# Best Mind Control Documentary Excerpts

by Cheryl Welsh, February 2003

**Documentaries discuss and scientifically demonstrate mind control technology, including electromagnetic weapons for microwave hearing, visual hallucinations, influencing emotions and reading thoughts.**

A special thank you to those who sent Cahra much of this information:  
Liza minetti, Blanche Chavoustie, Harlan Girard, and Ed Light.

- A must see! ABC News Special Mission Mind Control 1979 An ABC News Special about the human mind and experiments in mind control. Featuring Allen Dulles, CIA director, John Marks, author and 1977 congressional hearings on mkultra mind control experiments and more. View this classic tv documentary at:  
  
<http://www.xenutv.com/cults/mindcontrol.htm>
- 1993 Newsnight with David Shukman, demonstration of Russian psychiatrist and researcher Dr. Igor Smirnov's computer program to analyze the brain's response to visual stimulus and use this information to develop messages to beam back into the subject's mind via "psychoacoustic correction".
- CNN news broadcast, Special Assignment, Nov.-1985, by Chuck DeCaro, "Weapons of War, Is there an RF Gap?"
- "Opening Pandora's Box", 1984, produced by David Jones for Fulcrum Central Productions, aired on BBC Channel 4.
- Ultrascience III, Spies are us", Beyond Productions, Learning Channel, 1998
- Ultrascience, "Weapons of War", Learning Channel, 1997
- The Learning Channel TV program "War 2020" , Beyond Productions, 1998
- History Channel, Fall, 2000, "Mind Control: America's Secret War"
- Secret Russia, TV program, ZDF, Geheimes Russland ,TV-Tagestip, Der Dienstag im ZDF: Dec, 22, 1998

## **Pictures on Russian and American mind control technology from TV documentaries**

"Secret Russia: Moscow The Zombies of the Red Czar", German TV documentary, 1998. This documentary discussed psychiatrist Dr. Igor Smirnov and his psychoacoustic correction technology and equipment to beam messages directly into the patient's head for therapeutic purposes. The documentary included interviews of victims claiming illegal Russian government experiments for testing classified mind control or 'psychotronic' weapons.

"Secret Russia: Moscow The Zombies of the Red Czar", German TV documentary, 1998. Andre Slepucha explains changes which have to be made on a simple transistor so it can be used as a measuring instrument for extremely low electromagnetic waves to discover if a source of so-called psychotronic (the Russian name for electromagnetic radiation mind control weapons) treatment is nearby. Slepucha stated that he had been imprisoned as a political prisoner in the KGB prison in the Lubyanka in 1954 and experienced "psychotronic treatment" for the first time. He reported "strong sounds in the head and very strong acoustic and visual hallucinations."

Ultrascience, "Weapons of War" , Learning Channel, 1997. Dr. Michael Persinger, Professor of Neuroscience , Laurentian University, Ontario, Canada, discussing his work and demonstration of precisely directing very specific, minute magnetic signals into the brain of a volunteer student in an experiment. Dr. Persinger specializes in relaxation and pain therapies.

Ultrascience, "Weapons of War", Learning Channel, 1997. Student reported feelings of well-being as Dr. Persinger beamed "an opiate firing pattern" of extremely weak magnetic signals from electric coils on either side of her head. While showing scenes of enemy soldiers beamed from a distance with a magnetic signals, Dr. Persinger said it would be unethical to cause feelings of fear and anxiety but clearly this could be done. "Mind control would be the ultimate nonlethal weapon" the narrator stated.

CNN news broadcast, Special Assignment by Chuck DeCaro, "Weapons of War, Is there an RF Gap?", November 1985. Dr. Bill van Bise, electrical engineer, conducting a demonstration of Soviet scientific data and schematics for beaming a magnetic field into the brain to cause visual hallucinations. The demonstration on reporter Chuck DeCaro was successful. Dr. van Bise stated, "In three weeks, I could put together a device [weapon] that would take care of a whole town."

CNN news broadcast, Special Assignment, by Chuck DeCaro, "Weapons of War, Is there an RF Gap?", November 1985 Reporter Chuck DeCaro was blindfolded and his ears were blocked for sound in an experiment using Soviet specifications for equipment capable of generating specific but very weak magnetic signals designed to cause visual 'hallucinations'. DeCaro stated "A parabola just went by.. I could see wave forms changing shape as they went by."

BBC documentary, "Opening Pandora's Box", produced by David Jones for Fulcrum Central Productions, 1984. Dr. Ross Adey with Russian Lida machine, developed in Soviet Armenia in 1940s. This device was used to beam radiofrequencies, sound and light on Soviet psychiatric patients to put them to sleep, like a tranquilizer, without physical contact with the patient. Dr. Adey tested the device on animals and it "produced marked relaxation". The BBC narrator stated that according to one account, the Lida was used on POWs for brainwashing in the Korean war.

Ultrascience III, "Spies are us", Beyond Productions, Learning channel, 1998 Dr. James Lin, "a world authority on microwave hearing" demonstrates the phenomena of microwave hearing. Pulses of microwaves are generated behind Dr. Lin and are absorbed by his brain and picked up by Dr. Lin's hearing mechanisms in his head. Dr. Lin stated that he could hear the microwave pulses, while no one outside the beam can hear the microwave pulses. Professor Lin stated it is possible, theoretically possible that one could embed or encode a message on a microwave signal in order to communicate via microwave hearing.

The Learning Channel, 199? Janet and Chris Morris, advisors for the FBI on acoustic technologies. Janet Morris stated, "the ultimate spy technologies? , the holy grail of spy technologies? ...control of behavior, a selective behavior control device."

The Learning Channel, 199? Janet Morris stated, "one could create voices in the head in order to drive a target crazy", while a man in a red jacket tries to block voices in his head, on a public sidewalk, which is the behavior of many of the mentally ill street people in cities today.

History Channel, Fall 2000, "Mind Control: America's Secret War." Psychiatrist, Dr. Colin Ross described nonlethal weapons as various forms of energy such as acoustic and electromagnetic radiation which are "beamed at individuals in order to control them." Dr. Ross stated that given the past history of government experimentation on unwitting civilians, such as radiation experiments and LSD experiments, it is implausible that there hasn't been some clandestine experiments of nonlethal weapons on individuals today.

### **Details on best mind control documentaries listed above.**

- 1993 Newsnight with David Shukman, demonstration of Russian psychiatrist and researcher Dr. Igor Smirnov's computer program to analyze the brain's response to visual stimulus and use this information to develop messages to beam back into the subject's mind via "psychoacoustic correction". Janet and Chris Morris, nonlethal weapons advocates, said that the computer program analysis was accurate after Dr. Smirnov demonstrated the use of the computer program on Chris Morris. Also, a book by David Shukman, *The Sorcerer's Challenge: Fears and Hopes for the Weapons of the Next Millennium*, London: hodder & Stoughton, page 223, describes this episode. Dr. Smirnov discussed the fact that the FBI also worked with

him in order to use the equipment on David Koresh. This was also reported in *Defense Electronics, DOD, Intel Agencies Look at Russian Mind Control...* by Mark tapscott, July, 1993 p. 17. The *Defense Electronics* article stated: "In a series of closed meetings ... FBI officials were briefed on the decade-long research on a computerized acoustic device allegedly capable of implanting thoughts in a person's mind without that person being aware of the thought."

- CNN news broadcast, Special Assignment, Nov.-1985, by Chuck DeCaro," Weapons of War, Is there an RF Gap?" This program features Dr. Robert O. Becker, two time Nobel prize nominee, scientist and researcher of electromagnetic radiation effects on the body and author of *Body Electric*, summarized, "The government has never disproved the psychological effects of electromagnetic radiation." Dr. Jose Delgado and his Yale University experiments of brain implants to control a charging bull. Dr. Ross Adey discussed a demonstration of the 1950s Russian lida machine, which used electromagnetic energy to put Russian psychiatric patients to sleep. A demonstration by Dr. Elizabeth Rauscher and Dr. William van Bise, directed magnetic signals into the brain of reporter Chuck DeCaro and created visual images as in a hallucination, and more. For a 55\$ copy of this tape call CNN at 404 827 2712 and ask for R2501 #13, R2747 #33, R2501 #15, R2501-#17. It runs about 20 minutes.
- "Opening Pandora's Box", 1984, produced by David Jones for Fulcrum Central Productions, aired on BBC Channel 4. This is a summary of main points of an exceptionally insightful and succinct documentary. Many thanks to Harlan Girard for finding a copy of this video. This is a long but important description below:

Project Pandora: The U.S. government explores whether the Soviets are using emr as a weapon

The Soviets started bombarding the American Embassy in Moscow in 1953 and the U.S. government funded Project Pandora to find out why. Project Pandora was "a top secret multimillion dollar program". Top scientific experts were consulted by the American Government "about the meaning of microwaving" of the Moscow Embassy. "Five presidents kept it secret". President Johnson complained to the Soviet Premier Kosygin who claimed that he was unaware of the signal and would be sure that it was turned off. Officially the Soviets did not admit that they were microwaving the Embassy. But the bombardment of the Moscow Embassy continued. It began in 1953 and in 1975 the signals changed. Two new transmitters were added by the Soviets.

Dr. Robert Becker was an eminent scientist and was asked if central nervous system, CNS disturbances occur by microwave radiation. The Pandora Project found that the microwave radiation interferes with decision making capacity, causes chronic stress and low efficiency. The white blood count of Embassy workers was 40% higher than normal. Monkeys exposed to microwave radiation showed a marked decreased performance of simple tasks. Making embassy personnel function less efficiently would obviously be a benefit to the Soviets.

Dr. Becker stated that the U.S. couldn't say anything about it because safety standards for the U.S. were higher than the microwave signals used by the Soviets on the Moscow Embassy. He stated that you do affect cns (central nervous system) by microwave exposure. But if the U.S. admitted bioeffects or athermal effects, meaning not heating effects as from a microwave oven, but other biological effects from the radiation, such as a high white blood count, it would throw into doubt the U.S. standard set "rather arbitrarily " in the 1950s. It would be an embarrassment to the Americans who chose to keep the public in the dark about the microwaving of the Moscow Embassy from 1953 to 1975.

David Jones stated, "Recent intelligence reports say the American army is developing emr weapons programs and predict by year 2000 armies could use them. There will be microwave weapons to disorient and immobilize opposing troops. Psychological attack is particularly effective on air pilots. There is no doubt about the potential of emr [weapons] in the Soviet Union."

Nonthermal emr effects controversy is born. U.S denies effects, Soviets disagree

Dr. Becker commented that the U.S. safety standard presented a dilemma for U.S. military planners. Dr. Becker explained that the problem was that the U.S. population was currently being exposed to the same athermal effects level of emr that the U.S military was using to develop classified emr weapons. This athermal level of radiation is not biologically active, according to the U.S. safety standard. But the dilemma was, how could the U.S. government develop an emr weapon system based on the athermal effects of emr when currently allowing exposure of their own people to the same athermal effects level of emr in their environment from TV and radio towers and microwave ovens, for example? It was a conundrum.

Dr. Becker stated, "A good,...the best cover story is that, based on best American scientist's [opinions],.... the [U.S.] nation has discarded [the theory of athermal] health effects from emr, entirely."

David Jones asked Dr. Koslov; "In terms of science there seems to be two possibilities, one is that behavior and health are affected by emr and the second is the creation of a new genre of weapons and that its conceivable that it is a totally black area of research. Dr. Koslov replied that back in 1965, there was alot of conjecture and hypothesis about that. That's why it led to Project Pandora. Since then, I don't think there is very much possibility, that there is, at this point in time, there doesn't seem to be.

Dr. Sam Koslov, director of Project Pandora continued, [We] thought about it, don't get me wrong,... but nothing was found, it doesn't look like[there is]...militarily at this time, there is no emr weapons potential. There is nothing to the biological effects claim. There is an amount of power problem."

David Jones asked Dr. Koslov why he thought that the Soviets were microwaving the Embassy. Dr. Koslov replied that "I would rather not discuss it [because] it would get into security areas."

[Today, with the nonlethal program unveiled in the 1990s and the Soviet evidence of emr nonthermal effects available today, it is clear that Dr. Koslov was lying in the name of national security. At the least, Dr. Koslov would have been aware of the classified emr nonlethal program which began in the 1960s, see US News, 1997)]

### The 1950s, the Lida Machine and Korean Brainwashing

In the 1950s, intelligence agencies were interested in changing mental states. The theory is that brain waves can be tuned to a different emr frequency and can change moods and character. The CIA sponsored LSD experiments and the MKUltra Project for 10 million dollars in the early 1960s. A CIA memo stated that they were looking for behavior control to enhance consciousness. The Soviets had realized the same thing. Dr. Ross Adey, famous emr researcher at Loma Linda Veterans Hospital, examined the Lida machine, from the Soviet Union. It was described as a machine to "rearrange consciousness". The Russians claimed to use it for treatment of emotional disorders in the 1950s. Dr. Adey stated that the Lida machine is now obsolete. It used coiled wire inside ear muffs which acted like an antenna and emitted 1/10 sec pulses of emr. Dr. Adey demonstrated that excited animals rapidly quiet down when exposed to the Lida emr frequencies. There was one account that the Lida machine was used during the Korean War for brainwashing American Prisoners.

Since the Korean war, the art of brainwashing has improved significantly, says David Jones

Dr. Becker was asked by the CIA in early 60s to determine whether pilots shot down and captured by Soviets in the 1960s could possibly have been exposed to emr without them realizing it and would that have caused personality change. The pilots were tested psychologically before and when they came home. A dramatic change in test results was found. The question posed was, can you change, entrain brainwaves with an external source? "Pilots did not report bad treatment and were not aware of any emr exposure by Soviets during debriefing sessions." They were interned by the Soviets for two to six week and returned with "considerable personality alterations". The CIA wanted to know if there was a relationship between the Moscow Embassy and flight crews that would cause personality alteration? Dr. Becker stated "yes, there is a distinct possibility, we don't know at this time for sure."

Dr. Robert Beck's (not the same person as Dr. Robert Becker) classified experiments of behavior effects of emr on human subjects for weapons use.

The mechanics of this source of personality change ( Dr. Becker's pilot study above) "fell into an area of science shrouded in the greatest of secrecy". "It is at the center of mind control programs in both the east and west." Dr. Robert

Beck, an electronics engineer, is one former member of an elite corp of scientists recruited by his government to work in this area. His published work talks of "specific frequencies that cause anxiety, fear, confusion". His unpublished work include "bizarre experiments in which would disorientate other scientists and is said to include changing moods from elation to depression. He described an experiment in which electromagnetic pulses emitted from a device that looked like a wristwatch caused other diners in a restaurant to talk more loudly or quietly, depending on the em pulse emitted by the wristwatch device."

"What is technically possible?" asks David Jones. "There, I would rather not discuss some of the work that I've seen. It has been done, replicated. Replicated experiments simply done. That subject is totally dark. I've done some of that myself and I'll never do it again. There is no mystery to it. There are ethical considerations. It's part of the physical universe. Changing people's behavior by low levels [of emr], that subject is totally dark."

Dr. Beck continued, "It's possible to replicate experiments, simply, I don't approve of it, a tool to manipulate. But moral considerations are invariably not considered by governments. The Soviets are ahead [in emr research]."

David Jones asked, "As far as affecting human behavior, what is possible? Dr. Beck said, "It's possible, it's been replicated. It's a dark area of research."

The Moscow microwave bombardment is a prototype weapon of the 1977 Soviet Woodpecker Emr signal: Soviet emr weapons go public

Dr. Beck stated, "[the 1976] Russian woodpecker signal is the most powerful man made emr source ever. 10 pulses per second, 40 million watts per pulse, it is psycho active." It is generated in the Soviet Union and permeates everything in the U.S.. It was picked up by power grids and irradiated into homes."

The question is why are the Russians doing this? Dr. Becker said that there are three theories. First, that the Woodpecker signal is an over the horizon radar. No, Dr. Becker stated that a satellite is better available surveillance. Second, the woodpecker signal is for submarine communication. Dr. Becker could not answer that. Third, that the Russian woodpecker is biologically active and will have an effect on populations in U.S. and Canada. In 1976, the Soviets increased the signals and now have seven transmitters. "They are the most expensive and powerful in the world." "Dr. Becker said there are persistent rumors that the U.S. is doing the same to the Soviet Union, powerful U.S. transmitters beaming 16 cycles per second to produce the same effect as the Soviets, into the Soviet Union." "We are in the middle of electronic warfare aimed at citizens of both countries."

The Woodpecker has been beamed for six to seven years and can't be heard in Soviet Union but can be heard in Britain, Western Europe, Australia and Far East. Dr. Beck, [the electronic engineer] stated that the magnetic component can penetrate anything. "We have decoded intelligence on the signal. The 10 Hz signal is a benign frequency and we know it can be psycho active. 30% of

the population will exhibit neuronal manifestations. Soviet scientists know about psychoactive effects in animals. Soviet scientists knew well before 1950s. The Soviets published research on long term effects of microwaves, extreme fatigue, loss of coordination and sensory control. A group in American Intelligence believed that one can alter brainwaves of staff of Moscow Employees and the Moscow signal was a prototype of the Russian Woodpecker."

Dr. Beck continued, "If you drop frequency down a few hertz, it is known to be neurally psychoactive and you could have basket cases. [This is] more terrifying and frightening than the atomic bomb. It's a brand new concept, we haven't adapted to this concept. Having done a number of experiments, one can't imagine the destructive power of these things. There were no National Institute of Health, NIH guidelines in the experiments I conducted. I know what some of these things can do to the nervous system. Most wars are fought over real estate. [It will be] better to use psyop weapons than atomic bombs- alot cleaner, more terrain left, it could just kill people. There is no defense that I know of."

- Ultrascience III, Spies are us" Featured Dr. James C. Lin, PhD. biomedical and electrical engineer, educator, author of Microwave Auditory Effects and Applications, 1978. Lin demonstrated microwave hearing, a symptom of many of the victims, hearing voices. Also featured Cheryl Welsh on the issue of mind control experimentation.
- Ultrascience, "Weapons of War", Learning Channel, 1997, Featured Dr. Michael Persinger, Laurentian University. He described weapons using "psycho or influence technology" and electromagnetic radiation frequencies to control what people think, for psychological warfare purposes.
- In the U.S., the Learning Channel TV program "War 2020" produced by Beyond Productions in 1998 is a good representation of information warfare. The program included Dr. Persinger of Canada's Laurentian University and his discussion on magnetic signals and how signals could be beamed from television, microwave and telephone towers and systems to targeted populations for mind control purposes. The program narrator stated, "The ultimate weapon in the info war would be the human brain. ...Mind control will be the ultimate nonlethal weapon ." Mind control weapons are categorized as information and nonlethal weapons, according to these sources. Ultrascience, "War 2020", Beyond Productions, Learning Channel, 1998, Dr. Michael Persinger, Laurentian University demonstrated a helmet with solenoids which induce magnetic fields into the brain and cause panic, fear, God and UFO experiences. He stated that with current technology it is possible to use mind control on the mass populations.
- Dr. Alan Scheflin, law professor at Santa Clara Law School and author of the 1978 Paddington Press book, "Mind Manipulators" and Dr. Colin Ross, psychiatrist appeared on the History Channel, Fall, 2000 on "Mind Control: America's Secret War" (800 708-1776 to order). Both Dr. Scheflin and Dr. Ross commented that it is plausible that

electromagnetic and nonlethal weapons on being used in experiments on US citizens without their consent today.

- TV program, ZDF, Geheimes Russland ,TV-Tagestip, Der Dienstag im ZDF: Dec, 22, 1998, entitled Secret Russia. " Since the years of Soviet rule people have spoken furtively in Russia of secret research and experiments, which the Army and the KGB sponsor. ... Rumours are making the rounds, the talk is about victims [of government mind control experiments]. Anatolij Iwanyttsch, a 47 year-old former boxer and dissident... His organization has in the meantime grown to about a thousand members from all over Russia.

55100 Mainz  
West-Germany

NOTE CONCERNING THE ENGLISH TRANSLATION OF THIS DOCUMENT:

The spelling of all Russian names, places, locales and words is to be regarded as "experimental" and possibly incorrect.

The translator.

SECRET RUSSIA : MOSCOW -- THE ZOMBIES OF THE RED CZARS

SPEAKER :

The Kremlin. Until shortly the symbol of absolute power. The dream of the red czars was a disciplined society they could completely control. This dream once inspired George Orwell to write his darkly futuristic novel, "1984". Autumn 1998, and [now] there is a new crisis in Russia. Years after the collapse of communism the citizens are crushed as much by the economic collapse as they are crushed by the aftermaths of the more than seven decades lasting old system. It was like a net of blunt force and secret control which constrained the citizens. Some of these methods, like the Stalinistic camps, were reported all over the world. Others even its victims only report very rarely. In this country, many see themselves as victims : Victims of armed conflicts or political repression. Victims of secret psychiatric experiments or the constant fear of the "big brother".

# **U. of Albany NY Suspends Implant Research**

**Albany Times-Union**

**Wednesday, August 25, 1999**

---

This article was sent in by Thomas Savona, a prisoner in the N.Y. State Correctional system. Being both a prisoner and a victim, Mr. Savone would appreciate anyone willing to become a pen pal. His mailing address is:

**THOMAS SALVATORE SAVONA  
ID # 88A3148  
135 State Street  
Auburn Correctional Facility  
Auburn, New York  
USA 13024**

While implants are often older, unclassified technology, this article shows that some groups at least, probably those without access to current-day perp technology, are using them. The reader should remember that a large number of current-day psycho-electronic victims claim they have no implants, and that small implants using conventional radio signals have severe power and range limits for tracking and two way communication with a target's brain and nervous system.

---

UALBANY SUSPENDS IMPLANTS RESEARCH

Albany Times Union, August 25, 1999

Professor whose work is at issue has focussed on surgically inserted mind control devices.

By: Andrew Bronstein, Staff Writer

The University of Albany has shut down the research of a psychology professor probing the "X-Files" world of government surveillance and mind control.

At conferences, in papers over two semesters, professor Kathryn Kelley explored claims of those who say they were surgically implanted with communications devices to read their thoughts.

According to colleagues, Kelley has privately claimed the university is violating her academic freedom. She declined to discuss this matter with a reporter.

Kelley's research and the controversy surrounding it echoes the experience of John Mack, a renowned Harvard psychiatrist.

[snip]

According to three sources -- two faculty members and a graduate student -- the school's Institutional Review Board, which monitors human research, closed the project when a student complained late last spring. The student, sources said, was NOT ALLOWED TO LEAVE A LECTURE THAT WAS PART OF KELLY'S EXPERIMENT. Refusal to allow a subject to leave an experiment violates National Science Foundation guidelines.

Despite the inquiry, Kelley, a fully tenured professor who earned \$67,000 last year, is slated to teach two graduate courses in the fall.

The department became aware of Kelley's theories as early as the spring of 1998, when a note on her office door announced a lecture called "The Psychology of Invading the Self".

The note described implant research funded by the National Security Agency and the Department of Defense with an annual budget of \$2 Billion. The "UNINFORMED, UNCONSENTING SUBJECTS" of these devices were typically "FEDERAL PRISONERS AND POLITICAL DISSIDENTS," the note said.

At the same time, Kelley won approval from the review board to conduct research on "advances in technology that affect interpersonal communication."

In a 16 page outline to the board, Kelley said she wanted to look at the USES OF TECHNOLOGY FOR "MONITORING AND CONTROL." She proposed presenting a lecture to research subjects and then having them respond to 60 questions about how the case study she would describe affected their views.

[snip]

Gregory George, a graduate student who has since left the university, said he was part of a research team assigned to lay the factual foundation for the implants research.

To his astonishment, he found several firms had developed "trans-tympanic transducers," instruments that function as mini-telpehones, sending voice messages to the inner ear. Companies decided to market the product for fear of bad transmissions causing deafness, he said.

[snip]

In a more detailed treatment she gave at a conference earlier this month in Orlando, Fla., Kelley lent more credence to the phenomenon. She described how a subject be implanted with the device during anesthesia, perhaps leaving tiny stitches visible in the ear. She called the devices RAATs, short for RADIOWAVE, AUDITOR, ASSAULTIVE, TRANSMITTING IMPLANTS.

"When short-wave operators transmit to or scan [receive from] RAAT implants in victims, THEY CAN TALK TO THE VICTIMS REMOTELY AND ANONYMOUSLY, AND HEART HE VICTIM'S SPEECH AND THOUGHTS," Kelley wrote.

[EW: There would be SEVERE limits on distance and unshielded line of sight requirements for this to work using unclassified technology.]

The perp noted that the National Institutes of Health denied any governmental role in such research.

[snip]

The current investigation into Kelley's work is considered highly sensitive at the university, coming four years after A GUNMAN WHO CLAIMED THE GOVERNMENT PLANTED MICROCHIPS IN HIS BODY HELD A CLASS OF 37 STUDENTS HOSTAGE AND SHOT ONE DURING A STRUGGLE. Ralph Tortorici, the gunman, recently hanged himself in his state prison cell.

Without commenting on specifics, sociology professor David Wagner, outgoing chair of the review board, said that shutting down a professor's research was "quite rare".

Some faculty members said the last time they remember the board making such a move was in the early 1970s.

# **2002 Media Guide to Disarmament in Geneva [Excerpts]**

[Complete Document in Adobe Acrobat Format](#)  
[Free Acrobat Reader](#)

---

[Mind Justice Home Page](#)

[\*Cheryl Welsh Listed in This Document\*](#)

Please don't contact Media Guide authors. They do not help individual cases. They review disarmament on a global level, are extremely busy and have no power to remedy our cause. The hard reality is that appeals for help are taken as mental illness and are dismissed and alienate the reader. Because the UN is a bureaucracy and works systematically, it takes a group effort not individual appeals.

Please contact Cahra, [welsh@dcn.davis.ca.us](mailto:welsh@dcn.davis.ca.us), so that we can continue the group process that will ban "mind control" weapons as blinding lasers have been banned. This is a first step in making "mind control" weapons a mainstream issue. By supporting Cahra, the UN Disarmament Committee may address "mind control" weapons as a new technology in weapons. Cahra will be working on studies, grant applications, and forming coalitions with other human rights groups. Your support so far has made this possible!

## ACKNOWLEDGEMENTS

Warm thanks are due, first and foremost, to the people listed in this guide for having agreed to act as media contact points in their respective areas of expertise. Special thanks also to the United Nations Information Service in Geneva for helping shape this project and for providing valuable support throughout. For her untiring efforts in researching and compiling the guide, we are indebted to Ms. Hyekyung Park of UNIDIR.

The production of this guide was made possible by the generous support of the Ford Foundation

## Introduction

THE GENEVA FORUM is a joint initiative of the Quaker United Nations Office, Geneva (QUNO), the United Nations Institute for Disarmament Research (UNIDIR), and the Programme for Strategic and International Security Studies (PSIS) of the Graduate Institute of International Studies. Its aim is to support and facilitate multilateral disarmament and security processes in Geneva.

Central to the work of the Geneva Forum is a recognition of the important role played by the Geneva-based international media in bringing such activities to the attention of the wider world. In this regard, journalists provide a crucial service by helping to ensure that disarmament work carried out in Geneva does not take place in a vacuum. As a contribution to helping journalists in this difficult task, we are pleased to present this *2002 Media Guide to Disarmament in Geneva*.

The guide begins with an overview of the principal entries in the 2002 disarmament calendar. The remainder is divided into 15 issue-areas of disarmament and security and 6 geographical regions. Each section covering disarmament issues contains a calendar of disarmament negotiations and events in that particular thematic area where a series of meetings is foreseen, a list of experts in that particular aspect of disarmament -- some Geneva-based -- who have indicated their willingness to act as media contact-points, and a compilation of internet links to further useful information. The geographical sections list experts in various aspects of regional disarmament and security.

Because of the volatile nature of disarmament and security issues, this guide is necessarily a work in progress. It will be updated, as needed, throughout the year and a new issue will be released at the beginning of each year. We would like to engage your help in improving this guide by asking you to give us your feedback using the form on the last page. Your suggestions will help us greatly in improving the quality of future editions.

You may also consult this guide, and check for newer versions throughout the year, on the UNIDIR website:

[www.unog.ch/UNIDIR](http://www.unog.ch/UNIDIR)

We wish you every success in reporting on disarmament and security processes in Geneva this year and hope that this guide will be of some assistance in your work.

## De-classified harassment technologies

July 30, 1999

This page lists articles from technology publications which show how these technologies are being marketed in commercial form, and have also been and are being used to harass covert weapons testing victims:

**The reader is asked to remember that ANNOUNCED inventions with potential for "national security" use are ALWAYS already in use covertly when announced. The SR-71 "Blackbird" surveillance aircraft was in use almost 20 years before the public saw it.**

This page lists articles from technology publications which show how these technologies are being used to harass covert weapons testing victims, and are now coming out in commercial form, or have been announced to the public:

1. Aviation Week & Space Technology, March 10, 1997  
"Radar Warns Birds of Impending Aircraft"

This article by Bruce Nordwall (Washington bureau) describes research being carried on by the USAF Wright Laboratory at Dayton Ohio. The article describes the use of MODULATED radar signals to produce AUDIBLE SOUND within the brains of birds near airport runways to cause them to fly away and avoid collisions with landing aircraft.

Other references on work with animals or humans with "audible microwaves":

Science, vol. 181, 27 July 73, page 356  
Nature, vol. 216, DEC 16 1967, page 1139  
Nature, vol. 210, May 7 1966, page 636  
Journal Acoustical Society of America,  
June 1982, page 1321  
Bioelectromagnetics conference, 1992,  
13:323-328 (pages 323-328)

This list was furnished by the lab at Wright-Patterson Air Force Base where this type of unclassified development is now in progress.

\*\* The transmission via MODULATED microwave pulses carrying voices to selected weapons testing victims has been carried on for more than two decades, as reported by the victims. There has been little published about this phenomenon, and since direct-to-skull voice transmissions are consistently mis-interpreted by psychiatrists as 'schizophrenia', getting

this information to the public needs concerted attention.

Below is a DOD project along the same line:

([http://es.epa.gov/ncerga\\_abstracts/sbir/other/monana/kohn.html](http://es.epa.gov/ncerga_abstracts/sbir/other/monana/kohn.html), updated Nov. 17, 1997, or local copy of text only: [v2s-kohn.htm](#))

#### Communicating Via the Microwave Auditory Effect

Awarding Agency: US Department of Defense  
SBIR Contract Number: F41624-95-C-9007  
Principal Investigator: Mr. Brian Kohn  
Company Name:  
Science & Engineering Assoc, Inc.  
6100 Uptown Blvd NE  
Albuquerque, NM 87110  
Telephone Number: 505-884-2300 (project)  
Information 411: 505-424-6955  
Project Amount: \$739,995  
Research Category: Monitoring/Analytical

#### Description:

An innovative and revolutionary technology is described that offers a means of low-probability-of-intercept Radio frequency (RF) communications. **The feasibility of the concept has been established** using both a low intensity laboratory system and a high power RF transmitter. Numerous military applications exist in areas of search and rescue, security and special operations.

2. Electronic Business Today, February 1997  
"Business Trends" section, page 20

See: [How it works](#)

Inventor Elwood Norris, and his small company, (American Technology Corp., Poway CA) have designed a market ready device called an "acoustical heterodyne".

This device sends out two sound signals in the ultrasonic (above-human-hearing) range which, when they impact a surface, which may be a living creature, then and only then produce a sound at a frequency equal to the DIFFERENCE ("heterodyne") of the two ultrasound frequencies.

\*\* This technology has been used extensively by harassers who follow a walking or driving victim and bounce raucous, unnatural bird calls and other strange sounds off surfaces near the victim. This type of sound is tape recordable.

3. New York Times, April 7, 1997, "Devices May Let Police Find Hidden Guns on Street" article

Current site: <http://www.millivision.com>  
AP article: [..about airport usage, March '99](http://www.millivision.com/..about/airport_usage/March_99)

This article, with photos supplied by Millitech Corporation, describes recently unclassified "millimeter wave" cameras (and some other see-thru technologies less well developed.)

These units operate like camcorders, giving the user a real-time thru-clothing, thru-luggage image for detecting weapons and drugs.

Technology like this does not just pop out of nowhere overnight, and it probably has its roots in the 1960's classified microwave weapon "renaissance" - about the same time as the U.S. embassy staff in Moscow discovered they were being bathed in Soviet microwave signals.

Electronic weapon Roy Bercaw, Boston MA, reports:

Boston Herald reports Oct 13 '98 "police used a ground radar device to investigate whether the newly painted basement floor had been disturbed."

I called to that police department today. I was referred to the state police crime scene services. The state police Lt. is said to have "hired the guy" who used that equipment. It is for hire? Who wants to rent one? I'll try to get the name of the manufacturer and maybe some specifications.

-----  
See also: [Millitech Corp.](http://www.millitech.com)  
article titled "Frisking from Afar" from the October 1995 issue of Popular Mechanics.  
See also: <http://www.millivision.com>  
the manufacturer who took over this product line from Millitech.  
-----

OEM Magazine, February 1997, page 20  
"Electronic Dipstick" article

This article describes "micropower impulse radar" or "MIR" radar, developed at Lawrence Livermore Lab in California, and licensed to several large companies for consumer products. Basically, this radar uses the highest radio frequencies and does not require the supporting hardware like rotary antennas which 'conventional' radar does.

Uses include vehicle blind-spot sensors, traffic control sensors, heart muscle response monitors, and see thru plaster stud finders.

-----

New York Times, National Section, May 5, 1995  
page A19, title: "In Search of Security: Radar Scanners That 'Undress' People", Malcolm W. Browne

This article pre-dates the Millitech articles above, and references the Pacific Northwest Laboratory in Richland WA, operated by the U.S. Department of Energy. The National Institute of Justice has expressed interest in radar units which can scan for weapons at a distance of 12'.

Douglas L. McMakin says he has demonstrated that this is technically feasible.

Ira Glasser, executive director of the ACLU, referred to the project as a "looney tunes scheme".

-----

\*\* Thru the wall radar has been covertly used for a number of years on weapons testing victims. One common use has been to detect where the victim is standing or walking in their apartment, and 'follow' the victim's position by rapping floor, walls, or ceiling from an adjacent apt. This is designed to let the victim know he/she is under constant surveillance.

Bulletin received August 99:  
"Hey look Vinnie. We're on 'Cops'!"  
Cops Have Eyes On X-Ray Vision  
APB Online

Three high-tech labs are in the final stages of developing a new form of radar device that can see through walls by broadcasting radio signals across broad bands of the spectrum to pinpoint a hidden suspect. Based on military technology, the products still need government approval and won't go on the market for at least a few more months. But police who have tried various versions of the new radar scanners like what they see and what the product developers are telling them.

[http://www.apbonline.com/behindthebadge/1999/06/04/radar0604\\_01.html?s=WallsGlasses\\_247](http://www.apbonline.com/behindthebadge/1999/06/04/radar0604_01.html?s=WallsGlasses_247)

4. Defense Electronics, July 1993, page 17

DOD, INTEL AGENCIES LOOK AT RUSSIAN MIND CONTROL CLAIMS

Federal law enforcement officials considered testing a Russian scientist's acoustic mind control device on cultist David Koresh a few weeks before the fiery conflagration that killed the Branch Davidian leader and 70 of his followers in Waco, Texas, DEFENSE ELECTRONICS has learned.

In a series of closed meetings beginning March 17 in suburban northern Virginia with Dr. Igor Smirnov of the Moscow Medical Academy, FBI officials were briefed on the Russian's decade-long research on a computerized acoustic device allegedly capable of implanting thoughts in a person's mind without that person being aware of the source of the thought.

...

His account of the meetings was confirmed by Psychotechnologies Corp., a Richmond, Virginia based firm that owns the American rights to the Russian technology.

...

[Not necessarily unclassified, but at least made known to a limited segment of the public]

5. Associated Press, date obsucred on library photocopy but is Soviet-era

Title: Russian Machine That Tranquilizes People

Dr. Ross Adey, chief of research at Loma Linda Veterans Hospital, tests a LIDA machine, which uses a radio signal to perform the same function as chemical tranquilizers.

**PROOF POSITIVE that radio signals can alter the functioning of the human mind.**

See: [The full text](#) of the original article.

6. Dan Rather's CBS Evening News, Dec. 9, 1997

Police helicopters were the topic, and one of the features soon to be added to police helicopters was "an electromagnetic ray gun which can stop speeding cars dead."

While this is primitive technology compared with that used to manipulate the minds and nervous systems of e-weapons victims of the 1990's, it does demonstrate quite clearly that government is putting substantial resources into electromagnetic weapons development.

7. Canadian version, Discovery Channel, "Invention" segment, Thursday December 25, 1997

During part of the show, it was stated that the current development of polygraphs (lie detectors) using massive computer-aided database comparisons was now a reality and these machines were making substantial progress towards near-perfect accuracy.

The final statement in that segment was: It is expected that the next stage in polygraph development will be REMOTE MICROWAVE detection of bodily functions, which will mean the polygraph can then be used SECRETLY, at a distance.

8. Associated Press: (Dec. 2, 1997)

TOKYO - Tired of reaching for the remote control every time you surf the channels? Help is on the way - at a price. A Japanese company plans to market a device that changes television channels and activates household appliances at the flicker of a brain wave. The price: roughly 600,000 yen (\$4,800). The product, called the Mind Control Tool Operating System, or MCTOS, is the result of a collaboration between the Technos Japan Co. and the Himeji Institute of Technology in southwestern Japan.

Say you want to turn on the air conditioner. Simply focus on that icon on the MCTOS computer display menu while wearing a pair of beta-wave trapping goggles. Then, according to Technos spokesman Sadahiro Ushitani, say something like "Ei!!" inside your head. Soon your air conditioner will be pumping cool air into the room.

MCTOS is scheduled to go on sale in April, 1998.

9. On Jan. 19 the Washington Post had an article about a device for remotely detecting heartbeats by detecting the electromagnetic pulses emitted by beating hearts.

URL:  
<http://www.washingtonpost.com/wp-srv/WPlate/1998-01/19/0171-011998-idx.html>

See also this article posted on this site:

[Picture](#) of an actual "radar flashlight" device.

An excerpt:

"The pumping of the human heart is controlled by electrical signals, which doctors measure in

electrocardiograms. The heart's activity generates an irregular, ultralow-frequency electric field that extends in a circle around the body.

"The field is faint, but it can pass through almost any physical barrier. The LifeGuard can pick up on the strongest part of the field, the heart, through barriers including concrete walls, heavy foliage and rocks. Company officials say the LifeGuard can detect a person in less than five seconds and can pinpoint his or her location with a high degree of accuracy."

The company is marketing the device for potentially locating people in need of rescue, or detecting where individuals are located inside a building.

10. Nature magazine, Vol 391, January 22, 1998, page 316,  
"Advances in neuroscience may threaten human rights"  
by Declan Butler

(PARIS - Pasteur Institute - Speech by Chairman of  
the French national bioethics committee Jean-Pierre  
Changeaux)

"But neuroscience also poses potential risks, arguing  
that advances in cerebral imaging make the scope for  
invasion of privacy immense.

"Although the equipment needed is still highly spec-  
ialized, it will become commonplace and capable of  
being used at a distance, he predicted. That will  
open the way for abuses such as invasion of personal  
liberty, control of behaviour, and brainwashing."

"These are far from being science-fiction concerns,  
said Changeaux, and constitute a serious risk to  
society."

Also in that article:

"Denis LeBihan, a researcher at the French Atomic Energy Commission, told the meeting that the use of imaging techniques has reached the stage where we can almost read people's thoughts."

NOTE: These scientists are speaking ONLY about the UNCLASSIFIED scientific arena. Classified technology can always be assumed well ahead of unclassified.

11. Dan Rather's CBS Evening News, October 7, 1998

Demonstrated the "TCMS" device, or "Trans Cerebral Magnetic Stimulator", which is used as a substitute for conventional conductive electrode psychiatric shock treatment.

Of interest to electronic neuro-influence weapons victims was the demonstration where the magnetic coil array was placed on a test subject's forearm. Each pulse triggered involuntary movement of the subject's fingers, very similar to what e-weapons victims experience repeatedly.

12. [silsoun2.htm](#), partly unclassified system where ultrasound carrier signals carry hypnotic commands to the enemy. Used by the U.S. Army during the gulf war. Considerable detail on that page - call it up for printing - it's worth the read!

13. [thotuncl.htm](#), unclassified devices which are beginning to catch up to the full blown classified thought readers.

[ratrobot.htm](#), unclassified experiment in Philadelphia in which implanted rats "command by thinking they are thirsty" a robotic water dispenser.

## Quick read for those tight on time

### The State of Unclassified and Commercial Technology Capable of Some Electronic Assault Effects

Eleanor White, P.Eng.

Last Update: November 19, 2009

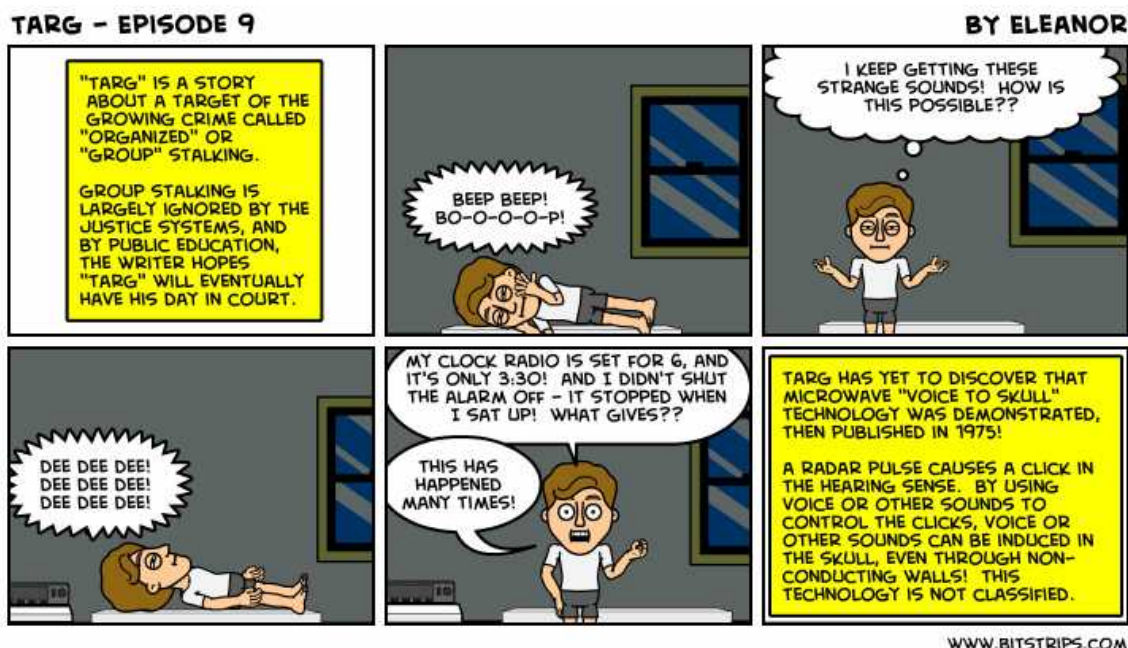

<http://www.raven1.net/uncom.htm>

Note: The information content of this article has not been updated since December 1999. The information here applies regardless of the year it is read. Slight changes in wording will be made from time to time as activism to expose crimes done with this equipment may change the current terminology.

QUICK READ covering just those technologies directly capable of duplicating through wall silent electronic harassment, and which have been available to the public for decades. This long document includes those, and is for those who want more information than the quick read.

The quick read is better for educating the public as to the reality of electronic harassment.

OVERVIEW of the crime of organized stalking and electronic harassment, which also mentions the proven technologies and is written for educating those who are not targets.

[More comic strips](#)

## To help the reader appreciate the importance of this matter...

"We need a program of psychosurgery and political control of our society. The purpose is physical control of the mind. Everyone who deviates from the given norm can be surgically mutilated.

"The individual may think that the most important reality is his own existence, but this is only his personal point of view. This lacks historical perspective.

"Man does not have the right to develop his own mind. This kind of liberal orientation has great appeal. We must electrically control the brain. Some day armies and generals will be controlled by electrical stimulation of the brain."

Dr. Jose Delgado (MKULTRA experimenter who demonstrated a radio- controlled bull on CNN in 1985)

Director of Neuropsychiatry, Yale University Medical School

Congressional Record No. 26, Vol. 118, February 24, 1974

Monkeys in restraint, wires coming out of top of skull, left image "normal", right image with electric current being fed into the monkey's brain - note pupil sizes and clenched teeth! These images portray Dr. Delgado's ruthless disregard for life, pain, and suffering!

## I. LIMITATIONS

The author acknowledges that this article falls short of a rigorous academic paper. This is explained by the fact that organized stalking and electronic harassment targets are kept in a sort of "barely alive" condition, with significant health problems, and either unable to work or just barely able to hold a job with limited earning potential.

Furthermore, since the perpetrators constantly work to prevent the public from knowing anything about organized stalking and electronic harassment, evidence is obtainable with great difficulty, and often the only evidence is of lower quality than would be accepted for a scientific treatise.

In short, everything in this article represents a struggle against immense odds. We ask readers to understand this.

## [Up to Contents](#)

## II. INTRODUCTION

Electronic assault and control technology had it's start in the 1950s, as an obscure branch of the CIA's MKULTRA project group. Just as organized crime is not stopped by hearings and court cases, neither did this originally obscure branch of MKULTRA activity, when the institutional/drug/child abuse phases were exposed by the U.S. Senate's Church-Inouye hearings in the late 1970s. No criminal proceedings followed, and only two civil law suits (Orlikow and Bonacci) have succeeded.

This assembly of unclassified and commercial literature is to show investigators and concerned citizens that in spite of the tightest possible information blackout imposed in the early 1970s, enough of the classified electronic harassment and control technology has leaked out to show that significant classified accomplishments are overwhelmingly likely, and in need of disclosure, here at the end of the 20th century.

It is hoped that government and media, who have shied away from this topic for decades, preferring the warm fuzzy feelings that "this can't be true", will read about the unclassified and commercial devices and understand the implications of continued turning the other way.

=====

### III. E-HARASSMENT EFFECTS

The following description of electronic attacks is taken from the personal experiences of the "2,000 or so" known organized stalking and electronic harassment targets. The targets without exception report that once the harassment begins, in virtually all cases it continues for life. It continues in every city, state, and country the target moves to. It continues in prisons and hospitals, even when the target is dying of cancer.

Many targets are young seniors, and some in their 70s and 80s.

Some have children and the children are often subjected to the same attacks as their parent(s). Pets are not only tortured, but even killed, painfully and violently.

The attacks pattern:

This article is about unclassified/commercial technologies which can produce some of the effects of the harassment equipment:

- All harassment consists of unique, carefully engineered-unprovable events to produce psychological stress in the victim. There are no events which do not fit that apparent purpose.
- In every series of stress event type, one, and often a PAIR of, introductory event(s) of very high energy/effect is staged. The obvious purpose is to be certain the victim KNOWS this is external harassment, and not just "bad luck". From that time forward, the perpetrators appear to apply "Pavlovian training" so that they can get the victim to "jump" (or react in some way) to the same effect at a tiny fraction of the initial "introductory" event.
- This type of harassment started during the Cold War, and shows every characteristic of military and intelligence psychological warfare operations. Only Congress is likely to be able to access direct evidence from those agencies, so at the moment, that is a guess.
- This type of harassment points to CONTROL of the test subject. Endlessly repeated words generated inescapably within the skull are just one hypnosis-like experience.
- The total number and type of crimes which make up organized stalking and electronic harassment simply could not take place without cover being supplied by government. Bizarre court decisions in which the target is forced into involuntary mental health treatment and a criminal spouse (for example, a pedophile father discovered "doing" his own child) clearly show that organized stalking and electronic harassment are heavily protected by all levels of government and

the medical establishment.

The effect types categorized:

Here is a list of most of the common effects. It is not exhaustive, but is intended to show the reader how the perpetrators' palette of stress effects is broken down. Indent levels are used to show categories and sub-categories:

1. Invasive At-a-Distance Body Effects (including mind)

- a. Sleep deprivation and fatigue
  - i. Silent but instantaneous application of "electronic caffeine" signal, forces awake and keeps awake
  - ii. Loud noise from neighbours, often SYNCHRONIZED to attempts to fall asleep
  - iii. Precision-to-the-second "allowed sleep" and "forced awakening"; far too precise and repeated to be natural
  - iv. Daytime "fatigue attacks", can force the victim to sleep and/or weaken the muscles to the point of collapse
- b. Audible Voice to Skull (V2S); sometimes non-voice sounds
  - i. Delivered remotely, at a distance
  - ii. Made to appear as emanating from thin air
  - iii. Voices or sound effects only the victim can hear
- c. Inaudible Voice to Skull (Silent Sound)
  - i. Delivered by apparent at a distance radio signal; manifested by sudden urges to do something/go somewhere you would not otherwise want to; silent (ultrasonic) hypnosis is possible
  - ii. Programming hypnotic "triggers" - i.e. specific phrases or other cues which cause specific involuntary actions
- d. Violent muscle triggering (flailing of limbs)
  - i. Leg or arm jerks to violently force awake and keep awake
  - ii. Whole body jerks, as if body had been hit by large jolt of electricity
  - iii. Violent shaking of body; seemingly as if on a vibrating surface but where surface is in reality not vibrating
- e. Precision manipulation of body parts (slow, specific purpose)
  - i. Manipulation of hands, forced to synchronize with closed-eyes but FULLY AWAKE vision of previous day; very powerful and coercive, not a dream
  - ii. Slow bending almost 90 degrees BACKWARDS of one toe at a time or one finger at a time
  - iii. Direct at-a-distance control of breathing and vocal cords; including involuntary speech
  - iv. Spot blanking of memory, more than normal forgetfulness
- f. Reading said-silently-to-self thoughts
  - i. Engineered skits where your thoughts are spoken to you by strangers on street or events requiring knowledge of what you were thinking
  - ii. Real time reading subvocalized words, as while the victim reads a book, and BROADCASTING those words to nearby people who form an amazed audience around the victim
- g. Direct application of pain to body parts
  - i. Hot-needles-deep-in-flesh sensation
  - ii. Electric shocks (no wires whatsoever applied)
  - iii. Powerful and unquenchable itching, often applied precisely when victim attempts to do something of a delicate or messy nature
  - iv. "Artificial fever", sudden, no illness present
  - v. Sudden racing heartbeat, relaxed situation

- h. Surveillance and tracking
    - i. Rapping under your feet as you move about your apartment, on ceiling of apartment below
    - ii. Thru wall radar used to monitor starting and stopping of your urination - water below turned on and off in sync with your urine stream
  - 2. Invasive Physical Effects at a Distance, non-body
    - a. Stoppage of power to appliances (temporary, breaker ON)
    - b. Manipulation of appliance settings
    - c. Temporary failures that "fix themselves"
    - d. Flinging of objects, including non-metallic
    - e. Precision manipulation of switches and controls
    - f. Forced, obviously premature failure of appliance or parts
  - 3. External Stress-Generating "Skits"
    - a. Participation of strangers, neighbours, and in some cases close friends and family members in harassment
      - i. Rudeness for no cause
      - ii. Tradesmen always have "problems", block your car, etc.
      - iii. Purchases delayed, spoiled, or lost at a high rate
      - iv. Unusually loud music, noise, far beyond normal
    - b. Break-ins/sabotage at home
      - i. Shredding of clothing
      - ii. Destruction of furniture
      - iii. Petty theft
      - iv. Engineered failures of utilities
    - c. Sabotage at work
      - i. Repetitive damage to furniture
      - ii. Deletion/corruption of computer files
      - iii. Planting viruses which could not have come from your computer usage pattern
      - iv. Delivered goods delayed, spoiled, or lost at a high rate
      - v. Spreading of rumors, sabotage to your working reputation
      - vi. Direct sabotage and theft of completed work; tradesmen often involved and showing obvious pleasure
-

#### IV. MAJOR TECHNOLOGY CLASSES

These technology classes are for the UNclassified and commercial equipment which can emulate the "real" classified electronic harassment equipment.

[Technologies summary](#) more suitable for activism.

#### TRANSMISSION METHODS FOR NEURO-EFFECTIVE SIGNALS:

- pulsed microwave (i.e. like radar signals)
- ultrasound and voice-FM (transmitted through the air)

While transmission of speech, dating from the early 1970s, was the first use of pulsed microwave, neuro-effective signals of as yet unknown type can now cause many other nerve groups to become remotely actuated. At time of writing, that technology appears to be classified.

#### PAVLOVIAN HYPNOTIC TRIGGERS:

A [Pavlovian] hypnotic trigger is a phrase or any other sensory cue which the victim is programmed to involuntarily act on in a certain way. The 50s-70s MKULTRA survivors can still be triggered from programming done decades ago. A name "manchurian candidate", from a novel by John Marks, is used to describe a person who carries Pavlovian triggers.

One of the main goals of the institutional/drug/child abuse phases of the CIA MKULTRA atrocities (1950's through 1970's) was to implant triggers using a "twilight state" (half-conscious) medication and tape recorded hypnosis. The ultimate goal was to have the acting out of Pavlovian triggers erased from the victim's memory.

Using a combination of Joseph Sharp voice to skull and Lowery Silent Sound technologies, these triggers can now be planted with the subject being unaware, or just barely aware of a very high tone in his or her hearing sense.

#### THROUGH-WALL SURVEILLANCE METHODS:

So-called "millimeter wave" scanning. This method uses the very top end of the microwave radio signal spectrum just below slightly into the infra-red frequency region. To view small objects or people clearly, the highest frequency that will penetrate non-conductive or poorly- conductive walls is used. Millimeter wave scanning radar can be used in two modes:

- passive (no signal radiated, uses background radiation already in the area to be scanned, totally UNdetectable)
- active (low power millimeter wave "flashlight" attached to the scanner just as a conventional light mounted on a camcorder), or, the use of archaeological ground penetrating radar

#### THOUGHT READING:

Thought reading can be classed as a "through wall surveillance" technology. Thought reading, in the

unclassified/commercial realm, can be broken down as follows:

- magnetic skull-proximity or throat (vocal cord proximity) reading
- EEG (electroencephalogram) interpretation, particularly by way of inside the brain pickup wires

The ability to read and display what the eyes are seeing using implanted pickups is one form of technology almost the same as "thought reading".

NASA and DARPA have been reported in the mainstream press as working on technology which can pick up silently-said-to-self thoughts through pickup coils against the throat.

#### BRAIN ENTRAINMENT:

The reverse of biofeedback. Those low frequency electrical brain rhythms which are characteristics of various moods and states of sleep can not only be read out using biofeedback equipment or EEG machines, but using radio, sound, contact electrodes, or flashing lights, the moods and sleep states can be generated or at least encouraged using brain entrainment devices.

Brain entrainment signals cannot carry voice, which is a much higher frequency range. Brain entrainment can, however, be used to "set up" a target to make him/her more susceptible to hypnosis by inducing a relaxed and/or sleeping state. (This is the same state used by remote viewers.)

These major technology classes can produce some of the observed electronic harassment effects, FROM HIDING AND UNDETECTABLY, with the exception of remote physical manipulation.

IMPLANTATION is sometimes used to assist the above technologies but with current devices. Implants do not appear to be required, based on large numbers of people who have had no surgery, no unexplained wounds, and no missing time.

Diagram showing the overall method, based entirely on unclassified 1974 technology, of how SILENT hypnosis may be transmitted to a target without the target's being aware. This technique is probably the most insidious, because it allows months and years of programming and Pavlovian trigger-setting, while the target cannot resist because the target can't hear the programming.

**\* REMEMBER: THIS WAS DO-ABLE IN 1974 !**

Steady tone, near the high end of the hearing range, say, 15,000 Hz

Hypnotist's Voice, varying from, say, 300 Hz to 4,000 Hz

**FREQUENCY MODULATOR, VOICE CONTROLS FREQ.**

Output is now more or less a steady tone, like tinnitus, but with hypnosis embedded.

Curve below is magnified to show how the FM-voice controls the timing of the transmitter's pulses.

Each vertical line is one short pulse of microwave signal at a frequency to which the human brain is sensitive . . . then

brain converts the train of microwave pulses back to inaudible voice; there is no conscious defense possible against the hypnosis.

**Transmitter**

Timing of each microwave pulse is controlled by each down-slope crossing of the voice wave (Sharp's original 1974 method).

**HOW SILENT (CONVERTED-TO-VOICE-FM) HYPNOSIS CAN BE TRANSMITTED USING A VOICE FREQUENCY MODULATOR TO GENERATE THE "VOICE", THEN PULSED-MICROWAVE VOICE-TO-SKULL FOR DISTANCE AND COVER**

<http://www.raven1.net/hypno2s.gif>

Mar 21/00

[Up to Contents](#)

V. PULSED MICROWAVE

Pulsed microwave voice-to-skull (or other-sound-to-skull) transmission was discovered during World War II by radar technicians who found they could hear the buzz of the train of pulses being transmitted by radar equipment they were working on. This phenomenon has been studied extensively by Dr. Allan Frey, whose work has been published in a number of reference books.

What Dr. Frey found was that single pulses of microwave could be heard by some people as "pops" or "clicks", while a train of uniform pulses could be heard as a buzz, without benefit of any type of receiver.

Dr. Frey also found that a wide range of frequencies, as low as 125 MHz (well below microwave) worked for some combination of pulse power and pulse width. Detailed unclassified studies mapped out those frequencies and pulse characteristics which are optimum for generation of "microwave hearing".

Very significantly, when discussing electronic harassment, is the fact that the PEAK PULSE POWER required is modest - something like 0.3 watts per square centimeter of skull surface, and this power level is only applied for a very small percentage of each pulse's cycle time. 0.3 watts/sq cm is about what you get under a 250 watt heat lamp at a distance of one meter. It is not a lot of power.

When you take into account that the pulse train is OFF (no signal) for most of each cycle, the average power is so low as to be nearly undetectable.

Frequencies that act as voice-to-skull carriers are not single frequencies, as, for example TV or cell phone channels are. Each sensitive frequency is actually a range or "band" of frequencies. A technology used to reduce both interference and detection is called "spread spectrum". Spread spectrum signals have the carrier frequency "hop" around within a specified band.

Unless a receiver "knows" the hop schedule in advance, there is virtually no chance of receiving or detecting a coherent readable signal. Spectrum analyzers, used for detection, are receivers with a screen. A spread spectrum signal received on a spectrum analyzer appears as just more "static" or noise.

My organization was delighted to find the actual method of the first successful UNclassified voice to skull experiment in 1974, by Dr. Joseph C. Sharp, then at the Walter Reed Army Institute of Research.

Dr. Sharp's basic method is shown in Appendix PM6, below. A Frey-type audible pulse was transmitted every time the voice waveform passed down through the zero axis, a technique easily duplicated by ham radio operators who build their own equipment.

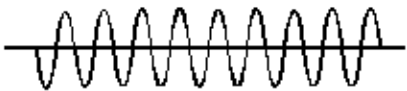

[Simple Sharp V2S demo circuit](#) Note that this is NOT a microwave voice to skull transmitter. It simply demonstrates how voice (or music) can be synthesized using a string of properly spaced clicks.

A pattern seems to be repeated where research which could be used for mind control starts working, the UNclassified researchers lose funding, and in some cases their notes have been confiscated, and no further information on that research track is heard in the unclassified press.

Pulsed microwave voice-to-skull research is one such track.

---

ORDINARY RADIO AND TV SIGNALS USE A SMOOTH WAVE FORM CALLED A 'SINE' WAVE, SHOWN BELOW. THIS SMOOTH SINE WAVE SIGNAL CANNOT NORMALLY PENETRATE THE 'VOLTAGE GRADIENT' ACROSS NERVE CELL WALLS

RADAR SIGNALS CONSIST OF VERY SHORT AND POWERFUL PULSES OF SINE WAVE SIGNAL,

... AND THESE SHORT PULSES CAN PENETRATE THE STEEP VOLTAGE GRADIENT ACROSS NERVE CELL WALLS. THIS WAS MADE PUBLIC BY G.E. SCIENTIST ALLAN H. FREY AT CORNELL UNIVERSITY IN 1962.

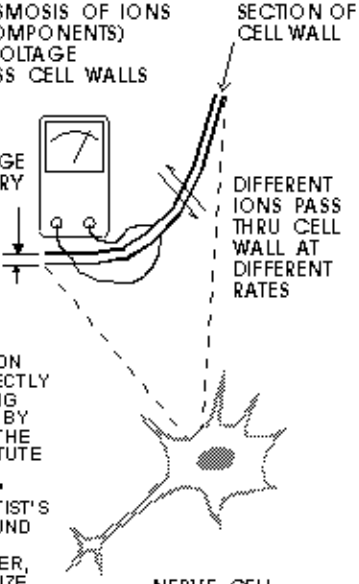

NASA, DOD, AND EPA HAVE PUBLISHED REPORTS WHICH DECLARE THAT WORD COMMUNICATION BY THIS METHOD IS AN ESTABLISHED TECHNOLOGY.

DIFFERENCES IN OSMOSIS OF IONS (DISSOLVED SALT COMPONENTS) CAUSE A SMALL VOLTAGE DIFFERENCE ACROSS CELL WALLS

WHEN A SMALL VOLTAGE APPEARS ACROSS A VERY TINY DISTANCE, THE CHANGE IN VOLTAGE IS CALLED VERY 'STEEP', AND THIS STEEP 'GRADIENT' IS WHAT KEEPS NORMAL RADIO SIGNALS FROM THROWING US INTO CONVULSIONS.

\*THE FIRST UN-CLASSIFIED SUCCESSFUL TRANSMISSION OF THE HUMAN VOICE DIRECTLY INTO THE SKULL OF A LIVING PERSON WAS PERFORMED BY DR. JOSEPH C. SHARP OF THE WALTER REED ARMY INSTITUTE OF RESEARCH IN **1974**.

BY CONVERTING A HYPNOTIST'S VOICE INTO THE ULTRASOUND RANGE USING A MODIFIED TELEPHONE VOICE CHANGER, IT IS POSSIBLE TO HYPNOTIZE A TARGET WITHOUT THE TARGET BEING AWARE, FROM HIDING, LEAVING ZERO TRACE EVIDENCE.

SECTION OF CELL WALL

DIFFERENT IONS PASS THRU CELL WALL AT DIFFERENT RATES

## VI. ULTRASOUND AND VOICE-FM

Ultrasound is vibration of the air, a liquid, or a solid, above the upper limit of human hearing which is roughly 15,000 Hz in adults. Voice-FM uses a tone at or near that upper limit, and the speaker's voice VARIES the frequency slightly. Either a "tinnitus-like sound" or nothing is heard by the target.

Ultrasound/voice-FM can be transmitted in these ways:

- directly through the air using "air type transducers"
- directly to the brain using a modulated microwave pulse train
- through the air by piggybacking an ultrasound message on top of commercial radio or television

The use of commercial radio or television requires that the input signal at the transmitter be relatively powerful, since radio and TV receivers are not designed to pass on ultrasound messages. However, the average radio and TV receiver does not simply stop ultrasound, rather, the ability to pass ultrasound messages "rolls off", i.e. decreases, as the frequency is increased.

Today's radios and TVs can carry enough ultrasound messaging to be "heard" by the human brain (though not the ear) to be effective in conveying hypnosis. This was proven by the U.S. military forces in the Gulf War.

Ultrasound's (and voice-FM's) main advantage in mind electronic harassment work is that it can carry VERBAL hypnosis, more potent than simple biorhythm entrainment.

The brain CAN "hear" and understand this "inaudible voice", while the ear and conscious hearing cannot. Once you can convey hypnotic suggestion which cannot be consciously heard, you have eliminated a major barrier to the subject's acceptance of the words being transmitted.

In previous decades, "subliminal advertising" using voice and images at normal frequencies were "time sliced" into an apparently normal radio or TV broadcast. This apparently did not work well, and now voice-FM "subliminal learning tapes" commercially available have superseded the old time slice method.

## VII. THROUGH-WALL RADAR

When "millimeter wave" microwave signals are received, the waves are so small that they can display a two-dimensional outline of an object. Lower frequency radar can only show a "blip" which indicates an object's presence or motion, but not it's outline.

Incoming millimeter wave signals are channeled on to a plate with a two-dimensional array of elements sensitive to millimeter wave frequencies, in exactly the same way a camcorder focusses light on to array of sensitive light pickups. Each of the sensitive elements is scanned in a definite order, just as with a TV camera and screen, and a picture showing the outline of an object is formed.

If no signal is sent out by the scanner, it is called "passive" millimeter wave radar. If the subject is illuminated by a separate source of millimeter wave signals, it is an "active" scanner. Since passive systems can penetrate clothing and non-conductive walls UNDETECTABLY, it is obvious that with just a small millimeter wave "flashlight", non-conductive walls can be scanned through and still very little detectable signal is present.

Millimeter wave through-clothing, through-luggage is currently in use at airports, but can be a powerful tool for stalking groups wishing to harass a target at home.

The subject is portrayed in the nude.

#### VIII. THOUGHT READING

"Thought reading", at least of words "silently said-to-self", appears to be not that difficult to do. NASA is experimenting with sensitive pickup coils on the throat of a pilot, for example.

Thoughtreading by way of pickup wires or coils on the head is an enhanced version of computer speech recognition, with EEG waves being substituted for sound waves.

The easiest "thought" reading is actually remote picking up of the electro-magnetic activity of the speech-control muscles in the vocal cords.

When we "say words to ourselves, silently", or, read a book, we can actually  
FEEL the slight sensations of those words in our vocal muscles - all that is  
absent is the passage of air. Coordinated speech signals are relatively strong and relatively consistent.

The other kind of "thought reading", i.e. "MINING" someone's brain for information from a distance is SPECULATIVE. We targetted individuals have no way to verify that is happening, however, we do know that we are "fed" hypnotic signals to force consistent "neutral" content (but of different character than prior to becoming test subjects,) DREAMS.

These forced, neutral content ("bland" content) dreams occur every single night and may represent the harassers' (or experimenters') efforts to have our experiences portray themselves in such dreams, in effect, MINING our experiences. Again, this is SPECULATION, but it seems very logical.

Appendix TR4, referenced below, confirms the ability of current unclassified technology to actually see what a living animal sees, electronically. It is therefore extremely likely that these forced dreams can be displayed on the experimenters' screens.

Finally, among the "couple of thousand" known organized stalking and electronic harassment, we sometimes have strangers either tell us what we are thinking, say they can pick up our broadcast thoughts, or tell us about events inside our homes at times when they could not have seen from the outside. BUGS and covert cameras are not used, and they have been searched for.

[Up to Contents](#)

## IX. IMPLANTS

Electronic implants are actually one of the older forms of electronic mind control technology. Implants can either receive instructions via radio signals, passing them to the brain, or, can be interrogated via external radio signals to read brain activity at a distance.

Implants are currently used, however, many of our group have had no surgery, unexplained wounds, or missing time since becoming targets, and we suspect that both implant and non-implant technology may be in use. Implants are significant for these reasons:

1. Their use, since World War II and continuing to the present day, associated with MKULTRA atrocities, is a crystal clear indication that a MOTIVE POOL of unethical researchers has existed through the late 1970s. The same people, none jailed, are still working, by and large. The reader can see that the existence of the same motive pool is overwhelmingly likely, given that no social changes have occurred which would prevent that.
2. The fact that to date (autumn 1999) no victim who has had implants removed has ever been able to get custody of the removed implant shows that research programmes using implants are still quite active and obviously quite important to someone. Implants, even though not in the hands of the victim, were photographed and are quite real:

See <http://www.ritualabuse.net/MCF/>, the Mind Control Forum for details on involuntary experimentees' implantation and removal experiences.

3. The use of implants shows that, in the field of involuntary human experimentation, not every perpetrator group has access to the most sophisticated (implant-less) technology. Since implants for

beneficial purposes are actively being promoted by NIH, it is obvious they will not disappear any time soon.

Appended articles:

[IMP1](http://www.raven1.net/centneur.htm) <http://www.raven1.net/centneur.htm>, an article showing that human implantation is being done and even encouraged by the U.S. NIH (National Institutes of Health). While this public information is for the public good, it is a small step to move from publicly known and VOLUNTARY implantation to CONCEALED implantation for INVOLUNTARY and criminal purposes.

## X. CONCLUSION

Conclusion? While the documentary evidence in this report, attached as appendices below, does not exactly "prove" we are being targeted by intelligence/defence contractors using classified electronic weapons, it certainly eliminates the argument that such devices are impossible, don't exist, or that government has "no interest" in them, or that the "were tried years ago but didn't work".

Add in the experiences of victims of the Tuskegee untreated syphilis experiments, the feeding of radioactive food to uninformed U.S. citizens, and the atrocities perpetrated under the institutional/drug/child abuse phases of the CIA's MKULTRA programmes, and you have more than enough grounds to petition for an independent, open investigation of electronic harassment capable technologies.

No doubt there were citizens of ancient Pompeii who argued that Vesuvius could not possibly erupt in their lifetimes.

Eleanor White

If any doubts as to the importance of this issue remain, please see below what the U.S. NSA (National Security Agency) says would be the result of releasing information on electronic mind control, which is one motive for developing weapons which can be used for electronic harassment:

NATIONAL SECURITY AGENCY  
CENTRAL SECURITY SERVICE  
FORT GEORGE G. MEADE, MARYLAND 20755-8000

Serial: J9728-96

19 March 1997

Ms. Cheryl Welsh  
915 Zaragoza St.  
Davis, CA 95616

**Obvious question:  
If government-sponsored  
mind control is not happening,  
then why could it "reasonably  
be expected to cause  
exceptionally grave damage  
to national security"!?**

Dear Ms. Welsh:

This responds to your Freedom of Information Act (FOIA) request dated 28 July 1995 submitted to the Defense Intelligence Agency (DIA) for records pertaining to yourself and other various topics. A copy of your request is attached for your convenience. On 21 October 1996 the DIA referred one responsive NSA-originated document relating to a Soviet mind control system to this Agency for our review and direct response to you.

The document has been reviewed by this Agency pursuant to the provisions of the FOIA and has been found to be currently and properly classified in accordance with Executive Order 12958. This document meets the criteria for classification as set forth in subparagraphs (c) and (g) of section 1.5 and remain classified TOP SECRET as provided in section 1.3 of Executive Order 12958. The information is classified because its disclosure could reasonably be expected to cause exceptionally grave damage to the national security. Because the information is currently and properly classified, it is exempt from disclosure pursuant to the first exemption of the FOIA (5 U.S.C. section 552(b)(1)).

In addition, this Agency is authorized by various statutes to protect certain information concerning its activities. We have determined that such information exists in this document. Accordingly, those portions are also exempt from disclosure pursuant to the third exemption of the FOIA which provides for the withholding of information specifically protected from disclosure by statute. The specific statutes applicable in this case are

APPENDIX PM1 ... THE LIDA MACHINE

Associated Press (Exact date not shown on copy but tests took place 1982/83) Loma Linda (Veterans Hospital research unit) San Bernardino County

An old medical, Russian-made device that transmits pulses of 40 MHz radio signal at pulse rates designed to match relaxed and sleeping states originally.

The machine, known as the LIDA, is on loan to the Jerry L. Pettis Memorial Veterans Hospital through a medical exchange program between the Soviet Union and the United States.

Hospital researchers have found in changes behaviour in animals.

"It looks as though instead of taking a valium when you want to relax yourself it would be possible to achieve a similar result, probably in a safer way, by the use of a radio field that will relax you" said Dr. Ross Adey, chief of research at the hospital. [Dr. Adey is now deceased.]

[Missing one line on the photocopy] ... manual shows it being used on a human in a clinical setting, Adey said. The manual says it is a "distant pulse treating apparatus" for psychological problems, including sleeplessness, hypertension and neurotic disturbances.

The device has not been approved for use with humans in this country, although the Russians have done so since at least 1960, Adey Said.

Low frequency radio waves simulate the brain's own electromagnetic current and produce a trance-like state.

Adey said he put a cat in a box and turned on the LIDA.

"Within a matter of two or three minutes it is sitting there very quietly ... it stays almost as though it were transfixed" he said.

The hospital's experiment with the machine has been underway for three months and should be completed within a year, Adey said.

Eleanor White's comments (Dr. Byrd's statement follows):

1. Heavy "fatigue attacks" are a very common experience among involuntary neuro-electromagnetic experimentees. The LIDA device could, right out of the box, be used as a fatigue attack weapon, FROM HIDING, thru non- or semi-conductive walls.

2. If the LIDA machine is tuned for tranquilizing effect, then it might also be tuned for "force awake" and other effects too. This device is an electronic harassment weapon, AS IS. A TV documentary stated the Russian medical establishment considers this 1950s device obsolete. (Wonder what has taken it's place?)

Below is a statement from Dr. Eldon Byrd, U.S. psychotronic researcher who funded Dr. Adey's work with the LIDA machine:

"The LIDA machine was made in the 1950's by the Soviets. The CIA purchased one through a Canadian front for Dr. Ross Adey, but didn't give him any funds to evaluate it.

"I provided those funds from my project in 1981, and he determined that the LIDA would put rabbits into a stupor at a distance and make cats go into REM.

"The Soviets included a picture with the device that showed an entire auditorium full of people asleep with the LIDA on the podium. The LIDA put out an electric field, a magnetic field, light, heat, and sound (of course light and heat are electromagnetic waves, but at a much higher frequency than the low frequencies of the electric and magnetic fields mentioned above).

"The purported purpose of the LIDA was for medical treatments; however, the North Koreans used it as a brain washing device during the Korean War. The big question is: what did they do with the technology? It could have been improved and/or made smaller. It is unlikely that they abandoned something that worked.

"Direct communication with Ross Adey: While he was testing the LIDA 4, an electrician was walking by and asked him where he got the "North Korean brain washing machine". Ross told him that it was a Russian medical device.

"The guy said he had been brain-washed by a device like that when

he was in a POW camp. They placed the vertical plates alongside his head and read questions and answers to him. He said he felt like he was in a dream. Later when the Red Cross came and asked questions, he responded with what had been read to him while under the influence of the device. He said he seemed to have no control over the answers.

"The LIDA is PATENTED IN THE US. Why? They are not sold in the US--the only one I know that exists is the one that was at Loma Linda Medical Center where Adey used to work. Eldon"

.....

Involuntary neuro-experimentation activist Cheryl Welsh, Davis CA, sent in this clipping from an article by Dr. Ross Adey but without complete bibliographic references:

"Soviet investigators have also developed a therapeutic device utilizing low frequency square wave modulation of a radiofrequency field. This instrument known as the Lida was developed by L. Rabichev and his colleagues in Soviet Armenia, and is designed for "the treatment of neuropsychic and somatic disorders, such as neuroses, psychoses, insomnia, hypertension, stammering, bronchia asthma, and asthenic and reactive disturbances".

It is covered by U.S. Patent # 3,773,049. In addition to the pulsed RF field, the device also delivers pulsed light, pulsed sound, and pulsed heat. Each stimulus train can be independently adjusted in intensity and frequency.

The radiofrequency field has a nominal carrier frequency of 40 MHz and a maximum output of approximately 40 Watts. The E- field is applied to the patient on the sides of the neck through two disc electrodes approximately 10 cm in diameter. The electrodes are located at a distance of 2-4 cm from the skin.

[Eleanor White's comment: The fact that Dr. Ross Adey mentioned an "audience" being put to sleep by the LIDA suggests that the "E-field" electrodes may not play an essential role. The radio signal appears to be the primary cause of the sleep/trance effect.]

Optimal repetition frequencies are said to lie in the range from 40 to 80 pulses per minute. Pulse duration is typically 0.2 sec. In an 8 year trial period, the instrument was tested on 740 patients, including adults and children. Postivive therapeutic effects were claimed in more..."

APPENDIX PM2 - FREY'S PAPER

## **Human Auditory System Response To Modulated Electromagnetic Energy**

**ALLAN H. FREY**

## General Electric Advanced Electronics Center Cornell University Ithaca, New York

TRANSCRIPTION, Courtesy of MindNet Archives, Mike Coyle  
posted at <http://www.ritualabuse.net/MCF/>

Frey, Allan H., Human Auditory system response to modulated electromagnetic energy. J. Appl. Physiol. 17(4): 689-692. 1962.

(\*) Asterisks indicate unreadable characters in the original copy.

NOTE: In 1962, frequencies were expressed as kiloCYCLES, megaCYCLES, etc., with abbreviations being kc, mc

--The intent of this paper is to bring a new phenomena to the attention of physiologists. Using extremely low average power densities of electromagnetic energy, the perception of sounds was induced in normal and deaf humans. The effect was induced several hundred feet from the antenna the instant the transmitter was turned on, and is a function of carrier frequency and modulation. Attempts were made to match the sounds induced by electromagnetic energy and acoustic energy.

The closest match occurred when the acoustic amplifier was driven by the rf transmitter's modulator. Peak power density is a critical factor and, with acoustic noise of approximately 80 db, a peak power density of approximately 275 mw / rf is needed to induce the perception at carrier frequencies 125 mc and 1,310 mc. The average power density can be at rf as low as 400  $\mu$ w/cm<sup>2</sup>. The evidence for the various positive sites of the electromagnetic energy sensor are discussed and locations peripheral to the cochlea are ruled out.

Received for publication 29 September 1961.

A significant amount of research has been conducted with the effects of radio-frequency (rf) energy on organisms (electromagnetic energy between 1 kc and \*\* Gc). Typically, this work has been concerned with determining damage resulting from body temperature increase. The average power densities used have been on the order of 0.1-t w/cm<sup>2</sup> used over many minutes to several hours.

In contrast, using average power densities measured in microwatts per square centimeter, we have found that \*\*\*\*r effects which are transient, can be induced with rf energy. Further, these effects occur the instant the transmitter is turned on. With appropriate modulation, the perception of different sounds can be induced in physically deaf, as well as normal, in human subjects at a distance of inches up to thousands of feet from the transmitter. With somewhat different transmission parameters, you can induce the perception of severe buffeting of the head, without such apparent vestibular symptoms as dizziness or nausea. Changing transmitter parameters down, one can induce a "pins-and-needles" sensation.

Experimental work with these phenomena may yield information on auditory system functioning and, more generally, in the nervous system function. For example, this energy could possibly be used as a tool to explore nervous system coding, possibly using Neider and Neff's procedures (1), and for stimulating the nervous system without the damage caused by electrodes.

Since most of our data have been obtained of the "rf sound" and only the visual system has previously been shown to respond to electromagnetic energy, this paper will be concerned only with the auditory effects data. As a further restriction, only data from human subjects will be reported, since only this data can be discussed meaningfully at the present time. The long series of studies we performed to ascertain that we were dealing with a biological significant phenomena (rather than broadcasts from sources such as loose fillings in the teeth) are summarized in another paper (2), which also reports on the measuring instruments used in this work.

The intent of this paper is to bring this new phenomenon to the attention of physiologists. The data reported are intended to suggest numerous lines of experimentation and indicate necessary experimental controls.

Since we are dealing with a significant phenomenon, we decided to explore the effects of a wide range of transmitter parameters to build up the body of knowledge which would allow us to generate hypotheses and determine what experimental controls would be necessary. Thus, the numbers given are conservative; they should not be considered precise, since the transmitters were never located in ideal laboratory environments. Within the limits of our measurements, the orientation of the subject in the rf field was of little consequence.

Most of the transmitters used to date in the experimentation have been pulse modulated with no information placed on the signal. The rf sound has been described as being a buzz, clicking, hiss, or knocking, depending on several transmitter parameters, i.e., pulse width and pulse-repetition rate (PRF). The apparent source of these sounds is localized by the subjects as being within, or immediately behind the head. The sound always seems to come from within or immediately behind the head no matter how the subjects twists or rotates in the rf field.

Our early experimentation, performed using transmitters with very short square pulses and high pulse-repetition rates, seemed to indicate that we were dealing with harmonics of the PRF. However, our later work has indicated that this is not the case; rather, the rf sound appears to be incidental modulation envelope on each pulse, as shown in Fig 1.

Some difficulty was experienced when the subjects tried to match the rf sound to ordinary audio. They reported that it was not possible to satisfactorily match the rf sound to a sine wave or to white noise. An audio amplifier was connected to a variable bypass filter and pulsed by the transmitter pulsing mechanism. The subjects, when allowed to control the filter, reported a fairly satisfactory match. The subjects were fairly well satisfied with all frequencies below 5-kc audio were eliminated and the high- frequency audio was extended as much as possible. There was, however, always a demand for more high-frequency components. Since our tweeter has a rather good high-frequency response, it is possible that we have shown an analogue of visual phenomenon in which people see farther into the ultraviolet range when the lenses is eliminated from the eye. In other words, this may be a demonstration that the mechanical transmission system of the ossicles cannot respond to as high a frequency as the rest of the auditory system. Since the rf bypasses

the ossicle system and the audio given the subject for matching does not, this may explain the dissatisfaction of our subjects in the matching.

FIG. 1. Oscilloscope representation of transmitter output over time (pulse-modulated).

FIG. 2. Audiogram of deaf subject (otosclerosis) who had a "normal" rf sound threshold.

TABLE 1. Transmitter parameters

| Trans-<br>mitter | Frequency,<br>mc | Wave-<br>length, cm | Pulse Width,<br>_u_sec | Pulses Sec. | Duty Cy. |
|------------------|------------------|---------------------|------------------------|-------------|----------|
| A                | 1,310            | 22.9                | 6                      | 244         | .0015    |

FIG. 4. Threshold energy as a function of frequency of electromagnetic energy (ambient noise level 70-90 db).

FIG. 5. Microwave power distribution in a forehead model neglecting resonance effects and considering only first reflections (from Nieset et al. (5), modified).

FIG. 6. Area most sensitive to electromagnetic energy (shaded portion).

Given: As a threshold for the rf sound, a peak power density of 275 mw/cm<sup>2</sup> determined in an ambient noise environment of 80 db. Earplugs attenuate the ambient noise 30 db.

If: 1 mw/cm<sup>2</sup> is set equal to 0 db, then 275 mw/cm<sup>2</sup> is equal to 24 db.

Then: We can reduce the rf energy 50 db to -26 db as we reduce the noise level energy from 50 db to 0 db. We found that -26 db rf energy is approximately 3  $\mu$ w/cm<sup>2</sup>.

Thus: If an anechoic room, rf sound could theoretically be induced by a peak power density of 3  $\mu$ w/cm<sup>2</sup> measured in free space. Since only 10% of this energy is likely to penetrate the skull, the human auditory system and a table radio may be one order of magnitude apart in sensitivity to rf energy.

#### Up to Contents

#### RF DETECTOR IN AUDITORY SYSTEM

One possibility that seems to have been ruled out in our experimentation is that of a capacitor-type effect with the tympanic membrane and oval window acting as plates of a capacitor. It would seem possible that these membranes, acting as plates of a capacitor, could be set in motion by rf energy. There are, however, three points of evidence against this possibility. First, when one rotates a capacitor in an rf field, a rather marked change occurs in the capacitor as a function of its orientation in the field. When our subjects rotate or change the positions of their heads in the field, the loudness of the rf sound does not change appreciably. Second, the distance between these membranes is rather small, compared with the wavelengths used. As a third point, we found that one of our subjects who has otosclerosis heard the rf sound.

Another possible location for the detecting mechanism is in the cochlea. We have explored this possibility with nerve-deaf people, but the results are inconclusive due to factors such as tinnitus. We are currently exploring this possibility with animal preparations.

The third likely place for the detection mechanism is the brain. Burr and Mauro (6) presented evidence that indicates that there is an electrostatic field about neurons. Morrow and Sepiel (7) presented evidence that indicates the existence of a magnetic field about neurons. Becker (personal communication) has done some work indicating that there is longitudinal flow of charged carriers in neurons. Thus, it is reasonable to suspect that possibly the electromagnetic field could interact with neuron fields. As yet, evidence of this possibility is inconclusive. The strongest point against it is that we have not found visual effects although we have searched for them. On the other hand, we have obtained other nonauditory effects and have found that the sensitive area for detecting rf sounds is a region over the temporal lobe of the brain. One can shield, with a 2-in.2 piece of fly screen, a portion of the stippled area shown in Fig. 6 and completely cut off the rf sound.

Another possibility should also be considered. There is no good reason to assume that there is only one detector site. On the contrary, the work of Jones et al. (8), in which they placed electrodes in the ear and electrically stimulated the subject, is sufficiently relevant to suggest the possibility of more than one detector site. Also, several sensations have been elicited with

properly modulated electromagnetic energy. It is doubtful that all of these can be attributed to one detector.

As mentioned earlier, the purpose of this paper is to focus the attention of physiologists on an unusual area and stimulate additional work on which interpretations can be based. Interpretations have been deliberately omitted from this paper since additional data are needed before a clear picture can emerge. It is hoped that the additional exploration will also result in an increase in our knowledge of nervous system functions.

Abstract:

A decoy and deception concept presently being considered is to remotely create the perception of noise in the heads of personnel by exposing them to low power, pulsed microwaves. When people are illuminated with properly modulated low power microwaves the sensation is reported as a buzzing, clicking, or hissing which seems to originate (regardless of the person's position in the field) within or just behind the head. The phenomena occurs at average power densities as low as microwatts per square centimeter with carrier frequencies from 0.4 to 3.0 GHz. *By proper choice of pulse characteristics, intelligible speech may be created.* Before this technique may be extended and used for military applications, an understanding of the basic principles must be developed. Such an understanding is not only required to optimize the use of the concept for camouflage, decoy and deception operations but is required to properly assess safety factors of such microwave exposure.

Eleanor White's comments: I have received this report in it's entirety and I find that the article itself is about the title: Cerebral blood flow in rats. We involuntary experimentees are extremely lucky that the authors mentioned the success of microwave voice to skull transmission in this official document.

Below I have extracted some of the references to the full document which appear to be more promising and specific. This sub-list is guesswork since the references omit article titles, but any articles by Frey or Justesen are potentially useful.

#### Abstract:

In this research program, we plan to investigate a revolutionary new form of communication based on the microwave auditory effect. This proposed communication idea satisfies the requirements for an innovative, natural interface requiring no learning or training for efficient operation and effective communications. The purpose of the program proposed here is to extend the results of a recent feasibility study, performed for the Armstrong Laboratory/OEDR. *The study found that voice communications, via the microwave auditory effect, are highly feasible.* In Phase I of this SBIR, we propose to investigate the range of potential applications for this radically different form of voice communication and recommend hardware and systems concepts suitable for laboratory and brassboard demonstrations to be built under Phase II.

#### APPENDIX PM5 - BIOLOGICAL AMPLIFICATION

##### Electromagnetic Interaction With Biological Systems

edited by Dr. James C. Lin, University of Illinois  
1989 Plenum Press, New York

Proceedings of the Joint Symposium on Interactions of Electromagnetic Waves with Biological Systems, held as part of the Twenty-Second General Assembly of the International Union of Radio Science, Aug 25 - Sept 2, 1987, in Tel Aviv, Israel.

Eleanor White's comments on this posting:

This book focusses on NON-ionizing radiation, and contains detailed texts about NON-THERMAL effects. In other words,

"right up our alley".

The main use of this book is to show that it is easy for electromagnetic signals to cause radio frequency hearing and other effects at LOW power levels. This in turn can be used to explain why DETECTION is so very difficult.

I don't understand the biological jargon, however, a few of the more plain-language paragraphs STUNNINGLY verify that with careful choice of signal frequency and modulation, not only can the body's cells detect the modulation envelope of an incoming radio signal (i.e. function as a "cellular crystal set") but even AMPLIFY these carefully formed signals. (Amplification of other effects, such as proneness to disease, is also covered in the book.)

"Detection", in terms of radio signal reception, means that some portion of the reciever "rectifies", that is, turns the AC of the incoming signal into varying DC. If this conversion is not done, voice to skull wouldn't work.

The book touches also on ways in which cells communicate, and shows that electromagnetic fields of relatively weak power levels can affect intercellular communication, which is, as I understand the subject, what the brain is "all about".

Bio-amplification is apparently why radio signals of very low average power ("MICROWatts" per NASA) can still produce audio effects, and no doubt plays a part in difficulties in detection.

When two more characteristics of voice to skull are factored in:

1. The carrier signal can be "hopped" continuously within the bioeffective bandwidth, known as "spread spectrum" transmission, and,
2. The voice modulation most effective for undetectable hypnosis is evidently a voice shifted just above normal hearing, but still audible to the brain,

...you have a recipe for incredibly difficult signals to detect.

This book is a mainstream publication, very well suited to use in our publicity and persuasion campaigns, and our dealings with authorities who claim radio signals don't affect living tissue except to heat it.

Finally, many thanks to Blanche Chavoustie for providing me photocopies of this book - a saintly work!

.....  
Page 110:

...  
At that time [1953] excitatory mechanisms in nerver fibers and nerve cells were grouped under a common rubric of ionic equilibrium mechanisms. There was little interest in the possibility that functional organization of mebranes of cell bodies might involve threshhold sensitivities to both oscillating EM fields and to molecular stimuli *at energy levels substantially lower* than predicted by Hodgkin-Huxley models, and *substantially below typical threshholds in nerve fibers.*

Much recent research cited below has shown that imposed weak low frequency fields (and radiofrequency fields amplitude-modulated at ELF frequencies) that are many orders of magnitude weaker in the pericellular fluid [fluid between adjacent cells] than the membrane potential gradient [voltage across the membrane] can modulate actions of hormone, anti-body neurotransmitter and cancer-promoter molecules at their cell surface receptor sites.

From their electrical characteristics, these sensitivities appear to involve nonequilibrium and highly cooperative processes that mediate a major amplification of initial weak triggers associated with binding of these molecules at their specific cell surface receptor sites.

(Adey, 1983, 1986, 1987; Adey and Lawrence, 1984; Lawrence and Adey, 1982).

Page 122:

Cooperative Modification of Calcium Binding by RF Fields at Cell Surfaces with Amplification of Initial Signals

Initial stimuli associated with weak perpendicular EM fields and with binding of stimulating molecules at their membrane receptor sites elicit a HIGHLY COOPERATIVE modification of Ca++ binding to glycoproteins along the membrane surface.

As noted above, a longitudinal spread is consistent with the direction of extracellular current flow associated with physiological activity and imposed EM fields. This cooperative modification of surface Ca++ binding is an AMPLIFYING STAGE, with evidence from concurrent initial molecular binding events by imposed RF fields that there is a far greater increase in Ca++ efflux than is accounted for in the events of receptor-ligand binding (Bawin and Adey, 1976; Bawin et al, 1975; Liu-Liu and Adey, 1982).

Page 124:

...  
Enzymes are protein molecules that function as catalysts, initiating and enhancing chemical reactions that would not otherwise occur at tissue temperatures. This ability resides in the pattern of electrical charges on the molecular surface. In the fashion of more familiar chemical catalysts, such as the hydrocarbon oxidation systems which function only at very high temperatures in automotive exhaust systems, a catalyst emerges unchanged from these reactions and is thus able to participate indefinitely in a specific reaction.

Activation of these enzymes and the reactions in which they participate involve energies millions of times greater than in the cell surface cell surface triggering events initiated by the EM fields, emphasizing the MEMBRANE AMPLIFICATION inherent in this trans-membrane signaling sequence.

Page 131:

...  
Stimulus Amplification in Cooperative Systems

...  
It is therefore clear that OBSERVED EM field interactions

with cells and tissues based on oscillating ELF tissue gradients between  $10^{-7}$  and  $10^{-1}$  volts per centimeter would involve cooperativity MANY ORDERS OF MAGNITUDE GREATER than envisaged in the examples just cited.

In part this discrepancy appears to relate to far greater sensitivities to low-frequency EM fields [EW: ELF, that is, the "entrainment" frequencies] and to RF fields with low-frequency amplitude-modulation [EW: this includes radar hearing signals] than to imposed step functions or DC gradients [EW: common with contact electrodes, not of interest in mind control at a distance] used in many electrochemical experiments and models to test levels of cooperativity in biological systems.  
(Blank, 1972)

[EW: In plain language, both entrainment (ELF) fields and pulsating radar-like (RF) fields are a hell of a lot more influential on cells than some experimental work using DC and electrode methods.]

Page 95:

[EW: This section is not part of the demonstration that EM signals can be biologically amplified, as above. It's main interest is that a magnetophosphene "gun" was under consideration by the U.S. National Institute of Justice in 1993, along with a "fever" gun and a "convulsion" gun, both using microwave technology. As of 1999, nothing has been heard from NIJ on this development, however, page 95 here suggests that such a microwave weapon is feasible.]

#### Magnetophosphenes

An effect of time-varying magnetic fields on humans was first described by d'Arsonval (1896) [EW: Anyone doubt there has been some progress since 1896?] is the induction of a flickering illumination within the visual field known as magnetophosphenes. This phenomenon occurs as an immediate response to stimulation by either pulsed or sinusoidal magnetic fields with frequencies less than 100 Hz, and the effect is completely reversible with no apparent influence on visual acuity. The maximum visual sensitivity to sinusoidal magnetic fields has been found at a frequency of 20 Hz in human subjects with normal vision.

[EW: Radio signals are a combination of electric and magnetic fields. To radiate a 20 Hz signal would require such huge antennas that it is impractical to do so. I'd recommend that if someone has the facilities and skills, I'd try some VHF (or microwave) pulsing at 20 Hz on an RF carrier at, say, the 2-meter (144-148 MHz) ham band with a duty cycle, say, of 20% pulse-ON time.]

APPENDIX PM6 - VOICE TO SKULL, 1974 SUCCESS

Microwaves and Behavior  
Dr. Don R. Justesen  
Laboratories of Experimental Neuropsychology  
Veterans Administration Hospital

Kansas City, Missouri  
as published in  
American Psychologist  
Journal of the American Psychological Association  
Volume 30, March 1975, Number 3

..... Eleanor's comments .....  
This LAYS TO REST ANY DOUBTS THAT VOICE TO SKULL  
TECHNOLOGY DOES NOT EXIST OR IS "IN THE FUTURE"!  
PERIOD!

This article describes in precise terms how Dr. Joseph C. Sharp and staff transmitted the WORDS for the digits 1 to 10 using a modulated version of an Allan Frey type pulsed microwave transmitter. A detailed description of Frey transmitters can be viewed at:

#### Appendix PM2

The relevant text is below.

.....  
Page 396:

...

The demonstration of sonic transduction of microwave energy by materials lacking in water LESSENS the likelihood that a thermohydraulic principle is operating in human perception of the energy. Nonetheless, some form of thermoacoustic transduction probably underlies perception. If so, it is clear that simple heating is NOT a sufficient basis for the Frey effect; the requirement for pulsing of radiations appears to implicate a thermodynamic principle.

Frey and Messenger (1973) and Guy, Chou, Lin, and Christensen (1975) confirmed that a microwave pulse with a slow rise time is INeffective in producing an auditory response; only if the rise time is SHORT, resulting in effect in a square wave with respect to the leading edge of the envelope of radiated radio-frequency energy, does the auditory response occur.

[Eleanor's comment: This is why we don't "hear" ordinary radio and TV signals.]

Thus the rate of change (the first derivative) of the waveform of the pulse is a CRITICAL factor in perception. Given a thermodynamic interpretation, it would follow that information can be encoded in the energy and "communicated" to the "listener".

Communication has in fact been demonstrated. A. Guy (Note 1), a skilled telegrapher, arranged for his father, a retired railroad telegrapher, to operate a key, each closure and opening of which resulted in a pulse of microwave energy. By directing the radiations at his own head, complex messages via the Continental Morse Code were readily received by Guy.

Sharp and Grove (note 2) found that appropriate modulation of microwave energy can result in "wireless" and

"receiverless" communication of SPEECH. The recorded by voice on tape each of the single-syllable words for digits between 1 and 10. The electrical sine-wave analogs of each word were then processed so that each time a sine wave crossed ZERO REFERENCE IN THE NEGATIVE DIRECTION, a brief pulse of microwave energy was triggered.

[Eleanor's comment: This is, in effect a form of what is called pulse-RATE modulation.]

By radiating themselves with these "voice modulated" microwaves, Sharp and Grove were READILY able to hear, identify, and distinguish among the 9 words. [Typo?] The sounds heard were not unlike those emitted by persons with artificial larynxes.

Communication of more complex words and of sentences was not attempted because the averaged densities of energy required to transmit longer messages would approach the current 10 milliwatts per square centimeter limit of safe exposure.

The capability of communicating directly with a human being by "receiverless radio" has obvious potentialities both within and without the clinic. But the hotly debated and unresolved question of how much microwave radiation a human being can safely be exposed to will probably forestall applications within the near future.

SUBJ: SCIENTISTS DISCUSS MIND CONTROL TECHNOLOGY

TEXT:

(((FBIS EDITORIAL REPORT)) MOSCOW RUSSIAN PUBLIC TELEVISION FIRST CHANNEL NETWORK IN RUSSIAN AT 1610 GMT ON 6 OCTOBER DURING THE "MAN AND LAW" PROGRAM CARRIES A FIVE-MINUTE FEATURE ON MIND-CONTROL TECHNOLOGY.

ANNOUNCER YURIY VOROBYEVSKIY BEGINS BY SAYING THE FBI HAS ALREADY USED A "PSYCHOTRONIC" DEVICE DEVELOPED BY A MOSCOW SCIENTIST, IGOR SMIRNOV. VOROBYEVSKIY THEN SHOWS VIDEO FOOTAGE FILMED AT SMIRNOV'S LABORATORY. A MAN IN A SPECIALLY FITTED HELMET WITH ELECTRIC CABLES ATTACHED IS SITTING IN FRONT OF A SPECIAL SCREEN ON WHICH VARIOUS ENCODED MESSAGES FLASH. VOROBYEVSKIY SAYS: "THE CODED SIGNAL IS BEING PICKED UP THROUGH EARPHONES AS A LIGHT RUSTLE. HOWEVER, THIS IMPERCEPTIBLE COMMAND REACHES THE BOTTOM LAYERS OF CONSCIOUSNESS. THIS METHOD IS USED FOR TREATING NERVOUS, PSYCHIATRIC, AND OTHER DISORDERS. BUT THE QUESTION IS: COULD THIS BE USED AS THE NOTORIOUS PSYCHOTRONIC WEAPON?"

NEXT, VOROBYEVSKIY INTRODUCES VIDEO FOOTAGE WHICH HE SAYS WAS FILMED THREE YEARS AGO AT A RESEARCH INSTITUTE OF THE RUSSIAN MINISTRY OF INTERNAL AFFAIRS. IT SHOWS A CLASS OF OMON SPECIAL-PURPOSE TROOP RECRUITS APPARENTLY IN A HYPNOTIC TRANCE LOOKING AT A TELEVISION SCREEN. THIS SHOWS A MAN DRESSED IN BLACK WHO IS ENCOURAGING FEELINGS OF CONFIDENCE IN HIS AUDIENCE. AN IMAGE OF A FEMALE NUDE IS USED TO REINFORCE THE DESIRE FOR SUPERIORITY AND MALE DOMINANCE.

UNCLASSIFIED

UNCLASSIFIED

PAGE:0051

IGOR SMIRNOV, CAPTIONED AS MEMBER OF THE COMPUTER PSYCHOTECHNOLOGY INSTITUTE, PROPOSES THE USE OF "INDIRECT METHODS" TO FIGHT DRUG ADDICTION. HE SAYS: "THIS COULD BE DONE STRAIGHT FROM THE TELEVISION SCREEN, IN A SPECIAL PROGRAM, AT AN APPOINTED TIME OF THE WEEK. THE TIME SHOULD BE ANNOUNCED IN ADVANCE, WITH A WARNING THAT SPECIAL SUBLIMINAL COMMANDS WILL BE BROADCAST, SO THAT THOSE WHO ARE AFRAID SOMETHING COULD HAPPEN TO THEM CAN SWITCH OFF AT THAT TIME."

ANOTHER SCIENTIST, VALERIY KANYUKA, HEAD OF A PSYCHOTRONIC RESEARCH CENTER NEAR MOSCOW, DISAGREES WITH SUCH METHOD, STATING: "UNTIL ALL THE COUNTRIES OF THE WORLD AGREE ON THIS, UNTIL INTERNATIONAL LEGISLATION BANNING PSYCHO-PHYSICAL MANIPULATION OF THE HUMAN MIND AND INFLUENCE ON HUMAN BEHAVIOR HAS BEEN DEVELOPED, THERE SHOULD BE A MORATORIUM ON SUCH RESEARCH." VOROBYEVSKIY SAYS KANYUKA APPEARED WITHOUT SUCCESS TO THE FORMER RUSSIAN SUPREME SOVIET IN A LETTER MENTIONING "CLASSIFIED DECISIONS OF THE CPSU CENTRAL COMMITTEE ON THE SUBJECT OF REMOTE INFLUENCING OF THE MIND." VIDEO SHOWS KANYUKA AND A TYPED LETTER.

VOROBYEVSKIY THEN INTRODUCES ALEKSANDR KACHUROV, CAPTIONED AS MEMBER OF MOSCOW PSYCHOTRONIC INSTITUTE. KACHUROV OPENS A BRIEFCASE WITH SOME DEVICE INSIDE AND SAYS: "ANYONE WHO WANTS TO POSSESS SOMEONE'S SECRETS IS WELCOME TO ORDER A SPECIAL DEVICE FOR THEMSELVES, AS LONG AS THEY ARE PREPARED TO PAY FOR IT. ANYTHING CAN BE MADE. WHAT ABOUT THE MORAL ASPECT, PEOPLE MIGHT ASK. SOME SAY: IT IS WRONG, YOU ARE MAKING PSYCHOTRONIC WEAPONS." VOROBYEVSKIY INTERJECTS: "LET'S SAY, THE MILITARY ORDERS YOU TO DESIGN A CERTAIN TYPE OF EQUIPMENT?" KACHUROV SAYS: "YES, BUT, EXCUSE ME, THE MILITARY-INDUSTRIAL COMPLEX IS THE MOST POWERFUL INDUSTRIAL GROUP THERE IS. WHAT ARE WE TALKING ABOUT? WE ARE ALL DEVELOPING WEAPONS OF THIS KIND. ARE NUCLEAR WEAPONS ANY WORSE?"

VOROBYEVSKIY SAYS LAWS ARE BADLY NEEDED TO PROTECT THE INDIVIDUAL FROM ALL TYPES OF MIND CONTROL.

A STATE DUMA EXPERT, YURIY LOPATIN SAYS: "PSYCHOTRONIC TECHNOLOGY IS SPREADING ILLEGALLY. A LAW BANNING THE ILLEGAL DEVELOPMENT, PRODUCTION, RETAILING, AND SPREADING OF PSYCHOTRONIC DEVICES WHICH INFLUENCE THE MINDS AND BEHAVIOR OF CITIZENS IS BADLY NEEDED." HE GOES ON TO SAY: "THE USE OF THE MASS MEDIA FOR PSYCHOLOGICAL EXPERIMENTS SHOULD BE BANNED AND ALL THE STATE-ORDERED RESEARCH IN HUMAN GENETIC EXPERIMENTS SHOULD BE STRICTLY REGISTERED. THIS WAS APPROVED BY GEORGIY GEORGIYEVICH ROGOZIN, FIRST DEPUTY HEAD OF THE PRESIDENTIAL SECURITY SERVICE."

VOROBYEVSKIY QUESTIONS WHAT MIGHT HAPPEN WERE SUCH TECHNOLOGY TO FALL INTO THE HANDS OF UNSCRUPULOUS PEOPLE. HE SAYS NO ONE CAN FEEL SECURE UNTIL SPECIAL LAWS ARE PASSED.

NO FURTHER PROCESSING PLANNED. 07/1631Z OCT WC 638

PHYSIOLOGICAL RESPONSES APPLICABLE TO DEVELOPMENT OF  
LESS-THAN-LETHAL WEAPONS

Oak Ridge National Laboratory

Physiological Responses Applicable to Development of  
Less-Than-Lethal Weapons

Sponsored by National Institute of Justice

Oak Ridge National Laboratory

Less-than-lethal weapons have a variety of applications in law enforcement, including rescuing hostages, stopping fleeing felons, and quelling prison disturbances. The National Institute of Justice is sponsoring a broad program to develop new techniques for "friendly force" as an alternative to the use of deadly force. As part of this program, Oak Ridge National Laboratory (ORNL) is examining approaches based on known physiological responses to certain types of stimuli. These "weapons" would temporarily incapacitate an individual or a group with no lasting physiological damage. These concepts are based on ORNL's experience and expertise in biological-based systems and biophysical responses, particularly in evaluating the physical responses of humans to a variety of chemical, physical and radiological agents. ORNL also has extensive experience and expertise in risk analysis and in risk assessment and modeling.

The ORNL less than-lethal weapons project sponsored by the National Institute of Justice began in September 1993. The following tasks are being performed:

- \* Locate and compile data from tests, accidents, medical literature, etc. on biological and biophysical responses to energetic stimuli (such as electromagnetic fields).
- \* Analyze the information and identify promising candidate mechanisms for further development for a friendly force

- \* Evaluate the applicability of the proposed approaches to several realistic scenarios (such as hostage rescue or riot control).

ORNL has already examined several possible concepts for less-than-lethal weapons based on known physiological responses to energetic stimuli, including a thermal gun, a seizure gun, and a magnetophosphene gun. A thermal gun would have the operational effect of heating the body to 105 to 107F, thereby incapacitating any threat, based on the fact that even a slight fever can affect the ability of a person to perform even simple tasks. This approach is built on four decades of research relating radio frequency exposure to body heating. A seizure gun would use electromagnetic energy to induce epileptic-like seizures in persons within the range of a particular electromagnetic field. The magnetophosphene gun is designed around a biophysical mechanism which evokes a visual response and is thought to be centered in the retina, known as magnetophosphenes. This effect is experienced when a person receives a blow to the head and sees "stars". This same effect can be produced with electromagnetic energy. While there are a number of technical challenges to be overcome in building devices of these types, less-than-lethal weapons based on physiological responses to energetic stimuli would provide a safe and effective means of dealing with a number of law enforcement situations where use of deadly force is not desirable.

#### Mind-Altering Microwaves: Soviets Studying Invisible Ray

A newly declassified U.S. Defense Intelligence Agency report  
says extensive Soviet research into microwaves might lead to  
methods of causing disoriented human behavior, nerve disorders,  
and even heart attacks.

...

A copy of the study was provided by the agency to the Associated  
Press in response to a request under the Freedom of Information  
Act.

...

Sounds and possibly even words which appear to be originating  
intercranially (within the head) can be induced by signal  
modulation at very low average power densities, the study said.

...

One physiological effect which has been demonstrated is heart  
seizure, the report said.

It said this has been accomplished experimentally in frogs  
by synchronizing the pulses of a microwave signal with the  
animal's heartbeat and beaming the radiation at the chest  
area.

.....  
Microwave News, January-February 1987

#### ZAP!

Six hundred scientists and engineers with security clearances  
spend the first week of December at Kirtland Air Force Base in  
New Mexico examining the potential of high-power microwaves to  
zap enemy electronics...

... Many branches of the Department of Defense were represented, including the Air Force, the Army and the Navy, together with DARPA, DIA, and DNA. The Lawrence Livermore Labs were also well represented, as were most of the big defense contractors - General Dynamics, Physics International and TRW each have a high-power microwave testing facility.

In addition to these sources, susceptibility and hardening, there was one on biological effects: Dr. David Erwin and Major Robert Downs represented the Air Force and Howard Bassen and Dr. John D'Andrea described the Army and Navy programs, respectively. Dr. Frank Barnes of the University of Colorado in Boulder presented a poster paper on his and Dr. Howard Wachtel's research on the effects of pulsed microwaves.

Chuck de Caro, a former correspondent for the Cable News Network, considers the possibility that the U.S. is falling behind the U.S.S.R. in microwave weapons in "The Zap Gap", to be published in the March issue of "The Atlantic" (see also MWN November-December 1986).

.....  
Microwave News, January-February 1996

#### RF WEAPONS - Disabling People and Electronics

The military continues to explore development of RF weapons for the conflicts of the future. For instance, the "First Directed Energy Warfare (DEW) Conference", held last year at the Mitre Corp. in McLean VA, featured Dr. David Erwin of the Armstrong Lab at Brooks AFB, San Antonio, TX, on "Directed Energy Warfare RF Effects", and Dr. Jose Pina of the CIA on "Ground Combat Applications of RF". Other topics included "Personnel Vulnerability" and Directed Energy Warfare Biological Effects".

The June meeting was organized by the Association of Old Crows, whose members are specialists in electronic warfare. Conference participants had to have security clearances of "Secret" or higher, as has been the case at similar meetings in the past (See MWN, J-F 87 and N-D 93).

Public discussions of RF/MW weapons have focussed on disrupting technology. But a recent Article in the Airpower Journal revealed "for the first time that the military is developing high-powered microwave weapons for use against human beings", reports Peter Cassidy in the January 1996 "Progressive" (see p. 14).

RF/MW and EMF-based weapons are also being studied for civilian law enforcement. Oak Ridge National Laboratory (ORNL) in Oak Ridge TN will soon complete a literature review for the National Institute of Justice on the feasibility of "thermal guns" which could heat the body to 105 to 107 degrees F and incapacitate the target; "seizure guns" which would use EM energy to induce epileptic-like seizures; and "magnetophosphene guns" which would cause the target to "see stars".

The institute's Ray Downs in Washington cautioned that the report may not be made public. ORNL's Dr. Clay Easterly

has said that some effects not associated with heating could be useful in developing nonlethal weapons.  
(See MWN, N-D 93.)

.....  
Microwave News, September-October 1996, page 19

#### Stop That Car or We'll Zap You

They're the sexiest gadgets in this year's action movies: EMP weapons, which use electromagnetic pulses to zap electronics. They have starring roles in Goldeneye, the latest James Bond movie, as well as in Broken Arrow, Escape From LA, and Eraser. And soon they may be coming to a police car near you.

Law Enforcement News (September 30) reports that the U.S. Army and the National Institute of Justice are running a \$500,000 field test to see if EMP guns can force a car to stop by disabling its electrical systems. The plan is to use EMP to do away with high speed chases (another Hollywood staple). This is another example of the growing interest in using nonlethal weapons developed by the military.

#### ----- APPENDIX US1 - SILENT SOUND

Eleanor White's comments:

This article shows clearly the military's intent to use every possible thought-influencing technology. This technology is largely classified but there are leaks, like this article. We involuntary test subjects can tell you from first hand experience that far more invasive devices now exist.

This article represents one of the two parallel "tracks" on which thought-influencing technology is being used and further developed:

- Radio frequency signals, based on the WW II phenomenon called "radar hearing"
- Ultrasound signals, which can be transmitted through the air or piggybacked on to radio/TV signals

*Military Use of Mind Control Weapons*  
*Judy Wall 1998*

*PSY-OPS WEAPONRY USED IN THE PERSIAN GULF WAR*

*For years, rumours have persisted that the United States Department of Defense has been engaged in research and development of ultra-sophisticated mind- altering technology. Confirmation of this came to me recently in the form of two ITV News Bureau Ltd (London) wire service bulletins.[1]*

*The March 23, 1991 newsbrief, "High-Tech Psychological Warfare Arrives in the Middle East", describes a US Psychological Operations (PsyOps) tactic directed against Iraqi troops in Kuwait during Operation Desert Storm. The manoeuvre consisted of a system in which subliminal mind-altering technology was carried on standard radiofrequency broadcasts. The March 26, 1991 newsbrief states that among the standard military planning groups in the centre of US war planning operations at Riyadh was "an unbelievable and highly classified PsyOps program utilising 'silent sound' techniques".*

*The opportunity to use this method occurred when Saddam Hussein's military command-and-control system was destroyed. The Iraqi troops were then forced to use commercial FM radio stations to carry encoded commands, which were broadcast on the 100 MHz frequency. The US PsyOps team set up its own portable FM transmitter, utilising the same frequency, in the deserted city of Al Khafji. This US transmitter overpowered the local Iraqi station. Along with patriotic and religious music, PsyOps transmitted "vague, confusing and contradictory military orders and information".*

*Subliminally, a much more powerful technology was at work: a sophisticated electronic system to 'speak' directly to the mind of the listener, to alter and entrain his brainwaves, to manipulate his brain's electroencephalographic (EEG) patterns and artificially implant negative emotional states-feelings of fear, anxiety, despair and hopelessness. This subliminal system doesn't just tell a person to feel an emotion, it makes them feel it; it implants that emotion in their minds.[2]*

*I noticed that the ITV wire service was from outside the United States. Readers of Resonance may recall that in the Electromagnetic Weapons Timeline in issue no. 29, reference is made to the documentary video, Waco: The Big Lie Continues, which contained video footage of three EM weapons. This segment of the film was from the British Broadcasting Corporation (BBC). I wondered if there was any significance to this.*

*At the library I pulled up back issues of my local newspaper for the same time-period of the Gulf War to see what the American wire services had said, if anything, about the use of this special PsyOps weapon. There was nothing said about it directly, but three news articles seemed related. In a news release from Associated Press during the same timeframe of the Gulf War truce, I read:*

*"The American pilot who shot down the second Iraqi warplane in 48 hours said Friday that continued Iraqi flights suggested that US warnings were not filtering down to Iraqi pilots... He said he hopes Saddam gets the message now. 'It's really too bad that these people have to die for their unwillingness to heed our warnings...*

What I really think is, they don't communicate down to the people,' he said. 'If they have a communications problem, I suggest they fix it.'"[3]

That may have been coincidence but two earlier news articles, dated March 1, 1991, apparently have a common origin with the ITV news bulletin. The first article[4] tells us that approximately 100 members of the US 101st Airborne Division, fluent in Arabic, talked the enemy into surrendering. These soldiers rode in the Apache helicopter gunships that were involved in the longest helicopter-borne assault in history. They told the Iraqi troops that they would be slaughtered if they didn't give up.

"They got the point," one soldier is quoted as saying.

This all sounds very unremarkable, except when you read the editor's note: "The following dispatch was subject to US military censorship." Now why would they want to censor such a mundane tactic, except out of embarrassment that the US Army fighting forces had fallen to the level of a cheer-leading squad? ... in which case they would have nixed the thing entirely.

But upon re-reading the article, we may pick out certain key phrases (emphasised in italics):

"He [the soldier interviewed] was one of dozens of Arabic speakers that played a key role in the allied ground attack against Iraq, and part of an attempt by the US Army to use finesse, intelligence work and tactics to complement brute strength."

If we fill in the missing blanks with such descriptions as "the megaphone was used to direct psychoacoustic frequencies that engaged the neural networks of the enemy's brain, causing him to think any thought and feel any emotion that the Americans chose to lay on him", then it starts to make sense. And it would no longer seem so surprising that one soldier could talk 450 enemy soldiers into surrendering. The possibilities are there, and, as the next article[5] documents, that is exactly what happened. Iraqi troops gave up en masse.

We quote: "They were surrendering in droves, almost too fast for us to keep up with..."; "...two Iraqi majors, both brigade commanders, who gave up their entire units..."; and "...one of them gave up to an RPV [remotely piloted vehicle]. Here's this guy with his hands up, turning in a circle to give himself up to a model airplane with a camera in it."

Irrational? Not if there was also a voice being beamed into his head from that little flying toy, saying, "Give up, give up!" Otherwise, how do we account for the editor's note at the beginning of the article: "The following is based on pool dispatches that were subject to military censorship." Without that note, we could smugly think that the Iraqi soldiers were cowards or crazy, but why censor that idea?

#### MIND CONTROL WITH SILENT SOUNDS

The mind-altering mechanism is based on a subliminal carrier technology: the Silent Sound Spread Spectrum (SSSS), sometimes called "S-quad" or "Squad". It was developed by Dr Oliver Lowery of Norcross, Georgia, and is described in US Patent #5,159,703,

"Silent Subliminal Presentation System", dated October 27, 1992.  
The abstract for the patent reads:

"A silent communications system in which nonaural carriers, in the very low or very high audio-frequency range or in the adjacent ultrasonic frequency spectrum are amplitude- or frequency-modulated with the desired intelligence and propagated acoustically or vibrationally, for inducement into the brain, typically through the use of loudspeakers, earphones, or piezoelectric transducers. The modulated carriers may be transmitted directly in real time or may be conveniently recorded and stored on mechanical, magnetic, or optical media for delayed or repeated transmission to the listener."

According to literature by Silent Sounds, Inc., it is now possible, using supercomputers, to analyse human emotional EEG patterns and replicate them, then store these "emotion signature clusters" on another computer and, at will, "silently induce and change the emotional state in a human being".

Silent Sounds, Inc. states that it is interested only in positive emotions, but the military is not so limited. That this is a US Department of Defense project is obvious.

Edward Tilton, President of Silent Sounds, Inc., says this about S-squad in a letter dated December 13, 1996:

"All schematics, however, have been classified by the US Government and we are not allowed to reveal the exact details... .. we make tapes and CDs for the German Government, even the former Soviet Union countries! All with the permission of the US State Department, of course... The system was used throughout Operation Desert Storm (Iraq) quite successfully."

The graphic illustration, "Induced Alpha to Theta Biofeedback Cluster Movement", which accompanies the literature, is labelled #AB 116-394-95 UNCLASSIFIED" and is an output from "the world's most versatile and most sensitive electroencephalograph (EEG) machine". It has a gain capability of 200,000, as compared to other EEG machines in use which have gain capability of approximately 50,000. It is software-driven by the "fastest of computers" using a noisenulling technology similar to that used by nuclear submarines for detecting small objects underwater at extreme range.[6]

The purpose of all this high technology is to plot and display a moving cluster of periodic brainwave signals. The illustration shows an EEG display from a single individual, taken of left and right hemispheres simultaneously. The readout from the two sides of the brain appear to be quite different, but in fact are the same (discounting normal left/right brain variations).

#### CLONING THE EMOTIONS

By using these computer-enhanced EEGs, scientists can identify and isolate the brain's low-amplitude "emotion signature clusters", synthesise them and store them on another computer. In other words, by studying the subtle characteristic brainwave patterns that occur when a subject experiences a particular emotion, scientists have been able to identify the concomitant brainwave pattern and can now duplicate it. "These clusters are then placed on the Silent Sound[TM] carrier frequencies and will silently trigger the

occurrence of the same basic emotion in another human being!"

[Up to Contents](#)

#### SYSTEM DELIVERY AND APPLICATIONS

There is a lot more involved here than a simple subliminal sound system. There are numerous patented technologies which can be piggybacked individually or collectively onto a carrier frequency to elicit all kinds of effects.

There appear to be two methods of delivery with the system. One is direct microwave induction into the brain of the subject, limited to short-range operations. The other, as described above, utilises ordinary radio and television carrier frequencies.

Far from necessarily being used as a weapon against a person, the system does have limitless positive applications. However, the fact that the sounds are subliminal makes them virtually undetectable and possibly dangerous to the general public.

In more conventional use, the Silent Sounds Subliminal System might utilise voice commands, e.g., as an adjunct to security systems. Beneath the musical broadcast that you hear in stores and shopping malls may be a hidden message which exhorts against shoplifting. And while voice commands alone are powerful, when the subliminal presentation system carries cloned emotional signatures, the result is overwhelming.

Free-market uses for this technology are the common self-help tapes; positive affirmation, relaxation and meditation tapes; as well as methods to increase learning capabilities.

In a medical context, these systems can be used to great advantage to treat psychiatric and psychosomatic problems. As a system for remediating the profoundly deaf, it is unequalled. (Promises, promises. This is the most common positive use touted for this technology over the past 30 years. But the deaf are still deaf, and the military now has a weapon to use on unsuspecting people with perfectly normal hearing.)

#### OFFICIAL DENIALS

In fact, the US Government has denied or refused to comment on mindaltering weapons for years. Only last year, US News & World Report ran an article titled "Wonder Weapons", basically a review of the new so-called 'non-lethal' or 'less-than -lethal' weapons.' Not one word about S-squad, although the technology had been used six years earlier!

Excerpts from the article read:

"Says Charles Bernard, a former Navy weapons-research director: 'I have yet to see one of these ray-gun things that actually works...'; and

DARPA (Defense Advanced Research Projects Agency) has come to us every few years to see if there are ways to incapacitate the central nervous system remotely,' Dr F. Terry Hambrecht, head of the Neural Prostheses Program at NIH, told US News, 'but nothing has ever come of it,' he said. 'That is too science-fiction and

far-fetched."'

It may sound "science fiction and far-fetched" but it is not. However, that is just what the powers-that-be want you to believe, so as to leave them alone in their relentless pursuit of...what?

The idea behind non-lethal weapons is to incapacitate the enemy without actually killing them, or, in the case of riot control or hostage situations, to disable the participants without permanent injury, preferably without their knowing it. The electromagnetic mind-altering technologies would all fall into this class of weapons, but since they are all officially non-existent, who is to decide when and where they will be used?

And why should selected companies in the entertainment industry reportedly be allowed access to this technology when the very fact of its existence is denied to the general public?

As recently as last month [February], this stonewall approach of total denial or silence on the subject still held fast, even toward committees of the US Congress!

- The Joint Economics Committee, chaired by Jim Saxton (R-NJ), convened on February 25, 1998 for the "Hearing on Radio Frequency Weapons and Proliferation: Potential Impact on the Economy". Invited testimony included statements by several authorities from the military:

- Dr Alan Kehs, of the US Army Laboratories, discussed the overall RF threat.

- Mr James O'Bryon, Deputy Director of Operational Testing and Director of live fire testing for the Office of Secretary of Defense at the Pentagon, discussed the role of Live Fire Testing and how it plays a role in testing military equipment with RF weapons.

- Mr David Schriener, Principal Engineer of Directed Energy Studies with Electronic Warfare Associates and recently retired as an engineer with a naval weapons testing facility, talked about the difficulty in building an RF weapon and about the terrorist threat.

- Dr Ira Merritt, Chief of Concepts Identification and Applications Analysis Division, Advanced Technology Directorate, Missile Defense and Space Technology Center, Huntsville, Alabama, discussed the proliferation of RF weapons primarily from the former Soviet Union.

Although these statements gave information of technical interest, they are perhaps more important for the information they did not give: information on the existence of radiofrequency weapons that directly affect the human brain and nervous system.

#### KGB PSYCHOTRONICS

This technology did not spring up overnight. It has a long history of development and denials of development-by the US Government and probably half of the other governments of the world as well.

We know that the former Soviet Union was actively engaged in this type of research. In a previous article we reported that during the 1970s the Soviet KGB developed a Psychotronic Influence System

(PIS) that was used to turn soldiers into programmable 'human weapons'. The system employed a combination of highfrequency radiowaves and hypnosis. The PIS project was begun in response to a similar training scheme launched in the US by President Carter, according to Yuri Malin, former security adviser to USSR President Gorbachev. [8]

In my Electromagnetic Weapons Timeline[9] I covered a period of 60 years of interest and development in EM weapons—information gathered from the many articles and news clippings sent in by readers of Resonance. In my article on synthetic telepathy[10] I traced the development of the 'voice in your head' technology dating back to 1961, all my references coming from the open scientific literature.

#### POWER OF THE MILITARY-INDUSTRIAL COMPLEX

Jan Wieseemann has written an apt description of the situation which now exists in the United States, about the 'forces that be' and how the situation came about:

"During the Cold War the United States not only engaged in a relatively open nuclear arms race with the Soviet Union, but also engaged in a secret race developing unconventional weapons. As the intelligence agencies (which prior to the Second World War had merely played a supporting role within the government) continued to increase their power, so did the funds spent on developing techniques designed to outsmart each other.

"And as the US intelligence community began to grow, a secret culture sprang about which enabled the intelligence players to implement the various developed techniques to cleverly circumvent the democratic processes and institutions...

"Like many other democracies, the US Government is made up of two basic parts the elected constituency, i.e., the various governors, judges, congressmen and the President; and the unelected bureaucracies, as represented by the numerous federal agencies.

"In a well-balanced and correctly functioning democracy, the elected part of the government is in charge of its unelected bureaucratic part, giving the people a real voice in the agenda set by their government.

"While a significant part of the US Government no doubt follows this democratic principle, a considerable portion of the US Government operates in complete secrecy and follows its own unaccountable agenda which, unacknowledged, very often is quite different from the public agenda. "[11]

Jan goes on to quote one of the United States' most popular war heroes: Dwight D. Eisenhower, who served as Supreme Commander of Allied Forces during World War II and was later elected 34th President of the United States. In his farewell address to the nation in 1961, President Eisenhower said:

"...we have been compelled to create a permanent armaments industry of vast proportions. Added to this, three and a half million men and women are directly engaged in the defence establishment. We annually spend on military security more than the net income of all United States corporations.

"This conjunction of an immense military establishment and a large arms industry is new in the American experience. The total influence-economic, political, even spiritual-is felt in every city, every state house, every office of the federal government. We recognise the imperative need for this development. Yet we must not fail to comprehend its grave implications. Our toil, resources and livelihood are all involved; so is the very structure of our society.

"In the councils of government, we must guard against the acquisition of unwarranted influence, whether sought or unsought, by the military-industrial complex. The potential for the disastrous rise of misplaced power exists and will persist. We must never let the weight of this combination endanger our liberties or our democratic processes."

#### INTERNATIONAL CONCERNS OVER NEW WEAPONS

The United Nations was established in 1945 with the aim of "saving succeeding generations from the scourge of war". In 1975 the General Assembly considered a draft first proposed by the Soviet Union: "Prohibition of the Development and Manufacture of New Types of Weapons of Mass Destruction and New Systems of Such Weapons".

In 1979 the Soviet Union added a list of some types of potential weapons of mass destruction:

- 1) Radiological weapons (using radioactive materials) which could produce harmful effects similar to those of a nuclear explosion;
- 2) Particle beam weapons, based on charged or neutral particles, to affect biological targets;
- 3) Infrasonic acoustic radiation weapons;
- 4) Electromagnetic weapons operating at certain radio-frequency radiations which could have injurious effects on human organs.[12]

In response, the US and other Western nations stalled. They gave a long, convoluted reason, but the result was the same.

In an article entitled "Non-Lethal Weapons May Violate Treaties", [13] the author notes that the Certain Conventional Weapons Convention [14] covers many of the non-conventional weapons—"those that utilize infrasound or electromagnetic energy (including lasers, microwave or radiofrequency radiation, or visible light pulsed at brainwave frequency) for their effects".

Harlan Girard, Managing Director of the International Committee Against Offensive Microwave Weapons, told me he believes the strategy behind the government's recent push for less-than-lethal weapons is a subterfuge. The ones that are now getting all the publicity are put up for scrutiny to get the public's approval. The electromagnetic mind-altering technologies are not mentioned, but would be brought in later under the umbrella of less-than-lethal weapons.

These weapons were recently transferred from the Department of Defense over to the Department of Justice. Why? Because there are several international treaties that specifically limit or exclude

weapons of this nature from being used in international warfare.

In other words, weapons that are barred from use against our country's worst enemies (notwithstanding the fact that the US did use this weapon against Iraqi troops!) can now be used against our own citizens by the local police departments against such groups as peaceful protestors of US nuclear policies.

#### TOWARDS GLOBAL MIND CONTROL

The secrecy involved in the development of the electromagnetic mind-altering technology reflects the tremendous power that is inherent in it. To put it bluntly, whoever controls this technology can control the minds of men-all men.

There is evidence that the US Government has plans to extend the range of this technology to envelop all peoples, all countries. This can be accomplished, is being accomplished, by utilising the nearly completed HAARP project[15,16] for overseas areas and the GWEN network now in place in the US. The US Government denies all this.

Dr Michael Persinger is a Professor of Psychology and Neuroscience at Laurentian University, Ontario, Canada. You have met him before in the pages of Resonance where we reported on his findings that strong electromagnetic fields can affect a person's brain.

"Temporal lobe stimulation," he said, "can evoke the feeling of a presence, disorientation, and perceptual irregularities. It can activate images stored in the subject's memory, including nightmares and monsters that are normally suppressed." [17]

Dr Persinger wrote an article a few years ago, titled "On the Possibility of Directly Accessing Every Human Brain by Electromagnetic Induction of Fundamental Algorithms". [18] The abstract reads:

"Contemporary neuroscience suggests the existence of fundamental algorithms by which all sensory transduction is translated into an intrinsic, brain-specific code. Direct stimulation of these codes within the human temporal or limbic cortices by applied electromagnetic patterns may require energy levels which are within the range of both geomagnetic activity and contemporary communication networks. A process which is coupled to the narrow band of brain temperature could allow all normal human brains to be affected by a subharmonic whose frequency range at about 10 Hz would only vary by 0.1 Hz."

He concludes the article with this:

"Within the last two decades a potential has emerged which was improbable, but which is now marginally feasible. This potential is the technical capability to influence directly the major portion of the approximately six billion brains of the human species, without mediation through classical sensory modalities, by generating neural information within a physical medium within which all members of the species are immersed.

"The historical emergence of such possibilities, which have ranged from gunpowder to atomic fission, have resulted in major changes in the social evolution that occurred inordinately quickly after the

implementation. Reduction of the risk of the inappropriate application of these technologies requires the continued and open discussion of their realistic feasibility and implications within the scientific and public domain."

It doesn't get any plainer than that. And we do not have open discussion because the US Government has totally denied the existence of this technology.

#### Acknowledgements

I would like to give special thanks to: Jan Wiesemann for sending the Silent Sounds[TM] statement and patents which were the keystone of this article; Mike Coyle, whose computer search turned up many more related patents; Harlan Girard, who has provided numerous official government documents; and to the many who have provided newspaper clippings and articles, moral and financial support to Resonance, without which we'd have ceased publication long ago.

Eleanor White's comments: This hard hitting article by Judy Wall, who is NOT a mind control victim and in fact avoids victim testimonials in favour of only factual objective material, contains some POWERFUL items not widely known among involuntary mind control experimentees.

The most important facet of this article is that Judy Wall presents evidence unknown to most of the public IN SPITE OF ITS BEING UN-CLASSIFIED, and in the public domain for the past two decades.

The main technology used is a mix of ultrasonic voice or brain entrainment, mixed with microwave voice-to-skull or ordinary radio and TV signals, described in detail in Appendix US1:

#### [US1.....SILENT SOUND, BRITISH ITV & NEXUS MAGAZINE](#)

The microwave voice-to-skull technology is described in the 1974 article

from American Psychologist magazine, Appendix PM6:

PM6.....DR. DON R. JUSTESEN'S REPORT: 1974 VOICE TO SKULL SUCCESS

.....  
USAF COMMANDO SOLO: AERIAL MIND CONTROL BROADCASTS

The United States Air Force uses aerial mind-control broadcasts against civilian population as well as enemy troops. Some of these actions against civilians are done with the intent of influencing public opinion and the outcome of elections.

In a previous article, we examined mind-control technology, especially that utilizing Silent Sound [TM], in which radio-frequency broadcasts carry subliminal patterns that entrain the listener's brainwaves into a pre-selected emotional state. According to ITV wire service reports, this technology was used during Operation Desert Storm in 1991, as part of the US Psychological Operations (PsyOps) directed against Iraqi troops. [1,2]

To the Desert Storm offensive we can now add several other incidents. Alex Horvat, editor of The Probe, calls to our attention the 1998 video, Exotic Weapons of Mass Control, produced by Bob Fletcher.

"The excerpt played on Fletcher's video is from TLC (The Learning Channel) and clearly states that Commando Solo was used in Haiti for what was called Operation Uphold Democracy. As the general populace was violently opposed to Aristide and most in favor of his ouster, it took nearly a year of this clandestine counter-programming to get them to change their minds. Instead of butchering a population physically, we can now manipulate them mentally, virtually enslaving their thoughts with a criss-cross pattern of flights by an EC-130 (which is just a C-130 heavily laden with electronic hardware.) [3]

We were not at war with the citizens of Haiti, yet the U.S. Government directed military weapons against this friendly, or at least neutral, civilian population. The U.S. Government sanction the "rigging" of the Haitian election by mental control of the people, programming them to cast their votes for the Americans' favored candidate. And they had the nerve to call it "Operation Uphold Democracy". Some sense of humor! Stalin would have loved it. Hitler would have loved it. Why is the U.S. Government doing this? Who is behind this flagrant violation of civil liberties? Is it the U.S. Central Intelligence Agency (CIA) which has a long history of interfering in foreign government politics? Or has this become standard military procedure?

The rationale is always the same: "to make the world safe for democracy". Yet what is democracy if not freedom? Freedom to think your own thoughts; freedom to express your own opinions; freedom to vote for the candidate of your own choice.

Fletcher's video also mentions that the same technology was used against the Bosnia population for a week to influence their election. [4] This was probably done during Operation Joint Guard in 1995. [5]

The questions arise: If they have used mind-control broadcasts against foreign civilian populations to influence elections, will they use them against American citizens -- or have they already? What other countries may be the recipients of this innovative technology?

Just what is this EC-130E Commando Solo? The United States Air Force has helpfully published a fact sheet that describes the Lockheed built air-

craft. [6] This 1995 bulletin states that the "unit flyaway cost" is more than US \$100 million each, and that there are eight in the inventory. Its primary function is "Psychological operations broadcasts". The crew consists of four officers (pilot, copilot, navigator, control chief/EWO) and seven enlisted members (flight engineer, loadmaster, five mission crew.)

According to the fact sheet:

"Air Force Mission: Commando Solo conducts psychological operations and civil affairs broadcast missions in the standard AM, FM, HF, TV and military communications bands. Missions are flown at maximum altitudes possible to ensure optimum propagation patterns. The EC-130 flies during either day or night scenarios with equal success, and is air refueable. A typical mission consists of a single ship orbit which is offset from the desired target audience. The targets may be either military or civilian personnel.

"Secondary missions include command and control communications counter-measures (C3CM) and limited intelligence gathering.

"Air Force Features: Highly specialized modifications have been made to the latest version of the EC-130. Included in these modifications are enhanced navigation systems, self-protection equipment, and the capability of broadcasting color television on a multitude of world-wide standards throughout the TV VHF/UHF ranges.

"Air Force Background: Air National Guard EC-130 aircraft flown by the 193rd Special Operations Group were deployed to both Saudi Arabia and Turkey in support of Desert Storm. Their missions included broadcasts of 'Voice of the Gulf' and other programs intended to convince Iraqi soldiers to surrender.

"The EC-130 was originally modified using the mission electronic equipment from the EC-121, known at the time as the Coronet Solo. Soon after the 193rd SOG received its EC-130s, the unit participated in the rescue of US citizens in Operation Urgent Fury, acting as an airborne radio station informing those people on Granada of the US military action.

"Volant Solo, as the mission is now known, was instrumental in the success of coordinated psychological operations in Operation Just Cause, again broadcasting continuously throughout the initial phases of the operation."

Operation Just Cause? this is another propaganda name, applied to the U.S. invasion of Panama to take out that country's leader, General Noreiga, the CIA's erstwhile partner in drug smuggling. Apparently the General had made someone mad -- how else to account for the massive invasion of this tiny tourist country? To wit: "A superpower whipped the poop out of 10 percent of the police force of a Third World nation. You are supposed to be able to do that. It was done well, and I credit those who did it. But it is important that we draw the right lessons from it" according to an anonymous US Marine. [7]

Our Commander-in-Chief had another point of view: "...the roll call of glory, the roster of great American campaigns -- Yorktown, Gettysburg, Normandy, and now Panama."

--President George Bush, March 1990 [8]

#### MILITARY PSYOPS AGAINST CIVILIANS

In a phone call to the USAF Special Operations Command Public Affairs

Office, I questioned the legitimacy of using these subliminal broadcasts against civilian populations. [9]

[Judy Wall's article on Silent Sound for details.]

I was told that it was all perfectly legal, having been approved by the U.S. Congress (!). It may be okay by Congress, but I sincerely doubt that it would be approved by the recipient populations.

That conversation also elicited more information concerning the Commando Solo units. For instance, the Air National Guard of the individual states in the U.S. can also operate Commando Solo aircraft, should the Governor of a state request assistance. That means the PsyOps mind-control technology can be directed against U.S. citizens.

The Commando Solo aircraft have participated in the following missions--possibly more, as the early missions of Volant Solo 1 were not known to this spokesperson:

- Operation Urgent Fury (Grenada, Oct-Nov 1983, Jan-Jun 1985)
- Operation Just Cause (Panama, late December 1989)
- Operation Desert Shield (Kuwait, Iraq, from August 1990)
- Operation Desert Storm (Saudi Arabia, Turkey, Iraq, 1991)
- Operation Uphold Democracy (Haiti, 1994-1995)
- Operation Joint Guard (Part of a UN operation in Bosnia-Herzegovina, 1995)
- Operation Desert Thunder (part of a UN operation in Iraq)
- Operation Desert Fox (Iraq, 2 to 3 days in December 1998)

Other countries are known to have a similar aircraft, but the PR officer declined to identify them, suggesting that I check out Jane's Defence Weekly for such information. Not having access to that particular publication, I searched through my copy of Jane's Radar and Electronic Warfare Systems 1993094. [10] The Commando Solo unit was not listed, but a browse through the book was informative as to the numerous types of electronic offence and defence systems available. These include stationary and mobile land units (many housed in large trucks), shipboard and airborne models as well as space-based technology. If the military is spending US \$100 million per airborne unit (times eight, we're talking US \$800 million here), I think it is safe to assume that they have tried out mind control equipment with less expensive, roving land units (trucks), but use the airplanes to cover wider areas and hard-to-reach locations of the world.

And I might add, we can assume that they have tried out the efficacy of this mind-control technology. Even the US military would not waste \$800 million on something unless it has been proven to work, and work effectively, even under the adverse situation of military combat. This is an important point.

The initial research into mind control in the USA was conducted under the auspices of the CIA. The flagrant abuse of human rights in experimenting on unsuspecting persons was based on the supposition that the veracity of experiments would be compromised if a subject knew that he was participating in an experiment. In the case of mind-control technology, this supposition might very well be true. But that does not justify its use -- or so said the Nuremberg Code, the tenets of which were used as a legal basis to pro-

secute Nazi scientists for war crimes. However the US seems to have excused its own military and scientific community from adhering to that Code. [11]

#### MANIPULATING MIND AND BODY BY SATELLITE

The next logical step in mind control would be to incorporate this technology into satellite communications. Since other countries are known to have similar capabilities, there could occur a situation in which electronic mind control warfare is waged against a civilian population, receiving conflicting mental manipulation from both sides. What would be the mental state of individuals so targetted? Would it cause a rise in mental aberrations and schizophrenia? And what are the limits of mind manipulations? Can people be forced to commit suicide? Can physical ailments or psychosomatic illnesses be induced?

A March 1990 report from Bosnia-Herzegovina in the former Yugoslavia suggests the latter may have already happened. The report concerns 2,990 ethnic Albanians who were admitted to hospital with complaints of lung and skin problems for which doctors could find no physical cause. [12]

It is not a far step from manipulating a person's emotional state to influencing bodily functions. Indeed, much of the literature on documenting microwave effects on biological systems deals with precisely this phenomenon. In fact, studies of the physical effects of microwave exposure (including radio frequencies) generally preceeded studies of mental effects.

A meeting sponsored by Defense & Foreign Affairs and the International Strategic Studies Association was held in Washington DC in 1983. High-level

officials from many countries met for this conference. They discussed psychological strategies related to government and policymaking. A summary of the agenda reads: "The group will be discussing the essence of future policymaking, for it must be increasingly clear to all that the most effective tool of government and strategy is the mind... If it's any consolation

to the weapons-oriented among defense policymakers, the new technologies of communications -- satellites, television, radio, and mind-control beams -- are 'systems' which are more tangible than the more philosophically based psychological strategies and operations.

[Eleanor White's comment: Anyone know where to get a copy?]

"But we should make no mistake; it will be the 'psychologically based' systems which determine the world's fate in coming years: the condition of the minds of populations and leaders. And we should not ignore the fact that the USSR [this was in 1983] is working on electronic systems to 'beam' messages directly into the brain. What good, then, are conventional systems if these types of weapons are not countered? And, on a more basic level, what good is a weapon system if public opinion or political constraints prohibit its deployment?" [13]

It is obvious that they found the answer to that last question. If the public does not know about a weapon system, it cannot prohibit its deployment. This is the situation that applies to mind-control technology.

#### MIND CONTROL AGAINST 'POTENTIAL' ENEMIES

The US military is aware that certain actions or procedures may not be acceptable to the American public. Metz and Kievit express these concerns

in their paper, "The Revolution in Military Affairs and Short Conflict War."

[14] "The use of new technology may also run counter to basic American values. Information age -- and in particular, information warfare -- technologies cause concerns about privacy... American values also make the use of directed-energy weapons ... morally difficult, perhaps unacceptable. The advantage of directed-energy weapons over conventional ones is deniability.

"Against whom is such deniability aimed? ... deniability must be aimed at the American people."

Later they state: "We must decide whether innovative military capabilities are, in fact, acceptable and desirable. That can only happen through open debate. The military must be a vital participant, but not the sole one."

But there has been no open debate.

On July 21, 1994, the US Department of Defense proposed that non-lethal weapons be used not only against declared enemies, but against anyone engaged in activities that the DOD opposed. That could include almost anybody and anything. Note that the mind-control technology is classified under non-lethal weapons. [15]

A 1998 news item states that US Air Force General John Jumper "predicts that the military will have the tools to make potential enemies see, hear, and believe things that do not exist" and that "The same idea was contained in a 15-volume study by the USAF Scientific Advisory Board, issued in 1996, on how to maintain US air and space superiority on the battlefields of the 21st century". [16,17]

It seems that, in military parlance, a "prediction" means: "Don't be surprised when you find out we've already got this, but it's classified and we can't admit to it just yet."

Notice that General Jumper predicts that mind control technology will be used against potential enemies. The military and government agencies may apply this term to any group or individual they perceive as a threat to their own interests. Potential enemies may be counter-culture individuals, those of opposing political viewpoints, economic or financial competitors, biological undesirables, etc. It is part of the military agenda to identify potential threats so as to be prepared to meet them. Experience has shown that the US Government (the CIA and FBI, for example) has moved against these people or groups, slandering, harassing, even killing them, without adequate cause or legal sanction.

A weapon that can be used in secret lends itself to abuse by unethical individuals in positions of power. The military and secret services have shown themselves often to be lacking in ethical constraints. After all, the job of the military is war; it is killing people; and so, just how this is accomplished may be considered irrelevant. Lesser evils, like mind control, pale by comparison.

Of course, it can be argued that it is far more humane to brainwash a person via mind control technology than it is to torture or kill them. Others vehemently deny this. They'd rather be dead than a mental slave to Big Brother! That is what revolutions are about. And if I recall correctly, that is the idea behind the US Bill of Rights.

EUROPEAN PARLIAMENT WARNS OF DANGERS

Awareness of the existence of mind-control technology, and hence its dangers and possibility for misuse, seems to be more prevalent than in Europe than in other areas. The European Parliament recently passed a "Resolution on environment, security, and foreign policy". [18] This document includes these articles:

"23. Calls on the European Union to seek to have the new 'non-lethal' weapons technology and the development of new arms strategies also covered and regulated by international conventions..."

"27. Calls for an international convention introducing a global ban on all developments and deployments of weapons which might enable any form of manipulation of human beings."

The United States will ignore these resolutions, of course, as it has other EP requests; for example, as mentioned in the same document:

"24. Considers HAARP (High Frequency Active Auroral Research Project) by virtue of its far-reaching impact on the environment to be a global concern and calls for it's legal, ecological and ethical implications to be examined by an international independent body before any further research and testing; regrets the repeated refusal of the United States Administration to send anyone in person to give evidence to the public hearing or any subsequent meeting to be held by its competent committee into the environmental and public risks connected with the HAARP programme currently being funded in Alaska..."

One of HAARP's potential uses is a communications system. The military officially acknowledges two communications-related applications: (1) to replace the existing Extremely Low Frequency (ELF) submarine communications system now operating in Michigan and Wisconsin; (2) to provide a way to wipe out communications over an extremely large area, while keeping the military's own communications system working. [19]

As we have seen, the mind-control subliminal messages are carried on radio-frequency broadcasts.

[Judy Wall's article on Silent Sound for details.]

The HAARP facility could be used to broadcast global mind-control messages, or such messages could simply be inserted into existing systems.

Dr. Igor Smirnov, of the Institute of Psycho-correction in Moscow, says in regard to this technology: "It is easily conceivable that some Russian 'Satan', or let's say Iranian [or any other 'Satan'], as long as he owns the appropriate means and finances, can inject himself [intrude] into every conceivable computer network, into every conceivable radio or television broadcast, with relative technological ease, even without disconnecting cables.

You can intercept the [radio] waves in the aether and then [subliminally] modulate every conceivable suggestion into it. If this transpires over a long enough time period, it accumulates in the heads of people. And eventually they can be artificially manipulated with other additional measurements, to do that which this perpetrator wants [them to do]. This is why [such technology] is rightfully feared." [20]

A WORLDWIDE MIND CONTROL MISSION

To return to the USAF Fact Sheet, it concludes: "In 1990 the EC-130 joined the newly formed Air Force Special Operations Command and has since been designated Commando Solo, with no change in mission. This one of a kind aircraft is consistently improving its capabilities.

The next few years should see continued enhancements to the EC-130 and its worldwide mission."

APPENDIX US3 ... U.S. ARMY ULTRASOUND WEAPON PROJECT

TOPIC NUMBER: A97-003

FIRM:

SYNETICS Corporation <http://www.synetics.com>

CORPORATE OFFICIAL:

George D. Hughes Jr.

PHONE:

540-663-2137

TITLE:

Parametric Difference Waves for Low Frequency Acoustic Propagation

ABSTRACT/BENEFITS:

Prior research indicates that an array of ultrasonic sources operated with an offset in frequency will produce infrasonic or very low frequency energy. This energy is useful because it is omni-directional, and it propagates well with little absorption. With sufficient energy, the resulting infrasonic waves can be disabling or lethal. Synetics proposes an approach toward developing infrasonic waves that can ultimately be incorporated into future man-portable small arms weapon systems. This approach utilizes modernized pneumatic technology which produces an extremely high-powered ultrasonic source. The resulting frequency generated is precisely controlled such that the desired high power infrasound frequency can be generated at the target by beating two focused ultrasonic sources.

BENEFITS:

The potential post applications of the parametric difference wave generator include non-lethal crowd control, non-lethal self defense units for police and personal use, and soot and crustacean removal devices for commercial industries.

KEYWORDS:

INFRASOUND GENERATION ULTRASONIC TUNING

ACOUSTIC WEAPON ULTRASONIC HIGH POWER

*SILENT SUBLIMINALS*

*Only your mind can hear. Your ears hear nothing but your mind  
hears and accepts the powerful suggestions.*

*You can safely play these tapes anywhere - in a car, while  
watching TV or listening to your favorite music, while working  
or even as silent sleep programming.*

*Warning: Everyone within listening range of the tape will be*

programmed by the suggestions. To assure yourself that strong suggestions are recorded on the tape, take it to any Radio Shack store, play it on their stereo and read the output with a Radio Shack Sound Level Meter (Item 33-2050)

*How To Use The Tapes:* Increase the volume until it is just below any tape noise. If your stereo deck has treble and bass controls, you can boost the subliminal output by increasing the treble and decreasing the bass. The player then emits a strong but inaudible frequency - modulated 60 - 90 decibel signal that is received and demodulated by the human ear.

*Technical Information* The Suggestions are delivered on a carrier frequency of 14,800 cps, via a low-distortion sinewave signal. This frequency is slightly above the audible hearing range but the frequency-modulated (FM) signal is still strongly impinging upon the diaphragm of the ear. The listener can expect his subconscious mind to accept the suggestions with repeated listening.

[EW: Note the similarity to Lowery patent, [US 5,159,703](#)]

*How To Use The Tapes:* Increase the volume until it is just below any tape noise. If your stereo deck has treble and bass controls, you can boost the subliminal output by increasing the treble and decreasing the bass. The player then emits a **STRONG BUT INAUDIBLE** frequency-modulated 60 to 90 decibel signal that is received and demodulated by the human ear.

The Silent Subliminals is a new brain / mind technology developed by an aerospace engineer. This new technique has been licensed to Valley of the Sun Audio /

Video for this incredible new tape series. Patent pending.  
Note: Because the frequency is beyond normal recording range, the tape cannot be duplicated:

*Examples of Suggestions:*

- "Every day you become thinner and thinner"
- "You now lose weight and full fill your goals"
- "You attain your weight goals and the body you desire"
- "You have the power and ability to attain the perfect weight and body you desire"
- "You have the self-discipline to lose all the weight you want"
- "You live a healthy lifestyle and eat a proper diet"
- "You now quit smoking because it serves you"
- "You lose all desire to smoke"
- "You accept that you now quit smoking"
- "You are a non-smoker"
- "Quit smoking. Quit smoking. Quit smoking"
- "You have the willpower to do anything you want to do"
- "You have great self- discipline and you use it to quit smoking"
- "Cigarettes disgust you"
- "You are very sure of yourself"
- "You accept that you have great inner courage"
- "You are self-reliant and self-confident"
- "You are full of independence and determination"
- "You have great inner courage"

- "Every day in every way, you become more and more self-confident"
- "You feel good about yourself"
- "You project a very positive self-image"
- "You are relaxed and at ease"
- "You detach from worldly pressures and experience an inner calm"
- "Negativity flows through you without affecting you"
- "You accept other people as they are"
- "You peacefully accept the things you cannot change, and change the things you can"
- "You are at peace with yourself, the world and everyone in it"
- "Your mind is like calm water"
- "You direct your time and energy to manifest your desires"
- "You have the self-discipline to accomplish your personal and professional goals"
- "Every day, you increase your self-discipline"
- "You do what you need to do and stop doing what doesn't work"
- "You freely choose to do what you need to do"
- "You are assertive and feel good about yourself"
- "You now focus your energy upon attaining success"
- "You know exactly what you want and you go for it"
- "You can accomplish whatever you set out to do"
- "Be ultra-successful. Be ultra-successful and become wealthy"
- "Every day in every way, you become more successful"
- "Your creative thinking opens the door to monetary abundance"
- "You easily achieve and maintain a penile erection"
- "Your body performs perfectly during sex without thinking about it"
- "A hard, firm erection is your natural response to sexual stimulation "
- "You can make love for a long before you ejaculate"
- "Every day you feel better about your sexual prowess and your ability to achieve and maintain a hard, firm erection"

 US5....."ACOUSTIC SPOTLIGHT" CAN TARGET ONE PERSON IN CROWD

THIS IS THE TEXT PORTION ONLY OF THE ORIGINAL WEB PAGE  
 POSTED BY F. JOSEPH POMPEII, MIT MEDIA LAB. The image  
 below, posted by Eleanor White, describes nearly identical  
 technology being commercially developed by American  
 Technologies Corp., San Diego CA, (as of March 22, 2000):

The ORIGINAL LINK FOR THIS PAGE (As of March 22, 2000):  
<http://sound.media.mit.edu/~pompei/spotlight/>

Machine Listening Group Digital Life Consortium

A beam of light can be controlled in many ways - it can be aimed at one person in a crowd, spread to fill a room, or projected to create rich, distant imagery.

We can now do these very same things with sound.

To my friends in the UK:

Thanks to those who have contacted me regarding the BBC piece; I'm happy it was so well received. I recently had a very polite British visitor, who seemed to enjoy the demonstration a great deal... click the photo to see who it was.

The Audio Spotlight<sup>TM</sup>, invented and developed at the MIT Media Lab, is a device which uses subtle nonlinear properties of the air to create an extremely narrow Sound Beam<sup>TM</sup>. This beam of sound behaves just like a beam of light - 'shining' it at a specific listener allows only that person to hear it, and projecting it against a surface creates an acoustic 'image' at the point of reflection. It is the first device that provides total control over both the location and distribution of high quality sound, something impossible to achieve with traditional loudspeakers.

The circular transducer is very thin, and can be constructed in a variety of sizes and configurations as needed. A typical Audio Spotlight transducer has an active area of approximately 1 foot diameter, and, depending on size and frequency content, projects an approximately three-degree wide beam of sound audible to well over 100 meters. Harmonic distortion has been reduced to close to that of a traditional loudspeaker, sound level is quite appreciable (on the order of 80-90dBA) at several meters, and frequency response, depending on size, extends down to a few hundred Hertz, and upwards beyond the range of hearing. Continued research is being conducted on all facets of the technology.

While still under development, we are testing applications of the device in collaboration with several of our Media Lab Sponsors in preparation for eventual commercial release.

Put sound wherever you want it.TM

F. Joseph Pompei [pompei@media.mit.edu](mailto:pompei@media.mit.edu)

### Usage

The Audio Spotlight can be used in two major ways: As directed audio, sound is directed at a specific listener or area, to provide a private or area specific listening space. As projected audio, sound is projected against a distant object, creating an audio image. This audio image is literally a projected loudspeaker - sound appears to come directly from the projection, just like light.

The Audio Spotlight consists of a thin, circular transducer array and a specially designed signal processor and amplifier. The transducer is about half an inch thick, nonmagnetic, and lightweight. The signal processor and amplifier are integrated into a unit about the same size as a traditional audio amplifier, and has similar power requirements.

### Technology

Because it is impossible to generate extremely narrow beams of audible sound without extremely large loudspeaker arrays, we instead generate the sound indirectly, using the nonlinearity of the air to convert a narrow beam of ultrasound into a highly directive, audible beam of sound.

The device transmits a narrow beam of ultrasound (blue), which, due to the inherent nonlinearity of the air itself, distorts (changes shape) very slightly as it travels. This distortion creates, along with new ultrasonic frequencies, audible artifacts (green) which can be mathematically predicted, and therefore controlled. By constructing the proper ultrasonic beam, this nonlinearity can be used to create, within the beam itself, an audible sound beam containing any sound desired. This is presently done in real-time using low cost circuitry, a specially designed amplifier, and transducers developed at MIT specifically for this project.

### Hyperdirectivity

The directivity, or narrowness, of an acoustic wave generated by a circular transducer is proportional to the ratio of the diameter of the transducer to the wavelength of the sound. So a transducer much larger than the wavelength of the sound creates a very narrow beam.

Audible sound contains wavelengths reaching lengths of several feet, so a reasonably sized loudspeaker will always produce a very wide, non-directional source at lower frequencies. The Audio Spotlight, in contrast, outputs short, millimeter sized ultrasonic waves, which form a very narrow beam even in a small transducer, which in turn generates audible sound. The nature of the nonlinear transformation also essentially eliminates sidelobes in the resulting beam, and maintains relatively uniform directivity across the entire audible frequency range.

The figure to the right compares the directivity of the Audio Spotlight (yellow) to that of an ordinary loudspeaker (purple).at 400 Hz. Note that the directivity of the Audio Spotlight is only three degrees, compared to the essentially omnidirectional directivity of the loudspeaker.

In order to obtain such narrow directivity from a traditional loudspeaker system, one would need a loudspeaker array fifty meters across!

A loudspeaker is like a light bulb, but the Audio Spotlight is like a laser.

## History

The use of nonlinear interaction of high frequency sound to generate directive low frequency sound sources has been a well researched subject in the field of underwater acoustics since the early 1960's. Often misattributed to so-called "Tartini Tones", the effect is more accurately described as a parametric array, a term introduced by Westervelt [1]. In the past several decades, many underwater sonar researchers have used the effect to both generate directive low frequency sonar beams, detect underwater sound (parametric receiving array), and extend the bandwidth of underwater transducers.

The first published demonstration of an airborne parametric array was in 1975 by Bennett and Blackstock [2]. Rather than using inaudible ultrasound, they instead used very intense, high frequency audible sound to produce simple difference tones. While their goal was not a practical audio reproduction device, they nonetheless effectively demonstrated that the parametric array would work in air in addition to underwater.

In the early 1980's, several Japanese companies, such as Nippon Columbia, Ricoh, and Matsushita, attempted to develop the parametric array for the reproduction of broadband audible sound. They typically deployed large arrays containing hundreds of piezoelectric transducers, such as the one to the right [3], to transmit simple AM modulated audible signals. While successful in reproducing sound, tremendous problems with cost, robustness, and extremely poor sound quality (up to 50% total harmonic distortion) caused them to abandon the technology as unfeasible.

More recently in mid 1996, an American company produced their own version of this device and proclaimed it 'a revolution' in audio. In fact, this device, contrary to their claims and unbeknownst to the popular press, was very similar to those described in audio journals a decade earlier (shown to the left), and of course suffered from the very same problems of poor sound quality and lack of robustness that plagued the earlier researchers [4]. Since then, there has been no published evidence of progress towards a practical device.

## Background

Since his days as a part-time musician and young acoustics engineer at Bose in the early 1990's, Mr. Pompei recognized that a key ingredient missing from audio reproduction was the ability to reliably spatialize sound. While in a natural environment, sound occurs all around us, giving us a tremendously strong impression of our environment, the reproduction of sound over loudspeakers, at best, provides a very vague and limited spatial impression. Similarly, what was missing from music, he decided, was the ability to choreograph musical instruments in space, just as you would dancers.

While pursuing as a Master's student techniques related to '3D Audio' technologies, he realized that this method would simply not work in an uncontrolled acoustic environment - if the listener moved out of the small 'sweet spot', the illusion would vanish, and there were no practical remedies to this problem, so long as traditional loudspeakers were used. The solution, then, was to not rely on psychoacoustic illusions, but instead to create sound independently of the loudspeaker. One of several ideas he had at the time was the use of interacting ultrasound beams to produce audible sound.

After briefly researching the idea, he discovered the numerous papers describing the underwater parametric array and the earlier attempts of its application as an audible sound source. From these papers, he saw that there were two key concepts which were overlooked in the previous attempts, mitigating their success:

## Preprocessing

Earlier attempts used simple AM modulation to generate the ultrasound signal, which does create audible byproducts, but also substantial distortion. The nonlinear transformation from ultrasound to audible sound is much more complex than AM demodulation. Therefore, in order to reduce distortion, this specific transformation needed to be mathematically modeled, inverted, and then applied as a preprocessing algorithm. The lowest-order preprocessing method, used in the earliest MIT prototypes, was derived from a simple model [5] proposed in 1965.

## Transducer Design

The transducers used in previous attempts were common piezoelectric transducers used for ultrasonic ranging. These transducers are highly resonant, and do not have sufficient

bandwidth to reliably reproduce the preprocessed ultrasonic signal. Thus, even with a preprocessing algorithm, substantial distortion would continue to result until we developed transducers capable of reliably reproducing the broadband preprocessed signal.

As a side project during his Master's work, he continued his development of these ideas, studying nonlinear wave interactions and ultrasonic transducer design, eventually deciding to pursue the area as the focus of a doctoral dissertation. Of all the universities that he applied to, he decided that the free-wheeling nature of the MIT Media Lab was the ideal environment for developing the idea.

The first full size prototype was demonstrated in April 1998 to our Media Lab Sponsors, and performed beyond all expectations. The first demonstration was a John Coltrane solo, whose saxophone was heard loud and clear, projected like a spotlight all around a movie theater, and flying right over the audience. Power consumption was nominal ([Up to Contents](#))

#### APPENDIX TWR1 - THE LADS DEVICE

Tuesday, September 09, 1997 10:20:09 AM

VSE CORP. LIFE ASSESMENT DETECTOR SYSTEM (LADS)  
Patent Pending

The Life Assessment Detector System (LADS), a microwave Doppler movement measuring device, can detect human body surface motion, including heartbeat and respiration, at ranges up to 135 feet (41.15 meters). The primary function of the LADS is to provide a reliable method by which medical and emergency personnel can locate personnel buried in building collapses or injured on the military battlefield.

LADS can detect such signs of life as movement, heartbeat, or respiration.

**\*\* NOTE:** The referenced image of the LADS device is no longer available at the <http://www.vsecorp.com> web site. What it showed was mainly a small dish antenna mounted on the top of a tripod.  
(August 9, 1998)

Originally designed to detect heartbeat and respiration of military personnel wearing chemical-biological warfare protective overgarments, the LADS has been restructured, greatly increasing its operational range and providing a means for eliminating "nuisance alarms" which could mimic human life signs, such as fans, wind drafts, or swaying trees. This is accomplished through neural network technology, which "trains" the system to recognize human motion and heartbeat/respiration functions. If these functions are not detected, the reasonable assumption is that there are no survivors. Operating under such an assumption, the rescue team can now proceed without fear of further loss of life; i.e., rescue and medical personnel and equipment can be deployed more effectively and efficiently.

The LADS consists of a sensor module, a neural network module, and a control/monitor module. The sensor module is an x-band (10 GHz) microwave transceiver with a nominal output power of 15 milliwatts,

operating in the continuous wave (CW) mode. The neural network module device can store many complex patterns such as visual waveforms and speech templates, and can easily compare input patterns to previously "trained" or stored patterns.

The control/monitor module provides the LADS' instrument controls, such as on-off switches, circuit breakers, and battery condition, as well as motion, heartbeat waveform, pulse strength, and pulse rate displays.

LADS provides life assessment capabilities for people who are:

- Trapped in building rubble;
- Battlefield casualties in a chemical/biological warfare environment;
- Victims of airline, train, or automobile crashes;
- Trapped in an avalanche or mud slide;
- Trapped on a mountain ledge;
- Trapped under a collapsed tent structure; or
- Hostages being held in a nonmetallic room.

For more information about the LADS, send E-mail to:

#### APPENDIX TWR2 - THE RADAR FLASHLIGHT

Project Title: Radar Flashlight

Project Description:

The National Institute of Justice (NIJ), through the Joint (Justice-Defense) Program Steering Group (JPSG), is sponsoring Georgia Tech Research Institute (GTRI) in developing an inexpensive, handheld, low-power radar that will enable law officers to detect individuals through interior building walls. It works by sensing the motion of an individual's chest when they breath.

Status Report:

GTRI is currently designing and refining the first prototype unit. A laboratory test area has been constructed consisting of a section of home siding and drywall, a wooden front door, and a section of brick and mortar. The laboratory model shown here, was able to detect individuals through each of these materials. It also demonstrated the ability to detect an individual through the laboratory's cinder block walls. GTRI is working to combine the two parts of this device into a single unit. NIJ plans on demonstrating the Radar Flashlight with law enforcement agencies through its National Law Enforcement

and Corrections Technology Center (NLECTC) (Southeast Regional Center) before the end of 1999.

APPENDIX TWR3 - MILLIVISION RADAR

Current Millivision information at: <http://www.millivision.com>

PM: TECH UPDATE: Frisking From Afar: OCT 95 Popular Mechanics magazine

**OCTOBER 1995**

Millimeter-wave camera picks up both metallic and plastic concealed handguns.

DEERFIELD, MA-Between microwave and infrared lies the millimeter wave band. This little-heralded portion of the electromagnetic spectrum turns out to be perfect for "remote frisking." Millitech Corp. has designed a camera to accomplish just that.

[MILLITECH HAS SOLD THE RIGHTS TO MILLIVISION, NORTHAMPTON MA]

The idea calls for measuring the time delay and intensity of millimeter wave energy that radiates naturally. At millimeter wavelengths, people are good emitters, while metals are very poor. Dielectric objects, such as plastics, ceramics and powdered drugs, are somewhere in between. Clothing and building materials, such as wallboard, are virtually transparent.

TWR4.....GROUND [\*\*OR HOME/APT WALL\*\*] PENETRATING RADAR

THIS IS TEXT EXCERPTED FROM GROUND-PENETRATING RADAR MANUFACTURER PATRIOT SCIENTIFIC CORPORATION. THE PURPOSE OF INCORPORATING THIS TEXT IS THAT GROUND-PENETRATING RADAR SYSTEMS OVERCOME THE PARTLY-CONDUCTIVE-WALL BARRIER TO PASSIVE MILLIMETER WAVE THRU-WALL RADAR.

The original link for this text (as of March 22, 2000) is:  
<http://www.ptsc.com/radar/index.html>

Patriot Scientific Corporation

Patriot Scientific Corporation has developed radar technologies with a wide range of possible applications.

This description below will highlight possibilities for use in:

- Ground Penetrating Radar (GPR)
- Communications
- Surveillance
- Ordnance Detection
- Stealth Radar

The Demonstration System:

...is a diagram of the demonstration system. A pulse generator is used to drive the transmit antenna. The pulse is a positive spike going up to 100V then falling back to ground in one and a half nanoseconds corresponding to a pulse transmit frequency of 750 MHz.

The return signal is read by the receive antenna. At this point some simple analog processing is done and the signal is digitized at a resolution of 6 GHz, and sent to a PC.

The PC correlates the data into a conventional waveform, does some processing, then transmits the data over an ethernet cable to a Pentium workstation (not shown).

The Pentium workstation is used to apply different digital filters, combine waveforms, and display the results. This system can be used to demonstrate detection of small targets buried in sand, people behind walls, and other targets.

*Patriot has used its antenna system to demonstrate detection of objects as small as a coke can buried in sand, through a wall. Even small targets disturb the wavefront of the pulse, producing reflections and modifying the field in measurable ways.*

*Patriot will be testing this technology for suitability for mine detection. We will be acquiring sample casings and running further tests.*

#### *Advantages of Patriot's Impulse Radar System*

*The key to Patriot's Radar system is its ability to transmit and receive pulses barely longer than single cycles at the transmit frequency. The first waveform shown here is a pulse generated by an earlier Patriot Design, based on "off the shelf" antenna technology. The waveform on the bottom was produced and received by Patriot's current Design.*

*The current Patriot antenna system produces a pulse at the desired frequency with little leading or trailing noise. The Patriot antenna system provides many advantages over pulse-based systems.*

*Patriot originally developed the impulse radar system to allow time domain processing in Patriot's GPR systems. Because the impulse is extremely short (3 nanoseconds), the time to return can be used to gauge the distance traveled by the pulse.*

*Furthermore, the transmit and receive antenna's are very directional, eliminating much of the multipath components of the return signal.*

The short pulse combined with the directional transmit and receive to provide us with a number of important advantages:

- Very low average power during transmission
- Low interference from other transmitters
- Transmission invisible to conventional receivers
- High bandwidth digital data transmission possible
- Difficult detection by other impulse receivers

Interference with other sources and receivers is further reduced by using directional antennas. The antenna design shown is highly directional.

When penetrating the ground, we wish to eliminate as much of the multipath signal as possible. The directional antennas reduce the multipath signals detected to those that are relatively inline with the wave path, and eliminate much of the multipath signal that returns at odd angles.

Impulse radar uses low power inherently because the transmissions occur in pulses separated by periods of no transmission. The power of the pulses is offset by the dead time between the pulses. The average output of the current system is about 300 MICROWatts. THE LOW AVERAGE POWER OF AN IMPULSE SYSTEM EFFECTIVELY HIDES THE TRANSMISSIONS FROM CONVENTIONAL RECEIVERS.

Interference can be further reduced in an impulse system by using random interval spacing. As long as the transmit and receive antennas are in sync, the period between pulses can be varied to prevent aliasing with other continuous- or pulse-transmission systems that might be operating in the same locale. Furthermore, if an impulse system is being used to transmit data, varying the intervals between pulses prevents other impulse systems from locking onto the signal. Patriot Scientific's current GPR system does not use random interval spacing.

APPENDIX TR1 - COMMERCIAL THOUGHT READING DEVICES

.....  
<http://www.mindmouse.com/> The Cyberlink Mind Mouse:  
Hands-Free, Brain-Wave Control for your Computer

## *The Cyberlink Mind Mouse*

*What is it?*

*The Cyberlink Mind Mouse is a revolutionary hands-free computer controller which allows you to move and click a mouse cursor, play video games, create music, and control external devices, all without using your hands.*

*How does it work?*

*A headband with three sensors detects electrical signals on the forehead resulting from subtle facial muscle, eye, and brain activity. This headband connects to an interface box which amplifies and digitizes the forehead signals and sends them to your computer. The Cyberlink software decodes the forehead signals into ten BrainFingers for continuous cursor control. It also decodes eye motion and facial gestures into mouse button clicks, keystrokes, and cursor resolution control. With a little practice, most or all of these commands can be mastered to operate virtually all computer functions.*

*I can do what...?*

*By learning to change the energy levels of your BrainFingers, you will be able to do just about anything on a computer, except turn it on! The Cyberlink Mind Mouse supports hands-free mouse, keyboard and joystick cursor control, switch closure, video game control, and music and art synthesis.*

*...and it works with my software?*

*The Cyberlink Mind Mouse features a Windows 95 Mouse Driver for hands-free control of third party software like games, business software, Internet browsers, and a range of assistive technologies, such as the X-10 Home Controller and special needs word- processing and communication software, including WiVik2, Words Plus, and Clicker Plus.*

*What kind of computer does it take?*

*The Cyberlink Mind Mouse has the following PC requirements:*

*Pentium Processor  
16 MB RAM  
20 MB Disk Space  
VGA or better Display  
Windows 95*

*What comes with the Mind Mouse?*

*The Cyberlink Mind Mouse consists of the following components:*

*Cyberlink Interface Unit  
Cyberlink Headband/Sensor Harness with 3 Sensors  
Cybergel  
Cyber Trainer Software  
Windows 95 "Mouse" Driver*

Cables  
User manual

How much is it?

The Cyberlink Mind Mouse is priced at \$1495.00 (US\$) plus shipping. Free upgrades are included for one year.

SIGHTINGS

Implants Can Now Allow Humans To Control Computers

By Nigel Hawkes

Science Editor

The Times (London)

[www.the-times.co.uk](http://www.the-times.co.uk)

AN AMERICAN scientist has entered the world of science fiction by implanting electrodes in the brains of disabled people so that they can control a computer by the power of thought.

The implants have enabled two paralysed people to move the cursor on the screen simply by thinking about moving part of their body. They were able to convey messages such as "I'm thirsty" or "please turn off the light" by pointing the cursor at different icons.

The hope is that eventually patients will be able to communicate complex ideas just by thinking about them. "If you can run a computer, you can talk to the world," Dr Ray Bakay of Emory University in Atlanta, whose team developed the implants, said.

A number of laboratories around the world are working on brain implants, but the only devices licensed for use so far are bionic ears for the profoundly deaf and chips which can control the tremor caused by Parkinson's disease.

The Emory implants go much further. They consist of two hollow glass cones, each the size of a ballpoint pen tip, placed into the brain's motor cortex, which controls body movements. The cones are covered in chemicals that encourage nerve growth, extracted from the patient's knees. Once installed, nerve cells grow into the cones and attach themselves to tiny electrodes inside.

The location of each cone is determined by monitoring the patient's brain using scanners and identifying the most active regions. Once the cones are in place and surrounded by nerve cells, the patient is asked to think about moving some part of the body, and signals from the electrodes are picked up by a small transmitter-receiver, amplified, and used to control a computer. Depending upon which nerves grow into the cones, each patient may have to think about moving a different part of the body to achieve the same effect.

They are trained by listening to a buzzer which becomes faster and louder when they are thinking along the right lines. Dr Bakay says that controlling the cursor soon becomes second nature.

The first two patients, New Scientist reports, were a woman with motor neuron disease, who was given the implants 18 months ago and has since died, and a 57-year-old man paralysed by a stroke.

They were taught very simple commands, with one cone being used to move the cursor up and down and the other from left to right. If they could give more complex commands, disabled people could use them to make the computer speak for them. Dr Bakay warns that this could still be years off. But he has secured funding from the US National Institutes of Health to continue the research with three more patients.

The British Telecom laboratories near Ipswich have also done research into implantable chips, including a possible memory chip which would take data from the eye and store it for a computer. "There is a raft of wonderful benefits to bringing chips and circuits inside human beings," said Dr Peter Cochrane, head of research.

.....  
Communicating with 'thought power'

"Bionic brain implants allowing a computer to be operated by the power of thought, have been developed by American scientists," reports BBC News. Read all about it here:

[http://www.news.bbc.co.uk/hi/english/sci/tech/newsid\\_193000/193946.stm](http://www.news.bbc.co.uk/hi/english/sci/tech/newsid_193000/193946.stm)

The BBC report states that "the [brain] implant becomes naturally 'wired' into the patient's brain as neurones grow into the cones and attach themselves to the electrodes mounted inside," and that "An FM transmitter under the scalp transmits the signal without wires, and...no batteries," to operate the cursor on a computer... hard to believe!

APPENDIX TR2 - RATS CONTROL DEVICES WITH THOUGHT

[Eleanor White comments: This article shows clearly that the reading of minds is almost accomplished in the UNclassified world. Since CLASSIFIED technology is always a decade or two ahead of the unclassified world, imagine what exists now in the black areas of

defense contractors and government labs!]

## Rats Control Robot by Thought Alone

By Maggie Fox  
Reuters

WASHINGTON (June 23) - It sounds like something out of science fiction -- a rat with a small electrode sticking out of its head decides it wants a drink and, without touching anything at all, gets a robotic arm to bring it some water.

Still, a team of neurobiologists say their rats can control a machine with brainpower alone, and they think their technology may someday help paralyzed people.

'The people in the lab started calling the experiment the 'thinking about drinking experiment,' John Chapin of Hahnemann Medical College in Philadelphia, who led the research, said in a telephone interview. 'But we don't know whether rats think.'

Whatever the rats are doing, they are controlling the robotic arm without touching anything, said Chapin, who worked with colleagues at Duke University in North Carolina.

Reporting in the July issue of the journal Nature Neuroscience, they said they implanted tiny electrodes, no thicker than a hair, into the brains of six rats.

'It doesn't hurt the animal,' Chapin said. 'All there is is a little plug coming out of the animal's head. He runs around the cage and everything.'

The electrode is recording the activity of neurons -- on average 46 -- which Chapin found was important to making the experiment work. Earlier studies that recorded the activity of just one or a few brain cells did not work.

'We trained the rat initially to put his paw on a lever and to press the lever down. When the lever got pressed down there was a robot arm that moved over to a water dropper and then brought the water back to the animal's mouth,' Chapin said.

The rats had to carefully control the lever -- if they only pushed the lever halfway, it would only bring the arm halfway to them.

Chapin's team then recorded the brain activity associated with the movement of pressing the lever.

'We have an electronic device that converted those patterns of activity in the brain of the animal into a single electronic signal that could move the robot arm,' Chapin said.

Soon they disconnected the lever from the robot arm and hooked it up to the converting device alone.

They found, as other researchers have, that the brain activity controlling the movement came before the actual movement.

'When control of the robot arm was switched to the brain, the robot arm went over and brought water to the animal's mouth before

the animal even started to move," Chapin said.

"After a couple of days, the animals began to recognize that and they stopped actually pressing the lever."

Chapin said if the technique can be proven safe and reliable in animals such as monkeys, which have bigger and more complex brains than rats, it might eventually be tested in people with severe paralysis.

"If this really becomes a workable thing, I think there are a lot of people that could use it," he said.

It is important to record the signals from many neurons and not just a few, Chapin said. Of the six rats tested, he added, just four could get the arm to work. "Two rats would do it a few times and then they would stop," he said.

"The reason was we were not recording enough neurons in those animals. The robot arm would jerk around a lot and it wasn't smooth. When the animal tried to get his mouth around it, it would kind of bop him on the nose. They didn't like it."

For complex movements, such as those made by an artificial limb, even more neurons will be required, he said.

"In principle, it should be possible to tap this information and control a prosthetic limb," Dr. Eberhard Fetz of the University of Washington in Seattle wrote in a commentary on the findings.

APPENDIX TR3 - THOUGHT READING BY RADIO SIGNAL

ELECTRONICS & BRAIN CONTROL  
Excerpted From  
Popular Electronics Magazine  
July 1973, Vol. 4, Number 1  
by L. George Lawrence

Comments by Eleanor White: This article is excerpted mainly to provide experimenters and researchers with leads toward much better quality evidence that electronic mind control works. This article is NOT rigorously enough referenced that it will stand as evidence by itself.

Only those paragraphs which are of high relevancy have been transcribed; the article is long and since it is not a courtroom-ready document, I won't be adding to this transcription.

Items in square brackets [ ] are comments inserted by me to clarify the original text.

[pg 65]

It is time that we closely examined brain control now that scientists are actively seeking to unravel the mysteries that shroud that miniature bioelectric giant known as the human brain. Elements of brain control can already be found in anti-collision radar technology involving birds.

It has also been substantiated that pumping energy in the gigahertz range of frequencies through human heads, subjects can suddenly "hear" without using their ears.

See Allan Frey's paper

[SNIP]

[pg 66]

It was during these [Frey] studies that a profoundly important discovery was made: Deaf subjects often had the ability to hear radio frequency sound. The clinical criterion was that, if a given person could hear audio above 5 kHz [higher range of a piano] by bone or air conduction, then radio frequency sound could be heard as well.

This and related work has resulted in the manufacture of radio frequency [!!] type hearing aids for the deaf, one of which is made by LISTENING INC., 6 Garden Street, Arlington, Mass., and is known as the Neurophone Model GPF-1. [Not Flanagan's Neurophone] It operates at 100 kHz [about five times the normal maximum hearing frequency] and employs crystal control.

[pg 67]

These observations tie in with the fact that some individuals can detect radio programs through fillings in their teeth. This phenomenon was technically verified by interposing shields between respective people who exhibited this effect and the modulated radio frequency sources.

["Modulation" means "changes" made to an otherwise steady signal.]

When the lower half of the head was covered, including the maxillary dental area, the radio frequency sound was perceived. The sound ceased on covering the top half of the head. While the mechanism responsible for this phenomenon is only imperfectly understood, it can be assumed to be the result of DIRECT cortical stimulation.

[In other words, even when the sound seems to be coming from the teeth, it is actually being directly received and interpreted in the brain, not the teeth.]

[SNIP]

[pg 68]

**Fig. 4.** Cazzamalli's brain-wave detector of some years ago is illustrated here.

Brain-Wave Detection. Some 40-odd years ago, university professor F. Cazzamalli started publishing papers on the subject of brain-wave detection [using radio signals] and implied that he had detected radiations from the mind. [See image above.]

As shown in Fig. 4, he placed his subjects in a shielded room (or Faraday cage), emanated VHF radio waves through their heads, and claimed to have recorded "beat frequencies" obtained with an untuned receiver consisting of a galena crystal or diode tube [same thing for practical purposes], a fixed capacitor, an antenna, and a sensitive light beam galvanometer. [A "galvanometer" is a voltmeter; light beam types show up in physics labs and are one of the most sensitive types of voltmeter.]

The trouble is that Cazzamalli never mentioned transmitter power in his somewhat unprofessional papers [that's why we can't use this experiment directly as standalone evidence]. His oscillograms meant to show variations of the "beat" when his subjects were emotionally aroused or engaged in creative tasks when they were in the Faraday cage. ["Beat" as used by Cazzamalli refers to EEG-frequency, i.e. ELF, traces.]

Later he told an astounded world that his subjects would hallucinate when under the influence of his "oscillatori telegrafica", its frequency being around 300 MHz at the time. [Aviation radios are in this range.]

Tom Jaski, a noted science writer and engineer duplicated some of Cazzamalli's work with a modern low-power oscillator that was swept from 300 MHz to 600 MHz. [Cell phones start at over 900 MHz.]

His subjects could not see the dial. They were told to sound off as soon as they felt something unusual. At a certain frequency range - varying between 380 MHz and 500 MHz - the subjects repeatedly indicated points with exact accuracy in as many as 14 out of 15 trials. At these "individual" ...

[pg 69]

...frequencies, the same subjects announced having experienced pulsing sensations in the brain, ringing in the ears, and an odd desire to bite the experimenters. [I'd like to do that anyway - preferably using a hungry alligator!]

The oscillator's output power was only a few milliwatts, while the oscillator itself was located several feet away from the subjects.

[Any experimenters out there want to try this? Milliwatts are quite safe for short term experiments. Kids' walkie talkies are 50 to 100 milliwatts, for example.]

APPENDIX TR4 - ELECTRONICS SEES WHAT A CAT SEES

Eye's Visions Electronically Read And Displayed

Eleanor White's comments: Over decades of experience and among around 300 involuntary neuro-electromagnetic experimentees, there have been instances where two types of thought reading were evidently performed by the experimenters:

- Electronic reading of thoughts "said to one's self"
- Electronic viewing through the eyes of the experimentee

This article is about picking up recognizable images from a living brain (a cat's) and displaying those images on a screen. Keeping in mind that classified projects can be 20 or more years ahead of unclassified work (e.g. the SR-71 aircraft), the claims of the involuntary experimentees become much closer to believable in light of the unclassified work described below.

(\*\* NOTE: While pondering the technology here, the reader should also reflect on the apparent ease with which these experimenters can cut up a cat's skull, restrain it, in obvious discomfort and extreme unwillingness, to obtain this data. We 300 victims would like to point this out to show the world that this same callous attitude is what enables similar covert experimenters to torture us around the clock and completely shatter our lives.)

A Cat's Eye Marvel - EXCERPT:

by Leander Kahney

3:00 a.m. 7.Oct.99.PDT

In a dramatic demonstration of mind reading, neuroscientists have created videos of what a cat sees by using electrodes implanted in the animal's brain. Garrett Stanley of Harvard, and Fei Li and Yang Dan of the University of California, Berkeley, were able to reconstruct in startling detail scenes flashed before a cat's eyes.

.....

Read ongoing Med-Tech coverage

.....

The reconstructed scenes clearly demonstrate the scientist's ability to decode the language of the cat's visual system.

The researchers attached electrodes to 177 cells in an anesthetized cat's thalamus, a region of the brain falling about half-way in the visual processing pathway.

Having recorded patterns of firing as various scenes were flashed before the cat's eyes, the team was able to reconstruct very closely what the animal saw, which varied from people's faces to scenes of a dark forest.

The research was applauded by other neuroscientists.

"The demonstration that you can reconstruct a movie from the multiple cells in the thalamus is an important step in our understanding of how signals are represented in the activity of populations of cells," said Fred Rieke, an assistant professor of physiology and biophysics at the University of Washington.

Stanley, an assistant professor of biomedical engineering, said the research provides clues about how prosthetics may one day be wired into the mammalian nervous system. By understanding the language of the brain, scientists will be able to create devices that talk to it, he said.

"Trying to understand how the brain codes information leads to the possibility of replacing parts of the nervous system with an artificial device," he said.

Stanley predicted that in the next couple of decades, as more and more of the neural code is decoded, brain interfaces may start to appear.

But he cautioned it may take a lot longer. He noted that the team also recorded the activity of cells higher up in the cat's visual pathway -- in the visual cortex -- but the results were not as startling because of the greater complexity of the cells.

"So little is understood about thoughts, perceptions, dreams, it's impossible to predict how much progress we'll make in understanding them," he said.

However, Ken Miller, as associate professor at the University of California, San Francisco, said researchers around the world are using similar techniques to decode higher brain functions.

"These methods could be applied to further up the visual pathway," he said. "It will become more difficult ... but it's a promising direction."

The experiments were reported in the September 99 issue of the Journal of Neuroscience.

TR5.....MIND SWITCH - THINK APPLIANCES ON, OFF, OR ADJUST

Original link (March 2000):

[http://www.phys.uts.edu.au/~asearle/mind\\_switch/m\\_switch.html](http://www.phys.uts.edu.au/~asearle/mind_switch/m_switch.html)

#### OVERVIEW

The Mind Switch refers to the technology that has been developed which allows a person to turn on and off an electrical appliance, such as a desk lamp or TV in 2-3 seconds using EEG signals, without training. Proportional control, such as turning up or down the volume of a radio is also possible with the technology. This research is being carried at the University of Technology, Sydney (UTS).

#### BACKGROUND - General

Early in 1994 while studying the response of the brain to environmental factors Professor Ashley Craig and Mr Paul McIsaac of the Department of Health Sciences at UTS, noticed an effect which appears to be common among all persons. That effect is an increase in a particular brain signal when a person closes his/her eyes for more than one second. The important question that Ashley and Paul then asked was could this effect be used to do something useful?, ie - could the control of the brain signal be used, in turn, to control something else?

At this stage Ashley contacted Professor Tony Moon, the Dean of Science at UTS, to find out if anyone could help answer the technical questions and design a system that might exploit the apparent change in the signal level when a person closes his/her eyes. Professor Moon introduced Ashley to Assoc Prof Les Kirkup who is an associate professor in the department of Applied Physics at UTS, who has experience in developing electronics and instrumentation.

It was thought he could offer important input to the project. He was initially sceptical that signals as small as those that are present on the scalp, (where electrodes are placed to pick up brain activity) could be detected reliably and analysed sufficiently quickly to allow activation of an external device, such as a lamp or TV. The data that had been gathered on signal levels with eyes open and eyes closed showed that a significant increase occurred in the 8-13Hz part of the 'brain spectrum' commonly referred to as the 'alpha' region.

Les built a detection, discrimination and analysis system based on Ashley and Paul's data and, much to his surprise at least, the first person (Lucy) connected to the system showed the capability of operating a switch which could control an electrical appliance.

## BACKGROUND - Technical

Serious work done on brain signals began with Berger in 1929 [Berger 1967]. Since that time the acquisition and analysis of brain signals, referred to as Electroencephalography (EEG) has advanced to such a state that EEG is regularly used to assist in the diagnosis of schizophrenia, epilepsy and brain tumours. [Geddes and Baker, 1989]. EEG has also been used in biofeedback studies in which subjects may learn to modify their EEG signals in response to visual representation of their EEG signals.

This control usually take weeks or months to learn and is not highly reliable. The system we have developed does NOT rely on any learned skill by an individual. It simply requires a person to close his/her eyes for more than 1 second to effect sufficient change in the signals levels to allow for the reliable operation of a switch. It turns out that it has been known for many years that increase in signal level occur upon eye closure, but this is the first example (to our knowledge) of the recognition of its potential and the exploitation of the effect.

The system used to detect the change in signals consists of amplifiers, filters and other signal processing elements (full DETAILS ARE STILL CLASSIFIED at the moment!). As there are other sources which can generate signals which can interfere with brain signals (and hence cause intermittent switching on and off of appliances) we have developed a noise suppression system which eliminates the effect of those noise sources. This feature is very important as we are currently developing the technology for disabled persons (we have a three year grant from the Motor Accident Authority of New South Wales, MAA) and reliability is a major issue. The funding from MAA has allowed us to appoint Mr Andrew Searle who has become a key figure in the technical developments regarding the Mind Switch.

In addition Mr Perez Moses is developing new noise suppression techniques to be applied in this work.

APPENDIX IMP1 - PROMOTION OF HUMAN IMPLANTATION BY NIH

THIS TEXT WAS COPIED FROM THE ORIGINAL NIH/CNCT WEB SITE AT THIS ADDRESS:

<http://www.engin.umich.edu/center/cnct/orgind.html>

Center for Neural Communication Technology Organization

The NIH NCRR requires that its Centers have several basic components:

internal research projects, collaborative research projects, and service to external investigators in the form of distribution and training. The organization of the Center for Neural Communication Technology (CNCT) will be described here with links to more details on individual projects.

The underlying goal for all of the work conducted by the CNCT is to make multichannel recording and stimulation devices available to researchers which will enable them to more efficiently communicate with the brain. Micromachined electrodes offer the potential to extend small ensemble studies to tissue volume studies consisting of dozens if not hundreds of cells.

#### *Internal Research Projects*

There are three internal research projects under the Center which are designed to enhance the capability of the base technology:

##### *Project 1, Extensions of Micromachined Microelectrode Technology:*

*Extend the basic structure of the device to include fluid carrying channels for delivery of fluids to tissue volume, and/or to lesion at recording/stimulation site locations.*

##### *Project 2, Biological Neural Networks:*

*Develop techniques for data acquisition from and analysis of neural circuits in the volume surrounding arrays of recording devices. The direction which has been proposed for this project over the next grant period will be to study the relationships between the physical characteristics of the devices and the architecture of the neural tissue to rationalize the process of design and experimentally explore and model the deterioration of chronic implants over time to improve their behavior. A recent poster presentation on data collected from the cochlear nucleus can be seen [on the original site.]*

##### *Project 3, Morphological Visualization and Assessment:*

*Explore the envelope of tissue surrounding stimulation, recording and/or chemical delivery probes for histological evidence of deterioration of probe performance which has been observed electrophysiologically in vivo.*

#### *Collaborative Research Projects*

*In addition to internal projects, there are multiple collaborative research projects with investigators outside the Center. Collaborators contribute significantly toward improving and expanding the use of the technology in areas including optimization of device designs, evaluation of chronic connectors, interconnects and cranial chambers, improvement of implantation methods, development of protocols for chronic electrode site maintenance, testing of advanced devices, and exploration of new application areas.*

*Here are links to webpages of some of our collaborators (more to come.....):*

*<http://osiris.rutgers.edu/Buzsaki.html>*

*Gyorgy Buzsaki, M.D., Ph.D., Rutgers University, Neural network*

activity in the hippocampal formation

Steven Highstein, M.D. Ph.D., Washington University, Effects of microgravity upon the labyrinth

[http://msewww.engin.umich.edu/people/milty/protein\\_polymers.html](http://msewww.engin.umich.edu/people/milty/protein_polymers.html)

David Martin, Ph.D., University of Michigan, Microstructure and processing of bioactive protein polymers

<http://www.med.umich.edu/khri/censys/jmiddleb.htm>

John Middlebrooks, Ph.D., University of Michigan, Cortical representation of auditory space

Service to investigators outside of the CNCT is provided in the forms of distribution of probes, and training in their use.

