upper middle class income?

Your [Lay Institute](#) mission should make this a natural fit within your other excellent work.

Why am I asking this? Thousands of targets of organized stalking and electronic harassment have had the torture of false diagnosis of mental illness heaped upon them at a time when the criminals misusing the equipment have destroyed just about every facet of their careers, relationships and health. If you would please prominently feature Dr. Joseph Sharp's now ancient voice to skull technology in your writings and speaking engagements, you could do more than all of our pleas to public officials, our web sites, our flyers, our picket signs, due to your having the credibility we have been falsely robbed of.

Please do this one thing, Dr. Begich?

=====

Dr. Nick Begich earned his degree in Traditional Medicine from the Open International University for Complementary Medicines, in 1994.

He has sought to bring information to light, particularly among the sciences, which points the way to having science applied for the maximum benefit of mankind. His books are gold mines of on point research, and include these:

- Angels Don't Play This HAARP; Advances in Tesla Technology (with Jeanne Manning)
- Earth Rising - The Revolution: Toward a Thousand Years of Peace (with James Roderick)
- Earth Rising II - The Betrayal of Science, Society and the Soul (with James Roderick)

As someone who has spent some years picketing the streets about the crime of organized stalking and electronic harassment, I owe thanks to Dr. Nick Begich for some of the awareness of electronic harassment which Dr. Begich's books and broadcasts have generated.

Dr. Begich currently (autumn 2006) hosts a once a week show on the Republic Broadcasting Network:

<http://www.rbnlive.com>

... and has appeared on numerous other radio and TV shows where the impact of science on the state and future of humankind is taken seriously.

Dr. Begich is currently the executive director of the Lay Institute on Technology:

<http://www.layinstitute.org>

... a not-for-profit corporation having the goal of educating the public on the impacts of technology in the 21st century and beyond. Dr. Begich's work there has resulted in a substantial database of technology information being placed on file.

Mind Control is one sub-category of the crime syndrome called organized stalking and electronic harassment. It is a particularly invasive sub-category, as various signal types, some taught in today's schools and some as yet not, can enter the mind from a distance, silently, through walls, and cause incredible pain, career destroying fatigue, career destroying sleep deprivation, "voices" and other distortions of perception all of which add up to the total destruction of a target's life.

More, today's electronic harassment devices can do this SELECTIVELY, so that one member of a married couple can be destroyed, while the spouse may experience nothing. The vicious criminals responsible choose only silent, nearly impossible to prove technology, along with a campaign of lies which cause community members to add conventional harassment, break-and-entry, and sabotage to the target already struggling to avoid breakdown. These community members choose only exaggerated forms of "life's normal misfortunes", making it impossible for targets to convince others they are in fact being tortured. Even though the "normal misfortunes" happen DAILY, the average person will automatically discount reports that anything out of the ordinary is happening.

After this has happened for a time, almost always, the target is labelled as mentally ill and discredited, and forced to take dangerous pharmaceuticals even though the target in fact has no mental illness, but is simply reporting the truth.

"Mind control", then, is NO PARLOUR TRICK and deserves the keenest attention of the reading public. I, Eleanor White, pray all who read this review will go on to read this book.

In Chapter One, titled The Root of The Technology , Dr. Begich explains that electromagnetic signals can indeed affect biological processes. Because the public is immersed in all sorts of electromagnetic signals - radio, TV, sun/starlight, cosmic rays - that is often lost on the unaware public and skeptics need to be reminded of this. Just because we don't all go into convulsions when our neighbour with a CB transmitter keys up doesn't mean EM signals don't affect us.

In Chapter Two, titled Controlling the Human Mind On the Way to 1984, Dr. Begich has collected, for easy quick reference, many of the mind control techniques, and some of the mind control crimes, we often discuss, with an excellent collection of footnotes giving us the citations for many of them. This includes the MKULTRA crimes. This makes the book quite handy for preparing for encounters with skeptics, including family members, doctors, and police, three of the most skeptical groups on the planet.

One major benefit of this book, as I see it, is that it's portable, can be taken anywhere, and it collects pretty well everything posted among our many web sites, and even more, thanks to Dr. Begich's skill and hard work at gathering research. This should add both speed and factual dependability to the work of our many activists.

Another benefit is that, even if the Internet is ripped down and replaced with an extremely expensive and heavily censored "Internet II", having this book in hand, and better yet, having LIBRARIES equipped with copies too, will mean that the information is not totally lost.

Having said that, as an activist myself, I have to say that a great deal of what is posted on our sites, and presented in this book, does not work at significant (neighbour's home to yours) distances, through walls. Technologies requiring contact or close proximity, and/or which do not work through walls, are still useful, but I have to caution that most of what we experience happens through walls, at home to home distances or greater, even out in the wilderness. We can use close up technologies to POINT to eventual long distance, through wall capability, but not prove it actually exists now.

This extremely compact handy reference is not going to make it possible for us to convert all family members, doctors, and police into instant believers. We must not over reach the

limitations of the many technology items presented in discussions with skeptics. But even without proving long distance or through wall capability, the existence of the many influence technologies documented in this book is going to be dramatic news for many people!

One excellent feature of Chapter Two is that the electronic aspects of MKULTRA are listed.

Chapter Three, titled New Initiatives, starts out summarizing military officer John B. Alexander's work. It is very handy for targets to have material on John Alexander because his name often pops up when discussions of mind control are in progress.

Dr. Begich describes Alexander's interests as "in obscure science and parapsychology, connecting with Janet Morris, with whom he wrote a book on mind training techniques."

Begich goes on to say "The use of the technologies was apparently known by Alexander to be problematic, because some of the weapons systems would violate international agreements."

You'll hear the term "nonlethal weapons" often used in relation to John Alexander and Janet Morris. To cut to the quick, the writings and media appearances I'm familiar with by these two people were rock solid stonewalling by people regarded by non-targets as "non lethal weapons experts." They repeatedly deny the existence of any of the weapons which might cause the effects we report.

In fact, several of us targets were in email contact, back in the mid-1990s with Col. Alexander (he had an email address posted at that time.) We informed Col. Alexander of the [undeniable, available, and not secret mind-control-capable weapons](#), how they work, and stressed the fact that anyone with a good income can have them. Col. Alexander went on Coast to Coast AM shortly after that exchange and denied ANY such weapons exist.

Janet Morris has made similar statements on TV appearances.

Dr. Begich points out a 1980 statement by John Alexander which shows clearly that this man is a disinformation agent:

"Mind-altering techniques designed to impact opponents are well advanced." In other words, in 1980, such techniques were "well advanced", yet in the mid-90s on Coast to Coast AM, suddenly such techniques "don't exist?"

The reason I bring this up is because we who are fighting to expose and stop organized stalking and electronic harassment need to know about the people who are doing all they can to stifle our efforts. It is great Dr. Begich chose to mention them. It would have been even better if Alexander's later negative statements were included as well.

Also handy in this chapter is the mention of the European Parliament's lightly touching on mind control by recommending laws be written to carefully monitor and control the use of such techniques.

Dr. Begich's detective work turned up a company, Mankind Research Unlimited (MRU) which apparently investigated "psychic warfare, bioenergetic fields, and manipulation of energy in order to affect people." This company, dating from the 1960s through the 1980s, is listed as capable of thirty one program areas which are highly relevant to our experiences.

When you see terms like "psychic" and "bioenergetic", you are talking about effects which cannot be produced by signal types as taught in today's schools. As targets, we need to be EXTREMELY reluctant to express certainty about such advanced effects, because they are beyond the laws of science as taught in today's schools. But we do in fact experience things, such as penetration of top grade shielding which stops electromagnetic signals, which can't be explained by school-taught signal characteristics, and I feel it is good that Dr. Begich has included some material referencing such advanced signal characteristics.

My advice to targets is to be totally honest - if a discussion touches on experiences which are beyond school-taught science, say you don't know how it is done. I don't recommend using this book to "prove" the more advanced effects are "real." We know they are very real, but without an actual mainstream-acknowledged demonstration, we can't prove it to others.

Chapter three goes on to describe the work of Dr. Michael Persinger, HAARP, Dr. Jose Delgado the brain implant guy, the Woodpecker Signal, Dr. Andrija Puharich, Dr. Robert C. Beck, more detail about the Lida machine, Dr. Ross Adey, and government involvement in the mind control programs the public rarely hears about. He also mentions at length the work of Dr. Reijo Makela, a researcher in using electromagnetic (particularly laser) technology for healing.

Dr. Begich, in fact, has considerable interest in using technology for healing, and I'm grateful he has taken considerable trouble to research the MIS-use of technology as well.

Chapter Four, titled Mind Wars, provides some really handy references shoring up the very sobering reality of mind control. This book is an excellent pocket reference, and my experiences bringing out Carol Rutz' book "A Nation Betrayed" on the picket site show how powerful having a tangible book in your hand can be. Carol is a survivor of the brutal child physical and sexual abuse performed under the auspices of the U.S. government during the MKULTRA era.

Loud mouth hecklers were literally silenced when I raised Carol's book into view. I would expect Dr. Begich's book might work equally well, particularly if you find yourself in a debate with hostile family members, doctors or police.

Mind you, I'm not saying this or any book is guaranteed to work as a "get out of jail free card," just that the impact of an authoritative book, and this one clearly is, can be dramatic.

Ah, Chapter Five, Auditory Effects, does outline Dr. Joseph Sharp's voice to skull success, and it goes quite a bit further, providing some details of various conventional signals which generate acoustical phenomena in a subject's hearing sense.

It is with considerable regret that the paragraph mentioning Sharp's voice to skull includes a reference to 1995, but not the year of the original experiment's announced success, in 1974. This may seem like nit-picking, but to an organized stalking/electronic harassment target, who has been ridiculed by police, family, and may be taking antipsychotic medication involuntarily with very nasty side effects, this is NOT a minor issue.

It is essential in the fight to expose and stop all aspects of organized stalking and electronic harassment that the AGES of the proven beyond all doubt weapons be PROMINENTLY displayed. When a military weapon is discussed, say, in an article in Defense Electronics a

month ago, that's one thing. But when a technology is brutally invasive, as voice to skull is, and has been around for over THREE DECADES, and is relatively simple to be created by a senior radar technician or engineer, the public MUST be told that. Loud and often.

Availability over decades, and relatively easy access create a vivid picture of likelihood that the technology has been used, in the mind of the public.

Anything less simply isn't helping our cause to the maximum extent unclassified knowledge is capable of. This is why I have begged Dr. Begich in the message at the top of this review to consider really PROMOTING the age, simplicity, and availability of Sharp's voice to skull, so our members might eventually emerge from under the heavy and totally unjustified yoke of mental illness charges.

Dr. Begich has done us a great favour in his Chapter Six, titled Other Patents - The Ethics of It All. Our members love patents because they do give a very official aura to various proposed methods of mind control. I often serve as the chronic wet blanket when I have to remind our members that the issuance of a patent does not prove a given technology has actually been DEMONSTRATED. Big, big difference between a patent and a demonstration.

But even with that limitation on patents, it is terrific to have one handy place where mind control patents are not only gathered, but very well explained by Dr. Begich. Patents do have persuasive value in talking with the unaware public, I've found. All I urge is that we not say such-and-such mind control technology IS IN USE, when there is no separate documentation of an actual demonstration, acceptable to public officials.

One of the BIG open questions our members face is: Has there ever been a DEMONSTRATION of a technology which can at least READ the EEG (electroencephalographic) signals from the brain, at REAL WORLD distances (in our case, from a neighbour's home to ours), precisely enough that activity of subtask neuron clusters can be read independently?

This chapter talks about doing that, but I didn't see, on my relatively rapid read, any DEMONSTRATION of that capability. (Apologies, but I've been a target of this type of technology for 26 years now. I just can't force myself to read word by word by word, having read this material for years now. Mea culpa. I may have missed something, yes.)

Yes, we know that the LIDA machine and other more sophisticated transmitters can WRITE to and influence the brain to varying degrees of precision. Reading at real world distances, in real world unshielded environments is a very much more difficult task, because the power output of the brain is exceedingly tiny, and, other people and plants are busy outputting their own signals. Add to that non-biological electromagnetic noise, and you have a good case for doubting reading subtask-resolved EEG signals can be done using conventional signal types. We don't know yet what other, as yet not taught in school signal types may be capable of.

Bottom line, I urge our members to not use this chapter to try to "prove" remote thought reading, the ultimate use for remote EEG reading, can be done.

In chapters Seven through Nine, Dr. Begich goes into more detail about how the mind and body can be controlled, and the roles played by scientific and government organizations.

Again, a really handy collection of the articles posted in many places on the Internet, all in one tidy book.

Part II is devoted to Dr. Begich's original interest - positive uses for this technology. I sincerely hope that members of the public who read this book also read Part II, as not only is this important technology being used for criminal purposes, it is being denied to people who could benefit from it.

Chapter Ten is Who Are The Victims?. Dr. Begich demonstrates with this chapter that his studies of mind control, the history of its development and usage, are not strictly scholarly. He could have left this chapter out, and still have had a first rate book. I am personally very thankful that he remembered those of us for whom mind control has been an every day reality for years and decades.

I do have one small bone to pick with Dr. Begich for this statement, though:

"The problem is that it is difficult if not impossible to sort out which people might be victims and which are delusional."

I say that if some esteemed doctors would take the trouble to get to know some of our more experienced members, a panel of trusted targets could sort out who is a genuine target versus who is delusional. This goes contrary to the idea that anyone who hasn't gone through med school then psychiatric residency couldn't possibly do that. I know Dr. Begich must make the statement above to preserve his credibility, but I'm saying no, there actually is a way, if the psychiatric establishment were to accept assistance from targets.

And Dr. Begich does state he believes some of our stories do have a basis in fact, given that the U.S. Government has a track record of "people being exploited by scientists", MKULTRA being the best known example. For a non-target and increasingly a public figure to say that is a MAJOR boost for us!

Dr. Begich sees his role in assisting victims (most prefer the title "target", "targeted individual" or "TI" these days) ... as public education. Nick, this book is a major step in that direction, as have been your previous books! Well done!

## David Lawson's Investigation Into Organized Stalking

This page updated January 19, 2008

---

[Click to read review 000\\_005:](#)

OK applies ONLY to Lawson's OBSERVATIONS  
and NOT his conclusions  
Review posted November 23, 2008

[Click here](#) to see the 5-minute video from which the "watcher" image above was taken.

American private investigator David Lawson spent approximately 12 years investigating stalking groups in the United States and Canada, mainly in the 1990s. He wrote about his experiences "riding with" these networked community harassment groups in two books.

The first, released in 2001, was:

**Terrorist Stalking in America**

ISBN: 0-9703092-0-1

That book is now out of print. Lawson then produced an updated book on the same subject in March 2007:

**Cause Stalking**

ISBN-13: 978-0-9703092-3-5

While group harassment in the workplace is fairly common, and well documented in this book:

**Mobbing: Emotional Abuse in the American Workplace**

By Dr. Noa Davenport, Ruth Distler Schwartz, Gail Pursell Elliott

Copyright 1999

ISBN 0-9671803-0-9

... the community-based counterpart, organized stalking, is not well known to the average member of the public. This paper is to share some of David Lawson's findings so the reader can begin to grasp what appears to be a relatively new type of crime. So new, in fact, that targets of organized stalking have great difficulty getting law enforcement officials to take it seriously.

Before sharing David Lawson's findings, it should be pointed out that Lawson's books contain two types of information: his **observations**, and his **conclusions**.

David Lawson's observations of the activities of the community organized stalking groups are a perfect match for the types of harassment reported by organized stalking targets. However, Lawson's conclusions as to who is mainly responsible are puzzling to targets who have read his books.

David Lawson claims that foreign terrorists and "anti-government" groups are responsible for the growing organized stalking crimes. Very few targets of organized stalking see evidence that Lawson's conclusions match the targets' experience. Lawson may have discovered those groups operating when he rode with the harassment groups, but anyone interested in finding the backers of local harassment groups would do well to suspend judgement on Lawson's conclusions.

Right up front, targets of organized stalking report that LIES circulated about the targets are what fuel local hatred for the targets. One of the favourite lies being circulated is that the target is a child molester. This is routinely used against female targets as well as targeted men.

Other lies are that the target has a serious criminal record, or is into the drug trade, or is a prostitute. So for those reading this paper who aren't familiar with organized stalking, keep in mind that the obvious answer to "Why would people harass targets who are nobodies?" ... is that once lies are circulated that the target is a major criminal, that target is no longer a "nobody."

As to why certain people are chosen as targets, targets' reports show that whistleblowers and activists are sometimes subjected to organized stalking as "punishment" for their activities. Other cases occur when a target is in line for a large inheritance, or has turned in a well-connected spouse for criminal activity such as pedophilia, or sometimes the target just "ticked off" someone who is well-connected to groups willing to do organized stalking.

According to David Lawson, some targets are simply chosen for 'practice.'

#### SELECTED QUOTES:

Quotes are from David Lawson's currently available book "Cause Stalking" except where noted from his original book, "Terrorist Stalking in America."

Author David Lawson did interview perpetrators, ("perps"), targetted people ("targets"), and the police. Here is what the author heard from the police he interviewed:

[pg 79] "I also spoke with a few police officers from across the country. They confirmed the existence of stalking groups across the country. In general, they said that 'cause stalking' is primarily a civil problem where the plaintiff has to prove financial loss. They also said that there are free speech and grass roots issues involved. In fact, the police themselves are targets of these groups. In small towns, the number of members in these groups can easily exceed the number of police officers. In general, the police will not talk about stalking

groups. One officer did say there is a storm brewing as groups become larger and more numerous."

Author Lawson explains here how he got involved and began to interact with the 'cause stalking' perpetrators:

"One day, several years ago, I was sitting in my house, and checking out the activity on my scanner. I heard a woman say that she was following a certain vehicle. She gave the location, the make and model of the car and the license plate number. A few days later, I heard the same woman on the same frequency (84) request backup at a certain location. A few days after that I again heard her broadcasting the position and details about another vehicle she was following. I listened to other people talking on that frequency and they didn't give any indication that they were with any government agency but they were talking about arresting people."

"On another occasion, on the same business band frequency, I heard someone complain that an African American man was crossing the street. "All we could get him for is jaywalking" responded the leader. "Leave him for the police."

"People in the group would discuss where they would go for supper, after their shift was over, so I [the author] went too. I listened to a group of people openly discussing various activities as if they were the police.

"Real police officers were also sitting in the restaurant, listening to them. I later learned that their presence was not a coincidence.

"One man who had supper with the group drove a van marked with the call letters of a local AM radio station. I started listening to it. Most of the guests were people who said they had new revelations about Waco or Ruby Ridge, or had some inside story about government corruption. It is called hate radio. I also heard advertisements for the meetings of a local political group and I attended some.

"At the first meeting I attended, one young man flashed a phony police badge at me. No one paid any attention. Some of those in attendance were the people I had seen in the local restaurant. This was my introduction to the creepy world of anti-government extremists."

David Lawson goes on to explain that he has observed "extremist groups" for several years while living in New York State, Florida, and Canada. He monitored the stalking groups' public communications, attended meetings, and rode with them.

The author defines the basic reason for being for these citizen stalking groups as CAUSE STALKING. Cause stalking means the group is assembled, under a leader with a "shadowy past", for some specific cause.

"Cause stalking has been used by extremist groups since the early 1990s. The basic system is alleged to have been developed by the Ku Klux Klan and refined through years of use."

Some details about the typical cause stalking recruit:

"Recruits tend to be blue collar workers who are at the bottom end of the job scale. They are janitors in apartments, hotels, etc., who have keys to get in any locked doors. They are security guards, who can let fellow members into places where they would not normally be allowed to go. They are city workers, who can, in many cities, follow a target around all day in their vehicles or have a noisy project underway near his [target's] residence. They are taxi drivers, who are a network that is always on the road. They are cable, telephone and electric company employees who can interfere with a target's service and spend time on patrol with the group, while they are on the job."

Those are the author's words. Here are a few quotes from the perpetrators themselves, from the original book:

[From Terrorist Stalking in America] "We are like the police except we are ABOVE the police."

[From Terrorist Stalking in America] "We are a citizen's group that helps the police. We are trying to alert people in the area about this person [the target] before he gets to do what he did in the last place he lived." [Eleanor White talking: All the cause stalking targets I know well did not commit ANY offenses. The stalkers are filled with LIES by their leaders.]

[From Terrorist Stalking in America] "When I get the call, I go to whatever the address is. It doesn't matter what they [targets] do, they can never get away from us."

[From Terrorist Stalking in America] "Who are we? We drive the ambulances that take you to the emergency room. When your house is burning, we put out the fire. We are security guards. We protect you at night. You only have electricity, phone and cable service because of us. We are janitors. We have the keys. We fix your cars. You don't want to mess with us."

In "Cause Stalking", David Lawson provides some details about the motivations of stalking group members not in the first book:

- 25% follow the nominal "cause" they were recruited under
- 25% actually participate in the harassment
- 75% harass occasionally or not at all
- 10% join out of fear of being harassed themselves

That 10% joining out of fear of harassment is quite interesting, as one of the most difficult barriers to educating the general public about organized stalking is why anyone would volunteer to harass others.

Lawson describes recruits to these groups as "... those who feel powerless, inferior and angry." Common sense is that naturally, such people would be easy to recruit for street and adjacent to the target's home harassment, but I would comment that lots of professionals put

us (targets) down at every opportunity, declaring us mentally ill for even suggesting organized stalking is possible. These professionals don't "feel powerless, inferior, and angry."

And I doubt the many utility and city employees who participate feel "powerless, inferior, and angry" either. So while David Lawson has done a great job, some aspects of organized stalking have apparently escaped him.

One comment Lawson makes is that "Firemen across the country, and even some police officers, support these groups."

I have heard a number of reports that vehicular harassment has involved an above average number of vehicles that bear stickers of firefighters, or, a few targets have traced perpetrator identities to firemen. One target discovered that a number of vehicular harassment cars, identified by licence number, were parked in a police station parking lot.

My personal take on why some firemen and police might back these groups is that many have a heightened sense of community service. If they can be persuaded that the target has a criminal record, the worst case being that of a pedophile, it would be natural for firefighters and police to "help keep the target in line".

The author concludes, as explained at a number of places in the book, that the "cause" the typical group is "working toward" is mainly an excuse to get the groups together. The main motivation of members who stay with these groups is the sense of power and belonging the group members derive. Having a "cause" enhances the feelings of power and righteousness, but group members, according to the author, are most concerned with how their fellow group stalkers feel about their "work" and accept them.

Lawson explains the attitude of the typical stalking group member towards the "cause" this way:

"Most active group members have only a general idea of the ideology of the group but they don't particularly care."

These groups come into being and are run by leaders. Here is what the author says about them in this book, a bit different and more clearly, when compared with the [original book](#):

"Group leaders do have political goals and the belief that the end justifies the means."

Lawson describes leaders as considering their members "disposable."

Lawson states that some leaders work for corporations and politicians (original book didn't mention politicians.)

Lawson states that leaders identify targets but don't directly supervise the harassment group members.

Lawson describes leaders as having an "air of mystery", "having worked for the CIA, NSA, or some other intelligence agency that doesn't reveal

information about their employees." Lawson states that this "background" is likely mythology.

How about financing these groups?

Although the author states that the pay is low, there are still very large expenses to harass people as thoroughly as targets report. Here is an example of what I mean by "large expenses":

"Groups are well financed. They can afford to rent property wherever the target lives. If he drives across the country, he will be followed by supporters of similar groups in that area. If he travels by plane, group members will meet him wherever he lands in the U.S. They may even accompany him on a plane if they know his travel plan, and there is a good chance that they do."

Here is what the author learned about their financing:

[From Terrorist Stalking in America] "The operations of many extremist groups are actually financed by corporations which use them to stalk their enemies or potential enemies. The groups are used as the private armies of those corporations. Some countries kill dissidents and in others they are jailed. In the United States, someone who is threatening to corporations or industries, like a whistleblower or activist, is likely to become the target of an extremist group."

The author makes several statements that these criminal stalking groups not only harass targets specified by their leaders, but also are FOR HIRE - a kind of "revenge service" for those wealthy enough to hire them.

There are two distinct reasons why targets are harassed:

- The initial reason targets are placed on the stalking groups' "list"
- The reason the stalkers keep it up (always involves lies)

Those two reasons should always be kept separate in your mind, reader. David Lawson's focus is mainly on the reason the stalkers continue to harass targets.

David Lawson's chapter on Selection of Targets may well be true, but it certainly doesn't describe the thousands of people who don't fit his list of targeted categories. Here are some of the categories of targets Lawson records in "Cause Stalking":

- Abortion clinic workers
- People guilty of mistreatment of animals
- County clerks and local politicians
- Police officers
- Judges
- IRS and Treasury agents
- Civil rights activists
- Government or corporate whistleblowers

One thing David Lawson makes clear in describing the targets is that "The ultimate goal of the groups is to destroy the targets." Those who have been stalked by organized citizen groups which are fed lies report that these groups do destroy targets with great efficiency.

Next, let's look at some of the typical OPERATIONS these groups carry out. Here, I have retained a number of quotes from the original book because I feel they state the situation as well or better than the new book:

- The first step, after a target has been selected, is to establish a personality profile "... which will involve an assessment of IQ, personality type, and history."
- "A target may also notice being photographed."
- [From Terrorist Stalking in America] "The primary characteristic of cause stalking is that it is done by large groups of people. A target will always be followed, but he is unlikely to see the same stalkers very often." ...

[From Terrorist Stalking in America] "Many of these groups include hundreds of people."

- "Some authors refer to cause stalking as terrorist stalking. Groups do not just stalk individuals. They employ organized programs of harassment which include break-ins, property damage, assault and occasionally, even death. The children of a target are a favorite."
- [From Terrorist Stalking in America] "Firemen across the country, and even some police departments have a long history of supporting extremist groups. Fire trucks can sometimes be seen riding in extremist convoys, with their flashing lights turned on and their sirens screaming. They will also race to greet a convoy which is entering their town. The participation of firemen, city workers and utility company workers helps give group members an illusion of legitimacy and power."
- [From Terrorist Stalking in America] "City employees can be used to harass a target in many ways including tearing up the road in front of a target's home. Employees of pest control businesses who have access to the keys for apartments and those who work for alarm and locksmith companies are also of interest."
- [From Terrorist Stalking in America] "Groups also attack targets of convenience. These people are selected because they are convenient targets, and not for any other reason. These include loners who tend to be more vulnerable to their harassment tactics than those with family and friends around them. Targets of convenience are used for practice."
- [From Terrorist Stalking in America] "In order to establish bases of operation, they will enlist the assistance of neighbors. In many areas, they can do this by intimidation. Those who do not co-operate can be targetted, which includes harassment of their families and damage to their homes and vehicles."

"If they are dealing with individuals who do not know them, they can also appeal to their sense of patriotism and they can offer drugs, friendship, home repair, free taxi

rides and what ever else they have to. In some cases they may even be able to get a key to the residence from a 'patriotic' landlord."

- [From Terrorist Stalking in America] "Surveillance is conducted 24 hours a day, 7 days a week. When a target leaves his residence they will alert the group, either by cell phone or by business band radio. Other members, who are patrolling the perimeter to watch for police and other vehicles driving in the area, will race to the location to begin pursuit. In small towns, where business band radio is widely used, these activities are a local sport among a small group. Anyone with a scanner can join in. Some targets have reported hearing an announcement on their scanners as soon as they turn their lights on in the morning."
- [From Terrorist Stalking in America] "In a typical apartment setting, they will attempt to lease, sublet, or otherwise have access to apartments above, below, and on both sides of the target. They will also "guard" the vehicles of a target in the parking lot."

[From Terrorist Stalking in America] If [the target] flushes a toilet, he may hear a car horn honk, the sound of a power tool or hammering, for example. There will also be a large number of people coming and going, and accompanying rowdiness and noise."

- [From Terrorist Stalking in America] "A common ruse used by these groups is that they are a 'citizens group' which assists the police and they are 'just keeping track of' a certain individual, for whatever reason. The illusion is reinforced by the case files they carry which are complete with photos of the target and look like those used by police."
- "During a search [of the target's home or apartment] members who are on patrol anyway establish a perimeter around the residence to watch for police vehicles. In an apartment setting, entry will likely be gained through a member of the janitorial staff, pest control or alarm technician, since they have a right to enter. They may even be able to approach a landlord and gain his co-operation, after convincing him of their 'higher purpose'. He may also co-operate out of fear."
- [From Terrorist Stalking in America] "Others do not recognize that they are being harassed by an organized group. They just think that there are a lot of rude people in the world."
- "Interception of mail is standard practice." ... "Typically, targets notice that their mail is arriving late or they do not receive certain pieces of mail. They [targets] may overhear people at a nearby table in a restaurant talking about certain mail, and realize it is theirs, or someone may drive by [the target] waving their mail at them."
- "Interception of phone calls is also standard practice. This is done by telephone company employees who support the [stalking] group for ideological reasons or because they obtain some benefit." Eleanor White comment: I'd add to that one of the most likely reasons, because the phone technicians are told lies about targets."
- "An objective is to isolate the target from his family and friends. He can tell them about all the strange things happening around him, but they will not understand and perhaps will think he is crazy. Sometimes other members of the family will receive the same treatment."

- "When a target is driving, standard practice is to surround his vehicle and attempt to control his speed. He will not be followed in close proximity by the same vehicles for a long distance. They do frequent trade-offs. Vehicles line up behind the target to take their turn."

"In many parts of the country it is common to see groups of six to 30 or more vehicles driving around in convoys with their high beams on during the day. This is one of the ways a convoy can be identified."

- "Standard practice is to watch the target's vehicles and this subjects them to damage including slashed tires, scratched paint, stolen license plates, etc. Typically they would not cut the brake lines on vehicles or commit other similar acts of sabotage, but they would drain the oil or antifreeze over a period of time."
- [From Terrorist Stalking in America] "A target will be followed on foot wherever he goes. Anyone can go to the same public places he goes, and they will attempt to get into any other restricted places he goes, including hospitals, places of employment, etc. It has been said that it is possible to go nearly anywhere if you have a clipboard in your hand and it is almost true. They also like to wear name badges on a lanyard, and some carry phony police badges."
- [From Terrorist Stalking in America] "Common harassment tactics used by those on foot include pen clicking, in which they repeatedly click a ball point pen, key rattling, and rattling change in their pockets while standing behind the target. Many tactics are tried and the result is observed. Those which evoke a response from the target are repeated. When a target sits anywhere in public, group members will attempt to sit behind him in order to create noise, by whatever means, including tapping their feet on the target's chair. The objective is to harass the target constantly."
- [From Terrorist Stalking in America] "Groups attempt to interfere with any business and personal relationships which the target has. Typically, this interference involves character assassination from some anonymous individual and is not usually taken seriously by those who know the target. It can be effective with people who don't know the target."
- "At work, the target will also experience character assassination. If he works in any position where he has to deal with the public, there will be a steady stream of customers who complain about him. If he is a real estate agent, he will have a steady stream of prospects who occupy his time but never make an offer."

Let me, Eleanor White, give you an example of how brutal and serious this "character assassination" can be.

One of our members, who prefers to remain anonymous, moved in with her husband and children to a house which, unknown to them, had been a methamphetamine lab. The chemicals used to brew meth apparently cause distinctive symptoms in the mouth. This family's dentist felt he was "helping law enforcement" by reporting them to local law enforcement as meth users. This was absolutely untrue, but the family didn't even know the report had been made and had no way to correct it. (In fact, in some places, dentists are REQUIRED to report suspected cases of meth use.)

Law enforcement in that area was apparently tied in to the citizen groups, and the family was harassed for many years. The husband died, apparently from exposure to these chemicals.

The lady, now a grandmother, steadfastly did detective work and eventually found out about her family's reputation, with some help from a policeman who was a personal friend, from a different jurisdiction. This policeman admitted off the record that "meth mouth" can result in people being submitted to citizen harassment groups for harassment.

Character assassination is complete, and has life-destroying consequences!

- "A common tactic use by groups is noise campaigns. Group members will drive by the target's residence or work place, honking their horns, squealing tires, and making whatever other noise they can."

"They will also make noise from whatever nearby properties they have access to. Typically, they will make noise when the target goes outside. Group members will also frequently knock on his door for whatever peculiar reasons they can dream up."

- "In an apartment setting, targets can expect to hear tapping on the walls in the middle of the night, hammering etc. from the upper and/or lower apartments, and possibly the apartments on both sides. They will continue to 'work' on these activities for as long as they can get away with them."
- [From Terrorist Stalking in America] "... It is not uncommon, in an apartment setting, for a target to hear someone moving from room to room as he does, from the upper or lower apartment. [Eleanor White talking: This requires commercial through wall radar or more advanced technology in many cases.]
- "Often they occupy a nearby apartment, part time, when the owner is not there and he receives some benefit. A target may notice someone leaving a nearby apartment when he leaves his, and arrive when he arrives. In addition, he will often be accompanied in elevators by a steady stream of different individuals who go to the apartments being used by the group."

What about the future, then? Let me close this review with a chilling quote from David Lawson's first book, Terrorist Stalking in America, reporting what the author learned from some of the leaders:

"The leaders ... are starting to balk at exposing their members to arrest for activities which amount to little gain for the movement. they say that anyone who is a target should be killed, and not just harassed for years."

Eleanor White

Victor Frankenstein surgically fathered the famous fictional monster, but the fiend was conceptually mothered if not physically spawned by electricity in the form of lightning from the heavens. Perhaps unwittingly, perhaps intuitively, author Mary Shelley (1831) touched a deep truth in the maternal metaphor: Life did originate from electrical discharges into the primeval fog. Indeed, life continues to preserve in all of its earthly forms from the most primitive cell to the most complex organism an elemental dependence on electrical phenomena. Understandably, the curiosity of the scientist about the electrobiological goings-on of the earth's flora and fauna is shared by the layman. A large popular literature is accumulating and embraces experiments and anecdotes that range from the ostensibly respectable to the seemingly bizarre. Recently published texts by Tompkins and Bird (1973) and by Burr (1972, 1973) are not only exemplars of the literature but are rich sources of reference materials. One reads, for example, that plants have nervous systems that yield differing electrical signals on "stimulation" by *kind* or *malevolent thoughts* of human beings (Backster, 1968). One also reads that many Soviet scientists are giving credence and careful study to ESP and related phenomena, not in defiance of Marxian dictates of materialism but quite in keeping with them. The Soviets are championing earlier theoretical notions of Georges Lakhovsky (1934) to the effect that each plant or animal cell is an oscillatory system capable of transmitting and receiving high-frequency electromagnetic energy over a distance. While affirming that electrical events are

This article is based on materials presented in a seminar to the faculties of Psychology and Engineering at the University of Utah (Salt Lake City, Utah) on August 21, 1974. The author's research program is supported by the Veterans Administration and by U.S. Public Health Service Grant FD00650. Acknowledged in the preparation of the manuscript are E. L. Wike and C. L. Sheridan, for a critical reading; Kay Wahl, for artwork; and Lynn Bruetsch and Virginia Florez, for typing. I also thank John Osepchuk of the Raytheon Corporation for his searching criticism of the manuscript; our opinions differ, his advice is appreciated.

## Microwaves and Behavior

DON R. JUSTESEN

Laboratories of  
Experimental Neuropsychology,  
Veterans Administration Hospital,  
Kansas City, Missouri

Above image shows the start of the article, with the very important statement about the August 1974 public announcement of the successful transmission of pulsed microwave voice to skull at the University of Utah.

water, for example, in carbon-impregnated plastic and in crumpled sheets of aluminum foil. Even subjects who cannot hear microwaves when directly radiated by them can readily perceive clicking sounds when a piece of energy-absorbing material is interposed between the head and a radiator of pulsed microwave energy. Oddly enough, the mass of the interposed material does not seem to be too critical; I successively used smaller and smaller pieces of material as sonic transducers until it was necessary to impale tiny pieces on a toothpick, yet the clicking sounds induced in the material by microwave pulses were clearly audible to me.

The demonstration of sonic transduction of microwave energy by materials lacking in water lessens the likelihood that a thermohydraulic principle is operating in human perception of the energy. Nonetheless, some form of thermoacoustic transduction probably underlies perception. If so, it is clear that simple heating as such is not a sufficient basis for the Frey effect; the requirement for pulsing of radiations appears to implicate a thermodynamic principle. Frey and Messenger (1973) demonstrated and Guy, Chou, Lin, and Christensen (1975) confirmed that a microwave pulse with a slow rise time is ineffective in producing an auditory response; only if the rise time is short, resulting in effect in a square wave with respect to the leading edge of the envelope of radiated radio-frequency energy, does the auditory response occur. Thus, the rate of change (the first derivative) of the wave form of the pulse is a critical factor in perception. Given a thermodynamic interpretation, it would follow that information can be encoded in the energy and "communicated" to the "listener." Communication has in fact been demonstrated. A. Guy (Note 1), a skilled telegrapher, arranged for his father, a retired railroad telegrapher, to operate a key, each closure and opening of which resulted in radiation of a pulse of microwave energy. By directing the radiations at his own head, complex messages via the Continental Morse Code were readily received by Guy. Sharp and Grove (Note 2) found that appropriate modulation of microwave energy can result in direct "wireless" and "receiverless" communication of speech. They recorded by voice on tape each of the single-syllable words for digits between 1 and 10. The electrical sine-wave analogs of each word were then processed so that each time a sine wave crossed zero reference in the negative direction, a brief pulse of microwave energy was trig-

gered. By radiating themselves with these "voice-modulated" microwaves, Sharp and Grove were readily able to hear, identify, and distinguish among the 9 words. The sounds heard were not unlike those emitted by persons with artificial larynxes. Communication of more complex words and of sentences was not attempted because the averaged densities of energy required to transmit longer messages would approach the current 10 mW/cm<sup>2</sup> limit of safe exposure. The capability of communicating directly with a human being by "receiverless radio" has obvious potentialities both within and without the clinic. But the hotly debated and unresolved question of how much microwave radiation a human being can safely be exposed to will probably forestall applications within the near future.

The U.S. limit of 10 mW/cm<sup>2</sup> is actually an order of magnitude below the density that many investigators believe to be near the threshold for thermal hazards (Schwan, 1970). There are two camps of investigators in the United States, however, who believe that the limit is not sufficiently stringent. In the first camp of conservatives are those who accept the Soviet's belief that there are hazardous effects unrelated to heating from chronic exposures to fields of low density (< 1 mW/cm<sup>2</sup>): some agree with Milton Zaret (1974), a New York ophthalmologist, who holds that severely debilitating subcapsular lesions of the eyes may develop years, even decades, after exposure to weak microwave fields. Others tend to reject the notion that weak microwave fields produce this anomalous cataract, because of lack of substantiating evidence from the clinic or the laboratory (Appleton & Hirsch, 1975). But these conservatives are possessed of a vague unease simply because the Soviet's limit of continuous permissible exposure is three orders of magnitude below that of the United States.<sup>3</sup>

The other camp of conservatives tends to reject the possibility of hazardous nonthermal effects,

<sup>3</sup> The Soviet's exposure limit of 10  $\mu$ W/cm<sup>2</sup> is three orders of magnitude below the exposure limit in the United States, but a different, that is, *emission*, limit holds for microwave ovens purchased for use in the American kitchen. In the United States at the present time, a newly purchased microwave oven may not emit radiation at a density greater than 5 mW/cm<sup>2</sup> as measured at a distance of 5 cm from the oven's surface. A user who stands 1 m from an oven that emits energy at the maximum permissible quantity would probably be exposed to a density of only a few microwatts per square centimeter—this is because electromagnetic energy when radiated from a point source attenuates markedly as it propagates through space.

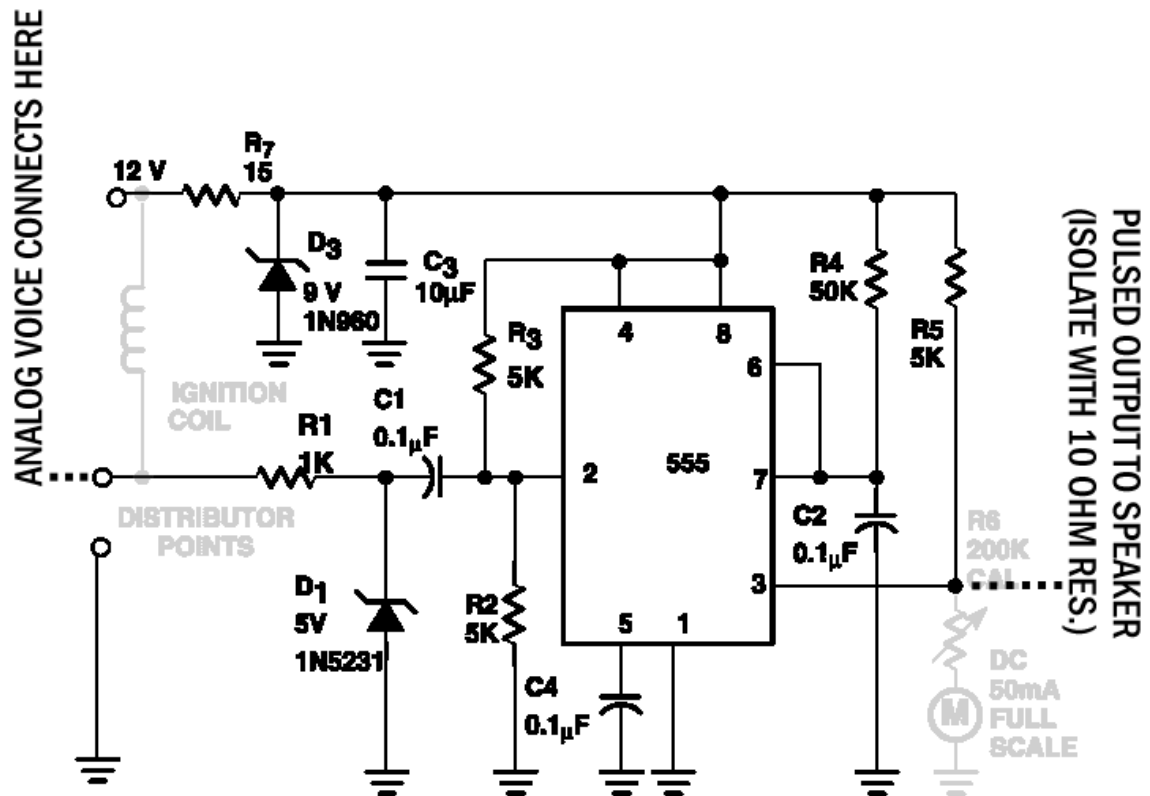

Above image gives the description of the successful modulation. Note that the fidelity of current-day voice to skull transmission is much higher after three-plus decades of apparent development.

VOICE CONVERSION TO PULSES, AS USED IN THE SUCCESSFUL DEMONSTRATION OF MICROAVE VOICE-TO-SKULL TECHNOLOGY IN 1973 BY DR. JOSEPH SHARP. THIS IS NOT CLASSIFIED.

Above image illustrates the modulation method used by Dr. Joseph Sharp for the first known successful transmission of voice to skull using pulsed microwave. No implants are required for this form of V2S transmission, and this form of transmission will penetrate non-conducting walls. Image below shows a simple circuit which can duplicate Sharp's modulation method.

### USING A 555 CHIP TACHOMETER DRIVER CIRCUIT TO SIMULATE DR. JOSEPH SHARP'S MICROWAVE VOICE TO SKULL VOICE-TO-PULSES CONVERSION METHOD

Above image shows a simple 555 timer chip circuit which can duplicate Joseph Sharp's original modulation method. When output to a loudspeaker, voice and music are recognizable.

AP Article: To some psychiatric patients, life seems like TV

WEB SITE:

[http://news.yahoo.com/s/ap/20081124/ap\\_on\\_re\\_us/truman\\_syndrome](http://news.yahoo.com/s/ap/20081124/ap_on_re_us/truman_syndrome)

\*\* Full text of the article follows here below my signature.

A medical diagnosis should follow the basic scientific method:

- make some observations
- propose a hypothesis (educated guess)
- test the hypothesis

Apparently, this article's referenced professionals prefer to dispense with those last two messy steps. They "just know" that organized stalking and electronic harassment (OS/EH) are silly nonsense, Clearly delusional.

Wouldn't it be nice, if these professionals actually TESTED their delusional hypothesis? As in, testing against REALITY?

By seeking out the long term targets who aren't so flustered they can barely put a sentence together (as new targets can be) and who have solid research materials on the crime of OS/EH, including relevant statistics, history, proven available and workable technology, and investigation of the organized stalking groups?

Wouldn't that be nice? And scientific?

(See: <http://www.raven1.net/proventechs.htm>)

Wouldn't it be nice, too, if professionals who expound on the crime of organized stalking and electronic harassment would consider that the seemingly mentally ill behaviour of some (not all) targets may actually be the NORMAL response by MENTALLY HEALTHY people to the external circumstances imposed on them by determined stalking groups?

How about saying that in print?

In this case, reporter Jennifer Peltz, it would have been nice just once if you'd asked psychologist Dr. Vaughan Bell, quoted in your article, if he considers ALL who report organized stalking as delusional.

Dr. Bell, in a recent private email, told me he that his psychiatrist colleagues do NOT, in fact, consider all who report organized stalking as delusional. Kind of nice to have a little "balance" in your articles, as they taught you in journalism school, right?

And by the way, Ms. Peltz, most who experience organized stalking do NOT believe they are in a genuine "Truman Show" scenario. They say organized stalking is LIKE the Truman Show, that's all. Kind of like the times you yourself have called a really nice experience "Heavenly."

Eleanor White

FULL TEXT OF ARTICLE:

To some psychiatric patients, life seems like TV

By JENNIFER PELTZ, Associated Press Writer Jennifer Peltz, Associated Press Writer -- Mon Nov 24, 6:36 pm ET

NEW YORK One man showed up at a federal building, asking for release from the reality show he was sure was being made of his life.

Another was convinced his every move was secretly being filmed for a TV contest. A third believed everything -- the news, his psychiatrists, the drugs they prescribed -- was part of a phony, stage-set world with him as the involuntary star, like the 1998 movie "The Truman Show."

Researchers have begun documenting what they dub the "Truman syndrome," a delusion afflicting people who are convinced that their lives are secretly playing out on a reality TV show. Scientists say the disorder underscores the influence pop culture can have on mental conditions.

"The question is really: Is this just a new twist on an old paranoid or grandiose delusion ... or is there sort of a perfect storm of the culture we're in, in which fame holds such high value?" said Dr. Joel Gold, a psychiatrist affiliated with New York's Bellevue Hospital.

Within a two-year period, Gold said he encountered five patients with delusions related to reality TV. Several of them specifically mentioned "The Truman Show."

Gold and his brother, a psychologist, started presenting their observations at medical schools in 2006. After word spread beyond medical circles this summer, they learned of about 50 more people with similar symptoms. The brothers are now working on a scholarly paper.

Meanwhile, researchers in London described a "Truman syndrome" patient in the British Journal of Psychiatry in August. The 26-year-old postman "had a sense the world was slightly unreal, as if he was the eponymous hero in the film," the researchers wrote.

The Oscar-nominated movie stars Jim Carrey as Truman Burbank. He leads a merrily uneventful life until he realizes his friends and family are actors, his seaside town is a TV soundstage and every moment of his life has been broadcast.

His struggle to sort out reality and illusion is heartwarming, but researchers say it's often horrifying for "Truman syndrome" patients.

A few take pride in their imagined celebrity, but many are deeply upset at what feels like an Orwellian invasion of privacy. The man profiled in the British journal was diagnosed with schizophrenia and is unable to work. One of Gold's patients planned to commit suicide if he couldn't leave his supposed reality show.

Delusions can be a symptom of various psychiatric illnesses, as well as neurological conditions such as Parkinson's and Alzheimer's diseases. Some drugs also can make people delusional.

It's not unusual for psychiatrists to see delusional patients who believe their relatives have been replaced by impostors or who think figures in their lives are taking on multiple disguises.

But "Truman" delusions are more sweeping, involving not just some associates but society at large, Gold said.

Delusions tend to be classified by broad categories, such as the belief

that one is being persecuted, but research has shown culture and technology can also affect them. Several recent studies have chronicled delusions entwined with the Internet such as a patient in Austria who believed she had become a walking webcam.

Reality television may help such patients convince themselves their experiences are plausible, according to the Austrian woman's psychiatrists, writing in the journal *Psychopathology* in 2004.

Ian Gold, a philosophy and psychology professor at McGill University in Montreal who has researched the matter with his brother, suggests reality TV and the Web, with their ability to make strangers into intimates, may compound psychological pressure on people who have underlying problems dealing with others.

That's not to say reality shows make healthy people delusional, "but, at the very least, it seems possible to me that people who would become ill are becoming ill quicker or in a different way," Ian Gold said.

Other researchers aren't convinced, but still find the "Truman syndrome" an interesting example of the connection between culture and mental health.

Vaughan Bell, a psychologist who has researched Internet-related delusions, said one of his own former patients believed he was in the virtual-reality universe portrayed in the 1999 blockbuster "The Matrix."

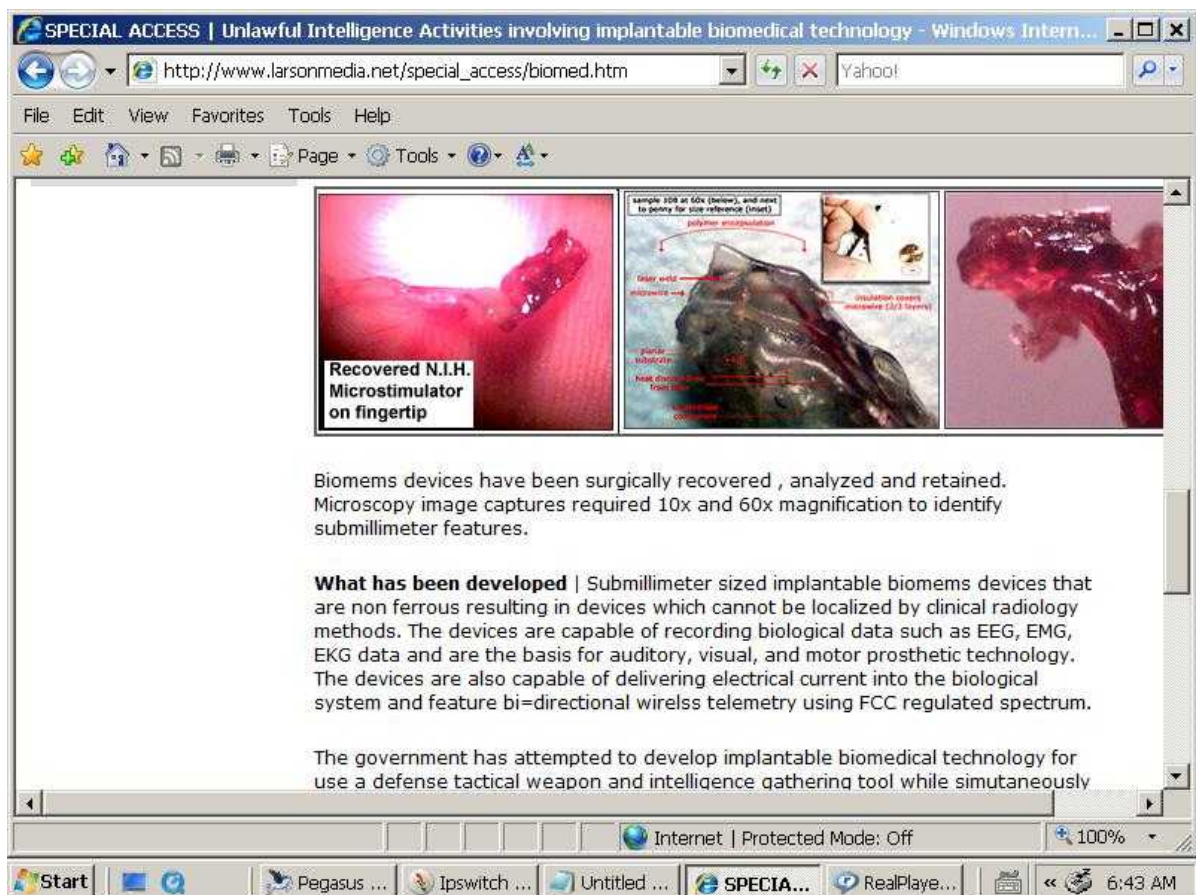

"I don't think that popular culture causes delusions," said Bell, who is affiliated with King's College London and the Universidad de Antioquia in Medellin, Colombia. "But I do think that it is only possible to fully understand delusions and psychosis in light of our wider culture."

Eleanor White rating: LOOKS OK  
November 26, 2008

WEB SITE:

[http://www.larsonmedia.net/special\\_access/biomed.htm](http://www.larsonmedia.net/special_access/biomed.htm)

ORIGINAL LARSON REPORT:

<http://www.raven1.net/lrr.pdf>

Officially recognized involuntary implantee David Larson's business site, specifically his section on his efforts to expose the practice of illegal covert implantation of patients, involuntarily, with monitoring and control electronic implants.

The LOOKS OK rating applies to both his business site's biomed page and his original report.

EW: The "LOOKS OK" rating was set up for cases where an article has a substantial component of personal testimonial, where the reviewer doesn't have the resources to thoroughly investigate all the claims. The "LOOKS OK" rating means the reviewer finds no obvious bogus claims, and recommends it to journalists as a "promising lead." Such leads should be checked further if a journalist decides to use the "LOOKS OK" leads for an article.

Re: IMPLANTATION of organized stalking and electronic harassment targets.

Many targets, especially those who are new to electronic harassment, come to believe strongly they are implanted. This is based on the common experience that the electronic harassment is not escapable by distance or location, with a very few exceptions.

Most targets have not had surgery just before the electronic harassment started, nor "missing time", unexplained wounds, or anomalous lumps on the body. More than that, harassment-capable technology has existed for as long as five decades which does NOT require implants in the body:

<http://www.raven1.net/proventechs.htm>

For these reasons, it is far from certain that implants are widely used in current day electronic harassment. There are only two confirmed implantees at time of writing, David Larson, and Robert Naeslund. Some MKULTRA targets have evidence of implantation which hasn't yet been confirmed by the mainstream medical system.

The reason I have posted this item relating to David Larson's implantation is that it is likely journalists will mention or even feature the implantation question in media articles. So it is important that journalists know that covert monitoring/control implantation has been proven beyond doubt in a small number of cases.

Eleanor White rating: NOT RELEVANT FOR OS/EH ACTIVISM  
November 26, 2008

WEB ARTICLE:

<http://www.globalresearch.ca/index.php?context=viewArticle&code=CHO20020104&articleId=205>

Washington's New World Order Weapons Have the Ability to  
Trigger Climate Change  
by Michel Chossudovsky  
Global Research, January 4, 2002

This article is one of many which describe the weather  
modification and military potential of the HAARP system.

("High-frequency Active Auroral Research Project.")

Articles about HAARP are not relevant to organized  
stalking and electronic harassment as experienced by  
targets of this crime. Comments explaining this  
follow.

This system comprises very high power transmitters in  
the high frequency, or "HF" or "shortwave" band which  
are oriented so as to transmit powerful signals in a  
fairly narrow beam, aimed at the atmosphere.

These shortwave signals can heat areas of the upper  
atmosphere, and can be reflected off the ionosphere for  
use in communications and ground penetration radar  
projects.

Heating the ionosphere, which is electrically conductive  
and is heated by the powerful shortwave signals, can  
affect weather.

Shortwave signals when modulated ("shaped") in ways which  
affect the brain and body can theoretically affect people  
at ground level in the reflected signal. But HAARP's  
"beam" is not sharply focussed, as say a laser is. It  
spreads as it travels.

"HF" or shortwave signals are fairly low on the radio  
spectrum, and low frequency signals don't stay in a  
collimated beam, as signals in the high end of the  
microwave region can.

The ionosphere isn't a perfect shiny mirror either, and  
further spreading occurs in the reflected signal.

The end result is that if HAARP were used to cause mind  
and body effects on people, it would affect many square  
miles.

Electronic harassment targets, by contrast. experience  
EXTREMELY localized effects from the electronic assault  
equipment. Sometimes people nearby can feel something, but  
in other times and places, even someone embracing a target  
feels nothing when the target reports being attacked.

Furthermore, there has been no demonstration of a HAARP  
signal causing mind/body effects published by a mainstream  
source, under their name and logo.

Bottom line, HAARP's operating characteristics just don't match, at all, the surgically precise attacks reported by targets of organized stalking and electronic harassment.