Distribution has been a key component of the CNCT since its inception. In fact, it provided the main motivation for applying for the first NIH NCRR grant in 1994. To receive probes, we require that investigators fill out an application. Details of the variety of devices which we offer to the research public are outlined in a catalog. Standard devices are provided packaged appropriate for acute use. Prior to receiving additional batches of probes, we require the submission of a feedback form so that we may track progress and use the data to better understand and improve the technology.

The CNCT offers several training opportunities to provide education and experience in the design, handling and application of multichannel probes.

#### APPENDIX IMP2 - ITALIAN DOCTOR REPORTS HUMAN IMPLANTATION

July 1999 Statement by an Italian Doctor Regarding Unusual Human Implants

This physician has requested anonymity but is well-known to the involuntary human experimentation community and can be contacted through some of us. Eleanor White

..... statement by Italian physician .....

"A physician of my acquaintance has repeatedly discovered metal objects implanted into a number of residents - normal people, workers - of small towns in the North-Western surroundings of Turin, towards the valley ending in the French frontier.

"These devices, to the best of my knowledge, are not for any therapeutic purpose. Knowing that people have been used for involuntary electronic implantation experiments, these patients may have also been implanted in this way. Further investigation would be needed to learn the truth about these metallic implants."

#### APPENDIX IMP3 - IMPLANT TRANSMITS PHYSIO- AND PSYCHO- PARAMETERS BY RADIO

Unclassified Read-by-Radio Implant Development Project

Eleanor White's comments on this posting: This posting describes unclassified wireless telemetry of bodily functions, used for benign and beneficial purposes. This is about monitoring BY RADIO.

The reason it is of interest to involuntary neuro-electromagnetic experimentees (military and intelligence) is that development programmes like this one show that both the WILL and the MEANS to track someone's bodily functions by radio EXIST, and exist RIGHT NOW.

People seeking to discredit us will say that such technology could not possibly be in use now, or in some cases, even exist. Keeping in mind the typical 20-year spread between classified and unclassified technology, as demonstrated by the SR-71 reconnaissance aircraft, it is clear that classified military and intelligence programmes have highly advanced methods of tracking a target's body functions.

ABSTRACT; Biopotential recordings of human psycho-physiological parameters are hampered in many field settings, and some laboratory and clinic settings, by the sensor technology.

[Eleanor White's comment: Take SPECIAL NOTE of that word "PSYCHO-"... that has great significance for neuro-electromagnetic experimentees!]

Conventional electrodes which tether the subject to the signal amplification and recording equipment, are cumbersome to apply, often interfere with normal movements, are easily dislodged, and induce electrical noise due to the movement of the electrode wires carrying low level signals.

This project seeks to design essentially wireless electrode recording systems that use radio frequency telemetry to transmit the biopotential signal from the recording site to a body-worn transceiver and then to a remotely located receiver.

[Eleanor White's comment: That means, radio signals THROUGH THE FLESH to an externally worn transceiver. The only difference between this UNclassified project and the involuntary neuro-electromagnetic experimentees is distance, which can be overcome with time.]

The present subcontractor has developed transceiver and receiver technology that will be reviewed and customized as needed for the present application. The focus here will be on developing a generic design for the sensor subsystem ("telectrodes") to include the transducer interface with the skin, miniaturized amplifier and filter circuitry, an optimal connection between the transducers providing differential inputs to the amplifier, a longlasting but compact battery, and transmitter.

Phase I will consist of a design specification, development of a bench-top engineering prototype, design trade-off studies using the prototype, and the delineation of a detail design.

Intracerebral Radio Stimulation and Recording in Completely Free Patients

Dr. Jose M. R. Delgado

[EW: An MKULTRA perpetrator, yet unpunished. Intracerebral = in the brain]

Diagnosis and treatment of focal brain dysfunction associated with behavioral abnormalities are complex tasks which require more effective exploratory techniques. Intracerebral electrodes, electrocorticographical studies, and subsequent discrete neurosurgery have given the epileptologist and stereotaxic surgeon new possibilities for clinical investigation which as yet have been applied to only a small percentage of the patients suffering from neurological disorders including temporal-lobe epilepsy and related episodic behavior problems.

In these therapeutic studies, recordings and stimulation of any chosen cerebral structure can be performed over a period of days or weeks, and neuronal sites identified as triggers for abnormal electrical patterns associated with behavioral disturbances can be destroyed by electrolysis or resection.

Unfortunately in some patients episodic behavior disorders may be more disabling than their epileptic seizures, and focal lesions may improve one syndrome without modifying the other. Furthermore, recording and stimulation are usually performed under conditions which qualify their usefulness, because the patients' mobility is limited by connecting leads, and the behavior is likewise altered by the stressful and artificial environment of the recording room.

[Inset] Reprinted from The Journal of Nervous and Mental Disease, copyright [copy unreadable] by the Williams and Wilkins Company, Vol. 147, No. 4. Reproduced by permission.

1 Research and instrumental development from the construction of the stimoeiver was supported by the United States Air Force, 6571st Aeromedical Research Laboratory F 29600-67-C-0058. Additional support for our research was provided by the United States Public Health Service, M-2004, and the Office of Naval Research, 609 (48).

The circuit for EEG recording is a modified version of the unit described by Meehan (1965), and his help in providing us with the information and one of his units is gratefully acknowledged. The help of Mr. Per Ha...[unreadable] developing telestimulation is also gratefully acknowledged.

During the last few years, methodology has been developed to stimulate and record the electrical activity of the brain in completely unrestrained monkeys and chimpanzees (Delgado, 1967; Delgado and Mir, in press). This procedure should be of considerable clinical interest because it permits exploration of the brain for unlimited periods without disturbing their rest or normal spontaneous activities. [EW: Dr. Delgado, you are all heart!]

This paper reports instrumentation used and clinical application in four patients with psychomotor epilepsy in whom electrodes had been implanted in the temporal lobes. To our knowledge, this is the first use of intercerebral radio stimulation and recording in man.

#### METHODS

page 185

Implantation of electrodes

Electrodes were constructed and stereotaxically implanted according to methods previously described (Mark & Ervin, 1969). The electrode assemblies

which were connected to a McPherson skull plug, consisted of a plastic stylet, 1.2 mm in diameter, with 15 stainless steel 2 mm wide contacts at 3 mm intervals, plus one thermistor and three other contacts at the tip.

Using a McPherson Type 2 stereotaxic machine (Mark & Ervin, 1969), electrode assemblies were implanted ??laterally into the anterior medial amygdala of each patient.

#### Radio Stimulation

This system consists of two instruments: (1) the RF transmitter that measures 30 cm x 25 cm x 15 cm and includes the circuitry for controlling repetition rate, duration, and amplitude (intensity) of the stimulating pulse. The repetition rate may be varied in steps between 10 and 20 Hz and the duration between 0.1 and 1.5 millisecl. Single pulses may also be generated.

Intensity control is accomplished by varying the frequency of the three subcarrier oscillators that operate in the 100 to 200 kHz frequency range. A 100 MHz oscillator is turned on and off by the pulse train from the subcarrier oscillators. The duration of this pulse is determined by the pulse-duration switch. These bursts of 100 MHz RF energy are received by (2) the receiver-stimulator which is carried ?? the subject, measures 3.7 cm x 3.0 cm x 1.4 cm, and weighs 20 grams.

The solid-state circuitry is encapsulated in epoxy resin which provides it with very good mechanical strength and makes it waterproof. Space for the 2 volt mercury battery is included in the size mentioned above.

After RF detection, the resulting subcarrier frequency is demodulated into an amplitude. This amplitude controls the current intensity of the stimulation pulse by means of a constant current transistor in the output circuit of the receiver. This method makes the pulse intensity independent of biological impedance changes over a wide range. Under average stimulation conditions, the battery life is approximately one week.

Operating range is up to 100 feet.

[EW: This is prototype equipment, unclassified, and operating sometime in the 1970s. Imagine classified equipment at the end of the 20th century!]

Three channels of stimulation are available. The pulse intensity of each channel can be controlled individually from the transmitter. The pulse duration and repetition rate are the same for all three channels.

#### Encephalographic (EEG) Telemetry

A miniature FM-FM amplifier-transmitter combination and telemetry receiver are used for this purpose. (1) The transmitting circuitry, carried by the subject, consists of an EEG amplifier with a gain of 100, input impedance of 2 megohms, frequency response from 2 to 200 Hz, and a voltage-controlled oscillator (VCO) for each channel. The VCO operates in one of the frequency bands assigned for subcarrier oscillators by the IRIG standards.

In these studies, a three-channel system was used which operated on IRIG

channels (Delgado & Hamlin, 1962; Delgado & Mir, in press; Fonberg and Delgado, 1961). The outputs of all three subcarrier oscillators were summed and connected to the single RF transmitter module.

The miniaturized RF transmitter operates at 216 MHz and its range is 50 to 200 feet, depending on the environment. The size of the three channel unit, including the battery, is 4.5 cm x 4.5 cm x 1.5 cm and it weighs 50 grams.

The signals from the depth electrodes are received by the amplifier. The output signal of the amplifier controls the frequency of the subcarrier oscillator, and the oscillator output in turn controls the frequency of the transmitter.

(2) After amplification of the received signal from the transmitter has been demodulated, the composite subcarrier signals are connected to the inputs of the three discriminators, which then separate and demodulate their respective subcarriers to obtain the telemetered analog information. In the instrumentation used in this instance, a 100 microvolt signal at the input of EEG amplifier resulted in a 1-volt output from the corresponding discriminator in the receiver.

The analog output signals from the receiver were connected to the inputs of an EEG recorder and a magnetic tape recorder.. A microphone was also mounted in the room with the subjects and conversation was also recorded along with the EEG on magnetic tape.

[EW: So much for the idea that human implantation and MILITARY PARTICIPATION therein is only a myth.]

APPENDIX IMP5 ... UNCLASSIFIED SATELLITE TRACKING HUMAN IMPLANT SYSTEM

#### SIGHTINGS

World's First Satellite-Tracked Human Implant Device  
Applied Digital Solutions, Inc.  
12-17-99

Eleanor White's comments: This article clearly shows both availability of technology, (the classified world has certainly had this for some time), and intent to produce satellite-based human tracking implants.

Unequivocally.

.....

PALM BEACH, FLORIDA - Applied Digital Solutions, Inc. today announced that it has acquired the patent rights to a miniature digital transceiver - which it has named "Digital Angel" -- that can be used for a variety of purposes, such as providing a tamper-proof means of identification for enhanced e-business security, locating lost or missing individuals, tracking the location of valuable property and monitoring the medical conditions of at-risk patients.

In the agreement signed last week, ADS acquired the right to develop this unique product itself for all of its applications or to sublicense the development of specific applications to other entities. A special technology group has been formed within ADS to supervise the development of the device.

The implantable transceiver sends and receives data and can be continuously tracked by GPS (Global Positioning Satellite) technology. The transceiver's power supply and actuation system are unlike anything ever created. When implanted within a body, the device is powered electromechanically through the movement of muscles, and it can be activated either by the "wearer" or by the monitoring facility. A novel sensation feedback feature will even allow the wearer to control the device to some degree. The "smart" device is also small enough to be hidden inconspicuously on or within valuable personal belongings and priceless works of art.

Commenting on Digital Angel's many potential applications, Richard J. Sullivan, Chairman and CEO of Applied Digital Solutions, Inc. (ADS), said: "We believe its potential for improving individual and e-business security and enhancing the quality of life for millions of people is virtually limitless. Although we're in the early developmental phase, we expect to come forward with applications in many different areas, from medical monitoring to law enforcement. However, in keeping with our core strengths in the e-business to business arena, we plan to focus our initial development efforts on the growing field of e-commerce security and user ID verification."

Sullivan added that the multi-purpose technology would enable ADS to tap into a vast global market, through licensing and other commercial arrangements, with an estimated total value in excess of \$100 billion. "The e-business to business security market alone could reach as high as \$10 to \$12 billion in the near future," Sullivan added.

ADS is actively seeking joint venture partners to help develop and market the unique technology. The company expects to create a working prototype by the end of next year.

Applied Digital Solutions, Inc. is an e-business to business solutions provider offering Internet, telecom, LAN and software services to a wide variety of businesses throughout North America. For more information, visit the Company's web site at:

POSTSCRIPT

Advances in neuroscience 'may threaten human rights'  
[Nature Magazine](#) - January 22, 1998

Paris. Neuroscience is being increasingly recognized as posing a potential threat to human rights, just as another area of biology -- research in human genomics -- may lead to an excessive focus on genetic determinism and raises the spectre of genetic discrimination. This was one of the conclusions to emerge from the annual public meeting of the French national bioethics committee held last week in Paris on the theme of 'Science and Racism'.

Jean-Pierre Changeux, the chairman of the committee and a neuroscientist at the Institut Pasteur in Paris, told the meeting that understanding the working of the human brain is likely to become one of the most ambitious and rich disciplines of the future.

"But neuroscience also poses potential risks", he said, arguing that

advances in cerebral imaging make the scope for invasion of privacy immense. Although the equipment needed is still highly specialized, it will become commonplace and capable of being used at a distance, he predicted. That will open the way for abuses such as invasion of personal liberty, control of behaviour and brainwashing. These are far from being science-fiction concerns, said Changeux, and constitute "a serious risk to society".

Denis Le Bihan, a researcher at the French Atomic Energy Commission, told the meeting that the use of imaging techniques has reached the stage where "we can almost read people's thoughts".

The national bioethics committee is taking such threats so seriously that it is launching a study to consider the issues and recommend possible precautions. The study will also cover more immediate issues such as the legal question of whether criminals are responsible for their actions; Changeux predicts an increase in defence arguments based on irresponsibility due to a genetic predisposition to certain types of behaviour.

In closing the meeting, Claude Allegre, the minister for national education, research and technology, hinted at the creation of a revamped parliamentary office of technology assessment, arguing that the national bioethics committee's approach in the life sciences needed to be applied to other areas of science.

**Book Review:**  
**Unshackled: A Survivor's Story of Mind Control**

by Kathleen Sullivan,  
reviewer Eleanor White  
This page updated September 29, 2007

**This is the PUBLICATION ANNOUNCEMENT,  
not an actual review. When I am able to obtain a  
copy of Kathleen's book I will convert this page  
into a review. Meanwhile, the email below will  
explain how to get the book.**

**Eleanor White**

TO PURCHASE:

Paperback, 486 pages, \$24.95 USD as of December 17, 2003

<http://www.dandelionbooks.net/books.html#sullivan>

(Control-F find "Unshackled", about halfway down the page)

That page takes you to [this one](#).

Some of the information from my book, Unshackled, A Survivor's Story of Mind Control, can now be viewed on Amazon.com at:

[http://www.amazon.com/gp/reader/1893302350/ref=sib\\_dp\\_pt/104-9989004-5295913#reader-link](http://www.amazon.com/gp/reader/1893302350/ref=sib_dp_pt/104-9989004-5295913#reader-link)

... as part of their "see inside the book" offer. Please be aware that some of it may be triggering for survivors of criminally perpetrated trauma.

Anyone who doubts that current-day governments don't have sufficiently evil intent to carry out today's high tech torture of selected citizens should reflect on Kathleen's

living nightmare, described in this new book.

Author Bio: Kathleen Sullivan

Kathleen Sullivan lives near Chattanooga, Tennessee with her husband, Bill. She is the founder and president of a grassroots advocacy organization, North American Freedom Foundation, a Positive Activism, Remembrance and Commemoration for Survivors of Ritual Abuse and Mind Control. For more information, see:

<http://naffoundation-org>

A master gardener and rock collector, Kathleen enjoys "playing in the dirt." She's currently helping to develop PARC-VRAMC's Chattanooga Living Memorial Garden. A Social Work student at the University of Tennessee, she is also the author of MK, a novel about mind control that is scheduled for publication in 2004. You can visit her personal website at:

Subject: UNSHACKLED: A SURVIVOR'S STORY OF MIND CONTROL,  
BY KATHLEEN SULLIVAN  
Date sent: Fri, 12 Dec 2003 06:32:58 +0800

To all:

My book is now available for sale through the Internet - see my publisher's posting below. If it does well, it will probably also be sold later in book stores and through Amazon.com. Some of the posting is quite intense and may not be best for survivors to read. The book is also intense in places, including some of the artwork, but I tried my best to temper it with hope and positive thinking. The book may also be too triggering for some survivors to read, but their support people could still benefit and learn from it.

Thanks to everyone who has held my hand through this. I couldn't have done it without you.

Kathleen Sullivan

FOR IMMEDIATE RELEASE

'DAD WASN'T A MURDERER; HE DID THE WORLD A FAVOR BY TAKING OUT THE

TRASH'

JUST RELEASED BY DANDELION BOOKS:

UNSHACKLED: A SURVIVOR'S STORY OF MIND CONTROL, BY KATHLEEN SULLIVAN

TEMPE, AZ . . . Kathleen Sullivan was once an assassin and human guinea pig for satanic rituals and "experiments." A victim of mind control from childhood, until recently, when vivid flashbacks and nightmares started to leak the horrible truth, Sullivan had no recollection of any of these activities.

In UNSHACKLED: A SURVIVOR'S STORY OF MIND CONTROL, Sullivan delivers a first-hand account of her experiences as part of an underground criminal network that includes Intelligence personnel, military personnel, doctors and mental health professionals contracted by the military and the CIA, criminal cult leaders and members, pedophiles, pornographers, drug dealers and Nazis.

This network included her own father, who brutalized his daughter for years and even forced her to kill her own infant child.

UNSHACKLED [ISBN 1-893302-35-0], just released by Dandelion Books, is available online:

Paperback, 486 pages, \$24.95 USD as of December 17, 2003

<http://www.dandelionbooks.net/books.html#sullivan>

(Control-F find "Unshackled", about halfway down the page)

That page takes you to [this one](#).

with toll free ordering at 1-800-861-7899. It is also available in bookstores worldwide.

"This is not a book for weak stomachs--nor should it be read by those who are afraid to face the truth because it might hurt," states Dandelion president, Carol Adler.

Like the Mafia, the rules and mores of this criminalized, networked subculture are drastically different from the rules and mores of "normal" society. "I'm not an exhibitionist," writes Kathleen. "I value my privacy. And yet, I believe my story needs to be told so that more people will understand how 'Manchurian Candidate' style mind-control techniques can create alter-states in the minds of unwitting victims, causing them to perform deeds that are normally repugnant."

"There have been many books written about MKULTRA and its victims," writes Gordon Thomas, best-selling author of JOURNEY INTO MADNESS, one of the first books ever written about mind control and MKULTRA, "but nothing quite like the impact that UNSHACKLED will make on your psyche. It is written from not only the heart but from the inside.

"Here is what it was REALLY like to have been the victim of the grossest abuse committed by any American government," states Thomas. "The indictment in these pages is a Paean to survival and a wake-up call. It MUST be read. And its stunning revelations must be acted upon--NOW."

Sullivan was a product of three generations of inbred mind control.

"Dad couldn't see himself as who and what he really was," writes Sullivan. "He'd constructed an immense nearly impenetrable mental wall

behind him. Behind it was the pain of his having been abused and betrayed as a child.

"In front stood the part of Dad that had secretly operated in the criminal world. This adult part had dumped its guilt onto me, his small victim, because he was unwilling to recognize that he was a murderer and a pedophile.

"Dad had lied to himself most of all. In his fantasy world, he wasn't a child molester; he expressed his love for children by having sex with them.

"He wasn't a murderer; he had to 'teach a lesson' when he believed that adult cult members had betrayed him. He wasn't a murderer when he slaughtered 'disposable' infants on altars-he'd need their life-force to survive.

"He'd tortured and sometimes killed children for being weak, with the justification that only the strong should survive. He'd raped and sometimes killed women because 'women always get you in the end.'

"He'd killed 'street bums' because they were worthless and caused problems. He wasn't a murderer; he did the world a favor by taking out the trash."

Dandelion Books is an independent Arizona based publishing company rapidly becoming known for its gutsy "Uncensored Wake-Up Books."

"Something must be done. We must rescue America from its destroyers," writes Norman D. Livergood, renowned educator and intelligence expert and co-owner of [www.hermes-press.com](http://www.hermes-press.com) in his popular Dandelion book, AMERICA, AWAKE! WE MUST TAKE BACK OUR COUNTRY  
<http://www.dandelionbooks.net/books.html#livergood>

# Satellite 'Big Brother' eyes parolees

**Technology is same as that used to guide nuclear missiles**

By Gary Fields, USA TODAY

Military satellites designed to guide nuclear missiles are being used to monitor prison parolees and probationers in a technological advance designed to reduce the nation's skyrocketing prison population. But critics say it also raises the specter of an Orwellian future.

The ComTrak monitoring system uses 24 Defense Department satellites orbiting 12,500 miles above the Earth to track 100 people in nine states. The people under surveillance range from sex offenders in Chicago to juvenile delinquents in New Jersey. The cost of monitoring each person is \$12.50 per day.

It is a long way from a system originally designed by the Defense Department to help guide nuclear missiles. The Pentagon began leasing satellite time, allowing others to use the satellites, after the Cold War ended. "It's bullets to plowshares," says Jack Lamb, president and CEO of Advanced Business Sciences Inc., the Omaha-based company that developed the ComTrak system.

The system has three main components: a bracelet the size of a wristwatch, a 3-pound personal tracking unit that resembles a walkie-talkie, and the battery charger/base that is kept at the monitored person's house and transmits information by telephone to a monitoring center. If the bracelet is broken or removed or the wearer is more than 50 feet from the tracking unit, an alarm is sent to the monitoring center.

The system is programmed to set up zones where a person monitored can and cannot go, depending on the crime committed. For example, people with drunken-driving convictions can be tracked to set off an alarm if they enter local bars. Exclusion zones for a sexual predator can include schools and parks in a designated area. And an abusive husband can be tracked to ensure he stays clear of his wife's workplace, home or places she visits. When a person being monitored enters an exclusion zone, the tracking unit sends an automatic alert to monitoring centers in Omaha. Law enforcement authorities are alerted within minutes.

At night, the tracker is placed in the charger, which downloads all of a person's movements that day -- right down to the precise route the person took to work -- and sends the record of movements to the monitoring center.

Lamb says the potential for growth is "phenomenal." There are nearly 4 million people under some form of supervision in the USA. Of those, only about 11,000 are monitored electronically under the old system, which is unable to track a person's movements once he or she has left home. Some see the new system as a tool for judges grappling with a prison and jail population of 1.8 million people at a cost of more than \$40 per day for each inmate.

Percy Luney Jr., president of the National Judicial College at the University of Nevada, Reno, where judges receive training in such issues as alternative sentencing, says the system "gives judges an option for keeping people out of jail and away from all the negative influences there. It's also a cost-saver for the taxpayer."

Lamb says his system also is an improvement over older technology, which can tell only if those being monitored leave home during restricted hours. "The problem with the old system is once they leave home, you have no idea where they are or what they are doing," Lamb says.

Others involved in the prison industry, from defense lawyers to probation and parole officers and judges, acknowledge that the advanced monitoring system has potential. However, there are some concerns about how far the use of such surveillance will go.

Paul Rothstein, a law professor at Georgetown University, says the system has the potential "to change the face of law enforcement and incarceration." But he also sees the "potential for creating a monster."

Rothstein is concerned that the advances in technology could result in more and more people being subjected to electronic monitoring -- not just those on parole .

"You could end up with the majority of the population under some kind of surveillance by the government," he says.

Jack King, spokesman for the National Association of Criminal Defense Lawyers, says his organization supports the electronic monitoring. He sees it as especially helpful in the case of someone who should be out on bail but is too destitute to pay it.

He says he is concerned about such technology being used to monitor people who have served their sentences and paid their debts to society.

"If it's to track someone who has done his full term, like a registered sex offender or a formerly dangerous felon, then the use of this technology becomes Orwellian with all the dangers to all our freedoms that suggests," King says. "Who would they be tracking next?"

An ugly prison record

Given the way it treats its own inmates, America shouldn't be shocked at the abuse of Iraqis

<http://tinyurl-com/2w8f4>

by Christopher Reed

For a nation founded on slavery and genocide, Americans retain an astonishingly enduring faith in their continuing righteousness. They are sounding this note again as the prison torture scandal continues in Iraq.

In a column in the New York Times last week, Middle East analyst Thomas Friedman warned that the revelations created the "danger of losing America as an instrument of moral authority and inspiration in the world."

Does he not read the world's newspapers? Uncle Sam as moral authority?

Other U.S. pundits similarly harrumphed about America's endangered integrity and leadership. President George W. Bush himself said the prison mistreatments were not the American way.

But they were, and they are.

Friedman's column was headlined, "Restoring our honour," but the abuse of prisoners surprises nobody who reads newspapers or scans the Internet. Americans have been mistreating and torturing their fellow Americans in their own lock-ups for decades. What honour is there to restore?

In "liberal" California, horror stories have appeared for years from hellholes such as Pelican Bay prison, where they house "the worst of the worst" - and also inflict the worst brutalities. A prisoner dumped in scalding water so his skin peeled off like old varnish; prisoners left naked outside in rainy and bitter weather for days; multiple beatings and rapes; several unexplained deaths.

In Corcoran prison, California, guards held their own Roman gladiator games with prisoners pitted against each other in fights to the near death. A disliked and defenceless prisoner was placed in the same cell as the biggest and baddest sex criminal - known as the Booty Bandit - to be duly raped to the amusement of the prisoner's supposed guardians.

Pelican Bay is such a fearful place, with prisoners kept under perpetual scrutiny while unable to see any other human being, a psychiatrist told a court that many were going insane.

A federal judge finally ordered reforms, as did another over Corcoran, but there is little evidence that either have become proper places even to house the worst.

Similar reports surface across America. Texas is especially bad.

Significantly, private, for-profit prisons have some of the worst records.

They often have such poor medical facilities that prisoners die from curable conditions, as Harper's magazine revealed in an exhaustive inquiry last year.

California holds more prisoners than Britain, France, Germany, and Canada combined, yet jails are still grossly overcrowded. Conditions in many southern U.S. prisons resemble some of the worst of the developing world, with prisoners sleeping on filthy floors overrun by rats.

In 1999, it was reported that 13 women at California's state-run Chowchilla female detention centre had died the previous year from negligent, or non-existent, medical care. Amnesty International reported in 1999 that male guards in several U.S. states routinely raped female prisoners.

In a book published in 2001, *Going Up The River*, former Wall Street Journal reporter Joseph Hallinan told of visiting a prison in Alabama where chained inmates still broke boulders with sledgehammers.

The sheriff of Phoenix, Ariz. was re-elected by loyal voters after bringing in female convict chain gangs. All this has been going on since Saddam Hussein was a young man.

It has worsened in recent years, despite a massive prison-building program that now incarcerates 2 million, the world's largest prison population.

Yet Americans have mostly ignored the disgrace of their penal system.

They became so fearful of crime, they lost consideration for the lives of criminals. Any idea of rehabilitation has been abandoned. Even when scandals over mistreatment do emerge, many say the inmates deserve it.

This does not excuse commentators such as Friedman, or the shocked, shocked, demeanour of U.S. news anchors and commentators.

Yet the details from Iraq itself support the view that prisoner abuse in Iraq was inevitable.

At Abu Ghraib prison, the alleged main perpetrator is staff sergeant Ivan "Chip" Frederick, 37, the senior of six noncommissioned officers charged with cruelty and other mistreatment. He is a part-time military policeman called up last year for service in Baghdad - and was a prison guard for six years in Virginia.

Another reflection on the role of private enterprise in U.S. incarceration is the background of Brigadier-General Janis Karpinski, also a military police reservist in Iraq.

When she was put in command of Abu Ghraib and its thousands of Iraqi inmates last year, she had never done penal work before. In the army she was an intelligence officer and in private life, a business consultant.

Shortly before her suspension from duty she told a Florida newspaper that her prisoners were living so well, she was worried they wouldn't want to return home.

Another American living in dreamland.

Christopher Reed is a Los Angeles-based reporter who has written extensively on prison conditions in the United States.

## **U.S. Disinformation Agency?**

This article below shows that even in the UNclassified world, disinformation is considered a justifiable tactic. The question is: With a topic as invasive and sensitive as mind control using today's no-evidence psychotronic weapons, would governments seek to publish disinformation to cover it up? Given this article, it's not hard to imagine that a major mind control research program can be underway and yet denied by governments.

Pentagon Readies Efforts to Sway Sentiment Abroad

By JAMES DAO and ERIC SCHMITT

WASHINGTON, Feb. 18 The Pentagon is developing plans to provide news items, possibly even false ones, to foreign media organizations as part of a new effort to influence public sentiment and policy makers in both friendly and unfriendly countries, military officials said.

The plans, which have not received final approval from the Bush administration, have stirred opposition among some Pentagon officials who say they might undermine the credibility of information that is openly distributed by the Defense Department's public affairs officers.

The military has long engaged in information warfare against hostile nations — for instance, by dropping leaflets and broadcasting messages into Afghanistan when it was still under Taliban rule.

But it recently created the Office of Strategic Influence, which is proposing to broaden that mission into allied nations in the Middle East, Asia and even Western Europe. The office would assume a role traditionally led by civilian agencies, mainly the State Department.

The small but well-financed Pentagon office, which was established shortly after the Sept. 11 terrorist attacks, was a response to concerns in the administration that the United States was losing public support overseas for its war on terrorism, particularly in Islamic countries.

As part of the effort to counter the pronouncements of the Taliban, Osama bin Laden and their supporters, the State Department has already hired a former advertising executive to run its public diplomacy office, and the White House has created a public information "war room" to coordinate the administration's daily message domestically and abroad.

Secretary of Defense Donald H. Rumsfeld, while broadly supportive of the new office, has not approved its specific proposals and has asked the Pentagon's top lawyer, William J. Haynes, to review them, senior Pentagon officials said.

Little information is available about the Office of Strategic Influence, and even many senior Pentagon officials and Congressional military aides say they know almost nothing about its purpose and plans. Its multimillion dollar budget, drawn from a \$10 billion emergency supplement to the Pentagon budget authorized by Congress in October, has not been disclosed.

Headed by Brig. Gen. Simon P. Worden of the Air Force, the new office has begun circulating classified proposals calling for aggressive campaigns that use not only the foreign media and the Internet, but also covert operations.

The new office "rolls up all the instruments within D.O.D. to influence foreign audiences," its assistant for operations, Thomas A. Timmes, a former Army colonel and psychological operations officer, said at a recent conference, referring to the Department of Defense. "D.O.D. has not traditionally done these things."

One of the office's proposals calls for planting news items with foreign media organizations through outside concerns that might not have obvious ties to the Pentagon, officials familiar with the proposal said.

General Worden envisions a broad mission ranging from "black" campaigns that use disinformation and other covert activities to "white" public affairs that rely on truthful news releases, Pentagon officials said.

"It goes from the blackest of black programs to the whitest of white," a senior Pentagon official said.

Another proposal involves sending journalists, civic leaders and foreign leaders e-mail messages that promote American views or attack unfriendly governments, officials said.

Asked if such e-mail would be identified as coming from the American military, a senior Pentagon official said that "the return address will probably be a dot-com, not a dot-mil," a reference to the military's Internet designation.

To help the new office, the Pentagon has hired the Rendon Group, a Washington-based international consulting firm run by John W. Rendon Jr., a former campaign aide to President Jimmy Carter. The firm, which is being paid about \$100,000 a month, has done extensive work for the Central Intelligence Agency, the Kuwaiti royal family and the Iraqi National Congress, the opposition group seeking to oust President Saddam Hussein.

Officials at the Rendon Group say terms of their contract forbid them to talk about their Pentagon work. But the firm is well known for running propaganda campaigns in Arab countries, including one denouncing atrocities by Iraq during its 1990 invasion of Kuwait.

The firm has been hired as the Bush administration appears to have united around the goal of ousting Mr. Hussein. "Saddam Hussein has a charm offensive going on, and we haven't done anything to

counteract it," a senior military official said.

Proponents say the new Pentagon office will bring much-needed coordination to the military's efforts to influence views of the United States overseas, particularly as Washington broadens the war on terrorism beyond Afghanistan.

But the new office has also stirred a sharp debate in the Pentagon, where several senior officials have questioned whether its mission is too broad and possibly even illegal.

Those critics say they are disturbed that a single office might be authorized to use not only covert operations like computer network attacks, psychological activities and deception, but also the instruments and staff of the military's globe-spanning public affairs apparatus.

Mingling the more surreptitious activities with the work of traditional public affairs would undermine the Pentagon's credibility with the media, the public and governments around the world, critics argue.

"This breaks down the boundaries almost completely," a senior Pentagon official said.

Moreover, critics say, disinformation planted in foreign media organizations, like Reuters or Agence France-Presse, could end up being published or broadcast by American news organizations.

The Pentagon and the Central Intelligence Agency are barred by law from propaganda activities in the United States. In the mid-1970's, it was disclosed that some C.I.A. programs to plant false information in the foreign press had resulted in articles published by American news organizations.

Critics of the new Pentagon office also argue that governments allied with the United States are likely to object strongly to any attempts by the American military to influence media within their borders.

"Everybody understands using information operations to go after nonfriendly," another senior Pentagon official said. "When people get uncomfortable is when people use the same tools and tactics on friendly."

Victoria Clarke, the assistant secretary of defense for public information, declined to discuss details of the new office. But she acknowledged that its mission was being carefully reviewed by the Pentagon.

"Clearly the U.S. needs to be as effective as possible in all our communications," she said. "What we're trying to do now is make clear the distinction and appropriateness of who does what."

General Worden, an astrophysicist who has specialized in space operations in his 27-year Air Force career, did not respond to several requests for an interview.

General Worden has close ties to his new boss, Douglas J. Feith, the under secretary of defense for policy, that date back to the Reagan administration, military officials said. The general's staff

of about 15 people reports to the office of the assistant secretary of defense for special operations and low-intensity conflict, which is under Mr. Feith.

The Office for Strategic Influence also coordinates its work with the White House's new counterterrorism office, run by Wayne A. Downing, a retired general who was head of the Special Operations command, which oversees the military's covert information operations.

Many administration officials worried that the United States was losing support in the Islamic world after American warplanes began bombing Afghanistan in October. Those concerns spurred the creation of the Office of Strategic Influence.

In an interview in November, Gen. Richard B. Myers, chairman of the Joint Chiefs of Staff, explained the Pentagon's desire to broaden its efforts to influence foreign audiences, saying:

"Perhaps the most challenging piece of this is putting together what we call a strategic influence campaign quickly and with the right emphasis. That's everything from psychological operations to the public affairs piece to coordinating partners in this effort with us."

One of the military units assigned to carry out the policies of the Office of Strategic Influence is the Army's Psychological Operations Command. The command was involved in dropping millions of fliers and broadcasting scores of radio programs into Afghanistan encouraging Taliban and Al Qaeda soldiers to surrender.

In the 1980's, Army "psyop" units, as they are known, broadcast radio and television programs into Nicaragua intended to undermine the Sandinista government. In the 1990's, they tried to encourage public support for American peacekeeping missions in the Balkans.

The Office of Strategic Influence will also oversee private companies that will be hired to help develop information programs and evaluate their effectiveness using the same techniques as American political campaigns, including scientific polling and focus groups, officials said.

"O.S.I. still thinks the way to go is start a Defense Department Voice of America," a senior military official said. "When I get their briefings, it's scary."

## Good Lord! What in heaven's name is that?

By DAVID HAMLING in London

We are in Baghdad in 1991, and something strange is happening. A hush falls over the city as a huge shimmering face materialises in the sky. Soldiers and citizens prostrate themselves as each hears the voice of Allah, commanding them to overthrow the evil and treacherous Saddam Hussein. Within minutes an angry mob is storming the palace as the guards flee ...

This highly imaginative scenario was proposed by US Air Force (USAF) planners for a bloodless victory in the Gulf conflict. The idea of putting words in God's mouth is not new. In the second century AD Lucian described a statue of the god Aesculapius that spoke to believers, aided by a hidden priest with a speaking tube.

The Baghdad plan involved projecting a giant hologram over Iraq. This kind of projection requires a mirror behind it. The scale of the project dictated a mirror several kilometres across up in space. So far the largest mirror developed has been 30 metres wide and present versions are too small to produce a convincing image at ground level.

Another approach would be to make a mirror out of thin air. When warm air lies on top of cold air, the difference in density is enough to bend light. At higher altitudes, a mirage can make whole landscapes appear in the sky. An artificial mirage could in theory be made by heating the atmosphere with radio waves or microwaves.

The military certainly appears to believe in the potential use of holograms. A USAF think-tank has devised uses ranging from deceptive holographic imaging to the Star Trek-sounding distortion field projector. These are described as useful for strategic deception purposes, particularly against an unsophisticated adversary. They would be projected by a special aircraft, an airborne hologram projector.

Perhaps the nearest current equivalent is the Commando Solo, a modified Hercules festooned with aerials and antennae and carrying pods of classified electronics. It can transmit across the electromagnetic spectrum, including radio and television signals.

**The face of God needs a voice. A new technique using microwaves could produce this. When a high-power microwave pulse strikes the human body, a small temperature disturbance occurs, causing an expansion of tissue that can create an acoustic wave. A report from the USAF scientific advisory board says: "With a pulse stream, an internal acoustic field of 5-15KHz can be created which is audible. Thus it may be possible to 'talk' to adversaries in a way which would be most disturbing to them."**

The practical difficulties in microwave transmission are formidable. The exact sound perceived depends on the size and shape of the hearer's skull and orientation to the source. Microwaves can be reflected or dampened by solid objects, so God's voice could have the underwater quality of poor radio reception. And would you believe in a God whose voice drops off when you walk behind a lamp-post?

But there were other problems with the plan. Images of Allah are forbidden in Islam. How can you project an image of God when nobody knows what He is supposed to look like?

And the citizens of Baghdad are not superstitious savages, prone to fleeing at the sound of a disembodied voice from a gramophone. They have been exposed to years of computer-generated imagery and flashy special effects. If God's image did appear in the heavens, someone would be bound to suggest it was all done with mirrors.

BONE CONDUCTION THERMOELASTIC  
COCHLEAR MICROPHONICS

Abstract: In this research program, we plan to investigate a revolutionary new form of communication based on the microwave auditory effect. This proposed communication idea satisfies the requirements for an innovative, natural interface requiring no learning or training for efficient operation and effective communications. The purpose of the program proposed here is to extend the results of a recent feasibility study, performed for the Armstrong Laboratory/OEDR. The study found that voice communications, via the microwave auditory effect, are highly feasible. In Phase I of this SBIR, we propose to investigate the range of potential applications for this radically different form of voice communication and recommend hardware and systems concepts suitable for laboratory and brassboard demonstrations to be built under Phase II.

**Pages:** 10

**Contract Number:** None

**NASA Subject Category:** LIFE SCIENCES (GENERAL)

**Abstract:**

A decoy and deception concept presently being considered is to remotely create the perception of noise in the heads of personnel by exposing them to low power, pulsed microwaves. When people are illuminated with properly modulated low power microwaves the sensation is reported as a buzzing, clicking, or hissing which seems to originate (regardless of the person's position in the field) within or just behind the head. The phenomena occurs at average power densities as low as microwatts per square centimeter with carrier frequencies from 0.4 to 3.0 GHz. **By proper choice of pulse characteristics, intelligible speech may be created.** Before this technique may be extended and used for military applications, an understanding of the basic principles must be developed. Such an understanding is not only required to optimize the use of the concept for camouflage, decoy and deception operations but is required to properly assess safety factors of such microwave exposure.

## **Notes on Voice to Skull Patent 6,470,214 by Dr. Allen L. Barker, January 27, 2007**

These notes present some details on an improvement in the pulsed microwave voice to skull technology originally demonstrated in 1973 by experimenter Dr. Joseph Sharp. Note that this is a 1994 re-confirmation of voice to skull as a fully demonstrated technology, and NOT "in the future" as some articles mistakenly say.

[Below are comments on] two of the documents which Sharon Weinberger received as a result of a FOIA request for documents related to the patent:

O'Loughlin JP, Loree DL: Method and device for  
implementing the radio frequency hearing effect.  
US patent #6470214, Oct 22, 2002

One document is an Aug. 2001 letter from O'Loughlin to the Judge Advocate handling the patent case, and the other is a draft of the patent from 1994 which contains some different information than the final patent.

The scientific principle underlying the invention, and assumed by the inventors, is that thermal expansion can convert microwave pulses to acoustic signals. As everyone knows from basic science, when things heat up they tend to expand, and when they cool down they tend to contract. Microwave pulses carry energy, and when a pulse is absorbed by biological tissue this energy is converted to heat. This causes the tissue to expand very slightly, and then to contract back when it cools. This is basically the standard model for describing and analyzing the microwave hearing effect (and has been for several decades). A single microwave pulse causes a click to be heard. More complex signals can be broken down into strings of "clicks" by various modulation methods. The amplitude of the induced acoustic wave is (at least roughly) proportional to the power level of the microwave pulse.

The basic modulation method used in the O'Loughlin patent is an amplitude modulation. In a simple amplitude modulation, the signal is broken up into discrete samples in time and then the power level of the microwave pulse train is modulated accordingly. This is "an AM modulated envelope over a pulsed RF carrier train." This method unfortunately introduces nonlinear distortion which cannot be compensated for by preprocessing. It works for tones, but not for complex signals such as speech. This is theoretically worked out in the draft patent, which also describes experimental verification that the simple AM modulation produces barely intelligible speech. The experiments were conducted at "the Air Force Phillips Laboratory during the week of 24 Oct 94, using the AM sampled data modulation process." Subjects could recognize the encoded messages, but only if they were told what the message was.

The patent actually makes use of a different form of AM modulation, the "AM double sideband suppressed carrier" method, which is linear in the amplitude and allows for preprocessing of the audio signal. They state (and show) that "conventional AM modulation ... is not useful for the implementation of this invention."

O'Loughlin points out in his letter that since the power of a microwave signal is proportional to the square of its amplitude, and since the acoustic signal at the head is roughly proportional to the microwave signal's power level, the microwave signal's amplitude should be modulated according to the square root of the original audio signal's amplitude. According to O'Loughlin, "This is the basic essence of the invention." It is essentially a preprocessing of the input audio signal. Other preprocessing is also applied, for example to decrease the higher frequencies according to a spherical model of a human head (which shows "a 40dB per decade slope in favor of the higher frequencies").

In the Washington Post article "Mind Games," Sharon Weinberger writes that she obtained "records that note that the patent was based on human experimentation in October 1994 at the Air Force lab, where scientists were able to transmit phrases into the heads of human subjects, albeit with marginal intelligibility." But these were initial experiments, using the simple AM modulation (which would be expected to give marginal intelligibility). Using the actual process in the patent "will produce an undistorted subjective sound; which is the invention," according to the draft of the patent. O'Loughlin's letter to the Judge Advocate states, "... the fact that when the signal is processed by the teachings of the invention the signal is intelligible has also been experimentally demonstrated."

In a calculation in the draft patent, the sound level is calculated for a single tone sent via the AM balanced modulator method. A 1GHz RF carrier is used, with a power level of 100mW/sqcm. The calculation yields a sound level of ~50dB, which is said to be at the level of "a normal male voice at one meter." The calculations do not take several loss sources into account, though, and the actual sound level would be somewhat lower. It is calculated that the 100mW/sqcm signal could be applied for ten seconds and stay within the ANSI exposure level at 1GHz.

The suppressed-carrier method only outputs power while a signal is present, so power levels would be much less of a problem unless someone were really being blasted by a constant auditory stream. (As if any experimenters on nonconsensual subjects would necessarily follow the ANSI exposure levels while psychologically manipulating involuntary human subjects.)

Justesen reported in "Microwaves and Behavior," American Psychologist, March 1975, that Sharp and Grove had successfully encoded speech (the spoken digits from one to ten) in a pulsed microwave signal. The method reported in that article is essentially an FM modulation, rather than an AM modulation. That paper states that "the electrical sine-wave analogs of each word were then processed so that each time a sine wave crossed zero reference in the negative direction, a brief pulse of microwave energy was triggered." That sounds like they are taking a Fourier decomposition of the speech signal and then using a frequency modulation on all of the Fourier components, simultaneously. The results reported in the O'Loughlin patent for AM modulation do not necessarily apply to the FM modulation methods.

Of course, neither the Justesen article nor the O'Loughlin patent discuss the psychological sequelae that would result from testing these devices on nonconsensual subjects and/or applying them against unwitting citizens.

## **Microwave Ray Gun Controls Crowds with Noise**

**By DAVID HAMBLING**

**July 4, 2008**

A US company claims it is ready to build a microwave ray gun able to beam sounds directly into people's heads.

The device dubbed MEDUSA (Mob Excess Deterrent Using Silent Audio) exploits the microwave audio effect, in which short microwave pulses rapidly heat tissue, causing a shockwave inside the skull that can be detected by the ears. A series of pulses can be transmitted to produce recognisable sounds.

The device is aimed for military or crowd-control applications, but may have other uses.

Lev Sadovnik of the Sierra Nevada Corporation in the US is working on the system, having started work on a US navy research contract. The navy's report states that the effect was shown to be effective.

### **Scarecrow Beam?**

MEDUSA involves a microwave auditory effect "loud" enough to cause discomfort or even incapacitation. Sadovnik says that normal audio safety limits do not apply since the sound does not enter through the eardrums.

"The repel effect is a combination of loudness and the irritation factor," he says. "You can't block it out."

Sadovnik says the device will work thanks to a new reconfigurable antenna developed by colleague Vladimir Manasson. It steers the beam electronically, making it possible to flip from a broad to a narrow beam, or aim at multiple targets simultaneously.

Sadovnik says the technology could have non-military applications. Birds seem to be highly sensitive to microwave audio, he says, so it might be used to scare away unwanted flocks.

Sadovnik has also experimented with transmitting microwave audio to people with outer ear problems that impair their normal hearing.

### **Brain Damage Risk**

James Lin of the Electrical and Computer Engineering Department at the University of Illinois in Chicago says that MEDUSA is feasible in principle.

He has carried out his own work on the technique, and was even approached by the music industry about using microwave audio to enhance sound systems, he told New Scientist.

"But is it going to be possible at the power levels necessary?" he asks. Previous microwave audio tests involved very "quiet" sounds that were hard to hear, a high-power system would mean much more powerful and potentially hazardous shockwaves.

"I would worry about what other health effects it is having," says Lin. "You might see neural damage."

Sierra Nevada says that a demonstration version could be built in a year, with a transportable system following within 18 months. They are currently seeking funding for the work from the US Department of Defence.

...

The demonstration of sonic transduction of microwave energy by materials lacking in water LESSENS the likelihood that a thermohydraulic principle is operating in human perception of the energy. Nonetheless, some form of thermoacoustic transduction probably underlies perception. If so, it is clear that simple heating is NOT a sufficient basis for the Frey effect; the requirement for pulsing of radiations appears to implicate a thermodynamic principle.

Frey and Messenger (1973) and Guy, Chou, Lin, and Christensen (1975) confirmed that a microwave pulse with a slow rise time is INeffective in producing an auditory response; only if the rise time is SHORT, resulting in effect in a square wave with respect to the leading edge of the envelope of radiated radio-frequency energy, does the auditory response occur.

*[Eleanor White's comment: This is why we don't "hear" ordinary radio and TV signals.]*

Thus the rate of change (the first derivative) of the waveform of the pulse is a CRITICAL factor in perception. Given a thermodynamic interpretation, it would follow that information can be encoded in the energy and "communicated" to the "listener".

Communication has in fact been demonstrated. A. Guy (Note 1), a skilled telegrapher, arranged for his father, a retired railroad telegrapher, to operate a key, each closure and opening of which

resulted in a pulse of microwave energy. By directing the radiations at his own head, complex messages via the Continental Morse Code were readily received by Guy.

Sharp and Grove (note 2) found that appropriate modulation of microwave energy can result in "wireless" and "receiverless" communication of SPEECH. The recorded by voice on tape each of the single-syllable words for digits between 1 and 10. The electrical sine-wave analogs of each word were then processed so that each time a sine wave crossed ZERO REFERENCE IN THE NEGATIVE DIRECTION, a brief pulse of microwave energy was triggered.

VOICE CONVERSION TO PULSES, AS USED IN THE SUCCESSFUL DEMONSTRATION OF MICROAVE VOICE-TO-SKULL TECHNOLOGY IN 1973 BY DR. JOSEPH SHARP. THIS IS NOT CLASSIFIED.

*[Eleanor White's comment: This is, in effect a form of what is called pulse-RATE modulation.]*

By radiating themselves with these "voice modulated" microwaves, Sharp and Grove were READILY able to hear, identify, and distinguish among the 9 words. *[Typo?]* The sounds heard were not unlike those emitted by persons with artificial larynxes.

Communication of more complex words and of sentences was not attempted because the averaged densities of energy required to transmit longer messages would approach the current 10 milliwatts per square centimeter limit of safe exposure.

The capability of communicating directly with a human being by "receiverless radio" has obvious potentialities both within and without the clinic. But the hotly debated and unresolved question of how much microwave radiation a human being can safely be exposed to will probably forestall applications within the near future.

# VALERIE B. WOLF

## OBITUARY FROM [www.nola.com](http://www.nola.com)

---

WOLF, VALERIE B.

02/06/02

Valerie B. Wolf, a graphic arts student and former social worker, died Monday of cancer at Memorial Medical Center. She was 54. Mrs. Wolf was born in Vancouver, B.C., Canada, and lived in New Orleans since 1975. She received a master's degree in social work from Syracuse University and a master's in physical education from Ithica College. She was enrolled at Tulane University. She was a member of Touro Synagogue, a past president of the New Orleans Chapter of the National Council of Jewish Woman and a member of Sweet Adelines. Survivors include her husband, Thomas M. Wolf; a son, Mark H. Wolf; a brother, Guy Winchester of Toronto, Canada; and two sisters, Holly Winchester of Halifax, Nova Scotia, and Deirdre Evans of Vancouver. A funeral will be held today at noon at Touro Synagogue, 4238 St. Charles Ave. Visitation will begin at 10:30 a.m. Burial will be in Hebrew Rest Cemetery. Tharp-Sontheimer-Tharp Funeral Home is in charge of arrangements.

---

### DISCIPLINARY ACTION

From [www.labswe.org](http://www.labswe.org)

Valerie B. Wolf, BCSW, #908, was sanctioned by the Board on July 19, 2000. Ms. Wolf's BCSW license was revoked for violation of:

LSA R.S. 37:2713.A. (4) and (6):

The board shall have the power to deny, revoke, or suspend any certificate issued by the board or applied for in accordance with this Chapter, or otherwise discipline a board certified social worker for any of the following causes:

(4) willfully or repeatedly violating any of the provisions of this Chapter.

(6) being grossly negligent in practice as a board certified social worker.

Rule No. 103.E:

A social worker may not practice beyond his competence. A social worker must make appropriate referrals when the client's needs exceed the social worker's competency level.

Rule No.103.H:

Relationships with clients, students and supervisees must not be exploited by the social worker for personal gain. A social worker must not violate such positions of trust and dependency by committing any act detrimental to a client, student, or supervisee.

## Radiation Experiment Committee Letters

[The following document is in the public domain.]

Valerie B. Wolf, BCSW, ACSW, BCD  
740 Dante St.  
New Orleans, LA 70118  
(504) 865-1546  
March 12, 1995

TO: Presidential Commission on Radiation Committee  
FROM: Valerie Wolf  
RE: Connection between Radiation and Mind Control Experiments

My name is Valerie Wolf. I am here to talk about a possible link between radiation and mind control experimentation that began in the late 1940's. The main reason that mind control

research is being mentioned is because people are alleging that they were exposed to mind control, radiation, drugs and chemical experimentation which were administered by the same doctors who are known to have been involved in conducting radiation and mind control research. Because these people were children and were easily controlled, they appear to have been used in more than one research project. I have provided written documentation revealing the names of people involved in the research and the names of the research projects, with statements from people across the country who allege that mind control and radiation research was conducted on well children. It is also important to understand that mind control techniques and follow ups into adulthood may have been used to intimidate these particular research subjects into not talking about their victimization in government research.

As a clinical social worker for the past 22 years, I have specialized in treating victims and perpetrators of trauma and their families. This population has included victims of disasters, Vietnam veterans and sexual, physical and emotional abuse.

In preparation for my testimony at these hearings, I called nearly 40 therapists across the country to find out what they knew about the link between radiation and mind control and to get what other therapists were seeing in clients who had been used in mind control experiments.

In the January 24, 1994 issue of U.S. News and World Report, there is an article on "The Cold War Experiments." The basic conclusion of the article is that "radiation tests were only one small part of a vast research program that used thousands of Americans as guinea pigs." The research programs included radiation, drugs, mind control and chemicals. My clients and others have reported all of these as being used on them, although technically they were considered to be part of the mind control experiments.

Generally, it appears that therapists across the country are finding clients who have been subjected to mind control techniques. The consistency of their stories about the purpose of the mind control and torture techniques such as electric shock, use of hallucinogens, sensory deprivation, spinning, hypnosis, dislocation of limbs and sexual abuse is remarkable. There is almost nothing published on this aspect of mind control used with children and these clients come from all over the country, having had no contact with each other. From the small sample of therapists to whom I talked, it appears that about 25% of the clients report memories of being used in radiation experiments. It is possible that more people were exposed to radiation, but that the memories have not yet emerged because our awareness of this experimentation is so new.

What was startling was that therapists reported many of these clients were also physically ill with multiple sclerosis and other muscle and connective tissue diseases as well as mysterious ailments for which a diagnosis cannot be found. While Somatic Disorder is commonly found in these clients, many of the clients who have been involved in the human experimentation with the government have multiple medically documented physical ailments. It is unclear if these physical disorders and symptoms were caused by radiation or drugs used in the experiments.

I have a client, who appears to be typical of these clients, who has a myriad of symptoms which her doctors cannot diagnose. She has autoimmune problems, problems with healing, thyroid problems that just appeared for no apparent reason, weight gain, edema, constant low grade fever and generally does not feel well. She has three sisters who also have mysterious

ailments, including one sister who has a rare adrenal cancer. She has been asked several times by different doctors if she could have been exposed to radiation, but she does not remember. A major part of the mind control experimentation was involved in wiping out the memory of the subject through electric shock, trauma and drugs. She is afraid to tell her doctors about her history as a mind control subject for fear that they will think she is crazy.

These clients have named the same people, particularly a Dr. Greene. I had heard Dr. Greene's name for several years associated with clients' reports of childhood torture, mind control techniques and childhood sexual abuse. One of my clients, who had seen him with a name tag, identified him as Dr. L. Wilson Greene. I made inquiries and to my surprise found out that a person with this same name was the Scientific Director of the Chemical and Radiological Laboratories at the Army Chemical Center and that he was engaged in doing research for the Army and the CIA.

It needs to be made clear that these clients have remembered these names and events spontaneously with free recall and without the use of any memory retrieval techniques such as hypnosis. As much as possible, we have tried to verify the memories. I have sent information from one of my clients to Alan Schefflin, Professor of Law at Santa Clara University Law School. He has been able to confirm that the information that she has supplied is absolutely true and that her memories could not have been derived from any published source. This client simply came into my office one day with MKULTRA written on a piece of paper after about 9 months of therapy. Another client's memories about the CIA connection to Dr. Greene appeared spontaneously several months ago. She has memories of being exposed to radiation. I had never mentioned anything about government research or the CIA to either of them prior to the time that their memories emerged spontaneously.

With the proper knowledge of mind control techniques, these clients can be helped. I have been amazed at the progress these clients have made since I began understanding about how the mind control techniques work. Many attempts have been made through Freedom of Information Act filings to gain access to the mind control research documentation. These requests have generally been slowed down or denied, although some information has been obtained. It is very important that we have information to confirm or deny the thing being remembered.

Furthermore, if, as the evidence suggests, some of these people were used in radiation experiments, there might be information in the mind control experiment files on radiation experiments, especially since Dr. L. Wilson Greene, Dr. Sidney Gottlieb, and Dr. Martin Orne among others, have been reported by people to have been associated with both. If there are radiation files within the mind control files, then people across the country may then possibly have the documentation to take to their doctors to assist in their medical treatment.

There is some suggestion that this research is continuing to the present day and people and their therapists are being harassed by associates of the mind control projects who were assigned to monitor the subjects so that they never talk and so that they can continue to be used as needed.

Finally, I urge you to recommend an investigation into these. Although there was a commission on mind control, it did not include the children because most of them were too young or still involved in the research in the late 1970's to come forward.

The only way to end the harassment and suffering of these people is to make public what has happened to them in the mind control experiments. Please recommend that there be an investigation on the Mind Control experiments as they related to children. We need more information to help our clients. We need the glare of publicity to stop the continuing harassment of people who were subjects in mind control experiments.

Thank you for listening to us.

Statement to:

Presidential report on radiation

Claudia S. Mullen

March 15, 1995

Between the years of 1957 and 1984, I became a pawn in a government scheme, whose ultimate goal was mind control and to create the "perfect spy" all through the use of: chemicals, radiation, drugs, hypnosis, electric shock, isolation in tubs of water; sleep deprivation; brainwashing and verbal, physical, emotional & sexual abuse.

I was exploited unwittingly for nearly three decades of my life and the only explanations given to me were: "that the end justifies the means" and "I was serving my country in their bold effort to fight communism."

I can only summarize my circumstances by saying, they took an already abused 7 year old child and compounded my suffering beyond belief the saddest part is -- I know for a fact: that I was not alone! There were countless other children in my same situation and there was no one to help us... Until now.

I have already submitted as much information as possible; including conversations overheard of the people and agencies responsible. I am able to report this to you in such graphic detail because of both my photographic memory and the arrogance of the doctors involved ,who were certain they would always control my mind and behavior. Although, the process of recalling these atrocities is certainly not an easy task; nor is it without some danger to my self and my family. But, I feel the risk is worth taking.

Dr. L. Wilson Greene, who claimed to have received 50 million dollars for his army chemical and radiological corporation, as part of the tsd (technical science division) of the cia, once described to a Dr. Charles L. Brown Jr.; "that children were used as subjects because they were more fun to work with and cheaper too. They needed lower profile subjects than soldiers or government people, so only young willing females will do.... Besides," he said, "I like scaring them... They and the agency think I'm a god... Creating subjects and experiments for whatever deviant purposes Sid (Dr. Sidney Gottlieb) and James (Dr. James Hamilton) can think up!"

In 1958, I was to be tested they told me by some important doctors coming from a place called the "society" (the Human Ecology Society). I was told to cooperate; answer any of their questions. Then, since the test "might hurt, I would be given shots, x-rays and a few jolts of electricity." I was also instructed, "not to look at anyones face too hard and to ignore names, as this was a very secret project, .... but to be brave and all those things would help me forget." Naturally, as most children do, I did the opposite; and remembered as much as I could!

A Dr. John Gittinger tested me and Dr. Cameron gave me the shocks and Dr. Greene the X-rays. Then, I was told by Sid Gottlieb "I was ripe for the big A -- meaning Artichoke."

By the time I left to go home -- just like every time from then on, I would recall nothing of my tests or the different doctors. I would only remember whatever explanations Dr. Robert G. Heath (of Tulane Medical School) gave me for the odd bruises, needle marks, burns on my head and fingers and even the genital soreness. I had no reason to believe otherwise. Already, they had begun to control my mind! The next year, I was sent to a place in Maryland called Deep Creek Cabins to learn how "to sexually please men." Also, I was taught how to coerce them into talking about themselves. It was Richard Helms (Deputy Director of the CIA), Dr. Gottlieb, Captain George White and Morse Allen, who all planned on filming as many high government and agency officials and heads of academic institutions and foundations as possible; so later, when the funding for mind control and radiation started to dwindle: then the projects would continue -- at any cost!

I was to become a regular little "spy" for them after that summer Eventually, entrapping many unwitting men, including themselves, all with the use of a hidden camera. I was only 9 when this kind of sexual humiliation began.

I overheard conversations about a part of the agency called ORD (Office of Research and Development) run by Dr. Geeene, Dr. Stephen Aldrich, Martin Orne and Morse Allen. Once, a crude remark was made by Dr. Gottlieb about a possible leak over in New Orleans East, involving a large group of retarded chldren, who were being given massive doses of radiation. He asked "why Wilson was so worried about a few retatrdrd kids? After all, they would be the least likely to spill the beans!"

Another time, I heard Dr. Martin Orne, who was the "Director of the Scientific Office" and later the Institute for Experimental Research, stated that in order to keep more funding coming from different sources for the radiation and mind control projects, he suggested stepping up the amounts of all the "stressors used" and also, the blackmail portion of the experiments. He said, "It needed to be done faster, then get rid of the subjects, as it was asking for "us" to come back and haunt them, by remembering."

There is much more I could tell you about government sponsored research, including project names; subproject numbers and the people involved; the facilities used; humiliating tests & other forms of torture and abuse; but, I think I have given more than enough information to recommend further investigation of all mind control projects... especially as they involve so much use of radiation.

I would love nothing more than to say I had dreamed all this up; and need to just forget it.... But that would be a tragic mistake. Not only that -- it would be a lie. All these atrocities did occur to me and countless other children; and all under the guise of "defending our country"!

It is because of the cumulative effect of exposure to the radiation, chemicals, drugs, torture and subsequent mental & physical distress that I have been robbed of the ability to work and even to bear children of my own! It is blatantly obvious that none of this was needed -- nor should have ever been allowed to take place at all!

The only means we have to seek out the awful truth; and bring it to light (no matter how disgusting) is by opening whatever files remain on all the projects; through another presidential commission on mind control. I believe that every citizen of this great nation of ours has a right to know just what is fact and what is fiction. It is our greatest protection against the possibility of this ever happening again!

Therefore -- now I leave this matter in your capable hands. I can offer no more than what I have given you today. The truth.

Thank you for your time.

Catherine Michelle (Claudia S. Mullen)

Valerie B. Wolf, BCSW, ACSW, BCD  
740 Dante St.  
New Orleans, LA 70118  
(504) 865-1546

TO: Presidential Commission on Radiation Committee  
FROM: Valerie B. Wolf  
DATE: March 10, 1995

As Claudia S. Mullen's therapist, I would like to document her memory recovery process. She was referred to me after being sexually assaulted, but did not respond to treatment initially. She was constantly remembering being abused and became dysfunctional and suicidal. After about 9 months of therapy, she came to therapy one day with MKULTRA written with other words on a piece of paper. From that point on, she began to work on the mind control issues and began to improve. All of her memories have emerged spontaneously without the use of memory enhancement techniques such as hypnosis or sodium amytal. I had told her nothing about government and CIA research projects.

To the best of my knowledge, she has read nothing about mind control or CIA covert operations. Since she decided to listen carefully and remember as much as she could about conversations among the researchers, her memories are extraordinarily complete. I have sent written copies of memories to Dr. Alan Schefflin for validation and he has confirmed that she has knowledge of events and people that are not published anywhere, that some of her memories contain new information and that some are already known and published. Some of her memories have been confirmed by family members. She has also shown me old

scrapbooks where she wrote notes to remember what was happening to her and hid the notes under the pictures in the scrapbook.

## Corel Draw Drawings, Silent Sound Demo Device Construction April 3, 2001

---

**Use CHIP SOCKETS! Old timers may tell you they are unreliable, but unless you like trying to unsolder/re-solder the 16 pins on the XR2206 chip if you need to replace it or troubleshoot, USE THE SOCKETS!**

---

[CLICK HERE FOR Q & A ABOUT DEMOS](#)

[vfmdemo.htm](#), actual spiel and setup  
instructions for demonstrating the unit in public.

The several Corel Draw 3 .CDR drawings referenced below will NOT display in most browsers. The idea is that you SAVE TO YOUR LOCAL HARD DRIVE each one, then print from a compatible graphics package. This method gives the clearest quality prints.

\*\* I HAVE ALSO INCLUDED .GIF DRAWINGS, HOWEVER, DUE TO THE COARSE RESOLUTION OF MY GRAPHICS SOFTWARE, THESE MAY OR MAY NOT PRINT TO MEET YOUR NEEDS.

An office services shop should be able to print the .CDRs - BE SURE THEY SELECT "FIT TO PAGE". Most recent full featured graphics packages can read and print a Corel Draw 3 (VECTOR) drawing.

The entire set of .CDR files will fit on one EMPTY 1.44 MB floppy diskette. Here are the clickable references, sizes, and paper orientation. PRINTING THIS PAGE will assist the office services shop:

[vfmckt3.cdr \(RIGHT click\)](#) 141K

[vfmckt3.gif \(LEFT click to view, RIGHT to download\)](#) 29K

[vfmckt3.exe \(LEFT click\)](#) 26K, when downloaded,

you will need to run vfmckt3.exe as a program, and it will unpack itself as vfmckt3.cdr. The zipped version will remain on disk too.

=====

SAMPLE SILENT SOUND DEMO Q & A:

[vfmdemo.htm](#), for a much more complete how-to-demonstrate writeup.

> Are the items in question expensive? I MIGHT be  
> interested in paying for a demo unit. How large  
> and heavy is it when finished?

I estimate it could be done for about \$200 US, though this would vary upwards if you had to purchase a tape recorder, say, or a frequency meter along with it.

Tape recorder, a small one, is necessary. A frequency meter is not, subject to conditions below.

With the largest Radio Shack plastic project box, it's 8" x 6" x 3". With the 12-volt gel cell inside, it weighs perhaps 3 lbs.

> Could you briefly describe how you demo it  
> to curious onlookers?

I keep a tape recorder with sample ordinary voice with the unit, so I can demonstrate both the 1,500 Hertz normal speech center freq. then raise the center frequency up until it is not audible. At that point, the visitor is hearing "silent sound" carrying speech, using FM rather than nature's AM.

I also unplug the attenuator/patch cable from the "earphone" jack on the tape recorder, which allows the visitor to hear the ordinary voice on the tape, which is AM (amplitude modulation).

Also at that point, the brain is using "slope tuning" to recover the normal voice from the inaudible signal.

I tell them this is an unclassified device which can hypnotize SILENTLY, show them the label with the U.S. patent #5,159,703, and tell them a unit like this was used in the 1991 Gulf War by the U.S. Army Psychological Warfare branch to persuade, silently, all those Iraqi troops to surrender so quickly.

That was DOCUMENTED on ITV, and you should have for

your reference (one copy, not to hand out - it's too long) the Judy Wall article at this link:

<http://www.raven1.net/silsoun2.htm>

I go on to tell them that this device gets it's REAL destructive power when connected to a voice to skull transmitter, one of which is under construction here in Ontario. It can beam hypnosis silently into someone's skull for years and they won't be aware.

\*\* You CAN also use the Radio Shack sound level meter to show, when the frequency setting is high, that sound is coming out of the tweeter even though they can't hear it. Due to having to use the bus, I'm restricted on how much I can carry, so I haven't used this but once. (Doesn't seem to be required, actually.)

But there are a couple of important caveats if you want to use a sound level meter:

- Radio Shack's sound level meters are calibrated to match the human ear response. Since the demo unit can easily tune the center frequency up above 20 kHz (the meter's upper limit) you must have a FREQUENCY COUNTER with you or your sound level meter may miss your then-ultrasound signal
- This demo unit, in order to pump out any kind of signal near the high end of human hearing (around 15 kHz) uses a small PIEZO tweeter, 2 inches dia.

The readily available, simple, LM386 audio amplifier chip will handle this frequency, but without much power to spare, so the actual amplitude is not great at 14.5 kHz, the Lowery patent specification.

Therefore, especially OUTDOORS, a demo to use a sound level meter needs an ADDITIONAL STAGE of amplification. That could be added on to the circuit board, but room is a problem with the 276-158 board, or, an amplified speaker, like the Radio Shack 21-541 would be needed for a reliably convincing sound level meter demo. (The 21-541 should also have it's low-frequency speaker replaced with a 30,000 Hz PIEZO tweeter.)

The GOOD news is that so far, the sound level meter demo does NOT seem to be necessary, though I do have the equipment should that be necessary. The full demo would probably be used for

a pre-arranged meeting with a group.

> Are visitors instantly convinced?

YES, as far as I can tell.

What's more, most who stop to ask questions clearly do NOT want me to turn it on, for what they fear it might do to them. I think I've turned it on half a dozen times in the last three months.

## Demonstration Spiel for Silent Sound Demo Device

### September 28, 2000

---

=====

#### DEMONSTRATION PROCEDURES

1. THOROUGHLY go through the setup procedures first. You need to be completely familiar with the unit before attempting to demonstrate it to the public. Be sure your battery has been charged overnight.

#### [Setup procedures](#)

2. Shortly before the demo, refresh yourself on:
  - U.S. Govt (NSA) admission mind control exists [nsal.gif](#)
  - unclassified and commercial mind-weapons-capable devices [uncom.htm](#)
  - MKULTRA and the successful lawsuit against the CIA [anat-1.htm](#)
3. MATERIALS. You need, when dealing with the public:
  - a printout of THIS SET OF INSTRUCTIONS
  - a printout of [hypno2s.gif](#) (see other below)
  - a printout of [mkcover.gif](#) (OPTIONAL)
  - a picket sign (if outdoors without a pre-arranged meeting with visitors)
    - some handouts, one sheet of which MUST be [nsal.gif](#) (This has proven very compelling to those who read it)
    - for YOUR reference, a printout of Judy Wall's article on silent sound, including Gulf War use, [silsoun2.htm](#)
    - a copy of these instructions and spiel script
    - small flip-nozzle container of water for your voice and perhaps throat lozenges
    - sunscreen and sun hat if outdoors
    - a small tape recorder with a voice-ONLY cassette, normal sound
    - a patch cord between the "ear" jack on the recorder and the MONO 1/8" jack on the demo unit (keep volume low or use an attenuator from Radio Shack. Excess volume results in garble.)

Some may find this image explaining silent sound WITHOUT the extra clutter from the voice-to-skull attachment easier to use:

- a printout of [voicefm.gif](#) (OPTIONAL)

Some may wish to hand out schematics. I recommend this schematic and matching solder-side component placement image:

- [vfmckt3.gif](#), schematic
- [kitbotm3.gif](#), solder-side layout

4. ICE-BREAKER. Mine is a picket sign that carries this message:

"GOVT-MEDIA TELL THE PUBLIC ABOUT ELECTRONIC MIND WEAPONS"

[poster9.gif](#)

5. SPIEL. The words below VARY according to the person I'm talking

with, and for best effectiveness you will need to judge just how interested the visitor is. I've had SHORT visits like:

VISITOR: What is this? (Pointing to the demo unit)

DEMONSTRATOR: This is a device which takes ordinary human speaking voice and does two things to it:

- converts it from natural AM (amplitude modulation) to FM (frequency modulation); this garbles the voice
- raises the average frequency from around 1,500 Hertz, which is normal, to around 15,000 Hertz.

At 15,000 Hertz, young people with good hearing can hear a slight "ringing in the ears" from this device, while many adults hear nothing at all.

But the brain CAN HEAR THE WORDS, even though the ear cannot.

This allows a hypnotist to program an individual over months and years without the target being aware. There is no resistance to the hypnosis because the target doesn't hear it.

This can be beneficial, but it can also do severe damage to a person's well being. This is why our group is out here demonstrating.

We want government to earn their salaries and perks by placing controls on who can possess such devices and what can be legally done with them.

VISITOR: Thank you (and leaves.)

>> LONG visits start out as above. If questions keep coming, you will need to answer them. Below are some typical questions and answers:

DEMONSTRATOR: (Continuing from the "short" spiel above)

\*\* AT THIS POINT, YOU MAY WANT TO DROP DOWN THIS SCRIPT TO ITEM #6, THE ACTUAL PHYSICAL DEMO OF THE UNIT. I HAVE FOUND THAT A GREAT MANY VISITORS DO NOT WANT TO HEAR THE UNIT. I NEVER PRESS THAT ISSUE WITH THEM, AND ONLY START IT UP WHEN ASKED.

This device as it is here is harmless, unless used on someone who has already been programmed with trigger words or phrases. It becomes very invasive and dangerous, though, if connected to a voice-to-skull projector. A voice-to-skull projector is a modified radar transmitter in which the human voice controls how close together the radar pulses occur.

In 1974, Dr. Joseph Sharp, of the Walter Reed Army Institute of research, announced his successful transmission of speech directly into the human skull with no receiving device. By connecting this "silent sound" device to a voice-to-skull transmitter, it is possible to transmit hypnotic phrases silently into a target's bedroom, every night, for years, without the target's being aware.

By programming enough "Pavlovian triggers" into an individual, that individual's personality can be changed substantially.

Using pre-programmed trigger phrases, a "handler" of that individual can literally use him or her as a "living robot", in cases where the individual has high susceptibility to hypnosis.

The process of programming enough triggers into an individual for purposes of control is called "creating a Manchurian Candidate", after two books of that title.

The formal program of the CIA, begun in the 1950s, started out as 149 separate experiments, and was in response to cold war fears and the apparent "brainwashing" of Allied POWs in Korea. This group of "behaviour modification" experiments bore the code name MKULTRA.

MKULTRA did include electronic mind control devices, but the best known electronic mind control device of the early days was the Russian LIDA machine. The LIDA, one of which is in possession of Veterans' Administration researcher Dr. Ross Adey, "entrained" or electronically coerced a target in the path of it's signal to be relaxed and more susceptible to hypnosis. A few Korean War vets claimed to have seen the LIDA in use at the POW camps.

The MKULTRA code name ceased in the late 1970s when the U.S. Senate's Frank Church Committee investigated MKULTRA experiments and found that serious atrocities had been committed on people in the military, prisons, or in mental hospitals. However, not one single perpetrator from the MKULTRA programs was ever brought up on charges.

We know that electronic mind control experimentation did not cease, and this "silent sound" technology was used in actual military combat in the 1991 Gulf War. The United States Army connected a silent sound voice converter like this one to an FM broadcast transmitter, broadcasting on a frequency of 100 Megahertz, and the silent hypnotic commands were carried right on top of normal voice in the Iraqi language. The normal voice carried confusing information, while the SILENT component re-inforced a sense of despair by hypnotic suggestion.

This was documented on Britain's ITV network, but not shown in the U.S. or Canada.

The successful use by the U.S. Army clearly shows that this technology does work. Through-the-wall voice-to-skull technology makes it almost inescapable. Our group hopes that eventually the public will learn enough about the invasive privacy destroying electronic mind control weapons available today to demand that government report on these devices to the people, and make their use and possession matters of ongoing PUBLIC record.

Electronic mind control devices have been under development for 50 years, and our group knows only the unclassified and commercial versions. The time for public input and control of all such technologies is LONG overdue.

## 6. ACTUAL DEMONSTRATION OF THE UNIT ITSELF.

Put a tape with VOICE (not music) into your demo tape recorder.

Connect a patch cable between the "ear" jack on the recorder and the INPUT jack on the demo unit. If you have an attenuator, use it, but if not, remember to keep the volume setting on the recorder quite low. Excess volume garbles the speech making for an unconvincing demo.

Switch on the demo unit. Adjust the tone near the lower end of

the frequency knob's travel. The Input Level should be around one third of it's way up from it's lowest position.

Push PLAY on the recorder. You should hear speech "mixed" in with the demo unit's tone. This demonstrates to a visitor what simply converting natural human voice, which is AM or amplitude modulation to FM or frequency modulation sounds like. Near the low end of the frequency knob's travel, the frequencies of the voice are still about at their natural values, but the mode is now FM, as opposed to AM. THE VISITOR CAN HEAR THIS IS GARBLED.

Now slowly increase the frequency knob until the audible sound is as HIGH as you and your visitor can just hear. If you are both adults, this point is approximately where the brain can start to convert this inaudible sound BACK TO WORDS. The process is called "slope tuning". You can move the IN-OFF-OUT switch back to IN to show the visitor that voice is actually being fed into the unit.

[vfmslopd.gif](#), shows how the brain recovers the inaudible words using the process of "slope detection" or "slope tuning" - worth having a few of these for technical folks who are interested in how it works.

If you have a frequency counter or meter, connect it to the two binding posts, one red, one black, on the front panel. During a demo adjust frequency somewhere between 14.5 and 14.8 kHz (14,500 Hertz to 14,800 Hertz.) This is the range where both the Lowery patent (5,159,703) and the New Zealand Altered States company operate at to produce brain-understandable silent sound.

>> SEE ITEM 4 BELOW UNDER SETUP FOR COMMENTS ABOUT USING AN AUDIO LEVEL METER TO ENHANCE YOUR DEMONSTRATION

=====

[Back to top](#)

#### SETUP PROCEDURES

[vfmttest.gif](#), shows what the scope trace should look like when proper frequency modulation by voice is applied.

[vfmslopd.gif](#), shows how the brain recovers the inaudible words using the process of "slope detection" or "slope tuning" - worth having a few of these for technical folks who are interested in how it works.

1. You will need a small voltmeter to monitor battery charge state. This must be a small meter that reads out VOLTS, and \*NOT\* a "battery OK" meter with red and green scales. It is necessary to know voltages for communications by email or phone with people who can offer technical help.

A convenient meter is the Radio Shack 22-802, for around \$30, which has a folding case fully containing the two probes and their cable. The only trick with any meter is TO REMEMBER TO SHUT IT OFF WHEN YOU ARE FINISHED. Almost all of today's voltmeters have digital displays and have their own small internal battery. (Pick up and carry a spare battery.)

2. First job is to charge the internal 12-volt gel cell.

The charger supplied with units purchased from Eleanor White is a simple "wall mount" style 12-volt power supply, with a cable that cannot be connected with the wrong polarity.

Measure the voltage by touching the positive (red lead) screw on the terminal strip with the red probe, and the negative (black lead) screw on the terminal strip with the black probe.

You should get "13 something" volts if the battery is reasonably well charged. If you get zero volts, it is likely that one of the 3/4 amp fuses is blown. Check both fuses to be sure.

(You can check a fuse visually, but 3/4 amp size is hard to see. Instead, switch your meter to K-ohms and put the probes on either end of the glass fuse. The fuse should show zero or very close to zero if it is good. The fuses are 5 MILLIMETER and you may need to go to Radio Shack to get replacements.

!!!!!! SWITCH YOUR METER OFF OR BACK TO VOLTS WHEN FINISHED !!!!!

Now remove the probes and connect your charger. Put the probes back on their screws and note the voltage reading. If charging is in progress, you should see "14 something" volts and perhaps as high as 15 volts. If you don't, something is wrong - see the paragraph on blown fuses above, or be sure the charger is plugged in, or be sure the outlet has power.

If your "wall mount" power supply has a SLIDE SWITCH TO CHANGE VOLTAGE, be sure it is set to "12".

3. Switch the unit on. You should see the LED on the panel lit up. If not, check the fuses.

Switch the IN-OFF-OUT switch to OUT. Turn the frequency control to the lower part of its travel. Be sure the Output Level knob is at least 1/4 of the way up. You should hear a steady tone.

Test that the frequency control can raise the tone high enough that you can no longer hear it, then bring it back down low.

Switch the IN-OFF-OUT switch to IN. Raise the Input Level to full scale. If you get a squeal, as sometimes happens with PA systems, you need to make a mental note of where that occurs and not go above that point with INPUT level.

4. Put a tape with VOICE (not music) into your demo tape recorder.

>> COMMENTS ABOUT AUDIO LEVEL METER DEMOS ARE AT THE END OF THIS ITEM.

Connect a patch cable between the "ear" jack on the recorder and the INPUT jack on the demo unit. If you have an attenuator, use it, but if not, remember to keep the volume setting on the recorder quite low. Excess volume garbles the speech making for an unconvincing demo.

Switch on the demo unit. Adjust the tone near the lower end of the frequency knob's travel. The Input Level should be around one third of it's way up from it's lowest position.

Push PLAY on the recorder. You should hear speech "mixed" in with

the demo unit's tone. This demonstrates to a visitor what simply converting natural human voice, which is AM or amplitude modulation to FM or frequency modulation sounds like. Near the low end of the frequency knob's travel, the frequencies of the voice are still about at their natural values, but the mode is now FM, as opposed to AM. The visitor can hear this is garbled.

Now slowly increase the frequency knob until the audible sound is as HIGH as you and your visitor can just barely hear. If you are both adults, this point is approximately where the brain can start to convert this inaudible sound BACK TO WORDS. The process is called "slope tuning". You can move the IN-OFF-OUT switch back to IN to show the visitor that voice is actually being fed into the unit.

If you have a frequency counter or meter, connect it to the two binding posts, one red, one black, on the front panel. During a demo adjust frequency somewhere between 14.5 and 14.8 kHz (14,500 Hertz to 14,800 Hertz.) This is the range where both the Lowery patent (5,159,703) and the New Zealand Altered States company operate at to produce brain-understandable silent sound.

If you have an AUDIO LEVEL METER, it can be used to show that sound is coming out at 14.5 kHz even though it is inaudible.

!!!!!! BUT BEWARE !!!!!

Some audio meters like Radio Shack's CUT OFF AT OR NEAR 20 kHz.

You need to do considerable testing in private before you attempt audio meter proof in front of visitors. It is quite easy to get the frequency too high, in which case the audio level meter will show nothing at all.

To be practical, you really would need a frequency meter connected to the binding posts to assure yourself you were in the 14.5-14.8 range.

Furthermore, the piezo tweeter is good at high end frequencies, but the common audio chips in the unit are not really strong at these high-end frequencies. If you plan to use an audio level meter, I'd recommend something like the Radio Shack amplified speaker, catalogue #21-541, requiring it's own separate 12-volt source (the demo unit's can be tapped by someone with electronic assembly skills. This will shorten the charge life of the demo unit's battery but may be worth doing anyway.)

If you do use an external amplifier, be SURE it gets it's normal voice coil speaker replaced with a PIEZO unit or the high frequency sound won't get through well enough for the audio level meter to detect.

## Vibrations Harassment

August 22, 2004

One of the most unusual effects observed during the electronic harassment and organized stalking crime syndrome reported on this web site is the vibrations of body parts and specific objects. This vibration can be very powerful and yet, it can be entirely localized in one object, with no nearby objects effected. When the human body is targetted by this remote vibration signal, the furniture, bed, or floor is hardly affected at all. Yet, experiments such as holding a glass of liquid on the vibrating object and triggering of vibration switches show that these attacks are not imaginary.

In bed, the vibrations and shaking are very different from the commonly experienced heartbeat frequency vibrations in mattresses and springs, and cannot be attributed to that natural effect.

---

In one case, that of Victor N. Moturi of Fayetteville, North Carolina, these vibration attacks became so frequent and pronounced during Victor's university classes that Victor had to quit his studies. Here below are the letters from one professor and one witness that describe vibrations of such amplitude that they were seen by others, and were in fact very disruptive to Victor's classes. At the time of posting, we in the electronic harassment/organized stalking target community do not have an explanation as to how powerful and surgically localized vibrations can be induced at a distance, as mainstream science has yet to recognize the work of experimenters who have duplicated remote physical manipulation at a distance, such as John Hutchison.

August 9, 2004

WHOM IT MAY CONCERN:

Ref: Victor N. Moturi

Victor Moturi has been a student in 3 of my classes.

While teaching General Physics I class (which he was taking) in Fall of 2003 I noticed that his head would shake suddenly and would continue vibrating uncontrollably for sometime. He felt bad and later explained that he has been a victim of electromagnetic radiation precisely transmitted by covert operators to any of his locations causing these vibrations on impact. The same activity continued during General Physics II course he took during Summer II of 2004. This behavior, however, was not noticed during General Chemistry I class he took in Spring of 2002.

Any help given to him will be of benefit in his efforts in accomplishing education goals of this young man.

Truly Yours,

A handwritten signature in cursive script, appearing to read "G. S. Rahi".

G. S. Rahi  
Assistant Professor

---

7/29/2004

Dear Sir/Madam

Re: Victor N. Moturi

I was introduced to Mr. Victor N. Moturi by the Student Support Services summer of 2004. I needed Assistance in the General Physics I class that I was taking. In some occasions during my tutoring session he complained of discomfort due to burning sensations on his skin from what he claimed would be electromagnetic waves radiations from devises controlled by covert operators.

I later witnessed the vibration of his head and body when I enrolled with him in the Physics II class summer session II, 2004.

He claimed to have reported this to the Fayetteville city police Sgt. Podobinski on 07/06/2004. I understand Sgt. Podobinski told him it was hard to investigate on some secret activities like this. He concluded by telling him that it would be the military or any other known organization doing this but one had to have sufficient evidence.

Sincerely

### **Man held in attempt to mail Clinton a bomb**

by Joseph A. Slobodzian,(Philadelphia?) Inquirer Staff Writer

Date not known.

A North Philadelphia man who authorities say made a series of threats against public officials last year has been charged with mailing a "Molotov cocktail" to President Clinton.

Joseph Washington, 31, of the 1300 block of Ridge Avenue, was charged Monday with mailing an explosive device after postal officials X-rayed a padded envelope he mailed to the White House on Thursday at the Fairmount branch and allegedly discovered a plastic bottle filled with kerosene or lighter fluid. the device never detonated.

Assistant U.S. Attorney Mary E. Crawley said she could not comment on where Washington was being held.

A federal law enforcement official said, however, that authorities agreed not to take Washington into custody after he voluntarily admitted himself into a psychiatric facility.

According to an affidavit by Richard Weber, an agent with the Federal Bureau of Alcohol, Tobacco and Firearms, Washington's envelope never left the Fairmount postal branch, at 900 N. 19th St.

When postal officials at the Fairmount branch saw that the bulky envelope was addressed to the White House and Clinton, the affidavit says, they ordered it examined.

The X-ray of the 10 1/4-by-9 1/4-inch yellow envelope showed the plastic bottle, the affidavit says. The bottle was about three-fourths full of a liquid and had a homemade wick attached to the cap. Some of the liquid had leaked out of the bottle and saturated a two-page letter addressed to the President.

**According to the affidavit, the letter tells Clinton to "tell the Philadelphia Naval Base to stop trying to brainwash me into killing people with covert E.L.F. electronic weaponry" and asks for "compensation for being a research test victims."**

The letter warns that if Clinton failed to act, Washington would "start killing political people," the affidavit says. The letter threatens the lives of the President, Hillary Rodham Clinton and the Clintons' daughter, Chelsea according to the affidavit.

NOTE: Victim's allegations match government technology, such as the following article.

## **New World Vistas, 1996**

United States Air Force Scientific Advisory Board, Ancillary Volume p. 89-90

NOTE: MANY DOCUMENTS SUCH AS THIS, SHOW U.S .INVOLVMENT IN ELECTROMAGNETIC TECHNOLOGY

## **Biological Process Control**

Looking 50 years into the future is extremely easy and, at the same time, exceedingly difficult. Easy, since I will not be around to catch the flak for being very wrong. Difficult, since it is really presumptuous to pretend that you have the vision to see the future. Nonetheless, you asked for it and here goes.

As we look forward to the future, it seems likely that this nation will be involved in multiple conflicts where our military forces increasingly will be placed in situations where the application of the full force capabilities of our military might cannot be applied. We will be involved intimately with hostile populations in situations where the application of non-lethal force will be the tactical or political preference. It appears likely that there are a number of physical agents that might actively, but largely benignly interact or interfere with biological processes in an adversary in a manner that will provide our armed forces the tools to control these adversaries without extensive loss of life or property. These physical agents could include acoustic fields, optical fields, electromagnetic fields, and combinations thereof. This paper will address only the prospect of physical regulation of biological processes using electromagnetic fields.

The literature regarding the interaction of biological processes with electromagnetic fields is growing at a rapid rate. Sources are becoming more available, biomedical instrumentation is improving so that the interactions between biological processes and physical fields can be examined with fewer artifacts, and the principles underlying these interactions are becoming clearer and more amenable to theoretical prediction.

Prior to the mid-21st century, there will be a virtual explosion of knowledge in the field of neuroscience. We will have achieved a clear understanding of how the human brain works, how it really controls the various functions of the body, and how it can be manipulated (both positively and negatively). **One can envision the development of electromagnetic energy sources, the output of which can be pulsed, shaped, and focused, that can couple with the human body in a fashion that will allow one to prevent voluntary muscular movements, control emotions (and thus actions), produce sleep, transmit suggestions, interfere with both short-term and long-term memory, produce an experience set, and delete an experience set. This will open the door for the development of some novel capabilities that can be used in armed conflict, in terrorist/hostage situation, and in training.** New weapons that offer opportunity of control of an adversary without resorting to a lethal solution or to collateral casualties can be developed around this concept. This would offer significant improvements in the capabilities of our special operation forces. Initial experimentation should be focused on the interaction of electromagnetic energy and the neuromuscular junctions involved in voluntary muscle control. Theories need to be developed, modeled, and tested in experimental preparations. Early testing using in vitro cell cultures of neural networks could provide a focus for more definitive intact animal testing. If successful, one could envision a weapon that would render an opponent incapable of taking any meaningful action involving any higher motor skills, (e.g. using weapons, operating tracking systems). The prospect of a weapon to accomplish this when targeted against an individual target is reasonable; the prospect of a weapon effective against a massed force would seem to be more remote. Use of such a device in an enclosed area against multiple targets (hostage situation) may be more difficult than an individual target system, but probably feasible.

**It would also appear possible to create high fidelity speech in the human body, raising the possibility of covert suggestion and psychological direction. When a high power microwave pulse in the gigahertz range strikes the human body, a very small temperature perturbation occurs. This is associated with a sudden expansion of the slightly heated tissue. This expansion is fast enough to produce an acoustic wave. If a pulse stream is used, it should be possible to create an internal acoustic field in the 5-15 kilohertz range, which is audible. Thus, it may be possible to "talk" to selected adversaries in a fashion that would be most disturbing to them.**

In comparison to the discussion in the paragraphs above, the concept of imprinting an experience set is highly speculative, but nonetheless, highly exciting. **Modern electromagnetic scattering theory raised the prospect that ultrashort pulse scattering through the human brain can result in reflected signals that can be used to construct a reliable estimate of the degree of central nervous system arousal. The concept behind this "remote EEG" is to scatter off of action potentials or ensembles of action potentials in major central nervous system tracts.** Assuming we will understand how our skills are imprinted and recalled, it might be possible to take this concept one step further and duplicate the experience set in another individual. The prospect of providing a "been there-done that" knowledge base could provide a revolutionary change in our approach to specialized training.

How this can be done or even if it can be done are significant unknowns. The impact of success would boggle the mind!

NOTE: VICTIM'S ALLEGATIONS OF EXPERIMENTATION MATCHES U.S. GOVERNMENT TECHNOLOGY.

### **Dan Rather Identifies Attacker**

by Newsradio 88 Staff

It took ten years, but finally we find out about the bizarre attack on CBS Newsman Dan Rather on Park Avenue.

Rather says he now knows who mugged him and muttered the notorious line, "What's the frequency, Kenneth?" back in 1986.

He tells the Daily News he's learned who it is from a psychiatrist who examined the suspect after the fatal shooting of an NBC technician outside the Today show studios in 1994. That psychiatrist, says Rather, says there's no question it was the same man--49-year old William Tager.

Tager is in prison after pleading guilty to first-degree manslaughter.

**When he mugged Rather, he apparently was demanding the frequency used to transmit hostile messages he was convinced the news media were beaming into his head.**

---

NOTE: Here is another article on government technology as a plausible explanation for victim's allegations. See highlight.

### **U.S. Explores Russian Mind-Control Technology**

January 11-17 1993 Defense News

By Barbara Opall

Washington-The Russian government is perfecting mind-control technology developed in the 1970s that could be used to hone fighting capabilities of friendly forces while demoralizing and disabling opposing troops.

Known as acoustic psycho-correction, the capability to control minds and alter behavior of civilians and soldiers may soon be shared with U.S. military, medical and political officials, according to U.S. and Russian sources.

The sources say the Russian government, in the spirit of improved U.S.-Russian relations, is beginning to lift the veil of secrecy surrounding the technology.

The Russian capability, demonstrated in a series of laboratory experiments dating back to the mid-1970s, could be used to suppress riots, control dissidents, demoralize or disable opposing forces and enhance the performance of friendly special operations teams, sources say.

**Pioneered by the government-funded Department of Psycho-Correction at the Moscow Medical Academy, acoustic psycho-correction involves the transmission of specific commands via static or white noise bands into the human subconscious without upsetting other intellectual functions. Experts said laboratory demonstrations have shown encouraging results after exposure of less than one minute.**

Moreover, decades of research and investment of untold millions of rubles in the process of psycho-correction has produced the ability to alter behavior on willing and unwilling subjects, the experts add.

In an effort to restrict potential misuse of this capability, Russian senior research scientist, diplomats, military officers and officials of the Russian Ministry of Higher Education, Science & Technology Policy are beginning to provide limited demonstrations for their U.S. counterparts.

Further evaluations of key technologies in the United States are being planned, as are discussions aimed at creating a frame-work for bringing the issue under bilateral or multilateral controls, U.S. and Russian sources say.

An undated paper by the Psychor Center, a Moscow-based group affiliated with the Department of Psycho-Correction at the Moscow Medical Academy acknowledges the potential (?) of this capability.

U.S., Russia Hope to Safeguard Mind-Control Techniques

Control, From Page 4

The Russian experts, including George Kotov, a former KGB general now serving in a senior government ministry post, present in their report a list of software and hardware associated with their psycho-correction program that could be procured for as little as \$80,000.

“As far as it has become possible to probe and correct psychic contents of human beings despite their will and consciousness by instrumental means; results having been achieved can get out of { our } control and be used with inhumane purposes of manipulating psyche,” the paper states.

The Russian authors note that “World opinion is not ready for dealing appropriately with the problems coming from the possibility of direct access to the human mind.” Therefore, the Russian authors have proposed a bilateral Center for Psycho-technologies where U.S. and Russian {?} restrict the emerging capabilities.

Janet Morris of the Global Strategy Council, a Washington-based think tank established by Ray Cline, former Central Intelligence Agency deputy director, is a key U.S. liaison between Russian and U.S. officials.

In a Dec. 15 interview, Morris said she and the Richmond, Va.-based International Healthline Corp. have briefed senior U.S. intelligence and Army officials about the Russian Capabilities, which Morris said could include hand-held devices for purposes of special operations, crowd control and antipersonnel actions. Healthline Corp. is evaluating Russian health care technologies and will underwrite Russian demonstrations in the United States.

“We talked about using this to screen and prepare special operations personnel for extremely difficult missions and ways in which this could be integrated {?} for psychological operations,” Morris said.

She said Army officials were concerned about the capability being directed against armored systems and personnel through electronic communications links. Ground troops, she said, risk exposure to bone-conducting sound waves that cannot be offset by earplugs or other current protective gear. Morris added that U.S. countermeasures could include sound cancellation, a complex process that involves broadcasting oppositely phased wave forms in precisely matched frequencies.

Major Pete Keating, a U.S. Army spokesman, said senior Army officials had expressed interest in reviewing Russian capabilities but that repeated plans to schedule visits to the former Soviet Union were rejected by Donald Atwood, deputy secretary of defense. Keating said he was unfamiliar with the mind-control technology {?} specific details.

U.S. sources said government officials and leaders from the business and medical communities will consider Russian offers to place the mind-control capability under bilateral controls.

At least one senior U.S. senator, government intelligence officials and the U.S. Army’s Office for Operations, Plans and Force Development are interested in reviewing the Russian capabilities, U.S. sources said.

In addition, International Healthline Corp. is planning to bring a team of Russian specialists here within the next couple of months to demonstrate the capability, company President Jim Hovis said in a Dec. 2 interview.

Meanwhile, the U.S. Army’s Armament Research, Development & Engineering Center is conducting a one-year study of acoustic beam technology that may mirror some of the effects reported by the Russians.

Army spokesman Bill Har? said Dec 3 the command awaited the one-year study contracted Scientific Applications & Research Associates of Huntington Beach, Calif. Related research being conducted at the Moscow-based Andreev Institute, U.S. and Russian sources said.

Despite the growing interests a capability traditionally reserved for science fiction novels and ?, industry and academic experts, are cautious and skeptical about its potential battlefield use.

“This is not something that strikes me as requiring high-? attention,” Raymond Gartho? defense and intelligence analyst at the Washington-based Brookings Institution, said in a De? interview.

Morris contends that the capability has been demonstrated in the laboratory in Russia and should be placed under international restrictions at the earliest possible ?

---

NOTE: Another allegation of mind control. With a closer look, mental illness can be ruled out.

## **Hong Kong professor sues U.S. for mind control**

The South China Morning Post reported on Jan. 25 that an assistant professor at the University of Science & Technology, Hong Kong, has filed a \$100 million suit against the U.S. government for implanting mind-control devices in his teeth. Huang Si-ming charges that the devices were implanted during root canal work in 1991 while he was studying at the University of Iowa, according to Morning Post reporter Patricia Young. Another student at Iowa U who, like Huang, was born in China, had gone on a shooting spree, and the feds, Huang says, put the devices in his teeth to find out if he was involved.

The Hong Kong professor says he suffered an Alzheimer's disease-like memory loss that hampered his teaching. It stopped, he says, only when he sought legal aid to mount his lawsuit. Besides the U.S., the suit names the University of Science & Technology on the grounds that it was involved in continuing the mind-control work. It also seeks punitive damages of \$1 million from the defendants for "low ethical standards."

Huang claims that one of the devices in his teeth can read his thoughts and talk to his mind when he's asleep. A second device, he believes, transmits pictures of what he sees to a receiver for recording. The mind controller, he says, can drive him to "bad" behavior, he gives two examples, one of which cannot be mentioned in a family magazine.

Neither the university nor the U.S. Consulate in Hong Kong would comment on the suit, according to reporter Young.

## **Voice of America Mind Control Interview an Example of Disinformation Tactics**

**Eleanor White - June 21, 2002**

---

The audio track below was a talk show interview with the Voice of America's "Talk To America" show. This show received world wide radio broadcast. There was some TV exposure as well - I (Eleanor) was on the telephone, and in studio was a communications professional, Dr. Chris Simpson.

Dr. Simpson, in my opinion, functioned perfectly as a disinformation agent whether or not he knew it. The reason for posting this interview is to show other victims one type of tactic they may run into when discussing mind control with anyone.

During this particular interview, I let Dr. Simpson "have his say" during the first half of the show, my tactic being to have the second half where I could make my points without seeming as if I were trying to hog the conversation. I hope this audio track will assist others in dealing with professional "slick talkers" in the future.

[Click Here](#) to listen to the show.

## INVOLUNTARY "VOICE" FORCED ON VICTIMS OFTEN TO INTERRUPT SLEEP

---

THIS PAGE REQUIRES A PC WHICH IS EQUIPPED TO PLAY SOUND.

There is no harm in trying if you don't know if your PC is equipped to play sound files.

The latest sound-playing software for Windows can be obtained, to the best of my knowledge, at this link, and is called "WINDOWS MEDIA PLAYER":

<http://www.microsoft.com/windows/mediaplayer/en/>

The approximately 15-second "sound bite" on this page is one of the many ways the neuro-electromagnetic experimenters use to force awake or keep awake their victims, although this same vocal cord forcing technology has been used to force actual words into some victim's mouths at all hours of the day as well as night.

1. The Windows Media Player sound file (smaller file):

[eleanor.asf](#)

2. The alternate MP3 format (larger file)

[eleanor.mp3](#)

Visitors are asked to say a prayer of thanks their sleep is not interrupted by this highly invasive in-home torture. The recording method was to wrap my neck with loose ace bandage, and insert a microphone with a switch. When the forced "voice" got aggressive, switching the mike on also started the recorder.

This is a recent development - in earlier decades, much more effort was made by the perpetrators to avoid any taping of their torture. Lately they seem increasingly open, and have done a number of witnessed attacks to me and to others.

## **Court Recognizes Electronic Harassment: Protection Order for James Walbert**

**December 30, 2008**

This could be the first official recognition of the need to protect citizens against electronic harassment. The following are comments from Julianne McKinney regarding the posted page scans:

This is actually very impressive. Walbert persuaded the Court that the defendant was using electronic weapons against him and his family, in addition to resorting to obvious forms of stalking.

He substantiated his claim with DoD documentation and had the support of a security specialist, who proved that electronic frequencies were involved, and, it would appear, the support of a couple of police officers. He also made use of letters from Missouri Representative, Jim Guest.

The outcome: The defendant failed to show up in court. The defendant has to pay all legal fees. The defendant may not employ 3rd-party means of re-establishing contact with Walbert (which would constitute multiple stalking), and may not employ any form of "electronic means" in harassing Walbert.

Walbert filed his complaint on November 25, 2008. The court decided the case on December 30, 2008.

Although this will probably not protect Walbert in the long term, he has obtained the first court-based acknowledgement of the existence of electronic weapons and of electronic harassment, that I know of.

## Book Review:

# War at Home

### December 23, 2000

This small paperback is perfect for carrying with you whenever you face anyone who may not want to believe that the U.S. government will commit crimes against U.S. citizens. This inexpensive book will force a questioner to either declare the information wrong (and the many good references given) or accept that crimes against citizens happen to U.S. citizens.

[Original COINTELPRO documents site](#)

I strongly recommend this is one you will want to keep handy for both your writing and speaking.

---

WAR AT HOME: COVERT ACTION AGAINST U.S. ACTIVISTS  
AND WHAT WE CAN DO ABOUT IT

Copyright 1989, Brian Glick  
Paperback, 92 pages, \$5.00 US  
ISBN 0-89608-349-7

<http://www.amazon.com>  
<http://www.bn.com> (Barnes and Noble)

Since this book is a fairly straightforward "debating tool" for our war effort, I'm not going to give you a whole lot of my gab. Rather, I'm going to extract here some highlights, so you can make up your mind if it's worth \$5.00:

Let me start by giving three of the review blurbs on the back cover:

The breadth and scope of the massive FBI investigation of CISPES indicates that the Bureau was engaged in an illegal campaign to stifle dissent, that its violation of Constitutional rights of citizens who oppose unpopular U.S. wars continues. *War at Home* is a timely and important book which every activist working for peace and justice at home and abroad must read.

--Angela Sanbrano, Committee in Solidarity with the People of El Salvador (CISPES)

Brian Glick has given us not only a brilliant and chilling account of the government's dirty war against its own people, but has provided a complete battle plan to combat it.

--Haywood Burns, National Lawyers Guild and  
National Conference of Black Lawyers

*War at Home* describes activities that can only be

described as GOVERNMENT-SPONSORED TERRORISM against those of its own citizens who are so brash as to engage in a serious struggle for justice, democracy, and peace. It shows that every disgraceful tactic that our government uses in its "covert" activities abroad it ALSO uses in its little understood covert "war at home."  
 --David Dellinger, peace activist

Next, let me share the first paragraph in the book's Introduction. Note the names of the groups targetted:

In January 1988 the people of the United States learned of a secret nationwide FBI campaign against the domestic opponents of U.S. policy in Central America. Government documents obtained through the Freedom of Information Act show that from 1981 through at least 1985, the FBI infiltrated the Committee in Solidarity With the People of El Salvador (CISPES) and disrupted its work all across the country. The investigation eventually reached into nearly every sector of the anti-intervention movement, from the *Maryknoll Sisters*, the *Southern Christian Leadership Conference*, and the *New Jewish Agenda* to the *United Auto Workers*, the *United Steel Workers*, U.S. Senator *Christopher Dodd*, and U.S. Representatives *Pat Schroeder* and *Jim Wright*.

Next, the table of contents:

|                                                                                    |    |

 Date sent: Fri, 24 Nov 2000 20:08:05 -0500

Dear Eleanor:

War At Home is a very handy little book. This almost-unknown chapter of American history set the stage for much of the horror going on today.

Along with War At Home, "Here's How It All Came About" on my web site at <http://www.angelfire.com/nj/jhgraf/hereshow.html> mentions Break-Ins, Death Threats, and the FBI by retired Pulitzer-Prize-winning reporter Ross Gelbspan. Mr. Gelbspan's work, which I consider the single most important book of the second half of the twentieth century, convincingly documents the campaign of state-terrorism waged against peaceful people protesting the death squads of El Salvador and Guatemala and the atrocities perpetrated by the illegally-funded Nicaraguan Contras. This is when -- this is how -- the US Government decided that its people had no rights that it was bound to respect. This, above all, is when "national security" destroyed human rights

and silly rationalization defeated conscience and common sense.

In 1992, Gary Null did an interview of Ross Gelbspan on WBAI-FM in New York.

Its text is available on the web at

<http://www.etext.org/Politics/Conspiracy/DiNardo/FBI.Terrorize.Citizens/>

Subject: Re: Book review: "War at Home"

Dear Eleanor,

Put Brian Glick's book together with William Blum KILLING HOPE that documents 'war on allied countries and other' and you have why humane citizens of USA move to Canada - such as yourself and the Geri and Alfred Webre, and why Harlan Girard wants to \*retire\* out of USA! I suggested he headed our way and, with current rate of exchange, doubles his money right now!! We are being sold cheap on Wall St. - that'll teach us for getting uppity about East Timor (when USA wanted the status quo) and for protesting WTO decisions! I'm sure there would be more!

Betty

# **Implant Experiment Shows Human Tracking Implants Are Effective "at Some Distance"**

## **UK Professor Kevin Warwick's Voluntary Experiment**

**From Beyond 2000**

Eleanor White's comments: Current, late-90's electronic mind control technology in the classified realm does not require implants. However, implants are still very significant for two reasons:

1. Not all electronic mind control perpetrators possess, apparently, the implant-LESS technology. This is evident from the fact that several involuntary implantees have had implants removed but not one has ever been given custody of the removed implant. Someone apparently wants them kept out of our hands.
2. Not every level of government even knows about implant-LESS technology, and therefore, these non-privileged levels of government are obviously attracted to the degree of control which can be had by implanting populations. The following article makes that chillingly clear!

THIS ARTICLE, while relating to a simple experiment by a UK cybernetics professor on himself is nevertheless of KEY importance because:

- It firms up the assertion that there IS a genuine interest in and will to use implants - something our detractors often deny
- It clearly shows the professor's opinion that unclassified use to track non-criminal employees, which points to more sinister uses, is likely
- The simple first-try (by this professor) produced tracking results of a totally flesh-enclosed implant "over a good DISTANCE", which points toward the distance effects experienced by MKULTRA and neuro-electromagnetic experimentees.

---

From Beyond 2000, [http://www.beyond2000.com/guest\\_star/guest\\_star.html](http://www.beyond2000.com/guest_star/guest_star.html)

THE CYBORG PROFESSOR

Professor Kevin Warwick of the University of Reading in the UK made

headlines last year when he took the drastic step of having a computer chip implanted into his body. The chip was part of an experiment to see how such 'wetware' could interact with an 'intelligent building'.

The scene of the experiment was Professor Warwick's workplace: the university's Department of Cybernetics. The building had been wired to detect the presence of the implant; essentially just a tiny smartcard. When Warwick arrived in the morning the doors would even open automatically for him and call a cheerful greeting.

One ambition of such research is to design buildings able to locate a person and then personalise the environment for that particular individual, for instance to divert phone calls to the nearest extension or to adjust the heating and lighting levels to a pre-determined preference or perhaps display an appropriate screen at an information point. The lattice of nodes could also be used to support navigation services in large buildings.

The chip was removed from Professor Warwick after a few days, purely for medical safety reasons. He's already planning more experiments though, with the ultimate goal of wiring implants directly into the human nervous system.

But is Professor Warwick's vision of the future a utopia or a nightmare? That depends how much privacy you like....

Beyond 2000: Cyborgs in science fiction often have an evil connotation but you're looking at it just as a more general interaction between humans and machines.

Kevin Warwick: I think I'm really looking at it in terms of how machinery can enhance or help what humans can do normally.

B2K: Now tell us about what you had implanted.

KW: Well I had a silicon chip transponder implanted in my left arm, just above the elbow and lying against the muscle. It was in there for about 9 days.

B2K: Many would ask the question "Why?"

KW: I did it as part of a research programme...The main emphasis was looking to the future and the possibility of connecting up to the human nervous system and interacting with technology that way.

B2K: Were you scared?

KW: I've never had an implant of any kind before so it was scary at first...but I wanted to do it. It was something I had to find out what it was actually like.

B2K: What did it feel like while it was in your arm?

KW: The first couple of days it was a little bit uncomfortable, but after that I didn't really notice it was there physically...but mentally it was quite a surprise; that because the implant was interacting with the computer in the building and for all intents and purposes the implant was part of me after a couple of days, I accepted it. Mentally I had a link with the computer, an affinity that I hadn't expected.

B2K: How did that affinity make you feel?

KW: Well it made me feel quite strong, quite powerful because I had this computer that was doing all sorts of wonderful things...I just had to move around near it. But also I realised the potential there, that when you link humans and technology together the possibilities are enormous. Just by being in the vicinity of a machine the interaction could give you tremendous powers...super-human powers.

B2K: What did you learn from the trial?

KW: The experiment was a tremendous success. Technically it worked very well; THE IMPLANT WAS PICKED UP BY THE BUILDING ALL THE TIME AND OVER A GOOD DISTANCE. The main thing I learnt though was in looking to the future. The possibilities are tremendous and it really opened up my eyes to what might be possible around the corner.

B2K: Where do you see this research leading us?

KW: When we look to connecting an implant such as I had up to the human nervous system it opens up a whole different spectrum. Then we can look at getting movements...with arm movements you're sending a signal from your brain to your fingers and telling them to move. Those signals can be picked up and transmitted to a computer to make the computer move. We can learn essentially to interact with computers without the need for a keyboard or a mouse. To interface with computers we won't need the old-fashioned, mechanical arm movements or even voice input, it will be straight from the nervous system and ultimately the brain, straight into the computer.

B2K: To get to where you're talking about do we have to have a direct connection between a chip and a nerve or are there other ways of thinking about this?

KW: One can pick up some signals from the nervous system from the outside by connecting electrodes or sensors....Some research is going on in that area. But connecting up directly to the nervous system, which technically is no too much of a problem, allows you a much more immediate connection and ultimately will be far more powerful.

B2K: What kind of other applications do you see in the future?

KW: Well with the type of implant I have, what you could actually do now is have a credit card as an implant. So it wouldn't get stolen and it's not something you're going to lose. But also other applications immediately are prisoners. Instead of tagging, which can be visually very nasty, the implant could be under the skin and not immediately visible. Or other types, paedophiles for example; making sure they don't go into areas you don't want them to.

B2K: Anything else you can think of?

KW: (Grinning) One possibility also is say, for businesses who want to track their employees, they will pay you a salary if you have an implant. That way they can check on you when you go to the toilet, what time you come in, etcetera.

B2K: I'm sure that will be popular.

KW: If the salary's right!

## **Setting Up A Library Email Account**

**November 14, 2003**

You can set up a free email account from your library, and check and send your email from the library. Actually, your free email account is not based at the library PC but rather from one of the free email providers on the World Wide Web. Once set up, you can use this email account to communicate from ANY PC IN THE WORLD.

To start, you need to open the PC's browser, and go to one of the free email providers, for example:

<http://www.yahoo.com>

<http://www.hotmail.com>

From that point, it's a matter of following instructions. For yahoo.com, which is more than an email service, you need to look for and click on their "Email" item.

You need to supply a user ID and password you can remember, and probably an identity-testing question, such as your mother's maiden name, in case you forget your password.

Once you get your account set up, it's important to click on "Edit My Profile" or "Preferences", and click through all the menus until you find one which allows you to say NO to commercial junk mail. If you don't do this, your mail box will quickly load up with "spam" emails and effectively shut off your account.

It's important to check your email at least weekly, because email "boxes" all have fixed size limits. If yours gets full, emails others send to you will bounce.

If you are new to being a mind control target, you need to realize that the perpetrators can not only read what you type on a PC screen, but also read thoughts you may say silently to yourself. Trying to avoid having your email read by constantly changing accounts is not effective.

## What Can Be Done on an International Level?

**(This is a summary of the Nonlethal Weapons article and extensive footnotes which follow.)**

The U.S. seems to be the world leader in the global arena. Military budgets are the driving force and speak louder than public input. International organizations such as the UN, the European Union and the International Committee of the Red Cross are politically controlled by these factors. (See example 1 below.) Therefore, public protest will be an area to work on. Working with professionals who care about this issue and are willing to speak out is critical. Finding the decision-making organizations such as the UN Committee on Disarmament and making public statements is important. The odds are formidable but less so when examined and analyzed.

For example, Nick Begich, co-author of Angels Don't Play This HAARP which discussed the U.S. HAARP defense project and mind control, spoke at the European Parliament about HAARP and environmental and health concerns in February 1998.(Tigner, 1998,p.3). This was reported in Defense News and contributed to public awareness.

It is important to work as a group. Projects are better than just one letter to the UN C.A.H.R.A. is planning on compiling reports and to work with other human rights groups. Your support and contact with C.A.H.R.A. can make a difference. As C.A.H.R.A. is a nonprofit organization, there can be no political activities but C.A.H.R.A can research and disseminate information.

Example 1. "Progress toward a ban{on landmines] has been painfully slow. After endless debate, 38 countries, including Britain, agreed to add a protocol to the 1980 Convention on "certain conventional weapons", which seeks to make a distinction between legitimate military weapons and those that cause "superfluous injury..in excess of what is needed for military purposes". But it was a feeble affair. It regulates rather than prohibits landmines by stipulating that only weapons which self-destruct after 30 days may be manufactured and sold. The trouble is that these new "improved" landmines cost \$5, and since most customers are from poor countries, they are likely to opt for the cheaper version. What is more the protocol could take at least ten years to come into effect."

Linklater, Magnus.(1997,Jan.16).Diana's Smart Weapon. Times. Lexis-Nexis

[Contents](#)

## Introduction: Nonlethal Weapons

Electromagnetic technology is a new emerging weapon with significant importance to international politics. **Electromagnetic technology has been developed internationally as a weapon of war for at least forty years, but it has been highly classified.**(Pasternak,1997). The weapons are designed to target any and every nerve of the body including the human brain. There are many independent sources that verify this little-publicized fact. "Research work in this field [directed energy weapons] has been carried out in almost all industrialized countries, and especially by the great powers, with a view to using these phenomena for anti-materiel or anti-personnel purposes." (Doswald-Beck,1990,18). **..."[U.S.] scientists, aided by government research on the 'bioeffects' of beamed energy, are searching the electromagnetic and sonic spectrums for wavelengths that can affect human behavior."** (Pasternak,1997,38). A 1993 Defense News article entitled "U.S. Explores Russian Mind-Control Technology" described "acoustic psycho-correction, the capability to control minds and alter behavior of civilians and soldiers..." It uses **"transmission of specific commands via static or white noise bands into the human subconscious..."** The article further stated that U.S. and Russian sources were planning "...discussions aimed at creating a framework for bringing the issue under bilateral or multilateral controls".(Opall,1993,4). These are just a few examples of the dozens of articles available on this topic.

## **Background Information. A Serious International Issue According to the Experts.**

Electromagnetic weapons are as important as the atomic bomb, according to many experts. Here are examples of just a few. **Gorbachev stated in 1986 "new non-nuclear weapons [such as] ...radio wave, infrasonic... which, in terms of their destructive potential, could be no less dangerous than already existing weapons of mass destruction."** (BBC,1986,A1.) Dr. Stefan Possony was a Hoover Institute fellow and was called "the intellectual father of 'Star Wars' and "one of the most influential civilian strategic planners in the Pentagon"(Guardian,1995,17). Dr. Possony wrote about **"messaging directly into a target mind" with low frequency waves.** (Possony,1983,34). The article was entitled "Scientific Advances Hold Dramatic Prospects for Psy-Strat". A "Harvard molecular geneticist and biological/chemical warfare specialist, Matthew S. Meselson warned: 'We're going to learn how to manipulate every life process, genetic ones, **mental ones, the emotional ones**, ...If our inevitably increasing knowledge of life process is also harnessed to hostile purposes, that will completely change the nature of the expression of human hostility.'" (Mann,1996, 58). It is logical to conclude that some of the top strategists and academic experts may know of the classified technology and cannot openly discuss it.

There are several unclassified sources to document a forty year history of the international arms race to develop electromagnetic weapons. From 1975 to 1998, the UN Committee on Disarmament has discussed the Russian proposals to ban "new types of weapons of mass destruction." One of these weapons was described by the Soviet government in 1979 as "Infrasonic 'acoustic radiation' weapons. They would utilize harmful effects of infrasonic oscillations on biocurrents of the brain and nervous system;" (United Nations Department for Disarmament Affairs,1985,115). But neither side has admitted to having electromagnetic weapons. "Russia's Federal Counterintelligence Service emphasized that there is no psychotronic weapons on the territory of Russia, and never has been."(Tass,1994). Psychotronic is the Russian name for electromagnetic mind control weapons. And the Pentagon has stated that "Radiofrequency weapons are too sensitive to discuss." ("CNN Reports", 1985).

### [Contents](#)

## **Denial That the Weapons Exist and Little Public Accountability**

While the superpowers have denied the existence of the weapons on one level, there are many articles to the contrary. And it seems that the United States has the lead in this international arms race. For example, U.S. non-proliferation experts have categorized acoustic and directed energy weapons as "highly dangerous technologies", in order to control the arms sales. (Opall,1997,16.) And since the 1990s, there are numerous articles have been written about the so called new nonlethal technologies, which include electromagnetic weapons. It can be

concluded that the classified technology is now going online and consequently there has been some declassification at an international level.

Public awareness has been slow. Here is just one example. France is involved in NATO research on this topic. They have begun to implement nonlethal strategy into their military doctrine. A classified study in 1995 listed 50 types of weapons including acoustic and electromagnetic, psychological and persuasive weapons ("France's Non-Lethal",1996,286). The president of France, Jacques Chirac described the weapons as "science fiction". The public has had a difficult time figuring out the facts on electromagnetic weapons when conflicting statements are made by government officials who may not be aware of the classified technology.

China experts have discussed electromagnetic weapons. "...weapons systems produced by the third military revolution mainly used sound, electromagnetism, ...they possess enormous military potential.(Pillsbury,1997). **Russia, China, Ukraine, the U.K., Australia, and France reportedly have advanced RF programs and Germany , Sweden, South Korea, Taiwan and Israel are said to have emerging programs...**" ("Emerging Threat",1998). Several articles support the fact that electromagnetic weapons are here to stay.

[Contents](#)

## **International Use of Nonlethal Weapons**

The public is now beginning to hear the debates on the strategic development of electromagnetic weapons. While much of the technology is still classified, the nonlethal weapon debate is reflective of international concerns about electromagnetic weapons. Many countries plan to use nonlethal weapons for low intensity conflict, international terrorism and peace-keeping missions. The many articles on this topic describe the great interest in and funding of nonlethal weapons and the possibilities for it's misuse. For example in Harvard International Review, Ethan Mollick described a nonlethal weapon catastrophe in the Gulf War, the use of carbon-fiber bombs which caused widespread civilian deaths as a result of the electrical and water pump failures. Military proponents have stated that one of the main goals is to limit deaths.

Proponents claim nonlethal weapons will provide more options in conflict situations but opponents argue that more military interventions may occur based on misperceptions about nonlethal weapons. Mollick effectively argues for an international consensus and exploration of nonlethal strategies.

Mollnick does repeatedly discuss the problem of unrealistic expectations by the military and the public and stated that this is a very important issue for the future successful use of nonlethal weapons. For example, in OOTW or operations other than war, the apolitical nature of the armed services may be compromised and in a similar way there are concerns that nonlethal weapons will require new strategies and will fulfill new roles in war and will substantially change the nature of fighting. These are important issues that the strategic experts are beginning to work out.

A 1996 report by the Institute for Foreign Policy Analysis was extremely thorough and detailed about the role of nonlethal weapons on an international level. This study pointed out the important factors in developing the United States policy framework on nonlethal weapons. Nonlethal weapons were considered an asset to military operations. This report recommended further development of a clearly worded nonlethal weapons policy so that the opponent would take the U.S. stance seriously and know that the U.S. could stand behind its stated capability. Nonlethal weapons were discussed as part of the U.S. arsenal and there were questions about issues of proliferation and problems of countermeasures. **The consensus was that the U.S. should continue staying one step ahead of other countries in nonlethal weapons technology and not worry about using the classified technology.** Public discussions on this issue were encouraged and nonlethal weapons cooperation with NATO members was encouraged. Multinational cooperation is an area of concern. Discussions concerning deterrence policy and the role of nonlethal weapons are currently being discussed. The U.S. seems to be leading the way for international policy formulations, based on the quantity and quality of the U.S. information on nonlethal weapons.

## [Contents](#)

### **The Dangers of Nonlethal Electromagnetic Weapons**

In an article commissioned by the European Parliament, concerns about "less-lethal" weapons were discussed. The European Union is concerned about nonlethal weapons and protecting civil rights. The article concluded that further research on such topics as proliferation and control are needed. "Formal liaison arrangements between the EU and the USA" on nonlethal weapons was investigated. This further demonstrates the international importance of nonlethal weapons. Many countries are seriously incorporating the use of nonlethal weapons into their arsenals. Accordingly, concerns about maintaining a lead over other countries and of the abuse of the new technologies are being discussed by most countries today.

The European Parliament complained of the dangers of HAARP, a U.S. electromagnetic defense project and of being uninformed about the dangers after NATO and U.S. officials had declined invitations to the discussions on HAARP (Tigner, 1998, 3). This is a good example of the possible global implications of electromagnetic weapons and the problems involved with classified weapons programs such as miscommunication. Several articles point out similar concerns.

**The discussions on nonlethal weapons has increased dramatically since the 1990s.** Most articles present a pro and con picture and that the nonlethal arsenals are increasing in many countries. Nonlethal weapons will play a significant role in international strategies, according to the cited articles above. And they have already been deployed in Somalia during the United Nations peacekeeping missions in 1995. (Schmitt, 1995) This is indicative of nonlethal international strategies on the use of the still very classified nonlethal weapons that is now in effect.

Another example of the importance of electromagnetic weapons was clearly stated as follows. "In a much quoted speech made in 1974, Fleet Admiral Gromyko of the USSR, considered

the "father" of modern Soviet navy, stated that "the country that best exploits the electromagnetic spectrum will win the next war." (Herron,1984,64) **Proliferation and the development of countermeasures have led to an escalating arms race.** To a certain extent, the country with the money can buy this technology, but **the superpowers have the leading edge technology.** It is available on the international market and is proliferating at a very fast pace. (Dunigan,1996,15). This is another factor that will affect nonlethal strategic policy development.

## [Contents](#)

### **International Human Rights Organizations: No Match for the International Military Arms Trade**

International regulation of electromagnetic weapons has been discussed by the **International Committee of the Red Cross and the Stockholm International Peace Research Institute**, as well as other human rights groups. Concerns about the humane use of these weapons are being discussed. But overall, the consensus on arms control is small in comparison to the interest in gaining military power. Most would agree that the process of international arms control has and does make a significant difference. For example, some of the above cited articles discussed the international treaties and laws under which nonlethal weapons must comply and concerns about whether other countries will obey. This is just one factor which may affect developing strategic plans.

Rupert Pengelley of the International Defense Review as well as others have argued against the possible misuse of nonlethal weapons (Pengelly,1994,1). Pengelly described the atomic bomb as "the ultimate nonlethal weapon." The atomic bomb was a great deterrent after Hiroshima and Pengelly wonders who will be first to use nonlethal weapons so that they too will never be used.

Additionally, comparisons of nonlethal weapons to the atomic bomb and the powerful deterrent effects of its terrifying destructive power have been made by Dunnigan in the book, Digital Soldiers. The atomic bomb and its effect on international politics is still being sorted out. The atomic bomb will be a point of comparison for mind control technology discussions as the electromagnetic technology is declassified.

Most of this technology has been classified until recently and little public protest or input on this topic can be found in the literature. Here is one of the few international politics position today on electromagnetic mind control. "World opinion is not ready for dealing appropriately with the problems coming from the possibility of direct access to the human mind." (Opall,1993,4.)

The alarming problem with electromagnetic mind control has been articulated by Russian officials as follows. "As far as it has become possible to probe and correct psychic contents of human beings despite their will and consciousness by instrumental means... results having been achieved can get out of [our] control and be used with inhumane purposes of manipulating psyches, the [Russian] paper stated." (Opall,1993,4)

## [Contents](#)

### **Major Conclusions: Comparisons to the Atomic Bomb**

As with many international issues, the use of electromagnetic weapons on an international level is complex. Many experts agree that it should be a topic of concern in international politics.

Experts and officials have called electromagnetic mind control 'science fiction', 'too sensitive to discuss' or nonexistent and electromagnetic technology is confusing and not understood or known by the public. **Public discussions and declassification of the technology is being recommended.**

Electromagnetic technology has become a part of the arsenals of most countries. As a result of the world-wide declassification and use of electromagnetic nonlethal weapons in the 1990s, the problems and strategies are being discussed openly by experts. There is no international global strategy for nonlethal weapons but trends and strategies are developing. New technologies and counter technologies are proliferating. **International discussions on the legal, moral and ethical use of electromagnetic weapons are beginning to take place.**

The United States, the leader in nonlethal weapons at this time, is formulating strategy and tactical uses for nonlethal weapons. International politics is changing in very complicated ways and strategic experts are beginning to discuss the possible future effects that nonlethal weapons will have. Nonlethal weapons will not replace lethal power but most international countries believe that it will be a significant addition to their arsenals. Most strategic experts are using **words of warning**.

**The atomic bomb had a major impact on international politics and the consensus is that this new emerging technology will have a similar effect.** Many complex factors are developing in discussions on electromagnetic warfare. The history of the atomic bomb will be a useful tool of analysis.

## **What Major Newspaper, Magazine and Journals Are Writing about Nonlethal Electromagnetic Weapons**

**(Important information is highlighted so that it can be skimmed.)**

"Certainly one of these things is to recognize that export control documents, particularly the Military Critical Technologies List, need to be reviewed to determine if **radio frequency technologies should be considered in the same careful way we do nuclear technologies**," he [Army Lt. Gen. Robert Schweitzer speaking to Congress] said.

no author. (1993, Mar. 2). Emerging Threat: Radio Frequency Weapons. *Defense Week*, vol. 19.

"The Pentagon's exotic weapons programme, led by the Air Force, is cloaked in ultra-secrecy which **forbids any public comment by scientists**. ...Electromagnetic radiation-basically waves below radio frequencies -was found to prompt human or animal brains to release chemicals that affect behaviour. "We could put animals in a stupor," he explained, adding it would be probably possible to **create flu-like symptoms and nausea in humans**. Such work continues. In 1995 Air Force generals reviewed more than 1,000 proposed exotic weapons projects. One was called "Put the enemy to sleep/Keep the enemy from sleeping." Another project approved for more research involved **brain-wave manipulation**. ...According to **Louis Slesin**, editor of Microwave News, the effort is practical. He says such exotic weapons are merely the next logical step to the variety of radio beams used to knock out the electronic systems of aircraft or missiles. "Once you are into these anti-material weapons, it is just a short jump to anti-personnel ones." In effect, **humans are also just electro-chemical systems that can be disrupted**."

Dettmer, Jamie.(1997, Aug 3). It's war, Jim, but not as we know it. Scotsman Publications Ltd. Scotland on Sunday.p 5. Lexis-Nexis.

"As former science-fiction writers,[Janet and Chris Morris, leading proponents of nonlethal weapons] the couple speak with zeal about a coming age in which the enemy will be disorientated by very low frequency sound waves, dazzled by isotropic radiators, **imprisoned by invisible magnetic fields**,... ..After his retirement, [Ray] Cline, the leading biographer of the CIA, had taken charge of a privately funded Washington think-tank called the US Global Strategy Council. A world authority, he soon became the Morris's' mentor and their introduction to the murkier reaches of the Pentagon. ...**The Morris's even talk admiringly about a technology that would enable two different acoustic beams to plant a voice in a dictator's head, convincing his subordinates that he had suddenly gone mad.**"

Bone, James. (1996, Sept.21). Stick'em up. The Times.

"The microwave bomb, which works by emitting a massive pulse of radio energy, would **render humans unconscious by scrambling neural paths in the brain but would not cause lasting injury.**"

Campbell, Christy. (1992,Sept 27). Microwave bomb that does not kill. Sunday Telegraph.p6.

"Terrifying noise weapons that can rupture organs, inflict burns, and create bubbles and cavities in human tissue may be just around the corner, an expert has warned. **Acoustic weapons are now so highly developed that they could make an appearance at any moment, according to writer William M. Arkin[Human Rights Watch]**. ...About 20 US government laboratories and military commands were involved in acoustic weapons development, contracting with half-a-dozen private companies. ...one of two leading contractors, **Scientific Applications and Research Associates Inc. (Sara), Huntington Beach, CA**. A high-power weapons would radiate a directed energy beam to "induce severe incapacitation (and if necessary, lethality), within a specified/designated area." The intensity

could vary from a 90 to 120 decibel low-frequency soundwave "to provide extreme levels of annoyance and distraction", through 150 to 150 decibels for "strong physical bodily trauma and damage to tissues", to "shockwave" levels at more than 170 decibels. At this intensity, an acoustic weapon could produce "instantaneous blastwave-type trauma" and lethal effects. Very low frequencies could produce internal hemorrhaging and spasms while higher frequencies were capable of raising body temperature and burning tissue. At the top end of the frequency scale, cavitation effects and bubbles could result as the structure of human flesh broke down." Arkin[writing in the quarterly journal *Medicine Conflict and Survival*]said: "Acoustic weapons could be the next new major weapons to be deployed based **upon 'novel' and heretofore unapplied physical principles** in warfare." Arkin recommended "the humanitarian community to involve itself in the assessment and debate..." [on high-power acoustic beam weapons.] ...He suggested that Protocol IV[of the Inhumane Weapons Convention] might be the starting point for curbing acoustic weapons."**Medicine, Conflict and Survival is a journal of the group International Physicians for the Prevention of Nuclear War.**"

von Radowitz.(1997, Dec.7). Acoustic Weapons 'Close to Becoming Reality'.Press Association Newsfile.Lexis-Nexis.

**"The International Red Cross is looking at other weapons which may cause "gratuitous" damage to human beings, including some that may not have progressed beyond the drawing-board.** Recently, it mounted a successful campaign to ban laser weapons that cause blindness. Now it is looking at cluster-bombs, which cause appalling injuries and which can have the same effect as landmines if they lie unexploded on the ground. There are electromagnetic and acoustic weapons which destroy human organs, and fuel-air explosives worse than Napalm. No one can say for certain what the next generation of "unacceptable" weapons will consist of -only that they will be worse."

Linklater, Magnus.(1997, Jan.16). Diana's Smart Weapon. Times Newspapers Limited.

"Chinese Views of Future Warfare: Prepared Testimony by Dr. Michael Pillsbury, Associate Fellow National Defense University Before the Senate Intelligence Committee. ...Radiation Combat--"In the wars of the past, the power to inflict casualties mainly depended on the effects of kinetic energy and thermal energy; but the weapon systems produced by the third military revolution mainly use sound, electromagnetism, radiation, and other destructive mechanisms. **The main radiation weapons are laser weapons, microwave weapons, particle beam weapons and subsonic wave weapons;they possess enormous military potential.** ...Vice President of the Russian Academy of Military Science Vladimir Slipchenko [stated that] ...By directing energy emission at a target it is possible to turn an enemy division into a herd of frightened idiots...electromagnetic weapons...ionizing (plasma ) weapons...our 'likely friends' in the West and the East are developing new weapons and means of employing them."

Pillsbury, Michael.(1997, Sept.18)Senate Intelligence Committee. Federal News Service. Lexis-Nexis.

"...a new U.S. government publication, "Chinese View of Future Warfare, sponsored by Andy Marshall, the Pentagon's director of net assessment. ...editor Michael Pillsbury. ...Richard Macke, former commander-in-chief of U.S. Pacific Command. ...He noted, however, that China does not intend to put its gradually modernized force to use. "I don't think they want to go to war with anybody. I think they want to amass the capabilities that we have in order to earn respect...showing force without using it."

Opall, Barbara.(1997,May19). Chinese Covet High-Technology Arsenal; DoD Report Reveals PLA Quest For Robotics, Cyber Warriors.Defense News.pg.1.

"The latter stages of the Cold War saw a new twist to the development of Non-lethal weapons, involving the use of directed-energy devices exploiting different parts of the electromagnetic spectrum(such as laser light, isotropic radiators, high-power microwaves, and electromagnetic pulses) to disrupt,or impede the functioning of, military equipment.

...**The ICRC [international Committee of the Red Cross]** is right to call attention to the emergence of this new generation of weapon. **Some form of international regulation is indeed needed-an agreement between the then Soviet Union and the United States not to utilize lasers...has been in effect since January 1990, and could provide the basis for a wider agreement.** Similarly, at a national level **there need to be strict legal controls over the acquisition and use of non-lethal weapons, not least by security agencies."**

Pengelly, Rupert.(1994, Apr.1). Wanted:a Watch on Non-lethal Weapons.International Defense Review Vol27 No.4 pg.1.

"Richardson said one far-future[2011 and beyond] communications system being investigated is **"synthetic telepathy."** **One day, SOF commandos may be capable of communicating through thought processes.** A less revolutionary communications system available today is the New Eagle Communications Model DB headset. It incorporates a bone vibrating speaker placed directly in front of the ear that transfers incoming radio signals through bones."

Lopez, Ramon.(1993, Mar.1). Special Operations Survives Pentagon Budget Constraints. International Defense Review. Vol.26; No. 3.pg. 247.

"This fall, a joint committee staffed by the Department of Justice and the Pentagon will decide which "less than lethal" technologies to develop. Here is a sample of systems the committee may consider: ...**High-power electromagnetic generators that interfere with brain waves and alter behavior."**

Walker, Sam.(1994,Sept.6).An Array of 'Less Than Lethal' Weapons. Christian Science Monitor. pg.12.

A classified nonlethal weapons study by France included a "list of around 50 types of such weapons placed into three categories: those that neutralize personnel... ...Other sub-systems are acoustic weapons; computer viruses and disruptive agents; **psychological and persuasive weapons.**"

No author.(1996, Apr.18).France's Non-Lethal Options.Intelligence Newsletter. Indigo Publications.;N.286.

"Examples include weapons that...**infrasound waves that disorient civilians for crowd control and psychological operations**,... Co-chaired by conservative luminaries like former UN ambassador Jeane Kirkpatrick and an array of former generals, admirals, and defense secretaries, the council formed a nonlethality policy review group in 1990 that bent the ears of Vice President Dan Quayle, Chief of Staff John Sununu, and National Security Advisor Brent Scowcroft, persuading the Bush administration to establish a Nonlethality Task Force under the secretary of defense. ...Research has been actively pursued for the past several years at Lawrence Livermore and Los Alamos National laboratories... Like the Strategic Defense Initiative a decade ago, nonlethality exercises a seductive promise to render the enemy 'impotent and obsolete'...

Sommer, Mark.(1994, Feb.17).Nonlethal Weapons Offer a Faustian Bargain.Christian Science Monitor.p19.

"**The two doctors[Dr. Nick Lewer and Dr. Steven Schofield, Bradford University Peace Studies Dept.]**-whose survey of the strategic, technological, ethical and environmental issues arising from the use of non-lethal weapons was published yesterday-say **there is an urgent need for awareness and political debate to determine the proper ground rules for their use.** ...Research and development of new weapons is proceeding apace, in what amount to an almost unseen arms race."

Simister, David.(1997, Apr.15).UK:Lethal Warning on New Breed of Weapons. Yorkshire Post.

"Security classification makes it difficult to be very specific about the technologies. We know that all of the U.S. armed services..are working on weapons projects that could be described under the heading non-lethal technologies and that at least some of these projects have parallels in other nations," said **Professor Harvey Sapolsky, of the Massachusetts Institute of Technology, in a recent report.[Dr. Sapolsky also with SIPRI,Stockholm International Peace Research Institute].**"

Winton, Neil.(1995, May22). Hi-tech Weapons offer War Without Death.Reuters North American Wire. Lexis-Nexis.

"True, a CIA report published this summer asserted that former Presidents Jimmy Carter and Ronald Reagan both claimed to have seen UFOs. But that just tells us what we already know: that Americans are credulous. But who can blame them? The very government they accuse of withholding information on the paranormal from them is directly responsible for feeding their wildest fantasies. ...**The Federation[of Atomic Scientists, FAS] was set up in 1945 by researchers into the atomic bomb, anxious to campaign against government secrecy over scientific research. If anyone reliable might be capable of exposing a cover-up, you feel it must be them. ...John Pike...director of Space Policy[FAS].** ...Pike, ultimately, has no doubt there is intelligent extraterrestrial life, and that it has visited our end of the galaxy."

White, Jim & Fowler, Rebecca.(1997, Sept21). Adventures in Alien Territory. Mail On Sunday(London).Pg13. Lexis-Nexis.

"For example,[U.S. Air Force Maj. Norman] Routanen has proposed using "very powerful microwave devices to confuse, disable, or even kill the enemy." The report by the Georgetown University panel on combating terrorism similarly proposes **"techniques to impair brain functions."** Navy physician Capt. Paul E. Tyler sees an opposite use for electromagnetic radiation: he suggests that exposing U.S. military personnel or their allies to electromagnetic radiation might allow them to act 'with minimal rest and still maintain peak performance.'"Efforts to create a super soldier are not as far-fetched as they sound, nor are they new. Members of the navy's SEALs--its elite special-forces unit--took dextroamphetamine to stay awake for several days on missions during the Vietnam War. **Since at least 1954, various Defense Department agencies have conducted hundreds of experiments on ways of enabling troops to endure extremely taxing conditions."**

Miller, Marc S.(1987, Aug.). Ambiguous War The United States and Low-Intensity Conflict.MIT Alumni Association Technology Review Vol.90 pg.60.

"The U.S. Government has been researching beam weapons --microwave, light (laser), electron and other particle beams, and most recently x-rays--**since the 1940s.** ...Dr. Robert Cooper, director of the Defense Advanced Research Projects Agency(DARPA), the Pentagon's own R & D arm, has been involved with beam weapons **since the 1960s.** ...All four technologies have made huge strides in 25 years, Dr. Cooper says. Radars are 10 to 100 times as powerful, and have been supplemented by optical surveillance systems that did not exist in 1959. The power of the biggest computers, needed for battle management, has tripled every three years since 1959. ...At Sandia National Laboratory, managed by Bell Laboratories for the U.S. Government, they are probably as knowledgeable as any centre in the world of the damage beams can do."

Fishlock, David.(1983, Sept.19).Thunderbolt of the future;Reagan's 'Star Wars' Mission.Financial Times(London)p.18.

The[NATO Nonlethal Weapon Technologies for Peace Support Operations,1996 Study. The April 16th study was approved during a semiannual meeting in Brussels of NATO national armaments directors] study lists 10 categories of technology that offer potential for industrial collaboration among NATO countries. These are: **containment devices and entanglers; dazzle lasers, including strobe lights and holograms; markers; ...and odors.**"

Tigner, Brooks.(1996,Apr.29).NATO Group Pushes, Pentagon Pulls Nonlethal Efforts;Alliance Study Urges Nations To Collaborate on Weapons.Defense News.pg12.

**"This raises the question of the extent to which hypersonic systems have been explored in the "black" world of unacknowledged programs.** The SAB's[Scientific Advisory Board, USAF] recommendations **appear bold in the extreme in light of "white-world" experience.** As far as the unclassified world is concerned, the highest speed attained by any US air-breather is just over Mach 5...**A body of black-world experience** would make the goal a little more reasonable."

Sweetman Bill.(1996,June,1).US Air Force Probes Technological Frontiers.International Defense Review.Vol.1.No.6.Pg.1.

This new "non-lethal" arsenal includes devices that stop engines from afar, capture hostage-takers, push cars off roads, knock down attackers, control crowds and prisoners and incapacitate field troops and **small populations.** ...In the US, the FBI has ordered Myotron "Widow Makers" -a powerful new type of stun gun that knocks down men, tigers and even elephants for several crucial minutes(time to get away or call for help) without harm. ...**Humans on whom it has been tested, say it feels like millions of tiny needles racing through their body. Brain signals are scrambled and all voluntary muscles are incapacitated.**"...Mr. William Gunby, "They are legal to the public by US federal law and we are re selling them around the world." **But what if the US\$200 (\$\$335) Myotron falls into the hands of robbers or rapists?** ...the Vortex Cannon was designed to fire a smoke ring-like charge of air spinning faster than the speed of sound.Inside the barrel of air is a shock wave which cannot be stopped by anything built by man. ..**America had already begun a highly secret vortex programme called Project Squid in 1940. The US Army and Navy have top-secret vortex projects underway at Camp Pendleton, California but will not discuss them.** Now Swedish researchers have miniaturized and refined the Vortex so it can blow cars off a road, engulf, knock down and sicken rioters or deliver gas at the speed of sound.

Laytner, Ron.(1998,Jan.4). You can hide but you can't run: Radar will top your car. Straits Times(Singapore) Sunday Plus.Pg6. Lexis-Nexis.

"The advent into the world's arsenals of **directed energy weapons may be as revolutionary as was the introduction of the other great weapon developments of the 20th century--the machine-gun and the atomic bomb,**"according to the former head of the Defense intelligence Agency(DIA, Leonard Perroots. ...According to U.S. experts, the Soviet Union has the edge

over the United States in developing what is known as "directed energy weapons" and "Radiofrequency weapons."

Debusmann, Bernard.(1990,Mar.28).Beam Weapons Predicted to Revolutionize War, Spur Arms Trade.Reuter Library Report BC cycle. Lexis-Nexis.

"The Marine Corps, which fought long and hard for the **honour of being chosen to expand "non-lethal warfare"**, believes that the weapons will be of great value, particularly in peace-keeping operations such as those in Bosnia and Somalia where minimum force has to be used to try to avoid alienating the local population."

Bellamy, Chris.(1996,Mar.30).Weapons that don't Kill? Tell it to the marines. Independent(London).p1.

"Today there is a **new class of radically new and important radio frequency weapons(RFW) which merits your attention** as it emerges. ...This is particularly true of the newly emerging threat of radiofrequency weapons. And even more importantly, we must develop countermeasures before such weapons are used against us."

Prepared Testimony by Lieutenant General Robert L Schweitzer U.S. Army (Retired) Before the Joint Economic Committee.(1997,June17). Federal News Service.Lexis-Nexis.

**"Brain Bombs.** According to Dr. John Nuckolls, head of physics at the Livermore laboratory, human suffer confusion and disorientation when subjected to long wavelength radiation of great strength. So too, he said, it is entirely possible that physicists might one day find a way to **direct and concentrate the fower from nuclear weapons into this part of the electromagnetic spectrum, producing a bomb that would leave an enemy stunned and unable to wage war.**

Broad, William.(1985, July16). 40 Years Ago, The Bomb: the Questions Came Later. New York Times. Section c pg1.

"Susan Blackmore states: "Suddenly, prospect of **magnetic mind control** seem an awful lot worse than the idea of being abducted by imaginary aliens". ...[Scientist, Michael] Persinger was employed by the US national security establishment to develop behaviour-modifying electromagnetic weapons under project "Sleeping Beauty". He came to the attention of the defense industry after he published a paper entitled "Possible cardiac driving by an external rotating magnetic filed" in 1973. Captain Paul Tyler, the Director of the US Armed Forces Radiobiology Research Institute, wrote in 1986 of a technique employed by national security establishment to disrupt "the electrical signal in cardiac muscle", to produce "complete asystole with a resultant fatal outcome".

Krawczyk, Glenn.(1994,Dec.17).Mind Control. New Scientist. p.50.

**"There are indications that (electro-magnetic weapons) may have adverse affects on the brain," she[Doswald-Beck] said. ...Louise Doswald-Beck, deputy head of the legal division of the Geneva-based ICRC, said the international community had scored a major breakthrough last year when it banned blinding laser weapons before they came on the market. ...that new directed-energy weapons threatened the status quo. ...all new weapons should be scrutinized to see if they contravened the humanitarian principles of causing unnecessary suffering or being indiscriminate in nature, she said. ...humanitarian law exerted only moral pressure on weapons-makers and governments by stigmatizing new and inhumane tools of war."**

# WHY?

## Why are people chosen to be targeted?

**February 14, 2005**

---

There is quite a variety of reasons why people become targeted with organized stalking and electronic harassment. Indications are that one person in a thousand could be targeted at any time.

Here are some reasons I've heard about informally:

- Many targets simply don't know why
  - [Organized stalking groups](#) who tell their members LIES about their designated targets, often with the purpose of "running the target out of town"
  - Retired police officers who harass deadbeat dads (alimony cases) and pedophiles, admitted anonymously on a Toronto radio talk show
  - Police and other public safety officials who have developed methods of "settling scores" with people they can't "get justice" for in court. This includes [battered spouses](#) who make complaints about abusive officers, where other officers believe they are justified in defending against an "attack" (complaint against) "the police family" by attacking the complainant.
  - Aggravated school or workplace bullying
  - Hostile spouse or ex-spouse hires group to harass the other
  - Jilted lover hires group to harass the other
  - Victim reported crime where criminal is member of organized crime, for example, a husband who is a member of a [ring of pedophiles](#) with connections in high places
  - Anti-corporate or government whistleblower activity
  - Anti-corporate or government activism
  - Overzealous church groups harass "sinners" to "straighten them out"
  - Overzealous neighbourhood watch-like groups harass people they believe have criminal records (but don't!)
  - Harassment of "mentally ill" neighbours - totally against the law, and usually not even true. Sometimes to force the target to appear mentally ill to justify the harassment.
  - Harassment of racial minorities
  - Harassment of lesbians and gays
  - Family feuds over inheritance
  - Government attempts to unfairly seize land from owners
-

## **Could THIS BELOW be the reason why "us little nobodies" are chosen for incredibly expensive and extensive targetting?**

**February 18, 2002**

---

President George Bush the elder, and many seemingly savvy political analysts have repeatedly spoken the phrase "New World Order". Ex President Bush's remark to reporters, when asked what the NWO is remarked "Oh ... that's nothing to worry about." Analysts who include the NWO in their work postulate that this is a core group of the world's ultra rich, which has been silently pursuing their own vision of the future of planet Earth since the early 20th Century. Such extreme measures as the killing off of major portions of the world's population to head off environmental and economic crises have been speculated by analysts trying to track NWO plans.

It is logical that with the natural secrecy of the upper ranks of multinational corporations, such wealthy members who feel they are the best judges of what is good for planet Earth would be very tempted to engage in authoritarian excercises like mind control, hoarding of advanced technology, and perhaps even experimenting with the often heard "chemtrail" problem for heading off global warming, or even weakening immune systems of the populations. With this background, here is how I size up one possible explanation for why such unimportant people are chosen for such massive and expensive harassment:

When the New World Order comes out of the closet, it is going to have some really heavy duty resisters. But the NWO will want to maintain the same artificial sense of 'normalcy' that we current day mind control victims are stuck with.

So they won't want to "bump off" those heavy duty resisters. They will instead, use disabling harassment, torture, and the corrupt psychiatric system to "neutralize" them.

How will they have the necessary corps of experienced, trained harassers ready for coming-out day? Simple. Train them on US, BEFORE coming-out day!

Does this make sense?

Eleanor White

[Click here](#) for an article showing quite clearly that such initiatives as suggested above could be going on and yet be denied by government and media partners.

**Here is an [example](#) of brutality worthy of the mind control perpetrators. Odds are there is a connection!**

**Another [example](#) of brutality worthy of the mind control perpetrators.**

## **Wonder Weapons**

**July 7, 1997 US News and World Report**

**by Douglas Pasternak**

So you think neuro-influence weapons don't exist?

# Wonder Weapons

***The Pentagon's quest for nonlethal arms is amazing. But is it smart?***

BY DOUGLAS PASTERNAK

Tucked away in the corner of a drab industrial park in Huntington Beach, Calif., is a windowless, nondescript building. Inside, under extremely tight security, engineers and scientists are working on devices whose ordinary appearance masks the oddity of their function. One is cone shaped, about the size of a fire hydrant. Another is a 3-foot-long metal tube, mounted on a tripod, with some black boxes at the operator's end. These are the newest weapons of war.

For hundreds of years, sci-fi writers have imagined weapons that might use energy waves or pulses to knock out, knock down, or otherwise disable enemies--without necessarily killing them. And for a good 40 years the U.S. military has quietly been pursuing weapons of this sort. Much of this work is still secret, and it has yet to produce a usable "nonlethal" weapon. But now that the cold war has ended and the United States is engaged in more humanitarian and peacekeeping missions, the search for weapons that could incapacitate people without inflicting lethal injuries has intensified. Police, too, are keenly interested. Scores of new contracts have been let, and scientists, aided by government research on the "bioeffects" of beamed energy, are searching the electromagnetic and sonic spectrums for wavelengths that can affect human behavior. Recent advancements in miniaturized electronics, power generation, and beam aiming may finally have put such pulse and beam weapons on the cusp of practicality, some experts say.

Here's why it is so hard to find definitive evidence. But please remember, reader, that "lack of evidence" is not at all the same thing as "doesn't exist". The U.S. kept the atomic bomb VERY quiet until it was put into use.

While this and similar weapons may seem far-fetched, scientists say they are natural successors to projects already underway--beams that disable the electronic systems of aircraft, computers, or missiles, for instance. "Once you are into these antimateriel weapons, it is a short jump to antipersonnel weapons," says Louis Slesin, editor of the trade journal *Microwave News*. That's because the human body is essentially an electrochemical system, and devices that disrupt the electrical impulses of the nervous system can affect behavior and body functions. But these programs--particularly those involving antipersonnel research--are so well guarded that details are scarce. "People [in the military] go silent on this issue," says Slesin, "more than any other issue. People just do not want to talk about this."

U.S. Navy scientist Dr. Eldon Byrd's early work on neuro-influence weapons. Note that bioeffects do NOT require large amounts of power, and this contributes to their undetectability.

By using very low frequency electromagnetic radiation--the waves way below radio frequencies on the electromagnetic spectrum--he found he could induce the brain to release behavior-regulating chemicals. "We could put animals into a stupor," he says, by hitting them with these frequencies. "We got chick brains--in vitro--to dump 80 percent of the natural opioids in their brains," Byrd says. He even ran a small project that used magnetic fields to cause certain brain cells in rats to release histamine. In humans, this would cause instant flulike symptoms and produce nausea. "These fields were extremely weak. They were undetectable," says Byrd. "The effects were nonlethal and reversible. You could disable a person temporarily."

Byrd hypothesizes. "It [would have been] like a stun gun."

Byrd never tested any of his hardware in the field, and his program, scheduled for four years, apparently was closed down after two, he says. "The work was really outstanding," he grumbles. "We would have had a weapon in one year." Byrd says he was told his work would be unclassified, "unless it works." Because it worked, he suspects that the program "went black." Other scientists tell similar tales of research on electromagnetic radiation turning top secret once successful results were achieved. There are clues that such work is continuing. In 1995, the annual meeting of four-star U.S. Air Force generals--called CORONA--reviewed more than 1,000 potential projects. One was called "Put the Enemy to Sleep/Keep the Enemy From Sleeping." It called for exploring "acoustics," "microwaves," and "brain-wave manipulation" to alter sleep patterns. It was one of only three projects approved for initial investigation.

#### **IMPLANT VICTIM REFUSED HELP BY 'HUMANITARIAN' PHYSICIANS**

The Boston chapter of PHYSICIANS FOR HUMAN RIGHTS (PHR) last month refused to examine or treat government implant victim Brian Wronge, against the protest of some of its members.

Wronge, a New York City resident, and former prisoner at Elmira and Arthur Kill correctional facilities from 1979 to 1989, was found positive for "paramagnetic metallic foreign bodies" in his head and chest in 1991 by both MRI and CT scan. The CT scan was performed by MRI-CT Scanning Inc. on May 6, 1991, and the MRI was performed three weeks later by Diagnostic Imaging Associates. Both labs are in New York City.

Further examination revealed miniature radios implanted in the membrane of Wronge's eardrums, according to a research biologist who examined Wronge with a OTOSCOPE. Use of such radio implants by CIA-funded experiments had been rumored since the 1960's, when individuals testified that institutes in UTAH had been using them on prisoners in that state without the victims' knowledge.

Requests through the Freedom of Information Act to obtain documents on the UTAH experiments, to this date, have not been complied with.

A federal Eastern District Court Judge, Justice REENA RAGGI, has Wronge's lawsuit against the state of New York pending, instructing Wronge to find a surgeon to remove one of the implants. However, in the three years since the May 1991 lab reports, no surgeon would remove the implants, usually citing FBI RETALIATION as the reason.

In an effort to find Wronge a surgeon, his case was brought to the attention of PHR's BOSTON CHAPTER by one of its members three months ago. Although four prominent physicians supported the examination and pursuit-of Wronge's covert surgery, the PHR board, according to director ERIC STOVER, decided in a meeting in mid-June to refuse assistance to Wronge. Wronge had offered to finance his own trip to minimize any budgetary reason the group might claim.

There have been repeated requests for the minutes of this June meeting, but the group claims the minutes are still not ready. Despite several attempted interviews throughout July, neither the staff members nor the director would reveal details of the meeting's dialogue, nor reveal which of the board members were present. One staff member did say, "Everyone saw the information [the MRI and CT scan results]. It was well-discussed among all the staff and all the board members."

On July 21, a staff member stated, "No one here is allowed to speak with you. I was told to say that," mentioning that the director gave the silence order prior to a vacation.

The tense atmosphere at PHR following the Wronge denial was also evident among board members who refused to discuss details of the behind-the-scenes dialogue, although two of them revealed through various conversations that they were subjected to INTENSE CAMPAIGNING BY COLLEAGUES NOT TO SUPPORT PURSUIT OF THE ISSUE. Dr. CAROLA EISENBERG, vice president of PHR, was eager to help Wronge in late April but, in May, was discouraged from doing so after a conversation with STOVER.

The PHR decision was highly controversial, considering the group's documented statement of purpose - the basis on which it is supported by their large MEMBERSHIP. The statement includes the following mandates:

1. To stop torture that is committed by a government;
2. To investigate violations of humanitarian law and medical ethics in internal conflicts; and
3. To prevent physician complicity in human rights abuses

Furthermore, the denial of help to Wronge follows an early 1994 opinion poll indicating that the group's membership wanted to use more of its resources to examine prisoners in the United States, strongly inferring that PHR was avoiding domestic issues.

Since PHR's inception in 1986, it repeatedly has rejected suggestions to address medical misconduct by government agencies. "We may have a case of a group that is not pursuing the very issues its membership is MAKING LARGE CONTRIBUTIONS to see rectified," said one member of the Boston group.

THE CITY SUN spoke with ERIC STOVER about Hutcheon's charges. "This request went to the board, and the board felt that given the workload and the numbers of cases requiring our attention around the world, that we would not commit our limited resources to this case. We feel that what the plaintiff needs to do is to go to any properly certified general practitioner to obtain help. This does not indicate a lack of caring on our part. We have a small staff and limited funding, and we have to look at each case individually and make a decision."

In response to Hutcheon's assertion that PHR does not address medical misconduct by U.S. government agencies, Stover said, "That's categorically and absolutely untrue." He cited a Syracuse, N.Y., prison case he says PHR investigated which resulted in a 60 Minutes story and the rectifying of the inhumane treatment. Stover said the organization has addressed numerous other domestic cases and also has worked on cases in Rwanda, Burundi, Mexico, Chile, Yugoslavia and other foreign countries.

Stover and the PHR secretary both disavowed knowledge of the opinion poll referred to by Hutcheon.

## **WRONGE REVISITED: UPDATE ON IMPLANT VICTIM'S CASE**

As promised last week, we are updating our readers as to recent events surrounding implant victim BRIAN WRONGE. Many have inquired about the progress, if any, of Wronge's efforts to obtain a measure of justice for the heinous crime committed against him.

THE CITY SUN was the nation's first publication to bring Wronge's case to the public in our cover story by this writer, titled: CHARGE OF HOLOCAUST: Medical Experiment on Black Inmate" (Dec. 15-21, 1993). Since that time, a few other publications out of state have covered the story. Also, Wronge has been interviewed by Marjorie Moore, Sean Ashton and Bernard White on WBAI radio, by the Rev. Del Shields and Donna Wilson on WWRL and also has guested on several radio programs outside of New York. In addition, Wronge has appeared on a Manhattan Cable television show.

Wronge was illegally implanted with paramagnetic computer chips in various parts of his body while a prisoner at Fishkill Correctional Facility. He believes the procedure was done when he entered a hospital for a diagnostic procedure. He emerged a human guinea pig.

In October 1987, he was taken to Bayley Seton Hospital in Staten Island for a bronchoscopy at the suggestion of prison doctors. Immediately upon awaking and for months afterward, he suspected that his body had somehow been tampered with by surgeons, including Dr. Vincent Tarantola, who now heads the hospital's pulmonary clinic.

Wronge's suspicions were verified when, after his release from prison, a CT scan and MRI performed at separate diagnostic labs revealed the presence of "a paramagnetic foreign body artifact" under one arm and "dense rectangular-shaped metal foreign objects" in both inner ears. Subsequent examinations by physicians also corroborated these findings.

One physician told THE CITY SUN that an implant suspected to have been placed on Wronge's TRACHEA receives and transmits sound, including the high-pitched

frequencies of his thoughts resonating on his voice box. "Remember that saying, 'You can't go to jail for what you think'? Well, not anymore, "the doctor said.

Though this type of technology has been used for legitimate purposes for some time now, its used for prisoners without their consent is a blatant violation of the civil and physical rights of citizens. A surgeon who viewed Wronge's x-rays said, "A prosthetic device...is usually employed to replace a damaged element of the body. If he's never had a need for such a device, it should not be there, and certainly not without his knowledge."

Wronge's efforts to secure a lawyer have thus far been unsuccessful. There's been some dodging and dangling by a few attorneys, but as yet no commitment of legal representation. He has, however, filed suit against the federal government and was instructed to have a surgeon remove one or more of the implants for examination by court-appointed experts. He has been unable to obtain this assistance to date, though he has had at least one adventure in the attempt.

---

Attempts to secure the rest of the above article have been unsuccessful.

## Organized Stalking? You Decide.

September 27, 2004

---

In David Lawson's landmark book, [Terrorist Stalking in America](#), the author makes a point that some of the most "valuable" members of networked stalking groups are work crews who can make the life of a chosen target of organized stalking miserable. For unaware visitors, organized stalking targets are people chosen for never-ending harassment, in which the harassment is carefully engineered to look exactly like "normal breaks of life". The difference is that for a chosen organized stalking target, "normal breaks" happen every day, sometimes several times a day (as opposed to monthly or yearly, as with genuinely random "breaks.")

The organized stalking targets overwhelmingly have no criminal records, yet common lies are told about them to motivate group members, such as the target is a prostitute, is a drug dealer, or is a pedophile, or is "under investigation" where the "investigation" never ends.

To learn more about organized stalking, visit these sites:

<http://www.multistalkervictims.org>

<http://www.ganstalking.ca>

<http://www.stopcovertwar.com>

The photo above was taken September 27, 2004, and shows two workers jackhammering concrete outside an apartment building. What is unusual is that on that date, this jackhammering project was entering the EIGHTH WEEK. The eighth week of severe noise for the tenants, dust, dirt, and the inescapable carbon monoxide wafting up from the compressor which had been observed running even when no hammering was in progress.

Do you, visitor, believe that a 50-foot-square patch of concrete needs EIGHT WEEKS of jackhammering? IF (and this is doubtful) the one or two man crew needed eight weeks to accomplish this repair job, would it not have been possible to bring in more workers to do it in a much shorter time? Eight weeks' wages and carrying charges on the equipment certainly could have bought more labour, no?

Do you think if this same patch of concrete were part of a busy road, it would still take eight weeks?

Now a hallmark of organized stalking harassment is that some of the skits, though done for the "benefit" of one target, can also disrupt the lives of many people. Because all skits are designed to look like "normal breaks", the people other than the target don't have recourse, and the stalking groups don't care, since they are above prosecution, and lack consciences anyway.

With this particular apartment building, there is a history of organized stalking activity, reported by one of our members who lived there for two years. Endless noise attacks, midnight use of barbecue on the balcony under the target's apartment, and frequent cigarette smoke forced through openings into the target's apartment. The super's son was moved into the apartment next to the target, and immediately began blasting the target with loud music. Complaints to the super made no difference.

Finally a complaint to the property manager resulted in the son being moved off the floor, and immediately "renovations", always making the maximum noise and always carried on at night, began and continued until the target moved out. The property manager had her pay and hours cut in half immediately after she moved the son off the floor. Other tenants cautioned the target about criticizing the son's activities.

So, visitor - in light of the history of this occurrence, do you feel this is an organized stalking incident?

---

# Organized Stalking - A Taboo Subject

While the average 21st Century citizen prefers not to think about this crime syndrome, stalking groups have been using "civilian psychological warfare" on their targets now for at least two decades.

And talking about this taboo topic brings a very heavy "don't spoil my day" response. People not affected simply refuse to listen to information on stalking by more than one stalker. Kind of like the way folks don't like hearing about cancer.

In the early 1990s, legal jurisdictions in both the United States and Canada finally enacted legislation making stalking a crime. But to society's detriment, justice systems everywhere seamlessly ignore every case where a group of stalkers engage in the same behaviour as single stalkers. The reason isn't clear, but it may have to do with the rather substantial amount of investigative labour required when a group takes turns doing "little nasties" against a target. Who is the perpetrator?

That the stalkers are generally not career criminals makes going after stalking group members a substantial project for the justice system. Some of the stalkers have considerable respect in their communities.

Today's stalking groups use very carefully planned harassment methods. Every single act of harassment is carefully designed so that it is in the "life's normal breaks" category. What the target sees are "normal breaks" which usually occur maybe once or twice a month on average, to maybe once a year. But for organized stalking targets, such "normal breaks" happen at least once, and often several times a DAY.

This "life's normal breaks" format of the crime also adds to the difficulty of investigating and prosecuting organized stalking. In turn, the apparent normalcy makes it very easy for police and other officials to brush off complaints of organized stalking as the target being "mistaken", "overreacting," or often, "in need of seeing a good psychiatrist."

"Life's normal breaks" span a huge range of seriousness.

At the low end you have endless noise from co-opted neighbours who observe the target and schedule "normal activity" like running a leaf blower for each time a target may wish to enjoy peaceful activity. Or scattering the target's mail on their porch while the target is away at work. Or frequent, make believe, obviously sarcastic "wrong number" calls.

But at the opposite end of the range, you have

surreptitious entry to the target's home, car and workplace, with sabotage of belongings, and torture and even the death of pets. One target came home to find antifreeze in the dog's dish, and the dog permanently blind. Some pets or wild animals are butchered and left on the target's doorstep.

It is common, where a target is married, for the stalkers to carefully harass the target only at times and places when the target is separated from the partner. This eventually drives the target to complain, and the usual reaction is "Don't talk about that any more" or "Go see a psychiatrist right away". The marriage is then often headed for destruction.

Vicious lies are circulated in the community, and these lies do not stop. Such lies as the target is a prostitute, a drug user, a drug dealer, has a long criminal record, or the highly destructive favourite (applied to both men and women,) the target is a pedophile.

Sabotage, lies, and harassment happen at the workplace as well, and it's not unusual for the target to be driven from a job. Once that happens, when the target looks for another job, the target is shadowed, and lies are fed to prospective employers. Some targets have been driven to homelessness, and a few have been driven to suicide.

So just because activity is confined to "life's normal breaks", these "breaks" can be devastating and even become life-and-death issues.

Along with the lies, endless sabotage of individually small, but cumulatively important belongings accompanies the surreptitious entries, which are done using locksmithing techniques, and often, illegally obtained keys. The target effectively owns nothing, because anything he or she owns is subject to being ruined.

Sabotage is carefully spaced out and held to relatively low individual value per incident, as are the thefts that also occur. A great deal of effort is put into planning the sabotage and thefts, and scheduling them so police will not take the complaints seriously.

Even the sabotage has a well planned psychological element: Clothing is often ripped open at sexually significant places like armpits and crotches. Can you imagine taking your underwear to the police station to report that someone broke in and ripped out all the crotches? Do you think the police would treat that as a crime worthy of their attention?

How long does this go on? With a literal handful of rare exceptions, for life. Because the stalking groups continue to recruit and grow indefinitely, there is no "tiring" of the stalker, as happens in single stalker cases.

To this point, I've briefly highlighted the crime of organized stalking. Organized stalking is sometimes called "gang stalking" though the stalking group members generally

don't appear to be affiliated with youth gangs, race gangs, biker gangs, or say, the Mafia. "Vigilante stalking" is sometimes used because of the false allegations that targets are active criminals.

The big question of course, is "Why?" The full answer has yet to be discovered.

For an individual target, the "Why?" answer relates to the lies told to the people doing the harassing. There are people in any neighbourhood or community who enjoy the feeling of self-righteousness from "helping keeping crime under control", or in some cases "doing the Lord's work." Tell the right lies, and it's not hard to recruit harassers.

A second part of the "Why?" question, for which no clear answer is yet available, is why the leaders of these organized stalking groups propagate the lies. One author, Florida private investigator David Lawson, investigated organized stalking groups for more than a decade, and succeeded in infiltrating groups in the United States and Canada.

His current book on the subject is "Cause Stalking" and is available from [amazon.com](https://www.amazon.com)

David Lawson found that the organized stalking group leaders keep something of an "arm's length" distance from the members, often passing target designations in ways where the leader can't be identified, such as a coded classified newspaper ad, or even a mention on a local radio show.

Lawson reports that leaders are often from "somewhere else" and claim to have worked in "intelligence" or other difficult to verify jobs. He was able to interact with stalking group members, but his information on the leaders is skimpy.

David Lawson did report some corporate funding of these stalking groups, by corporations who needed ways to deal with people and groups they consider their "enemies." People like activists and whistleblowers, or even intellectuals critical of their activities.

Cases are known where, for example, a wife discovers her husband is a pedophile and reports him. Inheritance disputes are understandable. And of course, some organized stalking cases have resulted from having a marriage or relationship go sour.

Those are reasons why some targets have been selected, but it is distressing that there are many targets who do not know why they were initially chosen.

The reason David Lawson chose "Cause Stalking" as the title of his current book on the subject is that he found organized stalking members are often recruited on the basis of some "cause". Lawson didn't elaborate on the causes used for recruiting, but did report that once recruited, the "front" cause is essentially ignored, and the actual

work of the group is to harass "criminals", and perhaps drive them out of the community.

Lawson reports, and targets concur, that across the U.S. and Canada, local groups now exist everywhere and they are seamlessly networked. If a target moves, the group in the new location will continue the harassment.

David Lawson has done ground-breaking work in exposing the plight of thousands of organized stalking targets. His observations are hailed by the targets as "right on the money" - highly accurate.

And yet, he has missed the mark when it comes to his conclusions.

Lawson repeatedly lays the blame for organized stalking groups at the feet of foreign terrorists (the "Al Qaeda" thing,) and, members of the U.S. Patriot Movement, who, according to their radio shows, are interested in exposing government crimes and deviations from the U.S. Constitution. (Lawson calls them "anti government", but one would think that exposing government crime is a truly patriotic act.)

Lawson's own observations simply do not show any involvement by either foreign terrorists or the U.S. Patriot movement. No connection is visible. That doesn't mean there aren't some members of either Al-Qaeda or the U.S. Patriot Movement who also do some organized stalking, but targets don't report a visible connection with those groups from their experiences.

So, what can be done about the crime of organized stalking?

In the opinion of this writer, all it would take to stop it would be for organized stalking to become a household word. That's it. It's that simple.

The problem is that because the justice system consistently denies the reality, the media has nothing they are willing to print. If a target approaches reporters, the reporters, under the gun for accuracy, are very reluctant, though there are small hints this may be slowly changing.

If the general public were aware of this crime, the pressure on the justice system would be sufficient to stop it, I claim.

Meanwhile, what can someone who discovers (and that can take time) that their endless "bad luck" is really organized stalking do to help themselves?

Right now, there are a precious few, a small minority, of crisis support organization counselors who do know organized stalking is "real" and will offer some support. They cannot stop the crime, nor can they force the reluctant justice system to act to help the target, but it can make a huge difference just knowing one person, especially connected with an organization, does believe the target and does know that organized stalking is a real crime.

Anti-organized stalking activists need to work harder at developing connections with those few crisis support counselors, in the view of this writer.

Perhaps the largest pool of activity among targets is networking via the Internet. Because destruction of targets' incomes is a high priority of the stalkers, target activism is rather poorly funded, but some things are happening. At the moment, I'd like to recommend googling "organized stalking" (with the quotes) to readers who may believe their "bad luck" has reached the point of organized stalking.

Networking doesn't stop the harassment but it can dramatically improve the outlook for targets.

What can the general public do to help?

Look up organized stalking on the Internet, read what is available, and above all else, talk it up. The day organized stalking becomes a household word is the day that this crime will be properly attended to by justice systems.

Special thanks to readers who have read this article.

# Organized Stalking - A Taboo Subject

While the average 21st Century citizen prefers not to think about this crime syndrome, stalking groups have been using "civilian psychological warfare" on their targets now for at least two decades.

And talking about this taboo topic brings a very heavy "don't spoil my day" response. People not affected simply refuse to listen to information on stalking by more than one stalker. Kind of like the way folks don't like hearing about cancer.

In the early 1990s, legal jurisdictions in both the United States and Canada finally enacted legislation making stalking a crime. But to society's detriment, justice systems everywhere seamlessly ignore every case where a group of stalkers engage in the same behaviour as single stalkers. The reason isn't clear, but it may have to do with the rather substantial amount of investigative labour required when a group takes turns doing "little nasties" against a target. Who is the perpetrator?

That the stalkers are generally not career criminals makes going after stalking group members a substantial project for the justice system. Some of the stalkers have considerable respect in their communities.

Today's stalking groups use very carefully planned harassment methods. Every single act of harassment is carefully designed so that it is in the "life's normal breaks" category. What the target sees are "normal breaks" which usually occur maybe once or twice a month on average, to maybe once a year. But for organized stalking targets, such "normal breaks" happen at least once, and often several times a DAY.

This "life's normal breaks" format of the crime also adds to the difficulty of investigating and prosecuting organized stalking. In turn, the apparent normalcy makes it very easy for police and other officials to brush off complaints of organized stalking as the target being "mistaken", "overreacting," or often, "in need of seeing a good psychiatrist."

"Life's normal breaks" span a huge range of seriousness.

At the low end you have endless noise from co-opted neighbours who observe the target and schedule "normal activity" like running a leaf blower for each time a target may wish to enjoy peaceful activity. Or scattering the target's mail on their porch while the target is away at work. Or frequent, make believe, obviously sarcastic "wrong number" calls.

But at the opposite end of the range, you have surreptitious entry to the target's home, car and workplace, with sabotage of belongings, and torture and even the death of pets. One target came home to find antifreeze in the dog's dish, and the dog permanently blind. Some pets or wild animals are butchered and left on the target's doorstep.

It is common, where a target is married, for the stalkers to carefully harass the target only at times and places when the target is separated from the partner. This eventually drives the target to complain, and the usual reaction is "Don't talk about that any more" or "Go see a psychiatrist right away". The marriage is then often headed for destruction.

Vicious lies are circulated in the community, and these lies do not stop. Such lies as the target is a prostitute, a drug user, a drug dealer, has a long criminal record, or the highly destructive favourite (applied to both men and women,) the target is a pedophile.

Sabotage, lies, and harassment happen at the workplace as well, and it's not unusual for the target to be driven from a job. Once that happens, when the target looks for another job, the target is shadowed, and lies are fed to prospective employers. Some targets have been driven to homelessness, and a few have been driven to suicide.

So just because activity is confined to "life's normal breaks", these "breaks" can be devastating and even become life-and-death issues.

Along with the lies, endless sabotage of individually small, but cumulatively important belongings accompanies the surreptitious entries, which are done using locksmithing techniques, and often, illegally obtained keys. The target effectively owns nothing, because anything he or she owns is subject to being ruined.

Sabotage is carefully spaced out and held to relatively low individual value per incident, as are the thefts that also occur. A great deal of effort is put into planning the sabotage and thefts, and scheduling them so police will not take the complaints seriously.

Even the sabotage has a well planned psychological element: Clothing is often ripped open at sexually significant places like armpits and crotches. Can you imagine taking your underwear to the police station to report that someone broke in and ripped out all the crotches? Do you think the police would treat that as a crime worthy of their attention?

How long does this go on? With a literal handful of rare exceptions, for life. Because the stalking groups continue to recruit and grow indefinitely, there is no "tiring" of the stalker, as happens in single stalker cases.

To this point, I've briefly highlighted the crime of organized stalking. Organized stalking is sometimes called "gang stalking" though the stalking group members generally don't appear

to be affiliated with youth gangs, race gangs, biker gangs, or say, the Mafia. "Vigilante stalking" is sometimes used because of the false allegations that targets are active criminals.

The big question of course, is "Why?" The full answer has yet to be discovered.

For an individual target, the "Why?" answer relates to the lies told to the people doing the harassing. There are people in any neighbourhood or community who enjoy the feeling of self-righteousness from "helping keeping crime under control", or in some cases "doing the Lord's work." Tell the right lies, and it's not hard to recruit harassers.

A second part of the "Why?" question, for which no clear answer is yet available, is why the leaders of these organized stalking groups propagate the lies. One author, Florida private investigator David Lawson, investigated organized stalking groups for more than a decade, and succeeded in infiltrating groups in the United States and Canada.

His current book on the subject is "Cause Stalking" and is available from [amazon.com](https://www.amazon.com)

David Lawson found that the organized stalking group leaders keep something of an "arm's length" distance from the members, often passing target designations in ways where the leader can't be identified, such as a coded classified newspaper ad, or even a mention on a local radio show.

Lawson reports that leaders are often from "somewhere else" and claim to have worked in "intelligence" or other difficult to verify jobs. He was able to interact with stalking group members, but his information on the leaders is skimpy.

David Lawson did report some corporate funding of these stalking groups, by corporations who needed ways to deal with people and groups they consider their "enemies." People like activists and whistleblowers, or even intellectuals critical of their activities.

Cases are known where, for example, a wife discovers her husband is a pedophile and reports him. Inheritance disputes are understandable. And of course, some organized stalking cases have resulted from having a marriage or relationship go sour.

Those are reasons why some targets have been selected, but it is distressing that there are many targets who do not know why they were initially chosen.

The reason David Lawson chose "Cause Stalking" as the title of his current book on the subject is that he found organized stalking members are often recruited on the basis of some "cause". Lawson didn't elaborate on the causes used for recruiting, but did report that once recruited, the "front" cause is essentially ignored, and the actual work of the group is to harass "criminals", and perhaps drive them out of the community.

Lawson reports, and targets concur, that across the U.S. and Canada, local groups now exist everywhere and they are seamlessly networked. If a target moves, the group in the new location will continue the harassment.

David Lawson has done ground-breaking work in exposing the plight of thousands of organized stalking targets. His observations are hailed by the targets as "right on the money" - highly accurate.

And yet, he has missed the mark when it comes to his conclusions.

Lawson repeatedly lays the blame for organized stalking groups at the feet of foreign terrorists (the "Al Qaeda" thing,) and, members of the U.S. Patriot Movement, who, according to their radio shows, are interested in exposing government crimes and deviations from the U.S. Constitution. (Lawson calls them "anti government", but one would think that exposing government crime is a truly patriotic act.)

Lawson's own observations simply do not show any involvement by either foreign terrorists or the U.S. Patriot movement. No connection is visible. That doesn't mean there aren't some members of either Al-Qaeda or the U.S. Patriot Movement who also do some organized stalking, but targets don't report a visible connection with those groups from their experiences.

So, what can be done about the crime of organized stalking?

In the opinion of this writer, all it would take to stop it would be for organized stalking to become a household word. That's it. It's that simple.

The problem is that because the justice system consistently denies the reality, the media has nothing they are willing to print. If a target approaches reporters, the reporters, under the gun for accuracy, are very reluctant, though there are small hints this may be slowly changing.

If the general public were aware of this crime, the pressure on the justice system would be sufficient to stop it, I claim.

Meanwhile, what can someone who discovers (and that can take time) that their endless "bad luck" is really organized stalking do to help themselves?

Right now, there are a precious few, a small minority, of crisis support organization counselors who do know organized stalking is "real" and will offer some support. They cannot stop the crime, nor can they force the reluctant justice system to act to help the target,

but it can make a huge difference just knowing one person, especially connected with an organization, does believe the target and does know that organized stalking is a real crime.

Anti-organized stalking activists need to work harder at developing connections with those few crisis support counselors, in the view of this writer.

Perhaps the largest pool of activity among targets is networking via the Internet. # DOCTORS WHO KNOW INFORMATION

## - Log started Aug. 27, 2006

Rev: January 25, 2009

```
|-----|
| TO DOCTORS: As you can see here, your colleagues |
| are finally telling the truth. Please join them |
| in letting the world know about this decades-old |
| crime. Anonymity is guaranteed if you contact |
| me, Eleanor White, with your story. |
| ewraven1@sympatico.ca |
|-----|
```

Added on Aug 27/06 (code SP):

There are two conversations worth noting, both happened in Xxxx:

1. I tried to contact a well known psychiatrist who had spoken out publicly against some forms of harassment in the medical profession. He refused to meet with me at first, but finally agreed to one (1) conversation on condition that I would never discuss the conversation with anyone and that he would deny he had talked to me if asked. In this conversation, he told me that many kinds of coercion (i.e., mind control) can be applied that would be hard to detect and impossible for the patient to resist. These include drugs (by mouth, injection, absorbed through the skin, etc.), bodywork, 'relaxation techniques', subliminal tapes and other modalities. Doctors may use some combination of these to silence any patient who could be troublesome and to ensure the patient is compliant when receiving treatments which will be detrimental to their health.

If two or more doctors do the same thing it will be impossible for the patient to have recourse since the law assumes collusion does not exist.

2. I discussed this same issue with a licensed woman psychiatrist. I described the events. She asked me "what took you so long to realize they were colluding and hurting you?" (Obviously, it was the mind control.) But the point is she knew and admitted the doctors were colluding and hurting me.

By the way, I would hope you will advise TI's you know to avoid 'alternative' doctors (MD's and otherwise) unless they know the individual well. (A casual recommendation does \*not\* constitute knowing the doctor well.) Mainstream medicine is rampant with problems, perps and often not effective, but the people involved on the alternative side are even more often outright perps.

[Eleanor White speaking: I've listened to wonderful doctors, both MD and ND, who practice "alternative"

medicine by way of naturopathy, remedies which work based on centuries of experience, and in particular restoring vitamins, minerals, and co-enzymes which are missing from today's depleted soils. Their advice has worked very well for me in maintaining my health in spite of the attacks.]

I also know of several doctors who have written about harassment in the medical profession; but only concerning harassment of doctors by doctors (and related persons - health organizations, hospitals, etc.) Harassment of patients by doctors and collusion by doctors to harm and harass a patient is considered a hot potato. A doctor would be ending his career by publicly admitting to knowledge of it.

[Eleanor White speaking: For our research-oriented activists, maybe such writings are worth looking into.]

Added Aug 27/06 (Gloria Naylor's book "1996"):

This is a quote from Eleanor White's review of Gloria Naylor's book "1996" describing her experiences as an organized stalking and electronic harassment target:

"Gloria shared a very interesting twist of the non-fiction side of her story during a telephone conference call with targets. Logically, some targets of electronic harassment, given that transmitting voice through walls into the skull of a target does mimic mental illness, will opt to see a psychiatrist. Gloria did this, and predictably, was placed on anti-psychotic medication. After waiting for the medication to work, which it did NOT (as in all targets' medication trials), the psychiatrist actually revealed to Gloria that he KNEW about this harassment crime syndrome, yet did not tell her."

That is writer Gloria Naylor's TRUE LIFE experience.

Added Nov 2/06 (code S):

>I have a good therapist who has taken the time to read about this  
>horrible, inhumane crime. He has stated that this is not a mental  
>health issue but rather a legal issue.

Added Jan 15/07:

Dr. William Deagle, MD, PhD in molecular biology, and former civilian contract doctor to agencies of the U.S. Department of Defense, acknowledges having the massive harassment of citizens confirmed through his contacts and experiences. He is now (in January 07) a broadcaster who broadcasts on government and corporate crimes with emphasis on medical crimes. He also (in January 07) maintains this web site from which many of his recommended naturopathic supplements can be purchased:

<http://www.nutrimedical.com>

Added Jan 16/07 (code DL):

"... , my GP did say she says with current technology it is possible" (referring to electronic harassment technology such as microwave voice to skull technology, for details see the March 1975 issue of the

"American Psychologist" journal, the article by Dr. Don Justesen titled "Microwaves and Behavior". Or google Dr. Joseph Sharp.)

Added Feb 11/07 (code DG):

"I have spoken to some healthcare workers and some have indicated they hear that complaint 'all the time' from people when they are trying to 'return to work' "

[Eleanor White speaking: The writer of that quote is speaking about cases where "mobbing", which is the on the job version of organized stalking, has forced workers to take time off for "stress" reasons. In these cases, the behaviour of co-workers described to the health workers is identical with what this web site refers to as "organized stalking."]

Added May 17/07:

<http://www.americanchronicle.com/articles/viewArticle.asp?articleID=18774>  
January 8, 2007

About the author:

"Moss David Posner, M.D. is a physician currently in practice in the California Department of Corrections. He is prolific as well as versatile, and writes on a number of subjects, including philosophy, religion, and the state of medical care in the California Department of Corrections. Dr. Posner has published articles in a variety of publications, including a Journal of Transcription and the Department of the Navy."

Quote showing at the minimum, Dr. Posner is solidly behind claims that highly advanced electronic technology capable of messing with the human mind exists:

"I can tell you for an absolute fact that the technology exists today to scan your thoughts and actually to introduce, by the use of specific frequencies, certain ideas and emotions without the recipients being aware. Please do not take my word for this but do a search for 'mind control' and comparable technologies, and you will not believe your eyes."

Almost all doctors deny such technology even exists, never mind is being used on innocent people all over the world.

Added May 17/07 (code LT):

This is from a psychology professor with considerable published work in the field of stalking, with emphasis on partner stalking in domestic violence situations. The professor has heard of organized stalking cases, per the following email quote:

>Sometimes people are stalked by multiple people usually for the  
>purpose of one individual, often termed proxy stalking. However, I  
>am familiar with some cases of group stalking (like a gang). But,  
>I haven't seen any research on it.

Added June 10/08 (Leslie C):

Eleanor White's opening comments:

For the past 28 years, in spite of being under e-harassment and organized stalking, massive fatigue, sleep deprivation and artificial illness, every single lab report has always been reported to me as "perfect." By age 67, something is likely to show.

In recent emails, I've asked the question "Are the labs lying?" After all, corrupted medical labs are the perfect way to keep targets from getting treatment they need, and more importantly, medical recognition that SOMETHING is not right (which could even lead to being believed, maybe) ... is prevented.

Well recently, Leslie C, a member of one of our forums, who has some medical training, reports that in her case, it is the doctors themselves who seem to be ignoring negative indications on lab reports.

To me, this suggests it might be interesting for targets who visit doctors to learn lab results and maybe scan results, to ask to actually see the reports.

Leslie also suggests we can ask for copies.

Apparently a lab slipped her a report without her name on it, so that's something to watch for (and correct if it happens.) I would imagine that if the doctor wrote the patient's name on the report and initialled it, that would be sufficient, though a reprint would be best.

We can do this diplomatically, expressing just a general interest.

So for what it may be worth to solving the problem of "perfect lab reports" which mask what's going on with us, here is Leslie's posting, sent with her permission:

Leslie C writes:

```
>Yes I am certified to draw blood (Phlebotomist) so I was schooled
>in some Hematology. Enough to know when something is wrong..
>
>Its not hard [to spot variations from normal] when the computer
>writes HIGH HIGH HIGH on the report...
>
>To be fair though... I need to show the docs (whom I can't afford)
>that my white count has been increasing every year for years,
>by showing them all of the reports together...
>
>Though one report with that many highs on it should have made
>some impression.. and if I had insurance I wonder if he would
>have said something.
>
>But this makes 6 doctors who have now ignored it .. and they
>shouldn't be and I shouldn't be....this time there were more
>"highs" on that report than ever...
>
>leslie c
```

Added January 25, 2009 (Code MP):

A target of three decades' non-stop harassment made regular reports to her doctor. The doctor has an opened mind and has now become convinced that the target's complaints are entirely real.

Added January 25, 2009 (Adult bullying blog):

This is the place where you might suggest a shrink. But let me assure you, I am in the care of a wonderful psychiatrist, whose early suspicions of delusional psychosis quickly gave way to a surprising, unreserved affirmation that what I am reporting to him must be real.

Local Company Developing 'Less than Lethal' Weapon

Last Edited: Monday, 21 May 2007, 8:53 PM CDT

Created: Monday, 21 May 2007, 8:43 PM CDT

'EPIC' by Invocon is being developed as a 'Less than Lethal' Weapon.  
FOX 26 News

How do you disable bad guys in a crowd without killing them or causing permanent damage? It's a problem faced by troops in urban combat and by local law enforcement.

Now, a local company called Invocon may have the answer, and the solution may be a weapon code named "Epic." The company is developing a weapon they hope someday will be able to shoot through a wall and stun people on the other side of the wall.

The developers describe it as a Star Trek-Like phaser, set to stun.

The marine corps is footing the bill for developing the weapon. It works by shooting an electromagnetic pulse capable of penetrating walls. The pulse will affect the inner ear and affect a person's sense of balance, leaving them reeling. In theory the weapon is quite simple, and a small scale version of it under testing.

This "active denial system" uses an electromagnetic pulse to cause a burning sensation that does no actual damage. A truly safe "less than lethal weapon" is the goal of these designers.

The quest for a safe "less than lethal" weapon is not new. Many are already in use. Weapons such as tear gas, stun guns, and rubber bullets have met with mixed success. Now, the next generation is under development.

## News Release - From email received July 21, 2003 from Boyd Graves'

volunteer staff:

<http://www.boydgraves.com/news/071903.html>  
<http://www.boydgraves.com/news/071903.pdf>

Graves says 1971 Flow Chart proves U.S. government made HIV/AIDS, requests time

SAN DIEGO - Human rights activist Boyd E. Graves requested more time from the U.S. District Court for Southern Calif. to prove his case against the United States government for the creation, production, and proliferation of the HIV/AIDS virus inside the U.S. Special Virus Program.

Following opening arguments July 3, 2003, Judge Jeffrey T. Miller took the matter of Graves' request for the full disclosure of the formerly secret U.S. Special Virus Program under advisement before granting the United States' attorney Beth Levine's request for summary judgement on July, 7 2003.

In a motion submitted to the United States District Court for Southern California earlier this week, federal documents revealed Graves seeks to secure an additional 60 days to amend his AIDS origin complaint against the U.S. Special Virus Program and the federal agencies responsible for the program's administration.

"The peoples' case was not dismissed," Graves said. "The people have a real shot at the full disclosure of the U.S. Special Virus Program."

Court documents indicate Graves was 'accosted from his home, beaten, drugged and admitted to the maximum security psychiatric unit of the Veteran's Hospital in La Jolla, California' on July 4, 2003 and incarcerated through July seventh.

The Internal Affairs division of the San Diego Police Department is investigating Graves' arrest, and his allegations of physical abuse during his incarceration between July 4th and 7th, 2003.

[ELEANOR WHITE COMMENT: RIGHT AT THE TIME GRAVES' ORIGINAL MOTION WAS BEING DENIED!]

Graves said if his latest motion is denied, he will file a new complaint to further expose the U.S. Special Virus program. Graves makes his 1971 Special Virus Flow Chart discovery and many court documents on his case available on-line on his Web site at

## Letter received by British target Ruth Barnett in 2004:

Dear Ruth Barnett,

Thank you for your email - please accept this as a reply from both Green Party Members of English Parliament, myself and Jean Lambert.

The subject came to the attention of the Green Group in 1996, and we have slowly developed a knowledge base and large archive in this highly specialized area. Although neither of us were MEPs at the time of the vote in January 1999, the Green Group was the strongest supporter of the report.

Electro-Magnetic (EM) weapons are one of the newest and most serious military developments in the world today. Enormous secrecy surrounds their development, which is helped by the fact that they rely on the complex physics of non-ionizing radiation and on bio-electromagnetics. They can be broadly broken down into two categories - those aimed at the environment and those aimed at living systems, or in reality the human central nervous system.