For ACTIVISM PURPOSES, it is not correct to refer to HAARP as an electronic harassment weapon. For activism purposes, any article on HAARP is BOGUS, even though all the information about HAARP in the article may be correct. It's just not relevant.

Unless a demonstration of HAARP creating electronic harassment effects on one individual while people nearby are not affected surfaces, I advise not bringing HAARP into an electronic harassment conversation or printed item.

Eleanor White (READ BELOW)

The EFFECTS ON THE BODY of various radio signals are valid for activism materials. Books and articles on HAARP do have references to mainstream documents which describe effects of radio signals on the human body and mind. Activists should go directly to those referenced documents and use THEM as sources, rather than using books or articles about HAARP.

There is a huge number of articles about the effects of radio signals on the body. Activists should be VERY choosy about which ones to use in their materials. Choose only articles which have a short, plain language statement of how a given signal is FELT by someone in line with the signal, and be sure that the experience is very close to what electronic harassment targets report.

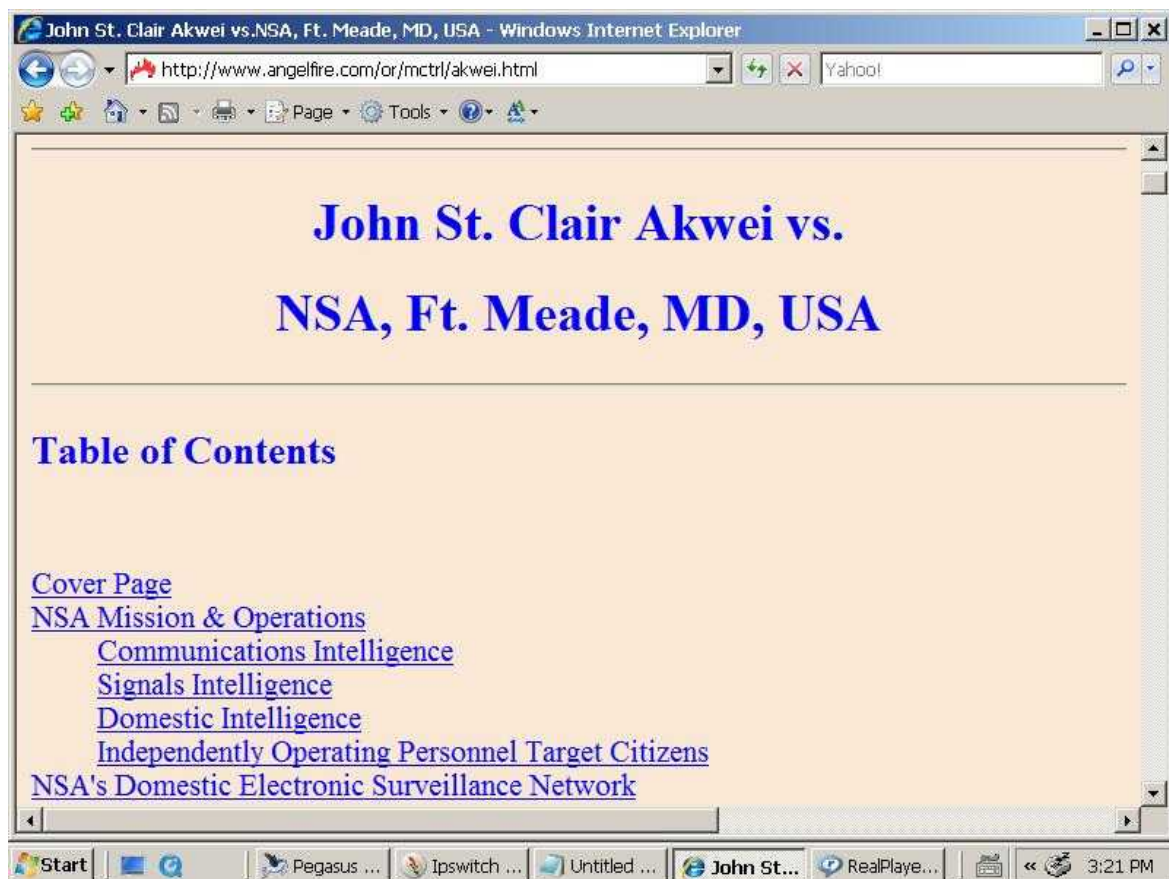

Just rattling on and on about how a radio signal, maybe, "interferes with calcium channel activity in neurons" would be of no use because the average person has no idea what interference with their "calcium channel" feels like.

Eleanor White rating: OPINION ONLY  
November 26, 2008

WEB SITE:

<http://www.angelfire.com/or/mctrl/akwei.html>

John St. Clair Akwei vs.  
NSA, Ft. Meade, MD, USA

There are two documents written by alleged former American National Security Agency (NSA) employees. John St. Clair Akwei is one seen circulating on the Internet, and William Filer is the other.

Many targets assume that because John Akwei sued the NSA about his electronic harassment, having his case heard by a federal court makes everything in his submission and subsequent postings fact.

Unfortunately, no transcript of the case has been made available and apparently John Akwei is no longer communicating with the organized stalking/electronic harassment community. We have no official record of the outcome of John's legal action.

While the information in his court submission may all be true, we are required to treat his words as expressions of his OPINION.

He lists some books on the topic of electromagnetic fields and how they interact with the body. If those books provide useful evidence, they should be cited directly in activism speaking or writing. That means read the books and copy the quotes from the books, instead of referencing John Akwei's court submission.

The accuracy of those books isn't what this review is about. This review is about the personal written submission to the court by John Akwei.

Again: John Akwei's words, submitted to court, with no transcript or documented favourable decision by the court, can only be offered as his opinion at this time.

Christians Against Mental Slavery, science page  
Webmaster: John Allman

Contributor: John McMurtrey, MS

I have known John Allman and John McMurtrey for some years now. Both are educated in basic science, and both are keen on providing rigorous, well-documented scientific papers to back up the reports of targets experiencing electronic harassment. This Science page is a dependable source of information.

\* However, for electronic harassment targets, I urge them to avoid simply "throwing links to these papers" at non-targets for activism purposes, especially first contact purposes.

The reason is that long, dense, rigorous scientific papers are not appealing to casual observers, and are not likely to be read by non-targets very often. There are other technology articles, much shorter, designed for the short attention span of the general public, one of them being this one:

<http://www.raven1.net/proventechs.htm>

Apologies, John and John, but that's my opinion based on years of face to face discussions with non-targets.

However, AFTER a non-target develops an interest in whether targets' claims are possible, it's hard to beat John McMurtrey's well-researched articles.

Cheryl Welsh has campaigned against involuntary human experimentation, particularly the "mind control"

experimentation, for more than a decade. As of the date of this review, Cheryl isn't engaging in high profile activism, but she maintains this excellent web site for the human experimentation/mind control arena.

Cheryl's approach is to acquire and post as much official information as possible, and journalists who wish to focus on the human experimentation and mind control aspects of the crime of organized stalking and electronic harassment (OS/EH) would do well to scan this site.

(Credibility rating applies to the accuracy with which Gloria Naylor portrays the experiences of targets of organized stalking and electronic harassment.)

Review posted November 27, 2008

Eleanor White rating: OK  
November 27, 2008

BOOK: <http://www.multistalkervictims.org/1996review.htm>

Title: 1996

Author: Gloria Naylor, novelist and target

The OK rating for this book applies to the accuracy of Gloria Naylor's description of the experience of being an organized stalking/electronic harassment target. She blended her own true experiences with her speculation as to activities of the perpetrators in hiding, and the appearances and characteristics of the weapons.

Her book cannot be used to prove the existence of any particular weapon or what electronic weapons may look like.

Ms. Naylor's writing skills make this book an excellent read for people who know little or nothing about the crime of organized stalking and electronic harassment.

Eleanor White rating: NEEDS INDEPENDENT VERIFICATION  
and DISTRACTS

November 28, 2008

WEB SITE: <http://www.exoticwarfare.org>

The photo in the screen shot says "you breathe nanomachines that receive microwaves."

This reviewer can't prove or disprove that, but it is such a potentially fear-inducing statement that I suggest it should be accompanied by an article from a mainstream organization in which the mainstream organization staff refer to the Morgellons fibers as "nanomachines that receive microwaves."

There is a link to Cliff Carnicom's chemtrail web site there, but my suggestion would be to show an actual scan or screen shot excerpt from a mainstream organization's document. Cliff Carnicom's site and research are too extensive, in my view, to make that adequate backup for such a strong statement.

I suggest this kind of material not only needs verification, but that the "shouting" style of the site, WHILE IT IS JUSTIFIED by the crimes being referenced, is likely to turn off journalists and non-targets. For that reason I give the "distracts" rating as well.

Keep in mind that my purpose is to show the non-target world, especially journalists and officials, that we are serious about credibility. With these ratings I'm sharing the lessons I've learned in my 12 years as an activist.

I, too, have posted sites which distract and show material requiring independent verification, so I'm not talking down to this webmaster.

Norma Lawrence's style, as shown on her site:

<http://www.catchcanada.org>

... shows that a toned-down approach is much more likely to engage the interest of non-targets. Her site actually helped to convince a few hostile family members and doctors. I saw how her excellent calm, rational materials worked with staffers of crisis support groups who were unaware of organized stalking and electronic harassment.

Please understand this review is intended to be constructive.

Review posted November 29, 2008

Eleanor White rating: NEEDS INDEPENDENT VERIFICATION  
November 29, 2008

WEB SITE: <http://www.surveillanceissues.com>

I have rated this site's cover page as NEEDS INDEPENDENT VERIFICATION because of a number of statements presented as fact which this reviewer is unaware have been demonstrated, and the demonstration created one of the

actual types of electronic assault targets of organized stalking and electronic harassment (OS/EH) experience, and the demo was published by a mainstream organization under their name and logo.

It is not uncommon to find claims which fail on one of the three points above stated as fact. This reviewer hopes that webmasters making such claims will consider either furnishing relevant mainstream demonstration articles, or, re-word the claims as their personal opinions.

Here are some of the quotes from that page, and my comments:

"Electromagnetic sensors (incl. brain wave sensors)"

While there are indeed electromagnetic sensors using pickup coils or high-end microwave signals, these existing sensors do not work through walls, nor at next-door-neighbour distances.

"Anti personnel weapons - sonic and phasar weapons as well"

There are sonic weapons, however, to penetrate walls they are not going to be silent. And at power levels to affect a target through walls, they will produce noticeable effects for neighbours as well.

This reviewer is unaware of what "phasar" weapons are, therefore, some sort of mainstream article should be clickable from that word in order to state it as fact.

"Scalar wave weapons - (scalar waves emanate naturally from living organisms and the earth itself)."

This reviewer is not aware of any laboratory demonstration, published by a mainstream source, in which "scalar waves" have been detected and/or actually did something tangible. This is not to say scalars don't exist, but rather, an article from a mainstream source is needed in order to make such a statement as fact.

"Infrasound weapons - inducing various forms of illness from remote sources (Also used on dissidents in France)"

Infrasound signals produce a detectable audible signature, at least. I don't know at what power levels they produce various forms of illness, but I suspect the power level would be high enough that detection would not be that difficult. (A "woofer" speaker and oscilloscope would work.)

Some sort of mainstream documentation on such weapons should be provided in order to make that claim as a fact.

"Neurophones ..."

The Patrick Flanagan neurophones require contact

with the body to conduct sound to the hearing sense. They are not relevant to the at-a-distance, through wall technology used on OS/EH targets.

"... holographs and so on to disorientate the target ..."

Holograms may well exist in free space, i.e. not in a controlled place within hologram projection, however, to claim holographs as a fact, there should be a mainstream demonstration article of a holograph being created at a distance without projection hardware nearby.

"Brain wave monitors/analysers (remote sensing)."

Brain wave monitors to date (as far as I'm aware) have only been demonstrated at short distances. Brain waves are extremely weak to begin with, and other living things all transmit in the same narrow band of frequencies. A mainstream demo at next door neighbour distances which was able to pick out just the target's brain waves is required in order to state that as a fact.

" 'Over the horizon' technologies - These facilitate ground-based methods of harassment (eg The Alaskan HAARP project which bounces signals off the ionosphere).

HAARP facilities are powerful shortwave transmitters. They can NOT be focussed to hit a single person. At best HAARP signals will cover several square miles after being refracted in the ionosphere. Even at the source, the "beam" is several acres wide. Therefore, HAARP is not relevant to electronic harassment as experienced by OS/EH targets. There have been no mainstream reports of large numbers of people reporting electronic harassment symptoms.

"Today, the CIA, DIA (etc) use satellites and ground - based equipment to deliver verbal threats, deafening noise and propaganda; using neurophone technology."

As explained earlier, neurophone technology requires CONTACT with the body. The statement above is bogus.

"Anything from TV's/radio's appearing to operate when switched off through to 'Voices from God' and encounters with 'telepathic' aliens are all cons using neurophone technologies to torment,..."

As explained earlier, neurophone technology requires CONTACT with the body. The statement above is bogus.

"Methods and Systems of Altering Consciousness:

US Patent # 5,123,844. June 23rd, 1992

US Patent # 5,289,438. February 22nd, 1994

These systems stimulate the brain with different frequencies and wave forms to alter the subject's state of consciousness."

Patents do not require a physical demonstration. Patents indicate patent office staff consider the idea will work and provide some benefit to society. In order to be

valid, the statement should read "These system MAY stimulate the brain ..."

"N.B. Similarly, EEG cloning feeds back the results of EMF monitoring in an attempt to induce emotional responses (e.g. fear, anger, even sleep etc.)."

This has not been demonstrated with the demo published by a mainstream organization under their name and logo. Therefore it cannot be stated as a fact.

There are more statements requiring independent verification on that page.

To journalists: Statements by webmasters which reach beyond supportable documentation are not uncommon. There is a very simple way to decide if a technology claim is a fact, for practical purposes. If a mainstream ORGANIZATION publishes an article describing a DEMONSTRATION, and the demonstration matches the electronic assault types being reported by targets, you can take that as a fact.

Do avoid accepting a demo which doesn't match the extremely PRECISE attacks experienced. A technology which affects people nearby is not a match for what targets experience, a good example being HAARP.

BOGUS FOR OS/EH RELEVANCE ONLY

[Review 000\\_017](#)

Review posted November 30, 2008

Eleanor White rating: BOGUS FOR OS/EH RELEVANCE ONLY  
November 30, 2008

WEB SITE: [\[long link\]](#)

ARTICLE: HAARP is a mass-murder weapon

Link as text:

<http://freepage-news.googlegroups.com/attach/8d3cb95e508bab3c/APFN+-+HAARP+is+a+mass-murder+weapon.html?view=1&hl=en>

The originators of the article are the "Peace in Space" folks. They provide good information for good purposes.

The problem with this article is that in subsequent incarnations, on the web, other posters have added the misleading title.

The article about HAARP having potential for triggering things like earthquakes may indeed be valid. Earthquakes do indeed kill many people. But HAARP itself has never been demonstrated to directly kill people as a result of transmitting its signal in the HF, ("high frequency",) or shortwave, radio band.

This misleading title has been picked up by some organized stalking and electronic harassment (OS/EH) bloggers, webmasters, and mass emailers, and sent out as some sort of "proof" that HAARP is a weapon which is used to directly electronically harass individual targets. That is simply not true.

This article also makes this statement:

"Scalar energy warfare against land and population targets, including cities, industrial sites, buildings, populations and individuals"

"Scalar" energy has not, to my knowledge, been demonstrated as having been detected and/or shown as actually doing something by a mainstream organization. Only when a mainstream organization publishes an article showing scalars actually doing something tangible, should "scalar" signals be stated as having weapons potential.

The rest of the article, speaking mainly about geophysical weapon potential, may or may not be accurate - that question is beyond the scope of these reviews.

Eleanor White (READ BELOW)

The EFFECTS ON THE BODY of various radio signals are valid for activism materials. Books and articles on HAARP do have references to mainstream documents which describe effects of radio signals on the human body and mind. Activists should go directly to those referenced documents and use THEM as sources, rather than using books or articles about HAARP.

There is a huge number of articles about the effects of radio signals on the body. Activists should be VERY choosy about which ones to use in their materials. Choose only articles which have a short, plain language statement of how a given signal is FELT by someone in line with the signal, and be sure that the experience is very close to what electronic harassment targets report.

Just rattling on and on about how a radio signal, maybe, "interferes with calcium channel activity in neurons" would be of no use because the average person has no idea what

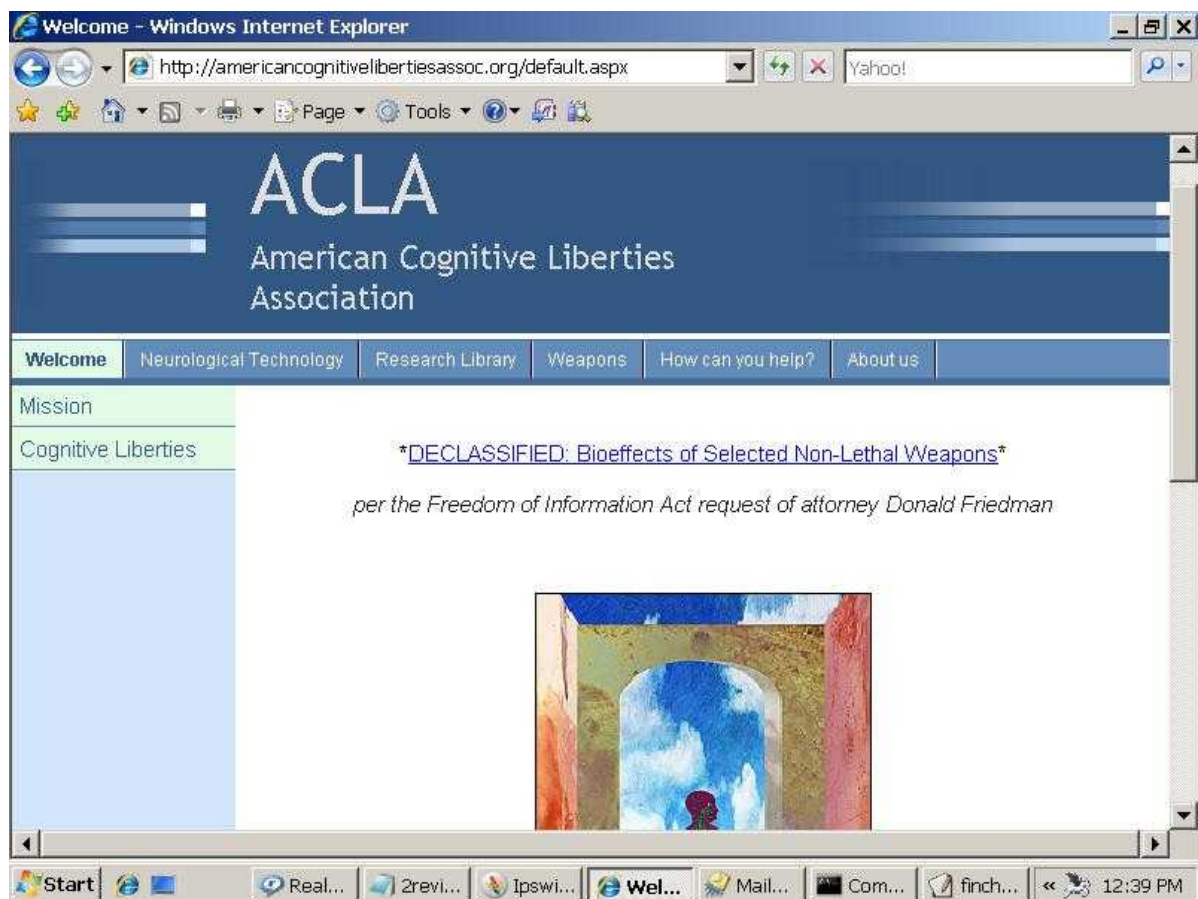

interference with their "calcium channel" feels like.

REVIEWER'S COMMENTS RE QUESTIONABLE QUOTES FROM WEB SITE:

Cover page: <http://www.us-government-torture.com>

... as viewed on November 30, 2008

"US government torture"

This reviewer is not aware of decisive evidence that the U.S. government is responsible for the torture applied to targets of organized stalking and electronic harassment (OS/EH).

It can be stated that all government entities at all levels parrot the same denial that OS/EH isn't happening and isn't even possible. To that extent, government is complicit.

People have been tortured in various ways under programs like MKULTRA and COINTELPRO, which occurred well after World War II and have been admitted to by the U.S. government.

So this reviewer is not claiming that U.S. government involvement is impossible, just that it can't be proven at this point in time and should not be stated as fact.

"Millions of Americans Implanted!"

Needs independent verification. To proclaim this loudly without courtroom quality evidence damages the credibility of the fight to expose and stop organized stalking and electronic harassment.

"To begin, first the author of this website and a few others have had the most advanced test done proving that they are in fact implanted with covertly installed devices emitting near lethal levels of radio and electric energy."

Needs independent verification. Who did the readings and where are the equipment and methods detailed? What power readings? "Near lethal levels" is a very strong statement. Near lethal levels of electromagnetic energy would produce considerable heating, and that much energy from a tiny implant hasn't been demonstrated to my knowledge.

As to electric energy, I'm taking that to mean lethal amounts of electric current, as in the electric chair. How was this reading made and where are the details?

Please provide contact information for the qualified expert who made the readings.

Numerous quotes claiming detailed knowledge of how implants are alleged to work.

This reviewer is not trained in biology, so I'm not commenting on the biological effects.

But what needs independent verification is how the author of this site knows the actual details of all the alleged implants he claims afflict millions of Americans.

"Techie" page: <http://www.us-government-torture.com>  
... as viewed on November 30, 2008

U.S. patent 3,612,211 showing a method of remotely producing infrasound, which is sound of too low a frequency to be heard.

The method illustrated is to use a pair of higher frequency transducers (used as special purpose loudspeakers in this application), which could send fairly compact beams for a hundred feet or so using ultrasound, and which would then mix at a point where they encountered a solid surface.

There are systems for transmitting audible sound this way, which is like ventriloquism, one being the "Acoustic Spotlight" by Holosonics Inc., the other being "HyperSonic Sound" by American Technologies Corp.

This system conveys infrasound the same way.

There is a very practical problem which gives me some doubt as to how effective this method of transmitting infrasound would be in re-creating the experiences reported by targets of electronic harassment.

The two transducers would have to use ultrasound because the effects targets hear are usually silent - not noticed by neighbours. Audible sound "beams" would be heard.

But ultrasound is very muffled by walls or even closed windows. Any beam-like coherence is lost, and a great deal of power is lost. So using this system on a target in their home would result in the infrasound being dumped into the outside air, without too much penetration into the target's space.

If the power level were high enough to affect the target, it would also affect neighbours and their animals. This is not the experience reported by targets.

So any claim that this patent is usable as a weapon to re-create effects reported by targets, in this reviewer's opinion, requires independent verification.

U.S. patent 5,864,517 showing a method of producing pulsed shock waves.

Shock waves are very loud. Shock waves are the result of explosions and the use of firearms. The effects targets experience are typically silent, so this patent does not seem relevant to electronic harassment.

U.S. patent 6,011,991 showing a method of transmitting brain waves to a remote location.

The diagram with this patent shows a subject's head with contact electrodes connected to an EEG machine. The EEG data is then transmitted up to a satellite.

This patent is not relevant to targets' claims their minds

are being read, because it requires an EEG machine connected to the target.

U.S. patent 3,951,134 showing a method of remotely detecting the brain wave activity of a person.

This patent shows an electromagnetic signal aimed at a subject's head, with a receiver picking up reflected signal and recovering the EEG activity from the reflected signal.

Patents show that Patent Office staff consider the idea as having potential benefit to society. Patents do not require physical demonstrations, even though some may include references to a demonstration in the application.

This is an important point for journalists to consider: A patent is very strong evidence of INTENT. To that extent, patents are definitely worth including in stories. But if a patent is not accompanied by a demonstration, documented by a mainstream organization under their name and logo, it can't be stated that a given technology exists and works.

U.S. patent 5,973,999 showing an "acoustic cannon."

An acoustic cannon produces shockwaves. Shock waves are loud, not silent. Electronic harassment is typically silent, therefore this type of patent is not relevant to the electronic harassment arena.

**\*\* APPLIES TO MANY MARSHALL THOMAS LINKS \*\***  
(Do a web search on "Marshall Thomas" MONARCH)

Review posted November 30, 2008

Eleanor White rating: BOGUS  
November 30, 2008

WEB SITE: VARIOUS (Do a web search on "Marshall Thomas" MONARCH)

The top screen shot shows a diagram from my own raven1.net web site pointing out some of the common effects on the body experienced by targets of electronic harassment.

(The other half of the crime which ruins a target's life is organized stalking.)

\*\* NEITHER \*\* organized stalking nor electronic harassment (OS/EH) have the SLIGHTEST connection with the alleged government program called "MONARCH."

Yet, Marshall Thomas, having been informed regularly of this disconnect, continues a thriving "cottage industry" peddling "MONARCH" tee shirts, "MONARCH" videos, and "MONARCH" books in/on which he mixes information about OS/EH.

The alleged program name MONARCH originated with the very real, absolutely proven beyond doubt, community of U.S. government torture survivors who went through MKULTRA (the parts not made public yet) and other "mind control" programs. "MONARCH" has not been acknowledged by government as a genuine program name.

More to the point, "MONARCH" is allegedly the practice of taking young children and brutally torturing them to force them to develop multiple personalities. People with multiple personalities are easy to hypnotize under one personality to commit crimes which

the other personalities will be unaware of.

Organized stalking and electronic harassment does NOT include the taking of children into physical captivity and torturing them to produce multiple personalities. Marshall Thomas' attempts to blur the line between a not-proven program of physical child torture with organized stalking and electronic harassment can seriously damage the credibility of OS/EH targets.

Marshall Thomas' excuse is that some (alleged) MONARCH survivors ALSO get OS/EH. That is like saying because some robbers have blue eyes, that robbery and blue eyes are related.

Journalists and officials are urged to IGNORE these materials as they are sending a BOGUS message.

Review posted December 1, 2008

Eleanor White rating: OPINION ONLY  
December 1, 2008

WEB SITE: <http://iamatorturevictim.blogspot.com>

ITEM IN QUESTION: Photo and statement by (? - not totally sure if the statement was his) David Hambling claiming "telepathic ray guns" vaporized his running shoes? It

looks as if maybe Hambling's article about voice to skull was the source of "telepathic ray guns," while another poster to this blog may have linked the damaged shoes to the "ray gun" headline.

\*\* Dec 11/08: Found the original article link:

<http://blog.wired.com/defense/2008/03/shoe-zapping-ra.html>

First, we do have solid evidence that using a modified radar signal, it is possible to transmit voice into the hearing sense of a target using a pulsed microwave transmitter. See review #6 on this site for the source material on that.

A voice to skull transmitter could conceivably be called a "telepathic ray gun", although, considerable power is needed to transmit voice to skull, and the device using that technology would be much larger than a "gun."

It's possible, too, that such a powerful microwave transmitter, set to stream a continuous signal, might be able to heat a running shoe to the point where it melted. (Since rubber doesn't usually conduct, it would require a very powerful signal.)

Perhaps this is what the poster of the damaged shoes had in mind, I don't know.

But this page is about the CREDIBILITY of what we post.

Most non-targets are blissfully unaware that pulsed microwave voice to skull technology has not only been successfully demonstrated, but that it appeared in a mainstream publication, hence it has been available to the public for over three decades.

So in that environment, one DOES NOT post phrases like "telepathic ray gun" if one wants serious FIRST CONTACT attention of the public, journalists, and officials(!) Again: FIRST CONTACT. Later on, once a listener or reader expresses interest, a phrase like "telepathic ray gun" is probably OK. But not on FIRST CONTACT material.

Instead, I'd suggest something like "Did a microwave transmitter do this damage?" Then, within the article, it could be stated that microwave transmitters can be set to transmit voice to skull as well, and that such microwave transmitters "have been referred to as 'telepathic ray guns' by some writers."

That way you are going from the familiar to the more speculative in steps.

The best rating I can give this item is OPINION ONLY, since the poster does not actually know what caused the that damage to his running shoes. (If the poster's feet had severe burns which a doctor states could have come from a microwave signal, then such an opinion could be safely stated.)

Review posted December 4, 2008

Eleanor White rating: NEEDS INDEPENDENT VERIFICATION  
December 4, 2008

WEB SITE: <http://www-organizedcrimewaves.com>

PAGE: "Symptoms"

QUOTES FROM TEXT OF THIS PAGE (revised May 26, 2008):

PHYSICAL & MENTAL SYMPTOMS OF:

- Electronic Organized Mind Control Programming
- Targeted Directed Energy Weapons
- Cointelpro Gang Stalkings

EW general comment: There are many excellent descriptions of the attacks on this web site, but there are enough problematic assumptions that make review comments necessary. These problematic assumptions and review comments follow.

"Psychopathic torture experiments"

EW comment: "Experiments" seem logical to organized stalking/electronic harassment targets, because the U.S. government committed Hitler-level atrocities under experimental programs such as MKULTRA, from the late 1950s through the early 1970s.

However, at this point in time, we do NOT have evidence what is happening to us are "experiments." OS/EH has been happening for more than two decades, and is international in scope. To claim "experimentation" doesn't fit well with that. Also, by claiming "experimentation", the general public will feel they can "rest easy" because they would "never" be a part of any "experiment."

The term "experiment" brings to mind a SMALL group of subjects, not a vast international operation. This reviewer suggests "CRIME" is a far better term.

"Reading private thoughts then and broadcasting/advertising in the victims neighborhood or work place ADDING rumors and lies - !"

At time of review, there has been no documented case of thought reading other than at very close proximity, such as the throat pickup coils used to detect silently-said-to-self dialogue, thought-controlled computer games which require body contact, and various thought-controlled devices to aid paraplegics.

To proclaim that our minds are being read, whether true or not (possibly true by way of classified technology) damages credibility. Without a published mainstream demonstration of remote thought reading, journalists should regard the above statement as the webmaster's personal opinion.

"Frequent breakins and poisoning of food - !"

Frequent entry to targets' homes, cars, and workplaces while the target is absent does indeed happen, as evidenced by things moved out of place, things ripped or broken, cigarettes or pennies left around, and other sabotage of computers and appliances.

However "poisoning of food" remains not proven. We can say it is possible, but without laboratory proof, that should be labelled as the webmaster's opinion.

"Controlled dreams - !"

At first glance, non-targets are likely to think that is a fantasy. However, just think back to the times when you have

fallen asleep with a radio or TV going, and had the program modify a dream.

Through-wall voice to skull technology makes this fairly easy.

<http://www.raven1.net/proventechs.htm>

"Impotency caused by secret poisoning of the food by FBI and NSA secret spies"

Again - "poisoning of food" remains unproven.

And we do NOT have solid evidence that either FBI or NSA employees are carrying out the harassment operations. Such statements must be taken as personal opinion of the webmaster.

"Fake sounds such as alarm clock going off when it shouldn't, telephone ringing when there is no incoming call, knocking on the door but no one is there - !!!"

Easily done with through-wall voice to skull technology.

<http://www.raven1.net/proventechs.htm>

"Death and disease threats via internet messages from undercover FBI and NSA spies"

We have no conclusive proof that any of the harassment is being carried out by any specific entity, government or private. The harassers work very hard to keep their command structure hidden.

Statements accusing specific agencies should be regarded as the webmaster's opinion.

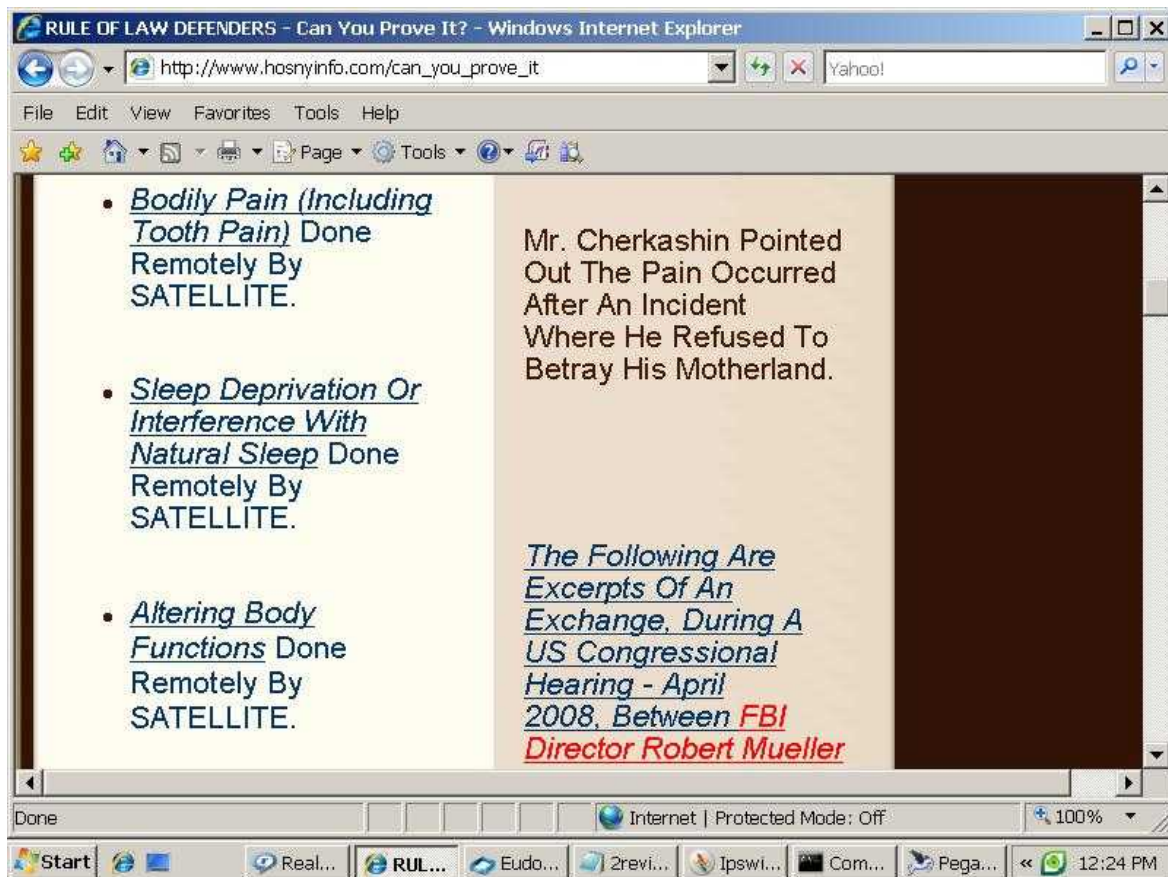

Eleanor White

Review posted December 4, 2008

Eleanor White rating: NEEDS INDEPENDENT VERIFICATION  
December 4, 2008

WEB SITE: [http://www.hosnyinfo.com/can\\_you\\_prove\\_it](http://www.hosnyinfo.com/can_you_prove_it)

PAGE: "Can you prove it?"

QUOTES FROM TEXT OF THIS PAGE:

"Bodily Pain (Including Tooth Pain)  
Done Remotely By SATELLITE."

"Sleep Deprivation Or Interference  
With Natural Sleep Done Remotely  
By SATELLITE."

"Altering Body Functions Done  
Remotely By SATELLITE."

EW comments:

1. Bodily pain of the sort caused by the military "area denial" or "skin heater" microwave beam is theoretically possible from satellite, but is yet to be demonstrated, and focussing on just a single person is questionable.
2. Sleep deprivation, using pulsed microwave as with a Lida machine set to entrain brain rhythm at a wide awake rate is theoretically possible from satellite, but is yet to be demonstrated, and focussing on just a single person is questionable.
3. Altering body functions, using various signal modulation envelopes may be possible from a satellite, and is yet to be demonstrated, and focussing on just a single person is questionable.

The standard of evidence required of targets of organized stalking and electronic harassment to date is that technology claims must be demonstrated, and the demonstration must be published in a mainstream source before journalists and officials will even begin to take OS/EH claims seriously. And even mainstream demonstrations have failed to convince officials in some encounters.

(Officials, when confronted with mainstream articles showing a given technology exists and works, simply switch to asking the target to prove there is a reason a covert group would bother to use advanced technology to harass them.)

Consequently, the author of this page should provide demonstrations of claims like the three above, written in a mainstream publication under the organization's name and logo. This reviewer is not aware of actual demonstrations of satellite-mounted equipment causing pain, sleep deprivation, or altered body functions, even though it's remotely possible to do that.

Aiming so as to cause these effects, while not causing the effects in people nearby, would be an extreme technical challenge. Microwave is far more difficult to focus at great distances than is light. Reading a licence plate with light is lots easier than confining a microwave signal to one person, because of the large difference in wavelength of the two signal types.

The author of this site quotes Dr. Nick Begich (doctor of

complementary medicine, similar to a naturopath) as proving that satellites can re-create the three effects above.

From actual experience in dealing with officials, journalists, and doctors, statements from individuals, no matter how well qualified, are treated by officials as unverified personal opinion.

Because the task at hand, exposing the crime of organized stalking and electronic harassment, requires action by officials, we must provide actual demonstrations, documented by mainstream organizations, and not just individuals.

Because of this requirement, not met in the text of this site, this site gets the NEEDS INDEPENDENT VERIFICATION rating.

REFERENCED FROM: <http://www.geocities.com/xposperps>

QUOTES FROM TEXT OF THIS PAGE:

EW comment: There are web pages which are written using technology jargon, but which plainly show the writer does not have a really good grasp of the technology being discussed. This page is bogus based on a number of points, flagged here below. Some of the statements are valid, but there are enough instances of misunderstood technology that my rating is bogus.

I regret this rating, because I believe the writer is well intentioned, but in this effort to get the truth heard by non-targets, I have to say this article isn't up to the necessary standard.

"Combining two or more focused sound waves results in a more powerful lower frequency sonic wave. This new more powerful sonic wave is no ordinary sound wave."

Combining two sound signals creates a signal at the sum of the two frequencies, and the difference of the two frequencies. There are four signals following this mixing: The original two signals, a sum signal and a difference signal. These products of mixing are indeed ordinary sound waves.

"Because the molecules in the air of this sonic wave have been

accelerated to such a high velocity, ..."

Sound waves propagate at a predictable rate, the speed of sound. However, that speed is how fast the sound perturbation travels, NOT the actual air molecules moving like bullets.

"... it can penetrate the walls of a house without damaging the walls or house in anyway."

OK - sound waves can penetrate walls to some degree, we all know that. And do so without damaging the walls.

But it's also important to note that sound is muffled (absorbed and partly converted to heat) and loses directional properties after being re-radiated by the wall. Just as frosted glass absorbs some light and diffuses the rest.

"By using commercial or medical ultrasonic transducers, an artificial focused sonic shock wave can be produced that is directional."

Sound comes in two types:

- "sound waves"
- "shock waves"

"Sound waves" are like ripples on the water, they are smooth oscillating perturbations of air, liquids, or in solids.

"Shocks", often called "shock waves," are single areas where the medium carrying the shock wave jumps from steady state pressure to high pressure. Just as with propagation of "sound waves", the pressure front propagates at some speed in the same range or higher as "sound waves" travel. But like "sound waves", "shock waves" do not refer to molecules travelling like bullets. After the shock wave passes, the molecules end up not too far from their original position.

Medical kidney stone ultrasound tanks do indeed cause shock waves aimed at the patient in such a way as to break the stone. In air, a gun firing a blank also causes a shock wave to travel out from the barrel.

"These focused sonic shock waves can be combined to produce an even more powerful sonic shock wave."

That would depend on how well matched the arrival times of two shock waves were at a target. It would be a technical challenge to get two shock waves to arrive so as to perfectly reinforce one another.

"These powerful focused sonic shock waves are directional and will also penetrate house walls without damaging the house in anyway."

That would depend on how much energy the two shock waves were packing, so that statement cannot be made for every situation.

"Force will be put on the walls of the house if a strong focused sonic shock wave passes through the house. This force is not enough

to damage the walls or house, however."

Again - depends on the energy - there are shock waves which can demolish a house. That's what large bombs can do - emit house/building destroying shock waves.

"If this strong focused sonic shock wave also passes through a human as it is passing through the house, a force will also be applied to that human."

Any shock wave which passes through a wall without destroying it has lost a huge amount of energy - through conversion to heat in the wall, and through loss of beam-like properties as it is re-radiated by the inside of the wall.

"A similar amount of force applied to a human body will effect the human. The bones in the human body are dense, which means the sonic wave will have more trouble passing through them. As this sonic wave passes through the human body, it will produce a strong force applied to the human body because of the bones. This force could produce a strong violent jolt of the human body, as the sonic wave attempts to drag the bones of the body in the direction of the sonic wave."

The writer is talking about a shock wave, which will try to "drag" the target in its direction of travel. However, its pressure rise will apply force to the entire body, not just the bones.

**\*\* IMPORTANT:** We are discussing the crime of organized stalking and electronic harassment. When targets report forces acting on their bodies, it can NOT be "sound."

First, shock waves are not silent, they are LOUD. One powerful enough to move a body is going to be at least like a weak bomb blast.

Secondly, for a shock wave to pass through a building wall with enough energy left to move the target's body, there would have to be a hole blasted in the wall.

Targets do not report loud booms when they experience body movement, and they do not report holes blown in their walls.

"Another way to think of these focused sonic waves is a "sonic laser". Instead of the wave being electromagnetic, as a laser is, it is an atmospheric wave. UltraSonics is creating powerful infrasonic and ultrasonic sonic lasers that will cut through walls, ceilings, glass, furniture, and/or people. The amplitude of these sonic lasers could be an inch to several inches. These sonic lasers also have a tremendous distance, probably several hundred feet."

This reviewer is not expert in technology called "sonic lasers", however, cutting and breakage as mentioned above is not silent. Targets do not report hearing or seeing their possessions being broken or cut up as if by a sound wave. Furthermore, for a "sonic laser" to do its work indoors, it would have to also cut through the walls, floors, ceilings.

"Strong sonic waves passing through the human body also effect the nerves of the human body. A choking effect can be produced by passing the right frequency sonic wave through the neck of a human. The vocal chords will resonate, which causes this choking sensation."

Documentation needed.

"Passing a sonic wave through the chest can effect the lungs and produce a gasping for air reflex."

Would depend on the energy, and documentation needed.

"Ultrasonic waves passing through the head can cause severe head pains."

Would depend on the energy, and documentation needed.

"A shot to the stomach will produce a violent reflex of the stomach muscle, which could take a standing person down."

That kind of energy would require a hole being blown in the wall - and targets don't report walls being blown in.

"The weapons are used for crowd control, and they are designed to disable a person in a riot situation."

A version of the acoustic heterodyning technology has indeed been supplied for riot control. It causes a loud scream to dispel rioters. That is simply loud sound, not a shock wave.

"Other types of these sonic weapons shower large parts of the Target's body with an array of sonic waves. Since the waves are out of the human hearing range, he or she will hear nothing as these waves strike against or pass through their body. By targeting the legs of the Target's body with the ultrasonic version of this weapon, the Target will feel a burning sensation in his or her legs. This method can be used to make the Target feel very uncomfortable while sitting in a chair in his or her living room, for example."

In order to produce high energy ultrasound inside a target's home, the energy would be so huge that neighbours would be affected as well. While ultrasound can travel somewhat beam-like, once it hits a solid surface, such as an outside wall, it will get reflected in many directions.

Also, to make the "burning sensation" claim, some documentation is needed.

"The power needed to operate these sonic weapons must be enormous. A charging device would be necessary to build up a charge over a period of time, from normal household power."

If so "enormous" that it exceeds the power capacity of a home, it's not going to confine its effects to just one target. Neighbours will be affected too.

"Thermal imaging technology can be used to see people through walls also."

No, thermal imaging portrays the relative temperature of the surface of a wall. There is through wall radar, which operates at lower frequencies and can see through non-conductive walls.

There are enough questionable statements on this page that regardless of the good intentions of the writer, I have to rate it BOGUS as an information source for referring journalists and officials to.

Eleanor White rating: LOOKS OK  
December 4, 2008

WEB SITE: <http://www.bugsweeps.com>

TITLE: Advanced Electronic Security Co., Roger Tolces

This is the commercial site for electronic detective Roger

Tolces, who has been heard on many radio shows discussing all types of electronic crimes, including electronic assaults on people.

This reviewer's opinion is that Roger is a top notch consultant for making measurements of electromagnetic signals. I would encourage journalists and officials to consider contacting him for matters related to measuring EM signals which may indicate electronic harassment.

In order to be complete, I have to comment that shielding which does stop conventional EM signals does not always help the user, even when totally enclosing, say, the target's bed. Then again, materials which do not stop conventional EM signals have provided targets some relief. For example, leather, rubber, or freezer gel packs.

There are some observations where target's body parts and/or objects (metallic and non-metallic) in the target's environment have been set into vibration. (Confirmed by test equipment in a few cases. Interestingly, some "Taos Hum" hearers also share the experience of having body parts and objects being vibrated. The Hum hearers are not targets, and their experience suggests both groups may have a common source for that particular occurrence.)

The mixed shielding experiences, and experiences like the remote mechanical vibration point to the likelihood that some technology of a very advanced type is in use in some cases.

I haven't seen indication to date that Roger Tolces' detective service can offer detection of or protection from the very advanced technology. HOWEVER, Roger's expertise and his finding of very anomalous conventional EM signals definitely show "something" is going on that is very unusual, in the environments of targets who have hired his service.

Roger's web site has very solid information about EM signals and their effects on the body. I can only rate it "LOOKS OK" because I lack the expertise and strength/time to exhaustively research all he has posted there. My guess is if his site were exhaustively researched, it could be rated a "gold standard" of information about conventional EM signals.

Eleanor White rating: BOGUS  
December 4, 2008

WEB SITE: <http://www.abovetopsecret.com/forum/thread59988/pg1>

TITLE: 2020 Neural Chip Implant. Fact or Fiction

EW comments: This article has been circulating on forums about organized stalking, electronic harassment, and mind

control for years. It starts off with this "sexy" heading:

CONFIDENTIAL  
INTELLI-CONNECTION  
A Security Division of IBM  
1200 Progress Way  
Armonk, New York 11204  
LIMITED DISTRIBUTION ONLY  
LEVEL 9 COMMUNICATION  
2020 NEURAL CHIP IMPLANT

... and ends with an equally "sexy" closing:

End Communication... 10/20/95  
Distribution: Eyes Only: Project Group 7A

It describes an implant program allegedly being run by IBM.

This review is not about what the article says. Instead, it gets my BOGUS rating because it is simply a digital document. I'm unaware of a hard copy on genuine IBM stationery.

In the fight to expose organized stalking and electronic harassment, which includes "mind control," targets are held to an extremely high evidence standard, because officials claim the crime of OS/EH isn't happening, and couldn't happen, and even if it did happen, nobody "would bother to harass YOU, because you are a nobody."

To make matters worse, the "Above Top Secret" site itself has material relating to aliens and UFOs. I have no idea what UFOs are, but I do know that a web site mixing UFOs and mind control, organized stalking, implants, electronic harassment and the like is the worst possible source of information for journalists and officials.

Until and unless someone comes up with a verified original of this "memo" on genuine IBM stationery (proving that would be a very difficult project,) I have no choice but to give this item a BOGUS rating.

Eleanor White rating: BAD FOR ACTIVISM  
December 6, 2008

ITEM: Mass emailings to a world wide variety of recipients in which questionable and bogus information is offered, in which statements often "scream at" the recipient, and which are very long emails.

Some of the items in this review system with questionable or bogus ratings are offered or even headlined.

These mass emailings tend to use a goodly amount of all upper-case lettering.

They would be several pages long if printed.

And they often contain distracting material even though these emails are sent as first contact items, i.e. to a recipient who knows little or nothing about the crime of organized stalking or electronic harassment.

One such sender is an organization calling itself the "MC Mailteam."

While those working on these mass emailings mean well, this reviewer feels they have not taken the time to think about how, if they were not targets, a busy, first-contact individual would react to several pages of "screaming about" an issue they may have never heard of.

I feel that the MC Mailteam's correspondence I've seen to date is likely to be deleted without seriously reading any of it.

I feel that MC Mailteam should review principles of business communications, and plan their work according to best practices in business communications. For example:

- RESEARCH THE RECIPIENT'S MISSION STATEMENT.
- DON'T TELL ALL. Not everything which is true is suitable for sharing, especially with first contact recipients. Select portions of the full OS/EH story which FIT WITH the recipient's mission statement. Select portions of the full

OS/EH story which are closest to the experiences of ordinary non-targeted people.

\*\* For example: AVOID the "mind control" term, and stress that a CRIME is occurring. Everyone is familiar with crime; few understand what "electronic mind control" is.

- First contact material should above all be SHORT, because many recipients will have many competing demands on their time. One printed page is a good goal to work towards.
- First contact material should limit the information to that which is likely to KINDLE INTEREST on the part of the recipient. There will be plenty of time to provide more detail for those recipients who ask for more later.
- First contact material should suggest something the recipient should DO, as opposed to simply complaining. That can be as simple as inviting them to learn more, at a site with a track record of appealing to non-targets, [catchcanada.org](http://catchcanada.org) being my personal favourite.

\*\* Important: Suggesting something the recipient should DO means that to some extent that something should logically stem from the mission statement of the recipient.

- If possible, and this may or may not be do-able, a BENEFIT of learning more about OS/EH might be suggested. It's not like selling a product with clear cut benefits, but the benefit aspect is worth thinking about when composing mailings.
- SLEEP ON IT, and MULL IT OVER within the group which will be sending the first contact item. You only get one first impression, and, the first impression you create will affect how any other targets or target groups will be received when they contact your recipient.

\*\* Important: Part of mulling it over should be to take advantage of comments about any material you plan to include or reference (for example, this rating system) you learn about or hear about from others.

It is my fond hope that groups like the MC Mailteam will take these suggestions to heart, because their long, shrill emails to most government and private organizations to date have probably killed off potential interest.

Eleanor White rating: OPINION ONLY  
December 10, 2008

ITEM: A very long document, which has been circulating on the Internet in various forms since the late 1990s, titled:

"NSA Mind Control and Psyops  
by Will Filer"

A sampling of the beginning of this document is quoted below between rows of equal signs:

=====

Subliminal Implanted Posthypnotic Suggestions and Scripts Using Acoustically Delivered and Phonetically Accelerated Posthypnotic Commands without Somnambulistic Preparation in the Subject for Intelligence and Counterintelligence Applications by the United States National Security Agency.

1. INTRODUCTION:

1. The following information is an overview of one area of NSA Intelligence Technology and Applications. A Technology Title, Applications, Technology Description, case history summaries and the NSA's Behavioral Modification Procedure Outline documented for the non-technical person.

2. TECHNOLOGY TITLE:

1. Subliminal Implanted Posthypnotic Suggestions and Scripts Using Acoustically Delivered and Phonetically Accelerated Posthypnotic Commands without Somnambulistic Preparation in the Subject for Intelligence and Counterintelligence Applications by the United States National Security Agency. "Computer Simulated Subconscious Speech Language".

3. APPLICATIONS:

1. Intelligence:

1. Used on foreign and domestic diplomats, spies, and citizens to

gather intelligence, steal advanced technology for US Defense applications. Surveys of citizen's opinions to government events and propaganda. Heavy survey use during times of war, economic strife and political elections. War against drugs. Used to identify investments that have high yield to support clandestine operations. Used to direct field agents without the agents having to carry communications hardware and encryption devices.

## 2. Counterintelligence:

1. Used on foreign and domestic diplomats, spies, and citizens to identify intelligence operations; scope, participants, communication methods, and weaknesses in individuals, systems, equipment, or signals that can be exploited. Additional applications include misinformation dissemination, confusing and confounding leaders during critical decision moments, distorting significance of various facts to sway decisions and actions in US favor, behavioral modification of foreign spies to betray their loyalties, self initiated executions (suicides).

## 3. Behavior Modification and Accelerated Resocialization:

1. This technology is used to develop and control spies, political candidates, and other public figures through psychological intimidation, fear and extortion.

... ETC.

=====

This document has been VERY appealing to targets of organized stalking and electronic harassment because it seems to describe perfectly what is happening to them. It has been offered to non-target members of the public and organizations as "proof" the American National Security Agency (NSA) is the culprit in the OS/EH crimes.

The problem is, this document, written beautifully, can NOT be backed up by official documentation.

What the "Will Filer" document says MAY WELL BE TRUE. But simply being true is not enough for public officials. The MINIMUM evidence standard to force these reluctant officials to take OS/EH claims seriously, and carry out their sworn duties, is a document published by a mainstream ORGANIZATION under their name and logo. An individual's word, no matter how well qualified the individual may be, just won't budge officials on the topic of organized stalking and electronic harassment.

Targets of OS/EH have not been able to correspond with "Will Filer."

So we have a document which at best is the opinion of one individual, and we can't verify the individual's qualifications or even ask him questions.

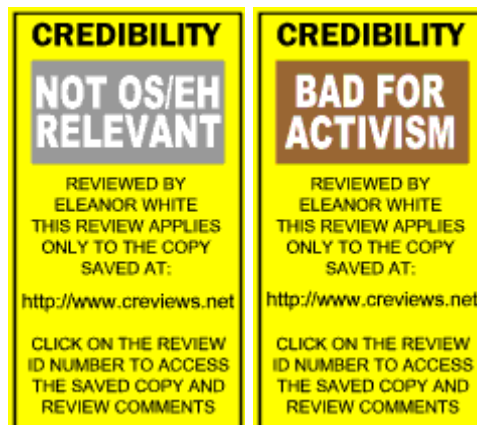

Consequently, this document should not be quoted to prove anything. Especially, references to this document should not appear in FIRST CONTACT activism.

Just because a document describes targets' experiences well does

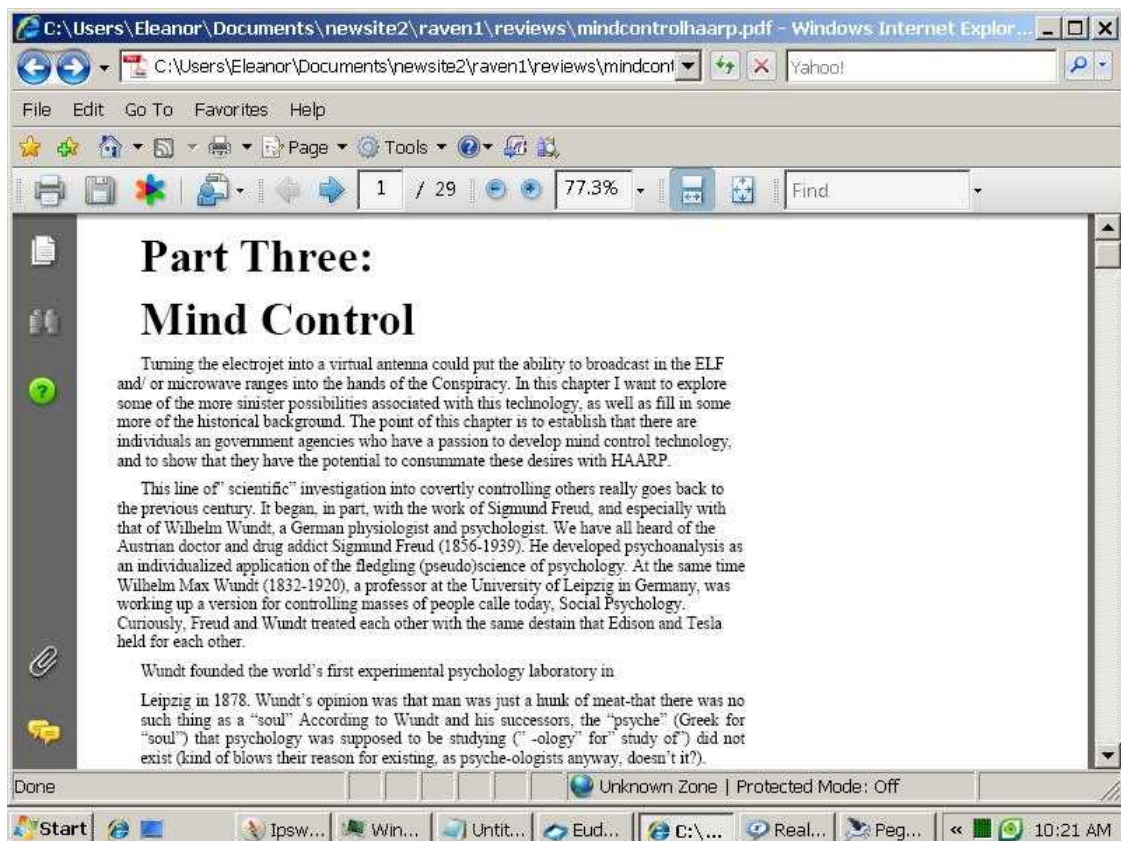

not mean it proves anything. It has to be published by a mainstream organization, under their name and logo.