In the case of the environment, very large quantities of energy can be literally 'broadcast', like radio, to create certain special environmental effects - radical changes in the ionosphere to affect communications, and possibly even the weather, as well as reflection to earth to perform such feats as x-raying the earth to find underground installations, possibly large transfers of energy to power equipment, or to apply destructive forces anywhere on earth, including EMP effects (Electro-Magnetic Pulse, associated with nuclear explosions), and simpler tasks like submarine communication, using very long waves.

The more sinister aspect concerns the ability to use low energy density waves of particular frequencies and special waveforms to literally 'tune into' the human central nervous system (CNS), something that has been achieved in the laboratory, according to publicly available scientific literature. This might be done on an individual scale, to temporarily or perhaps permanently alter psychological states, so as to elicit certain behaviours from human beings. It is alleged that many victims have been tested involuntarily for decades now with this technology.

It is also suggested that these weapons have been used in some actions, most especially the Gulf War and against the Greenham Common women in the UK. In this case they would have a mass effect, in that they are aimed at large groups. This use is sought not only by the military, but, alarmingly, by the police forces as well, clearly for the purpose of controlling unruly domestic populations.

Once achieved, such a system might become irreversible, or unstoppable.

This subject also has very serious implications for standard setting for non-ionizing radiation, because the levels of exposure

at which one can manipulate the human being are very low indeed, since it is the tuning and the waveform which matter, not the levels, which is the reason that Russian exposure standards are apparently 1000 times lower than the US standards.

It is worth comparing the standard setting processes for non-ionizing and for ionizing radiation, as they are remarkably similar. The military, via the International Commission on Radiological Protection (ICRP), played a major role in originally setting ionizing standards at ridiculously high levels by burying or ignoring the science, leading to the need for continuous reductions in the acceptable exposure levels.

Something similar appears to be happening with non-ionizing radiation, in that a very similar unelected 'independent' advisory committee (ICNIRP - International Commission on Non-Ionizing Radiation Protection) has offered advice in this area, which is accepted blindly by the European Commission, despite the fact that, once again, much of the science is being ignored, and the precautionary principle, for some odd reason, seems not to apply. The fact that two of the US representatives on ICNIRP have been associated with the military has echoes of the past, and is most suspicious.

The focus of public attention so far has been a project in Alaska called HAARP (High frequency Active Auroral Research Program), which is a massive 'array' transmitter designed to manipulate the ionosphere for military purposes - communications effects, earth x-rays, and possibly weather manipulation (despite conventions banning this). But the range of uses of this basic technology is very wide, much wider than its predecessor, ionizing radiation (nuclear).

The primary difference is that electromagnetic waves can be "tuned" so as to have certain effects on living systems, whereas the "chaotic" nature of ionizing radiation does not facilitate this and the result of exposure to it is normally direct damage only. As stated above, scientists have been able to "tune" EM to facilitate remote direct communication with the central nervous systems of living creatures, and they are of course especially interested in using this fact to manipulate human beings.

They were used in a crude form by the Soviets against the US Moscow embassy in the '60s with fatal consequences for the ambassador himself, and it is believed that they were used in what is called a 'superfence' against the Greenham Common women, and also to demotivate the Iraqi troops during the Gulf War. The Soviets tried in the 70s to prevent an arms race in this area by means of a Convention, but the US rejected these efforts, and has moved ahead very rapidly, also within NATO, into a dominant position.

Unless this development is stopped, we are entering an Orwellian '1984' type scenario, which could potentially permanently transfer enormous power to those in control of the technology. It must also be seen in the wider context of the one-sided arms race currently underway, where the US is re-arming, by continuing with 'Star Wars', and is aiming to be totally dominant in 'Space Power' by 2020.

Electromagnetic weapons play a key role here, alongside ABMs, lasers and particle beam weapons.

We are of course totally opposed to the development and deployment of these weapons. We regard the unsuccessful attempts in the 70s of the former Soviet Union to have these weapons controlled by a UN Convention as having been a major missed opportunity, which has now led to a new arms race in this field. We have sought to renew the attempt to have a Convention to outlaw these weapons and the research that leads to them, primarily that concerning external manipulation of the human central nervous system.

The Greens achieved the quite remarkable Parliament resolution on January 28th 199, damning the US for not being willing to even come to discuss the matter with the Parliament, and in particular attacking the HAARP project in Alaska, calling for a Parliament STOA study on it, while also calling in rather vague terms for a ban on the manipulation of human beings.

Yours sincerely,

Dr Caroline Lucas  
Green Party MEP for South East England

and Statistics Directorate  
March 2004

Report page 23:

Well over a million women reported experiencing  
stalking behaviour.

Report page 24:

Almost 900,000 men were affected by  
stalking.

2001 Census link:

[http://www.statistics.gov.uk/census2001/pop2001/united\\_kingdom.asp](http://www.statistics.gov.uk/census2001/pop2001/united_kingdom.asp)

Total stalking targets: 1,900,000

Total UK population per  
2001 census: 58,789,194

Stalking target %: 3.23%

(or, over 3 people per 100 in 2001)

# UNITED STATES DISTRICT COURT

SOUTHERN DISTRICT OF TEXAS  
HOUSTON DIVISION

Jesus Mendoza Maldonado,  
Pro-se Plaintiff

Case NO. 4:05MC00003

Honorable Kenneth Hoyt  
US District Judge

V.

Michael James Lindquist,  
Christopher T. Lohden,  
Diane K. Smedley, and  
Ruth Watkins, Defendants.

Jury Demand

## PRO-SE PLAINTIFF'S ORIGINAL COMPLAINT

1. Pro-se plaintiff, Jesus Mendoza Maldonado is a citizen of the United States of America. Plaintiff is a Mexican-American with Mexico as national origin.

## JURISDICTION AND VENUE

1. This Court has subject matter jurisdiction over this cause of action pursuant to 28 U.S.C. s 1331, 42 U.S.C. 1985 and 42 U.S.C. 1986.
2. This Court has personal jurisdiction over named defendants. Named defendants reside within the State of Texas, conduct business within the State of Texas, and the actionable acts and omissions stated in this complaint occurred within the State of Texas.
3. Venue is proper in the US District for the Southern District of Texas, a substantial part of the events giving rise to Plaintiff's claims occurred within the Southern District of Texas.
4. Defendant Michael James Lindquist may be served with service of process at 2503 E. 28th St. Mission, Texas, 78574.
5. Defendant Christopher T. Lohden may be served with service of process at 2004 E. 25th St., Mission, Texas, 78574.
6. Defendant Diane K. Smedley may be served with service of process at 2020 E 27th St. Mission, Texas, 78574. Defendant Ruth Watkins may be served with service of process at 2217 E. 28th St., Mission, Texas, 78574.
7. Unless otherwise specified in this complaint, the term "defendants" refers to named defendants, and unidentified John and Mary Doe defendants.
8. Defendants are being sued on their individual, personal, capacity.
9. At several times relevant to this case plaintiff has been a party and a witness in federal court while litigating a case of discrimination on the basis of race and national origin, and fraud of federal funds against the Thomas M. Cooley Law School, some of its officers, and others, collectively the Cooley defendants.
10. Plaintiff law suit against the Cooley defendants included a claim that the Cooley defendants operated a scheme to defraud more than seventy-percent of minorities of their federal loans halting their education while on the other hand, the Cooley defendants were giving away law degrees to their affiliates.
11. At several times when plaintiff was a law student at the Thomas M. Cooley Law School, Shawn Gannon and other law students claimed to be related to promineny within the Central Investigation Agency and other federal law enforcement agencies.
12. Plaintiff lawsuit against the Cooley defendants included a claim that the Cooley defendants incited a federal investigation and an electronic

aggression against plaintiff which caused plaintiff severe injuries including an electrical sensitivity.

13. Plaintiff is sensitive to electricity. Plaintiff exposure to electricity causes among other things pain, swelling of vital organs, breathing, speech and concentration problems. Plaintiff's ability to work, to travel long distances, and to be inside a building has been substantially impaired.

14. At several times relevant to this case an electronic aggression has caused plaintiff to be critically ill. The electronic aggression causes plaintiff to be in pain most of the time.

15. The next day plaintiff attempted to file a criminal complaint against the Cooley defendants, three identified agents of the Federal Bureau of Investigation were found in a restricted area of an elementary school, and around plaintiff's vehicle. One door of plaintiff's vehicle was found unlocked.

16. The principal of the elementary school who witnessed the incident, claimed that the local FBI office had directed him to destroy the information gathered by plaintiff.

17. At no time the US Attorney General has engaged the evidence in support of this claims.

18. The case against the Cooley defendants was dismissed after aggravation of plaintiff's condition prevented him from attending depositions.

19. Before the lawsuit against the Cooley defendants was dismissed, the legitimacy of plaintiff's claims, including plaintiff's electrical sensitivity and mental stability were established as a matter of law.

20. The US court of appeals affirmed the dismissal and further aggravation of plaintiff's condition prevented plaintiff from appealing to the US Supreme Court.

21. Aggravation of plaintiff health condition forced plaintiff to dismiss a case of disability discrimination that had been filed in State court.

22. At several times relevant to this case, the intensity of non ionizing and ionizing radiation around plaintiff, (microwave and x-ray radiation, "radiation" hereafter), has increased during critical stages of federal, and State court proceedings, aggravating plaintiff's health condition.

23. At several times relevant to this case, the intensity of radiation has impaired plaintiff health condition during State administrative hearings in which plaintiff has been seeking rehabilitation services.

24. At several times relevant to this case, the intensity of the electronic aggression has increased when plaintiff explains to others the discriminatory motive of the electronic aggression.

25. At several times relevant to this case, plaintiff's three -year-old son and four -year-old daughter suffered pain with convulsions when a meter showed high intensities of radiation inside plaintiff's home.

26. At several times a microwave meter has detected several beams merging on the head of plaintiff's three-year-old son.

27. At several times relevant to this case, plaintiff's three-year-old son has collapsed crying in pain when a microwave meter has shown several beams merging on his head.

28. At several times relevant to this case, plaintiff has recorded on videotape the electronic aggressions. .

29. At several times relevant to this case, a microwave meter has shown several beams merging on the bed of plaintiff and on the bed of plaintiff's children.

30. At several times relevant to this case plaintiff's children have complained of pain when intense radiation has been found inside plaintiff's home,

31. At several times relevant to this case plaintiff's children have suffered convulsions while asleep.

32. At several times relevant to this case plaintiff's children tremble on their sleep before the telephone rings.

33. At several times relevant to this case, plaintiff's children have asked for medicine while crying in pain when intense radiation have been found inside plaintiff's home.

34. At several times relevant to this case plaintiff and his children have had convulsions almost at the same time.

35. At several times relevant to this case the intensity of radiation increases when plaintiff approaches his children and his pregnant wife.

36. On December 29, 2004, the intensity of radiation increased dramatically

at the time plaintiff was with his wife during surgery during the birth of plaintiff's daughter.

37. At several times relevant to this case plaintiff anticipates to his wife the screaming of his children when plaintiff approaches their bed at night.

38. At several times relevant to this case the intensity of radiation increases when plaintiff attempts to read stories to his children.

39. At several times relevant to this case, a meter has registered high intensities of ionizing radiation when plaintiff is driving, or walking with his children around the neighborhood.

40. At several times relevant to this case, the levels of radiation increase before the telephone rings, during telephone conversations, when plaintiff has visitors, before someone enters or exits plaintiff's home, when plaintiff moves around inside plaintiff's home, when plaintiff's children or wife approach plaintiff, and when plaintiff is doing legal work.

41. At several times relevant to this case plaintiff feels pain and his children tremble on their sleep before the telephone rings.

42. At several times relevant a meter has shown several beams of radiation merging on plaintiff's workbench.

43. The electronic aggression has prevented plaintiff to work on his repair shop.

44. The electronic aggression has prevented plaintiff from working or staying outside of his home.

45. At several times relevant to this case, plaintiff has found bleeding on stool, on urine and on saliva after exposures to intense radiation.

46. At several times relevant to this case, the intensity of radiation has increased during critical stages of the litigation impairing plaintiff's ability to prosecute his claims.

47. Plaintiff moved to the home of Gustavo Ramirez to spare pain and suffering to his children.

48. The level of radiation in the area around Ramirez home increased after plaintiff moved into his place.

49. Days after plaintiff's health aggravated while Ramirez complained of pain, while Ramirez' brother-in-law complained of feeling his eyes about to pop out.

50. On February of 2003, plaintiff filed in the US District Court for the Southern District of Texas, a cause of action against the US Attorney General seeking an order to cease and desist from directing radiation into plaintiff and his family on the ground that the electronic aggression has caused severe physical harm to plaintiff and his children, and on the ground that plaintiff's investigation is retaliation for bringing claims of discrimination and fraud against the Cooley defendants. Jesus Mendoza Maldonado v the US Attorney General, John Ashcroft, Case No. M 03-038.

51. US district Judge Ricardo Hinojosa assigned the case to US Magistrate Dorina Ramos.

52. The US Attorney General has not denied the fact that plaintiff is the subject of an investigation and active electronic surveillance.

53. At several times relevant to this case the US Attorney General, has claimed that others may be involved in electronic aggression of plaintiff, and has claimed that the federal government has no duty to protect plaintiff against these aggressions.

54. On April 4, 2003, judge Ramos reset the hearing scheduled for the same day impairing plaintiff's ability to present expert and lay witness in support of immediate injunctive relief.

55. On April 7, 2003, plaintiff filed a motion to recuse judge Ramos on the ground that judge Ramos had ignored false statements made by the Cooley defendants to defraud of venue the district court and had ignored evidence of the legitimacy of plaintiff's disability, displaying a deep-seated favoritism toward the Cooley defendants and a deep-seated antagonism toward plaintiff that made fair judgment impossible.

56. Judge Ramos recused herself and judge Hinojosa reversed judge Ramos recusal.

57. On May 15, 2003, plaintiff's wife testified before judge Ramos to the swelling, pain, and breathing difficulties caused on plaintiff by exposure to electricity and how this has affected daily activities, to the suffering of their children when they are exposed to electromagnetic radiation inside their home, and as to how high readings on radiation meters inside the home decrease when plaintiff attempts to record the occurrence in a video camera.

58. Plaintiff's brother testified as to the pain and suffering, experienced

by Ramirez and Ramirez brother-in-law after plaintiff moved into Ramirez place.

59. Plaintiff's wife, daughter, and brother testified before judge Ramos to plaintiff's mental stability and law-abiding conduct. (Maldonado v Ashcroft, case No. M 03-038, Audiotape of hearing, Docket No. 29).

60. During the telephonic hearing, a dramatic increase of radiation aggravated plaintiff's condition and plaintiff sought a continuance on defendant's motion to dismiss.

61. Without a hearing on defendant's motion to dismiss judge Ramos issued a Report and Recommendation to dismiss plaintiff's claims as frivolous.

62. Judge Ramos modified the testimony of plaintiff's wife in which she testified to how high readings on radiation meters inside the home decrease when plaintiff attempts to record the occurrence in a video camera into: "Silvia Mendoza, who is Plaintiff's wife, testified that Plaintiff's has trouble breathing, among other things. She also testified that Plaintiff's difficulty seems to subside when he operates a camera." (Docket No. 32, at five, Statement of Evidence, Affidavit of plaintiff's wife in which she denies giving that testimony, Docket No. 40, and audiotape of hearing, Docket No. 29 ).

1. Judge Hinojosa adopted the recommendation to dismiss plaintiff's claims and plaintiff appealed.

2. Plaintiff's appeal was based on the claim that a district judge cannot adopt a Report and Recommendation to dismiss a case when the disqualification of the magistrate judge has been established as a matter of law.

3. Judge Hinojosa and judge Ramos declined an invitation by the Judicial Council of the US Court of Appeals for the Fifth Circuit to engage plaintiff's complaint of judicial misconduct.

4. The US Attorney General did not object to the claims and evidence supporting plaintiff's claims of judicial disqualification.

5. In support of a motion to expedite the appeal, plaintiff filed on the Court of Appeals videotape showing the pain and suffering caused on plaintiff and on plaintiff's children by the malicious exposure to radiation inside plaintiff's home. The US Attorney General did not challenge the evidence.

6. Plaintiff filed a petition for hearing in banc after a panel of the US Court of Appeals for the Fifth Circuit did not address the issue presented to the Court.

7. On an Order dated December 13, 2004, the Panel of the Court denied plaintiff's petition for hearing in banc.

8. On November 17, of 2004, defendant Christopher T. Lohden attempted to ram on the rear plaintiff's vehicle.

9. Plaintiff asked defendant Lohden why Lohden attempted to ram plaintiff's vehicle.

10. Defendant Lohden answered by saying that he was to call the police.

11. After defendant Lohden called the police on a cellular telephone, a lady came from the front door of the house and asked defendant Lohden what was going on.

12. Defendant Lohden answered "I called the police, this guy says that I tried to ram his car."

13. The lady said, "You did! Why are you calling the police?! Don't call the police!" The lady then walked back inside the house.

14. Plaintiff then asked Lohden to tell the police that plaintiff was coming back.

15. At that time defendant Lohden asked where plaintiff lived.

16. Plaintiff said "You know where I live, and you know me, this is not the first time that you engage in this kind of harassment."

17. Defendant Lohden did not reply to plaintiff's statement.

18. Plaintiff returned when a police car was parked at the home of defendant Lohden.

19. Plaintiff explained to Mr. Hernandez and to Mr. Paniagua, officers of the Mission Police Department, the fact that Mr. Lohden had attempted to ram plaintiff's vehicle.

20. Defendant Lohden did not deny plaintiff's claim and instead said that plaintiff was doing thirty miles an hour on the road.

21. Officer Paniagua asked plaintiff to come across the street.

22. There, plaintiff explained to officer Paniagua and to officer

Hernandez about the defendant's attempts to ram plaintiff's car; about the statements made by the lady that came out of the house; about the fact that defendant Lohden had attempted to run over plaintiff and plaintiff's children when they were crossing the street; about the fact that everyday plaintiff was subjected to this type of harassment; about the fact that other individuals in the neighborhood have engaged in the same harassment; and about the fact that this harassment was the result of racism.

23. At several times relevant to this case defendant Ruth Watkins has come into convenience stores, followed by other individuals, who engage in acts of intimidation against plaintiff and then leave leaving without buying anything.

24. A several times relevant to this case defendant Watkins has led the way to a number of individuals who have engaged in harassing and intimidating acts against plaintiff and his children including the pushing, placing their hands on plaintiff's vehicle while looking at plaintiff's children seated inside plaintiff's vehicle.

25. At several times relevant to this case defendant Watkins has communicated to these individuals by gestures and hand signals to some of these individuals.

26. At several times relevant to this case, defendant Watkins has acted in concert with other individuals in a course of repeated physical proximity and threatening behavior against plaintiff and his children.

27. At several times relevant to this case defendant Watkins has claimed that this conduct is not harassment.

28. At several times relevant to this case defendant Watkins has refused to identify others involved in this harassment.

29. At several times relevant to this case high intensities of radiation have been detected when plaintiff is approaching and passing by Watkins' home.

30. At several times relevant to this case, furtive high intensities of radiation have been detected to come from the direction of Watkins' home into plaintiff's home.

31. At several times relevant to this case defendant Diane K. Smedley has attempted to run over plaintiff and his children when plaintiff and his children were crossing the street.

32. At several times relevant to this case defendant Smedley has engaged in street harassment of plaintiff and his children.

33. On or about December 6, 2004, plaintiff complained to the Chief of Police of the Mission Police Department Lio Longoria about named defendants gang stalking, and Longoria claimed starting an investigation of plaintiff's claims.

34. The road harassment ceased afterward.

35. On December 10, 2004, an ionizing meter collected a dramatic increase in ionizing radiation inside plaintiff's home, causing on plaintiff among other things swelling, and pain.

36. The same day plaintiff showed to Jose Gonzales, investigator of the Mission Police department, video tapes of the increase in ionizing radiation inside plaintiff's home, and the pain and suffering caused by the radiation to plaintiff's three-year-old son.

37. On or about December 20, 2004, Ezquiel Navarro an investigator of the Mission Police Department notified to plaintiff that the Federal Bureau of Investigation had instructed Navarro not to disclose any information about the investigation because of a pending investigation of plaintiff by the Central Intelligence Agency.

38. Navarro claimed knowing about agents that take x-ray devices home.

39. The levels of ionizing radiation at points around the neighborhood resumed, while the intensity of radiation inside and outside plaintiff's home increased.

40. Plaintiff's ability to be with his family became more limited.

41. Defendant Michael James Lindquist calls himself Apostle of the congregation.

42. At several times relevant to this case defendant Lindquist has led the way to some individuals who have been engaged in gang stalking of plaintiff and his children.

43. At several times relevant to this case, plaintiff has notified defendant that some individuals on the congregation and running team have been involved in gang stalking of plaintiff and his children.

44. At several times relevant to this case, plaintiff has asked defendant

Lindquist to identify and to ask those who have been engaged in this wrongdoing to cease and desist from this type of harassment, and Lindquist has refused to do so.

45. On January 2, 2005, during worshiping services, an individual that has been harassing plaintiff walked into Lindquist's office after he realized plaintiff had identified him. Plaintiff was not allowed to enter the office.

46. At the end of the service the individual stayed at Lindquist office while his companions left without him.

47. At several times relevant to this case high intensifies of radiation have been detected when plaintiff is passing across Lindquist's home.

48. At several times relevant to this case, furtive high intensities of radiation have been detected to come from the direction of Lindquist's home into plaintiff's home.

49. Ruben Luna, plaintiff's neighbor and a former government agent claims spending a week on the hospital after attesting before others to the legitimacy of plaintiff's claims of electronic aggression.

50. At several times Luna has claimed to feel the effects of an electronic aggression.

51. Luna claims spending two weeks on the hospital with internal bleeding.

52. Luna had reassured plaintiff by telephone his willingness to testify in court as to the legitimacy of plaintiff's claims of electronic aggression before reassuring plaintiff of his willingness to testify as to the legitimacy of plaintiff's claims.

53. Luna lives across the street from defendant Watkins.

54. Lunas' affidavit attesting to the legitimacy of plaintiff's claims about an electronic aggression is part of the federal record.

55. At several times relevant to this case plaintiff's mother has been critically ill exhibiting the typical symptoms of an electronic aggression including sleep deprivation, loss of concentration, swelling of eyes, unexplained pain and fatigue, erratic blood pressure, and severe dizziness.

56. At several times relevant to this case, meters have read intense amounts of non-ionizing and ionizing radiation inside the home of plaintiff's mother.

57. At several times relevant to this case, intense amounts of non ionizing and ionizing radiation have been found inside the home of plaintiff's in-laws.

58. Plaintiff's father-in-law has been critically ill, displaying symptoms of overexposure to radiation including sleep deprivation, unexplained pain and fatigue, and erratic blood pressure.

59. At several times relevant to this case plaintiff's mother-in-law has been displaying symptoms of overexposure to radiation, including sleep deprivation, loss of concentration, and unexplained pain and fatigue. She is now terminally ill.

60. At several times relevant to this case plaintiff's neighbors have claimed suffering of sleep deprivation, pain and loss of concentration.

61. Plaintiff's next-door neighbor has been critically ill several times.

62. At several times relevant to this case plaintiff's pain has made plaintiff to walk out of the house in the middle of the night only to hear screams of joy coming from the neighborhood.

63. At several times relevant to this case the gang stalking and electronic aggression against plaintiff and his children has intensified during the times plaintiff has filed complains describing the misconduct of judge Hinojosa and judge Ramos.

64. Plaintiff has heard the same screams of joy from speeding vehicles attempting to run over plaintiff and his children.

65. At several times relevant to this case, the lights on the side of the street turn off during the night and on during the day when plaintiff is driving or walking with his children.

66. Plaintiff's oldest daughter has witnessed streetlights turning off as plaintiff is driving by.

67. At several times relevant to this case, family members of named defendants have engaged in harassing of plaintiff.

68. At several times relevant to this case, named defendants have shared information to use in furtherance of the conspiracies to injure plaintiff and his children.

69. At several times relevant to this case vehicles have darted to plaintiff

and to plaintiff's children when plaintiff and his children have been walking around the neighborhood.

70. At several times relevant to this case, plaintiff has been thrown off the road by unidentified vehicles. At several times relevant to this case, plaintiff has been the subject of gang and electronic harassment by named defendants.

71. At several times relevant to this case speeding vehicles have attempted to ram plaintiff's vehicle running red lights to avoid identification.

72. At several times relevant to this case defendant has darted her vehicle towards plaintiff and his children when they are walking around the neighborhood.

73. At several times relevant to this case, unidentified vehicles have attempted to ram the rear of plaintiff's vehicle.

74. At several times relevant to this case plaintiff has been subjected to electronic harassment by named, unnamed, and unidentified individuals.

75. Two shots have been fired into plaintiff's direction, and plaintiff filed a report with the Hidalgo County Sheriff's Department.

76. At several times relevant to this case high levels of ionizing radiation have occurred when plaintiff is attending church services on minority congregations, while the same intensities do not occur when plaintiff attends non-minority congregations.

77. At several times relevant to this case the street and electronic harassment compelled plaintiff to leave the state of Michigan, and the State of Texas.

78. The gang stalking and electronic aggression is more intense when plaintiff is with his children.

79. At several times relevant to this case, plaintiff has found loose or over tight lug nuts on the front wheels of plaintiff's car.

80. The harassment has intensified during and after critical stages of litigation.

81. At several times relevant to this case, defendant engaged in electronic surveillance of plaintiff with intent of harassing, intimidate and cause harm to plaintiff.

82. At several times plaintiff has heard racial slurs by speeding vehicles when he is with his children around the area.

83. On January 2, of 2004, around 1:30 a.m., another sudden dramatic increase of radiation occurred at the time plaintiff approached the bed of his children and wife.

84. Plaintiff warned his wife about the increase in radiation seconds before plaintiff's newborn daughter and five-daughter year old started to cry.

85. The aggression has intensified during the drafting of this complaint.

86. Furtive high densities of directed radiation is a daily occurrence at plaintiff's home.

87. COUNT ONE. VIOLATION OF 42 U.S.C. 1985(2).

88. Plaintiff incorporates hereby all paragraphs of this complaint.

89. Defendants conspired to deter plaintiff by force, intimidation, and threat, from attending courts of the United States, as a party and witness.

90. Defendants conspired to deter by force, intimidation and force, from testifying freely and fully in courts of the United States,

91. Defendants conspired by force, intimidation, and threat, to injure plaintiff in his person and property on account of plaintiff being a party, having attended and testified in a court of the United States.

92. Defendants conspired for the purpose of impeding, hindering obstructing, and defeating in several manners the due course of justice in the State of Texas and a court of the State of Texas.

93. Defendants conspired with intent to deny plaintiff the equal protection of the laws, and injured plaintiff and his property for lawfully enforcing and attempting to enforce the right of plaintiff and the right of plaintiff as a citizen of the United States and member of a class of persons, to the equal protection of the laws.

94. Defendants conspired to interfere with plaintiff's family relationship.

95. Plaintiff suffered injury as proximate result of defendants' misconduct.

96. Therefore, defendants are liable to plaintiff.

97. Therefore, named defendants are liable to plaintiff.

98. COUNT TWO VIOLATION OF 42 U.S.C. 1985(3).

99. Plaintiff incorporates hereby all paragraphs of this complaint.

100. Defendants conspired to deprive plaintiff of the equal protection of the laws and of the equal privileges as described by 42 U.S.C. 1985 because plaintiff's race and national origin.

101. Defendants conspired with the purpose of preventing and hindering the constituted authorities of the State of Texas from giving and securing persons within the State of Texas the equal protection of the laws. The purpose of defendants' conspiracy is to influence the activity of the State.

102. Defendant's conspired to injure plaintiff on his person and property because of plaintiff's race and national origin.

103. Defendant's engaged in a course of conduct which purpose is to injure plaintiff and plaintiff's children.

104. Defendants' conspired to retaliate against plaintiff for plaintiff litigating claims of racial and national origin discrimination.

105. Defendants' conspired to deprive plaintiff of right to access the courts.

106. Defendants' conspired to interfere with plaintiff's right to interstate travel.

107. Defendants' conspired to violate plaintiff's right to be free from public and private racist violence.

108. Defendants' conspired to deprive plaintiff of the right to be free from the conduct described by 42 U.S.C. 1985(2).

109. Defendants' engaged in several overt acts in furtherance of the conspiracy to deprive plaintiff's rights described by 42 U.S.C. 1985(2)(3).

110. Defendants reached a conspiratorial agreement to violate plaintiff's protected rights.

111. Defendants caused acts in furtherance of the object of the conspiracy to violate plaintiff's rights, whereby plaintiff was injured in his person and property and plaintiff was deprived of having exercised rights and privileges of a citizen of the United States.

112. Defendants conspired to retaliate against plaintiff for plaintiff bringing claims of discrimination and retaliation pursuant to 42 U.S.C. 1985, and 42 U.S.C. 1986.

113. Defendants engaged in racist conspiracies to deprive plaintiff of his right to obtain reasonable accommodations because of his disability.

114. Plaintiff suffered injury as proximate result of defendants' conspiracies.

115. Therefore, defendants are liable to plaintiff.

116. COUNT THREE VIOLATION OF 42 U.S.C. 1986.

117. Plaintiff incorporates hereby all paragraphs of this complaint.

118. Defendants have actual knowledge of a conspiracy to violate plaintiff's rights as described by 42 U.S.C. 1985.

119. Defendants breached a duty to disclose to plaintiff the identity of those by failing to prevent the conspiracy.

120. Defendants knew or had reasons to know about a conspiracy to injure plaintiff and failed to prevent a conspiracy.

121. Defendants have a duty and the power to prevent or aid in preventing the commission of the conspiracies described by 42 U.S.C. 1985, and defendants failed to do so.

122. Plaintiff suffered damages caused by the misconduct of defendants.

123. Defendants are joint and severally liable to plaintiff.

124. JURY DEMAND

125. Plaintiff hereby demands for trial by jury of all disputed issues of fact.

126. RELIEF

127. Plaintiff respectfully asks this Court for an Order compelling defendants to cease and desist from engaging in the conduct described herein.

128. Plaintiff respectfully asks this Court to compel named defendants to disclose to plaintiff the identities of individuals and entities that have engaged, participated encouraged, supported directly or indirectly in any way in the conduct described herein.

129. Plaintiff respectfully ask this Court to render judgment in favor of plaintiff and find defendants jointly and severally liable for all relief, in law and in equity to which plaintiff may be entitled including general and special damages, aggravation of preexisting condition, cost of technology to accommodate impairment, past and future pain and suffering,

past and future mental anguish, past and future medical expenses, past and future loss of earning capacity, loss of consortium, loss of household services, loss of companionship and society, loss of enjoyment of life, punitive damages, prejudgment and post-judgment interest, interest, court costs, and cost of expert witnesses.

Respectfully Submitted

## June 2004

Dear Colleagues,

I am forwarding this on behalf of the California Protective Parents Association.

Warmly,

Ellen Lacter, Ph.D.

<http://truthbeknown2000.tripod.com/Truthbeknown2000/>

Dear Friends,

We have a unique opportunity to assist a group of young people to present at an international conference in September.

We are asking for your help with a tax deductible donation to fund their trip.

Thank you, Connie Valentine

THE COURAGEOUS KIDS NETWORK

<http://www.courageouskids.net>

WHO ARE WE?

We are young people who were taken away from our safe, loving mothers by family courts when we were young. The judges refused to speak to us when we tried to tell them how our fathers had abused our mothers and us.

Instead, the judges put us in the custody of our abusers.

We finally got old enough to run away from our fathers' miserable homes and fought hard to live with our moms. Our childhood was taken away from us and our lives have been destroyed.

WHAT ARE WE DOING NOW?

We are telling the world about these civil and human rights violations.

We are asking for donations of any amount to help us travel to San Diego to be the keynote presenters for the Ninth International Family Violence Conference on September 20, 2004.

Please assist us by sending a check made out to:

CPPA

P.O. Box 15284

Sacramento, CA

USA 95851-0284

CPPA is a 501(c)(3) non-profit organization and your donation is tax deductible.

Please call 530-753-0807 or write to [cppa001@aol.com](mailto:cppa001@aol.com) if you have any questions.

Subject: [Fwd: Re: Guzzardi on the War in Arizona]

COMING TO AMERICA  
Authorities won't enforce immigration laws  
Tancredo slams customs official, lawmaker for reassuring illegals

Posted: May 1, 2004  
1:00 a.m. Eastern

© 2004 WorldNetDaily.com

Rep. Tom Tancredo, R-Col., is calling for a White House probe into high-ranking federal Homeland Security authorities in Texas who publicly reassured illegal aliens and their backers they have no plans to enforce federal immigration laws anytime soon.

Rep. Tom Tancredo, R-Colo. Tancredo, head of the Congressional Immigration Reform Caucus, responded to statements by Bureau of Immigration and Customs Enforcement Agent in Charge Joseph Webber, and Rep. Gene Green, D-Texas, who called a special meeting, attended by about 400 people. At the meeting, they announced they had no plans to arrest, deport, or hassle the scores of aliens illegally living and working in the Houston area, according to the Houston Chronicle.

"The fact that an administration official and a United States Congressman, would take such pains to publicly assure people that they have no plans to enforce the laws they are sworn to uphold is, simply put, mindboggling," said Tancredo, "and they owe the American people an explanation."

Tancredo said if "regional bureaucrats at the Drug Enforcement Agency called a special meeting in a neighborhood infested with crack houses or cocaine dealers to assure the general public that they had no plans to enforce federal narcotics laws, heads would roll - and rightly so."

"The job of federal immigration authorities is not to assure illegal aliens they can work and travel without fear of arrest or deportation," said Tancredo, "President Bush should make it clear that these statements do not reflect the official policy of the administration, and immediately take appropriate action to discipline Agent Webber."

Tancredo said President Bush, Homeland Security Undersecretary Asa Hutchinson and BICE administrator Michael J. Garcia need to remind agents of their duties to this country and its citizens. "Their job is to protect this nation and it's citizens not to make life easier for illegal aliens and their advocates - irrespective of the political power they wield in some cities or states." Tancredo said.

The congressman has said he believes President Bush's plan to allow millions of illegal aliens to remain in the country will not pass

Congress, but he fears his colleagues will open the door wider for illegals.

"If something comes out of this Congress, it'll be worse," Tancredo told Joseph Farah's WorldNetDaily RadioActive in January, noting Democrats want to make it even easier for illegals to stay in the United States, and many Republicans would support them.

Bush has proposed sweeping changes that would allow the 8 million to 12 million illegal aliens thought to be in the country to remain if they have a job and apply for a guest-worker card. The immigrants could stay for renewable three-year periods, after which they could apply for permanent legal residence.

=====  
Mind Control Programming Seminar  
Taught by Steve Oglevie

When all you know to do is not enough.

This 24 hour course will focus on recognizing the presence of mind-control within a client. Psychologists, psychiatrists, and therapists working with DID clients and survivors of ritual abuse will learn to understand some of the barriers they are encountering. While some of the obstructions are due to resolvable psychological issues, often the best therapy with the most motivated survivors is not enough.

Therapy may not resolve the unconscious personalities perceiving themselves inexorably trapped in programming, or the carefully hidden program structures. This course will also cover information regarding the various types of secretive groups that use programming and indicators to begin to properly diagnose the groups that have installed structures in the unconscious mind. A framework for understanding the body, brain, conscious and unconscious mind interaction will prepare participants to comprehend how mind-control itself works.

When: April 8-10, 2005  
Friday, Saturday, Sunday,  
9:00 a.m. to 5:00 p.m.

Where: Hilton Greenville  
45 West Orchard Park Drive  
Greenville, SC 29615  
(864) 232-4747

Fee includes: Course Materials: Mind Control: An  
Introduction by Steve Oglevie

(300 page notebook not available to the public)

Susan Ford  
2512 Lynn Road, Suite One  
Tryon, NC 28782  
or  
Fax: (828) 859-1247  
sueford@earthlink.net.

Statement by Steve Oglevie:

"I am not a ritual abuse survivor, but I am privileged to work with those who are survivors. Most of these have grown up in multi-generational cult families so their abuse and programming began very early in childhood. They have given me a very precious gift. They have shown me how the mind-control system works so I can now explain to the survivor how they can be removed. These mind-control systems are implanted in the mind while undergoing very systematic physical, medical, spiritual, and psychological abuse.

I have discovered that there are four basic elements to ritual abuse that need to be addressed in order for recovery to take place:

- 1) Memories of Trauma
- 2) Dissociation/Multiplicity
- 3) Teaching and Training and
- 4) Conditioning

These can all be resolved at the cognitive level but, all four can be controlled by a fifth element, that of mind-control programming of which the client may or may not be aware. This seminar will address this fifth element. I have spent the last twelve years removing mind-control systems in over 350 persons. They have been my teachers and I am here to share with you what they have taught me."

Steve Oglevie

#### Course Description

Day One: The History of Mind Control and Programming, Recognizing the Presence of Mind Control in a Client, Differentiating between Satanic Cult Mind Control and the so-called "Government" Mind Control Systems.

The therapist will be given a clear understanding of the history of mind control and the development of programming over the last 100 years. Since not all programming is installed using the same methods, the various methodologies will be examined as well as the steps necessary to remove the various forms of programming.

The therapist will be introduced to Trans-generational Satanism, with a brief history, an understanding of basic theology, a demonstration model of a SRA mind control system, and some guidelines to recognize the presence of Satanism in a client.

The therapist will be introduced to the three primary "Governmental" mind control groups, each with a brief history, the principle belief system, and some guidelines to recognize the presence of each of these three in a client.

Day Two: The History of Multigenerational Fertility Cults (MFC), the Domination of Personality, Recognizing the Presence of MFC in a Client, and Differentiating between MFC and SRA and "Government" Mind Control.

The therapist will be introduced to MFC (also known as Witchcraft), with a brief history, an understanding of basic theology, typical control of personalities and some guidelines in recognizing MFC in a client. Since MFC is so much more complex than either SRA or "Government" systems, considerable material will be given concerning the domination of the personality and the necessary steps necessary to remove this domination from the individual personalities and the person as a whole.

Differentiating between SRA and/or "Government" systems and MFC is necessary as often two or more systems may co-exist

within the same client and must be handled differently.

Day Three: Practical Methods for a Therapist dealing with Spiritual Evil, Dissociated and Disembodied Foreign Human Spirits, "Installed" personalities and Genuine Personalities.

The therapist will be presented with a diagnostic tool to distinguish between genuine human personalities, "installed" personalities, foreign human spirits, and spiritual evil.

The therapist will be introduced to the very complex field of dissociated and disembodied foreign human spirits including their level of attachment to the client and ways in which they can be successfully disentangled from the true humanity and sent away.

The arena of the interrelatedness of mind-control, spiritual evil, foreign human spirits, and human will must be understood by the therapist in order to successfully remove the systems so the client can gain control over his or her own life.

Goal: To introduce therapists to the complex world of mind control - not to attempt to give them the tools to remove the mind control from their clients.

Included: Course Material entitled:  
Mind Control: An Introduction  
with over 300 pages of material.

Seminar may not be recorded or reproduced in any form.

# Sudden-Onset Ailments - Criminal Activity?

Has high tech era crime begun to influence health?  
If so, how?

Fatigue has been reported by some medical doctors as the most common complaint heard from their patients. Inability to concentrate is another common complaint.

These ailments can have many causes. Often they are long term chronic. Interestingly, they also happen to be symptoms of elevated exposure to microwave radio signals.

In recent years, evidence has been mounting that proximity to cell phone towers and other sources of radio frequency signals is a likely causative factor for some people.

Some people, however, report a SUDDEN onset of symptoms, like fatigue and inability to concentrate, without being close to antenna installations or having moved. With all the health activism "noise" being made about cell phone towers, sudden onset microwave exposure symptoms haven't attracted much attention.

Except for Dr. Reinhard Munzert of Erlangen, Germany.

Dr. Munzert has been paying considerable attention to sudden onset microwave exposure symptoms, and has presented what he has learned on this web site:

<http://www.mikrowellenterror.de/english/index.htm>

Dr. Munzert has come to the shocking conclusion that some sudden onset microwave symptoms are the result of CRIMINAL use of microwave technology.

Let me quote a couple of paragraphs from Dr. Munzert's site, describing the criminal uses of microwave technology:

"Not only the good guys can apply non-lethal weapons: '...there is mounting evidence that home-brew HPM weapons are being used to attack people...The latest research and finding on this horrific trend in Europe is quite frightening' (News from Infowar, Volume I Number 6, August 28, 2002).

"[snip] ... Through the illegal usage of innovative high-tech weapons, people are not 'shot', rather their living quarters are bathed in (high frequency)

electromagnetic waves. A high tech-gang in Germany is using and testing HPM-weapons that supply continuous or pulsed waves over long periods of time.

"The effects of the HPM-beam on the victims include headache, irregular heartbeat, painful testes, burned skin, eye damage and cancer."

Readers can be forgiven for responding, "Oh, well, that kind of thing doesn't happen in my neighbourhood", or, "My neighbours have trouble changing light bulbs - they certainly don't know how to build high-tech weapons" or "Oh, that kind of thing only happens in military test labs."

Dr. Munzert captured a screen shot of an amazon.com description of a book titled "The Poor Man's Ray Gun" by David Gunn. At the time Dr. Munzert captured the blurb about this 24 page book, which describes construction of a microwave weapon using microwave oven parts, this sentence was posted on the amazon.com site:

"The author shows in complete detail, and with plenty of photographs and diagrams, how to build a ray gun that is capable of setting fire to a piece of plywood at 500 feet made from only parts of a microwave oven."

(That sentence isn't on the current amazon.com site; not hard to wonder why!)

Let me comment that in terms of creating sudden onset symptoms, a tightly focussed "ray gun" would not be useful to a criminal wishing to target someone, because along with symptoms it would heat the walls of a targeted home, setting them on fire, thus exposing the criminal act. The reason David Gunn's ray gun creates fires, and not subtle physiological symptoms, is the tightness of focus.

Far more relevant to the question of criminal activity causing sudden onset symptoms would be the simple NON-focussed, door-removed microwave oven. By removing the door, and of course, bypassing the interlock switch that shuts the oven off when the door is opened, a wide, not tightly focussed microwave beam is emitted.

Well within the capability of the average teenager.

This form of a weaponized microwave oven would not cause fires, and used through, say, an apartment wall, might not produce enough heating of a person on the other side of the wall to be directly noticeable.

But other rather serious side effects of exposure to non-burning microwave radiation - headache, irregular heartbeat, fatigue, inability to concentrate, painful testes, eye damage and cancer - can devastate a target of a simple door-removed microwave oven.

Dr. Munzert's site claims there are targets of criminal

use of microwave radiation in Germany. To date, this writer is not aware of a single case where a court has acknowledged the criminal use of microwave signals anywhere in the world.

Does that mean it's not happening? Does that mean we don't need to worry about that, "... thank God?"

Good question. This writer has heard one report, indirectly, from a close friend who lives in central Texas, that one instance of use of a microwave oven to harass students in a university dorm did occur. Unfortunately, proof in the form of a police report and/or mainstream media article hasn't come to light.

And of course, there's that January 2004 report from the U.S. Department of Justice titled "Report to Congress on Implementation of Section 1001 of the USA PATRIOT Act", section III. Civil Rights and Civil Liberties Complaints, in which 720 complaints were received in a 6-month period, curiously labelled "unrelated."

A footnote explains what "unrelated" means:

"Examples of this category include complaints that the government is broadcasting harmful electronic signals to individuals, claims that the government is intercepting dreams, and allegations that the government is using subliminal messages to force people to engage in certain acts."

720 complaints acknowledged by a major federal justice agency in 6 months is more than just a few.

And, "harmful electronic signals" - could that be the use of weaponized microwave ovens?

Is it possible the targets alleging "government" is targeting them with harmful electronic signals are doing so because of the now obvious misapprehension that harmful signals exist only in military laboratories? Dr. Munzert's site shows that is certainly no longer true, and hasn't been true for as long as microwave ovens have been available.

This writer doesn't have firm answers to these questions. However, let me share some other things that have been done with radio signals and are also capable of penetrating walls, at least non-conducting walls.

Let's look at a really ancient medical device, the Russian-designed "Lida" machine. This machine was originally designed as a drugless sedation device. It carries a U.S. patent number, 3,773,049.

One of these units was obtained from the Soviet Union and studied by Dr. Eldon Byrd and Dr. Ross Adey, at the Loma Linda Veterans Hospital, Research

Unit. The earliest known sighting of a Lida machine was in a North Korean prisoner of war camp by a repatriated POW, captured during the Korean War.

The Lida doesn't use microwave, although there is more recent literature indicating that microwave frequencies can also be used. The basic method of the Lida machine is very much like biofeedback - except instead of the commonly used sound feedback, the Lida transmits simple pulses of radio signal at rates matching relaxed brain activity.

The original Lida machine transmitted in the medical equipment band at 40 megahertz, at a power level of 40 watts.

Drs. Byrd and Ross are on record as verifying that the unit works on animals, but this writer hasn't seen literature on human testing. It is likely that concerns about medical effects of exposure to radio frequency radiation have prevented this technology from coming into general use.

The process of inducing brain activity to change speed by applying pulsed radio signals is called "entrainment." Listening to certain sounds can accomplish the same thing, though sounds are consciously perceived, while the Lida principle could, in theory, be applied through walls to cause someone to be forced into a state of drowsiness without their understanding why.

Would the use of a Lida-like machine in the workplace, without the target being aware, constitute criminal causation of sudden onset symptoms? Well, overwhelming fatigue on the job has been reported by some of those 720 people complaining to the U.S. Department of Justice.

Perhaps even more invasive, what would be the outcome of setting the pulse rate of a Lida-like device a bit higher, into the WIDE AWAKE brain activity speed range? What if such a signal were aimed at the bedroom of a target, either through an apartment wall, or, with tighter focus, from a neighbouring house?

Would keeping someone wide awake at night, with very little chance they could figure out how or why, be sudden onset symptoms caused by criminal activity?

Here again, some of those 720 people complaining to the Department of Justice do indeed complain of heavy sleep deprivation, lasting years.

And pulsing radio transmitters are easily available to those who would like to "settle a beef" with a neighbour and who has the skills to set up and operate the equipment.

Already, we have seen that quite a range of disabling

symptoms can be caused by microwave signals and radio signals in general, and the U.S. Department of Justice registered 720 complaints of this nature over just six months. It's becoming clear that there actually are criminals at work.

Among those complaining about radio frequency harassment, many report that police deny such crimes are possible, even though both microwave ovens and Lida technology have been available, not classified, for some decades now.

Are there any other radio frequency technologies which are available to criminals? The answer is emphatically, yes.

Next on the list are the now popular airport luggage and cargo scanners, some of which operate at the top of the microwave frequency range. Several years ago, this writer phoned a Massachusetts maker of these scanners, and the salesman told me I could have a unit, no questions asked, if I handed over something like \$100,000. I stressed that I was in no way connected with any law enforcement agency, and that was "no problem."

The reader probably doesn't need help imagining how "through wall radar" scanners might be used by those of criminal inclination.

Interesting too, that those who have complained about electronic harassment report noises from neighbours, especially in apartment settings, which are perfectly synchronized with the actions of the targeted person. One target complains that for years, every time she would start to urinate, the water in the downstairs bathroom would be turned on, and kept on, and turned off when the target's urine stream stopped. Every time.

By now some readers will be thinking, there can't be any more, can there? Unfortunately for society, yes, there is more.

In World War II, radar came into being. Technicians standing near energized antennas discovered that the radar signals, which are streams of very short, powerful microwave pulses, cause a buzzing sound to be heard, as if it were originating within or behind the skull.

Simply, one short pulse of microwave signal causes one click in the hearing sense of someone standing in line with a moderately powerful signal.

We don't hear ordinary microwave communications signals because they aren't short pulses. It's the pulsing that acts like tapping a nail with a hammer, to force sound into the hearer's hearing sense.

In 1974, at the University of Utah, the successful

transmission of VOICE into the skull of a test subject, using only a pulsed microwave signal, with no special implants or other artificial aids, was announced. The experimenter was Dr. Joseph Sharp, then affiliated with the Walter Reed Army Institute of Research, using a pulsed microwave transmitter supplied by Dr. Joseph Lin of the University of Chicago.

Dr. Sharp used a simple algorithm to convert a smooth voice wave form into a string of "clicks", with each click being sent at the test subject as a short microwave pulse.

Sharp's success was published in the official journal of the American Psychological Association, "American Psychologist", in their March, 1975 issue.

And not unexpectedly, the U.S. Air Force announced an updated version of "voice to skull" with better fidelity than Joseph Sharp's original, in 1994.

A moderately powerful radar set can produce a buzzing sound in the skull of someone in direct line with the antenna. A couple of hundred watts will do, and that's not huge piece of equipment.

A criminal wanting the ultimate "revenge weapon" need only co-opt the services of a radar technician, to modify the set so that Joseph Sharp's voice conversion method would control the pulsing. The criminal can then, from hiding, through non-conducting walls, force a target in the next apartment or house to hear things, including voices, involuntarily.

A little pricey, but not out of reach of the upper middle class. Not at all.

By now, you can probably guess, YES, many of the 720 people complaining to the Justice Department also hear various strange sounds, including voices.

But for 33 years, it has been no secret that this can be done by equipment, and is not a guaranteed indication that the hearer is mentally ill. Unfortunately, just as most police officers deny radio frequency crimes are possible, so do most psychiatrists, resulting in false diagnoses, and heaping considerable trouble on already struggling targets of radio frequency crimes.

As of the date of writing, those are the proven beyond doubt, through wall, radio frequency weapons available to the sophisticated criminal. But there is one little encore item, called "Silent Sound." Silent Sound carries U.S. patent #5,159,703.

Know about those telephone voice changers? Which can take a deep male voice and move it up into a high female frequency range to disguise the

caller? Well, "Silent Sound" uses a similar technology to raise a speaker's voice a little higher, up near the upper limit of hearing.

At frequencies around 14,500 Hertz, a voice sounds mostly like a faint "ringing in the ears."

Someone hearing "Silent Sound", which isn't truly silent, just hears a faint ringing, and can't make out any words. So what use is "Silent Sound?"

Proponents claim it makes for dandy subliminal messages. Much better, they say, than the older "time slice" subliminal method in which every so many frames of a movie would show goodies available at the snack counter.

And "subliminals" are basically "lite" hypnosis. How well they work depends on the ability of the hearer to be hypnotized. Statistically, it's been reported that something like 4 out of 5 people can be hypnotically influenced to some degree.

All that's needed is some means of CONVEYING the "Silent Sound" to the target, such as pulsed microwave "voice to skull" technology, and not only can you force your neighbour to listen to you through his or her non-conductive walls, but you may be able to play "hypnotic tricks" on your target!

Best of all, for the revenge artist, the target can't even talk about what he or she hears without instantly being labelled a nut case.

There are more sophisticated versions of "Silent Sound" where the later patents deal with how to control volume level in stores, but the basic technology has been reported as effective in reducing shoplifting according to department stores using subliminals.

At this point, reader, you are probably wondering about the folks complaining about electronic harassment. Yes, they DO, once again, report "ringing in the ears" quite often!

A final point to ponder. Unknown to many, organized groups of over-zealous "law and order" groups of citizens have been quietly forming and operating throughout the U.S. and Canada. These groups have been documented as harassing people who are "not liked" for various reasons - going well beyond simply watching out for genuine criminal activity.

(Search for "Cause Stalking" on amazon.com, or google, for a book on this topic.)

Is it possible such groups have taken notice of the technologies described here?

[Eleanor White is a retired engineer and has been a ham radio operator since the 1950s.]

Would keeping someone wide awake at night, with very little chance they could figure out how or why, be sudden onset symptoms caused by criminal activity?

Here again, some of those 720 people complaining to the Department of Justice do indeed complain of heavy sleep deprivation, lasting years.

And pulsing radio transmitters are easily available to those who would like to "settle a beef" with a neighbour and who has the skills to set up and operate the equipment.

Already, we have seen that quite a range of disabling symptoms can be caused by microwave signals and radio signals in general, and the U.S. Department of Justice registered 720 complaints of this nature over just six months. It's becoming clear that there actually are criminals at work.

Among those complaining about radio frequency harassment, many report that police deny such crimes are possible, even though both microwave ovens and Lida technology have been available, not classified, for some decades now.

Are there any other radio frequency technologies which are available to criminals? The answer is emphatically, yes.

Next on the list are the now popular airport luggage and cargo scanners, some of which operate at the top of the microwave frequency range. Several years ago, this writer phoned a Massachusetts maker of these scanners, and the salesman told me I could have a unit, no questions asked, if I handed over something like \$100,000. I stressed that I was in no way connected with any law enforcement agency, and that was "no problem."

The reader probably doesn't need help imagining how "through wall radar" scanners might be used by those of criminal inclination.

Interesting too, that those who have complained about electronic harassment report noises from neighbours, especially in apartment settings, which are perfectly synchronized with the actions of the targeted person. One target complains that for years, every time she would start to urinate, the water in the downstairs bathroom would be turned on, and kept on, and turned off when the target's urine stream stopped. Every time.

By now some readers will be thinking, there can't be any more, can there? Unfortunately for society, yes, there is more.

In World War II, radar came into being. Technicians standing near energized antennas discovered that the radar signals, which are streams of very short, powerful microwave pulses, cause a buzzing sound to be heard, as if it were originating within or behind the skull.

Simply, one short pulse of microwave signal causes one click in the hearing sense of someone standing in line with a moderately powerful signal.

We don't hear ordinary microwave communications signals because they aren't short pulses. It's the pulsing that acts like tapping a nail with a hammer, to force sound into the hearer's hearing sense.

In 1974, at the University of Utah, the successful transmission of VOICE into the skull of a test subject, using only a pulsed microwave signal, with no special implants or other artificial aids, was announced. The experimenter was Dr. Joseph Sharp, then affiliated with the Walter Reed Army Institute of Research, using a pulsed microwave transmitter supplied by Dr. Joseph Lin of the University of Chicago.

Dr. Sharp used a simple algorithm to convert a smooth voice wave form into a string of "clicks", with each click being sent at the test subject as a short microwave pulse.

Sharp's success was published in the official journal of the American Psychological Association, "American Psychologist", in their March, 1975 issue.

And not unexpectedly, the U.S. Air Force announced an updated version of "voice to skull" with better fidelity than Joseph Sharp's original, in 1994.

A moderately powerful radar set can produce a buzzing sound in the skull of someone in direct line with the antenna. A couple of hundred watts will do, and that's not huge piece of equipment.

A criminal wanting the ultimate "revenge weapon" need only co-opt the services of a radar technician, to modify the set so that Joseph Sharp's voice conversion method would control the pulsing. The criminal can then, from hiding, through non-conducting walls, force a target in the next apartment or house to hear things, including voices, involuntarily.

A little pricey, but not out of reach of the upper middle class. Not at all.

By now, you can probably guess, YES, many of the 720 people complaining to the Justice Department also hear various strange sounds, including voices.

But for 33 years, it has been no secret that this can be done by equipment, and is not a guaranteed indication that the hearer is mentally ill. Unfortunately, just as most police officers deny radio frequency crimes are possible, so do most psychiatrists, resulting in false diagnoses, and heaping considerable trouble on already struggling targets of radio frequency crimes.

As of the date of writing, those are the proven beyond doubt, through wall, radio frequency weapons available to the sophisticated criminal. But there is one little encore item, called "Silent Sound." Silent Sound carries U.S. patent #5,159,703.

Know about those telephone voice changers? Which can take a deep male voice and move it up into a high female frequency range to disguise the caller? Well, "Silent Sound" uses a similar technology to raise a speaker's voice a little higher, up near the upper limit of hearing.

At frequencies around 14,500 Hertz, a voice sounds mostly like a faint "ringing in the ears."

Someone hearing "Silent Sound", which isn't truly silent, just hears a faint ringing, and can't make out any words. So what use is "Silent Sound?"

Proponents claim it makes for dandy subliminal messages. Much better, they say, than the older "time slice" subliminal method in which every so many frames of a movie would show goodies available at the snack counter.

And "subliminals" are basically "lite" hypnosis. How well they work depends on the ability of the hearer to be hypnotized. Statistically, it's been reported that something like 4 out of 5 people can be hypnotically influenced to some degree.

All that's needed is some means of CONVEYING the "Silent Sound" to the target, such as pulsed microwave "voice to skull" technology, and not only can you force your neighbour to listen to you through his or her non-conductive walls, but you may be able to play "hypnotic tricks" on your target!

Best of all, for the revenge artist, the target can't even talk about what he or she hears without instantly being labelled a nut case.

There are more sophisticated versions of "Silent Sound" where the later patents deal with how to control volume level in stores, but the basic technology has been reported as effective in reducing shoplifting according to department stores using subliminals.

At this point, reader, you are probably wondering about the folks complaining about electronic harassment. Yes, they DO, once again, report "ringing in the ears" quite often!

A final point to ponder. Unknown to many, organized groups of over-zealous "law and order" groups of citizens have been quietly forming and operating throughout the U.S. and Canada. These groups have been documented as harassing people who are "not liked" for various reasons - going well beyond simply watching out for genuine criminal activity.

(Search for "Cause Stalking" on amazon.com, or google, for a book on this topic.)

Is it possible such groups have taken notice of the technologies described here?

[Eleanor White is a retired engineer and has been a ham radio operator since the 1950s.]

# PERPS WHO TALK INFORMATION -

## Log started Jul. 17, 2007

Rev: Jul 17/07

This log is to report instances where perpetrators actually make statements to their targets which acknowledge the fact that they have been detailed to harass the target. Such encounters are quite rare, but they are also quite significant in the struggle to inform the world about the crime syndrome of organized stalking.

-----

Added on Jul 17/07 (John Allman, England):

What happened was that a young male stranger dealt me a few entirely unprovoked punches to my face, neck and torso, the first blow from behind, every blow witnessed by Xxxxx, the target who has been staying at my place lately, with whom I was taking a Sunday afternoon stroll when this occurred.

My assailant apologised to me, after I'd called the police, and before running away to escape arrest, claiming that he had been misinformed to the effect that I was a paedophile, and threatening me with worse violence, if I pressed charges when the police eventually arrived.

I found out the stranger's name from some teenagers standing by, who knew the assailant, and who witnessed the final stages of the series of attacks, and offered to testify if necessary. (The surprise attack and the subsequent detente was prolonged by my own deliberate psychological manipulation of the assailant, vainly hoping as I was to keep him provoked enough to linger until the police arrived, but not so provoked that he renewed his violence - a delicate balance.)

Xxxxx was courageous. She judged correctly that this assailant wasn't likely to punch a pretty young woman in the face, and so took the small risk of placing herself between me and him, several times, reducing by 50% or more the number of times I was actually punched. I am also grateful to Xxxxx for kindly placing my prescription spectacles into her coat pocket soon after the violence began.

When I asked my attacker who had set him up, by feeding to him the misinformation that I was a paedophile, he seemed to become very frightened when I asked this, and told me that he couldn't possibly tell me that.

# POLICE WHO KNOW INFORMATION - Log started Feb. 11, 2006

Rev: November 16, 2007

```
|-----|
| TO POLICE OFFICERS: As you can see here, your |
| colleagues are finally telling the truth. Please |
| join them in letting the world know about this |
| decades-old crime. Anonymity is guaranteed if |
| you contact me, Eleanor White, with your story. |
| ewraven1@sympatico.ca |
|-----|
```

The first instance where a police officer admitted to knowing that harassment is happening is from a lady who uses the code name "anymouse". She and her family moved into a house which, unknown to them, was a former methamphetamine lab.

The trace chemicals caused her family to have severely decayed teeth, to the point where their dentist accused them of being "meth users."

Someone, probably the dentist (some dentists are required to report possible drug user symptoms) then turned the family over to a harassment group who harassed them for years. Only after finding out about the "meth mouth" mandatory reporting laws, and informing local law enforcement that they were NOT meth users (a difficult task) was she able to get the harassment (almost) stopped.

No doubt, there are MANY other people who have been falsely reported by medical personnel as meth users, and don't have the slightest idea why they are being brutally harassed. This is an important human rights issue which needs to be exposed and stopped!

From: eleanor@raven1.net  
Subject: Nice backup for us,  
from a police officer  
Date sent: Mon, 28 Nov 2005

All emails like this one should be approached with a degree of skepticism, however, I find nothing in the content to suggest this isn't a bona fide email. I do find encouragement that if this is a real police officer, we do have at least some friends in blue:

=====  
Dear Eleanor,

I stumbled across your site only a matter of days ago and I'm afraid to say that the information has confirmed a number of facts that I had always suspected to be the case. Throughout recent years we have often ...

[Eleanor talking: Note the word "OFTEN"]

... been called in to cases where a victim suspects that he/she is being stalked by a large gang, and sometimes has some form of photographic evidence to back this up. However, our superiors informed us that they had strict orders (from where they were unsure) that we were to ignore all cases of gang stalking and, if possible, to provide evidence that the victim is criminally insane.

From my investigation in recent days it has become clear that:

- Victims are often people living on their own. This is because it is a lot easier to marginalize a victim who has no direct relatives to support them. It is also very useful for the perpetrators, since the single person can be classed as mentally ill and there will be absolutely no evidence to prove that this is not the case.
- The criminal justice system is strictly under the control of a small elite who ensure that no charges are pressed against the instigators of the gang-stalking.

I will continue to look into the matter in the forthcoming weeks; I get the feeling that perhaps in the Christmas period we may see a surge in attacks. I will endeavor to keep you informed as long as I am not silenced.

Thank you for being an upstanding defender of the truth. When justice is done you will be recognized as a pioneer of their downfall.

Xxxxx XXXXXX XXXXX

=====

Added on Feb 11/06 (code SN):

Well, today, I received a questionnaire form from a target in the same geographical area as the officer, and listen to what she reports about her attempts to get help from the police:

>I have been personally told by police not involved in  
>the situation that people within higher departments  
>WILL NOT ALLOW them to assist me.

Added on Feb 11/06 (code CV):

In response to yesterday's report of a second police officer explicitly stating they had ORDERS to not help a target of vigilante/group/gang stalking, one of our forum members reports this THIRD instance below:

"First they assigned the case to a third shift patrol officer - Officer XXXXXX - who had no computer background and

was on vacation. When he returned he told me he couldn't help and he was told to not even enter a record of the complaint into the police computer BY HIGHER UPS."

Until we had these three reports, the first being in Nov. 2005, our group of targets of vigilante stalking were largely only able to allege these crimes. These three reports change the entire complexion of the situation.

Orders from the top makes it very plain this is a major political agenda, and functionally, it's really not much different from Hitler's/Stalin's neighbourhood civilian thugs who keep citizens "toeing the line."

Added on Feb 11/06 (code HG):

A FOURTH report showing police acknowledgement of vigilante/group/gang stalking:

>In the beginning of my [criminal harassment] in 2000, when  
>I went to the police station in XXXXXXXX XXXXXXXX XX, the police  
>told me that "they were doing this type of thing to someone in  
>every apartment building in the city".

Added on Feb 12/06 (code FKA):

>Please don't use my name, but when I went to the FBI in 1996  
>and met with the Special Agent in Charge, he immediately said  
>"military".  
>  
>There was no pretending that this wasn't going on (and going  
>on a lot). He referred our case to the Portland FBI who  
>ordered an investigation. Of course that investigation would  
>be sent to Sacramento where the FBI there refused to investigate.  
>  
>Every other law enforcement agency were made to stop  
>investigating. None of the agents pretended there was "nothing  
>going on." They just looked beaten down and said "I'm sorry".

Added on Feb 13/06 (code \_S):

>2004, small mid-western town, victim remote shocked while  
>driving her car on main street.  
>  
>On reporting incident to police, officer admitted that remote  
>shocking can and does happen but refused to make a report and  
>referred victim BACK TO HER HOMETOWN POLICE.

Eleanor White commenting: "BACK TO HER HOMETOWN POLICE?"  
Does this suggest that local police are initiating targeting  
of some people they "can't get justice" for via the courts?

Added on Feb 14/06 (code ZR):

>Eleanor, I went to the sheriff's office in the county in  
>XXXXXX where I believe the gangstalk "higher ups" reside.  
>I called and e-mailed a detective in criminal intelligence  
>who was working with another target who resided in that  
>county (next to mine). I also mailed this detective a  
>copy of David Lawson's report ("Terrorist Stalking in  
>America") and Norma's [gangstalking] CD. He emailed me back

>and said that the volume of information that I and this  
>other target were sending him was too much.  
>  
>I then called him -- he said to go to MY local police--I  
>asked him if he was aware of where the gangstalking was  
>originating from (in his county) he replied "yes." I  
>hope he is aware of and working on this now in that  
>county. These people are also heavily into selling drugs  
>and claim to be professional murderers.

Added on Feb 16/06:

This is a quote from private investigator David Lawson's  
2001 book titled "Terrorist Stalking in America", a review  
of which can be read here:

<http://www.shoestringradio.net/terstalk.htm>

"I also spoke with police officers from across the country.  
They confirmed the existence of stalking groups across the  
country. In general, they said that "cause stalking" is  
primarily a civil problem where the plaintiff has to prove  
financial loss. They also said that there are free speech  
and grass roots issues involved. In fact, the police  
themselves are targets of these groups. In small towns, the  
number of members in these groups can easily exceed the  
number of police officers. In general, the police will NOT  
talk about stalking groups. One officer did say there is  
a storm brewing as groups become larger and more numerous."

Added on March 29/06 (code CJ):

>Was thinking this a.m. about an incident which happened about  
>10-8 years back in Key West An interim police chief with the  
>first name of John resigned his position due to threats on  
>himself and his family. When pressed for details by reporters,  
>he stated : "You wouldn't believe it"...I do know that a further  
>investigation was taken on his behalf by Top Cops around the  
>country, who then could not figure out how the "threats" were  
>delivered, although some were made on his phone. I think he  
>"heard" the threats to himself and family and the Perps seemed  
>to have highly personal information about him and family.

\*\* TO TARGETS: Keep this case in mind, as it suggests that  
interim police chief was a target of citizen gang stalking and  
electronic harassment. Mention it and the others here if you  
find yourself discussing citizen gang stalking with a police  
officer.

Added on May 12/06 (code DJ):

We have a report that two police officers in an Ontario,  
Canada city have affirmed to a target that they know organized  
stalking is happening. An investigation was started, stopped,  
and then restarted and is in progress as of May 12/06.

The officers are quoted as saying to the target that they do  
want a conviction, and that while working on "criminal  
harassment" cases - their term for organized stalking - is  
quite difficult, the police report success in dispersing some  
organized stalker by their presence.

Added on July 25/06 (code DJ):

This is a follow up to the above entry dated May 12/06.

In spite of the really hopeful admission that organized stalking was known to police, and that they wanted to help and obtain convictions, this case got assigned to a detective who flat refuses to "believe" (the word "admit" is more applicable) that organized stalking exists.

Furthermore, apparently, this same police department asked the local paper to NOT PUBLISH STORIES ABOUT ORGANIZED STALKING! This is an OUTRAGEOUS abrogation of freedom of speech and the senior officer responsible should not be allowed to continue in police service!

Added on November 16, 2007 (code CS):

From a former police officer writing about her ex-husband:

"I asked my ex husband who is a very honest law enforcement officer and has been for 37 years. He believed me but said to keep researching and filing reports with my local county... Well now 1 year later he admits he knows of the group and they are stronger than any police organization and they basically leave them alone and do not even talk about them."

Added on November 16, 2007 (code DJ):

A target who had been having intense on the highway harassment from perpetrator vehicles called the highway patrol agency and complained. The target complained about "cause stalking", which is the term for organized stalking used by private investigator David Lawson in his book by that name.

The target asked the highway patrol officer if the officer knew about "cause stalking." The officer replied, "OH, YES!"

The officer offered to investigate, but the officer could only go so far, because of a dead end investigating a licence plate. The officer stated emphatically that the officer knew that organized [cause] stalking was a real crime. The target was able to loan a copy of Lawson's book to the officer.

Added on November 16, 2007 (code EM):

A target who discussed organized stalking with a prominent lawyer got the reply "OH, YES!" to the question of whether organized stalking exists.

## From the Jeff Rense site:

<http://tinyurl-com/2pagrb>

Open Letter To The Tens  
Of Thousands Of Rogue Cops  
Jim Kirwan  
2-17-8

Your numbers may be growing among the millions of people wearing some kind of badge in the United States, but your days are numbered. Not because of any direct threat from people like me; no what I'm talking about here is the threat that you are creating all by yourselves. If you had been paying attention you would have seen this coming on your own.

What the military and the mercenaries are doing in Iraq and Afghanistan each of you is now doing here, in your own tiny little world so full of arrogance and basic brutality. Every time you beat a man senseless, or shame a woman to tears in front of her loved ones, or randomly kill someone either by accident or by design it happens just because you can - so you make more than enemies - you plant the seeds of your own violent end.

Have you ever seen children tear a well-trained combat soldier to pieces, I have. It happened in a relatively good neighborhood in LA, and the dead man was one of the most decorated marines we had. It happened a block and a half from my apartment. It was a very long time ago, but I never got over the shock of seeing what looked like The Lord of the Flies coming to life.

Before the Decider, police forces were relatively small in comparison to the size of the populations they were charged with "Protecting and Serving." But after it became clear that the entire upper echelon of government had become nothing more than glorified street bandits: the gloves came off all the way down the food chain. So when the demonstrations against the wars began, your departments began to behave as if US citizens were the real Enemies of the State.

Way back in 1992 the behavior patterns for you were in play in the aftermath of Hurricane Andrew. And you did oh such a job then of disposing of all those bodies-the Owners loved it, but that had to remain a secret because of "national security." (1)

Then came Katrina and the mercenaries helped you out with your own campaign of terror against the survivors of New Orleans that had the temerity not to die. But from that point forward your ranks began to swell, as officers began to catch the drift of what would lead

to their next promotion in the newly criminal world of 'law-enforcement.' (2)

This was followed by Blackwater that was armed with new and secret contracts to retrain the sheriffs, the marshals, and the police of all stripes to convert them into the heavily armored combat troops that would very soon begin to patrol the streets and byways of America. Since then you have become brazenly bold and unflinching in your treatment of the people that you were supposed to protect-the same people that actually pay your inflated salaries. Contrary to what you might believe you are not a law unto yourselves-you're supposed to be peace officers. (3)

That's what can be tracked about the current situation, and that's what most of you see as your current job: the brutalizing, the Tasing and or the killing of US citizens that fail in some small way to obey your every command-no matter how unreasonable. It seems no one knows exactly how many you have killed, as your departments fail to keep such records-but when one is too many - then a hundred or more amounts to a mutiny against the very people you are sworn to serve. Here's a rough history of your recent activities, in part. (4)

What you don't seem to realize is that when you take off the Kevlar, and unstrap both your weapons, you need a shower, possibly a shave if you're male, and you'll need to grab something to eat. If you live in the Burbs which most cops do, you probably have "friends" and maybe you might want to go to a game or just get together with "friends." In brief you do what other people do unless you're a robot living in a barrack somewhere dark and semi-distant. If you have a family they have their lives to live as well, grocery shopping, school etc. just like other people-except that you are not like other people! You have become a secret enforcer, the muscle and bullets of the fascist state incarnate. And that makes you and yours into targets for those that you have wronged.

What used to protect you was the good will of the people you served, but with that out-of-the-way now, because you've put yourself beyond the law and above the people that once cared whether you lived or died-your world has changed almost as much as ours: Only you still have no clue about the consequences that are coming!

When you do what you do to ordinary people your actions affect the lives of a great many people beyond the targets of your brutality-and those people whether adults or children will not forget. Meanwhile you have forgotten that you are not Supermen or Superwomen, you're just flesh and blood like all the rest of us: and with every day that passes the numbers of your enemies continue to increase by the hundreds, until that figure reaches into the thousands, and you are beginning to close in on that magic number now.

When my old man was murdered I lived with rage for a very long time-but it was a very different era then and reason won out-his killer had to live with perpetual uncertainty, but he got to live. This is a very different world today. But the laws of consequence and responsibility are still in tact in this jungle that passes for life-in-Occupied-America today.

Just thought you'd like to know that while the public has not yet decided to act, that day will not remain at bay forever. How long will it be before you need to look over your shoulder, or check you squad car before getting in, not once in awhile, but each and every time. How well do you know your 'friends' and how's your life these days, maybe a little more tension, a lot less patience because at some level you have to know we're watching. This is so because you have become unnatural, and with each passing day you grow more distant from the people that you brutalize so easily!

By the way this Open Letter is also meant for those thugs that serve the god of TSA. They might not get your perks but too many of them are all too eager to attack the innocent instead of simply asking civil questions. Events like this are growing in their frequency, every hour of every day. (5)

I came up the hard way and I carried a gun for a few years-so I'm not blind to what you're trying to do. Early on I lived in Paint Hotels among the drifters and the night-moths, but even then there were too many of your kind. I've had my share of pistol-whippings in the back of a patrol car, I survived the petty interrogations and the insults then-but I fought back with lawyers and with real cops to make it right.

Today everything is different and the Bad Guys wear the uniform and are praised for what they do to us. You might want to think about it boys and girls, because no one leaves this life alive. One of the first things that basic training taught to every military draftee, back in the fifties, was that there is always someone bigger, someone stronger, someone meaner than you might think you really are. That was a major life-lesson, too bad you guys missed out on that.

Your behavior towards the public is teaching them that "selling out is futile" and that anyone alone is always easy prey; maybe that's why you roam in packs? Soon the public may begin to emulate your tactics, and then where will you be when you find yourself outnumbered by an angry mob that no longer fears your uniform, but instead is energized because of what you do NOT stand for!

You might want to think about these things, because they are not secret anymore: and millions of people

have begun to watch your every move-so why not begin to do the right thing, while you can.

Sony Plans to Beam Sights and Sounds Directly Into Your Brain

CNN

If you think video games are engrossing now, just wait: PlayStation maker Sony Corp. has been granted a patent for beaming sensory information directly into the brain.

The technique could one day be used to create video games in which you can smell, taste, and touch, or to help people who are blind or deaf.

The U.S. patent, granted to Sony researcher Thomas Dawson, describes a technique for aiming ultrasonic pulses at specific areas of the brain to induce "sensory experiences" such as smells, sounds and images.

"The pulsed ultrasonic signal alters the neural timing in the cortex," the patent states. "No invasive surgery is needed to assist a person, such as a blind person, to view live and/or recorded images or hear sounds."

According to New Scientist magazine, the first to report on the patent, Sony's technique could be an improvement over an existing non-surgical method known as transcranial magnetic stimulation. This activates nerves using rapidly changing magnetic fields, but cannot be focused on small groups of brain cells.

Niels Birbaumer, a neuroscientist at the University of Tuebingen in Germany, told New Scientist he had looked at the Sony patent and "found it plausible." Birbaumer himself has developed a device that enables disabled people to communicate by reading their brain waves.

A Sony Electronics spokeswoman told the magazine that no experiments had been conducted, and that the patent "was based on an inspiration that this may someday be the direction that technology will take us."

## --- A Voice for Children <avoice@mtangel.netwrote:

From: "A Voice for Children" <avoice@mtangel.net>  
Subject: Tucson Officer's Taser is used on girl, 9  
Date: Wed, 26 May 2004 13:26:42 -0700

<http://www.dailystar.com/dailystar/metro/23436.php>

Officer's Taser is used on girl, 9

By C.J. Karamargin  
ARIZONA DAILY STAR

A veteran South Tucson police sergeant is under investigation for firing his stun gun to subdue a handcuffed 9-year-old girl.

At the request of Chief Sixto Molina, the Pima County Sheriff's Department is trying to determine if the sergeant committed a crime when he sent a jolt through the child's body.

The police officer used a Taser on the girl at about 5:30 p.m. May 8, Molina said. The nonlethal weapon uses a pulsating electrical charge to immobilize a person for several seconds.

"I'll be the first to admit, you've got a veteran sergeant Tasing a 9-year-old girl, it doesn't look good," said Molina.

The sergeant was one of at least two officers who responded to a call from the Arizona Children's Home, a school for special needs children, on South Eighth Avenue, he said.

"It had to do with a runaway from the institution," the chief said. He declined to provide further details.

The school could not be reached for comment late Monday. But Molina said that the facility is the source of frequent calls to his 25-person department.

Molina said one officer initially responded to the call from the school. That officer requested assistance from another officer and specifically asked that the second officer bring a Taser.

He said the girl was handcuffed at the time the weapon was used.

The sergeant who used the hand-held Taser remains on duty. His name is not being released while the investigation is under way.

"It didn't involve an integrity issue," Molina said. "The officer made a decision to do what he thought he needed to do."

Deputy Dawn Barkman, a spokeswoman with the Sheriff's Department, confirmed a review of the incident is under way but said she had no further details.

The results of the probe will be forwarded to the Pima County

Attorney's Office.

"They'll have to present it to us to see if any criminal charges are warranted," said County Attorney's Office spokesman Dan Benavides.

Sgt. Dan Snyder, a South Tucson police spokesman, said the investigation could be complete by the end of the week.

TORTURE IN TEXAS

http://www.hrw.org/reports/2001/prison/rodney_hulin.html

HUMAN RIGHT WATCH - My name is Rodney Hulin and I work at a retirement home here in Beaumont, Texas. I am here today because of my son. He would be here himself if he could But he can't because he died in [an adult prison]. . . . [At age seventeen], my son was raped and sodomized by an inmate. The doctor found two tears in his rectum and ordered an HIV test, since up to a third of the 2,200 inmates there were HIV positive. Fearing for his safety, he requested to be placed in protective custody, but his request was denied because, as the warden put it, "Rodney's abuses didn't meet the 'emergency grievance criteria.'"

For the next several months, my son was repeatedly beaten by the older inmates, forced to perform oral sex, robbed, and beaten again. Each time, his requests for protection were denied by the warden. The abuses, meanwhile, continued. On the night of January 26, 1996--seventy-five days after my son entered Clemens--Rodney attempted suicide by hanging himself in his cell. He could no longer stand to live in continual terror. It was too much for him to handle. He laid in a coma for the next four months until he died.

CASE NOTE: *Kyllo v. United States*: Is the Court's Bright-Line Rule on Thermal Imaging Written in Disappearing Ink?

Adam W. Brill

* The author would like to thank Carlton Bailey, Associate Professor of Law, University of Arkansas School of Law, who provided thought-provoking insight, mentoring, and practitioner insights. The author would also like to thank Michael Heister, J.D. 2002, for providing critical analysis.

SUMMARY:

... On June 11, 2001, the United States Supreme Court handed down its first opinion on whether the warrantless use of a thermal imager against the home constitutes a search. ... In district court, *Kyllo* filed a motion to suppress the evidence obtained by the warrantless use of the thermal imager. ... In a new, two-to-one decision, the Ninth Circuit held that *Kyllo* had no reasonable expectation of privacy against the use of a thermal imager on his home. ... It should be readily apparent, then, that the expectation of privacy that one has against a search may not apply when sense-enhancing devices are used against the curtilage, regardless of whether they are in the general public use.

... The holding in *Kyllo* should have been: absent a warrant, the use of a thermal imager constitutes a search wherever an expectation of privacy exists. ... Due to this move away from established precedent, the Court's holding fails to establish a bright-line rule as to whether the warrantless use of a thermal imager constitutes an unreasonable search. ... The irony is that because of the inherent vagueness in the *Kyllo* holding, there is no certainty as to whether the use of any device that enhances the senses, other than a thermal imager, will

constitute a search. ...

TEXT:
[*431]

I. INTRODUCTION*

On June 11, 2001, the United States Supreme Court handed down its first opinion on whether the warrantless use of a thermal imager against the home constitutes a search. Contrary to most circuit court decisions and the predictions of experts, the Court disallowed their use in *Kyllo v. United States*. n1 In an opinion written by Justice Scalia, the Court held that using a sense-enhancing device that is not available for use by the general public constitutes a search. n2

Rather than deciding *Kyllo* on its particular facts and simply finding that the warrantless use of a thermal imager against the home is unconstitutional, the Court tried to prevent what it perceived as a future threat to the home. n3 However, by hinging the protection the home receives on whether the "sense-enhancing technology" is in "general public use," the Court effectively weakened its own ruling, n4 and ensured that the bright- [*432] line protections created in *Kyllo* are temporary rather than permanent. n5

This note will examine *Kyllo*'s facts, its drawn-out and controversial procedural history, and the substantive history of search and seizure in the home. With this background, this note will then generally discuss the application of search-and-seizure law to the use of electronic-monitoring devices, sense-enhancing devices, and, finally, thermal imagers. The analysis will center on the holding in *Kyllo* by discussing the two interpretations applied to this case. Finally, this note will explain that the protection provided by *Kyllo*'s holding - which provides that the government's warrantless use of thermal imagers on a citizen's home violates the Fourth Amendment - may be illusory because it relies on courts to define and re-define sense-enhancing devices and what may constitute general public use.

II. STATEMENT OF FACTS

In the early 1990s, the United States Bureau of Land Management ("BLM") allowed investigations of large-scale marijuana cultivation to include private homes when there was information that public lands were involved. n6 While investigating a large indoor marijuana growing and distribution operation, BLM Agent William Elliott discovered information that suggested Danny *Kyllo* was involved with the operation. n7 Elliott also received information from local and state law enforcement officers that possibly linked *Kyllo* and another suspect to an indoor operation at the same residence. n8 Along with other information, this led Elliott to subpoena *Kyllo*'s utility records. n9 Using [*433] these records, Elliott estimated what *Kyllo*'s average electricity use should have been and concluded that *Kyllo*'s actual electricity use was excessive. n10 Elliott suspected that *Kyllo* was manufacturing marijuana in his home; a thermal scan would provide the answer. n11

At just after three o'clock in the morning, on January 16, 1992, without first securing a warrant, Elliott enlisted Daniel Haas, a Sergeant in the Oregon National Guard, to perform a thermal scan on *Kyllo*'s home. n12 Haas utilized an Agema Thermovision 210 thermal imaging device n13 ("Agema 210") to examine *Kyllo*'s home. n14 After using the thermal imager, Haas surmised that there was extensive heat

loss emanating from one of the walls and from the roof over the garage. n15 Haas also utilized the Agema 210 against two neighboring homes n16 to establish a baseline that Kyllo's home was "much warmer" than the surrounding homes. n17 Elliott interpreted the scan results to be consistent with the production of marijuana and inferred that the [*434] heat emissions were a likely indication of the presence of halide lamps. n18

Armed with this inference, Elliott presented the thermal scanner information, the electric bills, and an informant's statement in an affidavit to a magistrate. n19 A search warrant for Kyllo's home was executed on January 27, 1992. n20 The officers executing the warrant found live marijuana plants, dried marijuana, and growing equipment in Kyllo's attic. n21 Kyllo was subsequently indicted by a federal grand jury on February 20, 1992, for manufacturing marijuana in his residence. n22

III. PROCEDURAL DEVELOPMENT

In district court, Kyllo filed a motion to suppress the evidence obtained by the warrantless use of the thermal imager. n23 The district court denied his motion to suppress, finding that the use of a thermal imager to track heat sources was not an unreasonable search. n24 Based on the district court's ruling, Kyllo entered a conditional guilty plea, reserving his right to appeal. n25

On appeal, the Ninth Circuit remanded the case for an evidentiary hearing regarding the intrusiveness of thermal imaging. n26 On remand, the district court focused on the capabilities [*435] of the Agema 210 and found it to be "non-intrusive." n27 Subsequently, the district court affirmed the validity of thermal imaging to secure the warrant, and reaffirmed its denial of the motion. n28

On the second appeal, the Ninth Circuit reversed the district court, n29 finding that Kyllo had a subjective expectation of privacy against an intrusive search of his home. n30 It also found that thermal imaging revealed intimate activities and that it constituted an unreasonable search in violation of the Fourth Amendment. n31 However, this opinion was withdrawn upon a change in the composition of the court. n32 Over Kyllo's objection, the new panel reheard and affirmed the district court's decision. n33 In a new, two-to-one decision, the Ninth Circuit held that Kyllo had no reasonable expectation of privacy against the use of a thermal imager on his home. n34 Subsequently, the United States Supreme Court granted certiorari on September 26, 2000. n35

IV. SUBSTANTIVE DEVELOPMENT

The case law relied upon by *Kyllo v. United States* n36 spans the historical aspects of privacy within the home, search of the home, electronic monitoring of the home, sense-enhancing devices, and, finally, thermal imagers. This section will analyze each of these topics in turn.

[*436]

A. The Home

The notion that a "man's house is his castle," n37 originates from the earliest days of civilization. n38 Indeed, the home was held in such high regard in Babylonian times that one was forbidden to enter a home

without permission, and to do so at night was punishable by death. n39 It is this protection from governmental intrusion that led the Founding Fathers to establish the Bill of Rights n40 in an effort to protect private homes from the quartering of troops and unreasonable searches and seizures. n41

The Supreme Court has long recognized that the home is entitled to the greatest protection allowed under the Fourth Amendment. n42 By following the notion that "certain enclaves should be free from government interference," the Court has repeatedly held that warrantless searches of the home are per se unreasonable. n43 In an effort to protect this right of privacy, the Founding Fathers enacted the Fourth Amendment, which provides that "the right of people to be secure in their . . . [*437] houses . . . against unreasonable searches and seizures, shall not be violated." n44 This privacy interest is not found in the fact that the premises are occupied, but in the intimate activities that take place within the home. n45 The right of a person to retreat into the home to be free from unreasonable government intrusion is at the very core of the Fourth Amendment. n46

B. Search n47

Katz v. United States, n48 the seminal case regarding whether a search is constitutional, provides that courts must determine whether a search is unreasonable, and hence unconstitutional, by ascertaining whether the person "exhibited an actual expectation of privacy," and whether that expectation is one which society is willing to recognize as reasonable. n49 Of course, the expectation of privacy must be one that is found or drawn from "the personal and societal values protected by the Fourth Amendment." n50

C. Search and the Home

Because the "Fourth Amendment has drawn a firm line at the entrance" of the home, n51 any warrantless search or seizure within the home is presumptively unreasonable absent exigent circumstances. n52 Therefore, any non-consensual search n53 of the [*438] home must be accompanied by either a warrant executed by a "neutral and detached magistrate," n54 or by "exigent circumstances." n55

Prior to *Kyllo*, the Court had never applied the *Katz* I holding to the homeowner. *Katz* I adds to these exceptions by requiring that the homeowner must exhibit an actual expectation of privacy that the public is prepared to recognize. n56 In previous cases, the use of *Katz* I was limited to situations where privacy expectations were not clearly defined. n57

[*439]

D. Search and the Curtilage

Traditionally, the same body law governing the protection of the home has also applied to the area outside of the home. The historical significance of the moat surrounding the castle of the Dark Ages carried over to what English barristers eventually referred to as the "curtilage." n58 Early jurisprudence provided protection against trespass and intrusion to the outer ring or surrounding landscape of the home. n59 The Founding Fathers, impressed as to the importance of freedom from governmental intervention, passed this protection on to United States citizens through the Fourth Amendment. n60 In *Dow*

Chemical Co. v. United States, n61 the Supreme Court agreed with the Founding Fathers, and held that the curtilage was also deserving of protection. n62 Nevertheless, *Kyllo* provides protection to the home in isolation, but discounts the value of the curtilage within the context of search. n63 Therefore, when a search against the home requires [*440] a warrant, a warrant may or may not also be required for a search of the corresponding curtilage. n64

E. Electronic Monitoring and the Home

The Court has found electronic monitoring of the home to be an impermissible intrusion. n65 In *United States v. Karo*, n66 the Court held that the government 's use of a beeper to track the movement of chemicals within a private residence was unconstitutional. n67 This is because the beeper revealed information about the home that would not have been available unless the agent had personally entered the home in secret. n68 Therefore, a [*441] search is unconstitutional if it is conducted without a warrant and it uses a technology that gives or reveals facts about the interior of the home not otherwise available. n69

F. Sense-Enhancing Devices

The Court has held that sense-enhancing devices n70 may not be used against the home without a warrant. n71 Sense-enhancing devices may range in technological sophistication from a shot glass held up against a neighbor's wall n72 to a thermal imager capable of seeing movement through walls. n73 The sense-enhanced device spectrum includes: flashlights, n74 binoculars and telescopes, n75 night scopes, n76 canine sniffs, n77 aerial surveillance, n78 X- [*442] ray machines, n79 thermal infrared devices, n80 and gas chromatography/mass spectrometry devices known as "Sentors." n81 Absent exigent circumstances, the warrantless use of technologically advanced devices against the home constitutes a search where these devices provide access to intimate details not otherwise available. n82

[*443]

G. Thermal Imagers

Prior to *Kyllo*, the United States Supreme Court had never addressed the constitutionality of the warrantless use of thermal imagers. n83 It would be wrong, however, to infer that this was due to the issue being well-settled or sorted out in the lower courts. The use of thermal imagers has spawned a tremendous amount of litigation. n84 Some courts have found that the warrantless use of thermal imagers constitutes a search. n85 Courts reaching the opposite conclusion have justified the use of thermal imagers against the home by using one of three analogies: waste heat, canine sniff, and the technological approach. n86

The first, waste heat, analogizes the examination of discarded garbage without a warrant n87 to the examination of heat which is "discarded" from the home. n88 The second, canine sniff, argues that since police may use a canine (which is a sense-enhancing device) in an unobtrusive search without a warrant, n89 the use of a thermal imager (also a sense-enhancing device) is similarly an unobtrusive search and therefore is not a search. n90 The final analogy is the technological approach, which courts have used to find that the use of thermal imagers does not constitute [*444] a search because the technology did not reveal any intimate details. n91

Kyllo is one of many cases in which the lower court decided that sense-enhancing devices, and in particular thermal imagers, could be used against the home without a search warrant. n92 The crucial dividing line for the courts turned on whether the court found that the technology revealed intimate details. n93 By 1999, the circuit courts were fractured as to the legality of the warrantless use of thermal imagers; n94 thus, the Supreme Court had to address the issue for the first time.

V. ANALYSIS

A. The Case

Make no mistake about it, *Kyllo v. United States* n95 is a timely case. n96 The last time the Court visited the issue of the interplay between sense-enhancing devices and the Fourth Amendment was in 1986. n97 In choosing *Kyllo*, the Supreme Court was to decide an issue which had fractured the circuits. n98 [*445] The Court chose *Kyllo* carefully; rather than hearing a case where the facts were well-settled by a full bench trial, the Court granted certiorari for a case that was merely an appeal of a denied motion to suppress evidence obtained without a warrant. Under these circumstances, the holding should not be tied to the facts, save for the basic premise that the protection is for the home.

B. The Holding

In *Kyllo*, the Supreme Court held that "obtaining by sense-enhancing technology any information regarding the interior of the home that could not otherwise have been obtained without physical 'intrusion into a constitutionally protected area,' constitutes a search - at least where (as here) the technology in question is not in the general public use." n99

1. The First Interpretation

Following the Court's noteworthy decision, the media published the *Kyllo* holding as: "the use of thermal imagers against the home without a warrant constitutes a search." n100 Indeed, *Kyllo* was hailed as "a rare instance of an alliance between liberals and libertarians, united here in support of the sanctity of the home." n101 At least one source called it "the most unlikely collaboration of the year." n102 Because most experts were certain [*446] that the Court would find otherwise, n103 predictions were comprehensive and far-reaching. n104 In fact, it was so widely thought that the government would win that the only amicus brief filed with the Court was on behalf of *Kyllo*. n105

Given the surprising nature of the holding, one would hope that the case would have been reported correctly when it was announced. The reported holding - that the use of thermal imagers against the home without a warrant constitutes a search - is not the actual holding of *Kyllo*, but is rather a summation of what the media thought the holding meant. The sentence that follows the holding: "We hold the Thermovision imaging to have been an unlawful search, it will remain for the District Court to determine whether, without the evidence it provided, the search warrant issued in this case was supported by probable cause . . ." n106 is an instruction for what the district court must do on remand, and is not *Kyllo*'s holding. Unfortunately, most media sources, even the sources responsible for keeping the legal profession up to date on the law, reported the holding of *Kyllo*

incorrectly. n107 This misinformation is dangerous simply because it is misleading. n108

[*447]

2. The Correct Interpretation

The Court did provide protection for the home against the warrantless use of sense-enhancing devices that provide information not otherwise available without physical intrusion. n109 This holding is tempered though by the ambiguities of: (1) what constitutes "general public use," and (2) what devices are "sense-enhancing." Indeed, most sense-enhancing devices previously addressed by the Court are in the general public use. n110 The few exceptions are X-ray devices, thermal infrared devices, and gas chromatography/mass spectrometry devices. n111 Additionally, prudent readers should note that the curtilage is given short shrift in *Kyllo*. n112 It should be readily apparent, then, that the expectation of privacy that one has against a search may not apply when sense-enhancing devices are used against the curtilage, regardless of whether they are in the general public use. n113

3. What the Holding Should Have Been

The holding in *Kyllo* should have been: absent a warrant, the use of a thermal imager constitutes a search wherever an expectation of privacy exists. n114 While the Court used *Katz v. [448] United States* n115 to find that a search occurred, it failed to apply the "expectation of privacy" standard to wherever one may find it, including the home and even the curtilage. n116 The Court redefined "search," as it relates to the home, by providing protection against sense-enhancing devices only as they are used against the interior of the home, and only with respect to information that could not otherwise have been obtained without physical intrusion. n117

Due to this move away from established precedent, the Court's holding fails to establish a bright-line rule as to whether the warrantless use of a thermal imager constitutes an unreasonable search. n118 It does craft a response that can be interpreted to mean that, at the present, using a thermal imager against the home without a warrant is a search, but the ruling fails to actually hold that the use of a thermal imager without a warrant constitutes an unreasonable search. n119

While using a thermal imager to search a home constitutes a search for now, the real question is how much longer this will hold true. Courts are already using the *Kyllo* holding to permit the use of sense-enhancing devices that were previously thought to be prohibited because the devices are now in the general public [*449] use. n120 Simply stated, the Court should have, at a minimum, delivered an answer similar in simplicity and substance to *Silverman v. United States*: n121 that absent a warrant, a thermal imager may never be used against the home. n122

C. The Holding's Effect Now

Upon the dissemination of the *Kyllo* decision, several other pending cases were remanded for rehearing. n123 Undoubtedly, *Kyllo* affects how the government conducts searches now, n124 but the real consequences will only be realized through the lower courts. n125 The way the lower courts determine the protection required for the curtilage, the home, and searches within the home, will eventually set forth the rule

applied to one's locality. n126

1. The Holding's Effect on the Curtilage

The curtilage, that critical area surrounding the home, was the last bastion of protection against intrusion, but *Kyllo*'s sole mention of the curtilage is to discount it. n127 Any protections [*450] against sense-enhancing devices previously provided for the curtilage are now removed. n128 Before this ruling, the law in "X" jurisdiction may have required a warrant before a government agent could peer into, or use binoculars to look into, a barn within the curtilage. n129 *Kyllo* stands for the prospect that officers may use whatever sense-enhancing device they choose against the curtilage. *Kyllo* expressly discounts the notion that a minimum expectation of privacy exists in "areas such as telephone booths, automobiles, or even the curtilage," and insists that only the interior of the home deserves protection against the use of sense-enhancing devices. n130

2. The Effect of *Kyllo* on the Home

Following *Kyllo*, the home receives better universal protection against the use of thermal imagers than it did prior to the ruling. n131 The question of how long this will remain true will be answered depending upon how *Kyllo* is interpreted.

a. Sense-Enhancing Devices and the Home

Sense-enhancing devices are those instruments that amplify those sensory characteristics already present. This should mean [*451] that any use of a device previously discussed in this note n132 should fall under the umbrella of protection talked about in *Kyllo*. However, because the Court does not address what constitutes a sense-enhancing device, n133 there are questions as to what limits will be applied. n134

The irony is that because of the inherent vagueness in the *Kyllo* holding, there is no certainty as to whether the use of any device that enhances the senses, other than a thermal imager, will constitute a search. n135 This is because of the second requirement: a search only occurs when the device was not in the general public use.

b. What Devices are in the General Public Use?

Never before has an expectation of privacy rested on whether the item utilized by the government to conduct a search of the home was in the general public use. n136 In previous Court [*452] decisions, the protection a place or person received hinged on whether there was a reasonable expectation of privacy. n137 In fact, all of the other cases involving the use of sense-enhancing devices have been based on whether the item used provided intimate details or impermissibly infringed upon a person's reasonable expectations. n138

What, then, does this new direction mean for what the Court has previously held? n139 It could mean that any previous holding that provided protection against the use of a sense-enhancing device that is in the public use is now null and void. Devices like binoculars/telescopes, night scopes, n140 and beepers are all devices that should inarguably be found to be in the general public use. n141 *Kyllo*'s holding, then, should also similarly [*453] effect any other sense-enhancing device that is generally in the public use, and should mean that government agents can use them against the home without

first obtaining a warrant. n142

D. The Future of Search

If this holding is strictly construed, most protections previously available to areas where there was an expectation of privacy no longer exist. n143 However, there is potentially an even greater danger that exists depending on how future courts determine what devices constitute sense-enhancing devices. n144 Courts in large communities like Little Rock, Arkansas could find that thermal imagers are in the general public use, n145 while courts in much smaller communities might not even have a thermal imager within their jurisdiction, and would not find them to be in the general public use. n146 Even giving a device the distinction of being a sense-enhancing device will not alone be enough to ensure that the device cannot be used on the home. This is because courts, given a liberal enough interpretation, could eventually find that the general availability of a device constitutes general public use. n147 Surely, the Court did not intend [*454] Kyllo to provide unequal protection against governmental intrusion based upon the geographical location of the defendant's home. n148

VI. CONCLUSION

The *Kyllo v. United States* n149 decision is noteworthy for many reasons. It was a case of first impression and served to homogenize the split circuit court decisions. However, *Kyllo* is not the firm or bright-line rule that the Court would have us believe it is. Presently, thermal imagers cannot be used against the home. Unfortunately, *Kyllo*'s progeny will further weaken any chance of the home being safe against governmental intrusion. This is because the Court will inevitably create exceptions to what *Kyllo* requires.

Regardless of how future courts address this issue, technology remains an inherent threat to the sanctity of the home. It is inevitable that "the threat to privacy will grow, rather than recede, as the use of intrusive equipment becomes more readily available." n150 Although *Kyllo* has provided temporary protection against governmental intrusion, using open terms for its bright-line protections ensures that the ruling will last about as long as it takes for disappearing ink to dry. *Kyllo* provides protection today, but will it tomorrow?

n12. Id.

n13. Id. Thermal imagers rely on heat, not light, to create a picture of the outside world. See *Kyllo v. United States*, 533 U.S. 27, 29-30 (2001) [hereinafter *Kyllo VII*]. Thermal imagers

detect infrared radiation, which virtually all objects emit but which is not visible to the naked eye. The imager converts radiation into images based on relative warmth - black is cool, white is hot, shades of gray connote relative differences; in that respect, it operates somewhat like a video camera showing heat images.

Id. Thermal imagers are "off the shelf" military technology that have been in general use for nearly twenty-five years. *Kyllo V*, 190 F.3d at 1044. The device is used for search and rescue and is also utilized by many businesses for a variety of purposes including the detection of roof leaks, steam pipe leaks, cracks in high voltage transmission lines, and overloaded transformers. Id. Several companies market thermal imagers, which are readily available for purchase or rental. Id. They range in price from \$ 15,000 to \$ 35,000. See Petula Dvorak, Fire Chiefs Discuss Equipment Allegation, Wash. Post, Oct. 5, 2001, available at 2001 WL 28362310 (reporting that thermal imagers used by fire departments cost about \$ 15,000 each).

n14. *Kyllo V*, 190 F.3d at 1044.

n15. *Kyllo VII*, 533 U.S. at 30.

n16. Clearly, the Fourth Amendment is implicated by the search of homes of individuals who are not suspected of criminal activity. See, e.g., Melvin Gutterman, A Formulation of the Value and Means Models of the Fourth Amendment in the Age of Technologically Enhanced Surveillance, 39 Syracuse L. Rev. 647, 707 (1988); Lewis R. Katz, In Search of a Fourth Amendment for the Twenty-First Century, 65 Ind. L.J. 549, 559-60 (1990); James J. Tomkovicz, Beyond Secrecy for Secrecy's Sake: Toward an Expanded Vision of the Fourth Amendment

Privacy Province, 36 Hastings L.J. 645, 649 (1985).

n17. *Kyllo V*, 190 F.3d at 1044.

n18. *Id.* Halide lamps are typically used in sports lighting, but also function as a substitute for natural sunlight when used indoors. See Sharon Colley, *Neighborly Night Lights: Ball Fields That Don't Spill the Beams*, Am. City & County, Apr. 30, 2000; Kim Weststead, *Ill-mannered Dog "Rats Out" Victoria Marijuana Grow-Op its Owners Ran*, Can. Press, Sept. 20, 2001, available at 2001 WL 27755013. The use of halide lamps allows the growth of marijuana indoors. See Colley, *supra* note 18; Weststead, *supra* note 18.

n19. *Kyllo V*, 190 F.3d at 1044. The affidavit, which was later found to be false and misleading as it related to *Kyllo's* energy consumption, stated that the amount of electricity used at *Kyllo's* home was typical of indoor marijuana growth and that *Kyllo's* wife, Luanne, had previously been convicted of possession and distribution of an illegal substance. See *United States v. Kyllo*, 37 F.3d 526, 528 (9th Cir. 1994) [hereinafter *Kyllo II*]. The magistrate issued the warrant to search *Kyllo's* home based upon this affidavit. *Kyllo V*, 190 F.3d at 1044.

n34. *Id.* at 1046.

n35. *Kyllo v. United States*, 530 U.S. 1305 (2000) [hereinafter *Kyllo VI*].

n36. 533 U.S. 27 (2001) [hereinafter *Kyllo VII*].

n37. John Bartlett, *Familiar Quotations: a Collection of Passages, Phrases, and Proverbs traced to their Sources in Ancient and Modern Literature* 152 (Justin Kaplan ed., 16th ed. 1992) (quoting Sir Edward Coke); see Matthew L. Zabel, Comment, *A High-Tech Assault on the "Castle": Warrantless Thermal Surveillance of Private Residences and the Fourth Amendment*, 90 Nw. U. L. Rev. 267, 268 (1995).

n38. At least as early as 533 A.D., the home was considered a safe refuge from invasion. See Bartlett, *supra* note 37, at 152 n.2; see also Genesis 19:4-11 (explaining that when two strangers visited Lot in the city of Sodom, a mob approached Lot's home and called out to Lot to bring out the strangers that had sought refuge in his home).

n39. See Nelson B. Lasson, *The History and Development of the Fourth Amendment to the United States Constitution*, in 55 *The Johns Hopkins University Studies in Historical and Political Science* No. 2, at 14 n.6 (1937).

n40. See *id.* at 99-105.

n41. See *id.* at 51-78.

n42. See *Wyman v. James*, 400 U.S. 309, 316 (1971) (noting that the Court has consistently been protective of the privacy of the dwelling); *Mapp v. Ohio*, 367 U.S. 643, 647 (1961) (holding that the Fourth Amendment purposely put the Government under limitations and restraints to ensure the security of the people against all unreasonable searches); *Boyd v. United States*, 116 U.S. 616, 626-30 (1886) (finding that under the laws of England, all invasions of personal property, no matter how miniscule, were a trespass). For other cases discussing the importance of privacy in the home, see *Soldal v. Cook County*, 506 U.S. 56, 62-65 (1992) and *Payton v. New York*, 445 U.S. 573, 585-86 (1980).

n43. See, e.g., *United States v. Karo*, 468 U.S. 705, 717 (1984) (holding that warrantless searches are presumptively unreasonable); *Steagald v. United States*, 451 U.S. 204, 220 (1981) (holding that the Fourth Amendment was intended to protect against the abuses that had occurred in England); *Payton*, 445 U.S. at 586 (holding that searches and seizures of the home without warrant are per se unreasonable).

n44. U.S. Const. amend. IV.

n45. See, e.g., *Segura v. United States*, 468 U.S. 796, 810 (1984); *Payton*, 445 U.S. at 615; *Burdeau v. McDowell*, 256 U.S. 465, 475 (1921).

n46. See, e.g., *Soldal*, 506 U.S. at 64 (holding that the "'principal' object of the [Fourth] Amendment is the protection of privacy") (citing *Warden*, 387 U.S. at 304); *Winston v. Lee*, 470 U.S. 753, 758 (1985) (conveying a natural right to be left alone as inherent in humanity); *United States v. Martinez-Fuerte*, 428 U.S. 543, 561-65 (1976) (stating that private dwellings are afforded the most stringent protections of the Fourth Amendment as compared to automobiles); *Silverman v. United States*, 365 U.S. 505, 511 (1961) (discussing the right to retreat from government intrusion).

n47. When the Fourth Amendment was adopted, "to search" meant "to look over or through for the purpose of finding something; to explore; to examine by inspection; as to search the house for a book; to search the wood for a thief." *Kyllo VII*, 533 U.S. at 33 n.1 (quoting N. Webster, *An American Dictionary of the English Language* 66 (1828) (6th ed. 1989) (emphasis added)).

n48. 389 U.S. 347 (1967) [hereinafter *Katz I*].

n49. *Id.* at 361 (Harlan, J., concurring).

n50. *Oliver v. United States*, 466 U.S. 170, 182-83 (1983).

n51. *Payton*, 445 U.S. at 590.

n52. As a general rule, law enforcement may only intrude on private property by obtaining a search warrant issued by a neutral magistrate based on probable cause. See *Maryland v. Buie*, 494 U.S. 325, 329 (1990); *Karo*, 468 U.S. at 717; *Welsh v. Wisconsin*, 466 U.S. 740, 748-49 (1984); *Steagald*, 451 U.S. at 211-12; *Payton*, 445 U.S. at 586; *Coolidge v. New Hampshire*, 403 U.S. 443, 481 (1971).

n53. A consensual search is one of the specifically established exceptions to the warrant requirement. See *Schneckloth v. Bustamonte*, 412 U.S. 218, 219 (1973) (holding that individual consent could only be ascertained by analyzing all of the circumstances, and need not necessarily comply with the standard definition of voluntariness, meaning that the accused had a right to know of his right to refuse consent to a search). Voluntary consent may be given by the individual whose property is searched, or by a third party who possesses common authority over the premises being searched. See *Illinois v. Rodriguez*, 497 U.S. 177, 181 (1990). Illegal coercion is not established from the failure to inform the arrestee that he could withhold consent. See *United States v. Watson*, 423 U.S. 411, 425 (1976). If consent is given, the police may search property without a warrant. See *United States v. Matlock*, 415 U.S. 164, 171 (1974). The voluntary consent of any joint occupant of a residence to search the premises jointly occupied is valid against the co-occupant, permitting evidence discovered in the search to be used against him at a criminal trial. See *id.* at 171 n.7.

n54. The purpose of the neutral and detached magistrate requirement is to avoid having the inferences required to find probable cause "judged by the officer engaged in the often competitive enterprise of ferreting out crime." *Johnson v. United States*, 333 U.S. 10, 14 (1948). "The history of the use, and not infrequent abuse, of the power to arrest cautions that a relaxation of the fundamental requirements of probable cause would leave law-abiding citizens at the mercy of the officers' whim or caprice." *Wong Sun v. United States*, 371 U.S. 471, 479 (1963) (internal citations omitted).

n55. *Payton*, 445 U.S. at 586-87. Exigent circumstances exist (and thus the warrant requirement is extinguished) when there "is reason to believe that [delaying for a warrant] will allow an escape or increase unreasonably the physical risk to the police or to innocent persons" or will increase the likelihood that evidence will be destroyed. *Id.* at 577 n.7 (quoting *People v. Floyd*, 260 N.E.2d 815, 816 (N.Y. 1970)); see also *Warden, Md. Penitentiary v. Hayden*, 387 U.S. 294, 298 (1967) (holding that neither the entry of the inmate's home, nor the search for him, without a warrant was invalid due to the exigencies of the

situation).

n56. Katz I required "first that a person have exhibited an actual (subjective) expectation of privacy and, second, that the expectation be one that society is prepared to recognize as "reasonable.'" 389 U.S. at 361 (Harlan, J., concurring).

n57. See *Minnesota v. Olson*, 495 U.S. 91, 96-97 (1990) (holding that overnight guests have a legitimate expectation of privacy). But see *Minnesota v. Carter*, 525 U.S. 83, 88 (1998) (finding that guests have no right to standing unless they had a reasonable expectation of privacy); *Rakas v. Illinois*, 439 U.S. 128, 141-48 (1978) (holding that the capacity to claim an expectation depends upon whether the person has a legitimate expectation of privacy).

n58. "Curtilage" is defined as "the land or yard adjoining a house, usually within an enclosure." *Black's Law Dictionary* 389 (7th ed. 1999). "Under the Fourth Amendment, the curtilage is an area usually protected from warrantless searches." *Id.*

n59. Blackstone wrote that "no distant barn, warehouse, or the like are under the same privileges, nor looked upon as a man's castle of defence." William Blackstone, 4 *Commentaries on the Laws of England* (1765-1769) 225 (Univ. of Chicago Press 1979). Blackstone observed, however, that "if the barn, stable, or warehouse, be parcel of the mansion-house, and within the same common fence, though not under the same roof or contiguous, a burglary may be committed therein; for the capital house protects and privileges all its branches and appurtenances, if within the curtilage or homestall." *Id.*

n60. Both a home and the home's curtilage - i.e., "the area outside the home itself but so close to and intimately connected with the home and the activities that normally go on there that it can reasonably be considered part of the home" - are within the scope of the Fourth Amendment's protection. *United States v. Shanks*, 97 F.3d 977, 979 (7th Cir. 1996) (quoting *United States v. Pace*, 898 F.2d 1218, 1228 (7th Cir. 1990)).

n61. 476 U.S. 227 (1986).

n62. *Id.* at 227; see also *Shanks*, 97 F.3d at 979.

n63. In its discussion of the curtilage, the Court groups several areas together that are entitled to less protection than the interior of the home.

While it may be difficult to refine Katz when the search of areas such as telephone booths, automobiles, or even the curtilage and uncovered portions of residences are at issue, in the case of the search of the interior of homes . . . there is a ready criterion, with roots deep in the common law, of the minimal expectation of privacy that exists, and that is acknowledged to be reasonable.

Kyllo VII, 533 U.S. at 34. The preceding statement expressly discounts the curtilage, by comparing one's expectation of privacy within the curtilage to their expectation of privacy within an automobile - one of the least protected areas.

Prior to the *Kyllo* holding, the protection that the curtilage received was based on the expectation of privacy that existed there. In *Florida v. Riley*, 488 U.S. 445 (1989), a search of the curtilage

was found when flight over the curtilage was "sufficiently rare" to lend credibility to assertions that there is a reasonable expectation of privacy against observation, that there is interference with the use or enjoyment of the curtilage, or that intimate details were observed. *Id.* at 451-52.

n64. See, e.g., *United States v. Kyllo*, 190 F.3d 1041, 1046 (9th Cir. 1999) [hereinafter *Kyllo V*] (holding that the defendant did not have a subjective expectation of privacy in the waste heat emitted from his house because he made no attempt to conceal the heat emissions from the lamps needed to grow the marijuana); *United States v. Myers*, 46 F.3d 668, 669 (7th Cir. 1995) (holding that the defendant displayed no subjective expectation of privacy in the heat emitted from his home because he took no steps to contain the heat emissions; in fact, he released the heat through vents on the roof); *United States v. Ford*, 34 F.3d 992, 995 (11th Cir. 1994) (holding that the defendant's actions proved that he did not exhibit a subjective expectation of privacy in the heat emitted from his mobile home). But see *United States v. Cusumano*, 67 F.3d 1497, 1506 (10th Cir. 1995) (holding that the use of a thermal imager constituted an unconstitutional warrantless search).

Each determination of whether a certain property comes with the curtilage of a home, so as to come within the protection of the Fourth Amendment, is distinctive and stands or falls on its own unique set of facts. See *Daughenbaugh v. City of Tiffin*, 150 F.3d 594 (6th Cir. 1998). But a property owner may have a reasonable expectation of privacy even in areas and outbuildings that are some distance from the principal dwelling. See *United States v. Reilly*, 76 F.3d 1271, 1273-74 (2d Cir. 1996) (holding that a cottage 375 feet from a defendant's main residence was within the curtilage). However, some outbuildings may not be within the curtilage and may instead be grouped in the open field category. See *United States v. Van Damme*, 48 F.3d 461, 464-65 (9th Cir. 1995) (holding a greenhouse to be in an open field); see also *United States v. Wright*, 991 F.2d 1182, 1186 (4th Cir. 1993) (holding a barn to be in an open field).

n65. *Karo*, 468 U.S. at 717 (rejecting the use of a beeper to track the movement of objects within the home). But see *United States v. Knotts*, 460 U.S. 276, 284-85 (1983) (holding that the use of a beeper to monitor the movement of objects outside of the home is not violative of the Fourth Amendment).

n66. 468 U.S. 705.

n67. *Id.* at 705.

n68. See *id.* at 715.

n69. *Id.* at 715-16.

n70. Sense-enhancing devices include items such as: electronic tracking devices ("beepers"), aerial searches, thermal infrared imaging, and drug-sniffing canines. See Peter Joseph Bober, *The "Chemical Signature" of the Fourth Amendment: Gas Chromatography/Mass Spectrometry and the War on Drugs*, 8 *Seton Hall Const. L.J.* 75, 90-100 (1997).

n71. See *Dow Chem.*, 476 U.S. at 237 n.4.

n72. There is no reasonable expectation of privacy regarding motel

room conversations that are overheard with unaided ears in the motel room next door. See *United States v. Jackson*, 588 F.2d 1046, 1051-53 (5th Cir. 1979) (holding that there was no difference between using non-electronic devices to eavesdrop and simply maintaining surveillance of the activities). Use of hearing enhancement devices may "raise very different and far more serious questions" than visual enhancement devices when determining the reasonable expectation of privacy of defendants and, consequently, whether a warrant is required. *Dow Chem.*, 476 U.S. at 238-39.

n73. Contrary to government testimony, thermal imagers are capable of "through-the-wall infrared imaging which, when aimed at a wall, can plot details of all the objects behind it. In hostage situations, the police could detect the location of hostages, their captors, weapons and placement of walls, doors, etc. " Mohammed Ahmedullah, No Hiding Place with New Security System, *White House Weekly*, Sept. 18, 2001, *Defense Week Special Edition* (internal citations omitted), available at <http://www.kingpublishing.com/publications/whw/>.

n74. See *Marshall v. United States*, 422 F.2d 185, 189 (5th Cir. 1970) (holding that the use of a flashlight may constitute a search). But see *United States v. Booker*, 461 F.2d 990, 992 (6th Cir. 1972) (holding that no search occurs when a flashlight is used from the lawful vantage point of the front porch).

n75. The binocular/telescope rule is based on the theory that the sense-enhancing capability of the devices merely provides information that could have been otherwise obtained. See *State v. Young*, 867 P.2d 593, 598 n.1 (Wash. 1994). But see *United States v. Taborda*, 635 F.2d 131, 139 (2d Cir. 1980) (holding that the police use of a telescope to identify objects or activities, without which they would not have been able to identify, is a search). Consequently, the rule does not permit enhanced observations that enable an officer to observe objects or activities that could not be observed by the naked eye. In these circumstances, the defendant may have a legitimate expectation of privacy in the objects or activities. See, e.g., *United States v. Kim*, 415 F. Supp. 1252, 1256 (D. Haw. 1976) (holding that a search occurred when FBI agents used an 800 millimeter telescope to observe activities in the defendant's apartment one-quarter mile away); *State v. Kender*, 588 P.2d 447, 450-51 (Haw. 1978) (holding that a search occurred when the officer climbed up the fence on the neighboring defendant's backyard to observe activities that otherwise would have been concealed by a fence and heavy foliage).

n76. Night scopes are essentially a combination of artificial lighting and magnification. See generally *United States v. Ward*, 546 F. Supp. 300, 310 (W.D. Ark. 1982) (holding that there was no Fourth Amendment violation in the mere employment of a telescopic night scope before obtaining warrant); *United States v. Hensel*, 509 F. Supp. 1376, 1384 n.9 (D. Me. 1981); *Newberry v. State*, 421 So. 2d 546, 547 (Fla. Dist. Ct. App. 1982); *State v. Denton*, 387 So. 2d 578, 583-84 (La. 1980).

n77. A canine sniff is usually understood to be the use of a canine's superior sense of tracking odors and scents in a search. See *United States v. Place*, 462 U.S. 696, 707 (1983) (holding that canine sniffs may be used against luggage in a public place). But see *United States v. Thomas*, 757 F.2d 1359, 1366-67 (2d Cir. 1985) (holding that a search by a canine at the door of an apartment constituted a search).

n78. Aerial surveillance is not considered an enhancement that gives rise to a search violating the Fourth Amendment so long as the search occurs from public, navigable airspace and is not conducted in a physically intrusive fashion. See *California v. Ciraolo*, 476 U.S. 207, 213-15 (1986) (holding that a warrantless aerial observation of the curtilage of a home was not unreasonable under the Fourth Amendment); *State v. Myrick*, 688 P.2d 151, 155 (Wash. 1984) (holding that aerial surveillance of open fields at 1500 feet, without the use of visual enhancement, was not unreasonably intrusive). But see *Riley*, 488 U.S. at 451 (suggesting that aerial surveillance might violate the Fourth Amendment if it revealed "intimate details" or caused "excessive noise or other disturbances"); *Dow Chem.*, 476 U.S. at 238-39 (upholding high altitude aerial photographic surveillance by EPA on open fields, but once again suggesting that homes may not be subject to this type of search).

n79. See, e.g., *Brent v. Ashley*, 247 F.3d 1294, 1302-03 (11th Cir. 2001) (holding that strip search and pelvic X-ray examination was a violation of citizen's Fourth Amendment rights); *United States v. Allen*, 337 F. Supp. 1041, 1043 (E.D. Pa. 1972) (holding that using an X-ray machine against a suspect requires a warrant).

n80. See *supra* note 13.

n81. These devices, commercially known as Sentors, are used by federal law enforcement agencies in drug enforcement operations. See *Bober*, *supra* note 70, at 76 n.13. The Sentor is a super vacuum that uses a molecular filter to determine the amount of cocaine, heroin, or methamphetamine present in a given area. *Id.* at 76-77. It is strong enough to detect a particle of cocaine as small as one part per one hundred trillion. *Id.* at 77. Ratio-wise this is like "finding a specific grain of sand on a mile-long beach." *Id.* at 77 n.18.

n82. See *Riley*, 488 U.S. at 451; *Dow Chem.*, 476 U.S. at 239; *Karo*, 468 U.S. at 712; *Brent*, 247 F.3d at 1302-03; *Thomas*, 757 F.2d at 1367; *Taborda*, 635 F.2d at 135; *Marshall*, 422 F.2d at 189; *Kim*, 415 F. Supp. at 1256; *Allen*, 337 F. Supp. at 1043; *Kender*, 588 P.2d at 450-51.

n83. *Kyllo VII*, 533 U.S. at 29.

n84. See, e.g., *United States v. Myers*, 46 F.3d 668 (7th Cir. 1995); *United States v. Robertson*, 39 F.3d 891 (8th Cir. 1994); *United States v. Ford*, 34 F.3d 992 (11th Cir. 1994); *United States v. Pinson*, 24 F.3d 1056 (8th Cir. 1994); *United States v. Olson*, 21 F.3d 847 (8th Cir. 1994); *United States v. Deaner*, 1 F.3d 192 (3d Cir. 1993); *United States v. Feeney*, 984 F.2d 1053 (9th Cir. 1993); *United States v. Field*, 855 F. Supp. 1518 (W.D. Wis. 1994); *United States v. Domitrovich*, 852 F. Supp. 1460 (E.D. Wash. 1994); *United States v. Porco*, 842 F. Supp. 1393 (D. Wyo. 1994); *United States v. Penny-Feeney*, 773 F. Supp. 220 (D. Haw. 1991); *Young*, 867 P.2d at 593.

n85. See *United States v. Cusumano*, 67 F.3d 1497, 1510 (10th Cir. 1995); *United States v. Elkins*, 95 F. Supp. 2d 796, 811 (W.D. Tenn. 2000); *Field*, 855 F. Supp. at 1533; *United States v. Ishmael*, 843 F. Supp. 205, 213 (E.D. Tex. 1994); *Commonwealth v. Gindlesperger*, 743 A.2d 898, 905 (Pa. 1999); *State v. Siegal*, 934 P.2d 176, 180 (Mont. 1997); *Young*, 867 P.2d at 594.

n86. See, e.g., *Robinson*, 62 F.3d at 1330; *Ishmael*, 48 F.3d at 850; *Myers*, 46 F.3d at 668; *Pinson*, 24 F.3d at 1056.

n87. See *California v. Greenwood*, 486 U.S. 35, 37 (1988).

n88. See, e.g., *Myers*, 46 F.3d at 670; *Ford*, 34 F.3d at 997; *Pinson*, 24 F.3d at 1058; *Domitrovich*, 852 F. Supp. at 1474; *Porco*, 842 F. Supp. at 1397; *Penny-Feeney*, 773 F. Supp. at 226; *State v. McKee*, 510 N.W.2d 807, 810 (Wis. Ct. App. 1993).

n89. *Place*, 462 U.S. at 707.

n90. See, e.g., *Robinson*, 62 F.3d at 1330; *Pinson*, 24 F.3d at 1058; *Penny-Feeney*, 773 F. Supp. at 226-27; *McKee*, 510 N.W.2d at 810.

n91. These were generally known as the technology cases. See *Kyllo v.*, 190 F.3d at 1043; *Ford*, 34 F.3d at 996; *Pinson*, 24 F.3d at 1059.

n92. See, e.g., *Robinson*, 62 F.3d at 1330; *Ishmael*, 48 F.3d at 850; *Myers*, 46 F.3d at 668; *Pinson*, 24 F.3d at 1056.

n93. *Ishmael*, 48 F.3d at 855 (quoting *Dow Chem.*, 476 U.S. at 238).

n94. See *supra* notes 85-86, 88, 90-91.

n95. 533 U.S. 27 (2001) [hereinafter *Kyllo VII*].

n96. See John P. Elwood, *What Were They Thinking*, 4 *Green Bag* 2d 365, 370-71 (2001).

n97. See *Dow Chem. Co. v. United States*, 476 U.S. 227, 227 (1986). This is not to say that the Court has historically refused to intervene when devices were used against the home. As early as 1942, the Court had this to say about searches and the Fourth Amendment:

The search of one's home or office no longer requires physical entry for science has brought forth far more effective devices for the invasion of a person's privacy than the direct and obvious methods of oppression which were detested by our forbears and which inspired the Fourth Amendment Whether the search of private quarters is accomplished by placing on the outer walls of the sanctum a detectaphone that transmits to the outside listener the intimate details of a private conversation, or by new methods of photography that penetrate walls or overcome distances, the privacy of the citizen is equally invaded by the Government and intimate personal matters are laid bare to view.

California v. Ciraolo, 476 U.S. 207, 218 n.3 (1986) (citing *Goldman v. United States*, 316 U.S. 129, 139 (1942) (Murphy, J., dissenting)).

n98. See generally *supra* notes 88, 90-91 (citing cases regarding waste heat, canine sniff, and technology).

n99. *Kyllo VII*, 533 U.S. at 34. The Court explained that this holding would provide the same protection that the home had against government intrusion as when the Fourth Amendment was "adopted." *Id.*

n100. This is the *Kyllo* holding as reported by nearly every major news agency. See, e.g., *Court Reins in High-Tech Surveillance Justices Rule that Police Must Have a Warrant Before Using Detection Devices*, *Star Trib.*, June 12, 2001, at 01A, available at 2001 WL 9629297; *Linda Greenhouse, Court Curbs High-Tech Invasions of Home Privacy Justices Also Back After-Hours*, *San Diego Union & Trib.*, June 12, 2001, at A1, available at 2001 WL 6466142; *David G. Savage, Court Says No to Home*

Snooping Law: U.S. Justices Restrict the Use of Heat Sensors and Other High-Tech Spy Devices by Police, L.A. Times, June 12, 2001, at A1, available at 2001 WL 2494823.

n101. David Cole, *Scalia's Kind of Privacy*, The Nation, July 23, 2001, at 6, available at 2001 WL 2132778, at 2.

n102. *Id.* Justice Scalia, the civil-libertarian Justice, joined with ultra-conservative Justice Thomas, and was then joined by three liberal Justices Souter, Ginsberg, and Breyer. *Id.* The dissent is actually written by the most liberal justice, Justice Stevens. *Id.* Historically, Chief Justice Renquist and Justices Scalia, Thomas, O'Connor, and Kennedy have voted together in the area of criminal law and procedure. See Oneill, *infra* note 107.

n103. See *supra* notes 86, 88, 90-91; see also Alan M. Dershowitz, *A Court Term Defined at Its Beginning*, Seattle Post-Intelligencer, July 8, 2001, at D9, available at 2001 WL 3562567.

n104. See Christopher Bannerman, Note, *Forward Looking Infrared Radar and the Fourth Amendment*, 16 QLR 419, 428-43 (1997).

n105. Brief of Amici Curiae of the Liberty Project at 1, *Kyllo v. United States*, 533 U.S. 27 (2001) (No. 99-8508) available at 2001 WL 1706770.

n106. *Kyllo VII*, 533 U.S. at 40.

n107. Marcia Coyle, *As High Court Cases Go, These Were the Sexy Ones*, 23 Nat'l L.J. No. 50, Aug. 6, 2001, at C5; Marcia Coyle, *Taking Charge: An Activist Court Rules on Speech, Immigration, and One Big Election*, 23 Nat'l L.J. No. 50, Aug. 6, 2001, at C1; 2000-2001 Term: Supreme Court Review, 23 Nat'l L.J. No. 50, Aug. 6, 2001, at C1; Timothy P. Oneill, *"Crime Control Five": They Vote Together, Win Together*, 147 Chi. Daily L. Bull. No. 201, Oct. 12, 2001, at 5; NBC Nightly News: *New See-Through Technology Helps Law Enforcement, but Privacy Concerns Arise*, (NBC television broadcast, June 21, 2001) available at 2001 WL 24023270.

n108. This case is misleading in the same sense that most defendants have been misled to believe that their Miranda rights provide unlimited protection. See *Miranda v. Arizona*, 384 U.S. 436, 444 (1966). The Miranda rights require that "prior to any questioning, the person must be warned that he has a right to remain silent, that any statement he does make may be used as evidence against him, and that he has a right to the presence of an attorney, either retained or appointed." *Id.* Of course, there are many exceptions to this rule. See generally *New York v. Quarles*, 467 U.S. 649, 655-56 (1984) (holding that circumstances fall within public safety exception to general requirement, pursuant to or as aid in enforcement of the Federal Constitution's Fifth Amendment privilege against self-incrimination, to give Miranda warnings before conducting custodial interrogation); *Harris v. New York*, 401 U.S. 222, 226 (1971) (holding that otherwise inadmissible statement, taken in violation of the Miranda Rule, may be used to impeach inconsistent testimony); *United States v. Delago*, 397 F. Supp. 708, 712 (D.C.N.Y. 1974) (holding that Miranda was not required when, as a condition of his probation, the defendant was required to promptly and truthfully answer all inquiries directed to him by the probation officer).

n109. The Federal Bureau of Investigations had this to say about

the Kyllo decision: "As a practical matter, the Kyllo case will severely restrict the use of thermal imagers to scan private homes or other premises where there is an expectation of privacy. Such scans now require a search warrant, absent exceptions such as consent or emergency." Supreme Court cases: 2000-2001 term, 1/1/02 FBI L. Enforcement Bull. 22, available at 2002 WL 15329837, at 8.

n110. See Bober, *supra* note 70, at 90-100; see also *supra* notes 75-78.

n111. See *supra* notes 79-81.

n112. The Court again states in Kyllo that the Fourth Amendment draws "a firm line at the entrance to the house," and thereby discounts any area "which does not share the Fourth Amendment sanctity of the home." 533 U.S. at 40. But see *supra* notes 58-60.

n113. Newspapers were quick to point out that thermal imaging could be used against structures not protected by the Fourth Amendment. See Larry Wilson & Warren Spencer, *The Impact of Kyllo: Don't Discard those Thermal Imaging Devices*, 68 Police Chief, Sept. 1, 2001, at 1012, available at 2001 WL 15375038.

n114. This line of thought comports with the Court's previous decisions in *United States v. Karo*, 468 U.S. 705 (1984) and *United States v. Jacobsen*, 466 U.S. 109 (1984), in which the Court found that a search occurs when the government infringes on an area in which an expectation of privacy exists. *Karo*, 468 U.S. at 712; *Jacobsen*, 466 U.S. at 113. This could also provide the protections that the Fourth Amendment envisioned because curtilage and other areas where a person has an expectation of privacy receive protection. See generally *supra* note 60.

n115. 389 U.S. 347 (1967) [hereinafter *Katz I*]. *Katz I* held that courts must determine whether a search is unconstitutional by ascertaining whether the person "exhibited an actual (subjective) expectation of privacy," and whether that expectation is one which society is willing to recognize as reasonable. *Id.* at 361 (Harlan, J., concurring).

n116. However, this application of *Katz I* has previously been used by the Court in *Riley*, *Karo*, and *Dow Chemical*. See *supra* notes 60-65, 78, 97.

n117. *Kyllo VII*, 533 U.S. at 34 (citing *Silverman v. United States*, 365 U.S. 505, 512 (1961)).

n118. The question presented was: Does the use of a thermal imager against the home without a warrant constitute a search? The answer: "Obtaining by sense-enhancing technology any information regarding the interior of the home that could not otherwise have been obtained without physical 'intrusion into a constitutionally protected area,' . . . constitutes a search - at least where (as here) the technology in question is not in the general public use." *Id.*

n119. While the holding seems strong now, it is far from the absolute prohibition that was provided against electronic monitoring in *Karo*. See 468 U.S. at 717.

n120. See *People v. Katz*, 2001 WL 1012114, at 2 n.4 (Mich. App. Sep 4, 2001) [hereinafter *Katz II*] (holding that the police officer's use

of night-vision binoculars to obtain visual images does not constitute a search, as the binoculars might well be in the general public use); *State v. Mordowanec*, 788 A.2d 48, 54-55 (Conn. 2002) (holding that commercial property does not receive protection from search by thermal imagers).

n121. 365 U.S. 505.

n122. *Id.* at 505 (holding that eavesdropping accomplished by means of an electronic device that penetrated the premises occupied by petitioner was a violation of the Fourth Amendment).

n123. See, e.g., *Acker v. United States*, 533 U.S. 913, 913 (2001); *United States v. Depew*, 17 Fed. Appx. 563, 564 (9th Cir. 2001); *United States v. Real Property Located at 15324 Co. Highway E.*, No. 99-3190, 2001 WL 1021587, at 1 (7th Cir. Sep. 4, 2001).

n124. See *supra* note 105.

n125. See *Depew*, 17 Fed. Appx. at 564-65 (holding that under *Kyllo*, a thermal scan is a search).

n126. Given the full life cycle of *Kyllo*, Americans will no longer have an expectation of privacy against any sense-enhancing device previously discussed. The *Kyllo* dissent best argues that the rule's general public use "criteria is somewhat perverse because it seems likely that the threat to privacy will grow, rather than recede, as the use of intrusive equipment becomes more readily available." 533 U.S. at 47 (Stevens, J., dissenting).

n127. The curtilage is compared to telephone booths and automobiles in order to find strength for the interior of the home.

While it may be difficult to refine *Katz* when the search of areas such as telephone booths, automobiles, or even the curtilage and uncovered portions of residences are at issue, in the case of the search of the interior of homes . . . there is a ready criterion, with roots deep in the common law, of the minimal expectation of privacy that exists, and that is acknowledged to be reasonable.

Kyllo VII, 533 U.S. at 34.

n128. While it is true that curtilage was not squarely addressed by *Kyllo*, it is also true that the protections provided by *Kyllo* against the use of sense-enhancing devices only apply to the interior of the home - expressly excluding any protection to those areas outside of that zone. *Id.*

n129. See *Siebert v. Severino*, 256 F.3d 648, 654 (7th Cir. 2001) (holding that there is an expectation of privacy in a barn); *United States v. Wright*, 991 F.2d 1182, 1186 (4th Cir. 1993) (holding that there was a legitimate expectation of privacy inside a barn); *State v. Cada*, 923 P.2d 469, 477 (Idaho Ct. App. 1996) (holding that open view is limited when applied to the curtilage).

n130. This is because the holding only provides protection against sense-enhancing devices for the "interior of the home." *Kyllo* VII, 533 U.S. at 34. But see *State v. Schumacher*, 37 P.3d 6, 11 (Idaho Ct. App. 2001) (holding that the thermal imaging of a barn was an unlawful search).

n131. One must take into account the fact that, prior to the *Kyllo* ruling, using a thermal imager against the home was not considered a search in most jurisdictions. Only then does it actually seem as though the Court provided some real protection for the home against the use of sense-enhancing devices and, indeed, the thermal imager. See *supra* note 86.

n132. This list should include binoculars, night scopes, aerial surveillance, thermal imagers, and Sentors. See *supra* notes 13, 75-76, 78, 81.

n133. The description given is that "sense-enhancing technology [are used to gather] information regarding interior of home that could not otherwise have been obtained without physical 'intrusion into constitutionally protected area.'" *Kyllo VII*, 533 U.S. at 34. A recent slip opinion follows the *Kyllo* opinion analysis that the sense-enhancing "dog sniff" is a search despite the fact that canines are in the general public use. *United States v. Richard*, 2001 WL 1033421, at 6 n.4 (W.D. La. Aug. 29, 2001).

n134. Conversely, perhaps the Court had technological advancements in mind when constructing this opinion. Footnote four of the opinion expressly deals with the possibilities of what the National Law Enforcement and Corrections Technology Center intends to develop: "The ability to 'see' through walls and other opaque barriers is a clear, and scientifically feasible, goal of law enforcement research and development." *Kyllo VII*, 533 U.S. at 37 n.4. The Court mentions, by name, some of the devices that the "rule we adopt must take account of," including "Radar-Based Through-the-Wall Surveillance System, Handheld Ultrasound Through the Wall Surveillance, and a Radar Flashlight that will enable law officers to detect individuals through interior building walls." *Id.* at 37 n.4 (internal citations and quotations omitted).

n135. It should be noted that the Court could, in the future, rule that devices like the Sentor or the X-ray are beyond what could be categorized as sense-enhancing, thereby making the *Kyllo* ruling inapplicable to them.

n136. Perhaps some guidance as to what constitutes general public use is available. Prior Court opinions seem to hinge what constitutes general public use on both availability, see *Dow Chem.*, 476 U.S. at 243 n.4 (Powell, J., dissenting) (finding that a camera used to photograph an industrial complex was a common usage despite the fact that it "cost in excess of \$22,000.00 and is described by the company as the 'finest precision aerial camera available'"), and on use, see *Riley*, 488 U.S. at 451 (holding that when flights over the curtilage are sufficiently rare, then they may not be reasonably anticipated); *Ciraolo*, 476 U.S. at 215 (holding no expectation of privacy exists in the curtilage when the defendant knowingly exposed his backyard "in an age where private and commercial flight in the public airways [are] routine").

Following *Kyllo*, lower courts have followed the availability guidelines. See *Katz II*, 2001 WL 1012114, at 2 n.4 (holding that the police officer's use of "night vision binoculars" to obtain visual images "may very well be in 'general public use' such that their use" does not constitute an illegal search). Using the search terms "search /s general public use" on WestLaw, the phrase "general public use" results in only one opinion - *Kyllo VII*, 533 U.S. at 27.

n137. The right to a reasonable expectation of privacy in the home is long standing. See *Minnesota v. Carter*, 525 U.S. 83, 101 (1998) (Kennedy, J., concurring); *Illinois v. Rodriguez*, 497 U.S. 177, 190 (1990) (Marshall, J., dissenting); *Minnesota v. Olson*, 495 U.S. 91, 96 n.5 (1990); *Florida v. Riley*, 488 U.S. 445, 451 (1989); *California v. Greenwood*, 486 U.S. 35, 41 (1988); *Dow Chem.*, 476 U.S. at 238-39 n.5; *Ciraolo*, 476 U.S. at 211; *Karo*, 468 U.S. at 722 (O'Connor, J., concurring); *Katz I*, 389 U.S. at 360 (Harlan, J., concurring).

n138. Previously, cases that have considered the Fourth Amendment propriety of using enhancements when conducting a search have done so while also considering the petitioner's reasonable expectation of privacy. See generally *Riley*, 488 U.S. at 451; *Greenwood*, 486 U.S. at 41; *Dow Chem.*, 476 U.S. at 238-39 n.5; *Ciraolo*, 476 U.S. at 211; *Karo*, 468 U.S. at 722 (O'Connor, J., concurring); *Katz I*, 389 U.S. at 360 (Harlan, J., concurring).

n139. Will the Court say that *Kyllo* and its progeny are to form the future of searches aided by sense-enhancing devices, much like *Miranda* and its progeny have come to be synonymous with a suspect's right not to be coerced while in custody? If this line of thought is followed with *Kyllo*, as it was with *Miranda*, *Kyllo*, like *Miranda*, will be weakened to such a point that there is nearly an exception for everything it was initially designed to prevent.

n140. Because night scopes (night vision binoculars) can be purchased at most hunting and survival stores, courts have found them to be in the general public use and, in light of *Kyllo*, have held that their use against the home does not constitute a search. See *Katz II*, 2001 WL 1012114, at 2.

n141. This is because the Court directly stated that the rule is designed to protect against sense-enhancing devices that are far more sophisticated than these objects. See *Kyllo VII*, 533 U.S. at 37 n.4; see also *supra* note 134.

n142. See *Katz II*, 2001 WL 1012114, at 2 n.4 (holding that the police officer 's use of "night vision binoculars" to obtain visual images "may very well be "in general public use" such that their use" does not constitute an illegal search).

n143. "The contours of its new rule are uncertain because its protection apparently dissipates as soon as the relevant technology is "in general public use.'" *Kyllo VII*, 533 U.S. at 47 (Stevens, J., dissenting).

n144. Once again, perhaps the *Kyllo* holding is elastic enough for future inventions to be included within the definition of a sense-enhancing device. See *supra* note 134.

n145. Perhaps the most far-reaching question is how long will it be until thermal imagers are considered to be in the general public use, when over thirty-five percent of law enforcement agencies already use thermal imagers, and institutes like the National Law Enforcement and Corrections Technology Center further develop technology and ensure distribution. See *supra* note 73.

n146. This should suggest to most readers that having such loose guidelines is likely to result in the same plethora of differing opinions that were present prior to *Kyllo*. See *supra* note 136. In *Katz II*, the court found that because the petitioner did not raise the

issue of whether or not the use of a thermal imager constituted a search, the issue could not be raised on appeal. 2001 WL 1012114, at 2. In that jurisdiction, the use of a thermal imager did not constitute a search, so the defendant did not even know that its use could be challenged in the initial trial, despite the fact that *Kyllo* was decided between the initial decision and *Katz*'s appeal. *Id.*

n147. In *Dow Chemical*, the Court gave weight to the fact that the photographs at issue were similar to those taken when engaged in the activity of mapmaking, and that anyone "with an airplane and an aerial camera could readily duplicate them." 476 U.S. at 231. One must wonder though, whether an expectation of privacy may hinge on the exception to the rule, rather than his or her likely expectation that their acts constitute knowing exposure and therefore receive no constitutional protection.

n148. "To withdraw protection of this minimum expectation would be to permit police technology to erode the privacy guaranteed by the Fourth Amendment." *Kyllo VII*, 533 U.S. at 34. "The people in their houses, as well as the police, deserve more precision." *Id.* at 39. "The dissent argues that we have injected potential uncertainty into the constitutional analysis by noting that whether or not the technology is in general public use may be a factor We can quite confidently say that thermal imaging is not "routine.'" *Id.* at 39-40 n.6 (internal citations omitted).

n149. 533 U.S. 27 (2001) [hereinafter *Kyllo VII*].

n150. *Id.* at 47 (Stevens, J., dissenting).

NOTE: This email describes the UFO implant removal and research

to date arranged for by Dr. Roger Leir, a podiatrist and UFO researcher. Dr. Leir's web site is at:

<http://www.AlienScalpel.com>

Date sent: Tue, 10 Sep 2002 10:48:28 -0400
From: UFO UpDates - Toronto
<ufoupdates@virtuallystrange.net>
Subject: On The Surgical Removal Of
Alleged Alien Implants - Bourdais

From: Gildas Bourdais <gbourdais@wanadoo.fr>
To: <ufoupdates@virtuallystrange.net>
Date: Tue, 10 Sep 2002 12:40:31 +0200
Subject: Re: On The Surgical Removal Of Alleged Alien Implants

To EBK and the List,

Following my previous messages regarding Dr Leir's surgeries and alleged implants, I thought it would be useful to give a sort of basic summary of the findings, for those interested but lacking information.

Dr Roger K. Leir was subjected repeatedly to strong criticisms when he began talking publicly about his surgeries on alleged alien implants.

One major criticism was, and still is, that he and his colleagues have not written any scientific article, accepted by a reputed scientific review. While this is a serious shortcoming, it also appears that a significant amount of credible information is available about these operations, objects removed, alleged abductees and their personal stories.

Let's try to review briefly some basic information about them.

The surgeries

Here is the list of surgical extractions of alleged implants, performed either by Dr Roger Leir (in the case of foot implants) or by other surgeons with his assistance. This list is drawn from the book of Dr Leir, 'The Aliens and the Scalpel' published in 1998, and from several articles for later operations (see below). For anyone looking for information on the subject, the first thing to do is to buy his book and read it.

It may be ordered from his web site at:

<http://www.alienscalpel.com/>

According to Table 1, page 164 of his book, 8 operations took place

from 1995 to 1998.

First set of 3 surgeries, before NIDS involvement

1) 8-19-95, Patricia. Two implants in left toe, metallic seed, and metallic T-shape

2) 8-19-95, Paul. Left hand, metallic seed (looks like a 'cantaloup' seed)

3) 1-2-96, Babs (F). Left shoulder, 'elemental solid' ball

Second set, sponsored and paid by NIDS

4) 5-18-96, Annie. Left leg, elemental solid ball

5) 5-18-96, Doris. Left leg, elemental solid ball

6) 5-18-96, Don. Left jaw, metallic triangle

7) 1-12-97, Lyla. Left heel, glass sliver (earthly origin, discarded)

8) 8-17-98, Pablo. Left hand, metallic seed (filmed by NBC and aired in February 1999)

Other surgeries, after the publication of the book

9) 2-5-2000, Tim Cullen. Left wrist, metallic seed (case presented at the Laughlin UFO Congress of March 2000 with the presence of Tim Cullen. Reported in the MUFON UFO Journal of May 2000, and at the Mufon Symposium of July 2000. (See the Proceedings of the symposium, available at MUFON).

10) 10-29-2001, stewardess for a major airline. Small lump in the right arm, the size of a pea (case presented at the Laughlin UFO Congress, March 2002. Report in the British UFO Magazine of May 2002. Will be presented at the Leeds International UFO Conference, 20-22 September 2002).

The implants

Two series of tests have been performed in 1998 under the direction of NIDS, more precisely of Colonel John Alexander, at the Los Alamos National Laboratories, and at New Mexico Tech. In his book, his articles and conferences, Roger Leir mentions studies made in other laboratories, but these have not been published yet.

We first have the results of the analysis done at New Mexico Tech in 1996, paid by NIDS and published on its web site, at:

<http://www.nidsci.org/>

In addition to this document, we have the 'letter of opinion' of the metallurgic engineer who did the tests, Mr Paul A. Fuierer. It is not on the NIDS site, but it is reproduced by Dr Roger Leir in his book, with his comments, and on his own web site, at:

<http://aliensscalpel-com/NMTEch-opinion.htm>

It is also on the web site of the Abduction Information Centre (AIC) managed by John Velez, on which we have in addition some critical comments on the New Mexico Tech Analysis, at:

<http://www.virtuallystrange.net/aic/>

As for the analyses done at Los Alamos, it seems that they are presented, rather briefly, and only in the book of Dr Leir, which he published on his own initiative. It seems important to repeat here that, in the initial agreement between NIDS and the Leir-Sims team, it was understood that NIDS would publish a scientific article (according to Leir in his book). But instead of that, in 1996 they pushed Leir to publish rapidly an article in the Mufon UFO Journal (see p 175 of the book). Probably, this did not help to achieve the goal of obtaining a scientific publication.

Incidentally, Jacques Vallée, who is member of the scientific board of NIDS, could have easily obtained the publication of a properly written article in the Journal of Scientific Exploration. He obtained the publication, in April 2001, of a sharp criticism of the Cometa report, written by the french skeptic Claude Maugé, and translated by Vallee.

Why not an article on Dr Leir's implant scientific analyses done in those two laboratories, whatever the conclusion would be?

In his book (paperback edition) Leir recalls that Vallée was present at the meeting with Bigelow and the NIDS scientific board in Las Vegas.

We can also note that the biological findings have not been published at NIDS, although there are biologists on the board.

Articles

For the record, here are the main articles, to be found easily in the UFO litterature.

In the Mufon UFO Journal:

April 1996 (No 336): 'In Seach Of Hard Evidence' by Dr Roger Leir

June 1998 (No 362): 'Alien Implants - A 1998 Update' by Dr Leir

November 1998 (No 367): 'The effects of 'implant' removal discussed by five individuals', by Eve Frances Lorgen

December 1998 (No 368): 'NBC Films Implant Removal', by Dr Leir

May 2000 'implant' Removals Yield Interesting Results', by Dr Leir

Mufon July 2001 Symposium Proceedings: 'Alien abduction - Alien implants. Why ?' by Dr Leir

UFO magazine (US), January 1999: 'NBC Special to air surgical removal of purported implant, by Jack Carlson.

UFO Magazine (GB), May 2002: in the account of the Laughlin UFO Congress, by Graham Birdsall.

Some videos are also available on the surgeries and conferences of Dr Leir.

The summary of the scientific findings

For those who don't want to read any of these articles and documents, let's try to make a very brief summary of the most interesting findings. As seen in the list above, two main kinds of implants were found, metallic, and non-metallic (little balls). In his book, Roger Leir gives his summary of the biological and metallurgical findings (pp 162 to 171).

1) Biological findings

About the metallic objects:

Four produced metallic objects covered by dark, grey, shiny membranes that could not be opened with a surgical blade. This membrane was shown to consist of protein coagulum, hemosiderin, and keratin.

All three of these substances are naturally occurring in the body, but our investigation has shown no record of this combination in the medical literature.

The soft tissues adjacent to the metallic objects underwent analysis, and the findings demonstrated conglomerations of nerve cells and a total lack of inflammatory response'.

About the non-metallic objects:

'Three of the surgeries consisted of the removal of a skin lesion with an attached small BB-sized, greyish-white round ball in the underlying soft tissue. We found solar elastosis, clusters of nerve cells, and either minimal or no inflammation present'. The skin lesion were of the 'scoop-mark' kind.

Dr Leir then lists a series of biological findings, among which:

- All objects were obtained from the left sides of the bodies.
- Almost all of the specimens fluoresced under ultraviolet black light.
- All subjects showed abnormal reactions to procaine local anesthetics (no reactions, or allergic reactions).
- All had a compulsion to absorb a lot of salt.

In addition to that, it is to be noted that all appeared 'normal' according to a PhD psychologist.

2) Metallurgical findings

The main findings being on the internet (see links above, and my previous messages on this List, of September 1 and 5), I will just quote Dr Leir's book, about an interesting description of the T-shaped object (in Patricia's foot): 'The T-shaped object is composed of two small metallic rods. The horizontal portion contains a magnetic iron core that is harder than the

finest carbide steel. A complex layer of elements covers the core, forming a cladding. One portion of this cladding has a cristalline band, which circles the rod. When viewing this rod, as seen in the electronphotomicrograph, it appears to be structured. One end is in the shape of a barb while the opposite end is flat. In the center is a small depression. The shape of this depression conforms exactly to the shape of one end of the vertical rod. The vertical rod contains a similar cladding, but the core is composed of carbon instead of iron and it is magnetoconductive, but not magnetic'.

There are other interesting findings, but it would be too long to list them all.

At least should be mentioned electromagnetic properties, notably on Tim Cullen's implant, when the object was still in place in the body. Dr Leir was assisted in this area by electronic engineer Bob Beckwith, and Greg Avery, Mufon state director for Mouisiana. First, with a simple Gaussmeter, they found a 6 milligauss reading. Then, in spite of some difficulties, they were able to detect 'a pulse reading', which 'showed there was a signal being generated and one being received by the object' (see Mufon 2001 Proceedings, p. 194).

According to Dr Leir, further studies were done "by another world-class laboratory in Texas", which revealed that the main elemental component was iron, and, although it was amorphous, they were amazed to find that it was highly magnetic. They explained to Leir that "we have no such process for accomplishing this feat".

The UFO connection

Eve Frances Lorgen has interviewed five of the persons subjected to surgeries, and she found that "All persons, one male and four females, shared one thing in common:

UFO encounters And Contact With Non-Human Alien Beings (MUFON Journal, Nov. 1998).

The two more recent cases fall in that category as well. Tim Cullen had a close encounter in 1978, when travelling in his car with his wife. He talked about it only twenty years later when he felt his children were old enough to hear about it. I met him and found him very credible.

To conclude this short summary, I suggest that all readers of this List should not to reject this research without serious study.

READER: THE PROBLEM WE IN THE ORGANIZED STALKING TARGET

COMMUNITY ARE TRYING TO CONVEY TO YOU IS THAT THE "REASONABLE SOUNDING" INITIATIVE DESCRIBED BELOW IS **ALSO** BEING APPLIED TO PEOPLE WHO ARE **NOT** COMMITTING ANY OFFENSIVE BEHAVIOUR!

http://www.law.harvard.edu/students/orgs/crcl/vol40_2/lanni.pdf

The community prosecution tactic of targeting individuals and particular houses or businesses for civil enforcement and aggressive prosecution in an attempt to drive them from the neighborhood causes particular concern. One example is the Indianapolis initiative bearing the ominous title Targeting Neighborhood Troublemakers ("TNT"). [154]

Under the program, each district identifies individuals who commit "irritating misdemeanors." [155] When these individuals are arrested for a minor offense, prosecutors pursue higher bail and longer sentences. [156]

Community prosecutors in Indianapolis also regularly lead sweeps in which an inspection team that includes representatives from the fire, zoning, health, and animal control departments visits houses that have drawn complaints and combs the property "looking for any violation [it] can find." [157] Ironically, widespread community participation in pointing out "problem" individuals and properties to be targeted may make these tactics more troubling by raising the specter of mob justice.

America's Abu Ghraib
<http://www.nytimes.com/2004/05/31/opinion/31HERB.html?th>

By BOB HERBERT <mailto:bobherb@nytimes.com>

Published: May 31, 2004

Most Americans were shocked by the sadistic treatment of Iraqi detainees at the Abu Ghraib prison. But we shouldn't have been. Not only are inmates at prisons in the U.S. frequently subjected to similarly grotesque treatment, but Congress passed a law in 1996 to ensure that in most cases they were barred from receiving any financial compensation for the abuse.

We routinely treat prisoners in the United States like animals. We brutalize and degrade them, both men and women. And we have a lousy record when it comes to protecting well-behaved, weak and mentally ill prisoners from the predators surrounding them.

Very few Americans have raised their voices in opposition to our shameful prison policies. And I'm convinced that's primarily because the inmates are viewed as less than human.

Stephen Bright, director of the Southern Center for Human Rights, represented several prisoners in Georgia who sought compensation in the late-1990's for treatment that was remarkably similar to the abuses at Abu Ghraib. An undertaker named Wayne Garner was in charge of the prison system at the time, having been appointed in 1995 by the governor, Zell Miller, who is now a U.S. senator.

Mr. Garner considered himself a tough guy. In a federal lawsuit brought on behalf of the prisoners by the center, he was quoted as saying that while there were some inmates who "truly want to do better . . . there's another 30 to 35 per cent that ain't fit to kill. And I'm going to be there to accommodate them."

On Oct. 23, 1996, officers from the Tactical Squad of the Georgia Department of Corrections raided the inmates' living quarters at Dooly State Prison, a medium-security facility in Unadilla, Ga. This was part of a series of brutal shakedowns at prisons around the state that were designed to show the prisoners that a new and tougher regime was in charge.

What followed, according to the lawsuit, was simply sick. Officers opened cell doors and ordered the inmates, all males, to run outside and strip. With female prison staff members looking on, and at times laughing, several inmates were subjected to extensive and wholly unnecessary body cavity searches. The inmates were ordered to lift their genitals, to squat, to bend over and display themselves, etc.

One inmate who was suspected of being gay was told that if he ever said anything about the way he was being treated, he would be locked up and beaten until he wouldn't "want to be gay anymore." An officer who was staring at another naked inmate said, "I bet you can tap dance." The inmate was forced to dance, and then had his body cavities searched.

An inmate in a dormitory identified as J-2 was slapped in the face and ordered to bend over and show himself to his cellmate. The raiding party apparently found that to be hilarious.

According to the lawsuit, Mr. Garner himself, the commissioner of the Department of Corrections, was present at the Dooly Prison raid.

None of the prisoners named in the lawsuit were accused of any improper behavior during the course of the raid. The suit charged that the inmates' constitutional rights had been violated and sought compensation for the pain, suffering, humiliation and degradation they had been subjected to.

Fat chance.

The Prison Litigation Reform Act <http://tinyurl-com/2p5mt> , designed in part to limit "frivolous" lawsuits by inmates, was passed by Congress and signed into law by Bill Clinton in 1996. It specifically prohibits the awarding of financial compensation to prisoners "for mental or emotional injury while in custody without a prior showing of physical injury."

Without any evidence that they had been seriously physically harmed, the inmates in the Georgia case were out of luck. The courts ruled against them.

This is the policy of the United States of America.

Said Mr. Bright: "Today we are talking about compensating prisoners in Iraq for degrading treatment, as of course we should. But we do not allow compensation for prisoners in the United States who suffer the same kind of degradation and humiliation."

The message with regard to the treatment of prisoners in the U.S. has been clear for years: Treat them any way you'd like. They're just animals.

The treatment of the detainees in Iraq was far from an aberration. They, too, were treated like animals, which was simply a logical extension of the way we treat prisoners here at home.

GOVERNMENT DOCUMENT CONFIRMS
GULF WAR VETERANS WERE BECOMING VIOLENT:

DECORATED GULF WAR VETERAN
TO BE EXECUTED MARCH 18, 2003.

The American Gulf War Veterans Association has obtained documentation confirming that the Senate Veterans' Affairs Committee, chaired by John D. Rockefeller IV (D-WV), had knowledge as early as 1993 that Gulf War veterans were becoming violent. This information is considered to be critical with respect to our veterans again being placed in harm's way.

This also comes at a time when according to The Guardian newspaper:
(www.guardian.co.uk/uslatest/story/0,1282,-2485659,00.html)

"With another war with Iraq looming, the federal government is poised to execute a decorated Gulf War veteran who claims severe brain damage from his exposure to Iraqi nerve gas led him to kill. Unless President Bush or the U.S. Supreme Court intervenes, Louis Jones, Jr. WAS executed by lethal injection Tuesday, March 18, 2003, at the U.S. Penitentiary near Terre Haute, Indiana. Jones has asked the president to commute his death sentence to life without parole, citing what he says is evidence he suffered severe, personality-altering brain damage from exposure to sarin nerve gas in March 1991, after the Gulf War ended.

Jones' attorney, Timothy Floyd, said his client's exposure to the gas, his decorated military career (Army Ranger 23 years) and lack of prior criminal record make him different than the other 23 inmates on federal death row. He said severe brain damage from the nerve gas made him prone to violent outbursts. "It's sort of a mystery, but the answer to it is what happened to him over there in Iraq."

The AGWVA has received "after action reports" confirming that troops were exposed to nerve gas and chemicals and testimony obtained that the order was received from Schwartzkopf's Central Command to detonate the 100 hundred bunkers (each the size of a football field) in a complex called Khamisiyah. In December 2000, the Pentagon informed Jones that he, along with about 130,000 other soldiers may have been exposed to low levels of nerve gas wafting from a weapons depot that troops had destroyed near the southern Iraqi city of Khamisiyah.

Evidence supporting the "violence" that Gulf War vets are experiencing is found in "Senate Hearing 103-647 entitled "Persian Gulf War Illnesses: Are We Treating Veterans Right?" The Veterans Affairs hearing quotes former Senator Don Riegle, (D-MI), as saying:

"A number of months ago, several Persian Gulf War veterans came to me from Michigan to complain about the lack of response to serious medical problems they were experiencing of the type that Senator Campbell referred to. Their symptoms include muscle and joint pain, fatigue, bleeding gums, rashes, sores, stomach pains, bleeding from the rectum, respiratory problems, hair loss, headaches, memory loss, night sweats, insomnia, and also mood swings where people, in some instances, would get very angry. By that, I mean,

they would experience periods of violence which were way out of the pattern of their behavior before they went into the service."

Dr. Robert Haley, an epidemiologist with the Southwestern Medical School, Dallas, says: "There is now a compelling involuntary link between Mr. Jones' neutotoxic war injury and his inexplicable crime," he wrote in a letter to Floyd.

Those who sat on the Veterans Affairs Committee, November 16, 1993 and are aware of this testimony are:

John D. Rockefeller IV, West Virginia (Chairman
Dennis DeConcini, Arizona
Bob Graham, Florida
Daniel K. Akaka, Hawaii
Thomas A. Daschele, South Dakota
Ben Nighthorse Campbell, Colorado
Frank H. Murkowski, Alaska
Strom Thurmond, South Carolina
Alan K. Simpson, Wyoming
Arlen Specter, Pennsylvania
James A. Jeffords, Vermont

The AGWVA encourages people to contact the President of the United States about this decision and to ask that he consider life without parole.

###

Traumatic Distress Among Support-Seeking Female Victims of Stalking

Jan H. Kamphuis, Ph.D.

Paul M.G. Emmelkamp, Ph.D.

Objective: The authors examined the nature and prevalence of stalking behaviors, victims' coping responses, and the psychomedical impact of stalking on its victims.

Method: Widely accepted self-report measures, including the 12-item General Health Questionnaire and the Impact of Event Scale, were used to assess characteristics of the stalking history and its outcome in terms of general psychomedical distress and posttraumatic stress in a community study group of 201 female stalking victims.

Results: The majority of the victims had undergone multiple forms of harassment, including threats of violence in 74% (N=148) and actual violence in 55% (N=111). More than half of the victims met the criterion for clinically significant pathology on the General Health Questionnaire. Stalking often yielded substantial post-traumatic stress symptoms, commensurate with levels found in other studies of traumatized subjects.

Conclusions: Support-seeking female stalking victims experience pervasive and persistent threat and intrusion; these experiences lead to high levels of psychological morbidity.

(*Am J Psychiatry* 2001; 158:795–798)

Stalking can be defined as the willful, malicious, and repeated following or harassing of another person that threatens his or her safety (1). The most common form of stalking involves men stalking women with whom they had been sexually intimate (2). We are aware of only three studies to date that have specifically investigated the psychosocial consequences of stalking for its victims (3–5). Pathé and Mullen (3) found evidence of substantial depression, anxiety, and traumatic symptoms among victims of stalking in Australia. On the basis of a nonstandardized self-report instrument, 37% of the respondents in this study qualified for a diagnosis of posttraumatic stress disorder (PTSD). A national survey in the United States among 145 stalking victims (4) indicated negative personality changes as a result of stalking; increases in caution, suspiciousness, anxiety, and aggression were most frequently reported. Finally, a study of 36 female undergraduate stalking victims (5) revealed significant posttraumatic stress symptoms. However, inferences from these studies should be made with caution, given the nature and size of the groups studied and the use of unvalidated measures to index psychological distress (6).

The goal of the present report is to contribute to this body of evidence while remedying some of the listed shortcomings of the previous studies. Specifically, we address the following questions: 1) What are the demographic characteristics of stalkers and their victims? 2) What is the nature and prevalence of specific stalking behaviors? 3) What do victims do to counteract or cope with being stalked? 4) What is the impact of stalking on its vic-

tims in terms of general health and posttraumatic stress, and how do these effects compare with the impact of other traumatic events?

Method

Study Group

The potential study group consisted of 594 members of the Dutch *Stichting Anti-Stalking* (Antistalking Foundation) who were given questionnaire booklets. Two hundred fifty-five (43%) of the 594 subjects returned their questionnaire booklets. Twenty of these respondents were excluded for different reasons: six had not been stalked, four were unable to complete the questionnaires because of emotional distress or physical or intellectual impairment, seven respondents expressed very unusual or blatant paranoid ideation in their comments on the booklet, and three returned their questionnaires unanswered or unintelligible. Of the remaining 235 respondents, 201 were women; given this preponderance of female subjects, these were selected for inclusion in the study.

Procedure

Participants were invited through a newsletter of the Antistalking Foundation to participate in a study sponsored by the University of Amsterdam. A precondition for contacting the members of the Antistalking Foundation was that the names and addresses of the respondents would never be revealed to the university, which precluded the traditional formal informed consent procedure. Instead, a letter signed by both the Antistalking Foundation and the principal investigators (J.H.K. and P.M.G.E.) detailed the nature and purpose of the study, with a request to return the questionnaire booklet in an enclosed postage-free envelope. Moreover, it was explicitly stated that participation was entirely voluntary and that anonymity was guaranteed.

TABLE 1. Types of Repeatedly Experienced Stalking Behavior Reported by 201 Female Victims of Stalking

Stalking Behavior	Respondents Who Reported Repeatedly Experiencing Behavior	
	N	%
Made unwelcome phone calls	178	89
Involved others	165	82
Spread rumors and lies	164	82
Pestered at work or home	159	79
Followed on street	150	75
Made unwelcome visits	149	74
Threatened violence	148	74
Sent unwelcome mail	141	70
Falsely gained information	131	65
Damaged property	129	64
Made false charges	91	45
Used violence	111	55
Ordered items and charged them to victim's account	46	23
Smeared home	38	19
Stalked by means of the Internet	4	2
Other	80	40

Respondents were given the Meloy and Gothard definition of stalking (1) and asked whether they had repeatedly experienced instances of specific stalking behaviors. Inclusion of responses was based on endorsement of multiple repeated stalking behaviors and an affirmative response to the stated definition.

Measures

General health: the General Health Questionnaire. The 12-item General Health Questionnaire (7) was used to obtain an overall index of physical and psychological symptoms. The respondent is asked to rate the extent to which she experienced 12 specific symptoms during the past week on a 4-point Likert scale on which 1=not at all, 2=same as usual, 3=rather more than usual, and 4=more than usual. The General Health Questionnaire allows for the derivation of an index of a "case" criterion, i.e., a cutoff for a level of clinically significant pathology. A frequently used (and nationally tested) normative cutoff is a score of 3 or greater (7). The internal consistency of the General Health Questionnaire in the present group was high ($\alpha=0.92$).

Trauma-related symptoms: the Impact of Event Scale. To measure the changes in trauma-related symptoms, we used a Dutch adaptation of the Impact of Event Scale (8), which consists of 15 items measuring two aspects of PTSD: intrusions of images and thoughts (six items) and avoidance behavior (seven items). Participants indicated how frequently they had experienced each symptom in the past 7 days. They rated their responses on a 4-point scale that ranged from not at all to often. The Impact of Event Scale is a widely used instrument that has shown favorable psychometric properties. In the present group, the Impact of Event Scale and its intrusion and avoidance subscales obtained high internal consistencies ($\alpha=0.89$, $\alpha=0.86$, and $\alpha=0.78$, respectively).

Stalking characteristics. A 21-item questionnaire was specifically developed for the present study to document demographic information about the respondents and their stalkers as well as objective and subjective characteristics of the history of stalking. This questionnaire included items concerning the nature and duration of stalking, consequences of stalking in terms of changes in lifestyle, and the nature of the previous relationship between victim and stalker, if any.

Results

Demographic Characteristics of Respondents and Their Stalkers

Of the 201 female respondents, 162 (81%) experienced ongoing stalking. The mean age of the respondents was 43.3 years ($SD=10.1$, range=20–70). Fifty-three respondents (26%) were married and/or living with their partner, and 145 (72%) were either unmarried, divorced, or widowed. Information on marital status was missing for three respondents. As reported by the victims, 179 (89%) of the stalkers were male, 11 (5%) were female, and the gender of five (2%) was not reported; six respondents reported multiple stalkers (such as neighbors or multiple family members). The mean age of the stalkers was 41.9 ($SD=11.0$, range=19–80). Forty-three (21%) of the stalkers were married and/or living with their partner when the stalking started, and 149 were either unmarried, divorced or widowed. Data were missing on the marital status of nine stalkers. In 11 cases women were stalked by female stalkers. Four cases of stalking grew out of professional contacts. In 147 (73%) of the cases the stalkers were ex-partners of the victims.

Nature and Prevalence of Specific Stalking Behaviors

The median period of time the stalking continued was 38 months; 143 (71%) of the respondents reported that they had been stalked for 2 years or more. On a 1–5 scale, respondents rated their fear for their life as 3.77 ($SD=1.42$), level of powerlessness as 4.60 ($SD=0.77$), and perception of threat as 4.75 ($SD=0.70$). Table 1 shows the frequency of various stalking behaviors respondents experienced. Most victims were exposed to a large range of stalking behaviors: more than half of the respondents had been stalked in 10 or more different ways. Threats of violence were more likely when there had been a previous intimate relationship between stalker and victim (odds ratio=2.0, $p<0.05$).

Means of Coping

One hundred ninety-five (97%) of the respondents reported fear as a result of stalking, and 177 (88%) reported feeling that their physical safety was threatened. The majority of stalking victims had sought legal counsel ($N=139$, 69%), changed their phone numbers ($N=125$, 62%) and daily travel routes ($N=125$, 62%), avoided going out of their houses ($N=111$, 55%), and increased their home security ($N=103$, 51%). Sixty (30%) of the victims changed addresses within cities or moved to another city, and 34 (17%) tried both; 46 victims (23%) stopped work or school out of fear of being harassed by their stalker.

The Impact of Stalking

The respondents' mean score on the General Health Questionnaire was 4.45 ($SD=3.90$), and 119 (59%) of the respondents reported a clinically significant level of psycho-

TABLE 2. Impact of Event Scale Scores of Female Victims of Stalking in the Present Study and Subjects Who Reported Other Types of Trauma in Other Studies

Study	Year	N	Trauma	Score on Impact of Event Scale					
				Intrusion Subscale		Avoidance Subscale		Total	
				Mean	SD	Mean	SD	Mean	SD
Present study	2001	201	Stalking	18.0	7.9	18.2	8.6	39.7	17.0
Brom et al. (9) ^a	1993	112	Violence, acute bereavement, traffic accident	24.5	5.5	19.4	8.8	48.4	12.4
Brom et al. (10) ^b	1989	83	Traffic accident	9.3	5.9	7.2	5.7	17.4	11.3

^a Subjects were diagnosed as having posttraumatic stress disorder.

^b Subjects were interviewed 1 month after the accident.

^c Data from a forensic sample obtained from the Amsterdam police department.

medical symptoms, as measured by a score of 3 or higher. With regard to posttraumatic stress, the respondents' mean score on the Impact of Event Scale was 39.7 (SD=17.0), and their scores on the subscales for intrusion and avoidance were 18.0 (SD=7.9) and 18.2 (SD=8.6), respectively. Table 2 compares the Impact of Event Scale scores of the subjects in the present study with scores from other studies of formally diagnosed PTSD patients and nonclinical samples (9–11). All of the studies used the Dutch version of the Impact of Event Scale (8). As can be seen, the level of the Impact of Event Scale trauma symptoms of the stalking victims was comparable to those reported in samples of victims of generally recognized traumata (9–11). Only the Impact of Event Scale scores of the sample of diagnosed PTSD patients who had experienced acts of violence, acute bereavement, or traffic accidents (9) were higher than the scores of our group of stalking victims. No significant differences were observed on the General Health Questionnaire or Impact of Event Scale scores between victims whose stalking grew out of a former intimate relationship and those with other types of previous relationships.

Discussion

To our knowledge, this is the first large-scale study among a support-seeking group of female stalking victims documenting the impact of stalking by means of standardized outcome measures. Our findings indicate that the experience of being stalked often resulted in substantial distress and psychiatric morbidity. To illustrate, the proportion of stalking victims who met the General Health Questionnaire caseness criterion was very similar to the proportion recently reported among victims of the Boeing 737-2D6C crash in Coventry (12). The fact that the level of traumatic complaints among this group of stalking victims was similar to that among groups of patients with PTSD suggests that many victims of stalking suffer from clinical or subclinical manifestations of PTSD.

The present group of victims was exposed to a large range of intrusive following, unwelcome communication,

and various other forms of harassment. This finding calls attention to the severity of the threat and intrusion experienced by victims even in mostly nonforensic cases. (At the time of the study, stalking in itself was not a criminal offense.) Nearly three-quarters of the victims were threatened with violence; violence was actually used against half of the women. In most respects, the characteristics of stalking and the lifestyle changes made by the victims in our Dutch study group are strikingly similar to the ones reported in a U.S. study (4) and an Australian study (3). The overall conclusion has to be that being stalked is associated with severe and protracted suffering.

Some limitations of this study deserve comment. First, as already noted, our respondents were a self-selected group of support-seeking female victims of stalking, which likely skews the reported distress to the more severe end of the spectrum. Further studies are needed to investigate whether the psychological distress experienced by self-referred stalking victims (as presented in studies thus far) differs in nature and magnitude from that in the community at large or among forensic samples. Second, without data about victims' premorbid functioning and detailed histories of other life events or traumata, one cannot be too definite in attributing the victims' current level of functioning to the impact of stalking on their lives. Finally, a mailing of self-report instruments invites some problems particular to the research field of stalking. One cannot entirely rule out that nonstalked individuals with paranoid features or so-called false victimization syndromes (13) erroneously reported stalking, but it seems unlikely that this substantially affected the present findings. In general, it is estimated that less than 2% of the self-reported stalking victims represent cases of false victimization syndromes (2).

Received Dec. 15, 1999; revisions received June 27 and Oct. 31, 2000; accepted Nov. 16, 2000. From the Department of Clinical Psychology, University of Amsterdam. The *American Psychologist* is the official journal of the American Psychological Association and, as such, contains archival documents. It also publishes articles on current issues in psychology as well as empirical, theoretical, and practical articles on broad aspects of psychology. Manuscripts must adhere to the instructions on reference citations, preparation of tables and figures, manuscript format, etc., as described in the *Publication Manual of the American Psychological Association* (2nd ed.). Manuscripts that do not conform to the style set forth in the *Manual* will be returned for revision. When in doubt about practices of the Journal, authors should examine a recent issue.

Articles under consideration or accepted by another periodical of general circulation are not acceptable. Also, articles accepted for publication by this Journal may not be reprinted elsewhere without APA permission. Comments should be submitted no later than two months from the date of the issue containing an article on which comment is made in order to ensure timeliness. Submit manuscripts in triplicate, accompanied by a 100-120-word abstract, to Kenneth B. Little, American Psychological Association, 1200 Seventeenth Street, N.W., Washington, D.C. 20036.

Statements contained in the *American Psychologist* are the personal views of the author and do not constitute APA policy unless so indicated. APA reserves the right to edit all copy and to refuse ads that are not in consonance with the principles of Title VII of the Civil Rights Act of 1964 (Equal Employment Opportunity).

Written permission must be obtained from the APA for copying or reprinting text of more than 500 words, tables, or figures. Address requests to the Permissions Office.

Victor Frankenstein surgically fathered the famous fictional monster, but the fiend was conceptually mothered if not physically spawned by electricity in the form of lightning from the heavens. Perhaps unwittingly, perhaps intuitively, author Mary Shelley (1831) touched a deep truth in the maternal metaphor: Life did originate from electrical discharges into the primeval fog. Indeed, life continues to preserve in all of its earthly forms from the most primitive cell to the most complex organism an elemental dependence on electrical phenomena. Understandably, the curiosity of the scientist about the electrobiological goings-on of the earth's flora and fauna is shared by the layman. A large popular literature is accumulating and embraces experiments and anecdotes that range from the ostensibly respectable to the seemingly bizarre. Recently published texts by Tompkins and Bird (1973) and by Burr (1972, 1973) are not only exemplars of the literature but are rich sources of reference materials. One reads, for example, that plants have nervous systems that yield differing electrical signals on "stimulation" by *kind* or *malevolent thoughts* of human beings (Backster, 1968). One also reads that many Soviet scientists are giving credence and careful study to ESP and related phenomena, not in defiance of Marxian dictates of materialism but quite in keeping with them. The Soviets are championing earlier theoretical notions of Georges Lakhovsky (1934) to the effect that each plant or animal cell is an oscillatory system capable of transmitting and receiving high-frequency electromagnetic energy over a distance. While affirming that electrical events are

This article is based on materials presented in a seminar to the faculties of Psychology and Engineering at the University of Utah (Salt Lake City, Utah) on August 21, 1974. The author's research program is supported by the Veterans Administration and by U.S. Public Health Service Grant FD00650. Acknowledged in the preparation of the manuscript are E. L. Wike and C. L. Sheridan, for a critical reading; Kay Wahl, for artwork; and Lynn Bruetsch and Virginia Florez, for typing. Below image gives the description of the successful modulation. (Note that the fidelity of current-day voice to skull transmission is much higher, after three-plus decades of apparent development.):

water, for example, in carbon-impregnated plastic and in crumpled sheets of aluminum foil. Even subjects who cannot hear microwaves when directly radiated by them can readily perceive clicking sounds when a piece of energy-absorbing material is interposed between the head and a radiator of pulsed microwave energy. Oddly enough, the mass of the interposed material does not seem to be too critical; I successively used smaller and smaller pieces of material as sonic transducers until it was necessary to impale tiny pieces on a toothpick, yet the clicking sounds induced in the material by microwave pulses were clearly audible to me.

The demonstration of sonic transduction of microwave energy by materials lacking in water lessens the likelihood that a thermohydraulic principle is operating in human perception of the energy. Nonetheless, some form of thermoacoustic transduction probably underlies perception. If so, it is clear that simple heating as such is not a sufficient basis for the Frey effect; the requirement for pulsing of radiations appears to implicate a thermodynamic principle. Frey and Messenger (1973) demonstrated and Guy, Chou, Lin, and Christensen (1975) confirmed that a microwave pulse with a slow rise time is ineffective in producing an auditory response; only if the rise time is short, resulting in effect in a square wave with respect to the leading edge of the envelope of radiated radio-frequency energy, does the auditory response occur. Thus, the rate of change (the first derivative) of the wave form of the pulse is a critical factor in perception. Given a thermodynamic interpretation, it would follow that information can be encoded in the energy and "communicated" to the "listener." Communication has in fact been demonstrated. A. Guy (Note 1), a skilled telegrapher, arranged for his father, a retired railroad telegrapher, to operate a key, each closure and opening of which resulted in radiation of a pulse of microwave energy. By directing the radiations at his own head, complex messages via the Continental Morse Code were readily received by Guy. Sharp and Grove (Note 2) found that appropriate modulation of microwave energy can result in direct "wireless" and "receiverless" communication of speech. They recorded by voice on tape each of the single-syllable words for digits between 1 and 10. The electrical sine-wave analogs of each word were then processed so that each time a sine wave crossed zero reference in the negative direction, a brief pulse of microwave energy was trig-

gered. By radiating themselves with these "voice-modulated" microwaves, Sharp and Grove were readily able to hear, identify, and distinguish among the 9 words. The sounds heard were not unlike those emitted by persons with artificial larynxes. Communication of more complex words and of sentences was not attempted because the averaged densities of energy required to transmit longer messages would approach the current 10 mW/cm² limit of safe exposure. The capability of communicating directly with a human being by "receiverless radio" has obvious potentialities both within and without the clinic. But the hotly debated and unresolved question of how much microwave radiation a human being can safely be exposed to will probably forestall applications within the near future.

The U.S. limit of 10 mW/cm² is actually an order of magnitude below the density that many investigators believe to be near the threshold for thermal hazards (Schwan, 1970). There are two camps of investigators in the United States, however, who believe that the limit is not sufficiently stringent. In the first camp of conservatives are those who accept the Soviet's belief that there are hazardous effects unrelated to heating from chronic exposures to fields of low density (< 1 mW/cm²); some agree with Milton Zaret (1974), a New York ophthalmologist, who holds that severely debilitating subcapsular lesions of the eyes may develop years, even decades, after exposure to weak microwave fields. Others tend to reject the notion that weak microwave fields produce this anomalous cataract, because of lack of substantiating evidence from the clinic or the laboratory (Appleton & Hirsch, 1975). But these conservatives are possessed of a vague unease simply because the Soviet's limit of continuous permissible exposure is three orders of magnitude below that of the United States.³

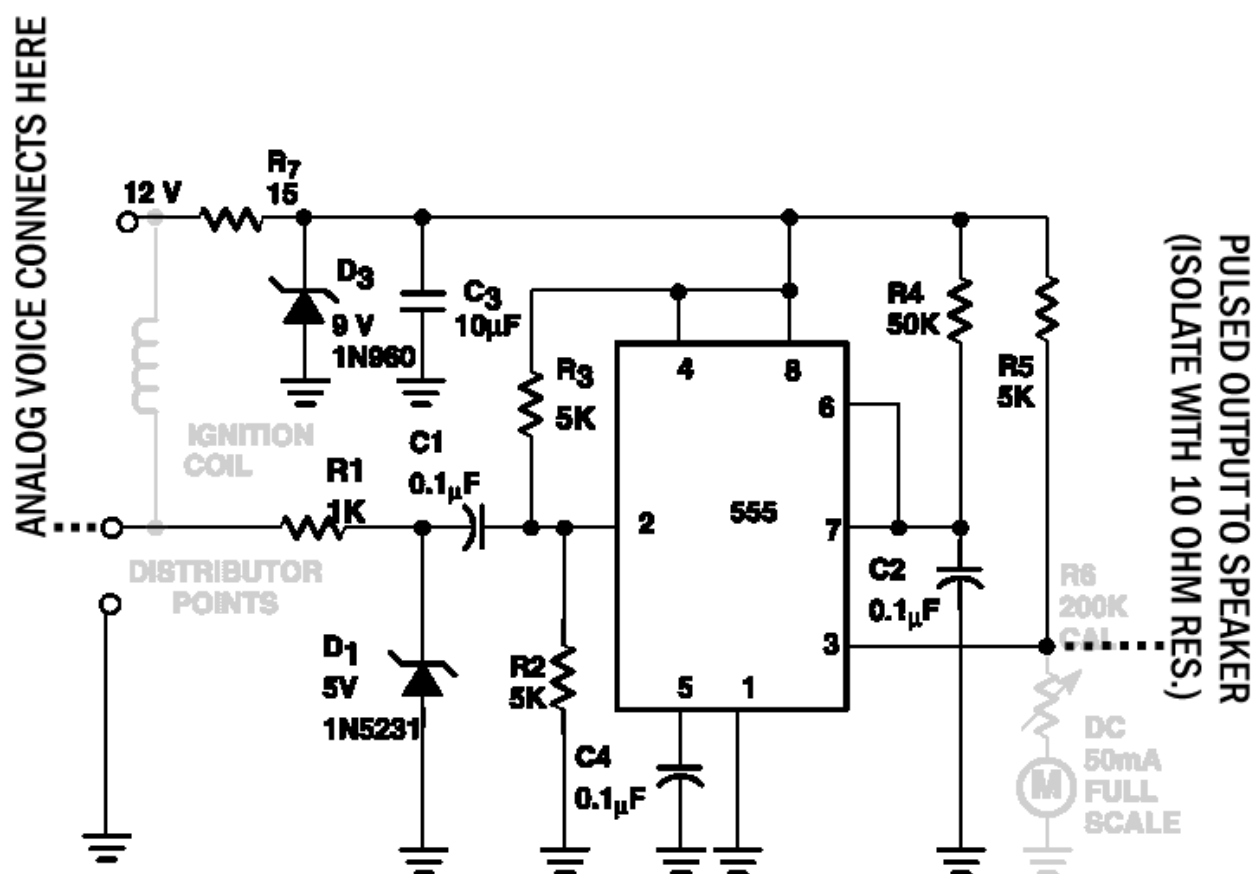

The other camp of conservatives tends to reject the possibility of hazardous nonthermal effects,

³ The Soviet's exposure limit of 10 μ W/cm² is three orders of magnitude below the exposure limit in the United States, but a different, that is, *emission*, limit holds for microwave ovens purchased for use in the American kitchen. In the United States at the present time, a newly purchased microwave oven may not emit radiation at a density greater than 5 mW/cm² as measured at a distance of 5 cm from the oven's surface. A user who stands 1 m from an oven that emits energy at the maximum permissible quantity would probably be exposed to a density of only a few microwatts per square centimeter—this is because electromagnetic energy when radiated from a point source attenuates markedly as it propagates through space.

Below image illustrates Dr. Joseph Sharp's voice to skull modulation method described above in the American Psychologist journal article:

Below image shows a way to demonstrate Dr. Joseph Sharp's voice to skull modulation method, converting speech or music to a string of pulses. In Sharp's experiment, the pulses were microwave signals, similar to radar, but the demo circuit below puts out simple DC pulses which can be fed to a speaker. It emits no microwave signals and is totally safe.

US Electromagnetic Weapons and Human Rights

By Peter Phillips, Lew Brown and Bridget Thornton

This research explores the current capabilities of the US military to use electromagnetic (EMF) devices to harass, intimidate, and kill individuals and the continuing possibilities of violations of human rights by the testing and deployment of these weapons. To establish historical precedent in the US for such acts, we document long-term human rights and freedom of thought violations by US military/intelligence organizations. Additionally, we explore contemporary evidence of on-going government research in EMF weapons technologies and examine the potentialities of continuing human rights abuses.

In the 1950s and 60s the CIA began work to find means for influencing human cognition, emotion and behavior. Through the use of the psychological understanding of the human being as a social animal and the ability to manipulate a subject's environment through isolation, drugs and hypnosis, US funded scientists have long searched for better means of controlling human behavior. This research has included the use of wireless directed electromagnetic energy under the heading of "Information Warfare" and "Non Lethal Weapons." New technological capabilities have been developed in black budget projects¹ over the last few decades— including the ability to influence human emotion, disrupt thought, and present excruciating pain through the manipulation of magnetic fields. The US military and intelligence agencies have at their disposal frightful new weapons, weapons that have likely already been covertly used and/or tested on humans, both here and abroad, and which could be directed against the public in the event of mass protests or civil disturbance.

Human Rights belong to people collectively. To believe in rights for some and not others is a denial of the humanness of people worldwide. Yet, denial is exactly what Congress and George W. Bush did with the signing of the Military Commission Act of 2006. The new official US policy is that torture and suspension of due process are acceptable for anyone the president deems to be a terrorist or supporter. This act is the overt denial of the inalienable rights of human beings propagated in our Declaration of Independence and the Universal Declaration of Human Rights. More so, US actions declared to the world that the US suspends human rights for those it believes are evil.

The precious words, "We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain unalienable Rights, that among these are Life, Liberty and the pursuit of Happiness," did not declare that only some men (and women) possess unalienable rights. Our independence was founded on the understanding that all men and women are recognized by this nation as having innate rights derived by their humanity.

Likewise, the Universal Declaration of Human Rights, created by the United Nations in 1948, signed and ratified by the US Congress, specifies in its preamble that "recognition of the inherent dignity and of the equal and inalienable rights of all members of the human family is the foundation of

¹ Black budgets are government funded projects that are classified/secret to Congress and the American people. For an in-depth analysis on the topic, see Weiner, Tim, *Blank Check: The Pentagon's Black Budget*, Warner: 1990.

freedom, justice and peace in the world.”

The Universal Declaration of Human Rights has been a guide for international law for most of six decades, and as such binds the United States to its general principles. Article 10 states that “everyone is entitled to full equality, to a fair and public hearing by an independent and impartial tribunal, in the determination of his rights and obligations and of any criminal charge against him,” and Article 5 specifically prohibits torture or cruel, inhuman or degrading treatment or punishment. Both of these basic human rights have been superceded by the passage the of Military Commissions Act of 2006.

Additionally, the Universal Declaration of Human rights declares that everyone has the right to freedom of thought and freedom of expression and opinion. This means that humans have the inalienable right to be able to freely think their own thoughts and discover their own truths. This paper addresses this most fundamental human right and explores the pending threats to individual freedom of thought posed by new EMF weapons technologies.

Freedom of thought or cognitive liberty is the natural human right of each person to be secure in their ability to perceive the world to the best of their ability. To have true cognitive liberty in a world as complex as ours would mean that first we must have access to truthful and unbiased information about the actions of others and the general state of the world. The Center for Cognitive Liberties defines this as “the right of each individual to think independently and autonomously, to use the full spectrum of his or her mind, and to engage in multiple modes of thought.”² Without accurate representations we cannot make independently informed choices. It is imperative that the human body and mind be considered sacrosanct. To invade a person’s body without their consent is an egregious human rights crime.

The circumstance may soon arrive in which anti-war or human rights protesters suddenly feel a burning sensation akin to touching a hot skillet over their entire body. Simultaneously they may hear terrifying nauseating screaming, which while not produced externally, fills their brains with overwhelming disruption. Not only are both phenomena currently possible, but designs for more powerful EMF technologies receive continuous funding from the US Government.

We are in a time of extremism, permanent war, and the unilateral manifestation of ethnocentrism and power by a cabal of people in the US government. These power elites have been in operation for decades and are set on nothing less than the total US military domination of the world. They defy the foundational values of the American people to achieve their ends. This is not a new phenomenon. The repression of human rights has been present within the US Government throughout our history.³

A long thread of sociological research documents the existence of a dominant ruling class in the US that sets policy and determines national political priorities. The American ruling class is complex and inter-competitive, maintaining itself through interacting families of high social standing with

² See the Center for Cognitive Liberty at <http://www.cognitiveliberty.org/>

³ For a full discussion on the Global Dominance Group currently operating in the US see: http://www.projectcensored.org/downloads/Global_Dominance_Group.pdf

similar life styles, corporate affiliations, and memberships in elite social clubs and private schools.⁴

This American ruling class is self-perpetuating,⁵ maintaining its influence through policy-making institutions such as the National Manufacturing Association, National Chamber of Commerce, Business Council, Business Roundtable, Conference Board, American Enterprise Institute, Council on Foreign Relations and other business-centered policy groups.⁶ C. Wright Mills, in his 1956 book *The Power Elite*, documents how World War II solidified a trinity of power in the US, comprised of corporate, military and government elites in a centralized power structure motivated by class interests and working in unison through "higher circles" of contact and agreement. Mills described how the power elite were those "who decide whatever is decided" of major consequence.⁷

With the advent of the military-industrial complex after World War II, President Eisenhower observed that an internal military industrial power faction was consolidating their long-term plans for the domination of America and, eventually, the world. Eisenhower was in no position to fight these men, and history records his feelings on the subject with the text of his short farewell address:

"...But threats, new in kind or degree, constantly arise. Of these, I mention two only...

...This conjunction of an immense military establishment and a large arms industry is new in the American experience. The total influence – economic, political, even spiritual – is felt in every city, every Statehouse, every office of the Federal government. We recognize the imperative need for this development. Yet we must not fail to comprehend its grave implications. Our toil, resources and livelihood are all involved; so is the very structure of our society.

In the councils of government, we must guard against the acquisition of unwarranted influence, whether sought or unsought, by the military-industrial complex. The potential for the disastrous rise of misplaced power exists and will persist.

We must never let the weight of this combination endanger our liberties or democratic processes. We should take nothing for granted. Only an alert and

⁴ G. William Domhoff, *Who Rules America?* (New York: McGraw Hill, 2006 [5th ed.] and Peter Phillips, *A Relative Advantage: Sociology of the San Francisco Bohemian Club*, 1994, (<http://library.sonoma.edu/regional/faculty/phillips/bohemianindex.html>)

⁵ Early studies by Charles Beard in the *Economic Interpretations of the Constitution of the United States* (1929), established that economic elites formulated the US Constitution to serve their own special interests. Henry Klien (1933) in his book *Dynastic America* claimed that wealth in America has power never before known in the world and was centered in the top 2% of the population owning some 60% of the country. Ferdinand Lundberg (1937) wrote *American's Sixty Families* documenting inter-marring self-perpetuating families where wealth is the "indispensable handmaiden of government. C. Wright Mills determined in 1945 (American Business Elites, *Journal of Economic History*, Dec. 1945) that nine out of ten business elites from 1750 to 1879 came from well to do families.