HAARP info only not relevant; rest relevant to MC  
Title makes book bad for activism  
Review posted December 11, 2008

Eleanor White rating:

NOT RELEVANT TO OS/EH ... The information about HAARP only  
BAD FOR ACTIVISM ..... Title contains term "conspiracy"  
Remainder of info ..... Relevant to "mind control", not OS/EH

December 11, 2008

ITEM: A web posting titled "HAARP: The Ultimate Weapon"

of the Conspiracy"

[http://cid-dc07e0698ba2abdf.skydrive.live.com/self.aspx/  
Public/PDFS/mindcontrolhaarp.pdf](http://cid-dc07e0698ba2abdf.skydrive.live.com/self.aspx/Public/PDFS/mindcontrolhaarp.pdf)

OR...

<http://tinyurl-com/5v2hj5>

This item was posted on some forums December 10, 2008.

The PDF appears to be the content from a published book.  
There is a title at the bottom of each PDF page that  
reads "HAARP: THE ULTIMATE WEAPON OF THE CONSPIRACY"

There is actually a book by that title available at  
amazon.com:

Haarp: The Ultimate Weapon of the Conspiracy  
(The Mind-Control Conspiracy Series) by Jerry E. Smith  
Paperback: 256 pages  
Publisher: Adventures Unlimited Press (August 1998)  
ISBN-10: 0932813534  
ISBN-13: 978-0932813534

While I don't know Jerry Smith really well, I have heard  
him interviewed on the radio several times, and as far as  
I can tell, Jerry is a really good guy who is concerned  
about technologies which can be used to oppress and control  
people.

I have scanned this posted section of what appears to be  
his book about HAARP.

What I find there is a great deal of "mind control" infor-  
mation, and some information saying that some of the people  
behind HAARP have been participants in "mind control"  
activities, one prominent activity having been named  
MKULTRA.

There are statements by scientists about the mind control  
POTENTIAL of radio signals.

Without exhaustively studying and checking references from  
every paragraph, what is written there appears to be of  
good quality.

And since HAARP equipment can broadcast powerful shortwave  
(not microwave, but short wave, aka "HF") signals over wide  
areas, it is possible that some people wanting to use MASS  
mind control on the population of this planet have plans to  
use HAARP to attempt that.

So far, so good.

There is a problem, though, when organized stalking and  
electronic harassment (OS/EH) targets attempt to use HAARP  
information to prove that a program of "mind control" is in  
progress - there is no demonstration in which HAARP actually  
produced the effects which OS/EH targets report, in people  
in its signal path.

Another problem relating to use of HAARP information to prove "mind control" or the wider arena, electronic harassment, is actually happening, is that HAARP can not focus its powerful signal on INDIVIDUAL human beings.

HAARP's antenna farms are large "phased arrays" which send a broad beam upwards. The original beam is as large as the antenna farm, and given that the signal is down in the HF (shortwave) band, will tend to spread.

Once this "beam" enters the ionosphere, like any other HF signal, it will be refracted (bent) back towards Earth, encountering the surface many miles from the antenna farm.

When a HAARP HF signal returns to the surface, it will affect many square miles, and if modulated so as to affect people in that area, will affect hundreds if not thousands.

This is totally different from the way electronic harassment affects targets. EH is often sensed only by the target, and only on rare occasions is someone else nearby affected. There is no indication neighbours are affected.

EH is NOT a HAARP signal.

Because HAARP has not been demonstrated to cause "mind control" effects in people, and because it cannot target single individuals, my rating for any article about HAARP is that it's not relevant to OS/EH.

What does this mean for targets? Don't include HAARP in any FIRST CONTACT activism material. ("First contact" meaning material given to people who have never heard of OS/EH.)

Once a contact has expressed a general interest in OS/EH, which can include "mind control", then a book about HAARP might be referenced as background information, but not for totally unaware members of the public.

This posting, which may well be from Jerry Smith's book, has another problem which I consider fatal for first contact activism - it prominently displays the term "CONSPIRACY" on every page.

The powers that be, and the mainstream media, have been using the term "conspiracy theory" when they want to dismiss claims of official (or corporate) wrongdoing, for a couple of decades now. This consistent use as a disparaging phrase has worked the mind of the general public around to where the word "conspiracy" is now an implied synonym for "hoax."

That is the way it is, and targets of OS/EH can't change that any time soon.

Consequently, I would recommend targets, and journalists too for that matter, not refer to this posting or Jerry Smith's book by the same title in connection to the crime of OS/EH.

I feel it also works against exposing the crime of OS/EH to use a book or any other material that labels the crime "mind

control."

"Mind control" does happen to some degree to OS/EH targets. But it is FAR from the full crime.

"Mind control" has been and may still be a HUGE crime unto itself. MKULTRA is one of the best known mind control programs, then there is "mind control lite," meaning some advertising practices, propaganda, subliminal lines in music, radio, or TV. "Mind control" falls FAR short of what happens to the targets of organized stalking and electronic harassment, so on the basis that this posting and Jerry Smith's book by the same title will draw a reader's attention away from the true scope of the OS/EH crime, I also rate it bad for activism.

What IS a good description of OS/EH then?

I can offer one 37-page e-booklet which is authoritative and which leaves an unaware reader with an accurate picture. It is posted at:

<http://www.raven1.net/osatv.pdf>

Finally, from what I saw of the actual "mind control" information in the posting, it appears to be of good quality.

\*\* Note: A book with good information about "mind control", but without that deadly "conspiracy" term, is mentioned here in [review #4](#), Dr. Nick Begich's book titled "Controlling the Human Mind."

Eleanor White (READ BELOW)

The EFFECTS ON THE BODY of various radio signals are valid for activism materials. Books and articles on HAARP do have references to mainstream documents which describe effects of radio signals on the human body and mind. Activists should go directly to those referenced documents and use THEM as sources, rather than using books or articles about HAARP.

There is a huge number of articles about the effects of radio signals on the body. Activists should be VERY choosy about which ones to use in their materials. Choose only articles which have a short, plain language statement of how a given signal is FELT by someone in line with the signal, and be sure that the experience is very close to what electronic harassment targets report.

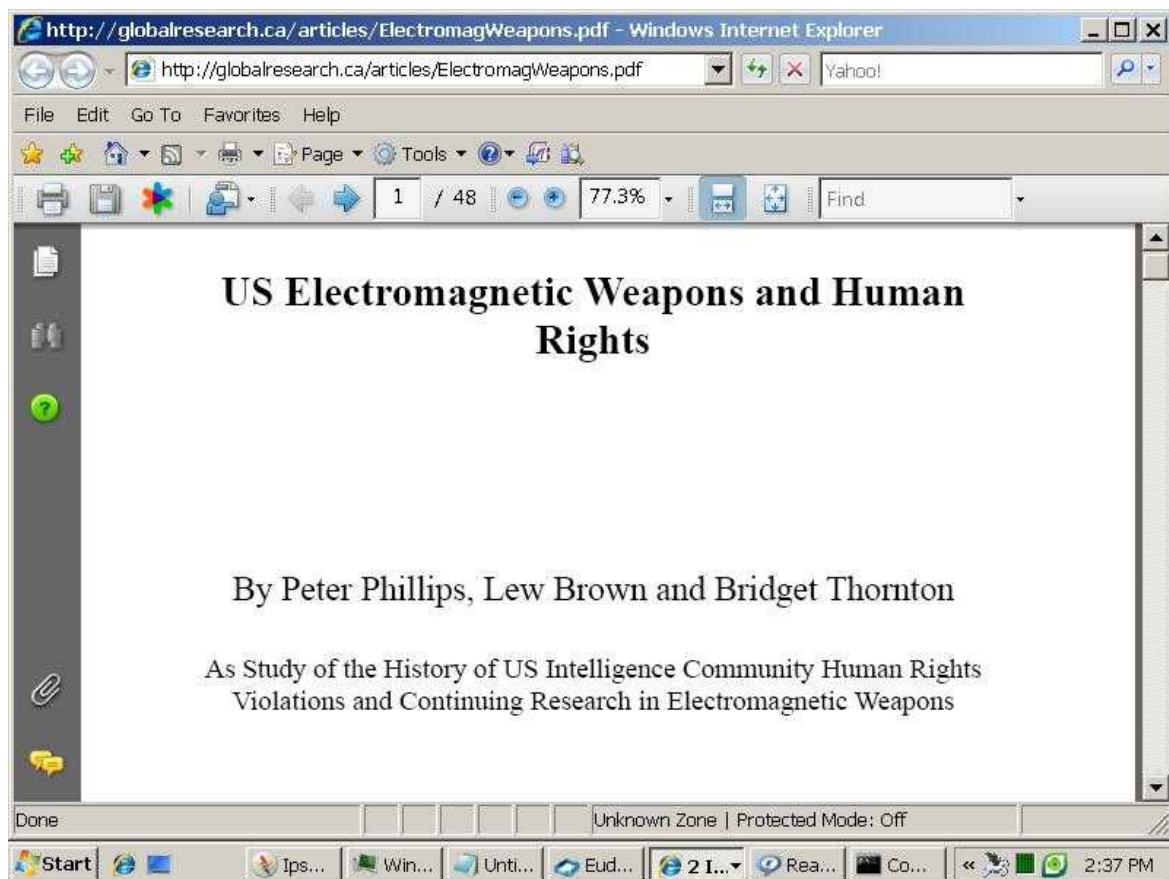

Just rattling on and on about how a radio signal, maybe, "interferes with calcium channel activity in neurons" would be of no use because the average person has no idea what interference with their "calcium channel" feels like.

WEB SITE: <http://globalresearch.ca/articles/ElectromagWeapons.pdf>

TITLE: U.S. Electromagnetic Weapons and Human Rights  
A Study of the History of U.S. Intelligence Community  
Human Rights Violations and Continuing Research in  
Electromagnetic Weapons

By Peter Phillips, Lew Brown, and Bridget Thornton

This paper, by sociology professor Peter Phillips (at Sonoma (California) State University and director of Project Censored, is excellent.

Like many mainstream information items on the topic of electromagnetic weapons, it does not get to the detailed plight of organized stalking and electronic harassment (OS/EH) targets. Consequently, this reviewer does not necessarily recommend it as FIRST CONTACT (with unaware members of the public) information as the actual current OS/EH crimes aren't specifically mentioned.

But it can be used to show evidence of intent to develop anti-personnel electromagnetic weapons by the U.S. power structure, and as a backgrounder for people who have been introduced to OS/EH and are willing to learn more.

The work of Cheryl Welsh, <http://mindjustice-org>, is referenced in this report.

Above is the cover letter to Donald Friedman  
accompanying the report sent in response  
[Click to read review 000\\_031](#)

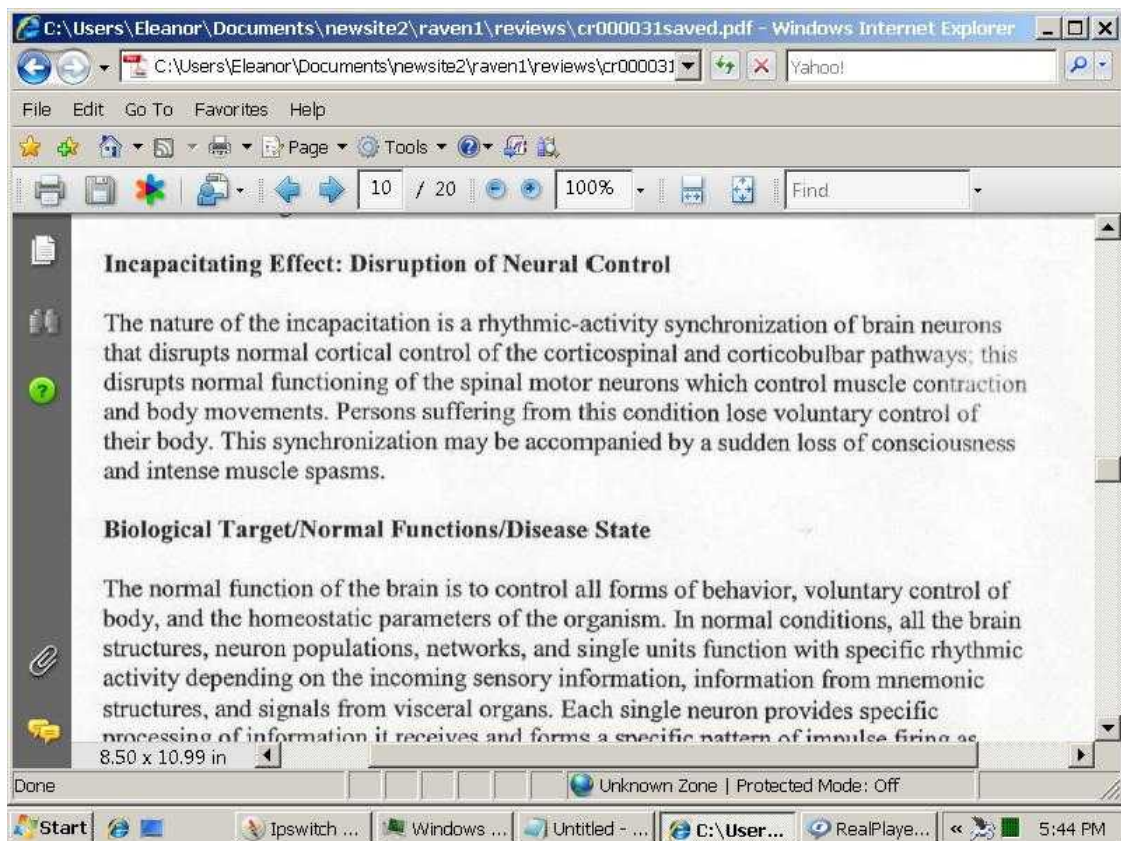

Above is the title page sent to Donald Friedman  
furnished in response to his U.S. FOIA request  
[Click to read review 000\\_031](#)

Above is a curious quote, referring to what is commonly called "voice to skull" technology, seeming to say people have been subjected to V2S for 'many years.' More likely, this is a reference to the well known phenomenon called 'radar hearing.'

[Click to read review 000\\_031](#)

Above is mention of "disruption of neural control"  
in a target of these electromagnetic non lethal weapons

Eleanor White rating: OK  
December 12, 2008

#### [U.S. ARMY FREEDOM OF INFORMATION REQUEST RESULT](#)

Petitioner Donald Friedman succeeded in obtaining a report on work in the field of electromagnetic non lethal weapons in 2006. This FOIA success is part of Donald Friedman's continuing activism.

Mr. Friedman has made claims about the culpability of certain U.S. government agencies for the organized stalking/electronic harassment crimes. Clearly, this government report gets an OK rating. However, even though this report shows government interest and work in the area of electro-magnetic non lethal weapons, it does not prove that specific government employees, or corporate government contractors are actually carrying out the OS/EH crimes.

This reviewer wishes Donald Friedman success in proving his claims, but for journalists, officials, and OS/EH targets, this specific report doesn't establish government culpability.

This report itself establishes WORK ON and INTEREST IN electromagnetic non lethal weapons, and in general terms. As I read it, it can't be used to prove any particular EM weapon is in production and/or in use.

This report is like a sequel to this earlier bulletin which was found and excerpted by a mid-90s anti mind control group, "MINDNET", a decade before this FOIA request.

[Click here](#) to read that early bulletin.

Together, these two items show that government has had a sustained interest in EM weapons.

From the screen shots above, there are a couple of interesting statements.

The third screen shot includes a sentence in a section about pulsed microwave voice to skull technology that "Human subjects have been subjected to this phenomenon for years." If you are a journalist, this statement most likely refers to the hearing of a buzz by people in line with powerful radar signals, called "radar hearing." Radar hearing dates back to World War II.

Quite a few organized stalking/electronic harassment (OS/EH) targets are assaulted with voice to skull technology, which has been unclassified and published since 1975. [Click here](#) for scans of one mainstream article about the first published voice to skull success.

The fourth screen shot above discusses "disruption of neural control." That jibes with the experiences of OS/EH targets where body parts sometimes operate as if they have a mind of their own, particularly when a target attempts work that is either messy or delicate. Actuating limbs, making them flail, while in bed, seemingly to prevent sleep, is also experienced. Balance while walking is also disrupted, according to reports from targets.

[Click here](#) for a short bulletin about developing a weapon called "EPIC" by a Texas firm. The EPIC weapon is part of the class of weapons designed to "disrupt neural control."

In summary, this article, "Bioeffects of Selected Nonlethal Weapons" is excellent to show that electromagnetic weapons are NOT something imaginary, and interest in their development by government has been expressed publicly for at least a decade.

This article does not mention that such weapons are in use on citizens, nor does it prove government is responsible for OS/EH, but that is a possibility that Donald Friedman continues to pursue.

TITLE: "Microwave Ray Gun Controls Crowds With Noise"

AUTHOR: David Hambling

Excerpted start of article:

"Microwave ray gun controls crowds with noise  
17:06 03 July 2008 by David Hambling"

"A US company claims it is ready to build a microwave ray gun able to beam sounds directly into people's heads.

"The device - dubbed MEDUSA (Mob Excess Deterrent Using Silent Audio) - exploits the microwave audio effect, in which short microwave pulses rapidly heat tissue, causing a shockwave inside the skull that can be detected by the ears. A series of pulses can be transmitted to produce recognisable sounds.

"The device is aimed for military or crowd-control applications, but may have other uses.

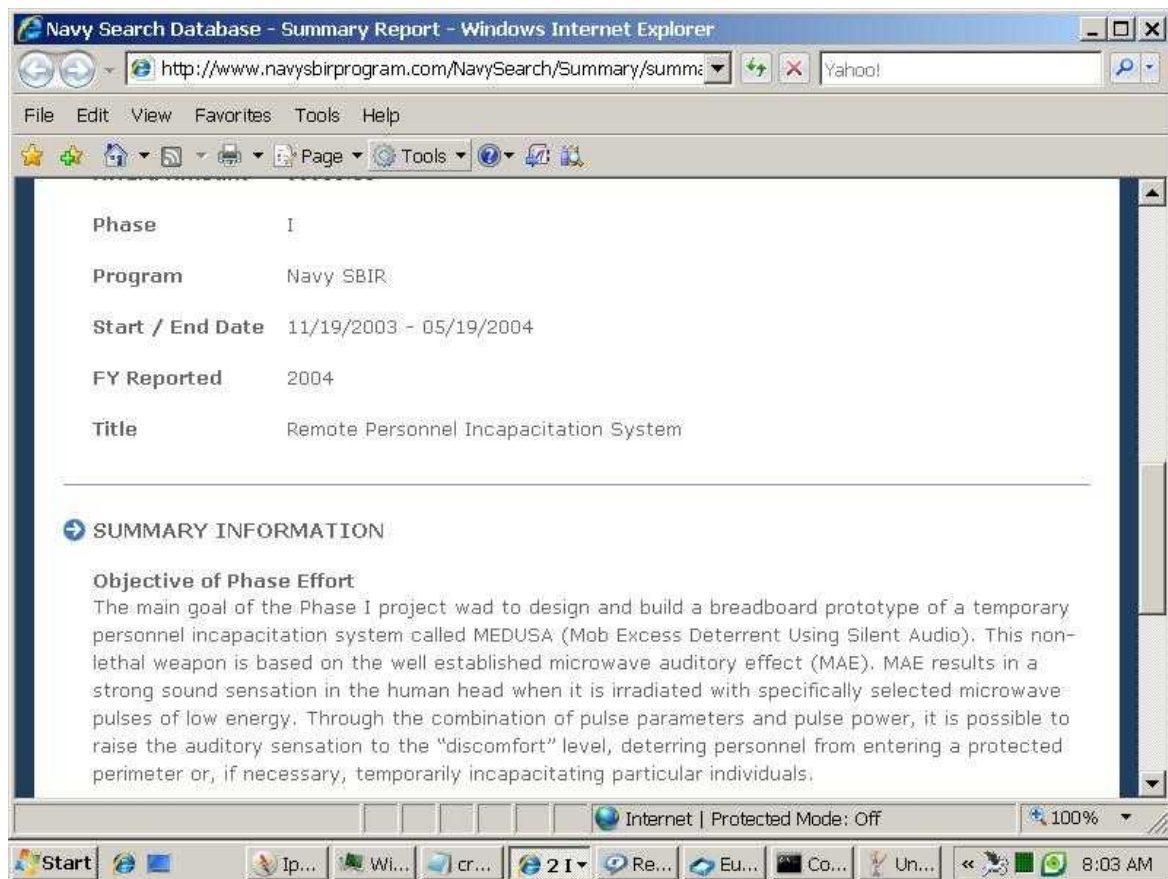

EW: This "MEDUSA" weapon is what organized stalking and electronic targets refer to as "voice to skull", or "V2S", or "V2K." (V2K has been designated by the U.S. Army as their acronym.)

The article continues:

"Lev Sadovnik of the Sierra Nevada Corporation in the US is working on the system, having started work on a US navy research contract. The navy's report states that the effect was shown to be effective."

The U.S. Navy has let a small business initiative contract to develop this MEDUSA concept, the title can be seen in the following screen shot:

This project shows that far from being a laboratory curiosity which was demonstrated in the early 1970s and forgotten, voice to skull continues to hold the interest of government. That does NOT prove weaponized devices are in use on citizens, but certainly shows that voice to skull isn't something "imagined," either.

**\*\* JOURNALISTS AND OFFICIALS PLEASE NOTE:** OS/EH targets have been told that technologies which can do what they experience "were tried and didn't work." Consider that if you were in charge of a weapons program which made a significant breakthrough, and your employer wanted to keep that success private, you would probably tell the public "It didn't work."

Take "It didn't work" with a huge grain of salt, please, if someone tells you MEDUSA "didn't work."

WEB POSTING: <http://tinyurl-com/58fode>

TITLE: "MOTION FOR AN ENLARGEMENT OF TIME TO REPLY TO PLAINTIFF'S OPPOSITION TO DEFENDANT'S MOTION FOR SUMMARY JUDGEMENT"

In plain language, activist Donald Friedman has requested information from the U.S. Secret Service about what they know about directed energy (electronic) weapons.

The Secret Service, the "defendant", wants more time, because these weapons are "very sensitive."

That's the significance of this post, the admission that "very sensitive" directed energy weapons are in fact known about by government agencies.

For the past decade or so, government agencies have been telling targets that no such weapons exist. This court document is a very welcome stepping stone in Donald Friedman's fight to show the world otherwise.

Eleanor White rating: BOGUS  
December 13, 2008

ARTICLE: <http://abcnews.go.com/Health/MindMoodNews/story?id=6443988&page=1>

TITLE: What's Behind Internet Conspiracy Empires?

I rate this article BOGUS because the writer and the professionals quoted simply assume that web sites describing crimes by two or

more perpetrators don't happen. While that explicit phrase is not part of the article, look at what the professionals actually say.

Their assertions would be nonsensical if they acknowledged that yes, organized stalking, one of the examples of delusional claims on the web, just might actually be happening.

PRIVATELY, one psychologist critic of web sites about organized stalking, Dr. Vaughan Bell from the United Kingdom, acknowledged to this reviewer that he and his colleagues consider only some of the organized stalking/electronic harassment web sites as indicating mental illness in the owner. But that doesn't make it into print, and until that point is made prominently in print, articles like this one will be rated bogus. They do not portray the truth.

\*\* Below is some of the text from the article, with reviewer comments embedded and indented:

What's Behind Internet Conspiracy Empires?  
As Conspiracy Communities Grow, Mental Health Docs Are Left  
With Big Questions  
By LAUREN COX  
ABC News Medical Unit  
Dec. 12, 2008

A man standing on a street corner with a sign reading "the lizard people rule you all," or, "my neighbors are spying on me for the government" isn't likely to get many supporters.

But give that man a Web site template, or let him produce some slick videos on YouTube and, lo and behold, he may have thousands of people across the world supporting him.

EW: If that man is telling the truth about crimes in progress, then his having thousands of supporters is a very good thing, right?

Such is the story of several extraordinarily popular conspiracy theorists and theories online today.

EW: Are you saying organized stalking is not happening, Ms. Cox? What is your basis for such an assumption? Are you willing to print the better quality information furnished by those reporting organized stalking?

Take the victims of gang stalking -- a subculture of people who think their friends and neighbors are all secret government spies ready to turn them over to the authorities. The movement has recently spawned gang stalking support groups, forums and advice Web sites.

EW: When and how did people reporting crime become a "subculture?" Are victims of store holdups a "subculture" too?

Or take the former journalist and BBC sports announcer, David Icke, for example.

Why do you bring David Icke, someone well known for his "lizard people" theory, into a discussion of the crime of organized stalking? There's no connection.

The Internet has always been a forum for fringe ideas, but success like Icke's, and subcultures built on paranoid theories like gang stalkers, points to an understudied corner in psychiatry: Who are the people who believe such theories in the quiet of their homes, and what does such behavior mean for a person teetering on the edge of mental illness?

EW: Here again, Ms. Cox assumes "gang stalkers", a poor substitute for the better term "organized stalking," is not possible. What is your basis for assuming organized stalking isn't happening, Ms. Cox?

"It's not an area that has been studied very well," said Angus MacDonald, a spokesperson for the mental health charity NARSAD, and an associate professor of psychology at the University of Minnesota in Minneapolis.

EW: Maybe it's time that organized stalking should be studied very well, and to avoid bias, people from the target community, voted as having a first class grip on the reality, should participate.

Does Conspiracy Always Equal Delusion?

MacDonald cautioned that not everyone who believes in a conspiracy plot is mentally ill. They just may be suggestible or just suspicious of authority.

For the healthy in mind, MacDonald said, "it's a wild card about whether this is going to improve people's state or not. It may turn out that the value of the community is greater than the destructive nature of the narratives that are spun out of them.

EW: Not clear on MacDonald's meaning there.

First, I'd like him to explain why reports of a serious crime are of a "destructive nature."

"But on the same point, this is a domain that didn't need more wild cards," he added.

Whether or not conspiracy theories harm people who are susceptible to mental illness is a matter of debate among psychiatrists.

"Most people with major mental illness don't believe in conspiracy theories," said Dr. Ken Duckworth, medical director of the National Alliance of Mental Illness.

Duckworth likes to imagine a Venn diagram with one circle representing people with paranoid psychosis and another circle representing people who believe conspiracy theories.

"They do overlap, but I can't tell you how big the overlap is," he said. "And, lizard people? Many people who are hearing voices would think that's crazy."

Duckworth argued that most mentally ill people create conspiracy theories that are self-centric, such as, "the mailman is after me," not inclusive such as, "the postal workers are all out to get us by 2015."

But others who treat schizophrenics and people with paranoia think there is a risk in circulating online conspiracies.

EW: What do those psychiatrists say about circulating material online about crimes that are actually happening?

"Paranoid is wide category -- it's another way of being separate with reality -- but in our culture, we've made it synonymous with persecutory delusions," said MacDonald.

The Making of a Conspiracy: Delusion or Not?

According to MacDonald, most delusions begin with general, unexplained feelings of discontent that are caused by a problem with the brain. It's only when someone tries to search for an explanation for their feelings that a delusion forms.

EW: What about when you come home and find your clothing ripped, furniture broken, and consumable supplies partly dumped? Or when your work station is sabotaged repeatedly and unendingly? Or when people whisper "pedophile" at you when they pass, sometimes spitting on the sidewalk in front of you?

Or when you are the proprietor of a business and suddenly your customers stop coming and your suppliers suddenly stop doing business with you?

What about when the control settings in your car repeatedly get changed overnight? Or you find your engine coolant pump has a hole drilled in it?

Or small but important items disappear from your home or car or workplace, sometimes replaced later, sometimes gone for good. But never major items like your big screen TV which might attract the attention of police?

Are those things "general, unexplained feelings?"

"Then over time, the delusions become crystallized -- meaning they take on particular narratives, story lines and people's motives begin to be fleshed out," said MacDonald. "When one thing isn't explained, it's never abandoned. The plot just thickens ... and you credit your persecutor with a tremendous amount of power."

EW: Sorry, MacDonald, organized stalking is about things that happen in reality, not some vague "plot" that "just thickens." You aren't talking about OS.

MacDonald said it can make it difficult to do talk therapy when delusional people feed their story from outside sources or find evidence with other conspiracy plots.

EW: It must be difficult to try to convince someone who is experiencing crime that they really aren't experiencing those events. Very difficult. One wonders why a therapist would even try to do that.

"You're sitting across from your therapist and they say, 'Well why

would they do all of this?' And you've got the answers because you've studied online," he said.

EW: How about they have answers because they are experiencing an actual crime? On what basis do you presume they can't be a target of crime?

Icke said that sort of danger is not his responsibility.

EW: I suggest it's only a danger if large numbers of people are reporting things that aren't happening. The mental health establishment merely declares that is so, they have not done any kind of serious, open minded look into these crimes. We in the organized stalking community have people who are rational and articulate - yet we never get interviewed. Why is that?

After studying conspiracy theorists, Michael Barkun, professor of political science at Syracuse University and author of the book, "Culture of Conspiracy: Apocalyptic Visions in Contemporary America," said he thought image and packaging is actually key to attracting followers.

"Even someone whose ideas are deviant can produce a Web site that looks sleek and professional," said Barkun. "Those who have conspiracy theories to peddle can do it very easily. And if they're reasonably sophisticated, [they] can do it in a way that gives those ideas the appearance of validity."

Whether those who make conspiracy theories for the masses are themselves mentally ill, Barkun said it depends on the conspiracy theorist.

EW: Mr. Barkun, it also depends on whether the crime being reported is actually happening. Something your statements here dismiss outright.

"I don't think you can generalize," he said. "Certainly, in terms of conspiracy theorists, they're all quite different."

EW: Some aren't "theorists," they are reporting reality.

As for Icke, he has long heard people accusing him of being a mentally-disturbed conspiracy theorist.

"I went out on a limb," he said. "What's happened within a period of 20 years is that the world has come to me. ... As people have seen it coming to pass, the laughter has stopped.

"I take a different view," he added, "and if that's at odds with mainstream society to the point of being crazy, then I'm fine with that."

EW: Again - I can't imagine why the crime of organized stalking (or "criminal harassment" in Canada) has been mixed in with comments from David Icke here. There is no connection whatsoever.

=== END ===

I'd like to suggest a reason why these professional critics of what they term 'conspiracy' web sites are becoming concerned.

It may be that the arrival of the Internet now provides the common people with an outlet for what concerns THEM, as opposed to what mainstream media editors WANT the common people to be concerned about. It's about time, I say.

\* Oh, a final thought for Lauren Cox - Lauren, if you find at some point you develop an interest in what's actually happening in the organized stalking crime arena, here's a pretty good e-booklet which is written specifically for people who know nothing about the crime:

BOGUS FOR OS/EH PUBLIC EDUCATION PURPOSES

[Click to read review 000\\_035](#)

Review posted December 18, 2008

Eleanor White rating: BOGUS  
December 18, 2008

WEB SITE: <http://www.psychologicalharassment.com>

TITLE: Psychological Harassment (Bullying and Mobbing)

In short, although this web site may contain truth, I rate it BOGUS for purposes of informing the world about the crime of organized stalking and electronic harassment (OS/EH.)

Here in the OS/EH camp, job one is to expose this crime to the world, as the first step in getting the crime stopped. Web sites and other materials which accurately describe the crime, and present evidence showing the crime can happen and is happening are what get my OK rating.

This site drones on, paragraph after paragraph, page after page, telling the public about all the ways OS/EH targets are likely to become mentally ill as a result of the harassment. Why, if you are trying to educate the world about the CRIME of OS/EH, would you refer people to a site about the mental state of the targets?

(You want to talk mental illness? How about the mental state of the perpetrators of organized stalking and electronic harassment?)

Even one of our prominent critics, psychologist Dr. Vaughan Bell from England, who has studied our sites, acknowledges that we are not all mentally ill.

Reporting a crime does not make one mentally ill. Reporting a crime does not make the target part of a "subculture," which has been alleged in several recent mainstream media articles. If we are a "subculture," then, say, all victims of convenience store holdups are a "subculture" as well.

So this huge, slickly presented site, is exactly where journalists, officials, and the public should NOT look for information about the crime of organized stalking and electronic harassment. Non-targets who read this site will come away with the impression that there are so many ways our experience could make us mentally ill that, golly gee, we must all be mentally ill by now.

Some examples:

Here's the main menu from the site:

- Home
- Ivan Pavlov
- Psychological Manipulation
- Technology
- Advanced Technologies
- Psychology Videos
- The Brain Video
- Stress and Stress Management
- Stress Effects
- Suicide Factors
- Depression & Suicide Prevention
- Degrading Themes
- Words
- Conclusion
- About Us
- Contact Us

While there may be information there of interest to those studying or practicing psychology, it's easy to see that the stress is on the mental state of mobbing/bullying targets. Since the site's

author includes "tooth implants," he/she extends the site's topic coverage to organized stalking and electronic harassment.

Here's a quote from the main page:

"After a few months some victims can suffer from psychiatric difficulties such as paranoia, chronic fatigue, loss of self-esteem and self-confidence, and depression."

I've been with this community for 12 years. In my estimation, we have a small handful of targets who may be genuinely mentally ill out of thousands. So why bring "psychiatric difficulties" at all into a conversation if you want to educate the public about OS/EH?

Notice that suicide is mentioned a number of times. Yes, a literal handful of targets have been driven to suicide. Out of thousands. The well-known "bell curve" would predict that for any group of people.

I have seen nothing indicating excessive rates of mental illness in my 12 years. I have seen people doing things that NORMAL, mentally healthy people are likely to do in response to around the clock harassment, and which are likely to be mis-diagnosed by mental health workers.

If you want to learn about this CRIME, instead of learning about psychology, avoid this site.

(\*\* Oh, and by the way, to the site's author: Chronic fatigue syndrome is NOT a "psychiatric difficulty.")

Here's a quote from the "Technology" page, on which conventional surveillance, like bugged telephone lines, is mentioned:

"Unfortunately, these technologies can also be used to intentionally harass individuals and induce different psychological disorders. Other individuals can constantly indirectly comment on the individual's computer and phone call activities. This not only gives the individual the impression of being under constant surveillance but also keeps part of his attention focused on the group's indirect comments."

According to private investigator David Lawson, who investigated organized stalking groups for 12 years in the U.S. and Canada, groups do actually keep their targets under constant surveillance. To learn more about that, see review #5 on this site.

I find the use of the phrase above, "... gives the individual the impression of being under constant surveillance ..." is wording which could convey to a non-target reader that what we experience is actually an "impression," as opposed to crime in progress, at least some of the time.

Here's a quote from the "Advanced Technologies" page:

"Researchers at MIT media Lab Europe have already come up with a design for a tooth implant that receives digital signals from radios and mobile phones. A micro-vibration device and a wireless receiver (Blue tooth, presumably) are implanted into a natural tooth during dental surgery.

Sounds transmitted to the device are transferred from the tooth into the inner ear by bone resonance creating, claim its designers, 'pure sound streaming into the consciousness.'

"Ask your dentist for one today.

"Wireless implants will also have some serious applications, says Kuss Wiseman, a wireless product creation guru and consultant. He foresees "embedded drug-delivery and muscle-control devices that can be controlled wirelessly from remote medical facilities."

"Source: The New World of Communication 1-2003 - From spying insects to tooth implants, some of the most profound wireless and outlandish inventions are currently incubating in laboratories around the world."

Remember, these reviews look at information's usefulness in conveying the truth about the crime of organized stalking and electronic harassment to the public. Implants in general have only been proven beyond doubt in two cases (Robert Naeslund, and David Larson.) A small handful have xrays which show anomalous objects, but have not yet been able to find a doctor who will give a diagnosis and remove the objects.

If you are a journalist or official, to date, implants have not been proven to be, in any numbers, part of the OS/EH crimes.

And of all the implants, the web site's author chose an article about a TOOTH implant. Tooth implants have been the butt of jokes for years. If you seriously wanted to educate the public, you would not pick a known object of ridicule.

Here's a quote from the "Conclusions" page:

"Many people claim that a network exists that uses Psychological Manipulation "mind control", negative conditioning, degrading themes, and advanced technologies to target them. They are intentionally driven to poverty, homelessness, and suicide."

In my view, while that statement is technically true, it conveys the impression that suicide is common. That is not so. Again, we have a small "bell curve" number of suicides, which is to be expected, but for the most part, our members stand up very well to harassment by organized stalkers, assisted by electronic technology, and which includes ridicule by law enforcement and false diagnosis by the medical profession.

Law enforcement's often heard claim that they've never heard of this crime has a simple explanation: They almost always refuse to take written reports, which neatly keeps OS/EH out of crime statistics.

The fact that some targets are forced into psychiatric care is the result of assumptions by many doctors, who assume that OS/EH doesn't happen.

I do not claim expertise in psychology, and it may well be that the psychological claims of this web site are valid.

But I do know what impression this site is likely to make on non-target visitors, which includes journalists and officials. That impression is

why I give this site a BOGUS rating for public education purposes.

TITLE: Domestic Torture via Radiation Weaponry:  
America's Horrific Shame

\*\* Reviewer comments are inserted in the article below,  
indented:

Posted By admin On December 30, 2008 @ 11:42 am In Science & Technology

Vic Livingston  
NowPublic  
December 30, 2008

The reality of domestic torture delivered by ideologically-driven, cold-hearted agents of government and their vigilante citizen operatives is finally gaining public exposure by way of first-hand accounts - including that of this correspondent, a mainstream journalist who who has been "community stalked" and tortured by means of silent, potentially deadly radiation weaponry for nearly five years.

EW comment: We DO NOT KNOW the extent of government culpability. We DO know from a couple of decades of face to face experience that government officials at all levels deny, deny, deny that organized stalking and electronic harassment (OS/EH) is happening, or is even possible.

We know that in most cases, police refuse to make a written report of OS/EH complaints. This conveniently keeps OS/EH out of criminal statistics databases.

That makes government culpable of gross negligence and violation of their oaths of office (if they in fact have oaths of office on record.)

We do know, given that several silent, through-wall technologies have been unclassified and in the public domain for between one and five decades, that government effectively "possesses" weaponry which could create a number of the electronic attacks which people have reported for decades now.

See: <http://www.raven1.net/proventechs.htm>

We do know what the organized (sometimes called "gang") stalking targets experience is a carbon copy of the government crimes committed under the FBI COINTELPRO operations from the late 1950s to the early 1970s, publicly admitted.

We do know that government tortured its own citizens under the MKULTRA crimes which accompanied the COINTELPRO operations brutally, children included, to produce hypnotically controllable multiple personality operatives. (They did far more than slip a bit of LSD into someone's drinks. MKULTRA comprised at least 149 sub-projects. Some MKULTRA survivors have prevailed in court.)

So there is good reason to believe government plays a central role in OS/EH, but we cannot state that this is a fact, at this point in time.

In a matter of weeks, this correspondent believes, operatives who have been involved in the purposeful "dosing" of American citizens with various forms of pulsed radiation emitted from so-called "directed energy weapons" and devices will begin to come forward, confirming reports of what's been euphemistically labeled as "electronic harassment" by victims of so-called "community stalking" or "gang stalking."

The "gang stalking" moniker trivializes what is an extensive, multi-level government campaign of extrajudicial targeting and punishment that victims say extends into Canada, the United Kingdom and other industrialized nations.

EW comment: This is why some activists urge dropping the "gang" stalking name, and instead using "organized" stalking.

The "targets" are not limited to "terrorists" or drug traffickers. They include individuals who have been labeled by persons in positions of authority as "dissidents," "radicals," "whistle-blowers" or undesirables, perhaps due to their lifestyles, their ethnic heritage, or their religious or political beliefs. Many find themselves slandered and unjustly accused of wrongdoing (but, notably, not charged with any violation of the law). Journalists are among targeted classes; but many don't realize they are subject to pervasive surveillance, physical harassment and career sabotage until they are already ruined, professionally and personally.

These targeted persons - and their families - are subject to relentless harassment, including surreptitious entry into their homes and vandalism of their property, with surveillance data about their whereabouts and personal daily routines funneled to "community stalkers" who are recruited under the cover of government-funded community policing, town watch, and business-related anti-terrorism programs. The operations of these civilian vigilantes are supervised by agents of government, ranging from local police personnel to federal intelligence and security agents under whose direction these programs have been institutionalized.

EW comment: At the time of writing this review, we are not, to my knowledge, able to prove to a courtroom standard that government is supervising this program.

We do have a handful of cases where targets observed, and in a couple of cases can prove, that police directly performed harassing actions not justified by any criminal behaviour of the target. But that isn't enough to make a blanket statement of fact that community policing is actually overseeing the harassment.

We certainly wish we could prove that, but we can not, at this time.

Under the guise of performing "surveillance," the "targets" are subject to electromagnetic radiation of various forms - ranging from microwave energy, sound waves, even X-rays and gamma rays. The government publicly claims that these "directed energy

weapons," or "D.E.W.", are still in the experimental stage, or that working equipment is large and bulky, such as the Army's recent demonstration of a microwave weapon tagged with an innocuous-sounding sobriquet, the "Active Denial System." The government describes these radiation weapons as "non-lethal" - when in fact, depending on the dosage of radiated energy delivered, they can stun, maim, burn, cause strokes or aneurysms, induce illness such as cancer, or kill.

EW: Anomalous radio signals and ionizing radiation have been occasionally detected in targets' environments, or even appearing to emanate from the targets' body. Certainly various sounds in excess of normal environmental sounds are part of the harassment. Anomalous burns are experienced.

So this paragraph above is in the main supportable by mainstream news and instrumentation readings made by targets and/or non-target helpers.

This relatively small body of evidence has yet to move officials to take our crime reports seriously.

These D.E.W. have are being widely deployed, as noted in an article in the April 2008 FBI Law Enforcement Bulletin. The article discusses the potential adverse health effects of D.E.W. fire. The article also states that law enforcement personnel themselves may fall victim to these adverse effects, should criminals or terrorists obtain D.E.W.

[www.fbi.gov/publications/leb/2008/april08leb.pdf](http://www.fbi.gov/publications/leb/2008/april08leb.pdf)

What the article does not state is that victims of "community stalking" have complained for several years that they are being tortured by painful D.E.W. radiation attacks, and that their health has been degraded by the cumulative effects of exposure to silent and potentially lethal beams of radiated energy.

These weapons share a characteristic that explains why few people outside of law enforcement are aware of their widespread deployment and usage: The radiation energy the weapons emit is silent and invisible, making possible "the perfect crime" - the covert application of potentially lethal force.

Victims of D.E.W. attack have tried to appeal to law enforcement for justice, but to no avail. Indeed, that's part of the "M.O." - when victims complain, they are routinely written off as delusional or mentally ill. Victims say that health care workers also cooperate in this persecution. Targeted persons may even be subject to attempts to commit them to psychiatric facilities, a means of accomplishing the underlying goal of extrajudicial targeting and punishment - the removal of "targeted individuals" (and by extension, their families) from mainstream society.

Victims of extrajudicial targeting also charge that their family finances are sabotaged and ultimately expropriated by secret government programs ostensibly implemented to disrupt the financial dealings of terrorists and drug traffickers. In effect, they say, they are victimized by a parallel system of transaction processing sold to lawmakers as necessary

components of the "war on terror" - not as an ideologically-motivated tool of social control and political repression.

EW: It's one thing to charge government manipulation of family finances, another thing to prove that. I'm not aware of proven manipulation of private finances by government to date.

There is no rational or moral defense for this horrific domestic torture - what could be termed a campaign of "slow genocide" - which is happening right now in cities and towns across America. The "targets" typically pose no danger to society. They are victims of a political system that has institutionalized - and has attempted to legalize - extrajudicial punishment. The "war on terror" is the pretext that has been employed to effect a wholesale bypass of the judicial system, and of constitutionally protected rights.

EW: I'm not aware of any official statement that organized stalking and electronic harassment is the consequence of the "war on terror." Until such official statement becomes available, that assertion must be regarded as opinion only.

This is the transformation of American democracy into a fascist police state - an American Gestapo, a frontal assault on our constitutionally guaranteed civil rights and liberties.

When the pervasiveness of this officially sanctioned and funded domestic terrorism and torture is confirmed by "official sources" - in recent times, the only sources that much of the mainstream media consider sufficiently credible - any excuses for the excesses that heretofore have come to light will be exposed as evil sophistry.

EW comment: I'm unaware of any proof that OS/EH is funded by government.

That day is coming, and very soon. In the meantime, please read related articles at <http://members.NowPublic.com/scrivener> and help secure the legal assistance of the American Civil Liberties union ([www.ACLU.org](http://www.ACLU.org)) or any other organization capable of bringing justice to the untold thousands of victims of extrajudicial targeting, punishment, and TORTURE in America 2008.

EW: It is great that anti government and corporate

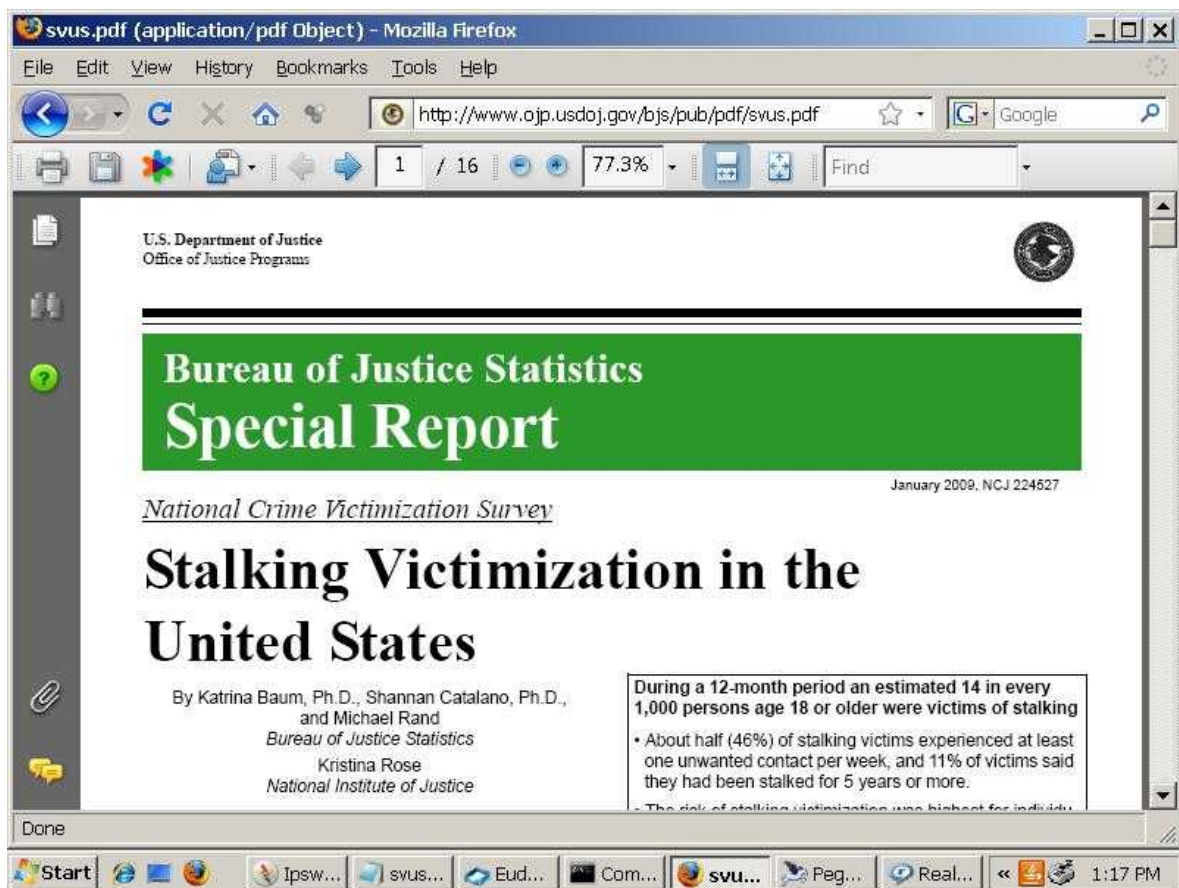

crime activist Alex Jones has finally recognized there "is something" to organized stalking and electronic harassment, however, for reasons noted above, the best rating I can give this article is "OPINION ONLY."

TITLE: Stalking Victimization in the United States

This long awaited report clearly shows that, contrary to police and doctor denials, multiple perpetrator stalking does indeed happen in the United States. Official data. Not deniable.

Some highlights:

This report contains the following statistics showing the occurrence of multiple perpetrator stalking cases within the total of all U.S. recorded stalking cases in the 2005-2006 time range:

"During a 12-month period an estimated 14 in every 1,000 persons age 18 or older were victims of stalking - About half (46%) of stalking victims experienced ...

\* 11% of victims said they had been stalked for 5 years or more.

[Eleanor White commenting: "5 years or more" is very characteristic of organized stalking, which usually never stops because the justice systems refuse to acknowledge this crime.]

\* An average of 10.6 percent of some 4.6 million stalking and harassment victims don't know the stalkers, since they're complete strangers.

[Eleanor White commenting: Almost all organized stalking is carried out by strangers, or people the target may know by sight but has never interacted with. The "4.6 million" figure above includes both stalking and harassment victims.]

\* Appendix table 3. Number of stalking offenders perceived by victim:

One 62.1%  
Two 18.2%  
Three or more 13.1%  
Number unknown 6.5%  
Total Number of victims 3,398,630

[Eleanor White comment: Adding three or more to number unknown, gives 19.6%. That suggests ~666,000 U.S. stalking victims may be organized stalking targets.]

TITLE: The Extent & Nature of Stalking: findings from the  
1998 British Crime Survey

REPORT ID: Home Office Research Study 210 by Tracey Budd and Joanna Mattinson with the assistance of Andy Myhill

This older report on stalking in the United Kingdom plainly states that 21% of British stalking cases, in 1998, involved multiple perpetrators. (Organized stalking has been reported by some targets as far back as the COINTELPRO crimes in the 1960s in the U.S.)

One major barrier targets of organized stalking face when reporting their attacks to police is "stalking by more than one stalker doesn't happen," and this is often followed by advice to "see a good psychiatrist."

Here below is the relevant paragraph from that report:

=====

THE OFFENDERS

The majority (79%) of incidents involved only one perpetrator. Incidents against male victims were more likely to have involved more than one offender. Overall, eight in ten (81%) incidents reported to the survey were perpetrated by men. Male offenders were involved in 90 per cent of incidents against women, and 57 per cent of incidents against men. In 29 per cent of incidents the perpetrator had an intimate relationship with the victim (current or former spouse, partner, girl/boyfriend or date) at the beginning of the incident. Strangers were responsible in 34 per cent of incidents. The remaining incidents involved close friends, relatives, household members or acquaintances.

=====

\* There are cases called "stalking by proxy" involving multiple perpetrators who are recruited by a classic single stalker. These are not organized stalking cases. So some portion of that 21% involving multiple perpetrator cases is assisted single stalking.

However, some unknown portion of the 21% does represent organized stalking.

\* Organized stalking targets are at least as many women as men.

\* The 34% of stalking cases by strangers covers organized stalking, as almost all of the organized stalkers are unknown to the target.

Once the lies, such as the target is a pedophile, are told, former friends, associates, and even family members sometimes turn against the target, actually participating in the harassment.

Private investigator [David Lawson](#) found that faked criminal records and fake badges are used by organized stalking groups to recruit people who eagerly harass their targets.

For cross reference, here is a corresponding stalking report from the United States, with more detail than the British report covered in this review:

Review posted January 31, 2009

Above is the title page of the e-book

Above is the cover page of the site on which  
is posted the e-book

Eleanor White rating: BOGUS  
January 31, 2009

WEB LINK: <http://www.gangstalkingunited.com/Bridgingthegap.pdf>

TITLE: Bridging the Gap, an e-book about what the  
author calls "gang" stalking

This 116 (Adobe Acrobat) page e-book is very reminiscent of the  
web site I reviewed as review #000\_002.

That site was <http://www.gangstalkingworld.com>

The site on which this e-book is found,  
<http://www.gangstalkingunited.com>, may be by the same author.

I regret I'm going to have to give this book a BOGUS credibility  
review. I've only scanned down to page 28 out of 116 Adobe Acrobat  
(PDF) pages, and I've come across these things which I consider  
seriously affect our credibility, should this book be shown to a  
non-target who is unaware of the crime.

First, the term of choice, used a number of times on every page, is  
"gang" stalking.

From personal experience, when I used "gang" stalking in face to  
face conversations with the public, the question always followed,

"Which gang is harassing you?"

In other words, the picture painted in the mind of the listener was of youth gangs, biker gangs, ethnic gangs, the Mafia, that kind of thing.

The task at hand, facing organized stalking and electronic harassment targets, is to paint a clear picture that makes it easy for the listener to understand what we are talking about as quickly as possible.

The term "gang" stalking is a side trip which delays that, and delays during first contact encounters can mean the difference between kindling interest, and dousing it.

Then I came across this:

Quote from Adobe Acrobat page 14:

```
=====
"Why would the government of a democratic country
target and monitor an innocent person 24/7?"
=====
```

Problem: We don't have evidence that government is the perpetrator.

The author keeps referring to how we are being stalked and harassed by government entities, and in fact, claims inside knowledge, stated as fact, of the details of perp tactics. I doubt the author managed to infiltrate, as [David Lawson](#) did.

Making a statement as fact that government is harassing us cannot be supported by evidence we have at this point in time. To make such a claim as fact seriously damages our credibility.

The author makes references to "conspiracies."

Given the public mindset I've encountered while trying to talk about organized stalking and electronic harassment, I get the impression that in the mind of the public, the word "conspiracy" has gradually become a synonym for "hoax."

Why give naysayers a hook on which to hang your credibility? Why use a term like that and make it easy for naysayers?

But here below is what finally flipped the switch over to the BOGUS rating for me:

Quoting Adobe Acrobat page 27:

```
=====
Covert Techniques
```

The following techniques are several types that are often used against Targeted Individuals. There are other techniques used, but these are some of the primary ones. The techniques are listed in alphabetical order.

Air Stalking

Helicopters are sometimes used to track targets that are on foot, or in cars. They fly over head and follow the targets from one location to the next. Some will monitor the targets shortly after they leave their homes. The use of airplanes and helicopters are considered legitimate and can be used during surveillance operations.

#### Brighting

As targets walk on the street, usually at night, informants will turn on their high beams. This might be flashed once or twice at targets. The idea is to intimidate the target and let them know they are being watched at all times. The idea is to create a sense of paranoia and fear in the target.

=====

\*\* To FRONT, that is, list FIRST, two stalking modes which are highly likely to turn off serious interest in the mind of the reader makes our crime complaints look frivolous, in my opinion.

The "alphabetical order" qualifier doesn't cut it, in my opinion.

If I wanted to mention these two forms of stalking, I would do so buried in a paragraph, only briefly and above all EXPRESSED AS SPECULATION, not stated as fact.

We KNOW that both of those forms of stalking do happen. But there are some experiences we encounter which are just plain NOT suitable for first contact dialogue. Brighting and what may or may not be "air stalking" are not common, however, and personally, I don't feel they should be part of any presentation to the public.

Extreme brighting can be seriously invasive - but in the mind of the public, it's no more than a minor bother, "Just draw your curtains." But extreme brighting is quite rare, in my experience, so why bring it up?

As to air stalking, that is totally unprovable. And yet, the author states this as a fact.

To make these things as the first items, stated as fact, alphabetical order or not, I feel discredits our cause.

Here's another quote, Adobe Acrobat page 28:

=====

#### Gassing/Poisoning

Informants will spray fumes or scents into a targets home to harass them. They will tamper with the targets food to make them become ill.

=====

\*\* I don't doubt some of that has happened. But because that's something which is nearly impossible to prove, it's not suitable for first contact material. I'm not aware of evidence which allows this to be stated as fact and my preference is to leave it out of any material which could be used to educate the unaware public in a first

contact situation.

This e-book has a fair bit of valid information, but its usefulness is nullified by some nasty "poison pills," in my view.