⁶ See R. Brady, *Business as a System of Power*, (New York: Columbia University Press, 1943) and Val Burris, *Elite Policy Planning Networks in the United State*, American Sociological Association paper 1991.

⁷ C. Wright Mills, *The Power Elite*, (New York: Oxford University Press, 1956).

knowledgeable citizenry can compel the proper meshing of the huge industrial and military machinery of defense with our peaceful methods and goals, so that security and liberty may prosper together.

Akin to, and largely responsible for the sweeping changes in our industrial-military posture, has been the technological revolution during recent decades.

In this revolution, research has become central, it also becomes more formalized, complex, and costly. A steadily increasing share is conducted for, by, or at the direction of, the Federal government.”⁸

We now understand that Eisenhower was referring to the conjunction of redirected tax monies to research secret new technology aimed at nothing less than increasing the controlling power of the military industrial elite to a global scale.

One particular faction of ambitious men, the former cold warriors and emerging neo-conservatives, were close followers of philosopher Leo Strauss. This elite group included not just generals and industrialists but philosophers, scientists, academics, and politicians have now become the most powerful public-private war organization ever known.

Strauss espoused an elitist philosophy that fawned over the characteristics of those who inherited wealth and lived lives of leisure to pursue whatever their interests may be. His ideas have been transformed into a cogent ideology in which the media, religion, and government are used to subdue the masses while the real “nobles” follow their own will without regard to the laws designed to control lesser men. Strauss was likewise fond of secrecy, as a necessity for control, because if the lesser men found out what was being done to them they would no doubt be upset.

“The people will not be happy to learn that there is only one natural right – the right of the superior to rule over the inferior, the master over the slave, the husband over the wife, and the wise few over the vulgar many.” In *On Tyranny*, Strauss refers to this natural right as the “tyrannical teaching” of his beloved ancients..⁹

Leo Strauss, Albert Wohlstetter, and others at the University of Chicago’s Committee on Social Thought receive wide credit for promoting the neo-conservative agenda through their students, Paul Wolfowitz, Allan Bloom, and Bloom’s student Richard Perle.

Canadian cultural review magazine *Adbusters*, defines neo-conservatism as, “The belief that Democracy, however flawed, was best defended by an ignorant public pumped on nationalism and religion. Only a militantly nationalist state could deter human aggression ...such nationalism requires an external threat and if one cannot be found it must be manufactured.”¹⁰

⁸ Public Papers of the Presidents, Dwight D. Eisenhower, 1960, p. 1035- 1040

⁹ Leo Strauss, “On Tyranny”, Edited by Victor Gourevitch and Michael S. Roth, University Of Chicago Press, 2000.

¹⁰ Guy Caron, “Anatomy of a Neo-Conservative White House,” *Canadian Dimension*, May 1, 2005.

The neo-conservative philosophy emerged as a reaction to the 1960s era of social revolutions. Numerous officials and associates in the Reagan and George H.W. Bush presidencies were strongly influenced by the neo-conservative philosophy including: John Ashcroft, Charles Fairbanks, Richard Cheney, Kenneth Adelman, Elliot Abrams, William Kristol and Douglas Feith.¹¹

Within the Ford administration there was a split between Cold War traditionalists seeking to minimize confrontations through diplomacy and detente and neo-conservatives advocating stronger confrontations with the Soviet's "Evil Empire." The latter group became more entrenched when George H.W. Bush became CIA Director. Bush allowed the formation of "Team B" headed by Richard Pipes along with Paul Wolfowitz, Lewis Libby, Paul Nitze and others, who formed the second Committee on the Present Danger to raise awareness of the Soviet threat and the continuing need for a strong aggressive defense policy. Their efforts led to strong anti-Soviet positioning during the Reagan administration.¹²

The Committees on the Present Danger (CPD) extend from the 1950s Russian threat to the present. The current CPD proudly boasts on their website;

"In times of great challenge to the security of the United States, Republicans, Democrats, and Independents have traditionally joined to make an assertive defense of American interests.

Twice before in American history, The Committee on the Present Danger has risen to this challenge. It emerged in 1950 as a bipartisan education and advocacy organization dedicated to building a national consensus for a strong defense against Soviet expansionism. In 1976, the Committee on the Present Danger reemerged, with leadership from the labor movement, bipartisan representatives of the foreign policy community and academia, all of whom were concerned about strategic drift in US security policy. With victory in the Cold War, the mission of the Committee on the Present Danger was considered complete and consequently was deactivated.

Today, the current CPD promotes radical Islamists as the primary threat to the American people and millions of others who prize liberty. They claim that the threat is global. They also claim that they operate from cells in a number of countries. Rogue regimes seek power by making common cause with terrorist groups. The prospect that this deadly collusion may include weapons of mass murder was the justification for the invasion of Iraq."¹³

¹¹ Alain Frachon and Daniel Vernet, "The Strategist and the Philosopher: Leo Strauss and Albert Wohlstetter," *Le Monde*, April 16, 2003, English translation: *Counterpunch* 6/2/03.

¹² Anne Hessing Cahn, Team B; The Trillion-dollar Experiment, *Bulletin of the Atomic Scientists*, April 1993, Volume 49, No. 03

¹³ The Committee on the Present Danger mission statement can be accessed at <http://www.fightingterror.org/whowere/index.cfm>

Journalist John Pilger recalls his interview with neo-conservative Richard Perle during the Reagan administration: "I interviewed Perle when he was advising Reagan; and when he spoke about 'total war,' I mistakenly dismissed him as mad. He recently used the term again in describing America's 'war on terror', "No stages, This is total war. We are fighting a variety of enemies. There are lots of them out there. All this talk about first we are going to do Afghanistan, then we will do Iraq . . . this is entirely the wrong way to go about it. If we just let our vision of the world go forth, and we embrace it entirely and we don't try to piece together clever diplomacy, but just wage a total war . . . our children will sing great songs about us years from now."'¹⁴

There is ample evidence available to show that some individuals within government and industry have little problem with violating the public trust and using their positions to kill, maim, torture and destroy. It is of the utmost importance to our traditional American values of human rights and cognitive liberty that we recognize this threat from within. We must move to identify those who show these proclivities and ensure that their activities have adequate oversight.

Stanley Milgram's famous experiment involving obedience to authority proved that individuals are fairly easily cowed into submitting to anyone who has a claim of authority, and that on average 61 percent of people will administer pain to another person if instructed to do so.¹⁵ Both test groups in these experiments rationalized their behavior by appealing to "the greater good." Because it was for the "advancement of science" they were able to be convinced they should ignore personal judgment and obey the instructions given to them by the experimenters.¹⁶

Martin Orne, who was one of those paid by the CIA to conduct experiments on obedience, showed in 1962 that people would go to tremendous lengths to please a person in authority. Orne conducted research that involved presenting subjects with a stack of 2,000 pages of random numbers and instructing them to add each two adjacent numbers until he returned. Over 90 percent of the test subjects continued in this meaningless task for up to five hours.¹⁷

Today the combination of political climate and technological capability presents a condition in which widespread manipulation of, not only the flow of information through the media, but also the manipulation of the emotional states and cognitive ability in large populations could be achieved. If policy elites are unaccountable to the public for their actions, and the public has been emotionally manipulated to support them, we can assume that they will certainly abuse their positions in the pursuit of their agendas.

New York: John Wiley & Sons, 1961

Previous human rights and cognitive liberty violations are evidenced in CIA and FBI records pertaining to the infamous MK-ULTRA project and the grim record of harassment and subversion uncovered in the COINTELPRO program in force through the 1950s and into the 1970s. We also examined some of the cases of illegal experimentation on the public dating back to the 1930s. We consider, in depth, the forms of electromagnetic weapons entering the battlefield today that trace their origins back through the secret projects of the Defense Department in the 1950s and 1960s.

Psychological Warfare, Information War, and mind control may seem to be exotic topics, but the impact of these technologies and techniques is profound. Our minds are being impacted through a longstanding series of programs aimed at manipulating public opinion through intelligence agencies, think tanks, corporate media and a host of non-governmental organizations designed to engender fear, division and uncertainty in the public.¹⁸ Media manipulation involving the artificial framing of our collective reality is often a hit or miss proposition, but psychological operations have been carried out in the past, and are being carried out even today, through the practices of “Information Warfare,” directed at enemies abroad and at the American people.¹⁹

According to Mary C. FitzGerald of the Hudson Institute, New-concept weapons, such as laser, electromagnetic, plasma, climatic, genetic and biotechnological are the central principle driving the modernization of national defense. The potential for these weapons to be used for both good and bad deserves a great deal of attention, but there is little to be found in the media or discussed by our administration.²⁰

The US is a system of many institutions including those whose sole function is to provide government oversight. When problems arise that threaten the stability of the country or the safety of the people, the US government is designed to have checks and balances that allow the people to challenge misconduct either directly or through congressional representatives. Increasingly, oversight is disintegrating. According to a 2006 report in the *Boston Globe*, the intelligence committee does not read most intelligence reports in their entirety.²¹

The media is complicit in omitting information necessary to make democratic decisions.²² A global dominance agenda includes penetration into the boardrooms of the corporate media in the US. A research team at Sonoma State University recently finished conducting a network analysis of the

boards of directors of the ten big media organizations in the US. The team determined that only 118 people comprise the membership on the boards of director of the ten big media giants. These 118 individuals in turn sit on the corporate boards of 288 national and international corporations. Four of the top 10 media corporations in the US have DOD contractors on their boards of directors including:

William Kennard: New York Times, Carlyle Group
Douglas Warner III, GE (NBC), Bechtel
John Bryson: Disney (ABC), Boeing
Alwyn Lewis: Disney (ABC), Halliburton
Douglas McCorkindale: Gannett, Lockheed-Martin

Given an interlocked media network, big media in the US effectively represent corporate America's interests. The media elite, a key component of policy elites in the US, are the watchdogs of acceptable ideological messages, the controllers of news and information content, and the decision makers regarding media resources

It is not suggested that everyone in the government believes in global domination, nor that it is the intent of every government official to 'cover up' misconduct.²³ Scientists involved in potentially harmful technology are not 'mad scientists.' In fact, there are many reports in the public sphere addressing government and military misconduct that are put forth by people within these very institutions. The problem is when the government threatens whistleblowers, intimidates officials with job loss, infiltrates activist organizations, and increases surveillance²⁴.

PSYCHOLOGICAL WAR

Modern Psychological Operations (Psy-Ops) were significantly advanced in the Second World War²⁵ and were brought to bear on the American public during the 1950s with the formation of a widespread network of social scientists, journalists, politicians, military specialists and intelligence operatives. Psy-Ops were used to promote a variety of programs in cooperation with the Industrial Military Complex. Their key piece of information warfare was the Communist Red Menace.²⁶

²³ Remarks on Classification, The Hon. Lee Hamilton, Information Security Oversight Office, October 18, 2005. "At a time when the US intelligence community is under intense scrutiny in the aftermath of 9/11 and the failure to find weapons of mass destruction in Iraq, we only increase public skepticism about our government by denying the public information."

One of the opening salvos in this war of deception was fired by George Kennan, the American ambassador to Moscow, describing the Soviet threat in a “long cable” sent to Washington in 1946. Kennan spent decades studying the Russian political scene. He became convinced that there would be little chance of cooperation with the Soviets and recommended a number of actions, most notably the institution of “political war” through the newly formed CIA - a decision he later regretted, even arguing for the elimination of the CIA in 1997.²⁷

In the late 1950s, a right-wing cadre of men within the new CIA was busy building secret armies, planning assassinations, and generally devising plans for world domination that still play out today. Operation Gladio was one example, well documented and international in scope, in which right-wing members of the US intelligence community created “stay-behind” armies in many of the nations of Europe. Those armies managed to infiltrate the highest levels of politics (most notably in Italy where the term “Gladio” refers to a double edged sword) and have been held responsible for numerous false-flag terrorist acts through the 1980s and 1990s. Terror and propaganda often go hand-in-hand in the extremist elements within our military and intelligence communities.²⁸

To counter the divisions within the intelligence community, a greater voice was given to organizations formal and informal. In the 1950s, one such group, the first Committee on the Present Danger (CPD), promulgated a series of “gap crises.” The Bomber Gap, the Missile Gap, the Space Gap, and the Brainwashing and Psychotronic Gap were used to justify increased military technology spending. Congress was led to believe that the Soviets were a much greater threat than they actually were, and that a terrifying new weapon was being developed that threatened America. They were thus convinced to vote for virtually any black budget proposal that came their way. The CPD ran a series of broadcasts to the public through the Mutual Broadcasting Network that spread fear in the minds of the public.

Under the first civilian CIA Director, Allen Welsh Dulles, the Company began to push forward with its agenda of manufacturing consent from the American people for a new state of perpetual war industrialization. Dulles was a well-connected individual, a successful spy for the OSS in Switzerland during the war, related to three secretaries of state, and the chief advisor to Dewey when he ran for President in 1948. Dulles had access to the highest echelons of policy making and his

Discusses the need for political warfare: that is, measures short of war, such as propaganda and covert operations.

²⁸ History News Network, USA 13 June 2005, Terrorism in Western Europe: An Approach to NATO’s Secret Stay-Behind Armies, by Daniele Ganser, *The Whitehead Journal of Diplomacy and International Relations* 1 June 2005, Kennan published his analysis anonymously in *Foreign Affairs*, the official magazine of the Council for Foreign Relations (CFR). [Mr. X (Alias ‘George C. Kennan): “The Sources of Soviet Conduct”, in *Foreign Affairs*, July 1947.] (http://www.isn.ethz.ch/php/documents/collection_gladio/Terrorism_Western_Europe.pdf)

influence was global in scope, counting among his close friends Henry Luce, publisher of *Newsweek*. Relying heavily upon established circles of contacts within the nation's media elites, Dulles recruited key members of the media to work directly for the CIA under Operation Mockingbird. Mockingbird was a psychological information campaign against the American people. In a campaign that would lead to acceptance of blanket secrecy for "national security", "the Red Scare" became the excuse for spending vast sums of money on weapon systems and an increase in covert operations both in foreign countries and within the United States. In the 1950s and 1960s, movies, news articles, books, radio and television programs were carefully laced with anti-communist messages and images designed to produce an acceptance of the policies being promoted by the defense elite's propaganda machine.²⁹

"Among the executives who lent their cooperation to the Agency were William Paley of the Columbia Broadcasting System, Henry Luce of Time Inc., Arthur Hays Sulzberger of the *New York Times*, Barry Bingham Sr. of the *Louisville Courier-Journal* and James Copley of the Copley News Service. Other organizations which cooperated with the CIA include the American Broadcasting Company, the National Broadcasting Company, the Associated Press, United Press International, Reuters, Hearst Newspapers, Scripps-Howard, *Newsweek* magazine, the Mutual Broadcasting System, The *Miami Herald*, and the old *Saturday Evening Post* and *New York Herald-Tribune*. By far the most valuable of these associations, according to CIA officials, have been with *The New York Times*, CBS, and Time Inc."³⁰

One of the engineers of this deception was a former head of the stay-behind network, Edward W. Barrett, director of the Interdepartmental Psychological Strategy Board (IPSB) and, not coincidentally an editor at *Newsweek*. Barrett was seen as being very effective in his efforts to manipulate public opinion. At the same time, CPD was a "non-political group of citizens of the western coast" and launched a media campaign in favor of the urgent reinforcement of the national defense. Among the organizers of the Committee were Frank Altschul (Director of the Council for Foreign Relations), William Donovan (former head of the OSS during WWII) and General Dwight D. Eisenhower.³¹

All of this activity was more than enough to stoke the fears of the public and encourage policy makers to accept the Cold War view of the world. This allowed Truman to convince Congress to approve a tripled military budget that provided funding for secret research and development and turn a blind eye (in the name of National Security) to "black operations" programs authorized under the new Cold War rubric of "containment" and aimed at undermining otherwise peaceful nations and

fomenting war, torture and assassination in countries as diverse as Iran, Guatemala and Indochina.³²

Post-war developments in Europe, especially the British withdrawal from Greece, led Truman to decide it was necessary to have a permanent American presence in the old continent to counteract the Communist influence.³³ General George C. Marshall, Secretary of State, designed a vast plan that mixed economic assistance and secret actions aimed at establishing democracies and making sure that voters in foreign countries made “the right choice.” National Security Council directive NSC 10/2, essentially written by Kennan, made official the creation of an anti-Communist interference network.³⁴

The US intelligence community had an ace in the hole, Reinhardt Gehlen, a Nazi spymaster with an existing network of agents became the front man in Eastern Europe for American intelligence. General Reinhardt Gehlen proved to be troublesome for the CIA over the years. Communist counter-spies infiltrated his network, his information was often incorrect, and he had downplayed his eagerness to serve the Reich. But Gehlen was only one of thousands of Nazis recruited to assist in the new “Cold War” through Operation Paperclip.³⁵ In fact, the intelligence assets acquired by bringing the Gestapo onto the US public payroll was overshadowed by the acquisition of dozens of brilliant Nazi scientists and researchers.

At this juncture, Truman, through the application of the 1947 National Security Act and the newly formed National Security Council³⁶, authorized a vast number of secret projects involving chemical, biological, nuclear and electromagnetic experiments. Former Nazis were put in charge of many of the most sensitive programs and facilities. The Army Ballistic Missile Agency (ABMA) was entrusted to the former SS officer Wernher von Braun.³⁷ Kurt Debus, another ex-SS officer, directed Cape Canaveral. At this time scientists began working on “black” projects in earnest, including attempts at finally developing the “lost” theories of Nicola Tesla, the Serbian-born American physicist, into military and intelligence applications.³⁸

Military interest into the weaponization of the electromagnetic spectrum has a long history, based on the theoretical work of Nikola Tesla. Radar, in its early inception, was seen not only as a means of tracking the position and speed of enemy targets, but as a potential weapon in its own right. There are very real problems however with overcoming the normal decrease in effect of an electromagnetic field over distance. This effect is a natural function of the laws of physics and applies to both electrical and magnetic fields³⁹. In short, the strength of a field drops off in inverse proportion to the distance of the target from the source. Without a means of concentrating and directing a beam of energy across long distances, any effect that an EMF weapon may have would be limited to its immediate vicinity. From 1900 until his death in 1943, Nikola Tesla worked to develop just such a weapon.

In a letter to the *New York Times* editor in 1908 Tesla wrote,

“When I spoke of future warfare I meant that it should be conducted by direct application of electrical waves without the use of aerial engines or other implements of destruction...What I said in regard to the greatest achievement of the man of science whose mind is bent upon the mastery of the physical universe, was nothing more than what I stated in one of my unpublished addresses, from which I quote: "According to an adopted theory, every ponderable atom is differentiated from a tenuous fluid, filling all space merely by spinning motion, as a whirl of water in a calm lake. By being set in movement this fluid, the ether, becomes gross matter. Its movement arrested, the primary substance reverts to its normal state. It appears, then, possible for man through harnessed energy of the medium and suitable agencies for starting and stopping ether whirls to cause matter to form and disappear. At his command, almost without effort on his part, old worlds would vanish and new ones would spring into being. He could alter the size of this planet, control its seasons, adjust its distance from the sun, guide it on its eternal journey along any path he might choose, through the depths of the universe. He could make planets collide and produce his suns and stars, his heat and light; he could originate life in all its infinite forms. To cause at will the birth and death of matter would be man's grandest deed, which would give him the mastery of physical creation, make him fulfill his ultimate destiny.”⁴⁰

Tesla made several claims during the latter years of his life, published by the *New York Times* in what became an annual event. His theory of the hidden nature of our universe supplants those of many of his contemporaries in that he was able to infer a multidimensional model of the universe that is only now being investigated through the theoretical mathematics of our leading physicists.⁴¹

³⁹ There are two laws of note here: the inverse square law, which relates to forces such as gravity, and the inverse cube law, which relates to electromagnetic forces. Both equations describe the relationship between the power of the force and the decrease in that forces effect over distance. In regards to magnetism we refer to the work of Maxwell. One easily accessible online source for his equations is: <http://www.rialian.com/rnboyd/maxwell.htm> A good place to start for understanding the man and his work is the James Clerk Maxwell Foundation at:

<http://www.clerkmaxwellfoundation.org/html/links.html>

⁴⁰ *New York Times*, April 21st, 1908 (p.5 column 6) Tesla Letter to the Editor :.

⁴¹ "The Cosmic Triangle: Revealing the State of the Universe," in the May 28, 1999 issue of the journal *Science*

Tesla also developed means of remotely controlling aircraft as early as 1915, foreshadowing the Unmanned Ariel Vehicles (UAVs) of today's battlefields. In 1934 Tesla offers to build a "Death Ray" that would make the power of an opponents air force obsolete. This was one of the earliest recorded statements regarding directed energy weapons.⁴² Tesla's offer to build this device for the US government for a bargain price, but with many caveats, was refused by officials who, preferred instead to pump money into the new Army Air Corp, which in turn gave rise to the military aviation complex that we have today.⁴³

Before the war the airline industry was not a major part of the economic life of the nation.⁴⁴ With huge wartime contracts, however, corporations such as Hughes, McDonnell Douglas, Lockheed, and Northrop quickly grew in power commensurate with the financial bonanza that was unearthed in the battlefields of Europe and the Pacific.⁴⁵ These companies formed the core of the "military-industrial complex." Their investors and managers began to consolidate their clout in political circles to keep the nation on a wartime economic footing, a simple and vastly powerful weapon that would make aircraft, bombs, missiles and attendant industries irrelevant would certainly be seen as a direct threat to the growing power of military arsenal. Instead, a "black budget" program was put into motion, which exploited the work of Robert Oppenheimer, Albert Einstein and others. The Manhattan Project, developed by the DOD in 1942, generated a vastly destructive weapon that required a well-established and unbelievably expensive aerospace industry, along with unprecedented levels of secrecy and autonomy from Congress and the public.⁴⁶

The US government also ignored Tesla's offer to produce a "city killing machine," which was composed of an electromagnetic shield and a wireless torpedo. Tesla made several proposals during the 1930s, none of which received funding. Among Tesla's claims, published annually on his birthday in the *New York Times*, were methods of harnessing the power of the sun to electrify the earth and provide free electrical power to anybody, anywhere.

Tesla did, however, conceive of at least one device that became a major part of our nation's arsenal -

discusses Dark Energy and Margaret Cheney, *Tesla: A Man Out of Time*, Dell Publishing, 1983.

⁴² Front page *New York Times*, July 11 1934 was entitled, "TESLA, AT 78, BARES NEW 'DEATH BEAM'" and told of the inventor's proposal that would "send concentrated beams of particles through the free air, of such tremendous energy that they will bring down a fleet of 10,000 enemy airplanes at a distance of 250 miles..."

⁴³ To illustrate the control of science for corporate profit, Tesla's practical applications all shared one thing in common, they were devoid of any profitable application. As a result, Tesla's development of wireless electricity has never borne fruit, leaving us still in the 21st century surrounded by a landscape of transmission wires, faulty electrical grids, destructive (though profitable) electrical generation systems, wars for oil, and a suffering environment. See Marc J. Seifer, *The Life and Times of Nikola Tesla*, Citadel Press, 1998.

⁴⁵ Carol L. Cook, *The Aerospace Industry: Its History and How it Affects the US Economy*, Yale-New Haven Teachers Institute, 2005.

⁴⁶ See the National Atomic Museum's archives concerning the Manhattan Project at <http://www.atomicmuseum.com/tour/manhattanproject.cfm> and the Brookings Institute's archives at <http://www.brook.edu/FP/PROJECTS/NUCWOST/MANHATTN.HTM>

radar. As early as 1917 he published his theory and developed the first prototype in 1934. It is from the basis of this technology that future research into weaponizing the electromagnetic spectrum proceeded. At the same time Tesla was working on methods of transmitting and receiving communication signals through interplanetary space and reading the images on a sleeping person's retina (by extension mind reading). His prediction that future wars would be fought with electromagnetic means foreshadowed the rise of electronic warfare and the non-lethal weapons technology being deployed today.⁴⁷

At first glance, it would seem probable that the military had taken over the management of Tesla's material. In fact, a number of projects related to his life's work were in development. For instance, the building of beam weapons at Wright Patterson Air Force Base under the code name "Project Nick"⁴⁸ headed by Brigadier General L.C. Craigie. This project was however, cancelled due to an apparent lack of understanding of Tesla's means of transmitting high-energy waves without a loss of power over great distances. Defense Advanced Research Projects Agency (DARPA) began another project in 1958 codenamed "Seesaw" at Lawrence Livermore Labs⁴⁹ aimed at combating reported Soviet advances in electromagnetic weapons and defenses, advances that many believe came about after 1952 when the bulk of Tesla's research and personal effects were turned over to his nephew, Sava Kosanovic, who promptly whisked them away to Yugoslavia. Eight years later Soviet Premier Nikita Khrushchev would state that, "A new and fantastic weapon is in the hatching stage,"⁵⁰ horrifying many and prompting calls for more effective means of using EMF, espionage and counter-espionage.

On February 9, 1981, the office of the Undersecretary of Defense Research and Engineering department sent a letter to the FBI that requested the papers of Tesla, stating, "We believe that certain of Tesla's papers may contain basic principles which would be of considerable value to certain ongoing research within the DOD. It would be very helpful to have access to these papers. The letter was signed by Lt. Col. Allan J. McLaren, an R.O.T.C. graduate from M.I.T. in 1960, who later went on to become a project director with Lockheed Martin Space Systems from which he retired in 2003."⁵¹

This section of his memo to the FBI was not declassified until 1993. In response, the FBI issued the same response as to all of the other inquiries with one exception, this time they identified who it was that examined the stored effects; it was the Office of Scientific Research and Development from

⁴⁷ *New York Times*, 1937 "...will send concentrated beams of particles through the free air, of such tremendous energy that they will bring down a fleet of 10,000 enemy airplanes at a distance of 250 miles from the defending nation's border and will cause armies of millions to drop dead in their tracks When put into operation, Dr. Tesla said, this latest invention of his would make war impossible. This death-beam, he asserted, would surround each country like an invisible Chinese wall, only a million times more impenetrable. It would make every nation impregnable against attack by airplanes or by large invading armies." For an interesting article about Tesla's "Death Ray" and the relationship to Tunguska see: <http://www.viewzone.com/tesla.ray.html>)

MIT, a breeding ground of CIA. technical types the Office of Naval Intelligence and agents from US Naval Research.⁵² What they may have been looking for had likely already been taken, according to a recent PBS special entitled *Tesla: Life and Legacy*, Tesla's nephew reported that Tesla's most recent journal was missing from the bulk of material stored by the OAP.⁵³ In recent years high profile projects such as the High Altitude Auroral Project ("HAARP"), the Strategic Defense Initiative ("Star Wars"), and many of the devices promoted by proponents of "Non-Lethal Weapons" have Tesla's intellectual fingerprints all over them.⁵⁴

MK-ULTRA

In terms of mind-control and the breaking down of prisoners for military interrogations, the events at Abu-Ghraib, Guantanamo, and in the CIA network of secret prisons dotting the globe, all have their intellectual origin in the work carried out by a network of scientists under the behest of the intelligence community beginning in the World War II period. Mind-control, per se, refers to a well-funded, broad based series of programs designed to explore the furthest reaches of human cognitive ability. The Nazis, as well as the Japanese, had been experimenting on prisoners throughout the war. Recovery of the records of these experiments led the US to proceed with investigations into new means of interrogations and the building of resistance to interrogations of US personnel..⁵⁵

The CIA, in association with various other agencies, undertook a long series of experiments on unsuspecting prisoners, students, military personnel and others recruited into one of the at least 162 subprojects of what became known as MKULTRA.⁵⁶ Interest was certainly piqued by the case of Cardinal Mindszenty and the reports of brainwashing techniques used on American soldiers in prisoner of war camps in Korea⁵⁷. But even prior to the Korean War the resiliency of the human mind was being tested by researchers on the black budget. These projects reportedly at times violated every conceivable notion of human rights and dignity.⁵⁸

Frank Olson, a mid-level CIA operative, worked on the development of aerosol delivery of drugs and poisons at Ft. Detrick, Maryland. His work, which is still classified, was funded through MKULTRA. Olson took a trip to England where MI6 and the CIA were working together on ways to

prevent allied spies and servicemen from yielding to interrogation. Olson also traveled to Frankfurt, where the two agencies conducted fatal experiments on prisoners of war and others considered to be “expendable.” Olson had an ethical dilemma with the research and, after voicing his concerns, returned to the United States. On November 28, 1953, Olson was in room 1018A of the Hotel Statler in New York. At 2 a.m., Olson fell from the 10th floor window of his room to his death on the sidewalk below. The headline reported his death as an accident or suicide. This report was discredited when, in 1975, another official lie was issued to ease his family’s suffering and deflect public scrutiny. This time Olson was called the victim of an LSD experiment.⁵⁹ Media reports cited in the *New York Times* focused on the sensational aspects of LSD use and psychic warfare, but did not dwell on the more egregious violations of human rights and dignity inherent in the programs overseen by the CIA.⁶⁰

The truth was not revealed until 1994 when his son finally had his body exhumed and examined. The autopsy showed that Olson’s left temple had been fractured before he fell. According to the *New York Times Magazine* CIA tradecraft books from 1953, that have since been released teach that “one of the surest methods of killing somebody without a trace involves impairing their reflexes with alcohol (or drugs) and then stepping up behind them and stunning them with a blow to the temple. After that you quickly grab their ankles and in a single motion flip them over a bridge, balcony or out of a window more than 70 feet off of the ground.”⁶¹ What Olson saw, and what cost him his life and his family their peace of mind for 30 years, was the beginning of a long term strategy to develop means of making individual both resistant to “brainwashing” and to control the actions of individuals.⁶² The cover story that was used to justify the beginning of the project was that there was a “brainwashing gap” with the Koreans.⁶³

Experimenters used college students, servicemen, mental patients, the poor and, in several instances, children as young as four years old, in attempts to create untraceable assassins, couriers and other operatives. MKULTRA sub-projects involved the services of many notable universities and used a number of false front corporations such as the Foundation for the Study of Human Ecology and think tanks such as RAND, to shield the source of funding from those with ethical “problems.”⁶⁴ We would still know nothing of these activities had it not been for the release of 16,000 pages of documents in 1977 through the FOIA request filed by the surviving family of Frank Olson. Unfortunately CIA Director Richard Helms ordered the destruction of any MKULTRA records

shortly before the order came in to his office⁶⁵, leaving an incomplete picture of a concerted effort by various agencies to create new and better means of controlling the thoughts, emotions and thus behavior, of unsuspecting individuals.

ILLEGAL EXPERIMENTATION

MKULTRA was, however, neither the first nor the last project funded by government or industry to experiment on people in the name of some greater good. A quick review of the history of secret experimentation and medical atrocities reveals a pattern of deadly behavior

The Tuskegee Experiments in 1932 cruelly condemned scores of black men to death from syphilis.⁶⁶

The Pellagra Incident, in which millions died over two decades, in spite of the fact that the US Public Health Service knew at the time that these deaths were caused by little more than a niacin deficiency.⁶⁷

In 1940 scientists exposed four-hundred prisoners in Chicago with malaria (a US experiment Nazis cited at the Nuremberg trials to defend their own experimentation).⁶⁸

During WWII, Seventh Day Adventist conscientious objectors were enlisted into Operation Whitecoat by the US Army and the Adventist Church. They were told that they were being tested for defensive research purposes while the government was in fact testing offensive chemical and biological weapons.⁶⁹

After WWII, matters became far worse for those who were caught up in the web of illegal scientific testing. In 1947 Colonel E.E. Kirkpatrick of the US Atomic Energy Commission issued a secret document stating that the agency would begin administering intravenous doses of radioactive substances to human subjects. At the same time atomic tests in which the residents of Utah and Nevada were purposely exposed to radioactive fallout. There were also a series of operations during the 1940s and 1950s in which US cities were attacked secretly by the military through the spread of biological agents in order to track their propagation through a real population.⁷⁰

⁷⁰ Atomic Energy Commission Secret Memo by Kirkpatrick, E. E. Col. A January 8, 1947, This was a draft memo from

THE SCIENTISTS

Dr. Ewen Cameron⁷¹

Once the details of MKULTRA came to light, the focus in the media and in the Senate, was on the use of drugs, especially LSD. While the researchers within the project did indeed concentrate on developing a variety of hallucinogenic concoctions, they did so with an end in mind. The goal was to devise means and methods of enabling undercover operatives, soldiers, contractors or anyone who was involved in secret projects, to be able to keep those secrets if they were captured or interrogated. Hypnosis, combined with drugs, sensory deprivation and systematic abuse were seen as a means to that end. The leader in this pharmaceutical and psychological research was Dr. Ewen Cameron. Cameron was at the time, one of the most esteemed psychiatrists in the world. As president of the American Psychiatric Association, Canadian Psychiatric Association, and one of the founders of the World Psychiatric Association, Dr. Cameron began experimenting on brainwashing techniques as early as the 1930s with schizophrenic patients. At this time lobotomies were not yet in common use, though the procedure would begin to be implemented in 1936 on a wide scale. Electroshock therapy was some years from being accepted as a primary means of changing behavior.⁷²

Cameron relied on torturous and highly stressful techniques for breaking down the personality of his patients. Schizophrenics would be stripped down naked beneath red lights for eight hours a day, sometimes for up to eight months with repeated messages inundating their senses. In other experiments Cameron would attempt to induce the delirium associated with a high fever by cooking his patients in an electric cage until their body temperature reached 102 degrees.

From January of 1957 until September of 1960 Cameron became one of the promising researchers the CIA turned to in order to develop means and methods of “brainwashing” and programming

Colonel Kirkpatrick, Acting Manager, Field Operations of AEC, to the AEC Berkeley Area Engineer, puts the AEC stamp on termination of human testing, while simultaneously revealing it was going on under the Manhattan Project-at the request of Oppenheimer: "Until the Atomic Energy Commission is able to consider sponsoring this type of experimentation, authorization cannot be given for the use of radioactive materials in human subjects under this contract." A more current report from the National Security Archives that clearly lays out the timeline and the assault by researchers on “subjects” can be found at

http://www.gwu.edu/~nsarchiv/radiation/dir/mstreet/commeet/meet12/brief12/tab_f/br12f1d.txt----“ Personal Statement from Elizabeth Zitrin, Attorney at Law Public Member of the Ad Hoc Committee on Radiation Experiments”. Eitzen Jr., MC, USA. -- Operational Medicine Division, United States Army Medical Research Institute of Infectious Diseases, Fort Detrick, Maryland, as posted at <http://www.fas.org/nuke/guide/usa/cbw/bw.htm>

⁷¹ This section about Dr. Cameron is based on Orlikow Vs. United States, CIA Settlement of Some Complaints. Ewen Cameron and the Allan Memorial Institute - Subproject 68 funded by CIA from March 18, 1957 to June 30, 1960 Without conceding liability, in 1988 the CIA agreed to pay \$750,000 to settle a case brought on behalf of nine plaintiffs who were subjected to federally funded mind control experiments sponsored by the CIA and conducted by prominent psychiatrist Ewen Cameron, M.D. The experiments included heavy doses of LSD, electroshock and psychic driving.

⁷² See “CIA Brainwashing Experiments”, *MacLean's*; January 28, 1985, Vol. 98 Issue 6, p46, 1/3p and “A cold-war horror show's last act”, *US News & World Report*; October 17, 88, Vol. 105 Issue 15, p13, 1/3p.

human beings to do the will of the agency. Cameron received \$64,242.44⁷³ from the CIA. to develop a combination of techniques that would destroy an individual's memory of an event and enable the programmer to control their behavior through post-hypnotic commands. Cameron used a variety of drug combinations coupled with prolonged sleep deprivation, isolation, hypnosis, and electroconvulsive therapy in order to "wipe" an individual's memory. His techniques worked, to a certain extent, but ethical considerations led the CIA to cut Cameron's funding in the US, prompting Cameron to move to Canada to continue his work with funding channeled through the Canadian Government.

He continued his work, officially, from 1961 until 1964 in Montreal where he received an additional \$57,750.⁷⁴ During this time Cameron combined his techniques (in a "therapy" he called de-patterning) with electroconvulsive therapy in which the voltage introduced into one subjects brain, Linda Macdonald, exceeded the APA's guidelines by 76.5 times. He succeeded in wiping her memory and to this day, she cannot remember anything prior to 1963. In a January 17, 1984 broadcast of the Canadian Broadcasting System, a program called "The Fifth Estate" detailed the experiments of Cameron, prompting a burst of investigative journalism culminating in a class-action suit brought against the CIA by former subjects. In 1988, the case was settled out of court for \$750,000, divided between 8 plaintiffs. Linda Macdonald received \$100,000 and legal fees from the Canadian government, but Cameron himself, faced no punishment.⁷⁵

Dr. Jose Delgado

Whereas Cameron focused on creating traumatized individuals through intense psychological pressure, Dr. Jose Delgado was investigating the direct route to control of "human subjects." Delgado physically invaded the brains of subjects with electrodes in order to create emotions and control actions with the push of a button. As he stated himself,

"We need a program of psychosurgery for political control of our society. The purpose is physical control of the mind. Everyone who deviates from the given norm can be surgically mutilated. The individual may think that the most important reality is his own existence, but this is only his personal point of view. This lacks historical perspective. Man does not have the right to develop his own mind. This kind of liberal orientation has great appeal. We must electrically control the brain. Some day armies and generals will be controlled by electric stimulation of the brain."⁷⁶

In his paper "Intracerebral Radio Stimulation and Recording in Completely Free Patients," Delgado observed that:

"Radio Stimulation on different points in the amygdala and hippocampus in the four

patients produced a variety of effect, including pleasant sensations, elation, deep thoughtful concentration, odd feelings, super relaxation (an essential precursor for deep hypnosis) colored visions, and other responses."⁷⁷

Delgado, to his credit, did make great strides toward a better understanding the physiology of brain structures and their attendant behavioral and emotional correlates, strides that did not go unnoticed by the intelligence community and the military.

While Delgado worked in an area of specific interest, the direct stimulation of brain structures through implanted electronics, other researchers explored means of creating multiple personalities and programming the alternate personalities that emerged to do a variety of intelligence related work as operatives, still others explored the effects of various drug combinations and other “programming” and interrogation techniques aimed at creating super spies and breaking down enemy agents.

THE EXPOSURE OF WATERGATE/MKULTRA/COINTELPRO

According to testimony by Senator Edward Kennedy in 1977,

"Some 2 years ago, the Senate Health Subcommittee heard chilling testimony about the human experimentation activities of the Central Intelligence Agency. The Deputy Director of the CIA revealed that over 30 universities and institutions were involved in an ‘extensive testing and experimentation’ program which included covert drug tests on unwitting citizens ‘at all social levels, [high and low], native Americans and foreign.’ Several of these [tests involved] the administration of LSD to ‘unwitting subjects in [social] situations.’ ... The Central Intelligence Agency drugged American citizens without their knowledge or consent. It used university facilities and personnel without their knowledge." ⁷⁸

As an example of the hubris wrought by institutions veiled in secrecy, given unlimited funds and staffed with amoral people we can only refer to the statement made by George White in a letter to MKUltra director Sidney Gottlieb: "I toiled wholeheartedly in the vineyards because it was fun, fun, fun! Where else could an *American* boy lie, cheat, rape and pillage with the sanction and blessing of the All Highest?" ⁷⁹

After Watergate, more information hit the papers, COINTELPRO was uncovered by a group of people who have never been apprehended, in spite of a six-year FBI investigation. The COINTELPRO program was secret until 1971, when an FBI field office was burglarized by a group

⁷⁸ Testimony of US Senator Edward Kennedy, Joint Hearing before the Select Committee on Intelligence, US Senate, 95th Congress, 1977.

⁷⁹ (letter to Sidney Gottlieb) See also *Sex, drugs and the CIA*, by Douglas Valentine posted at <http://www.counterpunch.org/valentine0621.html>

calling themselves the Citizens' Commission to Investigate the FBI. These people broke into an FBI office in Pennsylvania, rifled through the filing cabinets and leaked to the press documents detailing the abuses suffered by a wide variety of activists, including a long-term plan to destroy Martin Luther King Jr.:

“Agents tapped his phone, bugged his rooms, trumpeted his supposed commie connections, and his sexual proclivities, and sicced the Internal Revenue Service on him. When it was announced in 1964 that King would receive a Nobel Peace Prize, the FBI grew desperate. Hoping to prevent King from accepting the award, the Bureau mailed him a package containing a tape of phone calls documenting King’s extramarital affairs and an anonymous, threatening letter (shown here in censored form). In barely concealed language, King was told to commit suicide before the award ceremony or risk seeing his “filthy, abnormal fraudulent self” exposed to the nation. Fortunately, King ignored the FBI’s advice. He accepted the award and lived four more years until his assassination.”⁸⁰

Some of the largest COINTELPRO campaigns targeted the Socialist Worker's Party, the Ku Klux Klan, the "New Left" (including several anti-war groups such as the Students for a Democratic Society and the Student Nonviolent Coordinating Committee), Black Liberation groups (such as the Black Panthers and the Republic of New Africa), Puerto Rican independence groups, the American Indian Movement, and the Weather Underground. Later, Director Hoover declared that the centralized COINTELPRO was over, and that all future counterintelligence operations would be handled on a case-by-case basis.⁸¹

In addition, the MKULTRA documents hit the press and a number of books were written about the subject, most notable were “The Search for the Manchurian Candidate” by John Marks, “Bluebird” by Colin A. Ross MD, and “A Nation Betrayed” by Carol Rutz. At this point victims began to come forward with claims of being horribly abused in these programs, one of the most famous is a woman named Candy Jones who described in stunning detail a tale of corruption and abuse.⁸²

When Jimmy Carter became President in 1976 he promptly moved to introduce a modicum of control, he instituted the Foreign Intelligence Surveillance Act establishing an 11 member secret court to oversee the surveillance activities of our covert agencies. As an example of the limited reporting requirements for the court we have the first report issued to Vice President

⁸² Donald Bain, . The Control of Candy Jones. Chicago, *Playboy Press*, 1976. (Reissued in 2002 by Barricade books as The CIA's Control of Candy Jones with a new introduction by Bain)

Mondale from Attorney General Benjamin R. Civiletti in 1979:

This report is submitted pursuant to Section 107 of the Foreign Intelligence Surveillance Act of 1978, Title 50, United States Code Section 1807.

During calendar year 1979, 199 applications were made for orders and extensions of orders approving electronic surveillance under the Act. The United States Foreign Intelligence Surveillance Court issued 207 orders granting authority for the requested electronic surveillances. No orders were entered which modified or denied the requested authority.⁸³

Pointedly Carter's reform measure did not do anything to insure that the American public would be protected in the future from abuse and testing at the hands of the intelligence arm of the military-industrial complex. Carter's move to reform the CIA was to appoint an outsider as head of the agency, Admiral Stansfield Turner. After Turner took over as Director of the CIA 800 "rogue" agents were let go, though most all of them found work in various false front companies that had been set up in the previous years.⁸⁴

Both the Rockefeller Commission and the Church Committee revealed a long standing pattern of both developing new psychological, pharmaceutical and radiological technologies, to influence individuals and groups and long standing pattern of behavior whereby politically disruptive citizens were systematically targeted, harassed and destroyed. Yet there have, to date, been no provisions instituted which would stop this behavior, nor is there any guarantee that these kinds of covert programs ever actually ceased. The only practical change engendered by the disclosures of the 1970s was to drive these kinds of operations further into the shadows. That such research and experimentation may still be occurring is evidenced by a DOD directive, issued by the Secretary of the Navy on November 6, 2006 that specifically requires prior approval of the Under Secretary of the Navy before conducting "severe or unusual intrusions, either physical or psychological, on human subjects (such as consciousness altering drugs, or mind-control techniques)."⁸⁵

Non-Lethal Weapons Research Today

There is a long history that illustrates US Intelligence operations had tragic results for many involved. There was, however, no public debate surrounding these black operations because they were classified under the guise of national security. MKULTRA, Project PANDORA, plutonium testing, and many more projects conducted by the DOD and the CIA were exposed by committees

led by Senators Rockefeller and Church in the 1970s.⁸⁶ However, tighter restrictions on human experiment including accountability and transparency did not occur until 1997, when President Clinton instituted revised protocols on human experiments.⁸⁷

Official reports insist that the research involving experiments during the 1950s through the 1970s was destroyed. Yet, the scientists involved went without punishment, free to continue their careers.⁸⁸ Given the levels of ongoing EMF technology research today, and the recent retroactive approval of torture approved by the Military Commissions Act, it may be that human testing is occurring under post-9/11 national security protocols. Can we accept that all the psychological research conducted with government funding up to the 1970s was simply destroyed? At this time, the American public has no way to answer this question. The current administration classifies more information than any previous US administration.⁸⁹ Unclassified documents have even been recalled and re-classified.⁹⁰

In the 1980s nuclear radiation experiments on humans became public knowledge and Russian tests making use of the electromagnetic spectrum were exposed.⁹¹ Countries around the world passed laws and signed treaties in response to the danger of weapons that could adversely effect human behavior or manipulate human cognition. The Russians banned all EMF weapons in 2001. These treaties have roots in the human radiation experiments of the 1950s, 1960s and 1970s. In effect, these treaties declared a basic tenant of human rights and cognitive liberties.⁹²

In the quest for global military superiority, the US stepped up funding for the concept of the “Future Warrior” beginning in the late 1990s with the use of advanced nano-technology.⁹³ The idea was to streamline the military, improve soldier performance, control the fighting in real-time and avoid soldier mortality. Toward this end, the concept was to enhance the ability of soldiers in the field to interface with computer systems by using their own brain waves.⁹⁴ The US began to fund research

⁹⁴ See DARPA, “Neurotechnology for Intelligence Analysts”, <http://www.darpa.mil/dso/thrust/biosci/nia.htm>.

into decoding the brain as well as other neurological research. President George H.W. Bush declared the 1990s “The Decade of the Brain”.⁹⁵ At the same time, funding for computer to human interface poured into universities and Defense Advanced Research Projects Agency (DARPA) stepped up their research and development. In the universities, the field became “cognitive science” and within DARPA, the term “augmented cognition” was born.⁹⁶ While developments in brain research are touted for their amazing therapeutic advances in the medical field, they primarily serve the purposes of the US military.⁹⁷

Americans have little idea about the research concerning the capabilities of electromagnetism, directed acoustics, or computer-human interfacing. The majority of Americans do not know that we are currently using these new-concept weapons in Iraq and Afghanistan. Indiana University law professor David Fidler stated to the *Economist*, “because these weapons are most likely to be used on civilians, it is not clear that using them is legal under the international rules governing armed conflict...if they are used in conjunction with conventional weapons, they could end up making war more deadly, rather than less.”⁹⁸

A peek into the US arsenal of weapons is like a look into a science fiction film. DARPA and various military research labs provide a view of the current technology available to enhance US soldiers in the field and manipulate the emotions and behaviors of the perceived enemy. As American sentiment toward the Iraq war spirals downward, along with the approval ratings of the US president, domestic civil disobedience is likely to rise, as it has in many countries in response to US foreign policy.

Are new electromagnetic weapons in the possession of the government be used on American citizens? The issue at hand is whether the research and technology currently being developed will benefit or harm us and how much liberty we are willing to sacrifice for a possibly skewed sense of national security and protection.

In September 2006, Air Force Secretary Michael Wynne announced that crowd control weapons should be tested on Americans first. "If we're not willing to use it here against our fellow citizens, then we should not be willing to use it in a wartime situation," said Wynne. "(Because) if I hit somebody with a non-lethal weapon and they claim that it injured them in a way that was not intended, I think that I would be vilified in the world press."⁹⁹

⁹⁵ The proclamation declaring the 1990's the “Decade of the Brain” was signed by President George H.W. Bush on July 17, 1990, which can be accessed at the Library of Congress, <http://www.loc.gov/loc/brain/proclaim.html>.

⁹⁸ “Electromagnetic weapons: Come fry with me”, *The Economist*, January 30, 2003.

⁹⁹ Lolita C. Baldor, Associated Press, 9/12/2006. In addition to this comment, the Air Force released a declassified document located at the website of the Federation of American Scientists, (<http://www.fas.org/sgp/eprint/hamilton.pdf> directing the acquisitions team from the media. The author is the USAF principal deputy assistant secretary for acquisition, management and logistics, Darlene Druyun: “Effective immediately, I do not want anyone within the Air Force acquisition community discussing any of our programs with the media (on or off the record). This includes presenting program briefings in any forums at which the media may be present.”

Non-lethal weapons sound harmless in relation to guns and bombs. However, non-lethal weapons are not just tazers and annoying sounds. Nor are they harmless. In fact, NLWs are such a concern that many countries have treaties demanding transparency. Beginning in the 1990s, groups have formed to provide oversight of NLW research, including international committees, concerned scientists, and citizens' groups including the Federation of American Scientists and the Center for Cognitive Liberty and Ethics.¹⁰⁰ The proliferation of NLWs have raised concern within the EU, Russia, and other countries, as records of Cold War abuses come to light and people come forward with complaints of illegal testing.¹⁰¹

The concern is more than a political issue and stretches beyond civil liberties into human rights as they relate to a person's cognitive liberties. The following section highlights technologies with the capability to control and manipulate individuals or large groups of people.

Crowd Control using the Electromagnetic Spectrum

The electromagnetic spectrum has provided the military with an expanse of weapons, which are operational and in military and private use today in the form of millimeter waves,¹⁰² pulsed energy projectiles, and high power magnetic weapons.

Project Sheriff

The US has deployed the Project Sheriff active denial weapon in Iraq. Raytheon outfitted Humvees with their Silent Guardian Protection System, a device capable of heating the skin to 1/64 of an inch, causing instant pain similar to intense sunburn,¹⁰³ with the goal to facilitate dispersing a crowd. According to a report released by the Air Force on the human effects of this weapon, people with contact lenses and those wearing metal suffered greater effects. An imprint of a coin was discovered on the skin of a test subject and death or severe heart problems may occur.¹⁰⁴

Pulsed Energy Projectiles

¹⁰⁰ For a list of these groups see, Non Lethal Weapons, July 2005, compiled by Terry Kiss, Bibliographer, Air University Library, Maxwell AFB, AL accessed at the Maxwell Internet site, <http://www.au.af.mil/au/aul/bibs/soft/nonlethal.htm> and Appendix A of this paper.

¹⁰¹ For further reading on these treaties, see *The Bulletin of Atomic Scientists*, September/October 1994 pp. 40-45 (vol. 50, no. 05), "The Soft Kill Fallacy" by Steven Aftergood and Barbara Hatch Rosenberg's in the same issue, "Sidebar: A non-lethal laundry list". Rosenberg cites the Conference on Disarmament, *Report of the Ad Hoc Committee on Chemical Weapons to the Conference on Disarmament*, Aug. 26, 1992, Nos. 22, 25, 34 (CD/1170) as well as the treaty, "Convention on Prohibition or Restriction of the Use of Certain Conventional Weapons Which May Be Deemed to Be Excessively Injurious or to Have Indiscriminate Effects."

¹⁰² A detailed study conducted by Andrei G. Pakhomov, Yahya Akyel, Olga N. Pakhomova, Bruce E. Stuck, and Michael R. Murphy with the Brooks Air Force Base, Human Effectiveness Directorate, offers a scientific analysis of the effects of millimeter waves, "Current State and Implications of Research on Biological Effects of Millimeter Waves: A Literature Review", McKesson BioServices (A.G.P., Y.A., O.N.P.), U. Army Medical Research Detachment of the Walter Reed Army Institute of Research (B.E.S.), and Directed Energy Bioeffects Division, Human Effectiveness Directorate, Air Force Research Laboratory (M.R.M.), Brooks Air Force Base, San Antonio, TX.

¹⁰³ US Non Lethal Weapons for Iraq http://www.oft.osd.mil/library/library_files/article_461_Boston%20Globe.doc

¹⁰⁴ "Rumsfeld's Ray Gun," By Kelly Hearn, *AlterNet*. Posted August 19, 2005, <http://www.alternet.org/story/24044/>

Pulsed Energy Projectiles (PEPs) are another form of weaponry that is used to paralyze a victim with pain. According to *New Scientist* magazine, the expanding plasma effects nerve cells, but the long-term effects remain a public mystery.¹⁰⁵ The Joint Non-Lethal Weapons Program reports that, PEPs create a flash bang effect that startles and distracts.¹⁰⁶ However, the effects are much greater than just startling an individual. A 2001 *Time* magazine article states that the PEP “superheats the surface moisture around a target so rapidly that it literally explodes, producing a bright flash of light and a loud bang. The effect is like a stun grenade, but unlike a grenade the pep travels at nearly the speed of light and can take out a target with pinpoint accuracy...as far away as 2 km.”¹⁰⁷

While the effects of these weapons appear to be short-term and topical in nature, there is evidence that electromagnetic weapons have effects on the brain, including sleep disruption and behavior changes.¹⁰⁸ They can produce anxiety and fear or compliance in humans. It is possible to use these weapons as a means of torture, yet without knowing exactly when, where, and how the weapons are used, we are left to speculate.¹⁰⁹ An article by David Hambling in *New Scientist* magazine, March 2005, was titled, “Maximum pain is aim of new US weapons.” In 2006, Dr. Brian Martin, associate professor in Science, Technology and Society, University of Wollongong, Australia, co-authored a paper entitled “Looming struggles over technology for border control,” which describes the potential catastrophes that would lead to an extreme border protection plan. In the event of a natural disaster, or the rapid reduction of resources, or a major climactic change such as drought, rich countries will have a need to reinforce their borders against a massive influx of refugees. This scenario is often described in the nation-state context but it is possible to imagine such a perceived need in the event of internal civil unrest.

Directed Acoustics

In Maoist China, cities were equipped with megaphones, bombarding the people with on-going propaganda. The megaphones were in full vision of the people, yet there was no way to escape the sound. Today technology exists that fills a similar purpose. Voice to Skull directed acoustic devices are neuro-electromagnetic non-lethal weapons that can produce sounds within the skull of a human.¹¹⁰

A similar technology, known as Hypersonic Sound, is used in a similar fashion. According to its inventor, Elwood Norris of American Technology Corporation (ATC), the handheld speaker can

¹⁰⁵ See government contract M67854-04-C-5074, University of Florida, Division of Sponsored Research, July 1, 2004. Also located at <http://www.defensetech.org/peoplezapping.pdf>

¹⁰⁷ Lev Grossman, “Beyond the Rubber Bullet”, *Time Magazine*, July 21, 2002.

¹⁰⁸ David S. Walonick, “Effects of 6-10 Hz ELF on Brain Waves, www.borderlands.com/archives/arch/elf.htm

¹⁰⁹ David Hambling, Maximum Pain is Aim Of New US Weapons, *New Scientist*, March 2005.

¹¹⁰ Definition from the Center for Army Lessons Learned, Fort Leavenworth, KS: “Nonlethal weapon which includes (1) a neuro-electromagnetic device which uses microwave transmission of sound into the skull of persons or animals by way of pulse-modulated microwave radiation; and (2) a silent sound device which can transmit sound into the skull of person or animals. NOTE: The sound modulation may be voice or audio subliminal messages. One application of V2K is use as an electronic scarecrow to frighten birds in the vicinity of airports.” <http://call.army.mil/products/thesaur/00016275.htm>

focus sound waves directly at a person without anyone else hearing the sound. The technology is being tested by corporations such as McDonald's and Wal Mart to direct advertisements into a consumer's head.

The Long Range Acoustical Device (LRAD),¹¹¹ is used by the military in situations such as crowd control, mass notification, and perimeter enforcement. For instance, an unruly mob may not hear a warning to disperse with traditional acoustic technology, or border enforcement agents may need to warn an approaching intruder to turn away or face bodily harm. The technology has advantages over lethal force, yet it also has the potential to inflict physical harm, emotional manipulation, and death. According to *Defense Update*, the LRAD can produce a 150-decibel acoustic beam from 300 meters away. The human threshold for pain is between 120 to 140 decibels.¹¹² In a 2003 *New York Times* article Mr. Norris demonstrates his technology to the reporter. At 1% of capacity, the reporter's eyes hurt, and hours later still experienced a headache.¹¹³

This technology can inflict permanent damage and death despite its classification as a non-lethal weapon. While the LRAD may be seen as a way to save lives in times of disaster or to avoid civilian casualties, the LRAD and similar directed acoustics may be cause for concern to those who exercise their right to assemble and conduct peaceful demonstrations and protests. The New York City police used the LRAD at the Republican National Convention and it was also used in Miami at a WTO Free Trade protests.¹¹⁴ Covering one's ears will not protect a person and given, the long-range capabilities, fleeing from the beam may not help either (as evidenced in the use of directed acoustics against Jewish settlers in Gaza). The Associated Press (AP) reported that a device called "the scream" was used in a 2005 protest against Palestinians who "covered their ears and grabbed their heads, overcome by dizziness and nausea, after the vehicle-mounted device began sending out bursts of audible, but not loud, sound at intervals of about 10 seconds. An AP photographer at the scene said that even after he covered his ears, he continued to hear the sound ringing in his head."¹¹⁵

Neurological Technology

Neurobiology has many facets including therapeutic applications with Alzheimer's, epilepsy, depression, and stroke victims using Transcranial Magnetic Stimulation (TMS). Bush's Decade of the Brain produced outstanding advances for those with spinal cord injuries as well, which allows a paralyzed person to control a computer screen or a limb with a brain implant. There is also a new field in neurological research, Augmented Cognition. From universities to private business to the military, advances in neuro-technology can be used for amazing good. However, as we learned from the history of the Cold War, technology that has the capacity to heal also has the capacity to harm. Of great concern is the research being conducted at DARPA, which is trying to revolutionize the way soldiers receive information, respond to orders, adapt to stress, and perform while sleep

¹¹¹ The LRAD is another invention of Elwood Norris of American Technology Corporation.

¹¹⁵ Associated Press, "Israel May Use Sound Weapon On Settlers", 6/10/2005. Available at: http://www.huffingtonpost.com/2005/06/10/israel-may-use-sound-weap_n_2444.html

deprived.

TMS is being developed for military purposes using electrical impulses at close proximity to the skull to enhance mood, affect sleep patterns, and increase creativity.¹¹⁶ This technology is beginning to replace electro-shock therapy. DARPA granted a contract to the Medical University of South Carolina to research now to improve a soldier's performance. A soldier's reaction to stress may be less intense, or a 40-hour flight will allow for the soldier to remain awake without the side effects of sleep deprivation.¹¹⁷ Few, if any, understand the long-term effects of TMS, given its relative infancy in the overall field of Augmented Cognition. Does TMS produce unknown neurological effects ten, twenty, fifty years down the road? To what extent is TMS being researched? TMS is part of the overall field of Augmented Cognition. In essence, Augmented Cognition allows a human to interact with a computer through brain waves. The idea is to enhance a person's cognitive capabilities in the area of memory, learning, attention, visualization, and decision-making.

One application of augmented cognition allows a user to monitor a person's brain functions and send anticipatory commands to the person being monitored. For instance, a military command unit will be able to monitor a pilot in a cockpit, and based on the sensory output of the soldier, the base command can input messages directly into the pilot's brain to improve performance. DARPA describes this as a human computer symbiosis whereby, "This research will enable development of closed loop human-computer technologies, where the state of the user is measured, analyzed, and automatically adapted to by the computational system."¹¹⁸ The increase in human-computer relations and the ability to manipulate and control a person's senses, memory, and neural output has wide implications.

The basic ability to enter a person's mind is not a futuristic fantasy. This is real and in prototype. DARPA began this research in 1983.¹¹⁹ The Internet has become a focal point in our lives with reliance for information and communication. Our interaction and intimacy with computers is increasingly pervasive, as is our exposure to the field of augmented cognition. DARPA does not address the implications of such symbiosis, or the dilemma of the extent to which a person can or should be manipulated. The use of this technology is used for military purposes but it may not be long until it is used to "improve" the factory worker, prisoners, or the mentally ill.

¹¹⁹ New Generation Technology: A strategic plan for its Development and Application to Critical Problems in Defense, DARPA, 1983.

The Implant

Another realm of brain research is the field of neural implants. Until recently, implants were a futuristic fantasy. Current advances in the private and military sectors have produced an implant that can allow a victim of a spinal cord injury to walk again or give an amputee the ability to control her leg with her mind. In the private sector, Cyberkinetics is leading the way to liberating some people from wheelchairs. This technology is a path to a more functional way of life, but it is also possible that the use of implants could be used for malevolence.

John Donohoe, founder, chief scientific officer, and director of Cyberkinetics, addressed the issue of mind control and neural implants. When asked if creating a brain-machine interface will open the door to mind control Donohoe responded, “We do that all the time already. Advertising is mind control. Even pharmaceutical agents are a form of mind control. When people have behaviors that deviate far from the norm, they are given medications that bring their mind back into the realm of behavior that we call normal. If a child were to have a seizure and become unconscious because of the seizure, and we controlled his mind so that he did not have seizures, that would be a wonderful thing. We want to do that.”¹²⁰

The Experts¹²¹

Many scientists, philosophers, psychologists, and military analysts have written on the possibilities of accumulating information directly from the human brain as well as controlling human beings for various governmental and militaristic purposes using the aforementioned technologies. What follows are excerpts from recent interviews conducted by the authors with notable experts focusing on the capabilities of US EMF technologies and concerns about human rights and cognitive liberty. We contacted twenty-two experts in the fields of EMF technologies, many would not comment. The following are quotes from four experts who were willing to publicly address the subject.

Vladimir Nikolaevich Lopatin

Director of The Republican Scientific Research Institute of Intellectual Property, Moscow, former Deputy of the State Duma of the Russian Federation on the Vologda from 1995 to 1999, and Senior Assistant to the General Public Prosecutor of the Russian Federation. During the 1990s Lopatin was active in the Russian Federation’s banning of EMF technologies for military purposes.¹²²

¹²⁰ Neuroscience: John Donoghue By Aaron J. Sender, *Discover* Vol. 25 No. 11, November 2004, Mind & Brain

¹²¹ Gaining interviews with DARPA scientists and officials at the Human Effectiveness Directorate at Brooks proved troublesome. For information about current projects, see DARPA Defense Science Program, specifically COL Geoffrey Ling, M.D., PhD’s program “Human-Assisted Neural Devices” and Amy Kruse’s Improving War fighter Information Intake Under Stress (AugCog) and Neurotechnology for Intelligence Analysts. At the Human Effectiveness Directorate see Andrei G. Pakhomov, Yahya Akyel, Olga N. Pakhomova, Bruce E. Stuck, Michael R. Murphy, “Current state and implications of research on biological effects of millimeter waves: A review of the literature”, in *Bioelectromagnetics*, Volume 19, Issue 7, Pages 393 - 413.

¹²² The following are excerpts of an interview with Lopatin translated by U.C. Davis student, Tatiana Kanare.

The following are quotes from Lopatin:

“At the same time, the necessity of protection from information weapons, information terrorism and information war is being discussed more often during the last years.”

“...according to the Security Department of the Russian Federation, directors of Russian Special Services and the Ministry of Defense of Russia. Based on the data of special services, by the beginning of the 21st century expenses for purchasing means of information war increased within the last 15 years in the USA in four times and are ahead of all armament programs. Information confrontation during the times of a regular war began to change to a new, higher level – information war.”

“According to article 6 of the Federal Law “On weapons,” as of July 30, 2001, on the territory of the Russian Federation it is forbidden to circulate as means of civil and service weapons: ‘weapons and other objects, destructive ability of which is based on the use of electro-magnetic, light, heat, infrasound and ultrasound radiation and which have output parameters that exceed the amounts, set by state standards of the Russian Federation and norms of the federal body of executive power responsible for healthcare, and also mentioned above weapons and objects, manufactured outside of the territory of the Russian Federation’.”

Carol Smith

British psychoanalyst, private practice in London, member of The College of Psychoanalysts and the Institute for Psychotherapy and Social Studies and member of their Ethics Committee.

Asked if there are human rights concerns associated with these particular non-lethal weapons, Smith answered, “Yes – it depends though by what is meant by ‘the wrong hands’. For people who are targeted for experimentation – all such devices need testing – all hands are the wrong hands, be they government, private commercial, or sadistic/commercial. Ionatron, a large company based in Arizona, developed plasma channel directed energy weapons and state in their website: ‘What are LIPC laser-guided directed-energy weapons? Laser-guided directed-energy weapons work like “man-made lightning” to disable people or things. LIPC technology is Ionatron’s proprietary type of laser-guided directed-energy weapon. LIPC stands for laser-induced plasma channel; the plasma channel is how the energy is directed through the air at the target. Extremely fast femto-second lasers cause light to break into filaments, which form a plasma channel that conducts the energy like a virtual wire. This technology can be adjusted for non-lethal or lethal use’.”

Discussing neurotechnology, Smith adds, “Brain mapping indicated to us the pleasure centers of the brain. TMS is the accessing these with rapidly changing magnetic fields to produce electrical fields.

If the right hand rule is operative, the effect of inducing electrical fields by changing magnetic fields improves mood.

(Lenz’s law, however, gives the direction of the induced electromotive force (EMF) resulting from electromagnetic induction, thus: The EMF induced in an electric circuit always acts in such a

direction that the current it drives around a closed circuit produces a magnetic field which opposes the change in magnetic flux.) In other words, it would be possible to create depression and a feeling of overwhelming hopelessness by the induction of a current into the electrical circuit of the brain, which opposed the change in magnetic flux.¹²³

“In 2004, The US Air Force Directorate: Controlled Effects gives a clear picture of objectives: “The Controlled Effects long-term challenge focuses technology developments in three primary areas Measured Global Force Projection looks at the exploitation of electromagnetic and other non-conventional force capabilities against facilities and equipment to achieve strategic, tactical, and lethal and non lethal force projection around the world. Controlled Personnel Effects investigates technologies to make selected adversaries think and act according to our needs. Dominant Remote Control seeks to control, at a distance, an enemy's vehicles, sensors, communications, and information systems and manipulate them for military purposes. The S&T Planning Review panel looked first at extending the applications of advanced military technologies currently under development and then at new, revolutionary technologies for their military significance.”

“For the Controlled Personnel Effects capability, the S&T panel explored the potential for targeting individuals with non lethal force, from a militarily useful range, to make selected adversaries think or act according to our needs. Through the application of non-lethal force, it is possible to physically influence or incapacitate personnel. Advanced technologies could enable the war fighter to remotely create physical sensations such as pressure or temperature changes. A current example of this technology is Active Denial, a non-lethal counter-personnel millimeter wave system that creates a skin heating sensation to repel an individual or group of people without harm. By studying and modeling the human brain and nervous system, the ability to mentally influence or confuse personnel is also possible. Through sensory deception, it may be possible to create synthetic images, or holograms, to confuse an individual's visual sense or, in a similar manner, confuse his senses of sound, taste, touch, or smell. Through cognitive engineering, scientists can develop a better understanding of how an individual's cognitive processes (pattern recognition, visual conditioning, and difference detection) affect his decision-making processes. Once understood, scientists could use these cognitive models to predict a person's behavior under a variety of conditions with the potential to affect an adversary's mission accomplishment via a wide range of personnel effects.”¹²⁴

Dr. Dean Radin

Former positions at AT&T Bell Labs and GTE Labs on advanced telecommunications R&D, appointments at Princeton University, University of Edinburgh, University of Nevada, SRI International and Interval Research Corporation, co-founder of the Boundary Institute, Senior Scientist at the Institute of Noetic Sciences. Adjunct appointment at Sonoma State University, Distinguished Consulting Faculty for Saybrook Graduate School.

“I have spoken with experts in this area (extremely low frequency) about health effects in general

¹²³ To access Lenz's Law online, go to: <http://www.launc.tased.edu.au/online/sciences/physics/Lenz's.html>

¹²⁴ For the complete briefing see the Air Force Research Lab website at <http://www.afrlhorizons.com/Briefs/Jun04/DE0401.html>.

and the consensus seems to be that non-ionizing EM radiation definitely does have effects on living systems, from individual cells to human behavior. The principle health concern is childhood leukemia associated with proximity to high-tension lines. There the epidemiological evidence is fairly clear. On other sources of EM, like cell phones and microwaves, the jury still seems to be out, although I strongly suspect that directed microwaves at non-ionizing strength can induce all sorts of behavioral changes through direct influence of the nervous system. This comes from my contacts in the non-lethal weapons arena, which is often lumped in with the hysteria over supposed psychic mind-control. All things being equal, I'd rather see development of non-lethal weapons than lethal ones. How such weapons are actually used is another matter, of course."

"The question is, were there ever elements of the intel/military world engaged in experiments on human behavior (not mind) control? Yes, many decades ago, during the cold war. But is such work still taking place? I don't know, because if it is it would be a black project and then by definition only those involved would know of it. I hope no such projects are underway, because I do believe that EMF, used in nefarious ways, can destabilize the brain, and potentially generate feelings of violence or apathy. But I very strongly doubt that specific thoughts or intentions or actions can be induced"

Dr. Nick Begich

He is the editor of Earthpulse Flashpoints, a new-science book series and published articles in science, politics and education and is a well known lecturer, having presented throughout the United States and in nineteen countries. Begich has served as an expert witness and speaker before the European Parliament and has spoken on various issues for groups representing citizen concerns, statesmen and elected officials, scientists and others. He is the publisher and co-owner of Earthpulse Press and Executive Director of The Lay Institute of Technology, Inc. a Texas non-profit corporation.

"There are several ways that microwaves can affect humans. For instance, the Sheriff and weapons that can heat the skin for crowd control do what the military states but they are capable of much more. The thermal heating weapons act like a car radio; you can change the frequencies to get different effects. The electromagnetic weapons send an impulse through the nervous system. They can transfer sounds, like Woody Norris' directed acoustic weapons, which is contracted to the US government. It modulates a signal that is a radio frequency, which can be changed to affect certain organs. It can override an organ like the heart or the liver. So changing the perimeter is like changing the broadcast on the radio. These extremely low frequencies also have the capability to send messages directly into the head when only the receiver can hear it. (see the 1985 Radiofrequency Radiation Dosimetry Handbook)."

"The handbook talks about electromagnetics and about the rapid healing of bones. The frequencies can also be used to manipulate the brain and create a disequilibrium. These frequencies can also imbed signals on radio broadcasts to create a feeling of fear or anxiety. The US military would embed these signals on the Muslim prayer broadcasts during the first Gulf War. This was called Project Solo."

“During the 1990’s, in both presidential administrations, non-lethal weapons such as these and others received priority funding. The Secretary of Energy under Clinton, O’Leary, warned that over a 40 year period, 500,000 had been unwitting test subjects for military research on non-lethal weapons, including MKULTRA who claims among many victims, Ted Kaczynski, the Unabomber. There is no way to know who these people are or how to help them because there is paranoia in the military and no oversight in Congress. These black projects probably don’t even make it to the President.”

“The problem is that the military’s role is to be paranoid and think up scenarios where the worst can happen then prepare for this in order to protect the people from a hypothetical future event. But there is little to no oversight. The Senate Intelligence Committee is made up of people like Ted Stephens who thinks the internet is made up of pipes and tubes. These people do not have the required background knowledge to ask the right questions. According to the defense budget report, 40% of the budget is dedicated to black projects. There is no oversight and no public knowledge. In the European Union, things are much different.”

“In February 1998, I testified before the European Union parliament for an hour and a half and convinced them of the detrimental effects of non lethal weapons on humans, their behavior and their minds. The EU was convinced and passed a resolution banning the use of weapons that can manipulate a person (see Parliament Resolution A4-005/99 entitled "Resolution on the Environment, Security, and Foreign Policy" passed on January 29, 1999). During the hearings, the US representative and NATO representatives sat in the back and declined to participate when asked. In the US, there is no such resolution or anything remotely close to being considered by any member of Congress. There is no concern for it in the US because no one knows about them.”

“During the 1980’s and 1990’s, there were a lot of papers that came out of the Naval War College and from top military officials that advocated using weapons that would cut down on the carnage seen by the American public in order to maintain public support. There was another paper that discusses how people will give up their liberties if they lived in a climate of fear by an outside enemy. If the US public knew about these weapons and what they could potentially be asked to give up, their minds, the public would resist. So now, these weapons are being developed by the companies that comprise the industrial military complex who are immune from FOIA requests.”

“Without oversight, these weapons will allow a government to have absolute control. These weapons are most certainly in the hands of most industrialized countries. China certainly has them as intelligence reports released by the CIA reveal claims about these new concept weapons. There needs to be a debate in the public sphere because while these weapons appear frightening, they have amazing therapeutic potentials. There is the possibility of quicker healing and curing disease and what is just as important about government transparency concerning weapons is the transparency of life saving science being kept from the public. If we have the ability to cure and the government or military hides this, we have just as big a problem.”

Summary Analysis of Expert Interviews

From the four interviews we were able to complete, there is a clear consensus of concern for the potentiality of human rights abuses with EMF weapons testing and use. They collectively agree that the US is the leading global researcher in this area and spends increasingly more money building this technology. It is also clear that we know very little about the actual levels of experimentation, research, and capabilities of EMF weapons technologies due to high levels of US government security.

Department of Defense Military Contractors

Military contractors run our wars in concert with power elites. The corporation also has the power to determine which studies will reach the public.¹²⁵ To be certain, the military, in the interest of budgets, will allow negative or alarming studies to remain unreported or lost in a sea of classified documents.

The power of the military and DOD contractors is staggering. In the interest of national security and lessons learned from an open democracy during the 1970s and the 1990s, operations have become more black. In essence, no one can know with certainty what our military, government, or corporations have in store for the world, though, we have some clues.

Michael Vickers, senior adviser to the Secretary of Defense for the 2005 Quadrennial Defense Review and principal strategist for the largest covert action program in the CIA's history, recently testified on the importance of black operations:

“US Special Operations Command’s (SOCOM) emphasis after 9/11 has been to make white Special Operations Forces (SOF) more gray and black SOF more black. It is imperative, however, that white and black SOF be integrated fully from a strategic perspective.”¹²⁶

The money involved in the non-lethal weapons industry is growing and military contractors are reaping the profits. According to *Defense Industry Daily*, Aardvark Tactical, Inc. in Azusa, CA won a \$50 million contract to develop non-lethal weapons, anti-terrorism capabilities, and riot gear.¹²⁷ Ionatron was awarded a \$12 million contract to develop the Laser Induced Plasma Channel technology which produces man-made lightening bolts.¹²⁸ SAIC received a \$49 million in November 2004 to develop High Power Microwave and other directed energy systems while Fiore Industries received a \$16.35 million contract for similar technology and ITT received a \$7.85 million contract

¹²⁵ From *Microwave News*, July 2006, “Radiation Research and The Cult of Negative Results.” “When we investigated who sponsored the microwave-DNA papers published in *Radiation Research*, we discovered that four out of five were paid for by the wireless industry—notably Motorola—and/or the US Air Force, both of which have a long history of trying to control or suppress EMF research. Indeed, industry and the USAF paid for more than 75% of all the negative genotox studies, that is those published in all the various journals.”

¹²⁶ According to Michael Vickers biography at the Center for Strategic Defense Budget Studies’ website, “The paramilitary operation that drove the Soviet army out of Afghanistan and played a major role in ending the Cold War.” http://www.csbaonline.org/6About_Us/2Staff_Directory/Michael_Vickers.htm

¹²⁷ “\$50M for USMC Riot Gear, Protection Items, and Non-Lethal Weapons”, *Defense Industry Daily*, July 27, 2005.

¹²⁸ “Ionatron Facing Scrutiny Over Laser Projects”, *Defense Industry Daily*, May 24, 2006.

for the same in 2000.¹²⁹ Fiore Industries received a \$7.1 million for High Power Microwave Research and Experiment Program as early as 1994 and the same year Hughes Missile Systems Company received a \$6.6 million contract for *High Power Microwave Suppression of Enemy Air Defense Technology*.¹³⁰ Lockheed Martin secured a deal with DARPA in 2005 to continue the development of the Space Based Radar Antenna Technology in a \$19.5 million contract.¹³¹ According to the Lockheed press release, the technology, “could significantly increase global persistent surveillance coverage”.

In May of 2006, the Air Force issued \$24 million in contracts for “Electro Magnetic Effects Research and Development” to Northrup Gruman, Voss Scientific, Lockheed Martin, Electro Magnetic Applications, and SAIC among others.¹³² The DOD viewed electromagnetic research and development as a key component in future wars as early as the 1990s. Emmett Paige Jr., Assistant Secretary of Defense for Command, Control, Communications and Intelligence declared in 1996 that, “Well over a decade ago, a Soviet general reportedly said something like ‘to prevail in the next conflict, one must control the electromagnetic spectrum.’ That statement proved true in the Bacca Valley and on deserts in Iraq. The Department of Defense is committed to ensuring that “in the next conflict it is we who will control the spectrum. We know its value’.”¹³³ Increasingly, the value of non lethal weapons continues to rise as they produce fewer images of death in the media than traditional weapons.”

In addition to DOD contractors, the realm of non-lethal weapons extends into the universities with millions of dollars in scholarships and research fellowships. Pennsylvania State University, sponsors the Institute for Non-Lethal Defense Technologies (INLDT), the University of Medicine and Dentistry of New Jersey has the Stress and Motivated Behavior Institute, University of New Hampshire houses the Non-lethal Technology Innovation Center, and many US military schools have classes directly related to non-lethal weapons technology.¹³⁴ There are also numerous conferences each year hosted by the Department of Defense, contractors and universities.¹³⁵ The business of non-lethal weapons is expanding and will continue to grow. In 2006, the Joint Non-Lethal Weapons Directorate received \$43.9 million compared to \$25.8 million in 2000.¹³⁶

Ionatron’s website states that, “...the market for new directed-energy applications (will increase to \$12.7 billion over the next ten years for the defense market alone.”¹³⁷

Despite Clinton's reforms on human testing, the government, military and the corporation will undoubtedly want to test these weapons on humans whenever possible. Easiest to test would be prisoners in undisclosed CIA detention centers, civilians in war torn regions, and even US citizens in protest crowds or civilian jails. In addition to the rubber bullets and pepper spray, which are common in many police forces, new concept weapons are also in use. Perhaps soon Americans will learn first-hand, the effects of the new human control technologies.

However, hundreds of people continue to assert that a person or persons, whom they do not know, have been targeting them with electromagnetic weapons in a widespread campaign of either illegal experimentation or outright persecution.

These experiences involved a number of discrete phenomena:

Hearing voices when no one was present.

Feeling sensations of burning, itching, tickling, or pressure with no apparent physical cause.

Sleeplessness and anxiety as a result of "humming" or "buzzing".

Loss of bodily control, such as twitching or jerking of an arm or leg suddenly and without control.

Unexpected emotional states, such as a sudden overwhelming feeling of dread, rage, lust or sorrow that passes as quickly as it arises.¹³⁸

The levels of research on directed energy is now large enough to support a Directed Energy (DE) Professional Society made up of private contractors and Department of Defense officials with security clearances. They have been holding high security symposiums since spring 2001 including a planned meeting set for March 2007. The following is from the Directed Energy Professional Society's website.

"The Directed Energy (DE) Systems Symposium (March 2007) will focus on systems aspects of DE in a limited-attendance environment. The Systems Symposium consists of co-located technical sessions organized by five separate conferences, with joint technical and plenary sessions to encourage discussion outside narrow technical limits. Attendance at all sessions is limited to US citizens with classified visit requests on file.

¹³⁸ This list of symptoms was compiled from material available on the website of Californians Against Human Rights Abuses (CAHRA) and can be found at www.mindjustice.org. In addition the authors conducted interviews with seven individuals who wish to have their identities protected and who presented anecdotal and physical evidence to support their assertions. There is, however, little in the public domain that conclusively states the existence of direct human manipulation by governments, militaries or private companies/researchers in the current day, MKULTRA and other historic programs notwithstanding. However, there are many organizations that seek to help these people including concerned scientists, Russian Duma members and EU parliamentarians, psychologists and academics. A list of organizations follows in Appendix A.

Symposium Highlights

Beam Control Conference
Directed Energy Modeling and Simulation Conference
Employment of Directed Energy Weapons Conference
High Energy Laser Lethality Conference
High Power Microwave Systems and Effects Conference¹³⁹

The following are three course descriptions from the October Directed Energy Conference:

Course 9.†Military Utility Analysis for DE (Direct Energy) Systems

Classification: Secret

Course Description: This course will provide an overview of military worth analysis for DE weapon systems. The course will include a description of four areas of systems engineering assessment that are brought together to form military worth analysis. These are: 1) weapon system concept performance trade studies, 2) target vulnerability assessment, 3) engagement-level system operational effectiveness assessment, and 4) war gaming and mission/campaign level analysis. Each of these areas will be covered during the short course, with emphasis on the elements that are drawn from each of these areas to support military worth analysis. The course will particularly emphasize methods for assessing system level effectiveness in the context of traditional weapon effectiveness tools such as the Joint Munitions Effectiveness Manuals (JMEMs) and for providing data on DE weapons effectiveness to mission and campaign level analysis tools and to models and simulations used to support war gaming.

Topics to be covered include:

Definition of military worth analysis
Elements of DE weapon system performance trade studies and how they feed military worth analysis
Target vulnerability assessment and its use to support weapon effectiveness
Adapting standard weapon "kill" criteria to measure benefit of DE effects
Joint Munitions Effectiveness Manuals (JMEMs) weapon effectiveness models
Military utility studies
Modeling and simulation to support war games and war fighter exercises
Mission and campaign level modeling

Course 10. Laser Lethality

Classification: Secret

¹³⁹ Directed Energy Professional Society, Monterey, CA, 19-23 March 2007, Directed Energy Modeling and Simulation Conference 2007, <http://www.deps.org/DEPSpages/DEMSconf07.html>

Course Description: This course reviews laser material interactions over parameter ranges of interest for weapons applications. Fundamental considerations of the optical coupling of the laser energy into the material will be presented. This will be followed by physics-based treatments of the response of metals, organic-based materials, and ceramics to the laser irradiation.

Metals: Simple cw, one-dimensional treatments will be utilized to illustrate the general principles of the response of metals to laser radiation, but two-dimensional cases, phase changes, and pulsed effects will be discussed as well.

Organic Based Materials: The effects of high-energy laser (HEL) radiation on organic based materials, including fiber reinforced composites, plastics and coatings will be reviewed. Materials will range from char formers and charring ablators to clean ablators. The relationship between the pyrolysis processes taking place in various materials during HEL radiation will be reviewed as a function of material composition, form and structure.

Ceramic Materials: Considerations of the response of ceramic shapes when laser loading is added to in-service stresses will be presented. An understanding of these responses from models, which are based on a combination of the thermo-mechanical stress calculations and statistically based fracture initiation, will be presented.

Course 11.†Directed Energy Bioeffects

Classification: Secret

Course Description and Topics: This course will introduce the basics of the biological effects of Directed Energy on cells, tissues, organisms, and humans, with particular emphasis on the influence of such effects on the development of use of Directed-Energy-Emitting technologies.

The student will learn about the mechanisms, resulting damage, and mission impact of laser-tissue interaction. The student will learn what tissues are most susceptible to laser damage based on wavelength, exposure duration, and irradiance. The potential mission-impact of sub0-threshold, threshold, and suprathreshold exposures will be discussed.

Student will understand the nature of RF bioeffects research, including human/animal studies, modeling and simulation, and biotechnology approaches. Students will become familiar with current state of knowledge on potential health effects RF, such as cancer, memory loss, and birth defects. Students will become familiar with basis and structure of current RF safety standards, comparison between competing standards, and how RF safety standards are applied. Students will be instructed on common RF measurement equipment and important factors for investigating potential RF overexposures.

Topics to be covered include:

Laser damage of the eye (retina and cornea)

Laser damage to the skin
Laser safety standards
Laser damage as a function of energy, pulse duration, wavelength, and spot size
RF bioeffects research and the current scientific consensus on RF hazards
RF safety standards
RF measurement basics
Investigating RF overexposures”¹⁴⁰

The US Joint Non-Lethal Weapons Directorate released a paper in 2004 which presents “Crowd Control Modeling and Simulation.” This report discusses behavioral changes human populations.¹⁴¹ That the Department of Defense calls for new weapons systems designed to work on the psychological underpinnings of a population should give human rights activists great cause for alarm. The use of electromagnetic weapons to alter the emotional state, hamper the ability of an enemy or US citizens, to think clearly, and result in chaos and pain are morally problematic for a number of reasons:

1. Creating fear, anxiety confusion and irrational behavior within an individual or a population is counterproductive to the operations of a free society and to the execution of warfare. Chaos only breeds the need for greater and greater means of physical repression; irrational behavior is by definition unpredictable and as such provides significant difficulty when the task is to secure an area.
2. These weapons leave no tell tale clues. There are no bullet holes or gross damage (with the exception of those designed to maim, burn or explode targets).
3. They are operated from a great distance, meaning that the operator has no feedback as to the effects of his or her actions. This provides us with a very dangerous circumstance very similar to Millgram's experiment where we can predict with certainty gross abuses of power.
4. Any device that invades a persons mind, either through induction of “evoked potentials” through electromagnetic means or through the various “crazy-making” tactics employed in both information warfare and psychological operations is a violation of human rights and cognitive liberty.

In terms of authorizing and administering tests of radioactive substances and other tests on unsuspecting members of the public, history shows that people without ethical standards can rise to positions of great responsibility and once ensconced in such positions of trust, produce the most horrifying abuses without fear of reprisal. When layers of secrecy overlay the activities of otherwise rational and intelligent men, the failings of their hearts more readily show. In the case of actually attempting to control human behavior through both overt and covert means our departments of defense and intelligence agencies, both subordinate to the executive branch of government have historically proven incapable of protecting the public and undeserving of the trust given them to

perform their functions for the public good.

Total Surveillance: Cognitive Liberties vs. National Security

Today the US and the U.K. are becoming total surveillance societies in the name of national security. London, like cities across the US, is equipped with cameras citywide. Daily human actions are recorded with video and voice recognition device, while our email and computer usage is monitored. Increased demand for resources, the erosion of middle classes, war, poverty, and environmental disasters are historically factors leading to social uprisings and infiltration of political borders. As governments reinforce the threat of terror, people increasingly turn to their governments for protection.

The US has a long history of human rights violations through harassment, telephone tapping, video surveillance, behavior manipulation, torture, drug-induced states of conscience and psychological control. Congress's passage of the Military Commission Act of 2006 put universal human rights outside the scope of US policy. Today, the US government is using the most technologically advanced forms of surveillance and control, along with the propaganda of fear and intimidation against its citizens. The US engages in covert torture, covert imprisonment, increased censorship and the massive secret classification of government documents.¹⁴²

A prominent neuroscientist, Francis Crick stated in 1994, that "your joys and your sorrows, your memories and your ambitions, your sense of personal identity and free will, are in fact no more than the behavior of a vast assembly of nerve cells and their associated molecules."¹⁴³

Is it possible that today's scientists in the employ of the US neo-conservative global-dominance policy elites believe the same? According to Steven Rose, there are, "bad hats" in neuroscience: "There are always opportunists. The current affairs of our country have produced many."¹⁴⁴ The abundance of neuro-research has led to the development of several products by private business in the name of national security, including brain fingerprinting.¹⁴⁵

John Norseen, a neuroscientist interested in Biofusion, the relationship between humans and

¹⁴⁴ Steven Rose, *The 21st Century Brain: Explaining, Mending and Manipulating the Mind*, Jonathan Cape Publishing, March 31, 2005.

¹⁴⁵ The official explanation of Brain Fingerprinting from Dr. Lawrence Farwell: "Brain Fingerprinting testing is a scientific technique to determine whether or not specific information is stored in an individual's brain. We do this by measuring brain-wave responses to words, phrases, sounds or pictures presented by a computer. We present details about a crime, training or other types of specific knowledge, mixed in a sequence with other, irrelevant items. We use details that the person being tested would have encountered in the course of committing a crime, but that an innocent person would have no way of knowing. We can tell by the brainwave response if a person recognizes the stimulus or not. If the suspect recognizes the details of the crime, this indicates that he has a record of the crime stored in his brain." For more research, see the Brain Wave Science site, the official internet identity of Brain Fingerprinting Laboratories at <http://www.brainwavescience.com/Publications.php>.

computers, says, "If this research pans out you can begin to manipulate what someone is thinking even before they know it." Norseen says he is agnostic on the moral ramifications of this research. He feels that he is not a "mad" scientist - just a dedicated one. "The ethics don't concern me," he says, "but they should concern someone else."¹⁴⁶

We, the authors of this report, contend that human ethics should concern every person who believes in human rights and desires control over their own mind and body. Our brains control our bodies, actions, and thought processes. If the government and the scientists they employ perceive that the human mind as simply a collection of neurons, it then becomes possible to justify the surveillance of the human mind and body for national security purposes.

The control and manipulation of a human brain is a terrifying possibility. Lieutenant Colonel Timothy L. Thomas, US Army (ret), published an article in the military journal *Parameters* which likens the mind as a new battlefield. He quotes a Russian army major in relation to mind wars, "It is completely clear that the state which is first to create such weapons will achieve incomparable superiority." Thomas expresses concern about "information dominance" though he stops short on the moral implications.¹⁴⁷

Under the cover of secrecy provided by claims of national security, researchers in service to higher circle policy elites have implanted electrodes into human subjects to control minds and tortured prisoners and the mentally ill in efforts to find better "brainwashing" techniques. They have poisoned thousands with atomic testing, experimented on young children using drugs, trauma and hypnosis, sprayed major cities with biological agents to prepare for a future attack, overthrown governments, instituted mass killings, and engaged in every form of information distortion.

The current "War on Terror" has revealed to the public some of the tools that the military has been developing for decades. High profile weapons systems flash across the nightly reports of the major news networks, including highflying Stealth bombers on grainy green tinted video from the noses of "smart" bombs. On occasion glimpses are given through the media of what one article dubbed "Wonder Weapons."¹⁴⁸ Weapons that fall under the military category of "Non-Lethal Weapons." In fact the general position of the agencies who do comment on weapons that exploit the lower end of the electromagnetic spectrum is that they have no biological effect at all, except for what are dubbed "thermal effects," in essence heating of human cells.¹⁴⁹

Research into this subject has shown that this position is inaccurate, and that the effects of electromagnetic radiation weapons on human beings are in fact both chilling and dramatic. As reported in 2001, the statement of Dr. Eldon Byrd should be considered with great weight:

¹⁴⁶ Douglas Pasternak, "John Norseen Reading your mind - and injecting smart thoughts", *US News and World Report*, January 3-10, 2000.

¹⁴⁹ H. Pollack, "Epidemiologic data on American personnel in the Moscow embassy", *Bull N Y Acad Med.*, 1979 Dec;55(11):1182-6.

“A medical engineer, Eldon Byrd, reported a case that illustrates this point. After working on the Polaris submarine, which carried long-range nuclear weapons, Byrd developed non-lethal weapons with reversible effects. He regarded this as a humanitarian alternative to ‘punching holes in people and having their blood leak out’ in battle. His inventions used magnetic fields at biologically active wave frequencies to affect brain function. Byrd could put animals to sleep at a distance and influence their movements. When the success of his research became evident, suddenly he was pulled off the project and it went “black.” His believes the electromagnetic resonance weapons he developed have been used for psychological control of civilians rather than for exigencies in battle. That is, to ensure his participation, he was uninformed about the true nature of the project. Byrd’s case also illustrates how morally tolerable operations may transition to morally intolerable operations, or at least rise above the atrocity line”¹⁵⁰

Power elites who fund and support efforts at supplanting the will of the people do so from on high. Their ability to redirect public attention to ward external threats and away from their own motivations in effect silences opposition to their programs. By controlling the flow of information in society, the power elites provide the public with a limited choice in all matters that pertain to machinations of government and corporate control. Given more advanced technologies for the control of information unscrupulous individuals who ascribe to a “might makes right” philosophy may will find the ways and means of employing these technologies against those who would oppose their plans. The dangers here are great, in that the individual who would direct the torture and killing of innocents is usually removed from the actual fact. It is left up to lesser authorities to administer the beatings, bullets, and mind/body bending technologies.

For the US Government to unilaterally declare that our country will not comply with international human rights laws, nor uphold the core values of our nation’s foundation is an indication of extremism that supersedes the values and beliefs of the American people. When such extremism exists we need to take seriously the founders’ declaration that, “to secure these rights, Governments are instituted among Men, deriving their just powers from the consent of the governed, — That whenever any Form of Government becomes destructive of these ends, it is the Right of the People to alter or to abolish it, and to institute new Government, laying its foundation on such principles and organizing its powers in such form, as to them shall seem most likely to effect their Safety and Happiness.” (Declaration of Independence 1776)

Freedom of Information/
Privacy Office

Mr. Donald Friedman
Confidential Legal Correspondence
1125 Third Street
Napa, California 94559-3015

Dear Mr. Friedman:

References:

a. Your Freedom of Information Act (FOIA) request dated May 25, 2006, to the Department of the Army, Freedom of Information/Privacy Act Division (DA FOIA/PA DIV), for all documents pertaining to the microwave auditory effect, microwave hearing effect, Frey effect, artificial telepathy, and/or any device/weapon which uses and/or causes such effect; and any covert or undisclosed use of hypnosis. On September 5, 2006, the DA FOIA/PA DIV referred a copy of your request to this office. Your request was received on September 11, 2006.

b. Our letter of September 13, 2006, informing you of the search for records at another element of our command and were unable to comply with the 20-day statutory time limit in processing your request.

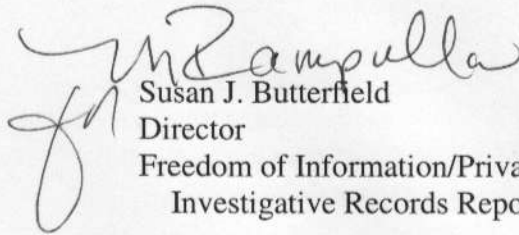

As noted in our letter, the search has been completed with another element of this command and the record has been returned to this office for our review and direct response to you.

We have completed a mandatory declassification review in accordance with Executive Order (EO) 12958, as amended. As a result of this review, it has been determined that the Army information no longer warrants security classification protection and is releasable to you. A copy of the record is enclosed for your use.

Fees for processing your request are waived.

If you have any questions concerning this action, please feel free to contact this office at (301) 677-2308. Refer to case #614F-06.

Sincerely,

A handwritten signature in cursive script, appearing to read "S. Butterfield".

Bioeffects of Selected Nonlethal Weapons(fn 1)

This addendum to the Nonlethal Technologies--Worldwide (NGIC-1147-101-98) study addresses in summary, some of the most often asked questions of nonlethal weapons technology, the physiological responses observed in clinical settings of the biophysical coupling and susceptibility of personnel to nonlethal effects weapons. These results identify and validate some aspects of maturing nonlethal technologies that may likely be encountered or used as nonlethal effectors in the future including:

- Laser and other light phenomena.
- Radiofrequency directed energy.
- Aural bioeffects.

The study of electromagnetic fields and their influence on biological systems is increasing rapidly. Much of this work is taking place because of health concerns. For example, increased concern has arisen regarding the effects of operator exposure to the electromagnetic fields associated with short-wave diathermy devices, high power microwave ovens, radar systems, magnetic resonance imaging units, etc. In addition, much concern has arisen about extremely low frequency (60 Hz power frequency) electric and magnetic fields that originate from high-voltage transmission lines, industrial equipment, and residential appliances. Both occupational and residential long-term exposure have been the focus of epidemiological studies. The studies have suggested possible adverse effects on human health (e.g., cancer, reproduction, etc.). Laboratory research is still being pursued to identify possible mechanisms of interaction. However, other than thermal heating for microwave frequencies, there is no yet agreed-upon mechanism of action. As a consequence, our knowledge base is developed entirely with phenomenological observations. Because of this fact, it is not possible to predict how nonthermal biological effects may differ from one exposure modality to another. It is especially difficult, because of the small data base for fast pulses, to predict biological effects that might be associated with high-power pulses of extremely short duration.

There is, however, a growing perception that microwave irradiation and exposure to low frequency fields can be involved in a wide range of biological interactions. Some investigators are even beginning to describe similarities between microwave irradiation and drugs regarding their effects on biological systems. For example, some suggest that power density and specific absorption rate of microwave irradiation may be thought of as analogous to the concentration of the injection solution and the dosage of drug

administration, respectively. Clearly, the effects of microwaves on brain tissue, chemistry, and functions are complex and selective. Observations of body weight and behavior revealed that rats, exposed under certain conditions to microwaves, eat and drink less, have smaller body weight as a result of nonspecific stress mediated through the central nervous system and have decreased motor activity. It has been found that exposure of the animals to one modality of radiofrequency electromagnetic energy substantially decreases aggressive behavior during exposure. However, the opposite effects of microwaves, in increasing the mobility and aggression of animals, has also been shown for a different exposure modality. Recent published data implicates microwaves as a factor related to a deficit in spatial memory function. A similar type of effect was observed with exposure to a "resonance tuned" extremely low frequency magnetic field. Thus, the data base is replete with phenomenological observations of biological systems "affected" by exposure to electromagnetic energy. (The fact that a biological system responds to an external influence does not automatically nor easily translate to the suggestion of adverse influence on health.) The objective of the present study was to identify information from this developing understanding of electromagnetic effects on animal systems that could be coupled with human biological susceptibilities. Situations where the intersection of these two domains coexist provide possibilities for use in nonlethal applications.

Incapacitating Effect: Microwave Heating

Body heating to mimic a fever is the nature of the RF incapacitation. The objective is to provide heating in a very controlled way so that the body receives nearly uniform heating and no organs are damaged. Core temperatures approximately 41° C are considered to be adequate. At such temperature a considerably changed demeanor will take place with the individual. Most people, under fever conditions, become much less aggressive; some people may become more irritable. The subjective sensations produced by this buildup of heat are far more unpleasant than those accompanying fever. In hyperthermia all the effector processes are strained to the utmost, whereas in fever they are not. It is also possible that microwave hyperthermia (even with only a 1° C increase in brain temperature) may disrupt working memory, thus resulting in disorientation.

Biological Target/Normal Functions/Disease State

The temperature of warm-blooded (homeothermic) animals like the human remains practically unchanged although the surrounding temperature may vary considerably. The normal human body temperature recorded from the mouth is usually given as 37° C, with the rectal temperature one degree higher. Variation between individuals is typically between 35.8° C and 37.8° C orally. Variations also occur in any one individual throughout the day--a difference of 1.0° C or even 2.0° C occurring between the maximum in the late afternoon or early evening, and the minimum between 3 and 5 o'clock in the morning. Strenuous muscular exercise causes a temporary rise in body temperature that is proportional to the severity of the exercise; the level may go as high as 40.0° C.

Extreme heat stress, such that the body's capacity for heat loss is exceeded, causes a pathological increase in the temperature of the body. The subjective sensations produced by this buildup of heat are far more unpleasant than those accompanying fever. In hyperthermia all the effector processes are strained to the utmost, whereas in fevers they are not. The limiting temperature for survival, however, is the same in both cases--a body temperature of 42° C. For brief periods, people have been known to survive temperatures as high as 43 ° C.

In prolonged hyperthermia, with temperatures over 40° C to 41° C, the brain suffers severe damage that usually leads to death. Periods of hyperthermia are accompanied by cerebral edema that damage neurons, and the victim exhibits disorientation, delirium, and convulsions. This syndrome is popularly referred to as sunstroke, or heatstroke, depending on the circumstances. When the hyperthermia is prolonged, brain damage interferes with the central thermoregulatory mechanisms. In particular, sweat secretion ceases, so that the condition is further exacerbated.

Mechanism to Produce the Desired Effects

This concept builds on about 40 years of experience with the heating effects of microwaves. Numerous studies have been performed on animals to identify characteristics of importance to the understanding of energy deposition in animals. As a result of the physics, the relationship between the size of the animal and the wavelength of the radiofrequency energy is most important. In fact, the human exposure guidelines to radiofrequency radiation are designed around knowledge of the differential absorption as a function of frequency and body size. The challenge is to minimize the time to effect while causing no permanent injury to any organ or the total body and to optimize the equipment function. The orientation of the incident energy with respect to the orientation of the animal is also important.

In a study of the effect of RF radiation on body temperature in the Rhesus monkey, a frequency (225 MHz) is purposely chosen that deposits energy deep within the body of the animal. A dose rate of 10 W/kg caused the body temperature to increase to 42° C in a short time (10-15 min). To avoid irreversible adverse effects, the exposure was terminated when a temperature of 42° C was reached. A lower dose rate of 5 W/kg caused the temperature to increase to 41.5° C in less than 2 hours. The reversible nature of this response was demonstrated by the rapid drop in body temperature when RF exposure was terminated before a critical temperature of 42° C was reached. It is estimated for rats that the absorbed threshold convulsive dose lies between 22 and 35 J/g for exposure durations from less than a second to 15 minutes. For 30-minute exposure, the absorbed threshold dose for decrease in endurance is near 20 J/g, the threshold for work stoppage approximately 9 J/g, and the threshold for work perturbation ranges from 5 to 7 J/g. All of the above measures, except convulsions, are types of nonlethal incapacitation.

A rough estimate of the power required to heat a human for this technology is on the order of 10 W/kg given about 15 to 30 minutes of target activation. Actual power levels

depend on climatic factors, clothing, and other considerations that affect the heat loss from the individual concerned. A method for expressing dose rate in terms of body surface area (i.e., watts per square meter) rather than body mass (i.e., watts per kilogram) would permit a more reliable prediction of thermal effects across species. However, there are large uncertainties in the ability to extrapolate thermoregulatory effects in laboratory animals to those in human beings.

This technology is an adaptation of technology which has been around for many years. It is well known that microwaves can be used to heat objects. Not only is microwave technology used to cook foods, but it is also used as a directed source of heating in many industrial applications. It was even the subject of the "Pound Proposal" a few years ago in which the idea was to provide residential heating to people, not living space. Because of the apparently safe nature of body heating using microwave techniques, a variety of innovative uses of EM energy for human applications are being explored. The nonlethal application would embody a highly sophisticated microwave assembly that can be used to project microwaves in order to provide a controlled heating of persons. This controlled heating will raise the core temperature of the individuals to a predetermined level to mimic a high fever with the intent of gaining a psychological/capability edge on the enemy, while not inflicting deadly force. The concept of heating is straightforward; the challenge is to identify and produce the correct mix of frequencies and power levels needed to do the remote heating while not injuring specific organs in the individuals illuminated by the beam.

A variety of factors contribute to the attractiveness of this nonlethal technology. First, it is based on a well-known effect, heating. Every human is subject to the effects of heating; therefore, it would have a predictability rating of 100%. The time to onset can probably be engineered to between 15 and 30 minutes; however, timing is the subject of additional research to maximize heating while minimizing adverse effects of localized heating. The onset can be slow enough and/or of such frequency to be unrecognized by the person(s) being irradiated. Safety to innocents could be enhanced by the application and additional development of advanced sensor technologies. Incapacitation time could be extended to almost any desired period consistent with safety. (Given suitable R&D, temperature or other vital signs could be monitored remotely, and temperature could be maintained at a minimum effective point).

Time to Onset

The time to onset is a function of the power level being used. Carefully monitored uniform heating could probably take place in between 15 and 30 minutes. Time to onset could be reduced but with increased risk of adverse effects. Minimum time is dependent on the power level of the equipment and the efficiency of the aiming device.

Duration of Effect

Assuming that the heating is done carefully, reversal of elevated body temperature would begin as soon as the source of heat is removed.

Tunability

This concept is tunable in that any rate of heating, up to the maximum capacity of the source, may be obtained. Thus it is suitable for use in a gradual force or "rheostatic" approach. If the situation allows, and the source is sufficiently powerful, there is the possibility to use this technology in a lethal mode as well. Prolonged body temperature above 43° C is almost certain to result in permanent damage to the brain and death.

Distribution of Human Sensitivities to Desired Effects

No reason has been identified to suggest that anyone would be immune to this technology. Individuals with compromised thermoregulatory mechanisms would be susceptible with a lower incident energy density. This would include people with organic damage to the hypothalamus, the part of the brain that integrates the autonomic mechanisms which control heat loss as well as people with compromised somatic features of heat loss (e.g., respiration, water balance, etc.).

The technologies needed for the thermal technology concept are relatively well developed because of the known biophysical mechanism, the universal susceptibility of humans to the mechanism of heating, and because of a well developed technology base for the production of radiofrequency radiation. Because the human body is inhomogeneous, certain organs are, by virtue of their size and geometry, more easily coupled with one radiofrequency wavelength than another. Therefore, to avoid permanent damage to the suspect or to innocent bystanders, it may be necessary to vary the frequency to avoid localized heating and consequent damage to any organ. Additionally, it will be necessary to avoid the conditions thought to be associated with the induction of cataracts. Thus, while the technology of microwave heating in general is mature, adaptation as a nonlethal technology will require sophisticated biophysical calculations to identify the proper regimen of microwave frequencies and intensities; it will also be necessary to optimize existing hardware to meet the biophysical requirements.

Possible Influence on Subject(s)

If the technology functions approximately as envisioned, the targeted individual could be incapacitated within 15 to 30 minutes. Because this technology is focused on a relatively slow onset, it should only be used in situations where speed is not important. The very uncomfortable nature of a high body temperature may be useful in negotiations or possibly for controlling crowds. It would be equally useful on single persons or crowds. Evidence also indicates a disruption of working memory, thus disorientation may occur because of an inability to consolidate memory of the recent (minutes) past.

Technological Status of Generator/Aiming Device

Equipment needed to explore this concept in the laboratory is available today. Design and construction of the RF/microwave generator will depend on the constraints posed by the calculations, potential generation devices, and energy-directing structures. A variety of

options exist for both of these equipment needs. The use of advanced frequency and modulation-agile RF generation and amplification circuitry will be required to assess fully the frequency/power/time envelope of RF heating profiles required. Although much equipment is commercially available, it is likely that custom hardware and software will be necessary because available equipment has not been designed with the need for frequency/intensity variability, which will probably be needed for safety purposes. In addition, the design of antennas and other energy-directing structures will almost certainly involve unique configurations. Since this technology utilizes radiofrequency energy, it can be defeated by the use of shielding provided by conductive barriers like metal or metal screen.

Incapacitating Effect: Microwave Hearing

Microwave hearing is a phenomenon, described by human observers, as, the sensations of buzzing, ticking, hissing, or knocking sounds that originate within or immediately behind the head. There is no sound propagating through the air like normal sound. This technology in its crudest form could be used to distract individuals; if refined, it could also be used to communicate with hostages or hostage takers directly by Morse code or other message systems, possibly even by voice communication.

Biological Target/Normal Functions/Disease State

This technology makes use of a phenomenon first described in the literature over 30 years ago. Different types of sounds were heard depending on the particulars of the pulse characteristics. Various experiments were performed on humans and laboratory animals exploring the origin of this phenomenon. At this time, virtually all investigators who have studied the phenomenon now accept thermoelastic expansion of the brain, the pressure wave of which is received and processed by the cochlear microphonic system, to be the mechanism of acoustic perception of short pulses of RF energy. One study (in 1975) using human volunteers, identified the threshold energy of microwave-auditory responses in humans as a function of pulse width for 2450 MHz radiofrequency energy. It is also found that about 40 J/cm^2 incident energy density per pulse was required.

Mechanism to Produce the Desired Effects

After the phenomenon was discovered, several mechanisms were suggested to explain the hearing of pulsed RF fields. Thermoelastic expansion within the brain in response to RF pulses was first studied and demonstrated in inert materials and was proposed as the mechanism of hearing of pulsed RF fields. A pressure wave is generated in most solid and liquid materials by a pulse of RF energy--a pressure wave that is several orders of magnitude larger in amplitude than that resulting from radiation pressure or from electrostrictive forces. The characteristics of the field-induced cochlear microphonic in guinea pigs and cats, the relationship of pulse duration and threshold, physical measurements in water and in tissue-simulating materials, as well as numerous theoretical calculations--all point to thermoelastic expansion as the mechanism of the hearing phenomenon.

Scientists have determined the threshold energy level for human observers exposed to pulsed 2450-MHz fields (0.5-to 32 micron pulse widths). They found that, regardless of the peak of the power density and the pulse width, the per-pulse threshold for a normal subject is near 20 mJ/kg. The average elevation of brain temperature associated with a just-perceptible pulse was estimated to be about $5 \times 10^{-6}^{\circ} \text{C}$.

Time to Onset

The physical nature of this thermoelastic expansion dictates that the sounds are heard as the individual pulses are absorbed. Thus, the effect is immediate (within milliseconds). Humans have been exposed to RF energy that resulted in the production of sounds.

Duration of Effect

Microwave hearing lasts only as long as the exposure. There is no residual effect after cessation of RF energy.

Tunability

The phenomenon is tunable in that the characteristic sounds and intensities of those sounds depend on the characteristics of the RF energy as delivered. Because the frequency of the sound heard is dependent on the pulse characteristics of the RF energy, it seems possible that this technology could be developed to the point where words could be transmitted to be heard like the spoken word, except that it could only be heard within a person's head. In one experiment, communication of the words from one to ten using "speech modulated" microwave energy was successfully demonstrated. Microphones next to the person experiencing the voice could not pick up the sound. Additional development of this would open up a wide range of possibilities.

Distribution of Human Sensitivities to Desired Effects

Because the phenomenon acts directly on cochlear processes, the thermoelastic pressure waves produce sounds of varying frequency. Many of the tests run to evaluate the phenomenon produced sounds in the 5 kHz range and higher. Because humans are known to experience a wide range of hearing loss due to cochlear damage, it is possible that some people can hear RF induced sounds that others with high frequency hearing loss cannot. Thus, there is a likely range of sensitivity, primarily based on the type of pulse and the condition of the cochlea. Bilateral destruction of the cochlea has been demonstrated to abolish all RF-induced auditory stimuli.

Recovery/Safety

Humans have been subjected to this phenomenon for many years. The energy deposition required to produce this effect is so small that it is not considered hazardous experimentation when investigating responses at the just-perceptible levels.

Possible Influence on Subject(s)

Application of the microwave hearing technology could facilitate a private message transmission. It may be useful to provide a disruptive condition to a person not aware of the technology. Not only might it be disruptive to the sense of hearing, it could be psychologically devastating if one suddenly heard "voices within one's head."

Technological Status of Generator/Aiming Device

This technology requires no extrapolation to estimate its usefulness. Microwave energy can be applied at a distance, and the appropriate technology can be adapted from existing radar units. Aiming devices likewise are available but for special circumstances which require extreme specificity, there may be a need for additional development. Extreme directional specificity would be required to transmit a message to a single hostage surrounded by his captors. Signals can be transmitted long distances (hundreds of meters) using current technology. Longer distances and more sophisticated signal types will require more bulky equipment, but it seems possible to transmit some type of signals at closer ranges using man-portable equipment.

Range

The effective range could be hundreds of meters.

Incapacitating Effect: Disruption of Neural Control

The nature of the incapacitation is a rhythmic-activity synchronization of brain neurons that disrupts normal cortical control of the corticospinal and corticobulbar pathways; this disrupts normal functioning of the spinal motor neurons which control muscle contraction and body movements. Persons suffering from this condition lose voluntary control of their body. This synchronization may be accompanied by a sudden loss of consciousness and intense muscle spasms.

Biological Target/Normal Functions/Disease State

The normal function of the brain is to control all forms of behavior, voluntary control of body, and the homeostatic parameters of the organism. In normal conditions, all the brain structures, neuron populations, networks, and single units function with specific rhythmic activity depending on the incoming sensory information, information from mnemonic structures, and signals from visceral organs. Each single neuron provides specific processing of information it receives and forms a specific pattern of impulse firing as outgoing information. Synchronization of neuron activity is a natural mechanism of the brain function that uses such controlling processes as motivation, attention and memory (experience) in order to organize behavior. For example, motivational processes are considered as activating ascending signals that synchronize the neuron activity of specific brain structures and neuron networks; this activation/synchronization in turn activates specific forms of behavior such as sexual, aggressive, ingestive activities.

In normal functioning the degree of neuronal synchronization is highly controlled. From experiments that record the neuronal activity in different brain areas simultaneously in animals, it is known that correlation of spike activity between neurons (measured by the correlation level of synchronization) changes depending on the stage of behavior, motivation, attention, or activation of the memory processes. However, under some conditions, such as physical stress, heat shock, or strong emotional stress, the level of synchronization may become higher, involving nonspecific large populations of brain neurons and the synchronization may become uncontrollable.

Depending on at which frequency the synchronization rhythm occurs and how many neurons are involved, it may produce different physical effects; muscle weakness, involuntary muscle contractions, loss of consciousness, or intense (tonic) muscle spasms. The higher level of synchronization takes place in persons affected with epilepsy when they experience periodic seizures since they have a pathologic source (e.g., from injury to the brain) of rhythmic synchronization. Because the neurophysiological mechanisms of epileptiform synchronization are better documented, this incapacitating technology is described in terms of epileptogenesis.

The neurophysiological mechanisms active in epileptogenesis involve changes in membrane conductances and neurotransmitter alterations as they affect neuronal interaction. In the process of epileptogenesis, either some neurons are discharging too easily because of alterations in membrane conductances or there is a failure of inhibitory neurotransmission. The actual discharges have been recognized to result from a neuronal depolarization shift with electrical synchrony in cell populations related in part to changes in membrane conductances. The ionic basis and biochemical substrate of this activation have been areas of considerable study but still leave many questions unanswered. What are the basic cellular properties, present in normal cells and tissue, that could contribute to the generation of abnormal activity? What parts of the systems are low threshold and function as trigger elements?

One of the current hypotheses is involved with microcircuitry, particularly local synaptic interactions in neocortical and limbic system structures. In the hippocampus, the role of the trigger element has been long attributed to the CA3 pyramidal cells--a hypothesis based on the fact that spontaneous synchronous burst discharge can be established in CA3 neurons. Some studies describe an intrinsically bursting cell type in the neocortex that plays a role similar to that of CA3 cells in the hippocampus and that of deep cells in the pyriform cortex. The intrinsic nature of these cells appears to be an important contributor to the establishment of synchronized bursting in these regions. Another apparent requirement in such a population is for a certain degree of synaptic interaction among neurons, such that discharge of even one cell enlists the activity of its neighbors. Given the presence of these bursting cells and the occurrence of excitatory interactions among them in normal tissue, it may actually be the morphologic substrate for epileptiform discharges.

Another hypothesis has focused particularly on the role of N-methyl-D-aspartate (NMDA) receptors. Various factors regulate the efficacy of NMDA receptors: their

voltage-dependent blockade by magnesium and modulation by glycine and polyamines. For example, in the low magnesium model, spontaneous synchronous burst discharge in hippocampal pyramidal cell populations is sensitive to NMDA antagonists. That finding suggests that it is the opening of NMDA channels, by relieving the magnesium blockade, that facilitates epileptiform activity.

Significant attention in the literature is also being given to gamma-amino butyric acid (GABA) receptors for the potential role in control of excitability. Changes in GABA inhibitory efficacy can lead to important effects on the excitability of the system. GABAergic inhibitory post-synaptic potentials (IPSPs) have been shown to be quite labile in response to repetitive activation of cortical cell populations, as may occur during epileptiform discharge. Scientists have shown that even a small percentage change in GABA inhibition can have profound effects on neocortical epileptogenesis. These changes in GABAergic inhibition may be the key to an explanation of how repetitive discharge patterns give rise to ictal discharge. Further, there appears to be a significant increase in excitatory postsynaptic potential (EPSP) frequency prior to seizure initiation an observation that is consistent with loss of IPSP efficacy prior to ictal onset.

The above hypotheses describe different mechanisms of epileptogenesis, but it is quite possible that all of these mechanisms take place, and they reflect large variety of types of epileptic seizures. The common principle of the mechanisms proposed is the change of membrane properties (i.e., conductance, permeability etc.) of certain neurons which results in depolarization and burst discharging. Some factors (e.g., trauma) can affect these specific neurons and initiate synchrony for neurons that control internal communication and communication with various muscle systems not associated with vital functions (i.e., heart beating, breathing). High strength pulsed electric fields could also be such a factor.

Mechanism to Reproduce the Desired Effects

Application of electromagnetic pulses is also a conceptual nonlethal technology that uses electromagnetic energy to induce neural synchrony and disruption of voluntary muscle control. The effectiveness of this concept has not been demonstrated. However, from past work in evaluating the potential for electromagnetic pulse generators to affect humans, it is estimated that sufficiently strong internal fields can be generated within the brain to trigger neurons. Estimates are that 50 to 100 kV/m free field of very sharp pulses (~ 1 nS) are required to produce a cell membranous potential of approximately 2 V; this would probably be sufficient to trigger neurons or make them more susceptible to firing.

The electromagnetic pulse concept is one in which a very fast (nanosecond timeframe) high voltage (approximately 100 kV/m or greater) electromagnetic pulse is repeated at the alpha brain wave frequency (about 15 Hz). It is known that a similar frequency of pulsing light can trigger sensitive individuals (those with some degree of light-sensitivity epilepsy) into a seizure and it is thought that by using a method that could actually trigger nerve synapses directly with an electrical field, essentially 100% of individuals would be susceptible to seizure induction. The photic-induced seizure phenomenon was borne out

demonstrably on December 16, 1997 on Japanese television when hundreds of viewers of a popular cartoon show were treated, inadvertently, to photic seizure induction (figure 31). The photic-induced seizure is indirect in that the eye must receive and transmit the impulses which initially activate a portion of the brain associated with the optic nerve. From that point the excitability spreads to other portions of the brain. With the electromagnetic concept, excitation is directly on the brain, and all regions are excited concurrently. The onset of synchrony and disruption of muscular control is anticipated to be nearly instantaneous. Recovery times are expected to be consistent with, or more rapid than, that which is observed in epileptic seizures.

Time to Onset

No experimental evidence is available for this concept. However, light-induced seizures latency onset in photosensitive epileptics varies from 0.1 to about 10 seconds. Because of the fact that the electrical impulses triggered by light must spread to other parts of the brain, photic-induced seizures are expected to have a generally slower onset than neural synchrony induced by high-strength pulsed electric fields.

Duration of Effect

For epileptic individuals, the typical duration of a petit mal event or a psychomotor event is 1 minute or 2, possibly longer, while the duration of a grand mal seizure is 1 to 5 minutes. In a non-epileptic individual who is induced by electromagnetic means, the durations of the different events are expected to be roughly the same as the epileptic individual's events after the external excitation is removed.

Tunability

There are many degrees of epileptic seizure in diseased persons, and it seems reasonable that electromagnetic stimulation of neural synchrony might be tunable with regard to type and degree of bodily influence, depending on the parameters associated with the chosen stimulus. Because there are no actual data to build on, these statements must be considered tentative. It is known that in the study of photic-induced seizures, parameters can be varied so that the individual under study does not actually undergo a grand mal seizure. This knowledge gives confidence that the proposed technology would be tunable.

Distribution of Human Sensitivities to Desired Effects

It is anticipated that 100% of the population would be susceptible. The mechanism is one that could act on many individual neuronal cells concurrently and hence does not depend on spreading regions of electrical activity as in the disease state.

Possible Influence on Subjects(s)

If the technology functions approximately as envisioned, the targeted individual could be incapacitated very quickly. Because there have been no reported studies using the

conditions specified, experimental work is required to characterize onset time. Different types of technologies could be employed to influence wide areas or single individuals. Because this technology is considered to be tunable, the influence on subjects could vary from mild disruption of concentration to muscle spasms and loss of consciousness. The subject(s) would have varying degrees of voluntary control depending on the chosen degree of incapacitation.

Technological Status of Generator/Aiming Device

An electric field strength of roughly 100 Kv/m over a time period of 1 nanosecond is approximately the condition thought to be necessary to produce the desired effect when provided to an overall repetition rate of 15 Hz. Such a field may be developed using a radar-like, high-peak-power, pulsed source or an electromagnetic pulse generator operated at 15 Hz. These technologies exist today sufficient to evaluate the disabling concept. Power requirements are not high because the duty factor is so low. Aiming devices are currently available, but a high degree of directionality at long distances will require development. It may be necessary to provide bursts of these nanosecond pulses in order to stimulate the desired effect. As the duty time increases so does the average power requirement for power source. Because there were no open literature reports from which to make inferences, there is some uncertainty about the power levels required.

Range

The effective range could be hundreds of meters.

Defeat Capabilities/Limitations

Shielding can be provided by conductive barriers like metal or metal screen. There are a number of drugs that are capable of inducing convulsive seizures and others, like phenobarbital, diphenylhydantoin, trimethadione, 2-4 dinitrophenol, and acetazolamide, which are anticonvulsive. Anticonvulsive drugs are known to be helpful in reducing the effect of seizures in epileptic patients, but their ability to reduce the effect of the proposed technology is unknown (possibly no effect) but expected to be less than for photic-induced seizures.

Incapacitating Effect; Acoustic Energy

The nature of the incapacitation consists of severe pressure sensations, nystagmus (a spasmodic, involuntary motion of the eyes), and nausea caused by high intensities of 9140-155 dB). Nystagmus occurs when convection currents are produced (cupula movement) in the lateral ear canal. This cupula movement causes the eyes to move involuntarily; hence, the external world is interpreted as moving. The subject "sees" his surroundings turning round him and at the same time experiences a sensation of turning. Persons exposed to these levels of sound experience nausea.

Biological Target/Normal Functions/Disease State

The two lateral semicircular canals, one located in each inner ear, alert a person to the fact that his upright head is experiencing angular acceleration. Within the ampulla of the canal are several so called hair cells. The cilia of these cells protrude into the lumen of the ampulla where they are encased in a mass of jelly-like material (the cupula) which is attached to the opposite wall of the canal. As the head accelerates, the cilia are bent by an inertial force of the cupula and the viscous liquid in the canal lumen. The bending of the cilia excites hair cells which in turn excite afferent neurons; these then alert the brain that a change of position of the head has occurred. Similar events occur when the head stops moving. The result of a strong hair cell stimulus to the brain is a rapid eye movement, call nystagmus, a feeling of dizziness and disorientation, and a possibility of nausea and vomiting.

Normal hearing is in the range between the frequencies of 20,000 to 16,000 Hz with the optimal sensitivity for most people between the frequencies of 500 to 6000 Hz.

Mechanism to Produce the Desired Effects

Because the end organs for acoustic and vestibular perception are so closely related, intense acoustic stimulation can result in vestibular effects. The hypothesis is that the sound of normal intensity produces oscillations of the endolymph and perilymph, compensated for by oscillations of the round window. High intensity sound produces eddy currents, which are localized rotational fluid displacements. High intensity sound can also produce nonlinear displacement of the stapes, causing a volume displacement, the result of which can be a fluid void in the labyrinth. To fill the void, fluid may be displaced along the endolymphatic duct and/or block capillary pathways, which, in turn, could stimulate vestibular receptors. Stimulation of the vestibular receptors may lead to nausea and vomiting if the sound pressure level is high enough. Conclude that both eddy currents and volume displacement serve to stimulate vestibular receptors in humans, when exposed to high levels of noise.

One study found nystagmus in guinea pigs exposed to high levels of infrasound via stimulation of the vestibular receptors. However, the same lab was unable to produce nystagmus in human subjects at 5- and 10-second exposures to a pure tone at 135 dB, broadband engine noise, or a 100 Hz tone at 120 dB, pulsed three times/s or 2 minutes. The same research was unable to elicit nystagmus at levels up to 155 dB, and also equally unable to produce nystagmus using infrasound levels of 112-150 dB in guinea pigs, monkeys, and humans. However, research with audible components in the sound spectrum with guinea pigs and monkeys produced nystagmus. Other researchers report other vestibular effects in addition to nystagmus at the following thresholds: 125 dB from 200-500 Hz, 140 dB at 1000 Hz, and 155 dB at 200 Hz. Decrements in vestibular function occur consistently for broadband noise levels of 140 dB (with hearing protection).

Human subjects listened to very high levels of low-frequency noise and infrasound in the protected or unprotected modes. Two-minute duration as high as 140 to 155 dB produced a range of effects from mild discomfort to severe pressure sensations, nausea, gagging,

and giddiness. Effects also included blurred vision and visual field distortions in some exposure conditions. The nature and degree of all effects was dependent on both sound level and frequency with the most severe effects occurring in the audible frequency range (as opposed to infrasound), at levels above about 145 dB. The investigators found no temporary threshold shift (TTS) among their subjects, and the use of hearing protectors greatly alleviated the adverse effects.

Since the early days of jet-engine testing and maintenance, anecdotal evidence has appeared linking exposure to intense noise, with such complaints as dizziness, vertigo, nausea, and vomiting. As a result of siren noise at 140 dB, subjects consistently reported a feeling of being pushed sideways, usually away from the exposed ear, and one subject reported difficulty standing on one foot.

These effects were not as dramatic as from the jet-engine (broadband) noise at 140 dB. This research concludes that the threshold of labyrinthine dysfunction is about 135 to 140 dB and that these effects occur during, but not after, exposure.

Time to Onset

No times to onset of nausea or nystagmus were identified in the literature but is presumed to be relatively immediate based on effects to the labyrinth system occurring during, but not after, exposure to sound pressure levels of 135 to 140 dB.

Duration of Effect

The incapacitation lasts only as long as the incapacitating sound is present.

Tunability

Based on the data presented above, it is unclear whether the degree of nausea or nystagmus is tunable, but similar symptoms caused by other stimuli are variable in degree.

Distribution of Human Sensitivities to Desired Effects

It is most probable that all individuals will be susceptible to this stimulus with the exception of those with a disease or defect (i.e., deaf mutes) of some part or parts of the vestibular system. Data showed no consistent decrease in vestibulo-ocular reflects with increased age.

Recovery/Safety

Normal subjects are likely to recover immediately and experience no or unmeasurable changes in hearing unless well known frequency-intensity-time factors are exceeded. This is based on studies which found no temporary threshold shift in hearing of subjects tested at low frequency. Occupational safety personnel generally recognize that 115

dB(A) is to be avoided and that 70 dB(A) is assumed safe. It is believed that the noise energy with predominating frequencies above 500 Hz have a greater potential for hearing loss than noise energy at lower frequencies. Occupational standards for noise state that a person may be exposed continuously for 8 hours to 90 dB(A) or 15 minutes to 115 dB(A).

Possible Influence on Subject(s)

Induction of nystagmus and nausea will have variable effects on individuals. Effects may be sufficiently incapacitating to allow offensive advantage; the perception of sickness may make a subject susceptible to persuasion. It would be difficult to target single individuals at the present level of sound directing technology. This technology may be better suited for groups of people.

Technological Status of Generator/Aiming Device

Sound generating technology is well developed but not highly portable. Aiming devices are poorly developed.

Range

Under normal circumstances the sound pressure level decreases 6 dB(A) when the distance from the source is doubled. For example if the sound is 100 dB(A) at 100 ft, at 200 ft the sound would be 94 dB(A). At very high sound levels, certain conditions may lead to nonlinear effects in propagation and greatly increase range accuracy.

Defeat Capabilities/Limitations

Negative effects of audible sound are greatly decreased if hearing protection is worn. High frequency sound is more easily blocked than low frequency sound due to wavelength effects.

Laser-Induced Biological Effects

There are three basic damage mechanisms associated with exposure to laser radiation: chemical, thermal, and mechanical or acoustic-mechanical.

The laser-induced, chemical alterations in irradiated tissue are referred to as photochemical damage. The likelihood of laser radiation in the blue-light portion of the electromagnetic spectrum (.380 to .550 microns) inducing photochemical reactions progressively decreases with increasing wavelength. Photochemical effects are not observed upon exposure to radiation with wavelengths exceeding .550 to .650 microns because the kinetic energy associated with these photons is insufficient to initiate a photochemical change.

On the other hand, the thermal effect is a primary mechanism for laser-induced injury. The extent of the injuries induced depends upon the wavelength and energy of the incident radiation, duration of exposure, and the nature of the exposed tissue and its absorption characteristics. Generally, this mechanism predominates in the visible and the near-infrared (.760 to 1.4 microns) portions of the electromagnetic spectrum and for almost all CW and pulsed exposures between 0.1 milliseconds and 1 to 5 seconds.

The third injury mechanism associated with exposure to laser radiation is the mechanical or acoustical-mechanical effect. The radiant energy is absorbed into the tissue and, as a result of rapid thermal expansion following a short (1 nanosecond to 0.1 millisecond) laser radiation pulse, a pressure wave is generated that may result in explosive tissue injury.

Generally, all three mechanisms operate concurrently in an irradiated animal. Thermal effects currently predominate for continuous wave (CW) lasers, while mechanical effects are of increased significance for pulsed-mode lasers. With even higher power, one must also consider nonlinear phenomena such as multiphoton absorption and electromagnetic field effects.

The organs most susceptible to external laser radiation are the skin and eyes. The severity of injury is affected by the nature of the target, the energy density delivered to the target, the frequency and power of the laser, atmospheric attenuation of the beam, and the use of filtering or amplifying optics by the target, etc.

The primary effect on the skin is thermal damage (burns). The severity varies from slight erythema or reddening to severe blistering or charring, depending on such factors as total energy deposition, skin pigmentation, and the tissue's ability to dissipate heat.

The eye is particularly susceptible to intense pulse of laser radiation because of its unique sensitivity to light. The focusing effect is similar to that of a magnifying lens, which focuses the energy on a particular spot. Since the cornea and lens of the eye amplify the intensity of the light incident upon the retina, the retina is extremely sensitive to visible and near-infrared light, and damage to the retina may result in temporary or permanent loss of visual acuity. Laser eye injuries vary according to incident power, spot size, beam angle, temporal mode (CW or pulsed), and pulse repetition frequency. Reported effects include corneal lesions, burns, cataracts, and retinal lesions.

Some high-power lasers can cause antipersonnel effects by the deposition of thermal energy. These lasers must operate at a wavelength that is readily absorbed by the skin or the cornea. These generally include the far- and mid-IR regions (10 to 12 microns and 3 to 5 microns) as well as the ultraviolet region (<0.4 microns). However, ultraviolet wavelengths generally do not propagate well in the atmosphere, so the primary threat wavelengths to be considered are between 3 and 12 microns. Although relatively modest amounts of far-IR laser power are required to produce superficial burns on the skin at short ranges, and efforts to design rheostatically lethal laser weapons are on going.

Nonlethal blinding laser weapons generally use collimated beams with very low beam divergence, and the energy contained in the beam diminishes relatively slowly over great distances. Imaging systems such as eyes and EO vision systems have focusing optics that bring the incident plane wave of light to focus at the sensor plane. This results in a high optical gain (greater than 100,000 for eyes), which makes the associated sensor vulnerable to relatively low fluences of laser energy.

The effects of lasers on eyes are threefold:

- Dazzling or induced glare.
- Flashblinding or loss of night adaptation.
- Permanent or semipermanent blinding.

The severity of laser eye injuries varies according to the incident power, spot size, beam angle, pupil diameter (ambient light conditions), temporal mode (CW or pulsed), and PRF of the laser. Reported effects include corneal burns, cataracts (a permanent cloudiness of the lens), and retinal burns and perforations. Low-energy laser weapons are capable of causing the latter.

Exposure to relatively low laser energies can produce temporary changes in the ability to see without producing permanent injury. Exposure to laser light can produce an effect called glare or dazzle, which is similar to the temporary loss of vision experience when viewing the headlights of an oncoming car. The visual effects last only as long as the light is present in the field of view (FOV). At slightly higher energy exposures, the same laser radiation can saturate or flashblind the photoreceptor cells, resulting in after images that fade with time after exposure. Only visible radiation will induce veiling glare or after images; near-IR radiation will not produce these effects even though the radiant energy reaches the photoreceptor cells. Flashblindness and dazzle, while not permanent injuries, can cause discomfort and temporary loss of vision. Some studies have shown that dazzle and flashblindness can seriously impact mission performance, especially in highly visual tasks such as piloting an aircraft or aiming.

Blinding is the permanent or semipermanent loss of visual acuity. The effect can last from several hours onward and generally is evidenced by a dark spot in the field of vision. This spot is called a scotoma. The impact of the scotoma on visual acuity will vary with the size and position of the injury. Human vision is greatly affected when the laser damage is to the central vision area of the retina called the fovea. Nonfoveal laser damage may be less severe or even go unnoticed because it affects only the peripheral vision. The most serious retinal injuries occur when the incident light is so intense that a perforation in the retina is formed, resulting in a hemorrhage into either the subretinal layer or, in the most severe cases, the vitreous humor of the eye. Less severe exposures result in lesions on the retina.

Criminal and Scientific Misconduct Involving Neural Prosthesis Research Funded by the NIH/NINDS/NPP and The Alfred E. Mann Foundation

David A. Larson
lars1212@verizon.net

Articles of Evidence:

The photos contained in this document are of microstimulator devices that were surgically recovered and analyzed by using microscopy and by materials characterization techniques. The recovered devices are an exact match for the devices that were developed by research scientists Joseph Schulman, Gerald Loeb and Philip Troyk under contract from the National Institutes of Health. There are about 4 contracts involved, but the initial contract was #N01-NS5-2325 and funded by the NIH/NINDS/NPP. More information regarding these contracts can be found at the NIH Neural Prosthesis Project website. The following list briefly outlines some of the evidence presented in this document:

1. Microstimulator devices have been surgically recovered by a Physician in Los Angeles CA.
2. Devices have been analyzed using Energy Dispersive Spectroscopy (EDS) at Photometrics (materials characterization lab, Huntington Beach, CA) and confirm the presence of Silicon, Chlorine and other materials used in semiconductor processing.
3. The recovered devices show fabrication and design methods which uniquely belong to research scientists Joseph Schulman, Gerald Loeb and Philip Troyk, and are detailed in their U.S. Patent office filings. The recovered devices precisely match these patents.
4. Additionally, Schulman and Loeb filed US Patent applications for a system of monitoring a patient and methods allowing bi-directional telemetry over greater distances that involves using one frequency typically used for communication between the number of small implants and other near-by devices (between 570Hz and 2Mhz), and then an additional frequency (such as 224.840 MHz, or higher) which carries the data over the necessary long distance to the remote location.
5. Timing 1: My assault occurred during the same quarter in which Schulman and Loeb filed patent applications for implantable devices and patient monitoring systems which employ above mentioned methods of bi-directional telemetry. U.S. Provisional Application No. 60/039,164 was filed on Feb. 26, 1997 and U.S. Provisional Application Ser. No. 60/042,447 on Mar. 27, 1997
6. Timing 2: Schulman and Loeb report the first functional microstimulators in a QPR just prior to my assault and first animal implantations are planned. They subsequently report "tightening up" the accountability and traceability of prototype devices in a QPR following the assault
7. Schulman has an FCC license and broadcasts at 224.840 MHz (K6BWA) and has repeaters operating to the North, South and East of my residence, all within a 22-mile range. Additionally, another repeater in Altadena CA (but with a call sign that begins with a "W"), operating at the same frequency is actually licensed to an individual who lives in Oak Lawn, IL., (14 miles from IIT Chicago).
8. Professor Wise from Univ. of Michigan reports in a QPR that because of bandwidth and impedance issues, 200MHz should be chosen for remote, wireless stimulation using a neural prosthesis. The FCC database shows that Joseph Schulman operates radio repeaters in this frequency as call sign K6BWA.
9. Schulman reported acquiring an ISDN "Connectix" phone as part of contract #N01-NS5-2325 claiming it would be used for file sharing and enhanced communication. Later, a company he founded called "NeuroDyne" markets a new system which used such an ISDN video-phone to enable multiple physicians to tele-conference while analyzing a patients biofeedback signals such as EEG and EMG in real-time as the physiologic data is displayed on the screens and which can be saved for further analysis
10. Schulman reports that a "faulty" diode and resistor required that they be removed in-house (using two weeks worth of labor as well as equipment) and that replacement components would then have to be re-attached, however the patents of Schulman, Loeb and Troyk describe how additional, minimal circuitry can be integrated onto existing circuitry allowing diodes and resistors to be eliminated rather

than replaced and beneficially resulting in a smaller overall device with increased range of telemetry operation.

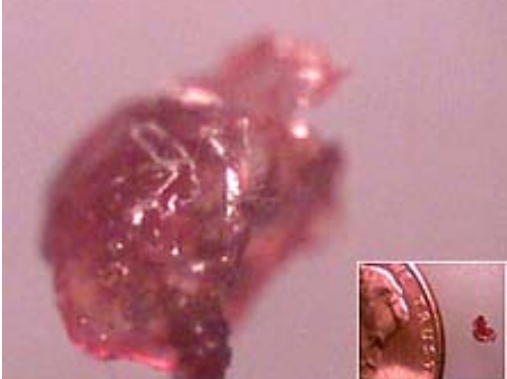

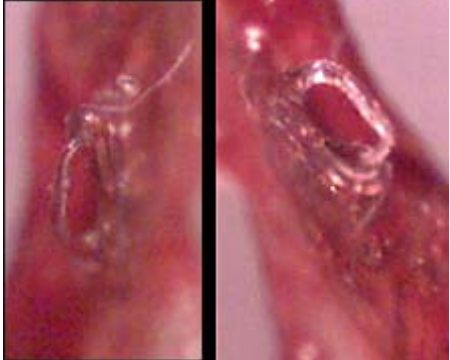

11. In a table of data listing the specs for components of the "BION" microstimulator, Schulman indicates that the diode used in replacement of the "faulty" diode is a "THD9064", however there doesn't appear to be any such diode in existence, and in fact, THD9064 only references low-power, high frequency microcontrollers and frequency doublers from manufacturers such as Siemens, ICS and New Focus
12. Throughout contract #N01-NS5-2325, Joseph Schulman fabricates an absurd amount of "vendor error" and "faulty product" which was done to conceal the real reason for the excessively low yield of microstimulators which can be attributed to the error prone stacking process of the smaller unethical implants as well as his need to secure a number of chips without accounting for them so that they could be used unethically.
13. Much further evidence exists in Joseph Schulman and Gerald Loeb's U.S. Patent Office filings and the Quarterly Progress Reports from contract #N01-NS5-2325. This evidence shows that implantable device invention and related technology discovery occurred during the contract period, and additionally were not reported or claimed to be made with government support. More importantly, many of the inventions involve integrating or stacking additional circuitry that enables additional functionality including long-distance bi-directional telemetry, and the accompanying ability to use this unethically
14. A vendor of Schulman's contract, Tom Wolf at Slicex reported that he sent hundreds of integrated circuits to Schulman and was never paid for the work. Schulman reported to the NIH that they were faulty, but the CEO of vendor, Tom Wolf, maintains that Schulman was happy with the devices and that they indeed worked fine. Schulman had to cook the books and not pay for the devices so they would be off the books, that way he could keep them and use them illegally without having to account to the NIH for them.

Evidence Detail

The following will provide detail as to each instance of evidence that is listed above in "evidence summary". From a criminal/legal perspective, even though the assault occurred some time ago, the devices presented as evidence have remained active and in the control of the defendants up until the time they were recovered, and while implanted, were used violently and maliciously. Additionally, the devices were just recently recovered allowing discovery of their existence, so no statute of limitations is applicable, nor should apply. I wish that Joseph Schulman and Gerald Loeb were not guilty of this, as it would be much easier on everyone involved, however the evidence proves that they did this. Any skepticism or doubt that you may have regarding the legitimacy of my allegations should be weighed against the evidence. If you look at the evidence, it will prove the legitimacy of my allegations, so all that I ask is that you read on and try to comprehend what is presented. Even if the substantial amount of evidence presented here does not overcome all remaining doubt, it should at minimum prompt you to seek and find the answers needed through investigation to arrive at the truth. I had to endure an enormous amount of physical pain and frustration over the last 5 years (and especially as of late) in order to be able to present this evidence to you, and I would not waste your time or mine if I were not in a position to provide the evidence you require in order to take action. This is a call to action and if you received this document, it is because your assistance is needed. The evidence begins on the following page and each allegation listed above (1 – 13), is specifically addressed and the proof presented in detail with substantiated source or fact.

Article 1. - Microstimulator devices have been recovered from my person:

1.1 Images: The devices below have all come from infected sites on my person and have been analyzed, numbered, documented and archived. Some of the images are shown below:

	
  <p>WIRE BOND</p>	

Summary of Article 1: The photos clearly show something foreign that is not organic mixed with the biological tissue.

Article 2. - Devices have been analyzed using Energy Dispersive Spectroscopy (EDS):

Energy Dispersive Spectroscopy is a common method used for materials composition analysis and is well known within the scientific community. I had samples analyzed at Photometrics in Huntington Beach CA., which has one of the newer era systems that features light detection ability etc., and confirms the presence of Silicon in devices which I have recovered. Silicon is the primary and most common material in semiconductor chips and is not normally present in the body, and in fact is harmful because it contains trace amounts of arsenic. Additionally, other materials were identified such as Chlorine, which is used in the chip manufacturing process, Tin, and Aluminum. Some of the data from EDS performed at Photometrics appears below and complete information is attached to the end of this document.

2.1: EDS Data

The data for this sample reads left to right as follows (the higher the “peak” the higher the concentration of indicated material): Carbon (C), Oxygen (O), Aluminum (Al), Silicon (Si), Sulfur (S), Chlorine (Cl), Tin (Sn), Antimony (Sb), and Iron (Fe)

Sample #15, L to R: Carbon (C), Oxygen (O), Sodium (Na), Magnesium (Mg), Silicon (Si), Phosphorus (P), Sulfur (S), Chlorine (Cl), Potassium (K), Calcium (Ca) and (Ca) again. The sample that produced this result is shown below at left

This is a photo of sample #15 that showed Silicon and Chlorine being present. This device doesn't look as much like semiconductor as others, but it is and presents an opportunity to address the oxidation that occurs. The oxidation that builds up on the implants is a result of an activated process that occurs when certain metals interface with the electrolytes present in human tissue, and the longer the device is implanted, typically, the thicker the oxidation layer. This is documented in papers and QPR's from Loeb. The presence of the oxidation and some remaining blood and tissue on this device, which was recovered from my nasal cavity, make it difficult to visually see semiconductor components, however if you look closely the circuitry is indeed visible. Note the inset photo which reveals the actual size of this sample by showing a penny next to it on the lab slide for reference.

Summary of Article 2: EDS offers proven statistical data that confirms the devices recovered from my person contain semiconductor material and combined with the visual images provide absolute certain proof that these devices are foreign and should not be naturally present in my body. Moving forward, what follows will focus on proving the identity of the individuals responsible for placing them there.

Article 3. - A number of recovered devices show fabrication and design methods which are unique to Joseph Schulman and/or Gerald Loeb, and are detailed in their U.S. Patent Office filings:

The examples below directly compare images of my recovered devices to images from The US Patent Office outlining inventions patented by Schulman, Loeb and others within Alfred E. Mann Foundation. It should be noted that my recovered devices have been implanted for 5 years and obviously will are not in the pristine condition of a line-drawing illustration, but the design and construction of the recovered devices is similar or in some cases, identical. From a research perspective, a neural prosthesis needs to remain implanted for over 40 years to effectively serve a disabled individual, and because not enough research (none in fact, except for simulations) has been done regarding this, it would make sense for Schulman and Loeb to implant a variety of devices as well as materials because the continual real-time feedback (or lack there-of) would allow them to determine which were most effective and also remained biocompatible over time. I have

recovered devices appear to utilize a hardened epoxy coating on them as well as others that appear to have a rubbery type silicone coating. Schulman and Loeb's patents made during the time of the microstimulator contract describe much more than a typical "BION" type microstimulator and specifically address alumina, silicone and epoxy coatings instead of glass or titanium, describe how additional circuitry can upgrade a device from one which requires an external coil to one that is fully implantable, the creation of electrodes as small as 15µm using a YAG/UV laser, and one patent even describes how an implantable system can have it's components "daisy chained" together by microwire (which is slightly thinner than human hair) rather than completely assembled inside a glass package. The devices recovered from my person do not all conform to one design or configuration, and most conform to patent filings of Loeb and Schulman. Some of the comparisons to those U.S. Patent Office filings follow:

3.1 Sample #111 vs. US Patent 6,214,032 "System for implanting a microstimulator" Inventors: Gerald Loeb, Frances Richmond Assignee: Advanced Bionics

Continued Next Page....

3.2: Sample 110 vs. US Patent 6,205,361 "Implantable expandable multicontact electrodes"
Inventors: Mann/Advanced Bionics

This invention describes an integrated circuit on flexible substrate (so that it will conform to the shape of the scalp, or muscle etc) with attached electrodes, and is designed to be "folded" into a syringe/hypodermic needle and injected into the target location. Upon being injected, the electrode array unfolds or "expands" to an open position. Although this device lists Mann as the inventor, and Advanced Bionics as the assignee, Gerald Loeb played a role in it's development as Advanced Bionic's "Chief Scientist".

The series of images to the left show my sample #110, and marked-up versions with the blue illustrations showing how my sample #110 compares to U.S. Patent 6,205,361 for a foldable/expandable array of electrodes. My sample #110 is consistent with above invention in that: (1) It has three defined areas at one end, and tapers to one section; and (2) it appears to be on a flexible substrate; and (3) it utilizes a wire perimeter for support

3.3 Sample #122 vs. US Patent 6,067,474 “Implantable device with improved battery (capacitor) recharging and powering configuration” - Inventors: Gerald Loeb, Frances Richmond Assignee: Advanced Bionics This patent lists Gerald Loeb (as well as F.J. R., also a principal investigator involved with the NIH microstimulator contract) as the inventors. In sample #122 recovered from my person, a coil (or “antenna”) can clearly be seen on top of the stack and is represented in the patent drawings as the innermost circle referenced as #172

My sample #122 is shown on the left. Patent #6,067,474 is shown to the right and illustrates a microstimulator that uses multiple circuits in a stacked configuration (with a coil on top, #172 in patent illustration) and the stacking is done to save space, however, such stacking complicates assembly and lowers yield. Schulman and Loeb claim that no such stacking of chips was performed, nor required by the “BION” microstimulator, however my sample #122 at left, US Patent # 6,067,474, at right, combined with Schulman reporting “unexplainable” low yields throughout his contract (as low as 30% in QPR#3) should be more than suspicious and immediately prompt inquiry followed by an investigation. And if the above wasn’t enough, the parent case documentation, U.S. Provisional Application Ser. No. 60/054,480, was filed Aug. 1, 1997 which is during the course of NIH contract #N01-NS5-2325, and not long after my assault.

Summary of Article 3:

Devices which have been recovered from my person and proven to contain semiconductor material, emulate and resemble devices which are unique to Joseph Schulman and Gerald Loeb.

Article 4. - Schulman and Loeb file US Patent applications for patient monitoring systems and methods for long range bi-directional telemetry:

Joseph Schulman and Gerald Loeb have each filed patents as well as later additions and newer patents for a “Patient Monitoring System” and “System of Implantable Devices for Monitoring and/or Affecting Body Parameters” and I contend that the “affecting” part is painful and has been applied by Schulman and Loeb maliciously through the recovered implanted devices shown in articles 1 and 3 above. What is defined in these systems is:

- Telemetry using multiple modes or frequencies so that one carrier can transmit a short distance with it being processed to another capable of longer range telemetry.
- Real time interaction that includes stimulation and recording from the human nervous system
- Audio and video conferencing are integrated into the system that displays the EEG, EMG and other data allowing Schulman, Loeb and Troyk to simultaneously interact with the system and each other
- A closed loop mode that has a “default” stimulus parameter loaded into memory for each electrode so that if the subject being monitored breaks the telemetry link, he will still be subject to electrical stimulation because power can be derived and stored into the capacitor from the Tantalum capacitor-electrode/bodily tissue electrolyte interface.

Because the illegal and unethical activity of monitoring an unwilling subject involves a database, which one can assume is backed up and stored somewhere (perhaps even online for remote retrieval) and also involves the program to be housed on a server that can be accessed by Schulman Loeb and Troyk, this presents considerable evidence that could be obtained by University personnel or law enforcement agencies, yet unobtainable to me. Because Schulman, Loeb and Troyk participate in this unethical/illegal research both at home and at work, this creates considerable liability for their employers and those who fund this research.

4.1 - U.S. Patent 6,315,721: "System of implantable devices for monitoring and/or affecting body parameters"

Inventors: Schulman; Joseph H. (Santa Clarita, CA); Assignee: Alfred E. Mann Foundation

(This application is a division of U.S. patent application Ser. No. 09/048,826, now U.S. Pat. No. 6,208,894, and claims the benefit of U.S. Provisional Application Ser. No. 60/042,447 filed Mar. 27, 1997 and U.S. patent application Ser. No. 09/030,136, now U.S. Pat. No. 6,185,452, which claims the benefit of U.S. Provisional Application Ser. No. 60/039,164 filed Feb. 26, 1997.)

"...a system implemented using multiple communication channels, e.g., a first sonic channel at a first carrier frequency and a second sonic channel at a second carrier frequency, is also considered to be within the scope of the present invention..."

4.2 – U.S. Patent 6,208,894: "System of implantable devices for monitoring and/or affecting body parameters"

Inventors: Schulman; Joseph H. (Santa Clarita, CA); Assignee: Alfred E. Mann Foundation

(This application claims the benefit of U.S. Provisional Application Ser. No. 60/042,447 filed Mar. 27, 1997 and U.S. Patent Application Ser. No. 09/030,106 filed Feb. 25, 1998 which in turn claims the benefit of U.S. Provisional Application Ser. No. 60/039,164 filed Feb. 26, 1997.)

"...A system for monitoring and/or affecting parameters of a patient's body comprised of a system control unit (SCU) and one or more other devices implanted in the patient's body, i.e., within the envelope defined by the patient's skin. In accordance with a preferred embodiment, the system operates in closed loop fashion whereby the commands transmitted by the SCU are dependent, in part, on the content of the data signals received by the SCU..."

... a preferred SCU is also implemented as a device capable of being injected into the patient's body... Wireless communication between the SCU and the other implanted devices can be implemented in various ways, e.g., via a modulated sound signal, AC magnetic field, RF signal, or electrical conduction....In accordance with a further aspect of the invention, the SCU is remotely programmable, e.g., via wireless means, to interact with the implanted devices according to a treatment regimen ...While the invention herein disclosed has been described by means of specific embodiments and applications thereof, numerous modifications and variations could be made thereto by those skilled in the art without departing from the scope of the invention set forth in the claims. For example, a system including multiple SCUs, e.g., one external and one internal, is considered to be within the scope of the present invention. Additionally, while the use of a single communication channel for communication between one or more SCUs and the other implanted devices has been described, a system implemented using multiple communication channels, e.g., a first sonic channel at a first carrier frequency and a second sonic channel at a second carrier frequency, is also considered to be within the scope of the present invention ...Transponders, e.g., are devices which can be used to extend the interbody communication range between stimulators and sensors and other devices, e.g., a clinician's programmer and the patient control unit. ... The clinician's programmer and/or the patient control unit and/or other external control devices can also communicate with the implanted devices, as described in the parent application, ... Alternatively, such external devices can communicate with the SCU via a transceiver coupled to the programmable controller. Since, in a preferred operating mode, the signal transmitter and signal receiver operate using sound means, a separate transceiver which operates using magnetic means is used for communication with external devices. However, a single transmitter/receiver can be used in place of transceiver if a common communication means is used..."

4.3 – U. S. Patent: 6,175,764: "Implantable microstimulator system for producing repeatable patterns of electrical stimulation" Inventors: Loeb; Gerald E. (Kingston, CA); Richmond; Frances J. R. (Kingston, CA)

Assignee: Advanced Bionics Corporation (Sylmar, CA) Appl. No.: 490921 Filed: January 25, 2000

(This application is a Divisional Application of U.S. application Ser. No. 9/077,662, filed May 29, 1998, now U.S. Pat. No. 6,051,017 which application is incorporated herein by reference, and which application was filed in the U.S. under 35 U.S.C. .sctn.371 based on

international application number PCT/US97/02576, filed Feb. 19, 1997; which international PCT application claimed priority to U.S. Provisional Applications Nos. 60/011,870; 60/012,019; 60/011,868; and 60/011,869; all filed Feb. 20, 1996.)

“...Improved implantable microstimulators are covered with a biocompatible polymeric coating... The microstimulator systems include external control for controlling the operation of the microstimulators. The control include memory for programming preferred stimulation patterns for later activation by the patient or caregiver.... can be implanted non-surgically by injection. ...upon an external command, or at predetermined intervals, power and command signals sent from controller cause the various microstimulators to emit a series of electrical current pulses (i.e., a pulse train) at the desired frequency and amplitude sufficient to cause the muscles to lift the body for the duration of the pulse train. ...also provides storage and production means for a program of output currents and stimulation pulses that may then be produced autonomously by the implanted device without requiring the continuous presence of extra corporeal electronic components, i.e., without the need for an external control device.

4.4 – U.S. Patent 6,164,284: “System of implantable devices for monitoring and/or affecting body parameters” Inventors: Schulman; Joseph H. (Santa Clarita, CA)

(This application claims the benefit of U.S. Provisional Application No. 60/042,447 filed Mar. 27, 1997 and U.S. patent application Ser. No. 09/030,106 filed Feb. 25, 1998 entitled “Battery-Powered Patient Implantable Device” which in turn claims the benefit of U.S. Provisional Application No. 60/039,164 filed Feb. 26, 1997)

“...it is preferably that at least a portion of the program storage be an alterable form of memory, e.g., RAM, EEPROM, etc., whose contents can be remotely altered as described further below. However, it is additionally preferable that a portion of the program storage be nonvolatile so that a default program is always present. The rate at which the program contained within the program storage is executed is determined by clock, preferably a real time clock that permits tasks to be scheduled at specified times of day...”

4.5 - U.S. Patent Application 20010054071: “Audio/video conference system for electronic care giving”
Loeb, Gerald E. December 20, 2001

4.6 - U.S. Patent 5,791,344: “Patient monitoring system”

Inventors: Joseph Schulman, A.E. Mann Foundation Appl. No.: 582756 Filed: January 4, 1996

4.7 – U.S. Patent 5,551,016 “Monitoring system and interface apparatus therefor”

Inventors: Loeb; Gerald E. Assignee: Queen's University at Kingston Appl. No.: 084928

“In monitoring systems for acquiring data about a subject, such as are used, for example, in the medical, scientific and engineering fields, determination of temporal relationships between data acquired from multiple monitoring devices is facilitated by means of an interface unit which interconnects the monitoring devices with tape recorders for storing the data and a computer for processing the data.”

Summary Article 4: These systems allow Schulman, Loeb and Troyk to interact with the implanted devices via radio frequency, and enables this interaction from any location that allows them (Internet access) to connect to a remote server.

Article 5. - Timing 1:

U.S. Provisional Applications No. 60/039,164 was filed on Feb. 26, 1997 and U.S. Provisional Application Ser. No. 60/042,447 on Mar. 27, 1997 –

These patent filings pertain to the patient monitoring systems and other technology applicable to a long term human study and include methods capable of long range bi-directional telemetry.

Summary Article 5: The above patent filings occurred during the same quarter as my assault

Article 6. - Timing 2:

Schulman and Loeb report the first functional microstimulators in a QPR just prior to my assault, and report “tightening up” the accountability and traceability of prototype devices in a QPR following my assault:

“....we were able to demonstrate the feasibility of using a single coil in the microstimulator both to receive power and data and to act as the tank circuit and antenna for outgoing RF transmission at the same frequency. The next silicon breadboard is a demonstration of the feasibility and achievable modulation rates for incoming and outgoing data transmission based on the suspended carrier mode of operation. This will be done by a chip that records in a shift-register the sequence of detected carrier half-cycles during incoming RF transmission. The chip then telemeters out that information as a sequence of AM encoded bits..... This design has passed intensive simulation and is now in layout. Release to the foundry is anticipated in August, with chips likely to be available for evaluation by early October...” (QPR #5 March 10, 1996 - June 9, 1996)

“In the next quarter, we intend to finalize and validate the sealing process and provide the necessary active implants to support preclinical chronic animal tests.....” (QPR #7 September 10, 1996 - December 9, 1996)

“During this quarter, we tightened up the traceability and documentation of BION prototype production units.....” (QPR #10 June 10 1997 – Sept 9 1997)

Summary Article 6: This proves that Schulman had achieved functional implants with back telemetry prior to my assault and that he expressed intent to chronically implant an animal during the following quarter which corresponds with the date of my assault. Additionally, it shows that following my assault, there was concern for the accountability of pre-production devices and chips.

7. Schulman has an FCC license (K6BWA) and has 224.840MHz repeaters operating to the North, South and East of my residence, all within a 22-mile range

An FCC database search reveals that Joseph Schulman holds an “Advanced” class radio license, call sign K6BWA, and that he upgraded his license as recently as Oct 2001. Evidence shows that repeaters (224.840 MHz) have been arranged in which licenses attributed to Danny Schulman and Barbara Schulman are involved and their location could facilitate access to the repeater data by Gerald Loeb, James T. Bennett, and even Phil Troyk. Because Joe Schulman license is used for a repeater in “Hollywood Hills” (yet lives 35 miles North from this location), and Danny Schulman’s (lives in Los Angeles) is used for one located in “Altadena”, which is 9 miles from Gerald Loeb, there seems to be some confusion as to where this hardware is and who can access it. Additionally, Robert Mancini (WB6PRR, note the “W” in call sign) apparently lives in Oak Lawn, IL (14 miles from Troyk @ IIT), but his license is attributed to another repeater in Altadena (why two both in Altadena?), this is also more than suspicious. Barbara Schulman will not even admit she is a radio operator, as attempts to contact here by email result in replies from Joe Schulman. Because Joe Schulman’s license is attributed to a repeater located in Hollywood Hills, so the repeater at his home or AEMF in Santa Clarita is operated by Joe under his wife’s license. One interesting observance is that neither “Sand Canyon”, nor “Hollywood Hills” is a real city, which again, is more than suspicious. Businesses bearing the name “Hollywood Hills Whatever” (such as Plumbing or Cleaners), are located in zipcode 90027 (which is Los Angeles, 4 miles from zipcode center to James Bennett’s residence) and “Sand Canyon” is a road in Santa Clarita that runs past the residence of Joseph Schulman. The tables of information that follow show:

The Repeater Network (Frequency / Call Sign / Location of the Hardware / Status <open or private>)

The FCC Licenses (Callsign / Assignee / Address)

Physical Map of Repeaters (Shows locations of repeaters in relation to my residence)

Private Repeater / Auxiliary Network:

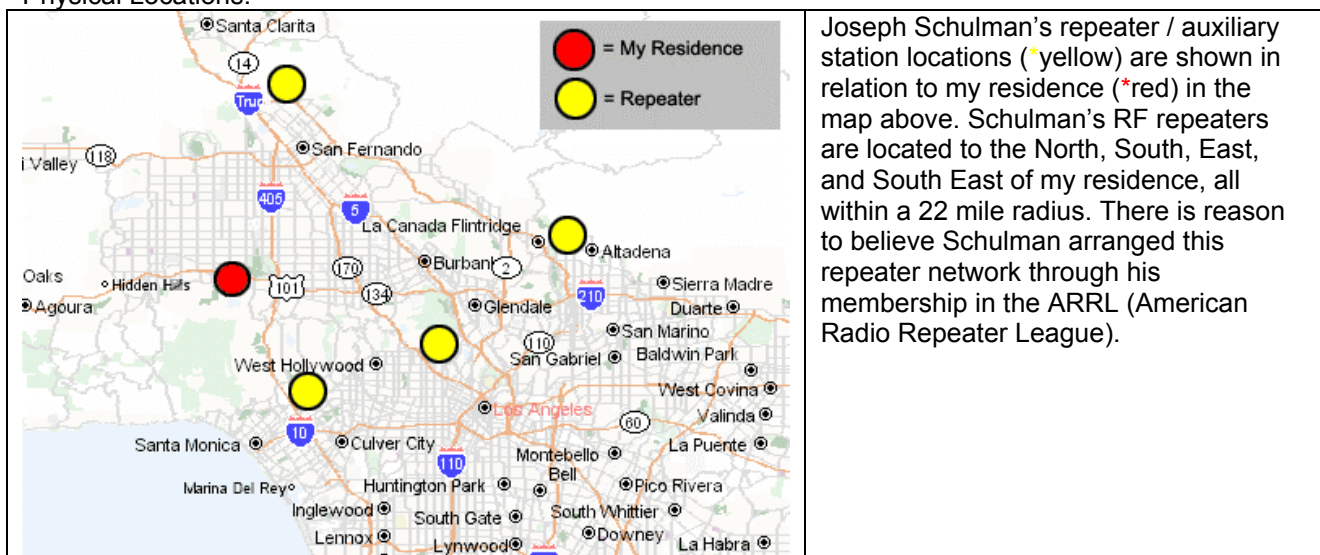

Freq (MHz)	Call Sign	Location of Repeater Hardware	Status / Mode
224.820 -	KJ6JY	SANTIAGO PEAK (CONDOR)	OPEN
224.840 -	K6BWA	HOLLYWOOD HILLS	PRIVATE
224.840 -	KA6UFC	SAND CANYON	PRIVATE
224.840 -	KS6E	SHERMAN OAKS	PRIVATE
224.840 -	KS6K	SILVERLAKE, L.A.	PRIVATE
224.840 -	N6EHD	ALTADENA	PRIVATE
224.840 -	WA6MTM	YORBA LINDA	PRIVATE
224.840 -	WB6PRR	ALTADENA	PRIVATE
224.860 -	N6ENV	LA COUNTY FIRE CAMP 49	OPEN

Information above has been confirmed from three sources:
www.220sma.org/smarpt.htm
http://www.gsl.net/cora/222_Mhz_Repeater_Guide.htm
<http://www.geocities.com/CapeCanaveral/Hangar/6847/>

Identity of above call signs from FCC:

FCC Callsign Lookup www.fcc.gov		
Callsign	Licensee Name	City (according to FCC license)
K6BWA	SCHULMAN, JOSEPH H	SANTA CLARITA
N6EHD	SCHULMAN, DANNY I	LOS ANGELES
KA6UFC	SCHULMAN, BARBARA L	SANTA CLARITA
KS6K	LEIDNER, JOEL D	LOS ANGELES
KS6E	FREEDMAN, MARVIN	LOS ANGELES
WB6PRR	MANCINI, ROBERT F	ALTADENA

Physical Locations:

Summary of Article 7: Joe Schulman has repeaters surrounding my residence and their locations do not match that of the licensee's. Additionally, one of the licensee's is located 14 miles from Phil Troyk at the Pritzker Institute/IIT. Other repeaters are located near Loeb and Bennett. The repeater locations are more than just coincidence. Enforcement is needed from the FCC and law enforcement.

*Update - I just spoke to Marvin Freedman KS6E at his home. Marvin Freedman told me that “he hasn’t been active as a HAM for years” and that “I’m not repeating from Sherman Oaks” and “I’m looking at my equipment,... it’s unplugged, sitting here in Los Angeles”. He also told me that he and Joe Schulman were “friends”. This suggests that Joe Schulman could be using Marvin Freedman’s FCC license without his consent”.

Joe Schulman is using his “old friend’s” FCC license for a repeater that is located on or near my Mother’s property in Encino. He is also using his own license, K6BWA for a repeater that is being operated by James Bennett located at 2288 Bronson Hill Dr. Los Angeles (aka “Hollywood Hills”), and he is using a license that he obtained in his wife’s name (his wife would not admit to me that she was a radio operator and insisted I speak to her husband about it) for a repeater at his residence in Santa Clarita (aka “Sand Canyon”). In fact, of the six repeaters listed in the table below, 3 are in non-existent cities (Hollywood Hills, Sand Canyon and Silverlake are not real cities with no US zip code). Joe Schulman is using this radio signal to control biomedical sensors which is part of his work at the Alfred E. Mann Foundation (<http://www.aemf.org/>) which developed sensors called the “BION”, (<http://ami.usc.edu/Projects/Bion/media.asp> or

8. Professor Wise from Univ. of Michigan reports in a QPR that because of bandwidth and impedance issues, 200MHz should be chosen for remote, wireless stimulation using a neural prosthesis

As if articles 1 through 4 were not enough evidence to prompt action, further evidence of the repeaters use is the frequency Joseph Schulman’s repeater/auxiliary stations are operating at (224.840 MHz). The significance of this is best explained by Professor Kensall D. Wise, University of Michigan, respected for his many years and considerable contributions to the NINDS/NPP:

“...the most important issue of an implanted biotelemetry system is power dissipation. To minimize the power of a transmitter, we have to select the lowest practical RF carrier frequency, since RF circuits dissipate power that is proportional to their operating frequency. The FCC has authorized unlicensed use of the 38-41MHz, 88-108MHz, and 174-216MHz Very High Frequency (VHF) bands for Industrial, Scientific and Medical (ISM) telemetry purposes. Other bands in the microwave region (900MHz and above) are not considered because of high tissue absorption at those frequencies. On the other hand, a higher carrier frequency is desired for wider bandwidth in data transmission. As the result of these trade-offs, 200MHz is chosen as the carrier frequency...” (recent QPR #5, (Oct/Dec 2001) Contract NO1-NS-0-2329 “Thin-Film Intracortical Recording Electrodes)

Ken Wise has been involved with the NPP and using micromachined Silicon electrodes to stimulate and record from the nervous system since as early as 1992, and is obviously very accomplished and knowledgeable. In the above, he establishes 200MHz as the preferred carrier frequency because higher frequencies use too much power, and lower frequencies do not penetrate the impedance of the tissue as well as higher frequencies.

Summary Article 8: If someone wanted to use wireless radio frequency to stimulate and record from an unwilling human participant, a frequency near 200 MHz would be desired

9. Schulman reported acquiring an ISDN “Connectix” phone as part of contract #N01-NS5-2325 claiming it would be used for file sharing and later, a company he founded called “NeuroDyne” markets a new system which used such an ISDN video-phone to enable multiple physicians to tele-conference while analyzing a patients biofeedback signals

In QPR #5 (March 10, 1996 - June 9, 1996), Schulman reports:

“In order to facilitate communication between the Mann Foundation (Schulman) and Queens University (Loeb), an ISDN telephone line and high speed modem have been installed with service to the Internet. The Connectix VideoPhone system is in use and remote file access and terminal sessions will soon be available between engineering and documentation computers at both locations...”

This ISDN video phone was actually used to provide real-time bio-feedback data from Schulman in Valencia CA, to Loeb at Queens University, and allow them to conference and interact while monitoring me and the biofeedback from their microstimulators during this unethical and illegal research. They also based parts of their “patient monitoring system” patents on this. The fact that Schulman and Loeb used the Connectix Phone for more than “remote file access” is substantiated by this press release from NeuroDyne, a corporation founded by (not a coincidence) it’s President, Joseph Schulman:

NeuroDyne/E-Tech Press Release:

August, 1999: A new Internet technology will allow a patient to carry on a face-to-face conversation with a doctor who is a few miles or even thousands of miles away while his physiological measures, such as EKG, EEG, EMG, GSR etc. are displayed in real-time on the doctor's screen for assessment... the ability for healthcare colleagues and specialists several thousand miles apart to conference concerning a patient, while interacting via audio, video and active monitoring of the patient's physiology.... Optionally, a Video Camera, VoxPhone software, and an Internet connection, allow two individuals virtually anywhere in the world to carry out a private conversation or to support a conference with up to five individuals. Under the joint venture, the VoxPhone interface will be expanded to allow the transfer of real-time data from NeuroDyne Medical's biomonitors instrumentation in addition to voice and video information. This physiological information can then be displayed graphically on both computer screens as well as being saved for further analysis.....”

Summary Article 9: It is becoming obvious (it it isn’t already), that Schulman and Loeb are guilty of my allegations. They implanted these microstimulators using a syringe leaving virtually no externally visible evidence and they expect you and others not to believe it because “it sounds crazy”. You don’t have to believe me but you do have to believe the evidence. The evidence is far too much and too convincing to be “amazing coincidence”. All of the evidence presented is documented, factual and proven. No speculation or fabricated conclusions. Just fact. This is currently page 15 of about 50 and the evidence in the following pages don’t make Schulman and Loeb look any more innocent. That is because they are not.

10. Schulman reports a “faulty” diode and resistor required that they be removed in-house and replaced, however the patents of Schulman, Loeb and Troyk allow diodes and resistors to be eliminated by integrating a chip based on the suspended carrier telemetry protocol resulting in a smaller device package size.

Schulman reports vendor errors have required a diode and resistor to be cut from the chip (removed) and then replaced. It is specifically indicated that these components were “defective” and that they would be

replaced with two new (off the shelf) surface components and that doing so required in-house post-processing. The legitimate reason behind elimination of the resistor and diode involves Schulman's want and need for a smaller implant, so placing tiny additional circuitry with the implanted chip would be needed and thus, also would need to be explained. I contend that the components were not defective and that they were not replaced with two comparable components as indicated. The reason Schulman removed them is because the diode and resistor would not be necessary after stacking an additional, small circuitry, (based on the Suspended Carrier telemetry protocol) onto the existing ASIC as described above. This additional circuitry was for the mixed signal demodulation required for long-range RF bi-directional telemetry and also performed DAC, clock, state machine and other functions. Schulman lays it on thick in QPR's, however contradicting (but accurate) explanation exists in their patent filings where they are forced to be honest in order to protect their invention:

QPR #3 conceals the reason for removing the diode and resistor by claiming the components are defective:

"...we were dealing with a chip that had a defective diode on board, which made the chip useless. Luckily, the position of the diode in the circuit and physically on the chip was such that it could be effectively removed from the chip and replaced by an external diode. Moreover, the resistor, essential for the data demodulation, was also conveniently placed and could be replaced by an external device. Having two additional devices in a small package required redesign of the package which in turn demanded repositioning of the bonding pads using a relatively inexpensive gold-bumping process..." (QPR #3, Sept 10, 1995 – Dec 9, 1995)

In the patent below, Schulman describes how additional circuitry can be used to upgrade an implant device from a system that requires an external coil and driver circuitry, to one that is fully implantable. One doesn't have to look far past contract #N01-NS5-2325 when wondering how Joseph Schulman came up with such a concept. Other descriptions in U.S. Patent 6,067,474 have allowed me to assess that Schulman and Loeb refer to the system used for their illegal and unethical research as a "proximity system" and that it was developed as part of NIH microstimulator contract N01-NS5-2325 and substantiated by its filing date.

"Appropriate switching circuitry is included with the battery (or capacitor) in the second device to convert the dc power of the battery to ac power for transmission to the first device. This ac power may be modulated, as desired, to also transmit information, e.g., control signals, from the second device to the first device. Yet a further embodiment of the invention, hereafter referred to as the "proximity system" embodiment, resides in a fully implantable system that includes first and second implantable devices. The first device houses electronic circuitry for performing a desired function. The second device houses a replenishable power source, and may also include additional circuitry. Thus, one use of this proximity system embodiment allows a second device.. that has heretofore been included in an external device, to be implanted proximate an implant device of an existing system, thereby effectively upgrading the existing system to a fully implantable system." (6,067,474: "Implantable device with improved battery recharging and powering configuration" Inventors: Joseph Schulman (U.S. Provisional Application Ser. No. 60/054,480, filed Aug. 1, 1997)

U.S. Patent Office filing contains accurate information:

Patent 5,697,076: "Suspended carrier modulation of high-Q transmitters" (the only patent legitimately indicating that it was made under government support) December 9, 1997, Inventors: Troyk; Philip R.; Heetderks; William; Schwan; Martin; Loeb; Gerald Assignee: Illinois Institute of Technology (Chicago, IL); United States of America as represented by the Department of Health and Human Services (Washington, DC) Appl. No.: 432605 Filed: May 1, 1995

“...When switch 13 is closed, current 22 rises to $(V_{supply}/R1)$ with an $R1/L1$ time constant. Thus, with the proper choice of $R1$, if switch 13 is closed long enough in advance of the closing of switch 12 (restart), the proper initial condition for current 22 can be achieved. When switch 12 is closed and Class E operation resumes, switch 13 opens, causing current 22 to flow into diode 16 instead of $R1$.

...Elimination of the R1-S3 branch may be possible with an appropriately sized choke inductor 21. In this case, the current 22 is allowed to go to zero, even for "short" off periods."

The above diagram is from their patent and obviously shows accurate information. The diagram that follows however, from NIH QPR #10 contains less “precise” information and further conceals how suspended carrier was being used during contract #N01-NS5-2325 :

This diagram is pictorial only, and does not precisely show the method used to sense the rectifier currents

"Not precisely" isn't even truthful because the truth would read "not even close"

The patent filing below shows how diode and resistance are present in the circuit diagram, but are not represented by actual components:

U.S. Patent 6,035,237: "Implantable stimulator that prevents DC current flow without the use of discrete output coupling capacitors"

FIG. 10

"As illustrated in FIG. 10, the coupling capacitor is actually formed by using the electrode-saline interface that results when a conductive electrode comes in contact with saline body fluids. In FIG. 10, Z22 represents the complex impedance between electrode 24 and the saline. Capacitor C12 and diode D12 (as well as capacitor C13 and diode D13) represent the passivation or oxide insulation layer that exists at the surface of each stimulating electrode."

In this invention, the result of the oxide insulation layer functions as a capacitor and diode, so although the circuit layout shows a diode, there is only oxide build-up that causes some resistance and capacitance and no true hardware components.

There is no mention of chip stacking in the text body of contract QPR's and when Schulman finally reports using a chip allowing elimination of the diode and resistor (which ironically doesn't happen until the final QPR in 1999), the additional circuitry is showed next to the existing circuitry in a planar configuration. This poses the following question: If no chip stacking occurred, what is meant in the text header contained in QPR #2 following subject header "Work at the Alfred E. Mann Foundation" that reads as follows:

3. Electronic assembly, stacked chips, side by side chips

"As reported in the 1st Progress report of this Contract, a plan was developed to rework the microstimulator integrated circuit wafers which had been fabricated at the end of the first microstimulator NIH contract. That circuit was not fully functional due to problems associated with the on-the-chip demodulation / rectifier diode....."

Additionally, if no chip stacking was used for the BION microstimulator, what was the cause for the abnormally low yield of microstimulators which was consistently around 30%? The "Evidence Detail" section of this document has shown a stacked chip device recovered from my person and Schulman's patents also describe a stacked chip configuration, most of which were initially filed during the microstimulator contracts period. Although Schulman eventually revealed the method of additional circuitry that was capable of eliminating the diode and resistor, the added chip was shown in a planar configuration rather than stacked which requires more substrate area. He concealed this throughout the duration of the contract and only partially revealed it in ironically, the final QPR of the contract in 1999. His U.S. Patent applications prove that he was aware of and practicing this invention as early as 1995 and the QPR's during the four years of the contract never mention fixing the chip design so as not to necessitate the addition of replacement components which suggests that this method of adding additional circuitry was occurring for the duration of the contract beginning with QPR1 in 1995 when he reported a need to cut "faulty" diodes from the chip. The final QPR from 1999 offers an illustration which shows one simple chip added next to (not stacked) the existing circuitry:

Figure 10 - 2MHz microstimulator with integrated rectifier and telemetry front end. (Front End)

Figure 11 - Original 2MHz microstimulator that used external diode rectifier

"...we revised the rectifier/data demodulator of MOS8 for integration with existing 2MHz microstimulator circuitry. The existing external diode, amplitude demodulator, and clock recovery circuit were replaced by a new ASIC cell that uses the techniques of MOS8. (Images 10 and 11, above) Presently these chips are under test..."

It is reported that the above ASIC "cell", which finally solves the 4 year old resistor/diode problem "uses techniques" of MOS8. I contend that this "cell" exists on a ASIC design layout that was submitted during the first year of the contract and that Schulman waited until the final QPR#16 to reveal it. This cell could have been present on (and cut from) any number of the early wafer/chip runs that he falsely reported being "unusable".

It is reported multiple times that a "faulty" diode needed to be replaced and is shown again in this instance:

"A major effort was expended dealing with the new microstimulator development and in correcting silicon foundry errors via chip microsurgery ...a new corrected layout was sent to the foundry for another run of wafers... when the wafers returned, it was observed that they did not work ...the design rules provided by the foundry allowed the shorts ...by cutting a trace on the integrated circuit, the external diode could be reliably removed. A diode-resistor combination could then substitute for the defective on-chip components." - Schulman/Loeb/Troyk QPR#1 – March 10, 1995 – June 9, 1995

Again, patent documentation makes argument against Schulman's reporting, and here he describes how removal of components followed by adding additional small circuitry can actually result in a smaller overall package:

Patent 6,035,237: "Implantable stimulator that prevents DC current flow without the use of discrete output coupling capacitors"

"The implantable stimulator of claim 3 wherein said first and second circuit means are realized using CMOS transistors configured to function as prescribed circuit elements on the same semiconductor chip ...while such DSP circuitry may utilize a significant number of CMOS transistors, configured into appropriate processing and logic circuitry, the overall space required by such DSP or other circuitry on the chip, or a supplemental chip, particularly given the smaller trace sizes associated with modern CMOS devices (0.8 micron and smaller) could still be less than using discrete coupling capacitors (resistor).

The repositioning of the bond pads was done to create electrical contacts for attaching the additional suspended carrier/long-range telemetry circuitry which also allowed the elimination of diode/resistor. This activity is not revealed in NIH QPR's, because Schulman claims that the additional bond pads were needed to attach the diode and resistor which was cut off of the original chip. Further evidence can be found in U.S. Patents 6,315,721 and 6,164,284 which describe the following:

"...The SCU 302 is primarily comprised of (1) a housing, preferably sealed and configured for implantation beneath the skin of the patient's body as described in the parent application in reference to the implanted devices, (2) a signal transmitter in the housing for transmitting command signals, (3) a signal receiver in the housing for receiving status signals, and a programmable controller, e.g., a microcontroller or state machine..."

The "state machine" mentioned above is included in the additional circuitry that Schulman used which allowed the elimination of the resistor and diode

"...For example, sensor circuitry can be coupled to the electrodes ...and provided the sensed data to the controller circuitry. Preferably, the sensor circuitry includes a programmable bandpass filter and an analog to digital (A/D) converter that can sense and accordingly convert the voltage levels across the electrodes into a digital quantity. Alternatively, the sensor circuitry can include one or more sense amplifiers to determine if the measured voltage exceeds a threshold voltage value or is within a specified voltage range. Furthermore, the sensor circuitry can be configurable to include integration circuitry to further process the sensed voltage. The operation modes of the sensor circuitry is remotely programmable via the devices communication interface..."

The programmable bandpass filter is also part of the additional circuitry that Schulman integrated after eliminating the diode and resistor during his NIH contract and the additional functionality of the added circuitry enabled bi-directional telemetry over greater distances than with a normal inductively coupled link. In order to sense and monitor as described above in patent text, and also the ability to do so with only 2-5% modulation and switch in 4 clock cycles or less which is described in Schulman's QPR's, the "sensor circuitry" mentioned above must be implanted with (onto or next to) the microstimulator. This is in contrast to a typical inductive link where this sensing and monitoring takes place between a coil attached outside the skin and an implanted device where the impedance of the tissue and the increased distance do not allow the low modulation and instantaneous switching. Although much of this evidence pertains to Schulman and Loeb, Phil Troyk worked very closely with them on the Suspended Carrier chip, the back telemetry and also the overall packaging. The fact that it is reported that Martin Schwan performed the removal of diodes and resistors at IIT also suggests that both Troyk and Schwan direct knowledge of Schulman and Loeb's intent with the device. In email correspondence, Phil Troyk responds to my inquiry about addition of the small circuitry by denying any intent for it to be added to the implanted package and claimed that it was to exist outside the skin, but then in an about face, claims that the idea was "one of the other team members" and that he "saw no benefit to it". This email correspondence is attached at the end of this document.

Summary Article 10: Respected Investigators, Professors and Scientists are capable of telling lies, they do tell lies, and Schulman has told more than his share. The diode and resistor were not defective. They just needed the additional circuitry integrated / added into or onto the implanted portion.

11. In a table of data listing the specs for components of the "BION" microstimulator, Schulman indicates that the diode used in replacement of the "faulty" diode is a "THD9064", however there doesn't appear to be any such diode in existence.

In QPR #2 (June 10, 1995 - Sept 9, 1995), a table of "Specifications" is present that provides details regarding each of the "BION" microstimulator components and indicates a mystery diode. Additionally, a table of "Suppliers" lists an undetermined vendor for an unknown component.

Suppliers:

1. Kimbel Borosilicate Glass

2. AVX Tantalum Corp
3. Vendor to be selected by A.E. Mann Foundation

Specifications:

Part	Abbrev	Specification
Glass Capillary	cap	0.079" OD
Glass Bead	bd	0.015" ID 0.065 OD
Iridium Ball	Ir ball	0.065" OD
Diode	D	THD 9064
Integrated Circuit Chip	IC chip	3 micron, double poly, CMOS

1. THD 9064 does not appear to be a commercially available diode. The fact that no such "THD9064" diode exists should alone prove that Schulman eliminated the diode rather than replaced it and the false data above is reason for Alan Price and John Krueger at the Office of Research Integrity to find Schulman guilty of misconduct and because he didn't act alone, the other Investigators should be subject to disciplinary measures as well.

2. A search for THD 9064 on two popular search engines (Hotbot and Google using the terms diode thd 9064 in various forms) returns a total of 3 results: (1) New Focus 12-GHz Amplified Free-Space Photoreceiver (which uses a MEMS class 25µm schottky diode), (2) Siemens SDA9064-5 Digital Deflection MicroController (frequency doubler), and (3) another microcontroller from ICS.

12. Throughout contract #N01-NS5-2325, Joseph Schulman fabricates an absurd amount of "vendor error" and "faulty product" which was done to conceal the real reason for the excessively low yield of microstimulators which can be attributed to the error prone stacking process of the smaller unethical implants

"Yield of the microstimulators after winding is approximately 30%. The reason for this poor yield is not yet known. The integrated circuits have been pretested. In some of the defective stimulators, measurements show that the external diode and resistor are not properly connected. In others the precise cause is unknown. Presently, test fixtures are under development, at the Mann Foundation, to permit testing of the electronic module at all assembly levels." (Contract N01-NS5-2325 QPR#3)

This atrocious yield of 30% is factual evidence and should have flagged concern upon NIH review. For those not totally familiar regarding ASIC fabrication process, a brief explanation may help. When Schulman says the circuits have been pretested, this is pretty understandable as testing a single IC after production is a simple process. The window of consistency for yield of chips from foundry runs industry wide (in process sizes ranging from .05µ to 3.0µ, CMOS or BiCMOS) is always in excess of 96% and is typically approaches 99%, which means there is very little "vendor error". Schulman indicates that after he gets his hands on them, yield falls to 30% and struggles to explain, but indicates that the problem is "unknown", but "some" of the problem is that the diode and resistor replacing the "faulty" components that were removed at IIT are not "properly connected". The "BION" microstimulator documented in this contract does not stack circuits in a vertical or 3D fashion and attaching basic components to bond pads in a 3.0µ or 1.5µ CMOS process is not immensely difficult, especially when you take into account the experience of Mann personnel who have prior experience with smaller chip processes used in cochlear implants and at IIT who is a leader in MEMS scale and Nano scale fabrication. There is another reason for 70% of the finished product being non-functional and the problem is not "unknown", it is deception that Schulman must conceal because the only legitimate explanation for this poor yield is that the chips were being stacked in order add functionality (long range telemetry) and save space and a quantity were being misappropriated as well.

Here a “clerical error” causes open pads, however open pads such as these would be beneficial if your intent was to dice and stack the chip:

“Among the chips included on the wafer run was a test chip for the suspended carrier front end. Due to a clerical error in the process of combining the chips onto one reticule, that test chip had open circuits at many of the pads, making testing of the chip essentially impossible. These opens and any other problems which can be fixed with metal layer changes will be corrected on the wafers which have been held in the early stages of processing. As this report is being prepared for submittal, the corrections in the metal layers have been submitted for two more wafer releases.” (QPR #15)

In this quarter, Schulman blames Slicex, a vendor in Salt Lake for two different errors and claims an entire run of chips are useless

“Prior to delivery of the chips it was discovered that an unfortunate error existed in the layout at the upper-most cell level. A long strip of via/contact had been placed, by Slicex, across the entire length of the repeater chip rendering it inoperative. Equally unfortunate was the substitution of cells from an earlier revision of the layouts in the test chip. Therefore neither of these chips were functional upon delivery. Fortunately, some of the circuits used in the Repeater chip design had been included in another MOSIS submission as part of work on ITT's contract: Multichannel Transcutaneous Cortical Stimulation System. Therefore we were able to use that chip, MOS2, to test the power supply regulator, and rectifier/data decoder Both of these circuits are key components for the telemetry of the proposed micromodules” (QPR #10)

E-mail correspondence with Tom Wolf, President of Slicex, reveals conflicting information:

Mr. Wolf writes: "...We brought Dr. Huber in primarily to address the latch up problem as AEM (Alfred E Mann Institute) was pushing the IC process beyond its ability... Dr. Schulman wanted to use an entire reticule which meant we placed 5 IC's in a stack, and then 2 IC's rotated 90 degrees at the end. At this point, the industry did not have good tools for debugging multiple IC's on a reticule (I am not sure if this is possible even today). But at that point, the only way to check was with the human eye. Shortly after the IC came back and was deemed acceptable by Schulman, I visited Schulman at AEM. He expressed his satisfaction with our work and then introduced me to Ron Liebel of MiniMed. He told Ron that he should use us and that we were great, just expensive. After which, we helped MiniMed with their artificial pancreas chip. At this point Dr. Schulman stated he had lots of new work for us, but we never saw any more from him. Just his sister companies, MiniMed and ABC (ABC = Advanced Bionics Corp) Now at ABC, we did several million dollars worth of business. I don't understand that Schulman could say we didn't understand anything, when we designed 1 IC for him that worked and 17 for ABC. Especially since according to Schulman, the only IC that had worked first time for AEM up until that point in time was the one done by SliceX...."

In email correspondence between Joseph Schulman and myself, a different scenario is portrayed:

"I WAS CONCERNED BECAUSE THEY ALL SAT QUIETLY AND DIDN'T ASK ANY QUESTIONS, AND WHEN I ASKED THEM IF THEY WERE SURE THEY UNDERSTOOD ALL THE SCHEMATICS WE WERE DISCUSSING THEY WOULD ALWAYS ANSWER YES. FINALLY WHEN THEY PRODUCED THE CHIPS, IT WAS OBVIOUS THAT THEY DIDN'T UNDERSTAND ANYTHING AND THUS HAD MANY ERRORS IN THE LAYOUT. WHEN I POINTED OUT THE ERRORS TO THEIR MANAGEMENT, THEY PROMPTLY RETURNED THE FUNDS WE PAID THEM. ANOTHER COMPANY THAT WORKED WITH THEM LOST OVER A MILLION DOLLARS DUE TO THEIR SCREWUPS..."

Mr. Wolf mentions that Schulman was stacking a full reticule as well as “pushing the process beyond it's ability” which indicates that the design was sacrificing reliability in favor of a smaller chip size. If this chip were just being used for the BION, space savings should not have been a concern as this chip was in a 1.5µm process which is considerably smaller than the 3.0µm chip that the project began using initially and as shown below in another section, there is enough room inside the BION glass capsule for circuitry and this is definitely not an issue. Although Mr. Wolf does admit some troubles with the full reticule, he indicates that he

is certain that Slicex is not responsible for an entire run of chips being non-functional and that they provided Schulman and AE Mann with a working design.

Summary Article 12: There are far more instances than what I report here. Schulman was keeping some of the chips for the smaller devices and was forced to cover this up by saying yield was poor and vendors made mistakes.

13. Other Evidence

Much further evidence exists in Joseph Schulman and Gerald Loeb's U.S. Patent Office filings and the Quarterly Progress Reports from contract #N01-NS5-2325. This evidence shows fraudulent reporting, that technology and alternative implantable device invention discoveries occurred during the contract period, and also provides insight regarding motive and other factual evidence. Most evident however is that many of the inventions and methods involve integrating or stacking additional circuitry allowing smaller implant sizes and the ability to eliminate external components and increase the range and options for bi-directional telemetry, and also making it possible to pursue the unethical long term research involving an unwilling subject.

Previously, in article 12, Mr. Wolf from Slicex reports that *"Dr. Schulman wanted to use an entire reticule which meant we placed 5 IC's in a stack, and then 2 IC's rotated 90 degrees at the end"*. The following shows an illustration from Philip Troyk's separate NIH contract for a visual prosthesis as well as text from those QPR's:

"....the NPP is highly motivated to initiate the development of a fully implantable cortical stimulation system which could be used to provide inputs and computer control for hundreds, to over one thousand, implanted cortical electrodes. This project used the combined capability four organizations, the Illinois Institute of Technology,, and the A.E. Mann Foundation. The device specified and designed in this contract has significantly higher packaging and functional density (is smaller) than any other implantable neural prosthesis previously developed."

Stacked visual prosthesis chips with portion rotated 90 degrees

Individuals at the Mann Foundation have expressed a desire to create a "universal family" of microstimulators that could be used for a visual, auditory or motor prosthesis. Such a universal device would have to be much smaller than the "BION" developed under contract #N01-NS5-2325 and be flexible so as to conform and stretch in response to it's implanted environment. The evidence presented here suggests that Schulman began development of this universal device using NIH grant funding from #N01-NS5-2325 and fundamentals learned are applied today by Mann Corporate ventures Advanced Bionics and Second Sight

"Work at the Alfred E Mann Foundation is increasingly directed towards a medium to large scale manufacturing of microstimulators. Methods are being developed for reliable and reproducible manufacturing procedures that can utilize batch-processes rather than production steps on an individual basis" (Schulman, QPR #3)

Later, from R. Greenberg, NC retinal chip investigator and now President of Mann founded "Second Sight"

"Also, by splitting the chips up into smaller components, and utilizing techniques such as solder bumping to connect the chips with flexible electrode substrates, we shall keep the sizes to a minimum...." (Robert Greenberg Mann Foundation Multiple-Unit Artificial Retina Chipset System To Benefit The Visually Impaired)

Most recently from USC media:

*"Health & Medicine – USC News;
...developing an eye chip that would be placed in the retina and restore some vision to people with degenerative diseases. The intraocular retinal prosthesis is created through microelectronics. The eye chips will be manufactured by Second Sight, a company that was founded by Alfred E. Mann, the Chair of the Board of Directors of the Alfred E. Mann Institute for Biomedical Research at USC
(<http://www.usc.edu/student-affairs/dt/V144/N26/04-doctor.26c.html>)*

Schulman defines smaller devices in patent applications with descriptions far smaller than the "BION". At 25 mils total thickness, this is approx 1mm, and thus many times more compact than the BION.

"...A thin hermetically sealed electrical feedthrough suitable for implantation within living tissue permits electrical connection between electronic circuits sealed within an hermetically sealed case and electrical terminals or contacts on the outside of the case ...For example, using currently known processing techniques, the frame and lid can be as thin as approximately 4 mils. The height of the cavity can be as small as about between 5 to 10 mils depending on the connections of the electronics contained within the cavity. The insulating layers, as indicated above, can be on the order of less than 1 mil thick, it is thus feasible using presently available processing techniques to construct an implantable device less than 25 mils thick, yet still providing an hermetically sealed case and hermetic feedthroughs." (U.S. Patent 5,750,926: "Hermetically sealed electrical feedthrough for use with implantable electronic devices" Inventors: Joseph Schulman Filed: Aug 16, 1995)

6,067,474: "Implantable device with improved battery recharging and powering configuration"

"Although the preferred power source for use within the fully implantable systems described herein is a rechargeable battery, it is to be understood that other power sources may also be employed. For example, an ultracapacitor (also known as a supercapacitor) may be used.. Thus, for this type of application, where recharging must occur on a regular basis, and when appropriate discharge circuits are employed to control the rate of discharge or energy withdrawal, the ultracapacitor provides a viable alternative to a rechargeable battery for use within the implantable system."

Patent 5,522,865 "Voltage/current control system for a human tissue stimulator"

Multiple Chip Control: "In the preferred embodiments thus far described, the ICS comprises a single chip. However, multiple chips of the same or similar circuitry may be usefully employed in a human tissue stimulator. In such an embodiment, a circuit at the input of each chip permits the interconnection of several chips into one functional unit by making one of the chips a master device which receives data and clock signals and then distributes such signals to all the slave chips. In this manner a large number of chips may be connected together forming a system with a large number of output channels"

Chips too big?

“To provide an easier fit in the small Microstimulator package, the chips must be lapped from a thickness of about 500 microns down to under 200 microns. While this can be done on individual chips, it is much easier (and more economical) to do it on an entire wafer before it is diced into individual chips. As mentioned in the previous report, an additional passivation layer (probably silicon nitride) is needed to protect the chips from damage due to the attached ferrites.” (QPR #6)

Schulman reports above that post-processing is needed to get the chips thin enough to fit into the microstimulator package, however there appears to be ample room within the glass housing for the tiny 1.5 μ and 3.0 μ process chips of the BION. A photo of an early and more recent BION is shown below:

Summary

Joseph Schulman and Gerald Loeb have both acted irresponsibly, selfishly and have caused me considerable pain, suffering and other damages during the last 5 years. They have anticipated that no proof would exist of their crimes and that nobody would believe a story of this nature. This will no longer be possible as the evidence and cause for investigation is presented here and now. Loeb's plans for the future at USC-AMI show a new improved version of the "Connectix" Video Phone mentioned as Article 9 in the "Evidence Detail" section above, however in this embodiment the server for this criminal misconduct will remain on campus allowing Schulman and Loeb to record data from and stimulate their unfortunate research subjects who are unwilling recipients of microstimulators, whether at home, on campus, on vacation, or at a National conference or event by remotely accessing the university "Telemedicine" server from their location. I'm certain that Mr. Steven Sample, President of USC did not anticipate this kind of trouble when welcoming the Alfred Mann Institute to USC, and had he known, he may have reconsidered, because this kind of human research misconduct far exceeds any that has existed, even at Johns Hopkins, whose Biomedical Dept has also received Mann funding. Loeb's future plans and ulterior motive for developing tele-medicine technology are a liability for USC and should not be allowed to continue regardless of revenue or finances, because this is a losing proposition no matter how you look at it.

Loeb's newest invention for USC is as follows: United States Patent Application 20010054071
Inventors: Loeb, Gerald E.; (Los Angeles, CA)

"...audio/video-call system allows communication using audio, video and/or data. The system includes two communication systems--one for the user and one for the caregiver. Each communication system includes a console coupled to a television. The console has a digital processor, storage, software, and connections to telephone equipment, channel tuner, a video camera, and steering for the video camera. A remote control issues commands to the console to initiate or accept calls to the other communication system. The phone line is used to carry the audio portion of the call while the network is used to carry any video and/or data portion of the call. In some embodiments, a passkey allows the caregiver's communication system to control the user's communication system without any interaction by the user. In other embodiments, more than one video camera is used for a communication system. A microphone can be coupled to the remote control to collect the audio channel for the call..."

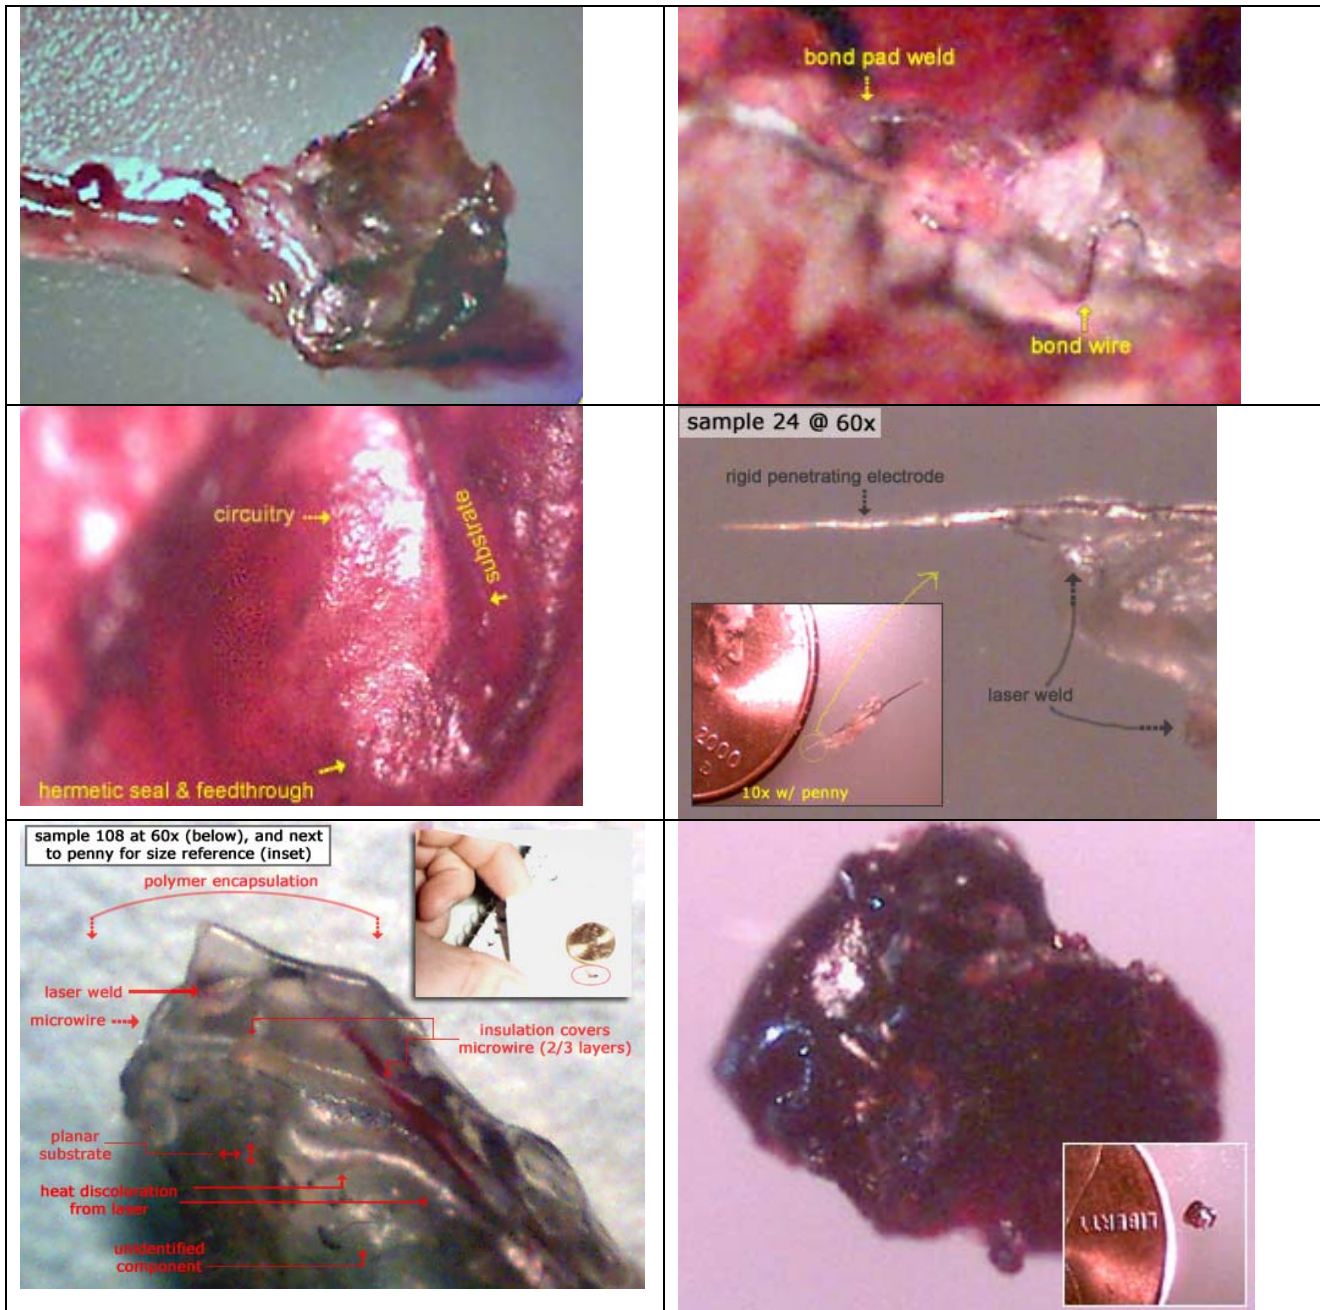

In conclusion, I hope that everyone who reads this will do what he or she can to ensure this behavior is discontinued and that disciplinary measures are pursued. I cannot take the law into my own hands. I need your assistance resolving this. I am willing to cooperate in any fashion that will assist authorities in realizing the truth regarding this situation and this would include having these devices analyzed using techniques or methods that are available which I cannot currently arrange due to financial reasons. Thank you for your assistance regarding this manner.

6. E-mail correspondence

More images of devices recovered from my person are presented here. Despite the overwhelming evidence presented above, these devices will make the strongest case against Joseph Schulman and Gerald Loeb and cannot be ignored.

There is a reason why these devices look the way they do. The first reason for their appearance is that they have been implanted for 5 years. The second is that if they were to be recovered, Schulman and Loeb would not want you to recognize them, and the third reason is explained by Jerry Loeb himself:

“Therefore, modification of the microstimulators' chemical nature and/or superficial physical contours to avoid, prevent and/or discourage an immunological response by the body, would be advantageous.”

PROBLEM SOLVING WITH SURFACE SCIENCE FOR RESEARCH, PRODUCTION AND QA/QC

Microstimulators and Microtransducers for Functional Neuromuscular Stimulation

Principal Investigator	Affiliation	Contract Number	Link
Joe Schulman, Ph.D.	A.E. Mann Foundation	N01-NS5-2325	

ARTICLE C.1 BACKGROUND

The Neural Prosthesis Program (NPP) of The National Institute of Neurological Disorders and Stroke is committed to the development of safe, reliable, and effective systems for functional neuromuscular stimulation (FNS) in spinal cord injured individuals. Multiple implantable microstimulators which selectively stimulate paralyzed muscles in a controlled fashion may permit an individual to use his or her own muscles as the motors to produce limb movement. Multiple implantable microtransducers that sense contact, grasp force, and limb position from either implanted transducers or intact sensory receptors may provide sensory feedback from an otherwise insensate limb. To produce a useful system, these sensory and motor prostheses are being developed together as standard and compatible building blocks of an integrated FNS system.

The NPP is supporting research and development of a system consisting of an extracorporeal coil and a family of implantable microstimulators and microtransducers (Loeb et. al., Injectable microstimulator for functional electrical stimulation., Med. & Biol. Eng. & Comput. 29:NS13-NS19, 1991; Troyk and Schwan, Closed-loop class E transcutaneous power and data link for microimplants., IEEE Trans. on BME 39:589-599, 1992). The system is designed to power and control up to 64 individual transducers and stimulators through a single external coil. During the past five years significant progress has been made in developing addressable, implantable microstimulators and an extracorporeal coil and transmission system. This work has progressed to the point where first generation devices are available for implantation. Work was also begun during the past 2 years on the development of implantable addressable transducers. This contract will continue the engineering development of the microstimulators and transducers. In addition, in-vivo evaluation of these devices will be initiated in an animal model.

This RFP represents a competitive renewal of an ongoing contract. Copies of progress reports from current contracts related to this work and a bibliography of Neural Prosthesis Program publications are available from the Contracts Management Branch, Room 901 Federal Bldg., 7550 Wisconsin Ave., Bethesda, MD 20892.

ARTICLE C.2. STATEMENT OF WORK

Independently, and not as an agent of the Government, the Contractor shall exert its best efforts to develop and test a system for functional neuromuscular stimulation (FNS) consisting of implantable receiver-stimulators and transducer-telemeters and an easily donned extracorporeal transmitter. Specifically, the Contractor shall:

A. Design, fabricate, and test implantable receiver-stimulators, implantable transducer-telemeters, and an extracorporeal transmitter for FNS.

1. The implantable receiver-stimulators, consisting of power receiver, control receiver, stimulus and control circuitry, electrodes, and encapsulation shall meet the following specifications:

- a. They shall be made as small as possible while still being compatible with the other requirements described below. The target volume of each stimulator shall be 60 cubic mm or less.
- b. An individual stimulator shall initiate a stimulus pulse only in response to a properly addressed command from the transmitter. There shall be at least 64 different stimulator addresses that can be selected.
- c. The stimulators shall derive their power and commands by an inductive link from a transmitter coil with field specifications as outlined below.
- d. The stimulus current waveform shall have two phases of opposite polarity. The duration of the first phase shall be variable from 0 to 200 microseconds in at least 200 steps on a pulse by pulse basis.
- e. The stimulus current level of the first phase of a stimulus pulse shall be adjustable and shall include levels of 1 and 10 milliamps under control of the transmitter. The current of the second phase shall guarantee long

term charge balance at the electrodes under all pulsing conditions within specifications. Stimulator compliance voltage shall be at least 10 volts.

f. Stimulating electrodes shall be made of corrosion resistant and biocompatible materials (e.g. platinum, platinum-iridium, iridium, or tantalum pentoxide) and shall be stable in physiologic saline at 37 degrees C for at least 1 year at the maximum charge delivery rate.

g. The stimulator shall be encapsulated in a manner that permits stable operation in physiologic saline at 37 degrees C for at least 1 year with materials that are known to be biocompatible.

2. The implantable transducer-telemeters consisting of transduction unit, power receiver, control circuitry, digitizer, telemetry circuitry, and encapsulation shall meet the following specifications:

a. The transducer-telemeters shall not interfere with the operation of the receiver-stimulators and vice-versa.

b. The transducer-telemeter package shall occupy a volume of no more than 125 cubic mm (not including magnets, electrodes, or other passive elements which can be external to the package if they are needed for the design). Biocompatibility and life expectancy shall be as specified for the microstimulator in part 1.

c. The transducer-telemeters shall derive power and commands from the same transmitter coil as the microstimulators and shall transmit information to this coil upon command.

d. The transducer-telemeters shall be addressable with at least 64 unique addresses using an addressing scheme that is compatible with the microstimulator addressing.

e. The telemeter's digitizing and telemetry circuits shall be designed to provide at least 8 bits of digital data per sample. Signal conditioning for sensing biopotentials suitable for closed-loop control and/or sensory feedback shall be incorporated in telemeters with addresses 1 through 16.

f. A joint angle transducer-telemeter shall be designed to provide wrist joint angle information for use as a command signal with a resolution of at least 5 degree as the wrist moves through its physiological range of flexion and extension. The error of angle measurement (including drift, hysteresis, and errors due to wrist movement other than pure flexion and extension) shall not exceed 15 degrees.

3. The extracorporeal transmitter shall meet the following specifications:

a. The transmitter field shall permit specified operation of the stimulators and transducers anywhere within a cylindrical shaped volume of physiologic saline at least 9 cm. in diameter and at least 16.0 cm in length.

b. The transmitter field shall permit specified operation with up to 10 degrees of axial misalignment between the transmitter coil and the receiver coils in the stimulators and transducers.

c. The transmitter, under the control of a computer, shall be capable of powering and controlling at least 64 stimulators and/or transducers in any combination.

d. The transmitter coil shall be designed to be donned and doffed as easily as an item of clothing.

e. The transmitter shall operate reliably in the presence of electromagnetic interference commonly found in a home or work environment.

4. The Contractor shall make its best effort to deliver to the Project Officer one set of 32 receiver-stimulators each with a different address, one set of 4 joint angle transducer-telemeters each with a different address, and one transmitter with specifications as outlined above by the end of the contract period.

B. Select a suitable animal model and evaluate implanted microstimulators in this animal model.

1. Evaluate the tissue reaction to implanted stimulators placed intramuscularly and subdermally for periods of at least 3 months.

a. Evaluate the tissue reaction to active and inactive devices.

b. Evaluate the tissue reaction to any components used in making the device that might be exposed to tissue should the encapsulation fail.

2. Investigate the threshold stability and motor recruitment stability of microstimulators over a period of at least 3 months.

3. Investigate the function of implanted transducer-telemeters over a period of at least 3 months.

C. Cooperate with other investigators in the Neural Prosthesis Program to integrate this work into practical FNS systems.

Multichannel Transcutaneous Cortical Stimulation System

Principal Investigator	Affiliation	Contract Number	Link
Phil Troyk, Ph.D.	Illinois Inst. of Technology	N01-NS7-2365	

BACKGROUND

The Neural Prosthesis Program (NPP), National Institute of Neurological Disorders and Stroke, National Institutes of Health develops implanted devices that interface directly with the nervous system to replace or supplement function in neurologically disabled individuals.

Significant advances have been made in demonstrating the feasibility of bypassing peripheral sensory organs such as the ear and the eye to restore lost sensory functions. Recently, a blind individual had an array of 38 microelectrodes with percutaneous leads implanted into her visual cortex for a period of three months. During this time she was able to see and describe visual phosphenes produced by electrical stimulation through the microelectrodes. Critical engineering parameters, such as phosphene thresholds as low as 4 microamperes and a two point resolution of 500 microns, were determined which now permit the design of a permanent implant controlled by electromagnetic signals passing across the skin. (Ref. Hambrecht, F.T., 1995, Visual prostheses based on direct interfaces with the visual system. In Brindley, G.S. and Rushton, D.N. eds., Baillière's Clinical Neurology: Neuroprostheses, Baillière Tindall, London, pp 147-165.) Because such a permanent implant would not require any leads passing through the skin, there should be little risk of infection and the implant could be left in place indefinitely.

Specifically, a transcutaneous stimulation system consisting of a computer controlled transmitter and a group of implantable receiver-stimulator modules, each with 256 stimulus channel outputs, is needed. Research and development are required to assure that the implanted portion of this system will be small enough to fit safely and comfortably beneath the scalp and that the stimulus outputs are flexible enough to provide the range of stimulus parameters necessary for producing patterns of phosphenes by intracortical microstimulation. This transcutaneous transmission system will interface not only with discrete wire microelectrodes but also with silicon microstimulating microelectrodes presently being developed by other investigators in the NPP. The extracorporeal portion of the system will include a computer controlled transmitter for sending power and control signals across the skin to the implanted receiver-stimulator modules.

This contract research is a new project not previously supported by the NPP. A bibliography listing publications resulting from NPP studies related to this project is available, free of charge, from the Neural Prosthesis Program, NIH, Federal Building, Room 916, Bethesda, MD 20892-9170. (fax: 301-402-1501, e-mail: fh2@cu.nih.gov)

STATEMENT OF WORK

I. Independently, and not as an agent of the government, the contractor shall exert its best efforts to design and fabricate a transcutaneous transmission system suitable for use in a human visual prosthesis. The system shall consist of: 1.) a group of appropriately packaged, implantable, 256 channel receiver-stimulator modules each with high density connectors suitable for connection to 256 cortical microelectrodes; 2.) an external transmitter interfaced to an external computer which can be used to control the implanted receiver-stimulator modules; 3.) a reverse telemetry system for monitoring key voltages in the receiver-stimulator modules. The contractor will not be required to furnish the microelectrodes nor perform any animal or human testing.

Specifically the Contractor shall:

- A. Design the overall system such that it can be expanded in modules of 256 channels up to 1024 channels.
- B. Design the receiver-stimulator module to meet the following target specifications. (Note: Priorities and

limits will have to be assigned to some of the stimulus parameters under certain operational conditions to avoid conflicts. These rules of operation will be established shortly after the beginning of the contract in a joint meeting between the contractor and the Project Officer.)

1. Capable of passing truly simultaneous biphasic current pulses through at least 16 of any of the 256 microelectrodes that will be connected to its output with the capability of passing interleaved biphasic current pulses through any or all of the non-simultaneously pulsed microelectrodes.
2. Capable of stimulating each channel at repetition rates of 10 to 250 Hz. The repetition period should have a resolution of 250 microseconds.
3. Phase durations of each phase of a biphasic pulse pair controllable over the range of 50 to 750 microseconds (50 microsecond resolution/phase)
4. Output compliance voltages of at least +/- 5 volts.
5. Amplitude of each phase controllable over the range of 0 to +/- 64 microamperes (0.5 microampere resolution) unless limited by the compliance voltage.
6. Have an anodic bias supply adjustable over the range of 0 to 0.75 volts referenced to a standard calomel electrode (SCE). In a functional system, the actual voltage of this bias must be translated to correspond to the use of a large surface area platinum reference electrode that will be used in place of a SCE. Each channel must be connected to the anodic bias supply through large bias resistors (e.g. 10 megohm)
7. Train length on each channel of 1 to 255 biphasic pulse pairs.
8. Train delay times for each channel referenced to a reference timing pulse (e.g. a reference pulse for channel #1) adjustable over the range of 0 to 12700 microseconds (100 microsecond resolution).
9. Maximum total output current of each module at least 1024 microamperes.
10. Have built-in safety features that include the ability to sense the failure of any of the output drivers or other modes of operation that could result in charge imbalance and tissue damage.
 - a. Since it is assumed that space will not permit output coupling capacitors on each channel, a desired feature would be the ability to disconnect a shorted output driver from its power supply.
11. The modules should be capable of independent operation, i.e. should any of the modules fail, such failure should not affect the operation of the remaining modules.
12. Have a reverse telemetry system for monitoring the following voltages within each module on demand
 - a. The voltage waveform developed across any remotely selected microelectrode during stimulation.
 - b. The anodic bias supply.
 - c. The positive and negative power supply voltages
13. Contained in a hermetic package
 - a. Suitable for implantation between the scalp and the skull with dimensions no greater than 5 mm thick, 30 mm wide, and 30 mm long, not including any receiving antennae which can be external to the package.
 - b. With 4 separate 66 contact, high-density, low disconnect force, connectors in the package walls that interface with appropriate connectors terminating the leads from the microelectrodes or on dummy loads during in-vitro testing.

c. With smooth, rounded edges and attachment sites for immobilizing the package to the skull in an appropriate manner.

C. Design the external transmitter portion of the system to supply power and full control of up to four receiver-stimulator modules.

1. The transcutaneous transmission signal should be capable of reliably operating through human scalp tissue with thicknesses ranging from 2 mm to 10 mm.

2. The transmitter shall be under the control of a computer whose output can be altered by keyboard entries, by software or by a remote interface that will eventually be controlled by an image sensing device such as a television camera. (The contractor does not need to supply the image sensor, nor any interface electronics between the image sensor and the computer, only the remote interface that will allow full control of the receiver-stimulator modules.)

3. Although the external portions of the systems to be supplied under this contract do not need to be "patient portable", the design should not ignore the fact that future generations of the system will be portable.

D. Fabricate and test, in-vitro, a complete system with 1024 channels.

1. Document the ability of the system to deliver the specified design stimuli at the specified rates without significant cross talk between channels.

2. Test functional receiver-stimulator packages with integral connectors for hermeticity and proper electrical operation in an accelerated aging environment of heated saline solution for a period of at least 6 months.

E. Before the end of the first year of the contract, furnish the Project Officer with 5 empty but hermetically sealed receiver-module packages with at least one 66 contact connector for in-vivo testing by other investigators in the Neural Prosthesis Program (NPP).

F. Before the end of the second year of the contract, furnish the Project Officer with at least 5 fully functional, 256 channel systems, complete with mating connectors so that other investigators in the NPP can attach microelectrode leads and test the complete system in animals.

G. Before the end of the third year of the contract, furnish the Project Officer with at least 2 fully functional, 1024 channel systems, complete with mating connectors for attachment to microelectrode leads for human testing by other NPP investigators.

H. Should failures occur during the above mentioned in-vitro or in-vivo testing, the remaining required deliverables will be reduced, upon mutual agreement between the contractor, the Project Officer and the Contracting Officer, to allow resources to be applied to the redesign and fabrication of relevant parts of the system.

I. The contractor shall coordinate his work, through the Project Officer, with other investigators in the NPP.

Subject: Re: NPP Quarterly Report #

This meant that the electronic transmitter circuitry would be small enough to physically mount on the extra-corporal transmitter coil, not that both coils would be implanted. This was a goal of one of the other team members. I was never convinced that there was any functional advantage to this.

P. Troyk

Dr. Troyk,

I am hoping you can help me with a question regarding some of the research performed by yourself and other colleagues as part of NIH contract N01-NS5-2325. The text below is taken from a quarterly report and mentions an interest in reducing coil driver circuitry so that it could potentially be located on the transmission coil itself. This in essence would mean both coils would be implantable correct? I did not see any mention of this interest in subsequent quarterly reports. Do you know if any efforts were made to achieve this? Thank you in advance for your assistance.

"We are working on a re-design of the coil drivers in which the driver circuitry is sufficiently small that it can be located outside the bedside controller and close to, or even on the transmission coil" (Microstimulators And Microtransducers For Functional Neuromuscular Stimulation Quarterly Progress Report #6 - June 10, 1996 - September 9, 1996).

Dr. Arzbacher,

My attempt to send this email to Dr. Troyk was unsuccessful. Would you be so kind as to forward this to him? Also, I copied you on the original as I am sure you may have some insight as well. Thanks again.

- DL

Dr. Troyk,

I have followed the development of the NINDS NPP for the last couple of years and admire your more than significant contributions to this project. I am quite familiar with the published data, however there is one aspect of the research that I have not found in the papers and I am hoping you can help.

Papers outlining NPP background and statement of work often refer to various electrode designs as well as leadless implanted receiver-stimulator modules for chronic implantation offering between 256 and 1024 individual recording/stim sites. Testing of these devices is also mentioned both in primates and a small number of human based experiments.

I am curious if any research effort has been made to examine the devices and surrounding tissue using radiology and diagnostic imaging in the living subject. There is only mention of histological inspection for evidence of substrate breakage, insulation damage etc. I would think that the ability to check for tissue or electrode damage as well as migration could be accomplished in-vivo using high field MRI or radiography and would prove especially useful during the longer term, chronic studies. Can you provide any insight regarding this?

Regards,

DL

Subject: CMOS ASIC Question.....

Ali,

Hello and happy new year. You probably don't remember me as I have only met you once on campus. I occasionally depend on the help of Steve Potter and others in Biomedical Imaging Center for help with Physiology studies etc., however I find myself in need of help regarding Integrated Circuits and Sensors.

1. If developing ASIC for implantable microstimulator for functional nerve stimulation (FES), mention is made in various papers of both CMOS and Bi-CMOS process. Can you provide a general or "approximate" idea as to what kind of yields from wafer are typically achieved in this process? Assume 3.0 μ or 1.2 μ process through MOSIS run?

The yield is usually very high (better than 99%) on those processes.

2. When testing chips and assemblies, what factors are used in determining the amount of difference in carrier levels? I have seen reference made to the lower level at 80% or 90% of the upper level. I am trying to determine what factors would require a greater depth of modulation to be desired.

Consider the following: If one were to multiplex a single electrode driver to multiple electrode sites and assuming a nominal stimulation rate of approximately 30 Hz, 10 to 100 electrodes could share a common driver provided that temporal and phase modulation of individual electrodes were not required for control. In such a scheme, creative circuit techniques would be needed to insure electrode charge recovery. Could this configuration require a greater depth of modulation?

I quite frankly don't follow this question entirely. If the question is how many electrodes can you control using one wireless driver, the answer is quite a few, if you use the right coding schemes. In general this depends on a large number of factors, such as bandwidth, the sophistication of the electrode function and the frequency of stimuli.

In an ASIC design that functioned appropriately at 5 volt compliance, and then encountered latch-up problems when redesigned for 20 volt compliance, how difficult do you think this problem would be to correct? If the process plays a significant role, consider the problem for both 3.0 and 1.2 μ CMOS through MOSIS run.

Latch up is primarily determined by the substrate doping level, and is usually avoided by following the design rules, including, but not limited to, close proximity of substrate contacts with the active devices. In general it is not advisable (at all) to use a process qualified for 3 or 5 volts with higher voltages. Even if the circuits work, you will have reliability and longevity problems.

Many thanks for your assistance and best wishes.

Dave Larson

Mr. Larsen: In going through my efiles as part of my year-end cleanup, I did not have a clear record that the following response was actually sent to you with regard to your September inquiry. Hence, I am sending it to you now. My apologies if it duplicates an earlier transmittal.

<http://www.nibib.nih.gov>

Dear Mr. Larson,

I have asked some people at NIH for an informed opinion on your query and am pleased to transmit the following response.

There are several parts to this inquiry, but basically the concern is the possibility that a clinical researcher could implant a clinically undetectable (with standard imaging methods) probe without approval to do so. A second part is if NIH is considering this possibility.

With regard to unapproved implantation, there is always the chance that a researcher could perform such an implant in conjunction with other clinical research activities without approval or without including this in the reviewed research protocols. Patient rights and informed consent are major concerns for clinical research, and the NIH requires stringent reviews of clinical procedures and on-site monitoring of clinical research for their funded grants. However, a knowledgeable researcher absolutely intent on implanting a sub-millimeter size probe may be able to find a way to do it during experimental activities.

Information obtained in such a manner could not likely be published in a reputable journal, since the methodology would have to be part of the article, which makes it less tempting if the unethical clinician is seeking acclaim. Also, the fact that such work could not then be replicated by others would heighten the likelihood of scrutiny and ultimately, exposure as fraud.

Is possible unethical research of concern to the NIH? Certainly. There is a Bioethics Office that explicitly deals with such issues, and the Office of Extramural Research coordinates clinical research requirements for NIH grantees for all the NIH research institutes and centers. On-site reviews of NIH-funded clinical research are conducted by NIH staff to evaluate compliance with patient rights issues and adherence to planned experimental protocols. The issue of unauthorized implants is one of many causes for concern in the general realm of unethical clinical research, and the NIH endeavors to deal with such issues before and during clinical investigations.

By way of information, all micro devices that are capable of sending signals into or out of the body are readily detectable using relatively standard x-ray imaging methods. You are correct that we use extensive histological analysis to evaluate the tissue response to implanted micro devices. This is not because we cannot detect the devices using x-rays but because there is a need to do safety studies that involve detailed light and electron microscopic analysis of the tissue response at a cellular and subcellular level.

The question of informed consent applies to all research involving human volunteers and is clearly one of increasing importance in light of recent shortcomings. Informed consent as outlined in the Belmont Report and subsequent guidelines as well as trust between the physician and human volunteers is essential for ethical research and should be a high priority at NIBIB as well as at the other institutes.

Subject: NIBIB Information

I have a question and I am hoping you can provide some insight. Current research in the NIH/NINDS Neural Prosthesis Project (NPP) has led to the development of implantable sensors and probes (Professors Troyk, Najafi, Banks etc., PI on NIH NPP contracts) that are just below the size of feature detection in typical clinical radiology (MRI/CT etc). Continuing research on animal models and a select few human cases show that these probes can not be imaged and the only means of examination is a histological method after the research subject dies with no in-vivo examination due to the sub-millimeter size. The MRI capability of a clinical MRI system (1.5T) is in no way capable of imaging an object below 500x500 microns, however there is development of new high field MRI as high as 7.0T and research at Caltech has used fields as high as 11.7T in rodents. My question Donna pertains to the potential that exists for an unethical researcher to implant probes in an unwilling human in order to gain long-term research data that is otherwise unattainable in animal models. The work of Professors Loeb and Troyk also involve passive, radio frequency techniques that make remote sensing and stimulation of the probes attainable. If this were to happen, there would be no way to detect the probes in a clinical situation and begin any treatment for the potential victim/subject. A horrible thought, yes, but it appears to be a potential cause for concern at this moment. Do you think the establishment of the NIBIB will address this, or has anyone in the NIH addressed this issue at all? Many thanks for your help.

David A. Larson
Los Angeles, CA

Dr. Kerns received a Ph.D. in Electrical Engineering from the California Institute of Technology and has been kind enough to take an interest in my situation and I am grateful because his knowledge of implantable devices and experience with integrated circuits and sensors has been very beneficial. His prior professional experience includes: Senior Analog Designer, Analog Devices, Inc. (A leading manufacturer of high performance analog and digital IC's) Staff Scientist, Tanner Research (IC design, simulation and layout software development), and Dr. Kerns has also worked for the Jet Propulsion Laboratory and Fermilab.

Subject: Re: Hello?

Dave,

Your "wirebond" pic does look very much like a single wirebond from a substrate to the top of a die, but I would have expected at least two bonds to a device capable of wireless communication and local stimulation. My opinion is certainly not the last word.

It looks like you're making good progress in pushing forward the analysis of the object.

- Doug K

"flip-chip" is an assembly process for connecting

an IC chip to other electronic devices. The process essentially consists of soldering the chip face-down (hence the name "flip-chip") onto the other stuff. Flip-chip assembly is full of technical hassles, but it's one of the most compact assembly techniques yet invented. The truly most-compact I've ever seen is "chip stacking." That has hassles that make flip-chip seem like a walk in the park, but there are still people who care so much for compact stuff that they'll pay the outrageous prices.

I hope that's helpful.

> Subject: Re: semiconductor technical stuff....

Chip stacking is the assembly technique of gluing several silicon chips together, typically adding metal interconnections between the layers of the stack by lapping the edges and doing the usual evap/resist/litho/etch process that's used to make the chips in the first place. The hassles one encounters are usually of two types:

(a) one of the chips in the stack is flawed, so it doesn't work correctly, and it's difficult to discover the flaws prior to assembling the stack. The end result is that the stack containing the flawed chip has to be thrown away, even though most of it is composed of good pieces. Sometimes a flaw can be caused by the stacking process, so even if you start with chips that are all known to be good, the stack may still be flawed after assembly.

(b) The interconnection between chips in a stack may have flaws, so there's a missing connection or a shorted connection. Again, the stack may have to be thrown away, even if all the chips were good.

Hi David,
 EDS would NOT be able to identify an epoxy polymer.
 FTIR would be able to identify it as an epoxy, but probably not a specific type. However, if it is not epoxy and
 is some other polymer FTIR would be able to determine that.
 With EDS, epoxies, urethanes, acrylics.... all look like they are carbon and oxygen.
 If you are interested in the FTIR let me know, I will have Greg Ansten call you.
 If you would like to schedule an appointment for EDS let me know

Thanks

Subject: Re: Implantable Microstimulators
Dave,

We have only a little experience evaluating tissue.

If the tissue samples are in an appropriate form we can look at them with the electron microscope and probably identify the chemical nature of the substances that may be foreign bodies. This we have done with specially prepared histology slides with some success.

If you want to discuss this further, please feel free to call me.

Subject: Re: Supply Voltage

The level shifter problem was just a design error. The output bus has a fair amount of capacitance and the driver was too small to drive it quickly. The best solution was to resize the driver, which we have done. But with the existing probes, another solution that helped a bit was to increase the voltage. This isn't desirable long term because it puts more stress across the encapsulating dielectrics. We would like the probes to operate as low in voltage as possible to minimize our packaging problems; however, ultimately, we are limited by the water window and the spreading resistance drops in the solution. They make it hard to operate below 5V for small sites. So the voltage is really a trade off between device site size and the needed stimulating current levels. Hope this helps a little.

LEUREN MORET

Uncovering the Truth About Depleted Uranium

“Each person has to find their own truth to heal the world.
It is the collective impact that makes the change.”

Leuren was born in Camp LeJeune, North Carolina, on March 3, 1945—months before the atomic bombs were dropped on Hiroshima and Nagasaki, bringing an end to World War II and introducing the Nuclear Age. She was one of the first women to graduate in geology from the University of California at Davis in 1968. For the next 10 years, she travelled extensively through Europe, North America and Eurasia, working as a geoscientist.

Leuren worked for Dr. Lewis Leakey on early hominids in Africa; conducted research on expeditions for the British Museum, Kew Gardens and Cambridge University; and periodically lambed 2,000 ewes on a farm in Ireland. After completing her master's degree in Near Eastern studies from the University of California at Berkeley in 1978, she conducted research at the Lawrence Berkeley National Lab on volcanoes, and later worked on the Yucca Mountain project, Waste Isolation Pilot Project in New Mexico and the Superfund project at the Lawrence Livermore National Lab in Livermore, California.

In 1991, Leuren became a whistleblower at Livermore and experienced years of retaliation by the University of California, the Livermore Lab, the Oakland police and local law enforcement. She is working with groups in many countries to establish an international moratorium on the use, manufacture, deployment, storage and sales of depleted uranium (DU) weapons, as well as with communities around the world to inform, educate and empower citizens to protect public health by protecting the health of the environment. Her daughter, Zephyr, is a science major and is as independent as her mother.

I am an independent scientist with a background in the geosciences. My hope and inspiration comes from my work with scientists and radiation specialists worldwide to educate and inform citizens of the world about the health and environmental effects of radiation exposure. In my professional career, I have worked at two nuclear weapons labs: the Lawrence Berkeley National Lab, where the transuranium elements were discovered that built the first atomic weapons; and the Lawrence Livermore National Lab, where nuclear weapons development continues.

After working for two years on the clean-up and disposal of high-level nuclear waste on the Yucca Mountain and Livermore Lab Superfund projects, I realized that something was very wrong. Through my experience, I observed an entrenched pattern of science fraud, theft, graft, corruption, lack of concern for safety and security, blatant discrimination against women and minorities and severe retaliation practices. I drove out of the lab gate one day and never went back. I knew that it would be difficult to survive economically as a single mother of my five-year-old daughter, Zephyr, but also knew that I could not take care of her if I was dead from cancer like so many around me.

I was participating in an industry that I perceived as having an absence of morality and ethics underpinning the misapplication of science and the nuclear weapons project; the apparatus of control and absence of good management; and the sexism and racial discrimination, which had created a completely insane culture dominated by white men. I did not want to remain involved with any aspect of a nuclear weapons lab or the people working there, even if it was to clean up the waste from the project. What species on Earth kills its young, generation after generation? What species on Earth sacrifices its young for the false notion of "security"? What male species kills its young and mates knowingly and repeatedly?

As I approached the gate with my office belongings piled in my car, I felt an incredible lightness of being. I dropped off my badge and beeper and got back in my car, laughing and thinking, "You just got out of jail!" Little did I know what was ahead.

The next 10 years were the darkest of my life and I am lucky to be alive today. My greatest gift was the discovery of my inner strength to be able to survive the retaliation, mobbing and harassment by the Livermore Lab, the University of California and the Oakland police department. Prophetically, an acquaintance coolly said to me a year after I left the lab, "You are in a police net you will never get out of ... for the rest of your life." She was right, but I no longer care because now I am not afraid. We are controlled by our fears until we have none left, and that happens when there is nothing left to lose.

The journey to that realization took 12 years of pain, a sense of loss and humiliation, a feeling of abandonment and the lifelong emptiness and absence of being loved—not by anyone, not at any time. The experience and purpose of being mobbed, and what I did not know in the isolation of the experience, is that I was not alone.

"Mobbing" is the purposeful and strategic institutional gathering of all information about an individual by using any method—legal or illegal. Contact for this purpose is made with neighbors, classmates, former partners, family members, former employers, teachers, church members, good friends and even your family tree ... everything must be known about the support system around you that makes your life possible.

The assessment of strategic resources and future income (finances, mobility, cars, insurance, credit cards, bank safety deposit boxes, post office boxes, wills, health records, birth

certificates, transcripts and photographs) is made without your knowledge. The purpose of mobbing is to drive the target individual out of the job force for the rest of their life; the bigger goal is to drive them to the ultimate self-destruction: suicide. There are now laws made by European unions to prevent this cancer on society and productivity, but it is practically unknown in the U.S.

The University of California, which had contributed so much to the State of California and to the global community through the benefits of education, had become a pathologically dysfunctional institution through its mobbing practices. I learned that more than 500 women and minorities had filed lawsuits against the University of California and had then experienced retaliation by the University of California apparatus of mobbing by employees, alumni and law enforcement.¹

The lawsuits were for denial of tenure, whistleblower retaliation and theft of intellectual property. These women had similar complaints about the destruction of their own lives and careers. The information gathered by the University of California is used to take your life apart; to destroy all that makes you feel safe; to bankrupt, isolate and alienate you from society and from yourself; and to attempt to make you look crazy. Your children are harassed, they come home with belongings missing and stories of teachers harassing them and a weirdness takes over your lives. Slowly, documents disappeared from my house; porn charges appeared on my credit card; files, my purse and my keys disappeared; mail was lost. I was forced to carry my documents with me at all times. All of my university transcripts and diplomas have been stolen from my house.

Two things kept me going and kept me alive. First, the warrior mother spirit guided me to protect Zephyr. That miracle of life taught me what it means to love unconditionally and completely. I began to learn to love myself. Second, my uncle had told me long ago, "No one can destroy you. Only you can destroy yourself." That information made me fight back. As I fought back, I got stronger, deeper into myself, and slowly left the external validations, which others control, behind and relied more and more on internal validations, which I controlled.

The process during those dark years was horrifying and terrifying; it took me to the edge of my emotions of fear, abandonment, alienation and isolation. In the end, I made the choice to not abandon myself. I knew that those were only feelings and that I could change them or choose different ones, which made me strong and ultimately free. Zephyr is strong and independent from her experience by my side. Perhaps she learned even more than I did.

*And let it direct your passion with reason,
that your passion may live through its own daily resurrection,
and like the phoenix rise above its own ashes.*

—Khalil Gibran

At the end of the millennium, which gave birth to nuclear weapons, I visited the Peace Museums in Hiroshima and Nagasaki during the 2000 World Conference Against Atomic and Hydrogen Bombs as the guest of Gensuikin (one of Japan's largest antinuclear and peace movement organizations). That visit to Japan changed my life: I finally understood the horrific effects of nuclear weapons.

In 1991, in the first Gulf War, the United States broke a 46-year taboo and introduced DU to the battleground—a radiological weapon that is truly a pernicious weapon of indiscriminate killing and mass destruction.² DU is nuclear trash from nuclear weapons and nuclear power projects. I had to ask myself which is worse: the horrific effects of flash annihilation from an atomic bomb or slow, eternal mutilation from DU weapons?

I came back from Japan and wanted to know everything about radiation. A former Manhattan Project scientist, Marion Fulk, who retired from the Livermore nuclear weapons program, had been opposed from the beginning to atmospheric testing. I learned that many scientists in the U.S. and globally, including Andrei Sakharov in Russia, had been united in opposing this insane practice.³

Over the past four years, Fulk has taught me everything I know about fallout and the impact on public health and the health of the environment from atmospheric testing. He gave me scientific self-confidence and a knowledge base that was bulletproof when confronting Department of Energy (DOE) and Department of Defense attack dogs who were carefully trained to silence scientists who speak out and tell the truth about radiation. He validated me as a woman as my father never did. He became my teacher, mentor, father, brother and uncle. He changed my life and he changed me. He showed me where the information is and then he showed me how to use it.

I contacted a group of scientists, the Radiation and Public Health Project, who have been collecting baby teeth from children who live around nuclear power plants and identifying the impact on public health from the emissions. I began collecting baby teeth in California and from other countries I visited for their project. The effects of chronic, low-level radiation exposure to populations living near nuclear power plants and facilities were profoundly disturbing to me.

That information and these experiences led me to begin my research on DU. In 2000, I met Akira Tashiro, a Japanese journalist, in Hiroshima, who asked me to write the foreword for his book about DU entitled *Discounted Casualties: The Human Cost of Depleted Uranium*. I began to give talks in small communities, where soldiers are economically drafted, and then for larger events. Soon, I received invitations to travel to other countries and speak.

It seemed as if I were part of a growing global awareness and consciousness that called for a moratorium on DU weapons use, manufacture, testing and deployment. The people I met had a new power and energy based on their spiritual beliefs. They felt that not only was humanity being destroyed by increasing levels of radiation, but it was also a war against the Earth and all life on this planet. I joined a global spiritual army of women warriors and men fighting together.

My first article on DU came out in a small San Francisco newspaper in a mixed minority community. I wanted to write about DU and tell the world about what the U.S. was doing at home and abroad with this horrific weapon. I wrote many articles and that is how I found a voice, *my voice* ... and I found myself.

I discovered something else that was too horrible to imagine. I found proof of the real and deeper purpose for the U.S. using DU weapons beginning in 1991: to deliberately and strategically contaminate entire regions where the world's oil supplies are located. That contamination of permanent, low-level radiation would guarantee the annihilation of populations in those regions who would be chronically exposed.⁴ I began to cry the day that bombing started in Af-

ghanistan in 2001. I cried for the mothers, the fathers, the children, the babies, the grandparents and the future generations in Afghanistan who will not be born because of this radioactive poisoning of their genetic future.

In 1943, a then-classified memo was sent to General L.R. Groves from Dr. James B. Conant, Dr. A.H. Compton, and Dr. H.C. Urey (a subcommittee of the S-1 Executive Committee on the "Use of Radioactive Materials as a Military Weapon," working under General Groves on the Manhattan Project).⁵ This memo was written on October 30, 1943—nearly two years before the atomic bombs were dropped on Hiroshima and Nagasaki—and was a recommendation that radiological materials be developed for use as a military weapon on the battlefield. It is a blueprint for DU weaponry—dirty bombs, dirty missiles and dirty bullets, which burn and create submicroscopic particles in huge volumes that behave like a radioactive gas.

This memo, now declassified, was given to me by Major Doug Rokke, a physicist and former head of the U.S. Army Depleted Uranium Weapons Project. He is a Gulf War I veteran and is now suffering from DU exposure with severe health effects referred to as Gulf War Syndrome. My work is inspired by the Hibakusha (from a Japanese term for the survivors of the Hiroshima and Nagasaki bombs) around the world who, like Doug, have told me their stories.

It is clear from this memo that the U.S. government and military had known before 1943 that radioactive materials, dispersed as very fine particles on the ground or from the air, would be an effective battlefield weapon. This plan was recommended so that the Germans would not develop similar weapons first from radioactive materials created by the waste from their nuclear weapons development.⁶

In the memo, the scientists recommended dispersing the radioactive materials in very fine particles (0.1 microns in diameter and smaller) from the air, land vehicles or the ground. It would disperse like a radioactive gas—invisible and undetectable to the enemy. They described how increasing the amounts of dispersed radiation would accelerate the lethality, decrease the time until death and increase the numbers of dead.⁷

It was known at that time that it would contaminate the air, water, food and soil. Entry into contaminated environments was impossible without certain exposure both to the enemy and to friendly forces. The memo detailed the fact that no protective methods were possible to develop and that very fine particles would pass through all gas masks.⁸

The memo also described that inhaled particles behave like a gas in the lungs, go directly into the blood and are dispersed throughout the tissues of the body. The gut would also be exposed by ingesting contaminated foods and areas of the gut where the food sat for longer periods would have more radiation exposure and increased damage.⁹

It is clear from this 1943 memo that everything was known about the extreme hazards to health and the environment of radiological materials dispersed in fine particles on the battlefield. The fact that DU burns at high temperatures and forms large numbers of extremely fine particles makes it even more deadly and effective than nearly any other material as a radiological weapon. The half-life of DU is so great (4.5 billion years) that environments where it is used as a weapon will remain radioactive forever.

It is no accident that an international taboo prevented further use of nuclear and radioactive weapons on the battlefield after 1945. The use of DU in Gulf War I was a decision made at the top levels of the U.S. government in order to blur the distinction between conventional and nuclear weapons.¹⁰ Because global opposition to nuclear weapons is strong, the use of DU was used as a strategy to reintroduce the use of nuclear weapons.

Under international law, weapons must pass four tests in order to determine their legality:

1. *Temporal test*: Weapons must not continue to act after the battle is over.
2. *Environmental test*: Weapons must not be unduly harmful to the environment.
3. *Territorial test*: Weapons must not act off of the battlefield.
4. *Humaneness test*: Weapons must not kill or wound inhumanely.

DU weaponry fails all four tests. For that reason, it is illegal under all treaties, all agreements, all war conventions and U.S. military law. It is a weapon of mass destruction by definition under U.S. law.¹¹

One military research report summarized the reason why DU was selected by the U.S. Army over other materials, such as tungsten, which are less damaging to the environment: *cost*.¹² Because DU is the trash from nuclear weapons and nuclear power industries, it is a radioactive hazard and a liability to the DOE. The DOE has nearly a million tons of DU to discard. The DOE made the decision to pass the radioactive trash on to the military-industrial complex for the manufacture of weapons. By passing the cost of disposal on to other countries, the U.S. government saves money. In fact, by selling DU weapons to more than 29 other countries, the DOE has made disposal a highly profitable business for the military-industrial complex.¹³

It is impossible for the U.S. government to continue to deny, as they have since Gulf War I, that DU weapons cause no harm or that there are no known health or environmental effects. The 1943 Groves memo and research report summaries of investigations conducted for the military from 1974 to 1999 indicate that the omniscient (that which affects all life) impact of DU weapons has been known for 60 years.¹⁴

Learning about DU was a horrible reality from which I could not run. The truth is the truth. Finding a way to communicate this truth, however, and the immense impact that its continued use would have on humanity and life on Earth, was much harder. As I began speaking out, traveling to communities for events and writing articles¹⁵ that came closer to revealing the truth—that the real and hidden purpose of using DU was to achieve geopolitical strategic goals—I came under attack.

I was not alone. Major Doug Rokke, Colonel Asaf Durakovich, Dr. Rosalie Bertell, Dr. Ruth McGill, Canadian Gulf War widow Susan Riordan, and many others who have expressed concerns about the use of DU, have experienced attacks and retaliation. Assassination attempts, break-ins and thefts of critical documents, physical violence, sabotage, guns shot into houses, computer and phone technology attacks, verbal attacks, disinformation and character assassinations are common methods that have been used to thwart and silence us.

The worst thing for me was the kidnapping of Zephyr when she was 13 by her father, with the help of the University of California and Livermore Lab network, assisted by the police and sheriff's departments. I did not see her for five years until she had graduated from high school and came home to "mom." This was the ultimate punishment for a nuclear whistleblower. Compared to that, the other forms of harassment seemed annoying and uncomfortable but

bearable—part of the price of opposing government, the nuclear establishment and special interest policies.

My mentor, Marion Fulk, protected me from a credibility attack by showing me where the “official” documents and studies are and how to use them against the very institutions and governmental agencies who had created them. After all, they can’t attack their own documents and studies without losing credibility themselves. Other attacks were more personal, such as on e-mail lists and phone calls during radio interviews. Publicly exposing, naming names and posting attacks have been the best responses, where the attackers get attacked by members of the public who provide information and documentation that publicly expose the real intentions of the attack dogs. I just think of the attacks as negative compliments. We must be making an impact if they are responding so viciously to our information in the “court of public opinion.”

U.S. government funding for nuclear weapons declined after Gulf War I to the lowest level in decades. From the lowest point in 1995, funding has increased to a level even higher than during the Cold War.¹⁶ The United States has no enemies, yet budget increases continue and nuclear weapons will expand into space in the near future.

Stockpile stewardship of the existing nuclear weapons arsenal is part of the cost, but new and evolving policies are emerging. Enhancing nuclear warhead capabilities are also part of the weapons program. Rebuilding nuclear weapons to improve accuracy, assessing storage capability, altering the ability of warheads to withstand changes in the environment and making modifications as to where, when and how they detonate are also part of existing policy.

“Gold plating the nuclear weapons labs” describes the spending sprees that are a result of large amounts of money pouring into lab budgets. When excessive purchases of instruments and “toys for the boys” exceed what is really needed to conduct competent science, the laboratories become “solutions looking for a problem.”

During a meeting in San Francisco where I gave testimony on May 15, 2003, the University of California Board of Regents was informed by National Nuclear Security Administrator Admiral Linton Brooks that the National Labs would be developing nuclear bunker busters. One hour later, he spoke at the Livermore Nuclear Weapons Lab (45 miles away) and informed personnel that they would not only be developing small nuclear bunker busters, but they would be building large nuclear weapons as well!

For 61 years, the University of California has been the manager of the nuclear weapons labs at Los Alamos and Livermore. Dr. Brooks informed the Regents of the University of California at the May 15, 2003 meeting that the management contract will now go up for bid. The University of Texas is perceived to be the favored choice for the new management contract. Is it a coincidence that the Bush family is also from Texas? In November 1991, Richard Berta, the western regional inspector for the DOE at the national nuclear weapons labs, told me, “The nuclear weapons labs exist for the Pentagon and the Pentagon exists for the oil companies.”

DU was used in large amounts for the first time on the battlefield during Gulf War I. The use of over 340 tons of DU weaponry in Iraq in Gulf War I has had devastating results over the past decade. The battlefields were far from the cities of southern Iraq, but soldiers and downwind populations could not escape exposure to the invisible war: DU in the wind.

Cancer, birth defects and radiation-related diseases in both Gulf War veterans and Iraqi civilians have increased to alarming levels.¹⁷

Children born to Gulf War veterans after the war, and children born to civilians living in areas downwind from the battlefields in Iraq, expose the long-term impact of this invisible war. In a Veterans Administration study of 251 Gulf War I veterans, severe birth defects and diseases in 67 percent of the children born after the war were found. They were born without eyes, brains, organs, legs, arms, hands or feet, or they had blood- and other radiation-related diseases.¹⁸ The Iraqi children also have birth defects and a high incidence of leukemia.¹⁹ In the decade after the Gulf War, each month the number of babies born with birth defects and mutations has increased.²⁰

Dr. Hari Sharma, an independent researcher, has measured the DU levels in 71 residents of Basra who died after the war was over. He found levels of 150 micrograms of DU per kilogram of tissue throughout their bodies.²¹ That would amount to a very high exposure rate, roughly estimated at 10 alpha particles per second throughout the body. (Alpha particles are the most biologically damaging form of radiation.) The radioactive decay products of DU are even more deadly many times over; that is why DU is called the “Trojan horse” of nuclear war: it keeps giving and it keeps killing.

Living in a radioactive environment with chronic exposure to low levels of radiation has a cumulative effect and the entire population in contaminated areas will slowly be destroyed. Genetic defects will be passed on to future generations who will also be exposed to new sources of radiation from contaminated air, water and food. The DU dust will cycle through the environment and be carried in the Earth’s atmosphere.²²

Following the Gulf War, Dr. Doug Rokke was in charge of the DU clean-up team for the U.S. Army. He provided me with documents detailing some of the U.S. Army directives and memorandums regarding DU. Referring to a document dated March 1, 1991, entitled “Los Alamos Memorandum,” he said, “I was directed to lie” to cover up the environmental effects of DU weaponry “so that the Army can continue to use it.” He told me, “What right do we have to throw thousands of tons of nuclear waste all over any country? [International humanitarian lawyer] Karen Parker considers this to be indiscriminate killing...”

The October 14, 1993 “Somalia Message” is the U.S. Army Medical Care Directive for unusual DU exposures such as “inhalation or ingestion of DU dust or smoke.” This directive requires a radiobioassay (the determination of kinds, quantities, concentrations and locations of radioactive material in the human body, whether by direct measurement or by analysis and evaluation of materials excreted or removed from the human body) within 24 hours, nasal swipes and analysis of gas mask filters used by exposed personnel. Hundreds of thousands of U.S. soldiers, Iraqi soldiers and citizens were exposed to “unusual uranium exposures.” Dr. Rokke said that nothing was done for anyone.

Under international law of the Hague and Geneva Conventions, after the battle is over, any medical treatment for wounded U.S. soldiers must be provided to wounded enemy soldiers as well. More importantly, any civilians who suffer from war exposures must also receive medical care. If the U.S. provides medical care for its own soldiers and does not treat enemy soldiers and/or civilians equally, it constitutes a war crime.

During the bombings in Kosovo and Bosnia, transboundary contamination by DU was monitored in Hungary and Greece, carried by the winds and eventually incorporated with

atmospheric dusts. It is impossible to escape exposure even for populations hundreds and thousands of miles from battlegrounds.

A new study in Germany of Gulf War and Balkans War veterans found significant amounts of chromosome damage in these veterans, which was characteristic of exposure to ionizing radiation and high linear energy transfer particles (alpha particles).²³

In the 2001 U.S. military invasion of Afghanistan, estimates of more than 1,000 tons of DU weapons were used—nearly three times as much as in Gulf War I.²⁴ The impact on the wildlife in Afghanistan has been devastating. Not only is the environment contaminated with DU, but the Afghanis have been forced to hunt rare and endangered species in order to eat the meat and sell the skins for money. The devastating effects of DU will occur in all species in contaminated areas. The impact on the animals in the Iraq region was also devastating, yet there was very little reporting on it.

The bombing of Afghanistan by U.S. military forces demonstrates the deliberate use of illegal weapons such as bunker busters, cluster bombs and other DU weapons systems to precision-target civilian populations, water supplies and infrastructure.²⁵ Afghanistan is a poverty-stricken, underdeveloped country that poses no threat to the United States or to any other country.

In the spring of 2002, an unauthorized, leaked, 7.5-minute video²⁶ permeated the Internet, showing the destruction from an AC-130 Spectre gunship—a C-130 cargo plane that carries a lot of fire power protruding from the left side—on a combat mission in Afghanistan. In the video, the plane circles a ground target counterclockwise and annihilates it. In the radio traffic from the AC-130 plane, the crew is engaged in combat from a safe distance and without any threat or resistance from the human targets on the ground. The video shows people leaving a mosque and running for their lives as they are fired upon. The AC-130 continues circling and firing on individual Afghanis below. The crew sounds like rednecks picking off varmints on a Texas ranch: “Yeah, I was trying to lead that guy ... he was hiding behind that bank ... he’s down, he’s still moving ... I saw him fly into pieces ...”

As I watched the video, I was in a state of disbelief followed by extreme sadness for the plight of the Afghanis who, until 2001, had never been conquered or defeated in their long history of thousands of years in the Himalayas. The American gunnery crew shooting the weapons were detached from humanity, the meaning of life, their own military law and international war conventions.

How could the “enemy”—the Afghanis below—respond to the invisible enemy high above? They had no aircraft or military weapons like the U.S. military and no satellite system to direct this unfair war. I began to realize and understand that this was not a war *in* the Third World ... this was a war *against* the Third World. It was a complete annihilation and destruction of the Afghanistan infrastructure, the Afghanis and their genetic future through the use of weapons of mass destruction (WMD)—illegal under the U.S. government’s own definition of WMDs.²⁷ I was completely disgusted and wondered if my father, grandfather, uncles and cousins, who had served in the military, had done the same thing.

DU is a war against the Earth, all life and all living things. DU weapons keep giving and keep killing ... *forever*. There is no way to turn them off or clean them up. DU is the ultimate rejection of life—the gift from the universe for our tiny planet. People do not understand or realize the global impact of DU and other radioactive weapons. The radioactive fallout from

these weapons is pernicious, unpredictable and global. There is nowhere on Earth that will escape some form or level of contamination.²⁸

Dr. Chris Busby's comments in a recent article posted on a Toronto website sums up the global impact that radiation has had from nuclear weapons testing and nuclear power plants. DU weapons use is adding to the radiation burden, which is the cause of the global cancer epidemic now on the increase. Dr. Busby says, "If you think cancer is a problem now, wait until more DU is released into the world."²⁹

The use of DU weapons is a crime against humanity, a crime against all species and a war against the Earth. It is imperative that we demand a permanent international moratorium on the manufacture, storage, deployment, use and sale of DU weaponry. The U.S. has sold it to 29 countries. The message, and maps of contaminated regions from the extensive research I have been doing, are profoundly shocking when they are presented. I think, in the end, people will realize that the truth is being told. As they slowly accept that what I am saying is the truth, they become angry; that anger, once it surfaces, can be used as positive energy to keep us alive. Redirecting the energy from that anger is powerful and liberating. It turns depression, which is anger turned inward, to action. That is what sets us free.

I now have a clear conscience and the satisfaction of acting as a citizen scientist instead of a prostitute for the military or for corporations. I have hope for the future. I know that the people of the world are the only ones who can stop the insanity of nuclear proliferation and radioactive contamination of the environment, which supports all life. With good information, the citizens of the world can make good decisions.

My purpose now, along with other independent radiation specialists who have joined together as the World Committee on Radiation Risk, is to provide good information about the health and environmental effects of radiation to the global community.

Many people have asked me how I could talk about such a difficult and horrifying subject. My answer is that *there is no choice*. For whatever reason, I believe that some power greater than I know has chosen me to be the messenger—one of many messengers—to bring the truth forward into the court of public opinion.

Our planet is being poisoned by the very people and the very entities where I have worked. I have been in their house; I have worked in their dark halls and laboratories. There are more and more of us—insiders who are speaking against ongoing events that will ultimately destroy our environment and ultimately all life.

I am a woman warrior, a warrior mother for all life on Earth. Words are my weapons. I kill with those words and speak the truth for the citizens of the world who have no voice. I am happy now. I feel good and fulfilled—a satisfaction I never had working in mainstream science.

There is a new global spiritual energy, and hope, bringing humanity together and opposing this death knell. In the very darkest hours, when many have thought that all hope is lost, indications are coming forward that there is hope. In April 2004, Spain voted the fascists out because they had sent troops to Iraq when the Spanish electorate had overwhelmingly opposed it.³⁰ A few days later, Malaysia voted out the fascists who had been in power since Malaysia gained its independence from Britain in the early 1990s.³¹ In South Korea, liberals and progressives won overwhelmingly and unexpectedly and are in favor of reunification with North Korea.³² This is the last thing the U.S. government wanted to happen. Now, encouraged by these small voices in the global dialogue, bigger steps are being taken to

remove troops and support for the U.S. policies being carried out in Iraq and other parts of the Islamic world.

I am always inspired by the words of Rev. Martin Luther King, Jr.: “Our scientific power has outrun our spiritual power. We have guided missiles and misguided men.” I am just one scientist, but I know that if I step forward and tell the truth as courageous people have always stepped forward and told the truth, others will follow. As Gandhi said, “Even a small lamp dispels the darkness.”

Encl: (1) Definitions

1. Purpose. To establish policy and assign responsibility for the protection of human subjects in research conducted by, within, or for the Department of the Navy (DON) per reference (a). This instruction has been extensively rewritten and should be read in its entirety.

6 November 2006

2. Cancellation. SECNAVINST 3900.39C.

3. Background

a. The DON supports human subject research to develop, test, and evaluate warfighting systems, casualty-care and personnel protection systems, clothing, and devices, and vaccines and drugs for disease prevention and treatment. Human subject research is essential to protect the health and optimize the performance of Sailors and Marines. Research involving human subjects receives considerable national and international attention. Support from all echelons is required to maintain the highest standards of research conduct and to provide for the ethical treatment and well-being of human research subjects.

b. Research as defined in reference (b) is a "systematic investigation, including research development, testing and evaluation, designed to develop or contribute to generalizable knowledge. Activities which meet this definition constitute research for purposes of this policy, whether or not they are conducted or supported under a program which is considered research for other purposes." See enclosure (1) for a more detailed definition.

4. Scope

a. This instruction applies to:

(1) All biomedical and social-behavioral research involving human subjects conducted by Navy and Marine Corps activities or personnel, involving naval military personnel and DON employees as research subjects, or supported by naval activities through any agreement (e.g., contract, grant, cooperative agreement, or other arrangement), regardless of the source of funding, funding appropriation, nature of support, performance site, or security classification. It also applies to human subject research using DON property, facilities, or assets.

(2) Human subject research conducted in the development, testing or evaluation of any item, system, vehicle, aircraft, piece of equipment, or other materiel, even if a person is not the direct object of the research. Examples include training exercises associated with the testing of personal protective equipment when worn by a person or the study of a new clinical laboratory test requiring freshly drawn or stored blood.

(3) Human subject research that meets criteria for exemption as defined in reference (b) and as determined by Institutional Review Board (IRB) Chairs, IRB Vice Chairs, designated IRB administrators, or designated officials of the DON Human Research Protection Program (HRPP). Investigators shall not make this determination.

(4) Individuals, for example, test pilots and experimental divers, who are specifically qualified by training and experience to perform hazardous duties who become subjects in research, regardless of whether the research is collateral or unrelated to their assignments.

b. This instruction does not apply to:

(1) Activities that do not qualify as research or activities that do not involve human subjects as defined in reference (b) and as determined by IRB Chairs, IRB Vice Chairs, designated IRB administrators, or designated officials of the HRPP. Investigators shall not make this determination.

(2) Individuals or organizations that perform commercial services, provide products, or perform other services without professional recognition or publication privileges.

(3) Investigators or research staff installing, familiarizing themselves with, or calibrating research equipment in preparation for the research effort, prior to IRB review unless the data collected during those preparatory efforts will be used in the research.

(4) Research using cadavers. However, institutions proposing to support or conduct this research shall meet requirements for scientific merit, comply with applicable state laws regulating organ donation for science or research, and verify that the research is limited to cadavers. If the research involves direct connections, coded connections, or other links of private identifiable information between deceased and living individuals, then an ethics review by an IRB is required.

(5) The use of investigational drugs, biological products, or devices for the purposes of Force Health Protection. Such use is governed by reference (c).

6 November 2006

c. The requirements in this instruction shall not be suspended or waived due to operational contingency or during times of national emergency, except by explicit action of the Secretary of the Navy.

d. Nothing in this instruction is intended to supersede either the requirements for health or safety reviews required by other authority, or to limit the authority of health care practitioners to provide emergency medical care to the extent individuals are permitted to do so under applicable federal, state, or local law.

5. Definitions. See enclosure (1).

6. Policy

a. Guiding Principles. The DON uses the ethical principles outlined in the Belmont Report, "Ethical Principles and Guidelines for the Protection of Human Subjects of Research" (reference (d)), as the foundation for its human research protection program.

(1) Respect for Persons. The rights, welfare, interests, privacy, confidentiality, and safety of human subjects shall be held paramount at all times and all research projects shall be conducted in a manner that avoids all unnecessary physical or mental discomfort, and economic, social, or cultural harm.

(2) Education and Training. All personnel involved in reviewing, approving, supporting, conducting, managing, or overseeing research involving human subjects must complete initial and ongoing research ethics and human subject protections training appropriate to each individual's level of involvement, duties, and responsibilities. In addition, education and training for investigational agent use for Force Health Protection is required by reference (c).

(3) Informed Consent. Voluntary informed consent is fundamental to ethical research with humans. Informed consent is not simply a document. It is a process that begins with subject recruitment. Informed consent includes a thorough discussion with prospective subjects and/or their legally authorized representatives and continues for at least the duration of the research. Depending on the research, ongoing discussion with and education of subjects may continue long

after the original informed consent is obtained. For additional requirements on informed consent refer to reference (e).

(4) Command Responsibility. All Navy and Marine Corps personnel conducting, supporting, reviewing, approving or managing human research shall view the protection of human subjects as an important command issue at all echelons, both ashore and afloat. Commanders, Commanding Officers, Officers in Charge, heads of activities, scientific and technical program managers, project directors, IRB members, IRB support staff, and investigators shall maintain concern for the safety and welfare of volunteer subjects.

(a) Human subject research shall not be initiated until the institution holds a valid Assurance for the Protection of Human Research Subjects, the research protocol has been reviewed by an IRB, and approved by an appropriate research approval authority.

(b) A Department of Defense (DoD) Navy Assurance is a document originated by the institution engaged in human subject research that states that it will comply with federal, DoD, and DON requirements for human subject protections. The DoD Navy Assurance is reviewed and approved by the Surgeon General of the Navy (Navy SG). Key requirements of the DoD Navy Assurance are completion of research ethics training, designation of IRB(s) to review research protocols, and the institution's plan for monitoring its human research.

(c) Approval of research is required prior to recruiting subjects, enrolling subjects, collecting data or specimens, analyzing data, conducting research interventions, or preparing publications or presentations. The institution performing the research also must meet all the requirements of this instruction.

(5) Research-related Injury. Due to the possibility of injuries arising from participation in human subject research, every project involving greater than minimal risk shall include an arrangement for emergency treatment and necessary follow-up of any research-related injury. IRBs will determine whether research involving minimal risk also might include a similar arrangement for research-related injury.

(6) Vulnerability and Additional Protections. Additional safeguards shall be provided for subjects who may be considered vulnerable to coercion or undue influence because of

6 November 2006

their age, health, employment, financial status, or other circumstances. References (a) and (f) require additional safeguards for children, prisoners, pregnant women, mentally disabled individuals, economically or educationally disadvantaged individuals. Other groups warranting additional protection include severely ill patients, those in employer-employee status (worker), student-teacher, supervisor-subordinate relationships, or deployed active duty personnel. Regardless of the risk level of the research, no superiors (civilian supervisors, officers, and noncommissioned officers (NCOs)) shall influence the decisions of their subordinates (e.g., junior enlisted personnel) whether to participate as research subjects.

(7) Chemical-Biological Research. Research involving testing of chemical or biological agents shall comply with reference (a).

(8) Captured or Detained Personnel. Research involving any person captured, detained, held, or otherwise under the control of DoD personnel (military and civilian, or contractor employee) is prohibited. Such persons include: Enemy Prisoners of War, Civilian Internees, Retained Persons, Lawful and Unlawful Enemy Combatants. Such persons do not include DoD personnel being held for law enforcement purposes. See references (a) and (g).

b. Conflict of Interest. Conflict of interest can be defined as any situation in which financial or personal interests may compromise or present the appearance of compromising an individual's or group's judgment in conducting, reviewing, approving, managing, and supporting research. Investigators, key research personnel, IRB members, and other personnel must disclose all conflicts of interest, including any financial interests for themselves, spouses, and dependent children. No person shall be involved in any review or approval of a protocol when there may be a conflict of interest.

c. Research that Meets Criteria for Exemption. Experienced individuals such as IRB Chairs, IRB Vice Chairs, designated IRB administrators, or designated officials of the HRPP must determine and document whether research protocols meet one or more categories of exemption as defined in reference (b). Investigators may not make this determination and may not start any research activities until the exemption determination is made and documented.

6 November 2006

d. Research that Meets Criteria for Expedited Review. Naval IRB Chairs or IRB Vice Chairs will review and determine whether research protocols meet criteria for review under expedited procedures as defined in reference (b).

e. Survey Research. Surveys, other than those executed entirely within the command, typically require Navy Survey Review and Approval per reference (h). The Navy Survey Approval Manager may require IRB review of the survey instrument prior to granting approval.

f. Collaborative Research. DON commands and activities may collaborate with each other, other DoD agencies, non-defense federal agencies, and non-federal institutions. An appropriate written agreement shall be established between the collaborators that includes a Statement of Work (SOW) and specific assignment of responsibilities. The agreement should briefly describe the research, specific roles and responsibilities of each institution, responsibility for scientific and IRB review, recruitment of subjects, and procedures for obtaining informed consent. The agreement also should describe provisions for oversight and ongoing monitoring, reporting requirements, documentation retention, and compliance for the entire research project. All collaborators must ensure compliance with all relevant human subject protection regulations at their sites. Collaborating institutions that rely on other institutions' IRBs for human subject protections to avoid duplication of effort must ensure that such reliance does not compromise any standards or requirements.

g. DON-Supported Extramural Research. DON supports research with human subjects conducted at non-federal institutions. Any research grants, contracts, cooperative agreements, Cooperative Research and Development Agreements (CRADAs), or other transactions must include the additional DoD and DON requirements for human subject protections.

h. Research Involving the Use of Investigational Test Articles. All research involving the use of investigational test articles (drugs, devices and biologics) shall comply with U.S. Food and Drug Administration (FDA) regulations, references (i) through (m). An Investigational New Drug (IND) application or an Investigational Device Exemption (IDE) must be filed with the FDA whenever research involving human subjects is conducted outside the United States with drugs, devices or biologics, which would require filing of an IND or an IDE if the research were conducted in the United States. Only the Navy SG,

6 November 2006

Commanders, and Commanding Officers may be designated as sponsors for INDs and IDEs. The Navy SG may consider an IND/IDE equivalency in circumstances where the requirements may not be possible or feasible in international research. Investigators may not be designated as sponsors for INDs and IDEs.

i. International Research. Research involving human subjects who are not U.S. citizens or DoD personnel, conducted outside the United States, and its territories and possessions, requires permission of the host country. The laws, customs, and practices of the host country and those required by this instruction will be followed. An ethics review by the host country, or local Naval IRB with host country representation, is required.

j. Classified Research. Classified research with human subjects is held to the same ethical principles and human subject protections as unclassified research and must receive prior approval from the Secretary of Defense (SECDEF) (SECDEF Memorandum of December 13, 1999). Classified research is not eligible for review under expedited review procedures as noted in reference (n).

k. Allegations of Non-compliance with Human Subject Protections. The Naval command or activity with responsibility for the research will review all allegations of non-compliance with human subject protections and take action if appropriate. Report the initiation of all investigations and report results regardless of the findings to the Navy SG and appropriate sponsors.

l. Allegations of Research Misconduct. The Naval command or activity with responsibility for the research will review all allegations of research misconduct and take action if appropriate. Report the initiation of all investigations and report results regardless of the findings to the Navy SG and appropriate sponsors as outlined in references (o) and (p).

m. Public Release of Research Information. To foster public trust in research and human subject protections, information is made available to the public, the news media, and Congress. This information may be released after appropriate review and approval per references (q), (r), and other applicable guidance.

7. Authority and Delegation. In accordance with reference (a) the Secretary of the Navy delegates the authority and

6 November 2006

responsibility for the DON Human Research Protection Program (HRPP) to the Navy SG, except for those specifically retained by the Secretary of the Navy and those delegated to the Under Secretary of the Navy.

a. Authority

(1) The Secretary of the Navy is the research approval authority for all research protocols involving:

(a) Waivers of the requirement for informed consent under reference (e).

(b) Exceptions from informed consent requirements for emergency research under 21 CFR 50.24 in reference (i) and in accordance with the requirements of reference (e).

(c) Requests for waiver of requirements of DON policy regarding human research protections.

(2) The Under Secretary of the Navy (UNSECNAV) is the Approval Authority for research involving:

(a) Severe or unusual intrusions, either physical or psychological, on human subjects (such as consciousness-altering drugs or mind-control techniques).

(b) Prisoners.

(c) Potentially or inherently controversial topics (such as those likely to attract significant media coverage or that might invite challenge by interest groups).

(3) The UNSECNAV forwards to the Director, Defense Research and Engineering (DDR&E) for final determination:

(a) All proposed research involving exposure of human subjects to the effects of nuclear, biological or chemical warfare agents or weapons, as required by reference (a).

(b) All human research protocols that would require action by an official of the Department of Health and Human Services under reference (f).

(4) UNSECNAV forwards to SECDEF, via DDR&E, for approval all classified human research.

6 November 2006

(5) The Navy SG is the single authority for policy development, oversight, compliance, and ongoing monitoring concerning human research protections in the DON.

(6) The Navy SG holds the DON's assurance approval authority for new assurances, renewal of current assurances, and acceptance of other assurances. The Navy SG also holds the authority to restrict, suspend, or terminate DON assurances.

(7) The Navy SG is the Approval Authority for all research protocols, except:

(a) Those addressed in paragraph 7a(1) through 7a(4), which are forwarded by the Navy SG to higher authority via the Assistant Secretary of the Navy for Research Development and Acquisition (ASN(RDA)).

(b) Those for which the Navy SG delegates approval authority to Commanders, Commanding Officers, and Officers in Charge through an approved DoD Navy Assurance for the Protection of Human Research Subjects.

(8) Commanders, Commanding Officers, and Officers in Charge, who have been delegated the authority by the Navy SG to approve research protocols under their respective jurisdictions, may do so only after review and recommendation by:

(a) IRB Chairs and Vice Chairs for research that is eligible for expedited review, or

(b) An IRB after a convened meeting.

b. Delegation

(1) The Navy SG may delegate to Commanders, Commanding Officers, and Officers in Charge the authority to approve research protocols under their respective cognizance through an approved DoD Navy Assurance for the Protection of Human Research Subjects.

(2) Commanders, Commanding Officers, and Officers in Charge may delegate to IRB Chairs and Vice Chairs authority to review and make recommendations for research that is eligible for expedited review, and to suspend research due to adverse events involving subjects or others, significant deviation from approved protocols, or for reasonable cause.

6 November 2006

(3) This authority may not be further delegated.

8. Responsibilities

a. The Surgeon General of the Navy

(1) Develops policies and programs for the DON HRPP.

(2) Establishes initial and ongoing research ethics and human subject protections education and training for all personnel involved in reviewing, approving, supporting, conducting, managing, or overseeing research involving human subjects.

(3) Verifies completion and documentation of research ethics and human subject protections training.

(4) Develops and maintains a DON HRPP Handbook to provide detailed, practical information to facilitate compliance with these requirements.

(5) Reviews and approves, if acceptable, requests for DoD Navy Assurances.

(6) Reviews and accepts, if appropriate, other DoD or federal assurances.

(7) Monitors institutions to ensure continued compliance with their assurances and such requirements as continuing review and reporting of unanticipated problems involving risks to subjects or others, or adverse events.

(8) Restricts, suspends, or terminates any assurance when institutions that hold DoD Navy Assurances fail to comply with DON requirements.

(9) Acts as the Approval Authority for research protocols, except for those research protocols:

(a) Forwarded to higher authority as stated in paragraphs 7a(1) through 7a(4).

(b) Approved by Commanders, Commanding Officers, and Officers in Charge who have been delegated this authority through an approved DoD Navy Assurance.

6 November 2006

(10) Conducts headquarters-level administrative review of research protocols, including research that meets criteria for exemption, following local command or institutional review and approval. Based on the results of the review may request modifications or information, suspend, or terminate the research.

(11) Reviews and approves agreements between performing institutions prior to assigning IRB review, approval, and/or oversight to other institutions.

(12) Reviews and, if appropriate, takes action on all allegations of non-compliance with human subject protections.

(13) Reviews and, if appropriate, takes action on all allegations of research misconduct and reports all serious research misconduct to DDR&E per references (a), (o), and (p).

(14) Reports the following to DDR&E via ASN(RDA) and the UNSECNAV:

(a) All restrictions, suspensions, or terminations of DoD Navy Assurances or of other assurances awarded to DON institutions from other federal entities.

(b) All investigations of the DON HRPP conducted by outside entities (e.g., the FDA or the Office of Human Research Protections (OHRP)).

(c) All DON investigations of extramural performers that uncover violations.

(d) All findings of serious non-compliance with human subject protections per reference (a).

(e) Unanticipated problems involving risks to subjects or others, or serious adverse events, as appropriate.

(f) Significant communication between DON institutions conducting research and other federal departments and agencies regarding compliance and oversight.

(15) May serve as the sponsor for INDs and IDEs.

b. Chief of Naval Research: The Chief of Naval Research will provide support and expertise to the Navy SG for human research protections in the Systems Commands, operational

forces, training commands, and DON-supported extramural performing institutions.

c. Commanders, Commanding Officers, and Officers in Charge:

(1) Complete and document initial and continuing research ethics and human subject protections training.

(2) Ensure initial and ongoing research ethics education and training for all personnel involved in reviewing, approving, supporting, conducting, or managing research involving human subjects. In addition, education and training for investigational agent use for Force Health Protection is required by reference (c).

(3) Ensure that subjects' decisions to participate are voluntary and are protected from undue influence.

(4) Verify, for each research protocol, whether their institution is engaged in research as determined by their IRB(s). Require certification(s) (IRB approval) from the performing activity or activities before allowing the research to begin.

(5) Obtain a DoD Navy Assurance from the Navy SG and:

(a) Obtain a Federal wide Assurance (FWA) when the institution is engaged in Department of Health and Human Service (DHHS)-supported research.

(b) Verify that all collaborating institutions, domestic and international, hold a valid DoD, DON, or other federal assurance. (Note: Any institution may apply for these assurances.)

(c) Submit an updated assurance whenever the Institutional Signatory Official or IRB Chairs change.

(6) Ensure an independent review of research for scientific merit or scholarship prior to IRB review.

(7) Ensure IRB review of research by establishing IRBs and appointing IRB Chairs and Vice Chairs to review research, by relying on IRBs established under other assurances, or relying on independent IRBs.

6 November 2006

(8) Serve as their institution's research approval authority contingent upon holding that delegated authority.

(9) May approve research protocols only after IRB review and recommendation for approval.

(10) May approve research protocols only after review and recommendation for approval by IRB Chairs or Vice Chairs for research that meets criteria for expedited review.

(11) May approve, require modifications to gain approval, disapprove new research protocols; require additional safe-guards, or refer the protocol to a higher approval authority, after reviewing and considering, at a minimum, the signed minutes of IRB meetings or the IRB Chair's written recommendations for research eligible for expedited review.

(12) May approve, require modifications to gain approval, or disapprove continuation of current research protocols; require additional safeguards, suspend or terminate the research based on specific criteria and the IRB's continuing review findings or the IRB Chair's written recommendations for research eligible for expedited review.

(13) Refer research protocols for which they are investigators or members of the research team to a higher research approval authority for review.

(14) Adhere to or increase the safeguards or special conditions recommended by the IRB.

(15) Shall support IRB recommendations when research protocols are recommended for disapproval.

(16) Provide certifications of research protocol review and approval to funding organizations, sponsors, and collaborators.

(17) Submit all research protocols and supporting documentation for Navy SG headquarters-level administrative review.

(18) Maintain appropriate research records in a retrievable format as "Project Case Files" as required by reference (s).

(19) Allocate resources adequate to ensure compliance with the institution's assurance and all applicable guidance.

(20) Negotiate appropriate written agreements with participating institution(s) for cooperative/collaborative research projects per paragraph 6f of this document. Obtain approval from the Navy SG for agreements relying on IRBs established under other assurances or relying on independent IRBs.

(a) Institutions using a standard agreement may negotiate and submit the finalized agreement with the applicable research protocol to the Navy SG for headquarters-level administrative review.

(b) Institutions electing to use agreements other than a standard must submit their proposed alternative to the Navy SG prior to finalizing the agreement.

(21) Review and, if appropriate, take action on any allegations of non-compliance with human subject protections.

(22) Review and, if appropriate, take action on any allegations of research misconduct.

(23) Report the following to the Director, DON HRPP and appropriate sponsor(s):

(a) Unanticipated problems involving risks to subjects or others, or serious adverse events.

(b) All suspensions or terminations of previously approved research protocols.

(c) The initiation of all investigations of non-compliance with human subject protections.

(d) The results of all investigations of non-compliance with human subject protections, regardless of the findings.

(e) The initiation of all investigations of research misconduct.

(f) The results of all investigations of research misconduct, regardless of the findings.

(g) All audits, investigations, or inspections of a DON-supported research protocol.

(h) All audits, investigations, or inspections of the institution's HRPP conducted by an outside entity (e.g., the FDA or the Office of Human Research Protections (OHRP)).

(i) Significant communication between the institutions conducting research and other federal departments and agencies regarding compliance and oversight.

(24) Only Commanders, Commanding Officers, or the Navy SG may serve as sponsors for INDs and IDEs.

d. DON-Supported Extramural Performers and Performance Sites. The responsibility for appropriate protection of human subjects in research lies with the performing institution. The institutions must:

(1) Submit the following to the DON HRPP Office prior to award:

(a) An appropriate institutional assurance (e.g., a FWA or DoD assurance) or an application for a DoD Navy Assurance.

(b) Written acknowledgement that the institution will comply with references (a), (b), and when applicable, (i) through (m).

(c) Documentation of the IRB's initial and continuing review and approval.

(d) IRB-approved informed consent form, except when not required consistent with law and regulation.

(e) IRB-approved research protocol.

(f) Documentation of completed research ethics and human subject protections training by the principal investigator.

(2) Report the following to the DON HRPP Office and appropriate sponsor(s):

(a) All suspensions or terminations of previously approved DON-supported research protocols.

6 November 2006

(b) The initiation and results of investigations of alleged non-compliance with human subject protections.

(c) Unanticipated problems involving risks to subjects or others, or serious adverse events in DON-supported research.

(d) All audits, investigations, or inspections of DON-supported research protocols.

(e) All audits, investigations, or inspections of the institution's HRPP conducted by outside entities (e.g., the FDA or OHRP).

(f) Significant communication between institutions conducting research and other federal departments and agencies regarding compliance and oversight.

(g) All restrictions, suspensions, or terminations of institutions' assurances.

e. Naval IRBs. The primary role of the IRB is to ensure the safety and welfare of human research subjects. IRBs make recommendations to the approval authority for research protocols. Naval IRBs:

(1) Must be composed of members who are current federal employees, individuals appointed under the Intergovernmental Personnel Act (IPA), or consultants consistent with the requirements established by reference (t). Status as a contractor or federal retiree alone is not sufficient to qualify as a federal employee for the purpose of IRB membership.

(2) Complete and document initial and continuing research ethics and human subject protections training.

(3) Determine, for each research protocol, whether their institution is engaged in research. Require certification(s) (IRB approval) from the performing activity or activities.

(4) Review and, if appropriate, take action on any allegations of non-compliance with human subject protections.

(5) Consult with other committees as appropriate (i.e., radiation safety, biosafety).

(6) Report to the Commander, Commanding Officer or Officer in Charge:

(a) All suspensions or terminations of previously approved research protocols.

(b) The initiation of investigations of alleged non-compliance with human subject protections.

(c) Unanticipated problems involving risks to subjects or others, or serious adverse events.

(d) All audits, investigations, or inspections of the institution's HRPP conducted by an outside entity (e.g., the FDA or the Office of Human Research Protections (OHRP)).

(e) Significant communication between the institutions conducting research and other federal departments and agencies regarding compliance and oversight.

f. Chairs and Vice Chairs of Naval IRBs. IRB Chairs and Vice Chairs, if delegated authority from the research approval authority, may review and make recommendations for research that meets criteria for expedited review procedures. IRB Chairs and Vice Chairs:

(1) Complete and document initial and continuing research ethics and human subject protections training.

(2) May suspend research due to unanticipated problems involving risks to subjects or others, or serious adverse events involving subjects or others, significant deviation from approved protocols, or for reasonable cause.

g. Principal Investigators (PIs). PIs have primary responsibility for compliance with all human subject protection regulations, directives, and instructions. Principal Investigators in DON-supported intramural research:

(1) Must be current federal employees. Status as a contractor or federal retiree alone is not sufficient to qualify individuals as principal investigators for such research.

(2) Complete and document initial and continuing research ethics and human subject protections training.

6 November 2006

(3) Obtain written determination of whether the proposed activity is research with human subjects or the research meets criteria for exemption per reference (b).

(4) Obtain institutional approval prior to conducting or continuing research.

(5) Obtain institutional approval prior to implementing proposed amendments to approved research.

(6) Notify the IRB in writing of unanticipated problems involving risks to subjects or others; serious adverse events; serious or continuing noncompliance with the human subject protection regulations and IRB requirements; and protocol deviations.

(7) Obtain informed consent from research subjects or their legally authorized representatives and provide them a copy of the completed informed consent document prior to the start of research, unless a waiver of the documentation is approved by the institution.

h. Clarification Contact. Any specific situations not addressed in this instruction should be referred to the Navy SG for clarification.

i. Reports. Reporting requirements contained in paragraphs 6k, 6l, 8a(14), 8c(23), 8e(6), and 8g(6) are exempt from reports control of reference (u).

Donald C. Winter
Secretary of the Navy

Electronic only, via Navy Directives Web site:

<https://doni.daps.dla.mil>

DEFINITIONS RELATED TO DON HRPP

1. Adverse Event. Any unfavorable and unintended occurrence associated with the conduct of a research project.
2. Approval Authority for Research Protocols. Individuals with delegated approval authority that permit research to begin. Such individuals also have authority to certify a research protocol.
3. Assurance. See Institutional Assurance.
4. Assurance Approval Authority. Individuals authorized to approve and renew institutional assurances to DON activities and extramural performers conducting human subject research, and the authority to accept other DOD or federal assurances.
5. Certification. The official written notification by the performing institution that a research project or activity involving human subjects has been reviewed and approved by an IRB per an approved assurance. [32 CFR 219.102(j)]
6. Engaged in Research. An activity becomes engaged in research when its personnel or agents either intervene or interact with living individuals for research purposes; or obtain individually identifiable private information for research purposes. [Office for Human Research Protections (formerly OPRR) memo of January 26, 1999]
7. Extramural Performer. Any individual or organization that is a party to a contract, grant, interagency transfer, or other agreement with any Navy or Marine Corps activity. An organization includes any Federal, State, municipal, or other Government activity, or any corporation, institution, foundation, agency, or other legal entity, whether foreign or domestic.
8. Headquarters-Level Administrative Review. Administrative review of approved research protocols by a designated Naval Research Approval Authority to verify regulatory compliance and human research protections following local approval.

9. Human Subject

a. Means a living individual about whom an investigator (whether professional or student) conducting research obtains either data through intervention or interaction with the individual, or identifiable private information. Intervention includes both physical procedures by which data are gathered (for example, venipuncture) and manipulations of the subject or the subject's environment that are performed for research purposes. Interaction includes communication or interpersonal contact between investigator and subject. Private information includes information about behavior that occurs in a context in which an individual can reasonably expect that no observation or recording is taking place, and information which has been provided for specific purposes by an individual and which the individual can reasonably expect will not be made public (for example, a medical record). Private information must be individually identifiable (i.e., the identity of the subject is or may readily be ascertained by the investigator or associated with the information) in order for obtaining the information to constitute research involving human subjects. [32 CFR 219.102(f)]

b. Human subject means an individual who is or becomes a participant in research, either as a recipient of the test article or as a control. A subject may be either a healthy human or a patient. [21 CFR 50.3(g) and 21 CFR 56.102(e)]

10. Institution. For the purposes of this instruction, institution refers to Navy and Marine Corps commands, units, activities, and detachments.

11. Institutional Assurance. A document originated by an institution engaged in research supported by the DOD stating that it will comply with federal regulations, DOD, and DON requirements for human subject protections.

12. Institutional Review Board (IRB). The IRB is a committee established in accordance with 32 CFR 219 to review research to ensure the protection of the rights and welfare of human research subjects.

13. Institutional Review Board (IRB) Member - Naval IRBs. A DON IRB member must be a current federal employee, an individual appointed under the Intergovernmental Personnel Act (IPA), or a consultant consistent with the requirements established by 5 USC

3109. Status as a contractor or federal retiree alone is not sufficient to qualify as a federal employee for the purpose of IRB membership.

14. Institutional Signatory Official. A senior institutional official (the Commander, Commanding Officer, Officer in Charge or Head of Activity) authorized to act for the institution and to assume on behalf of the institution the obligations imposed by the federal regulations, DOD, and DON requirements for the protection of human subjects. The IRB Chair and IRB members may not serve as the Institutional Signatory Official.

15. Investigational Test Article. Drugs, biologicals, and devices defined by U. S. Food and Drug Administration (FDA) as "investigational" because they are not yet approved for public use or commercial distribution. See also "Test Article."

16. Minimal Risk. The probability and magnitude of harm or discomfort anticipated in the research are not greater in and of themselves than those ordinarily encountered in daily life or during the performance of routine physical or psychological examinations or tests. [32 CFR 219.102(i)]

17. Naval Activities. Refers to both Navy and Marine Corps activities.

18. Non-compliance. Deliberate or inadvertent departure from or failure to comply with federal regulations, DOD directives, DON instructions, or IRB requirements for the protection of human research subjects.

19. Principal Investigator (PI). In DON-supported human subject research, an individual who possesses the required education, knowledge, skills, experience (credentials) to initiate, conduct and oversee human subject research, and has completed the required research ethics training including human subject protections. In addition:

a. For DON-supported Intramural Research. A Principal Investigator must be a current federal employee (uniformed or civilian, staff, or trainee), covered under the Intergovernmental Personnel Act (IPA), or a consultant consistent with the requirements established by 5 USC 3109, and must be assigned to or employed by a specific command. Status as a contractor or federal retiree alone is not sufficient to qualify individuals as principal investigators for such research.

b. For DON-supported Extramural Research. A Principal Investigator must meet the criteria established by the institution that receives the award.

20. Prisoner. Any individual (other than Captured or Detained Personnel) involuntarily confined or detained in a penal institution. The term is intended to encompass individuals sentenced to such an institution under a criminal, civil or military statute, individuals detained in other facilities by virtue of statutes or commitment procedures, which provide alternatives to criminal prosecution or incarceration in a penal institution, and individuals detained pending arraignment, trial or sentencing. [45 CFR 46.303(c)]

21. Prisoner of War (POW). A detained person as defined in Articles 4 and 5 of the Geneva Convention Relative to the Treatment of Prisoners of War of August 12, 1949. In particular, one who, while engaged in combat under orders of his government, is captured by the armed forces of the enemy.

22. Protocol. The detailed written research plan.

23. Research. Any systematic investigation, including research development, testing and evaluation, designed to develop or contribute to generalizable knowledge. Activities which meet this definition constitute research for purposes of this policy, whether or not they are conducted or supported under a program which is considered research for other purposes. For example, some demonstration and service programs may include research activities. [32 CFR 219.102(d)]

a. Research includes, but is not limited to, any project, task, test, pilot study, experiment, investigation, study, clinical study, clinical investigation, clinical trial, evaluation, developmental effort or similar undertaking, whether or not conducted or supported under a program that is officially considered research. Any effort, even if not considered research for other purposes, is considered research for purposes of this instruction.

b. Clarification of FDA-regulated Research. The terms research, clinical research, clinical study, study, and clinical investigation are deemed to be synonymous. Clinical investigation means any experiment that involves a test article and one or more human subjects, and meets the appropriate requirements for prior submission to the Food and Drug

Administration. [Excerpted from 21 CFR 56.101(c) and 21 CFR 50.3(c)]

24. Research Misconduct. Means fabrication, falsification, or plagiarism in proposing, performing, or reviewing research, or in reporting research results.

a. Fabrication is making up data or results and recording or reporting them.

b. Falsification is manipulating research materials, equipment, or processes, or changing or omitting data or results such that the research is not accurately represented in the research record.

c. Plagiarism is the appropriation of another person's ideas, processes, results, or words without giving appropriate credit.

d. Research misconduct does not include honest error or differences of opinion. [42 CFR 93.103]

25. Risk. Any possibility of harm, discomfort, or injury (physical, psychological, sociological, or other) as a consequence of any act or omission. (See Minimal Risk.)

26. Test Article. Any drug for human use, biological product for human use, medical device for human use, human food additive, color additive, electronic product, or any other article subject to regulation under the act or under sections 351 or 354-360F of the Public Health Service Act. [21 CFR 56.102(1) and 21 CFR 50.3(j)]

U.S. Department of Justice Office of the Inspector General

Report to Congress on Implementation of Section 1001 of the USA PATRIOT Act

(as required by Section 1001(3) of Public Law 107-56)

January 27, 2004

Section 1001 of the USA PATRIOT Act (Patriot Act), Public Law 107-56, directs the Office of the Inspector General (OIG) in the U.S. Department of Justice (DOJ or Department) to undertake a series of actions related to claims of civil rights or civil liberties violations allegedly committed by DOJ employees. It also requires the OIG to provide semiannual reports to Congress on the implementation of the OIG's responsibilities under Section 1001. This report – the fourth since enactment of the legislation – summarizes the OIG's Section 1001-related activities from June 16, 2003, through December 15, 2003.

I. INTRODUCTION

The OIG is an independent entity that reports to both the Attorney General and Congress. The OIG's mission is to investigate allegations of waste, fraud, and abuse in DOJ programs and personnel and to promote economy and efficiency in DOJ operations.

The OIG has jurisdiction to review programs and personnel in all DOJ components, including the Federal Bureau of Investigation (FBI), the Drug Enforcement Administration (DEA), the Federal Bureau of Prisons (BOP), the Bureau of Alcohol, Tobacco, Firearms and Explosives (ATF), the U.S. Attorneys' Offices, and other DOJ components.¹

The OIG consists of the Immediate Office of the Inspector General and the following divisions and offices:

- **Audit Division** is responsible for independent audits of Department programs, computer systems, and financial statements.
- **Evaluation and Inspections Division** provides an alternative mechanism to traditional audits and investigations to review Department programs and activities.
- **Investigations Division** is responsible for investigating allegations of bribery, fraud, abuse, civil rights violations, and violations of other criminal laws and administrative procedures that govern Department employees, contractors, and grantees.

¹ On March 1, 2003, the Immigration and Naturalization Service (INS) moved from the DOJ to the Department of Homeland Security (DHS). Consequently, the OIG's review of allegations of misconduct involving INS employees – including claims of civil rights and civil liberty abuses – ended in early 2003. If the OIG receives allegations involving immigration-related issues, including complaints about abuse of civil rights or civil liberties by employees of the former INS, we now forward the complaints to the DHS OIG.

- **Office of Oversight and Review** blends the skills of attorneys, investigators, and program analysts to investigate or review high profile or sensitive matters involving Department programs or employees.
- **Office of General Counsel** provides legal advice to OIG management and staff. In addition, the office drafts memoranda on issues of law; prepares administrative subpoenas; represents the OIG in personnel, contractual, and legal matters; and responds to Freedom of Information Act requests.
- **Management and Planning Division** assists the OIG by providing services in the areas of planning, budget, finance, personnel, training, procurement, automated data processing, computer network communications, and general support.

The OIG has a staff of approximately 400 employees, about half of whom are based in Washington, D.C., while the rest work from 16 Investigations Division field and area offices and 7 Audit Division regional offices located throughout the country.

II. SECTION 1001 OF THE PATRIOT ACT

Section 1001 of the Patriot Act provides the following:

The Inspector General of the Department of Justice shall designate one official who shall -

- (1) review information and receive complaints alleging abuses of civil rights and civil liberties by employees and officials of the Department of Justice;
- (2) make public through the Internet, radio, television, and newspaper advertisements information on the responsibilities and functions of, and how to contact, the official; and
- (3) submit to the Committee on the Judiciary of the House of Representatives and the Committee on the Judiciary of the Senate on a semi-annual basis a report on the implementation of this subsection and detailing any abuses described in paragraph (1), including a description of the use of funds appropriations used to carry out this subsection.

III. CIVIL RIGHTS AND CIVIL LIBERTIES COMPLAINTS

Review information and receive complaints alleging abuses of civil rights and civil liberties by employees and officials of the Department of Justice.

The OIG established the Special Operations Branch in its Investigations Division to help manage the OIG's investigative responsibilities outlined in Section 1001.² The Special Agent in Charge (SAC) who directs this unit is assisted by two Assistant Special Agents in Charge (ASAC), one of whom assists on Section 1001 and DEA matters and a second who assists on FBI matters. In addition, two Investigative Specialists support the unit and divide their time between Section 1001 and FBI/DEA responsibilities.

The OIG receives civil rights and civil liberties complaints via mail, e-mail, telephone, and facsimile. The complaints initially are reviewed by the Investigative Specialist and ASAC responsible for Section 1001 matters. After review, the complaint is entered into the OIG's investigations database and a decision is made concerning its disposition.

One of the initial determinations is whether a complaint alleges the type of abuse of civil rights and civil liberties contemplated by Section 1001 of the Patriot Act. While the phrase "civil rights and civil liberties" is not specifically defined in the Patriot Act, the OIG has looked to the "Sense of Congress" provisions in the statute, namely Sections 102 and 1002, for context. Sections 102 and 1002 identify certain ethnic and religious groups who would be vulnerable to abuse due to a possible backlash from the terrorist attacks of September 11, 2001, including Muslims, Arabs, Sikhs, and South Asians.

The more serious civil rights and civil liberties allegations that relate to actions of a DOJ employee or DOJ contractor are generally assigned to an OIG Investigations Division field office for investigation by OIG special agents. Other complaints are assigned to the OIG's Office of Oversight and Review for investigation.

Given the number of complaints and its limited resources, the OIG does not investigate all allegations made against DOJ employees. The OIG refers for appropriate handling many complaints involving DOJ employees to internal affairs offices in DOJ components, such as the FBI Office of Professional Responsibility, the DEA Office of Professional Responsibility, and the BOP Office of Internal Affairs. In certain referrals, the OIG requires the components to report the results of its investigations to the OIG. In most cases, the OIG

² This unit also is responsible for coordinating the OIG's review of allegations of misconduct by employees in the FBI and the DEA.

notifies the complainant of the referral.

Many complaints involve matters outside the OIG's jurisdiction because they involve issues regarding non-DOJ employees. Complaints that identify a specific issue for investigation are forwarded to the appropriate investigative entity. For example, complaints of mistreatment by airport security staff are sent to the DHS OIG. We also have forwarded complaints to the OIG at the Department of Housing and Urban Development, Department of State, and the Social Security Administration. In addition, we have referred complainants to a variety of police department internal affairs offices who have jurisdiction over the subject of the complaints.

When an allegation received from any source involves a potential violation of federal civil rights statutes by a DOJ employee, OIG staff discusses the complaint with the DOJ Civil Rights Division for possible prosecution. In some cases, the Civil Rights Division accepts the case and requests additional investigation by either the OIG or the FBI. In other cases, the Civil Rights Division declines prosecution. Even in the event of a declination, the OIG may continue investigating the complaint as an administrative matter.³

A. Complaints Processed this Reporting Period

From June 14, 2003, through December 15, 2003, the period covered by this report, the OIG processed the following number and types of complaints:

- Number of complaints processed suggesting a Section 1001-related civil rights or civil liberties connection:⁴ 1,266
- Number of "unrelated" complaints:⁵ 720

³ The OIG can pursue an allegation either criminally or administratively. Many OIG investigations begin with allegations of criminal activity but, as is the case for any law enforcement agency, do not end in prosecution. When this occurs, the OIG is able to continue the investigation and treat the matter as a case for potential administrative discipline. The OIG's ability to handle matters criminally or administratively helps to ensure that a matter can be pursued administratively, even if a prosecutor declines to prosecute a matter criminally.

⁴ This number includes all complaints in which the complainant makes any mention of a Section 1001-related civil rights or civil liberties violation, even if the allegation is not within the OIG's or the DOJ's jurisdiction.

⁵ Complaints in this category cite no improper act by a DOJ employee or contractor or no discernible nexus between the alleged conduct of the DOJ employee/contractor to any Section 1001-related civil rights or civil liberties violation. Examples of this category include complaints that the government is broadcasting harmful electronic signals to individuals, claims that the government is intercepting dreams, and allegations that the government is using subliminal messages to force people to engage in certain acts.

- Number of complaints outside the OIG's jurisdiction:⁶ 384
- Number of complaints within the OIG's jurisdiction: 162
- Number of complaints within the OIG's jurisdiction in which the OIG or another internal affairs office within a DOJ component opened an investigation or conducted a closer review: 17

The 162 complaints processed by the OIG during this reporting period that fell within the OIG's jurisdiction (*i.e.*, that state a claim involving a DOJ component or employee) covered a wide variety of subjects. They included allegations of excessive force and verbal abuse by BOP correctional officers, unwarranted cell searches by BOP staff, retaliatory actions by BOP employees, illegal searches of property and fabrication of evidence by FBI agents, and the failure of the FBI to initiate investigations.

However, many of the 162 complaints in this category, while within the OIG's jurisdiction and couched as a "civil rights" complaint, did not raise issues implicated by our duties under Section 1001. For example, the OIG received numerous complaints from inmates alleging that they have not received appropriate medical care or were given food that violated their religious dietary restrictions.

None of the 162 matters involved complaints alleging misconduct by DOJ employees related to their use of a substantive provision in the Patriot Act.

After closely analyzing the complaints in this category, the OIG identified 17 matters that warranted opening an investigation or conducting a closer review. These complaints, which varied in seriousness, included allegations of excessive force against BOP inmates, verbal abuse of inmates, denying inmates access to the law library and telephone calls, unreasonable prison cell searches, and placement in solitary confinement for no apparent reason.

⁶ These complaints generally cite issues that involve other federal agencies, state governments, local law enforcement agencies, or private businesses. Examples include allegations that local law enforcement officers used excessive force or entered a home without a search warrant; allegations of retaliation, unfair labor practices, discrimination, or other civil rights violations by federal agencies outside the DOJ; or allegations of rude treatment by INS or airport inspectors. We refer these complaints to the appropriate entity.

B. Section 1001 Cases this Reporting Period

1. Complaints Investigated by the OIG

a. New matters

During this reporting period, the OIG opened two new Section 1001-related investigations, continued eight ongoing Section 1001-related cases, and closed four Section 1001 investigations. The two new matters opened by the OIG alleging Section 1001-related civil rights and civil liberties abuses by DOJ employees during this reporting period are:

- The OIG is investigating allegations raised by a Muslim inmate that he was subjected to verbal abuse, discrimination, and anti-Islamic sentiment that has intensified since September 11, 2001. The inmate also complained he was transferred to another BOP facility in retaliation for filing complaints against BOP correctional officers.
- The OIG opened a preliminary inquiry into allegations received from an individual who alleged that he was abused by FBI agents and INS detention officers from his arrest in March 2002 until he was deported in April 2002.

b. Examples of cases opened during the previous reporting periods that the OIG has continued to investigate

- The OIG is investigating claims by an Egyptian national that the FBI improperly arrested and detained him immediately following the September 11 attacks and that during his detention his civil rights and civil liberties were violated. According to the Egyptian national, while held at a BOP facility he was forced to undergo an invasive body cavity search in the presence of numerous people, including a woman. To date, the OIG interviewed the Egyptian national and approximately 50 BOP employees who had contact with the detainee during his detention.
- The OIG is investigating claims that a BOP correctional officer verbally and physically abused an inmate while he was being transported to the prison's hospital and that the inmate was placed in solitary confinement after the incident. This case has been referred to the Civil Rights Division for prosecutive decision.
- The OIG investigated allegations that FBI agents conducted an illegal search of an Arab-American's apartment and during the search they vandalized the apartment, stole items, and called the complainant a

terrorist. According to the complainant, even though the FBI found no evidence linking him to terrorism, approximately four months later the FBI recruited an acquaintance of his to plant drugs in the complainant's home. FBI agents then arrived at the complainant's home and conducted a consent search and arrested the complainant after finding drugs. During the complainant's interview by the OIG, however, he admitted that the cocaine discovered could have been his and that he did not believe the FBI was involved in planting evidence. The OIG has completed its review of this matter and is drafting its report of investigation.

- The OIG is investigating allegations that Muslim inmates at a BOP facility have been targeted for disciplinary actions and subjected to disparate treatment by correctional officers. Specifically, the complainant alleges that certain members of the facility's staff take retaliatory actions against the Muslim inmates on a regular basis.
- The OIG is investigating allegations that unidentified correctional officers and the warden of a BOP facility threatened to "gas" inmates subsequent to the September 11 attacks. It was further alleged that these unidentified correctional officers and the warden have retaliated against the inmate complainant for making the allegations. The OIG is drafting its report of investigation.
- The OIG is investigating allegations that a detainee was assaulted at an INS contract facility. The detainee was involved in a verbal exchange with a correctional officer and allegedly was struck in the eye, pushed to the floor, and sprayed with pepper spray. The following day, the detainee was taken to a local hospital emergency room for treatment. The detainee suffered a black eye and back pain. The detainee has since been deported from the United States.⁷

c. OIG investigations closed during this reporting period

- The OIG investigated claims that an INS Supervisory Detention Enforcement Officer (SDEO) entered a gas station operated by an Arab-American and demanded paper towels. When the attendant replied that he did not have paper towels, the SDEO displayed his credentials, asked the attendant if he was American, and requested his immigration documents. The investigation also revealed that the SDEO requested a colleague to query an immigration database for information on the attendant. Our investigation concluded that the SDEO improperly displayed his credentials for other than official purposes and

⁷ The OIG began this investigation before INS was moved from the Department to the DHS and retained the matter after the transfer in order to complete the investigation.

inappropriately caused an INS database to be queried. We provided our report of investigation to the DHS for appropriate action.

- The OIG investigated allegations that a BOP correctional officer used excessive force and failed to follow BOP policy in handling and restraining a Muslim inmate when the inmate was removed from his cell to be escorted to the Medical Unit for examination. The investigation did not reveal sufficient evidence to conclude that the correctional officer used excessive force to restrain the inmate. However, the OIG concluded that the correctional officer used poor judgment in handling the inmate and failed to follow BOP policy when the correctional officer immediately entered the inmate's cell and used force to subdue the inmate instead of waiting for assistance and preparing a plan for a safer entry into the cell. The OIG provided its findings to the BOP for appropriate action.
- During the previous reporting period, the OIG opened an investigation based on allegations raised by approximately 20 inmates that a BOP correctional officer verbally abused inmates with ethnic and racial slurs and inappropriate comments. After the BOP facility's investigation concluded that the allegations were unsubstantiated, BOP's Office of Internal Affairs (OIA) referred the matter to the OIG. When the OIG interviewed the correctional officer, he admitted to not being completely candid with the investigators, to verbally abusing the Muslim inmate, and to throwing the inmate's Koran into the trashcan. The OIG provided its findings to the BOP for appropriate action.
- The OIG investigated allegations that an INS detention enforcement officer held a loaded gun to a detainee's head and threatened the detainee while transferring him to another detention facility. The OIG interviewed the detainee and the two detention enforcement officers who were transporting the detainee but could not substantiate the allegations due to conflicting accounts.

2. Complaints Referred to Other Components

During this reporting period, 15 of the 17 complaints were referred to internal affairs offices within DOJ components for investigation or for closer review. One of the 15 complaints was referred to the FBI. The complainant in that matter alleged that he was inappropriately subjected to surveillance by the FBI. The FBI determined that the allegation was without merit and closed the matter.

Fourteen of the 15 complaints were referred to the BOP this reporting period. They included allegations that BOP staff used excessive force and

verbally abused Muslim inmates; ignored requests for medical treatment; executed excessive searches of Muslim inmates' cells because of their religious beliefs; and denied Muslim inmates access to television, radio, books, and newspapers.

The 14 complaints sent to the BOP were designated by the OIG as "Monitored Referrals," which means that the BOP is required at the end of its investigation to send a report of the investigation to the OIG for its review. Of the 14 complaints, the BOP closed five matters during the reporting period, while nine matters remain open. The BOP closed four of the five as unsubstantiated and the fifth because the subject was terminated from his position as a correctional officer during his probationary period.

In our previous Section 1001 report, we described a complaint that was sent to the DEA alleging that DEA agents conducted an illegal search of an Arab-American's home and confiscated the family's passports and personal property, even though nothing illegal was found during the search. DEA OPR conducted an investigation of this matter and determined the allegations were unsubstantiated. The investigation also revealed that the complainant was charged by the DEA in connection with a drug investigation and is currently a fugitive from justice.

C. Other OIG Activities Related to Allegations of Civil Rights and Civil Liberties Abuses

The OIG has conducted activities that go beyond the explicit requirements of Section 1001 in order to more fully implement its civil rights and civil liberties responsibilities. Given the multi-disciplinary nature of its workforce, the OIG can extend its oversight beyond traditional investigations to include evaluations, audits, and special reviews of DOJ programs and personnel. Using this approach, the OIG has conducted several special reviews, including an in-depth inquiry into allegations that aliens detained in connection with the investigation of the September 11 attacks were physically and verbally abused by some correctional officers at the Metropolitan Detention Center in Brooklyn, New York.

1. Supplemental Report on September 11 Detainees' Allegations of Abuse at the Metropolitan Detention Center in Brooklyn, New York

On December 18, 2003, the OIG issued a report that examined in detail allegations made by detainees held in connection with the Department's terrorism investigation that some correctional staff members at the Metropolitan Detention Center (MDC) physically and verbally abused detainees. The report supplemented a comprehensive review released by the OIG in June 2003 that examined how the Department handled 762 detainees held on

immigration charges in connection with the investigation of the terrorist attacks, including their processing, their bond decisions, the timing of their removal from the United States, their access to counsel, and the conditions of their confinement.⁸

In Chapter 7 of the Detainee Report, the OIG described the treatment of the September 11 detainees at the MDC and concluded that the conditions were excessively restrictive and unduly harsh. We also concluded that evidence showed some MDC correctional officers physically and verbally abused some detainees, particularly during the months immediately following the September 11 attacks. However, we noted in the Detainee Report that while federal prosecutors had declined criminal prosecution in this matter, the OIG's administrative investigation of physical and verbal abuse at the MDC was still ongoing.

The December 2003 Supplemental Report details our findings and conclusions from this supplemental review. We concluded that certain MDC staff members did abuse some of the detainees. We did not find evidence that the detainees were brutally beaten, but we found evidence that some officers slammed and bounced detainees against the wall, twisted their arms and hands in painful ways, stepped on their leg restraint chains, and punished the detainees by keeping them restrained for long periods of time. We concluded that the way these MDC staff members handled detainees was, in many respects, unprofessional, inappropriate, and in violation of BOP policy.

In addition, we found systemic problems in the way detainees were treated at the MDC, including staff members' use of a t-shirt taped to the wall in the facility's receiving area designed to send an inappropriate message to detainees, audio taping of detainees meetings with their attorneys, unnecessary and inappropriate use of strip searches, and banging on detainees' cell doors excessively while they were sleeping.

During our investigation, we examined approximately 30 detainees' allegations of physical and verbal abuse against approximately 20 MDC staff members. In our review of these allegations, we interviewed more than 115 individuals, including detainees, MDC staff members, and others. The staff members primarily were correctional officers who had been assigned to the Administrative Maximum Special Housing Unit or ADMAX SHU, the high-security wing of the MDC that housed the September 11 detainees, or staff members who were involved in escorting the detainees on and off the ADMAX SHU.

⁸ "The September 11 Detainees: A Review of the Treatment of Aliens Held on Immigration Charges in Connection with the Investigation of the September 11 Attacks" ("Detainee Report"), issued June 2, 2003. On June 25, 2003, the Inspector General testified before the U.S. Senate Committee on the Judiciary regarding the Detainee Report.

We also reviewed MDC videotapes, including hundreds of tapes showing detainees being moved around the facility and tapes from cameras in detainees' cells. During the course of our investigation, MDC officials repeatedly told us that videotapes of general detainee movements no longer existed. That information was inaccurate. In late August 2003, the OIG discovered more than 300 videotapes at the MDC spanning the period from October through November 2001.

The OIG developed evidence that approximately 16 to 20 MDC staff members, most of whom were assigned to the ADMAX SHU, violated BOP policy by physically or verbally abusing detainees. We considered "physical abuse" to be the handling of the detainees in ways that physically hurt or injured them without serving any correctional purpose. Similarly, we considered "verbal abuse" to be insults, coarse language, and threats to physically harm or inappropriately punish detainees, all of which violate BOP policies.

For example, the videotapes showed compliant detainees being slammed or rammed against the wall, pressed by their heads or necks, and having their fingers or hands twisted, despite officers' denials that this ever occurred and despite statements by senior BOP officials that such actions were not appropriate. The videotapes also confirm that officers placed detainees against an American flag t-shirt with the phrase "These colors don't run," which was taped to the wall in the sally port area where detainees first arrived at the MDC. This t-shirt remained in place for many months, despite officers' denials of its existence or claims that it was removed after a short period of time.

Moreover, the videotapes showed that some MDC staff members misused strip searches and restraints to punish detainees and revealed that officers improperly recorded detainees' meetings with their attorneys.

We provided the results of our investigation to managers at BOP Headquarters for their review and appropriate disciplinary action. In the report to the BOP, we included an Appendix identifying current and former staff members who we believe committed misconduct, and we describe the specific evidence against them. In the Appendix, we also described allegations against specific officers that we did not substantiate. It is important to note that these allegations were not against all staff members at the MDC, and that many MDC officers performed their duties in a professional manner under difficult circumstances in the aftermath of the September 11 terrorist attacks.

In the Appendix (which was not released publicly because of privacy interests and the ongoing consideration of discipline against specific officers), we recommend that the BOP take disciplinary action against 10 current BOP employees, counsel 2 current MDC employees, and inform employers of 4 former MDC staff members about our findings against them.

In the report, we made seven recommendations to the BOP, ranging from developing guidance to train correctional officers in appropriate restraint techniques to educating BOP staff concerning the impropriety of audio recording meetings between inmates and their attorneys.

2. Analysis of Responses to Recommendations in Detainee Report

In Chapter 9 of the Detainee Report, the OIG made 21 recommendations related to issues under the jurisdiction of the FBI, the BOP, leadership offices at the DOJ, as well as immigration issues now under the jurisdiction of DHS. During the reporting period, the OIG analyzed two sets of responses from the Department to our recommendations in the Detainee Report and one set from the DHS.

The OIG received written responses to the 21 recommendations from the Deputy Attorney General on behalf of the DOJ on July 21, 2003, and from the Under Secretary for Border and Transportation Security on behalf of the DHS on August 4, 2003. On September 5, 2003, we issued an analysis of the responses of both the DOJ and the DHS. The OIG's analysis concluded that both agencies appeared to be taking the recommendations seriously and were taking steps to address many of the concerns raised by the Detainee Report. The OIG's analysis concluded, however, that many of the recommendations were not addressed with sufficient specificity and significant work remained before the recommendations were fully implemented. For several of the recommendations, the OIG requested additional information regarding the DOJ's proposed action to address the recommendations.

On November 20, 2003, the DOJ submitted to the OIG a second response to the recommendations that related to issues under the DOJ's jurisdiction. The DOJ's second response provided additional information and an update on the steps that the DOJ and its components were taking to implement the OIG's recommendations. The second response also included three attachments from the BOP describing policies it had adopted to address the OIG's recommendations.

The OIG analyzed the DOJ's second response and in a report issued on January 6, 2004, concluded that the DOJ has taken significant and responsible steps to implement the OIG's recommendations. For example:

- The OIG had recommended that the FBI develop clearer and more objective criteria to guide its classification decisions in future cases involving mass arrests of illegal aliens in connection with terrorism investigations. The DOJ's second response described how decisions will be made to determine whether someone is "of interest" to the FBI, and

also described a protocol on how that decision will be made. In making its initial decision, the FBI stated that it will rely on information from a variety of sources, including the Terrorist Threat Integration Center and the Terrorist Screening Center.

- The OIG had recommended that the FBI should provide the DHS and BOP with a written assessment of an alien's likely association with terrorism shortly after an arrest, preferably within 24 hours. The DOJ agreed with our recommendation to provide an assessment of an alien's suspected association with terrorism "as expeditiously as possible." It stated that it may not be possible to do so within 24 hours in all cases, but said if the initial statement of interest is oral, the FBI will provide a written statement as soon as possible thereafter.
- Given the highly restrictive conditions under which the BOP housed some of its September 11 detainees, and the slow pace of the FBI's clearance process, we had recommended that the BOP consider requiring written assessments from immigration authorities and the FBI prior to placing aliens arrested solely on immigration charges into highly restrictive conditions of confinement. Absent such a particularized assessment from the FBI and immigration authorities, we recommended that the BOP apply its traditional inmate classification procedures to determine the level of secure confinement required by each detainee. The DOJ response stated that the FBI will provide either a verbal or written statement to the BOP and DHS as to their interest in a detainee. The response further provided that in the absence of this statement, the BOP will apply its traditional inmate classification procedures to determine the level of secure confinement required by each detainee.
- The OIG had recommended that the BOP issue new procedures requiring that videotapes of detainees with alleged ties to terrorism who are housed in high security areas be retained for longer than the 30 days that was required at the time our Detainee Report was issued. The DOJ response described a new BOP policy that requires staff to retain for six months videotapes that depict routine inmate movements outside cells and BOP officers' entrances into the cells of inmates who are confined pursuant to national emergencies.

Because immigration enforcement responsibilities have been transferred from the DOJ to the DHS, the DHS OIG is now responsible for monitoring the DHS's implementation of the recommendations contained in the Detainee Report relating to immigration issues.

3. Review of the BOP's Process for Selecting Muslim Clerics

The OIG is examining the procedures used by the BOP to select Muslim personnel, contractors, and volunteers who provide religious services to inmates. We initiated this review in response to a request from a U.S. Senator expressing concern that the BOP relies solely on two organizations that allegedly have connections to terrorism to endorse Muslim cleric candidates as qualified religious leaders. The OIG review is examining whether the BOP's process for selecting Muslim religious service providers effectively screens candidates to ensure that extremist groups do not become religious service providers in the BOP.

4. Review of the FBI's Implementation of Attorney General Guidelines

In May 2002, the Attorney General issued revised domestic Guidelines that govern general crimes and criminal intelligence investigations. In May 2003, approximately one year after the revised Guidelines had been in effect, the OIG began a review of the FBI's implementation of the four sets of Guidelines: Attorney General's Guidelines Regarding the Use of Confidential Informants; Attorney General's Guidelines on FBI Undercover Operations; Attorney General's Guidelines on General Crimes, Racketeering Enterprise and Terrorism Enterprise Investigations; and Revised Department of Justice Procedures for Lawful, Warrantless Monitoring of Verbal Communications.

The objectives of the OIG review are to determine what steps the FBI has taken to implement the Guidelines, examine how effective those steps have been, and assess the FBI's compliance with key provisions of the Guidelines. Because the FBI's adherence to these Guidelines could implicate civil rights or civil liberties issues under Section 1001, we are including a description of this review in our report.

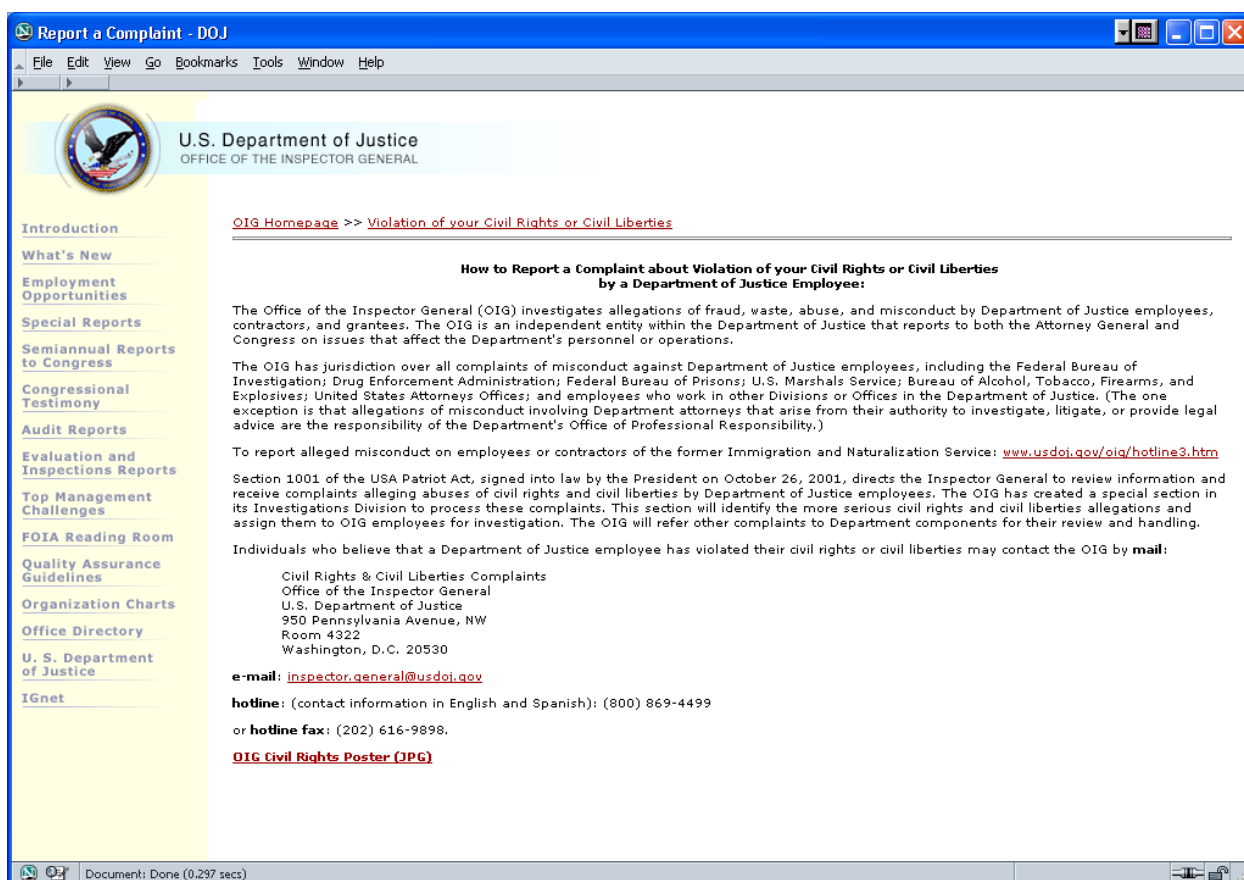

IV. ADVERTISING RESPONSIBILITIES

Make public through the Internet, radio, television, and newspaper advertisements information on the responsibilities and functions of, and how to contact, the official.

The OIG continues to meet its Section 1001 advertising requirements in a variety of ways.

A. Internet

The OIG's website contains information about how individuals can report violations of their civil rights or civil liberties. The OIG also continues to promote an e-mail address – inspector.general@usdoj.gov – where individuals can send complaints of civil rights and civil liberties violations.

The OIG previously developed a poster, translated in Arabic, that explains how to file a civil rights or civil liberties complaint with the OIG. An electronic version of this poster is available on our website.

The DOJ's main Internet homepage contains a link that provides a variety of options for reporting civil rights and civil liberties violations to the OIG. The Civil Rights Division's website also describes the OIG's role in investigating allegations of misconduct by DOJ employees and provides information on how to file a complaint with the OIG.

In addition, several minority and ethnic organizations have added information to their websites about how to contact the OIG with civil rights and civil liberties complaints. For example, the Arab American Institute

(www.aaiusa.org), an organization that represents Arab Americans' interests and provides community services, added the OIG's Section 1001 poster to its website of information and resources for the Arab American community. The Institute also has informed its members and affiliates of the OIG's Section 1001 responsibilities through its weekly e-mail newsletter. Similarly, the American-Arab Anti-Discrimination Committee (ADC), one of the largest Arab American organizations in the nation, has posted the OIG's contact information and Section 1001 responsibilities on its website, which at one time averaged more than 1 million hits per month. The ADC also has published the OIG's Section 1001 responsibilities in its magazine, the *ADC Times*, which is circulated to more than 20,000 people. Furthermore, the OIG's Arabic poster and Section 1001 responsibilities have been disseminated electronically by the Council on American Islamic Relations LISTERV and the National Association of Muslim Lawyers LISTSERV.

B. Television

During this reporting period, the OIG arranged to have the following television advertisement aired with the text spoken in Arabic and scrolled in English:

The Office of the Inspector General investigates allegations of civil rights and civil liberties abuses by U.S. Department of Justice employees. If you believe a Department of Justice employee has violated your civil rights or civil liberties, contact the Inspector General at 800-869-4499. That number again is 800-869-4499.

The OIG purchased blocks of time on ANA Television Network, Inc., an Arab cable television station with outlets around the country. According to the promotional materials, ANA Television Network is the largest Arab-American television network in the country and broadcasts news and entertainment 24 hours a day. The segment was aired 48 times, during prime time, from June 5, 2003, through July 22, 2003.

C. Radio

During the reporting period, the OIG submitted public service announcements to 45 radio stations in cities across the country, including New York, Los Angeles, Sacramento, Chicago, Detroit, Houston, Dallas, and Washington, D.C. The text of the PSA read:

The Office of the Inspector General investigates allegations of civil rights and civil liberties abuses by U.S. Department of Justice employees. If you believe a Department of Justice employee has violated your civil rights or civil liberties, contact the Inspector General at 800-869-4499.

We also purchased airtime for 44 radio advertisements on Arab/Muslim American radio stations in New York, Chicago, Los Angeles, Detroit, and Dallas. These advertisements, which ran in late 2003, were 60 seconds long and included the same script listed above both in English and Arabic.

D. Posters

Previously, the OIG disseminated approximately 2,500 Section 1001 posters to more than 150 organizations in 50 cities. The posters, in English and Arabic, explain how to contact the OIG to report civil rights and civil liberties abuses.

In an earlier reporting period, we also provided the posters to the BOP, which has placed at least two in each of its facilities. In addition, we had provided approximately 400 posters to INS officials prior to the agency's transfer from the DOJ for distribution to its offices across the country. If the posters generate complaints about immigration officials, as of March 1, 2003, we have forwarded these allegations to the DHS OIG.

REPORT
Civil Rights & Civil Liberties Abuses

E. Newspapers

The OIG is making arrangements to purchase a second round of advertisements in one newspaper highlighting its role in investigating allegations of civil rights and civil liberties abuses. This time, the display

advertisements will be placed in an Arab community newspaper. Advertisements will appear both in English and Arabic.

F. Flyers

With the assistance of the FBI's Language Services Department, the OIG developed flyers in Urdu and Punjabi, which after Arabic are the two most commonly spoken Arab languages. Flyers also were translated into Spanish and Vietnamese, and the FBI is preparing a translation into Indonesian. These flyers will be distributed to organizations that work with the respective communities to inform them of the OIG's Section 1001 responsibilities. In addition, we intend to provide all the flyers to the BOP and request that they be made available to incoming inmates in their native languages.

REPORT

CIVIL RIGHTS & CIVIL LIBERTIES ABUSES

ਅਮਰੀਕਾ ਦਾ ਇਨਸਾਫ਼ ਵਿਭਾਗ ਅਤੇ ਇੰਸਪੈਕਟਰ ਜਨਰਲ ਦਾ ਦਫਤਰ (OIG) ਲੋਕਾਂ ਦੇ ਮਾਨਵ ਅਧਿਕਾਰ ਅਤੇ ਮਾਨਵ ਅਧਿਕਾਰ ਉਤੇ ਕੀਤੀਆਂ ਗਈਆਂ ਬੇਇਨਸਾਫ਼ੀਆਂ ਦੀ ਤਹਕੀਕਾਤ ਕਰਦਾ ਹੈ। ਇਨ੍ਹਾਂ ਬੇਇਨਸਾਫ਼ੀਆਂ ਦਾ ਤਹਕੀਕਾਤ ਇਨਸਾਫ਼ ਵਿਭਾਗ, ਐ.ਬੀ.ਆਈ., ਡੀ.ਈ.ਐ. ਉਤੇ ਆਈ. ਐਨ. ਐਸ. ਫੈਡਰਲ ਜੇਲ ਵਿਭਾਗ, ਅਮਰੀਕਾ ਦੀ ਮਾਰਸ਼ਲ ਸੇਵਾ, ਅਮਰੀਕਨ ਵਕਾਲਤ ਦੇ ਦਫਤਰ ਅਤੇ ਹੋਰ ਸਾਰੇ ਇਨਸਾਫ਼ ਵਿਭਾਗਾਂ ਦੇ ਮੁਲਾਜ਼ਮਾਂ ਅਤੇ ਅਧਿਕਾਰੀਆਂ ਦੀ ਕੀਤੀ ਜਾਂਦੀ ਹੈ।

ਅਗਰ ਤੁਹਾਨੂੰ ਯਕੀਨ ਹੈ ਕਿ ਤੁਹਾਡੇ ਨਾਲ ਕਿਸੀ ਇਨਸਾਫ਼ ਵਿਭਾਗ ਦੇ ਮੁਲਾਜ਼ਮ ਨੇ ਬੇਇਨਸਾਫ਼ੀ ਕੀਤੀ ਹੈ, ਤੁਸੀਂ ਅਪਨੀ ਸ਼ਿਕਾਯਤ ਉ. ਆਈ. ਜੀ. ਦੇ ਦਫਤਰ ਨੂੰ ਇਸ ਪਤੇ ਤੇ ਭੇਜੋ।

ਚਿਠੀ ਭੇਜਣ ਦਾ ਪਤਾ

mail: Civil Rights & Civil Liberties Complaints
Office of the Inspector General
U.S. Department of Justice
950 Pennsylvania Avenue, NW
Washington, D.C. 20530

e-mail: inspector.general@usdoj.gov

or fax: (202) 616-9898

For more information, call (800) 869-4499 or visit the OIG's website at www.usdoj.gov/oig

The Office of the Inspector General (OIG), U.S. Department of Justice, investigates allegations of civil rights and civil liberties abuses by Department of Justice employees in the FBI, DEA, ATF, Federal Bureau of Prisons, U.S. Marshals Service, U.S. Attorneys Offices, and all other Department of Justice agencies.

If you believe a Department of Justice employee has violated your civil rights or civil liberties, you may file a complaint with the OIG by:

mail: Civil Rights & Civil Liberties Complaints
Office of the Inspector General
U.S. Department of Justice
950 Pennsylvania Avenue, NW
Washington, D.C. 20530

e-mail: inspector.general@usdoj.gov

or fax: (202) 616-9898

For more information, call (800) 869-4499 or visit the OIG's website at www.usdoj.gov/oig

V. ADDITIONAL OUTREACH AND TRAINING EFFORT

In addition to media advertisements, the OIG is reaching out in other ways to educate the public and its own employees about its Section 1001 responsibilities. For example, on June 26, 2003, an OIG Special Agent in Charge attended training sponsored by the DOJ's Community Relations Service entitled "*Building Cultural Competency: Arab, Muslim and Sikh Americans.*" This day-long program was designed to assist the attendees to understand cultural issues relating to the Arab, Muslim, and Sikh communities in the United States and to provide guidance for training others.

We are also developing a guide in question/answer format to assist individuals in understanding the OIG's Section 1001 responsibilities, our jurisdiction, and how to make a complaint. This guide will be posted on the OIG's website.

VI. EXPENSE OF IMPLEMENTING SECTION 1001

Submit to the Committee on the Judiciary of the House of Representatives and the Committee on the Judiciary of the Senate on a semi-annual basis a report...including a description of the use of funds appropriations used to carry out this subsection.

During this reporting period, the OIG spent approximately \$415,000 in personnel costs, \$13,400 in travel costs, and \$8,000 in advertising and publication costs, for a total of more than \$436,500 to implement its responsibilities under Section 1001. The personnel and travel costs reflect the time and funds spent by OIG Special Agents, inspectors, and attorneys who have worked directly on investigating Section 1001-related complaints and special reviews.

ACTIVISM TIPS

INFORMATION HANDLING IN THE FIGHT TO EXPOSE AND STOP THE CRIME OF ORGANIZED STALKING AND ELECTRONIC HARASSMENT

ACTIVISM HISTORY

ACTIVISM EVENTS IN THE FIGHT TO EXPOSE AND STOP THE CRIME OF ORGANIZED STALKING AND ELECTRONIC HARASSMENT

Eleanor White and others who contribute information

**** NOT COPYRIGHTED ****

This is a work in progress. Material will be added and changed as new information becomes available. Check the date/time stamp beside the page numbers to see if your copy is current.

Purpose of This Booklet

New targets of organized stalking and electronic harassment (OS/EH) are making themselves known all the time. Each new target goes through the usual learning curve period.

A great deal of activism to expose OS/EH , and this includes books, videos and legal initiatives, has taken place starting with the activism to expose government activist harassment and “mind control” programs in the 1970s. There are many web sites providing details of these initiatives, but they are scattered and a new target, or even an interested journalist, is likely to have difficulty getting a complete picture of what has been tried to date.

Not knowing what has been tried results in suggestions by the new targets who believe their idea hasn't been tried. Hopefully, this listing will quickly inform new targets what our activism history is, so their innovative efforts are better informed.

This booklet is not to provide exceptional detail, but instead is a list of activism initiatives known to me (Eleanor White) to date. In the beginning, this booklet will simply name the initiatives and some of the participants. Over time I hope to add more detail, but at least this booklet will give new targets and journalists an overview.

Note: I don't personally endorse the credibility of every activism initiative listed here, however, I am listing those initiatives which appear to have been significant. I do maintain a web site listing credibility ratings for various initiatives:

<http://www.creviews.net>

ALSO NOTE: There are many individual OS/EH activists who work quietly all the time, looking for, and taking advantage of, opportunities to educate the public. Their efforts may not result in clearly identifiable activism milestones such as listed below, but readers should understand that most OS/EH targets do some sort of activism on an ongoing basis.

List of Sections

1. Time Line of Significant Initiatives
2. Problems Observed With Some Initiatives

1. Time Line of Significant Initiatives

Human Radiation Experiment Hearings (19??)

<http://www.raven1.net/hradexco.htm>

Radiation hearings transcript

<http://www.raven1.net/achradex.htm>

Additional human radiation hearings documentation

* The below video "[acheslet.wmv](#)" includes testimony regarding the human radiation experiment hearings

MKULTRA-Era Involuntary Experimentation Hearings (1970s)

<http://www.raven1.net/mind-mk.htm>

MKULTRA era article in the Napa Sentinel newspaper (1991)

<http://www.raven1.net/video/acheslet.wmv>

Video "letter" to President Clinton and Canadian PM Jean Chretien (1997) which was a plea for government attention to both MKULTRA era survivors and OS/EH as well, a project of the Advisory Committee for Human Experimentation Survivors - Mind Control (ACHES-MC.) Note: ACHES-MC's web site is no longer active.

COINTELPRO Activist Harassment Hearings (1970s)

<http://www.cointel.org>

Paul Wolf's archive of official COINTELPRO hearing documents

<http://www.raven1.net/cointeldocs.htm>

Eleanor White's backup copies of the COINTELPRO documents

CNN's 1985 "Special Assignment" documentary with strong hints of the electronic harassment phase of the OS/EH crimes

<http://www.raven1.net/video/cnn1985.rm> (Real Player version)

<http://www.raven1.net/video/cnn1985.wmv> (Windows Media Player version)

Robert Naeslund (Sweden,) implant removal (1983)

<http://www.mindcontrolforums.com/v/naesdoc.htm>

Robert's account of his efforts to get his implant removed

Julianne McKinney, Director, Electronic Surveillance Project (Early 1990s - present)
Association of National Security Alumni (that specific project is no longer active)

<http://www.raven1.net/microwav.htm>

Julianne's landmark article about her investigation into OS/EH, which "woke up" a great many people who were targets but had no idea their harassment was a highly organized program with probable roots in government black operations

Harlan Girard, Managing Director, (Early 1990s - present) International Committee on Offensive Microwave Weapons

<http://www.icomw.com>

Harlan Girard's current web site

Cheryl Welsh, JD (doctor of law,) Owner of the "Mind Justice" web site, and initiator of a number of activism initiatives (mid-1990s - present.) Cheryl earlier founded CAHRA (Citizens Against Human Rights Abuse,) now replaced by Mind Justice.

Cheryl's work includes exceptionally high quality literature research both U.S. and foreign, with emphasis on mind control and involuntary human experimentation. As a lawyer, she writes authoritatively on relevant law.

<http://mindjustice.org>

Activism projects (sampling):

Time Line [of EM technology]: <http://mindjustice.org/timeline.htm>

U.S. Human Rights Abuse Report (1998): <http://mindjustice.org/7.htm>

Electromagnetic and Neurological Technologies (2000):

<http://mindjustice.org/campframeset.htm>

The Mind Control Debate is Over. What Next? (2008):

<http://mindjustice.org/debateover.htm>

Bulletin of the Atomic Scientists (2009): <http://mindjustice.org/legalhuman.htm>

History Channel (2009): <http://tinyurl.com/nfwpd7>

Ed Light - Ed created the "Mind Control Forum" web site in the mid-1990s, but has been harassed to the point where he had to give up ownership of the web site to Vicky Kindhart. (2???)

<http://www.mindcontrolforums.com>

The "MCF" web site is the largest repository of OS/EH target testimonials, and also has considerable historical material about other abuse crimes, such as ritual abuse, Satanic ritual abuse, and the MKULTRA era mind control experiments.

Brian Wronge, implant court case (1993, still not resolved.) Brian Wronge had official recognition of implantation but doctors refuse to remove the implants. Articles appeared:

The City Sun Newspaper, Brooklyn, NY, December 1993:

Article text: <http://www.raven1.net/wronge1.htm>

Article text: <http://www.raven1.net/wronge2.htm>

Alex Constantine, a prolific writer regarding government misdeeds, published his book Psychic Dictatorship in the U.S.A. in September, 1995. In that book he describes both MKULTRA-type and electromagnetic "mind control" activity. I (Eleanor White) have not heard of any new initiatives in the OS/EH arena by Alex since the turn of the 21st century. Because of his high profile identification with what many call "conspiracy theories," my opinion is his work is probably best left to historical perspective and not used for activism.

Dr. Nick Begich, (doctor of complementary medicine,) enters the arena of possible electromagnetic crimes with his book Angels Don't Play this HAARP in September 1995. Since then he has lectured and appeared on radio and in TV documentaries which touch EM crimes (tangentially,) and his most complete collection of research material in this arena is (Eleanor White's opinion):

Controlling the Human Mind, review: <http://www.raven1.net/controlmind.htm>

Article, Some Aspects of Anti Personnel Electromagnetic Weapons, (February 1996,) by David Guyatt. Synopsis Prepared for the International Committee of the Red Cross Symposium "THE MEDICAL PROFESSION AND THE EFFECTS OF WEAPONS." One copy is posted at (google title for others):

<http://www.mindcontrolforums.com/anti-personal-electromagnet-weapons.htm>

Kathleen Sullivan, MKULTRA survivor, began networking with OS/EH targets circa 1997 (at least as I, Eleanor White, am aware.) Her main interest has been healing abuse survivors, including survivors of the government-sponsored MKULTRA era crimes. In recent years we haven't heard a much from Kathleen but here are two items of note:

North American Freedom Foundation: <http://www.naffoundation.org>
Kathleen's book Unshackled: <http://www.raven1.net/unshackled.htm>

Judy Wall, editor, Resonance, the newsletter of the Bioelectromagnetic Special Interest Group, (late 1990s - early 2000s, she has not been heard from since)

EM Weapons Timeline: <http://www.raven1.net/jwalltil.htm>
Aerial Mind Control article: <http://www.raven1.net/commsolo.htm>

Dr. Rauni Leena Kilde, MD (~1997-present), former chief medical officer for Northern Finland and president of nursing school. We first saw Dr. Kilde in a 1997 British documentary on electronic weapons and mind control. (Her interests include areas such as the paranormal and UFOs and as a result we don't publicize her work which includes such material, but her matter of fact declarations on TV and radio that what we call electronic harassment and mind control are happening as fact were much appreciated.)

Microwave Mind Control: <http://www.raven1.net/kilde1.htm>

Sacramento, California state capitol rallies (1997 - ~1999) following names are not a complete list of participants:

Tim Donoghue (falsely imprisoned as a result)
Rod Orr
Mary Ann Stratton
Mike Duffy

David Larson, implant removal and court case (1997)

Larson's original report: <http://www.raven1.net/lrr.pdf>
Larson's web site: <http://www.larsonmedia.net>

S.M.A.R.T. abuse conferences, research, and other activities (1998 - present) This very active anti-abuse activism and support group hosts annual midsummer conferences. Detailed information is available at this web site:

<http://ritualabuse.us>

These conferences are of most interest to OS/EH targets who are also survivors of other types of abuse. (Some MKULTRA survivors have become OS/EH targets too.)

Carol Rutz, MKULTRA survivor (as child), publishes book A Nation Betrayed (July 2001), with her torture experiences and considerable research into the MKULTRA era government crimes

Book Review: <http://www.raven1.net/nabetray.htm>

"Space Preservation Act of 2001", HR 2977, October 2, 2001, submitted to the U.S. House of Representatives by Ohio representative Dennis Kucinich. The technologies included for banning were:

- (i) electronic, psychotronic, or information weapons;
- (ii) chemtrails;
- (iii) high altitude ultra low frequency weapons systems;
- (iv) plasma, electromagnetic, sonic, or ultrasonic weapons;
- (v) laser weapons systems;
- (vi) strategic, theater, tactical, or extraterrestrial weapons; and
- (vii) chemical, biological, environmental, climate, or tectonic weapons.

There are many controversial weapons listed in the bill, and this resulted in the bill being withdrawn and a replacement bill (HR 3616) was submitted instead.

Carole Smith's article (circa 2003) in the Journal of Psycho-Social Studies titled On the Need for New Criteria of Diagnosis of Psychosis in the Light of Mind Invasive Technology:

http://www.btinternet.com/~psycho_social/Vol3/JPSS-CS2.html (original)

<http://www.raven1.net/newcriteria.html> (backup copy)

Washington DC rally, October 7-8, 2005:

<http://www.shoestringradio.net> Scroll down to special item 5 for a report on the rally by Norma Lawrence

Appearances by OS/EH targets on Patriot Radio, (Approximately 2003 - 2007, with very occasional appearances since.)

<http://www.raven1.net/ravindex.htm>

Audio clips of some of the appearances are indexed there.

Norma Lawrence, founder of CATCH (Citizens Against Technological and Community-based Harassment) (2004 - 2006.) While the original CATCH group, which was based in Toronto, Ontario, is no longer active, the CATCH web site continues to be updated and is an excellent resource. Live presentations on OS/EH were given to crisis support organizations.

<http://www.catchcanada.net>

"U.S. Electromagnetic Weapons and Human Rights", (December 2006) a Project Censored report by (professor) Peter Phillips, Lew Brown, and Bridget Thornton, Sonoma State University:

<http://www.projectcensored.org/assets-managed/pdf/ElectromagneticWeapons.pdf>
(Original report)

<http://www.raven1.net/emwepsprojcensored.pdf> (backup copy)

Derrick Robinson, founder of FFCHS (Freedom From Covert Harassment and Surveillance) (2006 - present.) Derrick's organization and web site are currently (Sept 2009) the hub for North American networking. Derrick initiated telephone conference call networking and now there are conference calls nightly, with access information on the web site.

Organization's web site: <http://www.freedomfchs.com>

<http://www.nationalcaresociety.org>

ocwinfo@yahoogroups.com

America Needs To Know

Help TV

For reference [excerpted from an October 2009 email bulletin]: "Elizabeth is producing a television show entitled "America Needs to Know" which began broadcasting as one hour episodes on Berkeley community television in July. She is scheduling ongoing taping sessions for TIs to tell their stories. Dress professionally. We don't have to worry if we make a mistake because these are not live but just tapings and Elizabeth will edit them down into one-hour episodes, editing out any mistakes or non-credible sounding stuff. Still we should focus on sounding credible throughout so Elizabeth has as much material to work with as possible. Since we don't have any experts on this technology we're just going to discuss our personal experiences as victims. We'll appear on her show and discuss our targeting much as we do at the support meetings, on the conference calls, etc. You can choose whether or not you want to be on camera. Those who want to go public will be seated in front of the camera and those who wish to remain anonymous will be seated behind the camera."

2. Problems Observed With Some Initiatives

This section is to mention some problems observed with some of the historical activism initiatives. This section is not an exhaustive discussion of what makes for good activism. I have another booklet posted titled Information Handling, in which I go into detail on my own ideas for good activism, using widely recognized principles of persuasive communications. That booklet is available at this link:

<http://www.multistalkervictims.org/osih.pdf>

Note: Because I point out problems with past initiatives, I am not saying don't keep trying. I'm just passing along what history has shown us as problems, so future activists can work on ways to overcome such problems.

Email campaigns:

Politicians have stated outright that emails are the weakest form of communications. They say that when volume gets higher than they can handle, emails get deleted. Because it is so easy to send emails, naturally officials will have high volumes of them, and your requests for attention will stand out the least.

Hard copy letters, on a single page, are the most likely to get attention, they say. Faxes aren't too bad and can be sent from your PC.

During my first few years online, I sent out over 10,000 emails by rough but reasonably accurate count. I might have received a few dozen replies, most of them telling me I was crazy, or demanding to be taken off my email list.

Sometime in the early 2000s, a group calling itself the "MC Mailteam," filled with the "we've got to do something" spirit, began sending long, many-page emails screaming about torture, with a great deal of text in upper case lettering. They occasionally send these emails even now, to just about every government and private organization on the planet.

Other than a few courteous acknowledgements of receipt of emails, I'm not aware of this frantic activity bringing about any progress towards exposing the crime of OS/EH.

Bottom line - mass email campaigns to date seem to be a waste of time. If you're going to communicate cold with any organization or official, I urge you to at least scan the principles outlined here: <http://www.multistalkervictims.org/osih.pdf>

Petitions:

There are numerous electronic petitions posted on web sites set up for that purpose.

The problem with petitions is, unless there is a plan where the petition is printed out and physically delivered to an official whose duties actually allow the official to help, these are a waste of time.

Officials don't spend time looking for extra work, browsing petition sites to see if there are any that he/she can help with. In fact, most members of the public don't browse petition sites either.

My recommendation is that if you plan a petition, do nothing until you have established a way to physically transport the signatures to an official with relevant duties.

Handing out flyers:

I'm really in favour of flyers. However, when I went through over 3 years of street picketing and handing out flyers, I found that describing the full ugly truth about OS/EH caused an immediate apparent disconnect with the public. Once I reduced the flyers to just the organized stalking side of the crime, without mentioning exotic electronic weaponry, the passers-by became more interested.

Nobody suddenly wanted to go to war on our behalf, but they at least had some interest in the topic. Reducing the percentage of full truth told, and mentioning the more familiar stalking phase of the crime, helped noticeably.

In-person presentations:

I did just one of these on my own to an OS-friendly sexual assault support organization. But I accepted a right-after-lunch time slot. Bad idea. The audience could barely stay awake. I suspect the perps helped this somnolence along, but I'd recommend trying to negotiate away from that particular time slot.

Note: Norma Lawrence's CATCH organization, of which I was a member, made do with very short presentations, typically 15-20 minutes maximum, with a few minutes for questions and answers. For now, I would be careful to pare down to a 15 minute presentation, and time yourself to be sure you can fit in to that time block. You can ad lib up to a total time of half an hour. Rehearsal is essential.

Further information:

I found that loading a listener or reader down with a long list of web sites caused an apparent disconnect. I'd recommend just a single web site link if possible.

Request your listener/reader do something:

I found that in order to maintain interest, a request to do something specific was necessary. Even something simple like “tell your friends” made a difference.

I have also found that unless you tie your request to the mission statement of an organization or official you are approaching, you probably won't even get a reply. You need to find your recipient's mission statement and put a sentence in your material or verbal spiel showing how their mission statement is relevant to OS/EH.

Court cases:

There have been court cases dismissed as frivolous.

Consistently, targets have assumed that because what they describe “could only be done by government,” their stories alone will be accepted as grounds for suing government. That has not worked, and isn't likely to.

Court is for cases where an identifiable perpetrator has done you measurable damage. If you can't show both, history shows going to court is a waste of your money.

James Walbert succeeded in getting a court order because he was able to identify a perpetrator by name, for example. Just saying you want to sue the CIA hasn't worked.

ORGANIZED STALKING: A TARGET'S VIEW

Eleanor White
Revision of March 3, 2010

This writer has been an activist working to expose the crime of organized stalking for over two decades, and has been in contact with other targets of organized stalking since 1996. I am a retired engineer. This booklet relates my opinions and conclusions, and readers should be aware that others may hold different opinions.

**** NOT COPYRIGHTED ****

The purpose of this document is to educate the public about the crime of organized stalking, and copying and distribution as widely as possible is encouraged.

It is requested that anyone wishing to incorporate part or all of this document into their activism materials, and who wishes to modify the original text, remove my name and replace it with their own.

Chapter 5: Experiences of the Targets	34
Chapter 6: Bogus or Misleading Information	42
Chapter 7: Conclusion	45
Appendix 1: Attorney's Call report to National Center for Victims of Crime	47

Chapter 1: What is "Organized Stalking?"

Visit <http://www.targcomics.net> for twin comic strips illustrating organized stalking

Before I answer that question, let me say that this booklet is written to introduce the general public and public officials to an old crime, "ganging up" on someone, which has been "improved" to the point where targets not only cannot escape it, but it can be done in ways that people around the target, who witness some of the harassing acts, will deny it is even happening.

While any type of "ganging up" is organized, the "organized stalking" described in this booklet makes use of instant electronic communication, and through-wall electronic harassment technology, and willingness of corrupt officials to look the other way, to achieve an environment in which the target can never escape some degree of harassment.

This is new. This is why I am writing this booklet. The world needs to know that some citizens are experiencing Hell on Earth which uses highly developed tactics and silent, no-trace technology. Stalking has been brought to new level of both impact on the target, and deniability.

Deniability is Easy

Once a group of stalkers starts "working over" a target, deniability increases dramatically.

Imagine a group of school students who decide to "work over" a target. Each member of the group can do something minor, maybe once a day. "Accidentally" bumping into the target, passing a remark in the hall which can be said was not intended for the target, spilling something on the target's back in the lunchroom, stealing items of small value over time belonging to the target, and the familiar rumour campaign. No one member of the group ever does anything serious.

But from the target's viewpoint, they never have a nice day. There are always "minor" things going wrong. The rumour campaign turns formerly friendly schoolmates against the target.

The Mental Health System Makes Things Even Worse

Because the blame is spread out over a large group, if the student complains, school staff will very likely assume the target is the problem, that they are just "oversensitive", and perhaps that the target "needs mental health counselling." Such a slick, smooth "solution" to a "problem student."

With the participation of a large group, the targeted student's life can be ruined, and the target can get no help from the staff who are paid to resolve student problems. Complaints will bring the full weight of the mental health system down on the totally innocent target. And all this can be accomplished without any actual physical assault.

That group dynamic makes all this possible.

The Need For This Booklet

Perhaps, reader, you can see why a booklet of this sort is essential, to get organized stalking cases acted upon as seriously as single stalking cases have been.

This e-booklet is posted on line, and office services shops can often print copies on site as "print on demand" hard copy booklets. As new information becomes available, the content will be updated. However, until organized stalking is publicly acknowledged by the world's justice systems, an event which will render this booklet unnecessary, the content here is expected to be fairly complete for some time to come.

Organized Stalking Defined

"Organized stalking", in the current-day sense, is surveillance and harassment of a designated target by stalkers who are members of groups, which are networked throughout the industrialized nations of the world.

Organized stalking has three essential elements as the term is applied in this booklet:

- ** Organized stalking is harassment by a substantial number of people, not by an obsessed single stalker, nor by helpers recruited by an obsessed single stalker
- ** Organized stalking group members are given targets' names and/or have the target identified for them; they do not usually know the target beforehand
- ** Organized stalking community groups are tightly networked, within state or province, and internationally

Historical Roots?

Organized stalking in that sense, by reports I've seen, has been operating internationally at some level since at least the early 1990s. There may be a link to the similar FBI counterintelligence crimes which began under the program name COINTELPRO; certainly the tactics are similar. However, we do not at this time have evidence tying organized stalking to any specific government or private entity. We can say positively that government is ignoring all complaints of organized stalking, and to that extent is participating.

This sounds bizarre, however it is happening, and this booklet is to present information available about these crimes. Please withhold judgment until you have finished this booklet.

The Apparently Conflicting Stories and Theories

The reader needs to understand that the tactics and technologies used by today's organized stalkers are customized, taking elements from a huge "master menu," for each individual target. This, in turn, means that targets will tell different stories, and relate many different theories as to who is responsible, why they, personally, are being targeted, and how the technological harassment is being carried out. Readers should understand that these sometimes seemingly conflicting reports by targets are not an indication that organized stalking "isn't real," but rather a result of the customization of individual harassment programs.

Readers also need to understand that organized stalking has been designed to operate in a fashion where any one casual observer will see only a tiny part of the full stalking regimen. Stalking attacks which are visible are always designed to appear to a casual observer as "life's normal breaks."

This is deliberate. It is done to make the target appear to be "complaining about nothing" to people who know the target.

Secrecy Makes It All Work

Secrecy is the reason why organized stalking has continued and grown for over two decades, as of the time of writing, and why targets can hardly ever get public officials to take organized stalking as seriously as they do single stalker stalking. It is time for the anti-stalking laws of the early 1990s to finally be applied to organized stalking groups.

Legislators should facilitate this by adding specific references to organized stalking, and related tactics, into the stalking laws.

This writer believes that if organized stalking were to become sufficiently well known to the general public, it's unlikely this crime could continue, as it depends on secrecy and the non-belief of members of the public and public officials.

For Readers Who Want to Learn More

To readers who may look up organized stalking on the Internet, you need to be aware that there are alternate names and concepts used.

For the organized stalking side (as opposed to the electronic harassment side):

- ** group stalking
- ** multistalking
- ** community stalking (wide area supervised local harassment)
- ** gang stalking (organized stalking groups are NOT youth/race/biker/Mafia gangs)
- ** cause stalking (stalkers use a "cause" for recruitment)
- ** mobbing (organized stalking in the workplace)
- ** street theater (harassment skits done in view of the target out in the community)

For the electronic harassment side:

- ** electronic harassment
- ** electronic assault
- ** directed energy weapons ("DEWs")
- ** non-lethal weapons
- ** mind control (the through-wall electronics can affect the mind)
- ** voice to skull (U.S. Army designation "V2K")

The reader also needs to know that many web sites about organized stalking contain information and claims which are not backed up by mainstream documentation.

I ask the reader to understand the position of targets of organized stalking. Out of the blue, they experience a blizzard of harassment for which there is no apparent cause. Every facet of their lives has come under attack, both by strangers and even some of their acquaintances. They can be forced out of their jobs by unceasing harassment. Their children, pets, and family members can be harassed as well. All in ways carefully designed so that outside observers can dismiss complaints as "over-active imagination."

It is a perfectly natural response for a target to grasp at any article at all that mentions organized stalking or electronic harassment, and post it, without regard to whether the claims in that article are valid.

It is perfectly natural to develop personal theories as to why this is suddenly happening to them, because there is almost no official information available.

Just as a drowning person will sometimes try to force a rescuer under water in a desperate bid to get above the water, organized stalking targets will proclaim their information and claims loudly, on the Internet, trying to get public attention to end their nightmare. They are not able to exercise the laid back critical thinking that they could before the targeting began.

So for you, reader, it is essential to understand that the many web sites with unsupportable claims are not necessarily an indication of delusion, but instead, the natural result of desperation, perpetrator secrecy, and having all public officials deny organized stalking is even possible.

Separating Fact From Opinion

Within the target community, I urge targets to use the following criterion in deciding whether a claim made by anyone can be presented as fact:

Has the claim been DEMONSTRATED, and has the DEMONSTRATION been published by a mainstream organization, under their name/logo?

If yes, present it as fact. If no, present it as someone's opinion.

This criterion has been forced on us by public officials who almost always have denied every statement we make to them. We are held to a much higher standard of evidence than targets of other crimes.

So I recommend readers adopt that same criterion when browsing web sites dealing with organized stalking and/or electronic harassment. Not everything stated as a fact qualifies as fact, per the above criterion.

Disinformation Tactics?

There are a few web sites which appear, and we can't prove or disprove this, which appear to be attempts to trivialize the crime of organized stalking, by presenting minor acts of harassment (such as "brighting") or totally unprovable acts of harassment ("air stalking" - stalking by aircraft) at the top of the list. Attempts to discredit the victims of the MKULTRA mind control experiments, or the COINTELPRO harassment programs, show that criminals who depend on public ignorance do work to discredit victims.

Another potential (I can't know anyone's true motive, so I have to use the term "potential") disinformation tactic may be the publication of books, DVDs and even tee shirts which contain valid organized stalking material but which are titled using the alleged mind control program name "MONARCH." According to actual survivors of MKULTRA-era mind control experiments, "MONARCH" is allegedly the name of a program of torturing captive children to force them to develop multiple personalities. (Hypnotically programming someone with multiple personalities is much easier.) Unlike "MKULTRA", MONARCH has never been admitted to by any government authority as their program.

To the reader, if you come across this MONARCH-labelled information about organized stalking, please know that organized stalking is not about torture of physically captive children, and in my opinion, trying to blur MONARCH with organized stalking at least has the appearance of deliberate disinformation. Attempts to associate organized stalking with another military program named "New Phoenix" likewise have the appearance of disinformation.

It's reasonable to assume that the organized stalking perpetrators will post sites to discredit organized stalking targets. Stick to the mainstream organization publication criterion for determining fact, noted above, so fact can be separated from opinion or disinformation easily.

See the chapter titled "Bogus or Misleading Information" for more on this topic.

Statistics

While public officials continue to deny that organized stalking happens, official statistics indicate that multiple stalker cases are being handled by the justice system. For example:

**** A U.S. Department of Justice special report**, January 2009, NCJ 224527, titled Stalking Victimization in the United States, which is available at this link (as of January 2009):

<http://www.ojp.usdoj.gov/bjs/pub/pdf/svus.pdf>

... reported the following statistics showing the occurrence of multiple stalking cases within the total of all U.S. recorded stalking cases in the 2005-2006 time range:

* 11% of victims said they had been stalked for 5 years or more.

[Eleanor White commenting: "5 years or more" is very characteristic of organized stalking, which usually never stops, because the justice systems refuse to acknowledge this crime and there is no pressing reason for the stalking groups to stop.]

An average of 10.6 percent of some 4.6 million stalking and harassment victims don't know the stalkers, since they're complete strangers.

[Eleanor White commenting: Almost all organized stalking is carried out by strangers, or people the target may know by sight but has never interacted with. The "4.6 million" figure above includes both stalking and harassment victims.]

Appendix table 3. Number of stalking offenders perceived by victim:

One 62.1%
Two 18.2%
Three or more 13.1%
Number unknown 6.5%
Total Number of victims 3,398,630

[Eleanor White comment: Adding three or more to number unknown, gives 19.6%. That could suggest something like half a million U.S. stalking victims may be organized stalking targets.]

**** From Statistics Canada:** The following statistic covers all reports to police relating to infractions of Canada's "Criminal Harassment" law, which covers stalking. Statistics Canada, the federal agency which maintains statistics for all areas of Canadian life, including policing. The following statement was in response to Eleanor White's request for a checkoff item on Canada's Uniform Crime Reporting (UCR) system denoting harassment reports involving simultaneous multiple harassers (Chief, Policing Services Program responding):

"Thank you for e-mail of Jan. 17. There is no need to add a new field to the national Uniform Crime Reporting (UCR) survey to collect information on multiple harassers, as a field already exists for the identification of multiple accused persons for all criminal incidents reported to police. As an example, of the 10,756 incidents of criminal harassment reported to police in 2006, 1,429 of these (or 13%) involved more than one accused."

That is one criminal harassment report in eight, a very significant percentage. While not all of these would strictly fall under the organized stalking category, this rate of simultaneous multiple harassment reports at least hints that organized stalking may not be as rare as the general public seems to think.

**** A report on stalking posted by the American Journal of Psychiatry** on their web site, journal reference 158:795-798, May 2001, states ... 6 out of 201 (3%) respondents reported multiple stalkers... Compare that with the 13% in criminal harassment cases above, reported by Statistics Canada, and clearly, stalking by multiple stalkers is a very real crime, acknowledged by mainstream professionals.

Note carefully: There is such a thing as stalking by PROXY, in which a single stalker, motivated by amorous interest or mental illness, enlists helpers. Organized stalking is NOT stalking by proxy, but rather is stalking by a group totally independent of whomever originally submitted the target's name to the stalking group. The stalking group typically has no knowledge of why the target's name was submitted, and instead is given a lie, often that the target is a pedophile, to motivate the group stalking effort.

Link to the AJP article: <http://tinyurl.com/3fa3yw>

**** Article: "The Course and Nature of Stalking: A Victim Perspective"**, Authors: Sheridan, Davies, Boon

Source: Howard Journal of Criminal Justice, Volume 40, Number 3, August 2001 , pp. 215-234(20)

In 5% of the cases (5/95), there was more than one stalker. pp.219

"In 5 cases perpetrators were part of a group..", pp.219

"... [40%] of victims (38) said that friends and or family of their stalker had also been involved in their harassment... This is a surprising find as the popular view of a stalker is of a lone and secretive individual." pp.222 [COMMENT: This suggests that the above "5%" cases may have been groups other than family or friends, which is suggestive of organized stalking as opposed to simple proxy stalking. Organized stalking involves groups which are networked everywhere, while proxy stalking has a single stalker who has a very personal focus on the target. Organized stalking groups also work on more than one target, unlike proxy stalking.]

Typical of organized stalking: "In 15% of cases, the victim could provide no possible reason for their harassment" pp.226

**** Statistics from the book Mobbing: Emotional Abuse in the American Workplace** show that in Sweden, about 3.5% of the working population is subject to mobbing, which is organized stalking in the workplace. 3.5% of working people is roughly 1 person in a hundred total, and is in line with the organized stalking survey above.

**** Statistics from the U.S. Centers for Disease Control** concerning harassment and stalking cases give an overall figure for the U.S. of 4.5 people per 100 as having been harassed or stalked at one time. Our informal survey's result of about one person per 100 being targeted by organized stalking fits well within that 4.5 per 100 figure. (Source, ABC News)

**** Statistics from the British (government) Home Office** state that 1,900,000 people in the United Kingdom were victims of stalking or harassment at any one time as of the year 2001. That is about 3 people per hundred. Here again, the organized stalking survey's 1 person in a hundred is not out of line. Most interesting is that roughly 45% of the stalking victims are MEN! That suggests a very different picture from the conventional view of stalking victims being mostly women, and may well point toward the type of stalking described in this booklet. (Graph below shows all harassment offences, not specifically stalking.)

Here's another British stalking statistic:

Home Office Research Study 210 (1998 data):

THE OFFENDERS

The majority (79%) of incidents involved only one perpetrator.

[...]

Strangers were responsible in 34 per cent of incidents.

Those statistics are strongly suggestive of organized stalking, 79% involved one perpetrator means 21% involved more than one perpetrator. And stalking by strangers is the usual situation with organized stalkers. Even if only 5% of stalking cases are organized, 5% of a million cases could mean 50,000 organized stalking cases in the United Kingdom alone.

**** How common is the organized stalker personality type?**

For people who have trouble believing that stalkers can be as cunning and nasty as reports from organized stalking targets indicate, a psychiatrist, below, refers to one statistic indicating that as many as one stalker in just eight fits the observed personality of organized group stalkers:

Excerpt from book STALKING, by Debra A. Pinals, MD, Group for the Advancement of Psychiatry, Committee on Psychiatry and Law. Published by Oxford University Press US, 2007. ISBN 0195189841, 9780195189841, 260 pages

Page 42:

CLINICAL ASPECTS OF STALKING

"Finally the fourth type of stalking in the Sheridan and Boon (2002) taxonomy, sadistic stalking, comprised 12.9% of their sample. This construct looked at the victim in particular, identifying the victim as someone worth "spoiling" (Sheridan & Boon, 2002), and as someone who would not understand why they were targeted.

"The target and stalker began as low-level acquaintances, but eventually the stalker's motive is to frighten or demoralize the victim. For example, the stalker might reorder or remove private papers, or leave notes inside the victim's car, leaving the victim with some evidence that the stalker has had contact with their personal property.

"As the behavior progresses, the stalkers attempt to take full control of the victims' lives. Their behavior may include implied threats (e.g. pictures of tombstones) and sexual communications that intimidate or humiliate but would avoid directly pointing to the perpetrator.

"There may be reprieves from the behavior, which may later resume after a hiatus. These types of stalkers may work hard to defy police."

Chapter 2: Why Are Organized Stalking Targets Chosen?

Visit <http://www.targcomics.net> for twin comic strips illustrating organized stalking

The question "Why would a large group of people want to harass YOU?" is the big one. This "Why YOU" question is, in my view, the greatest barrier to exposing and stopping organized stalking.

The majority of organized stalking targets do not know for certain why they were chosen, in my experience corresponding with other targets. (I don't know why I was chosen either.) The majority of targets are not high profile people, or people with very sensitive knowledge of government secrets or corporate misdeeds.

Under the FBI's COINTELPRO ("counterintelligence") programs against activists in the 1960s, those who were targeted by FBI harassers were activists, for example, the Black Panthers.

We have a few government or corporate whistleblowers in the organized stalking target community. We have a few who were set to inherit large estates. We have some who found themselves targets during or after a hostile divorce. We have a few who were witnesses to crime. Some organized stalking targets are talk show hosts who broadcast about government and corporate crimes. Some organized stalking targets apparently "just ticked someone off."

But the barrier to credibility is the large number of targets who are "nobodies." I would estimate that perhaps 70% of organized stalking targets can't point with any certainty to the reason they were chosen to be targets. When these "nobodies" try to complain to the authorities about the harassment, they are told that stalking and harassment by groups never happens. I was told by the police officer hosting a group of stalking victims that because I could not name my ONE stalkER, I was not welcome to attend the support group.

"Nobodies" reporting organized stalking are told there is no such thing as an organized, well funded group, nor could there ever be, just to harass innocent individuals. And this is very logical sounding, to people who are not organized stalking targets. Such a glib dismissal is also a very easy way for a public official to "get rid of a problem person."

The end result is that the "system" heaps the ultimate "punishment" on the already desperate target - the target is often forced to undergo psychiatric treatment. This injustice pretty well disables further attempts by the target to get the crime remedied.

Organized stalking targets are never told why they were chosen, with a literal handful of exceptions. There is no visible accuser, no formal charges, no opportunity to defend one's self at trial, no appeal process. One day everything is fine, and suddenly you start to realize that you're experiencing unending hostile acts in the community, on the job or in school, in commercial establishments, and in the privacy of your home.

While some of the harassers say things to the target, if pressed, they consistently deny there is any harassment going on.

So the "Why YOU?" question remains the number one barrier to justice for targets. The "Why YOU?" question appears, as best we targets can discern, to have multiple parts to the

answer.

Why Initially Versus Why Continue

"Why YOU?" covers two very different phases (time points during) of the target selection process:

- ** Why the target was initially **chosen** for organized stalking
- ** Why the target's harassers **continue** to commit the crimes against the target

Why Initially?

We've already listed some answer categories for the "why initially chosen" question:

- ** Government/corporate whistleblowers
- ** Inheritance disputes
- ** Hostile divorce
- ** Witnesses to crime
- ** Ticked someone off (revenge)
- ** Truth-telling talk show hosts
- ** Unknown (I estimate at roughly 70%)

Over time, large numbers of harassers participate. In fact, by rotating the harassers, the target is unable to finger one or even a few specific individuals as "the" criminal(s). A large number of the harassers are not known to the target, being seen by the target rarely, or only once.

Why Continue?

Clearly, this large, diverse, frequently rotating group of harassers are not all motivated, say, by taking sides in a hostile divorce, wishing to retaliate for a crime report by the target, or disagreement with what a talk show host has to say.

So WHY would the large, diverse group of harassers keep the harassment up for years and decades in some cases? And from city to city, state to state, and even country to country?

A very few targets get to see and hear enough, over the years, to know that for them, an ongoing LIE CAMPAIGN is what the harassers use to justify the harassment among themselves. Vicious rumours are told such as the target has a long criminal record, the target is a thief, the target is a prostitute, the target is doing drugs, the target sells drugs, and when the harasser supervisors really want maximum effort from their "troops," the target is a pedophile.

The pedophile lie is their ultimate weapon, and is used on both male and female targets.

The pedophile lie has been used on me, as while outdoors, away from witnesses, I've been called that to my face by some of the perpetrators. I had a neighbour, who had been actively harassing me with noise, take pornography to my place of work one day while I was home sick, and announce loudly to the receptionist that I had asked for the material.

They don't know (or possibly don't care) that I have no criminal record, have had no such

sexual inclinations ever, and my total "police record" consists of two parking tickets, both paid on time.

Another lady in the same province has also been hounded by the pedophile lie, quite severely.

So at the LOCAL level, the answer as to why a "nobody" is harassed constantly is that once a vicious lie is circulated in the community, that target is no longer a nobody. They are high profile from that point onwards.

Why Continue Knowing the Target is Innocent?

Vicious lies explain why the often rotated local harassment "troops" keep harassing the target. But what about the supervisors, and some of the harassers who can see, over time, that the individual they have been detailed to harass really isn't, say, a pedophile, or other criminal?

(Interestingly, a few of my repeatedly-seen harassers have in fact stopped the harassment and become friendly. But there are still the hard core supervisors (and some of the repeatedly-seen perpetrators) who keep it up in spite of becoming aware their official lie about the target is a lie.)

Why do they keep it up? Why do they willingly take on additional targets in their area, knowing that lies about targets are being used?

Interestingly, one investigation turned up evidence that some harassers depend heavily on support of their peers, and they simply keep harassing targets to maintain approval by their peers, the feeling of being in the "in" crowd so to speak.

But this question shows that there are not only two parts relating to the "Why YOU?" question regarding initially then later on, but also that motive varies with the harassment organization LEVEL:

- ** The community level, frequently rotated harassment "troops"
- ** The supervisor and above levels

At this point in time, we have no detailed information about the supervisor and above levels of the harassment organization which we can prove in court. The incredibly seamless coordination of harassment groups from one town to the next, up to internationally, shows that there definitely are supervisors, and many levels above them. The fact that every single official repeats the same reply "There is no organized stalking. You need to see a psychiatrist." seems to indicate some sort of official cover is in effect.

The Official Cover Up

The question is, why would there be an official cover in effect?

We targets cannot answer that with any degree of certainty. At this time, I can only offer the reader an observation that local thuggery which is ignored by officials is a classic, repeating symptom of a dictatorship in the making. Criminal activity IGNORED BY OFFICIALS is very telling - it's exactly what happened in Nazi Germany and Soviet Russia during the runup to

overt dictatorship.

Since we targets network with one another in all industrialized nations, we know that organized stalking is a crime which is world wide in scope, with the same master menu of tactics showing up everywhere.

Can this mean that citizens of this planet are witnessing the formation of a world wide dictatorship? From where I sit, that's about the only answer that makes sense, in light of what I observe.

History's dictators have often stated the wish to expand their control world-wide. Here in the early 21st century, it appears the technology and tactics are available to accomplish that.

My best guess as to why a large, well funded, internationally networked organization of "control freak" thugs exists is to work towards the common dream of past and no doubt current dictators or would-be dictators. That is pure guesswork at this point in time.

Why DECADES of Covert Harassment if it's a Political Program?

Again, this is guesswork on the part of the writer. Because targets experience no break in the harassment when moving over long distances, even from one country to another, this suggests that the proposed dictatorship in the making is world wide in scope. Setting up a successful world wide dictatorship, and doing so quietly and incrementally, is a huge undertaking. For success, it is likely the elite power brokers are choosing to be more careful than historical attempts such as, Hitler's Germany or Stalin's Russia.

For such an undertaking, a time span covering several generations may be seen as the price of success.

I suggest that in order to have a top of the line population control organization, the power elite can't simply post newspaper ads for people willing to totally ruin the lives of others, people they don't know. This time around, the power elite wants a corps of local "controllers" or "enforcers" which has been vetted over time as having "the right stuff" for ensuring success of a world dictatorship.

And because a huge number of local "enforcers" would be needed to ensure a successful dictatorship, a long period of time observing "enforcer" candidates acting against many real people would be the way to build the "enforcer corps." Success of a world dictatorship requires that "enforcers" be obedient and not have personalities which doing unpleasant work is likely to change. And they need to be thoroughly practiced. And large in number.

So I suggest it is the need to recruit, train and observe a large number of "enforcers," and the time that requires, which is responsible for decades of large-scale covert harassment.

Summary of Answers to the “Why?” Question

To summarize the parts of the "Why YOU?" question:

WHY ARE TARGETS INITIALLY CHOSEN?

- ** Government/corporate whistleblowers
- ** Inheritance disputes
- ** Hostile divorce
- ** Witnesses to crime
- ** Ticked someone off (revenge)
- ** Truth-telling talk show hosts
- ** Unknown (estimated at roughly 70%)

WHY ARE TARGETS HARASSED FOR YEARS AFTER BEING CHOSEN?

WHY DO THE LOCAL HARASSERS KEEP IT UP?

- ** Harasser wants to be with the "in crowd"
- ** Lies that the target has a long criminal record
- ** Lies that the target is a thief
- ** Lies that the target is a prostitute
- ** Lies that the target is a drug user
- ** Lies that the target is a drug dealer
- ** Lies that the target is a pedophile (child molester)

WHY ARE TARGETS HARASSED FOR YEARS BY PERPETRATORS WHO KNOW THE LIES ARE LIES?

- ** Unknown. Similarity to political thuggery during the formative stages of dictatorships is noted.

Chapter 3: David Lawson's Landmark Investigation

Visit <http://www.targcomics.net> for twin comic strips illustrating organized stalking

Shortly after the 9/11 attacks on the World Trade Center in New York City, organized stalking targets became aware of a book titled "Terrorist Stalking in America" by private investigator David Lawson. A sequel was published a few years later titled "Cause Stalking."

Both books cover the same topic, which Lawson calls "cause stalking," and which is a perfect match for the "organized stalking" discussed in this booklet.

Lawson worked for more than a decade with a Florida detective agency. It appears that his investigative work involved travel throughout the U.S. and Canada. He stated that his investigation covered 12 years, and likely was a spare time activity for him.

David Lawson reports in his books that he was casually listening to his public service radio scanner, and discovered a group using police-like terminology, but which did not sound as if they were actual police officers. Eventually, he learned of a restaurant where they met for meals, and visited one of this group's gatherings there.

This provided the curious David Lawson with a chance to gain the confidence of the group, and Lawson found that they were, in fact, carrying out organized stalking on designated targets. This group assumed the role of some sort of "special community police."

I'm going to discuss here David Lawson's essential findings. But first, I need to explain that while David Lawson's investigation is a godsend for targets of organized stalking, there are frankly some problems with his books. Lawson presents **observations**, and his personal **conclusions** as to who is responsible.

From my experience in the organized stalking target community, Lawson's observations are a perfect match for what targets experience from people in their community (or people encountered while travelling.) But Lawson's conclusions, as to who is responsible, do not match what I know about organized stalking, and in fact don't match his own reports about the members of the stalking groups and their recruiting procedures.

Should a reader acquire one of Lawson's books, I beg you, separate his observations while "riding with" the harassment groups, from his personal declarations as to who is responsible.

Lawson lays the blame at "extremist groups," "foreign terrorists," and "anti-government groups." Some "extremist groups" may be responsible; we targets cannot be sure because the people seen by us appear to be normal citizens, with really aggressive behaviour against us, often fuelled by lies about us.

We have seen no indications I'm aware of that any "foreign terrorists" are responsible.

But I am able to comment on one group in the United States which Lawson names, and that is the U.S. Patriot Movement. The Patriot Movement is not a tightly organized group, and its members are spread out throughout the U.S. What I know about them is mainly what I have heard their shortwave and Internet (with some AM/FM affiliates) broadcasters report about their goals and activities, since I began listening to them in 2002.

What I have heard consistently from perhaps 50 commentators over that time span is that they are people who research government documents, scientific reports, and under-reported mainstream media reports both from the U.S. and foreign. They reference published history. The Patriot commentators have been warning since the mid-1990s that a world dictatorship is in the works. They present evidence which if true, very well shows there is reason to be concerned about that. They give source details and urge listeners to not accept their word, but to look up the original sources.

If what the broadcasters say is representative of the movement, these Patriots would be very much against organized stalking.

Lawson insinuates that the Patriots are "anti-government." That is absolutely untrue, based on my years of regular listening. The Patriots are opposed to crime in government, not government itself. They seek strict application of the U.S. Constitution, with power returned to the states and the people.

I have appeared on a number of their shows, as have several other organized stalking targets. While we targets don't feel the Patriots give our issue sufficient air time, we feel that the Patriots do support our work to expose and stop these crimes. In fact, at time of writing, 22 of the Patriot hosts have reported to me, either on the air or privately, that they also experience some of the things we do. In their case, they are essentially whistleblowers of government and corporate misdeeds, so it is not surprising that they would also be targeted.

Now it is possible that some people calling themselves "Patriots" may also be members of organized stalking groups. I have no way of knowing. But Lawson mentions the broadcasters as being involved in organized stalking, and unless he comes up with actual evidence, I will not accept that conclusion. That is my major reservation about David Lawson's books.

There is a secondary problem - Lawson told me directly that in his 12 year investigation, he found no evidence whatsoever that through-wall electronic harassment weapons were ever used.

For, (I would estimate 95% of,) targets of organized stalking, the electronic harassment is an integral part of their harassment regimen. Personally, I suspect Lawson does know about electronic harassment, but may have been threatened or "bought off." His books certainly would be much more helpful if he were to cover both the in-person harassment and the electronic harassment.

The main message I have for readers, should they acquire one of Lawson's books, is to suspend judgment about his conclusions as to who is responsible, but note that we targets give him excellent marks for his observations while "riding with" the harassment groups.

David Lawson discussed "cause" (organized) stalking with a few police officers during his investigation. He found an odd excuse made by police for allowing organized stalking to continue. The police claimed that somehow, harassment by groups amounts to "free speech." Lawson learned that:

** Police themselves are sometimes targets

** Police are very reluctant to talk about stalking by groups

** One officer acknowledged that stalking groups are growing in size and number

That statement by police, "In general, they said that 'cause stalking' is primarily a civil problem where the plaintiff has to prove financial loss" shows that police are definitely not interested in trying to go after organized stalkers. Since the early 1990s, there have been anti-stalking laws on the books. From that point forward, stalking is a criminal offence.

True, stalking, even by a known single stalker, is difficult to investigate and prosecute because no single act by a stalker needs to be seriously criminal. It takes quite a bit of investigative effort to prosecute what people who are not stalking targets consider something relatively minor. And when the "labour" of stalking is divided among members of a group, it is even more difficult to prove culpability.

But the fact remains that stalking is a criminal offence, and that 'civil problem' statement by police is what could be called a "cop out", pun intended.

Lawson found that the recruits he managed to meet were blue collar workers. These recruits can bring very powerful abilities to the stalking group by way of having keys to locked spaces and apartments.

Security guards, city workers, taxi drivers, cable, telephone and electric utility workers also contribute to the stalking groups' ability to keep the target "in their sights," constantly, Lawson found.

Keep in mind that organized stalking includes TWO phases - organized stalking by people, and attacks using advanced through-wall electronic technologies. The recruits described above, according to Lawson, had no knowledge of the electronic attacks. There is apparently a separate "elite corps" of electronic stalkers, based on the experiences of targets.

Lawson reports some statements from the harassers themselves, expressing their attitude and motivation. The stalkers believe:

** They are a kind of "police" who actually rank ABOVE the sworn constabulary.

** Their groups "help" police by trying to alert people living in the target's area that the target did something really bad at prior locations.

** They see themselves as kind of "minutemen" - always at the ready to be dispatched when called, forming a network the target can never escape.

** They feel the fact that essentially all service workers and trades are members of the stalking groups makes them a force a target "doesn't want to mess with."

Lawson reports some statistics he gathered regarding what motivates the perpetrators:

** 25% follow the nominal "cause" they were recruited under

** 25% actually participate in the harassment

** 75% harass occasionally or not at all

** 10% join out of fear of being harassed themselves

Lawson describes recruits to these groups as "... those who feel powerless, inferior and angry."

Common sense is that naturally, such people would be easy to recruit for street and adjacent to the target's home harassment, but I would comment that lots of professionals put us (targets) down at every opportunity, declaring us mentally ill for even suggesting organized stalking is possible. These professionals don't "feel powerless, inferior, and angry."

And I doubt the many utility and city employees who participate feel "powerless, inferior, and angry" either. So while David Lawson has done a great job, some aspects of organized stalking have apparently escaped him.

One comment Lawson makes is that "Firemen across the country, and even some police officers, support these groups."

I have heard a number of reports that vehicular harassment has involved an above average number of vehicles that bear stickers of firefighters, or, a few targets have traced perpetrator identities to firemen. One target discovered that a number of vehicular harassment cars, identified by licence number, were parked in a police station parking lot.

My personal take on why some firemen and police might back these groups is that many have a heightened sense of community service. If they can be persuaded that the target has a criminal record, the worst case being that of a pedophile, it would be natural for firefighters and police to want to "help keep the target in line".

The author concludes, as explained at a number of places in the book, that the "cause" the typical group is "working toward" is mainly an excuse to get the groups together. The main motivation of members who stay with these groups is the sense of power and belonging the group members derive. Having a "cause" enhances the feelings of power and righteousness, but group members, according to the author, are most concerned with how their fellow group stalkers feel about their "work" and accept them.

Lawson explains the attitude of the typical stalking group member towards the "cause" this way:

"Most active group members have only a general idea of the ideology of the group, but they don't particularly care."

These groups come into being and are run by leaders. Here is what the author says about them:

"Group leaders do have political goals and the belief that the end justifies the means."

Lawson describes leaders as considering their members "disposable." He states that some leaders work for corporations and politicians. Lawson states that leaders identify targets but don't directly supervise the harassment group members.

Lawson describes leaders as having an "air of mystery", "having worked for the CIA, NSA, or some other intelligence agency that doesn't reveal information about their employees." Lawson states that this "background" is likely mythology. If organized stalking is the leading edge of a world dictatorship, however, it's not impossible that the world's intelligence

agencies could play a part.

How about financing these groups?

Although the author states that the pay is low, there are still very large expenses to harass people as thoroughly as targets report.

Lawson observed that the stalking groups he met and travelled with can afford to rent property adjacent to the target's home, pay for all modes of transportation so that stalkers can travel with a target, and the communications and coordination expenses to provide seamless "coverage" of targets regardless of where they travel. This adds up to significant expense.

Here is what the author learned about their financing:

Lawson discovered that corporations fund at least some of these stalking groups, and use them as "private armies" against the "enemies" of the corporations. Enemies can be whistleblowers or activists, Lawson found.

The author makes several statements that these criminal stalking groups not only harass targets specified by their leaders, but also are FOR HIRE - a kind of "revenge service" for those wealthy enough to hire them.

There are two distinct reasons why targets are harassed:

** The initial reason targets are placed on the stalking groups' "list"

** The reason the stalkers keep it up

Those two reasons should always be kept separate in your mind, reader. David Lawson's focus is mainly on the reason the stalkers **continue** to harass targets.

David Lawson's chapter on Selection of Targets may well be true, but it certainly doesn't describe the thousands of people who don't fit his list of targeted categories. Here are some of the categories of targets Lawson records in second book, "Cause Stalking":

- ** Abortion clinic workers
- ** People guilty of mistreatment of animals
- ** County clerks and local politicians
- ** Police officers
- ** Judges
- ** IRS and Treasury agents
- ** Civil rights activists
- ** Government or corporate whistleblowers

One thing David Lawson makes clear in describing the targets is that the ultimate goal of the groups is to destroy the targets. Those who have been stalked by organized citizen groups which are fed lies report that these groups do destroy targets with great efficiency.