<http://www.raven1.net/cr000005.htm>

BOOKS: "Cause Stalking" and the earlier book  
"Terrorist Stalking in America" by private investigator  
David Lawson

REVIEW: <http://www.multistalkervictims.org/lawson.htm>  
(Includes ISBN information)

EW: These two very similar books report on David Lawson's  
12-year investigation, (apparently part time, not part of  
his paid work,) into what he calls "cause stalking", and  
what targets of this crime call "organized stalking" or  
sometimes "gang stalking."

David Lawson discovered the organized stalking perpetrators  
on his business band radio scanner, and ultimately  
infiltrated some of their groups, apparently out of personal  
curiosity.

Lawson's OBSERVATIONS of these harassment groups are very  
accurate when compared with the experiences of OS targets.

However, Lawson's reporting of those responsible are NOT  
accurate, when compared with what OS targets experience and  
observe. Lawson implicates these groups as perpetrators:

- extremist groups (e.g. white supremacists)
- foreign terrorists
- "anti-government" groups, such as the U.S. Patriot  
Movement

It is very possible, given the large number of perpetrators  
nation and world-wide, that members of those groups named  
do engage in organized stalking. SOME members.

However, this reviewer has been on line for 12 years, in  
daily contact with OS targets. Much detailed testimony has  
been discussed. I have not heard descriptions of the  
perpetrators matching those groups named above. Instead,  
the typical harasser is usually an entirely normal member  
of the community. Some seem to be unemployed, but often,  
the harassers are fully employed and some use their positions  
to harass the targets.

Like the famous Milgram experiments (look that up on the  
web) apparently the stalking group organizers find it easy  
to recruit ordinary citizens. Lawson reveals why - vicious  
lies, up to and including faked police records - make  
recruiting easy.

The bottom line, then, is that journalists, activists and  
the general public should pay close attention to Lawson's  
observations, but not his conclusions as to what groups

are responsible.

In my own reading of the Lawson books, his descriptions of the perpetrators do not match his assertions that extremists, foreign terrorists, and anti-government groups are responsible.

And as a post script, I am very familiar with the U.S. Patriot Movement through their broadcasts. Over the past 6 years I've heard regularly from perhaps 60 - 70 of their radio hosts, and many of their guests and callers as well. I have participated in their message boards.

I have not read or heard one single hint of any interest in acting as organized harassers from any of them. In fact, the Patriots have had a number of organized stalking targets on their shows to explain the crime to the public.

More than that, 20 of the hosts have either on air, or privately to me, stated they are receiving some organized stalking and electronic harassment attacks as well.

So my review awards a BRAVO to Lawson's OBSERVATIONS - and that is why I've included his books here.

BOOK: Controlling the Human Mind by Dr. Nick Begich

REVIEW: <http://www.raven1.net/controlmind.htm>

EW: In this case, the saved copy is not the book itself but my review of the book. All I can add here is that Dr. Nick Begich is an excellent literature researcher and has gathered within the pages of that book a great deal of credible material supporting the claims of electronic harassment targets.

This is the first book by Dr. Begich that tells the important story of the pulsed microwave voice to skull success, carried out by researcher Dr. Joseph Sharp in the early 1970s.

Journalists and officials please note: In spite of the title, there are many aspects of the crime of organized stalking and electronic harassment beyond simply controlling the mind with electronics.

ARTICLE: "Microwaves and Behavior" by Dr. Don Justesen  
published in the journal "American Psychologist" in the  
March 1975 issue

WEB SITE:

<http://www.raven1.net/v2success1.gif>

<http://www.raven1.net/v2success2.gif>

<http://www.raven1.net/v2success3.gif>

<http://www.raven1.net/v2success4.gif>

EW: In the electronic harassment arena, VOICE TO SKULL  
is the BIG ONE. It's the harassment experience that  
attracts journalists, for one thing, and it's the harassment  
experience that so often brings forth strong hints that  
electronic assault targets may be mentally ill.

What this article does is show that pulsed microwave  
voice to skull has been do-able, and not even a military  
secret, since it was announced at the University of Utah  
in August, 1974. That's more than three decades.

A recent Freedom of Information request shows that the U.S.  
military has an interest in developing voice to skull  
further:

<http://www.raven1.net/friedmanv2s.pdf>

Since the operating principle is simple, basically synthesizing  
voice from a stream of clicks, and a radar set can be modified  
to transmit the original voice to skull signal type, and since  
this technique has been available for over three decades, it is  
reasonable to not summarily assume targets of organized stalking  
and electronic harassment must be mentally ill.

Hopefully journalists will, in the future, clearly mention Dr.  
Joseph Sharp's success of the 1970s to give the public a  
balanced picture.

Eleanor White

## **Credibility Comments Relevant to ALL Web Sites About Organized Stalking and Electronic Harassment**

**December 5, 2008**

There are some credibility considerations which affect the hundreds of web sites, blogs, media articles, videos, radio interviews and other information sources relating to the crime of organized stalking and electronic harassment (OS/EH) which journalists and officials should be aware of.

- This crime naturally seems bizarre, especially in North America, where atrocities like those of the Ku Klux Klan, Hitler's and Stalin's political thugs, MKULTRA (NOT the LSD part but the child torture part), COINTELPRO, and like crimes are just not part of the average citizen's experience set. Lesson: Do not presume that reports of OS/EH are nonsense just because most citizens haven't experienced such crimes.
- Testimony by targets about OS/EH sound bizarre. But journalists and officials must reflect on how they personally would react, and what they would say publicly, if they were suddenly harassed in all places, non-stop, by group members who are very careful to appear as "just normal community members". Including destruction of health (electronically,) destruction of reputation (by non-stop lies,) sabotage designed to be of a type that avoids police attention at home, in the car, and at the workplace, loss of job, prevention of finding work by lies, destruction of businesses where the target is the owner, and so on.

NATURALLY, such a bizarre crime is going to result in targets publishing false conclusions, stating their guesses as fact, and grasping at bogus information for no other reason than it describes their situation accurately. NATURALLY. You journalists and officials would very likely do the same.

We have professionals from all walks of life in our ranks, and some of them act bizarrely too.

- Journalists and officials need to understand that when an ongoing crime specifically designed to produce reactions which look like mental illness, NOT-MENTALLY-ILL people are very likely to react in such ways.

Doctors in particular need to understand that it is wrong to label reactions to this crime as mental illness simply on the basis that they believe OS/EH "can't possibly happen." Doctors do not know that, since they never investigate.

- In any group of thousands of people, the "bell curve" principle indicates there will be some mentally ill people in the group. To publish articles highlighting the few targets who are or have become genuinely mentally ill without very clear statements that there are many targets who are not mentally ill is to block justice.

One psychologist, Dr. Vaughan Bell from England, has had his studies of web sites concerning OS/EH, which he and psychiatrist colleagues are certain were posted by "mentally ill people," written up in very mainstream news sources. Not one word that Dr. Bell is aware there are targets which are not mentally ill. Dr. Bell informed me privately that he and his colleagues are aware there are targets who are not mentally ill. Somehow, between what he provided the journalists and what the journalists wrote, this key fact never made it into print.

So to journalists and professionals alike, never forget that "bell curve" applies to targets of OS/EH as well, and above all, SAY THAT in future articles about this crime.

With those points in mind, the reviews posted here are intended to enable readers to see that targets of OS/EH do care about credibility, and this review system should help those who prepare future articles and information on this topic.

## Credibility Reviews: Organized Stalking and Electronic Harassment

This site went on line November 21, 2008

Most recent visits only:

[View Visit Stats for This Page](#)

[Jump down to start of reviews](#)

January 17, 2009

This credibility review system was established in November 2008 to counter the large amount of nonsensical, unsupportable, undocumented claims posted on the Internet about the crime of organized stalking and electronic harassment. Such material seriously hinders bona fide efforts to get this crime exposed to the public, and ultimately stopped.

Such nonsensical material means journalists are reluctant to "touch" this issue. Such nonsensical material makes officials reluctant to offer genuine support to targets asking for help. Bogus material is not a trivial issue.

Credibility reviews, posted here, are intended to help those who are not familiar with the crime of organized stalking and electronic harassment, or are targets who may be new or have limited awareness of literature relating to this crime.

The reviewers' opinions are their own personal opinions. Those who post reviews here have been chosen because they have had some years' experience with OS/EH literature, some education and experience relative to the topic of the items reviewed, and have demonstrated a strong interest in separating the best information from that which is bogus, or at least questionable.

An "OK" rating doesn't necessarily mean the item is perfect, rather, it means the reviewer considers the item of sufficient quality that it can be used to educate the public and officials about the crime of organized stalking and electronic harassment (OS/EH). Comments posted here relate to usefulness for public education.

A "LOOKS OK" rating is a "provisional" rating, meaning the reviewer does not find serious flaws on the face of it. For example, the writer of an item relates a personal experience, but the reviewer hasn't personally investigated (or hired a detective to do so) the story told by the writer, or, the reviewer hasn't been able to exhaustively research the item, but it is an item likely to come to the attention of journalists. Journalists can use this rating as a "promising lead," but before accepting it as fact, should do an appropriate independent check. (Reviewers can assist journalists or officials wanting further information if requested.)

An "OPINION ONLY" rating means the item, even though it may appeal to targets on the basis of it "sounds right" to them, has substantial claims not backed up by mainstream documentation. Examples are the testimony of John St. Clair Akwei, and the documents circulating on the Internet written by alleged former NSA agent "William Filer." Journalists should give these items credibility appropriate to personal opinion only.

An "OFF TOPIC" item may have excellent information, well documented, but has, in the reviewer's opinion, too much information not related to organized stalking and electronic harassment. While there are many urgent issues facing the world today, excessive information about them can tire the viewer/reader/listener, making them less likely to absorb the message that OS/EH needs everyone's attention.

A "DISTRACTS" item may have valid information, but the information is presented in a frantic matter, with huge fonts, heavy colours, literally screaming at the viewer/reader/listener. I, Eleanor White, used this frantic style in years past, and activist Norma Lawrence showed me that her toned-down, matter of fact style, in normal font sizes, with subdued colours, was the way to go. Her site, <http://www.catchcanada.org>, using a calm, collected style has actually played a part in convincing hostile family members and doctors.

**NEEDS  
INDEPENDENT  
VERIFICATION**

A "NEEDS INDEPENDENT VERIFICATION" item can be a claim made by an individual which, due to the reviewer being unable to travel or do the necessary research, would require someone professionally qualified, other than the person making the claim, to investigate before an "OK" review could be applied. Because the crime of organized stalking and electronic harassment is bizarre in and of itself, some "far out" claims are made on targets' web sites. Such claims could be picked up on by journalists or officials as evidence that the crime of OS/EH is not believable. This makes the "needs independent verification" rating important.

**NOT OS/EH  
RELEVANT**

A "NOT OS/EH RELEVANT" rating means the item, even though it may be perfectly accurate, does not apply to the actual experiences reported by targets of organized stalking and electronic harassment. A good example are devices which can produce electronic assault effects, but require direct contact with the body. EH targets experience assaults through walls, in the wilderness, and places where direct contact with devices isn't possible. Therefore articles on direct contact devices are "not OS/EH relevant."

**BAD FOR  
ACTIVISM**

A "BAD FOR ACTIVISM" rating can mean that bogus materials are included in the item, the item is too long, the item is too shrill, too much off topic or distracting information is included, that too much of the OS/EH story is included for FIRST CONTACT material, and/or any part of the material doesn't use best communications practice. An item of information can be all true but still bad for activism.

**BOGUS**

A "BOGUS" rating means there is at least one serious flaw in the item reviewed. It means the reviewer advises against referring to the item for activism purposes. There may be good information in the item, but the bogus portion is too serious for the item to represent the fight against organized stalking and electronic harassment to the public, in the opinion of the reviewer.

Reviewers are usually OS/EH targets who have done activism to expose and stop organized stalking and electronic harassment, and are not "top experts," however, they review items where their combined education and experience make their viewpoints worth considering carefully. Reviewers don't volunteer to review items where their education and experience are lacking in relevance.

The reviewed items registry below provides:

- A unique review identification number
- A screen shot of the item, made on the review date
- Review comments explaining the rating given

A reviewed item posted with the "Credibility OK" icon without a review identification number should be considered as NOT REVIEWED by this system.

A reviewed item which has been changed since the review copy was taken should be considered as NOT REVIEWED by this system.

BYLINE: By ALEXANDRA BANDON

BODY:

Someone about to commit a crime undergoes distinct physiological changes: body temperature, blood pressure and heart rate all rise and the body emits a musky scent. This wrist cuff, encompassing laser and microwave technology, would be able to read those vital signs and zap a potential attacker with a disabling arc of electricity. Think of it as a Mace for the 21st century.

"Every person emits a signature," explains Peter Rowland, spokesman for the Picatinny Arsenal in Rockaway Township, N.J., where the Army is developing weapons that operate on a similar principle. "A sensor could distinguish that signature and determine if it's friend or foe."

This cuff is meant strictly for personal defense: it can't be fired unless it senses an assailant. At that point, the system "taps" your wrist and points you at your foe. When you look in that direction, the earpiece registers your head movement and locks the firing system onto the target.

If the possible assailant advances within a predefined radius, the cuff fires a bolt of electricity, in an amount set to stun, wound or kill.

As a precaution, the wrist cuff could be fired only by its user. And it's a smart weapon, in the truest sense. By reading the user's brain waves, the system could decide to hold its fire against, say, a passionate lover. ALEXANDRA BANDON

# What Is This Batelle Plane Spraying?

<http://www.freewebs.com/daniscave/aerosoloperations.htm>

2-28-5

Note - We received this from an aviation professional who requested anonymity. -ed

3-1-5

In reference to your article, "what is this Batelle plane spraying?", please refer to this webpage

[http://www.pnl.gov/atmos\\_sciences/as\\_g1\\_2.html#Instrumentation](http://www.pnl.gov/atmos_sciences/as_g1_2.html#Instrumentation)  
for your answer. It is conducting atmospheric research

I have recently seen a C-130 aircraft operated by the National Science Foundation here in Antigua. This aircraft was based here for more than a month and was testing the "clean" atmosphere on the windward side of Antigua (Leeward Islands of the Caribbean) to use the data as a baseline measurement to compare to polluted areas. This aircraft had identical instrument systems on the wings and fuselage to this Battelle aircraft. I had a very close look and walked around the aircraft several times during operations from the V.C. Bird International.

# **1966 U.S. space research confirms John Ginter's 1968 description of M.I.N.D. device, or magnetic integrated neuron duplicator**

---

[C.A.H.R.A. Home Page](#)

---

John Ginter, with only a high school education, claimed that the chief psychiatrist at San Quentin, Dr. Schmidt told him that a M.I.N.D. device or magnetic integrated neuron duplicator was used on him at San Quentin Prison. See full posted story above. John described this and more details of a mind control experiment in his 1968 court case. Now in 2002, this information is directly linked to U.S. space research, thanks to researcher Tessa Puglia, who found a 1966 book on rocketry and spaceflight which has the exact same acronym listed. The book is posted on the following website at:

<http://www.lib.cas.cz/www/space.40/ACRONYMS/TACRON-M.HTM#MI>

In russian and translated to english, the book is, "English-Russian Guided Missiles & Space Flight Dictionary", publisher, Voenizdat, or Military Publishing House, Moscow, 1966. The foreword states: The monographs, reference works, dictionaries, and periodicals on rocketry and spaceflight published in the USA and UK were used as source for this Dictionary. Page 874, the full entry is: MIND magnetic integrator neuron duplicator, neuron magnetic integrator-repeater (for remembering experience and for learning new facts). Thanks also to Mgr. Antonin Vitek, CSc, Main Library, Academy of Sciences of the Czech Republic, for translating this excerpt and posting this information on his website. With John Ginter's amazing thirty-plus years of keeping his story alive, time has revealed what was missed by the US national security stamps and is still classified!

# **2003 Survey of Evidence Regarding Mind Control Experiments**

**by Cheryl Welsh, January 3, 2003**

---

[Mind Justice Home Page](#)

---

As director of the nonprofit IRS approved group Citizens Against Human Rights Abuse (CAHRA), I have received over 1800 claims of mind control since 1996. A strong case can be made that the US, Russia and major countries are developing and conducting classified mind control nonconsensual experiments. The issue of mind control and nonconsensual experiments is addressed by European, Russian and US legislatures, several human rights groups and notably, the United Nations Institute for Disarmament Research (UNIDIR). This article is a summary of the mind control issue, including sections on the follow:

- a cold war history of electromagnetic weapons development,
- experimentation law and history in the US,
- what electromagnetic radiation and mind control weapons are, according to human rights experts,
- the 2002 UNIDIR endorsement of CAHRA's article on experiments and mind control weapons,
- the major cluster of symptoms described by victims, particularly in the US and Russia,
- two obsolete cover stories, exposed with the breakup of the Soviet Union,
- a sample of laws covering mind control weapons,
- a short conclusion,
- citations and
- about CAHRA and the author

## **Overview of a long running issue**

A related cold war story of the development of electromagnetic radiation, (emr) weapons has been documented. As revealed in UN documents, weapons experts papers and scientific journals, a classified emr arms race between Russia and the US became public knowledge with the momentous event of the breakup of the Soviet Union in 1989.(1) And mind control weapon research is more secret than the Manhattan Project,(the project to develop the atomic bomb.) Some cover stories for mind control projects have been maintained by

the US government for fifty years and are now obsolete. One cover story was the US policy for emr health exposure limits: that emr has no provable health effects apart from heating. But with the breakup of the Soviet Union, the military flip flopped, threw out this fifty-year scientific fallacy and in 1997 revealed US military funding of the development of "new" weapons based on the biological effects of emr. A second cover story is that mind control weapons are science fiction. Three recent newspaper articles on fighting terrorism dispel this myth and expose the defense industry's flip flop attempts to perpetuate it.

Human rights experts and top political figures make comparisons of emr weapons to the atomic bomb; the most powerful weapons on earth. Freedom of thought can be obliterated with emr weapons' attack on the brain in addition to the body. Because emr weapons are silent, undetectable and leave no trace, some experts say WWW3 could be fought and won without a trace.(2) This article will present evidence that a classified emr arms race took place between the US and USSR, ending with a US victory. Given this fascinating and rarely reported history, claims of nonconsensual mind control experiments become plausible.

**Mind control experiments are similar to past nonconsensual government experiments: conducted for weaponization of the most significant scientific discoveries of the 20th century.**

The discovery of secrets of the atom led to the development of the atomic bomb, and scientists conducted extensive nonconsensual radiation experiments. With the discovery of the secrets of DNA and the development of biological weapons, biological experiments were conducted which have been declassified. Classified US experiments in which microbes were sprayed over cities, as well as post-cold war exposes of Soviet biological warfare efforts to develop lethal viruses have come to light. (3) Claims of mind control experiments beginning in the 1950s are now supported by evidence of scientific discoveries of brain physiology that have been used to develop mind control weapons by our government. A 1999 book on secret government experiments entitled *Undue Risk* by ethicist, Dr. Jonathan Moreno, stated: "... individual human subjects will be needed to 'perfect' the instruments for neuroimaging and the interpretation of the images into thoughts and ideas. The military possibilities of such capabilities are evident and the potential for human experiments under highly classified national security conditions are too obvious to require much comment." (4)

Not surprisingly, mind control victims have been labeled mentally ill. Labeling victims "nut cases" or "kooks" is not new. A 1997 *New York Times Magazine* stated; "For decades, those who claimed to be victims of clandestine radiation experiments conducted by the United States government were dismissed as paranoid." (5) Mental illness is an overwhelming alternate explanation and cover story for victims to overcome.

In the 1990s, the truth came out; nonconsensual radiation experiments were proven with government documents. Tragically, no laws have been passed to

prevent secret experiments from happening again. Dr. Jonathan Moreno has reported that in 2001, President Bush granted the department of Health and Human Services the authority to classify department research as secret. Dr. Moreno warned that this could allow the Defense Department or CIA to undertake secret human experiments with the HHS.(6) The increased secrecy and acquisition of billions of defense dollars are ideal strategies for continuing nonconsensual mind control experiments.

### **How emr works on the human mind and body**

Electromagnetic radiation weapons work on the theory that the mind and nervous system use electromagnetic signals and signals from outside sources which can mimic, block or alter the mind's and body's own electromagnetic radiation signals. A 1997 *US News and World Report* article by Douglas Pasternak entitled "Wonder Weapons" explained this process. ". . . the human body is essentially an electrochemical system, and devices that disrupt the electrical impulses of the nervous system can affect behavior and body functions. But these programs-- particularly those involving antipersonnel research--are so well guarded that details are scarce. "People [in the military] go silent on this issue," says [Louis] Slesin, [trade publisher of *Microwave News* for the electromagnetic radiation industry], "more than any other issue. People just do not want to talk about this."(7)

### **What is proven: classified development of mind control weapons by most of the major world powers-- without accountability.**

In the July, 1997 *British Medical Journal*, Robin M. Coupland of the International Committee of the Red Cross inquired, ". . . will the soldiers who have survived battlefields of the future return home with psychosis, epilepsy, and blindness inflicted by weapons designed to do exactly that?" (8) Dr. Barbara Hatch Rosenberg wrote in the September, 1994 issue of *The Bulletin of the Atomic Scientists*, "Many of the non-lethal weapons under consideration utilize infrasound or electromagnetic energy (including lasers, microwave, or radio-frequency radiation, or visible light pulsed at brain-wave frequency) for their effects. These weapons are said to cause temporary or permanent blinding, interference with mental processes, modification of behavior and emotional response, seizures, severe pain, dizziness, nausea and diarrhea, or disruption of internal organ functions in various other ways. ...The current surge of interest in electromagnetic and similar technologies makes the adoption of a protocol explicitly outlawing the use of these dehumanizing weapons an urgent matter."(9)

The November, 1990 *International Review of the Red Cross* reported: "Research work in this field [electromagnetic weapons] has been carried out in almost all industrialized countries, and especially by the great powers, with a view to using these phenomena for anti-materiel or anti-personnel purposes. ...In spite of the rarity of publications on this subject, and the fact that it is usually strictly classified information, research undertaken in this field seems to have demonstrated that very small amounts of electromagnetic radiation could appreciably alter the functions of living cells." (10)

In the June, 1996 *Aviation Week and Space Technology*, Paul Mann wrote, "A Harvard molecular geneticist and biological/chemical warfare specialist, Matthew S. Meselson warned: 'We're going to learn how to manipulate every life process, genetic ones, mental ones, the emotional ones, . . . If our inevitably increasing knowledge of life process is also harnessed to hostile purposes, that will completely change the nature of the expression of human hostility.'" (11) Unfortunately, Dr. Meselson's words have proven to be prophetic.

### **United Nations Institute for Disarmament Research cites "mind control" issue.**

Mind control weapons are a serious enough threat to be included along side nuclear, biological and chemical weapons in a document published by the United Nations Institute for Disarmament Research (UNIDIR).(12) The 2002 Media Guide to Disarmament in Geneva was compiled to help the Geneva-based media bring disarmament issues "to the attention of the wider world." CAHRA is one of six Non-Lethal Weapons experts cited by UNIDIR. Others include Human Rights Watch, International Committee of the Red Cross and University of Bradford Department of Peace Studies.

The Media Guide includes a nonlethal weapons "links" section to the Center for Defense Information, the University of Bradford, Non-lethal Weapons Research Project and to my article *Non-lethal Weapons--A Global Issue*. (13) In this article I present numerous comments and warnings by international experts and public figures about mind control weapons. The piece presents specific allegations regarding nonconsensual government experiments and classified nonlethal weapons which target the brain and nervous system, or as they are popularly known by the emotionally charged term, "mind control". Called information and psychotronic weapons in Russia and China, mind control weapons are included in the category of nonlethal weapons in the 2002 Disarmament Guide. UNIDIR is studying the parameters of this issue, nuclear disarmament and fourteen other categories of weapons. The 2002 UNIDIR citation of CAHRA and the article substantiate my position that claims of nonconsensual experiments by governments in highly classified mind control weapons programs are a legitimate and serious disarmament issue.

### **Reported mind control symptoms**

Victims from all over the world have contacted CAHRA with reports of being targeted with mind control, although approximately seventy-five percent of victims are American and Russian. The following is a description of symptoms most commonly reported by victims:

Twenty-four hours a day, seven days a week, for years on end, victims are subjected to various kinds of harassment and torture. Most believe that some technology is remotely targeting and controlling every nerve in their bodies. Heart rates speed up and slow down, bowel movements are regulated, illnesses can turn on and off in an instant. Victims report microwave hearing, (which is an unclassified military weapon), or voices in the head.(14) Sleep deprivation is common. Thoughts can be read, and played back to the victim,

instantaneously. People around the victim have repeated verbatim, the victim's immediate thoughts. Victims report that dreams are manipulated, behaviors controlled, emotions literally played with and all types of pain started and stopped in all parts of the body. Forced muscle movements, forced speech, forced precision manipulation of hands are also reported. Victims describe holograms being projected and remote sexual manipulation and abuse, with pedophilia, homosexual and degrading themes also reported regularly. Microwave burns are frequently reported, along with all types of bizarre and harassing manipulation of electrical equipment, phone, car, TV and computers. Mail tamperings are reported as well. Black bag intelligence tactics --tire slashings, break-ins without burglary but at times including sabotaged, modified items also appear on the list of invasions.

What follows is a short list of less commonly reported symptoms. Victims report the following phenomena spontaneously happens to them: Objects are moved, from tiny gas bubbles in the victim's respiratory tract and yanking legs out from under the victim, all the way up to shoving a moving car sideways. Some type of outside force can strike heavy blows to any object, or set any object including the body into strong vibration, while nearby objects are not vibrating at all. Wrenching of house/building structures cause loud snapping or crackling noises, often heard at precisely the point where a victim is starting to doze off to sleep.

Victims agree: the experience of mind control phenomena is vicious, amoral, sadistic and cruel. Most victims describe the experience as very debilitating and compare it to mental rape, an electronic prison or total destruction of the quality of their lives. Many have been labeled mentally ill and live with financial ruin, loss of health, social life and career. Victims theorize that the goal of the experiments would appear to be the development of weapons to neutralize the enemy. All say the technology is unbelievably sophisticated and effective. To them, it is like a slow death.

### **Typical cases of US mind control victims**

Dave Fratus and several other prisoners at Utah State Prison in Draper, Utah claimed hearing voices caused by remote electronic emissions in their head and that the voices said they came from the planet Astra. In a letter dated October 18, 1988, Fratus described "some type of remote control electronic brain punishment. . ." In 1981, Dorothy Burdick wrote the book, *Such Things are Known*, published by Vantage Press. Burdick was a college professor in a northern California community college. She was targeted with "microwave hearing," the phenomena of voices heard in the head and caused by microwaves. Stephen , whose father was a professor at UC Berkeley, says that the whole family was targeted because his father came from Iran. Currently a law student, I believe that I too was targeted when I signed papers for entering the military in 1986. I believe I have been part of some form of baseline study for brain studies on stress, or for military purposes such as psychological operations.

In 1997, victim Carole Sterling committed suicide in order to escape the torture of emr technology. She described attending the 5th International UFO conference at Mesquite, Nevada in the newspaper, *The Star Beacon* in Paonia, Colorado:

Dear Star Beacon, I am writing about something that happened to me which goes back to December, 1995. I went to a conference in Nevada. The day following the last night at the conference, I noticed that I had an injection mark on the base of my spine which was sore. Then the nightmare started three days after my return to Washington, DC . . . It totally scrambled my brain, leaving me unable to think properly, simply functioning on sheer shock and horror, with total incomprehension of what was going on. It actually was debilitating. The room felt like a torture chamber. This forced me out of my home. I believe that the technology used, be it some type of a frequency assault, some sort of directed energy, in addition to whatever was injected in me, has caused damage to my brain. [I have] been living with this debilitating and excruciating pain for the last eight months so far.(15)

Many such incidents have been reported in the mainstream press. The *Kansas City Pitch Weekly* reported in 1995 that, "[Paul Schaefer, engineer] cites numerous examples of occasions when 'adverse energies,' 'beams' or 'substances' have been 'shot' at him. 'A neighbor called me over to her porch one day, to tell me she'd seen a beam of light come out of the sky and shoot into one of my windows,'" said Schaefer. "I could see the path through the garden where the leaves turned yellow. . . . when asked why they want to attack him, he said it was because of his radical activities and writings." (16)

This 1997 excerpt from the *Pennsylvania Inquirer* describes a man who mailed a threatening letter to President Clinton. "According to the affidavit, the letter tells Clinton to 'tell the Philadelphia Naval Base to stop trying to brainwash me into killing people with covert E.L.F. electronic weaponry and asks for 'compensation for being a research test victim.'" (17) This man, Joseph Washington now networks with a victims group in Philadelphia.

This 1988 *Los Angeles Times* excerpt is long because it contains an exceptional description of what happens to a majority of victims. In addition, Martin Cannon wrote about this case of Rex Niles in chapter five of his book, *The Controllers*, making a point by point comparison of Niles' mind control symptoms with UFO abductee phenomena.

"...Government officials estimate that [Rex] Niles had handed over millions in under-the-table payments to employees of leading contractors in exchange for lucrative subcontracts before he secretly turned government witness and began an undercover campaign with the FBI to sting the crooked buyers who had depended on his largess. Niles' work as an informant led to the conviction of 19 industry buyers and supervisors on fraud, tax evasion and kickback charges, and Niles retired in triumph in April of 1987, lauded for his "unprecedented cooperation," into the Federal Witness Protection Program. But

in the way stories have of not ending the way they are supposed to, . . . Instead, he is living in a suburban home outside Los Angeles, sleeping under a makeshift foil tent fashioned to block the microwaves he believes are killing him. "His aluminum foil hat has tiny holes in it, says Rex Niles, proof that the government is bombarding him with microwaves in an attempt to kill him. . . . He has produced testimony from his sister, a Simi Valley woman who swears that helicopters have repeatedly circled over her home. An engineer measured 250 watts of microwaves in the atmosphere inside Niles' house and found a radioactive disc underneath the dash of his car. . . . The noises started again, he said. "You know, in the middle of the night at two in the morning, when they wouldn't allow me to sleep; when they were aggravating my conscious as well as my subconscious mind, I would hear what sounded like large groups of people . . . that sounded like a bottle breaking in the street. "So I would go to the window, or one time I was dressed because I couldn't sleep, so I went down, and the street was absolutely empty." Niles became convinced that the marshals had set up an elaborate speaker system around his room to confuse him with artificial sounds. In intricate detail, he has worked out his theory of what happened. The marshals, he said, were attempting to make it appear as though he were crazy, setting him up in order to make off with his money. They kept him awake at night to minimize his resistance, he theorized. "...This has been a very tough story to tell people," Niles admitted. "They have a hard time believing me and wonder how could I have this much audacity and this much vanity, to think that I'm worth this kind of a push, this much manpower, equipment, airplanes, helicopters, at one point, 14 lasers. It isn't that I'm worth it. It's because they've got so much to protect. . . ." (18)

## **Mind Control in Russia**

With the breakup of the Soviet Union, Russian reports of mind control have become available. CAHRA has formed an international coalition with a major group of mind control victims in Russia. In March, 2002, the Moscow Committee for the Ecology of Dwellings appointed me as the director of CAHRA to their Executive Committee. Since Emilia Cherkova and Leah Terekhova founded this Russian group in the 1990s, the organization has often been cited in major Russian newspapers. As an authority in the area of mind control, Emilia has sent CAHRA several articles and books on Russian mind control, which are now translated and will soon be posted on the CAHRA website. Below is one Russian newspaper article excerpt describing their group. The similarity of both symptoms and the frustration of attempts to obtain help encountered by US and Russian victims, is striking. The 1995 *Moscow Times* article, "Report: Soviets Used Top-Secret ' Psychotronic' Weapons":

There may be a scientific explanation for the rigid-faced inflexibility of Soviet-era border guards and soldiers, after all. Reports have emerged of a top secret program of "psychotronic" brainwashing techniques developed by the KGB and the Ministry. The techniques, which include debilitating high frequency radio waves, hypnotic computer-scrambled sounds and mind-bending electromagnetic fields, as well as an ultrasound gun capable of killing a cat at fifty meters, were originally developed for medical purposes and adapted into weapons, said journalist Yury Vorobyovsky, who has been investigating the program for three years. Ecology and Living Environment, an environmental and civil liberties group which claims a membership of 500 people in Moscow, has set up an association of "Victims of Psychotronic Experimentation," who have filed damages claims against the Federal Security Service, or FSB, and the government. Unfortunately, since by definition many of the victims are psychologically disturbed, there is a problem of verification. "The Health Ministry and the FSB are doing medical experiments on over a million innocent people," said Ecology and Living Environment President Yemilia Cherkova, an ex-member of Zelenograd's local council. Cherkova wears a lead helmet in bed to protect herself against the rays she says the government beams into her flat. "They put chemicals in the water and use magnets to alter your mind. We are fighting to prove to the authorities that we are not mad." Nevertheless, the State Duma is taking the matter seriously enough to draft a law on "security of the individual," which will include regulation of subliminal advertising and pseudo-religious sects, as well as imposing state controls on all equipment in private hands which can be used as "psychotronic weaponry." "The law is pre-emptive," said Vladimir Lopatkin, chairman of the Duma's drafting committee. "The equipment that now exists in laboratories must be very strictly controlled to prevent it from being sold to the private sector. . . . Of course this project is surrounded with a lot of hysteria and conjecture. . . "Something that was secret for so many years is the perfect breeding ground for conspiracy theories."(19)

## **EMR Weapons: As Powerful As The Atomic Bomb**

Nonthermal effects of emr are the scientific basis for weapons and biological basis of brain function, according to several human rights experts, military and civilian authorities and top government science advisors. For example, Dr. Stefan Possony, a Stanford University Hoover Institute fellow, who was called "the intellectual father of 'Star Wars' and was "one of the most influential civilian strategic planners in the Pentagon," wrote the 1983 *Defense and Foreign Affairs* article, "Scientific Advances Hold Dramatic Prospects for Psy-Strat". (20)

Suppose it becomes feasible to affect brain cells by low frequency waves or beams, thereby altering psychological states, and making it possible to transmit suggestions and commands directly into the brain. Who is so rash as to doubt that technological breakthroughs of this general type would not be put promptly to psyops use? More importantly who would seriously assume that such a technology would not be deployed to accomplish political and military surprise?" (21)

In a 1986 *BBC Summary of World broadcast*, Mikhail S. Gorbachev, former Soviet leader stated:

"Weapons based on new physical principles would include, amongst others, means in which physical principles which have not been used hitherto are used to strike at personnel, military equipment and objectives. Amongst weapons of this kind one might include beam, radio-wave, infrasonic, geophysical and genetic weapons. In their strike characteristics these types of weapons might be no less dangerous than mass strike weapons. The Soviet Union considers it necessary to establish a ban on the development of arms of this kind." (22)

### **US won classified emr arms race**

The former USSR has advocated banning emr ( electromagnetic radiation), weapons since the 1970s. The US has heavily classified nonlethal weapons since the 1960s and has denied the existence of weapons effects of emr up to the 1990s. (23) The Pentagon stated on *CNN* news that the radiofrequency weapons are too sensitive to discuss and has maintained this stance throughout the 1980s.(24) In the 1990s, however, the military admitted to looking for emr weapons based on emr bioeffects. (25)(26)

Russian classified mind control programs were revealed only as a result of the monumental event of the breakup of the Soviet Union. The 1993 *Defense News* article entitled "US Explores Russian Mind-Control Technology" revealed some of Russia's emr weapons. "Known as acoustic psycho-correction, the capability to control minds and alter behavior of civilians and soldiers may soon be shared with US military, medical and political officials, according to US and Russian sources. ...Pioneered by the government-funded Department of Psycho-Correction at the Moscow Medical Academy, acoustic psycho-correction involves the transmission of specific commands via static or white noise bands into the human subconscious without upsetting other intellectual functions."(27)

Russian top secret and massive mind control weapons programs were in chaos. The 1993 *Defense News* article stated that US and Russian sources were planning "...discussions aimed at creating a framework for bringing the issue under bilateral or multilateral controls". ...Therefore, the Russian authors have proposed a bilateral Center for Psycho-technologies where US and Russian authorities could monitor and restrict the emerging capabilities." In addition, a

1993 *Defense Electronics* article discussed concerns that Russian mind control weapons, like atomic weapons would get into the hands of terrorists and criminals and therefore international agreements were needed.(28) The United States emerged as the single world super power and classified international agreements now control the use of emr weapons.

**A cover story is now obsolete: Russia & former East Block maintain that nonthermal emr biological effects are used for new weapons, US says nonthermal emr effects are not proven.**

Russia and the East Block's position was that electromagnetic radiation (emr) biological effects could be used to develop new weapons of mass destruction. These biological effects were also called athermal or nonthermal effects of emr because they are in contrast to the thermal effects of emr, such as those caused by heating food in a microwave oven. The Russian scientific literature going back to the 1930s supported a theory of nonthermal or biological effects of emr. The UN Committee on Disarmament discussed Russian proposals to ban "new types of weapons of mass destruction." One weapon described by the Soviet government in 1979 was, "Infrasonic acoustic radiation weapons. ...They would utilize harmful effects of infrasonic oscillations on biocurrents of the brain and nervous system;... " The 1979 document continued, "4. Means using electromagnetic radiation to affect biological targets. As a result of research into the effects of electromagnetic radiation on biological targets, the existence of harmful effects of radio-frequency radiations within a wide range of frequencies on such vitally important organs of the human as the heart, the brain and the central nervous system may now be regarded as a firmly established fact. Assessments quoted in international literature of the potential danger of the development of a new weapons of mass destruction are based on the results of research into the so-called "non-thermal" effects of electromagnetic radiation on biological targets. These effects may take the form of damage to or disruption of the functioning of the internal organs and systems of the human organism or of changes in its functioning." (29)

The US position was the exact opposite of the Russian position; that there were no US research programs or weapons based on biological or nonthermal emr effects. Throughout this period, the US nevertheless conducted classified mind control weapons research based on the athermal or biological effects of emr. (30) Dr. Robert Becker was a consultant to the CIA in the 1960s on emr effects on fighter pilots shot down by the Soviets, as reported in *Opening Pandora's Box*, a 1984 *BBC TV* documentary. (31) Dr. Becker stated, "...the best cover story is that, based on best American scientist's [opinions],.... the [US] nation has discarded [the theory of athermal] health effects from emr, entirely." In fact, this was the official US position.

In sharp contrast to the Russian position on biological effects of emr, the US military, industry and government scientists publicly supported the position of Dr. Herman P. Schwan, a Nazi Paperclip scientist who established the safety limits of electromagnetic radiation exposure for the United States in the 1950s. The US operated Project Paperclip between 1945 and 1955 in an attempt to exploit the expertise of German scientists after W.W.II, and 765 scientists were

employed by the US government, including Dr. Schwan. (32) Dr. Schwan's position-- that there are no proven athermal or biological effects of electromagnetic radiation is still largely adhered to today. Professor Schwan worked at the University of Pennsylvania on numerous government contracts and received Navy and National Institute of Health, NIH funding throughout his entire career.(33)

With the breakup of the Soviet Union, the Pentagon publicly unveiled the nonlethal weapons program including weapons based on athermal or biological emr effects, and the US policy that there are "no proven athermal emr effects" took a 180 degree turn . The July, 7, 1997 *US News and World Report* article, *Wonder Weapons* stated: "...scientists, aided by government research on the "bioeffects" of beamed energy, are searching the electromagnetic and sonic spectrums for wavelengths than can affect human behavior." The former Soviet Union's position on banning emr weapons and the flip-flop of the US military's position on emr weapons after the breakup of the Soviet Union are indications of national security policy and it's influence on the scientific research of emr and emr weapons.

That emr can cause athermal biological effects is now a proven scientific theory. At a 1990 General Assembly of the International Union of Radio Science held in Prague, Dr. Ross Adey concluded that, "It is no longer a matter of speculation that biomolecular systems are responsive to low level, low frequency electromagnetic fields. Not only is tissue heating not the basis of these interactions, but the many instances of responses windowed with respect to field, frequency and intensity set a rubric for their consideration in physical mechanisms involving long range ordering at the atomic level." (34) The NRC report, *An Assessment of Non-Lethal Weapons Science and Technology* (2002) stated "Leap-ahead non-lethal weapons technologies will probably be based on more subtle human/RF interactions in which the signal information within the RF exposure causes an effect other than simply heating: for example, stun seizure, startle, and decreased spontaneous activity. Recent developments in the technology are leading to ultrawideband, very high peak power, and ultrashort signal capabilities, suggesting that the phase space to be explored for suble, yet potentially effective non-thermal biophysical susceptibilities is vast."(35)

Dr. Adey has also testified before the US Congress on US government suppression and control of research into the biological effects of emr.(36) A 1988 AP article stated, " Since the early 1980s, however, federal government support for non-ionizing radiation bioeffects research has declined markedly. W. Ross Adey, a leading researcher based at the Veteran's Administration Medical Center in Loma Linda, Calif., told a House subcommittee last Oct. 6 that current levels of government funding -now about \$7 million a year- are "disastrously low. There is reason to believe that this situation has arisen in part through a well-organized activity on the part of major corporate entities from the consumer and military electronic industries to discredit all research into athermal biological and biomedical effects," Adey said.

History has revealed that some US scientists knowingly lied, or at the least twisted and omitted evidence, and these unethical actions indicate the seriousness and magnitude of the issues the scientists were attempting to cover up. The public denial of athermal effects of emr by US government scientists was undoubtedly a cover story for a long-term, highly classified emr weapons program.

Two scientists, Dr. Rosalie Bertell and Dr. Eldon Byrd have studied emr bioeffects and both agree on the under-reported demise of this cover story. Dr. Rosalie Bertell has a doctorate degree in Biometry, the design of epidemiological research and the mathematical analysis of bio-medical problems. Dr. Bertell documented military microwave zapping of Greenham Commons women nuclear protesters in the 1980s as reported in London Guardian March 10, 1987. She authored UN reports on the Chernobyl disaster, has five honorary doctorates, numerous peace prizes and more. In an email dated 3-12-01, Dr. Bertell agreed that this cover story is obsolete. (37)

Dr. Eldon Byrd was quoted in the *US News and World Report*, July 7, 1997, Wonder Weapons article. "...From 1980 to 1983, a man named Eldon Byrd ran the Marine Corps Nonlethal Electromagnetic Weapons project. He conducted most of his research at the Armed Forces Radiobiology Research Institute in Bethesda, Md. "We were looking at electrical activity in the brain and how to influence it,' he says." In an email dated 1-10-02, Dr. Byrd also agreed that this cover story is obsolete. (38)

### **Another obsolete cover story: mind control is science fiction**

Mainstream media presents mind control weapons to the general public as a future possibility and science fiction. For example, the May 2002, *Economist* wrote "They [people] should worry about brain science too. There are no laws or treaties or public discussion of neurotechnology as there has been for genetics and cloning." But like so many articles on advances in brain science, the article avoids alarming the reader. The *Economist* article ends, "...to those who fear that neurotechnology is a hair's breadth from catapulting society into a post-human future... There is a [great] deal of searching to do yet before human nature gives up its secrets." (39) The *Economist* article on the ethics of brain science is typical of what the public has been told--a superficial survey of an issue that completely sidesteps existing military research.

The July 7, 1997 *US News and World Report* article reported, "In fact, the military routinely has approached the National Institutes of Health for research information. 'DARPA (Defense Advanced Research Projects Agency) has come to us every few years to see if there are ways to incapacitate the central nervous system remotely,' Dr. F. Terry Hambrecht, head of the Neural Prosthesis Program at NIH, told US News. 'But nothing has ever come of it,' he said, 'That is too science fiction and far-fetched.'"

The military's position-- that mind control is science fiction-- is not questioned or investigated by mainstream press, and this amounts to an effective cover story to keep mind control weapons classified. The following four articles

reveal that the capability to read thoughts is scientifically possible and surely developed by the military, especially given the information available on Russian mind control weapons. One article reported that mind reading technology to fight terrorism is possible, according to NASA. But in a fifth article, NASA, apparently worried about the developing public controversy, issued a denial that mind reading technology is now possible.

In the article, *Decoding Minds*, *Signal Magazine*, October, 2001, Dr. John D. Norseen, of Lockheed Martin stated, "We are at the point where this database has been developed enough that we can use a single electrode or something like an airport security system where there is a dome above our head to get enough information that we can know the number you're thinking," According to *US News and World Report*, January 20, 2000, "The National Aeronautic and Space Administration, [NASA]...have all awarded small basic research contracts to Norseen....-portions of them classified..."

One year later in the *Washington Times*, August 17, 2002, the article entitled *NASA plans to read terrorist's minds at airport* stated,

Airport security screeners may soon try to read the minds of travelers to identify terrorists. Officials of the National Aeronautics and Space Administration have told Northwest Airlines security specialists that the agency is developing brain-monitoring devices in cooperation with a commercial firm, which it did not identify. Space technology would be adapted to receive and analyze brain-wave and heartbeat patterns, then feed that data into computerized programs 'to detect passengers who potentially might pose a threat,' according to briefing documents obtained by The Washington Times. NASA wants to use 'noninvasive neuro-electric sensors,' imbedded in gates, to collect tiny electric signals that all brains and hearts transmit. Computers would apply statistical algorithms to correlate physiologic patterns with computerized data on travel routines, criminal background and credit information from 'hundreds to thousands of data sources,' NASA documents say. ...Robert Park, spokesman for the American Physical Society stated, 'We're close to the point where they can tell to an extent what you're thinking about by which part of the brain is activated, which is close to reading your mind. ...The idea is plausible, he says, but frightening'.

Finally, a 180-degree change in position was issued from Michael Braukus, NASA Headquarters, Washington, August 20, 2002(Phone: 202/358-1979) *RELEASE: 02-160: "NASA rejects claims it plans mind-reading capability. NASA managers today said published media reports suggesting the agency plans to read the minds of potential terrorists go too far and ignore the facts and science behind the research. '...NASA does not have the capability to read minds, nor are we suggesting that would be done,' said Robert Pearce, Director, NASA's Strategy and Analysis Division in the Office of Aerospace*

Technology in Washington. '...Some of the ideas will take several years of effort to establish, if there is a practical application.'"

Since the 1950s, scientists have warned about new brain research but usually add that the discovery of the secrets of the brain is years away. This is hard to believe when looking back at the title and excerpt of a 1976 *Los Angeles Times* article *Mind Reading Machine Tells Secrets of the Brain, Sci-Fi Comes True*.

Washington-In a program out of science fiction, the government is developing mind-reading machines that can show, among other things, whether a person is fatigued, puzzled or daydreaming. ...The Advanced Research Projects Agency says the \$1 million-a-year program has passed its initial laboratory tests and is ready for determination of its military uses. Scientist working under agency contracts at the University of Illinois, UCLA, Stanford, Massachusetts Institute of Technology and the University of Rochester and in laboratories [and] other facilities have been able to determine an individual's alertness from his brain waves. ...It may be only a matter of time before the machines will be able to read a person's brain waves to determine just what he is thinking. (40)

And yet the cover story continues to be maintained. Information available on mind control weapons in mainstream press continues to be biased and incomplete.

### **Discussions and legislation of mind control weapons**

The development and control of mind control weapons and concerns about nonconsensual experiments is a growing international issue, as seen in a few of the many available government documents. Here are four significant and recent US, Russian, and European documents.

House of Representative Dennis Kucinich submitted this October 2nd, 2001 H.R. bill 2977, "The Space Preservation Act of 2001". (41) This bill proposed banning weapons in space, including "psychotronic" and "mind control" weapons. The relevant excerpt states "... (ii) Inflicting death or injury on, or damaging or destroying, a person (or the biological life, bodily health, mental health, or physical and economic well-being of a person)--(I) through the use of land-based, sea-based, or space-based systems using radiation, electromagnetic, psychotronic, sonic, laser, or other energies directed at individual persons or targeted populations for the purpose of information war, mood management, or mind control of such persons or populations;..." According to Kucinich's office, amidst pressure and concerns about ensuring bill passage, this section of the bill was removed in Spring, 2002.

1998 Russian Federal law, *About Weapons* is cited in the edition of *Federal Laws Russian Federation*. This law prohibits "the circulation of civilian and military weapons" including the "use of radio-active radiations and biological factors; -weapons and other objects, the affects of the operations of which are

based on the use of electro- magnetic, light, thermal, infra-sonic or ultra-sonic radiations and which have [exiting ] parameters, exceeding the magnitude of established governmental standards of the Russian Federation and corresponding norms of Federal governmental organs in the area of the health department," (42) This Russian law is in effect today.

1998 report by Morton Sklar of the World Organization Against Torture, entitled: *Torture in the United States*.<sup>(43)</sup> The chapter on involuntary human scientific experimentation concludes with the following:

"Similar concerns also are being raised about involuntary human experimentation involving new forms of classified research and testing of high technology military weaponry, including microwave and laser equipment. Groups working on these issues cite, among other evidence of the existence of these unauthorized testing procedures, a White house intergovernmental memorandum dated March 27,1997, establishing stronger guidelines prohibiting non-consensual testing for classified research, but suggesting, by implication, that this type of human subject research may, in fact, be taking place. Because of the classified nature of these activities, it is very difficult to confirm or disprove that they are taking place. Given the serious negative impacts on non-consensual human subjects that classified research of this type is capable of producing, and given the past history of secret experimentation by the government, these allegations of continuing improprieties involving secret government sponsored human testing should not be dismissed without more thorough, impartial investigation."

European Parliament Resolution A4-005/99 on Environment, Security and Foreign policy, passed on January 29, 1999. The draft resolution specifically discussed the serious concerns regarding electromagnetic radiation weapons. The final resolution calls for an "international convention introducing a global ban on all developments and deployments of weapons which might enable any form of manipulation of human beings." <sup>(44)</sup>

## **Conclusions**

As history has shown, governments will never reveal classified weapons or nonconsensual experiments unless public opinion forces compliance. Mainstream press is repeating its historical stance regarding radiation experiments by assessing victims as crazy and refusing to investigate further. A number of experts agree that, given the increasing numbers reporting nonconsensual mind control experiments, to wait for solid proof of this issue is dangerous and inhumane, especially in light of the history of secret state experiments for the development of weapons. An investigation is appropriate.

The response to mind control victims by the FBI, police, congressmen, lawyers, newspaper reporters, friends and family has been that there is no

proof of a mind control program of nonconsensual experimentation. In addition to the barrier of a US cold war defense budget and a climate of secrecy which has continued into the 21st century, victims must deal with the stigma of the label of mental illness. For fifty years, mental illness has been a convenient excuse for not investigating claims of mind control. But now the circumstantial evidence of nonconsensual experiments is powerful enough to be cited by the United Nations Institute for Disarmament Research and human rights groups. With laws to ban and control the use of mind control weapons, the tide is turning, in spite of the ongoing classification of mind control programs.

Mind control weapons have finally become public knowledge and for the first time, information has become available from Russia. Human rights experts warn of emr weapons comparable to the atomic bomb, and the evidence of a fifty year emr arms race confirm the importance of mind control weapons to US and Russia. The east/west scientific controversy over emr biological effects is a strong indication of deeply classified and extensive mind control programs. The US government cannot credibly explain away the historical record of deception. The cover story that mind control weapons are science fiction is obsolete but the military continues to attempt to use it while reporters do not investigate.

The conclusion that the human brain is decoded, just like DNA and the secrets of the atom seems certain. Evidence supports the fact that control of your mind is another classified military capability, like biological weapons and the atomic bomb. CAHRA will continue to gather documentation of nonconsensual government mind control experiments and work towards stopping another illegal cold war program.

31. Opening Pandora's Box, 1984, produced by David Jones for Fulcrum Central Productions, aired on BBC Channel 4. Dr. Becker was asked by the CIA in early 60s to determine whether pilots shot down and captured by Soviets in the 1960s could possibly have been exposed to emr without them realizing it and would that have caused personality change. The pilots were tested psychologically before and when they came home. A dramatic change in test results was found. The question posed was, can you change, entrain brainwaves with an external source? "Pilots did not report bad treatment and were not aware of any emr exposure by Soviets during debriefing sessions." They were interned by the Soviets for two to six week and returned with "considerable personality alterations". The CIA wanted to know if there was a relationship between the Moscow Embassy [microwave bombardment] and flight crews that would cause personality alteration. Dr. Becker stated "yes, there is a distinct possibility, we don't know at this time for sure."

37. Posted at: <http://mindjustice-org/1-02-1.htm>. Email from Dr. Rosalie Bertell, 3-12-01, excerpt below.

Date: Mon, 12 Mar 2001 18:27:42 -0500

Dear Cheryl, I have received your document and I think you have enough information for a documentary report or an article by an investigative reporter. It may raise concern about the issues, but does not prove anything. [Dr. Bertell is referring to the document on my website, entry 14, EMR Weapons: As Powerful as the Atomic Bomb]. ...There is some confusion about weapon use and harassment or experimental use, with the latter being harder to document. The health effects which can be attributed to EMR weapons is also, as you know, not established. Your problems are quite similar to that of the atomic bomb victims, including the military, the Japanese and those living downwind of a nuclear test site. Very few of the experienced health effects have ever been admitted. We also deal with the same denial and secrecy with the Gulf War, Bosnia and Kosovo vets exposed to ceramic DU.

38. Email excerpt to Cheryl Welsh, From: "Eldon Byrd"

Sent: Thursday, January 10, 2002 5:43 PM  
... I agree that the thermal/athermal effects has ended, but I think for a different reason. What Frey discovered (that microwave effects can create clicks in the brain) was a thermal effect. Thermal effects can cook the brain, and even tho it was admitted that we (the US) looked into it, the ability to control a distance effect such as this just was not there. I had to fight tooth and nail to convince the establishment that elf had nothing to do with thermal effects. The establishment position was that ONLY microwaves could create an effect in the brain. Of course, they have changed their tune, over my dead body, and the dead bodies of some others. The references you quote are valid, ...Your statement that the Russian evidence is important because shows that the Russians have (at least had) a large mind control program dating back to the 1950's and therefore the US would also have a very (I would say, "it is reasonable to assume") classified mind control program, is pretty much dead on, in my opinion. And it is this area that my proposal will deal with--the other areas are more controversial, although the thermal/athermal issue is pretty dead, I think. ...Eldon

## About the author

I am a law student at Lincoln Law School in Sacramento, California. Currently I am taking a year off to work, to take national security law at McGeorge School of Law and international human rights law at the UC Davis law school. I received an AA degree in math and science and worked for ten years as a medical receptionist. I received a bachelors in physical education from UC Davis in 1991. I had a very ordinary life until I was targeted with nonconsensual government experimentation in 1987. Since then I changed my life to fight nonconsensual mind control experiments. I received a second bachelors in government from California State University, Sacramento and started a nonprofit IRS approved research and education organization, Citizens Against Human Rights Abuse (CAHRA) in 1996. Please see CAHRA's website at: [mindjustice.org](http://mindjustice.org). I have been interviewed by CNN on the program 'American Edge' in 1997, the 1998 Learning Channel program, Ultrascience III entitled 'Spies R Us', which also featured a demonstration of microwave auditory effects by Dr. James C. Lin, electrical engineer and Sacramento's KOVR 13 TV News in 2001.

This article appeared in Winter 2003/2004 Issue of Mkzine at [www.mkzine.com](http://www.mkzine.com) Please support MKZINE and order a hardcopy today!

**Publisher's Message:**

The second issue of mkzine has endured numerous obstacles, thus preventing its publication in a timely manner. I have only printed about 500 copies of this issue in order to fulfill my subscriptions, along with extras for additional orders. Also, the two magazine distributors we utilize would not accept this issue because of the significant delay. My apologies if this edition is not as elaborate as the first, but hopefully you will find the content to be as intellectually stimulating and emotionally compelling. Notwithstanding the trials and tribulations, our small but dedicated staff is preparing for the third issue (Spring - Summer 2004), which will tentatively be out in April.