Next, let's look at some of the typical OPERATIONS these groups carry out. These are paraphrased from Lawson's books below:

** Once a target has been selected, that target will be studied to ascertain the target's personality type, IQ, and personal history.

** Targets will be photographed, sometimes openly.

** Targets are kept under surveillance by large groups, and will always be followed. However, the stalkers doing the following are rotated, and this makes it difficult for the target to prove they are being followed.

** Lawson's "cause" or "terrorist" organized stalking groups do more than just follow targets, they perform break-ins, damage property, and, says Lawson, have assaulted, sometimes fatally, some targets. These stalkers also like to stalk children of a target.

** Firemen and even some police departments are reported as having a history of supporting "extremist" groups. (Lawson consistently blames "extremists" for organized stalking.) Lawson describes fire department equipment being used as part of stalker convoys. Lawson reports the participation of firemen, city workers and utility workers makes the stalkers believe they are doing great community service instead of committing crimes against innocent people.

** Lawson learned that city worker participation sometimes extends as far as tearing up the road in front of a target's home. This shows the depth of penetration into legitimate organizations of these stalkers.

** Some targets are selected just because they are "convenient," reports Lawson. Loners are good convenience targets, and those with a good network of family support are not.

** Neighbours of the target are often persuaded to participate. These neighbours can be intimidated by threats of harassment, and of damage to homes and vehicles.

Neighbours are plied with appeals to a sense of patriotism (the targets are painted as criminals and other types of undesirables) or the neighbours can be offered things like drugs, repairs to their homes, free taxi rides, or even just friendship. A major benefit to the stalkers is when they can persuade neighbours to give the stalkers a key to their residence.

** Lawson reports that targets are kept under surveillance around the clock. Stalkers detailed to keep the target under surveillance report the movements of the target by cell phone or two-way radio. Some stalkers will patrol the area to watch out for police, and if a target drives away from home, will begin to "tail" the target.

** Lawson found that in some locations, keeping a target under surveillance has almost become a "sport," and all who know what radio channel the activity is carried out on can participate. Some targets have become aware of the radio activity, and reported to Lawson that they hear a radio bulletin go out as soon as the target turns on their lights in the early morning.

** Targets who live in apartments can expect stalkers to move in to several apartments which adjoin theirs. Stalkers consider it important that their members have access to all apartments in all directions from that of the target. Stalkers also keep the target's vehicle under surveillance, says Lawson.

** Stalkers who keep targets under surveillance sometimes set up a system where, for example, if the target flushes a toilet, a car horn will honk every time in synchronism, or possibly a burst of noise from a power tool or hammering.

** Targets find that there are suddenly large numbers of people coming or going to or from apartments next to the target, accompanied by rowdiness enough to hold the attention of the target, but not quite enough for a successful complaint to building management or police.

** Lawson reports that the stalking groups tell their neighbours that the stalkers are some sort of citizens' group which "assists the police" and are there to "keep track of" the target for some legitimate-sounding reason. Stalkers use props like "case files," including photos of the target, to appear legitimate.

** Stalker will enter the target's home or apartment when the target is away, and they have lookouts patrolling a "perimeter" around the target's residence to watch for police. In apartments specifically, building staff are often co-opted by telling lies about the target. Building staff may also be intimidated and cooperate through fear of the stalkers. Pest control and alarm technicians sometimes provide access to the targets' apartments.

** Some targets, found Lawson, don't recognize that they are being deliberately harassed. Such unaware targets make an excuse such as "there are a lot of rude people in the world."

** Lawson reports that interception of targets' mail happens frequently. Targets will find their mail arriving late, or they will find some mail doesn't arrive at all. Stalkers sometimes "rub it in" by sitting at a nearby table in a restaurant discussing the target's missing mail, or sometimes stalkers may even drive by the target waving the missing mail at the target.

** Blocking of phone calls by telephone company staff happens routinely. The staffers may believe the target "deserves it," or for some perk offered by the stalkers.

** Stalkers put effort into destroying the target's social ties to family and friends. [This is made easy by choosing harassment methods which look like "life's normal breaks" to outside observers.] When the target inevitably describes the harassment, the target is likely to be seen as crazy. Lawson found that in some cases, more than one member of a family will receive the harassment.

** On the road, stalkers will often surround the travelling target and try to control the target's speed. To make it hard for the target to prove this crime, the stalkers doing vehicular harassment will frequently move off and a new group of harassers will take over.

** Stalkers like to drive around in convoys of 6 to 30 or even more vehicles, reports Lawson. Lawson found that a convoy all displaying high beams may be a stalker convoy.

** Sabotage of the target's vehicle happens, including scratching of the paint by a sharp object like a key, slashing the tires, even stealing licence plates. Stalkers avoid extremely dangerous sabotage like cutting brake lines, but they do engage in very expensive sabotage like draining oil or coolant to cause major repair bills and inconvenience.

** When a target walks in the community, he or she is followed everywhere. The stalkers seem to make a game out of trying to get into places with some restrictions on entry, such as

places of employment. Stalkers will carry clipboards, wear name badges on lanyards around their neck, or even carry phony police badges.

** Stalkers use harassment tactics that look “minor” to passers-by. These tactics include noisemaking near the target such as clicking ball point pens constantly, rattling keys or change, particularly when standing behind the target. If the target responds, the target can expect more of the same. When a target takes a seat in public, stalkers will sit nearby to deliver noise harassment, or to repeatedly tap their feet, sometimes on the target's chair. The goal is to keep the target uncomfortable constantly.

** Stalkers work at disrupting both business and personal relationships by character assassination. This can be effective for new relationships; it isn't always successful with people who know the target well.

** Starting rumours and passing lies at the target's workplace is another method reported by Lawson. Stalkers will pose as customers when the target works directly with the public, then make complaints about the target. One example would be where the target is a real estate agent, where bogus customers can take up huge amounts of their target's time without ever making an actual offer.

** Let me, Eleanor White, give you an example of how brutal and serious this "character assassination" can be:

One of our members, who prefers to remain anonymous, moved in with her husband and children to a house which, unknown to them, had been a methamphetamine lab. The chemicals used to brew meth apparently cause distinctive symptoms in the mouth. This family's dentist felt he was "helping law enforcement" by reporting them to local law enforcement as meth users. This was absolutely untrue, but the family didn't even know the report had been made and had no way to correct it. (In fact, in some places, dentists are REQUIRED to report suspected cases of meth use.)

Law enforcement in that area was apparently tied in to the citizen groups, and the family was harassed for many years. The husband died, apparently from exposure to these chemicals.

The lady, now a grandmother, steadfastly did detective work and eventually found out about her family's reputation, with some help from a policeman who was a personal friend, from a different jurisdiction. This policeman admitted off the record that "meth mouth" can result in people being submitted to citizen harassment groups for harassment.

Character assassination is complete, and has life-destroying consequences!

** Noise is one of the major means used by the stalkers. The stalkers use their cars to honk their horns or squeal their tires frequently as they pass the target's home.

** Stalkers use their access to nearby properties to create noise timed to target activities, such as the target leaving their home.

** Stalkers will make up nonsensical reasons to knock on the target's door.

** In apartment buildings, targets will be subjected to noise from “work”, like hammering or rapping on walls. The stalkers will “work” on these activities as long as possible, but avoiding

forming the basis for a legitimate complaint by the target.

** The stalkers will sometimes make noise indicating they are moving around in sync with movements of the target, from the apartment either above or below the target's apartment. [Eleanor White talking: This requires commercial through wall radar.]

** The stalkers will sometimes leave a nearby apartment [or home] in perfect sync with the target's leaving home, repeatedly. Sometimes the stalkers will arrive at their apartment repeatedly arrive at their apartment in perfect sync with the target's arriving home. Stalkers crowding elevators with the target also happens.

David Lawson's observations, paraphrased here, very accurately represent what targets of organized stalking experience from human stalkers. Please keep in mind that targets do not consider Lawson's conclusions that "anti-government groups," "Patriots," "extremist groups" or "foreign terrorists" are responsible, as accurate.

From the viewpoint of many targets, it is more likely that ordinary citizens from all age groups and walks of life are harassing us in an organized way, probably based on lies. Some targets have evidence that police play a role. In one case, someone claiming to be a retired police officer stated on a mainstream talk show about organized stalking that retired officers "sometimes make life hell" for targets who have done things they don't approve of.

Bottom line: In spite of David Lawson's excellent observations, we still can't explain with certainty what entity is overseeing this global harassment organization. David Lawson presented us few hints about that.

To locate a purchase source for his book, you can try a web search for:

"Cause Stalking" "David Lawson"

... keeping those quote marks as they are above. The book has been intermittently available by way of the amazon.com Internet bookseller.

Important Footnote

Many people, including police officers, don't believe the Lawson picture of organized stalking because "nobody has that much time on their hands."

The answer to that comment is that Lawson found much of the harassment is NOT spare time activity, but is in fact rolled in to the day's work for a wide variety of professions and trades.

Tradespeople and professionals simply carry on their normal careers. When the stalking group finds that a target has sought their services, the stalking group already knows which tradespeople are sympathetic to the stalking organization, and will alert them that the target is in fact designated. The tradespeople and professionals will then make sure the target receives treatment appropriate to the alleged "crimes" the target is said to be guilty of.

This carries through to stores, restaurants, and public transit as well.

So there is no need for harassers to have "time on their hands" in order for very vicious

harassment to be taking place. Only the target sees it all. Harassers may only carry out an occasional act against a target.

Beyond tradespeople, at any one time there are plenty of citizens of a community who are not currently working: housewives, children, the disabled, the retired, the homeless. These people are also recruited and have plenty of time and opportunity to help “punish” the target.

This, then, is the answer to critics who deny that anyone could have “that much time on their hands.”

Chapter 4: Through-Wall Electronic Weapons

Visit <http://www.targcomics.net> for twin comic strips illustrating organized stalking

Private investigator David Lawson presented us a thorough look at organized stalking by human beings in the community of the target. Most targets who have been targets for several years also experience a very invasive, inescapable form of harassment by through-wall electronic technology. (In virtually all cases to date, organized stalking appears to be a life sentence.)

In this chapter we will present some silent, through-wall, virtually zero trace evidence electronic technologies which can be used to literally destroy any quality of life a target may hope to have, **in the privacy of the target's home.**

Surprisingly, those technologies are not government secrets, and have been available to anyone with upper middle class income for one to five **decades!** Again, decades! The reason, reader, you may not be aware of them is that they were developed for legitimate uses, and some have not been widely publicized. And you, reader, have one of them right now in your home.

These technologies use the ability of radio signals to penetrate non-conducting walls, and use frequencies and modulation ("signal shaping") methods, which produce effects which are useful for covert harassment.

Here is the list through-wall harassment technologies currently available:

Weaponized microwave oven

A simple microwave oven, door removed, with the door interlock switch bypassed, and held against the bedroom wall of a target in an apartment building or semi-detached house. This device can cause a variety of disabling medical symptoms.

Some of the symptoms of microwave exposure are:

Asthma, cataracts, headaches, memory loss, early Alzheimer's, bad dreams, depression, fatigue, concentration loss, appetite loss, heart and blood pressure problems, and cancer.

Targets do report those symptoms, however, doctors almost never admit to patients that electronic harassment is even possible, never mind actually happening.

Voice to Skull

Joseph Sharp's voice to skull success, performed with Dr. James C. Lin's pulsed microwave transmitter, and publicly announced in 1974 at the University of Utah, at a seminar presented to the faculties of engineering and psychology.

That seminar, and the operating principle of Sharp's successful experiment, were described in the March 1975 "American Psychologist" journal. The operating principle, which has been improved upon in the more than three decades since Sharp's success, is based on the fact that one microwave radar pulse of medium to high power can produce an audible click in the hearing sense of a person in line with the signal. That effect has been called "radar hearing" since World War II.

Dr. Joseph Sharp used a computer to cause one microwave radar-like pulse to be transmitted every time a speaker's voice wave form swung from high to low, as illustrated below:

The result was that when Joseph Sharp sat in line with a microwave transmitter transmitting pulses as shown above, he could hear a "robotic" voice speaking the numerals 0 to 9. He did not carry the experiment further, at least according to available records. Sharp's experiment took place in 1973, and although the potential for microwave radiation to cause cancer wasn't as widely known, it may be that radiation danger is the reason this technology has not, at least publicly, been developed further.

Research into radar hearing by Dr. Allen Frey in the 1960s established that roughly three-tenths of a watt per square centimeter of skull surface is required to generate the clicks from which the voice is synthesized. Synthesis of voice from clicks is a primitive form of "digital audio."

For some years in the 1990s and early 2000s, the United States Army recognized "voice to skull" technology, which they abbreviated as "V2K," in their on line thesaurus. For reasons unknown, the Army removed that thesaurus entry circa 2007.

Some references to developing more advanced types of voice to skull can be found among

patents, and rare United States Air Force references to the technology in the late 1990s forward.

Voice to skull (V2S/V2K), a commercial version dubbed MEDUSA - "Mob Excess Deterrent Using Silent Audio", was proposed for commercial development for military and police use, per ABC news in summer 2008.

Targets report invasive sound transmissions of good fidelity at various times of day. Voices saying profane and disparaging things are common. False sounds of telephones ringing, pagers beeping, alarm clocks going off, knocking on the target's door, and other sounds have been reported. The fidelity of these transmissions indicates improvement over the method demonstrated by Dr. Joseph Sharp.

Silent Sound

Oliver Lowery's silent sound, U.S. patent 5,159,703, is the current method for "subliminal sound." "Silent Sound" replaced "time slice" subliminal sound, in which small slices of a subliminal message were inserted into an audio stream, such as at a movie or on TV, to influence the listener. Silent Sound is mixed with audio in places like department store Muzak systems to discourage shoplifting.

Although enhancements have been developed, at its simplest, a Silent Sound voice encoder takes a spoken message, and uses a circuit similar to a telephone voice changer to raise the frequency of the voice up near (but not exceeding) the upper limit of human hearing. The listener hears a fluctuating high-pitched tone, and any words cannot be discerned, consciously.

However, the brain can subconsciously decode the words. The brain takes advantage of the fact near the upper limit of hearing, the sensitivity to frequencies drops off. The sensitivity curve is sloped downwards in the Silent Sound frequency range, roughly 14,000 to 16,000 Hertz (cycles per second.) For readers with knowledge of radio detector circuits, recovering audio from a frequency modulated (FM) converted voice signal is done using "slope tuning." A concept diagram of how this works with Silent Sound is shown here:

How the brain decodes FM-encoded voice

"Silent Sound" is not a through-wall device by itself. However, when Silent Sound is transmitted to a target by way of a voice to skull through-wall transmitter, if the target is susceptible to hypnosis (many people are), the target's thought processes and personality could be severely disrupted over time, and the target would have no idea why this was happening, as the sound is essentially silent. The target may hear a high pitched tone or hiss, but no words. The target would be much less able to resist hypnotic suggestions than with audible speech.

It should be noted that many targets report hearing frequent or constant high-pitched tones or hissing.

"Silent Sound" subliminal hypnotic suggestion can also be piggybacked on to a target's cable TV or radio listening, as well as transmitted on a voice to skull signal.

The LIDA Machine

An old medical device, the Russian LIDA machine, a pulsed 40 watt, 40 MHz radio transmitter, which can be used to make a target exhausted on the job when pulsing at the rate consistent with sleep, and with a pulse rate increase, DEPRIVE a target of sleep too.

This device is a radio transmitter version of other types of trance induction devices, such as a swinging watch, or pulsing lights, or pulsing sound. Trance induction works using any low speed, regular stimulus. Even slowly swinging in a hammock or rocking in a rocking chair can induce sleep.

But if someone comes along and suddenly rocks a snoozing person's rocking chair at a high rock rate, that person is going to be forced awake. Same with a slowly beeping tone changing to a rapidly beeping tone. Alarm clocks use rapid beeps, for example.

The LIDA was originally designed as a drugless sedation machine. It was featured in a 1985 edition of a CNN "Special Report." An Associated Press photo of a LIDA machine, with one of the scientists who studied it, Dr. Ross Adey, is here:

The original LIDA machine uses not only a pulsing radio signal, but pulsing lights, sound and even radiant heat as well. It was designed to be used near the patient. The earliest report of the LIDA being in use I'm aware of is the report of a Korean prisoner of war who saw one in operation at a prison camp. That's half a century ago in terms of a radio harassment technology, which is quite simple, having been available for half a century.

(Note: Dr. Ross Adey and Dr. Eldon Byrd were scientists who studied the LIDA machine for possible weapons potential. There is no evidence that Dr. Adey or Dr. Byrd were ever associated with unethical activity.)

Organized stalking targets report overwhelming fatigue on the job at times. I'm retired now, but I was hit so hard with some sort of fatigue that I would have to find a room at work and lie down for as long as 30 minutes to just carry on. Concurrent with this, doctors could find no disease which could explain these very sudden, drop-you-in-your-tracks attacks.

Organized stalking targets also report extreme trouble sleeping, describing the sensation as "being injected with caffeine." I have experienced that too.

Through-Wall Radar

Through clothing (and through non-conductive wall) RADAR, widely used at airports and by police to look through clothing for hidden weapons. The harassment potential of this technology in the hands of organized stalking gangs is obvious.

Through wall/clothing radar images

The same security scanning radar used at airports, and now coming into use by police, can also view a target through a non-conductive wall. In the late 1990s, I pretended to be willing and able to buy such a unit, and was told by a salesman for the Millivision company, then making this equipment, no longer in business, that if I had the cash, then around \$100,000, I could have the equipment. I stated plainly that I was a private individual with no ties to law enforcement.

Many targets report being "followed" in their apartments by rapping noises from an adjacent apartment, particularly the one below. As the target walks about, rapping noise which sounds

as if the occupant of the adjacent apartment is doing "work" on something, will move as the target moves. This may go on for say, 15 minutes. It does seem as if someone has through-wall radar and is "enjoying" its use.

Once in a while, a target will experience a few weeks where every time they sit on the toilet, the water in the bathroom below theirs will be turned on at the exact time the target starts to urinate, and the water is turned off when the target's urine stream stops. Even throughout the night.

Readers may view this saved copy of a January 2010 sales video for a tactical through wall radar scanner called the "Xaver 800". This unit is specifically for monitoring or people and objects through walls in military and police tactical situations. The quoted price at that time was around \$30,000 which puts such units well within the purchase ability of determined criminal groups:

<http://www.multistalkervictims.org/video/xaver800.wmv>

The original link posted by the vendor of this video was:

http://www.camero-tech.com/xaver_vid.html

Those through-wall harassment technologies can all be proven to exist.

EPIC

There are some as yet to be demonstrated technologies as well, which are interesting in terms of harassment potential. One, code named EPIC, was announced on Fox News as under development by Houston, Texas firm Invocon, with funding by the U.S. Marine Corps.

EPIC, it is claimed, has the potential to disrupt the inner ear with an electromagnetic signal, through walls. Targets report disrupted balance, sometimes as they try to do delicate work, or work with the potential to spill things, which does happen regularly.

Implants

There has long been a suspicion by organized stalking targets that their disruptive effects may be due to implants in the body. There is very limited evidence that a handful of targets may be implanted, but by and large, targets do not report unexplained wounds, missing time, or medical scans with artificial objects which don't have a legitimate medical purpose. At time of writing, there are two targets who have had monitoring/tracking/control implants diagnosed by doctors and removed. Two out of thousands.

There are several who have medical scans which they claim show non-therapeutic, non-medical objects in their bodies. Without a professional diagnosis, I'm unwilling to claim those undiagnosed scans represent monitoring/tracking/control implants, though under the MKULTRA "mind control" crimes carried out in the 1950s-1970s by CIA contractors and affiliates, there was some implantation of the involuntary experimentees.

For today's organized stalking targets, the question of implants, possibly nano (microscopic)

sized, or even made of biological material, is wide open. My advice to organized stalking targets is to avoid compulsive worry that they are implanted without a high quality medical scan, at least. Because there are through-wall harassment technologies which do not require implants and which have been available for decades, implants should not be assumed, in my view.

Classified Technologies

It should be noted that while the five proven to exist, proven to work, through wall harassment technologies can severely disrupt a target's quality of life, they are easy to detect if a target has the right test equipment, and can be shielded against. Today's targets find that good quality shielding against electromagnetic signals does work now and then, temporarily, or partially, or, not for all who try shielding.

By contrast, materials that do not block electromagnetic (radio) signals do sometimes provide some relief. Examples are leather, rubber, and the common blue gel freezer ice packs.

The fidelity of today's through-wall sound projection weapons ("voice to skull") is much higher than Dr. Joseph Sharp's pulsed microwave method could produce.

Clearly, from the target's experiences, there is equipment in use now that is advanced beyond the proven technologies discussed here. This makes it much more difficult for targets to credibly prove the electronic harassment phase of the organized stalking crime.

Chapter 5: Experiences of the Targets

Visit <http://www.targcomics.net> for twin comic strips illustrating organized stalking

In this chapter, I'm going to relate some experiences of my own, and those of other targets.

No identities will be revealed here. It is strictly up to individual targets as to if or when they decide to publicly identify themselves. To maintain anonymity, I will not identify places or employer names. These experiences will be summarized, and may have taken place anywhere on planet Earth, as organized stalking has been reported in all industrialized countries.

Let me start by sharing some anecdotes about when targets first become aware they are being deliberately harassed. That is, the moment when they wake up to the fact that they are not simply experiencing incredible "bad luck."

** In my own case, I was working in the city of Toronto, Ontario, Canada, in 1980.

One day a rather nasty looking middle aged man on a bicycle brushed past me on the sidewalk in front of my apartment house, screeched to a stop, turned around, and stared intently at me until I entered the building. When I got home, I discovered my underwear had holes punched in the crotches. I found some supplies which had been nearly full were now nearly empty. There was no evidence of a break-in, so clearly, someone had used a key.

No valuable items, like my TV set, were taken.

I began to pop wide awake every single night, and no matter how still I laid there, no matter how quiet it was, no matter how physically comfortable I was, sleep was absolutely impossible until daybreak, then I had to get up to go to work.

Formerly friendly residents would no longer talk to me, but give me icy stares. Up until perhaps 11 pm each night, endless loud radios and banging noises became my constant companions. Before that, the apartment house had been quiet, and friendly.

Clearly "something was up," but I had no idea what. It wasn't until I read a paper on the Internet by former U.S. Army intelligence officer Julianne McKinney about organized stalking and electronic harassment activity, 16 years later, that I had any idea there were others going through this. No known cause for starting the harassment.

** A social worker reported that her harassment started when she was hired to care for a young girl who had been through Hellish ritual abuse torture, and had developed multiple personalities as a result. (This is normal for children who are severely tortured.) The social worker found that she was being followed. Her house was broken into and the intruders were going through her possessions. Verbal harassment by strangers followed. No obvious cause for starting the harassment.

** A mother of three grown children, who had done forensic accounting and had inexplicable difficulty on some of her assignments, suddenly experienced an "electrical sensation" around her head. She began hearing "tones" (a commonly reported experience) seeming to originate inside her head. She received voice to skull transmissions from a man claiming to be a physicist "experimenting" on her. No known cause for starting the harassment.

** A man reports that his harassment began when he turned down an attempt to recruit him to do illegal things like running drugs, fixing elections, and witness tampering by a prominent government agency. Apparent cause, his refusal to play along.

** A former prison inmate reported his harassment originated with a system called "the Inmate Computerized Tracking System." He reports that once this system was implemented unusual things happened in the institution, including suicides and suicide attempts, and numerous inmates being labelled mentally ill. When this man attempted to seek help from outside agencies, intense harassment by guards resulted. Apparently caused by this government surveillance program.

** A man who had held responsible jobs was driving along the interstate, when he received a voice to skull transmission saying "It's going to break." This was followed by a popping sound in the vehicle's steering mechanism. The left turn signal was then permanently broken. No known cause for starting the harassment.

** A middle-aged man with no criminal record and no habits which would engender suspicion became aware of his targeting when he accepted a job on a work visa to a neighbouring country. Initial clues included being singled out by customs for detailed questioning, and treatment for mild depression by doctors which didn't actually seem related to the problem. The odd, not relevant treatment by doctors continued. Strange signs of entry into the target's apartment began, including damage to blinds and cable ties showing up on lamp cords. Sounds of wires "scraping" in his apartment wall, always exactly at his bed time. No known cause for starting the harassment.

** A man moved to a new city and immediately began experiencing hostile behaviour of neighbours, "strange things" happening around his house, and harassing telephone calls. He then began to receive manipulated dreams, a common complaint. (Note: Even sleeping near a radio or TV can influence dreams, so influencing dreams by way of voice to skull and silent sound is not difficult.) No known cause for starting the harassment.

** A target noticed harassment starting just after telephone linemen were seen working just outside the target's home. The target began experiencing unusual clicks while talking on the phone, and when the target said "It seems someone is listening" the calls were cut off. (Noise and disruption on target telephones is common.) The target discovered their door unlocked or even open on returning from work, several days in a row. The television remote disappeared for a month. A man claiming to live in a motel overlooking the target's house offered to mow the lawn; obviously someone mowing lawns isn't going to be able to afford to live in a high quality motel. No known cause for starting the harassment.

** A female member of the army of a major country dated senior non-commissioned officers who were "revenge prone." Single stalking began which became organized stalking with electronic harassment. This female soldier reports hearing an attitude expressed by senior NCOs that single female soldiers need to be "managed." Apparent cause revenge, possibly related to a terminated relationship.

** A female software engineer began getting harassed on the job in the information technology security field. She had been getting top marks for her work prior to that. She began getting blacklisted, and heard specifically from one prospective employer that she was in fact blacklisted. There is an epidemic of severe abuse of foster children that you, reader,

may not be aware of because foster children are doled out by agencies ostensibly there to genuinely help children in distress. This software engineer's child was removed from her, something that happens to a number of organized stalking targets. Her child turned up in a hospital emergency room displaying sunken eyes and emaciation from starvation, with sores all over her mouth. No known cause for starting the harassment, however, from the targets' viewpoint, jealousy on the job is sometimes suspected.

** Two organized stalking targets report that their harassment began when they entered alcoholics anonymous or narcotics anonymous "12 step" residential programs. They report that these agencies apparently feel perfectly justified in "punishing" addicts. One such target reported that the operative phrase for targets who try to leave these programs is "We [the agency] will refund your misery."

** A single mom of a pre-teen boy began getting heavy fatigue attacks at work. Then began massive sabotage of multiple computers, her telephone service, and belongings in her home. An external roof drain pipe was repeatedly crushed or pried apart to flood the basement. Clothing was ripped, and even spots of engine oil were placed throughout her home and on her son's bed. Her bank account information kept being sabotaged. Telephone customer service people were strangely hostile and not helpful, actually lying about service calls. No known cause for her harassment, however she suspects a strange encounter with a man at a dance hall may have triggered the start of the harassment.

** A lady, with teenage daughter, had to enter alcoholics anonymous, a residential program, due to her alcoholism threatening her marriage. While there she met, and began a relationship with an ostensibly clean cut, intelligent, former drug addict. This man had criminal affiliations, and the target came into inside knowledge about a major crime. When she reported her inside knowledge to police, full fledged organized stalking began, including electronic attacks on her health, and murder of her pets. Moving to widely separated locations did not stop the harassment.

** A target's harassment was first noticed as sensitivity to bright lights at night. This was followed by transmissions of faked cell phone ringing (by voice to skull technology.) Actual voices followed, accompanied by tones. Balance difficulty (see the EPIC weapon in the chapter about through wall weapons) and vibration of the teeth began. Her significant other began to hear some of the voice to skull transmissions. Only minimal stalking by people reported. No known cause for starting the harassment.

** A man's start of harassment happened when one night, he was forced wide awake, with a pounding heart, at 3:00 am. (This is common.) His wife was sound asleep. He was on the wrong side of the bed, and the ceiling fan had been switched off by a cord switch instead of the outlet switch they normally used. No known cause for starting the harassment.

** Like the testimony above from a man whose harassment started with a voice to skull transmission that his vehicle's turn indicator was about to break, this man received a voice to skull transmission while a teenager undergoing dental work. He spoke about the transmission to the dentist, who got the man forced into the mental health system. The organized stalking program followed. No known cause for starting the harassment.

** A postal letter carrier accidentally hit the fence of a house connected to postal inspectors who were apparently involved in drug trafficking. That was enough to have the letter carrier's name turned over to organized stalkers, apparently because the letter carrier had become

aware of criminal activity there. Once organized stalking begins, it is virtually always for life.

** A registered nurse's harassment began after she accidentally linked to a local pornography network with a new computer. Heavy, invasive electronic harassment started immediately. No known cause for starting the harassment.

** A lady's voice to skull harassment began by perpetrators representing themselves (via voice to skull transmissions) as part of a "self help program." The perpetrators also contacted some of her family members, telling them the lady target had "ordered the service." No known cause for starting the harassment.

** A man reports organized stalking with electronic harassment for his entire life. No known cause for starting the harassment.

** A boarding house roomer's harassment started when people around him began discussing private things he had never discussed with anyone. This was followed by the classic harassment by members of the community, such as store clerks, and bank tellers. No known cause for starting the harassment.

** A lady's harassment started out as unexplained insults by neighbours, escalating into heavy electronic weapons harassment. No known cause for starting the harassment.

That's what it's like to have organized stalking and electronic harassment start up, for a sampling of targets.

Many targets have people or groups they suspect of being responsible for their harassment, but few actually know for sure. Because organized stalking and electronic harassment is so overwhelming, so total, so inescapable, and because virtually all officials deny that such a crime is possible, and because of known government criminal programs like MKULTRA (mind control by a variety of methods) or COINTELPRO (organized stalking to discredit activists,) many targets assume organized stalking is a government program.

The end result of the secrecy is that if you should come across target testimonials on the Internet, you can expect to see a lot of blame placed on government. This writer suspects government is indeed involved, but I have no evidence that today's organized stalking is in fact being done by government.

To my mind, the most important task ahead of targets of organized stalking is not speculating about whom to blame, but educating the general public. An aware public could apply enough pressure to get these crimes investigated seriously, and in all likelihood stopped.

One interesting occurrence relating to how targeting starts - several targets report actually being warned they were about to be targeted before the targeting started. In one case, a person photographed a harassment "skit" being performed on another target. A warning note was discovered on the photographer's vehicle saying "Do not interfere in what you do not know about."

Let's continue by relating some of the ongoing experiences reported by targets of organized stalking:

** Targets find that attempts are made to spoil every family, friendship and business

relationship they have. Investigator David Lawson did mention lies and fake criminal records being used. While estranged family, friends and business associates aren't inclined to discuss reasons why with targets, bribes and threats have been known to cause estrangement too. Whichever cause of the estrangement is used, it is almost always very effective. A number of targets who owned their businesses have lost their businesses to harassment of their customers.

** Groups of harassers sometimes swarm into a store, either just before a target arrives or just after the target arrives. These stalkers will crowd areas the target attempts to select items at, and will queue up at the checkout ahead of the target. This becomes obvious when it happens mid-day at times when shopping traffic is light. If a target operates on a regular schedule and visits, say, a convenience store on the way home from work regularly, the target is very likely to encounter constant long lineups indefinitely, even when the store is not in an area where high traffic occurs.

** Signs informing the public about organized stalking, as on targets' cars or even clothing or backpacks, have resulted in striking reductions in harassment in areas where the signs are displayed. This has been an effective technique in eliminating the store crowding skit described above. It is a guess, but possibly, the perpetrators don't want their local "troops" to visit web sites describing these crimes.

** One of the worst target experiences, thankfully not frequent, is the entry to the target's home while the target is out, and terrorizing the pet, giving the pet severe mental illness. Some pets are poisoned (one dog given antifreeze, making it blind.) Some pets and some wildlife are butchered and left on the target's doorstep.

** A sometimes intensely repeated skit, over perhaps a few weeks, is endless walking intercepts. Strangers will synchronize their walking speed and direction to force the target to take evasive action to avoid a collision. Several times over a short time span. Synchronized even to the point of turning the lock at exactly the same instant.

** A sometimes intensely repeated skit, over weeks, months or even years, also described by David Lawson's books, is highway harassment. This is especially true of targets who must commute to work by highways. Not only do perpetrators "box in" targets on the highway and force targets to drive more slowly than they had planned, but outright attempts to run the target off the road also happen. Targets occasionally collide with perpetrator vehicles and once in a while a target does run off the road. It appears that perpetrators may be given immunity by government for such attacks, however, I'm not aware of any explicit evidence to prove that.

** A sometimes intensely repeated skit, over weeks or months, are periods when perpetrators in vehicles will attempt to hit a target in a crosswalk, especially when no other traffic or witnesses are present. I've had several such encounters in 2007-2008. The drivers have been looking directly at me, not distracted, daytime, no visibility problems. I was entirely legal, all light signals being obeyed. The perpetrators entered the intersection and actually accelerated so as to hit me. The engines revved up noticeably. The drivers were middle-aged adults, not kids showing off. These are deliberate attempts, and not just imagining an attempt to hit is taking place. Other targets report the same.

** A sometimes intensely repeated skit, over perhaps a few weeks, is synchronized leaving and or arriving. Whenever the target leaves, a nearby neighbour will leave at exactly the

same time. This can also happen whenever the target arrives home. Another variation is, when the target does a lot of walking, to have someone on the opposite side of the street perfectly keep pace with the target for several blocks. While this happens in normal life, it doesn't happen day in and day out on streets that are nearly deserted.

** A skit by targets' neighbours is to start up noisy activity, such as a leaf blower when there are no leaves to be blown, the instant the target goes to their deck or back yard to relax.

** Another skit by targets' neighbours is to dump trash in the targets' yard while the target is away or not in a position to see the act.

** An ongoing skit is the entry to a target's home (usually) or sometimes automobile or workplace, when the target is absent. Furniture and objects are simply moved, as if to tell the target that the target is powerless to stop the entries. Once in a while the old "practical joke" of removing the screws holding a chair together will be performed.

** A strange experience by some targets is doctors who look at a clearly abnormal lab report, which the target can plainly see has very abnormal readings, and tell the target everything is fine. Confirmed by targets with medical training.

** Tradesmen hired by targets, or who are hired by say the target's employer to do work at the target's work area, "just always make mistakes." Mistakes that cost time, money, and create inconvenience for the target. By the time a target reaches middle age, they have a good idea of what the normal mistake probability is, and these cases are well outside that range.

For example, while I was in charge of the computer system at an employer, the telephone technician wrapped a cable spirally around a large group of computer data cables, making it impossible to move them as was sometimes needed. There was no need to do that. The normal way to handle that job would have been to use cable ties. We had to push the telephone company to return and re-do the job.

Another "mistake" occurred for a target when their car was towed away "by mistake."

** One somewhat common experience is that both by in-person approaches to the target, and voice to skull transmissions, the perpetrators attempt to convince the target that the target is in fact homosexual. This is a recurring "theme" in the harassment master menu.

** A lady videotaping harassment activity from her front porch was arrested for that legal act, on her front porch. When she read the report, the report stated she was actually around the corner on the sidewalk, taping one of the perpetrator's homes.

** Entry to targets' homes and moving objects into odd hiding places is done, probably to make the target think their mental faculties are deteriorating.

** Dumping of all sorts of consumable supplies is a regular experience for some targets. When a container is down to, say, 1/3 remaining, that's a time when the perpetrators will dump all but a small trace of the product. Labelling containers with the date purchased, the date opened, and in some cases, levels of product remaining and date, can reduce this activity.

** Ripping of clothing, and destruction of zippers, can be a common experience for some targets. Some targets experience emphasis on crotch and underarm places. One day I came home from work to find the crotches ripped out of every piece of underwear I owned. Sometimes, instead of a single rip, a small rip will be widened daily until the garment is destroyed. Sometimes, a crotch or underarm area will start out with many circular holes punched by a tapered awl, and these holes will be progressively widened over time.

** Destruction of furniture can happen to some targets. Items only a few weeks old will have welds, for example, snapped while the target is out. In one instance, I arrived home from work to find the back of my folding metal chair hacksawed off. In other instances, I have had folding chair legs bent, as if over a foot, while out at work.

** Thefts happen, but they are carefully done so that the value of the item is too low for the target to get police to take the incidents seriously. Theft of important personal papers is one type of theft experienced. While items of value are often not touched, there have been instances of moderate amounts of money (up to a couple of hundred dollars) stolen. It's not uncommon for stolen items to be returned AFTER the target replaces them.

** At work, targets experience sabotage of their work. At one job where I looked after the computer system, any programs I had written were frequently sabotaged overnight. Equipment "failed" at a rate far in excess of normal. "Failures" would sometimes be by way of someone working an equipment plug out just far enough to cause failure, and these tended to happen just as I was headed home, or about to bite into my sandwich at lunch time.

** Some targets report periods where everywhere they go, they are accompanied by very loud bird calls. This is true even where no birds are visible. While not a through-wall weapon, there is ultrasound technology which can project sound in a narrow beam, causing the impact point of the silent beam to appear to be the source of the projected sound. (Trade names such as "Acoustic Spotlight" or "HyperSonic Sound" are commercial versions of this technology.)

** Quite a few targets report at least one of the following through-wall electronic attacks:

- ** "Bee sting" sensations, particularly on the feet, particularly while trying to sleep
- ** Arms and/or legs jerking wildly when trying to sleep
- ** Extremely powerful, unquenchable, itching, no rash, no explanation from doctors
- ** Sudden extremely fast and heavy heartbeat, when fully relaxed
- ** Sudden extremely high body heat, fully relaxed, not after exercise
- ** Vibration of body parts and/or bed

Some of these may be high power microwave beams, which can penetrate walls, however, we cannot explain how some of these common attacks are done. These attacks do suggest that there is classified (secret) technology in use in some cases.

"The Phone Call"

Repeatedly heard in target reports is the sharp change in behaviour of professionals, clerks in commercial or government settings, and even just friendly people, when they get "the phone call."

A target will be receiving normal professional level attention from professionals or clerks, and

friendly conversation with people they meet, and all of a sudden, the phone rings. When the person taking the call returns, they suddenly begin very negative behaviour towards the target. This can include family members of the target.

The person who took the call suddenly “doesn't have time right now” to complete whatever interaction with the target was to happen.

Targets rarely find out what the call was about, but it does indeed look like something negative about the target was conveyed. One guess would be someone saying they are law enforcement, and that the target is under surveillance, a suspect of a serious crime, and that the interaction should stop right now. Again, that is a guess, but that is how many of those whose behaviour changes, seem to behave.

With professionals particularly, and with some clerks who handle very necessary services, this can be a significant problem. Some targets who have medical experience of some type report that they receive clearly faulty diagnoses from doctors. Often, these are of the type where a condition the target feels certain they have a medical condition needing attention and the doctor insists everything is OK.

In my case, having been a target for 29 years, I have had massive chronic fatigue, muscle and joint pain, and a great deal of psychological stress (particularly before I knew this was a crime with a name) and every single medical lab test is perfect. Everything tested for is precisely in the center of the normal range. This, while I had such heavy fatigue I had to find a hiding place and lie down on the floor for 30 minutes at a time at work just to keep going.

I simply don't believe all my lab tests were perfectly normal over that length of time. Just becoming a senior makes that highly unlikely.

Just one case, I had collapsed on my living room floor, and when I regained some strength went to emergency. I could hardly sit up in the chair - I went by taxi. In that case, the ER doc did show me my potassium was way high. But he said there was nothing wrong. I have no idea what such a lab report should have meant, but I mention it as some reason to suspect that some doctors may well have had “the phone call,” followed by ignoring physical symptoms.

Chapter 6: Bogus or Misleading Information

Visit <http://www.targcomics.net> for twin comic strips illustrating organized stalking

Readers who may be interested in learning more and following progress in the fight to expose and stop organized stalking would do well to understand that there is quite a bit of bogus or misleading information posted on web sites or blogs, posted on forums, or published in books. It is important to realize this, and to not write off people who report organized stalking as imagining it simply because a web site or book makes unsupportable claims.

I don't attempt to figure out the motives behind the posting of bad information. It's virtually impossible to find out, and creates a lot of emotional heat and wasted time trying. Possible motives could range from targets desperate for a quick fix grasping at straws, to deliberate disinformation. What is important is getting good information to the public and public officials, not witch hunting.

Here are some common forms of bogus or misleading information:

**** Blaming a specific entity, government or private, for the organized stalking program.**

At the time of writing, organized stalking targets do not have courtroom quality proof that any specific entity is responsible for organized stalking. Yes, government is highly suspect, because (a) similar programs such as COINTELPRO and some MKULTRA sub-programs were admitted to by the U.S. government, and (b) the sophistication and resources required to administer this program suggests both the budget and legal clout of government are required. But the bottom line is, we cannot prove any specific entity is actually doing the harassment at this point in time (time of writing.)

**** Too-good-to-be-true claims of inside information or employment having special access to inside information.**

Some articles written by targets claim a great deal of inside information and contacts, and often the writer will claim to have been a highly-placed government official. Such claims should be noted, but not accepted as fact, unless overwhelming independently checkable evidence from mainstream sources confirms the claims. There are people who love a following to stroke their egos, and claiming inside status and information to a group of targets desperate for relief is an easy way to build such a following. This writer sets such claims aside unless and until they are verified.

Claims of having worked for the CIA or NSA would be examples.

**** Claiming to know, for undeniable fact, which technology(ies) is/are in use.**

At the time of writing, the chapter titled "Through-Wall Electronic Weapons" is close to the full list of through-wall-capable electronic weapons capable of duplicating exactly the experiences of organized stalking targets.

At the time of writing, targets cannot prove exactly which technologies are used on them, because we do not have access to such electronic weapons information as is still classified secret. An article using the term "is consistent with" and mentioning a proven technology is credible. An article claiming to know exactly which weapon caused an

attack is doubtful, in this writer's opinion.

Targets tend to feel that if they can't identify the weapons used against them, they will not be believed. As they search for existing electronic weapons which can duplicate their attacks, it is common for them to find a weapon which seems at first glance to be relevant, but which can't actually duplicate the through-wall, silent attacks actually experienced.

A good example of unsupported claims are from targets who are absolutely certain, and claim as indisputable fact, that they have electronic implants in their bodies. This writer recommends that only if a target has a good quality medical scan showing objects which are foreign to the body, and not there for any legitimate medical purpose, should a target speculate to others that they are implanted. Making rigid claims of tracking/monitoring/harassment implantation as fact without at least a good quality medical scan is unsupportable unless tracking, monitoring, or harassment capable implants which are invisible to medical scanners are proven to exist and work.

**** Technology claims which have never actually been demonstrated.**

Exposing organized stalking means convincing non-targets, especially officials, that this crime is actually happening. By actual experience, this writer has found that the minimum requirement for convincing an official that such-and-such technology exists and works is a mainstream document describing the demonstration of the technology. When an official is reluctant, that may not be enough, but it is the minimum.

A statement by an individual, no matter how well qualified, that such-and-such technology works, is not enough for officials to accept the claim as reality, in my experience.

Both targets and members of the non-target public can use this simple criterion to easily sort out which technology claims are believable, and which are not.

If a technology was demonstrated successfully, and the article was printed in a mainstream publication (e.g., scientific journal, government report, major newspaper or magazine) the existence of that technology can be stated as fact. Otherwise, this writer suggests that particular technology claim must be treated as a personal opinion.

Claims that HAARP shortwave transmissions, which can only target very wide areas, are responsible for electronic harassment attacks of specific individuals and no one else, are examples of a common technology claim which has NOT been demonstrated.

Another common NOT-demonstrated claim is that brain electrical activity readings ("EEG" or electroencephalogram readings) can be accomplished from satellites.

**** Claiming patents prove a technology exists, has been demonstrated, and/or is in actual use against targets.**

Patents are issued on the basis that the Patent Office deems the idea workable and has a potential benefit to society. Patents are issued without requiring a successful demonstration.

Patents are useful for demonstrating both intent to use a given technology, and as a

basis for taking reports of attacks which the patented device might cause seriously, but they do not prove such a device has been built and placed into use.

(Targets and others looking into electronic weapons technology should note that patents contain references to other documents and could provide references to successful demonstrations.)

**** Trivial or unprovable organized stalking attacks presented prominently.**

Some web sites have presented some of the most trivial observations by targets, trivial enough that they can't be proven, as the worst types of attack. One example is "brighting" which is the shining of bright lights at the target, particularly at home at night. While "brighting" has indeed been used as a form of harassment by police, for example at the Waco, Texas siege, and is annoying, it's hardly even close to the worst form of attack.

"Air stalking," stalking by aircraft, helicopter or fixed wing, is just outright unprovable in most settings.

Being followed by young mothers pushing baby strollers and talking on their cell phones is another trivial, unprovable form of "attack."

When, reader, you encounter attacks which appear to be non-events, remember the really serious attacks described in this book, and don't assume trivial and unprovable attacks represent organized stalking.

For readers who are serious about sorting out good information from questionable or bogus information, this writer has established a credibility review web site to help with this:

<http://www.creviews.net>

Web sites and other publications are selected for review when an information item is promoted for use in educating the public. Not all information items relating to organized stalking and electronic harassment are reviewed, but those popular for activism material will be listed there. Explanations for the ratings are included.

Chapter 7: Conclusion

Visit <http://www.targcomics.net> for twin comic strips illustrating organized stalking

If you've stayed with me this far, you may be asking, along with us targets, what the heck can we actually do about this?

Clearly, the government officials who are paid (well) and sworn to serve and protect are providing cover for these crimes by denying organized stalking happens. That makes it really, really difficult.

Several targets have been told PRIVATELY by sympathetic police officers that they are under explicit orders to REFUSE to help us. One who contacted me was a chief of detectives. He told me privately that the orders to his department came from well above his local department, but he was not informed of the actual source of the orders.

There are numerous cases of police officers who refuse to log any complaints of organized stalking or electronic harassment in writing, or who become "unavailable" for subsequent inquiries by the targets. David Lawson reported that some departments actually support the organized stalkers.

Some targets have been heavily harassed by police under false charges, and a couple have been sent to state prison, having been framed by the authorities. (They were anti-organized stalking and electronic harassment activists.)

Many targets have posted their stories and their theories on web sites, in an attempt to engage public interest. Many of these sites state either theories about what technology is in use on them, or which organization is doing the harassment, as FACT, without having any solid evidence at all to back up their assertions. There are so many sites that I can't possibly review them all to separate those which offer simple testimonials minus the theories stated as facts, from the sites which are primarily guesswork.

And there are some sites which function as deliberate disinformation sites. (I am unable to prove the motives of the posters. I can only report the functionality of these sites.)

For these reasons, I have not included an extensive page with Internet links (site addresses.)

The Freedom From Covert Harassment and Surveillance (FFCHS) web site is currently a North American activism focal point, and is particularly good for networking of targets. The link for FFCHS is:

<http://www.freedomfchs.com>

There is a web site by a now inactive activist organization, (Citizens Against Technological and Community-based Harassment, or CATCH) which is very well written and continues to be maintained by the lady who started CATCH. This is the only site I am aware of which has been reported by targets as playing a tangible role in convincing officials that organized stalking is a "real crime" and deserves being taken seriously. The CATCH site has returned to the Internet at this NEW link:

<http://www.catchcanada.net>

A backup copy, which may not be up to date, is available here:

<http://www.multistalkervictims.org/catchcanada>

To the reader, I recommend you evaluate targets' web sites on the CITED REFERENCE MATERIALS, and if there is no mainstream cited reference for an assertion by a target about what organization is carrying out the stalking, or what technology is in use, consider those assertions as the personal opinion of the target.

There is an excellent personal narrative by a stalking target now available from online booksellers titled My Life Changed Forever - The Years I Have Lost as a Target of Organized Stalking by Elizabeth Sullivan, for readers who would like to learn more about the organized stalking experience.

As to what you, reader, can actually do to help?

The answer is simple and not expensive. Learn about organized stalking and electronic harassment, and discuss it with as many friends, family members and associates as you can comfortably. It is this writer's belief that the only way the crime of organized stalking can be stopped is to make the general public fully aware. And you, reader, can help with that easily.

And thank you for taking the time to read this booklet.

Appendix 1: Attorney's Call report to National Center for Victims of Crime

The reason this appendix is furnished to show the public the huge scale of people complaining about organized stalking to the National Center for Victims of Crime, a large, government supported private organization established to serve victims of crime. I, Eleanor White know how to access the original affidavit.

This is sworn testimony, equivalent to courtroom testimony. The reader must decide what weight to give this startling revelation (3 pages):

PAGE 1 OF 3

AFFIDAVIT OF KEITH [REDACTED]

I swear that the following is true and correct under the pains and penalties of perjury pursuant to the laws of these United States:

1. My name is Keith [REDACTED], and I reside at [REDACTED], New York. I am a licensed attorney in the state of New York.
2. On or about October 29, 2008 I called the National Center for Victims of Crime's ("NCVC") telephone help-line at 800-394-2255 and spoke to a victim advocate employee. I asked her if she was aware of gang stalking and if she offered any help. During that conversation she told me she was aware of gang stalking, but, that it was not a crime that NCVC provided any referral or help for. She also acknowledged that a large number of calls were regularly coming through the hotline regarding gang stalking from all around the United States. Upon being asked to estimate the number of gang stalking calls she received, she said ten (10) percent of the average call volume during her shift. She also admitted that NCVC kept "tallies" on the different types of complaints it received over the hotline from victims. Shortly thereafter I called back and spoke with another hotline advocate and she also estimated that 10 (ten percent) of the calls she received were gang stalking complaints. She admitted this meant thousands of calls per month. No victim advocate I spoke with, at this point or thereafter, would identify themselves, even by first name, unless I asked them to. I spoke with at least a total of seven victims advocates in the course of my conversations with NCVC.
3. Shortly thereafter, I called a third hotline advocate and asked her whether she could send me information regarding gang stalking complaints received by NCVC including statistics and/or tally numbers if she received supervisory approval. She informed me I would have to speak to her supervisor who she identified as Colleen. I asked when Colleen would be available to speak and she told me the next day.
4. On or about October 30, I called NCVC several times and finally got through to Colleen. I had a conversation with her and she acknowledged that she was familiar with the gang stalking calls being regularly received by NCVC. When I asked her to put something in writing regarding the gang stalking complaints being regularly received by NCVC, preferably with statistics, and send it to me, she told me she would not "memorialize" it in such a manner. I then asked for her supervisor's name and contact information. She then took my name and contact information, including my e-mail address. She first refused to tell me her supervisor's name. After I complained that she had taken my name and contact information she relented and told me his name was "Kevin". I found this type of secrecy in a non-governmental organization peculiar.
5. Later that same day, on or about October 30, 2008, I spoke with Kevin via a phone call I received from him. He identified himself as the Director of Victim's Services at NCVC. He acknowledged that organized gang stalking complaints were regularly

coming in to the hotline, and, further stated that no help or referral was being given. He said he had no organization to refer these complaints to for help, and, the role of NCVC was largely that of a referral service to government and private victim support organizations. He told me he would put together some information related to the gang stalking problem, and, try to include statistics. We agreed that said letter would be e-mailed by NCVC to my e-mail address on NCVC's letterhead. He said that he would first have to clear the transmission of this information with the United States Department of Justice "DOJ" because there was a clause in NCVC's federal funding contract with DOJ that made all of NCVC's internal information and records subject to DOJ control. When I clarified that this meant that DOJ had a property right to the information he agreed this was accurate. He said, however, that he did not foresee this being a problem and expected I would receive the information on gang stalking. The conversation was wholly amiable in tone from start to finish.

6. The next day, on or about October 31, 2008, I received an e-mail from The Executive Director of NCVC Mary Lou Leary denying my request. I later learned that Ms. Leary was a former U.S. Attorney and Assistant Attorney General for the United States Department of Justice.
7. On August 17, 2009 I made a follow-up call to the NCVC's Stalking Forum and told them I was having a problem with gang stalking in New York City. The telephone Victim's Advocate was kind enough to respond that her name was Paula. She was very knowledgeable about gang stalking, which she also referred to as group stalking. She admitted that the management of the NCVC were aware of gang stalking. When pressed for an anecdotal ballpark figure about the percentage of calls related to gang stalking she reflexively became very vague. She stated that she was instructed not to give out statistics on gang stalking even orally to a victim. She did state that it could be thousands of calls, but, because of afore-mentioned instructions by management she could not verify an actual number.

ORGANIZED STALKING: A TARGET'S VIEW

Eleanor White
Revision of January 1, 2010

This writer has been an activist working to expose the crime of organized stalking for over two decades, and has been in contact with other targets of organized stalking since 1996. I am a retired engineer. This booklet relates my opinions and conclusions, and readers should be aware that others may hold different opinions.

**** NOT COPYRIGHTED ****

The purpose of this document is to educate the public about the crime of organized stalking, and copying and distribution as widely as possible is encouraged.

It is requested that anyone wishing to incorporate part or all of this document into their activism materials, and who wishes to modify the original text, remove my name and replace it with their own.

Table of Contents

Chapter 1: What is "Organized Stalking?"	3
Chapter 2: Why Are Organized Stalking Targets Chosen?	11
Chapter 3: David Lawson's Landmark Investigation	16
Chapter 4: Experiences of the Targets	25
Chapter 5: Bogus or Misleading Information	32
Chapter 6: Conclusion	34
Appendix 1: Attorney's Call report to National Center for Victims of Crime	35

Chapter 1: What is "Organized Stalking?"

Before I answer that question, let me say that this booklet is written to introduce the general public and public officials to an old crime, "ganging up" on someone, which has been "improved" to the point where targets not only cannot escape it, but it can be done in ways that people around the target, who witness some of the harassing acts, will deny it is even happening.

While any type of "ganging up" is organized, the "organized stalking" described in this booklet makes use of instant electronic communication, and willingness of corrupt officials to look the other way, to achieve an environment in which the target can never escape some degree of harassment.

This is new. This is why I am writing this booklet. The world needs to know that some citizens are experiencing Hell on Earth which uses highly developed, inescapable, very difficult to prosecute, criminal tactics. Stalking has been brought to new level of both impact on the target, and deniability.

Deniability is Easy

Once a group of stalkers starts "working over" a target, deniability increases dramatically.

Imagine a group of school students who decide to "work over" a target. Each member of the group can do something minor, maybe once a day. "Accidentally" bumping into the target, passing a remark in the hall which can be said was not intended for the target, spilling something on the target's back in the lunchroom, stealing items of small value over time belonging to the target, and the familiar rumour campaign. No one member of the group ever does anything serious.

But from the target's viewpoint, they never have a nice day. There are always "minor" things going wrong. The rumour campaign turns formerly friendly schoolmates against the target.

The Mental Health System Makes Things Even Worse

Because the blame is spread out over a large group, if the student complains, school staff will very likely assume the target is the problem, that they are just "oversensitive", and perhaps that the target "needs mental health counselling." Such a slick, smooth "solution" to a "problem student."

With the participation of a large group, the targeted student's life can be ruined, and the target can get no help from the staff who are paid to resolve student problems. Complaints will bring the full weight of the mental health system down on the totally innocent target. And all this can be accomplished without any actual physical assault.

That group dynamic makes all this possible.

The Need For This Booklet

Perhaps, reader, you can see why a booklet of this sort is essential, to get organized stalking cases acted upon as seriously as single stalking cases have been.

This e-booklet is posted on line, and office services shops can often print copies on site as "print on demand" hard copy booklets. As new information becomes available, the content will be updated. However, until organized stalking is publicly acknowledged by the world's justice systems, an event which will render this booklet unnecessary, the content here is expected to be fairly complete for some time to come.

Organized Stalking Defined

"Organized stalking", in the current-day sense, is surveillance and harassment of a designated target by stalkers who are members of groups, which are networked throughout the industrialized nations of the world.

Organized stalking has three essential elements as the term is applied in this booklet:

- ** Organized stalking is harassment by a substantial number of people, not by an obsessed single stalker, nor by helpers recruited by an obsessed single stalker
- ** Organized stalking group members are given targets' names and/or have the target identified for them; they do not usually know the target beforehand
- ** Organized stalking community groups are tightly networked, within state or province, and internationally

Historical Roots?

Organized stalking in that sense, by reports I've seen, has been operating internationally at some level since at least the early 1990s. There may be a link to the similar FBI counterintelligence crimes which began under the program name COINTELPRO; certainly the tactics are similar. However, we do not at this time have evidence tying organized stalking to any specific government or private entity. We can say positively that government is ignoring all complaints of organized stalking, and to that extent is participating.

This sounds bizarre, however it is happening, and this booklet is to present information available about these crimes. Please withhold judgment until you have finished this booklet.

The Apparently Conflicting Stories and Theories

The reader needs to understand that the tactics used by today's organized stalkers are customized, taking elements from a huge "master menu," for each individual target. This, in turn, means that targets will tell different stories, and relate many different theories as to who is responsible, and why they, personally, are being targeted. Readers should understand that these sometimes seemingly conflicting reports by targets are not an indication that organized stalking "isn't real," but rather a result of the customization of individual harassment programs.

Readers also need to understand that organized stalking has been designed to operate in a fashion where any one casual observer will see only a tiny part of the full stalking regimen. Stalking attacks which are visible are always designed to appear to a casual observer as "life's normal breaks."

This is deliberate. It is done to make the target appear to be "complaining about nothing" to

people who know the target.

Secrecy Makes It All Work

Secrecy is the reason why organized stalking has continued and grown for over two decades, as of the time of writing, and why targets can hardly ever get public officials to take organized stalking as seriously as they do single stalker stalking. It is time for the anti-stalking laws of the early 1990s to finally be applied to organized stalking groups.

Legislators should facilitate this by adding specific references to organized stalking, and related tactics, into the stalking laws.

This writer believes that if organized stalking were to become sufficiently well known to the general public, it's unlikely this crime could continue, as it depends on secrecy and the non-belief of members of the public and public officials.

For Readers Who Want to Learn More

To readers who may look up organized stalking on the Internet, you need to be aware that there are alternate names and concepts used:

- ** group stalking
- ** multistalking
- ** community stalking (wide area supervised local harassment)
- ** gang stalking (organized stalking groups are NOT youth/race/biker/Mafia gangs)
- ** cause stalking (stalkers use a "cause" for recruitment)
- ** mobbing (organized stalking in the workplace)
- ** street theater (harassment skits done in view of the target out in the community)

The reader also needs to know that many web sites about organized stalking contain information and claims which are not backed up by mainstream documentation.

I ask the reader to understand the position of targets of organized stalking. Out of the blue, they experience a blizzard of harassment for which there is no apparent cause. Every facet of their lives has come under attack, both by strangers and even some of their acquaintances. They can be forced out of their jobs by unceasing harassment. Their children, pets, and family members can be harassed as well. All in ways carefully designed so that outside observers can dismiss complaints as "over-active imagination."

It is a perfectly natural response for a target to grasp at any article at all that mentions organized stalking, and post it uncritically, without regard to whether the claims in that article are valid.

It is perfectly natural to develop personal theories as to why this is suddenly happening to them, because there is almost no official information available.

Just as a drowning person will sometimes try to force a rescuer under water in a desperate bid to get above the water, organized stalking targets will proclaim their information and claims loudly, on the Internet, trying to get public attention to end their nightmare. They are

not able to exercise the laid back critical thinking that they could before the targeting began.

So for you, reader, it is essential to understand that the many web sites with unsupportable claims are not necessarily an indication of delusion, but instead, the natural result of desperation, perpetrator secrecy, and having all public officials deny organized stalking is even possible, never mind actually happening.

Separating Fact From Opinion

Within the target community, I urge targets to use the following criterion in deciding whether a claim made by anyone can be presented as fact:

Has the claim been published by a mainstream organization, under their name/logo?

If yes, present it as fact. If no, present it as someone's opinion.

This criterion has been forced on us by public officials who almost always have denied every statement we make to them. We are held to a much higher standard of evidence than targets of other crimes.

So I recommend readers adopt that same criterion when browsing web sites dealing with organized stalking. Not everything stated as a fact qualifies as fact, per the above criterion.

Disinformation Tactics?

There are a few web sites which appear, and we can't prove or disprove this, which appear to be attempts to trivialize the crime of organized stalking, by presenting minor acts of harassment (such as "brighting") or totally unprovable acts of harassment ("air stalking" - stalking by aircraft) at the top of the list. Attempts to discredit the victims of the COINTELPRO harassment programs, show that criminals who depend on public ignorance do work to discredit victims.

Another potential (I can't know anyone's true motive, so I have to use the term "potential") disinformation tactic may be the publication of books, DVDs and even tee shirts which contain valid organized stalking material but which are titled using the alleged mind control program name "MONARCH." According to actual survivors of MKULTRA-era mind control experiments, "MONARCH" is allegedly the name of a program of torturing captive children to force them to develop multiple personalities. (Hypnotically programming someone with multiple personalities is much easier.) Unlike "MKULTRA", MONARCH has never been admitted to by any government authority as their program.

To the reader, if you come across this MONARCH-labelled information about organized stalking, please know that organized stalking is not about torture of physically captive children, and in my opinion, trying to blur MONARCH with organized stalking at least has the appearance of deliberate disinformation. Attempts to associate organized stalking with another military program named "New Phoenix" likewise have the appearance of disinformation.

It's reasonable to assume that the organized stalking perpetrators will post sites to discredit organized stalking targets. Stick to the mainstream organization publication criterion for determining fact, noted above, so fact can be separated from opinion or disinformation

easily.

See also the chapter titled "Bogus or Misleading Information" for more on this topic.

Statistics

While public officials continue to deny that organized stalking happens, official statistics indicate that multiple stalker cases are being handled by the justice system. For example:

**** A U.S. Department of Justice special report**, January 2009, NCJ 224527, titled Stalking Victimization in the United States, which is available at this link (as of January 2009):

<http://www.ojp.usdoj.gov/bjs/pub/pdf/svus.pdf>

... reported the following statistics showing the occurrence of multiple stalking cases within the total of all U.S. recorded stalking cases in the 2005-2006 time range:

* 11% of victims said they had been stalked for 5 years or more.

[Eleanor White commenting: "5 years or more" is very characteristic of organized stalking, which usually never stops, because the justice systems refuse to acknowledge this crime and there is no pressing reason for the stalking groups to stop.]

An average of 10.6 percent of some 4.6 million stalking and harassment victims don't know the stalkers, since they're complete strangers.

[Eleanor White commenting: Almost all organized stalking is carried out by strangers, or people the target may know by sight but has never interacted with. The "4.6 million" figure above includes both stalking and harassment victims.]

Appendix table 3. Number of stalking offenders perceived by victim:

One 62.1%
Two 18.2%
Three or more 13.1%
Number unknown 6.5%
Total Number of victims 3,398,630

[Eleanor White comment: Adding three or more to number unknown, gives 19.6%. That could suggest something like half a million U.S. stalking victims may be organized stalking targets.]

**** From Statistics Canada:** The following statistic covers all reports to police relating to infractions of Canada's "Criminal Harassment" law, which covers stalking. Statistics Canada, the federal agency which maintains statistics for all areas of Canadian life, including policing. The following statement was in response to Eleanor White's request for a checkoff item on Canada's Uniform Crime Reporting (UCR) system denoting harassment reports involving simultaneous multiple harassers (Chief, Policing Services Program responding):

"Thank you for e-mail of Jan. 17. There is no need to add a new field to the national Uniform Crime Reporting (UCR) survey to collect information on multiple harassers,

as a field already exists for the identification of multiple accused persons for all criminal incidents reported to police. As an example, of the 10,756 incidents of criminal harassment reported to police in 2006, 1,429 of these (or 13%) involved more than one accused."

That is one criminal harassment report in eight, a very significant percentage. While not all of these would strictly fall under the organized stalking category, this rate of simultaneous multiple harassment reports at least hints that organized stalking may not be as rare as the general public seems to think.

**** A report on stalking posted by the American Journal of Psychiatry** on their web site, journal reference 158:795-798, May 2001, states ... 6 out of 201 (3%) respondents reported multiple stalkers... Compare that with the 13% in criminal harassment cases above, reported by Statistics Canada, and clearly, stalking by multiple stalkers is a very real crime, acknowledged by mainstream professionals.

Note carefully: There is such a thing as stalking by PROXY, in which a single stalker, motivated by amorous interest or mental illness, enlists helpers. Organized stalking is NOT stalking by proxy, but rather is stalking by a group totally independent of whomever originally submitted the target's name to the stalking group. The stalking group typically has no knowledge of why the target's name was submitted, and instead is given a lie, often that the target is a pedophile, to motivate the group stalking effort.

Link to the AJP article: <http://tinyurl.com/3fa3yw>

**** Article: "The Course and Nature of Stalking: A Victim Perspective",** Authors: Sheridan, Davies, Boon

Source: Howard Journal of Criminal Justice, Volume 40, Number 3, August 2001 , pp. 215-234(20)

In 5% of the cases (5/95), there was more than one stalker. pp.219

"In 5 cases perpetrators were part of a group..", pp.219

"... [40%] of victims (38) said that friends and or family of their stalker had also been involved in their harassment... This is a surprising find as the popular view of a stalker is of a lone and secretive individual." pp.222 [COMMENT: This suggests that the above "5%" cases may have been groups other than family or friends, which is suggestive of organized stalking as opposed to simple proxy stalking. Organized stalking involves groups which are networked everywhere, while proxy stalking has a single stalker who has a very personal focus on the target. Organized stalking groups also work on more than one target, unlike proxy stalking.]

Typical of organized stalking: "In 15% of cases, the victim could provide no possible reason for their harassment" pp.226

**** Statistics from the book Mobbing: Emotional Abuse in the American Workplace** show that in Sweden, about 3.5% of the working population is subject to mobbing, which is

organized stalking in the workplace. 3.5% of working people is roughly 1 person in a hundred total, and is in line with the organized stalking survey above.

**** Statistics from the U.S. Centers for Disease Control** concerning harassment and stalking cases give an overall figure for the U.S. of 4.5 people per 100 as having been harassed or stalked at one time. Our informal survey's result of about one person per 100 being targeted by organized stalking fits well within that 4.5 per 100 figure. (Source, ABC News)

**** Statistics from the British (government) Home Office** state that 1,900,000 people in the United Kingdom were victims of stalking or harassment at any one time as of the year 2001. That is about 3 people per hundred. Here again, the organized stalking survey's 1 person in a hundred is not out of line. Most interesting is that roughly 45% of the stalking victims are MEN! That suggests a very different picture from the conventional view of stalking victims being mostly women, and may well point toward the type of stalking described in this booklet. (Graph below shows all harassment offences, not specifically stalking.)

Here's another British stalking statistic:

Home Office Research Study 210 (1998 data):

THE OFFENDERS

The majority (79%) of incidents involved only one perpetrator.

[...]

Strangers were responsible in 34 per cent of incidents.

Those statistics are strongly suggestive of organized stalking, 79% involved one perpetrator means 21% involved more than one perpetrator. And stalking by strangers is the usual situation with organized stalkers. Even if only 5% of stalking cases are organized, 5% of a million cases could mean 50,000 organized stalking cases in the United Kingdom alone.

**** How common is the organized stalker personality type?**

For people who have trouble believing that stalkers can be as cunning and nasty as reports from organized stalking targets indicate, a psychiatrist, below, refers to one statistic indicating that as many as one stalker in just eight fits the observed personality of organized group stalkers:

Excerpt from book STALKING, by Debra A. Pinals, MD, Group for the Advancement of Psychiatry, Committee on Psychiatry and Law. Published by Oxford University Press US, 2007. ISBN 0195189841, 9780195189841, 260 pages

Page 42:

CLINICAL ASPECTS OF STALKING

"Finally the fourth type of stalking in the Sheridan and Boon (2002) taxonomy, sadistic stalking, comprised 12.9% of their sample. This construct looked at the victim in particular, identifying the victim as someone worth "spoiling" (Sheridan & Boon, 2002), and as someone who would not understand why they were targeted.

"The target and stalker began as low-level acquaintances, but eventually the stalker's motive is to frighten or demoralize the victim. For example, the stalker might reorder or remove private papers, or leave notes inside the victim's car, leaving the victim with some evidence that the stalker has had contact with their personal property.

"As the behavior progresses, the stalkers attempt to take full control of the victims' lives. Their behavior may include implied threats (e.g. pictures of tombstones) and sexual communications that intimidate or humiliate but would avoid directly pointing to the perpetrator.

"There may be reprieves from the behavior, which may later resume after a hiatus. These types of stalkers may work hard to defy police."

Chapter 2: Why Are Organized Stalking Targets Chosen?

The question "Why would a large group of people want to harass YOU?" is the big one. This "Why YOU" question is, in my view, the greatest barrier to exposing and stopping organized stalking.

The majority of organized stalking targets do not know for certain why they were chosen, in my experience corresponding with other targets. (I don't know why I was chosen either.) The majority of targets are not high profile people, or people with very sensitive knowledge of government secrets or corporate misdeeds.

Under the FBI's COINTELPRO ("counterintelligence") programs against activists in the 1960s, those who were targeted by FBI harassers were activists, for example, the Black Panthers.

We have a few government or corporate whistleblowers in the organized stalking target community. We have a few who were set to inherit large estates. We have some who found themselves targets during or after a hostile divorce. We have a few who were witnesses to crime. Some organized stalking targets are talk show hosts who broadcast about government and corporate crimes. Some organized stalking targets apparently "just ticked someone off."

But the barrier to credibility is the large number of targets who are "nobodies." I would estimate that perhaps 70% of organized stalking targets can't point with any certainty to the reason they were chosen to be targets. When these "nobodies" try to complain to the authorities about the harassment, they are told that stalking and harassment by groups never happens. I was told by the police officer hosting a group of stalking victims that because I could not name my ONE stalkER, I was not welcome to attend the support group.

"Nobodies" reporting organized stalking are told there is no such thing as an organized, well funded group, nor could there ever be, just to harass innocent individuals. And this is very logical sounding, to people who are not organized stalking targets. Such a glib dismissal is also a very easy way for a public official to "get rid of a problem person."

The end result is that the "system" heaps the ultimate "punishment" on the already desperate target - the target is often forced to undergo psychiatric treatment. This injustice pretty well disables further attempts by the target to get the crime remedied.

Organized stalking targets are never told why they were chosen, with a literal handful of exceptions. There is no visible accuser, no formal charges, no opportunity to defend one's self at trial, no appeal process. One day everything is fine, and suddenly you start to realize that you're experiencing unending hostile acts in the community, on the job or in school, in commercial establishments, and in the privacy of your home.

While some of the harassers say things to the target, if pressed, they consistently deny there is any harassment going on.

So the "Why YOU?" question remains the number one barrier to justice for targets. The "Why YOU?" question appears, as best we targets can discern, to have multiple parts to the answer.

Why Initially Versus Why Continue

"Why YOU?" covers two very different phases (time points during) of the target selection process:

- ** Why the target was initially **chosen** for organized stalking
- ** Why the target's harassers **continue** to commit the crimes against the target

Why Initially?

We've already listed some answer categories for the "why initially chosen" question:

- ** Government/corporate whistleblowers
- ** Inheritance disputes
- ** Hostile divorce
- ** Witnesses to crime
- ** Ticked someone off (revenge)
- ** Truth-telling talk show hosts
- ** Unknown (I estimate at roughly 70%)

Over time, large numbers of harassers participate. In fact, by rotating the harassers, the target is unable to finger one or even a few specific individuals as "the" criminal(s). A large number of the harassers are not known to the target, being seen by the target rarely, or only once.

Why Continue?

Clearly, this large, diverse, frequently rotating group of harassers are not all motivated, say, by taking sides in a hostile divorce, wishing to retaliate for a crime report by the target, or disagreement with what a talk show host has to say.

So WHY would the large, diverse group of harassers keep the harassment up for years and decades in some cases? And from city to city, state to state, and even country to country?

A very few targets get to see and hear enough, over the years, to know that for them, an ongoing LIE CAMPAIGN is what the harassers use to justify the harassment among themselves. Vicious rumours are told such as the target has a long criminal record, the target is a thief, the target is a prostitute, the target is doing drugs, the target sells drugs, and when the harasser supervisors really want maximum effort from their "troops," the target is a pedophile.

The pedophile lie is their ultimate weapon, and is used on both male and female targets.

The pedophile lie has been used on me, as while outdoors, away from witnesses, I've been called that to my face by some of the perpetrators. I had a neighbour, who had been actively harassing me with noise, take pornography to my place of work one day while I was home sick, and announce loudly to the receptionist that I had asked for the material.

They don't know (or possibly don't care) that I have no criminal record, have had no such sexual inclinations ever, and my total "police record" consists of two parking tickets, both paid on time.

Another lady in the same province has also been hounded by the pedophile lie, quite severely.

So at the LOCAL level, the answer as to why a "nobody" is harassed constantly is that once a vicious lie is circulated in the community, that target is no longer a nobody. They are high profile from that point onwards.

Why Continue Knowing the Target is Innocent?

Vicious lies explain why the often rotated local harassment "troops" keep harassing the target. But what about the supervisors, and some of the harassers who can see, over time, that the individual they have been detailed to harass really isn't, say, a pedophile, or other criminal?

(Interestingly, a few of my repeatedly-seen harassers have in fact stopped the harassment and become friendly. But there are still the hard core supervisors (and some of the repeatedly-seen perpetrators) who keep it up in spite of becoming aware their official lie about the target is a lie.)

Why do they keep it up? Why do they willingly take on additional targets in their area, knowing that lies about targets are being used?

Interestingly, one investigation turned up evidence that some harassers depend heavily on support of their peers, and they simply keep harassing targets to maintain approval by their peers, the feeling of being in the "in" crowd so to speak.

But this question shows that there are not only two parts relating to the to the "Why YOU?" question regarding initially then later on, but also that motive varies with the harassment organization LEVEL:

- ** The community level, frequently rotated harassment "troops"
- ** The supervisor and above levels

At this point in time, we have no detailed information about the supervisor and above levels of the harassment organization which we can prove in court. The incredibly seamless coordination of harassment groups from one town to the next, up to internationally, shows that there definitely are supervisors, and many levels above them. The fact that every single official repeats the same reply "There is no organized stalking. You need to see a psychiatrist." seems to indicate some sort of official cover is in effect.

The Official Cover Up

The question is, why would there be an official cover in effect?

We targets cannot answer that with any degree of certainty. At this time, I can only offer the reader an observation that local thuggery which is ignored by officials is a classic, repeating symptom of a dictatorship in the making. Criminal activity IGNORED BY OFFICIALS is very telling - it's exactly what happened in Nazi Germany and Soviet Russia during the runup to overt dictatorship.

Since we targets network with one another in all industrialized nations, we know that organized stalking is a crime which is world wide in scope, with the same master menu of tactics showing up everywhere.

Can this mean that citizens of this planet are witnessing the formation of a world wide dictatorship? From where I sit, that's about the only answer that makes sense, in light of what I observe.

History's dictators have often stated the wish to expand their control world-wide. Here in the early 21st century, it appears the technology and tactics are available to accomplish that.

My best guess as to why a large, well funded, internationally networked organization of “control freak” thugs exists is to work towards the common dream of past and no doubt current dictators or would-be dictators. That is pure guesswork at this point in time.

Why DECADES of Covert Harassment if it's a Political Program?

Again, this is guesswork on the part of the writer. Because targets experience no break in the harassment when moving over long distances, even from one country to another, this suggests that the proposed dictatorship in the making is world wide in scope. Setting up a successful world wide dictatorship, and doing so quietly and incrementally, is a huge undertaking. For success, it is likely the elite power brokers are choosing to be more careful than historical attempts, such as Hitler's Germany or Stalin's Russia.

For such an undertaking, a time span covering several generations may be seen as the price of success.

I suggest that in order to have a top of the line population control organization, the power elite can't simply post newspaper ads for people willing to totally ruin the lives of others, people they don't know. This time around, the power elite wants a corps of local “controllers” or “enforcers” which has been vetted over time as having “the right stuff” for ensuring success of a world dictatorship.

And because a huge number of local “enforcers” would be needed to ensure a successful dictatorship, a long period of time observing “enforcer” candidates acting against many real people would be the way to build the “enforcer corps.” Success of a world dictatorship requires that “enforcers” be obedient and not have personalities which doing unpleasant work is likely to change. And they need to be thoroughly practiced. And large in number.

So I suggest it is the need to recruit, train and observe a large number of “enforcers,” and the time that requires, which is responsible for decades of large-scale covert harassment.

Summary of Answers to the “Why?” Question

To summarize the parts of the "Why YOU?" question:

WHY ARE TARGETS INITIALLY CHOSEN?

- ** Government/corporate whistleblowers
- ** Inheritance disputes
- ** Hostile divorce
- ** Witnesses to crime
- ** Ticked someone off (revenge)
- ** Truth-telling talk show hosts
- ** Unknown (estimated at roughly 70%)

WHY ARE TARGETS HARASSED FOR YEARS AFTER BEING CHOSEN?

WHY DO THE LOCAL HARASSERS KEEP IT UP?

- ** Harasser wants to be with the "in crowd"
- ** Lies that the target has a long criminal record
- ** Lies that the target is a thief
- ** Lies that the target is a prostitute
- ** Lies that the target is a drug user
- ** Lies that the target is a drug dealer
- ** Lies that the target is a pedophile (child molester)

WHY ARE TARGETS HARASSED FOR YEARS BY PERPETRATORS WHO KNOW THE LIES ARE LIES?

- ** Unknown. Similarity to political thuggery during the formative stages of dictatorships is noted.

Chapter 3: David Lawson's Landmark Investigation

Shortly after the 9/11 attacks on the World Trade Center in New York City, organized stalking targets became aware of a book titled "Terrorist Stalking in America" by private investigator David Lawson. A sequel was published a few years later titled "Cause Stalking."

Both books cover the same topic, which Lawson calls "cause stalking," and which is a perfect match for the "organized stalking" discussed in this booklet.

Lawson worked for more than a decade with a Florida detective agency. It appears that his investigative work involved travel throughout the U.S. and Canada. He stated that his investigation covered 12 years, and likely was a spare time activity for him.

David Lawson reports in his books that he was casually listening to his public service radio scanner, and discovered a group using police-like terminology, but which did not sound as if they were actual police officers. Eventually, he learned of a restaurant where they met for meals, and visited one of this group's gatherings there.

This provided the curious David Lawson with a chance to gain the confidence of the group, and Lawson found that they were, in fact, carrying out organized stalking on designated targets. This group assumed the role of some sort of "special community police."

I'm going to discuss here David Lawson's essential findings. But first, I need to explain that while David Lawson's investigation is a godsend for targets of organized stalking, there are frankly some problems with his books. Lawson presents **observations**, and his personal **conclusions** as to who is responsible.

From my experience in the organized stalking target community, Lawson's observations are a perfect match for what targets experience from people in their community (or people encountered while travelling.) But Lawson's conclusions, as to who is responsible, do not match what I know about organized stalking, and in fact don't match his own reports about the members of the stalking groups and their recruiting procedures.

Should a reader acquire one of Lawson's books, I beg you, separate his observations while "riding with" the harassment groups, from his personal declarations as to who is responsible.

Lawson lays the blame at "extremist groups," "foreign terrorists," and "anti-government groups." Some "extremist groups" may be responsible; we targets cannot be sure because the people seen by us appear to be normal citizens, with really aggressive behaviour against us, often fuelled by lies about us.

We have seen no indications I'm aware of that any "foreign terrorists" are responsible.

But I am able to comment on one group in the United States which Lawson names, and that is the U.S. Patriot Movement. The Patriot Movement is not a tightly organized group, and its members are spread out throughout the U.S. What I know about them is mainly what I have heard their shortwave and Internet (with some AM/FM affiliates) broadcasters report about their goals and activities, since I began listening to them in 2002.

What I have heard consistently from perhaps 50 commentators over that time span is that they are people who research government documents, scientific reports, and under-reported

mainstream media reports both from the U.S. and foreign. They reference published history. The Patriot commentators have been warning since the mid-1990s that a world dictatorship is in the works. They present evidence which if true, very well shows there is reason to be concerned about that. They give source details and urge listeners to not accept their word, but to look up the original sources.

If what the broadcasters say is representative of the movement, these Patriots would be very much against organized stalking.

Lawson insinuates that the Patriots are "anti-government." That is absolutely untrue, based on my years of regular listening. The Patriots are opposed to crime in government, not government itself. They seek strict application of the U.S. Constitution, with power returned to the states and the people.

I have appeared on a number of their shows, as have several other organized stalking targets. While we targets don't feel the Patriots give our issue sufficient air time, we feel that the Patriots do support our work to expose and stop these crimes. In fact, at time of writing, 22 of the Patriot hosts have reported to me, either on the air or privately, that they also experience some of the things we do. In their case, they are essentially whistleblowers of government and corporate misdeeds, so it is not surprising that they would also be targeted.

Now it is possible that some people calling themselves "Patriots" may also be members of organized stalking groups. I have no way of knowing. But Lawson mentions the broadcasters as being involved in organized stalking, and unless he comes up with actual evidence, I will not accept that conclusion. That is my major reservation about David Lawson's books.

The main message I have for readers, should they acquire one of Lawson's books, is to suspend judgment about his conclusions as to who is responsible, but note that we targets give him excellent marks for his observations while "riding with" the harassment groups.

David Lawson discussed "cause" (organized) stalking with a few police officers during his investigation. He found an odd excuse made by police for allowing organized stalking to continue. The police claimed that somehow, harassment by groups amounts to "free speech." Lawson learned that:

** Police themselves are sometimes targets

** Police are very reluctant to talk about stalking by groups

** One officer acknowledged that stalking groups are growing in size and number

That statement by police, "In general, they said that 'cause stalking' is primarily a civil problem where the plaintiff has to prove financial loss" shows that police are definitely not interested in trying to go after organized stalkers. Since the early 1990s, there have been anti-stalking laws on the books. From that point forward, stalking is a criminal offence.

True, stalking, even by a known single stalker, is difficult to investigate and prosecute because no single act by a stalker needs to be seriously criminal. It takes quite a bit of investigative effort to prosecute what people who are not stalking targets consider something relatively minor. And when the "labour" of stalking is divided among members of a group, it is

even more difficult to prove culpability.

But the fact remains that stalking is a criminal offence, and that 'civil problem' statement by police is what could be called a "cop out", pun intended.

Lawson found that the recruits he managed to meet were blue collar workers. These recruits can bring very powerful abilities to the stalking group by way of having keys to locked spaces and apartments.

Security guards, city workers, taxi drivers, cable, telephone and electric utility workers also contribute to the stalking groups' ability to keep the target "in their sights," constantly, Lawson found.

Lawson reports some statements from the harassers themselves, expressing their attitude and motivation. The stalkers believe:

** They are a kind of "police" who actually rank ABOVE the sworn constabulary.

** Their groups "help" police by trying to alert people living in the target's area that the target did something really bad at prior locations.

** They see themselves as kind of "minutemen" - always at the ready to be dispatched when called, forming a network the target can never escape.

** They feel the fact that essentially all service workers and trades are members of the stalking groups makes them a force a target "doesn't want to mess with."

Lawson reports some statistics he gathered regarding what motivates the perpetrators:

** 25% follow the nominal "cause" they were recruited under

** 25% actually participate in the harassment

** 75% harass occasionally or not at all

** 10% join out of fear of being harassed themselves

Lawson describes recruits to these groups as "... those who feel powerless, inferior and angry."

Common sense is that naturally, such people would be easy to recruit for street and adjacent to the target's home harassment, but I would comment that lots of professionals put us (targets) down at every opportunity, declaring us mentally ill for even suggesting organized stalking is possible. These professionals don't "feel powerless, inferior, and angry."

And I doubt the many utility and city employees who participate feel "powerless, inferior, and angry" either. So while David Lawson has done a great job, some aspects of organized stalking have apparently escaped him.

One comment Lawson makes is that "Firemen across the country, and even some police officers, support these groups."

I have heard a number of reports that vehicular harassment has involved an above average number of vehicles that bear stickers of firefighters, or, a few targets have traced perpetrator

identities to firemen. One target discovered that a number of vehicular harassment cars, identified by licence number, were parked in a police station parking lot.

My personal take on why some firemen and police might back these groups is that many have a heightened sense of community service. If they can be persuaded that the target has a criminal record, the worst case being that of a pedophile, it would be natural for firefighters and police to want to "help keep the target in line".

The author concludes, as explained at a number of places in the book, that the "cause" the typical group is "working toward" is mainly an excuse to get the groups together. The main motivation of members who stay with these groups is the sense of power and belonging the group members derive. Having a "cause" enhances the feelings of power and righteousness, but group members, according to the author, are most concerned with how their fellow group stalkers feel about their "work" and accept them.

Lawson explains the attitude of the typical stalking group member towards the "cause" this way:

"Most active group members have only a general idea of the ideology of the group, but they don't particularly care."

These groups come into being and are run by leaders. Here is what the author says about them:

"Group leaders do have political goals and the belief that the end justifies the means."

Lawson describes leaders as considering their members "disposable." He states that some leaders work for corporations and politicians. Lawson states that leaders identify targets but don't directly supervise the harassment group members.

Lawson describes leaders as having an "air of mystery", "having worked for the CIA, NSA, or some other intelligence agency that doesn't reveal information about their employees." Lawson states that this "background" is likely mythology. If organized stalking is the leading edge of a world dictatorship, however, it's not impossible that the world's intelligence agencies could play a part.

How about financing these groups?

Although the author states that the pay is low, there are still very large expenses to harass people as thoroughly as targets report.

Lawson observed that the stalking groups he met and travelled with can afford to rent property adjacent to the target's home, pay for all modes of transportation so that stalkers can travel with a target, and the communications and coordination expenses to provide seamless "coverage" of targets regardless of where they travel. This adds up to significant expense.

Here is what the author learned about their financing:

Lawson discovered that corporations fund at least some of these stalking groups, and use them as "private armies" against the "enemies" of the corporations. Enemies can be whistleblowers or activists, Lawson found.

The author makes several statements that these criminal stalking groups not only harass targets specified by their leaders, but also are FOR HIRE - a kind of "revenge service" for those wealthy enough to hire them.

There are two distinct reasons why targets are harassed:

- ** The initial reason targets are placed on the stalking groups' "list"

- ** The reason the stalkers keep it up

Those two reasons should always be kept separate in your mind, reader. David Lawson's focus is mainly on the reason the stalkers **continue** to harass targets.

David Lawson's chapter on Selection of Targets may well be true, but it certainly doesn't describe the thousands of people who don't fit his list of targeted categories. Here are some of the categories of targets Lawson records in second book, "Cause Stalking":

- ** Abortion clinic workers
- ** People guilty of mistreatment of animals
- ** County clerks and local politicians
- ** Police officers
- ** Judges
- ** IRS and Treasury agents
- ** Civil rights activists
- ** Government or corporate whistleblowers

One thing David Lawson makes clear in describing the targets is that the ultimate goal of the groups is to destroy the targets. Those who have been stalked by organized citizen groups which are fed lies report that these groups do destroy targets with great efficiency.

Next, let's look at some of the typical OPERATIONS these groups carry out. These are paraphrased from Lawson's books, below:

- ** Once a target has been selected, that target will be studied to ascertain the target's personality type, IQ, and personal history.

- ** Targets will be photographed, sometimes openly.

- ** Targets are kept under surveillance by large groups, and will always be followed. However, the stalkers doing the following are rotated, and this makes it difficult for the target to prove they are being followed.

- ** Lawson's "cause" or "terrorist" organized stalking groups do more than just follow targets, they perform break-ins, damage property, and, says Lawson, have assaulted, sometimes fatally, some targets. These stalkers also like to stalk children of a target.

- ** Firemen and even some police departments are reported as having a history of supporting "extremist" groups. (Lawson consistently blames "extremists" for organized stalking.) Lawson describes fire department equipment being used as part of stalker convoys. Lawson reports the participation of firemen, city workers and utility workers makes the stalkers believe

they are doing great community service instead of committing crimes against innocent people.

** Lawson learned that city worker participation sometimes extends as far as tearing up the road in front of a target's home. This shows the depth of penetration into legitimate organizations of these stalkers.

** Some targets are selected just because they are "convenient," reports Lawson. Loners are good convenience targets, and those with a good network of family support are not.

** Neighbours of the target are often persuaded to participate. These neighbours can be intimidated by threats of harassment, and of damage to homes and vehicles.

Neighbours are plied with appeals to a sense of patriotism (the targets are painted as criminals and other types of undesirables) or the neighbours can be offered things like drugs, repairs to their homes, free taxi rides, or even just friendship. A major benefit to the stalkers is when they can persuade neighbours to give the stalkers a key to their residence.

** Lawson reports that targets are kept under surveillance around the clock. Stalkers detailed to keep the target under surveillance report the movements of the target by cell phone or two-way radio. Some stalkers will patrol the area to watch out for police, and if a target drives away from home, will begin to "tail" the target.

** Lawson found that in some locations, keeping a target under surveillance has almost become a "sport," and all who know what radio channel the activity is carried out on can participate. Some targets have become aware of the radio activity, and reported to Lawson that they hear a radio bulletin go out as soon as the target turns on their lights in the early morning.

** Targets who live in apartments can expect stalkers to move in to several apartments which adjoin theirs. Stalkers consider it important that their members have access to all apartments in all directions from that of the target. Stalkers also keep the target's vehicle under surveillance, says Lawson.

** Stalkers who keep targets under surveillance sometimes set up a system where, for example, if the target flushes a toilet, a car horn will honk every time in synchronism, or possibly a burst of noise from a power tool or hammering.

** Targets find that there are suddenly large numbers of people coming or going to or from apartments next to the target, accompanied by rowdiness enough to hold the attention of the target, but not quite enough for a successful complaint to building management or police.

** Lawson reports that the stalking groups tell their neighbours that the stalkers are some sort of citizens' group which "assists the police" and are there to "keep track of" the target for some legitimate-sounding reason. Stalkers use props like "case files," including photos of the target, to appear legitimate.

** Stalker will enter the target's home or apartment when the target is away, and they have lookouts patrolling a "perimeter" around the target's residence to watch for police. In apartments specifically, building staff are often co-opted by telling lies about the target. Building staff may also be intimidated and cooperate through fear of the stalkers. Pest

control and alarm technicians sometimes provide access to the targets' apartments.

** Some targets, found Lawson, don't recognize that they are being deliberately harassed. Such unaware targets make an excuse such as "there are a lot of rude people in the world."

** Lawson reports that interception of targets' mail happens frequently. Targets will find their mail arriving late, or they will find some mail doesn't arrive at all. Stalkers sometimes "rub it in" by sitting at a nearby table in a restaurant discussing the target's missing mail, or sometimes stalkers may even drive by the target waving the missing mail at the target.

** Blocking of phone calls by telephone company staff happens routinely. The staffers may believe the target "deserves it," or for some perk offered by the stalkers.

** Stalkers put effort into destroying the target's social ties to family and friends. [This is made easy by choosing harassment methods which look like "life's normal breaks" to outside observers.] When the target inevitably describes the harassment, the target is likely to be seen as crazy. Lawson found that in some cases, more than one member of a family will receive the harassment.

** On the road, stalkers will often surround the travelling target and try to control the target's speed. To make it hard for the target to prove this crime, the stalkers doing vehicular harassment will frequently move off and a new group of harassers will take over.

** Stalkers like to drive around in convoys or 6 to 30 or even more vehicles, reports Lawson. Lawson found that a convoy all displaying high beams may be a stalker convoy.

** Sabotage of the target's vehicle happens, including scratching of the paint by a sharp object like a key, slashing the tires, even stealing licence plates. Stalkers avoid extremely dangerous sabotage like cutting brake lines, but they do engage in very expensive sabotage like draining oil or coolant to cause major repair bills and inconvenience.

** When a target walks in the community, he or she is followed everywhere. The stalkers seem to make a game out of trying to get into places with some restrictions on entry, such as places of employment. Stalkers will carry clipboards, wear name badges on lanyards around their neck, or even carry phony police badges.

** Stalkers use harassment tactics that look "minor" to passers-by. These tactics include noisemaking near the target such as clicking ball point pens constantly, rattling keys or change, particularly when standing behind the target. If the target responds, the target can expect more of the same. When a target takes a seat in public, stalkers will sit nearby to deliver noise harassment, or to repeatedly tap their feet, sometimes on the target's chair. The goal is to keep the target uncomfortable constantly.

** Stalkers work at disrupting both business and personal relationships by character assassination. This can be effective for new relationships; it isn't always successful with people who know the target well.

** Starting rumours and passing lies at the target's workplace is another method reported by Lawson. Stalkers will pose as customers when the target works directly with the public, then make complaints about the target. One example would be where the target is a real estate

agent, where bogus customers can take up huge amounts of their target's time without ever making an actual offer.

** Let me, Eleanor White, give you an example of how brutal and serious this "character assassination" can be:

One of our members, who prefers to remain anonymous, moved in with her husband and children to a house which, unknown to them, had been a methamphetamine lab. The chemicals used to brew meth apparently cause distinctive symptoms in the mouth. This family's dentist felt he was "helping law enforcement" by reporting them to local law enforcement as meth users. This was absolutely untrue, but the family didn't even know the report had been made and had no way to correct it. (In fact, in some places, dentists are REQUIRED to report suspected cases of meth use.)

Law enforcement in that area was apparently tied in to the citizen groups, and the family was harassed for many years. The husband died, apparently from exposure to these chemicals.

The lady, now a grandmother, steadfastly did detective work and eventually found out about her family's reputation, with some help from a policeman who was a personal friend, from a different jurisdiction. This policeman admitted off the record that "meth mouth" can result in people being submitted to citizen harassment groups for harassment.

Character assassination is complete, and has life-destroying consequences!

** Noise is one of the major means used by the stalkers. The stalkers use their cars to honk their horns or squeal their tires frequently as they pass the target's home.

** Stalkers use their access to nearby properties to create noise timed to target activities, such as the target leaving their home.

** Stalkers will make up nonsensical reasons to knock on the target's door.

** In apartment buildings, targets will be subjected to noise from "work", like hammering or rapping on walls. The stalkers will "work" on these activities as long as possible, but avoiding forming the basis for a legitimate complaint by the target.

** The stalkers will sometimes make noise indicating they are moving around in sync with movements of the target, from the apartment either above or below the target's apartment. [Eleanor White talking: This requires commercial through wall radar.]

** The stalkers will sometimes leave a nearby apartment [or home] in perfect sync with the target's leaving home, repeatedly. Sometimes the stalkers will arrive at their apartment repeatedly arrive at their apartment in perfect sync with the target's arriving home. Stalkers crowding elevators with the target also happens.

David Lawson's observations, paraphrased here, very accurately represent what targets of organized stalking experience from human stalkers. Please keep in mind that targets do not consider Lawson's conclusions that "anti-government groups," "Patriots," "extremist groups" or "foreign terrorists" are responsible, as accurate.

From the viewpoint of many targets, it is more likely that ordinary citizens from all age groups

and walks of life are harassing us in an organized way, probably based on lies. Some targets have evidence that police play a role. In one case, someone claiming to be a retired police officer stated on a mainstream talk show about organized stalking that retired officers "sometimes make life hell" for targets who have done things they don't approve of.

Bottom line: In spite of David Lawson's excellent observations, we still can't explain with certainty what entity is overseeing this global harassment organization. David Lawson presented us few hints about that.

To locate a purchase source for his book, you can try a web search for:

"Cause Stalking" "David Lawson"

... keeping those quote marks as they are above. The book has been intermittently available by way of the amazon.com Internet bookseller.

Important Footnote

Many people, including police officers, don't believe the Lawson picture of organized stalking because "nobody has that much time on their hands."

The answer to that comment is that Lawson found much of the harassment is NOT spare time activity, but is in fact rolled in to the day's work for a wide variety of professions and trades.

Tradespeople and professionals simply carry on their normal careers. When the stalking group finds that a target has sought their services, the stalking group already knows which tradespeople are sympathetic to the stalking organization, and will alert them that the target is in fact designated. The tradespeople and professionals will then make sure the target receives treatment appropriate to the alleged "crimes" the target is said to be guilty of.

This carries through to stores, restaurants, and public transit as well.

So there is no need for harassers to have "time on their hands" in order for very vicious harassment to be taking place. Only the target sees it all. Harassers may only carry out an occasional act against a target.

Beyond tradespeople, at any one time there are plenty of citizens of a community who are not currently working: housewives, children, the disabled, the retired, the homeless. These people are also recruited and have plenty of time and opportunity to help "punish" the target.

This, then, is the answer to critics who deny that anyone could have "that much time on their hands."

Chapter 4: Experiences of the Targets

In this chapter, I'm going to relate some experiences of my own, and those of other targets.

No identities will be revealed here. It is strictly up to individual targets as to if or when they decide to publicly identify themselves. To maintain anonymity, I will not identify places or employer names. These experiences will be summarized, and may have taken place anywhere on planet Earth, as organized stalking has been reported in all industrialized countries.

Let me start by sharing some anecdotes about when targets first become aware they are being deliberately harassed. That is, the moment when they wake up to the fact that they are not simply experiencing incredible "bad luck."

** In my own case, I was working in the city of Toronto, Ontario, Canada, in 1980.

One day a rather nasty looking middle aged man on a bicycle brushed past me on the sidewalk in front of my apartment house, screeched to a stop, turned around, and stared intently at me until I entered the building. When I got home, I discovered my underwear had holes punched in the crotches. I found some supplies which had been nearly full were now nearly empty. There was no evidence of a break-in, so clearly, someone had used a key.

No valuable items, like my TV set, were taken.

I began to pop wide awake every single night, and no matter how still I laid there, no matter how quiet it was, no matter how physically comfortable I was, sleep was absolutely impossible until daybreak, then I had to get up to go to work.

Formerly friendly residents would no longer talk to me, but give me icy stares. Up until perhaps 11 pm each night, endless loud radios and banging noises became my constant companions. Before that, the apartment house had been quiet, and friendly.

Clearly "something was up," but I had no idea what. It wasn't until I read a paper on the Internet by former U.S. Army intelligence officer Julianne McKinney about organized stalking activity, 16 years later, that I had any idea there were others going through this. No known cause for starting the harassment.

** A social worker reported that her harassment started when she was hired to care for a young girl who had been through Hellish ritual abuse torture, and had developed multiple personalities as a result. (This is normal for children who are severely tortured.) The social worker found that she was being followed. Her house was broken into and the intruders were going through her possessions. Verbal harassment by strangers followed. No obvious cause for starting the harassment.

** A man reports that his harassment began when he turned down an attempt to recruit him to do illegal things like running drugs, fixing elections, and witness tampering by a prominent government agency. Apparent cause, his refusal to play along.

** A former prison inmate reported his harassment originated with a system called "the Inmate Computerized Tracking System." He reports that once this system was implemented unusual things happened in the institution, including suicides and suicide attempts, and

numerous inmates being labelled mentally ill. When this man attempted to seek help from outside agencies, intense harassment by guards resulted. Apparently caused by this government surveillance program.

** A middle-aged man with no criminal record and no habits which would engender suspicion became aware of his targeting when he accepted a job on a work visa to a neighbouring country. Initial clues included being singled out by customs for detailed questioning, and treatment for mild depression by doctors which didn't actually seem related to the problem. The odd, not relevant treatment by doctors continued. Strange signs of entry into the target's apartment began, including damage to blinds and cable ties showing up on lamp cords. Sounds of wires "scraping" in his apartment wall, always exactly at his bed time. No known cause for starting the harassment.

** A man moved to a new city and immediately began experiencing hostile behaviour of neighbours, "strange things" happening around his house, and harassing telephone calls. He found cigarette butts and pennies left in his home (a common experience among targets.) No known cause for starting the harassment.

** A target noticed harassment starting just after telephone linemen were seen working just outside the target's home. The target began experiencing unusual clicks while talking on the phone, and when the target said "It seems someone is listening" the calls were cut off. (Noise and disruption on target telephones is common.) The target discovered their door unlocked or even open on returning from work, several days in a row. The television remote disappeared for a month. A man claiming to live in a motel overlooking the target's house offered to mow the lawn; obviously someone mowing lawns isn't going to be able to afford to live in a high quality motel. No known cause for starting the harassment.

** A female member of the army of a major country dated senior non-commissioned officers who were "revenge prone." Single stalking began which became organized stalking. This female soldier reports hearing an attitude expressed by senior NCOs that single female soldiers need to be "managed." Apparent cause revenge, possibly related to a terminated relationship.

** A female software engineer began getting harassed on the job in the information technology security field. She had been getting top marks for her work prior to that. She began getting blacklisted, and heard specifically from one prospective employer that she was in fact blacklisted. There is an epidemic of severe abuse of foster children that you, reader, may not be aware of because foster children are doled out by agencies ostensibly there to genuinely help children in distress. This software engineer's child was removed from her, something that happens to a number of organized stalking targets. Her child turned up in a hospital emergency room displaying sunken eyes and emaciation from starvation, with sores all over her mouth. No known cause for starting the harassment, however, from the targets' viewpoint, jealousy on the job is sometimes suspected.

** Two organized stalking targets report that their harassment began when they entered alcoholics anonymous or narcotics anonymous "12 step" residential programs. They report that these agencies apparently feel perfectly justified in "punishing" addicts. One such target reported that the operative phrase for targets who try to leave these programs is "We [the agency] will refund your misery."

** A single mom of a pre-teen boy began getting heavy fatigue attacks at work. Then began

massive sabotage of multiple computers, her telephone service, and belongings in her home. An external roof drain pipe was repeatedly crushed or pried apart to flood the basement. Clothing was ripped, and even spots of engine oil were placed throughout her home and on her son's bed. Her bank account information kept being sabotaged. Telephone customer service people were strangely hostile and not helpful, actually lying about service calls. No known cause for her harassment, however she suspects a strange encounter with a man at a dance hall may have triggered the start of the harassment.

** A lady, with teenage daughter, had to enter alcoholics anonymous, a residential program, due to her alcoholism threatening her marriage. While there she met, and began a relationship with an ostensibly clean cut, intelligent, former drug addict. This man had criminal affiliations, and the target came into inside knowledge about a major crime. When she reported her inside knowledge to police, full fledged organized stalking began, including murder of her pets. Moving to widely separated locations did not stop the harassment.

** A postal letter carrier accidentally hit the fence of a house connected to postal inspectors who were apparently involved in drug trafficking. That was enough to have the letter carrier's name turned over to organized stalkers, apparently because the letter carrier had become aware of criminal activity there. Once organized stalking begins, it is virtually always for life.

** A registered nurse's harassment began after she accidentally linked to a local pornography network with a new computer. Heavy, invasive harassment started immediately. No known cause for starting the harassment.

** A man reports organized stalking for his entire life. No known cause for starting the harassment.

** A boarding house roomer's harassment started when people around him began discussing private things he had never discussed with anyone. This was followed by the classic harassment by members of the community, such as store clerks, and bank tellers. No known cause for starting the harassment.

** A lady's harassment started out as unexplained insults by neighbours. No known cause for starting the harassment.

That's what it's like to have organized stalking start up, for a sampling of targets.

Many targets have people or groups they suspect of being responsible for their harassment, but few actually know for sure. Because organized stalking is so overwhelming, so total, so inescapable, and because virtually all officials deny that such a crime is possible, and because of known government criminal programs like COINTELPRO (organized stalking to discredit activists,) many targets assume organized stalking is a government program.

The end result of the secrecy is that if you should come across target testimonials on the Internet, you can expect to see a lot of blame placed on government. This writer suspects government is indeed involved, but I have no evidence that today's organized stalking is in fact being done by government.

To my mind, the most important task ahead of targets of organized stalking is not speculating about whom to blame, but educating the general public. An aware public could apply enough pressure to get these crimes investigated seriously, and in all likelihood stopped.

One interesting occurrence relating to how targeting starts - several targets report actually being warned they were about to be targeted before the targeting started. In one case, a person photographed a harassment "skit" being performed on another target. A warning note was discovered on the photographer's vehicle saying "Do not interfere in what you do not know about."

Let's continue by relating some of the ongoing experiences reported by targets of organized stalking:

** Targets find that attempts are made to spoil every family, friendship and business relationship they have. Investigator David Lawson did mention lies and fake criminal records being used. While estranged family, friends and business associates aren't inclined to discuss reasons why with targets, bribes and threats have been known to cause estrangement too. Whichever cause of the estrangement is used, it is almost always very effective. A number of targets who owned their businesses have lost their businesses to harassment of their customers.

** Groups of harassers sometimes swarm into a store, either just before a target arrives or just after the target arrives. These stalkers will crowd areas the target attempts to select items at, and will queue up at the checkout ahead of the target. This becomes obvious when it happens mid-day at times when shopping traffic is light. If a target operates on a regular schedule and visits, say, a convenience store on the way home from work regularly, the target is very likely to encounter constant long lineups indefinitely, even when the store is not in an area where high traffic occurs.

** Signs informing the public about organized stalking, as on targets' cars or even clothing or backpacks, have resulted in striking reductions in harassment in areas where the signs are displayed. This has been an effective technique in eliminating the store crowding skit described above. It is a guess, but possibly, the perpetrators don't want their local "troops" to visit web sites describing these crimes.

** One of the worst target experiences, thankfully not frequent, is the entry to the target's home while the target is out, and terrorizing the pet, giving the pet severe mental illness. Some pets are poisoned (one dog given antifreeze, making it blind.) Some pets and some wildlife are butchered and left on the target's doorstep.

** A sometimes intensely repeated skit, over perhaps a few weeks, is endless walking intercepts. Strangers will synchronize their walking speed and direction to force the target to take evasive action to avoid a collision. Several times over a short time span. Synchronized even to the point of turning the lock at exactly the same instant.

** A sometimes intensely repeated skit, over weeks, months or even years, also described by David Lawson's books, is highway harassment. This is especially true of targets who must commute to work by highways. Not only do perpetrators "box in" targets on the highway and force targets to drive more slowly than they had planned, but outright attempts to run the target off the road also happen. Targets occasionally collide with perpetrator vehicles and once in a while a target does run off the road. It appears that perpetrators may be given immunity by government for such attacks, however, I'm not aware of any explicit evidence to prove that.

** A sometimes intensely repeated skit, over weeks or months, are periods when perpetrators in vehicles will attempt to hit a target in a crosswalk, especially when no other traffic or witnesses are present. I've had several such encounters in 2007-2008. The drivers have been looking directly at me, not distracted, daytime, no visibility problems. I was entirely legal, all light signals being obeyed. The perpetrators entered the intersection and actually accelerated so as to hit me. The engines revved up noticeably. The drivers were middle-aged adults, not kids showing off. These are deliberate attempts, and not just imagining an attempt to hit is taking place. Other targets report the same.

** A sometimes intensely repeated skit, over perhaps a few weeks, is synchronized leaving and or arriving. Whenever the target leaves, a nearby neighbour will leave at exactly the same time. This can also happen whenever the target arrives home. Another variation is, when the target does a lot of walking, to have someone on the opposite side of the street perfectly keep pace with the target for several blocks. While this happens in normal life, it doesn't happen day in and day out on streets that are nearly deserted.

** A skit by targets' neighbours is to start up noisy activity, such as a leaf blower when there are no leaves to be blown, the instant the target goes to their deck or back yard to relax.

** Another skit by targets' neighbours is to dump trash in the targets' yard while the target is away or not in a position to see the act.

** An ongoing skit is the entry to a target's home (usually) or sometimes automobile or workplace, when the target is absent. Furniture and objects are simply moved, as if to tell the target that the target is powerless to stop the entries. Once in a while the old "practical joke" of removing the screws holding a chair together will be performed.

** A strange experience by some targets is doctors who look at a clearly abnormal lab report, which the target can plainly see has very abnormal readings, and tell the target everything is fine. Confirmed by targets with medical training.

** Tradesmen hired by targets, or who are hired by say the target's employer to do work at the target's work area, "just always make mistakes." Mistakes that cost time, money, and create inconvenience for the target. By the time a target reaches middle age, they have a good idea of what the normal mistake probability is, and these cases are well outside that range.

For example, while I was in charge of the computer system at an employer, the telephone technician wrapped a cable spirally around a large group of computer data cables, making it impossible to move them as was sometimes needed. There was no need to do that. The normal way to handle that job would have been to use cable ties. We had to push the telephone company to return and re-do the job.

Another "mistake" occurred for a target when their car was towed away "by mistake."

** One somewhat common experience is that by in-person approaches to the target, the perpetrators attempt to convince the target that the target is in fact homosexual. This is a recurring "theme" in the harassment master menu.

** A lady videotaping harassment activity from her front porch was arrested for that legal act, on her front porch. When she read the report, the report stated she was actually around the

corner on the sidewalk, taping one of the perpetrator's homes.

** Entry to targets' homes and moving objects into odd hiding places is done, probably to make the target think their mental faculties are deteriorating.

** Dumping of all sorts of consumable supplies is a regular experience for some targets. When a container is down to, say, 1/3 remaining, that's a time when the perpetrators will dump all but a small trace of the product. Labelling containers with the date purchased, the date opened, and in some cases, levels of product remaining and date, can reduce this activity.

** Ripping of clothing, and destruction of zippers, can be a common experience for some targets. Some targets experience emphasis on crotch and underarm places. One day I came home from work to find the crotches ripped out of every piece of underwear I owned. Sometimes, instead of a single rip, a small rip will be widened daily until the garment is destroyed. Sometimes, a crotch or underarm area will start out with many circular holes punched by a tapered awl, and these holes will be progressively widened over time.

** Destruction of furniture can happen to some targets. Items only a few weeks old will have welds, for example, snapped while the target is out. In one instance, I arrived home from work to find the back of my folding metal chair hacksawed off. In other instances, I have had folding chair legs bent, as if over a foot, while out at work.

** Thefts happen, but they are carefully done so that the value of the item is too low for the target to get police to take the incidents seriously. Theft of important personal papers is one type of theft experienced. While items of value are often not touched, there have been instances of moderate amounts of money (up to a couple of hundred dollars) stolen. It's not uncommon for stolen items to be returned AFTER the target replaces them.

** At work, targets experience sabotage of their work. At one job where I looked after the computer system, any programs I had written were frequently sabotaged overnight. Equipment "failed" at a rate far in excess of normal. "Failures" would sometimes be by way of someone working an equipment plug out just far enough to cause failure, and these tended to happen just as I was headed home, or about to bite into my sandwich at lunch time.

"The Phone Call"

Repeatedly heard in target reports is the sharp change in behaviour of professionals, clerks in commercial or government settings, and even just friendly people, when they get "the phone call."

A target will be receiving normal professional level attention from professionals or clerks, and friendly conversation with people they meet, and all of a sudden, the phone rings. When the person taking the call returns, they suddenly begin very negative behaviour towards the target. This can include family members of the target.

The person who took the call suddenly "doesn't have time right now" to complete whatever interaction with the target was to happen.

Targets rarely find out what the call was about, but it does indeed look like something negative about the target was conveyed. One guess would be someone saying they are law

enforcement, and that the target is under surveillance, a suspect of a serious crime, and that the interaction should stop right now. Again, that is a guess, but that is how many of those whose behaviour changes, seem to behave.

With professionals particularly, and with some clerks who handle very necessary services, this can be a significant problem. Some targets who have medical experience of some type report that they receive clearly faulty diagnoses from doctors. Often, these are of the type where a condition the target feels certain they have a medical condition needing attention and the doctor insists everything is OK.

In my case, having been a target for 29 years, I have had massive chronic fatigue, muscle and joint pain, and a great deal of psychological stress (particularly before I knew this was a crime with a name) and every single medical lab test is perfect. Everything tested for is precisely in the center of the normal range. This, while I had such heavy fatigue I had to find a hiding place and lie down on the floor for 30 minutes at a time at work just to keep going.

I simply don't believe all my lab tests were perfectly normal over that length of time. Just becoming a senior makes that highly unlikely.

Just one case, I had collapsed on my living room floor, and when I regained some strength went to emergency. I could hardly sit up in the chair - I went by taxi. In that case, the ER doc did show me my potassium was way high. But he said there was nothing wrong. I have no idea what such a lab report should have meant, but I mention it as some reason to suspect that some doctors may well have had "the phone call," followed by ignoring physical symptoms.

Chapter 5: Bogus or Misleading Information

Readers who may be interested in learning more and following progress in the fight to expose and stop organized stalking would do well to understand that there is quite a bit of bogus or misleading information posted on web sites or blogs, posted on forums, or published in books. It is important to realize this, and to not write off people who report organized stalking as imagining it simply because a web site or book makes unsupportable claims.

I don't attempt to figure out the motives behind the posting of bad information. It's virtually impossible to find out, and creates a lot of emotional heat and wasted time trying. Possible motives could range from targets desperate for a quick fix grasping at straws, to deliberate disinformation. What is important is getting good information to the public and public officials, not witch hunting.

Here are some common forms of bogus or misleading information:

**** Blaming a specific entity, government or private, for the organized stalking program.**

At the time of writing, organized stalking targets do not have courtroom quality proof that any specific entity is responsible for organized stalking. Yes, government is highly suspect, because (a) similar programs such as COINTELPRO were admitted to by the U.S. government, and (b) the sophistication and resources required to administer this program suggests both the budget and legal clout of government are required. But the bottom line is, we cannot prove any specific entity is actually doing the harassment at this point in time (time of writing.)

**** Too-good-to-be-true claims of inside information or employment having special access to inside information.**

Some articles written by targets claim a great deal of inside information and contacts, and often the writer will claim to have been a highly-placed government official. Such claims should be noted, but not accepted as fact, unless overwhelming independently checkable evidence from mainstream sources confirms the claims. There are people who love a following to stroke their egos, and claiming inside status and information to a group of targets desperate for relief is an easy way to build such a following. This writer sets such claims aside unless and until they are verified.

Claims of having worked for the CIA or NSA would be examples.

**** Technology claims which have never actually been demonstrated.**

Some organized stalking targets believe they are targets of advanced technology.

Exposing organized stalking means convincing non-targets, especially officials, that this crime is actually happening. By actual experience, this writer has found that the minimum requirement for convincing an official that such-and-such technology exists and works is a mainstream document describing the demonstration of the technology. When an official is reluctant, that may not be enough, but it is the minimum.

A statement by an individual, no matter how well qualified, that such-and-such technology works, is not enough for officials to accept the claim as reality, in my experience.

Both targets and members of the non-target public can use this simple criterion to easily sort out which technology claims are believable, and which are not.

If a technology was demonstrated successfully, and the article was printed in a mainstream publication (e.g., scientific journal, government report, major newspaper or magazine) the existence of that technology can be stated as fact. Otherwise, this writer suggests that particular technology claim must be treated as a personal opinion.

**** Trivial or unprovable organized stalking attacks presented prominently.**

Some web sites have presented some of the most trivial observations by targets, trivial enough that they can't be proven, as the worst types of attack. One example is "brighting" which is the shining of bright lights at the target, particularly at home at night. While "brighting" has indeed been used as a form of harassment by police, for example at the Waco, Texas siege, and is annoying, it's hardly even close to the worst form of attack.

"Air stalking," stalking by aircraft, helicopter or fixed wing, is just outright unprovable in most settings.

Being followed by young mothers pushing baby strollers and talking on their cell phones is another trivial, unprovable form of "attack."

When, reader, you encounter attacks which appear to be non-events, remember the really serious attacks described in this book, and don't assume trivial and unprovable attacks represent organized stalking.

Chapter 6: Conclusion

If you've stayed with me this far, you may be asking, along with us targets, what the heck can we actually do about this?

Clearly, the government officials who are paid (well) and sworn to serve and protect are providing cover for these crimes by denying organized stalking happens. That makes it really, really difficult.

Several targets have been told PRIVATELY by sympathetic police officers that they are under explicit orders to REFUSE to help us. One who contacted me was a chief of detectives. He told me privately that the orders to his department came from well above his local department, but he was not informed of the actual source of the orders.

There are numerous cases of police officers who refuse to log any complaints of organized stalking in writing, or who become "unavailable" for subsequent inquiries by the targets. David Lawson reported that some departments actually support the organized stalkers.

Some targets have been heavily harassed by police under false charges, and a couple have been sent to state prison, having been framed by the authorities. (They were anti-organized stalking activists.)

Many targets have posted their stories and their theories on web sites, in an attempt to engage public interest. Many of these sites state a specific organization is doing the harassment, as FACT, without having any solid evidence at all to back up their assertions. There are so many sites that I can't possibly review them all to separate those which offer simple testimonials minus the theories stated as facts, from the sites which are primarily guesswork.

For these reasons, I have not included an extensive page with Internet links (site addresses.)

To the reader, I recommend you evaluate targets' web sites on the CITED REFERENCE MATERIALS, and if there is no mainstream cited reference for an assertion by a target about what organization is carrying out the stalking, consider those assertions as the personal opinion of the target.

There is an excellent personal narrative by a stalking target now available from online booksellers titled [My Life Changed Forever - The Years I Have Lost as a Target of Organized Stalking](#) by Elizabeth Sullivan, for readers who would like to learn more about the organized stalking experience.

As to what you, reader, can actually do to help?

The answer is simple and not expensive. Learn about organized stalking, and discuss it with as many friends, family members and associates as you can comfortably. It is this writer's belief that the only way the crime of organized stalking can be stopped is to make the general public fully aware. And you, reader, can help with that easily.

And thank you for taking the time to read this booklet.

Appendix 1: Attorney's Call report to National Center for Victims of Crime

The reason this appendix is furnished to show the public the huge scale of people complaining about organized stalking to the National Center for Victims of Crime, a large, government supported private organization established to serve victims of crime. I, Eleanor White know how to access the original affidavit.

This is sworn testimony, equivalent to courtroom testimony. The reader must decide what weight to give this startling revelation (3 pages):

PAGE 1 OF 3

AFFIDAVIT OF KEITH [REDACTED]

I swear that the following is true and correct under the pains and penalties of perjury pursuant to the laws of these United States:

1. My name is Keith [REDACTED], and I reside at [REDACTED], New York. I am a licensed attorney in the state of New York.
2. On or about October 29, 2008 I called the National Center for Victims of Crime's ("NCVC") telephone help-line at 800-394-2255 and spoke to a victim advocate employee. I asked her if she was aware of gang stalking and if she offered any help. During that conversation she told me she was aware of gang stalking, but, that it was not a crime that NCVC provided any referral or help for. She also acknowledged that a large number of calls were regularly coming through the hotline regarding gang stalking from all around the United States. Upon being asked to estimate the number of gang stalking calls she received, she said ten (10) percent of the average call volume during her shift. She also admitted that NCVC kept "tallies" on the different types of complaints it received over the hotline from victims. Shortly thereafter I called back and spoke with another hotline advocate and she also estimated that 10 (ten percent) of the calls she received were gang stalking complaints. She admitted this meant thousands of calls per month. No victim advocate I spoke with, at this point or thereafter, would identify themselves, even by first name, unless I asked them to. I spoke with at least a total of seven victims advocates in the course of my conversations with NCVC.
3. Shortly thereafter, I called a third hotline advocate and asked her whether she could send me information regarding gang stalking complaints received by NCVC including statistics and/or tally numbers if she received supervisory approval. She informed me I would have to speak to her supervisor who she identified as Colleen. I asked when Colleen would be available to speak and she told me the next day.
4. On or about October 30, I called NCVC several times and finally got through to Colleen. I had a conversation with her and she acknowledged that she was familiar with the gang stalking calls being regularly received by NCVC. When I asked her to put something in writing regarding the gang stalking complaints being regularly received by NCVC, preferably with statistics, and send it to me, she told me she would not "memorialize" it in such a manner. I then asked for her supervisor's name and contact information. She then took my name and contact information, including my e-mail address. She first refused to tell me her supervisor's name. After I complained that she had taken my name and contact information she relented and told me his name was "Kevin". I found this type of secrecy in a non-governmental organization peculiar.
5. Later that same day, on or about October 30, 2008, I spoke with Kevin via a phone call I received from him. He identified himself as the Director of Victim's Services at NCVC. He acknowledged that organized gang stalking complaints were regularly

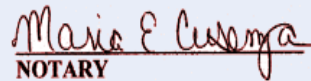

coming in to the hotline, and, further ~~stated that no~~ help or referral was being given. He said he had no organization to refer these complaints to for help, and, the role of NCVC was largely that of a referral service to government and private victim support organizations. He told me he would put together some information related to the gang stalking problem, and, try to include statistics. We agreed that said letter would be e-mailed by NCVC to my e-mail address on NCVC's letterhead. He said that he would first have to clear the transmission of this information with the United States Department of Justice "DOJ" because there was a clause in NCVC's federal funding contract with DOJ that made all of NCVC's internal information and records subject to DOJ control. When I clarified that this meant that DOJ had a property right to the information he agreed this was accurate. He said, however, that he did not foresee this being a problem and expected I would receive the information on gang stalking. The conversation was wholly amiable in tone from start to finish.

6. The next day, on or about October 31, 2008, I received an e-mail from The Executive Director of NCVC Mary Lou Leary denying my request. I later learned that Ms. Leary was a former U.S. Attorney and Assistant Attorney General for the United States Department of Justice.
7. On August 17, 2009 I made a follow-up call to the NCVC's Stalking Forum and told them I was having a problem with gang stalking in New York City. The telephone Victim's Advocate was kind enough to respond that her name was Paula. She was very knowledgeable about gang stalking, which she also referred to as group stalking. She admitted that the management of the NCVC were aware of gang stalking. When pressed for an anecdotal ballpark figure about the percentage of calls related to gang stalking she reflexively became very vague. She stated that she was instructed not to give out statistics on gang stalking even orally to a victim. She did state that it could be thousands of calls, but, because of afore-mentioned instructions by management she could not verify an actual number.

COUNTERMEASURE AND DETECTION EXPERIMENTS

IN THE FIGHT TO EXPOSE AND STOP THE CRIME OF ORGANIZED STALKING AND ELECTRONIC HARASSMENT

Eleanor White

WORK IN PROGRESS - frequent updates, check the page number/date/time stamp to see if you have the latest version.

**** NOT COPYRIGHTED ****

LIST OF SECTIONS

Page numbers are not given here, as this booklet will be updated frequently when new information becomes available and maintaining page numbers in the contents is more work than I'm able to provide.

Purpose of This Booklet and Cautionary Notes

I. ELECTRONIC ASSAULT COUNTERMEASURE EXPERIMENTS

1. Julianne McKinney's Successful 7-Radio Anti-V2S Countermeasure
2. Eleanor White's EM Shielding Experiment (Total Bed Enclosure)
3. The "McKinney Patch" Counteracts Extreme Fatigue
4. Signal Evasion Experiments
5. Flexible Shielding Material Experiments
6. Faraday Cage Experiments
7. Electrically Charged Shielding Experiments
8. Active Device Countermeasure Experiments
9. Water as Shielding Experiments
10. Gel Packs as Shielding Experiments
11. Rubber as Shielding Experiments
12. Grounding Experiments
13. Sheet Metal as Shielding Experiments
14. Disguised Head Shielding
15. Roger Tolces' "Electrostatically Charged Egg" Shielded Enclosure

99. Miscellaneous Countermeasure Experiments

II. ELECTRONIC ASSAULT DETECTION EXPERIMENTS

1. Sawtooth ELF waveform observed by Eleanor White
2. Eleanor White's EEG and GSR Experiments
3. Goldfish Apparently Shunning Restaurant Perpetrators?
4. Electromagnetic Detector Experiments
5. Sleep Study Experiments
6. Specific Test Equipment Experiments

99. Miscellaneous Detection Experiments

III. PROPOSED EXPERIMENTS

1. Recording EEG With Matching Log of Times and Effects

A1. Glossary

A2. Sources

A3. Tips

1. Determining if Your Camera or Camcorder is Sensitive to Infrared
2. Using "D-submini" Pins for Experimental Wiring
3. Detecting Ultrasound
4. Detecting Infrasound
5. Inexpensive Oscilloscopes
6. Frequency Counters
7. Spectrum Analyzers
8. Photographing Anything
9. Photographing Anomalous Lumps on Your Body

Purpose of This Booklet and Cautionary Notes

The purpose of this booklet is to record the countermeasure and detection experiments performed by targets of organized stalking and electronic harassment for use by targets of organized stalking and electronic harassment (OS/EH.)

Note CAREFULLY: At time of last update, we have no countermeasure or detection method which is assured of fully stopping electronic assaults, or convincingly detecting the electronic assaults. By “convincingly” I mean a detected assault is accepted as proof of assault by public officials. As a result, countermeasure and detection experiments continue to be speculative, and targets should not invest resources (money, time, strength or hope) in any experiment where the target cannot afford total loss of resources.

There is no guarantee that if one target has success, other targets will experience the same level of success.

Reports of experiments are welcome for addition here. Please try to keep the report to one or two pages. Photos are welcome.

All submissions must be COPYRIGHT FREE. Copyrighting, in this unusual OS/EH crime environment, hampers the free distribution of information.

Submissions about test equipment readings should include the make and model of the tester, and very importantly, the SCALE SETTINGS used. If you don't have that information you may still submit, but it is far more helpful when the settings you used are available.

This e-booklet titled “Tech Talk” is recommended for reference by experimenters who may not have technology education and experience:

<http://www.multistalkervictims.org/ostt.pdf>

Note also that some targets report electronic assaults which cannot be done using as-taught-in-school technologies. Classified (secret) technology is beyond the scope of this booklet, however, these reports of advanced technology make caution very important in deciding how to spend one's resources on experiments.

Do not assume, for example, that because you spend thousands of dollars on a top quality shielded enclosure which can stop conventional electromagnetic signals that you will find relief from the electronic attacks. Do not assume that because you buy or rent an expensive spectrum analyzer, you are guaranteed to find signals which officials will accept as proof you are being electronically assaulted.

Experimentation, I believe, is definitely worth the expense and effort, because historically, many scientific discoveries happened accidentally. But the odds are steeply slanted against the OS/EH experimenter, and all who do experiment should keep that in mind.

I. ELECTRONIC ASSAULT COUNTERMEASURE EXPERIMENTS

1. Julianne McKinney's Successful 7-Radio Anti-V2S Countermeasure

**** CAUTION ****

Experiment reports from targets contain both descriptions of the experiment, and sometimes their conclusions as to what was detected and/or why the results were as noted. I recommend treating only the experiment descriptions as fact, and any conclusions by the experimenters as their personal opinion. (That includes my own entries.) If a countermeasure is reported to work, I accept the target's word for that.

When assaulted by constant voice to skull transmissions, Julianne set up 7 radios, on different stations, to mask the word content of the voice to skull transmissions. Over time, this has caused her harassers to reduce the amount of such harassment, as when a target is not forced to follow what the voice to skull transmission is saying, the impact is far less.

Other targets have reported varying degrees of success with less than 7 radios.

Here are some audio files containing jumbled voices which can be downloaded to your PC, and possibly then uploaded to your MP3 player so you can carry this type of V2S masking in your travels and in some work situations:

<http://www.raven1.net/audio/6radios-lo.mp3>

6 radios, 32 kbps, mono

<http://www.raven1.net/audio/6radios-hi.mp3>

6 radios, 64 kbps, stereo

<http://www.raven1.net/audio/voicesmixdown2.mp3>

Multiple voices, not radio

**** Please save a COPY to your hard drive for repeated playing.**

2. Eleanor White's EM Shielding Experiment (Total Bed Enclosure)

**** CAUTION ****

Experiment reports from targets contain both descriptions of the experiment, and sometimes their conclusions as to what was detected and/or why the results were as noted. I recommend treating only the experiment descriptions as fact, and any conclusions by the experimenters as their personal opinion. (That includes my own entries.) If a countermeasure is reported to work, I accept the target's word for that.

In the late 1990s, at a cost of about \$3,000, Eleanor White built an enclosure of sufficient size to completely enclose her bed. In addition, Eleanor did a series of signal measurement experiments using a frequency counter, an oscilloscope, and common radio receivers covering the AM and FM broadcast bands, and the HF (shortwave) band.

An audio octave analyzer was used in two modes, connected to two different pickup coils to watch for strong ELF signals. The first mode was to cover the normal range of audio, from 20 to 20,000 Hertz, and the second mode, modified for the low end of the ELF band (brain wave region) from 0.2 to 200 Hertz.

A Victoreen xray lab/nuclear medicine pen-style ionizing radiation dosimeter, of the lowest (most sensitive) range available at the time, was used during the shielding experiments as well.

The enclosure had four layers:

- Outside, 0.035" sheet steel (about the thickness of an automobile body)
- A layer of aluminum foil, with internal corners filled with compressed foil
- A layer of "hardware cloth," galvanized steel mesh, 1/4" openings
- A layer of 1/8" 3M "Velostat" semiconducting foam

Seams were bolted and seams and corners stuffed full of compressed aluminum foil.

Breathing air was forced through about a duct with about a foot of real copper shaving scrubbing pads, by a powerful electronic equipment "Rotron" fan. A similar duct provided an exhaust pathway.

With regards to shielding from conventional EM signals, a totally enclosure eliminates all but the tiniest amount of leaked EM over the huge frequency range from low ELF up through ultraviolet light to the beginning of ionizing radiation frequencies.

If a top grade shielded enclosure does not provide relief, one can say that it is likely (not proven beyond all possible doubt, but likely) the attacks are not in that huge range of frequencies. An example of shielding performance for one commercial cage from this supplier (Holland Shielding Systems, <http://shieldingsystems.eu/>, linked Aug 09) follows:

Specific link for the above chart:

<http://shieldingsystems.eu/index.php?p=Nieuws&id=159&Lang=2>

That specific shielded enclosure is pictured at the above link, and appears to be a solid sheet metal structure, with a honeycomb style air inlet/outlet.

Let me explain the decibel system for expressing power levels, so readers can understand curves such as that one above.

A decibel = $10 \log (P1/P0)$

The logarithm of a number, any number, is the “power” that the number 10 needs to be “raised to” to equal the original number.

For example, take the number 100. The “base 10” needs to be squared, meaning the exponent is 2, to equal 100, so:

$\log (100) = 2$

A decibel is ten times the logarithm. So if $(P1/P0) = 100$, the log is 2, and that is the same as 20 decibels.

Think about that for the moment. Even down in the ELF range on the chart above, that shielding still provides 20 decibels of power reduction for a signal coming in at the enclosure. That means the ELF leaking through will be reduced by a factor of 100, or thereabouts, until

you get down close to the lower brain wave frequency range of ~0 to ~20 Hertz.

Metal shielding is still reasonably effective in blocking 60 Hz.

Let's look at ~400 Hz on that chart above. The chart shows a 60 decibel reduction for a signal hitting the enclosure. 60 decibels is a "power" of the number 10, that is, the exponent of 10, of 1/10th of 60, or 6.

10 raised to the 6th power is one million. That chart is saying that around 400 Hz, incoming signals are reduced to one-millionth of the power level outside.

(Above 200 kHz, a frequency below the AM broadcast band, the reduction in power, called "attenuation," is 120 decibels. The attenuation is 10 raised to the 12th power. That means that above 200 kHz, an incoming signal is reduced to one TRILLIONTH the power level of any incoming signal. Not much gets through, in other words, above 200 kHz.)

While I could not afford the perfected structure of the commercial enclosure above, I did use four layers, and had an inner layer of semiconductive foam. None of the devices I used to look for radio signals from the AM band (starting at 550 kHz) up through 3 GHz, which is about as high as voice to skull is assured, gave any indication that even the very strong local commercial signals were penetrating the enclosure with enough power to be heard or to show on test equipment readouts. Even the sawtooth waveform I detected throughout my apartment, see the Electronic Assault Detection section here, didn't show with the 24" square pickup coil inside the enclosure.

I experimented for about two years, sleeping (or attempting to sleep) in this enclosure throughout. I also used other things like pans and cookie sheets within the enclosure to experiment.

Bottom line: Neither this enclosure nor any of the smaller shielding experiments did anything at all to reduce any of the harassment. My "voice to skull" during this time frame was entirely fake noise, not voice. Things like fake alarm clocks and fake pager beeps, and many different tones or tone sequences. None of these acoustic effects were diminished at all by the shielding.

In addition, I sometimes had an oscilloscope inside the enclosure with a pickup coil outside the enclosure, and other than the sometimes 120 Hz, sometimes 180 Hz sawtooth waveform being present at times, there were no other ELF signals detected during sometimes rather violent involuntary movements of body parts. (Some movements involved my muscles contracting involuntarily, others didn't involve my muscles at all.) Similar measurements with the octave analyzer connected to the pickup coils found nothing other than the times when the sawtooth 120/180 Hz waveform was present.

In other words, there was no indication of ELF signal appearing at the same times as the involuntary body part movement.

No 60 Hz signals were measured inside the enclosure.

At the opposite end of the scale, I wore the Victoreen ionizing radiation pen-style dosimeter while at home, and while “sleeping” inside the enclosure. Only a very small gradual movement of the crosshair occurred, which according to the instructions which came with the unit, was the result of natural cosmic radiation and possibly radioactive material in the air or building structure.

I do not claim this experiment was a rigorous scientific one. At the time I was in a very distressed state, having had the harassment ramped up considerably and heavy sleep deprivation, maybe getting an hour's sleep a night. I was just trying to get a qualitative handle on what it was that was causing the attacks.

Roughly, not rigorously, it appeared to me that by the ELF measurements, comparing with the violent involuntary movement of my body parts and sleep deprivation times, I saw no ELF activity which correlated.

The shielded enclosure itself and several detection instruments made it unlikely that any strong incoming signals in the radio frequency range (top of ELF up to ionizing frequencies) were causing my involuntary body movements or sleep deprivation.

The medical grade ionizing radiation dosimeter showed only normal background ionizing radiation, and made it unlikely ionizing radiation was responsible for my involuntary body movements and sleep deprivation. And here, a decade later, I have no symptoms of ionizing radiation damage.

* Interestingly, some members the “Taos Hum” people, a group which has now become a “world wide Hum” sufferers group, experience powerfully vibrating beds at various times through the night. Some members of our organized stalking/electronic harassment group likewise experience that form of sleep deprivation. There isn't much in common with the two groups except that vibrating bed experience.

When I add my heavy harassment within my shielded enclosure, and along with the absence of signals at frequencies which can penetrate a shielded enclosure, ELF and ionizing, to the vibrating bed experience, my best personal guess is that this shielding experiment points to technology advanced beyond the signal types taught in school. It doesn't convince skeptical public officials, but I believe we are under assault by more than conventional signals.

In effect, good quality shielding is more than a countermeasure. If it doesn't help, it also “detects” that signals causing the assaults while inside may not be conventional.

3. The “McKinney Patch” Counteracts Extreme Fatigue

**** CAUTION ****

Experiment reports from targets contain both descriptions of the experiment, and sometimes their conclusions as to what was detected and/or why the results were as noted. I recommend treating only the experiment descriptions as fact, and any conclusions by the experimenters as their personal opinion. (That includes my own entries.) If a countermeasure is reported to work, I accept the target's word for that.

For the past couple of decades, I've experienced the constant assault method of massive fatigue attacks, which switch on (and off) like a light. Some other targets report this as well.

Julianne McKinney has had considerable success with sensing the direction of attacks, and shielding them with small metal objects. In this case, she recommended I wrap a patch of aluminum foil to considerable thickness with many layers. I wrapped a patch to a thickness of about half an inch, and ended up with approximately a 4-inch-square patch.

In accordance with Julianne's instructions, I waited until I encountered a fatigue attack, and held the patch (I used an elastic head band) over my forehead, centered above my nose. The result was instant relief, which lasted a couple of hours. By that time I was headed for bed.

The following day, I tried again, and there was some relief, not as much as day one. By the third and following days there was no obvious relief.

I waited a couple of months and it worked again, as the first time. Definite relief, but temporary. Certainly worth keeping in mind for targets who have just occasional critically important events and who get fatigue attacks. Especially at work.

4. Signal Evasion Experiments

**** CAUTION ****

Experiment reports from targets contain both descriptions of the experiment, and sometimes their conclusions as to what was detected and/or why the results were as noted. I recommend treating only the experiment descriptions as fact, and any conclusions by the experimenters as their personal opinion. (That includes my own entries.) If a countermeasure is reported to work, I accept the target's word for that.

Target A writes:

When under heavy attack in my residence I try to get to a location where I am out of the line of fire. I have stayed for short periods of times in the basement of friends homes, I have gone to hotels, I have gone to religious retreat centers, I've stayed at an international woman's shelter in another country and I have rented a second apartment. I think this method worked better 30 years ago because the equipment they used was bulky, heavy and I could move faster than they could get setup. Because equipment is now so portable it probably wouldn't work to go to a hotel these days. But staying in the basement of a friend is probably going to help anyone most of the time.

5. Flexible Shielding Material Experiments

**** CAUTION ****

Experiment reports from targets contain both descriptions of the experiment, and sometimes their conclusions as to what was detected and/or why the results were as noted. I recommend treating only the experiment descriptions as fact, and any conclusions by the experimenters as their personal opinion. (That includes my own entries.) If a countermeasure is reported to work, I accept the target's word for that.

Target A writes:

I made some garments and scarves and blankets which are enormously helpful during waking and sleeping hours. These are made of silverized fabrics and are very effective in protecting your brain and other organs. You can check them out at:

<http://www.magiccircleshielding.com>

I wear the headband and the balaclava together for sleep. I like to wear the silverized leggings and shirts or I sometimes I wrap a big scarf around me under the arms and secure it by rolling it over at the top and instead of pinning it, I secure by placing a small strong magnet on each side.

You can make a good sleeping bag from Mylar but it is way too hot to sleep in for any length of time.

Target B writes:

I purchased pairs of copper scouring pads and aluminum scouring pads, unrolled them, and wrapped the mesh around my head (covering forehead and tops of ears) like a ~4" wide sweat band, frequently doubling them up into an ~8" sweat band (covering eyes and ears and extending beyond forehead) (wire twist ties were used to configure the mesh into a sweat band). The first day they seemed 100% effective in eliminating the annoying tingling sensations in various areas of my body, possibly due to an inability of the perps to lock onto my brain to monitor the effects of the electromagnetic attacks. After about three days, however, the perps seemed to have adapted, and now (about three or four weeks since I began using them) the tingling sensations are perhaps 30% to 50% as intense as they were without this shielding, thus an effectiveness of 50-70%. It may be that it is more difficult for the perps to maintain a brain lock and receive feedback of what I'm experiencing. Doubling the ~4" wide sweat bands to produce an ~8" sweat band seems to provide greater effectiveness.

Another improvement that's hard to describe is that the moment I place this shielding on my head there is a quieting effect within my head, not in terms of audio noise, but perhaps in terms of some form of brain or EEG noise, possibly due to an elimination of electromagnetic energy being sent to the brain, or some other sensation that is only present when the perps are locked onto my brain -- perhaps it's the elimination of the TAMI (thought amplifier and mind interface) effect discussed in Robert Duncan's book "The Matrix Deciphered" which I assume to manifest as a feeling that your thoughts are susceptible to being read when your thoughts are amplified.

I didn't seem to notice any difference between the copper and aluminum pads, though more experimentation is needed to confirm this for sure. Due to skin contact issues I would recommend the copper pads as both produce oxide when contacting the forehead (blackish for the aluminum and greenish for the copper) which is probably absorbed by the skin, and aluminum causes Alzheimer's disease. I'm not aware of ill effects associated with copper though I haven't researched it. A cloth band under the metal mesh would help alleviate this.

I also tried wrapping aluminum foil completely around my head with openings around the eyes and mouth and the results seemed to be about the same as those for the metal scouring pads, though the foil was less comfortable, mostly due to condensation as a result of perspiration. Long-term absorption of aluminum through the skin is again an issue. A thin ski mask between the foil and skin would help; a layer of plastic wrap between the cloth mask and the foil would further guard against absorption.

Another TI reported similar results with a copper scouring pad over the head.

I strongly recommend this type of shielding to all TIs while sleeping and in the morning before

going out for the day.

This shielding is not effective against headaches, nor is it effective in preventing the perps from sensing when you're about to drift off to sleep.

Target C writes:

Using cellophane tape I taped lengths of heavy duty aluminum foil together to create a ~7' x 5' blanket which I placed in bed over a sheet and under a regular blanket while sleeping. The blockage of the energy causing the annoying tingling sensations was minimal, if existent at all, possibly only 5%-10% effective. It may have also had the effect of diffusing the focus point of the directed energy beam somewhat, reducing their ability slightly to target a specific area of the body. I only tried this for a few nights. I didn't try additional layers of foil, nor did I try a layer of foil under the fitted sheet to sandwich my body in foil, both of which may have improved effectiveness.

The foil was cumbersome as the regular blanket would sometimes slide off the smooth foil, you had to be careful how you moved around in bed so as not to tear the foil and keep the blanket from sliding off, and the foil would tear nevertheless requiring frequent repairs with cellophane tape. The edge of the foil posed the risk of injuring the eyes if you weren't careful when pulling the sheet/foil/blanket over the head. Sewing the foil within a blanket would have to some degree alleviated these problems, but fabric with metallic content or metallized Mylar would probably be more suitable for this application.

Target D writes:

One TI reported that an aluminum screen enclosure around a bed in which the screen enclosure had no openings where electromagnetic energy could enter provided 100% effectiveness.

Target E writes:

One TI reported close to 100% effectiveness with lead aprons used in x-ray exams, wrapped around the head, and presumably in other areas of the body.

6. Faraday Cage Experiments

**** CAUTION ****

Experiment reports from targets contain both descriptions of the experiment, and sometimes their conclusions as to what was detected and/or why the results were as noted. I recommend treating only the experiment descriptions as fact, and any conclusions by the experimenters as their personal opinion. (That includes my own entries.) If a countermeasure is reported to work, I accept the target's word for that.

Target A writes:

I have also build two kinds of Faraday cages. The first one was an inexpensive camping tent covered all around with Mylar blankets with a heavy duty aluminum floor . The second was made of silver netting suspended from a frame made of PVC pipes They both work well when they are properly set up but they are fragile and (the ones I made) difficult to keep properly sealed. I tested both kinds by putting an alarms inside and outside the structure. Sometimes when I was sleeping the alarm outside would ring and the one inside would not so I knew I was safe. They Mylar tenet is very hot so I had to use a couple battery operated fans. --I am planning to check out the shielding properties of S-cloth. If they are appropriate for a Faraday cage I will build one and check it out.

Commercial versions of the Faraday cage are available and offer 100% protection however they cost thousands of dollars.

Jesse Mendoza's Experiment:

Note: The image is NOT Jesse's actual experimental cage,
but illustrates the concept of his experiment

Jesse Mendoza purchased commercial bed-style faraday cages in an attempt to protect his two children from nightly painful electronic attacks. He reports that the children actually suffered more when they attempted to sleep inside the cages than without the cages.

7. Electrically Charged Shielding Experiments

**** CAUTION ****

Experiment reports from targets contain both descriptions of the experiment, and sometimes their conclusions as to what was detected and/or why the results were as noted. I recommend treating only the experiment descriptions as fact, and any conclusions by the experimenters as their personal opinion. (That includes my own entries.) If a countermeasure is reported to work, I accept the target's word for that.

I have no specific documentation at this moment, but I have heard (third party) that one target had some degree of success sleeping inside a literal “capacitor” made of two sheets of aluminized mylar.

The bottom sheet, underneath the bed was grounded and connected to the ground connector of an ion generator. The ion generator is a commercial health product.

The overhead sheet of aluminized mylar was connected to the “hot” lead of the ion generator, charging the top sheet to 15,000 volts above ground. Safety for this setup was provided by the very high resistance in series with the ion generator's “hot” plate.

Target A, who tried one charged aluminized mylar experiment writes:

[The kit supplier's] original instructions (which might vary now) were to hang sheets of mylar about 1/2" apart, suspended from the ceiling, and connected with alligator clips bound in wire (that plugged into a charger), which provided a small electrical current that ran along the surface.

My bed was completely surrounded in mylar, save top and bottom. The effect was like a four poster bed. Unfortunately the effect ended there. I was still subject to horrific attacks nightly, including hallucinations, muscle manipulation, forced wakefulness, and violent dreams.

The kit also included a very heavy piece of unfinished metal, which I bent into a U-shape and placed around my head. No luck.

[Eleanor White talking: I don't have a clear picture of exactly how the mylar was connected to the high voltage "charger" source. Target A reports that he could get "static like shocks" off the mylar, which is consistent with it being charged to a high voltage level. Target A returned the kit and so no longer has the documentation.]

Roger Tolces' "Electrostatically Charged Egg" Shielded Enclosure

<http://www.bugsweeps.com>

Electronic security detective Roger Tolces has been in business for years, and has worked for a number of organized stalking/electronic harassment targets. He reports he has had some success in relieving night time electronic assaults on his clients by way of having them sleep inside what he calls an "electrostatically charged egg." One place Roger described this type of shielding was on his August 5, 2008 appearance on Coast to Coast AM.

As of when I'm writing this (March 10, 2010) Roger has that show available for listening on his web site at this specific link, via a small audio player (arrow) button near the top right of the page:

http://www.bugsweeps.com/info/electronic_harassment.html

I have since contacted Roger and asked him if he could provide construction details so other targets might try to duplicate the successes his clients enjoy.

Roger replied that his approximately 50 clients who have these enclosures working all went through his full service testing program, and he wants to continue providing these enclosures to only targets who have first gone through his program.

I do understand Roger's wish to maintain his successful shielding technique as a trade secret – after all he is in business. Because his shielding is electrostatically charged, there is also a VERY SERIOUS SAFETY CONCERN.

If someone were to get electrocuted from a charged shielded enclosure, and Roger had furnished the plans, there would also be a liability problem. A shielded enclosure charged to a high voltage large enough to sleep in is definitely a safety hazard.

However, I have long wanted to try an electrostatically shielded enclosure, and Roger's experience suggests to me that this hazardous but potentially successful technique is worth trying by targets who can COMFORTABLY afford to experiment.

Historically, one target experimented with a type of electrostatically charged countermeasure,

in which the target's bed was placed between two aluminized mylar sheets, one above the bed and the other below. These two mylar sheets formed plates of a capacitor.

The target used a safe high voltage source, and this experiment is described in section 7 above.

I want to mention here that targets realize that even a safe, high-internal-resistance source of high voltage, such as the air ionizer used in the mylar sheet experiment, can create a serious shock hazard if it is used to slowly build up a high voltage on a very large capacitor or other charge accumulator. So don't assume because you use a low power source to charge your capacitor, that the fully charged device will be safe to touch.

It is EXTREMELY important that targets who experiment provide adequate safety devices when experimenting with high voltage. Climbing in or out of a charged enclosure requires a top quality design for ensuring the enclosure is discharged before climbing in or out.

A means of reading the voltage level on the enclosure would be essential for safety as well.

What this adds up to is that if you can afford to experiment but aren't thoroughly familiar with electrical technology and high voltage safety, you MUST hire someone who is, before you experiment!

What follows is purely my (Eleanor White's) guess. I do not know the details of Roger's successful enclosures.

But when I hear Roger describe an "electrostatically charged egg," my mind immediately brings up the common Van de Graff generator, often seen in small sizes in school physics labs. Much larger Van de Graff generators appear in science museums.

In the Van de Graff generator, electric charge is fed into the inside of a more or less smooth, hollow spherical charge accumulator. Same polarity electric charges will repel each other, and force themselves to the outside surface of the sphere. If the supply keeps charging the sphere, arc streamers will radiate outward from the sphere.

Here is a link to a hobby version of a Van de Graff generator, as of March 10, 2010:

<http://www.hobbytron.net/Van-De-Graaf-Generator-Kit.html>

My guess is that Roger is using something like a Van de Graff generator sphere, large enough to enclose a target's mattress and bedding. That hobby kit, above, could theoretically charge up a huge metal "egg" enclosure large enough to house a mattress for a sleeping target.

A simple wire connection between the sphere above and the larger sphere, would cause the charge to transfer. Naturally, this apparatus would require considerable care to avoid proximity to anything grounded to avoid arcing.

A means would be needed to limit the voltage to where the experimenter sees/hears visible or audible arcing. If the charge is allowed to accumulate to where arcing occurs, you would have major problems with radio and TV interference in your vicinity.

I don't know exactly how the voltage could be limited so it is high, but not arcing. Perhaps another reader of this booklet can let us know. One possibility, and this is only my guess at this time, is to use a very high resistance to bleed the charge as it accumulates.

Another possibility is to use a timer to switch the generator on and off. The duty cycle for that would depend on how quickly the electrostatic enclosure loses its charge.

Openings for air should not cause a problem, as the charge continuously will repel itself around openings – notice that Van de Graff generator accumulator spheres are actually open on the bottom.

I don't know if Roger uses a metal door or not. It may be that the "electrostatic egg" will work with an entry/exit port open. To avoid shock, I'd recommend at least a door made of heavy galvanized screening so the target doesn't sleepwalk out of the unit and zap him or herself.

Bottom line, I would say it is FAR better to hire Roger and use his services and proven

successful “electrostatic egg” shielded enclosure, but the fact that he has about 50 clients enjoying successful reduction of assaults while sleeping is important enough to mention in this booklet.

Again – SAFETY FIRST – do not casually experiment with high voltage countermeasures!

8. Active Device Countermeasure Experiments

**** CAUTION ****

Experiment reports from targets contain both descriptions of the experiment, and sometimes their conclusions as to what was detected and/or why the results were as noted. I recommend treating only the experiment descriptions as fact, and any conclusions by the experimenters as their personal opinion. (That includes my own entries.) If a countermeasure is reported to work, I accept the target's word for that.

An “active device” is a piece of equipment that generates some sort of signal, and would act as a “jammer.”

Target A writes:

[Summarized by Eleanor White] One target purchased a \$4,000 “jammer” from Top Secret Consumertronics, a small company run by John Williams, MSEE. The jammer provided no benefit whatsoever, and eventually the target was able to get a refund.

Target B writes:

Not sure whether it's the noise, the electromagnetic effect of the motor, the vibration resulting from leaning it against the bed, or perhaps just placebo effect, but I've found that a box fan at night leaned against the bed seems for whatever reason to make it easier to sleep.

Target C writes:

One TI reported that the vibration from a vibrator reduced the intensity of electromagnetic attacks.

9. Water As Shielding Experiments

**** CAUTION ****

Experiment reports from targets contain both descriptions of the experiment, and sometimes their conclusions as to what was detected and/or why the results were as noted. I recommend treating only the experiment descriptions as fact, and any conclusions by the experimenters as their personal opinion. (That includes my own entries.) If a countermeasure is reported to work, I accept the target's word for that.

Target A writes:

There have been several reports this month from callers who said their symptoms were lessened by the use of water. Two reported using water in a ziploc bag, one had long hair which was wet from the shower, and one used a wet towel, and one other victim used a wet washcloth. All had reported suffering from shocks, stings, and vibrations.

One victim placed a ziploc bag on the cranial area, and the other placed it in the crotch area. Wet hair was reported by another victim to make a difference, while another reported wrapping a wet towel around the head worked for them.

Still another victim reported using a wet towel or wash cloth as a loin cloth.

Our own experiments with water filled balloons, ziploc bags, and wet towels are yielding consistent results. Symptoms of vibrations are greatly attenuated and other symptoms are lessened; however, the perps follow up with other ways to accomplish sleep disturbance.

A local victim reports relief while sleeping. The bed is surrounded by chairs that are draped with the thickest wet towels available. There must be no breaks in this. Heavy plastic is placed under the towels to catch the excess water. Again, this only partially blocks the vibration, malaise, stinging sensations, etc., but any relief is welcome! The same victim reported complete blocking of all symptoms while swimming under water.

Victim reports use of humidifier lessens effects!

After reading about the shielding effects of water, a victim took the initiative to install a

humidifier at the head of the bed at night, turning it on before sleep. The victim believes the harassment has been reduced.

Target B writes:

Inspired by reports that gel packs, humidifiers and anything else involving water provide protection, I soaked a thick blanket in water so that it was dripping wet, sealed it within a large sheet of painter's plastic, and used it as a blanket in bed. I used it for just a couple of nights, and it's been a while and thus I can't remember for sure but I'd guesstimate its effectiveness at perhaps 30%-70%. It had the effect of completely diffusing the focus point of the directed energy beam, almost eliminating the ability to target any specific area of the body with tingling sensations.

Although this arrangement wasn't uncomfortable at all despite what you would intuitively expect with a heavy blanket, it is unfortunately a cumbersome arrangement -- the plastic would probably tear sooner or later causing a leak, and the water in the blanket would eventually develop algae or mold. Thus I wouldn't recommend this specific arrangement but it did seem very promising and thus worthy of further investigation. Something like an array of gel packs fastened together in a matrix the size of a blanket might be a workable arrangement. It's also possible that other heavy materials, such as lead aprons used in x-ray exams or a rubber mat the size of a blanket might be just as effective.

I've noted that I rarely if ever experience tingling sensations, headaches or any other directed energy symptoms while taking a shower.

Target C writes:

One TI reported that a waterbed had the effect of dramatically reducing the intensity of the directed energy attacks, saying the waterbed seemed to "ground-out" the electromagnetic energy.

10. Gel Packs as Shielding Experiments

**** CAUTION ****

Experiment reports from targets contain both descriptions of the experiment, and sometimes their conclusions as to what was detected and/or why the results were as noted. I recommend treating only the experiment descriptions as fact, and any conclusions by the experimenters as their personal opinion. (That includes my own entries.) If a countermeasure is reported to work, I accept the target's word for that.

Target A writes:

Yet another victim reported success with gel packs used for athletic injuries.

These are available in drugstores. The packs were worn in the underwear. All victims reported a lessening of symptoms using these methods.

Target B writes:

Shielding that tends to be popular due to their convenience and economy are blue hot/cold gel packs available at pharmacies used at room temperature (several of them taped together into a blanket increases effectiveness.)

Target C writes:

I purchased three hot & cold gel packs from a pharmacy and placed them against areas being attacked with tingling sensations, and they seemed perhaps 60%-95% effective at blocking energy immediately below that area, but I personally found its utility quite minimal as the perps would merely target an adjacent area. A couple of other TIs said they got relief using gel packs.

11. Rubber as Shielding Experiments

**** CAUTION ****

Experiment reports from targets contain both descriptions of the experiment, and sometimes their conclusions as to what was detected and/or why the results were as noted. I recommend treating only the experiment descriptions as fact, and any conclusions by the experimenters as their personal opinion. (That includes my own entries.) If a countermeasure is reported to work, I accept the target's word for that.

Target A writes:

Shielding that tends to be popular due to convenience and economy are rubber mats, the kind with suction cups for use in a bath tub, not to be confused with similar looking vinyl ones (Rubbermaid brand may work better than others).

[Eleanor White talking: One experimenter wrapped a transistor radio tightly, ends clamped shut, and the rubber did not stop the radio playing. Rubber without materials mixed in to

make it conductive does not stop conventional electromagnetic signals in the radio (20 kHz to 300 GHz.) Insulating against electric shock is not at all the same thing as shielding against EM signals.]

Target B writes:

I purchased a 28"x15" rubber mat (the kind with suction cups for use in a bath tub, not to be confused with similar vinyl mats) and placed it over the top sheet in bed so that it rested over whatever area of my body the perps were targeting with annoying tingling sensations. As long as it was snugly wrapped around the area of interest it seemed to block the directed energy with perhaps 70%-100% effectiveness. Another TI reported similar results, using two rubber mats, one above and one below the body. Ideal may be a rubber mat the size of a blanket. Definitely worth pursuing further IMO.

12. Grounding Experiments

**** CAUTION ****

Experiment reports from targets contain both descriptions of the experiment, and sometimes their conclusions as to what was detected and/or why the results were as noted. I recommend treating only the experiment descriptions as fact, and any conclusions by the experimenters as their personal opinion. (That includes my own entries.) If a countermeasure is reported to work, I accept the target's word for that.

General note:

A number of targets have reported relief from either sleeping on top of or having their bodies actually contacting grounded conductive material. Some of these experimenters have used outdoor ground rods with the grounding wire brought into their living spaces.

13. Sheet Metal as Shielding Experiments

**** CAUTION ****

Experiment reports from targets contain both descriptions of the experiment, and sometimes their conclusions as to what was detected and/or why the results were as noted. I recommend treating only the experiment descriptions as fact, and any conclusions by the experimenters as their personal opinion. (That includes my own entries.) If a countermeasure is reported to work, I accept the target's word for that.

Target A writes:

What I want to tell you is that I have finally found a defense that works. Actually, I had found it years earlier but had abandoned it for various reasons. Here is the bottom line: Steel. In particular, those who are attacked with DE weapons are often attacked while they sleep, to disturb their sleep; surround yourself with a careful arrangement of steel and you will be able to sleep and their attacks will be for the most part ineffective.

Many years ago I had the right away but did it the wrong way. I went out had custom, industrial-grade steel manufactured for me. (14 gauge cold-rolled sheet steel). The pieces were way too big and heavy, and corners were sharp and dangerous. I built a makeshift steel coffin out of it and had absolute peace but very nearly killed myself in the few nights that I slept in it. I constructed the steel coffin with the large, heavy, sharp planks of steel held up and reinforced with cinder blocks. This was far from ideal.

I realize now that going to these kinds of lengths is unnecessary. Almost any steel will do. Recently I have constructed a similar sort of steel coffin out of small file cabinets. I have them laid along the sides of a "tunnel" with a couple of them on top for support. They are actually quite light in weight. What's important is that you are **fully** surrounded by the steel; I mean FULLY. They can see your heat signature down to millimeters and it really is a "game" of millimeters. Leave the slightest opening and they will find it and punish you with it. You need to overlap the steel and consider any weaknesses in your steel coffin. You need not remove the steel from the boxes (I didn't), but make sure that inside the box the steel is right up against the inner lining (you may need to remove styrofoam fillers and such).

A variety of types and sizes of steel work. Make sure you leave no crevices and then lie down in the tunnel at night. You will be much better off. If you do this right, you should be able to sleep, and their attacks should be much, much less effective, if effective at all. You need to be on the **GROUND FLOOR** so that they cannot shoot upwards at you. If you don't live on a ground floor, I highly advise you to move. However, you can also lay planks of steel underneath you to sleep on (put something soft on top).

Target B writes:

I once tried placing a single 7'x4' sheet of steel sheet metal alternately in various locations relative to myself while I was laying on a sofa to block the directed energy from any location it may be coming from -- in front of the sofa, behind the sofa, at each end of the sofa, on top of the sofa, and below the sofa. It had the effect of significantly diffusing the focus point of the directed energy beam used to induce tingling sensations. This occurred no matter where I placed the sheet metal, which was counterintuitive with the assumption that the directed energy was coming from a single direction -- perhaps the directed energy is coming from several sources, or perhaps the back scatter of the directed energy, after passing through the body, is reflected back at the body from the sheet metal, creating the sense of an unfocused beam. At any rate it didn't seem very effective as a countermeasure but the experiment may be worth repeating.

14. Disguised Head Shielding

**** CAUTION ****

Experiment reports from targets contain both descriptions of the experiment, and sometimes their conclusions as to what was detected and/or why the results were as noted. I recommend treating only the experiment descriptions as fact, and any conclusions by the experimenters as their personal opinion. (That includes my own entries.) If a countermeasure is reported to work, I accept the target's word for that.

Target A writes:

[One] suggestion I can think of is to indeed try shielding if you can work it into your corporate attire -- I wear a shielded baseball cap (\$29 from <http://www.lessemf.com>) and clothes that are washed in AegisGuard LL (\$4/laundry load from <http://www.aegisguard.com>) -- in my case the baseball cap is consistent with attire for renovating houses, but you may have to be more creative for office attire -- perhaps place some neodymium magnets in your headphones, wear a cool-looking hat consistent with your corporate culture washed in AegisGuard, etc.

In my case the shielding, especially the head shielding, clears up my thinking and helps me get more things accomplished -- I credit it with being a significant contributor in "turning my life around."

**** [Eleanor White talking: I URGE TARGETS TO NOT TELL OTHERS YOU ARE TRYING TO SHIELD YOUR HEAD. MANY OTHERS RIDICULE TARGETS WHO TRY TO SHIELD THEMSELVES.]**

99. Miscellaneous Countermeasure Experiments

**** CAUTION ****

Experiment reports from targets contain both descriptions of the experiment, and sometimes their conclusions as to what was detected and/or why the results were as noted. I recommend treating only the experiment descriptions as fact, and any conclusions by the experimenters as their personal opinion. (That includes my own entries.) If a countermeasure is reported to work, I accept the target's word for that.

Target A writes:

North side of a strong magnet taped over an implant for a few days has seemed to disable it. [Eleanor White talking: Target A is one of a handful who has confirmed implants.]

Putting a circle of crystals and magnets around my bed has seemed to help.

I believe it is important to keep your immune system strong so I take supplements including silver water, herbs, vitamins and I have a very nutritious diet. [Eleanor White talking: Doctors who recommend silver as an anti-microbial recommend it for acute conditions, and not for continuous use.]

Target B writes:

Other countermeasures are steel cookie sheets, heavy pieces of steel such as barbell plates, multiple layers of foil, multiple layers of mylar blankets, wet towels, wet blankets, lead xray aprons, filled plastic water bottles, hand lotion and other lotions, jels and creams applied to the skin, metal necklaces, metal wrist and ankle bracelets, metal belts, metal impregnated clothing, metal impregnated bed sheets, RF shielding fabric conditioner, electrically grounded ground planes, electrically grounding our bodies, ceramic tile, unrolled copper mesh scourers wrapped around the head, RF shielded baseball cap from <http://www.lessemf.com>, neodymium or other strong or large magnets, box fan leaned against the bed to provide vibration, moving around during the day (working around the house, gardening, hiking -- makes targeting more difficult), playing one or more radios tuned to different news talk stations or tuned to different types of music stations such as classical and jazz, foam earplugs.

Shielding countermeasures that work well for me to counteract synthetic vibrational sensations are rubber mats, electrically grounded ground plane, electrically grounding myself, RF shielding fabric conditioner, ceramic tile, RF shielded baseball cap, the anti-tinnitus CD/headphone, and listening to talk radio.

I have an aluminum screen (metal kind used for window screen and screened doors) in bed

under my fitted sheet connected to earth ground (third prong of an electrical outlet, or cold water metal plumbing supply line pipe under the sink, or a metal rod driven ~2' into the ground outside). Thus I'm sleeping on a ground plane that tends to "ground-out" some of the RF directed at me. Helping further is an electrically grounded wire touching my skin while in bed, also helping to "ground-out" the RF. (Next thing for me to try is an RF fabric sheet on top, or a sheet washed in RF shielding fabric conditioner.)

Under my aluminum screen in bed is a layer of 16"x16" (more commonly available in the 12"x12" size) ceramic flooring tile from Home Depot. Yes, for whatever reason, any size ceramic tile works surprisingly well for many TIs according to someone on the conference calls who got the idea after researching what the military uses to RF shield their secure bunkers. If you've never tried it, do so! For me it probably works better than most if not all of the countermeasures listed here. In addition to sleeping on a layer of them if you want you can lean one tile against your abdomen and another against your head.

Also while sleeping I listen to a CD developed by a TI named David Case of Case Electronics which is supposed to eliminate the tinnitus some TIs experience; for me it helps me relax and may eliminate some of the electronic brain linking/neural monitoring from the perps. The CD is free (last time I checked) but you have to buy high-frequency headphones that go up to at least 25kHz, such as KOSS TSC75 and KOSS PRO35/A from Radio Shack (\$25-\$40). Listening to the CD on conventional speakers didn't help. Since using this CD I no longer need to sleep with head shielding.

A fabric conditioner called AegisGuard LL, available from <http://www.aegisguard.com>, added to the final rinse cycle of the laundry while in the washing machine, results in your clothes being RF shielded. I use it all the time and feel much more comfortable during the day as a result. It costs about \$4 per laundry load. Based on my experience it is highly recommended if you can afford it!

As everyone's targeting is different no one countermeasure works for everyone so experiment to see which set of countermeasures work best for you. Try one thing at a time. Even if something doesn't have much effect at first try it for a week as the beneficial effects may not be apparent initially. If things get extremely bad then discontinue but be aware it takes a while to adjust and sometimes sticking it out for a few days proves beneficial in the long run.

Try inexpensive countermeasures first before spending a lot of money on elaborate versions -- try \$2 copper mesh before spending \$30 for a shielded baseball cap, try \$10 rubber mats before spending \$150 for a blanket-sized sheet of rubber.

Once countermeasures are found that work, switching-off between two or more of them may increase their overall effectiveness. For example wear a shielded baseball cap during the day and listen to a jamming CD at night. Try moving shielding components around to a different spot each night. Reserve an especially effective countermeasure for use only in rare instances of unusually heavy attacks.

If you've never or only briefly experimented with shielding I would highly recommend doing

so. You may feel only a little better at night but then during the day may feel more positive and may be able to get more accomplished. Before employing shielding countermeasures my life had a very nightmarish, hopeless feel to it. Now my outlook is much more positive and I have more energy during the day!

More shielding ideas are at:

<http://www.freedomfchs.com/id12.html>

II. ELECTRONIC ASSAULT DETECTION EXPERIMENTS

1. Sawtooth ELF waveform observed by Eleanor White

**** CAUTION ****

Experiment reports from targets contain both descriptions of the experiment, and sometimes their conclusions as to what was detected and/or why the results were as noted. I recommend treating only the experiment descriptions as fact, and any conclusions by the experimenters as their personal opinion. (That includes my own entries.) If a countermeasure is reported to work, I accept the target's word for that.

This waveform was detected using either of two different large air core pickup coils:

24" x 24", 75 turns on corrugated cardboard core
24" x 72", 165 turns on corrugated cardboard core

The fundamental frequency measured 120 Hz at times, and sometimes 180 Hz.

Seen frequently at many different times of day and night. Taking the scope and smaller pickup coil to different locations around the apartment building showed that this waveform did not appear outside Eleanor's apartment. Though strong inside the apartment, within a few feet of the hallway door the signal strength dropped to zero.

One consequence of this signal was that any attempts to tape record the perpetrator audio

effects was prevented by the loud buzz this waveform caused in all recorders.

This signal was loud in an AM transistor radio between stations. Transistor radios, on the AM band, are quite directional as a ferrite (contains iron) core coil is used as an antenna.

An AM radio will null (go silent) when either end of the ferrite core internal antenna points at a point source of signal. Using my transistor radio to observe null directions throughout the apartment, I discovered that this ELF signal radiated from a sharp point source about ten inches above my bed pillow. This was confirmed by the buzzing in the AM radio and the tape recorder being strongest over my bed pillow.

This is a highly unusual wave form for domestic equipment, and persisted for years. I have no idea what the purpose of this signal was. Buzzing in tape recorders had also occurred in my two previous apartments, although there, I did not attempt, in the previous two apartments, to locate the exact source nor view the waveform. The buzzing sounded the same in all three apartments.

2. Eleanor White's EEG and GSR Experiments

**** CAUTION ****

Experiment reports from targets contain both descriptions of the experiment, and sometimes their conclusions as to what was detected and/or why the results were as noted. I recommend treating only the experiment descriptions as fact, and any conclusions by the experimenters as their personal opinion. (That includes my own entries.) If a countermeasure is reported to work, I accept the target's word for that.

Following the failure of my combination total-bed-enclosing four-layer shielding experiment and associated ELF and ionizing radiation tests during peak harassment, (no conventional signals appeared to be operating during periods of heavy harassment,) I read a book titled The Secret Life of Plants by Peter Tompkins and Christopher Bird, 1989.

This book described various experiments involving plants, specifically exploring plant "behaviour" which is not yet explainable by current day scientists. The book opens by documenting the experiments of polygraph expert Cleve Backster. Backster got curious one day, and connected his polygraph's galvanic skin response (GSR) section to a leaf on one of his philodendron plants. He wanted to see if the resistance of the leaf (which is what a GSR unit measures) would drop when he watered the plant. It did not, but Backster kept comparing events in his office with the plants' polygraph traces.

To make a long story short, he discovered that his plants' leaf electrical activity changed noticeably (on the paper strip his machine produced) according to HIS - to Backster's - emotional state. Not only that, the plants' electrical activity "went wild" when Backster

approached the plants with a cigarette lighter, or when certain people visited his office.

I (Eleanor White) reasoned that if technology beyond what is taught in school is in use on OS/EH targets, then perhaps the most reliable detector would be our bodies, and possibly even plants we care for.

The GSR units drive a very tiny amount of electrical current through what they are connected to. The more sensitive electro-encephalogram (EEG) units simply measure very small voltages across a human scalp, and can also measure similar activity in plants. I acquired a single channel EEG machine, of the type used for biofeedback experiments:

This biofeedback-style EEG unit does not have the paper strip chart seen on full-blown medical equipment. Instead it features two types of outputs: Meter reading, and geiger counter style clicks from its speaker. The more clicks, the higher the meter reading.

There is a filter range switch, which sets a narrow band of frequencies of interest. The scales run from 2 Hz to 42 Hz, covering most brain activity. Each setting does not select a single frequency, instead, each setting covers a small band of frequencies with the selected number in the center.

There is also a voltage level threshold adjustment, calibrated from below 4 microvolts, up to a maximum of 70 microvolts.

(For convenience, I added a continuous tone option where the pitch of the tone varies according to how high the meter reads.)

The unit is a single channel, with a “hot” lead and a “ground” lead. The original pickup harness uses a gentle conductive clamp electrode on each ear lobe for “ground,” and the “hot” electrode goes anywhere on your scalp.

When the filter range switch is set to the lower numbers, you will hear the most “geiger counter” clicking when you are relaxed.

When the filter range is set to the double digits, you will hear the most “geiger counter” clicks when you are busy and concentrating on something.

The machine indicated my mental state reliably. However, it wasn't comfortable to wear the pickup harness in bed. More importantly, I wanted some readings other than my own to indicate activity in sync with my own attacks.

So I acquired a philodendron plant, and using Dr. Eldon Byrd's suggestion of humanely connecting the two electrodes to leaves using “weak hair clamps,” I was able to hear the plant's electrical activity. I was able to duplicate Cleve Backster's high voltage and high frequency burst of activity when I approached the plant with a cigarette lighter and said I was going to burn it. (I only did that a couple of times, because now knowing that plants do “fear” potential harm, I felt it would be cruel to do a lot of experimenting along that line.)

See the illustration below. If I were into serious plant experimentation, and I wanted something better than the “weak hair clamp” electrode, I would look into various biological electrodes on line for better ideas. I've seen, can't remember where, the use of a seaweed product called “agar” to cement electrodes to plants. In any electrode scheme, the mechanical weight of the wiring and electrodes should be suspended from external structure so the leaf doesn't have to carry the weight.

I connected the ground wire from the EEG machine to a needle driven into the stem of the plant, and also connected the ground wire to aluminum foil surrounding the flower pot.

When I began to lie on a bed outside the shielded enclosure (which I discarded since it did no good) and attempted to sleep with the plant and the EEG unit next to the head of my bed, as soon as I'd finished all my bed time business and ablutions, and settled down to try to sleep, the plant electrical activity, at least as indicated by the EEG unit, stopped before the pain, sleep deprivation, or body movement attacks started. "Flat lined," in other words.

That may or may not be a total failure. Cleve Backster described visits by a scientist to his office who did regular experiments on plant growth and metabolism. Backster noted that oddly, his philodendron flat lined for the duration of every visit by this person. Backster began to ask him about the details of his work, and it turns out this scientist regularly incinerates his plants at the end of each experiment to obtain their dry weight. While it's not proof of anything, I do find it interesting that my plant flat lined during the intense harassment.

But that only lasted for a couple of days. On or about the third night, when I hit the hay, the perps started blasting the unit's speaker with loud static, and I had to cease experimenting with plants.

** I still feel that experimentation with newer, portable recording EEG units, worn by targets, and run along with audio or video comments by the target as to time, and what assaults are being experienced at that time, could provide valuable data. Expensive, but potentially highly persuasive when presented to officials.

I also acquired a small GSR unit to experiment with:

That GSR unit was advertised as a "lie detector" thing. It is basically an acoustic electrical

resistance meter. The pitch of the tone is opposite what is happening with the resistance of whatever is connected across the two finger-shaped electrodes. Rising tone indicates lower resistance. The tone is kind of faint, though you can hear it in bed easily. Headphones can be used too.

When nothing is connected across the electrodes, the unit shuts down. There is no on-off switch as there is no current drain until there is something across the electrodes. Current drain on the 9-volt battery is very light in any case.

Because skin has very widely varying resistance ranges (compare dry skin on a crisp, cold day to wet skin on a hot, muggy summer day) the unit has an adjustment to bring the tone into the audible range when it gets too low or too high.

This unit, by measurement, pushes about 15 microamps through my fingers. That is a very small current, but I tried sleeping with electrodes made of 25 cent coins on either side of my neck overnight, and the 15 microamp current had seriously and visibly irritated my skin by morning.

This unit does show some variations when attached to plants, however, the EEG machine is far more sensitive. Furthermore, as a matter of avoiding cruelty to living things, I did not want to push a current through a plant.

What I have used this unit for is connecting to a 100 turn air core pickup coil, about 10" by 18" in a rectangular shape, to carry around in a backpack to see if I could hear any unusual warbling of the tone in the headphones which matched any electronic assaults while away from home.

The results were inconclusive. Each time I carried the GSR unit and pickup coil, the perpetrators did not hit me with electronic assaults.

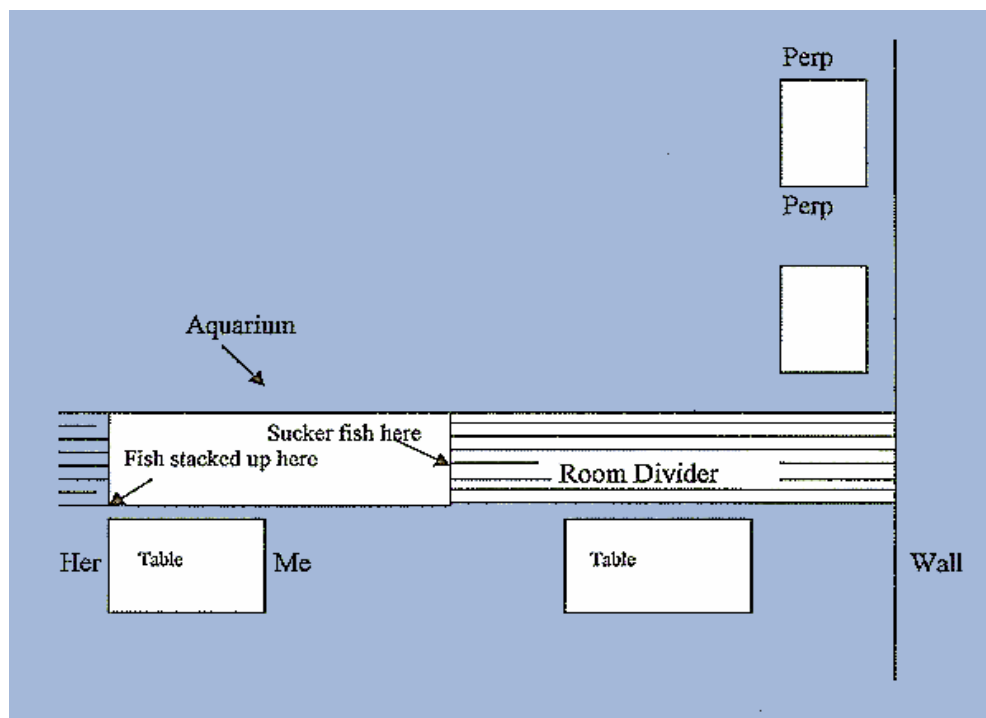

In spite of this result, there is a great deal of variety in the electronic assaults among targets, and I would think a GSR unit with a backpack pickup coil and headphones might turn up some interesting results. (No guarantee, of course.) I doubt officials would accept this experiment as proof by itself, but if others do try this experiment, I will be glad to display your results in this booklet.

3. Goldfish Apparently Shunning Restaurant Perpetrators?

**** CAUTION ****

Experiment reports from targets contain both descriptions of the experiment, and sometimes their conclusions as to what was detected and/or why the results were as noted. I recommend treating only the experiment descriptions as fact, and any conclusions by the experimenters as their personal opinion. (That includes my own entries.) If a countermeasure is reported to work, I accept the target's word for that.

[Eleanor White talking: This is another experiment suggesting that other biological entities, plant or animal, might be able to confirm the assaults we experience.]

“One evening in April, 2001, a friend and I decided to eat at a chinese restaurant. As we walked in, I noticed there were only two other people in the restaurant. I immediately identified these persons as perps and for that reason, requested that we be seated on the other side of the room divider. The room divider was actually a very wide wooden rail with a 5 foot long aquarium mounted on it.

“We sat at the table immediately adjacent to the aquarium. We ordered our meal, talking, eating, and watching the fish swim aimlessly about the aquarium. Then, I began to feel

directed energy weapons turned on me. I said nothing so as not to alarm my friend, although she was aware of such weapons. I noticed that all of the fish except for two appeared to be very old gold fish, the fancy kind with elaborate fins. One fish even had a large hump on its head.

“During the course of the meal, one by one, the old ones migrated to the very end of the tank, and sat suspended motionless in the corner of the tank farthest away from the perps. They finally started to stack on top of each other with their noses stuck in the same corner. They appeared to be staring at my friend and I joked that she was indeed growing in popularity as the fish stopped swimming and just hung there, noses touching the corner of the aquarium.

“They appeared to be gazing at her, one stacked on top of another, with only their gills moving in steady rhythmic breathing patterns. Then the last goldfish which appeared to be younger, joined them.

“Then one by one, still suspended in the corner, the 4 older goldfish appeared to have a small seizure, each lasting about 4 seconds, as evidenced by the "gnashing of teeth" and "quivering of gills". There was no food or anything they could have been after.

“It was then that I realized the fish were also being hit by the DEW! Clearly, the DEW (Directed Energy Weapons) had to get through the aquarium before getting to me.

“The perps kept the DEW on until we left the restaurant and the fish stayed in the corner of the aquarium farthest from the signal until we left the restaurant. There was one fish that did not seem to be affected. He was a young glass sucker, commonly called an "algae eater".

“He appeared to not care at all and stayed where he was the whole time, stuck to the glass on the side closest to the perps.

“The question is: Why wasn't this glass sucking algae eater affected by the DEW? Could it be that this fish is related to skates, eels, or rays that are capable of generating their own electric charge and thus may have a special electrical field around them, protecting them from the DEW?

Target B writes:

Inspired by a target reporting that while in a restaurant he witnessed fish in a large aquarium gravitating toward a corner of the aquarium directly opposite from the presumed source of a directed energy weapon, I purchased a goldfish and placed it in a round bucket filled with water, placed the bucket next to me while I sat on the sofa at home, and observed the goldfish when I experienced directed energy attacks which in my case consist of synthetic vibrational sensations. The goldfish didn't gravitate to any side of the bucket nor exhibit any unusual behavior while I experienced the directed energy attacks.

[Eleanor White speaking: Failure is normal for OS/EH targets. Experiments work with one

target and fail with another. This may be intentional on the part of the perpetrators. Regardless of the reason for inconsistent results, the inconsistency points up that repeating failed techniques, as long as experimenters can really afford to do so, may be worth trying.]

4. Electromagnetic Detector Experiments

**** CAUTION ****

Experiment reports from targets contain both descriptions of the experiment, and sometimes their conclusions as to what was detected and/or why the results were as noted. I recommend treating only the experiment descriptions as fact, and any conclusions by the experimenters as their personal opinion. (That includes my own entries.) If a countermeasure is reported to work, I accept the target's word for that.

Target A writes:

Everyone who is concerned about EMF really needs to use alarms so they can avoid or reduce the effects. My favorite alarm is the MicroAlert.

I was amazed when I started carrying it. Hidden audio and video surveillance is everywhere. I discovered that two ladies who frequently talked with me set it off the first time I had it on when talking to them. They never came back to talk with me again. I also discover that when I turned the lights off at work at the end of the day the alarm went off and when I entered my own home after work that alarm went off again. Recently I when I was targeted at a "by invitation only workshop" I had the alarm in my pocket and although everyone had their cell phones turned off, suddenly in the middle of a presentation my alarm went off. For a few seconds everyone turned and looked at me and the targeting stopped. About 20 minues later it started again and I guess because everyone noticed, it stopped in a few seconds and I got up and left the room.

Target B writes:

I borrowed a relatively inexpensive trifield meter from a fellow TI, AlphaLab "TriField Broadband Meter Extended Sensitivity Version," placed it next to me and observed it when I experienced directed energy attacks which in my case consist of synthetic vibrational sensations. There was no apparent correlation between the directed energy attacks and meter readings on any of the four scales: Magnetic 0-100 milligauss, Magnetic 0-3 milligauss, Electric 0-1000 volts/meter, or RF Radio/Microwave 100kHz-2.5GHz 0-1000 volts/meter.

[Eleanor White speaking: My own experiments, back in the late 1990s when I was working and could afford to experiment, showed a few odd signals (described here in other sections) but rarely showed even rough correlation with my attacks. This is one of the reasons why I believe technology advanced beyond that taught in school, i.e. classified, is in use.]

5. Sleep Study Experiments

**** CAUTION ****

Experiment reports from targets contain both descriptions of the experiment, and sometimes their conclusions as to what was detected and/or why the results were as noted. I recommend treating only the experiment descriptions as fact, and any conclusions by the experimenters as their personal opinion. (That includes my own entries.) If a countermeasure is reported to work, I accept the target's word for that.

Target A writes:

My last two [professional sleep lab] sleep tests were interfered with:

(1) Last year I began to have such execrable sleep (deprivation of deep sleep via imposition of vivid dreaming, etc.) that I had a sleep test to determine exactly what was happening. In the hour prior to the test itself my heart rate was accelerated to an abnormally high level for no organic reason whatsoever (while in hospital), which was already extremely tiring. Then after taking my sleep medication I tried to sleep but could not do so for about an hour, however, I was then permitted seemingly normal sleep but with bizarre nightmares that left me not well rested.

I suspect that despite my being told that no one would enter the room during my sleep, someone did so, because immediately upon being awakened I saw that my shoes had been moved and a pen had been stolen. The resulting polysomnograph showed no apparent abnormalities except the first hour of sleeplessness.

(2) After ever increasingly miserable sleep during the last year and a half (equivalent to forced daydreams while my eyes are shut), I again had a sleep test last month, this time in a different facility. I was permitted some very poor sleep, but I know that despite having my eyes closed for the last two hours or so, I failed completely to fall asleep at all. This time the results must absolutely have been falsified, because the polysomnograph I was shown indicated that I reached all levels of sleep for approximately the average durations required with no extended period of being awake at the end. However, I guess the falsifiers didn't want to appear totally unrealistic, so the claim was that I awoke 54 times.

6. Specific Test Equipment Experiments

**** CAUTION ****

Experiment reports from targets contain both descriptions of the experiment, and sometimes their conclusions as to what was detected and/or why the results were as noted. I recommend treating only the experiment descriptions as fact, and any conclusions by the experimenters as their personal opinion. (That includes my own entries.) If a countermeasure is reported to work, I accept the target's word for that.

Target A writes about the “EMF-829” RF meter:

“It detects more than 105 watts/sq. meter.”

One supplier, September 2009 advertises that meter for \$600 US.

<http://www.pro-measure.com>

[Eleanor White talking: For comparison purposes, 105 watts per square meter is 0.011 watts per square centimeter. That probably could have health implications if continuous, however, some comparisons with nearby places would need to be made, at various times, before it can be inferred that such a reading is deliberate harassment. Just a number by itself, unless the power level is really extreme, isn't much use in convincing officials that a crime is happening.]

Target B writes about another experimenter:

Xxxxx owns a \$11,000 black-and-white Infrared imaging camera. Xxxxx traveled around the country imaging TI's for implants in the head (front of the head and usually just high and to the right or left of the eyes).

He was quite successful at imaging something unusual in his own head and in that of other TI's. The device imaged would heat up and was hotter at times than the surrounding tissue, then would cool off. It was as if the device was being turned on remotely for a period of time (heating up) and then turned off (cooling down). Such a device was found in my own head but it wasn't as easy to image as some of the others.

[Eleanor White talking: While there is definitely some chance an actual device may be implanted in these cases, my experience with perp advanced technology causes me to not be certain any actual device is needed to cause such hot spots on a target's body.]

Target C writes:

I borrowed a relatively inexpensive trifield meter from a fellow TI, AlphaLab "TriField Broadband Meter Extended Sensitivity Version," placed it next to me and observed it when I experienced directed energy attacks which in my case consist of synthetic vibrational sensations. There was no apparent correlation between the directed energy attacks and meter readings on any of the four scales: Magnetic 0-100 milligauss, Magnetic 0-3 milligauss, Electric 0-1000 volts/meter, or RF Radio/Microwave 100kHz-2.5GHz 0-1000 volts/meter.

[Eleanor White speaking: My own experiments, back in the late 1990s when I was working and could afford to experiment, showed a few odd signals (described here in other sections) but rarely showed even rough correlation with my attacks. This is one of the reasons why I believe technology advanced beyond that taught in school, i.e. classified, is in use.]

99. Miscellaneous Detection Experiments

**** CAUTION ****

Experiment reports from targets contain both descriptions of the experiment, and sometimes their conclusions as to what was detected and/or why the results were as noted. I recommend treating only the experiment descriptions as fact, and any conclusions by the experimenters as their personal opinion. (That includes my own entries.) If a countermeasure is reported to work, I accept the target's word for that.

Target A writes:

Jolts of energy used to hit my house sometimes turning on TV and stereo or opening garage door, turning on motion sensitive lights etc. I made a copper coil from tubing and placed it near my bed. Every morning around 4:15 the lights would go on outside and the coil would make a sound. I think it did help me by absorbing the energy that would have gone into my body.

I made a mattress pad with small powerful magnets and that helped me sleep through the night. I also allowed me to have dreams that seemed to authentically belong to me.

III. PROPOSED EXPERIMENTS

This section lists ideas for experiments which have not yet been performed.

1. Recording EEG With Matching Log of Times and Effects

The mixed results for shielding and detection experiments strongly suggest that classified (secret) technology is in use. Some targets with decades of experience in being electronically assaulted and who have technology education and experience have come to believe that the only entirely reliable detector of electronic assault is the body itself.

I (Eleanor White) suggest that a moderately expensive and reasonably simple method to acquire “some” evidence of electronic assault may be for a target to do two things simultaneously:

1. Wear a recording EEG machine. Medical grade would be most convincing and most effective, however, the somewhat less expensive biofeedback grade should work for a pilot project.

The wearing would lend itself best to time at home, particularly in bed. Since some of the worst of the electronic assaults occur at home in bed, this would be an optimum time to experiment.

Be SURE the date and time are set up in the recording EEG unit accurately.

2. Use a camcorder or audio recorder to keep a verbal log (visual and verbal even better) of each assault type, with the date and time of each assault, for later matching with the stored EEG traces.

Getting this done with good clear data might be difficult, as the perps are known to disrupt equipment. However, my idea is to have different targets try this because the perpetrators seem to treat different targets differently, and a target may be found who can produce clean data.

Even periods of disruption can be somewhat convincing if they occur in a pattern where it is obvious the disruption is difficult. Perpetrators often do perform disruption in obvious patterns.

With good digital EEG waveform data, even if the waveforms are not done under medical supervision, and the audio/video log of assault descriptions at noted times, a report can then be assembled in a word processor, comparing during-assault waveforms with no-assault “baseline” waveforms.

A quick look at biofeedback quality (1 or 2 channel) EEG machines available in September 2009 show devices that require a PC as part of the system. Some are wired to a USB port

(readily available on PCs), others have a wireless adapter. The prices run from \$1,200 US to \$3,000 US in September 2009.

Realistically, one would have to add maybe \$400-\$500 to that for taxes, shipping and needed accessories.

Here are a couple of these systems:

http://www.eeginfo.com/shop/product_info.php/cPath/1/products_id/43

This is the \$3,000 unit, and here is part of the description:

“The EEG Info USB NeuroAmp is a user-friendly, high-performance interface between client and clinician computer for EEG Biofeedback (Neurofeedback) and/or peripheral Biofeedback therapy. Cygnet neurofeedback software is included with the purchase of a NeuroAmp.”

Here is the scalp pickup cap:

Here's another unit:

http://www.futurehealth.org/wireless_eeg.htm

All the electronics are in the cap. The September 2009 base price is \$2,000 US.

Here is an example of the type of graphic information this unit can put on a screen, which could then be captured and inserted into a report about EEG experiments:

Note that the lettering is blurred through multiple JPG resizings - the original would be much clearer. Also note that form of output has to be carefully researched before money is spent!!