Our most pending challenge, however, is the financial viability of mkzine. Since we have no paid ads to date, and sales of the magazine have been nominal, the likelihood of further issues after the third looks dim. My plea to you, reader, is to consider purchasing a subscription for 2004 and to buy a few copies of our first issue (I have plenty in my garage). If you know of someone who might want to provide us with financial assistance in our pursuit of disseminating ground-breaking information relating to mind control and other related abuses, that would be a most welcomed option. We have received a plethora of encouraging letters and appreciate the positive response. Again, please contemplate a way to keep mkzine alive. Take good care! Ron Patton

MKzine, a 64 page glossy-covered magazine, examines coercive mind control, invasive human experimentation and other related abuses. MKzine is available twice yearly. Our first issue was the Spring-Summer 2003 edition. We are presently experiencing difficulties with the layout of our second issue, however, we do anticipate the magazine will be printed and mailed out sometime in January. It will be featured as the Winter 2003/2004 issue. The yearly subscription price is \$10 U.S., \$14 Canada, and \$18 International. Separate issues are half the 2003 subscription price. The prices for a 2004 subscription (Spring-Summer 2004 & Fall-Winter 2004) will be \$12 U.S., \$16 Canada, \$20 International. Separate issues will be half of the 2004 subscription price. Send checks, money orders to: MKzine, PMB 175, 1910 East 4th Ave., Olympia, WA 98506

## Dismissing the crime: mind control as a conspiracy theory

That governments possess classified mind control weapons and are zapping and controlling people is accepted as a conspiracy theory without further investigation. Mind control and victims who claim to be bombarded by government radiowaves are a widely reported phenomena and are dismissed by the general public as conspiracy nuts or mental illness. For example, The London Independent, January 17, 2001 article, *Paranoid? You have no idea...* by Paul Lashmar, listed 10 conspiracy theories and described the tenth conspiracy as,

Mind control. The American military conducted a series of mind control experiments in the 1950s and 1960s. But most of

the files were destroyed in the 1970s when the US Congress began sniffing around. A large number of people are convinced they have been programmed by the CIA. The Electronic Surveillance Project Association, founded to counteract harassment of civilians, claims individuals have been targeted with microwave weapons.

And recently, Jonathan D. Moreno, ethicist at the University of Virginia, wrote in the journal, *Nature Reviews*, Vol. 4, February, 2003,

Mind Wars. During the 1940s and 1950s, the bulk of psychological research funding was provided by national security agencies that were interested in gaining an advantage during the cold war. Many of the scandals associated with this research, such as the CIA and army experiments with LSD and other hallucinogens, has become part of our cultural heritage. They have also spawned a legion of conspiracy theorists prepared to entertain any rumored 'mind control' technology without being inhibited by scientific implausibility.

Dismissing victims as crazy is not new. The often quoted, August 31, 1997, New York Times Magazine article, *Atomic Guinea Pigs*, discussed radiation experiment victims who were labeled "the crazies" by the Department of Energy officials. Their claims were ignored until 1993 when declassified government documents revealed a huge cold war classified program of human radiation experiments. Similarly, given the development of new brain technologies and heavily classified nonlethal electromagnetic weapons, the recent claims deserve investigation. Especially given the history of "the crazies", public inquiry into victim claims should be a serious obligation, not a flight of fancy or "conspiracy theory."

[Contents](#)

## **Why there is no proof of mind control experiments**

Mind control is a conspiracy theory because there is no scientific proof of government mind control technology or mind control experiments. But there are relevant reasons why this is so. In addition to the radiation experiments, in the late 1970s, the U.S. government declassified Mkultra mind control government documents on the CIA's experiments. Shockingly, absolutely no national or international laws were passed as a result of mind control or radiation experiments that would prevent the very same tragedies from happening again. In a catch-22 worthy of Joseph Heller, the current alleged mind control victims are unable to provide proof of what is classified and adding insult to injury, are labeled conspiracy nuts or worse.

Government secrecy is the main obstacle in proving mind control experiments. According to Daniel Ellsberg, a top Pentagon official, who leaked the Pentagon Papers in the 1970s, the successful keeping of secrets is a routine occurrence. In Ellsberg's 2002 book, *Secrets*, page 43, he explains,

It is a commonplace [belief] that "you can't keep secrets in Washington" or "in a democracy"... These truisms are flatly false. They are in fact cover stories, ways of flattering and misleading journalists and their readers, part of the process of keeping secrets well. ...But the fact is that the overwhelming majority of secrets do not leak to the American public." ..The reality unknown to the public and to most members of Congress and the press is that secrets [that] would be of the greatest import to many of them can be kept from them reliably for decades by the executive branch, even though they are known to thousands of insiders.

## [Contents](#)

### **Large-scale, officially sanctioned and horrific crimes are prevalent**

Yet another roadblock to proof of mind control involves the horrific nature of the claim. Usually victims are told that the government could or would never do such terrible and bizarre things to ordinary people. A typical response is a letter from R. James Woolsey, former CIA director, addressed to myself, Cahra director on Sept. 3, 1997 stated,

In the very unlikely event that any part of the U.S. government should attempt to develop or use any of this sort of stuff [electromagnetic weapons targeting the mind] against any American, or in any way other than through legal authorization and appropriation by the Congress, the relevant government officials would doubtless find their activities disclosed forthwith ... Conspiracy theorists always seem to me to forget that we have: (a) First Amendment, (b) two independent branches of the federal government outside the executive, and (c) a federal system.

Again, this dismissive response to claims of unlawful mind control experiments by former CIA director Woolsey illustrates either a 'conspiracy' cover story reply or a less likely explanation that Woolsey was unaware of the U.S. government's abysmal failure to address unlawful CIA and radiation experiments.

The 2002 scandal involving Catholic church priests sexually molesting young boys is analogous to mind control experiments and is a compelling case of how terrible acts can be kept secret for years by a great and trusted organization. Many top Catholic officials kept the sexual molestations secret for years. See December 31, 2002, Los Angeles Times, *Molestation scandal Wrenched Church Hierarchy and Faithful*. The sexual molestations took place for decades, on a large scale and were called "the greatest scandal in the history of the American Catholic Church". The molestations were not known by the public because the policy of the Catholic church was to ignore the problem. Surrounded by the denials of Catholic officials, the charges were unbelievable,

horrific and extremely difficult to prove. Finally, widespread media coverage forced the very reluctant church in Rome to address the scandal.

The expose of the tobacco industry is also analogous to mind control experiments in that officials at the highest levels condoned and contributed to the tobacco deaths of smokers while at the same time, making billions of dollars for decades. In 1994, top officials lied under oath to Congress stating they didn't believe cigarettes were addictive or caused cancer. Tobacco company documents contradicted their testimony.

In the information age, man's inhumanity to man is a common occurrence and clearly mind control experiments could happen today. Given the widespread and growing numbers of reported mind control victims for decades and the history of large scale U.S. secret cold war experiments, military defense contractors and top government officials have and probably are continuing to conduct unlawful experiments in the name of national security. And below are the reports in mainstream media of several experts who agree with this explanation.

#### [Contents](#)

### **Expert says U.S. classified human experimentation law is 'scandalous'**

National and international human experimentation law does nothing to protect human subjects from classified unlawful government experiments and actually protects the government from prosecution for criminal behavior. A key article entitled, *The Ethics of experiments; scholars fear post-attack secrecy*, on the state of current U.S. experimentation law appeared in the Richmond Times-Dispatch, March,3 2002,p. A-14,

"It borders on the scandalous that we still don't have rules in place that would at least begin to protect the people who are in those trials," cautioned Jonathan D. Moreno, director of the Center for Biomedical Ethics at the University of Virginia. ...Moreno pointed to a December news report that President Bush had given the secretary of health and human services [HHS] the authority to classify the information as secret. Moreno said that could allow the Defense Department or CIA to undertake secret human experiments with the HHS.

In the 1999 book, *Undue Risk*, on the history of secret experiments, Dr. Jonathan Moreno wrote,

Today and ever since the end of the World War II, the universal sensitivity about human experiments is coupled with the fact that they are probably unavoidable in the real world of national security. Textbook theories, laboratory experiments, and computer and animal models can only go so far. At some point, when information is needed about how human beings will react to new forms of weaponry, human experiments will have to

continue in this business. In a dangerous world one might well argue that it would be irresponsible for us not to do so.

In one of the final chapters of his book, Dr. Moreno predicts the inevitability of future unethical classified government experiments.

In the next century, as in the past, military medical research involving human subjects will be dictated by the limits of information available from other sources. Because a new generation of weapons is being developed that are intended to incapacitate rather than kill an enemy, computer simulations and animal models can only go so far. Among the next generation of weapons is one that may involve a different sort of radiation than that emitted by atomic fission: microwaves. Electromagnetic waves may be used to disrupt an enemy soldier's central nervous system, to causes epileptic seizures,...

### [Contents](#)

## **The program of U.S. federal regulations for experimentation is heavily influenced by the medical establishment.**

As Dr. Moreno points out, new laws are desperately called for. But nonconsensual experimentation victims don't have the political clout to make this happen. The medical establishment and pharmaceutical companies are powerful and want unencumbered medical research. As a result, congressional proposals to protect human subjects in experiments have all failed. The current federal regulations on human subject experimentation include ineffective enforcement or penalties for criminal behavior or for failing to follow the rules. The Plain Dealer, November 8, 1998 article entitled, *U.S. Medical Researchers Flout Rules Around World*, confirms this,

A legacy of medical exploitation, from secret Cold War radiation experiments to notorious syphilis studies on unwary blacks, has led the United States to adopt some of the world's toughest protections for people on whom scientists test new drugs, devices and vaccines. So firm is the underlying presumption that patients in experiments must be treated fairly and honestly that the protections of federal law apply not just to Americans but to any person, anywhere in the world, used in U.S.-financed research. But federal and foreign records disclose that the nation with some of the world's strictest research safeguards has flouted its own rules in dozens of countries, and has a history of "systemic deficiencies."

And in an October 4, 2002 Boston Globe article, *Panel Urges Changes in Research on Humans Institute of Medicine Worries that Public Trust is Threatened by Deaths*, reporters Michael Kranish and Alice Dembner stated,

Medical research institutions should make 'fundamental changes' in the way they conduct experiments on human beings in order to stop a string of accidental deaths, an influential advisory panel said yesterday. ...The Institute of Medicine panel also recommended that federal oversight of human research include privately funded experiments, currently, the government regulates federally financed experiments and those conducted at institutions that receive federal dollars. The panel also said a no-fault insurance program should be established to compensate people who are harmed during the experiments.

The Boston Globe article continues, "George Annas, chairman of Health Law department at Boston University's School of Public Health, said, "We need a lot more reform than the IOM (Institute of Medicine) seems to recognize. This is but another voice crying in the wilderness. All their major recommendations have been made over and over again." The article reported, "The release of the report (IOM report) comes as Congress this year has failed to come to an agreement on legislation to tighten protection in human experiments."

#### [Contents](#)

### **What does happen when classified experiments go wrong: victims are called paranoid and the government hides criminal behavior behind national security**

The September 13, 1997 Hamilton Spectator article entitled, *Playhouse of horrors: they believe they were young guinea pigs in military mind-control experiments during the cold war*, by Jim Bronskill, described another example of fifty years of unethical experiments.

"A person who claims to have been a victims of government mind-control programs is generally not going to be believed and is going to be considered mentally ill," said [Santa Clara law professor and author of the 1978 book, *The Mind Manipulators*, on CIA mind control experiments.] Schefflin. "And indeed, a lot of people suffer from the neurotic delusion that they were victims of mind control But not all of them are delusional. Otherwise, there would be no victims. We know there are victims because we know the experiments were done."

The Hamilton Spectator continued,

March 1995, New Orleans therapist Valerie Wolf and two clients traveled to Washington to address a U.S. presidential advisory committee probing government-sponsored radiation experiments on people in the decade following the Second World War. ...In early 1995, when word spread that Wolf would appear in Washington, nearly 40 other therapists from around the United States contacted her to tell of clients who had reported being used in mind-control and radiation experiments.

"We know beyond any shadow of a doubt that the CIA and army mind-control programs were much bigger, and much broader and much more extensive than we have knowledge of at this time." [Schefflin said in support of Valerie Wolf's experience].

The Presidential Advisory Committee on Human Radiation Experiments meetings were conducted to gather evidence of the disclosures of radiation experiments and included the testimony of mind control victims and therapist Valerie Wolf. As reported in the Hamilton Spectator article, "In its October 1995 report, the committee,... did recommend "all records bearing on programs of secret human research" from the late 1940s through the early 1970s "become a top priority for declassification review." This was never done and in addition, secrecy has increased since 9-11.

[Contents](#)

## **Health and legal professionals support mind control claims, to no avail**

The Hamilton Spectator article continues,

"A video letter to government officials included seven health and legal professionals. "The accompanying text called for the declassification of records, a presidential hearing to identify all U.S. government sponsored research involving covert mind control experimentation in the United States and elsewhere, criminal prosecutions where warranted and appropriate remedies for victims."

The president's office sent a form letter reply and nothing further was done.

The Hamilton Spectator article explains the devastating problem of lack of proof of mind control experiments.

Schefflin and the few others who take the subject seriously are severely handicapped. There are no research institutes, no grants and, despite promises, no firm indication the U.S. government will pry open its secret files. And without the necessary documentation, it's impossible to determine whose stories to believe. "I can't prove, without having the documents available, that what anybody is telling me, or part of what someone is telling me is true or not," said Schefflin "But I can tell you that it's [alleged mind control experiments] not out of the realm of possibility. And if it not true, it would be true of someone else who has not come forward."

[Contents](#)

## **Law expert says future unlawful experiments inevitable**

The Hamilton Spectator article reported a prediction of more unethical experiments.

Government and media indifference to the mind-control issue has left Schefflin discouraged. ...Schefflin is dismayed that intelligence and military agencies have essentially been able to carry out mind-control research on unwitting people with impunity, a lapse he feels will spawn further injustices. "They will be even more empowered to conduct even more outrageous experiments on even more people," said Schefflin. "It's an inevitability.

The following article lends support to Professor Schefflin's findings and reported that government mind control experiments continued into the 1970s, after government officials publicly stated that CIA mind control experiments were ended in the 1960s. Bill Richards' article entitled,

Book Disputes CIA Chief on Mind-Control Efforts: Work went on Into 1970s, Author Says (January 29, 1979 Washington Post, p. A2) explains,

Despite assurances last year from Central Intelligence Director Stansfield Turner that the CIA's mind-control program was phased out over a decade ago, the intelligence agency has come up with new documents indicating that the work went on into the 1970s, according to a new book. John Marks, the author of the book, said the CIA mind-control researchers did apparently drop their much publicized MK-ULTRA drug-testing program. But they replaced it, according to Marks, with another supersecret behavioral- control project under the agency's Office of Research and Development. The ORD program used a cover organization set up in the 1960s outside Boston headed by Dr. Edwin Land, the founder of Polaroid, who acted as a "figurehead," said Marks in his book. The project investigated such research as genetic engineering, development of new strains of bacteria, and mind control. The book identifies the Massachusetts proprietary organization headed by Land as the Scientific Engineering Institute. The CIA-funded institute was originally set up as a radar and technical research company in the 1950s and shifted over to mind-control experiments in the 1960s with the exception of a few scattered programs. According to Marks, however, the ORD program was a full-scale one and just as secret as the earlier MK-ULTRA project.

## [Contents](#)

### **How the legal system processes an unlawful mind control experiment court case**

One of two thorough firsthand accounts is a case on classified human subject government experimentation found in *The Cold War Era Human Subject*

*Experimentation, Hearing before the Legislation and National Security Subcommittee of the Committee on Government Operations House of Representatives*, September 28, 1994, page 204. "Testimony of Elizabeth Barrett." Barrett wrote a detailed summary of how Barrett's father was dosed with halucinogenic drugs and died. Her family pursued legal remedies for years and uncovered government lies and cover-ups. Finally Elizabeth Barrett received a comparably small settlement without any government official or agency admitting guilt.

Here is a recently uncovered example of the decades old government policy of covering up cold war experiments. The August 8, 2002 San Jose Mercury News article entitled, *Scientist's death haunts family*, stated:

The death in 1953 of a government scientist, Frank Olson, in a fall from a New York hotel window, is one of the most notorious cases in CIA history. ...Only recently Eric Olson, [Frank Olson's son; see <http://www.frankolsonproject.org/>] obtained files from a University of California-Davis history professor that showed White House officials had intentionally withheld details of Frank Olson's death from the family. ...a memo from Dick Cheney, a White House assistant at the time to Donald Rumsfeld, the chief of staff, on July 11, 1975... The memo warned that a lawsuit could involve "the possibility that it might be necessary to disclose highly classified national-security information in connection with any court suit or legislative hearings on a private bill. The documents also include memos written by White House counsel Roderick Hills to the president that were routed through Cheney and other officials. "Dr. Olson's job is so sensitive that it is highly unlikely that we would submit relevant evidence" to the court, Hills wrote, regarding a potential suit by the Olson family. "If there is a trial, it is apparent that the Olsons' lawyer will seek to explore all of the circumstances of Dr. Olson's employment as well as those concerning his death. Thus, in the trial it may become apparent that we are concealing evidence for national-security reasons and any settlement or judgment reached thereafter could be perceived as money paid to cover up the activities of the CIA." As a result, Hills urged settling the case out of court.

Today, cases filed by alleged mind control victims do not even reach the discovery phase of typical court cases. Nearly 100% of the time, a judge will dismiss the case and the reasons given are that the legal system does not recognize mind control technology as real and therefore the claim could never be proven in court. The claim is described as 'frivolous', a legal term meaning the case is unprovable, and is dismissed.

[Contents](#)

## **Classified human experimentation on an international scale: wide scale abuses and no legal recourse.**

Numerous articles describe widescale global experiments and the attendant abuses that go unpunished. A November 7, 1993 New York Times article entitled, *Soviet Atom Test Used Thousands as Guinea Pigs, Archives show*, reported that "On the morning of Sept. 14, 1954, in the Ural Mountains about 600 miles southeast of Moscow, the Soviet military exploded an atomic bomb in the air near 45,000 Red Army troops and thousands of civilians as part of a military exercise. ...a film of the test recently obtained from secret Soviet military archives sheds new light on the often reckless nuclear testing during the cold war..."

As reported in the Spring 2001, 13 Pace International Law Review 197, comment entitled, *Research and Accountability: The Need for Uniform Regulation of International Pharmaceutical Drug Testing*, by Dawn Joyce Miller,

...no enforceable international law exists, and no enforcement mechanism is in place [for human experimentation]. [Welsh, The Nuremburg Code and other codes for experimentation are only a recommendation, have no binding legal powers and are not enforceable.] This has prompted some to call for the creation of an internationally binding document. M. Cherif Bassiouni, for example has drafted a convention for the prevention of unlawful human rights experiments. Others have called for the addition of a protocol to Article 7 of the ICCPR [International Code of Civil and Political Rights]. Finally, still others have noted the need for either a statute to the new International Criminal Court or a permanent international tribunal to hear international violations of medical research ethics. Whatever the form such a binding agreement and enforcement mechanism should take, it is becoming increasingly evident that countries cannot deal with these problems on their own.

Boston University lawyer-ethicist, George Annas, editors and co-authors of the 1992 book *Nazi Doctors and the Nuremberg Code* wrote the following about M. Cherif Bassiouni's decades long work to include human experimentation law within an international criminal code, page 166. Professor Bassiouni also mentions the influence of the pharmaceutical industry on proposed international experimentation law.

It must be mentioned that one of the most eminent experts in the field of human rights law, M. Cherif Bassiouni, has developed a draft convention for the prevention and suppression of unlawful human experimentation. This convention, which was drafted so as to define unlawful human experimentation as a crime under international law, was considered in 1984 by the United Nations Sub-Commission on Prevention of Discrimination and

Protection of Minorities. In its work, the Sub-Commission adopted a resolution that would have authorized a Special Rapporteur to "prepare a study on the current dimensions and problems arising from unlawful human experimentation. The resolution was referred to the Commission on Human Rights for action or consideration. It seems, however, that no further steps were taken. Bassiouni believes that one possible explanation for this is that representatives of certain countries feared that such a convention would infringe on the practices of their pharmaceutical industries. ...it is important to note that the draft convention is based in large part on the Nuremberg Code, more so than any other text promulgated in the past two decades. While, for the present, the Sub-Commission on Prevention of Discrimination and Protection of Minorities has chosen not to pursue the subject of human experimentation, the possibility remains that the draft convention will be reintroduced at some point in the future.

### [Contents](#)

## **US involvement in foreign unlawful experiments though 1994.**

The April 29, 1998 London Times article entitled, US and Norway '*used insane for Nazi-style tests*' , reported US involvement up to the 1994 in international unethical experiments,

American and Norwegian hospitals were involved in sterilization experiments on the mentally retarded using radiation over a 20-year period up to 1994. Mr. Mellbye [former colleague of the then director of Norway's health services] said hospital records would prove the tests had taken place. "I cannot remember that anyone at any time put their foot down to stop what was happening," he said. "Both authorities in the health services, psychiatrist and other doctors knew what was going on." Mr. Mellbye said the Norwegian experiments were carried out with the co-operation of Americans "at the highest level" and that Norwegian doctors were encouraged to seek US financial support.

### [Contents](#)

## **An explanation of how rampant unlawful classified experiments have occurred and will most likely occur in the future.**

One explanation for the total lack of protections for human subjects of classified experimentation is the following. The harsh reality is that given the pattern of governmental abuse, the most probable and unspoken but widely accepted philosophy used for national security experiments is that the sacrifice of the few are necessary in order to benefit the many. The Bulletin of the Atomic Scientist, May 1, 2001, reported as much. In a book review of *Gassed*:

*British Chemical Warfare Experiments on Humans at Porton Down* By Rob Evans, David Eisenberg wrote: "As with chemical weapons programs in other countries, Porton Down's activities were justified on the basis that the needs of the many outweighed the needs of the few. Porton serves as yet another example of how national security interests can be used to justify what in retrospect are unethical endeavors."

Given the poor treatment of radiation experiment victims and the lack of public outcry, today, a significant number of Americans would probably privately agree that national security experiments are necessary and would look the other way. Still, classified, unlawful government experiments are undemocratic, unethical and violate fundamental human rights.

### [Contents](#)

## **Conclusions: no legal remedies now or in the future, experts say**

Experts are warning of the consequences of the lack of U.S. or international laws to punish the crime of unlawful, classified human experimentation. "The message to scientists and governments around the world is that you can get away with unlawful experiments on unwitting victims with impunity." stated law professor Alan Schefflin on the 2000 History channel program *Mind Control, America's secret war*. Current alleged U.S. victims have no legal recourse and little hope for future legal remedies as law professor Alan Schefflin and ethicist Dr. Moreno explained.

On an international level, the legal situation is even worse. Although Professor Bassiouni's 1999 *Draft Convention for the Prevention and Suppression of Unlawful Human Experimentation* would cover classified government mind control experiments, it has yet to be accepted and ratified by countries internationally. Then the U.S. Congress would have to ratify the convention so that it becomes U.S. law. Congress may then legislate U.S. law on human experimentation as ratified in the Convention. This is a positive process but it will take years. Also, the U.S. has not signed onto the newly formed International Criminal Court (ICC) and hasn't ratified the ICC treaty. As a result, the U.S. could not be brought to justice for unlawful human experiments, a violation of the Convention Against Torture, since a country must ratify the ICC treaty before it becomes binding on them. There may be legal ways around this but it becomes extremely unlikely and more difficult.

Given the powerful medical and pharmaceutical lobbies and the lack of political clout of human subjects of experiments, the chances of passing human experimentation protections legislation, let alone effective legislation or an international protocol or convention on human experimentation protections are remote. And in fact the Human Research Subject Protections Act of 1997 introduced by Senator John Glenn did not pass. Professor Bassiouni included his 1981 *Draft Convention for the Prevention and Suppression of Unlawful Human Experimentation* in his 1999 book, *International Criminal Law*, but the convention has not been introduced into the treaty making process.

In addition, experts like Professor Schefflin and Dr. Moreno are warning of the likelihood of current national security experiments. On the same 2000 History channel program, psychiatrist, Dr. Ross stated that given the past history of government experimentation on unwitting civilians, such as radiation experiments and LSD experiments, it is implausible that there hasn't been some clandestine experiments of nonlethal weapons on individuals today. Dr. Colin Ross described nonlethal weapons as various forms of energy such as acoustic and electromagnetic radiation which are "beamed at individuals in order to control them."

In conclusion, a strong circumstantial case can be made that the growing number of alleged mind control are not conspiracy nuts and are likely the work of government scientists conducting classified experiments in the name of national security. Like Professor Schefflin, I am extremely discouraged by the state of human subject experimentation law. Given the extensive history and the legal outcome of radiation and CIA mind control cases, looking for legal or legislative solutions is a formidable challenge. A more productive short term approach may be to concentrate on gathering evidence and proof of mind control experiments, not for a legal remedy but to stop the ongoing experimentation. As director of Citizens Against Human Rights Abuse, Cahra, I plan to continue Cahra's focus on group projects and documentation. Working with investigative journalists, who are experts at gathering evidence and top private investigators with backgrounds in intelligence activities and government surveillance are two areas Cahra is concentrating on. At least when armed with facts, victims are in a much better position to decide how they want to approach the mind control issue.

4. Several corroborating Russian newspaper articles on mind control
5. 1998 German TV, ZDF, "Secret Russia: Moscow--the Zombies of the Red Czars", documentary on Russian victims of psychotronic experiments, obtained by Blanche Chavoustie

Section II The Second and Equally Convincing Argument For the Existence of U.S. EMR Mind Control Weapons: The East/West Controversy over Thermal/Athermal effects of Emr Ends With the Exposure of a U.S. Cold War Cover Story

1. Freedom of Information Act excerpts from Harlan Girard, released 2001
2. Dr. Stephan Possony, "intellectual father of Star Wars", (Guardian, 1995, obituary) article in Defense and Foreign Affairs, 1993. Debunds athermal theory touted by State Dept, discusses Russian mind control, states emr athermal effects are likely scientific basis for mind control weapons.
3. BBC TV 1984 documentary, "Opening Pandora's Box", highlighting Dr. Becker's theory of large, classified U.S. emr weapons program based in part on evidence of the thermal/athermal controversy.
4. 2000 Video by Council on Wireless Technology Impacts, "Public Exposure", [www.emrnetwork.org](http://www.emrnetwork.org). More evidence of athermal controversy

Section III Conclusion: What this information means to victims of nonconsensual government experiments

1. The Russian evidence is important because it proves that the Russians have a large mind control weapons program dating back to the 1950s and therefore the U.S. would also have very classified mind control weapons. 1

---

## Summary

Please note that the opinions in this article are the opinions of Cheryl Welsh, alone.

Throughout this booklet, the words electromagnetic radiation or electromagnetic frequency are abbreviated with "emr". The terms, athermal and nonthermal electromagnetic radiation effects are used interchangeably and mean the same thing. Thermal effects of emr refers to the effects caused by heating. The cooking of food in a microwave oven is a thermal effect of microwaves, for example. The nonthermal emr effects are any effect not caused by heating.

Psychotronic is the russian term for mind control, although it has been given many meanings. Generally, psychotronic is term for the use of emr to affect the brain.

### Section I

The best argument for the existence of U.S. EMR Mind Control Weapons: The Russian evidence

Thanks to your generous donations, sixty-two pages of the V.N. Lopatin and V.D. Tsygankov book "Psychotronic Weapons and the Security of Russia, 1999, Moscow were translated by the UC Davis team of student translators. The whole translation is included in this compilation and a few main conclusions are listed below.

Cahra purchased a second book by Igor Vinokurov and Georgij Gurtovoj, "Society for the Research of Secrets and Mysteries of the Earth Mysteries", 1993, Moscow. Mojmir Babacek translated sections of this book on psychotronic war and one highlight is the section on Emilia Cherkova, who is mentioned in a Stolitza article below. Ms. Cherkova was a Zelenograd deputy and has filed complaints to the government of Russia on behalf of Russian psychotronic victims and became a target herself. In addition, the Fetzer Foundation of Kalamazoo, Michigan sponsored a Russian/US conference on bio-energetics and the Gurtovi book featured the 1989 Fetzer Foundation resolution signed by several scientists stating that they would not use their scientific knowledge to create weapons. Cahra purchased a third book, by V.D. Tsygankov entitled, "Neurocomputers and It's Applications, 1993. This book is in the process of being translated.

The two books, so far corroborate the previous 20+ articles gathered mainly from the Russian press since the break up of the Soviet Union. The 20+ newspaper articles can be found on Lexis Nexis library database available at most university libraries. Like the 1993 Defense News article included below, the Lopatin book is significant because it adds to the list of public figures talking openly about Russian mind control weapons. More research and analysis is needed but the information found so far is solid and will be helpful to victims of government mind control experiments.

Below are some of the highlights of the Russian book translation. This evidence is the best Russian mind control information that Cahra has found. It does not meet the scientific level of proof or the legal level of proof but it does meet the level of proof required to ask congress, human rights groups and others for an investigation into government mind control experiments. This evidence also meets the requirements of a journalism level of proof, that is several independent credible sources corroborating the evidence in a news story. In addition, information on the nonthermal effects of emr and how this ties into Russian mind control is included below. This nonthermal emr effects evidence spans fifty years and reveals an outdated U.S. cover story for mind control weapons. New evidence described below support the fact that the science behind the mind control weapons has been suppressed. As shown in previous Cahra papers, the open literature on neuroscience supports an athermal basis for at least some brain mechanisms. Hopefully, translation and research and analysis of the Tsygankov book will help in this area.

For over ten years, V.N. Lopatin has been prominent and influential in the Russian government. He has advocated the banning of Russian mind control weapons since the breakup of the Soviet Union and has taken this cause to the UN. Mr. Lopatin has a law degree, was a member of the state Duma of Russia and is currently a Russian government representative to Japan. The book includes his outline of the problem and threat of psychotronic weapons and war and the importance of public relations concerning this global threat. He writes of the proposed Russian federal law "Informational-psychological safety" concerning the protection and defense of rights and lawful interests of citizens and society. Internationally, Mr. Lopatin stands out as the most powerful public figure to advocate a ban on mind control weapons.

Evidence from the 20+ Russian articles on mind control confirm the evidence in the partial translations of the two books. There are hundreds of articles and books on psychotronic weapons in Russia. It is a popular topic, as can be seen in the 186 citations at the end of the Lopatin book, not to mention numerous footnotes. With the break up of the Soviet Union, the existence of a classified Russian mind control program was revealed by several independent and reliable sources. There were concerns that the mind control technology would fall into the hands of the Mafia, see for example, Defense News, 1993, below. Therefore, US and Russia were discussing the need for bilateral controls of the technology. Several articles allege Russian government experiments, experiments on military personnel and use of mind control weapons in Afghanistan. See below. Here are some of the sources that Cahra is trying to obtain; the Duma legislation proposed three times by Deputy Lopatin, the government documents of hundreds of complaints by citizens, military personnel and Russian government employees, the references to the Russian government documents on mind control weapons and the books and articles written on psychotronic weapons.

Credible, independent sources are stating that Russian mind control weapons exist, are being illegally used and laws are needed to protect Russian citizens. Here are a few examples with citations and full articles below.

Numerous public officials, including scientists, journalists and lawyers stated that mind control technology exists and needs to be controlled. Emilia Cherkova was discussed in the Gurtovoj book and three Russian newspapers.

Dr. Kaaznacheev, who was mentioned in the Gurtovoj book in the Fetzer Foundation letter and Emilia Cherkova are saying that mind control weapons exist and are in the hands of the military and government.

The scientist from Kiev, Sedletsky and Cherkova say there are experiments on Russian citizens. Stolitz, 1992.

Lopatin acknowledges the existence of mind control technology and even states that it was "secret for so many years". Moscow Times 1995. He dismisses the paranoid and conspiracy label on the allegations and instead takes mind control weapons very seriously, calling for legislation to ban their illegal use.

In the Moscow Times, 1995, Dr. Rudakov built the equipment and states that similar equipment was used in Afghanistan, as does the Defense Electronics article above. The Russian journalist Vorobyovsky has studied this story for three years. A complaint was filed with the CSCE, Stolitz, 1992.

Dr. Possony is an academic and public policy analyst who stands behind his statements. He stated that electromagnetic effects are the scientific basis for mind control weapons. Defense and Foreign Affairs, 1983.

1998 German TV Document, "The Zombies of the Red Czars"

Thanks to Blanche Chavoustie, Cahra has obtained a translation of the 1998 German TV channel ZDF documentary, "The Zombies of the Red Czars". This important documentary filmed the protesters demonstrating against psychotronic experiments in Moscow Square and interviewed some of the organizations against the misuse of psychotronic weapons. They allege secret psychiatric experiments all over Russia going back to the 1950s and continuing up to the present. Like their U.S. counterparts, Russian victims are labeled mentally ill, (zombies) and are not getting help.

Soviet and U.S. victims symptoms match and span over fifty years. The ZDF video described victims with psychotronic attacks on the organs of the body, including the heart. "Strange things. But when you go see a doctor he doesn't find anything." A political prisoner in the Stalinistic concentration camps was brought to an isolation cell in the KGB prison in the Lubyanka, where he experienced a psychotronic treatment of "strong sounds in the head, very strong acoustic and visual hallucinations." "The leader of the "Moscow Zombies" believes the malfunctions of the telephone are due to the effect of a psychotronic generator."

The book "Psychotronic War" by Gurtovi included a description. "The weapon seems to be capable, secretly, imperceptibly, work on his psyche, mind, behavior, desires, wishes, ...A wave of monstrous heat struck all of his body and firmly squeezed him." The section by Emilia Cherkova stated, "The victims are 'tortured' secretly right in their house, from behind the walls of neighboring rooms ..." An article in the book stated, "persecution of citizens by methods of distant manipulation of the brain by means of ultrasound, microwaves, laser beams and as well computers..."

In the newspaper Delovoi Mir, "Mind Control" by Ivan Tsarev, 1992, a victim wrote, "They controlled my laughter, my thoughts, and cause pain in various parts of my body...It all started in October 1985, after I had openly criticized the first secretary of the City Committee of the

Communist Party." "Sometimes voices can be heard in the head form the effect of microwave pulse radiation which causes acoustic oscillations in the brain," explained Gennady Schchelkunov, a radio electronics researcher from the Istok Association."

Here is a comparison to U.S. victims. Cahra has heard from victims all over the world. Here is a description of the cluster of symptoms common to most victims. 24 hours 7 days a week, for years on end, victims are subjected to all kinds of harassment and torture. Most agree that the technology can remotely target and control every nerve of the body. Heart rate can speed up and slow down, bowel movements can be regulated, illnesses can turn on and off in an instant. Victims report microwave hearing or voices in the head and sleep deprivation. Thoughts can be read, and played back to the victim, instantaneously. People around the victim can repeat verbatim, the victim's immediate thoughts. Dreams are manipulated, behaviors controlled, emotions literally played with and all types of pain can be started and stopped in all parts of the body. Remote sexual manipulation and abuse with pedophilia, homosexual and degrading themes are reported regularly. Microwave burns are frequently reported, along with all types of bizarre and harassing manipulation of electrical equipment, phone, car, TV and computers. Black bag intelligence tactics of tire slashings, break ins and mail tampering are reported. Hologram are projected. According to victims, it is vicious, amoral, sadistic and cruel. Most victims describe the experience as very debilitating and liken it to mental rape, prison or total destruction of the quality of one's life. Most are labeled mentally ill and live with financial ruin. loss of health, social life and career. All say the technology is very sophisticated and effective as a weapon. Some victims say they would use it on their torturers and feel vindication. It is like a slow death.

#### 1984 BBC Video, "Opening Pandora's Box"

Results from Harlan Girard's request under the freedom of information act on nonlethal weapons development in China and Russia are included here as background information V.D. Tsygankov wrote extensively of the U.S. nonlethal program and the threat that Russia must protect itself from. Tsygankov's biography is impressive, see below. Tsygankov graduated from the Odessa Electrical Engineering Institute of Communication, specializing in radio engineering. Tsygankov collaborated for many years with neuro-physiologist and academician P.K Anokhin. Dr. Anokhin's books can be found in medical libraries such as U.C. Davis. In addition Dr. Anokhin's extensive list of published works include collaboration with Dr. Mary Brazier, UCLA, 1961, for example. Of course the book does not reveal national security secrets or mind control equipment schematics, but both Tsygankov and Lopatin convey a sense of deep concern for a serious global issue. Lopatin and Tsygankov are important to victims of government illegal experiments because they state that Russian psychotronic or mind control weapons exist and that their use should be placed under international control.

#### How important is the Russian information?

Nothing in the U.S. is comparable to this body of evidence of Russian mind control weapons, nothing even close. The US has been silent on this issue for over fifty years. The U.S. has repeatedly stated that Russia has mind control research, technology and weapons based on athermal effects of emr. But contrary to logic, the U.S. position was that there are no provable athermal effects from emr, according the U.S. scientists. (See DIA report and Project Pandora below). Overall, the U.S. position is that there was no U.S. research, technology or weapons based on athermal emr effects. Up to the 1990s, the U.S. government has stated that RF

weapons are "too sensitive to discuss"(CNN1985) and that "Soviet mind control information" is classified, (1997 CIA/NSA foia letter). With the break up of the Soviet Union, the Pentagon unveiled the nonlethal weapons program, including weapons based on athermal emr effects, (U.S. News, 1997). Publicly, the fifty year U.S. policy of 'no proven athermal emr effects' took a 180 degree about face.

The value of the Russian information to U.S. victims is that it is powerful support for the argument that the U.S. would have to be developing mind control weapons also. The Russian evidence presented here is believable and convincing, therefore it is nearly impossible for the US to deny with any credibility the existence of their own mind control arsenal.

The evidence of Russian mind control weapons is substantial in quality and quantity. Each independent source verifies almost every other source. Although there is a definite limit to the Russian mind control technology discussed and the articles all state basically the same thing, it is revealing. For example, only with the breakup of the Soviet Union, did Russia make the decision to share Smirnov's acoustic psychocorrection mind control computer programs with the FBI during consultations concerning Koresh, in order "to improve U.S./Russian relations", (Defense News, 1993).

The break up of the Soviet Union has been a unique opportunity to gather declassified evidence of a very large, very black Russian mind control program. The facts show that the U.S. was aware of the Russian program for decades. It is improbable that there will be another comparable opportunity to pierce the veil of secrecy.

U.S. victims can use this very powerful information as a group and approach Congress, human rights groups The Russian evidence validates the claims made by victims of U.S. government mind control experiments. U.S. and Russian victims can now combine their claims which date back to the 1950s and make a strong case.

## Section II

The second and equally convincing argument in support of the existence of U.S. EMR mind control weapons: The East/West Controversy over Thermal/Athermal Effects of EMR Ends With the 1990s Exposure of a U.S. Cold War Cover Story for EMR Weapons

With the break up of the Soviet Union, the U.S. military unveiled a nonlethal weapons arsenal. U.S. News and World Report 1997 stated that "...And for a good 40 years the U.S. military has quietly been pursuing [emr] weapons of this sort. ...scientists, aided by government research on the "bioeffects" of beamed energy, are searching the electromagnetic and sonic spectrums for wavelengths that can affect human behavior." Looking back and reevaluating the history of emr weapons development, it becomes clear that the big users of emr technology, the military and emr related industry conducted secret research into athermal weapons effects and suppressed athermal em effects research the open literature. Government officials lied about athermal effects of emr to the U.S. public in the 60s, 70s and 80s. A quote from U.S. News provides an explanation. The public denial of athermal effects of emr was a cover story for a very long term, very classified emr weapons program. Dr. Louis Slesin, editor of Microwave News, U.S. News, 1997, "...the human body is essentially an electrochemical system, and devices that disrupt the electrical impulses of the nervous system can affect behavior and body functions. But these programs- particularly these involving

antipersonnel research- are so well guarded that details are scarce. "People [in the military] go silent on this issue ...more than any other issue. People just do not want to talk about this."

The thermal/athermal or nonthermal controversy has ended with the cold war. Dr. Robert Becker, Dr. Cyril Smith and Paul Brodeur wrote books in the 1970s and 1980s about the history of emr technology development and all three presented evidence of athermal biological effects from emr. In addition they cited the Russian literature going back to the 1930s in support of nonthermal effects of emr. In contrast, the military, industry and government supported the position of Dr. Herman Schwan, the Nazi paperclip scientist who established the safety limits of emr exposure for the United States in the 1950s. Dr. Schwan's position that there are no proven athermal effects of emr is still in place today.

Dr. Stefan Possony was called the "intellectual father of Star Wars" and "one of the most influential civilian strategic planners in the Pentagon" (Guardian, 1995). Called "the greatest strategic philosophers of the 20th Century", founder of International Strategic Studies Association and former psychological warfare expert with the Office of Naval Research, Dr. Possony wrote in Defense and Foreign Affairs, *Psy-war: Soviet Device Experiment*, 6-7-83, mind control by emr is feasible and militarily important. Dr. Possony also refuted the U.S. State department's athermal theory of emr in 1983. See below for athermal controversy.

1984 BBC video, "Opening Pandora's Box", national security and the athermal controversy

Thank to Harlan Girard for a copy of the 1984 British TV documentary, "Opening Pandora's Box". This video contains interviews with top public officials and emr experts and now, almost 20 years later, the emr weapons cover up can be clearly delineated in this video. One segment of the video features Dr. Robert Becker discussing his work for the CIA on U.S. pilots shot down and captured by the Russians in the 1960s. Dr. Becker was asked by the CIA to determine if the pilots were exposed to emr similar to the Moscow Embassy microwave bombardment from 1953 to 1976. The CIA was looking for an answer to the personality changes in the psychological tests given before and after their capture.

Russian UN documents from the 1970s through the 1990s also support the video evidence, which stated that scientific evidence supports the fact that nonthermal effects could be developed for weapons. With the Pentagon's unveiling of the U.S. nonlethal weapons program, Dr. Becker's theory that the U.S. is running a very black and very large emr weapons program in the 1970s is well supported. Dr. Becker discussed the Moscow Embassy microwave bombardment by the Russians from 1953 to at least 1988, (AP, 1988, Reppert), and the Russian Woodpecker signal, used by the Russians to irradiate the U.S. beginning in 1977 and later verified at least to 1988. Dr. Becker and others suspected that the Russians were attempting to create health and psychological effects in the U.S. population from the emr.

Significant facts of 1984 BBC video

Project Pandora: The U.S. government explores whether the Soviets are using emr as a weapon. The Soviets started bombarding the American Embassy in Moscow in 1953 and the U.S. government funded Project Pandora to find out why.

Nonthermal effects of emr used as psychological and biological weapons by U.S./Soviets  
1976 DIA Report based on Soviet research states that Soviets claimed that microwaves could

be found in human beings, to disorientate a person and a specific frequency could cause a heart attack.

Nonthermal emr effects controversy is born. U.S denies effects, Soviets disagree Dr. Sam Koslov, director of Project Pandora continued, "[We] thought about it, don't get me wrong,... but nothing was found, it doesn't

look like[there is]...militarily at this time, there is no emr weapons potential. There is nothing to the biological effects claim. There is an amount of power problem."

Since the Korean war, the art of brainwashing has improved significantly, says David Jones Dr. Becker was asked by the CIA in early 60s to determine whether pilots shot down and captured by Soviets in the 1960s could possibly have been exposed to emr without them realizing it and would that have caused personality change. Dr. Becker stated, "Yes, there is a distinct possibility, we don't know at this time for sure."

The Moscow microwave bombardment is a prototype weapon of the 1977 Soviet Woodpecker Emr signal: Soviet emr weapons go public Dr. Beck stated, "[the 1976] Russian woodpecker signal is the most powerful man made emr source ever. 10 pulses per second, 40 million watts per pulse, it is psycho active." It is generated in the Soviet Union and permeates everything in the U.S. It was picked up by power grids and irradiated into homes."

Persistent rumors that U.S. signal beamed over Russia. "They are the most expensive and powerful in the world." "Dr. Becker said there are persistent rumors that the U.S. is doing the same to the Soviet Union, powerful U.S. transmitters beaming 16 cycles per second to produce the same effect as the Soviets, into the Soviet Union." "We are in the middle of electronic warfare aimed at citizens of both countries."

Twenty years later: Conclusions of 1984 BBC video

Athermal effects of emr are used as a basis for weapons and is a national security issue. The controversy over athermal effects of emr is described as a national security issue by top emr scientists such as Dr. Becker, Dr. Beck and Dr. Zaret, all of whom were consulted by the CIA about the irradiation of the Moscow Embassy. The U.S. government trusted their judgment in the most demanding situation, national security matters.

HAARP, the U.S. transmitter of the 1990s, part of a vast weapons system capable of influencing human behavior. The article, "Apocalypse Now? HAARP or How the US Military is Playing the Sorcerer's Apprentices", by Alain Gossens, Bussels Telemoustique, 22-5-97 was translated by FBIS from french,(see foia section). The article describes the controversy surrounding the HAARP project. "Unofficially, HAARP will use the ionosphere, turning it into an energy weapon." Similar to the Moscow Embassy microwave bombardment and the Russian Woodpecker, the public is never told what is really going on. It is difficult to not believe that these are powerful weapons because both countries continue for decades to develop them. Mind control purposes are equally plausible as other theories such as over- the horizon radar which is better accomplished by other means, Dr. Becker stated.

U.S. cover story of no provable athermal effects can no longer be credibly maintained by U.S. According to Dr. Becker, consultant to the CIA in the early 1960s, the Soviets irradiated the Moscow Embassy and U.S citizens with the Woodpecker signal at great cost and for decades.

Dr. Becker described these aggressive acts by the Soviets and the U.S. as an electronic war on the citizens of both countries.

A cover up begins: U.S. government knew of athermal emr effects at least in the 1960s. By basing the U.S. safety standard for emr exposure on politics rather than scientific evidence, the U.S. government knowingly risked the health of U.S. citizens.

Evidence supports a 'Manhattan Project' mind control program based on emr athermal effects. The argument can now move to the extent that athermal biological emr weapon effects are capable of controlling the human body and behavior. Fifty years later, the U.S. government is on the record for lying about this issue. There is a mind control program more secret than the Manhattan Project, as Dr. Becker theorized and brain function is based on an athermal emr biological effects. Very sophisticated technology has been developed to control the mind, comparable to the atomic bomb.

Here is one stunning example of many available examples to show how far unclassified neurology research has advanced. A logical conclusion, given all of the evidence presented in this compilation, is that the classified research would make a very powerful mind control weapon. The article illustrates the convenient cover story that the Soviets have mind control research, that brain research for weapons purposes is classified and that emr athermal effects are the basis of mind control weapons. The stunning information is that the U.S. military is funding research to make a device for "inject[ing] information into the brain via electromagnetic waves."

U.S. News, 1-3-2000, John Norseen, Reading and changing your mind. [Lockheed Martin neuroengineer in Intelligent Systems Division] Norseen's interest in the brain stems from a Soviet book he read in the mid-1980s, claiming that research on the mind would revolutionize the military and society at large. [He] coined the term "Biofusion" to cover his plans to map and manipulate [the brain] leading to advances in ...national security... and ...would be able to convert thoughts into computer commands by deciphering the brain's electrical activity. BioFusion would reveal the fingerprints of the brain by using mathematical models, [Smirnov's computer program uses mathematical models also]. It sound crazy,...The National Aeronautics and Space Administration, the Defense Advanced Research Projects Agency, ...have all awarded...research contracts to Norseen. Norseen is waiting to hear if the second stage of these contracts-portions of them classified- comes through. Norseen's theories are grounded in current science. ...By MRI, scientists can tell what the person was doing at the time of the recording...Emotions from love to hate can be recognized from the brain's electrical activity. ...Norseen predicts profiling by brain print will be in place by 2005. ...Norseen would like to draw upon Russian brain-mimicking software and American brain-mapping breakthroughs to allow that communication to take place in a less invasive way. A modified helmet could record a pilot's brainwaves. "When you say right 090 degrees...the computer would see that electrical pattern in the brain and turn the plane 090 degrees. If the pilot misheard instructions to turn 090 degrees and was thinking "080 degrees," the helmet would detect the error, then inject the right number via electromagnetic waves."

An Electronic War starting with the Moscow Embassy: Serious Implications for the World  
Besides the need to stop illegal government emr weapons experiments, it is important to educate the public because of the far-reaching global effects surrounding this issue.

2000 Video, "Public Exposure", Cell Phone industry and athermal controversy

Thanks to Betsy Manning for the 2000 video, "Public Exposure" by the Council on Wireless Technology Impacts, (website at [www.cwti.org](http://www.cwti.org).) This video exposes emr industry abuses similar to the tobacco industry. Billions of dollars in cell phone sales are behind the athermal controversy and a complete lack of concern for the health of consumers. Because Dr. Schwan's 1950s safety limit for exposure to emr is the U.S. standard today, the U.S. public health is at risk. While the cell phone industry testified in a 2000 California Senate hearing that there were no health risks from cell phone use, a scientist testified that the cell phone industry was suppressing research. Another expert, Cindy Sage, Environmental Policy analyst explained the controversy. Athermal effects occur below the U.S. safety standard. The U.S. safety standard is the guideline for the cell phone industry. The scientific studies are reporting damaging health effects below the safety standard but the cell phone industry ignores the research because it is below the U.S. safety standard. Science author B. Blake Levitt wrote the book "Electromagnetic Fields", and explained that the industry knows it will take twenty years for scientific evidence to prove possible damaging health effects from cell phone emr exposure. In the meantime, billions of dollars are pocketed and there is little research into the rising incidence of cancer because the major funder of research is the cell phone industry. In another segment of the video, there were protest marches around the country against section 704 of the Telecommunications Act of 1996. Section 704 states that local governments are banned from taking into consideration the health effects of microwave, TV, radio and other emr towers which are to be located in their area.

Standard of proof: lessons learned from the cell phone video.

Cindy Sage in the 2000 video entitled "Public Exposure" described three levels of proof, the scientific level of proof, which is the highest level, almost 100%, the legal standard of proof, or 51%, the more probable than not standard and the environmental law standard, in the 10 to 30% range. Ms. Sage stated that the environmental law standard is the level at which public decision making on environmental issues takes place, i.e., at the potential level for a significant health impact. Ms. Sage believes that the emr controversy should be judged by the environmental law standard of proof and she mentioned the California Environmental Quality Act. [Note, I took an environmental law class in summer 2001 and the 2001 environmental law text book listed emr under toxic substances and described it as a controversial topic.]

An association but not a direct cause and effect scientific relationship between the exposure to emr from cell phones and the risk of detrimental health effects has been established. The cigarette industry used the scientific standard of proof, saying that there is no scientific cause and effect between smoking and lung cancer. The cell phone industry is using the same tactic. Environmental issues are decided at the 10-30% level of potential harm in order to protect public health. The cigarette industry's scientific standard of proof did not protect the public. In the late 1990s, all of the top executives of the major tobacco companies testified before Congress, under oath that cigarette smoking does not cause harm to a smoker's health. This is a blatant indicative of the lengths that companies will go to sell their products. Today, it is well known that many smokers died from lung cancer as a result of smoking and the addictive qualities of nicotine. Therefore the environmental standard of proof should be used in the emr research evaluations in order to protect the public.

In addition human rights violations standard of proof is lower and should apply to mind control victims because this is a human rights issue.

Section III

Conclusion: What this information means to victims of nonconsensual government experiments

Victims have two strong arguments for demanding an investigation into their allegations. If the Russians have mind control weapons, the U.S. undoubtedly has a mind control arsenal.

The evidence in this compilation spans 50 years, includes several independent, mainstream sources, and credible professionals, all stating that mind control in Russia exists. The historical and scientific evidence also supports a very long-term, large and classified emr weapons program in Russia and the U.S. The U.S. government is on record for lying to the U.S. public about lack of proof of nonthermal effects while the Russians claim that nonthermal effects of emr are being used for weapons. Now in the 1990s, the U.S. reveals the nonlethal weapons program and claims in U.S. News and World Report, 7-7-97, that "scientists, aided by the military research on the 'bioeffects' of beamed energy are searching the electromagnetic and sonic spectrums for wavelengths that can affect human behavior." The translation of the 1999 Lopatin book is the best evidence yet, a top Russian politician and scientist claim Russian mind control weapons exist and should be under international control.

Second, the athermal controversy is equally convincing historical evidence of a classified U.S. mind control program.

The number of victims in the U.S. and Russia, not to mention other countries is growing. For the first time, victims as a group can now organize and go to their congressional representatives, human rights groups, lawyers and investigative reporters and present an adequate level of proof of their claims, never before possible. The evidence now meets the standard of proof required for mainstream journalism, public knowledge and investigations such as a GAO investigation or a congressional hearing or a human rights investigation. Please see below for evidence and citations.

Electronic warfare since 1953, without public knowledge

In "Project Pandora", Dr. Becker, an eminent scientist consulted by the U.S. government on emr national security issues has warned of the electronic war on the citizens of the U.S and U.S.S.R. Many experts including Oppenheimer have warned that the Orwellian dangers of mind control are worse than the atomic bomb,(American Psychological Association). Information warfare using the mind as a target was described in the tv program, War 2020. War would be fought without even knowledge of a war taking place, (See Cahra International Campaign section).

In his 1990s book, "Crosscurrents", Dr. Becker wrote that it may be too late to stop the ongoing weapons programs. Unlike peace, electronic warfare resembles another cold war with its resultant high costs. Experts and public officials from the east and west warn of the dangers of psychotronic weapons or nonlethal emr weapons, the need for international control and of the need for open public debate.

What can be done?

Cahra does not have the resources to organize victims but I hope that others will. If this issue is presented as the international human rights issue that it is, public officials will be able to use their authority to ask for an investigation. Cahra will send this compilation with original

articles and translation at cost for xeroxing and postage to anyone interested in stopping nonconsensual government experiments.

Finally, thank you to all of the victims who generously donated to this project and also to those who shared their information included in this article. I could not have done it without you. The Russian translation project is a major step forward. I hope that much more research can be done and that as a result, a better strategy to stop illegal government experiments will be found in our lifetime.

Russian Experts State Mind Control Weapons Exist and Warn of Dangers of Psychotronic Weapons and War.

"...decades of research and investment of untold millions of rubles in the process of psycho-corrections has produced the ability to alter behavior on willing and unwilling subjects, experts add. The Russian experts, including George Kotov, A former KGB general also report a list of software and hardware associated with their psycho-correction program that could be procured for as little as \$80,000. As far as it has become possible to probe and correct psychic contents of human beings despite their will and consciousness by instrumental means; results having been achieved can get out of [our] control and be used with inhumane purposes of manipulating psyche," Defense News 1993.

U.S. sources said government officials and leaders from the business and medical communities will consider Russian offers to place the mind-control capability under bilateral controls. The sources say the Russian government, in the spirit of improved U.S.-Russian relations, is beginning to lift the veil of secrecy surrounding the technology [acoustic psycho-corrections, the transmission of specific commands via static or white noise bands into the human subconscious without upsetting other intellectual functions]. Defense News, 1993.

Dr. Igor Smirnov, consultant to the FBI about the use of acoustic psycho-correction on Koresh and one of the most important Russian psychiatrists, showing a computer illustration of the human subconscious, "To rule the [human] soul, one only has to put them into the area of effective vicinity of the apparatus. Or, there is already a method to transmit hidden information over long distances. According to Smirnov [such a method] does exist. ZDF, 1998.

V.N. Lopatin, author of "Psychotronic War and the Security of Russia", 1999, Moscow, Russian duma deputy advocates against mind control weapons in Russia and internationally for ten years. Lopatin proposes three times, legislation to ban illegal development and sale of mind-control devices. Lopatin quote in Moscow Times, 7-11-95, "Of course this project [psychotronics] is surrounded with alot of hysteria and conjecture. ....Something that was secret for so many years is the perfect breeding ground for conspiracy theories."

V.D. Tsygankov, co-author of "Psychotronic War and the Security of Russia", 1999, Moscow, scientist spent many years studying bionics and the development of neuro-computers. Tsygankov describes the problems of psychotronic weapons and war.

Lieutenant Colonel Timothy L. Thomas, US Army, Retired, writing about information warfare and a hard to believe report by a Russian scientist form the renowned Russian Baumann Technical Institute on use of computer screens to control or kill people. "...Yet in hindsight, man once could not comprehend electricity either, and we should at least consider

the possibility of this phenomenon. As the Russians have noted on several occasions, he who makes the first inroads into this area will control the destiny of mankind in the near future. Military Review, 1997

Victor Sedletsky, scientist interviewed by Stolitsa, 1992, "As an expert and a juridical person, I assert that mass productions of psychotronic biogenerators and their testing is underway in Kiev."

Academician V. Kaznacheyev from Novosibirsk writes in Stolitsa, "The military may use ESP to paralyze the will of other people turning them into obedient slaves." Kaznacheyev therefore insists on placing this kind of research under international control.

Fetzer Foundation of Michigan, Resolution, from Gurtovi book, "Psychotronic War", on emr research, "...we voluntarily undertake an agreement to never use, under any conditions, such weaponry and to sign any international agreements concerning this end.", signed by 20 science and administrative Fetzer conference participants, 1989.

From Gurtovi book, 1988, psychologist and psychotherapist from Netherlands, Vim Kramer, in a speech to First European Conference of Parapsychological Association, "What is needed now is openness of the research and freedom of information with respect to those perhaps secretly performed works, the results of which may be guilefully used in psychotronic war. ...It is necessary to hurry.. Since, in the opposite case, in the next century, perhaps it will be difficult to survive not only for parapsychology, but to the whole mankind."

"Ludmila Pikhova, an experienced presidential aide and speech writer turned on Rogozin, [Kremlin Security, former KGB and chief scientist on security problems], during a recent Kremlin meeting, screaming, "Don't you try to control my subconscious ever again.", reported in 1995 Washington Times.

Sergei Parkhmenko Russian journalist, Sevodnya newspaper put together a dossier of strange goings-on, including Ludmila Pikhova and other top officials in the Kremlin and confirms many persistent rumors of unusual surveillance, including mind control, Washington Post 1995

Journalist Yury Vorobyovsky has been investigating the top secret program of "psychotronic" brainwashing techniques developed by the KGB and the Ministry for three years. Moscow Times, 7-11-95.

Dr. Rudakov worked in a Defense Ministry psychotronic research laboratory and claimed that psychotronics were used on Spetsnaz troops in Afghanistan according to Moscow Times, 7-11-95. Defense Electronics, 1992 confirmed Dr. Rudakov's information and reported an intelligence agency source, "...we know there is evidence the Soviet Army's Special Forces used the technology during the conflict in Afghanistan."

Anatholiy Ptushenko, member of the Russian Federation of Space Exploration Scientific and Technical Council, 1994, Moscow Rabochaya Truibuna. "So a microwave system can easily be tuned into a psychotropic weapon--formidable in that it has a direct effect on the human brain...just by retuning the generator. ...which started to be developed in the sixties. ...The terrible danger of psychotropic weapons is the possibility of their simultaneously and unequivocally affecting large masses of people over huge areas. ...Nevertheless, faced with

such a terrible danger as psychotropic weapons..., it is our duty to ensure that the development and operation of space based solar energy system receive popular and above all mass media scrutiny."

Moscow Armeyskiy Sbornik, 1996, by Major General Valeriy Menshikov, doctor of technical sciences and Colonel Boris Rodionov, "A psychophysical effect on people also is possible for the purpose of altering their behavior and even controlling the social aims...Thus, the new space systems are potentially dangerous from the aspect of unfolding a wide-scale "information war" and even creating a global systems for controlling people's behavior in any region...A country possessing them will gain an enormous advantage."

19983 Defense and Foreign Affairs. Dr. Stefan Possony was a Stanford Hoover Institute fellow and was called "the intellectual father of `Star Wars" and "one of the most influential civilian strategic planners in the Pentagon" (Guardian, 1995, obituary). Dr. Possony describes the feasibility of communicating directly with the brain using emr and developing emr weapons. Dr. Possony discussed the microwave bombardment of the Moscow Embassy and inferred that the State Department lied about athermal health effects from the microwave irradiation.

### Scientifically Proven Victim Symptoms

| Symptoms                                                                                                                                                | Scientifically Proven        | Scientifically Feasible and Military Interest                               |
|---------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|-----------------------------------------------------------------------------|
| 1. Microwave Hearing. (DIA Report 1976), NASA DOC AD AO90426, Dr. Allan Frey, Dr. James Lin                                                             | Yes                          | Yes                                                                         |
| 2. Smirnov acoustic psycho-correction, transmission of specific commands into subconscious, Demonstration, Defense News, 1993 Defense Electronics, 1992 | Yes, per Janet Morris, 1990s | Yes, bilateral controls. US Corp. buy Russian equipment                     |
| 3. Emr signals to brain causing visual disturbances. Demonstration by Dr. Rauscher, Bise on CNN 1985.                                                   | Yes                          | Yes, Dr. Becker                                                             |
| 4. Inject words, numbers into brain via emr waves. U.S. News, 2000, J. Norseem                                                                          | No                           | Yes, review by military for funding                                         |
| 5. Manipulation of emotions via magnetic signals to the brain. ABC News 1998, demonstration Magnetic Therapy for depression                             | Yes                          | Russian newspaper allegations Yes, War 2020, Discovery Chan., demonstration |

## Section II

The Second and Equally Convincing Argument For the Existence of U.S. EMR Mind Control Weapons: The East/West Controversy over Thermal/Athermal effects of Emr Ends With the Exposure of a U.S. Cold War Cover Story

1.

Freedom of Information Act excerpts from Harlan Girard, released 2001

A. Moscow Rabochaya Tribuna Nov. 26, 1994 pp 1-2, "Psychotropic Arms Potential Must Be Monitored', by Anatolily Ptushenko, Member of the Russian Federation of Space Exploration Scientific and Technical Council. "While microwave radiation is variable: it can affect a person (or an army) temporarily or possibly forever. It is all determined by the mix of frequency and the power of the radiation. These systems were called "psychotropic Weapons" in official secret documents 30 years ago. It was these systems that we began to appreciate in the sixties. ...Nevertheless; faced with such a terrible danger as psychotropic weapons (and other kinds of space-based weapon), it is our duty to ensure that the development and operation of space-based solar energy systems receive popular and above all mass media scrutiny."

B. Russia National Information Security, Moscow Armeyskiy Sbornik, Oct. 96, No. 10, pp 88-90 "National Information Security: Opinion of the Subject", by Major General Valeriy Menshikov, doctor of technical sciences and Colonel Boris Rodionov, discussed satellites, remote mind control.

C. Beijing Renain Junyl [People's Military Surgeon] Vol 40, No 9 Sep 97, pp 507-508. Discusses infrasound weapons to induce immeasurable fear and unstable mental state...or even symptoms of mental disease."

D. People's Military Surgeon, Vol 40 No. 9 Sep 97 pp 507-508, discusses Incoherent Light Source weapon that can cause blindness and disorientation, and can also lead to symptoms of mental illness.

E. Beijing Jiefangjun Bao Chinese, 25 Dec. 1996, "High-Energy Microwave Weapons" Known as "Superstars", article stated, ""non-thermal effects" can produce psychological damage..."

F. "ATTN Wire Select, Belgium, by Alain Gossens, "Apocalypse Now? 'HAARP' or How the US Military is Playing Sorcerer's Apprentices", stated, "all research in the area of electromagnetic energy -- for say, medical purposes-- has been blocked. As a result a vast and

highly promising field of science and medicine has been monopolized by interests with ties to the US Army."

1. British tabloid, The Big Issue, Oct 2, 2000, "Strike Force", Dr. Bertell [a respected Canadian biometrics expert who led the Bhopal and Chernobyl Medical Commissions]"claims HAARP could disrupt human thought-processes."

2.

1983 Washington DC Conference on Psychological Strategies sponsored by the "Intellectual Father of Star Wars", Dr. Stefan Possony, discussing Russian emr mind control based on athermal emr effects.

A. Defense and Foreign Affairs Daily, 6-7 83 "Psy-War: Soviet Device Experiment" Article stated, "Dr. Adey was quoted as saying: "Some people theorize that the Soviets may be using an advanced version of the machine clandestinely to seek a change in behavior in the United States through signals beamed from the USSR."

3.

BBC TV 1984 documentary, "Opening Pandora's Box", highlighting Dr. Becker's theory of large, classified U.S. emr weapons program based in part on evidence of the thermal/athermal controversy.

A. AP Extra by Barton Reppert, May 21, 1988, "The Zapping of an Embassy: 35 Years Later, The Mystery Lingers"

B. November 6, 1953, "Destroying American Minds-Russians Made it a Science" Dr. Charles W. Mayo to the Political Committee of the United Nations about methods of torture used by Communists on American prisoners.

C.. Federal Times, Dec 13, 1976, "Microwave Weapons Study by Soviet Cited", From GPO, 1976 "Surveillance, Technology, Policy and Implications" Staff Report Subcommittee on Constitutional Rights, Committee on Judiciary, US Senate, Second Session.

D. Modern Electronics, Sept 1985, "Combating the Russian Woodpecker", by Glenn Hauser

E. UN, July 10, 1979, Committee on Disarmament by V.L. Issraelyan, Representative of the USSR, discusses development of new weapon of mass destruction based on 'non-thermal' effects.

F. Letter to Cheryl Welsh from NSA,CIA, May 19, 1997, "Soviet mind control system...is classified..."

G. NBC Magazine with David Brinkley, July 16, 1981, No. 47592, discussing Russian Woodpecker Signal and mind control.

H. U.S News and World Report, July 7, 1997, "Wonder Weapons, The Pentagon has a huge classified program to build sci-fi arms that won't kill the enemy. ..." By Douglas Pasternak

4.

2000 Video by Council on Wireless Technology Impacts, "Public Exposure", [www.emrnetwork.org](http://www.emrnetwork.org). More evidence of athermal controversy

A. Microwave News, March/April 2001 "Views on the News: Weapons Development and Public Health Should Not Mix"

### Section III

Conclusion: What this information means to victims of nonconsensual government experiments

1.

Where does the Russian translation Project fit in to the evidence?

A. Short overview: The scientific basis for emr mind control weapons, athermal effects of emr. Plenty of evidence in mainstream press

1. Davis Enterprise, 3-1-2001 "Frankengenes': The Dark Side of Biotechnology" by Lee Bowman

2. Parade Magazine, Dec. 29, 1996, Reuters: "Best News for Mortals" "British scientists say they're working on a "Soul-Catcher" memory chip, which would record human memories and thoughts, and expect it to be working within 30 years." Open literature discusses scientists interested in futuristic technology. Scientists conducting classified research, given the evidence in this compilation, have developed very sophisticated mind control weapons.

3. New York Times Magazine, Sept 29, 1996, "The Altered State" by Elizabeth Rotte. "Michael Persinger, a psychologist and neuroscientist at Laurentian University in Ontario, ...solenoids, which create gently fluctuating fields ...The impulses move through ...the brain, where they interfere and interact with the complex electrical patterns of the subject's neural fields. Persinger aims...switches ...they sense a sexual arousal.. negative presence, a benevolent force , opiate effects,...

4. Bulletin of Atomic Scientist, Sept/Oct 1994 by Barbara Hatch Rosenberg, "The Soft Kill Fallacy". "Many of the non-lethal weapons under consideration utilize infrasound or electromagnetic energy...These weapons are said to cause ...interference with mental processes, modification of behavior and emotional response,...severe pain... The current surge of interest in electromagnetic and similar technologies makes the adoption of a protocol explicitly outlawing the use of these dehumanizing weapons an urgent matter."

5. US. News Jan 3/10 2000 by Douglas Pasternak, "John Norseen, Reading your mind and injecting smart thoughts" "BioFusion would be able to convert thoughts into computer commands, predicts Norseen, by deciphering the brain's electrical activity. ... Norseen's theories are grounded in current science. Mapping human brain functions is now routine...

B. Russian and American victim's symptoms match.

1. U S District Court Eastern District of CA No Misc. 94-097-WBS John M. Ginter, Plaintiff, v. California Department of Corrections, et al., Defendants. John Ginter, San Quentin prisoner with high school education described in his 1967 court case that Dr. Schmidt, the San Quentin psychiatrist called the equipment used on John, "M.I.N.D. or Magnetic Integrated Neuron Duplicator".

2. Los Angeles Times, 3-28-88 part 2 page 1, "A Fearful Fix Grips Figure in Kickbacks" by Kim Murphy, Rex Niles, an FBI informant in a defense contractors kick back case in Los Angeles, CA. Photo caption stated, "His aluminum foil hat has tiny holes in it, says Rex Niles, proof that the government is bombarding him with microwaves in an attempt to kill him." He had detected microwave signals but was still labeled mentally ill.

3. New York Times Magazine, Aug. 31, 1997, "Atomic Guinea Pigs" by Michael D'Antonio "At the Department of Energy, which oversees America's nuclear-weapons research, these people [radiation experiment victims] were referred to collectively as "the Crazies." But the opening of the cold-war archives has brought the Crazies in from the fringe." The mind control victims in Russia and the U.S. are both labeled mentally ill.

### C. Conclusions

---

## Section I

The best argument for the existence of U.S. EMR Mind Control Weapons: The Russian evidence

1. Cahra Website posting, "Russian Book Translation Project Has Begun"

2. U.C Davis students translate sixty-two pages of the Russian book "Psychotronic Weapons and the Security of Russia" by V.N. Lopatin and V.D. Tsygankov, 1999 Moscow

3. Translation excerpts from second book "Psychotronic War, From Myths to Facts" by Igor Vinokurov and Georgij Gurtovoj", Moscow 1993, Translated by Mojmir Babacek

4. Several corroborating Russian newspaper articles on mind control

5. 1998 German TV, ZDF, "Secret Russia: Moscow--the Zombies of the Red Czars", documentary on Russian victims of psychotronic experiments, obtained by Blanche Chavoustie

1. Russian Book Translation Project has begun

Sponsored by Cahra,  
Citizens Against Human Rights Abuse  
Cheryl Welsh, Director  
Feb. 2001

Thanks to an anonymous tip, Cahra is sponsoring the translation of the 1999 Russian book, "Psychotronic War and Security of Russia", by V.N. Lopatin and V.D. Tsygankov. "Psychotronic" includes electromagnetic radiation, (emr) and mind control weapons.

This is the Russian translation of the author and title, above. ISBN 5-89638-006-2. 99-5371.

Cahra has purchased this 150 page book and has hired a team of UC Davis students, under the guidance of several UC Davis Russian Studies professors, to translate this book. The student team leader has a double major in Russian and International Relations.

### **Donations Needed:**

#### **Sponsor a paragraph, page or chapter**

Translating a language such as Russian is time consuming work which requires skill in choosing the correct words out of the many meanings a Russian word can have in English. This will be a professional translation, with the expertise of several fluent Russian professors and professionals available to the UC Davis students. Due to a university work study matching program, this is an excellent opportunity.

Translations in Russian usually start at 100\$ per page.

Thanks to donations by Ed Light, Cheryl Welsh, Harlan Girard, Eleanor White and Mike Duffey and an anonymous donor, we have approximately thirty pages paid for and the translating has started. As soon as approval from the editors is given for copying the translations, anyone who donates and is interested in a copy of the translation, will receive a copy upon request (minimum donation for copy of translation is 25\$ ). Please ask others for donations to this important cause. Any amount is helpful and tax deductible with Cahra's IRS status as a nonprofit 501(c)3 organization.

Why the translation is critical to Cahra's work

Contacting the highly influential and reputable Lopatin, an expert in the Duma in Russia would be a big step forward in strengthening the claims of victims in the US, at an international level. In addition, the translation can be used to generate funding from sponsors of human rights groups. The translation could be shared with other human rights groups, especially ICRC, which has worked extensively on the electromagnetic radiation (emr) issue.

A few people in Cahra's network have engineering backgrounds and may use the technical information in the book. The U.S. government position is that emr technology is classified. Therefore technical information on Russian victims and Russian mind control technology will support the claims of extensive use of mind control weapons and the obvious need for the US to have corresponding mind control technology, a fact which is denied by the US government.

There are a few attorneys working on freedom of information requests and this information could narrow the search. The Russian legal and political writings and government documents by Duma expert Lopatin will be invaluable for credibility and substantiation of mind control experiments on an international level. Finally, the information on victims in Russia could be evaluated and added to the literature review in the Dr. Bertell Preliminary Study.

Background information

Yuriy Lopatin, author of the Russian book, is mentioned in two unclassified government documents received under a freedom of information act request. The subject was a Moscow Russian Public Television program on Oct 6, 1995 entitled "Man and Law", Scientists Discuss Mind Control Technology. The program included an interview of ;

"State Duma expert Yuriy Lopatin calling for legislation banning illegal development and sale of mind-control devices." The documents stated further, "A State Duma expert, Yuriy Lopatin says: "Psychotronic Technology is spreading illegally. A law banning the illegal development, production, retailing, and spreading of psychotronic devices which influence the minds and behavior of citizens is badly needed." He goes on to say: "The use of the mass media for psychological experiments should be banned and all the state-ordered research in human genetic experiments should be strictly registered. This was approved by Georgiy Georgiyevich Rogozin, first Deputy Head of the Presidential Security Service."

A highly recommended , credible book on a topic rarely written about.

An AP reporter familiar with the emr issue, recommended translating this book after reviewing an excerpt. The UC Davis Russian Studies professor was impressed with Lopatin. At forty, according to the biography in the book, he had accomplished alot and held a high position in the Russian government. The second author, a radio engineer or scientist, V.D. Tsigankov is also well recommended.

A Russian view of mind control weapons not reported in the western press and a strong recommendation of this book.

The person who gave the anonymous tip wrote the following insightful information, which correlates which the 25 Russian articles which Cahra has collected from the library database Lexis Nexis. (See Cahra website, entry 11, chapter 5 for a partial list of the Russian articles.)

"There is also published in 1999 in Moskow very serious and fundamental book by Lopatin. He is author of the third legislation project, the chairman of Dumas Ecological Committee before the autumn of 1999. I have read about Emilia Cherkova and her group in Russian book "Psychotronic War" by A.Vinokurov and M.Gurtovoi, edited in Moskow in 1993. This organization had approximately 500 members in 1990-1993, mostly democratic activists from Russia and Moskov - victims, targeted by KGB using infrasonic and psychotronic weapon in combination with direct "hunting" on the cities streets.

Even after the dead of USSR in 1991, in the summer of 1992 KGB in Russia hired graduated students from medical universities (psychiatrists, psychoanalytics) to work in secret laboratories on human behavior control experimentation. After the second victory of democracy in October 1993 the hunting on people was officially prohibited. But a large amount of psychotronic devices had been sold to criminals and different kinds of private Security Services. After that this devices often used for apartment extortion, criminal attacks, and racket.

In Russian Parliament from 1993 till 1999 were prepared 3 different legislation projects against human behavior control experimentation and non-lethal weapon harassment, but no one had been accepted. In Ukrainan and Russian press from 1990 published a lot of articles concerning development and usage of psychotronic weapon (psychotronic generators) on the

territory of former USSR and in Ukraine, and now I have found a lot of resources In Russian and Ukrainian segments of Internet."

The table of contents of the Lopatin book has been translated and includes the following highlights.

Chapter 1. The Problem of Psychotronic Weapons and Psychotronic War.

Chapter 2. The Informational Foundations of PSO

Chapter 3. The Physical-Biological Basis of PSO

Chapter 3.1. Elementary Particles, The Interaction of Radiation and Matter

Chapter 3.2. Chromosomal Target, Mitogenetic Rays and A.G. Gorvich's Biological Fields

Chapter 4. Types of PSO, Its Harmful Factors and Field Applications

Chapter 4.3 Hypnosis

Chapter 4.6 Telepathy

Chapter 4.14 Technical Means of PSO, Interactions

Chapter 4.15 Neurocomputers As Possible PSO Means

Chapter 5.4 V.I. Vernadki's Noosphere and the Russian Nationalist Idea

Chapter 6. State Defense Initiative and Conceptions of Arms

Chapter 6.1 ONSD- Weapons of Nonfatal Effect

Chapter 6.2. Financial Fights in the U.S. Military

Chapter 6.3. Conception of PSO Weapons

Chapter 7. Legal Problems of Defense From Informational Weapons

Chapter 7.1. Topicality of Problems, Forms, And Harmful Information

Chapter 7.3 State System of Guaranteeing Informational-Psychological Safety

Chapter 7.4 Informational Weapons in Informational War

Chapter 7.5 Particularities in Legal Protection and the Proper Defense for Informational Systems

More Russian book translations to follow.

This may be just the beginning of an expanding Russian translation project. There is an extensive bibliography in the Lopatin book and a translation may lead to more critical Russian government documents and papers. The Russian group of human rights experts including Lopatin, who are against the illegal use of psychotronic (emr) weapons and also the victims of Russian psychotronic experiments, have made highly commendable progress in Russia. I hope that we can work with our Russian counterparts in the future. And finally, Cahra is trying to find a second book given in the anonymous tip above, entitled "Psychotronic War" by A. Vinokurov and M. Gurtovoi, edited in Moscow in 1993. If anyone has information on this book, please contact Cahra.

## Short Comments

Thanks to your generous donations, 62 pages out of a total of 140 of the V.N. Lopatin and V.D. Tsygankov book "Psychotronic Weapons and the Security of Russia, 1999, Moscow were translated by the UC Davis team of student translators. A summary of the main conclusions and highlights of the Russian book translation are below. The whole translation, so far is included in this compilation just after the summary.

This evidence is the most substantiating Russian mind control information that Cahra has found. Internationally, Mr. Lopatin stands out as the most powerful public figure to advocate a ban on mind control weapons.

The evidence in this compilation does not meet the scientific level of proof or the legal level of proof but it does meet the level of proof required to ask congress, human rights groups and others for an investigation into government mind control experiments. This evidence also meets the requirements of a journalism level of proof; several independent credible sources corroborating the evidence in a news story.

V.N. Lopatin: prominent and influential public official in Russian Government for ten years.

For over ten years, V.N. Lopatin has been prominent and influential in the Russian government. He has advocated the banning of Russian mind control weapons since the breakup of the Soviet Union and has taken this cause to the UN. Mr. Lopatin has a law degree, was a member of the state Duma of Russia and is currently a Russian government representative to Japan. The book includes his outline of the problem and threat of psychotronic weapons and war and the importance of public relations concerning this global threat. He writes of the proposed Russian federal law "Informational-psychological safety" concerning the protection and defense of rights and lawful interests of citizens and society. Internationally, Mr. Lopatin stands out as the most powerful public figure to advocate a ban on mind control weapons.

Yuriy Lopatin, author of the Russian book, is mentioned in two unclassified government documents received under a freedom of information act request. The subject was a Moscow Russian Public Television program on Oct 6, 1995 entitled "Man and Law", Scientists Discuss Mind Control Technology. The program included an interview of Lopatin.

"State Duma expert Yuriy Lopatin calling for legislation banning illegal development and sale of mind-control devices." The documents stated further, "A State Duma expert, Yuriy Lopatin says: "Psychotronic Technology is spreading illegally. A law banning the illegal development, production, retailing, and spreading of psychotronic devices which influence the minds and

behavior of citizens is badly needed." He goes on to say: "The use of the mass media for psychological experiments should be banned and all the state-ordered research in human genetic experiments should be strictly registered. This was approved by Georgiy Georgiyevich Rogozin, first Deputy Head of the Presidential Security Service."

The following article excerpt discusses Lopatin's ten year work to ban mind control weapons.

February 14, 2000, Monday THE RIDERS OF THE "PSYCHOTROPIC" APOCALYPSE  
Segodnya, February 11, 2000, by Andrei Soldatov

"THE RUSSIAN DEPUTIES INTEND TO DISCUSS THE DRAFT LAW ON INFORMATION SECURITY IN THE COUNTRY. THIS DECISION AROSE FROM THE FACT THAT THE US ALLEGEDLY CREATED A LOT OF DEVICES, WHICH CAN DESTROY INFORMATION SYSTEMS IN RUSSIA AND INFLUENCE THE POPULATION. According to "Segodnya," currently the Duma is actively discussing the draft law on the information-psychological security submitted by Vladimir Lopatin. It is possible that the fruit of ten years of work (the works on the draft law began in 1990) will be discussed in the first reading in April.

Such laws have never been discussed in any country. But this fact does not embarrass the deputies because they discovered that the enemy, which threatens Russia in this sphere, is dreadful and powerful. Secret methods of information-psychological influence can not only harm a person's health, but also lead to "the loss of people's freedom on the unconscious level, the loss of capability of political, cultural and other self-identification, manipulations with social consciousness" and even "the destruction of a common informational and spiritual integrity of the Russian Federation".

The next Lexis-Nexis article excerpt is an example of Lopatin's high position in Russian government.

Interfax Russian News, August 16, 1999, DUMA TO DEBATE PM'S CONFIRMATION, DAGESTAN ON MONDAY MOSCOW. Aug 16 (Interfax) The Russian State Duma will debate at its meeting on Monday the confirmation of Vladimir Putin, nominated by President Boris Yeltsin for premiership, and the situation in Dagestan.

Four hundred and four out of the total membership of 450 are attending the session which started at 2 p.m.

The Communist Party of Russia (KPRF) group's coordinator Sergei Reshulsky suggested that the Dagestan issue be included in the agenda. Defense Committee Chairman Roman Popkovich, Our Home Is Russia, and Vladimir Lopatin, Russia's Regions, support him. Lopatin went so far as to suggest skipping speeches by party group leaders in debating Putin's confirmation so as to allow time for debating a resolution on Dagestan. ...

This final article on Lopatin's background describes Lopatin's visit with U.S. Defense Secretary Cheney and Lopatin's press conference at the National Press Club. See also Bulletin of Atomic Scientist, Jan/Feb. 1991 "Renegade Russians Grab For Military Control" by Jennifer Scheck Lee which stated, "...Yeltsin's September 1990 choice of Lopatin, a former navy officer equivalent to major, to head the republic's new State Committee on Public Security..."

The Xinhua General Overseas News Service

Xinhua News Agency.OCTOBER 11, 1990, THURSDAY u.s. defense secretary to visit Moscow Cheney will stop over in London on his way to Moscow and in Paris on the way back. William's also disclosed today that yesterday, Cheney met with a young soviet military "reformer," Major Vladimir Lopatin, and had a "private conversation" with him. he declined to reveal the contents of the conversation. Lopatin, who addressed a press conference at the national press club here today, is in the united states on a visit hosted by "Global Outlook," a research institute.

V.D. Tsygankov writes six chapters of summary of psychotronic war, V.N. Lopatin writes one chapter about legislation to control psychotronic weapons use.

From the Publisher. Here are excerpts from pages 6,7 and 8 by "publisher and scientific editor of the serious informationization of Russian the 21st century. Cand/ Tech/ Scie/ V.L. Gyrevich, Moscow, Nov. 1998". Gyrevich describes the organization and subject-matter of the book.

...A psychotronic weapon is an effect on the brain, not as much an effect of the words as it is the energy information fields, for example (tertionic fields). A psychotronic war will not need big financing, and it will not cause the destruction of material objects. It means the consistent distortion of the people's psyche. ...The first six chapters of this book were prepared by the candidate of science, Vladimir Dimitrievich Sigankoff, The seventh chapter of the book was prepared by the candidate of jurisprudence, the head of the union of lawyers of Vologotskaya area, Vadimir Nickolaevich Lopatin- As opposed to the first six chapters, there are materials about the peculiarity of legislative defense and the defense of the rights of information systems during the availability of psychological security. ...These materials are new and available to the reader for the first time.

V.D. Tsygankov summarizes psychotronic weapons. Further research is needed.

Here are highlights of chapter 6. State Defense Initiative and Concept of Arms By V.D. Tygankov. The science described by Tsygankov is not clear to a layman and further research is needed. Tysgankov refers to Dr. Shipov and Dr. Akimov in chapter 3 and cites their scientific work in the literature section. The Russian Academy of Science debunked their work on torsion fields and questioned their credentials and this information is included below. In addition, see Fate Magazine article in 20+ Russian article section below for reference to Dr. Akimov and mind control research. Dr. Akimov received a tremendous amount of state funding according to the Stolita article below and yet was later debunded by science officials. There are Russian government documents mentioned in the Stolita and Fate Magazine articles that can be obtained so that this controversy can be explored further. The possibilty of government cover up of a Russian mind control program is possible.

Tsygankov writes that after the breakup of the USSR and the Warsaw Pact, the US considers itself "the single superpower" and 'a monopolistic technological leader in the world'. Tsygankov states that in addition to the nuclear doctrine, is the threat of US development of nonlethal weapons. He surveys the US Department of Defense finances and key technologies and his analysis reveals that the main emphasis in choice of key technologies is the development of GAUGE, or means of global monitoring of space and utilization of informational technologies.

Next, Tsygankov writes that each and every country should be able to provide adequate means and force to oppose the US. Tsygankov's opinion is that Russia should use "the State Defense Initiative". It is as follows and includes Tsygankov's capitalization and bold writing.

PUBLICLY, OPENLY, with complete INFORMATION and OPEN DIALOGUE with each interested individual or country;

In the creation of a POWERFUL PUBLIC OPINION and the IMPERMISSABILITY of SECRET PROJECTS in the sphere of PSW, in the prohibition of such projects and in the DESTRUCTION of samples and supplies of PSW;

Openly conducting projection CREATING means of defense from PSW influence under complete and strict INTERNATIONAL CONTROL;

In an urgent conclusion of international agreements of organizing a joint INSPECTION of projects and state territories conducting Psi-developments;

In creating a COLLECTIVE intergovernment, international SCIENTIFIC CENTERS (similar to UNI-United Nuclear Institute) coordinating plans and programs for solving complex global Psi-problem.

Tsygankov then lists 19 Basic Propositions of Psi-Weapons. He explains that PSW psychotronic weapons are related to the Pi-problem. "The fundamental principle of Psi-armament concept is its humane direction in the name of survival of humanity."

The chapter ends with 5 conclusions. First, "...Prohibition and destruction of PSW under strict international control." Second, "...preservation of a healthy ecology of consciousness of all the citizens, of the most valuable intellectual gene repository of Russia." Third, "...removal of veil of secrecy,..." Fourth, "...Creation of the Global system of rapid-monitoring of consciousness' ecology and Psi-conditions." Fifth, "...create an organizational structure under the President."

V.N. Lopatin discusses his detailed and legalistic views on psychotronic weapons. Mind control weapons are categorized as an information weapons.

A Note on the Tsygankov science controversy

Here is an article that indicates how the Lopatin/ Tsygankov book may be analyzed on the international level. See especially the third paragraph. Also note that Lopatin refers to the Virus 666 in chapter 7.

The article is "The Age of the New Persuaders", by Lieutenant Colonel Timothy L. Thomas, US Army, Retired May/June 1997 Military Review, p 72. 1st paragraph:

"There is another, more serious danger in the technical computer-manipulation arena, one which many Americans might expect to find in the pages of the National Enquirer. It does not involve semantic, informational or psychological devices, but focuses instead on a combination of technical and psychological devices that allegedly affect body processes. For the most part, this danger has been attributed to the Russian press and Russian scientists. Today, these scientists are studying how the display of information on computer monitors can affect the computer operator's bodily processes. They are looking for ways to manipulate the

operator to make him press certain buttons or pass along or destroy certain information as if he were hypnotized. The Russians are seriously investigating the potential of this phenomenon."

2nd paragraph:

"There are reports that the Russians have developed "Virus 666," which displays certain color and number combinations on a computer screen to affect bodily processes. According to a Russian report delivered by a scientist from the renowned Russian Baumann Technical institute at an information Warfare conference in Washington, DC, Virus 666 has been responsible for shutting down the bodily functions of more than 50 people, resulting in their deaths. 18"

3rd paragraph:

"Can such things happen? Americans are doubtful, because there is no proof computer screens can be used to control or kill people. Most believe such reports are not credible, even though Russian scientists, supported by highly influential people close to Russian leadership, are responsible for the information. Is Virus 666 a Russian manipulation effort to make the United States spend money on counter measures research and development? Perhaps. Yet in hindsight, man once could not comprehend electricity either, and we should at least consider the possibility of this phenomenon. As the Russians have noted on several occasions, he who makes the first inroads into this area will control the destiny of mankind in the near future."

In the Lopatin book, Tsygankov is a scientist and co-author with Lopatin, a duma expert. Tsygankov's views on mind control are supported by the highly influential Lopatin but the information is not believed. There is proof of mind control, but not at the scientific or legal level of proof. Unfortunately there is not yet a short and concise explanation because the information has been suppressed and each fact must be proven and also supported by experts.

Tsygankov is a 'highly influential' person close to Russian leadership, Lopatin and Tsygankov published information on mind control weapons that most US experts deny publicly or think is doubtful. Top Russian scientists like Tsygankov put out incomplete or publicly discredited information. Americans would doubt the validity of Tsygankov's scientific information. Lopatin and Tsygankov do seem to be highly concerned Russians worried about new weapons. The Lopatin book may also be used for diplomatic communication, testing the diplomatic and scientific waters or as Dr. Thomas explained, the information warfare game.

Questions remain about Tsygankov's scientific work and more research is needed. It could be that Tsygankov did not want to reveal national security secrets. It is interesting to note that Tsygankov did not have money to publish his books on neurocomputers, although Lopatin supports his views and Tsygankov has extensive credentials. Tsygankov could be a targeted dissident.

Highlights from chapter 7 Legal Problems of Defense From Informational Weapons by V.N. Lopatin

The last chapter begins with an overview of Informational weapons to include "unlawful utilization of commercial information, industrial espionage and hacking". Lopatin writes, "That necessitates solving problems related to the possibility of an informational war,

negative informational influence upon the individual and public consciousness and psyche of people, upon the computer networks and other informational systems from the organizational, technical as well as from the rights points of view."

Next, Lopatin writes, "it is still necessary to elaborate on destructive influences on human from cults, people who have parapsychological abilities, and others who covertly program via information sources, generators of physical fields and radiation, computer programs and other psycho-technologies." The reference to this quote includes I. Smirnov, et al, "psycho-technology: Computer Psycho-semantic Analysis and Psycho-correction On the Unconscious Level, M, 1996. (See Smirnov and Waco, FBI article on Cahra website.)

Lopatin writes

"...To the repeated appeals of Moscow's committee of habitat ecology to the organs of public prosecutor concerning the experiments upon the inhabitants of weapons of psychotronic type, in Moscow's public prosecutor reply #32-7-15-97 from 4/7/1997, it is stated that they are worried about the problem and they do send the "pertinent information" to the Attorney General of the Russian Federation. They are forced to note that:

"The given documents are proof that the principal requirement comes down to establishing control to research rights in this area of study. However, there is no legislation on this subject. therefore, the office of the prosecutor of the city has no ability to in any way protect the rights of citizens who are subjected to the influence of psychotronic technology."

That is already demonstrated by active research done in this area abroad. For example, intensive developments of methods and means of specific influence upon the human psyche, which originated in the 1950s in the US, are conducted. Since the 1970s, research programs have been conducted in the best universities around the world: USA, Germany, Austria, France, Italy, Japan, Israel, China and others. In the US in 1993, a prestige committee of American Society of Physics published their research results. In it, they concluded that such weapons systems (Psychological Weapon System) could be used effectively for solving a wide variety of military issues. The systems can be used for creation of new means and methods of conducting a war and for creation of a new type of strategic weapons (informational weapons in an informational war).<sup>3</sup> ...adoptions of the special federal law "Informational-psychological safety."

Lopatin then defines Informational-psychological safety "as the state of defense of the human psyche from destructive informational influences (intrusion of destructive information into the conscience and/or subconscious of a human, causing incomplete comprehension of reality by the human).<sup>4</sup>" The 4 citation is "Lopatin V.N. Legislative problems of providing informational-psychological safety for individuals/ Stenography of the Round Table in the Council of the Federation of Russia about the informational-psychological safety of individual. 1/27/95.

Lopatin lists "Potential sources of threats in this area", including "generators of physical fields and radiation;" He lists basic threats of informational-psychological safety including "restricting the freedom of human will on the imperceptible level, artificial engrafting a syndrome of dependence upon a human; development, creation and utilization of special technical and programmed means for destructive influence upon the psyche of a human; manipulation of the public conscience through the utilization of special means of influence;"

Lopatin writes, "Providing informational-psychological safety is the most important goal of the state and therefore guarantees of human protection from the destructive informational influences should be established. The state has to guarantee:

- imperceptible informational influence upon the human psyche (including hypnotism) cannot be carried out without the person being informed, except in instances prescribed by the law;

- ...-The government of the Russian Federation will inform the citizens, agencies of power, organizations, and local self-governments about the possibility of using destructive imperceptible informational influence, ... It should also notify the above mentioned parties about the means taken to neutralize the threats related to informational-psychological safety;

Lopatin then describes the state system necessary to provide informational-psychological safety. "The system needs to include in its structure agencies, strengths, and means to enforce them."

Agency power to provide informational-psychological safety should include:

- leading research, design, and other state organizations which carry out research and development of creation of means and methods of defense from imperceptible informational influence upon the human psyche;

- educational facilities of preparation and continuous training of human resources to provide informational-psychological safety.;

- individuals and organizations authorized by the system of state agencies to carry out separate functions of providing informational-psychological safety.

Lopatin states that registering and monitoring in order to account for potential threat sources, licensing individual and organization actions related to the development, production, and utilization of means and methods of imperceptible informational influence.

Lopatin concludes this section with the following. "If psycho-ecological expertise results in a destructive influence upon the human psyche and that leads to inadequate comprehension of reality, then that individual should receive medical help in accordance with the active laws. Reparation for harm and expenditures of those who suffered from destructive informational influence should be carried out according to law. Special attention to defending the rights and lawful interests of the individual, society, and the state is needed due to the threat of usage of informational weapons (including destructive informational influence) during international informational exchange."

In the next section, Lopatin defines Informational Weapons (iw) as the "means of destruction, manipulation, and theft of mass information, obtaining from it necessary information after overcoming defense systems, limiting or prohibiting access of lawful users to that information, scrambling technical means, making dysfunctional telecommunication networks, computer systems, society's high-tech infrastructure and government capabilities". Lopatin writes that "Additionally, considering its results, iw is comparable to weapons of mass destruction. Means of defeat of informational computer systems and defeat of people (their psyche) in times of peace and war can be classified as iw. ...Ways to defeat (influence)

humans and their psyche are distinguished by their goals in a psychological war. Such goals are:

- Distortion of information received by an adversary's political administration, the authorities and the armed forces personal staff and imposing upon them false information which strips them of their ability to correctly understand events or the current situation and make sound decisions;
- Psychological influence upon the population and troops;
- Ideological sabotage and false information;
- Upholding popular public opinion;
- Organization of mass demonstrations under false slogans;
- Propaganda and spreading false information;
- Manipulating and directing individual and collective behavior.

Along with the traditional means (printed and electronic mass media), they are actively developing and testing ways of influencing humans through mass media and through computer networks: means of informational-psychological (psycho-physical) influence (including the parameters of the MC-Ultra (Ultra Mind Control) MC-Delta (Delta Mind Control), remote human behavior alteration, Bluebird, Artichoke)...

In the next section, Lopatin writes Last year, the author came forward with the initiative supported by parliamentary committees of the State Duma. In December 1997 it became the political initiative of the nine states of the Union of Independent States (UIS). The Interparliamentary Assembly of the UIS addressed in the UN and OSCE (Organization on Security and Cooperation in Europe) the countries of Interparliamentary Union with an offer to add to the agenda of the General Assembly the question of preparation and conclusion of the international convention "preventing informational wars and limiting the exchange of informational weapons, then on protection from it, then from its destruction as it has been earlier with atomic, chemical and bacteriological (biological) weapons in the 20th century."

### Lopatin's Main Conclusions

Here are Lopatin's verbatim conclusions to chapter 7.

1. Development of public relations in the sphere of informational safety outstrips the creation of law and their application concerning the protection of individual, societal and state's life interests from external and internal threats from informational sphere.
2. The federal law "Informational-psychological safety" is necessary and additional changes to the current laws, which permit the use of established prohibitions concerning the protection and defense of rights and lawful interests of citizens and society.
3. For effective protection from threats during international informational exchange in an interdependent world, unified efforts of the international society are necessary concerning the

unification of international laws and the participation in the international convention "Preventing informational wars and limiting the exchange of informational weapons."

## The Book's Conclusion

Here is the conclusion to the book, in its entirety.

## Conclusion

"In this analysis, I tried to state objectively and without bias my view of the problems of psychotronic weapons (PSO) and psychotronic wars from the standpoint of Psi-phenomena and Psi-effects, primarily on the brain and human consciousness.

The mental degradation of society in the immediate foreseeable future is a distinct possibility if the state leaders and their administration do not analyze the situation which is taking shape in the world, regarding the ecology of consciousness, and don't make an accordingly constructive conclusions. rather than watching passively for the growth of destructive forces and power of diverse facilities that they use, the government should undertake the essential steps towards the protection of humanity from any possible violence by means of PSW defending the individual intellect of each citizen as the most valuable genetic repository of the nation and state. If it takes these steps openly and is will be available to general international participation in the work and the monitoring , then preventions against the possibility of psychotronic wars will be completely practical.

God willing that Humanity, Earth, and the Cosmos will not come to know and do not experience the psychotronic terror, the horror and the force which destroys Life functions with psychotronic weaponry in a " nonfatal" psychotronic war."

List of 186 citations are worth researching further. Help if you can.

Here is a partial listing of the 186 citations including familiar U.S. literature and many promising leads to research further. Anyone who may find copies of any of the following books and articles, please pass on the information to Cahra.

Short Comments

Translation excerpts from second book "Psychotronic War, From Myths to Facts" by Igor Vinokurov and Georgij Gurtovoj", Moscow 1993, Translated by Mojmir Babacek

One highlight is the section on Emilia Cherkova, who is mentioned in a Stolitza article below. Ms. Cherkova was a Zelenograd deputy and has filed complaints to the government of Russia on behalf of Russian psychotronic victims and became a target herself. In addition, the Fetzer Foundation of Kalamazoo, Michigan sponsored a Russian/ U.S. conference on bio-energetics and the Gurtovi book featured the 1989 Fetzer Foundation resolution signed by several scientists stating that they would not use their scientific knowledge to create weapons. See copy of letter from Vinokurov book. Cahra purchased a third book, by V.D. Tsygankov entitled, "Neurocomputers and It's Applications, 1993. This book is in the process of being translated.

There is so much research that could be done. This book references other books, newspaper articles and government documents. A letter with the Fetzer Foundation letterhead which was reproduced in the book, is reliable information. Fetzer Foundation has a website and an electromagnetic group which includes a Stanford professor. The Fetzer librarian was generous with information and sent a VCR tape of the 1989 conference featuring the Russian scientists Vlail Kaznacheev, mentioned in the letter above.

Emilia Cherkova describes her experience with psychotronic attack, (not translated yet). She is a reliable public figure and source of Russian mind control experiment victims and her human rights work is worth pursuing. Cherkova describes the torture of victims "right in their house" She stated, "the arsenal of secretly perfected KGB weapon is unbelievable...It is using the latest discoveries of physics, electronics, biology, etc...."

The Russian victims sound strikingly similar to the American victims in their descriptions. This example from the book was published in the newspaper Zlenogradskaya Gazeta. She was published in the newspaper Stolitza below and therefore it would be worth contacting her in order to exchange information and form an international movement.

Here is the partial translation by Mojmir Babacek.

Psychotronic War  
From Myths to Facts

Igor Vinokurov  
Georgij Gurtovoj

Society for the research of secrets and mysteries of the Earth  
„Mysteries"  
Moscow 1993

This book on psychotronic war, presenting a lot of factual and historical materials, the first one published in Russia, considers possible military use of parapsychological or psi-phenomena.

The book is destined to the widest public of readers.

Is telepathical terrorism feasible? Did Hitler own the „magic“ weapon? Does Saddam Hussein own it? What are psychotronic generators? Are not they used to irradiate us in our apartments? What was fearing general Kobets when the „White House“ was in danger of being attacked by special troops?

Those and many other unusual questions are considered on the pages of the presented book. Its authors are for years professionally engaged in the work in the area of parapsychology, psychotronics, bioenergoinformatics. They show conclusively how eternal, but untold effort for inhuman and especially military use of extrasensory, psychokinetic and other unusual human abilities gradually turns into everyday reality subjected to scientific research.

In the opinion of the authors, the psychotronic war, if it ever takes place, may prove to be the most cruel experience of mankind in all of its history. But this is - only their professionally founded view of the future. So far we do not face such a danger - the psychotronic weapon is still under development.

The book „Psychotronic War“ - is, in some way, the call on all those who are engaged in psychotronic research to never and under no circumstances use the knowledge they have achieved to the detriment of Man and mankind.

4

Taking into account a destructive experience in using atomic energy for military and political purposes and in order to prevent harmful consequences of uncontrolled use of these abilities, instruments or equipment created from its base, we address our appeal to the scientists, general public of the world, governments, and private organizations dealing with bio-energetics and exceptional human mental abilities. We declare it to be inadvisable to use these energies of man in any possible cases directed against humankind and we voluntarily undertake an agreement to never use, under any conditions, such weaponry and to sign an international agreement concerning this end.

From the Resolution of participants of international colloquium „New Frontiers in Experimental medicine and Energy Fields“

The John E. Tetzer Foundation  
Kalamazoo, Michigan, USA  
April 13, 1989

## EXPERIMENT IN SARATOVO (Instead of introduction)

A wave of monstrous heat struck all of his body and firmly squeezed him. He had the feeling that his hair is in flames. „War, bomb!“ the first idea that came across his mind was as a matter of fact very close to the right one (as became clear much later). In March 1983, in Saratovo, the first experiment was carried out with the noted psychotronic weapon. But he was not aware of it. He looked around at the unbroken walls, ceiling, wall papers - through the waves of plasma licking his body. - „But where are the flames? Is it a laser? Radiation? Microwaves?

What is it?" - He did not panic for few moments, he had not yet realized that the pain in the burning skin, all of his body and under his hair on the head makes him faint.

We will contravene the rules and will not place this strange story in paranthesis. And it should be done. But we wished to hit the reader in the flesh, in the same way we were hit some time ago: and more than that this story has been already expressed. Its heroe, it is B. E. Uzunov, the author of the book „Magicians, Women Magicians" published in 1991 in Obninsk (publishing house „Irina-Tch") - impressively and in an unusual, artfull, form - it presents the experiences of a man unwittingly falling victim to the effects of psychotronic weapon, so far unknown to majority of the people, but however already highly advanced. The weapon seems to be capable, secretly, imperceptibly, work on his psyche, mind, behavior, desires, wishes, interferes with his most intimate „self", in the most intimate spheres of his psychic life.

So who is it this B. E. Uzunov - the author of the book „Magicians, Women Magicians"? First of all we would never found out if it had not been for M. M. Bogatchikhin, thanks to whom the book got published. Let us see what Mai Mikhailovitch tells about its author:

Boris Ienverovitch Uzunov graduated from Saratovo University. His, too a degree unstandardized, psyche made jit impossible for him to stay on serious job and preserve his family life. Some time ago he sent me a manuscript for editing and publication and. disappeared. I found the material interesting, even serious and that is why the effort was taken to publish it.. It seems Boris will receive his author's fee.

Those words were written on June 27, 1990. Since this time Boris Ienverovitch has not appeared.

This is followed by excerpts from the book by Uzunov. His experience is certainly well known to the U.S. mind control victims.

The comments of the authors of the present book are those:

(page 9)

.what B.E. Uzunov describes we can refer realistically rather to some future than present days (if we leave out purely clinical motives - they were, are and will be every time). But the fact that the work toward the construction of psychotronic weapon is under way, with allways growing intensity, can not be denied any more in any way.

This is absolutely no myth, no fruit of somebody's ill imagination and certainly not an invention of journalists. This is a reality around which, this is true, is heaped quite a lot of myths, prefabrications and mistakes. We too. made effort to understand and make sense of this reality.

Now until page 16 follows analysis of parapsychological phenomenons

Page 16

Until now we have spoken about the first stage of the realization of the idea of PSI-weapon. In the second stage the methods were developed to strenghten the existing PSI-abilities using different pharmacological, psycho-technical and even technical means. And now we proceed

to the third stage of the works toward the construction of principally new generation of psychotronic weapon, based in technical - with the use of apparatus or devices - modelling of those "incomprehensible" biophysical phenomenons, which lay in the fundament of the unusual abilities demonstrated by certain people. The third stage was connected with the construction of the so called psychotronic generators. The name of those generators was inspired by the name of the new area of the scientific research - psychotronics - in the cadres of which were developed the ideas making it possible to define the task of the construction of psychotronic generators and theoretical principles of its solution.

The note at the same page : .abroad, with allways growing intensity, the research is being carried out into the development of methods and means of defense against the alleged PSI-effects.

Follows the history which led to creation of the term "psychotronics" - basically there were several conferences on parapsychology - one of them in Prague in 1973 - where the International Association for the Research of Psychotronic Problems" was established and Zdenek Rejdak from Czechoslovakia was elected as a chairman. According to Rejdak three quarters of the materials presented at this conference were scientific and technical in character, 180 out of 250 participants took part in the section (one out of six) "psychotronics and physics", two thirds of members of the Association were physics and engineers, three quarters of Czechoslovaks interested in psychotronics were engineers, physics, cybernetics and biocybernetics. In parapsychology the majority was formed by psychologists, biologists, physiologists and medics.

Page 20

We would like to stress especially the fact that the book "Psychotronic War: from Myths to Reality " is based in personal, years long , experience of the research in the area of bioenergoinformatics and strictly documented (more than 400 sources were used)\*. We based our work on materials, in most of the cases completely unknown to the reader or presumably forgotten by him, though most of the resources were published either in our country or abroad.

We especially concentrated on the afterwar period, burdened with the events of the Cold War. It is evident that in those conditions the interest of the waring sides in military aspects of psychotronics was very strong. Describing this interest and the consequences which it bears we made effort to make understand to what ends could lead the psychotronic competition in case of unexpected success of one of the powers in the construction of "magic" weapon.

However the succesfull construction of psychotronic weapon by the totalitarian regime may turn into psychotronic genocide of one's own nation.

Page 21

In 1988 a psychologist and psychoterapist from Netherlands, Vim Kramer, in his speech at the first Eeuropean conference of Parapsychological Association, said that if the parapsychology wants to survive in the next century it must undergo "perestroika and glasnost". In our opinion this is evidently insufficient. Perestroika and glasnost have already finished their job. What is needed now is openness of the research and freedom of information with respect to those pehaps secretly performed works, the results of which may be guilefully used in psychotronic

war. A clear NO must be expressed to all attempts to keep in secret not only the results of such research but as well to the fact that such research is being carried out.

It is necessary to hurry. Since, in the opposite case, in the next century, perhaps it will be difficult to survive not only for parapsychology, but to the whole mankind.

\*\*\*

The note of the translator: The text, as it is presented, shows a lot of jugglery around the possible reality of psychotronic weapons. At least to one of the authors, Georgij Gurtovoj, should have, as a pupil of S. IA. Turlygin, very clear idea of how far the research of psychotronic weapons reached the production stage. S. IA. Turlygin carried out experiments with the effects of electromagnetic fields on human psyche already in the thirties.

( Mojmir Babacek)

Cherkina - Zelenogradskaya Gazeta

(Gurtovoi - page 45 - 51)

Lunacy of Senseless Democrats?

"The newspaper Zelenogradskaya Gazeta" appearing in the city of Zelenograd near Moscow , on June 10, 1991, in the section dedicated to discussions, published an interesting material. It is entitled " The Science in the Service of KGB or the Lunacy of Senseless Democrats".

The material is introduced by the following note written by the newspaper staff: "The problem we want to discuss may provoke among readers conflicting reactions. What we are going to discuss is the use of the latest scientific discoveries for political terrorism, the use, by the secret services, of technical means for dealing with alternatively thinking individuals or simply experiments on unwitting citizens. This is the opinion of the authors of publications scarcely appearing in our as well as foreign press, this is the opinion of the authors of letters reaching "Zelenogradskaya Gazeta", who are trying to understand what is happening to them and around them. To closer define the topics we publish two letters which have in common the above introduced subject."

The author of one of the letters, entitled "Underground Genocide", is E. C. Chirkova, the national deputy of the city council of the city of Zelenograd, the member of the Commission on Human Rights. The authors of the second letter, entitled "Apartment Ecology", are Moscovites O. Lavrova and N. Kroschkina.

"As a member of the Commission on Human Rights of the City Council of Zelenograd, engaged in the research of contactless terrorism - one of the dangerous latent crimes - writes E.S. Chirkova- I want to draw the attention of general public to the continuation of the use, by the KGB, of methods of the Gestapo. But this is no more the 1937. This is much more horrible. The victims are "tortured" secretly right in their house, from behind the walls of neighboring rooms and apartments or neighboring houses by special services of KGB.. The arsenal of secretly perfected KGB weapon is unbelievable. It is using the latest discoveries of physics, electronics, biology etc. I am in touch with the victims from different districts of Moscow, different cities of the Soviet Union.

I have got many declarations - 20 from the citizens of Zelenograd. I will give real examples. I, myself, E. S. Chirkova. after taking part in the study of declarations, fell under the directed "fire" of the sadists, practically deprived of normal life, conditions for the activities of a deputy.

The first one to address us was E.V. Kirilov, the retired candidate of technical sciences. The similar effects and anomalies pertaining to the health of citizens appear practically in all microregions of Zelenograd. "

The authors of the second letter describe the same specific problems of the "apartment ecology", they write "Amongst the methods how to do away with social activists . one is in prevalence - the irradiation in apartments. This is secret method and rather impossible to prove. The sources of irradiation may be situated in the neighboring rooms of apartment houses or in the houses across the street."

There are two more materials refering to this subject.

"One sixth of the World - the Hall Number 6"

(Molodost Sibiri - The Youth of Siberia - , 1991, Number 6) and the Appeal of victims of psychoterrorism to the Parliament of Russia (Golos Vselenoi - The Voice of the Space -, 1991, number 6 and 7).

In the first material it is communicated that few years ago, under the auspices of International Organization for Human Rights, a Committee for Social Defense was established, with the objective to disclose the "persecution of citizens by methods of distant manipulation of the brain by means of ultrasound, microwaves, laser beams and as well computers..extrasensors and telepaths". The representatives of the committee "declare that it is necessary to form the centers for the defense of personality outfitted with the equipment capable to register the effects on human beings from outside, operated by independent personel and that it is necessary to enact legislation to this effect."

The members of the Committee are victims of experiments with those weapons.

In the Appeal by Victims of Psychoterrorism to the Parliament of Russia the necessity is proclaimed "to ban and destroy in Russia all bioenergetic weapons capable to affect at distance the activity of human psyche and reason . immediately stop the psychoterror performed by government organizations and scientific mafia" and "the ban of psychotronic and leptonic weapon at the territory of Russia" and also they demand the legislation "defining the punishment for the use of psychotronic and leptonic weapons at the territory of Russia".

L. Petrov comments in Zelenogradskaya Gazeta the first two letters, saying that if such unlawfull events indeed took effect in Russia, then the only effort the government and its executive branches would make, would consist of the effort to hide their crimes against their defenseless citizens from the nation.

Short Comments

20+ Russian articles corroborate Lopatin and Gurtovoj books

The first article, Jan 11-17, 1993 Defense news article "U.S. Explores Russian Mind Control Technology" is a milestone document for the following reasons.

Mind control is a legitimate term according to Russian and U.S. government experts. Both sides state that the government technology exists and is not sci-fi.

Both Russia and the U.S. state that the technology should be placed under international control.

"Decades of research and investment of untold millions of rubles in the process of psycho-correction has produced the ability to alter behavior on willing and unwilling subjects, the experts say."

The Russian and U.S. sources in this article speak for their governments and are very trustworthy and believable. The government representatives state that mind control technology exists and is an arms control issue. International controls on mind control technology are and will be classified, making the information in this compilation a unique look into classified mind control weapons.

The next series of articles discuss Dr. Igor Smirnov. Newsweek and Moscow News reported on Dr. Smirnov and his consultations with the FBI about using his psychocorrection equipment on David Koresh. Also see ZDF section in this compilation, in which Smirnov is described as 'one of the most important Russian psychiatrists'.

Moscow News, 3-25-94 reported that Igor Smirnov has 80 scientific publications and 17 discoveries. "a long time ago it was hammered home that psychotronic weapons were being created "in the basements of the CIA." And it was clear that the USSR would not sit idle waiting for a surprise." "...the [Smirnov] lab has been assailed by tough guys wanting its personnel on their pay-roll. Smirnov says no.

The 7-16-94 Moscow News stated, "The search for funding has taken the scientists who have developed an "Americanized" version of the program, to the United States. Smirnov said his firm is in "commercial discussions" with Psychotechnologies Corp., a Richmond Virginia-based firm."

The 1992 Defense Electronics article corroborated the series of Smirnov articles and further stated, "There was a strong interest among the intelligence agencies because they had been tracking Smirnov for years ...and because we know there is evidence the Soviet Army's Special Forces used the technology during the conflict in Afghanistan." "...Officials from the Central Intelligence Agency, Defense Intelligence Agency and the Advanced Research Projects Agency were also present,... The memo went on to note that meeting attendees were also interested in whether 'psycho-correction detection, decoding and counter-measures programs should be undertaken by the U.S."

This information originates from the intelligence community and it can be concluded that mind control technology has been explored at least as long as Smirnov's work was being monitored.