A1. GLOSSARY

ACOUSTIC BULLET

An acoustic bullet is a travelling shock wave, projected in a way that it stays in a compact area and can cause damage when it impacts something in its path. An acoustic bullet's action is similar to the spherical shock wave resulting from a bomb blast, but doesn't spread out as a bomb blast does. As with a bomb blast shock wave, an acoustic bullet will be converted to mechanical motion, then to heat, when it impacts a wall and will not travel through a wall with the original compact size, shape and energy. If the wall doesn't break, what gets transferred to the inside is diaphragm-like motion of the wall with some follow up low frequency vibration.

A target would be well aware, as would the neighbours, if an acoustic bullet were to impact the wall of a target's home - they are anything but silent.

ACOUSTIC HETERODYNING

Acoustic heterodyning is the transmission of a pair of ultrasonic signals through the air, which, when they strike a solid surface, mix and release audible sound which has been modulated on to the two ultrasound signals. Two commercial versions are "HyperSonic Sound" and the "Acoustic Spotlight."

Acoustic heterodyning does not carry through walls. Any audible sound is released at the outside of the wall, as if a small loudspeaker were mounted on the outside of the wall. However, this technology is voice-to-skull-like enough to make for interesting demonstrations with the public.

ACOUSTIC SPOTLIGHT

"Acoustic Spotlight" is one of the commercial versions of acoustic heterodyning technology. Two ultrasound signals travel together in a narrow column, and release audible sound at the point of impact with a solid object. Acoustic Spotlight technology is the product of Holosonics, Inc.

The "Acoustic Spotlight" does not carry through walls. Any audible sound is released at the outside of the wall, as if a small loudspeaker were mounted on the outside of the wall. However, this technology is voice-to-skull-like enough to make for interesting demonstrations with the public.

AMPERE

The unit of electrical current. Electric current is the rate of flow of electrons which are broken free from atoms, normally temporarily. (Metal atom electrons are easy to dislodge, and that is why metal conducts easily.) It takes VOLTAGE to push electrons

in a conductor to create a current.

ATTENUATE/ATTENUATION

Reduction, usually a reduction in power.

AUDIO FREQUENCY

Frequencies between 20 and 20,000 Hertz

CURRENT

Electric current is the rate of flow of electrons, measured in amperes, which are broken free from atoms, normally temporarily. (Metal atom electrons are easy to dislodge, and that is why metal conducts easily.)

DECIBEL

A common way to express relative power in technology literature. A small increase or decrease on the decibel scale is a large increase or decrease in actual power measured in watts. For most purposes, targets simply need to be aware that when the term “decibels” appears, it is power level being discussed. “Decibels” can apply to both sound and electromagnetic signals.

Electromagnetic shielding is rated in decibels, because for practical purposes, it is not possible to bring the level of electromagnetic signal inside to absolute zero. In most real world cases, EM shielding can reduce signal levels to well below where the tiny remaining signals cause problems.

Quick examples: A 60 decibel reduction is a reduction to one MILLIONTH of the signal outside the shielding. A 120 decibel reduction is one TRILLIONTH of the signal outside the shielding. In other words, the actual power reduction is far higher than the number of decibels.

DIPOLE

The simplest type of radio antenna. A straight wire or rod cut to half of the wavelength of the signal the antenna is designed for. This is a high-Q (quality factor) antenna.

EEG

“Electroencephalogram/graph,” the recording of the brain-induced electrical activity of the surface of the skull by way of skin-contact electrodes. The EEG readings are not the same as the firing of individual neurons in the brain, but represent the electrical average of the activity of millions of neurons. EEG frequencies lie in the range of approximately 0 - 100 Hertz, and all brains emit constantly changing frequencies within

this narrow band.

There is no frequency in this narrow band unique to an individual. It is possible that a computer program which analyzes the pattern of the many electrodes might be able to infer the identity of the test subject. However, doing this at next door neighbour distances has not been demonstrated at time of writing, so targets are urged to not claim this is being done.

ELECTRIC or ELECTROSTATIC FIELD

An area in which charged particles, such as electrons, experience mechanical force due to the presence of nearby charged objects. (Measured in units like volts per meter.) The familiar mechanical actions of static electricity show the presence of an electric field.

An electric field can be static, or varying (e.g. oscillating at a frequency.)

An electric field is not an electric current, but it can cause a flow of electrons which is an electric current.

ELECTROMAGNETIC SIGNAL or FIELD (EM)

An electromagnetic signal or field is a “chemical compound” of an oscillating electric field and an oscillating magnetic field, inseparable until it acts on a conductive antenna. An EM signal or field has properties different from either a pure electric or purely magnetic field. An EM signal can travel long distances, while both electric and magnetic fields are very short range localized phenomena in practical terms.

ELF

Abbreviation for “extremely low frequency.” The ELF frequency range extends from just above zero Hertz to either 300 Hz or 3,000 Hz, depending on whose definition one uses. When OS/EH targets use ELF, they are often talking about the low end of the range, zero to 100 Hz, which is where brain and neural activity takes place.

ELF frequencies can not be used to transmit voice to skull, as they are below the audible frequencies. ELF frequencies are not “microwaves” either.

The wavelengths of ELF signals are thousands of kilometers long and can not be focussed on anything as small as an individual person. ELF signals spread out.

FARADAY CAGE

A metallic enclosure, commonly thought of as made of screen, designed to reduce (or possibly eliminate) electromagnetic signals inside. For best performance the entire conductive outer surface must be electrically bonded at all points of contact.

HAARP

“High frequency Active Auroral Research Project,” a series of high power radio transmitting stations with “phased array” antenna systems. These phased array antenna systems can aim a beam of HF band (3 to 30 MHz) radio signal at the ionosphere. This causes heating of the ionosphere, thinning it. The signal is also refracted (bent) back down to the Earth at a distant point. HAARP can ****NOT**** target single individuals - when the signal reaches Earth it has spread to many square miles. HAARP is ****NOT**** “microwave.” (Microwave signals aren't refracted by the ionosphere.)

HYPERSONIC SOUND

“HyperSonic Sound” is a brand name of acoustic heterodyning technology, in which a pair of ultrasonic sound signals travel together in open air, and mix to release audible sound content where the ultrasound signals impact a solid surface. This technology is produced by American Technologies Corporation (Woody Norris, inventor.)

HyperSonic Sound does not carry through walls. Any audible sound is released at the outside of the wall, as if a small loudspeaker were mounted on the outside of the wall. However, this technology is voice-to-skull-like enough to make for interesting demonstrations with the public.

INFRARED

Electromagnetic radiation between 300 GHz (the top of the “radio” frequency band) and 430,000 GHz (the beginning of visible light.) This is a huge band where the top frequency is 1,433 times higher than the bottom. Infrared signals behave like visible light at the top of this band, and behave more like microwave at the bottom of this band. “T-waves” are signals in the terahertz range, and are typically spoken of in relation to through wall radar, which uses the lower end of the infrared band.

INFRASOUND

Sound at any frequency below 20 Hz.

INVERSE SQUARE LAW

If you research technical literature about radiation, you may find the term “inverse square law” referenced. The inverse square law describes how the power of a signal decreases with distance from the source.

If the source is not a perfectly collimated beam, that is, a beam which doesn't spread at all, the signal strength decreases in proportion to the square of the distance. That means that if you double the distance from the source, the signal is cut to one fourth of

the strength at the closer position. In other words, distance causes signal level to drop rather quickly, not just in proportion to the distance.

Laser beams are often thought of as perfectly collimated beams, and some lasers do use lenses to achieve that. But over large distances, even laser beams spread to some small degree. Microwave dishes also emit a beam which spreads to a degree.

LASER

“Light Amplification by Stimulated Emission of Radiation.” A laser is a device which takes ordinary light, in which the light's waveforms are jumbled and random, and converts the random “photons” (units of light) into photons all oriented in the same direction and leaving the device so all the waveforms are in perfect lock step with one another. This produces a beam which can go long distances with very little spreading.

It also means that the energy put into the beam can be nearly 100% recovered at the beam's impact point with an object.

The term “laser” is commonly applied to visible light, infrared, and ultraviolet radiation.

LENZ'S LAW

Lenz's Law describes the action where. when a signal acts on an area of conductive shielding, circulating currents in the shielding will act so as to set up an opposing signal, and that opposing signal travels away from the shielding as a reflection of the incoming signal. Reflected radio signals behave like reflected light, although the signals are diffused more than light (don't reflect in a single sharp-edged beam.)

LIDA

The half-century-old LIDA machine is a pulsed, 40 MHz, 40 watt radio transmitter, with other features such as pulsing light and heat. This machine originated in Russia and was intended as an alternative to sedative drugs. It operates by “entraining” (influencing) the brain's electrical rhythms to a frequency which causes drowsiness. It is the radio equivalent of rocking a baby's cradle or the motion of a train while trying to sleep, or the hypnotist's swinging watch. It's not the frequency of the signal that does the work, it's the rate at which it is pulsed.

MASER

“Microwave Amplification by Stimulated Emission of Radiation.” A device which generates a microwave signal in which all the energy leaves the device aligned in a narrow beam, the microwave counterpart of a laser.

MEG

“Magnetoencephalogram/graph,” the recording of the brain-induced magnetic activity at the surface of the skull by way of pickup coils outside the skull, at very short ranges. This correlates to internal electrical currents because currents create magnetic fields. The MEG readings are not the same as the firing of individual neurons in the brain, but represent the magnetic average of the activity of millions of neurons. MEG frequencies lie in the range of approximately 0 - 100 Hertz, and all brains emit constantly changing frequencies within this narrow band.

There is no frequency in this narrow band unique to an individual. It is possible that a computer program which analyzes the pattern of the many pickup coils might be able to infer the identity of the test subject. However, doing this at next door neighbour distances has not been demonstrated at time of writing, so targets are urged to not claim this is being done.

MICROWAVE

An electromagnetic signal starting at either 300 MHz or 3,000 MHz (3 GHz), up to 300 GHz (the top of the “radio” frequency band.) Different sources define the low end frequency differently.

MICROWAVE AUDITORY EFFECT

Microwave auditory effect is not voice to skull. MAE refers to the ability to hear microwave pulses which impinge on the head. Also called “radar hearing.” MAE was formally published by experimenters Allen Frey and James C. Lin, having been discovered by radar technicians during World War II.

Frey's and Lin's work led to the successful demonstration of voice (and other sounds) to skull by experimenter Joseph Sharp in 1973.

Targets should, when interest is expressed by non-targets, (after first contact,) refer to “voice to skull” instead of MAE, because the essential thing the public needs to know about is the use of voice for harassment, not just “clicks and buzzes.”

MODULATION

Modulation occurs when a steady stream of signal (constant amplitude, constant frequency) gets changed or “shaped” by another signal, typically a voice waveform in radio, or a picture waveform in TV, or chopped into pulses as in radar or Morse code transmissions.

ORGONE

A type of advanced technology which has not been accepted by officials as a “real” technology. Since acceptance by officials is what matters in the fight to expose OS/EH, targets are wise to avoid bringing orgone technology into serious discussions

about this crime with non-targets.

OSCILLATE

An object oscillates when it exhibits mechanical vibration (sound,) or, electrons in or on the object move back and forth (electrical oscillation.)

OS/EH

“Organized stalking and electronic harassment.”

PHASED ARRAY

When multiple antennas are spaced out in a grid pattern, and controlled so that the waveforms arrive or depart each antenna at slightly different times, this grid of antennas can emit a steerable beam. (“Phase” means “timing.”) The beam will be much narrower and sharper at microwave frequencies than, say, HAARP's range of 3 to 30 MHz, down in the “short wave” band.

Some radar systems use phased array antennas which are electronically more complex, but mechanically simpler than a motor driven dish.

POWER LEVEL

The power level of a signal, acoustic or electromagnetic, is often overlooked by targets as they try to understand how a particular attack type may be done. Targets should look through catalogue descriptions of common electrical or electronic devices and make note of the power consumption, or radiation in radio transmitting devices, to get a feel for what a given power level can do at what distance. Note should also be made of the physical size of various familiar devices which have a power rating.

Power is measured in watts, milliwatts, or microwatts. (Power is sometimes seen measured in “decibels,” a system of measurement based on ratios, and not direct measurement in watts.)

Required power levels set limits on how small a device can be to handle a given level of power, and many theories fail when device size versus power handling ability are taken into account.

PSYCHOTRONIC (-ICS)

Psychotronics has several meanings today, making it a poor choice of term to use in the OS/EH arena. Originally, psychotronics was the use of electronic components, built into non-powered devices, along with “special abilities” of an operator, for healing. These “special abilities” seem to be of the psychic variety. This is a good reason to avoid this term in the serious discussion of electronic harassment technology with non-

targets.

Literature this writer has seen suggests that advanced remote influencing technology, which could be used for electronic harassment, has been called “psychotronics” in Russian circles. I suggest not using the term with non-targets unless it becomes a popular term specifically referring to harassment, and not some “New Age” concept.

Q-FACTOR or QUALITY FACTOR

The quality factor “Q” of an object is highest when electrons in or on the object can move back and forth freely, with minimum energy loss (conversion to heat.) A high-Q object will resonate powerfully, while a low-Q object will not resonate powerfully and much of the incoming electromagnetic signal will be converted to heat.

A wire dipole antenna has a high Q factor. A head has a low Q factor because of the resistance of the flesh. A strand of DNA has a very low Q factor because it is in contact with other semiconductive material.

RADIATION (NON-IONIZING and IONIZING)

Electromagnetic signals or fields. EM signals up through radio, infrared, visible light and ultraviolet bands are “non-ionizing.” EM signals higher are “ionizing,” meaning they are so energetic that they can strip some of the electrons from molecules they interact with.

RADIO FREQUENCY

Radio frequencies start at either 3 kHz or 10 kHz, depending on a particular authority's usage. The upper limit is 300 GHz, which is also the beginning of the infrared frequency band, and is the area of “millimeter wave” through wall viewing technology.

RADIONICS

An advanced technology which, like “scalars,” “psychotronics,” and “orgone,” has not been accepted by officials as “real.” Therefore, radionics should not form part of a serious discussion of the OS/EH crime arena with non-targets.

RESISTANCE

Real world materials have various amounts of resistance to the flow of electric current. Metals have low resistance compared with insulators which have very high resistance. The resistance of an object affects how powerfully it can electrically resonate, because resistance converts the motion of electrons in or on an object to heat.

Resistance is measured in OHMs. Your average household extension cord, 8 feet long and #16 copper wire, would be something like 0.064 ohms, very low. It has to be low

to avoid overheating under load. Body parts have resistances measured in hundreds or thousands of ohms.

REMOTE NEURAL MONITORING (RNM)

Remote neural monitoring, that is, reading the state of someone's brain and nervous system at a distance, has not been demonstrated with the demonstration published by a mainstream source under their name and logo, at next door neighbour distances. This term is appealing to targets, but unfortunately, until it is demonstrated at distances where it could be used as part of electronic harassment, targets should refrain from stating it as accomplished fact. Best to speak of such a concept as one's guess or theory, or that targets' experiences are "AS IF" RNM was occurring.

RESONANT FREQUENCY

For electromagnetic signals, conductive objects, including body parts, can be made to oscillate (support alternating electric currents in or on.) The most powerful currents, at a specific frequency, depend on size and shape. This is like the frequency at which a bell will ring when struck. How powerfully a given object will resonate depends on a variety of things like "quality factor" or "Q." (See also entry above titled "Q-Factor")

SCALAR(S)

"Scalar(s)" is a term which is speculation at this point in time. Scalar(s) is a popular name for an advanced signal type which can create more effects than as-taught-in-school conventional signal types, and probably do so through shielding and regardless of distance. I urge targets to not use "scalars" in serious discussions of harassment technology with non-targets, unless well qualified as speculation. I'm not saying advanced signals don't exist, instead I'm saying we don't know what they are called or how they work at this time.

In Russian literature, similar speculative terms have made it into popular usage, such as "torsion fields" and "leptonics."

SEMICONDUCTIVE SHIELDING

Shielding which has significant resistance, unlike metal.

Metals have more or less zero resistance, so an incoming signal's induced current in the metal can cause the energy to be reflected in an outgoing signal. If a shielding material has significant resistance, the incoming signal will attempt to cause current to flow (see Lenz's Law,) but because the resistance will convert some of the energy to heat, semiconductive shielding will absorb, rather than reflect.

SPECTRUM ANALYZER

A radio receiver in which a range of frequencies is continually checked for the presence of signals, and a graph of signal strength versus frequency is displayed on its screen.

TMS

“Trans-cranial magnetic stimulation.” TMS involves pulsing electric current through induction coils, causing magnetic fields, held against the skull. These magnetic pulses have been demonstrated to be strong enough to trigger the firing of nerves when held against the hand. An alternative to electro-shock therapy.

For OS/EH targets, strong magnetic fields act only at very short range in practical terms. If a target discovers strong magnetic fields in their vicinity and there are no powerful induction coils nearby, technology far more advanced than TMS is at work.

T-WAVES

“Terahertz” electromagnetic signals in the vicinity of just above 300 GHz, the beginning of infrared, also called the “millimeter wave” region. For through wall viewing, frequencies into the lower end of the infrared band are used, though as you move up in the infrared band, EM signals behave more and more like visible light and less like wall-penetrating “millimeter waves.”

ULTRASOUND

Sound at any frequency above 20,000 Hertz.

ULTRAVIOLET

Electromagnetic signals just above visible light. High energy UV lasers can ionize a path through the air which can conduct electricity and this is one form of taser.

VOICE TO SKULL (or V2S or V2K)

The transmission of sound, including voice, into the skull of a target without the assistance of implants or any other device in or on the target. First announced as successful at the University of Utah in 1974, and the journal “American Psychologist” in March 1975. Although voice to skull can be simulated using “acoustic spotlight” technology, V2S usually refers to electromagnetic transmissions.

“V2K” was an abbreviation coined by the United States Army in their on line thesaurus for several years. The definition was eventually removed.

VOLT

The unit of electrical pressure. When loose electrons gather on an object in more than

natural quantities, that object possesses voltage relative to other objects. Voltage is what causes electric current to flow when a conducting path is made available. Also called “electrical potential.”

WAVELENGTH

Waves of any type (acoustic, electromagnetic, or water waves) are made up of alternating “up and down motions.” The wave length is the physical distance covered by one complete up and down motion. Historically one complete up and down motion is called “one cycle.”

The physical distances EM signals travel in one cycle are given above, in the chart showing the radio and through-wall radar spectrum.

A2. SOURCES

**** REALLY REALLY REALLY IMPORTANT ****

In this section are listed sources for various types of material for experiments, test equipment, and consultants qualified in the field of electronic security.

IN NO WAY does the inclusion of a vendor here constitute my endorsement or guarantee that materials, test equipment, or consulting services will provide the buyer with success in reducing or stopping organized stalking or electronic assault.

Your patronage of these sources is 100% at your own risk.

I urge spending no resources on experiments which you cannot afford to lose.

A3. TIPS

1. Determining if Your Camera or Camcorder is Sensitive to Infrared

Aim your digital camera or camcorder at a TV remote, while someone is pressing buttons. If your digital camera or camcorder is sensitive to infrared, you'll see a blinking light.

If your camera is of the film type, you would have to take several photos as you can't be sure exactly when the TV remote's infrared light is on. If your film type camera can accept shutter speed settings, set the shutter a little more slowly than normal for lighting conditions. Film which is sensitive to infrared might best be tested in low ordinary light conditions to keep the shutter open longer.

2. Using "D-submini" Pins for Experimental Wiring

WIRE-END CONNECTING PINS AND SOCKETS, MANUFACTURED BY AMP CORPORATION, CINCH CORP. AND OTHERS. AVAILABLE IN QUANTITY FROM ELECTRONIC SUPPLY HOUSES SUCH AS NEWARK ELECTRONICS.

BIOSENSING WIRING DETAILS 600 X 694 JAN 14/01

3. Detecting Ultrasound

Some targets have expressed interest in detecting ultrasound signals in their environment. A problem with this is to know what frequency to look for. The highest travels-through-air frequency I've seen is about 200 kHz (about ten times higher than human hearing.) That's the frequency used by acoustic heterodyning, AKA "HyperSonic Sound", or the "Acoustic Spotlight."

I've seen far higher frequencies ... up in the megahertz range referenced, but those were for industrial inspection of solid structures, not through air.

If an experimenter is satisfied with being limited to 200 kHz, then to find available ultrasound detection meters, search the web for "bat detectors." Prices range from less than \$100 to in the thousands. Before spending lots of money on any test equipment, keep in mind that it is extremely difficult to convince officials that odd test equipment readings in your home prove you are being deliberately harassed.

Keep in mind too that ultrasound coming in from outside your home or apartment is going to be largely absorbed by your windows and walls and converted to heat.

4. Detecting Infrasound

Here is what one NON-target experimenter found when he acquired infrasound detection equipment and tried it in a very quiet studio structure (2004):

<http://www.tomshardware.com/forum/42405-6-very-frequency-recording>

"I could not hear anything in the room, but was sure I could sense something like a car went past. So, I sealed all the doors, put up an octava omni into my quietest pre, with the mic stand on a sheet of foam, and turned the gain way way up, and hit record.

"Surprisingly, this showed a lot of activity, all of it way below 30hz, and much more often than nearby cars going past. Some 'events' were very quiet, very low cycles, but almost a minute in duration. (Possibly the train line around 800 metres away, or planes?). Others were quite short and damped. All were inaudible, though I could see the speaker cones moving if I played it really loud. "

There is considerable information about detecting infrasound (typically sound below 20 Hz) on the web.

For intense infrasound, a simple detector is a large loudspeaker, of the "woofer" variety, connected to an oscilloscope. The scope will show the infrasound on the more sensitive scales, and the time scale can be used to determine frequency. The formula is:

frequency (Hz) = 1 / period (seconds)

The period is the time one pair of up and down motions of a wave form takes to happen.

Determine the distance along the time axis first in centimeters, which you can read with your eye on the scope screen, then convert that to seconds using the time scale setting on the scope. If this is confusing, you need to study either the scope's manual, or perhaps an online article on using an oscilloscope. Run through a few examples until you are confident in how to convert a waveform on the screen to its frequency.

If you take a photo of the screen, be sure to keep a record of the time (horizontal) and voltage (vertical) scale settings.

Keep in mind that non-targets will find anomalies too, as in the above example. That is important, because the purpose of your experiments would be to show that some sort of infrasound unique to harassment is happening in your home. If non-targets also find anomalous infrasounds, that makes it far more difficult to prove what you found proves harassment. Very important to ponder these things before spending money on equipment.

Keep in mind too, that infrasound at power levels sufficient to attack the body's organs will rattle things and will also spread out and be sensed by neighbours. Before spending lots of money on any test equipment, keep in mind that it is extremely difficult to convince officials that odd test equipment readings in your home prove you are being deliberately harassed.

5. Inexpensive Oscilloscopes

There are no inexpensive oscilloscopes which operate in the frequency ranges where Sharp's voice to skull might be encountered. The two below would be suitable for searching for audio frequencies (detected through a microphone or speaker) or ELF electromagnetic fields:

DS1052E 50 MHz Digital Oscilloscope
<http://www.armdesigner.com/DS1052E.html>
\$449 in September 2009

HPS10SE 2 MHz Digital Oscilloscope (primarily useful as an audio/low ultrasound unit)
http://www.apogeekits.com/oscilloscope_handheld_hps10se.htm
\$209.95 in September 2009

Before spending lots of money on any test equipment, keep in mind that it is extremely difficult to convince officials that odd test equipment readings in your home prove you are being deliberately harassed.

6. Frequency Counters

Frequency counters display a frequency as a digital number. Typically they are calibrated to

pick up electromagnetic signals, though you may run across some calibrated for sound.

Regardless of whether you are using an electromagnetic or acoustic frequency counter, these devices only work accurately when there is one signal which is much stronger than all other signals at the point where the counter is being used. If a frequency counter “hears” two or more commercial radio stations at about the same strength, the counter will fluctuate and be “confused.”

So this meter is only suitable for special situations - you can't buy or rent one and expect to zoom in on “the frequency” you suspect is being used on you. Even the far more expensive spectrum analyzer does not guarantee that there is a dominant signal in your environment which can be tied to specific harassment effects.

7. Spectrum Analyzers

Here is the type of information you get from a simple (not heavily computerized) spectrum analyzer:

You get a plot of signal strength across a selected band of frequencies.

Heavily computerized devices can produce reports on signals, and allow you to designate parts of the band selected for special analysis, or allow you to set detection alarms, and other features.

But basically, you get signal strength across a band, displayed in real time.

These devices are quite expensive compared with other test equipment, particularly when you want to cover all possible radio frequencies from 0 Hz to 300 GHz (the beginning of infrared.)

Here's the problem targets must ponder when thinking about buying or renting spectrum analyzers: How are you going to take a screen image like the one above, and prove to police that any given signal on that image is causing your bodily effects?

There are huge, dense, wordy documents outlining bands of frequencies and their effects on the body, but unless you find really strong signals in a band of frequencies a lot of the time you are observing your spectrum analyzer, which match a bodily effect you consider is electronic harassment, and you find a law enforcement official willing to read the document and examine your screen images and reports, and find them so compelling he/she is willing to accept a report of harassment, the spectrum analyzer may not be the cure-all you had hoped.

I sound as if I am trying to discourage experimentation. No, I'm not. What I am doing is trying to make sure you have considered the down side of how well experimental results are likely to work in persuading officials an electronic through-wall crime is going on.

8. Photographing Anything

The best quality photos are generally not with flash. I find the best photos are taken near a window in daylight but without direct sunlight in the picture.

9. Photographing Anomalous Lumps on Your Body

Avoid flash - flash washes out detail. Instead, take a photo with a single lamp on in the room, and have the lamp aimed at a shallow angle to produce a shadow making any protuberance stand out well. A couple of different angles would be a good idea.

TARG HAS ENGAGED SHARI, A NEIGHBOUR, IN A DISCUSSION OF THE BIZARRE EVENTS IN HIS LIFE. AT THIS POINT, TARG HAS BECOME AWARE OF THE NETWORK OF ORGANIZED STALKING TARGETS, AND THE STATISTICS RELATING TO OS.

... AND FOR ALMOST THE PAST YEAR, I'VE HAD ENDLESS "SMALL" ACTS OF HARASSMENT DAYTIME, AND WHAT ARE APPARENTLY ODD ELECTRONIC "ANNOYANCES" HOME AT NIGHT!

WHY WOULD ANYONE WANT TO DO THOSE THINGS TO YOU?

AT FIRST I HAD NO IDEA. BUT THEN I FOUND A DEPARTMENT OF JUSTICE JANUARY 2009 REPORT ON STALKING ON THE INTERNET. I THEN FOUND A NUMBER OF OTHER "ORGANIZED STALKING" TARGETS WHO HAVE WEB SITES AND DISCUSSION GROUPS.

APPARENTLY, IT'S A VICIOUS LIE CAMPAIGN THAT KEEPS THESE GROUPS BUSY TRYING TO DESTROY THE LIVES OF THEIR TARGETS!

WHAT LIE HAS BEEN TOLD ABOUT YOU?

I DIDN'T KNOW AT FIRST, BUT IN THE PAST FEW WEEKS, I'VE HAD PEOPLE PASS BY, AND WHEN NO ONE WAS THERE TO HEAR, THEY WOULD SAY THINGS LIKE "PEDOPHILE" AND "BABY RAPER."

YOU SEE, WHEN LIES LIKE THAT ARE CIRCULATED IN YOUR COMMUNITY, YOU ARE NO LONGER JUST A "NOBODY!" AFTER THAT, YOU ARE *HIGH* PROFILE.

CAN'T YOU GO TO THE POLICE?

I HAVE TRIED THAT. EVEN WHEN THE STALKERS CUT MY CAT'S THROAT, THE POLICE ALWAYS MAKE UP A STORY WHICH MAKES ME OUT TO BE RESPONSIBLE. THEY ALSO KEEP TELLING ME TO SEE A PSYCHIATRIST, EVEN THOUGH I'M REPORTING CRIMES!

IT ACTUALLY LOOKS AS IF THE POLICE QUIETLY APPROVE OF THESE STALKING GROUPS!

THAT'S WHAT HAPPENS WHEN A DICTATOR COMES TO POWER!

TARG IS *EXTREMELY* FORTUNATE THAT SHARI KNOWS A GREAT DEAL ABOUT HISTORY. SHE UNDERSTANDS THAT AN EARLY WARNING OF AN IMPENDING DICTATORSHIP IS WHEN THUGS CAN COMMIT ANTI-SOCIAL ACTS AND THE POLICE TURN A BLIND EYE, EVEN MAKING EXCUSES FOR THE THUGS.

THIS SORT OF THING HAPPENED IN NAZI GERMANY AND SOVIET RUSSIA AS THE REGIMES BUILT UP LOCAL "ENFORCER" GROUPS TO KEEP DISSIDENTS IN LINE.

IT TAKES TIME AND EXTENSIVE TESTING OF LOYALTY, AND TESTING FOR WILLINGNESS TO DO NASTY THINGS TO BUILD A SOLID CORPS OF "CITIZEN ENFORCERS." THIS MAY EXPLAIN ORGANIZED STALKING.

TARG HAS DECIDED TO SEEK HELP FROM A LOCAL CRISIS SUPPORT ORGANIZATION

ELMVALE CRISIS LINE? I'M TARG SMITH. DO YOU HELP WITH STALKING CASES?

YES, WE DO THAT.

CAN YOU PUT ME IN TOUCH WITH A STAFF MEMBER WHO KNOWS WHAT "GROUP" OR "ORGANIZED" STALKING IS?

ACTUALLY, KARLENE IS AWARE OF ORGANIZED STALKING. LET ME CONNECT YOU.

KARLENE, I'M HAVING A LOT OF TROUBLE GETTING PEOPLE TO UNDERSTAND WHAT I'M GOING THROUGH. I WANT TO BE ABLE TO GET THE PUBLIC TO UNDERSTAND WHAT ORGANIZED STALKING IS. I BELIEVE IF THE PUBLIC KNEW THAT O.S. WAS GOING ON, THE PERPETRATORS COULDN'T RECRUIT OR OPERATE. WHAT DO YOU SUGGEST?

WELL, HOW ABOUT YOU PREPARE A 15 MINUTE PRESENTATION, AND COME IN TO OUR OFFICES AND LET US LISTEN TO IT? WE CAN COMMENT ON IT AND LET YOU KNOW HOW NON-TARGETS RESPOND.

THANK YOU, KARLENE! I'LL CALL YOU WHEN I'M READY!

OK. LET ME GIVE YOU A TIP. WHEN YOU WANT OTHERS TO UNDERSTAND THIS CRIME, GIVE FACTS FIRST, AND NEVER SAY ANYTHING AS A FACT WHICH IS REALLY JUST YOUR OPINION. TAKE YOUR TIME! TALK TO YOU LATER.

KARLENE IS RIGHT. EVEN THOUGH THE NATIONAL CENTER FOR VICTIMS OF CRIME GETS THOUSANDS OF CALLS ABOUT ORGANIZED STALKING EVERY MONTH, THE GENERAL PUBLIC REMAINS SKEPTICAL.

TO TELL THE PUBLIC ABOUT OS, PRESENTATIONS MUST BE SHORT, WITH JUST A FEW FACTS, VERY LITTLE OPINION AND OPINIONS LABELLED AS OPINIONS.

THE PUBLIC HAS THEIR OWN HEADACHES AND CAN ONLY DIGEST A VERY LIMITED AMOUNT OF INFORMATION AT THEIR FIRST ENCOUNTER WITH THIS CRIME.

FIRST CONTACT INFORMATION SHOULD BE GENERAL, AND AVOIDING THE PRESENTER'S PERSONAL STORY WORKS BEST.

FINALLY, IT USUALLY TAKES A NUMBER OF CALLS TO CRISIS ORGANIZATIONS TO FIND A KNOWLEDGEABLE "KARLENE."

WWW.BITSTRIPS.COM

TARG - EPISODE 18-A

BY ELEANOR

"TARG" IS A STORY ABOUT A TARGET OF THE GROWING CRIME CALLED "ORGANIZED" OR "GROUP" STALKING, SOMETIMES ABBREVIATED "OS."

GROUP STALKING IS LARGELY IGNORED BY THE JUSTICE SYSTEMS, AND BY EDUCATING THE PUBLIC, THE WRITER HOPES "TARG" WILL EVENTUALLY HAVE HIS DAY IN COURT.

FOR THE PERPETRATOR SIDE OF THIS CRIME, SEE THE "PETER PERP" STRIPS.

FOR A *SPOOF* "MANUAL" ILLUSTRATING THE ATTITUDE OF THE "PETER PERPS" SEE:

[HTTP://WWW.MULTISTALKERVICTIMS.ORG/TJOPSMANUAL.HTM](http://www.multistalkervictims.org/tjopsmanual.htm)

FOR DETAILED INFORMATION ON THE OS CRIME, PLEASE VISIT:

[HTTP://WWW.MULTISTALKERVICTIMS.ORG/OSATV.PDF](http://www.multistalkervictims.org/osatv.pdf)

THIS EPISODE, 18, IS A SMALL SUB-SERIES (A, B, C ...) IN WHICH TARG GIVES HIS TALK TO THE ELMVALE CRISIS LINE STAFF

GOOD MORNING! I'M TARG SMITH. I REALLY APPRECIATE YOUR ALLOWING ME TO SPEAK TO YOU THIS MORNING!

I'M HERE AT KARLENE'S INVITATION TO INTRODUCE YOU TO THE CRIME OF "ORGANIZED STALKING." AS CRISIS LINE STAFF MEMBERS, IT IS LIKELY YOU WILL ENCOUNTER SOME CALLERS WHO MAY BE STALKED BY A GROUP, BUT ARE NOT YET AWARE.

NOW THAT MAY SOUND REALLY ODD - HOW CAN A TARGET OF A CRIME NOT BE AWARE? THE ANSWER IS THAT IN ORGANIZED STALKING, THE ACTIVITIES ARE SPECIFICALLY CHOSEN FROM WHAT EVERYONE EXPERIENCES OVER TIME. "LIFE'S NORMAL BREAKS," IN OTHER WORDS. THIS SURFACE APPEARANCE OF "NORMAL LIFE" PROVIDES THE CRIMINALS WITH EXTREMELY EFFECTIVE COVER!

THE DIFFERENCE BETWEEN ORGANIZED STALKING AND "LIFE'S NORMAL BREAKS" IS THAT THE "BREAKS" OF ORGANIZED STALKING OFTEN HAPPEN SEVERAL TIMES A DAY. "NORMAL BREAKS" USUALLY HAPPEN WITH MONTHS OR YEARS BETWEEN THEM.

CONTINUED IN EPISODE 18-B ...

THE FIRST QUESTION THAT COMES UP IS "WHY?" ESPECIALLY "WHY *YOU*?" WHY WOULD A GROUP OF MEMBERS OF THE TARGET'S COMMUNITY DECIDE TO HARASS HIM OR HER CONSTANTLY?

WWW.BITSTRIPS.COM

TARG - EPISODE 18-B

BY ELEANOR

"TARG" IS A STORY ABOUT A TARGET OF THE GROWING CRIME CALLED "ORGANIZED" OR "GROUP" STALKING, SOMETIMES ABBREVIATED "OS."

GROUP STALKING IS LARGELY IGNORED BY THE JUSTICE SYSTEMS, AND BY EDUCATING THE PUBLIC, THE WRITER HOPES "TARG" WILL EVENTUALLY HAVE HIS DAY IN COURT.

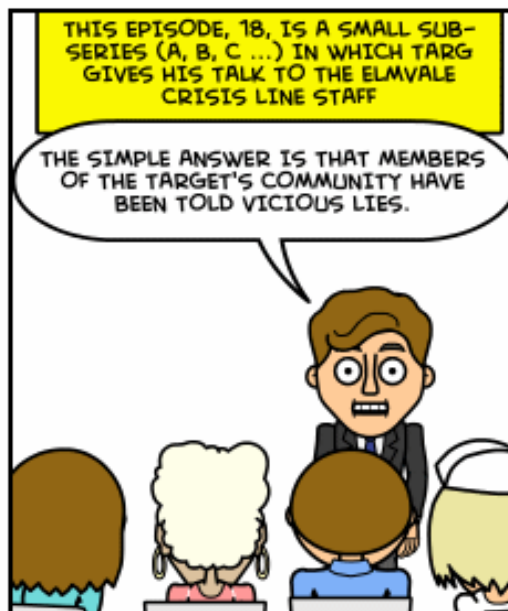

FOR THE PERPETRATOR SIDE OF THIS CRIME, SEE THE "PETER PERP" STRIPS.

FOR A *SPOOF* "MANUAL" ILLUSTRATING THE ATTITUDE OF THE "PETER PERPS" SEE:

FOR DETAILED INFORMATION ON THE OS CRIME, PLEASE VISIT:
[HTTP://WWW.MULTISTALKERVICTIMS.ORG/OSATV.PDF](http://www.multistalkervictims.org/osatv.pdf)

THIS EPISODE, 18, IS A SMALL SUB-SERIES (A, B, C ...) IN WHICH TARG GIVES HIS TALK TO THE ELMVALE CRISIS LINE STAFF

THE SIMPLE ANSWER IS THAT MEMBERS OF THE TARGET'S COMMUNITY HAVE BEEN TOLD VICIOUS LIES.

AFTER 12 YEARS OF A SPARE-TIME INVESTIGATION, IN WHICH HE WAS ABLE TO INFILTRATE THE STALKING GROUPS, PRIVATE INVESTIGATOR DAVID LAWSON PUBLISHED HIS REPORT TITLED "TERRORIST STALKING IN AMERICA." ORGANIZED STALKING TARGETS FIND LAWSON'S DIRECT OBSERVATIONS HIGHLY ACCURATE.

LAWSON DISCOVERED THAT MANY OF THE STALKING GROUP MEMBERS WERE ALSO MOTIVATED BY THE INTENSE SENSE OF BELONGING TO A GROUP WITH POWER, AND OSTENSIBLY DEDICATED TO COMMUNITY SERVICE. WHEN SUCH A GROUP IS TOLD, SAY, THAT THE TARGET IS A CHILD MOLESTER, IT'S NOT HARD TO IMAGINE THAT THE GROUP WOULD WILLINGLY ACCEPT ASSIGNMENTS TO MAKE THE TARGET'S LIFE UNPLEASANT!

LAWSON ALSO REPORTED THAT MANY TRADESPEOPLE WERE RECRUITED - CITY WORKERS, CONTRACTORS, AND ESPECIALLY VALUABLE ARE THE LOCKSMITHS AND UTILITY TECHNICIANS. THESE RECRUITS ACTUALLY PERFORM THE HARASSMENT AS PART OF THEIR NORMAL WORKDAY.

CONTINUED IN EPISODE 18-C ...

SOME SKEPTICS WILL SAY THAT THIS CRIME CAN'T BE HAPPENING BECAUSE "NOBODY HAS THAT MUCH TIME ON THEIR HANDS." WORKING PEOPLE CARRY OUT THE HARASSMENT DURING WORKING HOURS. NON-WORKING PEOPLE ALSO PARTICIPATE.

WWW.BITSTRIPS.COM

TARG - EPISODE 18-C

BY ELEANOR

"TARG" IS A STORY ABOUT A TARGET OF THE GROWING CRIME CALLED "ORGANIZED" OR "GROUP" STALKING, SOMETIMES ABBREVIATED "OS."

GROUP STALKING IS LARGELY IGNORED BY THE JUSTICE SYSTEMS, AND BY EDUCATING THE PUBLIC, THE WRITER HOPES "TARG" WILL EVENTUALLY HAVE HIS DAY IN COURT.

FOR THE PERPETRATOR SIDE OF THIS CRIME, SEE THE "PETER PERP" STRIPS.

FOR DETAILED INFORMATION ON THE OS CRIME, PLEASE VISIT:

[HTTP://WWW.MULTISTALKERVICTIMS.ORG/OSATV.PDF](http://www.multistalkervictims.org/osatv.pdf)

THIS EPISODE, 18, IS A SMALL SUB-SERIES (A, B, C ...) IN WHICH TARG GIVES HIS TALK TO THE ELMVALE CRISIS LINE STAFF

AND A MAJOR REASON WHY ORGANIZED STALKING DOESN'T REQUIRE "TOO MUCH TIME ON ONE'S HANDS" IS THAT EACH GROUP MEMBER ONLY DOES RELATIVELY SHORT "DUTY" IN ANY GIVEN DAY.

BUT WHEN ORGANIZED STALKING GROUPS INCLUDE A HUNDRED OR MORE PART-TIME HARASSERS, VERY LITTLE TIME SPENT BY EACH ONE CAN HAVE A DEVASTATING EFFECT ON THE TARGET. TARGETS "GET IT" MANY TIMES A DAY, AT WORK, IN THE COMMUNITY, AND AT HOME. IMAGINE THE WELL-KNOWN WORKPLACE HARASSMENT MOVING OUT INTO THE COMMUNITY!

AND DAVID LAWSON DID REPORT GROUPS OF A HUNDRED OR MORE WERE COMMON. HE ALSO REPORTED IN SOME COMMUNITIES, PEOPLE NOT DIRECTLY INVOLVED WOULD VIEW THE "ACTION" AS KIND OF A "LOCAL SPORT."

WHEN A TARGET HAS A PREDICTABLE ROUTINE, THE CHANCES OF A "SETUP" INCREASE. THERE IS SOME SURVEILLANCE OF A TARGET'S MOVEMENTS, INCLUDING PURCHASES AND NEEDS FOR SERVICES. HAVING A CAR SABOTAGED WHEN IT GOES IN FOR REPAIRS IS COMMON. BUT SABOTAGE IS ALWAYS MINOR - ANYTHING THAT WOULD ATTRACT POLICE ATTENTION IS CAREFULLY AVOIDED.

CONTINUED IN EPISODE 18-D ...

TRADESPEOPLE, HAVING BEEN FED LIES ABOUT THE TARGET, OFTEN MAKE LOTS OF "MISTAKES," MAKING OTHER WORK AND EXPENSE NECESSARY. THEY WILL OVERCHARGE, ARRIVE LATE, OR INCONVENIENTLY EARLY. EVERYTHING JUST SEEMS TO "ALWAYS GO WRONG" FOR THE TARGET.

WWW.BITSTRIPS.COM

TARG - EPISODE 18-D

BY ELEANOR

"TARG" IS A STORY ABOUT A TARGET OF THE GROWING CRIME CALLED "ORGANIZED" OR "GROUP" STALKING, SOMETIMES ABBREVIATED "OS."

GROUP STALKING IS LARGELY IGNORED BY THE JUSTICE SYSTEMS, AND BY EDUCATING THE PUBLIC, THE WRITER HOPES "TARG" WILL EVENTUALLY HAVE HIS DAY IN COURT.

THIS EPISODE, 18, IS A SMALL SUB-SERIES (A, B, C ...) IN WHICH TARG GIVES HIS TALK TO THE ELMVALE CRISIS LINE STAFF

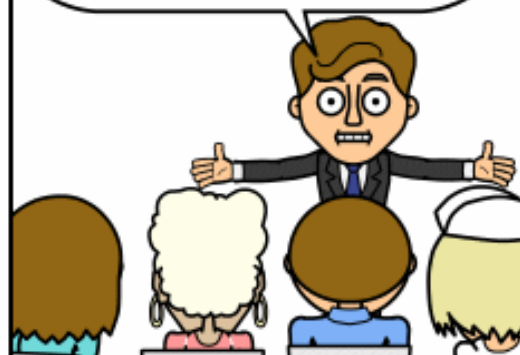

BESIDES THE WORKPLACE AND COMMUNITY, ORGANIZED STALKING HARASSMENT ALSO INCLUDES THE TARGET'S HOME. THE STALKERS WANT THE TARGET TO NEVER HAVE ANYWHERE SAFE FROM THEM.

THE HARASSERS DO MANY "SMALL" THINGS IN THE TARGET'S HOME, AND A FEW MAJOR ONES. LEAVING PENNIES OR CIGARETTE BUTTS AROUND, AND CONSTANTLY MOVING THINGS OUT OF PLACE. "SMALL" ITEMS ARE STOLEN, TOO SMALL TO ATTRACT SERIOUS ATTENTION FROM POLICE.

SOME CLOTHING IS RIPPED, AND SOME FURNITURE IS BROKEN. OFTEN OVER A PERIOD OF A FEW DAYS. BUT THEY ALSO TERRORIZE PETS. THEY HAVE BEEN KNOWN TO BUTCHER AND KILL PETS OR WILDLIFE, LEAVING THE ANIMAL ON THE TARGET'S DOORSTEP. ONE DOG WAS FED ANTIFREEZE AND FOUND BLIND WHEN THE TARGET RETURNED FROM WORK!

AND WHEN THE TARGET GOES TO THE POLICE? THEY USUALLY WON'T EVEN TAKE A CRIME REPORT. IN MANY REPORTED INSTANCES THE POLICE WILL ACTUALLY TRY TO MAKE THE TARGET APPEAR TO BE AT FAULT. IN ONE CASE, A TARGET WHOSE CAT HAD HER THROAT SLASHED WAS TOLD HE "PROBABLY DID IT FOR ATTENTION!"

CONTINUED IN EPISODE 18-E ...

I'VE ONLY GIVEN YOU HERE THE VERY BRIEFEST OUTLINE OF WHAT THIS CRIME IS ABOUT. YOU CAN SEE WHY I ASKED FOR THE OPPORTUNITY TO SPEAK TO YOU. PUBLIC EDUCATION IS NEEDED SO THAT GROUP STALKING CAN BE SEEN AS THE SERIOUS CRIME IT IS. AND YOUR GROUP CAN HELP WITH THAT!

WWW.BITSTRIPS.COM

"TARG" IS A STORY ABOUT A TARGET OF THE GROWING CRIME CALLED "ORGANIZED" OR "GROUP" STALKING, SOMETIMES ABBREVIATED "OS."

GROUP STALKING IS LARGELY IGNORED BY THE JUSTICE SYSTEMS, AND BY EDUCATING THE PUBLIC, THE WRITER HOPES "TARG" WILL EVENTUALLY HAVE HIS DAY IN COURT.

THIS EPISODE, 18, IS A SMALL SUB-SERIES (A, B, C ...) IN WHICH TARG GIVES HIS TALK TO THE ELMVALE CRISIS LINE STAFF

APPARENTLY, *ONLY* WHEN THE PUBLIC UNDERSTANDS HOW SERIOUS THIS CRIME IS, CAN TARGETS COUNT ON THE SAME LEVEL OF SUPPORT WHICH SINGLE STALKER CASES ARE GIVEN NOW.

ORGANIZED STALKING TARGETS WERE ENCOURAGED WHEN IN JANUARY 2009, THE U.S. DEPARTMENT OF JUSTICE PUBLISHED A REPORT TITLED "STALKING VICTIMIZATION IN THE UNITED STATES." THIS REPORT SHOWS THAT MANY *GROUP* STALKING COMPLAINTS ARE BEING HANDLED BY U.S. JUSTICE SYSTEMS. EXCERPTS ARE IN THE HANDOUT SHEETS YOU HAVE.

ABOUT ONE STALKING COMPLAINT IN EIGHT IS ABOUT GROUP STALKING.

WHAT CAN YOU, AS CRISIS SUPPORT ORGANIZATION STAFF DO TO HELP WITH THIS DIFFICULT CRIME PROBLEM? FIRST, *TALK* ABOUT THE CRIME. ONCE ENOUGH PEOPLE ARE AWARE, OFFICIALS WILL FIND IT MUCH MORE DIFFICULT TO KEEP DENYING IT IS HAPPENING.

ANOTHER THING YOU CAN DO IS TO NOT "BRUSH OFF" CALLERS WHO DESCRIBE EXPERIENCES LIKE THOSE I'VE SPOKEN ABOUT HERE, AND THE MORE COMPLETE INFORMATION ON YOUR HANDOUTS. THERE ARE INTERNET DISCUSSION GROUPS, CONFERENCE CALLS AND ACTIVISM EVENTS TO WHICH YOU CAN REFER YOUR CALLERS.

SO AGAIN, SPECIAL THANKS TO KARLENE FOR ARRANGING THIS MEETING, AND THANKS FOR YOUR TIME TO HEAR ABOUT THIS GROWING CRIME.

ARE THERE ANY QUESTIONS?

WWW.BITSTRIPS.COM

TARG - EPISODE 19

BY ELEANOR

"TARG" IS A STORY ABOUT A TARGET OF THE GROWING CRIME CALLED "ORGANIZED" OR "GROUP" STALKING, SOMETIMES ABBREVIATED "OS."

GROUP STALKING IS LARGELY IGNORED BY THE JUSTICE SYSTEMS, AND BY EDUCATING THE PUBLIC, THE WRITER HOPES "TARG" WILL EVENTUALLY HAVE HIS DAY IN COURT.

FOR THE PERPETRATOR SIDE OF THIS CRIME, SEE THE "PETER PERP" STRIPS.

[HTTP://WWW.MULTISTALKERVICTIMS.ORG/OSATV.PDF](http://www.multistalkervictims.org/osatv.pdf)

TARG HAS JUST COMPLETED HIS TALK TO THE ELMVALE CRISIS LINE STAFF, AND IS READY FOR QUESTIONS:

TARG, HOW DO WE KNOW THAT ORGANIZED STALKING TARGETS AREN'T IMAGINING ALL THIS? MAYBE THEY ARE MENTALLY ILL?

THINGS HAVE CHANGED IN THE PAST TEN OR FIFTEEN YEARS. WE NOW HAVE OFFICIAL CRIME STATISTICS FROM THE UNITED STATES, CANADA, AND GREAT BRITAIN, SHOWING THAT ROUGHLY ONE STALKING COMPLAINT IN EIGHT IS ABOUT STALKING BY A GROUP. THE NATIONAL CENTER FOR VICTIMS OF CRIME GETS LITERALLY THOUSANDS OF CALLS PER MONTH ABOUT STALKING BY GROUPS.

AND SOME MENTAL HEALTH PROFESSIONALS HAVE ACKNOWLEDGED, AND THIS IS PART OF YOUR HANDOUT MATERIAL, THAT: "IN 5% OF THE CASES (5/95), THERE WAS MORE THAN ONE STALKER." 5% OF THE 3.3 MILLION STALKING VICTIMS IS 165,000 AMERICANS WHO ARE POTENTIAL ORGANIZED STALKING TARGETS.

I INVITE YOU TO NOTE, IN YOUR HANDOUTS, THE QUOTE FROM THE SHERIDAN AND BOON STUDY OF TYPES OF STALKERS WHICH SAYS: "SADISTIC STALKING, COMPRISED 12.9% OF THEIR SAMPLE." IN OTHER WORDS, ONE STALKER IN EIGHT IS QUITE CAPABLE OF CARRYING OUT THE TYPE OF HARASSMENT WE REPORT.

** REMEMBER, TOO, THAT THE THOUSANDS OF PEOPLE INVOLUNTARILY RADIATED AND FORCED TO EAT RADIO-ACTIVE MATERIAL WERE OFFICIALLY LABELLED "THE CRAZIES." AS YOU FOLKS ARE CALLED TO GENUINELY HELP THOSE IN NEED, I ASK YOU NOW TO REMEMBER HOW, THROUGHOUT HISTORY, "CRAZIES" ARE OFTEN EVENTUALLY PROVEN RIGHT!

** ADMITTED TO BY PRESIDENT CLINTON IN THE 1990S

PETER PERP - EPISODE 11

BY ELEANOR

A COMPANION TO THE "TARG THE TARGET" STRIP, THIS STRIP LOOKS AT THE PERPETRATOR SIDE OF ORGANIZED STALKING (OS).

THE PERPETRATOR SIDE IS LARGELY SPECULATIVE. HOWEVER, P.I. DAVID LAWSON'S INVESTIGATION OF OS GROUPS, AND THE OBSERVATION OF THOUSANDS OF OS TARGETS MAKE THE SPECULATION HERE VERY WELL INFORMED. SEE: [HTTP://WWW.MULTISTALKERVICTIMS.ORG/OSATV.PDF](http://www.multistalkervictims.org/osatv.pdf) FOR DETAILS.

MR. HERNDON, I'M PETER, AND THIS IS MY BOSS, FRED. WE ARE WITH THE "TRUE JUSTICE" ORGANIZATION, AND WE ARE HERE TO TALK ABOUT YOUR MOVING.

MOVING!? I BEEN HERE 20 YEARS AND I AIN'T GOING NOWHERE!

IT'S ALL ARRANGED - AT NO COST TO YOU!

THE COMMUNITY NEEDS TO MOVE SPECIAL OFFICERS INTO YOUR HOME TO KEEP WATCH ON PHIL MARSH, THE DRUG DEALER NEXT DOOR!

HE'S NO DEALER! NO WAY, BUDDY!

PHIL HAS NEVER USED ILLEGAL DRUGS!

MR. HERNDON, LET US COME IN AND EXPLAIN HOW MOVING IS YOUR PATRIOTIC DUTY, AND, HOW THOSE WHO DO AS WE REQUEST ENJOY *FAR* LESS "TROUBLE" THAN THOSE WHO REFUSE!

MR. HERNDON WAS MOVED WITHIN A WEEK, AT NO COST TO HIMSELF. HE ALSO RECEIVED SEVERAL PERKS FROM LOCAL MERCHANTS. HE NOW RESIDES IN A BETTER HOME, JUST THREE BLOCKS FROM HIS OLD ONE.

THIS STORY, NEIGHBOURS MOVING OUT AND NEW ONES MOVING IN, REPEATS FOR MANY IF NOT MOST TARGETS, EACH TIME THEY MOVE. CLEARLY, THE OS GROUPS ARE NOT LIKE SINGLE STALKERS. NOT AT ALL.

PETER PERP IS HOLDING THE DAILY 7:00 AM CONFERENCE CALL FOR HIS "COMMUNITY BASED AGENTS" OR "CBAS."

OK DAY SHIFT, LISTEN UP!

FRANK, TOM, EDDIE, MEET TARG AT THE SANDWICH SHOP FOR LUNCH AND USE SCRIPT 28. MAKE SURE YOU ARE CLOSE ENOUGH TO TARG THAT HE WILL HEAR YOU!

FRED, WENDY, SOL, MARK, CLIFF, ANNIE, PHIL, TED, HANK, MARY, WILLIE, ROB, ZACK, TATIANA, MOE, RICK, HARVEY AND PAM .. YOU'RE TO PARK IN THE NORTH LOT AT WALMART. ROB WILL I.D. THE TARGETS FOR CROWDING IN THE STORES AND BLOCKING IN THE PARKING LOT!

RANDY, THIS IS YOUR FIRST DAY, SO YOU'LL RIDE WITH ME. MEET ME AT THE DONUT SHOP IN 30 MINUTES!

LOUIE, ELECTRONIC HARASSMENT SCRIPT 341 TODAY!

TO THE UNAWARE PUBLIC, THIS MAY SEEM "IMPOSSIBLE."

HOWEVER, P.I. DAVID LAWSON DISCOVERED, BY INFILTRATING THE STALKING GROUPS, THAT HARASSMENT HAS BECOME A LITERAL COMMUNITY-BASED "COTTAGE INDUSTRY."

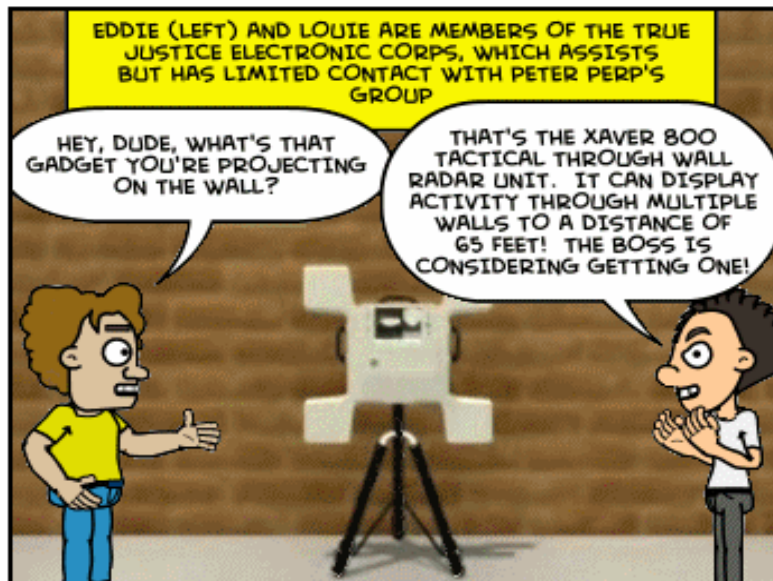

THESE GROUPS ARE TIGHTLY COORDINATED AND SUPERVISED BUT LAWSON REPORTED HE WAS NOT ABLE TO PENETRATE ABOVE THE COMMUNITY LEVEL.

MOVING DOES NOT STOP THE HARASSMENT.

WWW.BITSTRIPS.COM

THE LIDA MACHINE IS AN ACTUAL DEVICE, DEVELOPED ORIGINALLY AS A DRUGLESS SEDATION MACHINE IN RUSSIA, CIRCA WORLD WAR II. ONE FORMER KOREAN WAR P.O.W. SAW A LIDA MACHINE AT THE PRISON CAMP.

A LIDA MACHINE WAS STUDIED BY DR. ROSS ADEY AND DR. ELTON BYRD AT THE LOMA LINDA, CALIFORNIA VETERANS HOSPITAL RESEARCH UNIT.

DR. BYRD TOLD ME THAT WHILE THE ORIGINAL LIDA MACHINE USED OTHER REPETITIVE STIMULI, SUCH AS SLOWLY BLINKING LIGHTS AND RADIANT HEAT, THE PULSING RADIO SIGNAL WAS THE DOMINANT STIMULUS.

THE LIDA MACHINE IS NOT MARKETED BUT IT IS QUITE EASY TO ADAPT FROM A RADIO TRANSMITTER.

THE LIDA IS ACTUALLY PATENTED, THE PATENT BEING U.S. PATENT NUMBER 3,773,049.

PULSED MICROWAVE VOICE TO SKULL IS ACTUALLY A FAIRLY OLD TECHNOLOGY. DR. JOSEPH SHARP SUCCESSFULLY DEMONSTRATED IT IN 1973.

SHARP'S METHOD WAS DESCRIBED IN THE MARCH 1975 ISSUE OF THE JOURNAL "AMERICAN PSYCHOLOGIST" IN AN ARTICLE TITLED "MICROWAVES AND BEHAVIOR" BY DR. DON JUSTESEN.

WHILE MICROWAVE VOICE TO SKULL ISN'T WIDELY PUBLISHED, IT IS NOT CLASSIFIED SECRET, AND IS AVAILABLE TO CRIMINALS WHO CAN AFFORD A RADAR SET AND THE SERVICES OF A SENIOR RADAR TECHNICIAN.

AN ABC NEWS ITEM IN JULY 2008 DESCRIBED MILITARY AND POLICE WORK ON A VOICE TO SKULL TECHNOLOGY CALLED "MEDUSA", WHICH WAS PROPOSED FOR CROWD CONTROL USE.

THERE ARE TWO U.S. PATENTS: 4,858,612 AND 4,877,027

WHAT FATHER SIMMONS *DIDN'T* KNOW WAS THAT PETER PERP'S ORGANIZATION IS *FAR* MORE THAN SOME GROUP OF LOCAL DO-GOODERS!

ORGANIZED STALKING TARGETS WHO TRAVEL OR RELOCATE REPORT HARASSMENT CONTINUES ANYWHERE IN THE INDUSTRIALIZED WORLD, WITHOUT A BREAK.

NUMEROUS PEOPLE WHO TRY TO HELP EXPOSE ORGANIZED STALKING SUDDENLY GET "COLD FEET" AND STOP COMMUNICATING.

THREE DAYS AFTER THIS INCIDENT, FATHER SIMMONS WAS FOUND DEAD OF A HEART ATTACK IN HIS RECTORY.

WWW.BITSTRIPS.COM

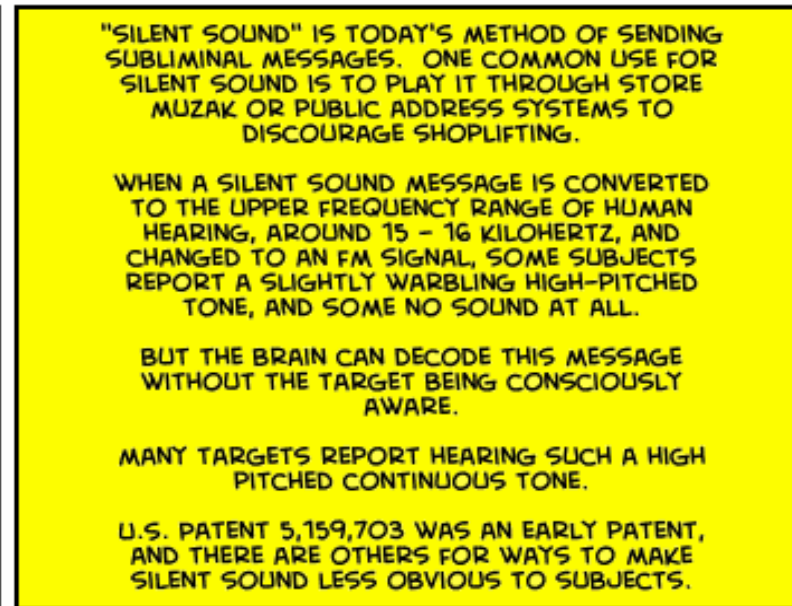

SOME ORGANIZED STALKING TARGETS REPORT FULLY STOCKED STORES REPEATEDLY HAVING JUST THE ITEM THEY NEEDED EMPTY, MANY TIMES OVER THE YEARS. TYPICALLY THIS HAPPENS WHERE THE PERPETRATORS CAN SEE FROM THE TARGET'S SUPPLIES WHEN THE TARGET WILL NEED A GIVEN ITEM.

BESIDES MISSING ITEMS, FINDING JUST ONE OF AN ITEM, TYPICALLY IN A BROKEN PACKAGE, IS REPORTED.

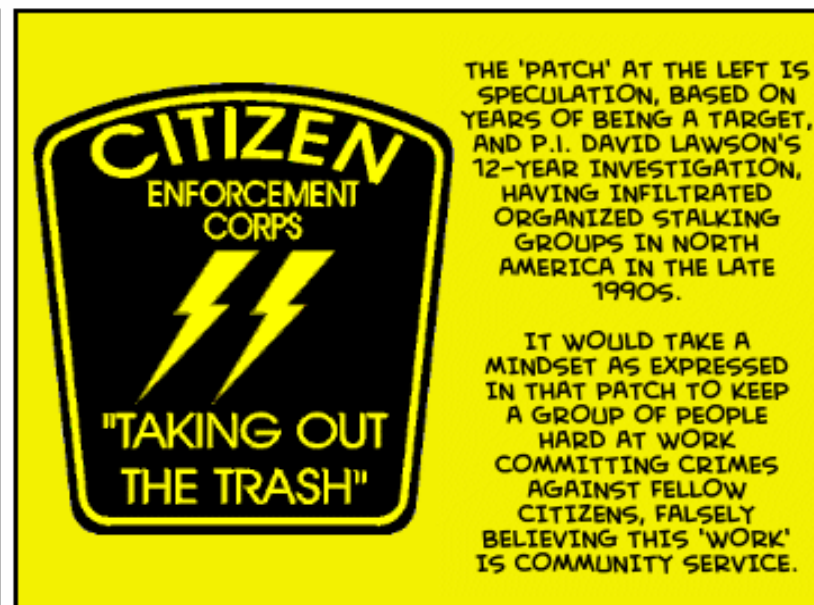

SPRAYING OF NOXIOUS SUBSTANCES ON WAREHOUSE ORDERED ITEMS HAS BEEN REPORTED.

THIS HARASSMENT IS PERFECT FROM THE PERPS' STANDPOINT BECAUSE PRACTICALLY NO ONE WILL BELIEVE STORE PERSONNEL WOULD DO SUCH THINGS.

TARG'S MAIN JOB IS LOOKING AFTER THE COMPUTER SYSTEM AND MAINTENANCE

HMMM ... I'VE BEEN AN ORGANIZED STALKING TARGET FOR ABOUT A YEAR NOW. THE AMOUNT OF COMPUTER TROUBLE I'VE HAD HERE AND AT HOME IS ABSOLUTELY ASTONISHING!

EVEN VISITING PROGRAMMERS AND TECHNICIANS ARE COMPLETELY BAFFLED!

I CAN WRITE A PROGRAM, AND EVEN THOUGH THE BUGS HAVE BEEN FIXED AND IT RAN SUCCESSFULLY, IT SUDDENLY REFUSES TO RUN. WHEN I ASK ANOTHER PROGRAMMER TO TYPE THE SAME CODE AND COMPILE IT, "HIS" PROGRAM WORKS PERFECTLY.

OF COURSE WHEN YOU'RE WORKING FROM A SERVER, OTHERS HAVE ACCESS.

I CAN PROGRAM A PAGER, AND IT FAILS. HAND IT TO SOMEONE ELSE, USING THE SAME STEPS, AND IT WORKS FINE. WITNESSED.

OVER THE PAST YEAR, LITERALLY, A *TRUCKLOAD* OF COMPUTER GEAR HAS FAILED AND HAD TO BE DISCARDED. ENOUGH TO FILL THE BACK OF A FULL SIZE PICKUP TRUCK. THAT IS *WAY* BEYOND THE NORMAL FAILURE RATE, AND OUR EQUIPMENT SUPPLIERS ARE SPEECHLESS - NOT ONE OF THEIR OTHER CUSTOMERS HAS EVEN COME CLOSE TO SUCH A HIGH FAILURE RATE!! EVER!

CONSTANTLY, COMPUTER FILES I HAVE WORKED ON HAVE AN OLDER COPY REPLACED ON OUR SERVER! COMPUTERS ALMOST ALWAYS FAIL JUST AS I START TO EAT LUNCH, OR JUST AS I START TO GO HOME. I FIND PARTS PULLED LOOSE IN COMPUTERS I'VE WORKED ON.

EVEN AT HOME, I'VE HAD THREE NEW WEBCAMS FAIL, DAYS AFTER I PUT THEM INTO SERVICE. NEW THUMB DRIVES TOTALLY TRASHED AFTER A COUPLE OF WEEKS.

THESE AND MANY OTHER FORMS OF SABOTAGE ARE EVERYDAY REALITY FOR ORGANIZED STALKING TARGETS.

EVEN THOUGH MOST EMAILS GO THROUGH, TIME SENSITIVE EMAILS ARE OFTEN DELAYED UNTIL AFTER THEY ARE NO LONGER USEFUL.

** AT TIMES, (VIA THE NORMAL REMOTE KEYBOARD OPERATING FEATURE,) I WILL HAVE MY WORK CHANGED OR DELETED, RIGHT AS I AM WORKING ON IT!

**
 (EDDIE'S AND LOUIE'S HANDIWORK! SEE THE PETER PERP STRIP.)

MIKKI IS A TARGET WHO IS IN A HOSPICE, DYING OF CANCER

ORGANIZED STALKING TARGETS ARE HARASSED EVEN IN HOSPITAL, EVEN WHILE DYING OF CANCER.

WHILE IT ISN'T CLEAR EXACTLY HOW THE "BEE STINGS" AND VISIBLE BURNS ARE DONE, THESE ARE FAIRLY COMMON AMONG O.S. TARGETS. "MASERS," OR MICROWAVE LASERS, ARE ONE POSSIBILITY.

TARGETS IN HOSPITAL ARE AWAKENED FREQUENTLY BY STAFF FOR NONSENSE REASONS LIKE TO LET THEM KNOW THE NURSING SHIFT HAS CHANGED.

INTERFERENCE WITH MEDICATION AT THE PHARMACY HAPPENS TO SOME TARGETS AS WELL.

THIS ILLUSTRATES THE POWER OF THE CONSTANTLY REPEATED VICIOUS LIE!

WWW.BITSTRIPS.COM

ORGANIZED STALKING TARGETS WHO ARE PARENTS, SUCH AS MS. BARCLAY HERE, CAN'T EVEN ASK THE AUTHORITIES FOR HELP BECAUSE LOSING THEIR CHILDREN DOES HAPPEN IF THEY COMPLAIN.

AND UNDER TODAY'S "FOURTH BRANCH OF GOVERNMENT," THE ADMINISTRATIVE BRANCH, AGENCIES OPERATE WITH LITTLE OR NO OVERSIGHT BY ELECTED LEGISLATORS, SO LOSS OF A CHILD CAN'T BE APPEALED.

ADDITIONALLY, CHILDREN OF TARGETED PARENTS ARE ALSO HARASSED. THEY ARE SITTING DUCKS FOR ORGANIZED STALKING IN SCHOOL.

TARGETED CHILDREN ASK THINGS LIKE "WHEN IS THIS GOING TO STOP, MOMMY?" AND THE TARGETED PARENTS ARE HOPELESS AND POWERLESS TO HELP UNTIL THE GENERAL PUBLIC WAKES UP TO THIS VICIOUS CRIME HAPPENING LITERALLY IN THEIR BACK YARDS!

PETER PERP - EPISODE 22

BY ELEANOR

A COMPANION STRIP TO THE "TARG THE TARGET" STRIP, THIS STRIP LOOKS AT THE PERPETRATOR SIDE OF ORGANIZED STALKING (OS.)

THE PERPETRATOR SIDE IS
LARGELY SPECULATIVE. HOWEVER,
P.I. DAVID LAWSON'S INVEST-
IGATION OF OS GROUPS, AND THE
OBSERVATIONS OF THOUSANDS
OF OS TARGETS MAKE THE
SPECULATION HERE VERY WELL
INFORMED. SEE FOR DETAILS:

HTTP://WWW.MULTISTALKERVIC
TIMS.ORG/OSATV.PDF

HTTP://WWW.MULTISTALKERVIC
TIMS.ORG/TJOPSMANUAL.PDF

PETER SLEEPS SOUNDLY. UNLIKE HIS TARGETS, HE DOESN'T HAVE A "LOUIE" OR "EDDIE" NEXT DOOR, AIMING A LIDA MACHINE ON WAKEUP SPEED AT HIM IN BED!

PETER! ... PETER !
REMEMBER ME? IT'S MISSY!
** YOU ** DROVE ME TO KILL
MYSELF, YOU BASTARD!!

****YOU** ROBBED ME OF EVERYTHING! MY KID, MY FRIENDS, MY FAMILY, MY HOME. I COULDN'T EVEN WORK, OR GET WELFARE, OR EVEN SLEEP AT NIGHT, THANKS TO **YOU**, BUD!**

"PATRIOTIC DUTY" - RIGHT! DRIVING
INNOCENT PEOPLE TO SUICIDE! HEAR
ME CAREFULLY DIRTBAG - I *KNOW*
WHAT HAPPENS AFTER DEATH NOW, AND
I KNOW WHAT**YOU** ARE IN FOR! IT
WON'T BE NICE. BUT I'M GOING TO
JUST LET YOU WORRY WHAT THAT WILL
BE, FOR THE REST OF YOUR MISERABLE
LIFE. F*** OFF, COCKROACH!!
GOOD BYE!

THAT WAS JUST A BAD DREAM!
RIGHT!! BESIDES, THAT C**T
DESERVED EVERYTHING SHE
GOT! I DON'T BELIEVE IN
THAT HEAVEN AND HELL S**T!
TRUE JUSTICE WILL PROTECT
ME!!

I'VE GOT TO GET THIS OUT OF MY MIND. BETTER GET TO WORK!

WWW.BITSTRIPS.COM

PETER PERP - EPISODE 24

BY ELEANOR

THIS IS AN ACTUAL ORGANIZED STALKING CASE. A FAMILY UNKNOWINGLY MOVED INTO A HOME WHICH HAD BEEN A METH LAB. THE RESIDUE FROM THE DRUG MANUFACTURING CAUSED ALL OF THE FAMILY MEMBERS TO DISPLAY "METH MOUTH" SYMPTOMS TO THEIR DENTIST.

THE DENTIST IDENTIFIED THEM TO THE SHERIFF, WHO TURNED THEM OVER TO A CHURCH-AND-CITY-EMPLOYEE NETWORK OF ORGANIZED STALKERS FOR THE "TOUGH LOVE" TREATMENT.

YEARS OF BRUTAL HARASSMENT, BOTH STALKING AND ELECTRONIC, FOLLOWED. EVENTUALLY, THE MOTHER, WHO WAS THEN A SENIOR CITIZEN, DISCOVERED THAT MEMBERS OF HER OWN CHURCH WERE PARTICIPATING IN THE ENDLESS HARASSMENT.

THE HARASSMENT CONTINUED IN SPITE OF SERIOUS ILLNESS OF THE PARENTS. ONLY A FRIEND, A SHERIFF IN A DIFFERENT COUNTY, WAS ABLE TO LOCATE THE SOURCE OF THE HARASSMENT. IT LARGELY STOPPED AFTER THAT.

TARG - EPISODE 5

BY ELEANOR

"TARG" IS A STORY ABOUT A TARGET OF THE GROWING CRIME CALLED "ORGANIZED" OR "GROUP" STALKING.

GROUP STALKING IS LARGELY IGNORED BY THE JUSTICE SYSTEMS, AND BY PUBLIC EDUCATION, THE WRITER HOPES "TARG" WILL EVENTUALLY HAVE HIS DAY IN COURT.

THIS OVERSIMPLIFIED "SKIT" SHOWS HOW EASY IT IS TO HARASS INTENSELY WHEN EACH HARASSER CAN ONLY BE HELD ACCOUNTABLE FOR SINGLE, OCCASIONAL, "INNOCENT" ACTS.

THE *TARGET*, ON THE OTHER HAND, GETS THEM ALL, AND AROUND THE CLOCK IN THE ORGANIZED STALKING WORLD!

WWW.BITSTRIPS.COM

TARG - EPISODE 6

BY ELEANOR

"TARG" IS A STORY ABOUT A TARGET OF THE GROWING CRIME CALLED "ORGANIZED" OR "GROUP" STALKING.

GROUP STALKING IS LARGELY IGNORED BY THE JUSTICE SYSTEMS, AND BY PUBLIC EDUCATION, THE WRITER HOPES "TARG" WILL EVENTUALLY HAVE HIS DAY IN COURT.

SO, MECH, WHY DID MY CAR BOIL OVER THIS MORNING??

YOU HAD A HOLE DRILLED IN YOUR WATER PUMP! THAT WILL COST YOU ABOUT \$600.

SORRY I'M LATE AGAIN, BOSS!

YOU'VE BEEN LATE A LOT!

SOMETHING *WEIRD* IS HAPPENING! I KEEP GETTING "BOXED IN" BY GROUPS OF SLOW MOVING CARS!

EVERY DAMN DAY, BOTH TO AND FROM WORK!

AND TODAY, A DRILLED HOLE IN MY WATER PUMP!

SORRY, TARG! I DON'T BELIEVE YOUR STORY. STRAIGHTEN YOURSELF OUT, OR YOU'RE TERMINATED!

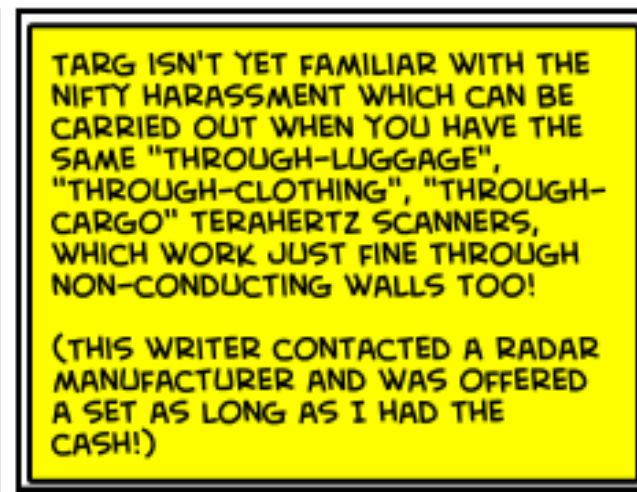

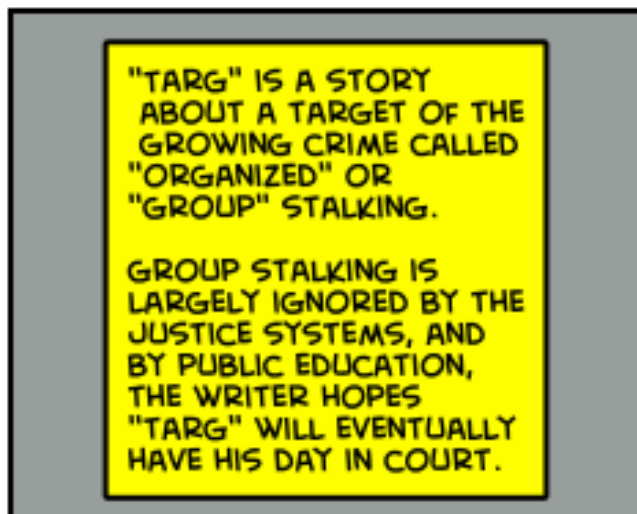

TARG DOESN'T YET KNOW THAT THERE ARE THOUSANDS OF GROUP STALKING TARGETS HAVING THE SAME THINGS HAPPEN TO THEM ... CONSTANTLY!

THE STALKERS STAGE "ACCIDENTS" AND TRY TO RUN TARGETS OFF THE ROAD OR INTO OBSTACLES, TOO.

WWW.BITSTRIPS.COM

TARG - EPISODE 7

BY ELEANOR

WWW.BITSTRIPS.COM

TARG - EPISODE 8

BY ELEANOR

"TARG" IS A STORY ABOUT A TARGET OF THE GROWING CRIME CALLED "ORGANIZED" OR "GROUP" STALKING.

GROUP STALKING IS LARGELY IGNORED BY THE JUSTICE SYSTEMS, AND BY PUBLIC EDUCATION, THE WRITER HOPES "TARG" WILL EVENTUALLY HAVE HIS DAY IN COURT.

BEEEDLE-DEEDLE-DEEDLE!

NO, I'M *NOT* TESSA!

TESSA?

AND I'M NOT FREDDIE, SUZIE, MARY, LOUIE, LORRAINE, TIM, OR PIZZA WORLD, OR ST. MICHAEL'S CHURCH!

FOR THREE BLINKIN' MONTHS, AT HOME AND AT WORK, I'VE HAD NON-STOP "WRONG NUMBERS!!"

AND CALLS I WANT DON'T RING!!

TARG HASN'T READ THE REPORT OF PRIVATE INVESTIGATOR DAVID LAWSON, WHO WAS ABLE TO INFILTRATE ORGANIZED STALKING GROUPS IN THE U.S. AND CANADA. (2002)

LAWSON REPORTED THAT UTILITY TECHS, SUCH AS TELEPHONE AND CABLE EMPLOYEES, ARE HIGHLY PRIZED MEMBERS OF THE O.S. GROUPS. (LOCKSMITHS TOO!)

AS A COVER, WRONG NUMBERS ARE OFTEN LEGITIMATE CALLERS, NOT STALKERS, AND THEIR CALLS ARE RE-ROUTED TO THE TARGET BY THE TELEPHONE TECHS.

WWW.BITSTRIPS.COM

TARG - EPISODE 9

BY ELEANOR

"TARG" IS A STORY ABOUT A TARGET OF THE GROWING CRIME CALLED "ORGANIZED" OR "GROUP" STALKING.

GROUP STALKING IS LARGELY IGNORED BY THE JUSTICE SYSTEMS, AND BY PUBLIC EDUCATION, THE WRITER HOPES "TARG" WILL EVENTUALLY HAVE HIS DAY IN COURT.

BEEP BEEP!
BO-O-O-O-P!

I KEEP GETTING THESE STRANGE SOUNDS! HOW IS THIS POSSIBLE??

DEE DEE DEE!
DEE DEE DEE!
DEE DEE DEE!

MY CLOCK RADIO IS SET FOR 6, AND IT'S ONLY 3:30! AND I DIDN'T SHUT THE ALARM OFF - IT STOPPED WHEN I SAT UP! WHAT GIVES??

THIS HAS HAPPENED MANY TIMES!

TARG HAS YET TO DISCOVER THAT MICROWAVE "VOICE TO SKULL" TECHNOLOGY WAS DEMONSTRATED, THEN PUBLISHED IN 1975!

A RADAR PULSE CAUSES A CLICK IN THE HEARING SENSE. BY USING VOICE OR OTHER SOUNDS TO CONTROL THE CLICKS, VOICE OR OTHER SOUNDS CAN BE INDUCED IN THE SKULL, EVEN THROUGH NON-CONDUCTING WALLS! THIS TECHNOLOGY IS NOT CLASSIFIED.

WWW.BITSTRIPS.COM

TARG - EPISODE 10

BY ELEANOR

"TARG" IS A STORY ABOUT A TARGET OF THE GROWING CRIME CALLED "ORGANIZED" OR "GROUP" STALKING.

GROUP STALKING IS LARGELY IGNORED BY THE JUSTICE SYSTEMS, AND BY PUBLIC EDUCATION, THE WRITER HOPES "TARG" WILL EVENTUALLY HAVE HIS DAY IN COURT.

MAN ... THOSE NEIGHBOURS HAVE A *LOT* OF VISITORS!

NIGHT AND DAY. I DON'T REMEMBER EVER SEEING THEIR LIGHTS OUT!

AND THE NEIGHBOUR ON THE OTHER SIDE, TOO ...

BUT THE ODDEST THING IS THAT NEIGHBOURS ON *BOTH SIDES* MOVED IN JUST DAYS AFTER I DID!

STRANGE AS THIS SOUNDS, *MANY* ORGANIZED STALKING TARGETS REPORT THAT EACH TIME THEY MOVE, WITH DETACHED HOMES OR APARTMENTS, NEIGHBOURS SEEM TO MOVE IN SHORTLY AFTERWARDS.

P.I. DAVID LAWSON'S INFILTRATION REPORT ABOUT SOME NORTH AMERICAN STALKING GROUPS REVEALED THAT THE STALKING GROUPS *DO* HAVE FUNDING TO ACCOMPLISH THIS.

WWW.BITSTRIPS.COM

PETER PERP - EPISODE 1

BY ELEANOR

A COMPANION TO THE "TARG THE TARGET" STRIP, THIS STRIP LOOKS AT THE PERPETRATOR SIDE OF ORGANIZED STALKING (OS).

THE PERPETRATOR SIDE IS LARGELY SPECULATIVE. HOWEVER, P.I. DAVID LAWSON'S INVESTIGATION OF OS GROUPS, AND THE OBSERVATION OF THOUSANDS OF OS TARGETS MAKE THE SPECULATION HERE VERY WELL INFORMED. SEE: [HTTP://WWW.MULTISTALKERVICTIMS.ORG/OSATV.PDF](http://www.multistalkervictims.org/osatv.pdf) FOR DETAILS.

GOOD EVENING, FOLKS. THANKS FOR STAYING LATE. I'M PETER PERP. I'M A LOCAL SUPERVISOR FOR A GROUP YOU PROBABLY HAVEN'T HEARD OF - "TRUE JUSTICE." WE ARE A SPECIAL AGENCY WHO WORK TO SEE JUSTICE DONE IN CASES WHERE THE COURTS HAVE NOT BEEN ABLE TO DEAL WITH A PROBLEM.

WE ARE LIKE A "POLICE AUXILIARY" BUT TO BE EFFECTIVE, THE POLICE QUIETLY SUPPORT US, BUT DON'T ACKNOWLEDGE OUR OPERATIONS.

WE ADMINISTER "SILENT JUSTICE" TO PEOPLE WITH CRIMINAL BACKGROUNDS, KEEPING THEM FROM THREATENING THE COMMUNITY!

SO WHERE DO WE COME IN?

FUTURE EPISODES WILL EXPLAIN HOW TARG'S CO-WORKERS, AND FOR THAT MATTER, ALL WHO COOPERATE, FIT IN WITH ORGANIZED STALKING.

FOR A **SPOOF** "OPERATIONS MANUAL" WHICH SETS FORTH OUR IMPRESSIONS OF THE ATTITUDE OF THE PERPETRATORS, SEE: [HTTP://WWW.MULTISTALKERVICTIMS.ORG/TJOPSMANUAL.HTM](http://www.multistalkervictims.org/tjopsmanual.htm)

CO-OPTING TARG'S PARENTS CONTINUES ...

WHY ARE YOU TELLING US ABOUT THIS?

WE WANT TO HELP TARG. WHEN SOMEONE'S BEHAVIOUR THREATENS THE COMMUNITY, WE KEEP SHOWING THEM LITTLE REMINDERS THAT THEY ARE BEING WATCHED - AROUND THE CLOCK. BUT NO PHYSICAL HARM* IS EVER DONE TO OUR CLIENTS.

* NOT TRUE! BEATINGS ARE RARE, BUT OTHER HARM HAPPENS!

TO BE EFFECTIVE, WE NEED *YOUR* HELP TOO! BE A BIT COOL TOWARDS TARG. IF HE STARTS TALKING ABOUT "STALKING," TELL HIM HE SHOULD SEE A GOOD PSYCHIATRIST. YOU MIGHT EVEN SAY OR DO ODD THINGS, THEN DENY IT, TO ENHANCE HIS GUILT FEELINGS.

THIS IS CALLED "TOUGH LOVE." SOMETIMES OUR CLIENTS CORRECT THEIR BEHAVIOUR. OTHER TIMES, THEY MUST BE PUT IN MENTAL HOSPITAL. EITHER WAY, OUR CLIENTS ALWAYS BENEFIT!

WE ARE "ALWAYS THERE FOR" OUR CLIENTS, AND YOU CAN HELP DO WHAT'S BEST FOR TARG, AND FOR THE COMMUNITY, BY HELPING US!

- A5. Gathering Evidence: Signal Detection

- A10. Group Stalking Statistics
- A11. Chapter 4 (OSATV): Through-Wall Electronic Weapons
- A12. Earning Attention Span Success Story

General

There are many different ideas and opinions within the organized stalking and electronic harassment community as to how to cope with this crime. This booklet presents the opinions of the author, Eleanor White, who at time of writing has been a target for 29 years. Because this crime includes tactics outside the widely recognized crimes, including classified (secret) technologies, nothing in this booklet is guaranteed to help in any particular case.

This collection of coping ideas is provided on a “for what it may be worth” basis.

Note: This book is not intended for the general public, however, I doubt it would do any harm if members of the public were to see it.

For a booklet on handling OS/EH information see:

<http://www.multistalkervictims.org/osih.pdf>

For a booklet about technology terms and concepts, see:

<http://www.multistalkervictims.org/ostt.pdf>

For a booklet describing OS/EH designed for the public see:

<http://www.multistalkervictims.org/osatv.pdf>

For further coping tips from the Stop Covert War web site:

<http://www.stopcovertwar.com/>

(Enter, then look for the bottom of page menu item saying “Countermeasures.”)

For a booklet describing OS/EH activism history ee:

<http://www.multistalkervictims.org/osah.pdf>

This blog contains additional suggestions for coping (listed October 2009):

<http://www.wiseti.blogspot.com>

1. “How Can I Get This Stopped!?”

“How Can I Get This Stopped!?” is, naturally, the number one question on the mind of every target of organized stalking and electronic harassment (OS/EH).

The short answer is that because this crime appears to have taken over all the world's governments and most relevant non-government organizations, and seems to have virtually unlimited funding and power, it's going to take a while, and we don't have a method which has been demonstrated to work at this time.

It has been urged that re-opening the U.S. government COINTELPRO hearings (a program of government-controlled organized stalking of activists in the 1960s) can stop these crimes. One activist group looked into that but didn't find that pathway open, apparently. (That group was FFCHS: <http://www.freedomfchs.com>) There are others talking about trying again, but we can't assume this will happen soon.

My own personal opinion is that the crime of OS/EH is the result of a long time covert effort to bring about a world dictatorship. This 'dictatorship' has been able to style itself so that people who are not OS/EH targets do not appear to be aware this is in progress, and don't want to hear about it anyway.

Asking someone to help you because you have a Mafia contract on you isn't going to get much, if any, help. Asking for help with OS/EH isn't either. To be realistic, we should accept that ordinary sources of help for crime victims are not going to help us, as they do victims of other crimes.

In light of these conditions, the number one coping strategy is to accept our situation as it is.

Another prominent question which new targets ask is "How long does this last?" The answer is that although there are a very small number of cases where the target has reported stoppage of the harassment, we are apparently intended to be in this for life.

That sounds really hopeless. My personal opinion, though, is that this crime could not continue if the general public arrived at the point where they were as aware of OS/EH as with other crimes. I believe that the general public has the potential to stop this crime, or at least stop a great deal of it. That's just my personal opinion, but it's an opinion that has developed from experiencing OS/EH for years, and observing perpetrator operations.

I've been a target of OS/EH for 29 years at time of writing. I've been trying different forms of activism for 13 years, at time of writing. I have seen some small scale, localized indications that a few non-targets are at least aware of the crimes, with even fewer willing to speak out. Two who have spoken out are U.S. member of Congress Dennis Kucinich, and Missouri state representative Jim Guest. In spite of their positions in government, they aren't able to muster a group of legislators willing to speak out about OS/EH, or even publicly acknowledge it.

One possibility for coping is to help expand public awareness. That's called "activism" and is indeed a coping strategy, though many targets are neither ready for activism or willing to do that. That's fine - and for targets who become interested in activism, I've included my suggestions in this information handling e-booklet:

<http://www.multistalkervictims.org/osih.pdf>

For those who do activism, they report it is a very invigorating method of coping.

This booklet, however, is about things targets can do, and have done to cope, other than activism.

By the way, one stellar example of activism is that done by the CATCH (Citizens Against Technological and Community-based Harassment) group in 2004-2006. The web site for that group is still actively maintained even though the group has geographically scattered:

<http://www.catchcanada.net>

That web site is an excellent example of how to handle information.

2. Lower Your Expectations But Don't Lose Hope

This is much easier said than done, but until our group is able to create public awareness, and/or some other action like a significant win in court, or government hearings on the OS/EH crimes, much of the stress targets experience is caused by expecting there is a way to recover the life targets were leading before they became targets. At this point in time, the most realistic approach is to be hopeful, but to not demand or expect a return to your former life any time soon.

The perpetrators try to discredit the target in the eyes of their co-workers and community members, and destroy the target's ability to earn a living. And they often succeed. A stoic outlook on life is a method of coping until these crimes are exposed.

A target is wise, instead of fuming over a lower standard of living, to look for low cost, simple pleasures of life which are accessible at a lower living standard. Such things as getting outdoors for regular walks, wildlife watching, and things like crossword puzzles, which don't depend on electronic equipment.

If you're forced out of a well paying job, as I was, I found security work was a financial lifeboat until I could retire. No shortage of professionals (I had been an engineer) at the firm I worked for - we had five engineers and even one psychiatrist working as guards.

The harassment continued, but by being watchful and anticipating harassment on the job, the impact was much less than the sabotage which had been occurring in my technical positions. (When doing security work, do carry a notebook to keep a checklist of assigned duties.)

There is no reason to lose hope. As long as we keep our lives going as best we can, never forget that WE have truth on our side, and as this crime grows and grows, and as the criminals get bolder and bolder, history proves that eventually they will trip up and the truth will come rushing into everyone's view. If you can genuinely lower your expectations, life can be liveable.

I get great hope listening to American Patriot Radio, where I hear crime after crime after crime of the criminal elite who run both government and business on this planet being exposed. Exposure will eventually lead to stoppage of these crimes. For those who may want to listen to the same broadcasters, I recommend starting with former USAF nurse Joyce Riley's "The Power Hour", which can be heard around the clock via reruns of the most recent show, or by free archives, at this Internet network:

<http://www.gcnlive.com>

Excellent natural health advice too!

(And by the way, if you want a really feel-good movie, though it's scarce on the rental-

purchase market nowadays, try “Song of Norway” with Toralv Maurstad and Florence Henderson!)

3. Avoid Discrediting Yourself

Here's something all targets need to learn as quickly as possible in order to have as good a quality of life as possible. If you don't work on this, you will be faced with heavy duty misery which you can't escape and, what's worse, which you do to yourself!

The perpetrators put a great deal of psychology-based planning into getting you to say nonsensical, unprovable things to others around you.

Reflect on this: What we SAY is EVERYTHING.

We have no control over lies told by the perpetrators about us, but we do have control what we say (or don't say) to others around us about this situation. While a target under heavy attack is not likely to be able to become a polished, professional speaker and writer, there are quite a few tips available for how to speak and write to others, to avoid discrediting yourself.

In this booklet I will only urge you to put some priority, as much as you can afford time- and energy-wise, on learning how to avoid sounding as if you are mentally ill. It is important to not “let it all hang out” when talking or writing to non-targets. Many targets who have gushed their personal stories at doctors or police, or even family members, have ended up being forced into the psychiatric system. You don't want that. Those medications with terrible side effects will heap much more misery on top of whatever the perps are dishing out.

And the harassment continues in mental hospital.

I would suggest at least scanning my e-booklet titled Information Handling as part of your coping strategy. You don't have to become a perfect speaker or writer, you don't have to work on your spelling. Mostly, you need to learn what things are likely to be taken seriously by the public and officials, and what things are likely to damage your credibility.

The good news is, there is no deadline, you can do this in very small bits, at your own pace. However, you do need to start learning about sane-sounding speaking and writing regardless of how slowly you work on this.

Here is the link to the Information Handling booklet:

<http://www.multistalkervictims.org/osih.pdf>

4. Network

Staying in touch with other targets is an important method for coping.

At time of writing, I'm aware of these networking opportunities:

- Email forums
- Weekly telephone conference calls
- Local get-togethers

At time of writing, the single North American web site with the most networking information I'm aware of is the Freedom From Covert Harassment and Surveillance web site:

<http://www.freedomfchs.com>

Unique to that web site are a number of weekly telephone conference calls. By using cut rate long distance plans or calling cards, telephone networking is affordable.

If you attend a conference all, listen for instructions on how to mute your telephone's mouthpiece if you have any background noise. It's not uncommon for, say, 20 people to be on line at once, and background noise in your area can disrupt the call for everyone.

At time of writing, the most common OS/EH forums are found by way of:

<http://groups.yahoo.com>

Historically, OS/EH was pre-dated by two U.S. government programs, COINTELPRO (FBI group stalking of activists) and MKULTRA (CIA mind control.) Some of those who survived the MKULTRA era mind control experiments began to network, in the 90s, with OS/EH targets. Furthermore, a portion of electronic harassment does involve a degree of control over the mental processes of some OS/EH targets.

Consequently, going to the yahoo group main page link above, and searching for "mind control" will bring up some forums relating to OS/EH.

Searching from that page above for "organized stalking" will also find some email forums which are relevant to OS/EH.

TIP: When doing any web search, if you want information relating to a multiple word phrase, type your phrase within double quotes. Examples:

"mind control"

"organized stalking"

That will bring the most relevant search results near the top of the result list.

Networking has problems - and it's important to not expect networking is always going to be pleasant, informative, and will solve all your problems. Some networking problems are:

- "Flame wars" can start up and continue for some time among sub-groups on the forums. This often results from differing opinions as to the truth, the best way to proceed, and in some cases, accusations that forum members are perpetrators.

It is an important coping skill to realize that regardless of “flame wars,” it is worth at least remaining a member of the forums for the useful information which is still posted, in spite of infighting which takes place from time to time. With yahoo email forums, you can stay a member but shut off emails for a period of time if you choose. That is much easier than quitting and re-applying for membership.

Most forums have a participating moderator, who will limit “flame wars” and can remove members who can’t focus on useful discussion.

Another coping skill is to always avoid accusing anyone of being a perpetrator. For practical purposes, that can never be proven or disproven. That creates huge amounts of emotional heat, and benefits no one since it can never be resolved. Remind yourself that what is important on forums is information, and stay focussed on the content of what is said, not suspicions that so-and-so is a perp. Remember that this bizarre crime situation can cause legitimate targets to behave oddly.

By staying focussed on the content and ignoring personalities, you also prevent perpetrators, who may be on a given forum, from being able to stir up the hate and discontent they would like to generate.

If you find a flame email headed in your direction, keep in mind that most forum members post rarely or not at all, and even though others may not leap to your defence, it is not a case of “everyone being against you.” And you have a right to express your thoughts and opinions just as they do.

It is a coping skill to realize that because someone is critical of your ideas, as long as the discussion stays on the content of the ideas and doesn't get personal, hammering out the best ideas is one of the purposes of the forums. Expect your ideas to be challenged now and then.

- Some targets are concerned about privacy. That can be solved by creating an email address using false information which can't be traced back to you. However, it is a coping skill to understand the bad guys already have all your personal information, so using a false name on the forums doesn't really protect you from the OS/EH perpetrators. Some targets are hypersensitive about their identity, and they don't need to be.

Some targets hold responsible jobs and choose to keep their real identities hidden, and that is certainly a good reason to do so.

- When discussing ideas, it is critically important to keep what is factual separated from what is opinion.

This is because the speaking and writing habits we develop on the forums often get carried over into conversations with non-targets, the public, family members, doctors

and police. What we say can be picked up by another target too.

It is common for, particularly new targets, to express their opinions as facts when they have no proof. For example: "The CIA is transmitting to my tooth implants via satellite." In fact, at the moment, we have no proof as to which entity/entities is/are responsible, and we do not have positive proof as to which technologies are actually in use today. A statement like "The CIA is transmitting to my tooth implants via satellite," with no qualifiers, is almost a guarantee of being forced into the mental health system if said to police, doctors, and often family members.

Credible speaking and writing tips are given in my e-booklet:

<http://www.multistalkervictims.org/osih.pdf>

Working on keeping facts separated from opinions is an important coping skill for participation in forums or conference calls.

- Not every web site, blog or article reference posted on the forums is credible.

An important coping skill is to develop ways to sort out credible information from that which isn't. While I don't claim to be perfect in my opinions, I have set up a web site on which the most popular web sites, blogs, or articles have been given a credibility rating. Targets naturally must draw their own conclusions, but my ratings are at least a starting point:

<http://www.creviews.net>

Email forums, and possibly telephone conference calls, are ways to find out if there is a local OS/EH networking group in your area. The concerns above for email forums apply in local groups.

5. Restrict What You Say to Professionals

(Restrict what you say to professionals WHEN ALONE. A carefully prepared activism group can safely say somewhat more. <http://www.multistalkervictims.org/osgroups.pdf>)

Targets can be forced into the mental health system by saying the wrong thing to both police and doctors. This is because police and doctors treat OS/EH as a crime that doesn't exist, and therefore indicates someone complaining of OS/EH is mentally ill. There have been a tiny number of exceptions, but targets should always assume that complaining directly of OS/EH is almost certain to result in a diagnosis of mental illness.

Those few police and doctors who have acknowledged OS/EH as a real crime have not done so publicly to date.

This is also true of a majority of targets' family members, who have been known to try to get the target forced into the mental health system.

It is important to have serious disabling physiological symptoms checked by a doctor. Not all electronic attacks result in serious, persistent symptoms, but some do. It may be helpful to have your doctor find medical abnormalities, (for later use as evidence,) but not know how to explain the abnormalities, or know what to do about them. More importantly, though, is that once in a while a serious medical condition may occur that does need medical attention.

When you describe your symptoms to the doctor, avoid saying they are or may be the result of harassment. It's as simple as that. If you don't claim you are being electronically harassed, or poisoned, or gassed, you will not be forced into the mental health system.

Just objectively describe your observations and sensations, and don't speculate as to the cause.

If you have a crime committed which is of a type police normally respond to, call the police.

But as with doctors, avoid saying the crime was committed by organized stalkers. And don't discuss electronic harassment with police. Targets who have had experience with police have reported that they often do treat complaints by targets as either mental illness, or will try to find some way to accuse the target of wrongdoing. Be prepared for that.

As with doctors, simply relate the facts, and point out the physical evidence.

If you use a video or still photo, be sure you have a backup copy somewhere away from your home, and be mentally prepared for police to try to discredit your video or photo.

Before involving police, write out what you will say to them. That will help you be more believable.

I personally recommend that any target who wants to approach officials about OS/EH crimes do so as part of a well-planned, well-rehearsed, in-person group. Approaching officials about OS/EH alone is a recipe for disaster.

My guidebook for doing local in-person group approaches to officials is here:

<http://www.multistalkervictims.org/osgroups.pdf>

IF YOU HAVE ALREADY SPILLED THE BEANS, and mentioned OS/EH to professionals, and have already been deemed mentally ill and perhaps forced on to antipsychotic meds, locating an advocate, possibly a mental health defence lawyer, or a local crisis support organization staffer who is aware of and opposes at least organized stalking, may be of some assistance. But it is far better to not let officials get you into the mental health system at all.

6. Get Serious About Health and Nutrition

Note: I, Eleanor White, have no medical training. What I am passing on in this section are my own personal opinions. Everything I say should be independently checked before

deciding if my suggestions might be useful to you. What I say in this section is based on years of listening to broadcasts by both MD doctors and naturopaths.

My comments here are general; I won't attempt to act as a doctor. I will say that in spite of chronic fatigue syndrome, I find that my quality of life is noticeably better since I got serious about high quality nutritional supplements circa 2000.

Both organized stalking and electronic harassment take a heavy toll on your health. This is made worse because today's commercially available foods are typically very low on nutrients, and now, are likely to be genetically modified. Harmful substances such as fluoride, pharmaceuticals, and chemicals from plastics are showing up in water, including bottled water, according to some professionals.

MD doctors, called "allopathic" doctors, are only weakly trained in nutrition, on average. I had one doctor from China who was very strong in the field of herbal medicine, but unfortunately, I had to leave the area where she practiced.

There are also licenced ND doctors, called naturopaths. These doctors receive 4 years of university training with the same level of training in physiology as MD doctors. Like MD doctors, they must have bachelor of science undergraduate degrees with strong bio-science emphasis to qualify for the 4-year ND graduate study program. (They don't receive training in surgery, of course.) NDs are not "nutritionists" - they are as well qualified in terms of physiology as MDs.

While naturopathic doctors are gradually being hired by medical institutions, by and large they are not covered by medical insurance. Their services are therefore expensive, particularly for targets.

Because at this time, natural supplements are non-prescription items, targets can experiment on their own, however, I recommend such experimenting be done with small doses and work up towards the recommended dose level. (Full recommended doses are likely to be expensive, and I use substantially less than full recommended doses, but still get benefits.)

There is one "natural supplement" which produced dramatic results for me, a long time chronic fatigue syndrome sufferer when I started on it. That supplement is clear water. For years, doctors have recommended eight 8-oz glasses of clear water a day, which equals two quarts, or approximately two liters. I have heard doctors, both medical and naturopathic, state that in order to qualify, the water must be clear - that is, it must contain no coloration.

Coffee, tea, soda, milk, soup do not qualify. To get adequate clear water intake, the clear water must be taken in addition to all other coloured drinks. This is because coloured drinks tend to act as diuretics, that is, they cause increased urination, which offsets the benefit of the water content of those drinks.

Before I started rigorously taking 2-1/2 liters of clear water every day, I couldn't even climb a single flight of stairs. A month after starting following the forced water regimen, I was able to climb some very steep hiking trails in a nearby ravine.

As a friend who is a naturopathic doctor predicted, I didn't find that I had to urinate excessively beyond the first couple of days. My bladder stretched, and now I have no problem with urinary urgency.

Another important tip, heard from many MDs and NDs, is avoid all aspartame, also known as nutrasweet. ALL aspartame. That means diet sodas are out.

I was acquainted with a superintendent couple in their 30s. The wife became so fatigued and had such sore muscles and joints that she was literally bedridden. MD advice did nothing for her. Then they heard about the negative side effects of aspartame, and switched to water or some regular soda, diluted to half soda, half water (then refrigerated for taste.) Within a couple of weeks she was back to normal health.

Aspartame gets converted to, among other things, formaldehyde. Not good at all for a target's already compromised health.

Sugar is another damaging substance. Use stevia in place of sugar.

There is a concern, when taking vitamins and minerals, about "bio-availability."

"Bio-availability" is the ability of each supplement to reach the body's cells in a form which the cells can readily use. Generally, mineral oxides are the poorest choice, as they have the least ability to be taken up by the cells. "Citrate" or "chelated" forms are more likely to be useful to the body's cells.

"Cyanocobalamine" is a form of supplement to be avoided, say some professionals.

Liquid forms are more likely to be absorbed. The highest bio-availability items tend to have the shortest shelf lives.

What I've described above can form the basis of your conversations with the proprietor of a local health food store. My naturopathic doctor friends advise that health food store products are more likely to be of a high bio-availability form, compared with vitamins and supplements as sold in pharmacies.

Because some of the high quality supplements are very large tablets, I tend to chew them and swallow them with a drink. Not the prescribed way to take these large tablets, but I can't swallow such huge items. (Personally, I use pliers to crack the largest tablets into chips, then pop the chips into my mouth along with a drink of tea.)

I would recommend that targets who can, do some reading, site visiting, and radio listening regarding nutrition before spending a lot of money on supplements. I won't go into detail here about the products I use, except to say that my naturopathic doctor friends tell me that the "Genestra" brand of supplements, not available in every health store, is one of the best. They prescribe that brand often.

I will list here some of the most-often-recommended supplements from broadcasts by natural-trained MDs, and NDs:

- magnesium (citrate or chelate)
- calcium (citrate or chelate)
- iodine
- digestive enzymes (particularly for seniors)
- selenium (MD doctor reports we are chronically short of this)
- co-enzyme Q10
- MSM
- zinc
- iron
- chromium
- curcumin (being studied for anti-cancer properties)
- melatonin (helps with sleep; has other health benefits)
- vitamin B complex, C, D, E (vitamin C recommended for flu moderation)
- oregano (works for me for anti-viral use)
- olive leaf extract (works for me for anti-viral use)
- spirulina and chlorella
- folic acid
- cranberry concentrate (for urinary tract infection)
- elderberry (immune system booster, but not for killer flu where deaths occur due to OVER ACTIVE immune function resulting in a "cytokine storm" in the lungs)
- glucosamine and chondroitin sulfates (for joint support)
- omega 3 (for cardiovascular health)
- colloidal silver or ionic silver (for acute bacterial or viral infection, not for steady use)
- "Floressence," also known as "Essiac tea" (has demonstrated anti-cancer benefits, Ojibway Indian preparation, used by Canadian nurse in the 1920s and 30s with widespread success, commercially available today)
- medicinal clay (taken internally and externally, has improved severe diabetic damage to extremities; "calcium bentonite" clay is highly recommended)
- multi-herb "heart drops," e.g. Strauss Heart Drops, Kardovite (have helped with a range of conditions and have improve different body functions per ND doctors)
- activated charcoal (internal and external use for poisoning, bites - NEVER take the powder without first mixing with water!)
- balsam fir oil (expensive; powerful bleeding stopper - "Bleed-X" is another)
- hydrogen peroxide (1:4 diluted, excellent mouthwash, has helped as a gargle with sore throat; some reports that peroxide certified for internal use is beneficial; I haven't tried that.)

That is far from a complete list. These are just highlights of the field. I recommend targets spend some time reading up on nutrition - knowledge in this area can help in serious situations, even along with whatever your MD doctor may prescribe.

One nutrition researcher from the United Kingdom, Dr. Eric Llewellyn, urges those who want the very best form of nutrients look for "protein-bound" supplements. "Protein-bound" means the nutrient is bound with material which, to use Dr. Llewellyn's words, "is the key to getting the material latched to the nutrient receptors in the cells."

Dr. Llewellyn promotes the "Grown by Nature" product line, at this web site:

<http://www.grownbynature.com>

I haven't tried this product line, and they are more expensive (to be expected,) but if someone has a serious illness and wants to aim for the most effective, I would at least give that product a try. Dr. Llewellyn has been a regular guest on The Power Hour radio show, a show which is heavy on nutrition information, hosted by Joyce Riley.

Dr. Llewellyn has mentioned studies showing that high quality selenium is something virtually everyone is chronically short of, and, he states studies show significant improvement for diabetes and cancer sufferers. Remember, this is Dr. Llewellyn's claim, not mine.

DENTAL HEALTH

Dental illness can be extremely disabling and extremely expensive. And targets often report teeth cracking up. I've had a lot of that. Teeth broken right off at the gum line.

Some years ago on The Power Hour, an American Patriot Radio show, I heard Joyce Riley, RN, interview a chemist who had dental problems, and made a hobby of delving into the actual chemical reactions responsible for tooth decay. The chemist's conclusion: Tooth decay can be eliminated by getting the glycerine residue left by conventional toothpaste on the teeth. This sticky layer provides cover for decay bacteria, and keeps their enamel-destroying excretions against the enamel.

His solution: After brushing with toothpaste, which is beneficial due to the fine grit content, brush with soap. Ivory soap has virtually no taste, by the way, as long as you don't get it way far back in your throat.

I tried this method, and in spite of the massive damage in my mouth, have had zero cavities for 11 years at time of writing. I also finish with a 1:4 solution of ordinary drug store hydrogen peroxide, diluted with water.

This remedy saved me thousands of dollars, based on previous experience. And the same hydrogen peroxide seems to help with some sore throats, as a gargle.

7. Exercise Helps a Lot

Exercise has been one of my most helpful coping methods. Not only does it promote general health, even in the face of health-damaging attacks, but the more exercise I'm able to do in a day, the more and better quality sleep I'm able to get. And as targets can tell you, sleep disruption/deprivation is a major attack type.

Personally I prefer walking as my main means of exercise, because it's a great way to get outdoors.

The perps do set up harassment skits as I walk outdoors, but they are restrained by their need for secrecy so that they can't harass a target every foot of the way without beginning to appear obvious.

Carrying one of today's compact digital memory camcorders definitely discourages perping outdoors. Not perfect, but the perps are sensitive to handing us easy evidence.

8. Wildlife Interaction - Inexpensive and Rewarding

I also find that while walking, being prepared with treats to toss to wildlife makes for a really fine bonus to the exercise gained. Wild animals and birds make exercising a whole lot more appealing. A few tips on tossing treats to wildlife:

- Roasted peanuts are pretty well a universally appreciated wildlife food, from squirrels and raccoons, down to the tiny chickadee. They must be roasted to protect the health of the wildlife. Feed squirrels or chipmunks near bushes or at tree trunks to give them a quick escape if they become threatened. Choose not salted peanuts.
- Birds appreciate peanuts out of the shell, naturally, since they have a lot of difficulty getting into a peanut shell. They must be roasted to protect the health of the wildlife. Choose not salted peanuts.
- I recommend not leaving animal food around, but rather, dispense it on request from the animals. You don't want to leave too much of a mess, and also, excessive feeding can induce overpopulation. Overpopulated animals would suffer when you stop.
- All wildlife needs water. They really appreciate water, which can be left in tip-resistant dishes, or cups fastened to bush or tree trunks, ideally changed daily. Squirrels may not drink much, but like us they need regular water. Animals and birds can foul water, so frequent changing of the water is important. Hiding the dishes, which can be dark green or brown plastic flower pot saucers, helps avoid vandalism. (Do not use metal dishes in cold weather - they endanger the tongues and lips of the animals.)
- Water is particularly important in cooler weather when there is no snow or ice available. Most people don't think that many animals have a very difficult time finding water in winter when the ground is bare, but they do. Animals appreciate liquid water, and hot tap water can be poured into the dishes in winter to give a few hours' of liquid before it turns to ice. However, animals are willing to scrape a frozen dish with their teeth to get water that way, so don't worry about the water freezing. Squirrels love ice cubes, and will take them up into the trees to munch on.

There is an image available at this link:

<http://www.multistalkervictims.org/water4wildlife.gif>

... which can be used as flyers or posters to advocate for providing badly needed water for wildlife in your area. Here below is a small image of that flyer/poster:

REMEMBER ...

**AS YOU DRINK THAT WATER, OUR
BEAUTIFUL WILDLIFE COMPANIONS
NEED IT TOO! AND IN CITIES, IT IS
VERY HARD FOR THEM TO FIND!**

**WEATHER HAS BECOME INCREASINGLY
DRY SINCE THE LATE 1990s. **DEW**
HAS ALMOST DISAPPEARED. PLEASE
CONSIDER SETTING OUT WATER DISHES
TO PREVENT THE SUFFERING AND
DEATH OF OUR BEAUTIFUL WILDLIFE.**

**PLEASE CONSIDER DOING THIS IN COOL
BUT DRY WEATHER AS WELL ... WINTER
CAN BE MERCILESSLY DRY, AND THERE
ARE NO LAWN SPRINKLERS! WILDLIFE
WILL EAT ICE GLADLY!**

THEY WILL APPRECIATE IT!

- Bread and crackers are not a good idea unless the animals have abundant clean water available, or, there is plenty of snow available.

- To to read about making friends with squirrels:

<http://www.multistalkervictims.org/sqfriend.htm>

It's a good idea to locate one or more local wildlife rehabbers, in case you come across an animal or bird in serious distress, or, an orphaned baby. They are often licenced by the state or province, and their contact info may be available from your local department or ministry of natural resources, humane society, or veterinarian. Keep a list of their telephone numbers handy if you visit wildlife frequently.

Contact the local rehabbers and ask them for tips on how and when to transport animals in distress. (I use a nylon mesh laundry bag, and wool gloves. Doing this, one has to gently move the bag now and then if the animal sets about chewing its way out. Soft, soothing talk to an animal you are transporting definitely makes them more comfortable. I just keep repeating "It's OK honey," and most animals I've transported genuinely relax.)

** By the way, I'm now in an area without access to squirrels, however, I've found another way to interact with wildlife that leaves me feeling good. This won't be for everyone, but some may be interested:

<http://www.multistalkervictims.org/ewrescue.htm>

9. Sleep Tips

Here are some things that help me either get more sleep, or, when forced awake by the perpetrators' technology, help make enduring the wakeful periods more comfortable:

- Realize that as long as one spends several hours in a relaxed pose, ideally in the dark, one can still function. It's not a great life, but I held a job for two decades like that.
- Get as much exercise, especially long walks outdoors, as possible
- Keep the bedroom as cool as you can take it, even if you need to wear a wool cap to keep your head warm
- I find having a fan on low speed blowing across my bare feet in cold weather, and bare legs in warm weather, does help me get better sleep.
- One 3 mg cap of melatonin at maybe 11 pm, and sometimes a second one in the wee hours (but no later than, say, 3 am, or it can make you groggy the next day) Note: Try to avoid taking things which can make you drowsy too much past midnight, if you have to work the next day. Melatonin is typically mild so I would take it as late as 3 am. That is a personal judgment call.
- A good quality magnesium supplement, one that is labelled "chelated" taken at bed time can help

- A generic allergy tablet, which can be had for ~\$15 for 100 (basically antihistamine) can help too, especially if the perps use itching to keep you from sleeping (generic name: diphenhydramine hydrochloride) Note: Try to avoid taking things which can make you drowsy too much past midnight, if you have to work the next day. That is a personal judgment call.
- I find that “foam cylinder” style ear plugs can help when the perpetrators use projected noises to keep me awake
- A commercially available white noise machine can help.

ITCHING:

Since itching can be a major sleep destroyer, let me add my tips for handling perp itching attacks:

I find that ordinary itching medication does help, however, the perp itching can be so constant that it's hard to afford enough to keep it under control if you totally depend on it.

Sometimes simple isopropyl alcohol helps. A small spray bottle can make it easy to carry and apply. E.g. an empty nasal spray squeeze bottle.

There's also the problem of having it rub off on your clothing and bedding, so it doesn't stay put all that long. And of course in public and on the job, slathering yourself with goo can make you look odd, and maybe smell medicine-y.

I use Dr. Scholl's corn removal abrasers which are like cheese graters, garlic graters, hair brushes which I've cut the bristle length by half of the original length, and the edge of a steak knife dragged across the skin at right angles to the skin. I scrape down to produce just enough pain so it at least partly masks the itching. Spraying alcohol increases the pain so you can mask it more effectively where needed.

Sometimes the scraped areas bleed a little, but I'd rather bleed a little and avoid the itching.

If you are working and they have large areas of your body absolutely on fire with itching, I take either non-prescription Tylenol, or in extreme cases, Tylenol 3 to relieve the itching at critical times like important work or trying to sleep. I did find a doc willing to prescribe Tylenol 3 in small quantities for this, as sleep is very important. I only take maybe 1/3 of a tablet at each incident to keep my usage rate low and not develop a tolerance for the drug.

I have lots of the above itch reliever tools lying around and carried with me at all times.

When my feet were under extreme attack, I wore heavy duty open sandals, even while at work, and even outside in winter. (I didn't find winter a problem doing this.) It was too hard to get into my shoes or boots every few minutes.

I carry a butter knife with me when I'm out walking, which allows me to use the tip to scratch some areas of my ankles and feet without having to unlace my boots.

I wear 3M brand extra coarse non-metallic paint removal scrubbers in my underwear everywhere I go. Wearing a bra comes in handy for that. I use those pads AFTER I've "broken them in" by sleeping on top of them in bed for a while - they are too scratchy to be used in new condition like that.

In bed, I have many of those pads and I keep tucking them in places where the perps are itch-attacking me at night.

I also have a 1/4" wooden dowel with the eye end of a sewing needle projecting out of it, the rest of the needle being glued into the wood. That can be handy to penetrate clothing to get at an itch spot while out in public without making too big a fuss.

10. Endless Churning

One of the most persistent and difficult-to-shake problems is the compulsive mentally "churning" of questions about OS/EH over day and night, to the extent that time and strength that might be used for enjoying life's simpler, scaled-down pleasures is gone. "Churning" thoughts is also a characteristic of some mental illnesses.

Targets will benefit from controlling the amount of time and strength spent churning the issues. Like dieting and stopping smoking, it's not necessarily easy but it is worth putting some effort into limiting the amount of mental churning you give to questions related to OS/EH crimes.

Some examples of the most commonly churned questions:

- Why did they choose me?
- How are they attacking me?
- Who is responsible for the attacks?

They are very important to any person under attack, and it is an important coping skill to accept that by and large, most of us do not know the answers to those questions. I recommend taking the time you spend asking those questions and putting it on other, healthier activities.

11. Ignoring Perpetrator Attacks

We can not "just ignore" the perpetrator attacks. They are too numerous and repetitive, and have been selected because they are hard to ignore. We are going to be ticked off after each attack. That is unavoidable.

But we can gradually train ourselves to spend as little time possible dwelling on the annoyance or anger. If you only spend a few minutes in a ticked off state after an attack, you are doing well.

12. The Strong Likelihood of Decoying

One important coping strategy is to keep yourself aware that some acts of harassment, including both organized stalking and the advanced technology attacks, are likely to involve decoying.

As a 29-year target of OS/EH at time of writing, and as someone who has been hearing stories from other targets for 13 years, one pattern is very clear: The perpetrators consistently try to coax targets into blaming either the wrong technology, or the wrong people, or both. This is a sub-task of their attempting to get targets to discredit themselves by making nonsensical or unsupportable claims to the public, and especially officials.

For example: You are getting heavy electronic harassment, but it stops when the neighbours next door move away.

In the world of organized stalking and electronic harassment, that the neighbour was the source of your electronic harassment is only a possibility. In the world of OS/EH, it is equally likely that your perps stopped some of your attacks to make you think the departed neighbours were responsible. Their long term goal would be to convince you that you had the ability to identify the true source of your attacks. The perps would hope that in a later situation, your confidence in your ability to identify the true source would cause you to complain to police about an innocent neighbour. The OS/EH perps are highly sophisticated, never forget that. They are not just thugs operating at the high school prank level, even if many of their operations resemble that.

I have had types of noise boom through the ceiling of my apartment with the sounds of heavy iron automotive engine parts, say, dropping on a heavy wood plank floor. Yet the ceiling was heavy 8-inch reinforced concrete, observed during the building's construction. I have heard loud bird noises emanating from bare trees with no birds, or large, windowless solid masonry walls. Clearly, the perps are capable of generating noise which seems to come from a neighbour's home or apartment, but in fact is artificially generated.

I have learned that this type of decoying is a recurring form of harassment, and that if I do refer to such activity to others, I must use the speaking style and demeanour used by professionals during public speaking, and use qualifiers such as “seems” or “appears to.”

Another form of decoying is setting up targets to cause them to complain loudly by “accidentally” showing them “equipment” which the target assumes is responsible for their harassment. One target “freaked out” over heavy metal rod bent in a “U” shape and welded to the sides of trailer hitches in his area. Because of a resemblance to the “trombone” shaped older TV antennas, he assumed these trailer hitches were antennas, the source of his harassment, while driving.

Other targets have found TV cables, old TV flat “twinlead” cable, the standoff insulators used to fasten the “twinlead” cable, and many other utility fittings and pieces of equipment and become absolutely sure those were responsible for their harassment.

All indications are that today's electronic harassment is carried out by very sophisticated signals, beyond those taught in school. My advice to targets who become convinced that a piece of equipment they find in their vicinity is to simply ask around and find out what it is, withOUT suggesting it is some sort of harassment device. In most cases that will put the target's mind at ease.

Targets can also take close up photos, and post them to the photo section of the forums, and ask if anyone knows what the item in the photo actually is. If you do that, be sure to read “Gathering Evidence: Photographic” in this booklet, for tips on how to make an evidence photo post-able/email-able.

It is very important that targets understand that everything they see and hear relating to OS/EH might be decoying, and that due caution is always necessary in drawing conclusions.

13. Shielding

Shielding is one of the first concerns which appear on a target's radar screen once they realize they are being electronically attacked. The problem is that to date, there is no known shielding method, including “jammer” devices, which completely stops one or more of the attack types, detects one or more of the attack types convincingly, or works for everyone who tries such methods.

More than that, I've heard from perhaps 40 to 50 targets over my 13 years on line who receive attack types involving mechanical vibration of both body parts and inanimate objects, which cannot be done using any technology, electromagnetic or acoustic, taught in today's schools, under the conditions experienced. Right up front, the perps clearly have classified (secret) technology.

The truthful statement answering the question “How are they doing that to us?” is that we do not know.

Interestingly, the many sufferers of what started years ago as the “Taos Hum,” a constant sound like “an idling diesel engine,” sometimes experience vibration too. While I do not recommend talking about vibration to non-targets, if it should slip out, OS/EH targets can mention the “Taos Hum” sufferers' vibration experiences as well.

We do know of some proven-beyond-doubt, demonstrated-as-workable, and available-to-anyone-with-the-cash, through-wall weapons which can replicate some of what happens to us, but not everything. Those weapons are summarized in this e-booklet:

<http://www.multistalkervictims.org/osatv.pdf>

While those proven technologies are great for educating the public about electronic harassment, they all use as-taught-in-school technology and can not perform all of the attack types we experience.

What all this means in practical terms is, while some types of shielding do work part of the time, and for some targets who try the various methods, it is unrealistic to expect that spending a lot of money on shielding experiments, (or detection experiments,) is likely to result in assured success. The bottom line rule of thumb for experiments is: Don't spend money you can't afford to lose.

Interestingly, shielding materials which do not stop electromagnetic, or EM signals have at least reduced the intensity of electronic attacks in some cases. (One way to test the EM shielding ability of a material is to wrap a transistor radio in it and see if the radio stops playing.)

Some materials which normally (with special case exceptions) pass EM signals are rubber, blue gel "freezer packs" (unfrozen,) leather, and wet towels. Yet such materials have provided at least partial success for some targets.

The lesson is, shielding is a wide open question, and as long as targets don't spend money they can't afford to lose, experiments may well turn up useful shielding techniques.

Sheet metal and/or metal screen, including commercially made "Faraday cages" have been tried with the same mixed results. Including one reconstructed top grade EM shielded hospital MRI room.

Some experimenters, myself included, have had temporary success with many folded over layers (to say, half an inch thickness) of aluminum foil held against the head.

A number of targets, including myself, have sensed, at least once in a while, that their electronic attacks come from a specific direction. Some targets are totally convinced. However, knowing how the perps like us to complain about and blame innocent neighbours, I regard my instances of directional sensing as probable decoying.

I did not take the bait, didn't complain, and the apparent directional attacks have ceased since then, and that was several years ago.

For coping, I advise not making complaints about a neighbour based on sensing an attack coming from their direction. The perps would clearly like to see us all locked up in a mental institution where they could torture us around the clock and no one would pay attention. I say be extremely careful with complaints, so as to avoid that.

14. Defending Against False Diagnosis of Mental Illness

There is a good chance that most targets will encounter charges that they are mentally ill. When these charges come from family members, police, or doctors, the target can find themselves facing incarceration in mental hospital, or, being forced to take dangerous and

debilitating psychoactive drugs in the community.

There are some things which can be done to avoid this. Summarized, they include:

- Restrict What You Say to Professionals (a section in this booklet)
- Restrict what you say to everyone, especially family
- Always speak to officials about OS/EH as a member of an in-person group
- Have stalking statistics and/or proven technology information printed and ready
- Call around local crisis support organizations to find an OS-aware staffer
- Locate a lawyer with mental health defence experience (who takes legal aid)
- If already in the psychiatric system, gradually appear to agree with them and get out

When I say “Always speak to officials about OS/EH in an in-person group” that especially includes doctors and police. Part of this point “Call around local crisis support organizations to find an OS-aware staffer” is to attempt to have such a staffer accompany you in any really critical meetings with doctors or police. It may be possible to have a particularly conservative, sane-sounding target accompany you if you can't get the crisis support staffer to go with you, but an organized-stalking-aware crisis support staffer is the best.

Sorry to have to say this, but not every target is going to present a credible appearance, so take time and care to find out how a potential escort to critical meetings will present themselves and answer questions. Only invite someone you have known and interacted with for some time.

Interestingly, rape crisis centers, sometimes called sexual assault centers, which can either be government or private agencies, have proven to have staffers who know what OS is. Even though you are not complaining about sexual assault, include them on your list of agencies to call looking for an OS-aware staffer. My experience with the Toronto rape center was that they were quite willing to talk to men - men aren't regarded as “the dreaded enemy” by the staff. CATCH met in their offices and men were welcome to attend. (They no longer take calls relating to OS/EH, FYI, because they have no targets to refer callers to.)

When calling, state your purpose right up front, that you are looking for a staffer who is aware of organized or group stalking. If you get a blank, try a different day or time when you are likely to get a different staffer on line. This repeated calling is how a target in Toronto was able to locate an OS-aware staffer in a supervisory position, who made the CATCH group possible. That group no longer operates, but in the two years it was active, a number of staff members who had been familiar with OS were located.

To locate a lawyer with mental health defence experience, I succeeded using the yellow pages. The law society's lawyer referral service may or may not be helpful, but they are worth a try. Actually contacting any lawyer's secretary may produce leads.

Once you locate such a lawyer, prepare a ONE PAGE, carefully prepared, sane-sounding description of your situation. Try hard for one page, though you may need two. You might even consider asking for comments on your proposed page on the forums to get it as good as

it can be. This page is like a resume.

Make sure there is a comment on your page saying what you want the lawyer to do.

In my case, it was simply to be ready to defend me against false mental illness charges because I had decided to go into the street picketing to expose OS/EH. If you are already in the mental health system, provide contact information on your page.

I recommend not more than one Internet web link, if any on that page.

Not as part of your page, but printed out and ready for backup if you find you need it during your conversation with the lawyer, I recommend you print out and have ready a photocopy of this e-booklet written as a brief overview of the OS/EH crime picture for the public:

<http://www.multistalkervictims.org/osatv.pdf>

That short document gives you quick access to both the government stalking statistics and the proven through-wall technologies, summarized for quick reading. If the lawyer shows interest in those things, you have them handy. You may also want to leave a copy of that e-booklet with the lawyer, but be sure you tell the lawyer you are not requesting them to read the booklet, or you may receive a bill for a couple of hundred dollars. (If you can afford that, it might be a good idea, though.)

Once that preparatory work has been done, make an appointment. Most lawyers will give you one free 30-minute consult to see if your needs match their offered services.

If you are in the mental health system, that may require some actual work and how to pay for that work must be discussed. Legal aid may not cover what you need.

If you are just setting yourself up with a lawyer who is willing to defend you in case you get falsely diagnosed in the future, what you are mainly doing is providing him a one-page summary to go in a file. That's the best that a free 30-minute consult can get you.

I lucked out when I went to see my mental health defence experience lawyer. She already knew all about OS/EH, because she had acted as a defence attorney for a perpetrator. Naturally she could give no details, but she did say he was a government employee who wanted to get out of doing OS/EH work. He was falsely convicted of a crime and placed in the Ontario Hospital for the Criminally Insane, and it took her 4 years to get him out.

Total secrecy was the price of getting him out and she is not willing to even repeat this publicly. She is now retired.

Targets must not assume they are going to do as well, but it does help with confidence when you find a non-target official who knows about OS/EH, even if they aren't willing to go public.

This may not be for everyone, but I did one thing on the recommendation of this lawyer: I went for a private psychiatric examination, with a psychiatrist that the lawyer knew was fair

and honest. The result: The psychiatrist found no signs of mental illness.

Unfortunately, the perps got after this psychiatrist and she no longer takes OS/EH target patients. But it is possible to find honest psychiatrists, and asking a mental health defence lawyer may be a way to do that. Doing that could help if a target is being pressured to see a psychiatrist, but is still free to choose one. Not guaranteed, but worth a try.

If you are stuck in a mental hospital, you may find that the doctor(s) will insist that you admit you are imagining the harassment before they will begin the process of letting you out. My recommendation is to very slowly appear to agree with them. Very slowly is critically important because going too fast will make it look as if you are faking it.

Some ways you can appear to “be recovering” are gradually read newspapers or watch news on TV, and make short comments occasionally to staff, showing you are aware of and interested in news stories. Show concern for your health, your diet, drink plenty of water, try hard to sleep or at least lie still through the night. Be sure to quietly keep yourself aware of things like the date and who is your country's leader. Failing to know those things is used by psychiatrists to diagnose you as mentally ill.

Don't force staff to inject you; take the damn pills and resolve never to go near a psychiatrist again once you are free.

Once you get out, go to a library (med school libraries are best) or research on line all the meds you are on. Find out what their side effects are. Then gradually, and I mean gradually as in “over several months,” taper off. Never stop completely, always keep a trace of the meds in your bloodstream until you are finally taken off them. You may want to emulate the side effects until you are taken off the meds.

To any member of the public who reads this and objects to my advice, I say if you don't like my advice, put the blame on the justice systems of the world who won't even take written complaints about organized stalking and electronic harassment, in most cases. The official crime statistics show OS is now being handled in some places at a rate of one case in eight. Once the justice system starts doing their sworn and paid jobs, instead of pretending OS/EH doesn't happen, we will then no longer need to resort to such tactics.

And by the way, SINGLE stalker targets have also been ridiculed and falsely diagnosed as mentally ill, so OS/EH targets are not unique in this respect.

15. Forming OS/EH Target Communes

Frequently, targets express the wish to form a commune, so targets can watch out and witness for one another. This is an excellent idea, but it needs to be tempered by the realities targets of OS/EH face.

First, unlike, say, a religious community, targets' organizations are subject to infiltration by perpetrators. I don't personally believe infiltrators are a huge problem, or that “there is an infiltrator behind every garbage can.” But it is possible, and anything as new and potentially

powerful as an OS/EH target commune is likely to draw special attention from the perps.

A more common problem is that to live in intimate living quarters where privacy is likely to be less available than, say, a home or apartment, by adult strangers of widely different personalities, does hold the possibility of very uncomfortable conflicts. Will housekeeping duties be shared equitably? How will missing or damaged personal property play out? What about noise? What happens when members don't or can't pay their full share of expenses?

My suggestion would be for targets seriously considering a commune would be to first move into close proximity in the same town or city, in regular, private homes or apartments. Get to know one another well in that setting. Give it at least a year that way.

In that setting, there are still going to be opportunities to witness and support one another, without the problems of adults who are initially strangers living under the same roof.

Sharing living quarters has been tried, and the results have not been all negative, but there have been enough difficulties to make full communal living something that needs much thought and planning before taking that leap.

16. Implants

In terms of coping, the possibility of implants - for monitoring, tracking, control and pain induction - deserves special mention. One of the concerns most frequently churned (excessively worried about) is the question as to whether a target is implanted.

Many targets assume they are implanted because they don't know of any other technology which can track and hurt them everywhere - even in underground tunnels or caverns. It is logical to suspect implants. But coping is affected by the all-consuming worry, and temptation to shout to the world that you have implants.

This temptation can lead to asking a doctor if he/she will remove one's presumed implants. Doing so places targets in serious danger of being forced into the mental health system, which multiplies the target's problems greatly.

In my experience discussing OS/EH with the non-target public, discussing the possibility that ordinary people who are "nobodies" have been involuntarily implanted does produce the "You are a wacko" response in some cases. That may change now that RFID chips are being forced into pets, however, there's a big difference between chipping pets, and people having implants forced into them covertly for tracking, control, or inducing pain.

It may well be that nano-scale implants play a part in OS/EH, or, implants made of biological material which don't show on medical scans. At this moment, we have no evidence that such things are in use and can produce the effects we experience. And can produce the effects we experience.

At this point in time, we have just two people who are proven to have been involuntarily implanted - Robert Naeslund and David Larson. Their implants were visible on medical

scans. It's not clear David Larson is actually an OS/EH target. Compare that with the several thousand OS/EH targets who keep in touch via the Internet.

At this point in time we know that devices which can perform some of the attacks we experience, silently, through walls, have been in existence, not classified secret, and available to anyone with the cash for up to five decades. Such technologies do not require that the target is implanted. It is likely there are additional classified secret technologies which do not require implants.

I suggest, based on the above, that targets should not assume, or tell the world that they have implants, without some sort of medical scan evidence, and/or, unusual lumps or unexplained wounds, or missing time experiences. And even there, avoid stating you are implanted as a fact without a doctor's diagnosis to back you up, is my suggestion.

Assuming you are implanted will produce huge amounts of worry and stress, which can be avoided unless you have really convincing evidence that you may have implants. A better way to cope is to just keep it on your "mental back burner" as one possibility, and put your time and strength into more useful things.

If you find yourself needing to comment on implants, you can always say "Because I am tracked and attacked everywhere, I believe I MAY have implants."

17. Satellites

Because targets are tracked and electronically attacked everywhere, many assume they are being targeted by satellite. The temptation to shout to the world that you are tracked and attacked by satellites is very strong, just as with the temptation to shout that you are implanted.

We do not know what role, if any, satellites may play in our harassment.

We do know that conventional, as-taught-in-school technologies can not create the attack effects we experience from satellite distances. The conventional as-taught-in-school technologies which can perform through wall attacks are all short range technologies. I am not saying here satellites are not involved, I am saying we do not know.

Since we do not know, successful coping means not telling non-targets you are attacked, as a fact, from satellites. Claiming you are attacked by satellites can easily discredit you.

If you find yourself needing to mention satellites, it is very simple to avoid discrediting yourself by saying something like "I am tracked and attacked everywhere, and I think I MAY be under satellite surveillance."

18. Mind Reading

OS/EH targets are divided on whether mind reading actually happens. My 29-year experience tells me it exists. Picking up and converting nerve activity at the vocal cords has

been demonstrated as able to electronically hear things said silently to self, at close range:

<http://www.raven1.net/subvocdemo.htm>

(Some insist that what targets believe is mind reading is actually thought insertion.)

Mind reading is a potential disaster in terms of coping. It can make targets feel totally helpless, and that there is no hope of meaningful opposition to the perpetrators because they know all our plans.

I can share with you how I look at mind reading.

For me, knowing our plans does not disable us, because the perps depend on total secrecy. If they start demonstrating, on a significant scale, that they can read our thoughts, they will have blown the cover they need to keep operating.

Additionally, we are totally in the right in this situation, and they are total criminals. They are the ones who have to stay secret, to “walk on eggs,” not us.

Finally, I don't really mind the perps reading my thoughts, because although it's unlikely, it just might be that this unusual way to communicate with them will convince them that we are not the criminals they've been told we are, and that our righteous thoughts may sow some discontent in their ranks. Bottom line is, I don't worry at all about my thoughts being read. I know we are in the right and that we will eventually win this.

I don't know if other targets can adopt that I-don't-care attitude, but I can tell you that for coping, it is a huge relief for me!

By the way, I urge not speaking about our mind reading experiences to non-targets!

19. Classified Technology and Coping

It is clear, from attack effects like remotely projected mechanical vibration of body parts and inanimate objects, and the sheer flawless performance of the attack technologies, that the perps possess classified (secret) technologies, advanced beyond those taught in school. (Interestingly, the many sufferers of what started years ago as the “Taos Hum,” a constant sound like “an idling diesel engine,” sometimes experience vibration too.)

For coping, this can easily produce hopelessness and despair. However, for me, discovering the existence of such advanced technologies became a welcome means of shedding a huge pile of anxiety.

IF only conventional technologies were in use, that would mean that we must work ourselves “to death,” and spend every penny we have experimenting.

Once the advanced-beyond-as-taught-in-school technologies made themselves unavoidably known to me in the early 1990s, I relaxed. I realized that struggling to explain them or

construct a countermeasure was so far beyond my ability, that I no longer had to churn myself day and night trying to do that. Instead, I could turn my energy over to activism and other things, like getting outdoors and enjoying at least some of my life.

I'm not saying experimenting is wrong or we shouldn't do it. I'm just saying is that self-forced spending of all our money, time, hope and strength is unlikely to get us to where we can "figure out" the technology. Therefore, I'm going to turn my attention to other things, like activism, which I know I can do. We do not need to explain all the technology to expose these crimes. We already have enough information to persuade an open-minded person that a serious crime is taking place.

Hopefully, other targets can use this line of thought to find some relief.

20. "The Phone Call"

Repeatedly heard in target reports is the sharp change in behaviour of professionals, clerks in commercial or government settings, and even just friendly people, when they get "the phone call."

A target will be receiving normal professional level attention from professionals or clerks, and friendly conversation with people they meet, and all of a sudden, the phone rings. When the person taking the call returns, they suddenly begin very negative behaviour towards the target. This can include family members of the target.

The person who took the call suddenly "doesn't have time right now" to complete whatever interaction with the target was to happen.

Targets rarely find out what the call was about, but it does indeed look like something negative about the target was conveyed. One guess would be someone saying they are law enforcement, and that the target is under surveillance, a suspect of a serious crime, and that the interaction should stop right now. Again, that is a guess, but that is how many of those whose behaviour changes seem to behave.

With professionals particularly, and with some clerks who handle very necessary services, this can be a significant problem. Some targets who have medical experience of some type report that they receive clearly faulty diagnoses from doctors. Often, these are of the type where a condition the target feels certain they have a medical condition needing attention and the doctor insists everything is OK.

In my case, having been a target for 29 years, I have had massive chronic fatigue, muscle and joint pain, and a great deal of psychological stress (particularly before I knew this was a crime with a name) and every single medical lab test is perfect. Everything tested for is precisely in the center of the normal range. This, while I had such heavy fatigue I had to find a hiding place and lie down on the floor for 30 minutes at a time at work just to keep going.

I simply don't believe all my lab tests were perfectly normal.

Just one case, I had collapsed on my living room floor, and when I regained some strength went to emergency. I could hardly sit up in the chair - I went by taxi. In that case, the ER doc did show me my potassium was way high. But he said there was nothing wrong. I have no idea what such a lab report should have meant, but I mention it as some reason to suspect that some doctors may well have had “the phone call,” followed by ignoring physical symptoms. (Odds are that they don't ignore any reasons to diagnose you as mentally ill, however.)

It may not always be possible to anticipate encounters with professionals who may have received “the phone call,” however, there are some things I can think of to offset the huge advantage they have over a target.

With police, be sure to type up, and carefully review and edit your report until it is as clean and factual as you can make it before you deal with them, if possible. If you can't do that on your first encounter, you might be able to do that on subsequent encounters if they are required. As one target put it, be very matter of fact, and expect professional level service from police.

With police, it may be worthwhile to research any laws which are part of your encounter with them. Make it a point to ask which laws are being referenced and write them down right as you are talking to police if possible.

With doctors, likewise, research any symptoms you might complain about, any illnesses you think you might have, and any medications you are on. Type up some sensible questions to ask the doctor. If certain lab tests are recommended in literature you research, ask if those lab tests have been done or if the doctor thinks the lab test should be done.

If you are on medication and you find negative side effects are possible, type up your information source and if the side effects are like your symptoms, ask if there is an alternative medication without those side effects.

One example of serious side effects from very popular medication is the very serious disruption of cognitive abilities from “Lipitor” and other “statin” anti-cholesterol drugs. There are books by MD doctors which shout about this known side effect, and the books recommend patients refuse these widely prescribed meds. If you, as a target, find yourself on any medication with such serious side effects, some research into that medication is important.

The overall point is, research and prepare what you will say to professionals, so that even if they get “the phone call” they will find it much more difficult to scam you.

And as stated before, always try to have someone friendly with you during high-stakes encounters with professionals. That can be another target, if you know the other target well and they have shown they can maintain conservative, credible appearance and speech.

21. “You Don't Have Any Evidence”

Targets who attempt to discuss OS/EH with non-targets, including doctors and police, will often be rebuffed with the statement “You don't have any evidence.” This section is about how to stand firm in the face of such a rebuff.

In my opinion, we do not have enough evidence to take these criminals to court. However, we do, in my opinion, have enough evidence that we can still defend ourselves against that rebuff well enough that we don't need to walk away with our tails between our legs.

The evidence we do have at least shows that the crime we experience is not only possible but quite likely, to someone who is at least neutral. Here are some of the best points of evidence I have successfully used to at least stand firm in conversations with those denying we have evidence:

- We have official statistics showing group stalking happens at a rate of about one stalking case in eight in the U.S., Canada and the United Kingdom, and some recognition by the psychiatric community that organized stalking happens, posted here:

<http://www.multistalkervictims.org/osatv.pdf> (Section on statistics near the front)

- We can show that national-level government-instigated organized stalking happened in the 1960s under the FBI's COINTELPRO operations. While this doesn't prove COINTELPRO-like operations are happening today, it makes it quite likely, given the endless stream of personal testimonials describing COINTELPRO-like attacks.

<http://www.cointel.org> (Paul Wolf's collection of COINTELPRO documents)

<http://www.raven1.net/cointeldocs.htm> (My backup copies)

- We can show that silent, through-wall electronic technologies which can do some of the things which targets experience are not only available to the public, but have been for up to 5 decades. As long as you don't make claims of attacks beyond what those technologies can do, you can stand firm against charges such weapons are impossible.

<http://www.multistalkervictims.org/osatv.pdf> (Section on electronic weapons)

- We do have some physical sabotage to show, and we have cumulative reports of tangible things like feces left in wastebaskets, cigarette butts and pennies left around - repeatedly. We have reports of, say, property fences being sabotaged. Or mail being scattered and opened. These things are physical evidence and would be significant in investigations of other crimes.

We have a few videos of organized stalkers in action.

- We have personal testimony. Most is not suitable for providing the non-target public

and officials, because many targets have been too busy surviving to work on good information handling techniques - something which is not their fault. However, if your back is to the wall, it can be said that personal testimony is something the courts place a high value on, and targets are qualified to be witnesses or jury members, even targets without PhD or MD degrees. In fact, some courtroom evidence must be backed by a witness or it's not accepted.

There is nothing to be ashamed about regards personal testimony, and ours is evidence. If personal testimony is not evidence, then all court cases are null and void immediately. As long as the discussion is about personal testimony in general, as opposed to some of the discrediting thing targets have said.

Important: It is critically important that targets don't get the idea that because we can stand firm in the face of charges of having no evidence, that we can forge ahead and sue someone. At this point in time, we do not have evidence to that level. What we have is evidence. It only becomes "proof" if a court or official accepts it. And experience to date is, our evidence hasn't reached that level.

See also the Appendices below for our best stalking evidence and our best e-weapons evidence, summarized.

22. Your Social Life

There's not a whole lot to say about your having a social life. You have just two choices:

1. Enjoy relationships with friends, family, and cordiality with strangers, or,
2. Talk about organized stalking and electronic harassment.

That choice seems very cruel and unfair, but that is the situation as it actually is. Just as people really don't like hearing about painful topics, they don't like hearing about OS/EH on average.

I follow option 1, and enjoy excellent relationships. I do not talk about OS/EH. I don't need to, as I do my talking about OS/EH by way of activism, to others. Others meaning those with whom I don't intend to have an ongoing social relationship with.

If you choose to do activism, then there are principles of OS/EH-related persuasive communications which should be followed, and they are in this booklet:

<http://www.multistalkervictims.org/osih.pdf>

If you try to do activism with friends, family and co-workers, until the world knows what OS/EH is, you will "blow it." Your call.

If you should want to TEST a non-target's readiness to hear about OS/EH, the following "test spiel" is taken from that information handling booklet above:

“Remember when stalking laws came into effect in the early 1990s? It took years before police and the courts began to consistently offer help to targets of single stalkers. Some single stalker targets still are denied serious attention and help, according to message boards about stalking by single stalkers.

“Well, since that time, some stalking targets have discovered that they are actually being stalked by groups. By 2006, increasingly detailed crime statistics began to show that one stalking case out of every eight cases involves stalking by groups.

“However, many targets of organized groups of stalkers are still being ignored by police, and even told organized stalking doesn't happen. This, in spite of their own statistics showing otherwise. This is why I am networking with other organized stalking targets to work towards exposing, and eventually stopping, this second form of stalking.”

At this point, if the non-target expresses no interest in knowing more, I JUST STOP talking about the issue. I've accomplished step one, making my listener minimally aware.

But I do not recommend using that test spiel with anyone you want a continuing good relationship with.

23. Mask Your Voice to Skull

Voice to skull (V2S or V2K) transmissions to targets have driven them close to suicide, and possibly over the edge. There is no longer any need for voice to skull to be unavoidable. While you can't stop it, you can mask it, using the audio tracks recorded in the MP3 files at this link:

<http://www.creviews.net/antiv2s.htm>

Follow the instructions there. This technique was developed by former U.S. Army intelligence officer Julianne McKinney and caused a significant drop in her V2S attacks. Presumably, her perpetrators realized that when V2S is masked, it's devastating effect is moderated.

These audio files are in MP3 format so targets can download them and transfer them to an MP3 player for use out in the community or even at work.

24. Sabotage in the Workplace

Sabotage in the workplace, I suggest, is best handled by never making a direct accusation of any co-worker, if possible. The perpetrators want to foment conflict between the target and co-workers which, they hope, will lead to the target being out of work, and destruction of the target's good reputation.

Just as moving doesn't stop OS/EH harassment, neither does changing workplaces. Sometimes conditions can improve, but leaving a job voluntarily should not be done willingly

with the idea conditions are guaranteed to improve.

As any good worker does, put much more effort into checking and re-checking your work than you might be inclined to do as a non-target. Keep a notebook, and make written notes of your assignments as soon as possible after receiving them, so you can check the fine points before turning the work in.

It's important to write up notes about each sabotage incident as soon as you can, and keep them on file. If possible on a computer, and keep yourself a disc copy of the file as well, in case the computer is hacked. These reports aren't for immediately confronting anyone, they are background information you can show at the right time when a sabotage campaign may come to a head. Don't be seen taking too much work time doing this.

When a job has been completed satisfactorily, it's a good idea to not let the work stay around, especially overnight, before showing it to, or turning it in to your supervisor. If the supervisor isn't available, perhaps ask a co-worker "Does this look right?" or some innocuous question to get them to witness that the work was done properly.

It's important to not overdo asking co-workers to look at your finished work, or that can be construed as faulty on the job performance itself. Save that for the more critical assignments.

If possible, take important work, at least a backup copy if it's computer work, home overnight. Then copy your backup copy over the one on the at-work machine before doing anything further the next day. Work on computers is smart to back up to disc anyway, even if there is a network backup each night.

If circumstances force you to delay turning the work in, and you lose custody, and the supervisor discovers sabotage, I would say "I don't know how that happened - when I put the work away, it wasn't like that." I suggest trying very hard to avoid claiming sabotage - better if you can, keep it something you ostensibly just "wonder about."

Depending on the situation, you might ask your supervisor for ideas on how to avoid damage such as that just discovered by the supervisor.

A small digital camera with close up capability to photograph sabotage is a good thing to have at work. Just take the picture, and I would personally not mind if others saw me doing this, and don't explain yourself unless asked. If asked, just say you are "concerned about the quality of my work" or "concerned about company property." Keep the focus on successfully accomplishing the company's mission, or, the quality of your job performance - and away from direct talk about sabotage.

A tip on damage photos - avoid flash if possible. Flash often washes out all detail. With a digital camera, the brightness and contrast can be adjusted later.

I'm suggesting it is possible to convey the message that there is sabotage happening, and even apply subtle pressure on your supervisor, without being confrontational.

If you discover your personal property disturbed, you can kind of exclaim out loud that “Hm. My bag wasn't like this when I left it there.” But don't go further, into explicit suggestions of sabotage. By using non-accusatory statements, which can be verified by other observers, you can apply pressure in a subtle way that doesn't give your perps reason to get you fired.

25. “Broken” Equipment

Perpetrators have a technology which can remotely hold a piece of electrical or mechanical equipment in a “broken” state. For extended periods.

Yet, and this has happened to me a few times, if the “broken” equipment is given away, it suddenly starts working perfectly for the lucky recipient.

This was dramatically demonstrated for me when I attempted to program in-plant pagers for key staff members at work. The procedure was simple, and I faithfully followed the steps. Not once did any of the pagers I programmed work.

So I asked a manager to program his own pager. He did, and the pager worked perfectly. For test, he handed it back to me, and I programmed it and it failed. We each did this a few times, and every single time, his programming worked, and mine didn't, even though clearly I was doing the exact same steps.

This is not fiction, it was clearly demonstrated and believed by that manager.

The lesson is, if you have a “broken” pieces of equipment, and are forced to replace them, just put your “broken” item away. It may be that after weeks or months, it will work again, and may serve you as a backup item later on.

26. How the Perps Get You to Discredit Yourself

Over and over, as new targets make their networking appearances on the forums, it is clear that many targets don't understand why perpetrators say the things they do, or create the bizarre harassment effects they do. Perps speak to some targets by way of voice to skull, to others by way of staged conversations close to the target in public places, or at work. Perps “accidentally” show the target “equipment” being carried in to the next door home. Perps create noises, say, of camera shutters clicking, in the ceiling of the target's home. Or perps project noises which sound like a neighbour is harassing the target, which may be amplified real noises from the neighbours, or faked noises not originating with the neighbours.

(The perps amplify annoying noises a lot - both indoors and outdoors.)

It is extremely important that new targets learn as quickly as possible:

- Everything heard by voice to skull, or overheard from staged conversations must be treated as LIES.

- The perpetrators can project sounds remotely, through walls, such that they can emanate from any point, including mid-air.

Failure to grasp and accept those things will keep the target in terrible distress, even to the point of being suicidal. Some suicidal targets believe the lies. Some targets are convinced that the projected “camera shutter noise” proves there is a physical camera installed up there in the ceiling.

About the lies, some perpetrators tell the target they are the police, or an agency like the FBI or CIA. In fact, we have no way of knowing how true that may be. But in terms of coping, all such statements delivered anywhere but right inside an official office building, must be treated as lies. Start with the assumption perp statements are lies. If you find independent and absolutely publicly verifiable proof a statement is true, only at that time should you accept such statements. By publicly verifiable, I mean anyone can look up the official source of the statement, and confirm it.

Anyone who invades someone's life, without some official confirmation like an actual physical arrest, on public record, is a criminal, and their word has zero credibility. Remember that PI [David Lawson](#) found that fake criminal records and fake police badges are a routine part of OS/EH perpetrator operations.

The “accidental” showing of equipment in or going in or out of a neighbour's place, likewise needs to be assumed bogus without some independent confirmation which public officials would accept. If you don't have official confirmation, no matter how “real” your equipment sighting seems, or how “real” the sounds you are hearing from your walls seem, for the sake of your mental health you must treat such things as decoying.

Don't assume your walls contain equipment without actually sighting it, and making photos, and having the equipment looked at by someone capable of identifying it. (Don't leave it with anyone - keep it in your custody at all times. Don't speculate to the technician - just ask them what this thing is. See the appendices on “Gathering Evidence” below for more details.)

Real people have killed themselves over the harassment, so understanding perp tactics is not a trivial matter.

It's also important to realize that these diverse acts of harassment all have a common theme: To get you to complain to police, doctors, and family about things that can later be shown as false. They want YOU put in mental hospital, target! And they want YOU to do that to yourself! (And they often succeed!)

By getting you to complain about things that are not what you assume they are, you can actually put yourself in mental hospital. So ignore perp statements, and special effects, unless you have proof which would be accepted by officials. Period.

Then, get on with trying to do some small scale fulfilling and pleasant things with your life. You don't have the same opportunities as a non-target, but that doesn't mean you can't find some things in life which you enjoy.

27. Telling Your Family

By the time a target reads this, chances are they have already told their family about their being an OS/EH target. However, just in case you haven't, I'd recommend avoiding telling your family if possible.

The reason to avoid this is that unlike someone in the street or even a friend, family can not simply ignore attacks on one of their members and maintain self-respect. You can be confident that the last thing anyone, including family members, want to become involved in is something akin to defending a person with an organized crime "hit contract" on them.

Defence mechanism psychology will cause 99.9% of target family members to react by insisting what you describe is impossible, and you're just imagining it. When you press the issue anyway, you are likely to reach a point where they will try to force you into the psychiatric system. That eliminates their worry, and they can justify it as "getting you the help you need."

There are a literal handful of family members who have come around to believing the target, and in a smaller number of cases, this is because they have witnessed the harassment. But you cannot count on that.

My family (parents) are deceased, but if I were going to approach the subject, I would start by pretending to be "amazed" at something you found on the Internet, and show them a printed article, or better yet, a published book you "found" or "was given."

Then say something like "Do you think this could REALLY be happening?"

That will show you whether going further is wise.

I think my favourite book on the organized stalking side is "My Life Changed Forever" by Elizabeth Sullivan.

<http://www.multistalkervictims.org/mlcf.htm>

I don't know of any credible books about through-wall assault technology which are simple enough to be grasped by unaware family in a short attention span.

For the electronic side, I'd recommend printing out just the Electronic Weapons chapter of:

<http://www.multistalkervictims.org/osatv.pdf>

For a general web site, covering both OS and EH, my choice is:

<http://www.catchcanada.net>

That catchcanada web site achieved credibility with a psychiatrist who was treating a Toronto

OS/EH target - it convinced the shrink there "must be something to" the OS/EH crime. Ditto with that target's family.

All above relates to the initial discussion with family. To avoid having family trying to force you into the psychiatric system, be prepared to drop the subject and not raise it again.

There will be a time when this is talked about freely, but we aren't there yet.

And *only* if your family expresses genuine interest would I recommend telling them you hear voices. Saying you hear voices is a *major* credibility trap, in my opinion.

There are plenty of non-voice symptoms you can refer to - if you're not getting them, there are plenty of places you can read up on what others experience. And of course, through wall radar can cause all sorts of mischief, and everybody knows it exists. Read the chapter on electronic weapons in the osatv.pdf booklet mentioned above, to get an idea of the non-voice effects which can be caused by proven through-wall weapons.

I recommend staying with effects which can be caused by the proven technologies. Plain old microwave can generate quite a few disabling things. It can be pulsed to force you awake nights, or force excessive drowsiness daytime, for example.

Because so very few targets have solid evidence of implants, and only two have had them removed and verified, I recommend not claiming you are implanted when talking with family.

Again - if your family starts getting edgy, I recommend you drop the subject for a good long time.

IF YOUR FAMILY HAS ALREADY BEEN TOLD

If your family has already been told, you have an uphill climb. But a few targets have made it up to where their family members believe and support them.

If I were in that position, I would promise to stop talking about OS/EH if they would let me give them a single book on the topic which they would promise to hold but not necessarily read. I believe that eventually they would read the book if they had it in their possession.

I would, at time of writing, offer them either Elizabeth Sullivan's book "My Life Changed Forever," linked above, or a printed out copy of my e-booklet "Organized Stalking."

If my "Organized Stalking" booklet is your choice, there are two versions, and which you choose would depend on your story:

http://www.multistalkervictims.org/osatv.pdf	Covers both OS and EH
http://www.multistalkervictims.org/osatv2.pdf	Covers OS only, no electronics

** You may also modify or request a modified version from me, if something in there doesn't fit well with the story you have told. Some people are uncomfortable with my hypothesized

“why” answers, for example. I included those comments because it is the #1 question targets are asked by non-targets. My answers are my guesses, and they are labelled as guesses.

Also, keep in mind that <http://www.catchcanada.net> has actually persuaded a couple of doctors and a few family members of the reality of the OS/EH crimes.

28. Coping With Dissolution of Memory

This is a reply to someone asking about dissolution of memory on the job, but it applies everywhere too:

“Personally, I think it's more a question of setting up memory-assist PROCEDURES than shielding.

“Take copious notes, and stick them in places where you absolutely cannot ignore them. That's the main way I dealt with electronic memory dissolution on the job. I also carried a small notebook for things I needed to remember but where sticking notes wasn't possible.

“Another thing is that just like airline pilots' "cockpit calls," which are vocal scripts cockpit crew members are required to say as they go through their checklist routines, remind yourself out loud.

“Saying out loud, for me, works far better than saying something silently.

“If you have time on the job, keeping a diary is possibly worth while, if you need to refer to things you did some time ago, identify memos received, and so forth.”

29. Unwitting Perpetrators

Observations of many targets over the past couple of decades indicate that there are members of the community who perform acts of apparent harassment, but do so without being aware their behaviour is harassing anyone.

On rare occasions, targets have had social interaction with such unwitting perps and found no further actions that are harassment, and no trace of motive to harass.

It is guesswork, of course, but since remote electronic influence is do-able to a primitive degree with the proven electronic weapons, chances are that the more advanced and as-yet-classified secret technologies are capable of silently influencing people, and very likely animals too, based on observed animal behaviour by targets.

What this means for coping is that it is very wise to avoid making accusations of deliberate harassment for people seldom seen. Targets do have repeat harassers, and harassers who display facial and body language expressing satisfaction that the target has been annoyed and inconvenienced.

But there are many seen-only-once people who do things that seem to be harassment

routines which are unmistakably deliberate. Best coping advice is to ignore all you can, and avoid making accusations where intent to harass isn't obvious. Once you get the reputation as a "crank" or "complainer," it's very hard to lose it, and such a reputation can be used to force you into the mental health system.

A1. Gathering Evidence: General

Carefully gathering evidence is a way to cope. It is key to remember that evidence that looks very convincing to you is probably not going to appear very convincing to non-targets, especially family members who believe you are crazy, or officials like police and doctors. One major skill in gathering evidence is restraining your belief that your evidence is going to “shake the world” and win your freedom.

Experience is that while gathering evidence is important, non-targets will actually try hard to discredit it, because bystanders really don't want it to be true that OS/EH exists, and because officials are consistently unwilling to work seriously on the crime of OS/EH. So we gather evidence, display it, and keep backup copies where possible, anticipating a day when OS/EH has become public knowledge. This is an important part of coping, even though the full value of our evidence will be in the future.

Some comments on gathering evidence follow.

A2. Gathering Evidence: Photographic

When perpetrators physically damage your property in some way that is clearly not natural, such as sawing through a piece of furniture, that is a terrific opportunity to photograph and post the evidence.

The problem is that some cameras don't have closeup capability, at least the lower priced cameras. There is a way around that. You can tape an eyeglass lens directly over the camera's fixed lens. Ideally, the eyeglass will be something like 2x (2.00 power) or more.

When you do that, your viewfinder will give too wide a view, but that's OK - just be sure the damage, such as the sawed end of a furniture leg, right at the center of the photo. If you don't have glasses handy, some relatively inexpensive reading glasses are available at pharmacies. Choose 2.00 to 2.50 power. You can remove the lens from the frame to make it more convenient to tape over the camera's lens.

FLASH is BAD for getting clear closeups. You'll usually get bright white, totally washing out all detail.

The best light for closeups is near a window, or outdoors, on a bright day but NOT IN DIRECT SUNLIGHT - same problem as with flash - you'll usually get everything too bright. Household electric lamps are OK - just don't get them really close or you can wash out the details of the damage.

Position the cut/torn or otherwise damaged object so shadows make the damage more obvious. If holes are involved, put something of contrasting colour behind the holes to make them stand out.

If the size of the object or damage isn't obvious, consider placing a ruler in the image.

When you are holding the camera, remember without flash, a camera needs to be held steadier than usual. If you have a tripod, use it, but if not, move some piece of furniture near the item to be photographed so you can steady your arms and camera on it.

Take SEVERAL photos at different distances. A digital camera will give you an on-screen preview but even there, a couple of different distances will ensure you get at least one good photo. With a 2x or more powerful lens taped over your camera's lens, you should be able to get somewhere from 16" close, and perhaps down to 10" or so.

When you post the photo on a web site, or send it to someone for posting, please be sure to supply the date and some sort of identification, even if you want to keep your identity anonymous. A date on a photo and even a false name are far better than nothing.

Also, supply a sentence or two about what happened before you discovered the damage. Such as: "I came home from work and found this ... " etc. Your caption or descriptive text is extremely important, because most photos taken by targets do not appear to be criminal activity to the average non-target. Remember, it's about how they (non-targets) see your work, and not how you see it.

If you digitize (scan) a photo to be posted, please learn how to do these three things to the photo before sending it (check your scanner's help screens):

- CROP off the excess unused space - a scanner normally produces an 8.5" x 11" image which is HUGE (Save the photo.)
- Reduce the BITS PER PIXEL, also called number of colours. Many scanners scan at 24 bits per pixel, when all that's needed are 8 bits per pixel (256 colours) (Save the photo.)
- IF the size of the image is wider than a screen, which can be as small as 800 pixels wide, RESIZE (sometimes called resample) the image so that the image fits within one browser screen. I normally choose 750 pixels as my maximum width for perp damage photos, to give a small allowance at the margins, and to avoid the vertical scroll bar. (Save the photo.)

Just scanning and sending a digitized photo without doing the above things can mean you are sending a one MEGabyte file, for each photo, which is way too big to be sent by email to people who have email size problems or limited disk space. Some people use emailers based on their PC as opposed to web mail, and they can have size concerns because every email received is stored on their own disk space. (The advantage of using an emailer on your PC is that it makes backing up possible and there is less chance for emails disappearing.)

A3. Gathering Evidence: Videos

Videos can be excellent for showing the public organized stalking is a real crime. However, in most cases, videos taken by targets are not convincing enough to break through the

credibility barrier. This is not the fault of target videographers - it is because the OS/EH perpetrators deliberately set up their harassment to look like ordinary everyday annoyances which non-targets experience now and then.

When taking the original footage, or when preparing a video for posting, the target needs to provide narration which explains that while the scene may look normal, it's not normal for this to happen "every day" or "all the time." Emphasize frequency of occurrence.

Here are two good organized stalking videos with good narration:

<http://www.multistalkervictims.org/videos.htm>

<http://www.multistalkervictims.org/osvideos.htm>

CAUTION: Over the past couple of years, U.S. police and security guards have been instructed to treat making videos or even taking still photos as possible "terrorist" activity.

One target was arrested and convicted of taking pictures from public property, which is legal, when in fact, she only took footage from her own home. The police lied in court to get her convicted of something which is actually legal.

This means care must be taken in taking of videos, especially in the U.S., but it is likely that such false arrest can happen anywhere in the current world. Today's small digital camcorders can be concealed, and that may be one way to handle the false arrest problem.

A4. Gathering Evidence: Suspected Surveillance Devices

It is extremely important that targets train themselves to regard "suspicious devices" in their area as suspected, until and unless someone qualified and willing to put their name on their analysis confirms a discovered device is actually for covert surveillance or electronic attack.

This is the same credibility requirement as not making a statement as fact without evidence which will convince officials. In making statements to others, and that includes other targets, it is essential that we avoid unsupportable claims of fact.

- If a target believes they have found a surveillance device installed in their home, car, or personal property, see the section "Gathering Evidence: Photographic" then:
- Find and place near the device an object of familiar size. Can be a clearly legible ruler, or a coin, or similar well-known object.
- Take several closeup photos of the item in place. Back up the photos by posting them to a forum, web site or blog, and CD or DVD.

If a bump needs to be portrayed, consider placing a lamp at a low angle, to produce a shadow. This technique is also important if you are trying to photograph a suspected implant.

in your body.

Then remove the device if you can, and take additional closeup photos at different angles.

Post and back up your photos to the web before the next step.

Locate someone who has substantial training and experience in electronics, and arrange for analysis. If you are asking a non-target technician, do not say you are a target of OS/EH - that can be as discrediting as saying that, alone, to police or doctors. Just say you want to know what this object is.

Type up a report of what the qualified individual says about the device. Add that individual's report, keeping their identity confidential, to your posting.

What else may be done about your find depends on the qualified report.

A5. Gathering Evidence: Detection of Signals

It is one thing to detect strange signals. It is far more difficult to prove that the signals you find have something to do with harassment. Merely finding signals on "government frequencies" proves nothing useful, because so many government radio sources are in operation everywhere, all the time.

And, here is what makes convincing/foolproof detection highly problematical. This statement is from the "Shielding" section of my e-booklet titled "[Coping](#)":

"I've heard from perhaps 40 to 50 targets over my 13 years on line who receive attack types involving mechanical vibration of both body parts and inanimate objects, which cannot be done using any technology, electromagnetic or acoustic, taught in today's schools, under the conditions experienced. Right up front, the perps clearly have classified (secret) technology.

"Interestingly, the many sufferers of what started years ago as the "Taos Hum," a constant sound like "an idling diesel engine," sometimes experience vibration too. While I do not recommend talking about vibration to non-targets, if it should slip out, OS/EH targets can mention the "Taos Hum" sufferers' vibration experiences as well."

This means that commercially available detection equipment is unlikely to convincingly detect at least the more advanced perpetrator attack signals. What that means in practical terms for targets is, use substantial amounts of caution in spending money on detection equipment or services.

Yes, some targets do indeed detect unusual electromagnetic signals in the vicinity of targets' homes, or even bodies. So there may be something useful in doing affordable detection experiments using conventional equipment and services. But targets must not get the idea that with an expensive spectrum analyzer, or a high priced electronic-harassment-aware private investigator, convincing proof will be the result. We are up against classified (secret) technology in an unknown percentage of targeting cases.

Let me define “convincing.” For OUR purposes, OS/EH targets, “convincing” means “will convince a public official that our detected signals prove harassment.”

We can find plenty of “unusual EM signals,” - I've done that myself - but showing them to police just got me silence or questions like “So? How does that prove you are being harassed?” Just finding, say, a signal on a “government frequency” doesn't prove anything. There is lots of government radio activity going on all the time.

Now having said all that, let me say that I definitely favour those targets who have a comfortable income hiring electronic-harassment-aware private investigators to attempt to detect and report on anomalous signals in their vicinity. Emphasis on comfortable income.

The reason is that the current-day electronic harassment technology is classified, so we do not know what it is, or isn't. It's a wide open question. And just as many scientific discoveries came about by accident, learning the true nature of present-day EH technology may also yield to an accidental discovery.

Also importantly, even if all a target can do is show a report by a qualified investigator which demonstrates very anomalous EM signals (or acoustic signals) in the target's home or vicinity, that is a stepping stone to a day when officials will take our complaints seriously. My request to targets who can afford that is to work out a contract with the investigator where the full report content can be made public, and posted on the web. That may require obscuring some of the identifying info, but as long as the un-obscured source document is in the target's possession, that is still beneficial.

My personal opinion is that so far, the only guaranteed-to-work detector for advanced perp attack signals is the target's body. (Plants cared for by the target may work too, though no extensive experimentation has been done along that line.)

I believe that a wearable recording electroencephalograph which can hold a full night's data, together with a written, audio, or camcorder log in which each attack is described along with the time, could be used to form a persuasive report. By comparing recorded EEG traces both during the logged attacks, and between attacks, I believe it can be shown that something very unusual is going on in that target's life. Best would be for a doctor to run the experiment, but even a well written report by itself could be persuasive.

Not guaranteed, but persuasive none the less.

Bottom line - detection experiments are potentially useful but are not guaranteed at this point to convincingly prove harassment.

A10. Group Stalking Statistics

While public officials continue to deny that organized stalking happens, official statistics indicate that multiple stalker cases are being handled by the justice system. For example:

**** A U.S. Department of Justice special report**, January 2009, NCJ 224527, titled Stalking Victimization in the United States, which is available at this link (as of January 2009):

<http://www.ojp.usdoj.gov/bjs/pub/pdf/svus.pdf>

... reported the following statistics showing the occurrence of multiple stalking cases within the total of all U.S. recorded stalking cases in the 2005-2006 time range:

* 11% of victims said they had been stalked for 5 years or more.

[Eleanor White commenting: "5 years or more" is very characteristic of organized stalking, which usually never stops, because the justice systems refuse to acknowledge this crime and there is no pressing reason for the stalking groups to stop.]

An average of 10.6 percent of some 4.6 million stalking and harassment victims don't know the stalkers, since they're complete strangers.

[Eleanor White commenting: Almost all organized stalking is carried out by strangers, or people the target may know by sight but has never interacted with. The "4.6 million" figure above includes both stalking and harassment victims.]

Appendix table 3. Number of stalking offenders perceived by victim:

One 62.1%
Two 18.2%
Three or more 13.1%
Number unknown 6.5%
Total Number of victims 3,398,630

[Eleanor White comment: Adding three or more to number unknown, gives 19.6%. That could suggest something like half a million U.S. stalking victims may be organized stalking targets.]

**** From Statistics Canada:** The following statistic covers all reports to police relating to infractions of Canada's "Criminal Harassment" law, which covers stalking. Statistics Canada, the federal agency which maintains statistics for all areas of Canadian life, including policing. The following statement was in response to Eleanor White's request for a checkoff item on Canada's Uniform Crime Reporting (UCR) system denoting harassment reports involving simultaneous multiple harassers (Chief, Policing Services Program responding):

"Thank you for e-mail of Jan. 17. There is no need to add a new field to the national Uniform Crime Reporting (UCR) survey to collect information on multiple harassers, as a field already exists for the identification of multiple accused persons for all criminal incidents reported to police. As an example, of the 10,756 incidents of criminal harassment reported to police in 2006, 1,429 of these (or 13%) involved more than one accused."

That is one criminal harassment report in eight, a very significant percentage. While not all of these would strictly fall under the organized stalking category, this rate of simultaneous multiple harassment reports at least hints that organized stalking may not be as rare as the general public seems to think.

**** A report on stalking posted by the American Journal of Psychiatry** on their web site, journal reference 158:795-798, May 2001, states ... 6 out of 201 (3%) respondents reported multiple stalkers... Compare that with the 13% in criminal harassment cases above, reported by Statistics Canada, and clearly, stalking by multiple stalkers is a very real crime, acknowledged by mainstream professionals.

Note carefully: There is such a thing as stalking by PROXY, in which a single stalker, motivated by amorous interest or mental illness, enlists helpers. Organized stalking is NOT stalking by proxy, but rather is stalking by a group totally independent of whomever originally submitted the target's name to the stalking group. The stalking group typically has no knowledge of why the target's name was submitted, and instead is given a lie, often that the target is a pedophile, to motivate the group stalking effort.

**** Article: "The Course and Nature of Stalking: A Victim Perspective",** Authors: Sheridan, Davies, Boon

Source: Howard Journal of Criminal Justice, Volume 40, Number 3, August 2001 , pp. 215-234(20)

In 5% of the cases (5/95), there was more than one stalker. pp.219

"In 5 cases perpetrators were part of a group..", pp.219

"... [40%] of victims (38) said that friends and or family of their stalker had also been involved in their harassment... This is a surprising find as the popular view of a stalker is of a lone and secretive individual." pp.222 [COMMENT: This suggests that the above "5%" cases may have been groups other than family or friends, which is suggestive of organized stalking as opposed to simple proxy stalking. Organized stalking involves groups which are networked everywhere, while proxy stalking has a single stalker who has a very personal focus on the target. Organized stalking groups also work on more than one target, unlike proxy stalking.]

Typical of organized stalking: "In 15% of cases, the victim could provide no possible reason for their harassment" pp.226

**** Statistics from the book Mobbing: Emotional Abuse in the American Workplace** show that in Sweden, about 3.5% of the working population is subject to mobbing, which is

organized stalking in the workplace. 3.5% of working people is roughly 1 person in a hundred total, and is in line with the organized stalking survey above.

**** Statistics from the U.S. Centers for Disease Control** concerning harassment and stalking cases give an overall figure for the U.S. of 4.5 people per 100 as having been harassed or stalked at one time. Our informal survey's result of about one person per 100 being targeted by organized stalking fits well within that 4.5 per 100 figure. (Source, ABC News)

**** Statistics from the British (government) Home Office** state that 1,900,000 people in the United Kingdom were victims of stalking or harassment at any one time as of the year 2001. That is about 3 people per hundred. Here again, the organized stalking survey's 1 person in a hundred is not out of line. Most interesting is that roughly 45% of the stalking victims are MEN! That suggests a very different picture from the conventional view of stalking victims being mostly women, and may well point toward the type of stalking described in this booklet. (Graph below shows all harassment offences, not specifically stalking.)

Here's another British stalking statistic:

Home Office Research Study 210 (1998 data):

THE OFFENDERS

The majority (79%) of incidents involved only one perpetrator.

[...]

Strangers were responsible in 34 per cent of incidents.

Those statistics are strongly suggestive of organized stalking, 79% involved one perpetrator means 21% involved more than one perpetrator. And stalking by strangers is the usual situation with organized stalkers. Even if only 5% of stalking cases are organized, 5% of a million cases could mean 50,000 organized stalking cases in the United Kingdom alone.

**** How common is the organized stalker personality type?**

For people who have trouble believing that stalkers can be as cunning and nasty as reports from organized stalking targets indicate, a psychiatrist, below, refers to one statistic indicating that as many as one stalker in just eight fits the observed personality of organized group stalkers:

Excerpt from book STALKING, by Debra A. Pinals, MD, Group for the Advancement of Psychiatry, Committee on Psychiatry and Law. Published by Oxford University Press US, 2007. ISBN 0195189841, 9780195189841, 260 pages

Page 42:

CLINICAL ASPECTS OF STALKING

"Finally the fourth type of stalking in the Sheridan and Boon (2002) taxonomy, sadistic stalking, comprised 12.9% of their sample. This construct looked at the victim in particular, identifying the victim as someone worth "spoiling" (Sheridan & Boon, 2002), and as someone who would not understand why they were targeted.

"The target and stalker began as low-level acquaintances, but eventually the stalker's motive is to frighten or demoralize the victim. For example, the stalker might reorder or remove private papers, or leave notes inside the victim's car, leaving the victim with some evidence that the stalker has had contact with their personal property.

"As the behavior progresses, the stalkers attempt to take full control of the victims' lives. Their behavior may include implied threats (e.g. pictures of tombstones) and sexual communications that intimidate or humiliate but would avoid directly pointing to the perpetrator.

"There may be reprieves from the behavior, which may later resume after a hiatus. These types of stalkers may work hard to defy police."

A11. Chapter 4 (OSATV): Through-Wall Electronic Weapons

Private investigator David Lawson presented us a thorough look at organized stalking by human beings in the community of the target. Most targets who have been targets for several years also experience a very invasive, inescapable form of harassment by through-wall electronic technology. (In virtually all cases to date, organized stalking appears to be a life sentence.)

In this chapter we will present some silent, through-wall, virtually zero trace evidence electronic technologies which can be used to literally destroy any quality of life a target may hope to have, **in the privacy of the target's home.**

Surprisingly, those technologies are not government secrets, and have been available to anyone with upper middle class income for one to five **decades!** Again, decades! The reason, reader, you may not be aware of them is that they were developed for legitimate uses, and some have not been widely publicized. And you, reader, have one of them right now in your home.

These technologies use the ability of radio signals to penetrate non-conducting walls, and use frequencies and modulation ("signal shaping") methods, which produce effects which are useful for covert harassment.

Here is the list through-wall harassment technologies currently available:

Weaponized microwave oven

A simple microwave oven, door removed, with the door interlock switch bypassed, and held against the bedroom wall of a target in an apartment building or semi-detached house. This device can cause a variety of disabling medical symptoms.

Some of the symptoms of microwave exposure are:

Asthma, cataracts, headaches, memory loss, early Alzheimer's, bad dreams, depression, fatigue, concentration loss, appetite loss, heart and blood pressure problems, and cancer.

Targets do report those symptoms, however, doctors almost never admit to patients that electronic harassment is even possible, never mind actually happening.

Voice to Skull

Joseph Sharp's voice to skull success, performed with Dr. James C. Lin's pulsed microwave transmitter, and publicly announced in 1974 at the University of Utah, at a seminar presented to the faculties of engineering and psychology.

That seminar, and the operating principle of Sharp's successful experiment, were described in the March 1975 "American Psychologist" journal. The operating principle, which has been improved upon in the more than three decades since Sharp's success, is based on the fact that one microwave radar pulse of medium to high power can produce an audible click in the hearing sense of a person in line with the signal. That effect has been called "radar hearing" since World War II.

Dr. Joseph Sharp used a computer to cause one microwave radar-like pulse to be transmitted every time a speaker's voice wave form swung from high to low, as illustrated below:

The result was that when Joseph Sharp sat in line with a microwave transmitter transmitting pulses as shown above, he could hear a "robotic" voice speaking the numerals 0 to 9. He did not carry the experiment further, at least according to available records. Sharp's experiment took place in 1973, and although the potential for microwave radiation to cause cancer wasn't as widely known, it may be that radiation danger is the reason this technology has not, at least publicly, been developed further.

Research into radar hearing by Dr. Allen Frey in the 1960s established that roughly three-tenths of a watt per square centimeter of skull surface is required to generate the clicks from which the voice is synthesized. Synthesis of voice from clicks is a primitive form of "digital

audio."

For some years in the 1990s and early 2000s, the United States Army recognized "voice to skull" technology, which they abbreviated as "V2K," in their on line thesaurus. For reasons unknown, the Army removed that thesaurus entry circa 2007.

Some references to developing more advanced types of voice to skull can be found among patents, and rare United States Air Force references to the technology in the late 1990s forward.

Voice to skull (V2S/V2K), a commercial version dubbed MEDUSA - "Mob Excess Deterrent Using Silent Audio", was proposed for commercial development for military and police use, per ABC news in summer 2008.

Targets report invasive sound transmissions of good fidelity at various times of day. Voices saying profane and disparaging things are common. False sounds of telephones ringing, pagers beeping, alarm clocks going off, knocking on the target's door, and other sounds have been reported. The fidelity of these transmissions indicates improvement over the method demonstrated by Dr. Joseph Sharp.

Silent Sound

Oliver Lowery's silent sound, U.S. patent 5,159,703, is the current method for "subliminal sound." "Silent Sound" replaced "time slice" subliminal sound, in which small slices of a subliminal message were inserted into an audio stream, such as at a movie or on TV, to influence the listener. Silent Sound is mixed with audio in places like department store Muzak systems to discourage shoplifting.

Although enhancements have been developed, at its simplest, a Silent Sound voice encoder takes a spoken message, and uses a circuit similar to a telephone voice changer to raise the frequency of the voice up near (but not exceeding) the upper limit of human hearing. The listener hears a fluctuating high-pitched tone, and any words cannot be discerned, consciously.

However, the brain can subconsciously decode the words. The brain takes advantage of the fact near the upper limit of hearing, the sensitivity to frequencies drops off. The sensitivity curve is sloped downwards in the Silent Sound frequency range, roughly 14,000 to 16,000 Hertz (cycles per second.) For readers with knowledge of radio detector circuits, recovering audio from a frequency modulated (FM) converted voice signal is done using "slope tuning." A concept diagram of how this works with Silent Sound is shown here:

How the brain decodes FM-encoded voice

"Silent Sound" is not a through-wall device by itself. However, when Silent Sound is transmitted to a target by way of a voice to skull through-wall transmitter, if the target is susceptible to hypnosis (many people are), the target's thought processes and personality could be severely disrupted over time, and the target would have no idea why this was happening, as the sound is essentially silent. The target may hear a high pitched tone or hiss, but no words. The target would be much less able to resist hypnotic suggestions than with audible speech.

It should be noted that many targets report hearing frequent or constant high-pitched tones or hissing.

"Silent Sound" subliminal hypnotic suggestion can also be piggybacked on to a target's cable TV or radio listening, as well as transmitted on a voice to skull signal.

The LIDA Machine

An old medical device, the Russian LIDA machine, a pulsed 40 watt, 40 MHz radio transmitter, which can be used to make a target exhausted on the job when pulsing at the rate consistent with sleep, and with a pulse rate increase, DEPRIVE a target of sleep too.

This device is a radio transmitter version of other types of trance induction devices, such as a swinging watch, or pulsing lights, or pulsing sound. Trance induction works using any low speed, regular stimulus. Even slowly swinging in a hammock or rocking in a rocking chair can induce sleep.

But if someone comes along and suddenly rocks a snoozing person's rocking chair at a high rock rate, that person is going to be forced awake. Same with a slowly beeping tone changing to a rapidly beeping tone. Alarm clocks use rapid beeps, for example.

The LIDA was originally designed as a drugless sedation machine. It was featured in a 1985 edition of a CNN "Special Report." An Associated Press photo of a LIDA machine, with one of the scientists who studied it, Dr. Ross Adey, is here:

The original LIDA machine uses not only a pulsing radio signal, but pulsing lights, sound and even radiant heat as well. It was designed to be used near the patient. The earliest report of the LIDA being in use I'm aware of is the report of a Korean prisoner of war who saw one in operation at a prison camp. That's half a century ago in terms of a radio harassment technology, which is quite simple, having been available for half a century.

(Note: Dr. Ross Adey and Dr. Eldon Byrd were scientists who studied the LIDA machine for possible weapons potential. There is no evidence that Dr. Adey or Dr. Byrd were ever associated with unethical activity.)

Organized stalking targets report overwhelming fatigue on the job at times. I'm retired now, but I was hit so hard with some sort of fatigue that I would have to find a room at work and lie down for as long as 30 minutes to just carry on. Concurrent with this, doctors could find no disease which could explain these very sudden, drop-you-in-your-tracks attacks.

Organized stalking targets also report extreme trouble sleeping, describing the sensation as "being injected with caffeine." I have experienced that too.

Through-Wall Radar

Through clothing (and through non-conductive wall) RADAR, widely used at airports and by police to look through clothing for hidden weapons. The harassment potential of this technology in the hands of organized stalking gangs is obvious.

Through wall/clothing radar images

The same security scanning radar used at airports, and now coming into use by police, can also view a target through a non-conductive wall. In the late 1990s, I pretended to be willing and able to buy such a unit, and was told by a salesman for the Millivision company, then making this equipment, no longer in business, that if I had the cash, then around \$100,000, I could have the equipment. I stated plainly that I was a private individual with no ties to law enforcement.

Many targets report being "followed" in their apartments by rapping noises from an adjacent apartment, particularly the one below. As the target walks about, rapping noise which sounds as if the occupant of the adjacent apartment is doing "work" on something, will move as the target moves. This may go on for say, 15 minutes. It does seem as if someone has through-wall radar and is "enjoying" its use.

Once in a while, a target will experience a few weeks where every time they sit on the toilet, the water in the bathroom below theirs will be turned on at the exact time the target starts to urinate, and the water is turned off when the target's urine stream stops. Even throughout the night.

Those through-wall harassment technologies can all be proven to exist.

EPIC

There are some as yet to be demonstrated technologies as well, which are interesting in terms of harassment potential. One, code named EPIC, was announced on Fox News as under development by Houston, Texas firm Invocon, with funding by the U.S. Marine Corps.

EPIC, it is claimed, has the potential to disrupt the inner ear with an electromagnetic signal, through walls. Targets report disrupted balance, sometimes as they try to do delicate work, or work with the potential to spill things, which does happen regularly.

Implants

There has long been a suspicion by organized stalking targets that their disruptive effects may be due to implants in the body. There is very limited evidence that a handful of targets may be implanted, but by and large, targets do not report unexplained wounds, missing time, or medical scans with artificial objects which don't have a legitimate medical purpose. At time of writing, there are two targets who have had monitoring/tracking/control implants diagnosed by doctors and removed. Two out of thousands.

There are several who have medical scans which they claim show non-therapeutic, non-medical objects in their bodies. Without a professional diagnosis, I'm unwilling to claim those undiagnosed scans represent monitoring/tracking/control implants, though under the MKULTRA "mind control" crimes carried out in the 1950s-1970s by CIA contractors and affiliates, there was some implantation of the involuntary experimentees.

For today's organized stalking targets, the question of implants, possibly nano (microscopic) sized, or even made of biological material, is wide open. My advice to organized stalking targets is to avoid compulsive worry that they are implanted without a high quality medical scan, at least. Because there are through-wall harassment technologies which do not require implants and which have been available for decades, implants should not be assumed, in my view.

Classified Technologies

It should be noted that while the five proven to exist, proven to work, through wall harassment technologies can severely disrupt a target's quality of life, they are easy to detect if a target has the right test equipment, and can be shielded against. Today's targets find that good quality shielding against electromagnetic signals does work now and then, temporarily, or partially, or, not for all who try shielding.

By contrast, materials that do not block electromagnetic (radio) signals do sometimes provide some relief. Examples are leather, rubber, and the common blue gel freezer ice packs.

The fidelity of today's through-wall sound projection weapons ("voice to skull") is much higher than Dr. Joseph Sharp's pulsed microwave method could produce.

Clearly, from the target's experiences, there is equipment in use now that is advanced beyond the proven technologies discussed here. This makes it much more difficult for targets to credibly prove the electronic harassment phase of the organized stalking crime.

A12. Earning Attention Span Success Story

A target, who has been a member of a church for a couple of decades, reports that they (anonymity requested) have gradually reached a point where the subject of organized stalking can be discussed, without negative repercussions, with the pastor and among the other members of the church. Here are some observations as to how the target has conducted themselves in the church which have led up to this favourable result:

1. Attend church regularly -- all events, including Bible readings and social circles, not just Sunday services.
2. Participate actively, giving special consideration to other (elderly and infirm) members of the congregation who might need particular forms of assistance.
3. Establish your credibility as a good, stable, civilized, trustworthy person and a true believer, which takes time.
4. Be a good listener, which means subordinating your personal problems to matters which are of far greater interest to other members of the congregation. You'd be surprised how many other members of the congregation may want to discuss the (bizarre) problems they've been experiencing in their lives.
5. Develop a warm, meaningful, trusting relationship with the church pastor and elders. This, too, takes time.
6. Over time, test the waters to see what approach can be best used in surfacing the topics of organized stalking and electronic harassment.
7. Stay understated and avoid portraying yourself in "rabid" terms as being a victim of a vast conspiracy.
8. Don't quit because of a few obstructions thrown in your path.

LOCAL GROUP PRESENTATIONS

IN THE FIGHT TO EXPOSE AND STOP THE CRIME OF ORGANIZED STALKING AND ELECTRONIC HARASSMENT

For an e-booklet outlining the history of OS/EH activism:

<http://www.multistalkervictims.org/osah.pdf>

1. Purpose of This Booklet

One of the most demonstratedly effective ways to educate the public about organized stalking and electronic harassment (OS/EH) is by way of presentations by in-person groups of targets to various local organizations. Although CATCH (“Citizens Against Technological and Community-based Harassment,”) an organization based in Toronto, Ontario Canada for two years (2004-06) was short lived in active form, the group was able to make several presentations about OS/EH to local crisis support staff groups. These presentations were very well received.

The CATCH web site has returned to the Internet at this link:

<http://www.catchcanada.net>

A backup copy, which is likely to be out of date but still helpful, is posted here:

<http://www.multistalkervictims.org/catchcanada/>

The in-person local presentation type of activism initiative has not, at time of writing, been repeated elsewhere. However, the potential benefits in terms of enlightenment of those professionals whose work affects targets are substantial, and this booklet is to gather some suggestions and tips for doing this elsewhere.

2. Outline of Steps

Putting on a presentation to local professional organizations is a big project, and to many targets, who can just barely cope, it may seem like something they would never be interested in. However, once this becomes a group project, and a project where the group members clearly accept that it must be done in many steps, over time, it begins to look do-able. Here are my suggested steps, which will be explained in detail in following sections:

- Assemble a local support group. This is often done simply for networking, not activism.
- Get to know one another, and observe potential for good quality writing and speaking, as well as special skills which can help with preparation of a presentation. Learn who may express interest in participating in a presentation.
- Those members who have ability and interest in making presentations should start contacting local crisis support organizations, looking for staff who already know what organized stalking is. (Knowledge of electronic harassment isn't necessary.)
- It's also not a bad idea to shop around for a lawyer with mental health defence experience, who accepts legal aid payments, and who is willing to defend group members if they become snarled in the mental health system. Use the “free 30 minute consult” for this. Prepare a one page fact sheet about your group before making contact.