The next article on Igor Smirnov that reveals how his work on mind control was classified. The FBI consulted with Dr. Smirnov and private U.S. companies are investing in his

technology. The FBI brought him to the U.S. and only turned down the offer to use his technology on Koresh because Smirnov could only guarantee a 70% certainty that it would work on Koresh. Therefore, Dr. Smirnov's information is very believable.

Moscow News 3-25-94. Medics, who dabbled in psychodiagnostics and psychocorrection for purely scientific interest, became objects of attention by the defense industry and the security service. They were not apprehended, but their steps were closely followed. The laboratory, [Smirnov's laboratory of Psychocorrection at the Moscow Medical Academy] its personnel (out of the same scientific interest the physicians came to need physicists and programmers) and all of its projects were classified and publications banned."

The U.S. scientific community would have to have a similar classified system.

The July 16, 1994 Moscow Times article stated, "Smirnov declined to talk about the early days, although he said that the state program was a large one and that the scientists had all the resources they needed. ...but the days of generous state funding for such projects are over. ...The search for funding has taken the scientists who have developed an "Americanized" version of the program to the United States."

Moscow Times, 7-16-94 described the capabilities of Dr. Smirnov's technology.

"Psychiatrists at the Moscow Medical Academy's Department of Psycho-Correction believe they have the answer. By using a system of computerized psychoanalysis that relies on subliminal stimuli, the psychiatrists say they can understand a person's subconscious and even change a person's personality. ...the method works roughly like this: Electrodes that register the electrical activity of the brain are put on a patient's head. The patient is then given aural and visual stimuli-words flashed quickly on a screen or voices manipulated into a code that sounds like white noise- that can only be understood on a subconscious level. A computer program then coordinates the reactions of the brain with the specific stimuli and assembles the data into a graph that can be analyzed to determine a patient's subconscious attitudes to different concepts. Smirnov calls it a kind of "truth detector." ..."Our machine reveals hidden information that sometimes is not realized by the person himself." In the next stage, the patient listens repeatedly to a tape of specific messages that have also been coded and will be understood subconsciously."

The 1985 CNN video featuring Dr. Rauscher and Dr. Bise demonstrated "technology from Russian literature"

in which visual disturbances were caused by small electromagnetic signals to the brain of the reporter, Chuck DeCaro, (See International Campaign paper on Cahra website) The unclassified technology describes microwave hearing, visual hallucinations, sending subliminal messages to the subconscious, causing health effects from Radio Frequency Sickness, causing nausea, heating of the skin, etc. Not surprisingly U.S. and Russian victims are experiencing symptoms which reflect much more sophisticated and classified mind control technology. Several independent facts from several different sources over several years indicate that mind control technology is more classified than the Manhattan Project.

Top Kremlin officials and Russian journalists confirm the use of Russian mind control weapons.

The next two articles on General Georgy Gorgyevich Rogozin are worth exploring and further research is needed.

The 1995 Washington Times and the 1995 European newspaper reported that Gen. Rogozin works in the Kremlin and that there are numerous reports of his surveillance techniques on them. Gen. Rogozin's background describes his KGB work from 1989-1991 as chief scientist dealing with security problems. He pursued a program which included mind-reading from a distance and control of the subconscious by telepathy. "Ludmila Pikhova, an experienced presidential aide and speech writer who is known for her iron strength of character and calm temperament, turned on Rogozin during a recent story Kremlin meeting, dragging him outside a conference room and screaming: "Don't you try to control my subconscious ever again." Sergei Parkhomenko, the Russian journalist for Sevodnya newspaper has put together a dossier of the strange goings-on, "... everybody I talk to at the Kremlin confirms the nightmare. ... Members of the Russian Parliament question what kind of influence is being wielded by this former KGB officer with his projects and what proportion of state funds are being squandered on black magic. ...A highly placed officer of the electronic surveillance service FAPSI warned: "It cannot be permitted that parquet (desk-bound)generals from the Kremlin guard are allowed to usurp power in this country...."

#### Emilia Cherkova and Psychotronic Victims Groups

Next are three articles on Emilia Cherkova and her human rights work to help victims of psychotronic experiments. As in the above articles, the references to scientists and top public officials discussing mind control and the resolution in the CSCE, i.e. more government documents, is substantial evidence. Here are the highlights from the articles.

Delovoi Mir, 2-15-92 Press reports that Ruslan Khasbulatov, Speaker of the Russian parliament, had to move from his flat, one possibility listed was the high level electromagnetic radiation felt in his flat. During the August coup General Kobets warned publicly that psychotropic generators might be used against the White House defenders. June 1991, a group of Zelenograd deputies sent an appeal signed by 150 people to President Yeltsin, demanding an investigation into the use of bio-electronic weapons.

Stolitza, 11-2-92. Victor Sedletsky, a scientist from Kiev stated that "As an expert and a juridical person, I assert that mass production of psychotronic biogenerators and their testing is underway in Kiev."

Academician V. Kaznacheyev from Novosibirsk does not rule out military uses or the development of plans for a "psychic war" which, in his view, is more dangerous than any other kind of warfare. The military may use ESP to paralyze the will of other people, "turning them into obedient slaves," the scientist writes. Kaznacheyev therefore insists on placing this kind of research under international control.

The international seminar on human rights held last year in the framework of the CSCE Conference on the Human Dimension passed a resolution, according to which the health Ministry and the KGB were requested to provide official information on the use of various means of influencing human behavior."

Moscow Times, 7-11-95. Journalist Yury Vorobyovsky has been investigating the top secret program of "psychotronic" brainwashing techniques developed by the KGB and the Ministry for three years.

Emilia Cherkova claims that there are over a million victims. Her group, Ecology and Living Environment has filed damages against the Federal Security Service or FSB. The newspaper reports, "there is strong evidence that some kind of psychotronic warfare program did exist in the Soviet period, and that the technology may be falling into the wrong hands.

Lopatin calls for legislation, which would "bring Russia into line with Bulgaria, the only other country to outlaw such equipment specifically." Lopatin concludes the article, "of course this project is surrounded with a lot of hysteria and conjecture. ...Something that was secret for so many years is the perfect breeding ground for conspiracy theories."

Dr. Yakov Kudakov used to work in a Defense Ministry psychotronic research laboratory and built a machine using powerful electromagnets. Dr. Rudakov claimed that psychotronics were used on Spetsnaz troops in Afghanistan."

Intelligence Agency reports of Russian mind control capabilities, 1976

The next two 1976 U.S. articles discuss the DIA, Defense Intelligence Agency report on Russia's deep involvement in researching ways to use microwaves to induce disease and control minds.

Los Angeles Herald Examiner, 11-22-76. "A newly declassified U.S. Defense Intelligence Agency report says-extensive Soviet research into microwaves might lead to methods of causing disoriented human behavior, nerve disorders or even heart attacks. "Soviet scientists are fully aware of the biological effects of low-level microwave radiation which might have offensive weapons application," says the report, based on an analysis of experiments conducted in the Soviet Union and Eastern Europe."

The article discussed the Soviet microwave bombardment of the U.S. Embassy in Moscow. "The [State] department spokesmen insist that medical tests have found no adverse health effects attributable to the microwaves."

The article also discussed microwave hearing. "Sounds and presumably even words which appear to be originating intracranially (within the head) can be induced by signal modulation at very low average power densities," the study said. "The report concluded that Soviet research in this are "has great potential for development into a system for disorienting or disrupting the behavior patterns of military or diplomatic personnel: it could be used equally as well as an interrogation tool."

The Paul Bannister Enquirer article quoted Dr. Zaret [a scientist consulted by the U.S. intelligence agencies for Project Pandora work to find the reasons for the microwave bombardment of the Moscow Embassy] on microwave hearing, "You could drive somebody mad with this." "Research in Russia, according to the report, has established that microwave radiation can induce such effects as "headaches, fatigue, perspiring, dizziness, menstrual disorders, irritability, tension, drowsiness, sleeplessness, depression, forgetfulness and lack of concentration."

The importance of this declassified 1976 DIA document is that it is a US government document discussing Soviet athermal emr research for weapons development. The DIA report was based on Soviet research. It becomes clear that both the Soviets and the U.S. were developing weapons based on the athermal effects of emr. For further details on this DIA report, refer to the Paul Brodeur book, "Zapping of America". Brodeur pointed out that the DIA report failed to mention scientist Allan Frey's work on microwave hearing beginning in the 1960s in the U.S.

Looking at the report over 25 years later, given the 1990s unveiling of the nonlethal emr weapons, it can now be verified that the U.S. did have a very classified emr program going back decades. The U.S. knew about the Russian emr weapons program and also developed an emr arsenal. The nonlethal weapons revealed in the 1990s were capable of causing symptoms which microwaves can induce as stated in the 1976 report.

This 1976 DIA report is also important for documenting that the U.S. State Department is on the record for lying to embassy employees about the finding of "no adverse health effects attributable to microwaves. The U.S. government has lied about scientific facts and risked the health of the Embassy employees and utilized the National Security Act to do so. The rights of U.S. citizens are usurped by the National Security Act. The laws in this regard need to be changed so that the U.S. government is held accountable for illegal government experiments.

A.E Akimov's mind control work, possible cover story?

The next informative article is from Fate Magazine by Paul Stonehill, Feb. 1994. The article discussed the controversial A.E Akimov's mind control work, see Tsygankov's citation of Mr. Akimov above. This excerpt is almost verbatim.

July 4, 1991, a month before the Aug. 1991 coup in the Soviet Union, a document known as "Resolution 58 of the Committee for Science and Technologies of the Former Soviet of the USSR came from the Kremlin. The resolution condemned the "depraved practice" of financing pseudoscientific research with State funds. Particularly, it was the research into the so-called spinor torsionnic or microleptonnic fields. The research was tied to the creation of an unusual organization in the Soviet State Committee for Science and Technologies. It became known as the Center for Non-traditional Technologies (CNT); its former director was Mr. A.E. Akimov. The research work had been going on for over 30 years. The research was based on assertions that there had been an unprecedented discovery in the science of physics. It had to do with a new class of physical fields and particles, and the influence exerted by such fields upon biological objects. The resolution stated that the Soviet science officialdom knew nothing of such discoveries, either through open publications, or closed channels. Regardless of the quasi-scientific terminology used in such reports, the information was unsubstantiated, illogical, and scientifically unfounded. The CNT itself was created without the necessary expertise.

Later, the research undertaken was legitimized by support given it by the State Committee. Because of such support, the USSR Ministry of Defense and other state agencies had enough grounds to create a special research center, VENT. Akimov became its general director. Millions of rubles had been spent as the projects of VENT received state funding. Akimov states that just the USSR Ministry of Defense had spent 23 million rubles, an impressive amount. The resolution states that the investigative committee took the conclusions of the Department of General Physics and Astronomy of the Academy of Sciences, USSR, under

consideration. These conclusions qualified the research work in the areas of spinor and microleptonic fields and their applications, as a recurrence of anti-scientific activity. One month later, the Soviet Union as shaken to its foundations and began to fall apart.

Yet the Sept 9, 1991 Komosomolskaya Pravda published an article by Mr. Volkov, and revealed what it was that the CNT had actually researched. His source was a report from the CNT "Main Directions of Research" The CNT was involved in study of remote medical and biological influences on the armed forces and people exposed to torsionnic radiation; remote influence on the armed forces and people from the same radiation"

Further information on A.E. Akimov is needed in order to draw any firm conclusions. At the least, Dr. Akimov was able to obtain very impressive state funding for mind control research and is cited by V.D. Tsygankov in the book, "Psychotronic War and the Security of Russia". VENT is mentioned in the 11-2-92 Stolita article, "The firm conducting most of the research and development in this field [mind control] is the Vent" technical center [previously called the Center for Non-traditional Technologies at the USSR Committee for Science and Technology]. As much as 500 million rubles was allocated for its project." This wording is the same as the Fate Magazine article on Resolution 58.

One side says that mind control technology was being developed at VENT by Akimov, as the general director. The government Resolution states that at least some of the research conducted there was pseudo-science. And the Internet article quoted the findings of the Commission at the Russian Academy of Sciences and stated that A.E. Akimov's science was unreliable. Both sides say that an large amount of money was spent. The controversy may be part of a mind control cover story. The Tsygankov scientific information in the Lopatin book needs to be evaluated further and contacting Tsygankov would be beneficial. There could be some truth to the VENT Akimov mind control research with the government trying to discredit the work and cover it up. Maybe the torsion field fraud is a front for mind control programs, just like the athermal/ thermal controversy was for emr weapons. Maybe this allows the scientists to continue their work and for the Russian government to discredit them, so that the extent of the mind control research will be kept out of the public eye.

Scientific summary of emr weapons corroborates 50 years of evidence

The final article is "Electromagnetic -Effect Weapons: The Technology and the Strategic Implications", 1988. This article cites a "recent" book, no title written "under the auspices of Znanyia, a cadre organization headed by top Soviet military scientist N.D.Basov. The book discussed Delgado's magnetic field experiments. The article mentions the history of emr research in Russia and names of scientists such as Alexander Gurvich and the very famous V.I. Vernadsky whom Gurvich followed. Vernadsky's famous ideas are mentioned in the Lopatin book and from this information, the unclassified development of emr and classified Russian development of emr weapons can be traced. Here is just one excerpt on the scientist A. Gurvich who is also cited by the Lopatin book.

"Another member of the Gurvich school, Alma Ata biophysicist Inyushin, wrote an article in the Red Army paper Krasnayz Zvezda in 1984 declaring that breakthroughs of "revolutionary significance" were being made in the optical biophysics field. Since then, Inyushin's name completely dropped out of Soviet scientific literature, indicating that he is now working in a top secret program. Indeed almost the entirety of the huge Soviet effort in biophysics of the Gurvich-Vernadsky variety has "gone underground" since 1983-84."

## Overall conclusions

1. The value of the Russian information to U.S. victims is in its power to argue convincingly that the U.S. would have to be developing mind control weapons also. The Russian evidence of mind control weapons is substantial in quality and quantity. Each independent source in the 20+ article verifies the other. Although there is a definite limit to the Russian mind control technology discussed and the articles all state basically the same thing, it is revealing. There is nothing comparable in the U.S, nothing even close to this Russian body of evidence. The break up of the Soviet Union has been a unique opportunity to gather declassified evidence of a very large, very black mind control program. As the facts above show, the U.S. was aware of this program and no doubt has a comparable classified mind control program of its own.

2. Credible, independent sources are stating that Russian mind control weapons exist, are being illegally used and laws are needed to protect Russian citizens.

Numerous public officials, including scientists, journalists and lawyers stated that mind control technology exists and needs to be controlled. Emilia Cherkova was discussed in the Gurtovoj book and three Russian newspapers.

Dr. Kaaznacheev, who was mentioned in the Gurtovoj book in the Fetzer Foundation letter and Emilia Cherkova are saying that mind control weapons exist and are in the hands of the military and government.

The scientist from Kiev, Sedletsky and Cherkova say there are experiments on Russian citizens.

Lopatin acknowledges the existence of mind control technology and even states that it was "secret for so many years". He dismisses the paranoid and conspiracy label on the allegations and instead takes mind control weapons very seriously, calling for legislation to ban their illegal use.

Dr. Kudakov built the equipment and states that similar equipment was used in Afghanistan, as does the Defense Electronics article above. The Russian journalist Vorobyovsky has studied this story for three years. A complaint was filed with the CSCE.

3. U.S. victims can use this very powerful information as a group and approach Congress, human rights groups The Russian evidence validates the claims made by victims of U.S. government mind control experiments. U.S. and Russian victims can now combine their claims which date back to the 1950s and make a strong case.

Here are a few of the articles in full length.

HEADLINE: Report: Soviets Used Top-Secret 'Psychotronic' Weapons

BYLINE: By Owen Matthews

BODY:

There may be a scientific explanation for the rigid-faced inflexibility of Soviet-era border guards and soldiers, after all. Reports have emerged of a top secret program of "psychotronic" brainwashing techniques developed by the KGB and the Ministry. The techniques, which include debilitating high frequency radio waves, hypnotic computer-scrambled sounds and mind-bending electromagnetic fields, as well as an ultrasound gun capable of killing a cat at fifty meters, were originally developed for medical purposes and adapted into weapons, said journalist Yuri Vorobyovsky, who has been investigating the program for three years.

"Ecology and Living Environment," an environmental and civil liberties group which claims a membership of 500 people in Moscow, has set up an association of "Victims of Psychotronic Experimentation," who have filed damages claims against the Federal Security Service, or FSB, and the government. Unfortunately, since by definition many of the victims are psychologically disturbed, there is a problem of verification.

"The Health Ministry and the FSB are doing medical experiments on over a million innocent people," said Ecology and Living Environment President Yemilia Cherkova, an ex-member of Zelenograd's local council. Cherkova wears a lead helmet in bed to protect herself against the rays she says the government beams into her flat. "They put chemicals in the water and use magnets to alter your mind. We are fighting to prove to the authorities that we are not mad." Despite these somewhat far-fetched testimonies, there is strong evidence that some kind of psychotronic warfare program did exist in the Soviet period, and that the technology may be falling into the wrong hands.

Official confirmation was first hinted at in the 1991 Soviet budget, which mentioned that 500 million rubles of the state security budget had been spent on "psychological warfare technology" over an unspecified period of years, said Vorobyovsky. Former state security and interior minister General Viktor Barannikov, sacked for supporting the 1993 coup attempt, warned in an Interior Ministry memorandum earlier that year that he had information that the mafia had got hold of the technology, though little concrete evidence has been found by police.

"We have no evidence that our local mafia has psychotronic weapons; they have enough ordinary ones," said Gennady Melnik of the Moscow Police Department. "They are not the most technologically advanced mafia in the world. It must be cheaper just to use guns." Nevertheless, the State Duma is taking the matter seriously enough to draft a law on "security of the individual," which will include regulation of subliminal advertising and pseudo-religious sects, as well as imposing state controls on all equipment in private hands which can be used as "psychotronic weaponry." The legislation brings Russia into line with Bulgaria, the only other country to outlaw such equipment specifically.

"The law is pre-emptive," said Vladimir Lopatkin, chairman of the drafting committee. "The equipment that now exists in laboratories must be very strictly controlled to prevent it from being sold to the private sector." Vorobyovsky has filmed several laboratories which are using powerful electro-magnets of the sort experts believe can be used as weapons to supposedly cure private patients of various ailments. One, the Biovolna clinic in Zelenograd, near Moscow, went private after its funding from the Defense Ministry was discontinued. The

clinic has "treated" more than 7,000 people, despite not having a Health Ministry license. One of Vorobyovsky's film crew volunteered to be subjected to rays from a similar machine built by Dr. Yakov Rudakov, now a general practitioner who used to work in a Defense Ministry psychotronic research laboratory. He described feeling dizzy, lethargic and confused after exposure to certain frequencies.

The dissident writer Vladimir Voinovich described in his memoirs how the KGB used a cocktail of drugged cigarettes and electromagnets to sap his energy and induce disorientation and confusion.

"One could call this 'Black Science.' Research scientists whose funding has been cut have resorted to putting equipment costing millions of rubles to any use that will pay," said Vorobyovsky.

Another program Vorobyovsky filmed was a sound studio at the Interior Ministry's research laboratory where officers were played bursts of computer-scrambled messages encouraging them to be more decisive and fearless. Dr. Rudakov claimed that this technique was used on Spetsnaz troops in Afghanistan. The danger, says Vorobyovsky, is that similar messages can be transmitted over the telephone, television or radio to influence whoever hears them.

"Of course this project is surrounded with a lot of hysteria and conjecture," said Lopatkin, of the Duma committee. "Something that was secret for so many years is the perfect breeding ground for conspiracy theories."

Mind-Altering Microwaves  
Soviets Studying Invisible Ray  
November 22, 1976

NOTE: SEVERAL INDUSTRIALIZED COUNTRIES ARE DEVELOPING  
ELECTROMAGNETIC TECHNOLOGY FOR ANT-PERSONNEL USE.

Mind-Altering Microwaves  
Soviets Studying Invisible Ray

A newly declassified U.S. Defense Intelligence Agency report say-extensive Soviet research into microwaves might lead to methods of causing disoriented human behavior, nerve disorders or even heart attacks. "Soviet scientists are fully aware of the biological effects of the low-level microwave radiation which might have offensive weapons application," say the report, based on an analysis of experiments conducted in the Soviet Union and Eastern Europe.

According to the study, this research work suggests the potential for the development of a number of antipersonnel applications."

Microwave beams are the electronic basis of radar and are widely used for relaying long distance telephone calls. Other common sources of microwaves include television transmitters.

A copy of the study was provided by the agency to the Associated Press in response to a request under the Freedom of Information Act. The Pentagon agency refused to release some portions of the study, saying they remain classified on national security grounds.

The report made no direct mention of the Soviet microwave bombardment of the U.S. Embassy in Moscow where despite strong American protests the radiation continues, though at reduced levels.

Up to now, the view most widely accepted among State Department officials in Washington has been that the Soviets appear to be using the microwave beams to foil sophisticated U.S. electronic intelligence gathering equipment at the embassy.

The State Department issued an administrative source on Nov. 12 declaring Moscow "an unhealthy post," but no link was officially drawn between this move and the radiation situation. Department spokesmen insist that medical tests have found no adverse health effects attributable to the microwaves.

The Soviets have denied beaming any radiation at the embassy, contending that the microwaves are simply part of the normal background radiation found in any major city.

The Pentagon agency's report, distributed within the government last March said that biological effects which could alter anti-personnel uses is the phenomenon known as microwave hearing.

"Sounds and possibly even words which appear to be originating intracranially (within the head) can be induced by signal modulation at very low average power densities," the study said. It added that "combinations of frequencies and other signal characteristics to produce other neurological effects may be feasible in several years."

The report concluded that Soviet research in this area has great potential for development into a system for disorienting or disrupting the behavior patterns of military or diplomatic personnel. It could be used equally as well as an interrogation tool.

...Soviets have also studied various changes in body chemistry and functioning of the brain resulting from exposure to microwaves and other frequencies of electromagnetic radiation.

One physiological effect which has been demonstrated is heart seizure. It said that this has been accomplished experimentally in frogs by synchronizing the pulses of a microwave signal with the animals heart beat and beaming the radiation at the chest area.

The document added that a frequency probably could be found which would provide sufficient penetration of the chest wall of humans to accomplish the same effect-heart attacks.

The report said that another potential antipersonnel use. ...microwaves could be used to effect the blood-brain barrier, which regulates the exchange of vital substances between brain cells and the circulatory system.

From Delovoi Mir, pp. 1,9 February 15, 1992 "Mind Control"by Ivan Tsarev

"Brainwashing techniques still being used in Russia, claims member of human rights commission."

"Psychological warfare is still being used by state security agents against people in Russia even after the abortive August coup, said Emilia Chirkova, a Deputy of the Zelenograd Soviet and member of the Human Rights Commission. She recalls the scandal surrounding the alleged bugging equipment installed close to Boris Yeltsin's office. KGB agents admitted then that the directional aerial in the equipment was designed for transmission, not for reception. She believes it was part of an attempt to affect the health of the Russian President using high frequency electromagnetic radiation. The Human Rights Committee, Chirkova said, had warned Yeltsin about such a possibility."

"She cited several further instances of the use of similar devices. Microwave equipment had been used in 1989 and 1990 in Vladivostok and Moscow prisons, in a mental hospital in Oryol and in the Serbsky Institute in Moscow [also a mental hospital], she said. during his exile in gorky, Andrei Sakharov noticed the presence of a high tension electromagnetic field in his flat. It was reported recently in the press that Ruslan Khasbulatov, Speaker of the russian parliament, had had to move from his flat to another district of Moscow. High level electromagnetic radiation has been included among the possible causes of the discomfort he felt in his flat. During the August coup General Kobets warned publicly that psychotropic generators might be used against the White House defenders."

Purported victims of psychological warfare have written to the paper. From Voronezh comes this letter: "They controlled my laughter, my thoughts, and caused pain in various parts of my body... It all started in October 1985, after I had openly criticized the first secretary of the City Committee of the Communist Party. Sometimes voices can be heard in the head from the effect of microwave pulse radiation which causes acoustic oscillations in the brain," explained Gennady Shchelkunov, a radio electronics researcher from the Istok Association. Numerous sufferers from this alleged manipulation have set up a public movement."

"In June 1991, a group of Zelenograd deputies sent an appeal signed by 150 people to President Yeltsin, demanding an investigation into the use of bio-electronic weapons. Non-official sources say that a commission charged with investigating possible use of such weapons is being set up at the Russian Government."

In two articles, Jonathan Tennenbaum describes development of Soviet electromagnetic weapons and the physics and biology behind the weapons.

Electromagnetic-Effect Weapons: The Technology and the Strategic Implications. Wiesbaden Federal Republic of Germany Jan. 16, 1988. Executive Intelligence Review.(Executive Intelligence Review Special Report. 317 Pennsylvania Ave. S.E., 2nd Floor. Washington, DC 20003 (202) 544-7010. Pg. 7. Michael Liebig.

..."This Special Report is meant to sketch the gestalt of this newly emerging Soviet threat, the dimensions of which the Western public is most dangerously unaware. There is barely any understanding in the West of the revolutionary transformations in technology and strategy associated with electromagnetic effect weapons."

Tennenbaum, Jonathan.(1988, Feb). Some ABCs of Electromagnetic Anti-Personnel Weapons. Executive Intelligence Review.Executive Intelligence Review Special Report. 317 Pennsylvania Ave. S.E., 2nd Floor. Washington, DC 20003 (202) 544-7010. Pg. 9.

Dr. Jonathan Tennenbaum is on the Board of Directors of Fusions-Energie-Forum in the Federal Republic of Germany, and an editor of its magazine, Fusion.

"Often referred to by the misleading name, "radio-frequency weapons," The most sophisticated new type of anti-personnel weapons now being perfected by the USSR for use by its Spetsnaz and regular forces, uses pulses of electromagnetic energy to disorient, paralyze, and kill human targets. Such electromagnetic pulse (EP) weapons can take a variety of forms, including the following: ...

Electromagnetic pulse anti-personnel weapons have many scientific and technical features in common with the laser weapons under development in the American and Soviet anti-missile defense programs. Both use electromagnetic radiation, propagating at 300,000 kilometers per second, to achieve their destructive effect. Both require compact power sources, generators of electromagnetic radiation (e.g., lasers, magnetrons, gyrotrons, etc.), beam radiator and focusing apparatus (e.g., optics for lasers, wave guides and phased-array antennas for microwave weapons), and computerized control systems In both cases also, the maximum effect of these weapons is obtained by "tuning" or "tailoring" the output to the characteristics of the target.

The chief peculiarity of EP anti-personnel weapons lies in their exploitation of highly non-linear effects of electromagnetic radiation upon living organisms. Typically, these weapons employ complicated pulse shapes and pulse trains, involving several frequencies and modulations which can range over a wide spectrum from extremely low frequencies (ELF) into the hundred gigahertz range. Thus, although state-of-the-art technology permits construction of mobile systems of extremely high output power (up to 10 megawatts average power, peak pulsed powers of many gigawatts), it is not the high power per se which determines the lethality of the system, but rather its ability to "couple" the output effectively into the target and to exploit non-linear biological action. While high output power may be used to obtain range and breadth of effects and penetration into enclosures and defenses, the minimum lethal "dose" on target will typically be orders of magnitude less than that which would be required to kill by mere heating, in the manner of a microwave oven.

The closest analogy to a sophisticated EP anti-personnel weapon is provided by powerful chemical weapons, such as nerve gases having rapid, fatal effects at extremely low concentration. In the latter case, the effect is mediated by molecules which enter nerve synapses and other critical areas and disrupt normal functions without massive destruction of tissue. The poison acts on the higher levels of organization of living process. Furthermore, it should be understood that molecules themselves are nothing but electromagnetic configurations. That is, the molecules (e.g., of the nerve gas) act via electromagnetic fields, by exchange of electromagnetic energy with other molecules. Hence, it should hardly be surprising to discover that the same effects can be induced by electromagnetic radiation alone-without the presence of the molecules! In principle it suffices to identify the precise geometrical characteristics of the electromagnetic action associated with the given substance, and then just "mimic" the molecular action by a carefully "tailored" signal. Once this principle is understood, biophysical research can define the most appropriate pulse forms for weapon applications, independently of any specific chemical "model." That this is by no means a mere

theoretical possibility is proven by a wide variety of experiments on the biological effects of "tailored" electromagnetic radiation, carried out in the West and East over the last 40 years. For obvious reasons, experiments involving lethal effects are mostly classified. To illustrate some of the relevant research areas, we present a couple of examples of well-documented non-lethal effects.

Since the 1950s much scientific attention has been paid, in the East and West, to effects on the brain of 1) psychotropic drugs (LSD, depressants, stimulants, etc.) and 2) electrical stimulation of specific areas of the brain by implanted electrodes. Among other things, experiments showed that minute currents induced by electrical stimulation could evoke profound changes in brain function, similar to those obtained by psychotropic drugs, the latter often at extremely low concentrations. This work reveals some "deep secrets" of the physiological organization of the brain, secrets having potentially far-reaching military implications. Since the early 1970s a number of published experiments have shown that similar, profound neurological effects can be induced without the "substantial" intervention of drugs or electrodes, by electromagnetic fields applied from outside the experimental subject. Typical of these are those of Dr. Jose Delgado and Dr. Ross Adey. Delgado applied a slowly modulated weak magnetic field (several Gauss, pulsed at less than 100 Hz) to the heads of monkeys via external coils. Depending upon the precise modulation frequency used, specific effects were induced. Thus, one frequency caused the animals to fall asleep, and another triggered aggression, each time with very specific neurophysiological effects on specific areas of the brain. Adey and others have obtained similar neurophysiological effects with a modulated, low-power, radio-frequency field, with modulation frequencies in the range of the internal "brain waves" (EEG). Absorbed power levels were very low- on the order of a thousandth of a watt per square centimeter.

Related experiments have shown that internal EEG waves can be entrained and modified, demonstrating the possibility of direct information transfer to the brain via modulated radio-frequency (RF) fields. Thus, below the threshold of lethal effects, a certain potential for subtle psychological manipulation by means of "tailored" electromagnetic signals cannot be excluded.

Lethal effects have been obtained at power levels not very much higher than in behavior modification experiments. Again, it is not so much the net power as the exact form of the applied series of pulses, which makes the difference. One laboratory device, used in brain research, kills experimental animals with a single microwave pulse of 1/6 second duration.

While the neurological effects of modulated RF and microwave radiation have long been a high-priority area for Soviet research, this field has tended to be played down or even suppressed in the West. For example, Delgado's magnetic field experiments have gone nearly unnoticed in the Western scientific literature, but are a featured subject in a recent Russian book, published under the auspices of Znanyia, a cadre organization headed by top Soviet military scientist N.D. Basov.

While we have concentrated here on the brain as a key target of EP weapons, this is by no means the only target. The central nervous system more generally, and vital organs, especially the heart, are all possible targets. Moreover, a very insidious deployment of EP would be to degrade the overall health of persons in a certain area by long-term, low-level irradiation. There is evidence that the latter has already been tried by the Soviets in a number of cases.

Much more could be said about non-linear biological effects exploitable by EP weapons. In this short introduction, however, we want to move on to another key problem of these weapons; how to generate and deliver the destructive action to the target.

This Special Report presents some details on high-power RF and microwave generators, an area of highest priority in Soviet research and development. There are two essential types of devices which can be used in EP weapons; oscillators using beams of electrons or plasmas, and solid-state devices.

Solid state radar, whose development is driven by the needs of military aircraft and missiles, is one of the fastest advancing areas of electronic technology today.

Although solid state devices do not (yet!) reach the very high powers attained by electron beam devices, miniaturization makes it possible to build today complete, highly sophisticated phased-array radars of suitcase-size, with several kilowatts of average output. The principal advantage of this technology is that it permits extremely sophisticated "tailoring" of pulse shape in space and time, in a compact system, with direct coupling to high-speed computers. This is exactly what is needed in order to optimally exploit non-linear biological effects. What is lost in brute power is thus gained in efficiency.

Recent breakthroughs in what is called "high-temperature superconductivity" open up the perspective that both types of EP generation technology--electron beam as well as solid state--are going to undergo revolutionary improvements in the years immediately ahead. The impact of this revolution cannot even be estimated at this time, but it will certainly mean radical reductions in the size of devices having a given electromagnetic "firepower".

As our discussion of biological effects already indicated, electromagnetic anti-personnel weapons depend essentially on "tuning" the output signal to the target. This goes not only for the frequency and amplitude of the signal, but for its entire space-time "shape." Figure 6, for example, is drawn from thermographs of models of the human body irradiated by RF radiation of the same frequency, but with field geometries. These and other experiments demonstrate, that the areas of maximum absorption of electromagnetic energy inside the body depend on the geometry of the incident wave. By choosing the right geometry, the energy can be focused into any desired area, such as the brain.

A sophisticated EP weapon must thus be able to project a specific geometry of electromagnetic field onto a distant object, over a given terrain and in given surroundings. Without going into technical details of waveguides and various antenna types, we shall briefly present one of the relevant techniques: the principle of the phased array.

A phased-array antenna consists of an assemblage of many individually controlled emitting (or receiving) elements, placed in a fixed geometrical arrangement. The output field of the array is the sum of the waves emitted by the individual elements. By electronically controlling the relative phases of these individual signals, the output field can be given any desired "shape" and direction, limited only by the wavelength used, the number of elements and the size of the array. The huge soviet ABM radar at Krasnoyarsk, for example, contains an 83-meter diameter phased array of thousands of elements. The output can consist of a single, very narrow beam, or hundreds of independently directed beams, all depending on the "phasing" of the elements. This radar can track large numbers of missiles simultaneously, without any mechanical motion of the antenna.

The functioning of phased-array antennae is thus closely related to holography, or three-dimensional photography. In a hologram, a photographic plate records interference patterns, corresponding to the phase relationships of laser light reflected from the object. When the holographic plate is illuminated by a laser, the phase relationships are "reconstituted" and the viewer has the impression of seeing a three dimensional object.

The ensemble of elements of a phased-array antenna takes the place of the holographic plate, but at a much longer wavelength than visible light (centimeters and millimeters instead of fractions of a micrometer). When operated in a receiving mode, the phased array obtains much more information than an ordinary antenna; like the hologram, it measures entire electromagnetic field geometries, not merely a one-dimensional, electromagnetic "signal"

The holographic principle underlying phased-array systems points to a potentiality for creating any desired three-dimensional, electromagnetic field distribution around a target object, from a distance, correcting for reflections, obstacles and other interference. Moreover, the field can be transformed and shifted from one location to another in space within a fraction of a second. Thus, an ideal EP-weapon could attack many individual targets, simultaneously or in rapid succession. One or more phased arrays would be used in receiving and transmitting modes to "lock on" to selected targets, and determine the necessary geometry of the attack pulses. To fully exploit such potentialities, the weapon would require for its target-acquisition and beam-control systems, sophisticated high speed computers, able to perform complex computations of the "inverse-scattering" type. Miniaturized systems of this sort are well within the reach of 'fifth generation' computer technology. "Hybrid" digital-analog systems would be simpler, smaller, and faster still. There is much overlap in requirements between EP weapons and systems developed for strategic defense(SDI).

For concrete weapons applications, simpler devices will often suffice; trade-offs can be made among range, output power, extent of three dimensional field control, and sophistication of biological effects.

As was the case earlier with nuclear weapons, many people may be tempted to think that EP anti-personnel weapons constitute "absolute weapons" against which no defense is possible. A glance at the history of the SDI, or of military science and technology in general, shows why no such thing ever has or will exist.

An obvious aspect of defense is to detect, locate, and neutralize weapons before they can be used. Antenna structures of EP weapons are resonant structures which can be detected in various ways. Spetsnaz deployment of EP weapons can be countered by intercepting the weapons or weapons components in transport, by appropriate surveillance of the areas around potential targets, and by the whole range of countermeasures which can be taken against the Spetsnaz groups themselves. Of course, the EP weapon declares its existence as soon as it is turned on, and itself becomes vulnerable to rapid counterattack if readiness and appropriate means are at hand.

The famous "Faraday cage" and other forms of electromagnetic shielding can provide some protection against EP weapons, especially if the characteristics of the EP signal are known in advance and countermeasures are devised accordingly. Unfortunately, a sophisticated weapon can "tailor" its pulse to get through nearly any given kind of shielding utilizing non-linear, inverse-scattering techniques and a process known as "self-induced transparency." A Faraday

cage under certain conditions can be transformed into an antenna, focusing the signal on the inside and even enhancing the effect for the unfortunate persons inside.

In theory, biological effects can be offset by creating a controlled "electromagnetic environment" around the target, with the effect of "detuning" the target relative to the anticipated signal of the attacking EP weapon - a kind of "immunization." To realize such potentialities will require a major research effort, but one having important spinoffs for biology and medicine.

The application of holographic principles to EP weaponry has profound implications for the future shape of warfare. The deployment of such weapons and the defense against them cannot be understood in terms of "point-to-point trajectory" concepts associated with conventional firearms and artillery. Actually, even in the past, competent military doctrine has always emphasized the geometries of "fields of fire" generated by overall deployment of mobile weapons over a given area, as opposed to mere "straight-line" action of an individual weapon. The geometrical aspect becomes much more explicit in the era of EP weaponry, in which "firepower counts as the ability to control the electromagnetic field geometry on the field of battle, through coordinated deployment and operation of mobile phased arrays and related devices.

The situation could therefore be summed up as follows: in practice, both the use of EP weapons and defense against them is a tricky, sophisticated business, if the antagonists are at comparable levels of technology, knowledge, and preparation. A surprise attack against an unprepared enemy is simpler and very devastating. In this respect, EP weapons are no exception to the general rules of warfare."

Tennenbaum, Jonathan.(1988). Soviet Work on Electromagnetic Pulse Weapons. Executive Intelligence Review. Pg. 17

The 1987 edition of the U.S. Department of Defense review, Soviet Military Power, contains the following stern warning about the current Soviet mobilization to perfect electromagnetic pulse (EP) weapons: "Recent Soviet developments in the generation of radio-frequency (RF) energy have potential applications for a fundamentally new type of weapon system that would degrade electronics or be used in an anti-personnel mode. The Soviets already have or are working on much of the technology for such a system. In their research the Soviets have generated single pulses with peak power exceeding 1 billion watts and repetitive pulses of over 100 million watts.. No significant technological obstacles stand in the way of a prototype short-range tactical RF weapon."

In this Special Report, we shall document that the U.S.S.R. presently possesses the essential technological base, plus knowledge of advanced biophysics, to realize a wide variety of tactical and strategic electromagnetic anti-personnel weapons. We shall demonstrate this from the Soviets' own technical publications. Fortunately, we are not able to show pictures of EP weapons on parade in Red Square-if we could, it would be too late!

Figure 1 shows, on a map of the U.S.S.R., some of the known centers of Soviet work on the science and technology of EP weapons. For example, advanced high-power microwave generator work is carried out at the Applied Physics Institute in Gor'kiy near Moscow, at several institutes in Tomsk, at the Moscow Lebedev Institute, in Leningrad, Novosibirsk, and other locations. Advanced biophysical research of military importance is going on at the

Institute for Biological Physics (G.M. Franck) at Pushchino near Moscow, at the Siberian Division of the Academy of Medical Sciences at Novosibirsk, at several institutes in Alma Ata, in Vladivostok, and at a number of establishments linked to the Soviet manned space program. (There is significant overlap between space medicine and the biophysics of EP weapons effects.) The question marks on the map indicate that only a very small part of the relevant research and development ever finds its way, even obliquely, into available Soviet technical journals. Military secrecy is much stricter and all-encompassing in the East than the West.

An interesting article appeared this year by one V.M. Koldayev in the Soviet journal *Biologicheskiye Nauki* dealing with "The Correction of Acute Microwave Exposure by Drugs-Experimental Results." In the article a large number of pharmaceuticals are evaluated for their capability of enhancing the resistance of the human organism to microwave radiation. Both preventive treatment, before exposure, and post-exposure treatment are discussed. Koldayev stresses a point which is key to the Soviet approach to microwave and radio-frequency effects: "Intensive microwave radiation changes the membrane characteristics of cells and ion transport, generates electrical breakdown at the boundaries of phase regions and other effects causing a destruction of living processes. Research in recent years has shown that the 'thermal conception' of microwave effects is inadequate."

Kolayev points to a major stumbling-block of Western biophysical research: the absurd, but stubborn insistence on the part of the Western research "establishment", that electromagnetic radiation could have no other effect on a living organism than to increase its temperature (I.E., in Koldayev's words, the "thermal conception"). As a result of this blind spot, many Western specialists still refuse to accept the existence of precisely those kinds of effects upon which the most lethal Soviet EP weapons depend.

The Soviets presently lead the world in research into a crucial, but not much publicized field called "optical biophysics," sometimes referred in the West as "bioelectromagnetics," which deals with the electromagnetic organization of living processes. Although modern research into this area goes back to Louis Pasteur, the most consistent and sustained efforts were launched in Russia by V.I. Vernadsky (1863-1945), the physicist biologist, geologist, and architect of the Soviet atom bomb project.

Vernadsky's scientific training focused on the works of Pasteur and radioactivity pioneer Pierre Curie, and included visits to the Pasteur Institute and other leading European science institutes. Vernadsky initiated the systematic search for reserves of uranium and other technically crucial minerals throughout the Russian empire, and was a key organizer of the pre-World War I economic mobilization in Russia. As founding director of the State Radium Institute in Leningrad, Vernadsky launched in 1926 a crash program of fundamental research into the "physical geometry" of living processes, which would include a comprehensive study of their interaction with electromagnetic radiation:

"Only a few of the invisible radiation's are known to us at present. We have hardly begun to realize their diversity and the inadequacy of our knowledge of these radiations which surround us and pass through us in the biosphere, and to understand their basic role in the processes going on around us, a role which is difficult to comprehend by those accustomed to other conceptions of the Universe...We are surrounded and penetrated, at all times and all places, by eternally changing, combining and opposing radiation of different wavelengths--from 10 millionths of a millimeter to several kilometers."

Out of Vernadsky's program came the Soviet military slogan: "He who controls the entire electromagnetic spectrum will dominate the world." It was Vernadsky who coined the now-common term "biosphere," emphasizing the fact that the totality of living matter on the Earth forms a coherent process in powerful mutual interaction with the climate and geophysical conditions of the planet. This work was the basis of the concept of "planetary war" advocated by Marshal Ogarkov, according to which all available scientific knowledge concerning the biosphere is to be mobilized in war in order to crush the enemy. This includes development of means of weather modification, manipulation of the ionosphere and other layers of the atmosphere, large-scale biological warfare, triggering of natural disasters, as well as global electromagnetic warfare.

Vernadsky's efforts provided the scientific atmosphere for the launching of the most powerful current of Soviet biophysical research, that associated with Alexander Gurvich(1874-1954). Gurvich was the first to systematically demonstrate that absorption of minute amounts of "tuned" electromagnetic radiation, down to individual quanta, can decisively influence the course of biological events. This is now known in the Soviet literature as the "informational role of electromagnetic radiation in biological systems."

In connection with this research, Gurvich developed that first "field theory" approach to the geometry of living processes, and discovered the universal ultraviolet light emission of cells called "mitogenetic radiation". He was the first to point to the capability of biological molecules such as proteins and DNA, to absorb energy at long wavelengths and reemit the stored energy at much shorter wavelengths-phenomena which are intensively studied today under the name of "multiphoton processes in non-linear spectroscopy."

Gurvich was thereby a pioneer in the area of advanced research which is decisive for the most devastating forms of electromagnetic anti-personnel weapons.

Gurvich's student G.M. Franck founded the Institute of Biological Physics in Pushchino, which still bears Franck's name, and is today a key center of military-related research on electromagnetic pulse effects on biological systems. Another Gurvich disciple, Prof. Vlail Kaznacheev, heads the Medical Division of the Soviet Academy of Sciences in Novosibirsk, with close ties to the military space establishment. Kaznacheev carried out a decade-long series of experiments on the electromagnetic basis of the pathogenic action of viruses and poisons. Another member of the Gurvich school, Alma Ata biophysicist Inyushin, wrote an article in the Red Army paper Krasnaya Zvezda in 1984, declaring that breakthroughs of "revolutionary significance" were being made in the optical biophysics field. Since then, Inyushin's name completely dropped out of Soviet scientific literature, indicating that he is now working in a top secret program. Indeed, almost the entirety of the huge Soviet effort in biophysics of the Gurvich-Vernadsky variety has "gone underground" since 1983-84.

One indicative area of continued Soviet publications is on the "non-thermal" effects of low-level microwave radiation in the millimeter wavelength band. Since at least the late 1960s, a U.S.S.R.-wide network of more than 21 institutes has conducted research into this field, led by Prof. N.D. Deyatkov of the Soviet Academy of Sciences. This research is continuing to this day. Late last year, for example, the Soviet microwave technology journal Radioelektronika published two long papers on biological effects, written by known members of the Deyatkov group. These papers discussed the mechanisms by which millimeter radiation interacts with internal electroacoustical oscillations, notably in cell membranes, to generate the resonant, frequency-dependent effects documented in a large number of experiments.

The significance of these sorts of publications is not that they give a direct "peek through the window" at weapons-development; rather, they indicate an orientation of "civilian" basic research programs to the type of phenomena of relevance to weapons applications. (It is unlikely that electromagnetic anti-personnel weapons would work with pure millimeter waves. Millimeter-band "harmonics" would be included in complex pulse forms, however.)

Unfortunately, Devyatkov's area of research was all but closed down in the U.S., following the conclusion of "biological warfare accords" between the U.S. and the U.S.S.R. in the early 1970s-another concession from which the Soviets have extracted great strategic profit.

The capability to generate controlled high-power pulses of electromagnetic energy has long been a top priority area for Soviet applied physics research and development. It even has its own name in the Soviet literature, for which no direct equivalent term exists in the West: *sil'notochnaya elektronika*. It includes things like explosive cathodes and other technology for high-current relativistic particle beams, energy storage and pulse compression technology, non-linear plasma devices such as the plasma focus, "explosive" MHD power generation, EMP simulators, etc.

Significant parts of this R&D are being carried out in "purely peaceful" programs, such as controlled fusion energy and accelerators for elementary particle research. So, Soviet development of gyrotron devices for ultra-high-power microwave generation has the "official purpose of providing means for heating plasmas in experimental fusion reactors. And, in fact, gyrotrons can do exactly that. But, the technical advances thus made-or acquired from the West-under "civilian" fusion research programs with international cooperation, can immediately be transferred to secret military programs. Thus, Rudakov's huge "Angara V" electron beam pulse generator, allegedly constructed for fusion research, was obviously motivated by some other reasons than just the publicized ones.

Soviet development of high-power magnetohydrodynamic (MHD) generators is another interesting example. For many years, Vice-president of the U.S.S.R. Academy of Sciences E.P. Velikhov has directed a large program to perfect this technology for direct conversion of chemical combustion energy into electricity, for a variety of "peaceful" applications.

These are figures from 1977, ten years ago. Given intensive Soviet work in this field in the intervening period, we must assume that they can obtain the same or better output with much smaller devices. These and the famous "Pavlovskii" pulse generators play an important role in the Soviet's own version of the SDI, as power sources for beam weapons. They provide enough power for very devastating types of mobile anti-personnel weapons.

The heart of an EP anti-personnel weapon is the system for generating and emitting the electromagnetic radiation. Here the Soviets can draw from their vast experience with all types of military radars, including the large phased-array installations at Krasnoyarsk, Pechora and elsewhere, as well as advanced research into relativistic electron beam devices for ultra-high-power EP generation. The article by Robert Gallagher documents how the Soviets have led the world in development of pulsed gyrotrons and related EP devices covering a wide frequency range. This new hardware is being "spun off" in great quantity and variety as a product of the *sil'notochnaya elektronika* thrust. Nor have the potentialities of solid-state been neglected. While the Soviets may lag in some of the most exotic microchip technology, they are quite familiar with solid state radar systems applicable (among other things) to

miniaturized EP weapons. "Briefcase size" EP weapons for "close-in" Spetsnaz assassinations and related missions, are well within Soviet technological capability.

Recently, it was announced that the U.S.S.R. intends to use its new, heavy space-lift system Energiya, with five times the payload of the American space shuttle, to station some very large structures in orbit. Besides a larger version of their present space station, one of the plans is for a huge "solar power station" which would relay its energy to Earth via a high-power laser or a beam of microwaves. (A similar project was considered by the U.S. NASA, but rejected because of the of inadvertently irradiating populated areas.) With a proposed several gigawatts of continuous power at its disposal, such a station could carry out weather modification as well as electromagnetic warfare on a large scale. Of course, compact nuclear reactors (which the Soviets are already using in radar reconnaissance satellites), especially in a pulsed mode, and MHD devices, could be much better energy sources for a military system. given a sufficient supply of energy, a large, phased-array EP system in orbit could attack entire cities, with loss of life comparable to nuclear weapons, but without collateral damage.

However, it is not necessary to station EP weapons in space in order to have firepower on a "strategic" scale. The Soviets have been early masters at combining their knowledge of geophysics and non-linear wave propagation to develop novel types of over-the-horizon radar. Using combinations of phased-array installations with a very large effective aperture, it is theoretically possible to project lethal electromagnetic signals over thousands of kilometers. At shorter ranges, incoming missiles and aircraft might be destroyed using EMP-like effects. Soviet activities should be closely watched in these respects, especially in view of the potential "dual purpose" exploitation of certain facilities.

(The following list is not intended to be comprehensive, but merely exemplifies extensive Soviet scientific efforts in fields relevant to EP weaponry. The interested reader will find further literature through the cited publications.)"

Editor's note. Here are more substantiating articles in support of Tennenbaum's information. It is in list format.

Liebig, Michael.(1988).Radio-Frequency Weapons: Strategic Context and Implications. Executive Intelligence Review. Pg. 42.

Michael Liebig is Managing Director of EIR nachrichtenagentur GmbH in Wiesbaden, Federal Republic of Germany. The following paper was presented at conferences in the Federal Republic of Germany, France, and Italy.

"...It is obvious that the whole complex of RF technologies, precisely because of the vast potential for military application, is highly classified. Detailed information on RF systems is extremely scant in the public domain. Yet we do know the scientific-technological basics of RF systems and their interaction with biological and other soft targets. While operational RF weapon systems may not yet exist as such, it can be stated categorically, that not just research, but development work towards operational RF weapons, is underway in the East and West, especially in the East.

Pg. 40. "Radio-frequency weapons" is a misleading name, carried over from a pragmatic understanding of earlier stages of electronic warfare. For example, it was thought, mistakenly, that the use of microwaves as anti-personnel weapons depended upon the heating effects of such waves upon targeted material. Today, it has been shown that properly tuned electromagnetic pulses have mortal effects at levels of energy-deposit as low as two or three orders of magnitude below those required to kill cell-tissue by means of induced thermal effects. This comparison illustrates the importance of the term "non-linear effects."

The most important of the near-term applications of non-linear electromagnetic effects are in the domain of optical biophysics, either as strategic or tactical anti-personnel weapons, or to produce global effects within the biosphere surrounding those personnel. However, there is also the prospect of disintegrating non-organic material, as well as the disruption of apparatus, through the same class of technologies. In applying the notion of technological attrition to all such electromagnetic-pulse weapons as a general class, it is the principles causing all of the indicated range of effects which must be considered as a unit for purposes of shaping strategic doctrine.

All of the weaponry based upon "new physical principles," including lasers, particle beams, and non-linear electromagnetic-pulse effects, belong, together with the role of high temperature superconductivity, to the domain of sub-atomic physics. Modern high-energy physics, especially that focused upon so-called "force free" status of plasmas, shows that sub-atomic phase-space has a distinct, Kepler-Gauss sort of inherent curvature. It is also shown, that non-linear effects of coherent electromagnetic pulses, as phenomena of the macro-scale, are rooted in the non-linear physics of the curvature of "force-free," least-action states in the sub-atomic domain.

One of the most important lines of inquiry to this effect today, is modern optical biophysics' attention to the decisive role of precisely tuned, inherently coherent electromagnetic pulses in living processes.

Conceptually, this new work belongs to the tradition of Pasteur's work on optical biophysics and the definition of living processes presented by Luca Pacioli and Leonardo da Vinci nearly 500 years ago. Essentially, modern instruments permit us to detect and measure localized coherent pulses in the range of quanta of emission, leading into what is called today "non-linear spectroscopy" of living processes. The comparison of the results obtained in this way in biological research, with lessons learned from high-energy physics of force-free plasma states, is the key to design of strategic and tactical anti-personnel assault weapons and related applications."

Frazer, James W. PhD and Frazer, Joyce E.(1988, Mar.Apr.)How Radiofrequency Waves Interact with Living Systems.21st Century.Pg. 50.Dr. Frazer, adjunct professor of pharmacology, University of Texas Health Science Center San Antonio. Dr. Frazer was featured as a weapons expert on CNN's Special Report,1985 and discussed his ten year Air Force career and on electromagnetic effects. His conclusion that "radiofrequency weapons could be the wild-card in the arms race."

"The nonthermal effects of electromagnetic radiation on living cells offer clues as to what is life, as well as to understanding Soviet research on the possibility of controlling human thought and emotional experience." Pg. 54. "In earlier work, Adey's group had shown a modulation sensitive effect on calcium efflux from chick brains. These findings created considerable controversy, but were completely substantiated by work done in Environmental Protection Agency(EPA) laboratories at Research Triangle Park in North Carolina. The subsequent history of their group is of interest. Adey's group continued with practical and theoretical studies of nonlinear response of biological systems to low-intensity fields-but with nearly annual cuts in funding levels. The federal agencies monitoring that work have been fragmented and the people either left or transferred to other fields of endeavor. Price, Frazer, Mori, and all of the people performing the original lymphocyte experiments have resigned, been victims of reductions in force, gone into other areas of research, or retired. Thus, an area of research of great interest to theoretical biology has been very effectively choked off."

Wellborn Stanley & Daniloff, Nicholas.(1984, Oct. 1'). Can U.S. Hold Its Lead Over Soviets in Science Race? U.S News and World Report.Pg 53.

"The Soviets, for example, experiment extensively in parapsychology and psychic warfare," in modification of weather and in the biological effects of microwave and other electromagnetic fields. Much of this research is given high priority.

Commission on Security and Cooperation In Europe 102nd Congress First Session. The Moscow Meeting of the Conference on the Human Dimension of the Conference on Security and Cooperation in Europe 10 Sept.-4 Oct.1991. Pg. 9.

"Many individual Soviet citizens also attended, seeking help in redressing grievances against the Soviet system after decades of lawlessness and arbitrary administration of justice. Complaints ranged from unjustified loss of employment and placement in psychiatric hospitals to subjection to space-based rays launched and maintained by Soviet security organs. The U.S. delegation was able to do little more than listen to these individuals and forward their complaints to the Soviet delegation or the relevant republican authorities, suggesting to the Soviet delegation that it address the problems of these individuals."

From Fate Magazine, Feb. 1994, p 70. "Soviet Psychic Warfare" by Paul Stonehill

"In 1991, an article entitled "Once More About Psychic Weapons" was published in the Ugolog Ukraine newspaper (Issue 3, 1991) by Mr. A.V. Kalinets-Bryukhanov (K.B.), president of the All-Union Scientific Research Association for the Study of Psychophysical Problems of Nature. ...K.B. state that the "much buzzed about psychic weapons" do exist. In April 1983 he participated in the development of one of the most classified projects of the Soviet State Committee for Science and Technologies. ...K.B. ended his article strangely. Having observed the brain as a receiving and transmitting device, the researchers had discovered certain wavelengths. Using them, it is possible to influence various sections of the brain directly, reproduce cerebral tissue, and then provoke unusual changes in the qualities of individual psyches. Then one can program anything into the brains of experimental subjects."

"On July 4, 1991 a month before the August 1991 coup in the Soviet Union, a curious document known as Resolution 58 of the Committee for Science and Technologies of the ...USSR came from the Kremlin. The resolution condemned the "depraved practice" of financing pseudoscientific research with State funds. The research in question was of 'non-traditional technologies,' and had been conducted in the scientific research centers of the Academy of Sciences of the USSR, Academies of Sciences of several Soviet republics, and a number of State ministries and departments. Particularly it was research into the so-called spinor torsion or microleptonic fields."

"The research was tied to the creation of an unusual organization in the Soviet State Committee for Science and Technologies. It became known as the Center for Non-traditional Technologies (CNT); its former director was Mr. A.E. Akimov.

Akimov said that, "The research was based on assertions that there had been an unprecedented discovery in the science of physics. It had to do with a new class of physical fields and particles, and the influence exerted by such fields upon biological objects, inorganic nature, instruments, and equipment."

"The resolution stated that Soviet science officialdom knew nothing of such discoveries, either through open publications, or closed channels, that there had been only one private publication of the subject (by then refuted). The information presented by CNT's officials (hence through reports, presentations, or publications) had, in essence, contradicted conceptions established by modern science."

"Regardless of the quasi-scientific terminology used in such reports, the information was unsubstantiated, illogical, and scientifically unfounded. The CNT itself was created without necessary expertise."

"Pseudo-science blossoms"

"Later, the research undertaken was legitimized by support given it by the State Committee. Because of such support, the USSR Ministry of Defense and other state agencies had enough grounds to create a special research center, VENT. Akimov became its general director. Millions of rubles had been spent as the project of VENT received state funding. Akimov states that just the USSR Ministry of Defense had spent 23 million rubles, an impressive amount. Total funding for VENT (according to Akimov) from the USSR Military-Industrial Commission of the Cabinet of Ministers, and the KGB, was 500 million rubles."

The resolution states that the investigative committee took the conclusions of the Department of General Physics and Astronomy of the Academy of Sciences, USSR, under consideration. These conclusions qualified the research work in the areas of spinor and microleptonic fields, and their applications, as a recurrence of anti-scientific activity."

The committee blamed the irresponsible approach taken by state agencies toward scientific expertise for the waste of state funds allocated for "anti-scientific activities." This was a clear abuse of the secrecy regime in Soviet academic institutions. The latter, as well as some colleges, had been involved in the whole mess."

"The "blossoming of pseudo-science" was assisted by the circulation of unclear information about similar research efforts abroad, but no convincing confirmation ever existed. The committee finally requested several things:

- 1) expert reports before funds would be allocated
- 2) control over completed or planned work in non-traditional fields
- 3) and mildly asked the KGB, the military, and the nuclear R&D establishment to report the sums spent, and the sources for the financing used for microleptonic and other projects."

"One month later, the Soviet Union was shaken to its foundations, and began to fall apart. Yet, on September 9, 1991, the Komsomolskaya Pravda newspaper published an unusual article. Its author, M. Volkov, revealed what it was that the CNT had actually researched. His source was a report from the CNT, Main Directions of Research."

"The CNT was involved in the study of remote medical and biological influences on the armed forces and people exposed to torsion radiation; remote psychophysical influence on the armed forces and people from the same radiation; and, finally, the defense to exposure in torsion radiation."

"In the fall of 1991, a two-part article in issues 34 and 35 of Molodaya Gvardia magazine was written by Emil Fedorovich Bachurin in the Soviet city of Perm. The information demonstrates the kinds of weapons that fall under the heading of "psychotronic weapons." ...The weapons are dreadful. A human being becomes a silent cog in a hellish machine of all-

devouring fear. An individual's brain can be suppressed, activities curtailed, and such an individual will submit to any wish of the operator."

"The Zombies of the Red Czars", a documentary by Jerzy Sadkowski, 1998, shown on German TV channel ZDF

'The Zombies' refers to the victims of secret psychiatric experiments in Russia. This documentary, shown on ZDF, a mainstream TV channel in Germany, explores the evidence surrounding the allegations of the Zombies, psychotronic victims in Russia. The opening statement describes a new crisis in Russia, ..."crushed as much by the economic collapse...", The break up of the Soviet Union and the resultant economic crisis is the probable explanation for the extensive amount of Russian mind control information available for the first time in mainstream and international media. This documentary included five examples of previously classified information on mind control technology. Dr. Igor Smirnov demonstrated the 'psycho-acoustic correction technology that he developed. He is described as "one of the most important Russian psychiatrists". See 20+ section, several articles on Smirnov and his classified work and his consultations with the FBI.

The importance of this documentary is that the victims describe the same cluster of symptoms reported by U.S. victims, including mail and phone tampering, familiar tools of intelligence black bag operations. The documentary shows the extreme conditions that victims live with daily; they line their apartments with foil and wear electronic gear to ward off the harassing signals. The film says that there are "thousands of such people in Moscow." Nicolai Ivanitsch holds meetings for victims and claims over a thousand members. Alleged victims protest in Moscow Square.

This documentary shows five clips from secret Russian government training films. The films confirm the existence of psychotronic generators. One film features Dr. Smirnov demonstrating his equipment to top government officials of North Korea. Another film shows the militia leader V. M. Soniko during the war in Afghanistan in which he helped pilots overcome stress and fight ruthlessly.

Andre Slepucha, (spelling could be incorrect), was a prisoner of the Stalinistic camps and the KGB and claims that he received psychotronic treatment there in 1953. He is author of several publications and is recommended as a credible victim by the documentary producers.

## Conclusions

1. Dr. Smirnov is a well-known psychiatrist and treats the claims of the victims as plausible. The documentary discloses just how comprehensive the alleged Russian mind control experiments are.
2. This documentary adds support to the theory of a large mind control weapons program.
3. Parallel documentation by the victims of U.S. mind control experiments supports the theory of a large, very similar, but still very classified program in the U.S.

MOSCOW :

THE 'ZOMBIES' OF THE RED CZARS

TRANSLATED INTO ENGLISH BY :  
Jan Wiesemann

CREDITS :

Second part of a three-part German documentary, titled : "Geheimes Rußland. Moskau -- Die Zombies der roten Zaren" [translation : "Secret Russia. Moscow -- The zombies of the red czars"] Part (1) and part (3) of this documentary do NOT deal with Mind Control or Psychotronic Weapons & techniques.

CREDITS for part (2) of the documentary translated here :

A documentary by Jerzy Sladkowski, edited by Agnieszka Bojanowska, camera by Nikolaj Sidortschenko, producer Horst Kalbus, a production by Besta Film, Warschau, Stanislaw Krzeminski. Financed by (the German TV channel) ZDF and (the ??? TV channel) TVP, in close cooperation with (the French/German TV channel) Arte. The documentary aired on the German ZDF Tuesday evening, December 22, 1998, from 10:15pm until 11:00pm. A VHS copy of the documentary is available from the German TV-station ZDF for the equivalent of 80 DM (approximately 40 Euros) plus shipping & mailing charges. To order, be sure to mention the title and the precise date the documentary was shown on German TV (see above).

The address is:

ZDF Programmverwertung  
Postfach 4040  
55100 Mainz  
West-Germany

NOTE CONCERNING THE ENGLISH TRANSLATION OF THIS DOCUMENT:

The spelling of all Russian names, places, locales and words is to be regarded as "experimental" and possibly incorrect.

The translator.

SECRET RUSSIA : MOSCOW -- THE ZOMBIES OF THE RED CZARS

SPEAKER :

The Kremlin. Until shortly the symbol of absolute power. The dream of the red czars was a disciplined society they could completely control. This dream once inspired George Orwell to write his darkly futuristic novel, "1984". Autumn 1998, and [now] there is a new crisis in Russia. Years after the collapse of communism the citizens are crushed as much by the economic collapse as they are crushed by the aftermaths of the more than seven decades

lasting old system. It was like a net of blunt force and secret control which constrained the citizens. Some of these methods, like the Stalinistic camps, were reported all over the world. Others even its victims only report very rarely. In this country, many see themselves as victims : Victims of armed conflicts or political repression. Victims of secret psychiatric experiments or the constant fear of the "big brother".

[A young man is shown. He is in a wheelchair and has bandages all over his head. An old lady, presumably an assistant to Dr. Smirnov, attaches electrodes to various parts on his head and body.]

SPEAKER :

This young man is a victim of the war in Tschetschenia. A soldier who could escape from the surrounded Grosnie.

MAN IN WHEELCHAIR :

"Mama has cried. She thanks you for everything you have done for us."

SPEAKER :

Only a year ago, due to his war trauma, Sasha could neither talk nor move on his own. He had eye and hearing disturbances. Traditional psychiatry had given him up as a hopeless case and condemned him to vegetate in a closed asylum.

OLD WOMAN [asks Man In Wheelchair] :

"Is it conformable for you like this ? You can sit calmly this way and rest your head." [The man in the wheelchair is seated in front of a computer screen].

SPEAKER :

Soon yet another session of a treatment will start which eventually will completely heal the young man. The instrument of this treatment is a computer program which has been individually tailored to each patient. Over a system of impulses it directly acts on his subconscious. Its inventor refers to this treatment as 'Psycho-Correction'. With this therapy the ruins of the psyches of a human are patched up again, a human who has experienced more than he can handle. The numbers on the screen are meant to engage the conscious (part of the mind) to divert attention from the real communication between computer and subconscious.

CLOSE-UP OF MAN IN THE WHEELCHAIR AS HE STARES AT THE NUMBERS FLASHING ON A COMPUTER SCREEN. (His eyes flicker)

CLOSE-UP OF A COMPUTER SCREEN UPON WHICH A SERIES OF NUMBER SEQUENCES FLASH BY.

SPEAKER :

This technique, which is healing Sasha, has been developed by Dr. Igor Viktorovitsch Smirnov, (spelling ???) member of the Academy of Sciences, grandson of a famous

[representative] KGB chief, born in a Stalinistic prison. Today, he is one of the most important Russian psychiatrists and famous not only in Russia. His services were even employed by the FBI, which Russian television proudly reported in spring 1993.

REPORTER (Different Speaker) :

Waco, Texas : Law enforcement authorities have surrounded the compounds of a fanatic cult of David Koresh who did not want to surrender. The negotiations have reached a stalemate. The FBI turns to Moscow scientist Igor Smirnov. This respectable bureaucracy took his ability to directly influence the subconscious of the cult members very seriously. At the location Dr. Smirnov introduced a plan by which the cult members were to be "softened up" before the final confrontation.

DR. SMIRNOV :

I wanted to use an appeal by close relatives, from (the cult member's) children and parents. Such as, "Mama come out. We love you very much and are waiting for you." In this fashion I wanted to directly reach [target] every known member of the cult individually in this building. With the help of computer programs these appeals were to be turned into a sound-like signal. While the conscious mind will not recognize these signals the unconscious will react to it. This was to minimize the danger of preventing extreme situations from developing, including a tragic outcome.

SPEAKER :

Via radio, television and telephone lines, the cult of David Koresh was to be subjected to subliminal psychological pressures. But the FBI was also under pressure. Smirnov was not able to carry out the plan.

DR. SMIRNOV :

Three days after our agreement with the chief of the technical services of the FBI, the Americans suddenly changed their decision to wait for one week, which I had asked for so everything could be installed. And they used only one of the agreed upon components, that is, the appeals of close relatives. But in a completely open manner. They installed loudspeakers and began to broadcast everything openly [i.e., in the normal audio mode]. And then the tragedy happened. [The burning of the David Koresh's compound in Waco, Texas, is shown.]

SPEAKER :

This is when the public found out for the first time what the mysterious professor occupies himself with. In addition to hundreds of new patients from all over Russia, clients with completely different needs also started to contact him.

INTERVIEWER (asks Dr. Smirnov) :

Are you or have you ever been contacted by politicians to help them get elected ?

DR. SMIRNOV :

But of course. Just now a new wave of approaches has began. There are going to be presidential elections soon. Our Russian politicians are uneducated and uncivilized. That's why they are such a ruthless and manipulative pack. They don't recoil from attempting to exploit the entire population with technical means, such as ours, only to reach the desired office. I do not advocate supporting this pack. I will never do that under any circumstances.

INTERVIEWER (asks Dr. Smirnov) :

Is this even possible technically ?

DR. SMIRNOV :

Yes. We have conducted experiments with groups of young volunteers. In situations where an immediate decision has to be reached, the group behavior can be changed with a high degree of probability.

[CUT TO : Two men, outside : One in a jeans jacket, another in a suit. Both are nervously smoking a cigarette.]

SPEAKER :

The man wearing the jeans jacket views himself as an unwitting victim of considerably less harmless experiments : Nicolai Ivanitsch Anisinov (spelling ???), a former dissident and prisoner of the KGB. Today he is the representative of the "Moscow Zombies". These people have the habit of constantly watching over their back. They often change their address. They do not trust anyone, whether with or without reason. On their shoulders rests the shadow of the Soviet past.

SPEAKER (continued) :

There are thousands of such people in Moscow. This includes victims of "secret experiments", as they say, and victims of the fear of the allmight of an Orwellian "thought police". These victims are represented by Nicolai Ivanitsch (spelling ???). This is the site where the office of this organisation used to be. One year ago, the Soviet authorities withdrew their permit.

[Close-up of the man in suit smoking a cigarette]

SPEAKER (continued) :

The man with the cigarette watches to make sure they no longer enter the building. This organisation has over a thousand members and receives letters from all over Russia. A few dozens every week. Nicolai Ivanitsch now holds his meetings every Wednesday on this street corner. But only a few show up at these meetings. Many are still afraid. And many simply do not have the strength. The authorities ignore the problem of the Zombies. Comments [information ; details] were refused. For the majority of the population it remains a somehow uncomfortable [undefinable] secret.

[Cut to a science laboratory]

SPEAKER :

Secrecy also surrounds this Moscow research laboratory of which it is not known who finances it. This film was recorded three years ago for a Russian documentary which the Russian television station was suddenly ordered to withdraw without being given a reason. The scientists here do not exactly push themselves in front of the camera. The laboratorist introduces herself as Vera".

[A man lying on his back is being rolled into a huge sphere. Vera, a female laboratorist, speaks to the camera :]

VERA :

So, our machine corrects the human biofield. It not only corrects it but heals it as well. For every patient we put together an individual therapy program.

SPEAKER :

In every case Vera refers to the experimental volunteer as a "patient", even though the laboratory is not a scientifically [recognized] establishment.

VERA :

Currently with this device, AL-015-T, we can transfer every known medication to the patient.

RUSSIAN INTERVIEWER (asks Vera ):

The walls of this room are so shielded. What physical processes occur here ?

VERA :

Yes, we shield every human which does not have anything to do with our therapy or our illnesses from the effects of this machine. Because everything has its own radiation. We protect both the humans as well as ourselves.

RUSSIAN INTERVIEWER (asks Vera ):

You refer to this cassette as a program. But there's some type of a fluid inside it ?

VERA :

This is the programator.

RUSSIAN INTERVIEWER (asks Vera ):

What is that ?

VERA :

Hmm, we will reveal this once it has been patented.

RUSSIAN INTERVIEWER (asks Vera ):

In other words, a type of fluid which contains some kind of information ?

VERA :

Correct. This is an information programator.

RUSSIAN INTERVIEWER (asks Vera ):

And this will then be transferred [(?) inserted electronically (?) ] into the body of the patient ?

VERA :

Yes.

INTERVIEWER (asks Vera ):

Could you explain this again ?

VERA :

With your permission, I will not do that. [i.e, explain it again]

[CUT to man lying under a huge hemispherical device.]

SPEAKER :

This type of research was once controlled by the communists. Today the same scientists operate in a lawless environment for the free (unregulated) market.

CUT TO DR. SMIRNOV

[wearing a black suit and tie]

DR. SMIRNOV :

What we do here and have implemented for some time, could from a certain point of view, appear as a weapon. In most countries this is heavily regulated and prohibited. In Russia, until now you can do everything you want. The only barrier is the ethic of those who possess this technology.

CUT TO AN APARTMENT

SPEAKER :

In Russia, the methods by which the human soul and body can be manipulated by electronic means, even from a distance, are called 'Psychotronic treatment'. [A cheaply constructed headgear is shown.]

SPEAKER :

This is a self-fabricated headgear against low electromagnetic frequencies. Tenants of these apartments have voiced complaints which are said to be symptomatic of victims of psychotronic experiments. One of them is Yirena Koslova (spelling ???). We visit her together with the electronic engineer Andre Slepucha (spelling Subj: MC Russia 2

SPEAKER (continued) :

He alleges that the KGB already experimented on him during the 1950's. Fact is, at that time Andre was a prisoner of the Stalinistic camps and the KGB. Yirena Koslova sleeps in this cage to protect herself against the exterior effects of psychotronic influences. When she notices our expressions of disbelief she shows us an attestation from the International Center of Psychiatry which certifies that she is psychologically perfectly healthy. Yirena used to work for the Moscow district attorney. She was fired after she protested against the suppression of politically sensitive evidence.

YIRENA :

Without this technology, I would already be lying in the cemetery. When they start to pound your brain, you feel as if you are weightless, for a few days thereafter. If you move your head too fast and abruptly, you become dizzy.

ANDRE SLEPUCHA :

In the first two, three years, you don't particularly notice the effects of a psychotronic treatment. But only then the organism gets shaken up and a strong reaction of all organs begins. (to YIRENA :) What is wrong in your case? Is it the kidneys, the heart? Do you have heart problems ?

YIRENA :

Well, they do it so that everything is swinging. It starts to hammer and flutter.

ANDRE SLEPUCHA :

An arrhythmia. This is typical.

YIRENA :

Either they cause a sharp pain or it starts to flutter.

ANDRE SLEPUCHA :

This is a reaction to a radiation of approximately 3 MHZ. This affects the centers which control the heart functions.

YIRENA :

It causes a state in which the heart becomes [feels] very heavy and you can't do anything anymore. Everything falls out of your hands. Suddenly it hurts here and there. But when you go see a doctor he doesn't find anything. Strange things.

ANDRE SLEPUCHA :

Anything possible can happen.

YIRENA :

You are completely incapacitated and completely unable to do anything. But then you go see a doctor and there is nothing.

CUT TO THE OUTSIDE OF THE APARTMENT BUILDING(S)

SPEAKER :

As we leave Yirena's home we are apprehended with the question whether it is even possible to cause such considerable strong reactions of the body by manipulating the psyches from a distance. We ask Professor Smirnov whether he ever encountered such a case during his long years of clinical practice.

[CUT TO DR. SMIRNOV, SITTING BEHIND A DESK]

DR. SMIRNOV :

I once watched a 52 year old (female) patient, who was a very well known doctor with academic degrees and titles. Within one week she suddenly lost her hair, nails, eyelashes, eyebrows and teeth. She completely lost her ability to move, except for her right hand. She started making unarticulated sounds which remotely sounded like language. Using her [partially unaffected right] hand to communicate by making small notes onto a paper she was able to explain to us that this was the result of a violation [attack] of a psychotronic weapon. Officially she was diagnosed as suffering from a destruction of the vessels in the cerebrum [frontal lobe] of the brain. But [such vessels] did [do] not exist there. And by which means did their destruction occur so suddenly ? Here we seriously have to consider the possibility whether there might not be someone evil who is secretly radiating, perhaps the neighbors next door, with radioactive Cobalt.

CUT BACK TO ANDRE SLEPUCHA'S APARTMENT

SPEAKER

Andr, Slepucha demonstrates the means by which he tries to protect himself against unwanted outside influences. The authors of the documentary hired by the Russian television [station] referred him to us as a credible victim of psychotronic abuse. He is also the author of several publications on this subject.

ANDRE SLEPUCHA

These are so-called elements [parts] for the personal protection against psychotronic treatments [ psychotronic weapons]. Here on the arms I have certain sensors. Also, on this hand, and also, here at knee level. They are all connected together to an electrical system. This box is the size of a transistor receiver. The thing is, the psychotronic treatment of the brain is being carried out with radiowaves of a specific frequency and a very wide bandwidth.

A psychotronic generator is often directly connected to the [consumer] supply outlets, especially onto the telephone network, the radio network, and similar networks. In this case you must, to simplify this, connect certain filters for these arriving messages. I can show them to you.

SPEAKER :

Andr, shows us his home which he has transformed into a fortress to defeat psychotronic signals. With the means available to him he has constructed filters for all entrances of the supply networks, for the telephone [networks], radio [networks] and electricity [networks]. Experts have confirmed that one can indeed protect oneself with such means [devices / instruments] against extreme, low-frequency electromagnetic waves [ELF's], which may have possible negative effects on the organism. The question remains : Who could be interested in harassing this old man ? Is he today really the victim of secret [psychiatric] experiments or [rather] the victim of an exaggerated paranoia which has its roots in his persecution during the days of Stalin ?

ANDRE SLEPUCHA :

This here is my laboratory, or more specifically, my workshop. Here I try to construct the devices I told you about to help those people who have grievances [complaints] due to psychotronic treatments [psychotronic weapons].

SPEAKER :

Andr, Slepucha explains to us which changes have to be made on a simple transistor so it can be used as a measuring instrument for extremely low frequency electromagnetic waves [ELFs]. He connects it to a metal band on his wrist so that it forms a closed circuit and turns it on to discover if a source of a so-called psychotronic treatment is nearby.

[A nondistinctive rushing sound it heard in the device]

ANDRE SLEPUCHA

There is a psychotronic generator at work !

SPEAKER :

Let us assume this is really so. Who is then behind it ?

CUT BACK TO INTERVIEW WITH DR. SMIRNOV

DR: SMIRNOV :

Russia holds the first place with regards to the annually produced [created] computer viruses. This implies that we have colossal numbers of scarily active and very inventive brains for whom there is no demand and who find their self-fulfilment in producing evil.

DR. SMIRNOV (continued) :

The unrestrained development of the psychotronic technology can today be compared to the condition of, lets say, the nuclear research [when it was still] in its very infancy.

CUT TO A GROUP OF TRAINEES WATCHING A FILM

SPEAKER :

We are searching for explanations in secret film material made available to us. They are information and teaching films which were produced under orders from the Russian Interior Ministry. [CUT to close-up of the film] These films confirm the existence of psychotronic generators as well as their dangers.

1st Russian Speaker from Russian Interior Ministry Film :

Time and again, the development [construction] of different psychotronic generators has proved fatal for their inventors. Not in every case, but certainly often enough to be relevant statistically.

2nd Russian Speaker from Russian Interior Ministry Film :

There are four main stages [in the symptoms suffered as a result to the exposure to a psychotronic generator [device]] : The first is a general feeling of unwellness, a weakening of the functions [of the organs/of the brain (?)]. The second is the loss of logic. The third is the loss of spacial orientation. The fourth is the loss of consciousness.

CUT TO A DIFFERENT FILM

SPEAKER :

Another archive film shows a deserted laboratory for psychotronic experiments in the town of Selenoga (spelling ???). The commentator explains that in this case, it was not the crazy experimenters who became victims of their own work but a family with four children who [had] lived in a neighboring [adjoining] home. All of them [suddenly] got ill and died. The only lead which remains of the scientists who are now wanted by the police are a Buddha figure and photos from a study excursion [trip] to Tibet. The identity of those who financed their research is also unknown.

CUT BACK TO ANDRE SLEPUCHA'S APARTMENT. CLOSE-UP OF A PANORAMA PHOTO SHOWING THE COAL MINES OF VORKUTA (spelling ???) :

SPEAKER :

The coal mines of Vorkuta (spelling ???) from the days of the Stalinistic persecution. This panorama reminds millions of Russians of the worst moments in the history of their country. Andr, Slepucha owns yet another souvenir from his days in the [Stalinistic concentration] camps.

ANDRE SLEPUCHA :

In November 1954 I came into contact with what today is referred to as [a] "Psychotronic Treatment" for the first time. Back then they took me out of the concentration camp where, under Stalin, I had been imprisoned as a political prisoner, and brought me into an isolation cell in the KGB prison which was located in the Lubyanka.

After an approximately two week long continuous occupation of the cell I suddenly experienced in the morning strong sounds in the head, very strong acoustic and visual hallucinations.

SPEAKER :

Since the 1970's it is no longer a secret that the Soviet Intelligence Services experimented with the psyches of its imprisoned dissidents. But Slepucha also points out a more recent example of a possible psychotronic manipulation which involved top [Russian] government officials.

ANDRE SLEPUCHA :

The former chief of [Boris] Yeltsin's bodyguards, Alexander Vasilivitch Korjakov (spelling ???), said in February 1991 on the radio, [that] they were outraged, because next to Yeltsin's office they had discovered a room with a great number of electronic devices. When they moved the panels, they also discovered in Yeltsin's office certain specific antennas [related to psychotronic generators and weapons].

CUT TO PUSHKIN MEMORIAL, OUTSIDE, IN MOSCOW :

SPEAKER :

At the Pushkin memorial, in the center of Moscow, some who believe themselves to be victims of psychotronic treatments try to arouse the attention of the passerbys. But hardly anyone pays attention to the posters with the dramatic displays which purport to document the plight of alleged fatal victims of psychotronic experiments.

Russia Part 3

CUT TO PUSHKIN MEMORIAL, OUTSIDE, IN MOSCOW :

SPEAKER :

At the Pushkin memorial, in the center of Moscow, some who believe themselves to be victims of psychotronic treatments try to arouse the attention of the passerbys. But hardly anyone pays attention to the posters with the dramatic displays which purport to document the plight of alleged fatal victims of psychotronic experiments.

SPEAKER (continued) :

In light of the severity of the existential problems prevailing in Russia today, such questions do not appear as important. Psycho-Fascism is the charge made on the poster[s]. The photos show Nikolai Ivanitsch (spelling ???) during several stages of psychotronic treatments which he alleges also left [him with] physical traces. Sometimes one of the older people want to

know the details. For the younger [generation] this is a totally strange subject. Basically, only the perpetrators, and perhaps also their victims know more details concerning questionable experiments with/on the human psyches [brain].

[CUT TO DR. SMIRNOV'S LABORATORY : Closeup of a computer monitor upon which a harmless appearing film of a Buddhist ceremony is shown]

SPEAKER :

This film was produced for demonstration purposes by Russian scientists for top government officials of North Korea. One of those [Russian] scientists was Dr. Smirnov. Today he unveils in our presence the secret of the manipulation. To make it visible in this innocent picture, you have to know the correct [computer] code [of the computer software which encrypted the unseen subliminal message/picture and hid it in the visible picture of the Buddhist temple.]

DR. SMIRNOV :

This film was produced in order to demonstrate how to insert a thought, a picture, a suggestion, into a totally different context. Someone who looks at such material will consciously only notice the disguising picture, such as, for example, any given TV show or commercial.

DR. SMIRNOV (continued) :

In fact, however [at the same time the viewer] also receives a secret information [which is] not accessible to the conscious. Let me [now] show you the picture which has been inserted by code into this video.

[Smirnov punches a code into his computer which makes the picture visible]

DR. SMIRNOV :

There it is. [Now we see a photo of U.S. President Bill Clinton with the message : "YANKEE GO HOME !" ]

SPEAKER :

We are no longer dealing with a briefly inserted, unencrypted film picture, a technique which had been tested and prohibited years ago in [for] American commercials. The difference [between the older subliminal technique of briefly inserting an unencrypted picture into a commercial and Dr. Smirnov's new technique] is that the [subliminally] encrypted technique demonstrated here is almost impossible to prove.

DR. SMIRNOV :

Try to comprehend the danger if this were to be produced by a government-controlled television [station] so that millions of people would be repeatedly exposed to the [subliminal] message for, let's say, each day for at least a month. Slowly but ever so gradually it [the subliminal message] would penetrate the brains.

[WE CUT TO RUSSIAN PEOPLE, OUTSIDE]

SPEAKER :

The first Russian generation which has come of age without Communism is now confronted with this danger. [This generation] competes for the once forbidden fruits, and in the intoxication of the newly won freedoms doesn't care for any prohibitions or restraints. [A CLOSE-UP of a Russian Nazi insignia is shown] This is naturally a fertile ground for modern gurus of different origins.

SPEAKER (continued) :

One of them is this man : The militia leader Vijatscheslav Mikhailovitsch Soniko (spelling ???). During the war in Afghanistan he helped pilots to overcome their battle stress. Today he heads a center for psychophysiology in which members of the Special Forces are being instructed. Here too, they treat the human subconscious. But rather than healing [psychological] illnesses, as Dr. Smirnov [does], this treatment instead seeks to reduce the patients' susceptibility to stress and improve their will to execute orders obediently and consistently, in other words, ruthlessly. The patient in this top-secret instruction film of the Interior Ministry is a perfectly healthy officer of the Special Forces [shown] here during [his] psychological preparation for Special Missions. This could be regarded as a genuine Zombie Factory.

[CLOSE-UP of a computer monitor displaying various rhythms (heart, breathing & perspiration rates, etcetera) as well as of the face of the man undergoing the treatment, hooked up to a variety of electronic devices, and the face of the man now speaking]

Speaker of brainwashing operation :

There is a feeling of calmness in every conceivable circumstance. In every conceivable situation. In every conceivable circumstance. You will keep your self-control. Your organism will function reliably and solidly. In every circumstance, even in the most difficult. In every muscle, in every cell of your organism you will feel, now and forever, a pleasant clam energy in every single cell. [A video of a drug bust is shown while the treatment continues] This condition will remain with you in every conceivable, difficult situation. Calm self-assurance. Calm self-assurance in even the most difficult situation.

Russia Part 4

the face of the man now speaking]

Speaker of brainwashing operation :

There is a feeling of calmness in every conceivable circumstance. In every conceivable situation. In every conceivable circumstance. You will keep your self-control. Your organism will function reliably and solidly. In every circumstance, even in the most difficult. In every muscle, in every cell of your organism you will feel, now and forever, a pleasant clam energy in every single cell. [A video of a drug bust is shown while the treatment continues] This condition will remain with you in every conceivable, difficult situation. Calm self-assurance. Calm self-assurance in even the most difficult situation.

Another Speaker of the laboratory addresses the TV audience :

I believe if this is done only for good, then even the forces of the Almighty, to the extent that they exist, will not be angry at us with regards to the experiments we conduct, and the methods we are developing which help the human to keep his sanity.

[A Member of the laboratory responds to the questions of the interviewer] :

Member of the laboratory :

Up until today we have collected enormous statistical data on more than ten thousand humans, and we never noticed [came across] any cases of negative side-effects.

SPEAKER :

In the same archive film, we discover even more evidence dealing with the concern for the psychological health of the human being.

(Same) Member of the laboratory :

[The laboratory member explains a drawing of a building complex on a wall] This fantastic experimental-technical development was [conducted/carried out upon] the orders of the [Soviet/Russian] Defense Ministry. This movable complex is a container which is made up of a bioresonance room, a machine room, a hospital room, and a [very] special bio-manual treatment room. With a length of 12 meters, a height of 3 meters, and a width of 3 meters it satisfies the general European standards. This is a transporter which can be put up anywhere, with automatic aircondition. It can be placed on the Northpole or at the equator, wherever you want.

INTERVIEWER :

And why was especially the military so interested in this ?

Member of the laboratory :

Why the military ? They are investigating the possibilities of rehabilitation of troops under combat conditions [in the field].

CUT TO :

[A diagram of numbers and figures flashing on a computer screen is shown]

SPEAKER :

What remains of the Russian soul once it has gone through such a container in which a computer programmed for the cleaning of the subconscious changes feelings and human excitements into numbers and [mathematical] diagrams, which can then be "corrected". [A diagram of wavy lines is shown]

SPEAKER (continued) :

This is one of Professor Smirnov's recorded computer displays of a human subconscious, a graphic illustration of the [human] soul. Every one who has access to the computer and knows the [software] program has access to this soul. To rule the [human] souls, one only has to put them into the area of effective vicinity of the apparatus. Or, there is already a method to transmit hidden information over long distances. According to Smirnov [such a method] does exist :

DR. SMIRNOV :

You can input a suggestive "equation", a "consciously not noticeable fable", as we like to call it, into every conceivable low-frequency sound, for example, into the background sound you can hear in the telephone, even into the sound of a sledge hammer, not to mention the fact that this can be even more easily done with the radio or pieces of music. It works like this :

[Dr. Smirnov speaks into a microphone which is hooked up to his computer]

DR. SMIRNOV :

[Into the microphone :] "Attention. Attention. This is Germany. In five minutes, Hitler will be finished." [To the TV audience :] We now have recorded an audio database which can then be played back from the computer.

[Dr. Smirnov plays his own voice back : "Attention. Attention. This is Germany. In five minutes, Hitler will be finished."]

There is nothing special about this. But now we change this [audio] database into an undecipherable format. We receive a database which produces a sound. [Dr. Smirnov plays the changed database of his voice back which now sounds only like background noise rushings].

Only the rhythm is the same as that of the originally recorded database, but my words are no longer recognizable, right ?! Still, the brain will not rest until it has decoded [the message]. We too can decode [the message] if we change it back [to its original form]. I have recorded this changed-back database. Now we'll open it. [Dr. Smirnov does this on the computer]. There it is. Let us listen to it again. [The same rustle-rushing sound is heard]. Yes, there is that sound [again]. And now we'll decode it. Even if my voice will [now] be a little distorted, I hope that it can [still] be recognized.

[The recording of Dr. Smirnov's voice is played once more : "Attention. Attention. This is Germany. In five minutes, Hitler will be finished." ]

If a great number of people would be exposed to all of this, for example through the TV, or the movie theatres, or radios, then, I believe, that there exists a certain danger for our security.

WE CUT BACK TO THE APARTMENT OF A LITTLE OLD LADY

MAN :

Again the telephone doesn't work as it is supposed to. It dials all by itself.

SPEAKER :

The leader of the "Moscow Zombies" believes [that] the malfunctions of [the problems with] the telephone are due to the effect of a psychotronic generator.

MAN :

Veronika was [is located in] the 'Middlevar' (spelling ???). Again it is dialling a different number. I wanted to call the 'Tekovar' (spelling ???).

OLD WOMAN :

And it doesn't dial the number ?

MAN :

No, it dials the time announcement, which you called the last time, as if [the numbers] had been stored.

OLD WOMAN

And I call the security services of my apartment, but [instead I] receive the time announcement. I try it again and nothing gets dialled.

MAN

When I called the Terkovar yesterday, I got connected to the cemetery.

OLD WOMAN

At the cemetery ? So they sent you to [connected you with] the cemetery.

SPEAKER

Nikolai Ivanovitsch (spelling ???) pays no rent. He also has no money for food. The old woman, a retired biologist, supports [both] him and herself from her meagre social security proceeds.

SPEAKER (continued) :

She does that out of solidarity with the "Zombie"-movement because she has spent many years in the [Stalinistic concentration] camp herself and has basically been persecuted politically for her entire life.

MAN :

I just [simply] wanted to tell you that the contact with me can bear various conflicts. Therefore, I always tell you : Talk less.

OLD WOMAN

You know this better than I do.

MAN

It doesn't necessarily have to come down to a conflict. But it may give [result in] provocations [enmities] and such. It is better not to talk.

SPEAKER :

Nobody knows in how many homes in Moscow, or [even] in all of Russia, there are people who up until today are afraid to talk freely. People who are afraid of their own shadow. And nobody knows how many of them are really the victims of dubious [psychological] experiments with [on] the human psyches. And how many are victims of the fear of such manipulations.

WE CUT BACK TO DR. SMIRNOV WHO IS SEATED BEHIND A DESK :

DR. SMIRNOV :

What, in my opinion correctly, is feared the most in the entire world, is an invasion into the soul. This couldn't be any other way. After all, it is better to lose the body than [to lose] the immortal soul. It is easily conceivable that some Russian "Satan", or, let's say an Iranian or any other [Satan], as long as he owns the appropriate means and finances, can [could] inject himself [intrude] into every conceivable computer network, into every conceivable radio or tv broadcast with relative technological ease, even without disconnecting [any] cables. You can intercept the [radio]waves in the aether and then [subliminally] modulate every conceivable suggestion into it. If this transpires over a long enough time period, it accumulates in the heads of the people. And eventually, they can be artificially manipulated with other additional measurements to do [exactly] that which this perpetrator wants [them to do]. This is why [such technology] is rightfully [correctly] feared.

CUT BACK TO ANDRE SLEPUCHA'S APARTMENT

ANDRE SLEPUCHA :

Many who view these pictures might think, this man alleges to have been [psychotronically] treated for fifteen years, yet at the same time his arguments are sufficiently logical and analytical. And for his almost seventy years, he doesn't look so bad. But [the fact is] I have been clinically dead three times, due to the effects of special electronic vibrations, which led to very strong internal bleedings and a great loss of blood.

ANDRE SLEPUCHA (continued) :

I was simply lucky with the ambulance so that I, as they say, could be saved. And [the] second [reason is] that for at least seven years I have successfully employed these protective measurements which I have demonstrated to you.

WE CUT TO OUTSIDE, RUSSIA, EVENING

SPEAKER :

We are driving to the Bolsheia Pirogovka, Russia's oldest psychiatry, the Korsakov clinic. Here is also the Institute for Psycho Technology which Dr. Smirnov founded ten years ago. Since then, more than ten thousand people have contacted him to volunteer for the technique he developed, an operation on the "open subconscious". One of them was also Olga.

OLGA :

I took drugs for approximately three years, and tried in the past one and a half years exceedingly to stop. I've been in all kinds of [drug abuse] hospitals for rehabilitation [purposes]. But none of the therapies [I tried out] were successful. This [Dr. Smirnov's] treatment applies a medication which does not directly produce hallucinations, but you somehow "see" your subconscious, your own life from beginning to the end. [After completing Dr. Smirnov's treatment (and taking the medication)] I had a genuine feeling that I could not possibly return, as if, although I'm not dying, but nevertheless am removing myself to someplace. The procedure takes only approximately one minute. But it feels like three to four hours. I subjected myself to this treatment about a month and a half ago. And since then, I feel good. I can say that today I feel like a free person, because I can [now] say "no" to the drugs.

[WE NOW CUT TO THE CLINIC OF DR. SMIRNOV: A YOUNG MAN IS BEING PREPARED FOR AN OPERATION ON HIS SUBCONSCIOUS]

SPEAKER :

In the clinic of Dr. Smirnov : This narcotized young man also has been a drug addict for four years. Soon he will begin a unique, unbloody operation after which he will wake up cured of his fateful drug addiction. [CLOSE-UP of the patient as he watches a sequence of numbers flashing on a computer screen]. From the computer loudspeakers, coded instructions are intruding into the subconscious of the patient which force him to confront the worst experiences of his life. Therein lies the hidden cause of his drug addiction. The sensations [emotions ?] [the patient experiences] during [this procedure] are so strong that sometimes the heart stops beating. This is the reason for the narcosis and the [presence of] a specialized team of doctors which is able to revive the patient in case of [an] emergency. The [subliminal] instructions are being encrypted into the sound of the [patient's] heartbeat. The operation lasts only a few minutes. Usually the patient continues to repeat one word which for him has a [personal] key meaning.

PATIENT :

Mama. Mama. Mama.

SPEAKER :

The subconscious, the soul of the young man, now lies exposed to the surgeon. Only Smirnov practices such procedures on the subconscious today. Sergei's [the patient's] pulse increases to two hundred beats per minute. In this moment, the drug addiction is literally being surgically removed.

[A noise of an increasing pulse beat is heard]

SPEAKER

Brainwashing per computer !

[The sound of the pulse becomes louder and faster]

PATIENT

Mama. Mama. Mama. Mama. Mama. Mama. Mama. Mama.

DR. SMIRNOV :

Finished ?

SPEAKER :

Now the pulse frequency decreases again. The "cavity" [hole] created in his subconscious is now being replaced ["filled"] with positive motivation. It [the positive motivation] will help him to live without the [drug] addiction.

[The patient sighs and breathes deeply.]

One could feel enthusiastic. Would there not be a [rather] disturbing thought : If it is possible to remove "evil" from the soul of a human being, and have it replaced with "good", is this also possible the other way around ? Can anyone in Russia today guarantee that this is never going to happen ?

DR. SMIRNOV :

There is a famous bible verse which is [usually] interpreted incorrectly :

"I am the Lord." [ alternative translation : "I am the Master."]

Everyone assumes automatically that this is a word of God, right ? He is the Lord [Master]. In fact, "I am the Lord [Master]", means "I am God", "She is God", or "They are God". "God", this is the Holy Spirit, this is us. The general population does not realize this second meaning. And although we psychiatrists operate with relative material objects, computers, programs, semantic structures and such, which can be measured, weighted, and be understood and expressed in numbers, we treat this [Holy] Spirit in a pretty mediocre way. Because this is not something so metaphysical, immaterial and irrational as [was] once thought.

## Section II

The Second and Equally Convincing Argument For the Existence of U.S. EMR Mind Control Weapons: The East/West Controversy over Thermal/Athermal effects of Emr Ends With the Exposure of a U.S. Cold War Cover Story

1. Freedom of Information Act excerpts from Harlan Girard, released 2001
2. 1983 Washington DC Conference on Psychological Strategies sponsored by the "Intellectual Father of Star Wars", Dr. Stefan Possony, discussing Russian emr mind control based on athermal emr effects.
3. BBC TV 1984 documentary, "Opening Pandora's Box", highlighting Dr. Becker's theory of large, classified U.S. emr weapons program based in part on evidence of the thermal/athermal controversy.
4. 2000 Video by Council on Wireless Technology Impacts, "Public Exposure", [www.emrnetwork.org](http://www.emrnetwork.org). More evidence of athermal controversy

Freedom of Information Act Request thanks to Harlan Girard, 2001

This series of unclassified FBIS documents verifies, in detail, the information in the Lopatin book and Russian articles. This fact indicates that information on the mind control issue in the public domain is limited in scope. Some of the authors of the articles are scientists and Russian military personnel. Some articles were translated for government staff. A major theme of the articles is the concern about the dangers of the technology and the need for international controls.

Member of the Russian Federation of Space Exploration Scientific and Technical Council, Anatoliy Ptushenko describes spaced-based energy systems ...that are "capable of driving millions of people crazy".

The first articles an in-depth account written by a member of the Russian Federation of Space Exploration Scientific and Technical Council, Anatoliy Ptushenko. He discussed "for the first time in our press in Rabochaya Tribuna ...about psychotropic weapons...spaced-based energy systems ...that are "capable of driving millions of people crazy.... which started to be developed in the sixties--" The article continues with a discussion of space-based energy systems and the need for the world community to establish an apriori permanent, preventive monitoring of the development and deployment of space-based energy systems. He then described the demonstrators on the streets of Moscow "with banners saying "stop developing psychotronic weapons."

Moscow Rabochaya Truibuna 11-26-94. "But people at the time were most interested in microwave systems. ...However, the most important thing was deemed to be the psychotropic effect created by these systems under certain conditions. That was why they were officially called psychotropic rather than psychotronic weapons. It turned out that it was all a matter of frequency... Generally speaking, most readers are probably familiar with superhigh frequency radiation: Few people with a head cold or a sprain have not sat in a clinic between the two black plates of a "UHF generator." There are frequencies that are beneficial to people. But naturally there are also those which are hazardous. At certain frequencies (I think that only professionals are interested in knowing precisely which ones) microwave radiation creates that very same psychotropic effect. That is, it has a direct physical effect on the human brain."

"So a microwave system can easily be tuned into a psychotropic weapon--formidable in that it has a direct effect on the human brain...just by retuning the generator." Ptushenko stated, "The terrible danger of psychotropic weapons is the possibility of their simultaneously and

unequivocally affecting large masses of people over huge areas." He writes "Moskovskiy Novosti, the Komsomolka, Golos, Moskovskiy, Komsomolets, and many other papers have been frantic to tell us all about "psychotronic" weapons (as if they had conspired!). " ...they are talking about something completely different: about hypnosis, "verbal zombification," the effect of ultrasound signals on the human subconscious (on the lines of Ilona Davydova). The subject of the articles is always associated with an acoustic address system. Involving suggestions, for instance i.e. verbal (oral) pressure on a person--albeit using inaudible ultrasonic frequencies."

Ptushenko then mentions Dr. Smirnov, the Russian psychiatrist who is famous for his mind control equipment, see 20+ section. "Smirnov has it that 'psychotronics' are easily blocked-...But these childish tricks will not work with psychotropic weapons. It resembles the effect of a psychotropic drug, which is why the weapons were called psychotropic: An imbalance occurs, a fundamental change in a person's psyche, he loses self-control and becomes easily led, and his mind moves from the real world to a world of hallucination."

Ptushenko then distinguishes psychotropic drugs from psychotropic weapons.

"But there are fundamental differences between them. All pharmaceutical psychotropics are temporary-acting. While microwave radiation is variable: It can affect a person (or an Army) temporarily or possibly forever. It is all determined by the mix of frequency and the power of the radiation. These systems were called "psychotropic weapons" in official secret documents 30 years ago. It was these systems that we began to appreciate in the sixties."

Ptushenko ends the article with a warning.

"They may quite well have actually been tested. It was not for nothing that at that time some graduates of the Moscow State University Biology Faculty were sent to Ministry of Radioelectronics Research Institutes... So let us leave the notorious science of psychotronics to the conscience of psychiatrists, psychics, and hypnotists. Nevertheless, faced with such a terrible danger as psychotropic weapons (and other kinds of space-based weapons), it is our duty to ensure that the development and operation of space based solar energy system receive popular and above all mass media scrutiny."

The above article describes the tremendous amount of information on psychotronics in Russian newspapers and agrees with the concerns of Lopatin and Tsygankov and the need to control these weapons. Ptushenko questions the psychotronic weapons school of thought and whether hypnosis will work on unwilling subjects. Hypnosis does work on unwilling subjects, see Dr. Schefflin's book "Mind Manipulators", 1978 and Dr. Colin Ross, "Bluebird", 2000. Both books document government involvement in hypnosis research and disinformation surrounding this issue. Ptushenko too questions the information available on psychotropic weapons claims concerning "hypnosis, 'verbal zombification', the effect of ultrasound signals on the human subconscious..." Ptushenko states emphatically that psychotropic weapons,

"do not enable the individual human mind to be controlled in a precise and purposeful way. They simply "jam" any internal connections responsible for a person's self-control, and he becomes easily controllable "according to mob law" in line with commands from a space-based station. He can be controlled either from earth or from a command center lost in space."

These are considerable statements coming from a prominent space expert. Ptushenko has obviously given the matter serious consideration and believes that there are terrible dangers from psychotropic weapons and public debate is necessary. Further research is needed.

The following article written by Russian military experts discuss information warfare Lopatin extensively discussed the threat of information warfare in his book. In the U.S., the Learning Channel TV program "War 2020" produced by Beyond Productions in 1998 is a good representation of information warfare. The program included Dr. Persinger of Canada's Laurentian University and his discussion on magnetic signals and how signals could be beamed from television, microwave and telephone towers and systems to targeted populations for mind control purposes. The program narrator stated, "The ultimate weapon in the info war would be the human brain. ...Mind control will be the ultimate nonlethal weapon ." Mind control weapons are categorized as information and nonlethal weapons, according to these sources.

This article describes space weapons, including targeting of populations anywhere in the world with behavior control.

The article supplies details to prove that behavior control weapons are feasible, that the U.S. is concentrating research in this area and warns about possible American information and space warfare.

From: Moscow Armeyskiy Sbornik in Russian, Oct 96 No 10, pp 88-90, Article by Major General Valeriy Menshikov, doctor of technical sciences, and Colonel Boris Rodionov, "Along with ordinary wars, states have waged "information wars" since time immemorial, and are doing so now. But while previously they were given only an auxiliary role, lately their significance has grown immeasurably, and new technologies are "guilty" of this. Armeyskiy Sbornik regularly publishes articles on this topic. Today leading specialists of the RF Armed Forces tell about achievements in this area."

"The Teledesic Advanced low-altitude global satellite communications system is of special interest. It will have 15 times more satellites than Iridium--840. With other conditions being equal, the low orbit of small, lightweight craft (no more than 700 km) permits increasing the power of their radio emission on the Earth's surface 2,500 times or more and performing a wide range of military missions. It is unprecedented: the numerical size of the Iridium orbital grouping enables as a minimum simultaneously irradiating any point on Earth from two spacecraft. This provides double redundancy and increased reliability of communications, as for military systems. The band of radio-frequency emissions (20-30 GHz) also has not been used previously in commercial communications."

"An analysis of the enumerated features indicates that the Teledesic system can be used for irradiating ground, sea and airborne facilities with high-power modulated emissions, which in various automated control systems permits initiating computer viruses such as "sleepers," triggered by a special signal. This can become a real threat to security for countries whose command and control systems are oriented on foreign equipment."

"A psychophysical effect on people also is possible for the purpose of altering their behavior and even controlling the social aims of regional or even global sociums. Fantasy? But the fact is that today the United States is spending as much money on developing psychophysical weapons as on the most complex space programs, and such a correlation cannot be accidental.

The Americans began such research back in the prewar period and continued it after the war within the scope of programs known as MC-Ultra mind control, MC-Delta--remote alteration of human behavior, and also Bluebeard and Artichoke. Such an effect also is possible via the mass media by creating special audio signals in music hits, key video images in television programs and so on. The Teledesic space system also can be used for this same purpose. Suffice it to recall numerous statements to courts by U.S. citizens that cellular communications is the cause of various ailments, including brain cancer. U.S. scientists from the National Cancer Institute and the Food and Drug Administration recommended limiting use of such communications systems. Similar effects also are possible from the new systems. True, for this the output of its satellites has to be increased a thousand times more than what was announced, but technically it is fully feasible."

"Thus, the new space systems are potentially dangerous from the aspect of unfolding a wide-scale "information war" and even creating a global systems for controlling people's behavior in any region, city or locality, including one's own. A country possessing them will gain an enormous advantage."

The next two articles from China confirm that the Chinese military are aware of emr weapons. Research on infrasound began during the 60s and 70s in some major military countries and is capable of producing fear and hysteria and even mental illness, according to the first of two articles.

From: "New Weapons, Medical -Related Problems'. Beijing Remain Juny: (People's Military Surgeon) In Chinese Vol 40 No 9 Sept 97 pp. 587-588 Mori DocID: 587142

"New-concept weapons refer to weapons whose basic principles, construction and killing and wounding mechanism are entirely different from those of traditional-concept weapons. ..."

"Infrasound Weapons. Infrasound refers to sound waves with frequency lower than 20 Hz, which can cause malfunction of heart blood vessels, and of respiratory, digestive and central nerve systems, disorientation and emotional disorder. Take these infrasound functions as casualty factors and apply them to weapons systems, are called infrasound weapons."

"One kind of infrasound weapon, through bomb explosion, produces high-intensity infrasound wave impacting directly on human bodies. Another kind of infrasound weapon, installed and mounted on a vehicle, directionally radiates infrasound wave indirectly acting on human bodies with an effective distance reaching several hundred meters. When transmitted in water, air, or on ground, infrasound wave has the special features of slight attenuation, rapid speed, long effective distance, strong power of penetration, and being hard to defend and protect against."

"Some major military countries started research on infrasound weapons during 60's to 70's. Infrasound was proven capable of damaging human sensory and internal organs and disabling people. A small amount of output power can induce immeasurable fear and cause mass hysteria. A large amount of output power can cause unstable mental state and body malfunction, or even symptoms of mental disease. Infrasound can deal effectively with personnel in camouflage and battlefield equipment. An advanced infrasound generator targeting personnel has been designed and tested, with amount of energy of generated infrasound wave adjustable to cause personnel disorientation, nausea, vomiting, and

incontinence. Research indicates that such reactions are temporary. Once wave generation stops, symptoms disappear with no lasting side effects."

"At present time, infrasound weapons are still at the stage of experimental research, with existing technical problems of miniaturization of weapon size. It is predicted that troops will not be equipped with infrasound weapons within fifteen years."

"....All main military major countries have engaged in research on microwave weapons, with rapid progress in recent years."

Continued in Mori DocID; 587142.

"5. Incoherent Light Source and Super-high Frequency Weapons. Study from experts in foreign armed forces think that bright incoherent light source can cause blindness and Super-high frequency weapons can interfere with human nervous system activities, temporarily disable people, cause unbearable noise and sense of whistling sound, or even damage nervous systems leading to death. The existing problems with these weapons are short launching effective distance, high cost and need for miniaturization of weapon size."

"...At present time, weapons generating interference and causing blindness have become practical to use. Foreign armed forces already have corresponding prevention and protection measures, standard, and diagnostic techniques, and have conducted further research. .Bijing Remain Junyi in Chinese --monthly journal of the PLA General Logistics Department Health Department, carrying many technical articles on military medicine..."

This article from China was important for it's statement on nonthermal effects of emr weapons being capable of producing psychological damage to personnel.

From "High-Energy Microwave Weapons, known as Superstars", Beijing Jiefangjun Bao Chinese 25 Dec. The following is supplied by the Publications Translation Section of the U.S. Consulate General in Hong Kong. Mri DocId: 587137.

"High-Power microwave beam energy technology has been utilized in developing weapons, and it is thereby that the high-power microwave frequency weapons have been produced. ...Its "non-thermal effects" can produce psychological damage to personnel and a decline in the functions of all sectors. Its "thermal effects" can produce scorching of human skin, cataracts in the eyes, and even fatal burns. This sort of weapon is characterized by a large target attack area and a long operating distance, and it is little affected by the weather. Military experts thus praise it as the "superstar" of directional weapons."

This last article is included because it is about the HAARP Project. Dr. Rosalie Bertell, (see Cahra website under `study') is a respected Canadian biometrics expert who led the Bhopal and Chernobyl Medical Commissions and "claims HAARP could disrupt human thought-processes." From British tabloid, The Big Issue, 10-2-2000, "Strike Force".

Also note the mention of the EU and Grattan Healy's work on HAARP issues in this article. Healy was instrumental in the 2000 EU resolution to ban weapons that `manipulate behavior'. See Cahra website International Campaign, under Progress.

The article states that medical emr research has been blocked by the HAARP Project patents, see last paragraph. This information supports the fact that emr athermal effects research in mainstream science is underfunded and suppressed in the US, (Reppert, AP, 1988) and is far behind the Russian emr research in the open literature. Given its value for weapons use and the fact that the military has developed their nonlethal emr weapons program for over 40 years, according to U.S. News, 1997, there are no doubt, beneficial uses of emr that have been suppressed in the process.

Since Eastlund applied for the patents, all research in the area of electromagnetic energy--for, say medical purposes-- has been blocked. As a result a vast and highly promising field of science and medicine has been monopolized by interests with ties to the US Army. (passage omitted)"

Here is the factfilled and revealing article in its entirety from the FBIS.

From Brussels Telemoustique in French 5 Nov 97 pp 40-43, "EU Worries Over US HAARP Project Noted, Mori DocID: 587140. Article by Alain Gossens: "Apocalypse Now? `HAARP or How the US Military Is Playing the Sorcerer's Apprentice"

"Are the Americans currently developing a vast weapons system capable of scanning the entrails of the earth to seek out secret bases, jamming any form of radio communications, influencing human behavior, modifying the weather, zapping airplanes in the sky just like your microwave zaps your soup, and causing earthquakes or explosions as powerful as an atomic bomb? With " HAARP the US Army is reportedly reinventing, in a more economical and even more dangerous form, its defunct Star Wars Project. There is just one difference: This time it is a land-based installations."

"A number of scientists, weapons experts, and members of the European Parliament are concerned --and that is putting it mildly-- about the development of this project. This is why energy expert Grotan Healy, an adviser to members of parliament, is now collecting accusatory evidence of this Armageddon project. Magda Aelvoet, a Belgian member of the European Parliament and leader of the Green group in the European Parliament, is in charge of the dossier. She is the one responsible for officially following up the requests for explanations made by members of her group. She will take steps to ensure that the European Parliament exerts pressure, via NATO, to make the United States answer all the pertinent questions. As can be read in her interview, Magda Aelvoet is worried. She even goes so far as to say that, apart from the disastrous environmental consequences it could have, this kind of weapon (nonlethal weaponry) can jeopardize individual liberties and democracy." Nothing less.

"30\$ Million"

"HAARP stands for High-frequency Active Auroral Research (research in the area of high frequency applied to the aurora borealis). First of all, behind the somewhat esoteric initials lies a project costing \$30 million per year which the US Army is presenting as innocent research into the ionosphere. The project promoters are not sparing any effort or money in their public relations and advertising campaign. Never the less, if one is aware of the fact that the real sponsors are the Navy, the Air Force, and the Department of Defense, then it is hard to believe that it is not a project for military purposes."

"What does HAARP look like on the ground? It is a massive installation covering several hectares in Gkona, a small town northeast of Anchorage, Alaska. It is not that much a backwater since the installation lies alongside the immense gas and oil reserves belonging to the Arco company, which also holds the patents on the technology comprising the HAARP and is the "cover financier" for the equipment. In addition, HAARP is linked to one of the world's most powerful computers, located in the University of Alaska's perimeter cleared of trees with 48 20-meter-high antennas, each linked to a transmitter of just under 1 million watts. In the long run, the number of antennas and the power of the transmitters will be set up in such a ways as to achieve a phenomenal power of 1 billion watts transmitted by a network of 360 antennas. The transmitters are powered by six 3,600-hp turbines burning some 95 tonnes of diesel fuel every day. At this point, it should be noted that the entire installation is rather harmful to the immediate environment since it emits more than 7 tonnes of pollutants every day."

"What Is It Used For?"