- When a crisis support staff member who is familiar with OS is located, ask them if your group could make a sample presentation, and, if those who attend the presentation could make critical comments so the target group can improve their presentation.
- Look for opportunities to make presentations to other crisis support organizations, particularly non-government (NGOs.) Leave evaluation forms or invite them to submit their comments about the presentations electronically.
- Once the critical comments from these organization have been addressed and necessary corrections made, ask for help from the NGOs you have presented to for help in gaining invitations from the higher stakes local organizations, both government, and professional, such as legal, medical and law enforcement organizations.

Local groups starting this type of project need to know up front that it can take a couple of years before you are going to be invited to present to the high stakes organizations. That acceptance is essential in order to maintain enthusiasm. This is a very important type of activism and it cannot be rushed.

3. Forming a Local Group

[This section contributed by another OS/EH target from first hand experience.]

Forming a local target group can be an enjoyable, empowering and rewording experience, while simultaneously providing an eye-opening perspective on what other targets are experiencing. Unlike the forums and conference calls, it offers the opportunity to bond with targets face-to-face in a group dynamic setting where everyone can share their experiences and coping strategies.

To identify other targets in your area, peruse OS/EH web sites that list contact info of targets interested in networking, submit posts to target forums indicating you are seeking to network with other targets in your area, ask around in the conference calls to see if anyone knows of targets in your area, do internet searches for OS/EH related terms and the name of your geographic area, for example "organized stalking san francisco." You can even post ads in online classifieds such as craigslist or post flyers in your area. Once you make contact with targets in your area ask them if they know of other local targets interested in networking.

Start by getting to know the other targets in your area. This can initially be accomplished via email exchanges and phone conversations, eventually leading up to individual face-to-face meetings, possibly at a neutral location such as a restaurant.

Before holding a group meeting, first meet individually with several targets, ideally with those who will be attending the group meetings, so that you get used to communicating with targets in person. The first time a target meets another target there can be significant stresses involved -- is the other target really a perp, what will they think of me, etc. Meeting individually with targets allows you to get this tension out of the way on your part if you have

not met with targets before, as well as on the part of the other targets who will be attending the group meetings.

As far as a location for group meetings, it can be an informal setting like someone's home, or a more formal venue like a conference room at a public library. Meeting in a restaurant is less than ideal as it may be noisy or some members may not feel comfortable discussing OS/EH when it could be overheard by people nearby. Meeting outdoors in a secluded area usually works out ok.

When holding group meetings there are several things you should be prepared for.

Organizing a group meeting with targets presents unique challenges not otherwise normally an issue. One target may not want to go if another target he or she dislikes will be there, another can not come before early afternoon due to being targeted with DEWs in the mornings, yet another may want everyone at the meeting remove their cell phone batteries, etc. Like anything else you will have to find a time and place that works best for the majority of the members interested in attending the group meetings as you may not be able to accommodate everyone's needs.

Be aware that well-meaning targets may say or even promise they will come to the meeting, but then never show up. Attending one's first group meeting is something many targets will never know whether they will be up to until the day of the event.

The first time a target meets either individually or in a group setting there is usually a strong urge to talk about their targeting at length, or otherwise have their experiences validated, as this may be the first time they have ever met anyone who believes what they are saying and are able to empathize. For the first 2 or 3 group meetings expect this to be an issue, in subsequent meetings becoming less so. One strategy is, at the beginning of every meeting, to go around the room and have each participant, if they want, to spend one or two minutes discussing how their week went. However if there are more than a few attendees, this may be too time consuming if there are other issues the group needs to focus on at the meeting.

At the meeting it is usually rare but it is possible a couple of targets may get into an argument, sometimes suspecting or even accusing one or the other of being a perp. In this situation consider informing the group that unless someone explicitly admits to being a perp there is no way to know for sure if someone is indeed one, and if we let them disrupt the meeting then the perps have won. However if a target is indeed disruptive then you need to deal with that individual more directly.

Sometimes one target will dispute another target's experiences. If this occurs consider informing the group that every target's experiences are different, and just because one target is not experiencing the exact same harassment another is, that does not mean it is not happening.

And note that some targets are willing to attend group meetings but are not willing to "go public" in terms of distributing OS/EH flyers outdoors where their picture could be taken, or participating in public OS/EH presentations especially if it will be videoed, as they may want to

maintain anonymity due to family or job considerations.

If meeting minutes or other local group news is distributed, especially outside the group, for example to the greater targeted community, then omit individual target names from the communication unless you know those targets do not mind their names being thus distributed.

In reference to membership lists, if the group is small and close knit, then all members may feel comfortable listing their phone numbers and/or email addresses on a sheet of paper and having it photocopied it so everyone has a copy. However over time if the group becomes larger and members come and go then privacy concerns should be observed. This means if one target asks you for another target's phone number or email address, unless if you are positive the other target would not mind, you should tell the inquiring target that you do not like to give out target contact info without checking with the other target to see if it is ok with them, or offer to forward the inquiring target's contact info to the target being inquired of.

As the group grows you may consider creating an internet forum to make it easier for local members to keep in contact with one another, starting a weekly or monthly conference call, distributing an email newsletter, or developing a web site for the group, but of course these will require additional time and energy.

Also be prepared to spend time on fielding questions and requests from the local members and for interfacing with new targets in your area being referred to you. You may need to develop strategies for effectively managing your time, for example, limiting the time you spend on OS/EH issues to a two-hour timeframe in the evenings.

4. Locating an OS-Aware Crisis Support Staff Member

The OS/EH target who found the organized-stalking-aware crisis support staffer took about a year to do so. She basically kept calling around all the crisis lines in the Toronto, Ontario area, and eventually found a rape crisis center supervisor who knew what OS was. (Note: That rape crisis center no longer deals with OS/EH, as CATCH is no longer available to refer callers to.)

This target probably took longer to find an OS-aware staffer than necessary, because she told her story and asked if the call taker could help. It is likely that if target group members were to call around and ask the question right up front: "Who on your staff is aware of organized group stalking?" ... the OS-aware staffer(s) could be found much more quickly.

Non-government crisis support organizations are probably the most willing to hear about OS/EH even if they aren't aware of the crime, however, I would urge any local group members to spend some time learning about OS/EH information handling before making calls. That will, in my opinion, make it more likely the crisis support call taker will respond positively and try to locate OS-aware colleagues. Here is my e-booklet of suggestions for OS/EH information handling:

<http://www.multistalkervictims.org/osih.pdf>

You might mention that the Toronto Rape Crisis Centre did at one time host the CATCH group, should your local crisis support group want to contact them for information. I, Eleanor White, can put them in touch with the OS-aware staffer when this step is reached, but I won't provide the contact information in this booklet.

WHAT TO ASK:

Once you locate a crisis support staff member who is OS-aware, ask if your group can put on a sample presentation for their membership, and it would be just fine if you put on your first presentation to just the one OS-aware staffer. You will be asking for their critique of your presentation, comments as to what they found interesting and engaging, and what they found turned off their interest.

Making presentations is a repetitive cycle - you make one, fix it according to comments received, and make another one, and so on. In this cycle, you start with the organizations most likely to be OS/EH friendly (the crisis support organizations) and gradually work your way up to the tough ones, police and doctors.

5. Suggested Information Sources for Presentations

Here are some suggestions for places to look for material to form your presentation:

<http://www.creviews.net>

This above site is my activism materials credibility review system. I don't claim to be the ultimate authority in this regard, but credibility is crucial, and there are no other places I'm aware of at time of writing where you can see the credibility of commonly referenced sources displayed and explained. I recommend any material you plan to use should be checked to see if there is a review posted there.

<http://www.multistalkervictims.org/osih.pdf>

The above e-booklet contains my suggestions on how to present information so as to be credible to non-targets.

<http://www.multistalkervictims.org/osatv.pdf>

The above e-booklet contains material which is written specifically for reading by the non-target public. Our best current factual evidence, such as group stalking statistics and the long-time proven to exist and work electronic weapons are included. David Lawson's report is included. A number of OS/EH target personal experiences are included. Not copyrighted - use anything you like.

<http://www.catchcanada.net> (the OFFICIAL CATCH web site)

<http://www.multistalkervictims.org/catchcanada/> (backup copy, likely to be out of date)

The above site is a copy of the original CATCH (Citizens Against Technological and Community-based Harassment) web site. The CATCH presentations used material

similar to that posted there. There is currently no CATCH organization, and there is currently no official CATCH web site posted.

<http://www.multistalkervictims.org/flyer1.pdf>

The above flyer is very similar to the original CATCH flyer, designed for a single fold. The text is very close, but referring to CATCH itself may not be ideal, since the CATCH organization is no longer an active group. ** Check the official CATCH web site for any activism materials which may be available there. <http://www.catchcanada.net>

<http://www.multistalkervictims.org/osvideos.htm>

The above link takes you to two organized stalking videos.

The first is the original CATCH founder's video of organized stalkers who had set up outside her home, anticipating she would drive off. Instead, she paused and took the video, and provides commentary about the activity recorded. Narrated. (Note: the CATCH founder's video is copyrighted.)

The second is footage from an exterior security camera at the house of a target in Florida. Narrated.

These videos might be useful at a presentation, played on a laptop computer.

<http://www.cointel.org> (Paul Wolf's original)
<http://www.raven1.net/cointeldocs.htm> (Eleanor White's backup)

The above links take you to original COINTELPRO documents. I recommend going very light on lengthy, non-easy-reading documents like those, but at the same time, a couple of pages of official text used as part of your handout package can be very persuasive. COINTELPRO was the 1960s FBI program of organized stalking of activists, particularly anti-Viet Nam war activists, and clearly shows that organized stalking has been proven to happen in fairly recent times.

<http://www.multistalkervictims.org/stats.htm>

The above page contains just the organized stalking statistics, separated on their own page for convenience.

<http://www.raven1.net/proventechs.pdf>

The above page contains just the information about the proven-to-exist e-weapons which can produce some of the attacks we experience, silently, through walls. Separated on their own page for convenience.

<http://www.multistalkervictims.org/lawson.htm>

The above page contains quotes from private investigator David Lawson's 12-year investigation of organized stalking groups by infiltration. NOTE: Lawson's observations are excellent, but Lawson's conclusions as to who is responsible are way off base in my (Eleanor White's) opinion. That means that Lawson's work is best used in the form of carefully chosen excerpts.

<http://www.multistalkervictims.org/mlcf.htm>

The above page is my book review of Elizabeth Sullivan's personal testimonial describing her organized stalking experiences. I give her book top marks. Because holding up a physical book during an activism spiel has proven highly persuasive, I recommend this one for your consideration.

<http://globalresearch.ca/articles/ElectromagWeapons.pdf> (Original)
<http://www.raven1.net/phillipseweapons.pdf> (Eleanor White backup)

Article, US Electromagnetic Weapons and Human Rights by professor Peter Phillips of Project Censored Media Freedom Foundation. This is a rather long, dense, but very authoritative article which would best be selectively quoted, rather than reading long passages of it. It doesn't cover organized stalking, but does show that there are real concerns about the total lack of controls on the use of electronic anti-personnel weapons.

<http://www.multistalkervictims.org/catchcanada/videos.htm>

Backup copies of the CATCH presentation videos, showing the presentations by CATCH founder Norma Cross which went over well with local crisis support organizations. (CATCH videos are copyrighted. See the official CATCH web site for any updates: <http://www.catchcanada.net>)

6. Suggestions for Organizations Which Might Be Presented To

Here are some suggestions for attempting to present to, after a number of presentations to local crisis support organizations:

Nursing organizations
Doctors' organizations
Psychologist organizations
Social worker organizations
Police unions
Police social clubs
Press (news gatherers) clubs
Service clubs (Freemasons, Moose, Elks, Rotarians, etc.)
Community patrol groups (Neighbourhood Watch, Citizens on Patrol, Block Parents)
Churches and religious groups

Ethnic minority organizations
Alcoholics Anonymous and/or Narcotics Anonymous
Local university departments and/or student clubs

Appendix 1: The Problem With the Name "Mind Control"

NEVER NEVER NEVER use this chart for FIRST contact with the public! WAIT until and unless the member of the public has expressed *genuine* interest in learning more about OS/EH! Use of "mind control" with uninformed non-targets can and will destroy your credibility!

Historically, because many targets of organized stalking and electronic harassment have reacted most strongly to that portion of the OS/EH crime which can be called "mind control," in the 1990s this crime acquired "mind control" as its semi-official name.

This historic name for the OS/EH crime is both confusing and discrediting when spoken or written to non-target members of the public. This is confirmed by actual face-to-face experience. It often produces the "you are a wacko" response from the public, and gives the listener or reader the excuse to ignore the message.

Because of the considerable amount of information about OS/EH on the web which uses the older "mind control" name, the diagram below has been created to assist new OS/EH targets, particularly those inclined to discuss this crime with non-targets, see that indeed there is some "mind control" activity involved, but "mind control" is only a portion of the full crime.

The chart itself is on the following page:

“MIND CONTROL” IS ACTUALLY ONLY ONE SPECIFIC PART OF THE FULL CRIME:

INFORMATION HANDLING

IN THE FIGHT TO EXPOSE AND STOP THE CRIME OF ORGANIZED STALKING AND ELECTRONIC HARASSMENT

Eleanor White

WORK IN PROGRESS - frequent updates, check the page number/date/time stamp. This e-booklet replaces "Activism Tips", the title for which prevented many targets from understanding that the tips in this booklet apply to all target communications, not just the information handled by activists.

- A1. Gathering Evidence: General
- A2. Gathering Evidence: Photographic
- A3. Gathering Evidence: Videos
- A4. Gathering Evidence: Suspected Surveillance Devices
- A5. Gathering Evidence: Detection of Signals
- A10. Earning Attention Span Success Story

IMPORTANT FOREWORD

Before getting into the details of information handling, organized stalking and electronic harassment (OS/EH) targets must understand that there are two ENTIRELY DIFFERENT situations when it comes OS/EH information:

- The full ugly truth
- What we can say to non-targets and still remain credible, and/or earn enough of their attention span to get some basic facts across

Very few targets understand that those situations are night-and-day different. The full, ugly truth is TOTALLY inappropriate for talking to the unaware general public, or public officials. The result of ignoring the difference between the full ugly truth and what we can say to the public results in gushing of personal stories, and personal theories stated as fact, both of which have proven to turn off the unaware public.

The perps have designed this crime to make us sound insane. We can overcome this disadvantage by keeping the two different situations above in mind at all times.

Some have complained that limiting how much we say in first contact activism situations means I'm saying "do nothing." That is not so, not at all. What I am saying is that by feeding a first contact listener or reader only what they can handle at their first introduction, we can do a lot more. The alternative is to turn off their interest.

There is plenty of time AFTER the first contact with a member of the public or public official to get into greater detail.

Some complain that things like "mind control" and the many other government and corporate crimes are so important that the public needs to know about them anyway. I say that yes, the public should learn about all the issues, but when we are trying to earn their serious interest, WE should not be the ones trying to cram the full ugly truth into their knowledge base. Leave that for other activists, and other times and places.

OS/EH targets need to understand that these horrible crimes have robbed them of their ability to remember the fine points of human psychology that all who are mature of years have learned over time. That knowledge has been pushed aside by the targeting.

Targets should re-acquaint themselves with the way human beings react to very negative information they would rather not hear about. When trying to raise such issues, success requires carefully metering out a small amount of that information most familiar to the listener or reader. And leaving it at that, on first contact. The human mind has a way of filling in a more detailed understanding over time – you don't need to cram all the ramifications into your first contact speaking or writing.

1. Purpose of this booklet

This booklet is a collection of my (Eleanor White's) suggestions for targets of organized stalking and electronic harassment (OS/EH) relating to "information handling." It is based, at time of first writing, on my 13 years of networking with other targets on the Internet, and many conversations with non-targets, including public officials.

Before going any further, let me say that in my years as an OS/EH activist, I have repeatedly been criticized. Below is the text of a recent email I posted to all the forums answering these criticisms:

From: ewraven1@sympatico.ca
Subject: In response to criticism ...
Date: Thu, 23 Jul 2009 06:31

Over the past year or so, I've received a number of emails, quite a few of them private, criticizing me for my urging that activism materials be toned down, and saying that we don't have sufficient evidence to take to court.

These folks long for bold moves to expose the full horror of the OS/EH crimes, and want to scream every sordid detail to the entire world.

I've been accused of "giving up," "doing nothing," and "working against targets," when in reality, I have been working very hard to get targets to pay close attention to what they say to non-targets. That requires self-restraint and planning, and may look like "doing nothing" to some, but I suggest best speaking and writing is essential for *all* activism initiatives.

I'd like to explain here that the reason I urge toned-down dialog with the public, giving them only a restricted amount of the truth, and favouring such information as they are ready to hear, is that public education PREVENTS DENIAL AND COVER-UP.

No matter what other initiatives are being tried, such as letter writing campaigns, attempts at getting heard in court, or new COINTELPRO hearings, having an educated public is our BEST INSURANCE POLICY against having the other initiatives denied and covered up.

I suggest targets understand that multiple initiatives can be carried on at any point in time. Because some are working on public education does not mean that other things can't be done at the same time.

My methods apply to, and assist with, every possible activism initiative.

Again: Tailoring our speaking and writing to educate the public is working to prevent denial and cover-up, and is critically important to success.

Eleanor White

While I don't claim I have all the answers, this booklet should provide relatively new targets, or targets who appreciate that in order to end this nightmare we need to take care in how we handle information, issues they should at least think about as they think, speak, and write about OS/EH.

This booklet is not intended for the non-target public. Given that the effort to expose and ultimately stop the crime of OS/EH is thoroughly honest and laudable, there should be no harm done, should a non-target member of the public come into possession of it. However, the issues discussed here should not generally be given to the public, because OS/EH itself is very foreign to Joe and Jane Average.

Please do not, therefore, hand copies of this booklet out to non-targets, or make it available through publicly visible linking from web sites or blogs. If a target wishes to hand out copies of a booklet designed specifically for the public, I suggest one of the following:

<http://www.multistalkervictims.org/osatv.pdf> (both OS and EH)

<http://www.multistalkervictims.org/osatv2.pdf> (OS only, for special circumstances)

This booklet may also be of interest to non-targets who support the effort to expose OS/EH.

For a booklet to assist with technical terms and concepts see:

<http://www.multistalkervictims.org/ostt.pdf>

For a booklet on COPING with OS/EH, see:

<http://www.multistalkervictims.org/oscope.pdf>

For a booklet of suggestions for setting up local target group presentations see:

<http://www.multistalkervictims.org/osgroups.pdf>

For a booklet on OS/EH activism history, see:

<http://www.multistalkervictims.org/osah.pdf>

1a. "Past Speaking/Writing Has Failed - Try Something New"

Regardless of how it may have started, organized stalking and electronic harassment is now, at this point in history, a world-wide crime, in which all governments and levels of government deny in lock-step that this crime exists. The nature of the attacks require that the OS/EH organization(s) has/have virtually unlimited funding and power.

Serious attempts to get OS/EH recognized and acted upon by government, and known to the general public have had very little success. I suggest this is due to the degree of corruption in all levels of authority, the funding, and the effectiveness threats must have on honest officials to ignore this crime. I suggest that it is not because previous activism has been "wrong."

There are targets, desperate for relief, who have now (early 21st century) begun to call for rejection of the principles of good information handling, and to start publicly blaming government, without solid proof government is carrying out these crimes. This "feels right"

approach, without solid evidence, will have disastrous effects on the credibility of OS/EH targets. The principles of good persuasive communication are the target's best protection.

I strongly believe that government is a major participant in these crimes. But my goal is to kindle interest in the unaware public, so I hold back my beliefs and say what I have found, by actual face to face testing, is most likely to kindle serious interest in the mind of the public. I stick mainly to factual information, as opposed to stating my beliefs.

- We CAN say that government is stonewalling us. That much is backed by the testimonies of hundreds of targets who have tried to get government to help.
- We CAN say that government has committed similar crimes in the past, COINTELPRO being one of the best examples.
- We CAN say that we believe government is involved, but without that word “believe,” we are stating something as fact which we can’t prove at this time.

I suggest that any new approach to getting OS/EH exposed and stopped must never give the other side the advantage by making statements they can use to show we are making baseless claims, and are probably crazy. The information handling methods in this booklet are universal - they apply at all times to all situations. I urge not letting frustration with the slow pace at which these crimes are being exposed cause you to make baseless claims, or discard the principles of good persuasive communication.

2. What is “Information Handling?”

It's all about what THEY are READY to hear,
and not what we want them to hear.

Information handling for, say, environmental matters, or against, say, war, is one thing. Everyone knows and understands the issues.

Because the crime of organized stalking and electronic harassment continues to be totally denied by government, the media, and many non-government organizations who might provide tangible help for targets, the way we handle information is very different for us. We have miles of road to cover, and foothills to hike through, before we can even start to climb the mountain to freedom.

Making credible information handling even more difficult is that OS/EH destroys much of the target's ability for laid-back critical thinking and careful planning. Targets are often hit with extremely intense harassment at the beginning of their “life sentence” of being targeted around the clock.

If that isn't enough, the mental health system automatically diagnoses complaints of OS/EH as delusion, paranoia, schizophrenia or a combination thereof. And they have the police to back them up, as many targets know all too well!

All this means that for US, information handling is a very different endeavour than for those concerned about environmental or anti-war issues. VERY different. WE literally have to “program” ourselves to think, speak, and write in a way that isn't natural for someone whose life is under attack from every angle, if we hope to be believed.

Information handling for US must become a “way of life,” I suggest, if we are to overcome the barriers to being believed I've listed above.

Credible information handling, for US, means that even when thinking verbally to ourselves, or talking with other targets privately, we must stop and change our way of saying things until credible speaking and writing becomes second-nature. It's within our thinking verbally to ourselves, and on the forums, where credibility actually starts.

What you say to someone else affects what they are likely to say to non-targets, too! What you say on the forums may very well be echoed by another target - making it important to think about what you say before you hit 'Send.'

Information handling, then, is really everything we ever think, say and write about organized stalking and electronic harassment.

What this means to new targets, is that they are in fact sharing information when they are simply discussing OS/EH on the forums. They should work on credible information handling from the moment they realize they are targets of this crime. Credible information handling is the target's best protection against saying the wrong thing to the wrong non-target, an official perhaps, and against being wrongly forced into the mental health system.

That sounds like bad news. After all, just surviving takes all the energy many targets can muster, so how can they take on “information handling” on top of that?

The good news is, this “credible information handling” thing doesn't need to be learned all at once. We're basically in this for life, and we have all the time in the world to work with. One part of the suggestions in this book is to work on sorting out descriptive terms which help with credibility, from those that damage credibility. A target under heavy fire can work on correcting just one single term in their vocabulary. Once that's done, pick a second term and work on that, and so on.

Go at your own pace. There is no deadline.

Another bit of good news: While picketing, I didn't find it that difficult to convince passers by that there was some sort of crime relating to organized group stalking happening. The reason my years of picketing didn't cause a visible breakthrough, in my estimation, was that (a) most people didn't want to be involved with my headaches, and (b) one picketer would have a very hard time mustering a “critical mass” of aware members of the public.

It wasn't that difficult, using conservative, toned-down speech and flyers, to at least convince the public a crime was being committed.

This booklet presents many different suggestions for credible information handling, but these suggestions can be pretty well summarized by these principles:

- Learn to sort out what is accepted as fact by non-targets from what, to be honest, we must treat as someone's personal opinion. Not everything that is true is accepted as true by non-targets. A starting point for learning that can be found here in the section titled "Use Our Best Information."
- Learn which terms for OS/EH related things work well, and remove those which don't work well from your vocabulary. Some terms destroy credibility, fairly or unfairly. See the section titled "Good Terms Versus Bad Terms."
- Learn which portion of the full truth is most likely to kindle genuine interest on the part of non-targets in the OS/EH issue. The full truth will drive many non-targets away. See the "Thin Edge of the Wedge Principle" and "Lead (Start) With the Familiar Principle" sections.
- Watch how professionals describe criminal activity to the public, and work towards making your speaking and writing sound like theirs. We want people's serious attention? We have to sound like them, to "speak their language."

Notice in the principles above, information sharing is all about what OTHERS (non-targets) think, and how THEY react, not how you think or react. That's fundamental to good information handling.

Doing those things, as one target put it, can turn us from hopeless targets into formidable forces for ending this nightmare. Doing those things is worth the effort.

And know this, targets: WE HAVE ENOUGH DOCUMENTED INFORMATION THAT WE CAN EXPOSE THE CRIME. (By "expose" I mean make the public and public officials aware.)

We do not have to wait until we can explain every last piece of technology, or identify the specific organizations responsible, to just expose the fact that this crime is happening. A win in court is nice, but we can do considerable exposure of the crime by sharing credible information with the public and public officials. We don't need to "hold our breath" until we have a significant court victory.

You see, the main barrier to getting OS/EH stopped is that most of the public doesn't know this crime is happening. I suggest that accomplishing nothing more than making the public, and honest public officials, aware this crime is happening will stop the crime, or at least, much of it.

I suggest churning our minds and bodies day and night, trying to explain all of the technology, and identify specific organizations responsible, is natural, but is not needed to expose the crime's reality. I say let's start by the limited objective of exposing the basic crime FIRST.

Once public awareness has been accomplished, we can then begin to work on more detail. By scaling our objective down to first things first, we save ourselves a whole lot of anguish, and, by avoiding claims beyond our proven information, we will achieve better credibility.

At the moment, the average target feels paralyzed by the scale of the highly advanced, classified secret technology and the world wide scale of perp-co-opted organizations. We can do an end-run around all that by making use of our best information, limited as it is, and working only on getting the basic crime exposed. When you build a house, you lay the foundation first, and we need to do the same.

The basic lesson is, we need to feed the public our information in the way a "timed release" pill works.

3. Two Different Worlds

Get used to it, folks. We live in two strikingly different worlds. Targets must never forget that, and must adjust their speaking and writing accordingly. One world is society, and this where our most important information sharing, speaking and writing is done. The other world is discussions among targets.

"Letting it all hang out," i.e. telling your full personal story, in detail, and discussing your theories, guesses and opinions - that is for the world of discussions among targets. Doing that in public, even to trusted friends and family members is extremely bad information handling, and also carries the real risk of losing formerly good relationships, and being forced into the mental health system.

I learned the hard way: When I first got on the Internet in 1996, and discovered I was a target of a crime happening to others world wide, I told everyone everything. I lost friends as a result. Fortunately, I had just enough critical thinking ability to see that this wasn't working. I wasn't getting any serious attention to the crimes being committed against me. So I began to work on sounding rational.

None the less, the need for careful speaking and writing was driven home to me in 1998, when the local police chief, after a written complaint was submitted to the police civilian review board, sent his psycho squad to pick me up in a surprise raid. Only by God's grace was I able to convince them, after an hour of conversation, that I wasn't a danger to myself or others. That was a close call.

Other targets have not been so fortunate, and some languish in mental hospital as a result.

You see, folks, WHAT WE SAY is EVERYTHING. EVERYTHING. When we get into trouble, it's because of the words WE CHOOSE, voluntarily, to say to non-targets. So it is extremely important to keep clearly in your mind which "world" you are speaking or writing to at all times.

It is extremely important to remind yourself that you can't just "tell all" in the world of society at

large.

4. Thin Edge of the Wedge Principle

One doesn't need to be a physics professor to know that trying to split wood with the blunt end of a wedge simply doesn't work.

It is, I suggest, the same way with sharing information about OS/EH.

Joe Average just isn't interested in YOUR headaches. He has plenty of his own, thank you. Joe Average isn't the type of guy who is going to listen to a 15 minute spiel, or read a 15 page document, and carefully ponder and analyze your points, no matter how persuasive your points of logic are. It just ain't gonna happen.

Joe Average, from my experience, will give you (or your literature) about 30 seconds' worth of attention span.

Joe Average isn't going to, in that 30 seconds, try to figure out abbreviations, or figure out names for things that aren't obvious. If you use a misleading name for something, Joe will rapidly assume something equally misleading, and by that time, you've used up your 30 seconds for, in many cases, nothing of benefit.

What this means is that we need to constantly work towards shaving our information sharing for non-targets down to fit within a 30-second attention span, if you are speaking or writing to non-targets who have never heard of OS/EH. The closer you come to this for FIRST CONTACT purposes, the more likely you will be successful in educating that non-target as to what OS/EH is.

Save your wordier material for later, after the non-target's interest has been kindled, and they ask for more information.

There is a second part of the "thin edge of the wedge" principle: Even for non-targets who have interest in knowing more, I urge you to AVOID telling them the FULL story for a good long time, if ever. Besides a short first contact attention span, non-targets, in my opinion, simply will not believe the full truth about OS/EH.

It is far better, I suggest, to keep them interested in only a little bit of the full truth, than to feed them the blunt edge of the wedge and lose their interest. The full truth can turn a non-target with some interest into someone who believes we are crazy.

Yes, obviously there will be exceptions, non-targets who can handle the full OS/EH truth, but it is never wise to test that. Time will tell you which non-targets can handle the full truth. Don't push it, is my advice.

And by the way, there will be plenty of time AFTER the crime of OS/EH becomes public knowledge to fill them in on the details!

To summarize, there are two characteristics of non-targets which REQUIRE that we cut way down on how much of the truth we try to “feed” them:

- The 30-second attention span during first contact situations
- The tendency to switch from being interested to non-belief, when the non-target's threshold of how much of the OS/EH story they can handle is reached

One target, David Beach, has an excellent way of saying it - you simply CAN'T TELL PEOPLE MORE THAN THEY ARE READY FOR. And non-targets are not ready for very much!

5. Lead (Start) With the Familiar Principle

Credibility is the name of the game, and not all aspects of OS/EH are equally credible.

To attain credibility, we must first “put ourselves in the shoes of” people who have never heard of OS or EH. Our speaking and writing must be tailored to THEIR outlook, not ours, if we hope to get their serious attention. This is not natural for targets of a serious crime, who want to shout from the rooftops. But it is what we must do to sound credible.

What I discovered during my street picketing, which gave me direct face to face feedback on what I was saying or was printed on my flyers, was that the organized stalking side of the full crime was an easier “sell” to the non-targets I spoke with. I believe the reason is that everyone knows what the crime of stalking is, while very few people have ever pondered the possibility of through-wall electronic weapons being used on them.

So I take advantage of that familiarity with stalking to introduce the OS/EH crime as “stalking by groups,” also known as “organized stalking.” Very good acceptance when I start out that way. I also remind them of the situations that most people have observed in the workplace, where a group of employees will harass a single employee, a lot like school bullying. That too is familiar to non-targets, and is well accepted.

When I tried introducing the crime by describing through wall electronic attacks, I saw lots of head-shaking, bewildered expressions, and immediate departures by people who obviously thought this was something they didn't think was possible. I got a few “You are crazy” type statements with materials talking about electronic harassment.

IF you manage to get some genuine interest, you can then raise the proven to exist electronic weapons as a tag-along issue. See the electronic weapons chapter of this e-booklet for information on the proven-to-exist e-weapons:

<http://www.multistalkervictims.org/osatv.pdf>

But always, always, always, I suggest, lead with the familiar for first contact non-targets.

6. Use Our Best Information

In my 13 years of Internet information sharing, it has consistently amazed me that our most solid, most persuasive information is often ignored by targets.

As best I can determine, targets feel that only the latest, most recent information is “any good”. This is apparently born of the idea that in any field, new information is constantly turning up, rendering older information obsolete. Well, those mature of years have learned that “new” information, just like newer models of equipment, isn't necessarily better. And in the field of OS/EH, valid new information is very hard to come by, since clearly, the OS/EH information is being kept secret.

In fact, some “new” information is bogus, irrelevant, or “sounds right” for no better reason than because it is accompanied by an accurate description of what targets experience. While I don't claim this is a perfect system, I have set up an information review system, assigning credibility ratings to those information items which have been promoted for use by OS/EH targets, or are likely to reach the public on our behalf. That credibility review system Internet address is:

<http://www.creviews.net>

Here are my candidates for best information for sharing purposes:

<http://www.multistalkervictims.org/stats.htm> (organized stalking official statistics)

The official statistics regarding organized stalking (stalking by groups) above show that for the United States, Canada, and the United Kingdom, in spite of official stonewalling, justice systems are handling one case of group stalking out of eight stalking cases. That is a powerful defence against skeptics or officials who tell targets that stalking by groups never happens.

<http://www.multistalkervictims.org/lawson.htm> (private investigator's OS report)

Above is a report condensed from two books by Florida-based private investigator David Lawson, who, over 12 years of part time investigation, managed to infiltrate stalking groups in parts of the U.S. and Canada. Lawson's observations (not his conclusions, but his observations are an excellent fit with the observations of organized stalking targets. Lawson's investigation should be taken seriously by genuinely open minded public officials. Quotes from Lawson are probably not courtroom quality “proof”, but they are excellent, in my experience, dealing with the public.

<http://www.multistalkervictims.org/osatv.pdf> (chapter on proven electronic weapons)

There are, at time of writing, five electronic technologies which can operate through non-conductive (wood, dry masonry or drywall) walls, and which can re-create a number of the harassment effects reported by targets. These technologies are not classified (secret) and have therefore been available to criminals willing to make use of

them for one to five decades. They have all been demonstrated and proven to work.

Demonstrated is the most important criterion for technology. Patents do not require that they be demonstrated prior to issuing the patent and therefore are not solid proof of the existence in working form of a given technology.

They can also re-create attack types which exactly match what targets report. Targets will sometimes tell non-targets that electronic technologies are in use as harassment devices which actually can't re-create, exactly, one of the harassment effects targets experience. This can cause embarrassment to targets who claim such technologies are in use, when a skeptic or official who is knowledgeable corrects the target. (HAARP is one such mis-used technology. See the e-booklet linked above for more details.)

<http://www.targcomics.net>

This twin comic strip series has not been extensively tested with the public, but I have attempted to use the information handling principles in this booklet in creating the episodes. The story is best told if the reader starts at the beginning. I invite targets to try them cautiously until we see how they are received by the public.

7. To Attract Serious Attention, We Must “Sound Like Them”

We want and need to attract the serious attention of the public, and especially public officials such as police, politicians, lawyers, and doctors.

To attract their serious attention, we must train ourselves to “sound like them.”

Meaning, when we describe, either speaking or writing, the OS/EH crimes to non-targets, we need to use the careful, measured, qualified manner of speaking we hear from police officials who are describing a crime in, say, a television news interview. If we can do that, we will be “speaking their language.” That will require that we spend a little time listening to public officials when they speak on crime issues.

One thing officials do is to restrict the amount of information they provide. They don't just open the file on a crime and read everything written there. They condense, and arrange the material that suits their purpose, and stop there.

Officials describing crimes also “qualify” their speaking. They don't state as a fact what isn't actually proven. You hear qualifiers like “alleged”, “reported”, “theory”, “opinion”, and the like. That's what “qualified” speech is. Officials use qualifiers to verbally “label” guesses/opinions as such.

Officials in public also don't engage in very much speculation. We should keep our guesses or opinions or theories or speculation to a minimum in speaking or writing to the public.

Another good public speaking technique is to be totally honest and if you don't know something, say you don't know that. Targets seem terrified that if they say they don't know something, they won't be believed.

I suggest the opposite is true - that if you try to concoct answers where you really don't know, you are likely to seriously damage your credibility.

** Military personnel are trained, when asked a question they don't have the answer for, to respond: "I do not know sir, but I shall find out." To make a favourable impression on a non-target who asks you something you don't know, consider replying: "I don't have the answer, but I can look into it and get back to you, if you like."

In summary, watch officials on TV, and try to emulate them when speaking or writing to non-targets.

8. Personal Stories Bad for First Contact Non-Targets

Whenever a target ends up in mental hospital, or forced to take dangerous anti-psychotic drugs, it is invariably because they "gushed" their full personal story at local officials. It is natural to tell your story and beg for help when you are trapped by an inescapable group of criminals.

However, targets must resist the temptation to do that, either in an emergency situation like matters requiring medical or police attention, or, information sharing. As a rule of thumb, telling your full personal story (a) causes you to lose credibility and (b) can get you forced into the psychiatric system.

Save your full personal stories for the OS/EH forums is the bottom line, for conditions as they exist now.

We can use very carefully excerpted parts of other targets' stories, chosen from the more believable episodes, for communicating with non-targets. I personally don't recommend using one's own story unless asked. And when asked, restrict your answer to the more ordinary, believable parts of your story. Non-targets are not ready to hear our full stories yet, on average.

There have been a few successes where targets have succeeded with fairly aggressive telling of full personal stories. Emphasis on few. It is not wise to assume you will have successes in telling most or all of your story until more of the public are aware of the OS/EH crimes.

(With police, report only factual observations relevant to a crime where you have enough evidence that police must be involved. Do NOT blurt out ANYTHING about being group stalked or electronically harassed. With doctors, describe your physical symptoms and say NOTHING about your being an OS/EH target.)

9. In-Person Group Information Presentations Are Best

Should a target wish to make presentations to officials, IN-PERSON GROUP approaches are not only best, but given the way individual targets are treated when alone, are the only practical and reasonably safe way to accomplish approaches to officials.

The Canadian CATCH group (2004-2006) found that making presentations about OS/EH to local crisis support organizations worked quite well and were well received. The group had to disband, but moving on to official groups was discussed. The CATCH method of creating the presentations was to approach one crisis support organization (a rape crisis center), and ask them to watch a presentation, and then critique it for credibility. Presentations were made to three other groups, each one improved, based on comments received.

Had this been able to continue, by the time a presentation to officials could be arranged, the material would be as well polished as it could be, based on information available at the time.

I suggest two precautions as essential for making presentations to local officials:

- Arrange for a member of a local crisis support organization who knows what organized stalking is (perhaps electronic harassment too, but definitely OS) to accompany the group at the presentation.
- Brief a lawyer with experience in mental health as to the group's background and purpose and who is willing to defend the group against mental health charges should they occur. Such a lawyer should accept legal aid for this.

Having at least a second, credible-sounding target accompany targets to any situation where OS/EH is to be discussed is extremely important. Emphasis on "credible sounding."

The CATCH group is inactive but the web site is still posted and being managed by the originator at:

<http://www.catchcanada.net>

Here is an e-booklet with suggestions on how to prepare for local group presentations:

<http://www.multistalkervictims.org/osgroups.pdf>

10. Accurate Experience Description, But Bad Technology Info

Over the years, I have noticed that articles or books which include very accurate descriptions of what targets experience are irresistible to targets desperate for relief. Targets often assume because their experiences are described perfectly, that means that technology claims and/or claims as to which entity (often specific government agencies) is carrying out the harassment must be true.

Even worse, targets use such articles, which may contain very bogus or dubious information to tell the OS/EH story to the public. The worst case being to police or doctors. Really bad idea.

While this is understandable and a natural reaction, targets need to realize that the quality of the information from any source can vary within a single article, from excellent to outrageously bogus, again, within the same article.

In fact, there is a time-honoured technique used by “disinformation agents,” that is, people assigned to discredit organizations or individuals, called the “poison pill” technique. Articles, videos, speeches, and the like can be made with 99% good, valid information, but a couple of statements which are bogus. Those bogus statements are the “poison pills,” and they take advantage of the fact that many readers will see an entire information piece as tainted because of the presence of the “poison pills.”

In the arena of OS/EH information sharing, there are now quite a few functionally poison pill items available to the public. Some of those are flagged on my credibility review site, linked below, which was set up to assist with unravelling some of the credibility problems noted to date:

<http://www.creviews.net>

Targets preparing material for the public should carefully scan information they plan to use, and investigate suspected poison pills before releasing the material.

** By the way, it's a waste of time and needless worry trying to sort out who may be a deliberate disinfo agent, because in the OS/EH arena, it's possible that someone may include bogus information without having known it was bogus at the time. Personal accusations of being a perpetrator or disinfo agent create heated emotions, breed hate and discontent, and are from a practical standpoint, impossible to prove. Scrutinize the information, focus on exposing the basic OS/EH crimes, and don't concern yourself with someone else's motives, is my advice.

To assist targets in getting technology terms and concepts right see:

<http://www.multistalkervictims.org/ostt.pdf>

11. Technology: Demonstration Required to Claim as Fact

The NUMBER ONE criterion for claiming a weapon exists which can account for some of the experiences targets report is that the technology has been DEMONSTRATED.

“Demonstrated” for our purposes means:

A mainstream organization has published a detailed description of the demonstration,

under their name and logo.

“Demonstrated” for our purposes does not mean:

A lone individual, no matter how well qualified, says the technology has been demonstrated, or that he/she “knows it will work.”

This criterion has been forced on us by the public, especially public officials, and is the minimum requirement for stating a given technology is an accomplished fact.

Using this criterion has a major benefit for targets: It eliminates the need for targets without science or technology backgrounds to have to debate science. They need to know only one simple thing - was the technology demonstrated, or not.

Although expressing guesses, theories or opinions should be restricted for discussions with non-targets, it is OK to mention a not-demonstrated technology as long as it is qualified with words like “as if,” “might be,” “I believe,” etc.

A PATENT is not proof that a technology has been demonstrated. A patent is issued for ideas which the Patent Office staff believe are workable and which are likely to have some benefit to society. (Patents may refer to other documents reporting a demonstration. Patents also do indicate INTENT, meaning they can be helpful even though they don't prove the technology has been demonstrated.)

12. Keep Technology Attack Experience Reports Close to Demonstrated Technologies

There is a list of technologies which are both relevant to OS/EH target experiences, and have been available to criminals with the money for decades:

<http://www.multistalkervictims.org/osatv.pdf> (Electronic Weapons chapter)
<http://www.raven1.net/proventechs.pdf> (more detail)

Note: raven1.net is not a good site for referring the public to. It contains a large volume of true information, but will produce information overload for non-target visitors. “Thin edge of the wedge principle” makes that site not directly usable for referring non-targets to.

If you must discuss electronic attacks with non-targets, keep your attack descriptions very close to effects which can be done by the weapons listed above.

Bugs and cameras are demonstrated technologies, however, the number of actual discoveries/recoveries, verified by an expert, of bugs and cameras is tiny, as in a couple. It is OK to report attacks which could be carried out by bugs and cameras ****IF**** you use a qualifier, such as: “My perpetrators often react to my activities inside my home. I ****SUSPECT**** that I ****MAY**** have hidden cameras and microphones, or, that I ****MAY**** have through wall radar in use on me.”

Always “refer back” to demonstrated technologies along with your statements about electronic attacks - that makes you as credible as you can be.

13. Technologies Not Relevant to Electronic Harassment

There are technologies in the news which seem as if they might be in use to produce the attack effects we experience, but for various reasons, should not be named as technologies which are, as a fact, responsible for electronic harassment. A listing of technologies which do match our experiences can be found here:

<http://www.multistalkervictims.org/osatv.pdf> (Electronic Weapons chapter)
<http://www.raven1.net/proventechs.pdf> (more detail)

More information as to technologies which are not relevant is found in some of the reviews here:

<http://www.creviews.net>

Common reasons why published electronic weapons, typically military and/or police weapons or research programs, are not relevant are:

- The weapon is not capable of targeting a single individual as its signal spreads out too much (HAARP is one example)
- The weapon does not work through walls, or would have to cause obvious destruction to the wall to work (acoustic weapons which are powerful enough to move things are one example; the “acoustic spotlight” is another)
- The weapon would cause neighbours to be aware of its use (“LRAD” acoustic hailers are one example)

“Lasers” are LIGHT devices, and while some infrared “lasers” may penetrate non-conducting walls to some degree, but in general, do not use the term “laser” as a weapon which may be responsible for your indoor attacks.

You might use “maser,” which is a microwave version of the laser, to ****SPECULATE**** as to the origin of burns. Without test equipment measurements, do not claim “maser” as the source of burns.

Here is a list of criteria for determining if a given technology can be credibly used in describing electronic harassment attacks:

- it reproduces EXACTLY at least one of the attack effects we commonly experience
- it does so SILENTLY
- it does so THROUGH WALLS without disturbing the walls in any way
- it does so at NEXT DOOR NEIGHBOUR distances

- it does so withOUT alerting/affecting neighbours
- it has been DEMONSTRATED, NOT just forecast, and the details of the demo are documented in a mainstream ORGANIZATION's publication under their name or logo (individual assertions do not work in forcing reluctant, fearful or corrupt officials to accept reality, even if the individual is eminently qualified)

To assist targets in getting technology terms and concepts right see:

<http://www.multistalkervictims.org/ostt.pdf>

14. Good Terms Versus Bad Terms

The choice of terms used in conjunction with anti-OS/EH information sharing should always be made on the basis of what works, or is likely to work, to kindle interest in the part of unaware non-targets. It's a habit we all need to develop.

When I call a term “bad,” I am saying that term, from actual experience using it, does not achieve the result of kindling serious interest on the part of the listener or reader. Some terms are “bad” because not only don't they kindle interest, they actually cause listeners or readers to believe we are crazy, or probably crazy.

It's not about terms YOU like, it's not about what is actually TRUE. It's about getting the JOB done, the job being to kindle and hold the interest of the public and public officials. As in the “thin edge of the wedge principle” above, if we are serious about wanting this nightmare to stop, then we must significantly block out some of what is true in order to gain traction with the public.

Using the best terms is something which can be and should be practiced in silent verbal thought and conversations with other targets so that the best terms come naturally.

Note: Just because a term is popular among targets does not mean it is suitable for getting OS/EH exposed. I used many bad terms in my early activism, which I found out later caused credibility problems with the public. All information sharing is important, even if a target isn't directly involved in activism.

IMPORTANT: Abbreviations

Minimize abbreviations, especially on first contact materials. In our arena, odds are your listener/reader won't have a clue what your abbreviations mean.

For at least the first occurrence of an abbreviation, show it in parentheses after spelling it out, such as:

... organized stalking and electronic harassment (OS/EH) ...

BAD: "experimentee/experimentation/testing"

Experimentation involving harassment and torture has been acknowledged by the U.S. government. However, OS/EH is world wide, and has been happening for decades. A few OS/EH targets report this harassment is going on for over 40 years. That is not, I suggest, "experimentation." Yes, experimentation goes on all the time, but in the main, this program is too large and too old to be simply "experimentation."

GOOD: "crime"

OS/EH is best described as a "crime", because of the lead-with-the-familiar principle. The officials who can help us deal with "crime." They do not deal with "experimentation." Therefore, let's use the term which the officials we want to help us use.

BAD: "torture"

Yes we are being "tortured." But we do not look "tortured" to our associates. "Torture" typically refers to being in physical captivity - we are not in physical captivity. Lead with the familiar - choose "harassment" instead, to get that all-important initial interest kindled, even though we know we are being tortured.

BAD: "gang stalking"

"Gang" stalking was a term which originated with CATCH in 2004. I used it enthusiastically with members of the public, but I shortly realized it was a bad term. Invariably, my listener would ask me which "gang" was doing the stalking, as in "crips" or "bloods." This needs to be removed from your vocabulary in order to make the most accurate presentation to others. Remember that using "gang" stalking on the forums to other targets encourages them to use the term with non-targets too.

GOOD: "stalking/organized stalking"

"Stalking," and specifically "organized" stalking are excellent terms in accord with the "lead with the familiar" principle. Everyone knows what stalking is. Almost everyone has observed group bullying in the workplace or at school. I have found in face to face conversations with non-targets that "organized stalking" works well in quickly painting a correct picture of the crime.

GOOD: "harassment"

"Harassment" is a very good term based on the "lead with the familiar" principle. Everyone knows what harassment is. Yes we are being "tortured." But we do not look "tortured" to our associates. "Torture" typically refers to being in physical captivity - we are not in physical captivity. Lead with the familiar - choose "harassment" instead, to get that all-important initial interest kindled.

NEEDS QUALIFICATION: “stalking by proxy”

“Stalking by proxy” is a well recognized term in the field of SINGLE stalking, by criminologists, psychologists and the like. It happens when an obsessed single stalker enlists helpers, perhaps friends or relatives, to help them stalk their target. Organized stalking (OS) “sort of” fits that definition, however, with international OS, the person who submits a target for OS has no connection with the stalking groups that operate world wide, and the stalking groups don't have any idea of the reason that got the target designated as such, per David Lawson.

I don't recommend offering this term up front, but if it does enter a discussion of OS, the difference between the typical obsessed single stalker's helpers and international OS needs to be explained to your listener or reader.

BAD: “government IS the perpetrator”

Many targets assume that government is responsible for OS/EH. I certainly suspect that is true, but a key part of sounding professional is to be sure to label assumptions about what may be true as “allegations.” Best to say: “We don't know which organization or organizations are responsible. Government is stonewalling on acknowledging OS/EH is real, so government MAY be involved.” Saying government IS the perpetrator is a serious no-no unless solid evidence comes to light.

GOOD: “government MAY be involved”

Government officials stonewall us at all levels, ridicule us by laughing in our faces, and try to get us labelled as crazy (just as they did with the radiation experiment survivors.) It is OK to say that, but with one qualification - I urge we leave that allegation for non-targets who have expressed serious interest in learning more, not first contact situations.

BAD: “CIA,” “NSA,” “FBI,” and other intelligence agency names
NOT GOOD: MKULTRA (for first contact situations)

We have very good reason to suspect, strongly, that these outfits are involved with OS/EH. But because we must tailor our speaking and writing to what the PUBLIC will accept, it is not good to mention organizations of this type, at least for first contact.

One exception would be in conjunction with a proven crime, such as the FBI's COINTELPRO crimes, or the CIA's MKULTRA crimes. But getting into those crimes, even though they are true, shouldn't be done very much in first contact material.

Some members of the public actually see “CIA” or “NSA” as indicating the speaker/writer is a wacko.

Also, be very sparing with use of MKULTRA, as that was a mind control program, and OS/EH is very different when taking into account all of the facets. What happened

during MKULTRA is very foreign to non-targets (torture of captive children.) The public has also been told via the media that MKULTRA was basically a few hits of LSD. So particularly for first contact information, MKULTRA is not good.

BAD: “we ARE targets of COINTELPRO operations”

GOOD: “we are targets of a COINTELPRO-LIKE crime”

COINTELPRO is quite similar to OS/EH, except COINTELPRO targeted activists and whistleblowers, while OS/EH includes a majority who are neither activists nor whistleblowers. To remain credible, we can NOT claim we ARE, as a fact, targets of a government program called COINTELPRO. Officially, COINTELPRO stopped after some Congressional hearings in the 1970s. So the qualifiers “similar to” or “-like” must always be added to references to COINTELPRO.

“COINTELPRO” is an abbreviation for “counter intelligence program,” and counter intelligence means actively interfering with a targeted individual or group.

If you're doing activism, I recommend using COINTELPRO mainly in activism material which is longer, that is, designed for non-targets who ask for additional information, or, on blogs and web sites.

BAD: “Freemasons,” “Illuminati,” “New World Order”

We do not have evidence, at this point in time, proving that ANY specific entity is responsible for the OS/EH crimes. Freemasons, the Illuminati, and the New World Order are frequently cited as being responsible.

Those organization names tend to produce the “wacko” response in members of the general public. I urge keeping those organization names out of our OS/EH vocabulary.

BAD: Unverified program names, like “MONARCH” or “Phoenix II”

If you're not sure an alleged program has been acknowledged by mainstream sources, don't use it. “MONARCH” and “Phoenix II” have been used by one individual (Marshall Thomas) to title and appear in videos about OS/EH. First, those programs have only been alleged, never verified. “MONARCH” is an alleged program of torturing physically captive children. Avoid unverified program names and materials which use them.

BAD: “TI”

“TI” means “targeted individual.” It is popular among targets of OS/EH, but it is not known by the public and I recommend working to replace it with “target,” which is understood by the public. Stay with the familiar!

GOOD: “target” or maybe “victim”

Many targets don't like “victim,” but it is a good, familiar description of those who have

had crimes committed against them.

BAD: “spooks,” “government agents,” “spies”

We have no proof at time of writing that government intelligence agents are responsible for OS/EH, even though we can prove that under programs like COINTELPRO, they have been responsible for similar activity in the past.

GOOD: “perp,” “perpetrator,” “criminal”

Those who carry out OS/EH crimes are clearly perpetrators or criminals. Those are familiar terms, therefore best to use.

BAD: “mind control”

Influencing the mind (and body), remotely, does occur with OS/EH targets. However, from face to face conversations with the public, “mind control” is an instant credibility killer in most cases. MC is a good example of a portion of the truth which we must avoid speaking about in order to gain the serious attention of the public.

“Mind control” might be OK with non-targets who have expressed serious interest in knowing the full truth, but not for first-contact situations.

BAD: “implants”

Monitoring/tracking/control/harassment implants have been used in a few targets. They were used in some of the MKULTRA survivors. But unless you have a medical scan proving you have an implant, it is very important to break the habit of saying you ARE implanted. Remote-acting electronic weapons which work through walls have been available for decades, so implants are not actually necessary for very invasive attacks. Implants are another example of part of the truth which should be held back, at least from FIRST CONTACT activism material, for those who do activism.

What's the worst implant term? “Tooth implants.” Claiming that will make you the butt of jokes.

The possibility of implants might be OK with non-targets who have expressed serious interest in knowing the full truth, but not for first-contact situations.

BAD: “mind reading”

At present, a demonstration has been done where a test subject's silently said to self thoughts were detected by magnetic pickups near the throat. That technology does not work through walls, or at next door neighbour distances. Especially, it does not work at satellite distances.

BAD: “tin foil hat”

That should be obvious. We don't use terms that invite others to question our sanity.

BAD: "paranoid," "schizophrenic," and other mental illness jargon

We must not "defend ourselves" against those questioning our sanity unless the non-target raises the issue first. Keep references to our mental health out of of information sharing material used with non-targets.

I urge targets to not promote Harry Sweeney's works which all center around his original "Professional Paranoid" book. This is a glaring invitation to non-targets to question our sanity, and Harry has never furnished any remotely logical reason why we should make use of his work labelled with a discrediting term.

BAD: "psychotronics"

But because the term sounds ideal for us, many targets use the term that way.

Russian targets say it's an accepted second meaning over there.

I'm not trying to nitpick for no reason here. Instead, I'm urging targets to avoid a term which is easy for a knowledgeable naysayer to shoot down and make us look ridiculous.

"Psychotronics" is something like a century-old term which became well established before OS/EH started.

It is the original meaning of "psychotronics" which the U.S. Psychotronics Association is all about.

I bought two huge books about psychotronics, and eventually got rid of them because there was nothing in there relevant or useful to us.

Psychotronics started out as a HEALING effort, in which NON-POWERED electrical components, mainly selector switches, were mounted in wooden boxes. The early gear often had a small "tub" mounted in the panel, in which various objects, which might have included fingernail clippings from the person in need of healing, were placed.

The OPERATOR was the key, and was someone who had developed "special abilities" which were equivalent to psychic abilities.

The switch settings were called "rates."

Currently, various types of powered electronic devices are used as well.

But it's all about HEALING. Dr. Eldon Byrd, one of the original Lida machine testers,

was a member of the U.S. Psychotronics Ass'n. He confirmed that psychotronics was about healing and unrelated to electronic harassment.

So I urge not using this tempting term to avoid credibility problems and confusion with healing.

For good/bad TECHNOLOGY terms, see:

<http://www.multistalkervictims.org/osstt.pdf>

15. Claims of Being an “Insider”

From time to time, people pop up on our email forums claiming to be ex-government agents or employees, and who have lots of “inside information.” Sometimes they claim to know for certain, because they saw “classified documents,” how the OS/EH crimes are really being carried out, and exactly by whom.

Some of these “insiders” claim to know how to get this case into court and win.

Usually, they are excellent, persuasive writers and speakers.

Sometimes they claim to be targets.

There is no practical, affordable way to verify with absolute certainty their claimed backgrounds. The good news is if you follow good credibility principles, you don't need to do that.

These “pied pipers” are very attractive to targets desperate for a cure. The rhetoric produced by these “insiders” can hold a following for years.

To avoid heartbreak and wasted time, it is very important that targets apply the same criteria discussed here in this booklet to the statements by these “insiders.” They produce proof which can be independently verified, or, their statements must be treated as their personal opinion.

I have learned over the years that officials brush away claims by individuals, no matter how well qualified. If you can't give officials chapter and verse from a mainstream document, backed by a mainstream organization, they won't accept the claim as fact. And getting officials to accept our claims as fact is what information handling is ultimately all about.

Don't let a charismatic claimant of being an “insider” distract you from the need to sort information into fact or opinion. Their information is opinion until it is backed up.

Keep in mind that, given the large volume of web sites now posted about OS/EH, a clever, articulate individual can easily write and speak authoritatively. Such individuals may be clever

people with time on their hands who love to have a following. Or, it's not impossible that they could be working on the side of the OS/EH perpetrators.

Stick with solid criteria for evaluating information, and don't be distracted by rhetoric you can't validate independently.

16. Street Activism for Those Interested

Street activism consists of things like picket signs, handing out flyers, and perhaps playing pre-recorded audio tapes or showing an OS/EH video on a laptop.

All of the principles explained in other sections of this booklet apply.

In addition, here are some tips based on my experiences doing street activism:

- Use sun protection, even on cloudy days. Conventional “sunscreen” preparations have been, in the past few years, found to increase risk of skin cancer in the sun, believe it or not. Other skin creams may be better.
- A backpack makes handling your materials easy. A backpack with a substantial waist band makes holding and carrying a load much easier.
- I recommend a poncho, a good quality full sized poncho, as it provides maximum protection from sudden rainfall. Lightweight cheapies don't provide good coverage and are too easily lifted by the wind.
- External batteries for tape/CD players, and possibly laptop computers make electronic audio-video aids cheaper to operate. “Gell cells” which power security lighting or alarm systems work very well, though you would need to fabricate (soldering likely) cables and adapters.
- Contoured padding for your feet, giving arch support and perhaps heel cushioning, can help a lot.
- Clear “leaf bags” are often large enough to fit right over signs if you encounter sudden rain
- “Foam core board,” maybe 3/8” or 1/2” thick, with 1/4” stove bolts and large “body and fender” washers, and a 2” x 2” square handle help make a sign with good durability. You need durability because you often find strong winds on city streets.
- Apply a coat or two of clear varnish or lacquer to the foam core board (a) to make it more water resistant and (b) it makes any adhesive backed items you may paste on it easier to re-position if you take on the tricky task of applying adhesive items. If you paint directly on the foam core board, apply the varnish or lacquer after you have done

your painting. Don't forget the EDGES - that's where rain can seep in.

- Sign shops can print, it's pricey but they can do it, your customized sign image on adhesive backed waterproof vinyl. They can download them from the web. I'd recommend letting THEM apply it to your picket sign's foam core board - that is a tricky step and if they do it and screw it up they will have to make it good.
- Call the local police on their non-emergency number, and ask for specific rules about picketing, handing out flyers, or using public address equipment. You want to be sure you are legal. Generally, you can picket as long as you find a spot where you are not interfering with the flow of foot traffic or blocking vehicle traffic, including vehicle traffic's visibility. Some jurisdictions require a permit for PA equipment - you want to know that before spending money on PA equipment.
- Don't use excessive volume with PA; no louder than if you were listening to a portable radio while waiting for the bus. Standing near groups waiting to cross at a major intersection can get you a captive audience. Avoid being so pushy that the public could complain about your activity. Courtesy at all times.
- I found that picketing beside busy intersection stoplights, where vehicles had to sit there, giving the drivers an opportunity to read my sign, worked well. Offering a flyer to drivers stuck there worked at times, as well.
- I like the setup where I use a 4-foot length of 2" x 2" wood (sanded to remove sharp edges and splinters) as the handle on a picket sign. I stand in one place, with my hands on the top edge of the sign and the bottom end of the handle on the sidewalk. That makes conversation easy, and is a position which one can hold for some time.

I usually have a pouch with flyers too, and use one from a store with a velcro flap over the top to quickly cover the flyers if rain starts.

- For carrying signs on public transit, I used a small format - 20" wide by 32" high. That is adequate. I also used a larger format - 40" wide by 32" high - and constructed a hinged center section which allowed me to carry on public transit.

I also used a double ended 3/8" "lag screw" thing, sometimes used to hold furniture together, to make my handle come apart at the middle, also to make carrying on public transit easier.

- Holding up a physical BOOK has proven to be an excellent way to counter naysayers who may heckle a street activist. A good, published, available book (try amazon.com) is Elizabeth Sullivan's "My Life Changed Forever." A published book seems to have a certain "magic" that words from your mouth may not. "My Life Changed Forever" is reviewed here, with purchase sources:

<http://www.multistalkervictims.org/mlcf.htm>

AUTOMOBILE sign activism can work, though targets who hold a job should be careful with that. One lady in British Columbia, Canada, where rain is plentiful, reports that by painting messages with poster paint, one can have bold, clear messaging which does not instantly wash off when it rains. Being water based, these messages can easily be removed with soap and water, leaving no damage to the car's finish.

Be sure to carefully choose any web site links you may put on your car ... very sensational sites, and sites making unconfirmed claims as fact which aren't backed up are not good choices for the public's first introduction to OS/EH.

BACKPACK sign activism can work well. My experience with backpack signs has been that by simply placing a sign with a link to a higher credibility web site, the store crowding type of harassment stopped immediately. My guess is that the harassment group supervisors don't want their members to learn what they are actually involved in.

With either automobile or backpack activism, it's a good idea to have some flyers handy. I have a generic OS/EH flyer available, similar to the CATCH group's flyer, the group itself having now become inactive, at this address:

<http://www.raven1.net/flyer1.pdf>

Note: raven1.net is not a good site for referring the public to. It contains a large volume of true information, but which will produce information overload for non-target visitors. "Thin edge of the wedge principle."

The above flyer is designed to be folded over once, providing a four-page read.

Check the CATCH web site, still active, for any activism materials which may be available there at:

<http://www.catchcanada.net>

17. Defending Against Allegations of Mental Illness

I found my street picketing, most of which took place between 1998 and 2001, did not bring too much in the way of hecklers alleging I was crazy. But it happened from time to time. As mentioned in the street activism section, holding up a physical copy of a book, is one good way to counter such allegations. The book I recommend at this point in time is "My Life Changed Forever," by organized stalking target Elizabeth Sullivan, reviewed here, with purchase sources:

<http://www.multistalkervictims.org/mlcf.htm>

An excellent booklet, which covers both OS and EH, has not been published but can be printed and bound by an office services copy shop. It is my own booklet "Organized Stalking:

A Target's View.”

<http://www.multistalkervictims.org/osatv.pdf> (both OS and EH)

<http://www.multistalkervictims.org/osatv2.pdf> (OS only, for special circumstances)

In my booklet, both versions, official statistics showing the reality of organized stalking are given. Those statistics cannot be (legitimately) debated by naysayers.

The bottom line of those official statistics is that some jurisdictions in the U.S., Canada, and the United Kingdom report one stalking case in eight involves stalking by groups.

My booklet version covering both OS and EH has an Electronic Weapons chapter, which shows that some of the more common electronic harassment attacks have been doable with devices which have never been classified secret, and have been available to the criminal public for one to five decades.

Both versions of my booklet offer answers you can use to counter allegations of mental illness, and other doubts as well. For example “Nobody has the time on their hands to do all that.” That is covered in my osatv booklets - and the answer is that David Lawson found much of the harassment is done during working hours by employees with access to the target.

One point I have raised with those alleging that OS is imaginary is that crisis support agencies are aware of organized stalking and do deal with targets of OS. In fact, many crisis support staffers are not yet aware, but you can make the statement “Crisis support agencies are aware of organized stalking” and not have made an incorrect statement.

You can not convince everyone, so forget even trying. After presenting our best evidence, if the heckler keeps on saying you're crazy, just say “You believe what you want to believe. Have a nice day.”

18. Court Filings Aren't Proof

There have been some court cases where OS/EH targets have attempted to sue someone, typically a government agency, for damages caused by OS/EH. To date, none of these cases has even made it to trial.

However, some SUBMISSIONS to the court have been posted on the web. The submission most often referenced is that of John St. Clair Akwei, who claimed to have been an NSA employee. Mr. Akwei's lengthy submission makes many specific allegations about NSA “mind control” and electronic torture.

Mr. Akwei is rumoured to have made an out of court settlement, but he has disappeared, at least from the OS/EH target community, so the outcome of his case is entirely speculative.

The important thing for information handling is to realize that a document submitted to court,

but which wasn't heard in court and its accuracy determined, is ****NOT**** proof that any of the document contained truth. For information sharing purposes, we must regard Akwei's submission as his opinion.

We have one small but notable victory in the case of target James Walbert, who submitted a complaint to his local court, and his complaint of electronic harassment was not challenged. The court papers for this case are posted here:

<http://www.raven1.net/walbert.htm>

Note: raven1.net is not a good site for referring the public to. It contains a large volume of true information which will produce information overload for non-target visitors. "Thin edge of the wedge principle."

Acknowledging a complaint of electronic harassment basically means the court didn't find the existence of electronic weapons to be beyond belief. But it would be wrong for activists to take those court papers, say, to their police department, and say "I'm being harassed by these same electronic weapons! Here is proof!" You can't stretch Mr. Walbert's success that far.

The thing to remember about public officials is that they don't feel bound to decide as to the truth of OS/EH complaints in the same way as every other jurisdiction. An individual claiming OS/EH to court is in an exceptionally weak position, even following the Walbert success.

It's fine to raise the Walbert success, but don't wave it in people's faces demanding action. Those people with badges and guns could drag you off to mental hospital if they choose.

Walbert's success is likely to work far better as part of a well planned in-person group presentation to officials.

19. Writing Letters

If a target chooses to write activism letters, choose hard copy (paper) mail if possible. Political office staffers have acknowledged that emails are high in volume and are sometimes, of necessity, deleted. Faxing is second best.

To get the best chance that the letter will be read and comprehended, keep it to one page. That means maybe 40-45 actual lines of text, after heading and signature are taken out. Just like Joe Average's short attention span, officials are more likely to respond to short letters.

PLEASE, folks, break your letter into PARAGRAPHS. A huge long page of solid text is very unappetizing to a busy recipient. This document uses paragraphs, for example.

Always spell out the first occurrence of something you may abbreviate, and put the abbreviation in parentheses right after the spelled out name, for example:

... organized stalking (OS) ...

It is tempting to write a letter describing OS/EH and hoping your recipient will “figure out what to do” and do something to help you. That's not a good plan.

Before you write, have a clear idea of what you want the recipient to do, and explicitly request that. What you request:

- Needs to fit with the recipient's organizational mission statement. It is a good idea to copy a sentence (or phrase) from the posted mission statement.
- Needs to be something reasonable, given the resources available to your recipient. Don't ask for the sun and the moon if you want a serious response.

Spend time trying different ways to describe the situation you want to inform your recipient about before selecting the wording most likely to be taken seriously. If this is first contact, you need to be especially careful to avoid information overload. For example, instead of saying that thousands of people are having their lives utterly destroyed, (true,) consider saying something like “You may not be aware but the anti-stalking laws enacted in the early 1990s have not benefitted those who are stalked by groups, as opposed to those stalked by single stalkers.” Keep it light at first contact. The “lite” approach is more likely to give you a toe in the door than blasting your recipient with the heavy stuff.

As to what to ask for, it may be as simple as asking your recipient to learn more about OS/EH, and consider offering such help as may fit within his/her organization's mission statement. You can certainly ask for more, but many letters will be trying to just kindle interest.

Close by offering to provide further information on request.

Generally, a first contact letter should be very restrained on giving web site links. Just one single link with good quality information is better than a huge list of long links. If links are long, always create a tiny URL (at <http://tinyurl.com>) and provide the tiny URL in the letter.

Letters to justice system officials are dangerous, unless you have a local in-person group and are requesting the opportunity to make a presentation about OS/EH to their department. That request might be best made through a crisis support organization rather than directly from a target. At the very least, clear letters to justice system officials with your local group's lawyer.

I suggest not sending attachments on first contact letters, as that makes your letter look like “a lot of time” will be necessary.

BAD: Email activism campaigns which send hugely long messages to officials and organizations all over the world, screaming in all capital letters about the very worst aspects of OS/EH, using long strings of exclamation points, perhaps with horrifying full personal stories added on. One group calling itself the “MC Mailteam” (MC being a very bad way to make a first impression) did this for years, and may still be doing it. Avoid such groups is my advice.

Just flooding non-target recipients with full personal stories isn't going to get good results. Our communications, above all else, have to suggest something limited, something DO-ABLE, and something which fits with the organization's mission statement.

20. Sample “Lead With the Familiar” Spiel

Whether discussing OS/EH face to face with, or writing to non-targets, I'd like to share a spiel I've used which conveys just the smallest possible bit of organized stalking information, and because it doesn't slam the listener with the full horror story, does not produce rejection.

Not producing rejection is the best a target can hope for in first contact situations. Not producing rejection is also very important in talking with family members and officials, so as to avoid the risk of the target being forced into the mental health system.

Here's how I introduce the topic at this time (I use variations, of course, depending on who is listening or reading.) USE THIS AS A TEST OF INTEREST when you speak to a non-target who has never heard of OS or EH:

“Remember when stalking laws came into effect in the early 1990s? It took years before police and the courts began to consistently offer help to targets of single stalkers. Some single stalker targets still are denied serious attention and help, according to message boards about stalking by single stalkers.

“Well, since that time, some stalking targets have discovered that they are actually being stalked by groups. By 2006, increasingly detailed crime statistics began to show that one stalking complaint out of every eight cases involves stalking by groups.

“However, many targets of organized groups of stalkers are still being ignored by police, and even told organized stalking doesn't happen. This, in spite of their own statistics showing otherwise. This is why I am networking with other organized stalking targets to work towards exposing, and eventually stopping, this second form of stalking.”

At this point, if the non-target expresses no interest in knowing more, I JUST STOP talking about the issue. I've accomplished step one, making my listener minimally aware.

It is, I suggest, far more beneficial to have numbers of minimally aware non-targets than to push hard and generate numbers of non-targets who are opposed to hearing more, and possibly thinking the whole issue is indicative of mental illness.

I leave the electronics for later, after a non-target expresses interest in knowing more.

21. The “COINTELPRO operations” Faction

If someone suggested to you that the public's popular use of the term “holdup” was blocking the prosecution of robbery suspects on charges of “armed robbery,” what would you think? Read on.

There has been a “faction” for some years, led by “Bob S,” a retired lawyer and long time target who is very likely one of the original U.S. government's COINTELPRO targets. The original FBI COINTELPRO crimes were organized stalking carried out by, often, criminals who “owed” something to the FBI and were informers. These criminals were directed by the FBI to viciously harass a wide spectrum of 1960s activists, using techniques very similar to those reported by organized stalking targets, and David Lawson.

Bob S has been endlessly repeating that use of the term “organized stalking” is actually blocking his goal of obtaining new COINTELPRO hearings by the U.S. Congress. Even though he is, of course, free to do his own activism in a style of his choosing.

The public, I suggest, including Congressional staffs, are quite capable of realizing that crimes can be referred to by different names, even though there is a single name on the law books.

Even though I have explained to Bob S that “organized stalking” has been chosen because it fits well within the short, typically 30-second attention span of Joe and Jane Average and paints an accurate picture of the OS crime. Bob S doesn't recognize the importance of that first contact encounter with non-targets, and instead assumes everyone either knows what COINTELPRO was, or, is willing to have that program explained at first contact. My experience is that first contact non-targets do not know what COINTELPRO was, and aren't really interested in hearing me explain it.

The way Bob S wants all targets to describe the harassment is “COINTELPRO operations,” which implies that we are targets of a government program named COINTELPRO.

Well, we can't prove that. And Joe and Jane Average do notice when we make statements we can't support with evidence, and I urge all targets to not claim they are current day targets of COINTELPRO.

Bob S claims that “COINTELPRO operations” has become a widely accepted term meaning operations LIKE the original COINTELPRO program itself, but not meaning that the original COINTELPRO program continues. I say in response that regardless of what Bob S may MEAN when he uses “COINTELPRO operations,” the general public is going to interpret it as a claim that COINTELPRO operations continue under that name.

For example:

“U.S. Navy Sixth Fleet operations” refers to a very specific military unit operating in a very specific area. That phrase does not mean any naval operations like the U.S. Sixth Fleet carries out.

“COINTELPRO operations,” similarly, is going to be taken by listeners and readers as a reference to operations under an actual government program named COINTELPRO. This is very simple English; there is nothing particularly “legal” about it.

It is very simple to bring COINTELPRO into any conversation with non-targets honestly, by simply saying “The crime of organized stalking is very similar to the crimes carried out by the FBI under COINTELPRO.” Or, “Organized stalking is cointelpro-LIKE.”

Here are some criminal acts which Bob S states require that only the federal government can possibly be the perpetrator:

- Monitor, intercept, delay and tamper with mail and packages sent by USPS, FedEx, UPS, etc.
- Monitor and intercept phone calls from home phones and public phones (Calls that I make are sometimes answered by perps who give me false information. Calls made to me are sometimes intercepted by perps who impersonate me);
- Bypass every kind of lock and security device to enter homes and offices continuously without breaking in;
- Monitor everything that we say and do within our homes;
- Steal from safe deposit boxes in banks;
- Buzz us with military helicopters;
- Obtain participation in harassment and cover-up of crimes by local police everywhere.
- Persuade doctors and other medical personnel to engage in malpractice to harm targets who are their patients.

I agree with Bob S that it is highly likely the federal government is behind those criminal acts. But for maximum credibility, I urge targets to stick with statements such as:

- “Cointelpro-LIKE”
- “Extremely likely committed under federal government authority”

I suggest that because you make professional-sounding, qualified statements, you will be no less persuasive in petitioning Congress for a new COINTELPRO hearing, or any other officials. The rules of good persuasive communication do not change according to the particular situation.

Bob S claims that because current day stalking laws are only being enforced for single stalking cases, using the term “stalking” is saying that OS groups must be local, with no higher level supervision. I say the terms “organized” and “stalking” describe the mechanics of the crime, and do not specify the scope of the crime.

COINTELPRO itself disproves Bob S's claim that “organized stalking” must mean “under local control.” COINTELPRO was a nation-wide program of organized stalking. Case proved. It is not true that “organized stalking” specifies local crimes only. Hitler's Nazi Brownshirts carried out organized stalking against unpopular minorities under national supervision as well.

To discard “stalking” as an activism term is to discard some of the very best, factual, official government evidence - the statistics showing that one stalking case in eight involves stalking by groups:

<http://www.multistalkervictims.org/osatv.pdf> (section on statistics)

Finally, Bob S refuses to recognize that different jobs require different tools. You don't use a welding torch to paint your house, you use a roller or a brush. The job we have is building the numbers of the non-target public who are at least minimally aware of organized stalking. Some will be interested enough that we can include electronic harassment. I have tried introducing the crime of OS/EH with “COINTELPRO.”

Using COINTELPRO at first contact fell completely flat, because Joe and Jane Average don't know what “COINTELPRO” means, and furthermore, you can't explain that in the 30-second attention span window they give you.

If you, after reading this, are still tempted to claim you are a target of “COINTELPRO operations,” I suggest the honest alternative, “I am a target of cointelpro-LIKE operations.”

My strategy, by the way, for an attempt to gain a new Congressional COINTELPRO hearing is:

- Prime the non-target public using the (statistically backed and) most familiar term “organized stalking” - a term which has had demonstrated success
- Then point out to the non-target public that COINTELPRO was a nationally coordinated program of organized stalking, that many activists today are targeted with COINTELPRO-like operations - operations requiring government level participation
- Say a new Congressional COINTELPRO hearing is essential to expose government's possible role in these crimes, as OS targets lack the authority to access government agency records

The members of the “COINTELPRO operations” faction also accuse me of “covering up federal government responsibility” and being “anti-target.” No, I urge appropriate restraint against making accusations for which we have no evidence. That is plain common sense, and is something a lawyer should be promoting.

I apologize for this lengthy section, but Bob S continues to accuse me of “working against targets” because I recommend clear and uncomplicated wording with first-contact non-targets. This section is necessary to present my side of this issue.

22. The Strong Likelihood of Decoying

As a 29-year target of OS/EH at time of writing, and as someone who has been hearing stories from other targets for 13 years, one pattern is very clear: The perpetrators consistently try to coax targets into blaming either the wrong technology, or the wrong people, or both. This is a sub-task of their attempting to get targets to discredit themselves by making nonsensical or unsupportable claims to the public, and especially officials.

For example: You are getting heavy electronic harassment, but it stops when the neighbours next door move away.

In the world of organized stalking and electronic harassment, that the neighbour was the source of your electronic harassment is only a possibility. In the world of OS/EH, it is equally likely that your perps stopped some of your attacks to make you think the departed neighbours were responsible. Their long term goal would be to convince you that you had the ability to identify the true source of your attacks. The perps would hope that in a later situation, your confidence in your ability to identify the true source would cause you to complain to police about an innocent neighbour. The OS/EH perps are highly sophisticated, never forget that. They are not just thugs operating at the high school prank level.

Likewise, I have had types of noise boom through the ceiling of my apartment with the sounds of heavy automotive engine parts, say, dropping on a heavy wood plank floor. Yet the ceiling was heavy 8-inch reinforced concrete, observed during the building's construction. I have heard loud bird noises emanating from large, windowless solid masonry walls. Clearly, the perps are capable of generating noise which seems to come from a neighbour's home or apartment, but in fact is artificially generated.

I have learned that this type of decoying is a recurring form of harassment, and that if I do refer to such activity to others, I must use the speaking style and demeanour used by professionals during public speaking, and use qualifiers such as “seems” or “appears to.”

It is very important that targets understand that everything they see and hear relating to OS/EH may well be decoying, and that due caution is always necessary in drawing conclusions.

23. “You Don’t Have Any Evidence”

Targets who attempt to discuss OS/EH with non-targets, including doctors and police, will often be rebuffed with the statement “You don't have any evidence.” This section is about how to stand firm in the face of such a rebuff.

In my opinion, we do not have enough evidence to take these criminals to court. However, we do, in my opinion, have enough evidence that we can still defend ourselves against that rebuff well enough that we don't need to walk away with our tails between our legs.

The evidence we do have at least shows that the crime we experience is not only possible but

quite likely, to someone who is at least neutral. Here are some of the best points of evidence I have successfully used to at least stand firm in conversations with those denying we have evidence:

- We have official statistics showing group stalking happens at a rate of about one stalking case in eight in the U.S., Canada and the United Kingdom, and some recognition by the psychiatric community that organized stalking happens, posted here:

<http://www.multistalkervictims.org/osatv.pdf> (Section on statistics near the front)

- We can show that national-level government-instigated organized stalking happened in the 1960s under the FBI's COINTELPRO operations. While this doesn't prove COINTELPRO-like operations are happening today, it makes it quite likely, given the endless stream of full personal testimonials describing COINTELPRO-like attacks.

<http://www.cointel.org> (Paul Wolf's collection of COINTELPRO documents)

<http://www.raven1.net/cointeldocs.htm> (My backup copies)

- We can show that silent, through-wall electronic technologies which can do some of the things which targets experience are not only available to the public, but have been for up to 5 decades. As long as you don't make claims of attacks beyond what those technologies can do, you can stand firm against charges such weapons are impossible.

<http://www.multistalkervictims.org/osatv.pdf> (Section on electronic weapons)

- We do have some physical sabotage to show, and we have cumulative reports of tangible things like feces left in wastebaskets, cigarette butts and pennies left around - repeatedly. We have reports of, say, property fences being sabotaged. Or mail being scattered and opened. These things are physical evidence and would be significant in investigations of other crimes.

We have a few videos of organized stalkers in action.

- We have personal testimony. Most is not suitable for providing the non-target public and officials, because many targets have been too busy surviving to work on good information handling techniques - something which is not their fault. However, if your back is to the wall, it can be said that personal testimony is something the courts place a high value on, and targets are qualified to be witnesses or jury members, even targets without PhD or MD degrees. In fact, some courtroom evidence must be backed by a witness or it's not accepted.

There is nothing to be ashamed about regards personal testimony, and ours is evidence. If personal testimony is not evidence, then all court cases are null and void immediately. As long as the discussion is about personal testimony in general, as opposed to some of the discrediting thing targets have said.

Important: Because personal testimony is worthy of respect as evidence does not mean it is wise to gush full personal testimonies to non-targets at this point in time. My point here is that if a non-target challenges personal testimony in general as “not evidence,” that challenger can be reminded that the courts make extensive use of personal testimony.

Important: It is critically important that targets don't get the idea that because we can stand firm in the face of charges of having no evidence, that we can forge ahead and sue someone. At this point in time, we do not have evidence to that level. What we have is evidence. It only becomes “proof” if a court or official accepts it. And experience to date is, our evidence hasn't reached that level.

OUR OWN ACTIVISTS' DENYING EVIDENCE

Incredible as it may sound, some of our own activists actually deny evidence we've had for a decade at time of writing. Their denials show up in their letters to officials, in which they mention that “proving the EXISTENCE of electronic weapons is needed.” That is flat out not true, and to say that to an official is an incredibly poor tactic.

Yes, we can't explain ALL of the perpetrator weapons, but the job at hand is to first expose the basic crime, and we have plenty of evidence of the older weapons to back up a credible request for official action.

Here is an email I sent to all the forums, exclaiming over this mind-boggling harm done by failing to make full use of the e-weapons we can prove:

From: ewraven1@sympatico.ca
Subject: Jumpin' Jehosaphat!
Date sent: Sat, 25 Jul 2009 15:23

Jumpin' Jehosaphat!

I can't believe my ears! I've just 'heard', through email, two of our top activists discussing how to let politicians know they need to work at proving the EXISTENCE of e-weapons which can duplicate our attacks.

WHAT???

For the past DECADE we have had proof of five through-wall, silent, electronic weapons which can do SOME of our attacks. Some is ENOUGH to get the job at hand done!

We DO NOT NEED to tell politicians we are asking to help us that they need to "prove the existence of" e-weapons. That's a done deed!

<http://www.multistalkervictims.org/osatv.pdf>

... see the chapter on electronic weapons.

Are some targets assuming that we must explain every damn device in the perp inventory and provide scientific explanations before we can expose the basic CRIME?

First things first. Expose the basic CRIME, using the proven e-weapons which do SOME of what we experience. There will be plenty of time LATER, once officialdom has acknowledged the CRIME, to talk in terms of investigating the as-yet-secret weaponry.

By coupling proven voice to skull with today's "Silent Sound" subliminal technology, we HAVE a hypnotic channel into a target's mind which will work with a majority of people, the majority who have some susceptibility to hypnosis. That is plenty to get officialdom aware and acting.

Subliminal sound is a well known technology - we don't need to prove it exists.

If we wait until we can "prove the existence of" all the perp advanced weapons, we can just FORGET ever getting serious attention and an investigation going!

For gosh sakes, folks, do NOT ask your officials to prove what we have had proof of for a decade, that technology exists, is not secret, and has been available to the public for up to half a century now!

Outline the basic CRIME instead. Advanced technology disclosure can come LATER!

Eleanor White

24. Electrosensitivity

Electrosensitivity is raised, from time to time, as purportedly useful in conveying to non-targets what electronic harassment is all about. My recommendation: Stay away from electrosensitivity as a way to describe EH.

The reason is, in my experience I have had members of the public raise the issue when I talk about OS/EH. These members of the public were trying to paint us as simply “victims of the illness of electrosensitivity.”

First, we have no evidence of that. Getting tested for electrosensitivity is expensive, and I'm not aware of any target at this time who has had such testing.

Secondly, more important, the task at hand is to expose the CRIME of OS/EH, and inviting a listener or reader to deem us “sick” instead of targets of crime is a really, really bad idea, in my opinion. Don't offer your listener/reader the chance to write you off as merely “sick.”

The proven electronic weapon technologies we have to date do not depend on electrosensitivity to work, either. Again: The proven e-weapons do not depend on electrosensitivity to work. Keep that in mind.

25. The Huge Article Problem

Targets are faced with some really excellent information posted in huge articles. It would take a similarly huge amount of work to verify every statement in those huge articles. For information handling purposes, the way to make use of huge articles is simple: Do NOT 'throw' links to, or copies of, huge articles at non-targets.

Instead, pick through the article, and EXCERPT just a small portion, at any one time, you consider useful. Then research just that small portion by looking for independent confirmation that the small portion is backed up by mainstream acceptable proof. Sometimes, the writer of long articles will give references to other sources, which can help with that.

Once you have independent verification of the factuality of the small portion, that can be used to convey that information to others.

The longer the article, the more likely there will be “poison pill” information somewhere within the article.

26. The James Tilly Matthews Case (How to Rebut It)

From time to time some wit brings up the James Tilly Matthews case to cast doubt on our sanity. Here is a quote from an article by Mike Coyle, who is a mind control researcher:

“The first recorded case of paranoia in medical literature was of one James Tilly Matthews, a London tea broker who claimed his mind was being controlled by a gang operating a machine he called an "Air Loom" which was hidden in a London cellar and sent out invisible, magnetic rays. Matthews believed machines like the Air Loom were also controlling the minds of members of the British Parliament. He wrote letters to its members warning them about the machines and the conspiracy behind it. Matthews was committed to Bethlem Hospital as being insane. His case was published in 1810.”

Because Matthews' claim sounds a lot like ours, naysayers use this case to prove we are imagining our electronic assaults. Their logic is that because Matthews' description is like ours, his case and ours must be from identical causes.

I offer this reply to naysayers who use this case to our detriment:

“Obviously, since equipment which can assault people through walls did not exist in the early 1800s, Mr. Matthews was delusional. Now that such technology has been available, not classified secret, to the public, for up to half a century, our reports deserve the full and serious attention of those sworn to serve and protect.”

27. Petitions

I'd like to suggest that petitions are a waste of time UNLESS:

- After studying possible recipients of the petition, the text of the petition is TAILOR MADE to the recipients' organizations' MISSION statements
- The petition requests something be DONE and is not just a list of complaints
- The something to be done FITS, that is, it can ACTUALLY BE DONE by the recipient(s) of the petition
- Before the petition is put out for signatures, a do-able plan to DELIVER the petition to the recipient(s) is firmly established (no petition I've seen to date ever got delivered to anyone)
- The text of the petition does not exceed ONE PAGE (if it does, forget about it's being read by the recipient(s))
- A statement of the OPPOSING VIEWPOINT is included

That last requirement, the opposing viewpoint or case, is very important, and is never done for petitions I've seen to date. The reason it is important is a statement by an activist from San Francisco, who followed up a petition with city government. He found that the official who denied the petition did so because the opposing viewpoint was not spelled out.

For us, we can't state the viewpoint of the perps, because we don't really know their reasons.

But we CAN petition for officials to start taking these crimes seriously, MAKE THEM A PART OF THEIR OFFICIAL AGENCY RECORDS, and expend resources to seriously investigate these crimes.

In such a petition, we would explain the opposing viewpoint by describing how most of our complaints to police result in refusal to take a report.

We might reference this page, PROVIDED "PeaceFrog" would come out and use his or her REAL NAME:

<http://www.nowpublic.com/world/who-getting-thousands-gang-stalking-reports-month>

OR...

<http://tinyurl.com/yjlvvhg>

Page title:

"WHO IS GETTING THOUSANDS OF GANG STALKING REPORTS A MONTH?"

That page says that NCVC staff estimate 10% of their calls are about group stalking (their term.)

28. Surveys

I'd like to suggest that the official U.S. Department of Justice stalking survey form, the one with the excellent questions about organized stalking, be reviewed by those who create such a survey.

That form appears at these links:

http://www.ojp.usdoj.gov/bjs/pub/pdf/svs1_06.pdf
(Original)

http://www.multistalkervictims.org/svs1_06.pdf
(Backup copy)

**** Important:** I suggest rather than doing a survey which can't be sent to psychologists and psychiatrists, find a target who is capable of structuring the survey so it CAN be given to anyone, mental health workers included.

This, of course, means you don't dash off a survey in an afternoon and post it.

You get opinions on how to formulate the questions so it looks "scientific," and no "you-are-

wacko" trigger terms are used. That can be done, by the way. Tips on how to do that are contained within this booklet.

Among our members are people with mental health staff experience, and people with statistics experience who can, if asked, get a first class petition designed. It might take a month or two, but that time is very well spent.

Ask on all the forums for people with professional backgrounds who would be willing to help with survey design.

There are people with very refined skill sets who may be tempting to use, but for reasons we can never know, mess things up. I stop short of calling them perps, because that can never be determined.

The way to determine if someone's work is helpful or not is for those designing the survey to also use the participants' knowledge of human relations and psychology, and independently evaluate the work being done.

29. The Problem With the Name "Mind Control"

NEVER NEVER NEVER use this chart for FIRST contact with the public! WAIT until and unless the member of the public has expressed *genuine* interest in learning more about OS/EH! Use of "mind control" with uninformed first contact non-targets can and will destroy your credibility!

Historically, because many targets of organized stalking and electronic harassment have reacted most strongly to that portion of the OS/EH crime which can be called "mind control," in the 1990s this crime acquired "mind control" as its semi-official name.

This historic name for the OS/EH crime is both confusing and discrediting when spoken or written to non-target members of the public. This is confirmed by actual face-to-face experience. It often produces the "you are a wacko" response from the public, and gives the listener or reader the excuse to ignore the message.

Because of the considerable amount of information about OS/EH on the web which uses the older "mind control" name, the diagram below has been created to assist new OS/EH targets, particularly those inclined to discuss this crime with non-targets, see that indeed there is some "mind control" activity involved, but "mind control" is only a portion of the full crime.

The chart itself is on the following page:

“MIND CONTROL” IS ACTUALLY ONLY ONE SPECIFIC PART OF THE FULL CRIME:

99. Sample Images Illustrating the Principles of Persuasive Communication

Here below are some suggested poster or flyer (or web site) images based on the persuasive communications principles suggested in this booklet. These images were created by Eleanor White and are free of copyright. They may be used as is, or modified, without asking permission.

Just one favour - if you change any of my materials, please be sure to put your name on the modified materials and remove mine.

Here are the sample images on the following pages:

A0. Emails Relating to Information Handling

This section contains emails relating to information handling.

This email is about plans for global protest activism in September 2009:

From: ewraven1@sympatico.ca
Subject: Banner phrasing for global protest
Date sent: Tue, 15 Sep 2009 12:00:01 -0400

A couple of comments to those thinking about "banner phrasing" (basically, headlines, and the name used to identify the crime) doing global protest activism:

You can describe every one of the electronic assaults we receive without using the known "listener disconnect trigger words." Every one.

In my experience - not just opinion - but actual toe-to-toe street experience - "mind control" and "psychotronics" are two listener disconnect trigger words. Demonstrated. Repeatedly.

The good news: There are other terms which can be used to accurately tell the EH story. My favourite is Peter Rosenholm's "electronic assault."

Someone wrote me privately telling me that he wants to see "directed energy weapons" used somewhere in the material. That is an OK term, and many of the public these days have heard it, so they won't automatically disconnect at first hearing/reading.

But there is an important *qualifier* that needs to be added in when using that term, or your listeners are going to be confused. And a confused listener is less attentive to the urgency.

The public knows about high powered microwave weapons, the best known being Area Denial System (ADS.) They've heard about these high powered lasers mounted in aircraft too.

So if we use "directed energy weapons" in connection with our OS/EH crime, the public has to wonder if "we are all right upstairs," because we don't walk around with massive burns, and our dwellings aren't burned. Nor do people around us in public complain of burning skin sensations.

So, when we use the phrase "directed energy weapons," we need to qualify it somehow.

Perhaps "directed energy weapons capable of causing disabling effects through a target's home walls."

Here's another tip: When describing assaults on the mind, use "brain" instead.

"Brain" keeps the discussion more in the realm of physiology, than "mind." Psychiatrists are "doctors of the mind," and I urge choosing wording which keeps their profession out of the discussion. "Brain and nervous system" is another good phrase.

In other words, terms which send the public's mental image into areas which are not relevant to the invasive, up-close-and-personal, silent assaults we experience need a few extra words with them to clarify what crime we're describing.

Eleanor White

A1. Gathering Evidence: General

Carefully gathering evidence is a way to cope. It is key to remember that evidence that looks very convincing to you is probably not going to appear very convincing to non-targets, especially family members who believe you are crazy, or officials like police and doctors. One major skill in gathering evidence is restraining your belief that your evidence is going to “shake the world” and win your freedom.

Experience is that while gathering evidence is important, non-targets will actually try hard to discredit it, because bystanders really don't want it to be true that OS/EH exists, and because officials are consistently unwilling to work seriously on the crime of OS/EH. So we gather evidence, display it, and keep backup copies where possible, anticipating a day when OS/EH has become public knowledge. This is an important part of coping, even though the full value of our evidence will be in the future.

Some comments on gathering evidence follow.

A2. Gathering Evidence: Photographic

When perpetrators physically damage your property in some way that is clearly not natural, such as sawing through a piece of furniture, that is a terrific opportunity to photograph and post the evidence.

The problem is that some cameras don't have closeup capability, at least the lower priced cameras. There is a way around that. You can tape an eyeglass lens directly over the camera's fixed lens. Ideally, the eyeglass will be something like 2x (2.00 power) or more.

When you do that, your viewfinder will give too wide a view, but that's OK - just be sure the damage, such as the sawed end of a furniture leg, right at the center of the photo. If you don't have glasses handy, some relatively inexpensive reading glasses are available at pharmacies. Choose 2.00 to 2.50 power. You can remove the lens from the frame to make it more convenient to tape over the camera's lens.

FLASH is BAD for getting clear closeups. You'll usually get bright white, totally washing out all detail.

The best light for closeups is near a window, or outdoors, on a bright day but NOT IN DIRECT SUNLIGHT - same problem as with flash - you'll usually get everything too bright. Household electric lamps are OK - just don't get them really close or you can wash out the details of the damage.

Position the cut/torn or otherwise damaged object so shadows make the damage more obvious. If holes are involved, put something of contrasting colour behind the holes to make them stand out.

If the size of the object or damage isn't obvious, consider placing a ruler in the image.

When you are holding the camera, remember without flash, a camera needs to be held steadier than usual. If you have a tripod, use it, but if not, move some piece of furniture near the item to be photographed so you can steady your arms and camera on it.

Take SEVERAL photos at different distances. A digital camera will give you an on-screen preview but even there, a couple of different distances will ensure you get at least one good photo. With a 2x or more powerful lens taped over your camera's lens, you should be able to get somewhere from 16" close, and perhaps down to 10" or so.

When you post the photo on a web site, or send it to someone for posting, please be sure to supply the date and some sort of identification, even if you want to keep your identity anonymous. A date on a photo and even a false name are far better than nothing.

Also, supply a sentence or two about what happened before you discovered the damage. Such as: "I came home from work and found this ... " etc. Your caption or descriptive text is extremely important, because most photos taken by targets do not appear to be criminal activity to the average non-target. Remember, it's about how they (non-targets) see your work, and not how you see it.

If you digitize (scan) a photo to be posted, please learn how to do these three things to the photo before sending it (check your scanner's help screens):

- CROP off the excess unused space - a scanner normally produces an 8.5" x 11" image which is HUGE (Save the photo.)
- Reduce the BITS PER PIXEL, also called number of colours. Many scanners scan at 24 bits per pixel, when all that's needed are 8 bits per pixel (256 colours) (Save the photo.)
- IF the size of the image is wider than a screen, which can be as small as 800 pixels wide, RESIZE (sometimes called resample) the image so that the image fits within one browser screen. I normally choose 750 pixels as my maximum width for perp damage photos, to give a small allowance at the margins, and to avoid the vertical scroll bar. (Save the photo.)

Just scanning and sending a digitized photo without doing the above things can mean you are sending a one MEGabyte file, for each photo, which is way too big to be sent by email to people who have email size problems or limited disk space. Some people use emailers based on their PC as opposed to web mail, and they can have size concerns because every email received is stored on their own disk space. (The advantage of using an emailer on your PC is that it makes backing up possible and there is less chance for emails disappearing.)

A3. Gathering Evidence: Videos

Videos can be excellent for showing the public organized stalking is a real crime. However, in most cases, videos taken by targets are not convincing enough to break through the

credibility barrier. This is not the fault of target videographers - it is because the OS/EH perpetrators deliberately set up their harassment to look like ordinary everyday annoyances which non-targets experience now and then.

When taking the original footage, or when preparing a video for posting, the target needs to provide narration which explains that while the scene may look normal, it's not normal for this to happen "every day" or "all the time." Emphasize frequency of occurrence.

Here are two good organized stalking videos with good narration:

<http://www.multistalkervictims.org/videos.htm>

<http://www.multistalkervictims.org/osvideos.htm>

CAUTION: Over the past couple of years, U.S. police and security guards have been instructed to treat making videos or even taking still photos as possible "terrorist" activity.

One target was arrested and convicted of taking pictures from public property, which is legal, when in fact, she only took footage from her own home. The police lied in court to get her convicted of something which is actually legal.

This means care must be taken in taking of videos, especially in the U.S., but it is likely that such false arrest can happen anywhere in the current world. Today's small digital camcorders can be concealed, and that may be one way to handle the false arrest problem.

A4. Gathering Evidence: Suspected Surveillance Devices

It is extremely important that targets train themselves to regard "suspicious devices" in their area as suspected, until and unless someone qualified and willing to put their name on their analysis confirms a discovered device is actually for covert surveillance or electronic attack.

This is the same credibility requirement as not making a statement as fact without evidence which will convince officials. In making statements to others, and that includes other targets, it is essential that we avoid unsupportable claims of fact.

- If a target believes they have found a surveillance device installed in their home, car, or personal property, see the section "Gathering Evidence: Photographic" then:
- Find and place near the device an object of familiar size. Can be a clearly legible ruler, or a coin, or similar well-known object.
- Take several closeup photos of the item in place. Back up the photos by posting them to a forum, web site or blog, and CD or DVD.

If a bump needs to be portrayed, consider placing a lamp at a low angle, to produce a shadow. This technique is also important if you are trying to photograph a suspected implant.

in your body.

Then remove the device if you can, and take additional closeup photos at different angles.

Post and back up your photos to the web before the next step.

Locate someone who has substantial training and experience in electronics, and arrange for analysis. If you are asking a non-target technician, do not say you are a target of OS/EH - that can be as discrediting as saying that, alone, to police or doctors. Just say you want to know what this object is.

Type up a report of what the qualified individual says about the device. Add that individual's report, keeping their identity confidential, to your posting.

What else may be done about your find depends on the qualified report.

A5. Gathering Evidence: Detection of Signals

See also: <http://www.multistalkervictims.org/oscd.pdf> (Countermeasures and Detection)

It is one thing to detect strange signals. It is far more difficult to prove that the signals you find have something to do with harassment. Merely finding signals on “government frequencies” proves nothing useful, because so many government radio sources are in operation everywhere, all the time.

And, here is what makes convincing/foolproof detection highly problematical. This statement is from the “Shielding” section of my e-booklet titled “Coping”:

“I’ve heard from perhaps 40 to 50 targets over my 13 years on line who receive attack types involving mechanical vibration of both body parts and inanimate objects, which cannot be done using any technology, electromagnetic or acoustic, taught in today’s schools, under the conditions experienced. Right up front, the perps clearly have classified (secret) technology.

“Interestingly, the many sufferers of what started years ago as the “Taos Hum,” a constant sound like “an idling diesel engine,” sometimes experience vibration too. While I do not recommend talking about vibration to non-targets, if it should slip out, OS/EH targets can mention the “Taos Hum” sufferers’ vibration experiences as well.”

This means that commercially available detection equipment is unlikely to convincingly detect at least the more advanced perpetrator attack signals. What that means in practical terms for targets is, use substantial amounts of caution in spending money on detection equipment or services.

Yes, some targets do indeed detect unusual electromagnetic signals in the vicinity of targets’ homes, or even bodies. So there may be something useful in doing affordable detection experiments using conventional equipment and services. But targets must not get the idea that with an expensive spectrum analyzer, or a high priced electronic-harassment-aware

private investigator, convincing proof will be the result. We are up against classified (secret) technology in an unknown percentage of targeting cases.

Let me define "convincing." For OUR purposes, OS/EH targets, "convincing" means "will convince a public official that our detected signals prove harassment."

We can find plenty of "unusual EM signals," - I've done that myself - but showing them to police just got me silence or questions like "So? How does that prove you are being harassed?" Just finding, say, a signal on a "government frequency" doesn't prove anything. There is lots of government radio activity going on all the time.

Now having said all that, let me say that I definitely favour those targets who have a comfortable income hiring electronic-harassment-aware private investigators to attempt to detect and report on anomalous signals in their vicinity. Emphasis on comfortable income.

The reason is that the current-day electronic harassment technology is classified, so we do not know what it is, or isn't. It's a wide open question. And just as many scientific discoveries came about by accident, learning the true nature of present-day EH technology may also yield to an accidental discovery.

Also importantly, even if all a target can do is show a report by a qualified investigator which demonstrates very anomalous EM signals (or acoustic signals) in the target's home or vicinity, that is a stepping stone to a day when officials will take our complaints seriously. My request to targets who can afford that is to work out a contract with the investigator where the full report content can be made public, and posted on the web. That may require obscuring some of the identifying info, but as long as the un-obscured source document is in the target's possession, that is still beneficial.

My personal opinion is that so far, the only guaranteed-to-work detector for advanced perp attack signals is the target's body. (Plants cared for by the target may work too, though no extensive experimentation has been done along that line.)

I believe that a wearable recording electroencephalograph which can hold a full night's data, together with a written, audio, or camcorder log in which each attack is described along with the time, could be used to form a persuasive report. By comparing recorded EEG traces both during the logged attacks, and between attacks, I believe it can be shown that something very unusual is going on in that target's life. Best would be for a doctor to run the experiment, but even a well written report by itself could be persuasive.

Not guaranteed, but persuasive none the less.

Bottom line - detection experiments are potentially useful but are not guaranteed at this point to convincingly prove harassment.

A10. Earning Attention Span Success Story

A target, who has been a member of a church for a couple of decades, reports that they (anonymity requested) have gradually reached a point where the subject of organized stalking can be discussed, without negative repercussions, with the pastor and among the other members of the church. Here are some observations as to how the target has conducted themselves in the church which have led up to this favourable result:

1. Attend church regularly -- all events, including Bible readings and social circles, not just Sunday services.
2. Participate actively, giving special consideration to other (elderly and infirm) members of the congregation who might need particular forms of assistance.
3. Establish your credibility as a good, stable, civilized, trustworthy person and a true believer, which takes time.
4. Be a good listener, which means subordinating your personal problems to matters which are of far greater interest to other members of the congregation. You'd be surprised how many other members of the congregation may want to discuss the (bizarre) problems they've been experiencing in their lives.
5. Develop a warm, meaningful, trusting relationship with the church pastor and elders. This, too, takes time.
6. Over time, test the waters to see what approach can be best used in surfacing the topics of organized stalking and electronic harassment.
7. Stay understated and avoid portraying yourself in "rabid" terms as being a victim of a vast conspiracy.
8. Don't quit because of a few obstructions thrown in your path.

LIST OF SECTIONS

Page numbers are not given here, as this booklet will be updated frequently when new information becomes available.

1. Purpose of This Booklet
- 1a. Is It a Relevant Weapon, or Not?
2. Attacked by a “Signal,” not a “Frequency”
3. Fields
4. “Electric/Electrostatic,” “Magnetic,” and “Electromagnetic” Fields
5. Sound Versus Electromagnetic (or Electric or Magnetic) Fields/Signals
6. The Frequency Spectrum
7. Resonant Frequency
8. HAARP
9. Grounding
10. Power Level
11. Does Sound Cause Remote Physical Manipulation?
12. Light vs. Microwave, Resolution
13. Satellite Capabilities
14. LRAD, HyperSonic Sound, and the Acoustic Spotlight
15. The Neurophone

A1. Glossary

A2. Proven-to-Exist E-weapon Technologies

1. Purpose of This Booklet

This booklet is not a technology course. It is a collection of highlights of technology information and jargon to assist targets of organized stalking and electronic harassment (OS/EH) who do not have technology education and experience.

Most people can handle technology concepts well in conversation, even if their jargon is a little off, in most situations. But the OS/EH situation is quite different from “most situations.” Half of our attacks are in the form of silent, through-wall technology capable of singling out just one person, even in crowds. We are always fighting for credibility, and there are always skeptics and contrarians who will take advantage of a slip up in tech speak.

To targets who have technology backgrounds: I have intentionally avoided flooding the reader with the full story about the technology concepts presented here. You may find things you consider “needing more detail” or “not quite right.” Please keep in mind that this collection of information is for non-technology-educated people, and the goal is to give just enough insight that non-technology-educated targets can improve their grasp of technology concepts. Improvement, not a thorough education, is the purpose of this booklet.

Another e-booklet which outlines the proven-to-exist and not classified secret and available to the public for up to half a century and create-some-of-the-effects-we-experience electronic weapons is at:

<http://www.multistalkervictims.org/osatv.pdf> (Electronic Weapons chapter)

The above booklet is specifically designed to be given to the general public. The electronic weapons chapter is also appended here at the end of this booklet.

More detail on those weapons can be found here:

<http://www.raven1.net/proventechs.pdf>

See also Countermeasures and Detection:

<http://www.multistalkervictims.org/oscd.pdf>

1a. Is It a Relevant Weapon, or Not?

Here is a list of criteria for determining if a given technology can be credibly used in describing electronic harassment attacks:

- it reproduces EXACTLY at least one of the attack effects we commonly experience
- it does so SILENTLY
- it does so THROUGH WALLS without disturbing the walls in any way
- it does so at NEXT DOOR NEIGHBOUR distances

- it does so withOUT alerting/affecting neighbours
- it has been DEMONSTRATED, NOT just forecast, and the details of the demo are documented in a mainstream ORGANIZATION's publication under their name or logo (individual assertions do not work in forcing reluctant, fearful or corrupt officials to accept reality, even if the individual is eminently qualified)

Electronic weapons which do not meet those criteria can be helpful, by opening the eyes of the public that there really are such things as electronic weapons. But helpful or not, technologies which do not meet those criteria should not be claimed as being in use against organized stalking and electronic harassment (OS/EH) targets.

2. Attacked by a “Signal,” not a “Frequency”

Best to say “attacked by a SIGNAL.”

In speaking and writing to non-targets, we have the substantial disadvantage that at this time in history, the general public is unaware of OS/EH operations. That means that problems with jargon which are insignificant in, say, talking about gardening, can make us less believable.

The title of this section illustrates a common tech talk problem. Targets will sometimes say they are being attacked “by a frequency,” or by “frequency weapons.” While this isn't fatal, it could be improved.

The technically proper name for “something” which emanates from a source and travels to an object, where the “something” causes an effect is SIGNAL. When you are talking to people with technology backgrounds, SIGNAL is the best term to use.

Electromagnetic and acoustic SIGNALS have different “properties.” One such property is the FREQUENCY of the signal. FREQUENCY is just a property or attribute, it's not the “stuff” which enters your body and causes discomfort.

3. Fields

Most people understand magnetic fields, and static electricity fields. A FIELD can be static, not changing (like “static electricity”), or can be time varying, such as the way current flowing in your home power wiring can affect things nearby. A FIELD can have FREQUENCY as one of its properties.

A FIELD fills an AREA.

It is equally OK to refer to “detecting a FIELD,” or “detecting a SIGNAL.” To say “detecting a FREQUENCY” is a bit confusing because it could mean a property of an EM signal, or sound.

4. “Electric/Electrostatic,” “Magnetic,” and “Electromagnetic” Fields

ELECTRIC or ELECTROSTATIC fields happen when two objects have different voltage levels

applied to them, for example, two live wires, or you and a metal object in dry weather where you have picked up “static electricity.”

MAGNETIC fields exist around magnets, and magnets can be wires carrying current, either steady current or alternating current as in your house wiring. (Coiling a wire can increase the strength of the magnetic field in the area.)

Signals which include radio, microwave, infrared, light, ultraviolet, xrays, and gamma rays, are ELECTROMAGNETIC, and can also all be referred to as radiation.

- Of the three field types named in this section, ELECTROMAGNETIC fields can be created by a signal at huge distances. Electric/electrostatic and magnetic fields, in practical terms, are not long distance things.
- You know how table salt is a chemical compound of sodium and chlorine? Salt is not at all like either pure sodium or pure chlorine.

ELECTROMAGNETIC fields or signals or radiation are likewise different from both electric/electrostatic or magnetic fields, like a chemical compound.

- ELECTRIC and MAGNETIC fields can be either steady (“static”) or vary with time.

However, ELECTROMAGNETIC (EM) fields are unique, in that they are only produced when an electric current is changing with time. “Oscillation” is required.

In a practical sense, being harassed by either electric/electrostatic or magnetic fields would require that something capable of setting up such fields be physically close to the target.

A Tri-Field meter (<http://www.trifield.com>) has a selector switch and can check for all three types of fields.

ELECTROMAGNETIC fields or signals or radiation come in two varieties, depending on frequency of oscillation:

- Non-ionizing, from zero Hertz up through ultraviolet light
- Ionizing, above ultraviolet light

When the frequency of oscillation of an EM signal gets high enough, that radiation is energetic enough to knock some electrons out of their orbits around atoms or molecules. An atom or molecule which is missing or has an extra electron is an “ion.” That signal is in the “ionizing” frequency range.

When considering experiments with test equipment, you need to know whether you are looking to test for non-ionizing or ionizing radiation as the testers are quite different.

To date, most of the bodily effects which can be caused by EM radiation are documented in the non-ionizing lower frequency ranges.

5. Sound Versus Electromagnetic (or Electric or Magnetic) Fields/Signals

Sound is totally different from electromagnetic or electric or magnetic fields/signals.

Sound is mechanical vibrations in some physical object or substance. Nothing “electrical” about it.

Sound cannot travel in the vacuum of space, so if someone says a satellite can listen to conversations on Earth, that's a bogus claim. A radio transmitter on Earth, sending to the satellite, would be required for a satellite to hear conversations.

Sound travels at FAR less speed than electromagnetic signals. EM signals travel at the speed of light, or 300,000 kilometers/186,000 miles a second.

Sound travels at about 0.35 kilometers/0.2 miles a second. Not even close.

6. The Frequency Spectrum

“Range of frequencies” is what a spectrum is.

The spectrum of possible frequencies can apply either to sound or to electromagnetic signals. The full range of commonly spoken about frequencies goes much higher for electromagnetic (EM) signals than it does for sound, though sound up in the megahertz range is used commercially.

Frequency is measured in HERTZ. One HERTZ is one pair of wave actions, one swing upwards and one swing downwards on a wave form chart, per second. Older information referring to frequency may use the term “cycles per second.” One “cycle” is also one pair of wave actions, one swing up and one swing down, on a wave form diagram.

FREQUENCY SPECTRUM FOR SOUND

100,000 Hz .	ultrasound ~20,000+	** HyperSonic Sound, and its competitor, the Holosonics Acoustic Spotlight, operate around the 200,000 Hz frequency range
10,000 Hz ...	~ 20,000 Hz	** OS/EH targets' tinnitus is around 11,000 Hz measured by using an audio tone generator to “zero beat” (synchronize with) with the tone experienced by the target
1,000 Hz	audible	
100 Hz	~ 20 Hz	** LRAD, the directional loud hailer system, operates in the normal audible sound frequency range
10 Hz	~ 20 Hz infrasound	
0 Hz	~ 0 Hz	

The term “spectrum is almost always used conversationally to mean the electromagnetic frequency spectrum, though sound has a spectrum too.

RADIO AND THROUGH-WALL RADAR ELECTROMAGNETIC SPECTRUM (Wavelengths apply to EM signals, not sound. This chart stops at visible light.)

300 THz	0.001 mm	430,000 GHz

7. Resonant Frequency

When an electromagnetic signal arrives at a conductive object in its path, this signal will cause free electrons (lots of those in metal objects) to move back and forth.

The size and shape of the object determine a frequency at which the electrons move back and forth most energetically. That is the resonant frequency, and at that frequency, the object can be set into resonance by a very small incoming EM signal.

There are some important things about resonant frequency that targets need to know about.

First, a real life resonant frequency of an object is not a single frequency, but a band of frequencies. Yes, the very peak of electron motion does have a maximum at a single frequency, but frequencies near that resonance point also produce fairly energetic motion of the electrons in or on the object.

A graph of frequency versus electron motion is bell-shaped, with the frequency at the center of the bell called the resonant frequency. That bell shaped response curve is very important for targets to grasp, because what it means is, there is not a unique single frequency at which powerful electron motion occurs, but a band of frequencies. (See the illustration below.)

We often hear targets claiming that, for example, one person's head is unique in shape, therefore it has a unique resonant frequency. The bell-shaped response to an incoming (or transmitted) signal shows that although heads are unique, the uniqueness isn't enough to have a single, clearly identifiable frequency which is measurably different from that of other heads.

There is a second factor which determines how unique the resonant frequency of an object is, and that is the object's "quality factor," commonly called "Q" by technology workers. The higher the Q, the sharper will be the bell shaped response curve. But the response curve will never turn into a single vertical line representing a single unique frequency.

The illustration above shows how low Q factor makes the response curve much flatter, meaning a resonance point is much less unique.

A simple straight wire or rod antenna, commonly called a “dipole,” has about as high a Q as is obtainable under real world conditions. When a straight thin wire is made progressively fatter, the Q drops. When an object is shaped like a sphere, the Q is not as high as for a dipole.

Furthermore, the resistance of the object's material causes the Q to drop as the resistance rises. Body parts have hundreds to thousands of ohms resistance, whereas a wire antenna may only have a fraction of an ohm. So a head's Q is low compared with a straight wire antenna. Clearly, when talking about conventional radio (EM) signals, our heads do not exhibit unique resonant frequencies.

Another way to visualize Q, quality factor, is to consider the effect of trying to ring a bell under water. You'll still get a short tone, but the tone is quickly damped out by the friction of the water. A bell under water has far less Q than in air.

Another common assumption targets make about body part resonance is that everyone's DNA has a unique resonant frequency. When talking about a conventional radio signal, all DNA has virtually identical response curves, which is to say all DNA has virtually the same resonant frequency. That is because in spite of internal differences, all strands of DNA are approximately the same length. Length is the primary determinant of resonant frequency.

Moreover, the Q factor of DNA is even lower than that of a head, because the ends of the DNA strands are in contact with other conductive flesh. A body part embedded in flesh is like a radio antenna where, instead of glass or porcelain insulators at the ends, the wire was simply wrapped around damp tree branches. It would work to a degree, but resonance would be very broad because the partly conductive damp wood lowers the Q.

IMPORTANT: When I say these things to targets, many assume I'm saying that surgically precise accessing of our brains and nervous systems doesn't happen or can't happen. NO. I am not saying that. What I am saying is that the surgically precise targeting is not being done with anything as simple as conventional radio signal resonance. We do not know how the access is being done at time of writing. You might say "It is AS IF my harassers are able to monitor my brain and nervous system activity." That is not recommended for first contact (with non-targets) situations, however. That qualifier phrase "AS IF" is critically important.

8. HAARP

"High frequency Active Auroral Research Project," a series of high power radio transmitting stations with "phased array" antenna systems. These phased array antenna systems can aim a beam of HF band (3 to 30 MHz) radio signal at the ionosphere. This causes heating of the ionosphere, thinning it. The signal is also refracted (bent) back down to the Earth at a distant point. HAARP can ****NOT**** target single individuals - when the signal reaches Earth it has spread to many square miles. HAARP is ****NOT**** "microwave."

Targets tend to think of HAARP as a candidate for a source of some of the disabling effects they experience.

Pulsed radio signals have been demonstrated to influence, with potential for disabling effects, the overall electrical "rhythm" of the brain. This is called "brain entrainment." The Lida machine, an older medical device used for sedation, demonstrated this. Because HAARP can be pulsed in the same way, HAARP has "Lida-machine-like" potential for influencing the

mental and physical state of people where its signal returns to Earth.

However, the HAARP beam can never be smaller than the size of the huge antenna farms, with an area of a couple of city blocks. And because HAARP transmits in the "High Frequency" or "shortwave" band, the frequencies in that band do not focus sharply at all. This is because EM signals' wavelengths act like video screen "pixel size." Long wavelengths produce a very fuzzy "image"; they don't focus tightly.

Furthermore, the ionosphere is not mirror-like. HAARP signals do not "reflect from a shiny surface," but rather, they are gradually bent as they travel through miles of ionosphere, called "refraction." Refraction further spreads the beam. Depending on conditions, the refracted signal will cover at least dozens of square miles and probably more when it returns to Earth.

This means HAARP's effects would be felt by everyone in a wide area, not by specific individuals. For this reason, I don't list HAARP as one of the proven electronic harassment weapons. Having said that, publicity about HAARP has been helpful in gradually educating the public that EM signals can have effects on the mind and body. Just don't claim you personally are targeted by HAARP unless all your neighbours are complaining of the same effects you are experiencing.

Just keep in mind that targets who get electronic attacks which are not shared by neighbours over a very wide area are NOT being targeted by HAARP.

HAARP can NOT pinpoint specific individuals.
One article about HAARP claims:

"How low-frequency waves are absorbed and reflected by the earth can reveal what's underneath-including hidden bunkers."

HAARP MIGHT - it remains to be publicly demonstrated - be able to ILLUMINATE underground facilities with its signal. I will wait for a DEMO on that.

However, HAARP is a TRANSMITTING facility.

It would take some other device to PICK UP any reflections from underground facilities. HAARP's antennas do not appear oriented to do the RECEIVING task.

For example, a flashlight ONLY illuminates a darkened area. It takes YOUR EYES to RECEIVE the reflected light. The flashlight itself is not capable of "seeing in the dark."

So unless a mainstream documented demonstration comes to light, it is not correct to claim that HAARP can reveal "hidden bunkers."

9. Grounding

SUMMARY

Grounding is not necessary to shield against electromagnetic signals.

Many folks, including many with technology backgrounds, insist that in order for electromagnetic shielding to work, the shielding must be grounded. This is not true.

Shielding works by Lenz's Law, which describes currents circulating within shielding when an EM signal impinges on the shielding. These currents generate an opposing EM signal which cancels the incoming signal, and this opposing signal travels back away from the impact point as the reflected signal. Circulating currents do this. There is no need for current flow to or from the Earth.

Consider shielded electronic equipment held in your hand, mounted in your automobile, or mounted in aircraft, or even in satellites. The shielding in these devices works just fine, even though they are not grounded.

Shielding for safety reasons is often grounded, but that is not to stop EM signals.

There are antenna systems which do use the Earth as one pole of their “dipole” antenna system. That is the choice of the designer, and there are other designs which work equally well (called “balanced” antenna systems) which do not require connection to the Earth.

Also, some receivers exhibit less noise when grounded. The atmosphere has electrostatic charge which can generate noise. But that grounding is to reduce “static” in the receiver, it is not to shield against EM.

NOTE CAREFULLY: Grounding has been reported as successful in some countermeasure experiments. I'm not saying grounding doesn't help. I'm making a totally different statement, that grounding isn't necessary to shield against conventional EM signals.

Targets must keep in mind that a significant number of targets, conservatively 40-50, myself included, experience repeated attacks which are beyond the capabilities of technology as taught in school. Generally these are of the remotely induced vibration or shoving around type. (Remotely induced vibration, incidentally, is also reported by the “Taos Hum,” now world-wide hum sufferers as well.)

So when technology advanced beyond that taught in school is in use, it's anyone's guess as to what countermeasures may be effective. Consequently, grounding may well be an effective countermeasure. What I'm saying in this section does not contradict those successes, as I am writing strictly about conventional EM signals.

10. Power Level

SUMMARY

Microscopic implants put out power levels FAR below what is required to communicate with satellites. And neurons' signals are TEN MILLION times SMALLER.

Targets often don't consider power levels required when building their theories of how their harassment may be done. The result of ignoring power requirements are theories such as implants which are microscopic in size, and which can only acquire small power by way of battery action of bodily fluids, communicating directly with satellites hundreds or thousands of miles away.

Consider a small watch battery, 5.8 mm (0.22 in) diameter, with an energy capacity of 6 milliamp-hours (mah), putting out 1.5 volts.

Normally, batteries are designed to be used at currents of no more than 1/10th of the energy capacity. In this case, the battery could be used to power, say, a small radio transmitter at a current of 0.6 milliamps. Times 1.5 volts = 0.9 milliwatts. (The smallest walkie talkies use perhaps 50 milliwatts, or 50 times greater power.)

A tiny IMPLANT with such a relatively large battery, transmitting at 0.9 milliwatts, encased in semi-conducting flesh, is not going to be able to communicate directly with a satellite.

Even more so for “nano” size implants, because nano-size means nano-power.

A microscopic implant within the body, directly communicating with a satellite, is very far from being demonstrated. Claims that miniaturization may have reached this success level need demonstration before we can make such claims.

IMPORTANT: Targets sometimes feel that I'm saying that technology which communicates directly with our brain and nervous systems doesn't exist. I'm not saying that. I am saying that claiming satellite-based equipment, using conventional as-taught-in-school EM technology, communicating directly with body implants, has not been demonstrated, not even close. You can say “It is AS IF my harassers are able to monitor my brain and nervous system activity.” That is not recommended for first contact (with non-targets) situations.

In turn, that means avoid making claims that you have implants which are being read by satellite, and avoid using articles making such claims without an actual demonstration published under the name and logo of a mainstream source.

So far, that is for battery powered small transmitters.

When you get down into the electrical power involved with BRAIN activity, wattages are far smaller.

I own a small single channel EEG (electroencephalograph) machine. It has a sensitivity control calibrated in microvolts, from a couple up to 70.

One google find regarding current levels in neurons can be in the area of 10 nano-amps:

["Serotonin 1A receptor ligands act on norepinephrine neuron firing ...](#)

with a 10 nA current, by itself, produced a similar and statistically significant 27% decrease on basal LC. NE *neuron firing* in rats receiving glutamate and ...

OK. Wattage equals volts times amps. This is rough, but it does given a ballpark idea of the sorts of power levels neurons may transmit at.

Let's increase that 10 nanoamps to 1 microamp, a 100 times jump in current.

Let's go a little above the highest voltage on the EEG unit's scale, and use 100 microvolts.

So the next calculation is based on numbers higher than brainwave reality.

Brain event power level = 1 E-6 amps times 100 E-6 volts (calculator exponents)

= 100 E-12, or 100 PICOwatts.

The brain, then, emits PICOwatts of power when the neurons fire, and that is a generous calculation. And that is before the attenuation (power reduction) caused by the shielding effect of the semiconductive skull.

A 100 PICOwatt transmitter (a neuron, in other words) is 10 MILLION TIMES SMALLER than the little watch-battery powered transmitter described above.

And we have no demonstration of even the watch-battery transmitter, transmitting one milliwatt, carrying on direct communications with satellites. So how can a satellite directly read "transmitters" which are 10 MILLION TIMES smaller?

This is why I constantly advise not claiming your brain is being read by satellite - it's not even close to possible, using demonstrated as-taught-in-school technology. You might say "It is AS IF my harassers are able to monitor my brain and nervous system activity." That is not recommended for first contact (with non-targets) situations, however.

11. Does Sound Cause Remote Physical Manipulation?

SUMMARY

Sound cannot shove you around silently, through walls.

Some targets get odd vibration of not only body parts, but inanimate objects as well. What makes this vibration odd is that the surface underneath is not vibrating. These occurrences

have characteristics of harassment. For example, when a target needs to use a keyboard, the keyboard suddenly starts vibrating, sometimes to the point where it dances around the desk surface. Or when the target sits down to a meal, the dining table vibrates while the floor does not. Ripples on cups of liquid clearly show the presence of real mechanical vibration.

Or the target's bed is vibrated at times through the night to keep the target awake. Sometimes body parts themselves will vibrate and the target's muscles are totally slack, playing no part.

Some targets have body parts shoved around. Sometimes the muscles play a part, but sometimes the muscles are completely slack, playing no part whatever.

Some targets reason that this must be something like an "infrasound" attack, that is, sound of too low a frequency to be heard. There is logic to that, as we've all experienced things vibrating and rattling when some large vehicle or piece of machinery is operating nearby.

However, there is too wide a variation in environments to explain this by "some large piece of equipment nearby." Sometimes the vibration is up in the audible range. Sometimes the bed frame is shaken much more violently than could be explained by infrasound.

Furthermore, when intense infrasound is in the area, even though the ears can't hear it, there are feelings which tell the experiencer that powerful low frequency sound is in the area. Such feelings do not accompany this odd vibration.

And infrasound can't explain being shoved around. Shoving around happens at times during attempts to sleep, and also happens when the target is attempting to do either messy things, or things requiring precision and care. Over time it is clear these vibration/shoving occurrences are harassment, and not something natural. Furthermore, they haven't happened to targets prior to their becoming a target.

(Interestingly, the original "Taos Hum" and now worldwide-Hum sufferers sometimes report this anomalous vibration too. The Hum sufferers do not experience all the other things that make up organized stalking and electronic harassment.)

Heavy infrasound would be experienced by neighbours. Vibration and shoving are unique to the target.

Some have suggested that "sonic bullets" are being used for at least the shoving around attacks. That is not the case. "Sonic bullets" are shockwaves of the sort produced by firing a blank cartridge in a firearm. They are very noisy, while the shoving around occurs silently.

Furthermore, a sonic bullet, which is a localized travelling shock wave, would be stopped, diffused, and converted to heat when a target's home wall were encountered. The target inside would experience a thud, and a quick cycle or two of vibratory movement of the wall. The sonic bullet would not travel through the wall unless it first blew a hole in the wall, and that would not be silent and would be noticed by everyone in the area.

As to what is causing this remote vibration and shoving around - the answer is we do not know at this time. I do not recommend talking about being shoved around to non-targets as the technology is advanced far beyond technology taught in today's schools.

12. Light vs. Microwave, Resolution

SUMMARY

Microwave harassment-capable signals have wavelengths THIRTY THOUSAND TIMES longer than visible light. This means harassment-capable microwaves can not be aimed with the surgical precision of visible light. Wavelength is “pixel size” in determining the focus-ability of EM signals.

Targets believe that since high quality optics can pick up a licence plate from a satellite, it must be equally easy to aim a microwave signal with a beam precise enough to hit just the target's head without affecting neighbours. That's not so, and it has to do with the “resolution” of light versus microwave signals.

To understand this, compare the wavelengths of visible light with microwave signals to get an idea of why light has very precise resolution, but microwave does not.

Visible light's wavelengths are shorter than 0.001 millimeter.

The type of microwave which can penetrate the body to some degree would be at frequencies below 10 GHz. That means harassment-capable microwave would require wavelengths longer than 3 centimeters, or 30 millimeters.

That wavelength, 30 millimeters, is, minimum, THIRTY THOUSAND TIMES LONGER than visible light.

Imagine increasing the pixel size on your computer by a factor of 30,000! You would not be able to resolve any detail at all.

Harassment capable microwave, below 10 GHz then, is a “totally different animal” than visible light. Far coarser resolution, and, as wavelength increases (going lower in frequency) signals will increasingly spread out. At satellite distances, microwave can not be focussed as light can be.

A way to look at resolution is to conceive of a signal's wavelength as being approximately equal to “pixel size.” A radio signal is not going to be able to portray a picture of something smaller than the wavelength. That is why through wall radar uses wavelengths in the range of one millimeter.

** If anyone has discovered actual maser beam spread information, I'd like to add that here to this section. I have found references to Laser beam divergence, but nothing so far in the way

of actual data for Maser beam divergence.

13. Satellite Capabilities

Some targets report a satellite is regularly “parked above them.”

Low Earth orbit satellites are at least a couple of hundred miles up, to clear the atmosphere. Orbits that low require the satellite to move at around 17,000 miles per hour to stay in orbit. There is no way a low Earth orbit satellite can “park above” a target's home and be visible.

At altitudes of 22,300 miles, a satellite can indeed park, (exhibit no motion relative to the Earth's surface,) but only above the equator. This is the “geosynchronous” orbit, and it's not possible to park a satellite above a home in North America. More than that, any satellite of reasonable size is not going to be visible to the naked eye at 22,300 miles.

Discussing attacks by satellites as a fact is not recommended for speaking with or writing to non-targets. One could say “It is AS IF satellites are part of the harassment” because that is not stating it as a proven fact. That phrase “AS IF” is extremely important to maintain your credibility.

14. LRAD, HyperSonic Sound, and the Acoustic Spotlight

SUMMARY

LRAD uses audible sound and does not qualify as a weapon which can reproduce OS/EH harassment experiences. It is not silent.

Back in the 1990s, inventor Woody Norris developed a way to transmit sound over long distances, in a fairly narrow “beam,” silently except where the acoustic beam impacts a solid object. This was do-able because when sound is up in the ultrasound range (above 20,000 Hz) does travel in a fairly narrow beam when projected by a flat plate vibrating at ultrasound frequencies. He calls this technology “HyperSonic Sound,” now available from American Technologies Corporation.

Norris found that transmitting two ultrasound beams “within” one another using arrays of small flat plate transducers, some sending one frequency, the others sending a slightly different frequency, when this combination of two ultrasound beams struck a solid object, sound at the frequency difference between the beams would emanate from the beam impact point.

For example, if two sets of intermingled transducers sent one beam at 200,000 Hz, and the other set of intermingled transducers sent the second beam at 203,000 Hz, a tone of 3,000 Hz would be heard where this intermingled beam pair hit a solid surface.

By using a voice or music waveform to vary the frequency of one of the intermingled beams,

this system performs true ventriloquism or “throwing of the voice.”

This mixing of ultrasound beams to produce audible content is called “acoustic heterodyning.”

Because this technology “dumps” its audible content at a solid surface, it doesn't penetrate walls. If an acoustic heterodyning beam hits the wall of a target's home, the target will hear ordinary sound emanating from the outside of his/her wall. What this means for targets is that they should not assume that acoustic heterodyning, also known as “HyperSonic Sound,” or, the “Acoustic Spotlight,” is responsible for their voice to skull experiences.

However, two targets to date have done some interesting activism with the public using their acoustic heterodyning demonstration units. Even though it's not true voice to skull, it does begin to educate the public to the fact that there are interesting technologies they don't know about, and that helps us quite a bit.

Back when Woody Norris was developing HyperSonic Sound (HSS), he began work on a loud hailing system he called “LRAD” or “long range acoustic device.” Originally, promotional material suggested this device would make use of the HSS principle. However, the finished product is a straightforward loud hailer, using an array of transducers similar to those used for HSS devices, but carrying ordinary audible frequencies.

With LRAD, a narrower beam is formed by physically placing the transducers around the edge of the array at a slightly different height above the backplane than the main central part of the array. This somewhat cancels out sound leaving the transducer array which would otherwise spread out.

Because LRAD transmits only audible sound, it can NOT reproduce the attack effects we experience. A target's neighbours would all be alerted if LRAD were in use in the neighbourhood.

15. The Neurophone

The Patrick Flanagan Neurophone is a simple device. Conventional audio signals are played into the body by way of a pair of electrodes. Those electrodes are “piezoelectric” material, meaning as a voltage is applied to the electrodes, they mechanically vibrate, generating actual mechanical sound, which is carried by the body into the hearing sense.

The Flanagan Neurophone can NOT - repeat - NOT operate without being in contact with the body. Consequently, in spite of the appealing name, it can NOT be included in the list of electronic weapons which:

- operate silently
- through walls
- without breaking or disturbing the wall
- and without affecting or alerting neighbours.

A1. GLOSSARY

ACOUSTIC BULLET

An acoustic bullet is a travelling shock wave, projected in a way that it stays in a compact area and can cause damage when it impacts something in its path. An acoustic bullet's action is similar to the spherical shock wave resulting from a bomb blast, but doesn't spread out as a bomb blast does. As with a bomb blast shock wave, an acoustic bullet will be converted to mechanical motion, then to heat, when it impacts a wall and will not travel through a wall with the original compact size, shape and energy. If the wall doesn't break, what gets transferred to the inside is diaphragm-like motion of the wall with some follow up low frequency vibration.

A target would be well aware, as would the neighbours, if an acoustic bullet were to impact the wall of a target's home - they are anything but silent.

ACOUSTIC HETERODYNING

Acoustic heterodyning is the transmission of a pair of ultrasonic signals through the air, which, when they strike a solid surface, mix and release audible sound which has been modulated on to the two ultrasound signals. Two commercial versions are "HyperSonic Sound" and the "Acoustic Spotlight."

Acoustic heterodyning does not carry through walls. Any audible sound is released at the outside of the wall, as if a small loudspeaker were mounted on the outside of the wall. However, this technology is voice-to-skull-like enough to make for interesting demonstrations with the public.

ACOUSTIC SPOTLIGHT

"Acoustic Spotlight" is one of the commercial versions of acoustic heterodyning technology. Two ultrasound signals travel together in a narrow column, and release audible sound at the point of impact with a solid object. Acoustic Spotlight technology is the product of Holosonics, Inc.

The "Acoustic Spotlight" does not carry through walls. Any audible sound is released at the outside of the wall, as if a small loudspeaker were mounted on the outside of the wall. However, this technology is voice-to-skull-like enough to make for interesting demonstrations with the public.

AMPERE

The unit of electrical current. Electric current is the rate of flow of electrons which are broken free from atoms, normally temporarily. (Metal atom electrons are easy to dislodge, and that is why metal conducts easily.) It takes VOLTAGE to push electrons in a conductor to create a current.

ATTENUATE/ATTENUATION

Reduction, usually a reduction in power.

AUDIO FREQUENCY

Frequencies between 20 and 20,000 Hertz

CURRENT

Electric current is the rate of flow of electrons, measured in amperes, which are broken free from atoms, normally temporarily. (Metal atom electrons are easy to dislodge, and that is why metal conducts easily.)

DECIBEL

A common way to express relative power in technology literature. A small increase or decrease on the decibel scale is a large increase or decrease in actual power measured in watts. For most purposes, targets simply need to be aware that when the term “decibels” appears, it is power level being discussed. “Decibels” can apply to both sound and electromagnetic signals.

Electromagnetic shielding is rated in decibels, because for practical purposes, it is not possible to bring the level of electromagnetic signal inside to absolute zero. In most real world cases, EM shielding can reduce signal levels to well below where the tiny remaining signals cause problems.

Quick examples: A 60 decibel reduction is a reduction to one MILLIONTH of the signal outside the shielding. A 120 decibel reduction is one TRILLIONTH of the signal outside the shielding. In other words, the actual power reduction is far higher than the number of decibels.

DIPOLE

The simplest type of radio antenna. A straight wire or rod cut to half of the wavelength of the signal the antenna is designed for. This is a high-Q (quality factor) antenna.

EEG

“Electroencephalogram/graph,” the recording of the brain-induced electrical activity of the surface of the skull by way of skin-contact electrodes. The EEG readings are not the same as the firing of individual neurons in the brain, but represent the electrical average of the activity of millions of neurons. EEG frequencies lie in the range of approximately 0 - 100 Hertz, and all brains emit constantly changing frequencies within this narrow band.

There is no frequency in this narrow band unique to an individual. It is possible that a

computer program which analyzes the pattern of the many electrodes might be able to infer the identity of the test subject. However, doing this at next door neighbour distances has not been demonstrated at time of writing, so targets are urged to not claim this is being done.

ELECTRIC or ELECTROSTATIC FIELD

An area in which charged particles, such as electrons, experience mechanical force due to the presence of nearby charged objects. (Measured in units like volts per meter.) The familiar mechanical actions of static electricity show the presence of an electric field.

An electric field can be static, or varying (e.g. oscillating at a frequency.)

An electric field is not an electric current, but it can cause a flow of electrons which is an electric current.

ELECTROMAGNETIC SIGNAL or FIELD (EM)

An electromagnetic signal or field is a “chemical compound” of an oscillating electric field and an oscillating magnetic field, inseparable until it acts on a conductive antenna. An EM signal or field has properties different from either a pure electric or purely magnetic field. An EM signal can travel long distances, while both electric and magnetic fields are very short range localized phenomena in practical terms.

ELF

Abbreviation for “extremely low frequency.” The ELF frequency range extends from just above zero Hertz to either 300 Hz or 3,000 Hz, depending on whose definition one uses. When OS/EH targets use ELF, they are often talking about the low end of the range, zero to 100 Hz, which is where brain and neural activity takes place.

ELF frequencies can not be used to transmit voice to skull, as they are below the audible frequencies. ELF frequencies are not “microwaves” either.

The wavelengths of ELF signals are thousands of kilometers long and can not be focussed on anything as small as an individual person. ELF signals spread out.

HAARP

“High frequency Active Auroral Research Project,” a series of high power radio transmitting stations with “phased array” antenna systems. These phased array antenna systems can aim a beam of HF band (3 to 30 MHz) radio signal at the ionosphere. This causes heating of the ionosphere, thinning it. The signal is also refracted (bent) back down to the Earth at a distant point. HAARP can ****NOT**** target single individuals - when the signal reaches Earth it has spread to many square miles. HAARP is ****NOT**** “microwave.” (Microwave signals aren't refracted by the

ionosphere.)

HYPERSONIC SOUND

“HyperSonic Sound” is a brand name of acoustic heterodyning technology, in which a pair of ultrasonic sound signals travel together in open air, and mix to release audible sound content where the ultrasound signals impact a solid surface. This technology is produced by American Technologies Corporation (Woody Norris, inventor.)

HyperSonic Sound does not carry through walls. Any audible sound is released at the outside of the wall, as if a small loudspeaker were mounted on the outside of the wall. However, this technology is voice-to-skull-like enough to make for interesting demonstrations with the public.

INFRARED

Electromagnetic radiation between 300 GHz (the top of the “radio” frequency band) and 430,000 GHz (the beginning of visible light.) This is a huge band where the top frequency is 1,433 times higher than the bottom. Infrared signals behave like visible light at the top of this band, and behave more like microwave at the bottom of this band. “T-waves” are signals in the terahertz range, and are typically spoken of in relation to through wall radar, which uses the lower end of the infrared band.

INFRASOUND

Sound at any frequency below 20 Hz.

INVERSE SQUARE LAW

If you research technical literature about radiation, you may find the term “inverse square law” referenced. The inverse square law describes how the power of a signal decreases with distance from the source.

If the source is not a perfectly collimated beam, that is, a beam which doesn't spread at all, the signal strength decreases in proportion to the square of the distance. That means that if you double the distance from the source, the signal is cut to one fourth of the strength at the closer position. In other words, distance causes signal level to drop rather quickly, not just in proportion to the distance.

Laser beams are often thought of as perfectly collimated beams, and some lasers do use lenses to achieve that. But over large distances, even laser beams spread to some small degree. Microwave dishes also emit a beam which spreads to a degree.

LASER

“Light Amplification by Stimulated Emission of Radiation.” A laser is a device which takes ordinary light, in which the light's waveforms are jumbled and random, and

converts the random “photons” (units of light) into photons all oriented in the same direction and leaving the device so all the waveforms are in perfect lock step with one another. This produces a beam which can go long distances with very little spreading.

It also means that the energy put into the beam can be nearly 100% recovered at the beam's impact point with an object.

The term “laser” is commonly applied to visible light, infrared, and ultraviolet radiation.

LENZ'S LAW

Lenz's Law describes the action where. when a signal acts on an area of conductive shielding, circulating currents in the shielding will act so as to set up an opposing signal, and that opposing signal travels away from the shielding as a reflection of the incoming signal. Reflected radio signals behave like reflected light, although the signals are diffused more than light (don't reflect in a single sharp-edged beam.)

LIDA

The half-century-old LIDA machine is a pulsed, 40 MHz, 40 watt radio transmitter, with other features such as pulsing light and heat. This machine originated in Russia and was intended as an alternative to sedative drugs. It operates by “entraining” (influencing) the brain's electrical rhythms to a frequency which causes drowsiness. It is the radio equivalent of rocking a baby's cradle or the motion of a train while trying to sleep, or the hypnotist's swinging watch. It's not the frequency of the signal that does the work, it's the rate at which it is pulsed.

MASER

“Microwave Amplification by Stimulated Emission of Radiation.” A device which generates a microwave signal in which all the energy leaves the device aligned in a narrow beam, the microwave counterpart of a laser.

MEG

“Magnetoencephalogram/graph,” the recording of the brain-induced magnetic activity at the surface of the skull by way of pickup coils outside the skull, at very short ranges. This correlates to internal electrical currents because currents create magnetic fields. The MEG readings are not the same as the firing of individual neurons in the brain, but represent the magnetic average of the activity of millions of neurons. MEG frequencies lie in the range of approximately 0 - 100 Hertz, and all brains emit constantly changing frequencies within this narrow band.

There is no frequency in this narrow band unique to an individual. It is possible that a computer program which analyzes the pattern of the many pickup coils might be able to infer the identity of the test subject. However, doing this at next door neighbour distances has not been demonstrated at time of writing, so targets are urged to not

claim this is being done.

MICROWAVE

An electromagnetic signal starting at either 300 MHz or 3,000 MHz (3 GHz), up to 300 GHz (the top of the “radio” frequency band.) Different sources define the low end frequency differently.

MICROWAVE AUDITORY EFFECT

Microwave auditory effect is not voice to skull. MAE refers to the ability to hear microwave pulses which impinge on the head. Also called “radar hearing.” MAE was formally published by experimenters Allen Frey and James C. Lin, having been discovered by radar technicians during World War II.

Frey's and Lin's work led to the successful demonstration of voice (and other sounds) to skull by experimenter Joseph Sharp in 1973.

Targets should, when interest is expressed by non-targets, (after first contact,) refer to “voice to skull” instead of MAE, because the essential thing the public needs to know about is the use of voice for harassment, not just “clicks and buzzes.”

MODULATION

Modulation occurs when a steady stream of signal (constant amplitude, constant frequency) gets changed or “shaped” by another signal, typically a voice waveform in radio, or a picture waveform in TV, or chopped into pulses as in radar or Morse code transmissions.

ORGONE

A type of advanced technology which has not been accepted by officials as a “real” technology. Since acceptance by officials is what matters in the fight to expose OS/EH, targets are wise to avoid bringing orgone technology into serious discussions about this crime with non-targets.

OSCILLATE

An object oscillates when it exhibits mechanical vibration (sound,) or, electrons in or on the object move back and forth (electrical oscillation.)

OS/EH

“Organized stalking and electronic harassment.”

PHASED ARRAY

When multiple antennas are spaced out in a grid pattern, and controlled so that the waveforms arrive or depart each antenna at slightly different times, this grid of antennas can emit a steerable beam. ("Phase" means "timing.") The beam will be much narrower and sharper at microwave frequencies than, say, HAARP's range of 3 to 30 MHz, down in the "short wave" band.

Some radar systems use phased array antennas which are electronically more complex, but mechanically simpler than a motor driven dish.

POWER LEVEL

The power level of a signal, acoustic or electromagnetic, is often overlooked by targets as they try to understand how a particular attack type may be done. Targets should look through catalogue descriptions of common electrical or electronic devices and make note of the power consumption, or radiation in radio transmitting devices, to get a feel for what a given power level can do at what distance. Note should also be made of the physical size of various familiar devices which have a power rating.

Power is measured in watts, milliwatts, or microwatts. (Power is sometimes seen measured in "decibels," a system of measurement based on ratios, and not direct measurement in watts.)

Required power levels set limits on how small a device can be to handle a given level of power, and many theories fail when device size versus power handling ability are taken into account.

PSYCHOTRONIC (-ICS)

Psychotronics has several meanings today, making it a poor choice of term to use in the OS/EH arena. Originally, psychotronics was the use of electronic components, built into non-powered devices, along with "special abilities" of an operator, for healing. These "special abilities" seem to be of the psychic variety. This is a good reason to avoid this term in the serious discussion of electronic harassment technology with non-targets.

Literature this writer has seen suggests that advanced remote influencing technology, which could be used for electronic harassment, has been called "psychotronics" in Russian circles. I suggest not using the term with non-targets unless it becomes a popular term specifically referring to harassment, and not some "New Age" concept.

Q-FACTOR or QUALITY FACTOR

The quality factor "Q" of an object is highest when electrons in or on the object can move back and forth freely, with minimum energy loss (conversion to heat.) A high-Q object will resonate powerfully, while a low-Q object will not resonate powerfully and much of the incoming electromagnetic signal will be converted to heat.

A wire dipole antenna has a high Q factor. A head has a low Q factor because of the resistance of the flesh. A strand of DNA has a very low Q factor because it is in contact with other semiconductive material.

RADIATION (NON-IONIZING and IONIZING)

Electromagnetic signals or fields. EM signals up through radio, infrared, visible light and ultraviolet bands are “non-ionizing.” EM signals higher are “ionizing,” meaning they are so energetic that they can strip some of the electrons from molecules they interact with.

RADIO FREQUENCY

Radio frequencies start at either 3 kHz or 10 kHz, depending on a particular authority's usage. The upper limit is 300 GHz, which is also the beginning of the infrared frequency band, and is the area of “millimeter wave” through wall viewing technology.

RADIONICS

An advanced technology which, like “scalars,” “psychotronics,” and “orgone,” has not been accepted by officials as “real.” Therefore, radionics should not form part of a serious discussion of the OS/EH crime arena with non-targets.

RESISTANCE

Real world materials have various amounts of resistance to the flow of electric current. Metals have low resistance compared with insulators which have very high resistance. The resistance of an object affects how powerfully it can electrically resonate, because resistance converts the motion of electrons in or on an object to heat.

Resistance is measured in OHMs. Your average household extension cord, 8 feet long and #16 copper wire, would be something like 0.064 ohms, very low. It has to be low to avoid overheating under load. Body parts have resistances measured in hundreds or thousands of ohms.

REMOTE NEURAL MONITORING (RNM)

Remote neural monitoring, that is, reading the state of someone's brain and nervous system at a distance, has not been demonstrated with the demonstration published by a mainstream source under their name and logo, at next door neighbour distances. This term is appealing to targets, but unfortunately, until it is demonstrated at distances where it could be used as part of electronic harassment, targets should refrain from stating it as accomplished fact. Best to speak of such a concept as one's guess or theory, or that targets' experiences are “AS IF” RNM was occurring.

RESONANT FREQUENCY

For electromagnetic signals, conductive objects, including body parts, can be made to oscillate (support alternating electric currents in or on.) The most powerful currents, at a specific frequency, depend on size and shape. This is like the frequency at which a bell will ring when struck. How powerfully a given object will resonate depends on a variety of things like "quality factor" or "Q." (See also entry above titled "Q-Factor")

SCALAR(S)

"Scalar(s)" is a term which is speculation at this point in time. Scalar(s) is a popular name for an advanced signal type which can create more effects than as-taught-in-school conventional signal types, and probably do so through shielding and regardless of distance. I urge targets to not use "scalars" in serious discussions of harassment technology with non-targets, unless well qualified as speculation. I'm not saying advanced signals don't exist, instead I'm saying we don't know what they are called or how they work at this time.

In Russian literature, similar speculative terms have made it into popular usage, such as "torsion fields" and "leptonics."

SEMICONDUCTIVE SHIELDING

Shielding which has significant resistance, unlike metal.

Metals have more or less zero resistance, so an incoming signal's induced current in the metal can cause the energy to be reflected in an outgoing signal. If a shielding material has significant resistance, the incoming signal will attempt to cause current to flow (see Lenz's Law,) but because the resistance will convert some of the energy to heat, semiconductive shielding will absorb, rather than reflect.

TMS

"Trans-cranial magnetic stimulation." TMS involves pulsing electric current through induction coils, causing magnetic fields, held against the skull. These magnetic pulses have been demonstrated to be strong enough to trigger the firing of nerves when held against the hand. An alternative to electro-shock therapy.

For OS/EH targets, strong magnetic fields act only at very short range in practical terms. If a target discovers strong magnetic fields in their vicinity and there are no powerful induction coils nearby, technology far more advanced than TMS is at work.

T-WAVES

"Terahertz" electromagnetic signals in the vicinity of just above 300 GHz, the beginning of infrared, also called the "millimeter wave" region. For through wall viewing, frequencies into the lower end of the infrared band are used, though as you move up in the infrared band, EM signals behave more and more like visible light and less like

wall-penetrating “millimeter waves.”

ULTRASOUND

Sound at any frequency above 20,000 Hertz.

ULTRAVIOLET

Electromagnetic signals just above visible light. High energy UV lasers can ionize a path through the air which can conduct electricity and this is one form of taser.

VOICE TO SKULL (or V2S or V2K)

The transmission of sound, including voice, into the skull of a target without the assistance of implants or any other device in or on the target. First announced as successful at the University of Utah in 1974, and the journal “American Psychologist” in March 1975. Although voice to skull can be simulated using “acoustic spotlight” technology, V2S usually refers to electromagnetic transmissions.

“V2K” was an abbreviation coined by the United States Army in their on line thesaurus for several years. The definition was eventually removed.

VOLT

The unit of electrical pressure. When loose electrons gather on an object in more than natural quantities, that object possesses voltage relative to other objects. Voltage is what causes electric current to flow when a conducting path is made available. Also called “electrical potential.”

WAVELENGTH

Waves of any type (acoustic, electromagnetic, or water waves) are made up of alternating “up and down motions.” The wave length is the physical distance covered by one complete up and down motion. Historically one complete up and down motion is called “one cycle.”

The physical distances EM signals travel in one cycle are given above, in the chart showing the radio and through-wall radar spectrum.

A2. Proven-to-Exist E-weapon Technologies

This is technology-relevant text, excerpted from the separate e-booklet titled Organized Stalking: A Target's View, included as an appendix for reader convenience. The original link to the separate booklet is:

<http://www.multistalkervictims.org/osatv.pdf>

Chapter 4: Through-Wall Electronic Weapons

In this chapter we will present some silent, through-wall, virtually zero trace evidence electronic technologies which can be used to literally destroy any quality of life a target may hope to have, **in the privacy of the target's home**.

Surprisingly, those technologies are not government secrets, and have been available to anyone with upper middle class income for one to five **decades!** Again, decades! The reason, reader, you may not be aware of them is that they were developed for legitimate uses, and some have not been widely publicized. And you, reader, have one of them right now in your home.

These technologies use the ability of radio signals to penetrate non-conducting walls, and use frequencies and modulation ("signal shaping") methods, which produce effects which are useful for covert harassment.

Here is the list through-wall harassment technologies currently available:

Weaponized microwave oven

A simple microwave oven, door removed, with the door interlock switch bypassed, and held against the bedroom wall of a target in an apartment building or semi-detached house. This device can cause a variety of disabling medical symptoms.

Some of the symptoms of microwave exposure are:

Asthma, cataracts, headaches, memory loss, early Alzheimer's, bad dreams, depression,

fatigue, concentration loss, appetite loss, heart and blood pressure problems, and cancer.

Targets do report those symptoms, however, doctors almost never admit to patients that electronic harassment is even possible, never mind actually happening.

Voice to Skull

Joseph Sharp's voice to skull success, performed with Dr. James C. Lin's pulsed microwave transmitter, and publicly announced in 1974 at the University of Utah, at a seminar presented to the faculties of engineering and psychology.

That seminar, and the operating principle of Sharp's successful experiment, were described in the March 1975 "American Psychologist" journal. The operating principle, which has been improved upon in the more than three decades since Sharp's success, is based on the fact that one microwave radar pulse of medium to high power can produce an audible click in the hearing sense of a person in line with the signal. That effect has been called "radar hearing" since World War II.

Dr. Joseph Sharp used a computer to cause one microwave radar-like pulse to be transmitted every time a speaker's voice wave form swung from high to low, as illustrated below:

The result was that when Joseph Sharp sat in line with a microwave transmitter transmitting pulses as shown above, he could hear a "robotic" voice speaking the numerals 0 to 9. He did not carry the experiment further, at least according to available records. Sharp's experiment took place in 1973, and although the potential for microwave radiation to cause cancer wasn't as widely known, it may be that radiation danger is the reason this technology has not, at least publicly, been developed further.

Research into radar hearing by Dr. Allen Frey in the 1960s established that roughly three-tenths of a watt per square centimeter of skull surface is required to generate the clicks from

which the voice is synthesized. Synthesis of voice from clicks is a primitive form of "digital audio."

For some years in the 1990s and early 2000s, the United States Army recognized "voice to skull" technology, which they abbreviated as "V2K," in their on line thesaurus. For reasons unknown, the Army removed that thesaurus entry circa 2007.

Some references to developing more advanced types of voice to skull can be found among patents, and rare United States Air Force references to the technology in the late 1990s forward.

Voice to skull (V2S/V2K), a commercial version dubbed MEDUSA - "Mob Excess Deterrent Using Silent Audio", was proposed for commercial development for military and police use, per ABC news in summer 2008.

Targets report invasive sound transmissions of good fidelity at various times of day. Voices saying profane and disparaging things are common. False sounds of telephones ringing, pagers beeping, alarm clocks going off, knocking on the target's door, and other sounds have been reported. The fidelity of these transmissions indicates improvement over the method demonstrated by Dr. Joseph Sharp.

Silent Sound

Oliver Lowery's silent sound, U.S. patent 5,159,703, is the current method for "subliminal sound." "Silent Sound" replaced "time slice" subliminal sound, in which small slices of a subliminal message were inserted into an audio stream, such as at a movie or on TV, to influence the listener. Silent Sound is mixed with audio in places like department store Muzak systems to discourage shoplifting.

Although enhancements have been developed, at its simplest, a Silent Sound voice encoder takes a spoken message, and uses a circuit similar to a telephone voice changer to raise the frequency of the voice up near (but not exceeding) the upper limit of human hearing. The listener hears a fluctuating high-pitched tone, and any words cannot be discerned, consciously.

However, the brain can subconsciously decode the words. The brain takes advantage of the fact near the upper limit of hearing, the sensitivity to frequencies drops off. The sensitivity curve is sloped downwards in the Silent Sound frequency range, roughly 14,000 to 16,000 Hertz (cycles per second.) For readers with knowledge of radio detector circuits, recovering audio from a frequency modulated (FM) converted voice signal is done using "slope tuning." A concept diagram of how this works with Silent Sound is shown here:

How the brain decodes FM-encoded voice

"Silent Sound" is not a through-wall device by itself. However, when Silent Sound is transmitted to a target by way of a voice to skull through-wall transmitter, if the target is susceptible to hypnosis (many people are), the target's thought processes and personality could be severely disrupted over time, and the target would have no idea why this was happening, as the sound is essentially silent. The target may hear a high pitched tone or hiss, but no words. The target would be much less able to resist hypnotic suggestions than with audible speech.

It should be noted that many targets report hearing frequent or constant high-pitched tones or hissing.

"Silent Sound" subliminal hypnotic suggestion can also be piggybacked on to a target's cable TV or radio listening, as well as transmitted on a voice to skull signal.

The LIDA Machine

An old medical device, the Russian LIDA machine, a pulsed 40 watt, 40 MHz radio transmitter, which can be used to make a target exhausted on the job when pulsing at the rate consistent with sleep, and with a pulse rate increase, DEPRIVE a target of sleep too.

This device is a radio transmitter version of other types of trance induction devices, such as a swinging watch, or pulsing lights, or pulsing sound. Trance induction works using any low speed, regular stimulus. Even slowly swinging in a hammock or rocking in a rocking chair can induce sleep.

But if someone comes along and suddenly rocks a snoozing person's rocking chair at a high rock rate, that person is going to be forced awake. Same with a slowly beeping tone changing to a rapidly beeping tone. Alarm clocks use rapid beeps, for example.

The LIDA was originally designed as a drugless sedation machine. It was featured in a 1985 edition of a CNN "Special Report." An Associated Press photo of a LIDA machine, with one of the scientists who studied it, Dr. Ross Adey, is here:

The original LIDA machine uses not only a pulsing radio signal, but pulsing lights, sound and even radiant heat as well. It was designed to be used near the patient. The earliest report of the LIDA being in use I'm aware of is the report of a Korean prisoner of war who saw one in operation at a prison camp. That's half a century ago in terms of a radio harassment technology, which is quite simple, having been available for half a century.

(Note: Dr. Ross Adey and Dr. Eldon Byrd were scientists who studied the LIDA machine for possible weapons potential. There is no evidence that Dr. Adey or Dr. Byrd were ever associated with unethical activity.)

Organized stalking targets report overwhelming fatigue on the job at times. I'm retired now, but I was hit so hard with some sort of fatigue that I would have to find a room at work and lie down for as long as 30 minutes to just carry on. Concurrent with this, doctors could find no disease which could explain these very sudden, drop-you-in-your-tracks attacks.

Organized stalking targets also report extreme trouble sleeping, describing the sensation as "being injected with caffeine." I have experienced that too.

Through-Wall Radar

Through clothing (and through non-conductive wall) RADAR, widely used at airports and by police to look through clothing for hidden weapons. The harassment potential of this technology in the hands of organized stalking gangs is obvious.

Through wall/clothing radar images

The same security scanning radar used at airports, and now coming into use by police, can also view a target through a non-conductive wall. In the late 1990s, I pretended to be willing and able to buy such a unit, and was told by a salesman for the Millivision company, then making this equipment, no longer in business, that if I had the cash, then around \$100,000, I could have the equipment. I stated plainly that I was a private individual with no ties to law enforcement.

Many targets report being "followed" in their apartments by rapping noises from an adjacent apartment, particularly the one below. As the target walks about, rapping noise which sounds as if the occupant of the adjacent apartment is doing "work" on something, will move as the target moves. This may go on for say, 15 minutes. It does seem as if someone has through-wall radar and is "enjoying" its use.

Once in a while, a target will experience a few weeks where every time they sit on the toilet, the water in the bathroom below theirs will be turned on at the exact time the target starts to urinate, and the water is turned off when the target's urine stream stops. Even throughout the night.

Those through-wall harassment technologies can all be proven to exist.

EPIC

There are some as yet to be demonstrated technologies as well, which are interesting in terms of harassment potential. One, code named EPIC, was announced on Fox News as under development by Houston, Texas firm Invocon, with funding by the U.S. Marine Corps.

EPIC, it is claimed, has the potential to disrupt the inner ear with an electromagnetic signal, through walls. Targets report disrupted balance, sometimes as they try to do delicate work, or work with the potential to spill things, which does happen regularly.

Implants

There has long been a suspicion by organized stalking targets that their disruptive effects may be due to implants in the body. There is very limited evidence that a handful of targets may be implanted, but by and large, targets do not report unexplained wounds, missing time, or medical scans with artificial objects which don't have a legitimate medical purpose. At time of writing, there are two targets who have had monitoring/tracking/control implants diagnosed by doctors and removed. Two out of thousands.

There are several who have medical scans which they claim show non-therapeutic, non-medical objects in their bodies. Without a professional diagnosis, I'm unwilling to claim those undiagnosed scans represent monitoring/tracking/control implants, though under the MKULTRA "mind control" crimes carried out in the 1950s-1970s by CIA contractors and affiliates, there was some implantation of the involuntary experimentees.

For today's organized stalking targets, the question of implants, possibly nano (microscopic) sized, or even made of biological material, is wide open. My advice to organized stalking targets is to avoid compulsive worry that they are implanted without a high quality medical scan, at least. Because there are through-wall harassment technologies which do not require implants and which have been available for decades, implants should not be assumed, in my view.

Classified Technologies

It should be noted that while the five proven to exist, proven to work, through wall harassment technologies can severely disrupt a target's quality of life, they are easy to detect if a target has the right test equipment, and can be shielded against. Today's targets find that good quality shielding against electromagnetic signals does work now and then, temporarily, or partially, or, not for all who try shielding.

By contrast, materials that do not block electromagnetic (radio) signals do sometimes provide some relief. Examples are leather, rubber, and the common blue gel freezer ice packs.

The fidelity of today's through-wall sound projection weapons ("voice to skull") is much higher than Dr. Joseph Sharp's pulsed microwave method could produce.

Clearly, from the target's experiences, there is equipment in use now that is advanced beyond the proven technologies discussed here. This makes it much more difficult for targets to credibly prove the electronic harassment phase of the organized stalking crime.

Proven & Available Electronic Harassment Technologies:

There are older technologies capable of extreme destruction of the ability to earn a living, and the quality of life of a target, listed below. None of these technologies require implants, and all can be transmitted silently, through non-conducting walls, and leave no trace evidence. They have been available for one to five decades.

Since few targets will own the correct (and expensive) detection equipment, destruction of a target's life even using these older technologies is a perfect crime under today's justice system. Today's justice system denies that any effective through wall harassment technologies exist.

Here is the list:

■ **WEAPONIZED MICROWAVE OVEN:** A simple microwave oven, door removed, with the door interlock switch bypassed, and held against the bedroom wall of a target in an apartment building or semi-detached house. This device can cause a variety of disabling medical symptoms. (Google "Dr. Reinhard Munzert".)

Image showing weaponized microwave oven weapon,
for improved focus of the microwave radiation.

Some symptoms of microwave radiation:

Asthma, cataracts, headaches, memory loss, early Alzheimer's, bad dreams, depression, fatigue, concentration loss, appetite loss, heart and blood pressure problems, and cancer.

■ **VOICE TO SKULL:** Joseph Sharp's voice to skull success, performed with Dr. James C. Lin's pulsed microwave transmitter, and publicly announced in 1974 at the University of Utah:

Microwave Voice-to-Skull Success, Announced 1974

American Psychologist

Journal of the American Psychological Association
Volume 30 March 1975 Number 3

gered. By radiating themselves with these "voice-modulated" microwaves, Sharp and Grove were readily able to hear, identify, and distinguish among the 9 words. The sounds heard were not unlike those emitted by persons with artificial larynxes. Communication of more complex words and of sentences was not attempted because the averaged densities of energy required to transmit longer messages would approach the current 10 mW/cm² limit of safe exposure. The capability of communicating directly with a human being by

This article is based on materials presented in a seminar to the faculties of Psychology and Engineering at the University of Utah (Salt Lake City, Utah) on August 21, 1974. The author's research program is supported by the Veterans Administration and by U.S. Public Health Service Grant FD00650. Acknowledged in the preparation of the manuscript are E. L. Wike and C. L. Sheridan, for a critical reading; Kay Wahl, for artwork; and Lynn Bruetsch and Virginia Florez, for typing. I also thank John Osepchuk of the Raytheon Corporation for his searching criticism of the manuscript; our opinions differ, his advice is appreciated.

Requests for reprints should be sent to Don R. Justesen, Laboratories of Experimental Neuropsychology, Veterans Administration Hospital, Kansas City, Missouri 64128. The author is also at the Department of Psychiatry, Kansas University Medical Center, Kansas City, Kansas 66103.

AUDIBLE sound transmitted directly into a target's skull, through a target's wall, of course, can drive the through-the-wall target crazy, and if the target complains, the target will be immediately diagnosed as mentally ill. The perfect crime.

VOICE CONVERSION TO PULSES, AS USED IN THE SUCCESSFUL DEMONSTRATION OF MICROAVE VOICE-TO-SKULL TECHNOLOGY IN 1973 BY DR. JOSEPH SHARP. THIS IS NOT CLASSIFIED.

U.S. patent 6,587,729 was issued based on Dr. Joseph Sharp's voice to skull success.

Recent news story showing that voice to skull technology is admitted publicly as being of interest to military and law enforcement:

Original link: <http://abcnews.go.com/print?id=5305386>

Microwave Ray Gun Controls Crowds with Noise

By DAVID HAMBLING

July 4, 2008

A US company claims it is ready to build a microwave ray gun able to beam sounds directly into people's heads.

The device dubbed MEDUSA (Mob Excess Deterrent Using Silent Audio) exploits the microwave audio effect, in which short microwave pulses rapidly heat tissue, causing a shockwave inside the skull that can be detected by the ears. A series of pulses can be transmitted to produce recognisable sounds.

The device is aimed for military or crowd-control applications, but may have other uses.

Lev Sadovnik of the Sierra Nevada Corporation in the US is working on the system, having started work on a US navy research contract. The navy's report states that the effect was shown to be effective.

Scarecrow Beam?

MEDUSA involves a microwave auditory effect "loud" enough to cause discomfort or even incapacitation. Sadovnik says that normal audio safety limits do not apply since the sound does not enter through the eardrums.

"The repel effect is a combination of loudness and the irritation factor," he says. "You can't block it out."

Sadovnik says the device will work thanks to a new reconfigurable antenna developed by colleague Vladimir Manasson. It steers the beam electronically, making it possible to flip from a broad to a narrow beam, or aim at multiple targets simultaneously.

Sadovnik says the technology could have non-military applications. Birds seem to be highly sensitive to microwave audio, he says, so it might be used to scare away unwanted flocks.

Sadovnik has also experimented with transmitting microwave audio to people with outer ear problems that impair their normal hearing.

Brain Damage Risk

James Lin of the Electrical and Computer Engineering Department at the University of Illinois in Chicago says that MEDUSA is feasible in principle.

He has carried out his own work on the technique, and was even approached by the music industry about using microwave audio to enhance sound systems, he told New Scientist.

"But is it going to be possible at the power levels necessary?" he asks. Previous microwave audio tests involved very "quiet" sounds that were hard to hear, a high-power system would mean much more powerful and potentially hazardous shockwaves.

"I would worry about what other health effects it is having," says Lin. "You might see neural damage."

Sierra Nevada says that a demonstration version could be built in a year, with a transportable system following within 18 months. They are currently seeking funding for the work from the US Department of Defence.

■ **SILENT SOUND:** Lowery's "Silent Sound," patent 5,159,703, has been used for self-help subliminal hypnosis tapes and CDs and by the U.S. Army in Gulf War One (1991). Currently used for shoplifting prevention in some countries.

Together with Sharp's voice to skull, Silent Sound projected through a bedroom wall can hypnotize a target in their bed with the target being unaware. Unaware hypnosis is clearly electronic harassment in the extreme. A target's personality can be severely interfered with, and the target will not know why this is happening.

Concept diagram, combined voice to skull and Silent Sound

"Slope detection" or "slope tuning", showing how a constant volume frequency modulated acoustic signal can be changed into a normal variable amplitude audio signal by the ear's sloping response curve

■ **THE LIDA MACHINE:** A half-century-old medical device, the Russian-built Lida machine, a pulsed 40 watt, 40 MHz radio transmitter which can be used to make a target exhausted on the job when pulsing at the rate consistent with sleep, and with a pulse rate increase, deprive the target of sleep too! Certain ham radio transmitters can be configured so as to duplicate the Lida signal.

The Lida uses the repetitive stimulus principle, and it's pulsing radio signal is what makes this a through wall capable weapon. Very slow stimulus induces drowsiness, rapid stimulus induces wakefulness, all done silently.

U.S. Patent 3,773,049 describes the Lida operating principle.

Associated Press photo. Dr. Ross Adey, now deceased, was a researcher at the Loma Linda, California veterans hospital. Dr. Adey, together with Dr. Eldon Byrd, acquired a Lida machine for testing, with an eye towards weapons potential.

Neither Dr. Adey nor Dr. Byrd are known to have been associated with any unethical activities nor weapons derived from the Lida machine.

■ **THROUGH WALL RADAR:** Through clothing (and through non-conductive wall) radar, widely used at airports and by police to look through clothing for hidden weapons. The harassment potential of this technology in the hands of organized stalking gangs is obvious.

Through wall/clothing radar images.

■ **EPIC BALANCE DISRUPTOR:** Code name EPIC through wall coordination/balance disruptor weapon may become another through wall capable harassment technology, once it has been announced as having been successfully demonstrated.

Electronic harassment targets have reported suddenly having their balance and coordination disrupted.

Here's a quote from a May 21, 2007 article about the EPIC weapon on <http://www.myfoxhouston.com> :

Local Company Developing 'Less than Lethal' Weapon

'EPIC' by Invocon is being developed as a 'Less than Lethal' Weapon.

How do you disable bad guys in a crowd without killing them or causing permanent damage? It's a problem faced by troops in urban combat and by local law enforcement.

Now, a local company called Invocon may have the answer, and the solution may be a weapon code named "Epic." The company is developing a weapon they hope someday will be able to shoot through a wall and stun people on the other side of the wall. ...

Note that all of these silent, through-wall harassment devices can be had by anyone with an upper middle-class income. The public and public officials are urged to take complaints of electronic harassment very seriously, as there is no doubt that far more invasive classified (secret) technologies have been developed since these older technologies were developed, one to five decades ago.

The classified equipment, coming into wider use in the 1980s, can penetrate all shielding and is virtually unstoppable according to current experiences of targets. Our group as yet does not have documented information as to how these classified devices work.

Bureau of Justice Statistics Special Report

January 2009, NCJ 224527

National Crime Victimization Survey

Stalking Victimization in the United States

By Katrina Baum, Ph.D., Shannan Catalano, Ph.D.,
and Michael Rand
Bureau of Justice Statistics
Kristina Rose
National Institute of Justice

During a 12-month period, an estimated 3.4 million persons age 18 or older were victims of stalking. Stalking is defined as a course of conduct directed at a specific person that would cause a reasonable person to feel fear. The Supplemental Victimization Survey (SVS), which is the basis of this report, was conducted in 2006. The SVS identified seven types of harassing or unwanted behaviors consistent with a course of conduct experienced by stalking victims. The survey classified individuals as stalking victims if they responded that they experienced at least one of these behaviors on at least two separate occasions. In addition, the individuals must have feared for their safety or that of a family member as a result of the course of conduct, or have experienced additional threatening behaviors that would cause a reasonable person to feel fear.

The SVS measured the following stalking behaviors:

- making unwanted phone calls
- sending unsolicited or unwanted letters or e-mails
- following or spying on the victim
- showing up at places without a legitimate reason
- waiting at places for the victim
- leaving unwanted items, presents, or flowers
- posting information or spreading rumors about the victim on the internet, in a public place, or by word of mouth.

While individually these acts may not be criminal, collectively and repetitively these behaviors may cause a victim to fear for his or her safety or the safety of a family member. These behaviors constitute stalking for the purposes of this study. The federal government, all 50 states, the District of Columbia, and U.S. Territories have enacted laws making

During a 12-month period an estimated 14 in every 1,000 persons age 18 or older were victims of stalking

- About half (46%) of stalking victims experienced at least one unwanted contact per week, and 11% of victims said they had been stalked for 5 years or more.
- The risk of stalking victimization was highest for individuals who were divorced or separated—34 per 1,000 individuals.
- Women were at greater risk than men for stalking victimization; however, women and men were equally likely to experience harassment.
- Male (37%) and female (41%) stalking victimizations were equally likely to be reported to the police.
- Approximately 1 in 4 stalking victims reported some form of cyberstalking such as e-mail (83%) or instant messaging (35%).
- 46% of stalking victims felt fear of not knowing what would happen next.
- Nearly 3 in 4 stalking victims knew their offender in some capacity.
- More than half of stalking victims lost 5 or more days from work.

stalking a criminal act, although the elements defining the act of stalking differ across states (see box, Stalking laws).

The SVS also identified victims who experienced the behaviors associated with stalking but neither reported feeling fear as a result of such conduct nor experienced actions that would cause a reasonable person to feel fear. This report characterizes such individuals as harassment victims. These instances of harassment might eventually have risen to the definitional requirement for stalking. However, at the time of the interview, the offender's actions and victim's responses did not rise to the threshold of stalking victimization as measured by the SVS.

Few national studies have measured the extent and nature of stalking in the United States. The Department of Justice Office on Violence Against Women funded the 2006 SVS as a supplement to the National Crime Victimization Survey (NCVS) to enhance empirical knowledge about stalking (see *Methodology*). The SVS, which represents the largest study of stalking conducted to date, incorporated elements contained in federal and state laws to construct a working definition of stalking.

This report presents information on stalking victimization. Harassment is discussed where appropriate to provide fuller context. Appendix tables focus solely on stalking victims and exclude the people who experienced what this report terms as harassment. Persons interested in viewing the SVS data in its entirety may obtain the data file from the University of Michigan's Archive of Criminal Justice Data <www.icpsr.umich.edu/NACJD>.

During a 12-month period an estimated 14 in every 1,000 persons age 18 or older were victims of stalking

An estimated 5.9 million U.S. residents age 18 or older experienced behaviors consistent with either stalking or harassment in the 12 months preceding the SVS interview (table 1).¹ Of the 5.9 million victims, more than half experienced behavior that met the definition of stalking. Approximately 14 per 1,000 persons age 18 or older experienced the repetitive behaviors associated with stalking in addition to feeling fear or experiencing behaviors that would cause a reasonable person to feel fear. Harassment victims, who experienced a course of conduct consistent with stalking but who did not report feeling fear, experienced these behaviors at a rate of 10 victimizations per 1,000 persons age 18 or older.

About half (46%) of all stalking victims experienced at least one unwanted contact per week (appendix table 6). Many victims of stalking reported being stalked over a period of months or years, and 11% of victims said they had been stalked for 5 years or more (figure 1). The fears and emotional distress that stalking engenders are many and varied. About 1 in 5 victims feared bodily harm to themselves, and 1 in 6 feared for the safety of a child or other family member.² About 1 in 10 stalking victims feared being killed by the stalker. About 4 in 10 stalkers threatened the victim or the victim's family, friends, co-workers, or family pet.³

¹To place this estimate in perspective, there were about 5.2 million violent crimes—rape/sexual assault, robbery, aggravated assault, and simple assault—committed in 2005.

²Table 10 lists the range of fearful reactions about which victims were surveyed.

³Table 13 lists various threats stalkers made to victims.

The most common type of stalking behavior victims experienced was unwanted phone calls and messages

With the exception of receiving unwanted letters, e-mails, or other correspondence, stalking victims were more likely than harassment victims to experience all forms of unwanted behaviors (table 2). In particular, victims of stalking experienced higher levels of three unwanted behaviors most commonly associated with stalking. These included an offender following or spying on the victim, showing up at places without a legitimate reason, or waiting outside (or inside) places for the victim. Stalking victims were about 3 times more likely to report experiencing these three behaviors than individuals who were harassed. For example, 34% of stalking victims reported that the offender followed or spied on them compared with 11% of harassment

Table 1. Prevalence of stalking and harassment over the 12 months prior to interview

	Number	Rate
All victims	5,857,030	23.8
Stalking victims	3,424,100	13.9
Harassment victims	2,432,930	9.9

Note: The total population age 18 or older was 246,500,200 in 2006. Victimization rates are per 1,000 persons age 18 or older.

Table 2. Nature of stalking and harassment behaviors experienced by victims

	Percent of victims		
	All	Stalking	Harassment
Unwanted phone calls and messages	62.5%	66.2%	57.2%
Unwanted letters and e-mail	30.1	30.6	29.4
Spreading rumors	29.1	35.7	19.9
Following or spying	24.5	34.3	10.6
Showing up at places	22.4	31.1	10.2
Waiting for victim	20.4	29.0	8.3
Leaving unwanted presents	9.1	12.2	4.8
Number of victims	5,857,030	3,424,100	2,432,930

Note: Details sum to more than 100% because multiple responses were permitted.

About 10% of victims were stalked for 5 years or more

Note: Estimates exclude 1.2% of stalking and 10.2% of harassment victims due to missing data. All victims experience at least one unwanted behavior in the year before the interview.

Figure 1

victims who reported experiencing this behavior. Thirty-one percent of stalking victims reported that the offenders showed up in places where they had no legitimate purpose being; approximately 10% of harassment victims reported this type of unwanted behavior. Also, 29% of stalking victims stated that the offender waited in places for them, while 8% of harassment victims reported this type of behavior.

Risk of victimization varies more for stalking than for harassment

Females were at higher risk of stalking victimization than males (table 3). During the study period, females experienced 20 stalking victimizations per 1,000 females age 18 or older. The rate of stalking victimization for males was approximately 7 per 1,000 males age 18 or older. Males and females were equally likely to experience harassment.

Age

As with victimization risk more generally, risk of being stalked diminished with age. Persons age 18 to 19 and 20 to 24 experienced the highest rates of stalking victimization. About 30 per 1,000 persons age 18 to 19 and 28 per 1,000 persons age 20 to 24 were stalked during 2006.

Race and Hispanic origin of victim

Asians and Pacific Islanders (7 per 1,000 persons age 18 and older) were less likely to experience stalking than whites (14 per 1,000), blacks (12 per 1,000), and persons of two or more races (32 per 1,000). Despite apparent racial differences, no other consistent patterns of risk for stalking victimization emerged. Non-Hispanics were more likely than Hispanics to experience stalking. During the study period, non-Hispanics experienced about 14 stalking victimizations per 1,000 individuals age 18 and older. The rate for Hispanics during this period was 11 stalking victimizations per 1,000 persons age 18 or older.

Stalking laws

While the federal government, all 50 states, the District of Columbia, and U.S. Territories have enacted criminal laws to address stalking, the legal definition for stalking varies across jurisdictions. State laws vary regarding the element of victim fear and emotional distress, as well as the requisite intent of the stalker. Some state laws specify that the victim must have been frightened by the stalking, while others require only that the stalking behavior would have caused a reasonable person to experience fear. In addition states vary regarding what level of fear is required. Some state laws require prosecutors to establish fear of death or serious bodily harm, while others require only that prosecutors establish that the victim suffered emotional distress. Interstate stalking is defined by federal law 18 U.S.C. § 2261A.

Marital status

The rate of stalking victimization for individuals who were divorced or separated was 34 per 1,000 individuals age 18 or older—a higher rate of victimization than for persons of other marital status. Individuals who had never been married (17 per 1,000 individuals) were at a lower risk of stalking victimization than divorced or separated persons, but were at a higher risk of stalking victimization than persons who were married (9 per 1,000) or widowed (8 per 1,000).

Income

As with crime more generally, a pattern of decreasing risk for stalking victimization existed for persons residing in households with higher incomes. Individuals in households with an annual income under \$7,500 and \$7,500 to \$14,999 were equally likely to be stalked but more likely to be victimized than were persons in households with an annual income at or above \$25,000.

Table 3. Characteristics of stalking and harassment victims

	Population	Rate per 1,000 victims ^a		
		All	Stalking	Harassment
Gender				
Male	120,068,420	16.9	7.4	9.5
Female	126,431,780	30.3	20.0	10.2
Age				
18-19	8,047,540	47.2	29.7	17.5
20-24	20,346,940	45.7	28.4	17.3
25-34	39,835,680	30.1	20.2	9.9
35-49	65,886,490	29.9	17.3	12.6
50-64	51,400,990	20.4	10.4	10.0
65 or older	35,515,670	9.3	3.6	5.7
Race				
White	200,874,080	24.1	14.2	9.8

\$75,000 or more	56,633,800	18.8	9.6	9.2

Note: Table excludes missing data.

*Based on 10 or fewer sample cases.

^aVictimization rates are per 1,000 persons age 18 or older.

^bIncludes all persons of any race, including persons who identify two or more races.

Victims were more likely to be stalked by an offender of the same age and race

Offender age

Individuals were more likely to be stalked by offenders of similar age (appendix table 1). Nearly half of victims age 21 to 29 were stalked by offenders perceived to also be in their twenties, and 38% of victims age 30 to 39 perceived the offender to also be in their thirties.

Race

Similar to other types of victimization, stalking is primarily intraracial in nature (appendix table 2). Most (83%) of white stalking victims perceived the offender to be white compared to 66% of black stalking victims who perceived the offender to be black. This pattern of intraracial victimization changes for persons of other races. Despite apparent differences, persons of other races were equally likely to be stalked by an offender who was black, white, or of another race.⁴

Offender gender

Males were as likely to report being stalked by a male as a female offender (table 4). Forty-three percent of male stalking victims stated that the offender was female, while 41% of male victims stated that the offender was another male. Female victims of stalking were significantly more likely to be stalked by a male (67%) rather than a female (24%) offender.

Stalking is unlike most crimes because a course of conduct designed to create fear in another person does not necessarily require that the victim come into contact with the offender. For example, a victim may receive repeated threatening correspondence without knowing the source of the communication. Sixteen percent of male stalking victims and approximately 10% of female stalking victims were not able to identify the gender of the offender.

⁴Other races include American Indians, Alaska Natives, Asians, Native Hawaiians, other Pacific Islanders, and persons identifying two or more races.

Number of offenders

About 6 in 10 stalking victims stated that the perpetrator was a single offender (appendix table 3). A much lower percentage of victims reported being stalked by two (18%) or three (13%) offenders.

Relationship

About a tenth of all victims were stalked by a stranger, and nearly 3 in 4 of all victims knew their offender in some capacity (table 5). Stalking victims most often identified the stalker as a former intimate (21.5%) or a friend, roommate, or neighbor (16.4%).

Table 5. Victim-offender relationship in stalking and harassment

	Percent of victims		
	All	Stalking	Harassment
Total**	100%	100%	100%

Relative	8.5	9.0	7.6
Stranger	10.6%	9.7%	12.5%
Unknown	16.9%	15.0%	20.6%
Number of victims	4,619,430	3,064,950	1,554,480

Note: Table excludes 0.5% of all victims, 0.3% of stalking victims, and 0.7% of harassment victims due to missing data. Detail may not sum to 100% due to rounding.

*Estimate based on 10 or fewer cases.

**Includes victims who could identify a single offender who was most responsible.

Table 4. Perceived gender of the stalking or harassment offender, by victim gender

Gender of offender	Gender of victim					
	All		Stalking		Harassment	
	Male	Female	Male	Female	Male	Female
Total	100%	100%	100%	100%	100%	100%
Male	31.7	58.3	41.3	66.9	24.2	41.3
Female	37.9	22.4	42.5	23.5	34.3	20.3
Don't know	30.4	19.3	16.1	9.6	41.5	38.4
Number of victims	2,028,800	3,821,140	888,680	2,531,770	1,140,120	1,289,370

Note: Table excludes missing data about offenders from 0.2% of all male victims, 0.1% of all female victims, 0.4% of female stalking victims, and 0.3% of female harassment victims. Detail may not sum to 100% due to rounding.

Employment status of the offender

Forty-two percent of stalking victims stated that the offender was employed during the time stalking occurred (appendix table 4). Victims were equally likely to report that the offender was unemployed or that the victim was unable to ascertain the employment status of the offender.

Problems with the law

Thirty-six percent of stalking victims stated that the offender had some previous interaction with law enforcement (appendix table 5). A similar percentage of victims (38%) were unable to identify whether the offender had problems with the law prior to the stalking victimization.

One in 10 victims reported that the stalking started 5 years or more before the survey

Over half of all victims reported that the stalking or harassment began “less than a year ago” (figure 1). Harassment victims had characteristically experienced the harassing behavior for a shorter period leading up to the interview (6 months or less). Stalking victims were most likely to be stalked once or twice a week or with no set pattern (appendix table 6). Nearly a quarter of all victims reported that they were stalked almost every day (16.9%) or at least once a day (6%).

Victim perception of why stalking began

The most common reasons victims perceived for the stalking were retaliation, anger, spite (37%), or desire to control the victim (33%) (table 6). About 1 in 6 victims believed the stalking started to keep him or her in the relationship with the offender, and 1 in 10 reported the stalking began while living with the offender (not referenced in a table). About a tenth of victims did not know why the stalking began.

Cyberstalking and electronic monitoring

More than 1 in 4 stalking victims reported some form of cyberstalking was used, such as e-mail (83%) or instant messaging (35%) (table 7). Electronic monitoring was used to stalk 1 in 13 victims. Video or digital cameras were equally likely as listening devices or bugs to be used to electronically monitor victims (46% and 42%). Global positioning system (GPS) technology comprised about a tenth of the electronic monitoring of stalking victims.

Table 6. Victim perception of reasons stalking or harassment began

	Percent of all victims		
	All	Stalking	Harassment
Retaliation/anger/spite	30.0%	36.6%	20.0%
Control	25.2	32.9	13.4
Mentally ill/emotionally unstable	16.7	23.4	6.6

Note: Table excludes 8.8% of all victims, 7.8% of stalking victims, and 10.2% of harassment victims due to missing data. Details sum to more than 100% because multiple responses were permitted.

*Estimate based on 10 or fewer samples.

^aBased on 1,217,680 total victims, 677,870 stalking victims, and 539,820 harassment victims who experienced cyberstalking.

^bBased on 314,400 total victims, 244,880 stalking victims, and 69,530 harassment victims who experienced electronic monitoring.

One in 7 victims reported they moved as a result of the stalking

The most common types of actions victims took to stop the stalking from continuing were to change usual activities outside of work or school, stay with family, or install caller ID or call blocking (table 8). The least frequent actions taken were to alter one's appearance or get pepper spray, a gun, or some other kind of weapon. Forty percent of stalking victims did not change their usual activities outside of work or school, take protective actions, or change their personal information.

Help from others

Seven in 10 victims of stalking sought help to protect themselves or to stop the stalking (table 9). Victims were most likely to enlist the help of family or friends, followed by asking people not to release information about him or her (43% versus 33%). About 7% of victims contacted victim services, a shelter, or a helpline.

Table 8. Whether stalking or harassment victims took actions to protect themselves or stop unwanted behaviors

	Percent of victims		
	All	Stalking	Harassment
Changed usual activities outside work or school			
Changed day-to-day activities	14.3%	21.6%	4.1%
Stayed with family	11.6	18.1	2.6
Took time off work or school	10.8	16.7	2.6

Note: Details sum to more than 100% because multiple responses were permitted.

*Estimate based on 10 or fewer sample cases.

Reasons stalking stopped

At the time of the interview, 3 in 5 of the victims reported the stalking had stopped, while about 2 in 5 reported it was ongoing (appendix table 7). The most common victim perceptions for why the unwanted contacts stopped were that the police warned the stalker (15.6%), the victim talked to the stalker (13.3%), or a friend or relative intervened (12.2%). About a tenth of victims attributed the cessation of the unwanted behavior to obtaining a restraining, protection, or stay away order.

Emotional impact

For stalking victims, the most common fear cited was not knowing what would happen next (table 10). Nine percent of stalking victims reported their worst fear was death. Twenty-nine percent of stalking victims feared the behavior would never stop. More than half of the stalking victims feared bodily harm to themselves, their child, or another family member.

More than 7 in 10 of all victims felt angry or annoyed at the beginning of the unwanted contacts or as they progressed (table 11). Stalking victims were about twice as likely as harassment victims to feel anxious or concerned at the

Table 9. Types of help sought by stalking or harassment victims

	Percent of victims		
	All	Stalking	Harassment
Total	100%	100%	100%
Enlisted help of friends/family	30.0	42.6	12.2
Asked people not to release information	24.0	32.9	11.6
Talked to boss/employer	16.2	21.6	8.6
Talked to an attorney	13.5	19.9	4.4
Obtained a restraining/protection/stay away order	9.4	15.6	0.6
Talked to a mental health professional	8.3	12.4	2.6
Contacted building/office security	6.4	9.2	2.5
Talked to clergy/faith leader	6.1	9.0	2.0
Talked to a doctor or nurse	6.0	9.1	1.5
Contacted victim services/shelter/helpline	4.5	7.3	0.5*
Hired a private investigator	0.7	1.1	0.1*
Did not seek help**	47.3	30.3	71.2
Number of victims	5,857,030	3,424,100	2,432,930

Note: Details sum to more than 100% because multiple responses were permitted.

*Estimate based on 10 or fewer sample cases.

**Victims might have sought help from someone other than those listed above.

beginning of the unwanted contacts (52.7% versus 25.4%). As the unwanted contacts progressed, about 15% of stalking victims felt depressed or sick, and 1% reported feeling suicidal.

Workplace impact

Of the 79% of stalking victims who had a job during the 12 months preceding the interview, about 1 in 8 lost time from work because of fear for their safety or to pursue activities such as obtaining a restraining order or testifying in court (appendix table 8). Seven percent of victims lost time from work for activities such as changing a phone

number, moving, or fixing or replacing damaged property. For 1 in 7 of these victims, a day or less was lost from work (appendix table 9). More than half of victims lost 5 or more days from work. About 130,000 victims reported that they had been fired from or asked to leave their jobs because of the stalking (not referenced in table).

Financial impact of stalking on victim

About 3 in 10 of stalking victims accrued out-of-pocket costs for things such as attorney fees, damage to property, child care costs, moving expenses, or changing phone numbers (appendix table 10). About a tenth of victims spent less than \$250, while 13% spent \$1,000 or more. About 296,000 stalking victims lost pay from work (appendix table 11). Over half of the victims lost less than \$1,000 of pay, and 8% of victims lost \$5,000 in pay or more.

Stalkers commit various types of crimes against their victims

Stalking offenders committed identity theft against about 204,000 victims. Over half of these victims had financial accounts opened or closed in their names or money taken from their accounts, and 3 in 10 of these victims had items charged to their credit cards without their consent.

Any identity theft	204,230	100%
Opened/closed accounts	110,850	54.3
Took money from accounts	105,130	51.5
Charged items to credit card	60,790	29.8

Note: Estimates exclude 0.1% of missing data. Details sum to more than 100% because multiple responses were permitted.

Note: Table excludes 4.8% of all victims, 5.6% of all stalking victims, and 0.2% of harassment victims at the beginning of the behaviors and 0.5% of all victims, 11.3% of all stalking victims, and 12.7% of harassment victims as the behaviors progressed due to missing data. Details sum to more than 100% because multiple responses were permitted.

*Estimate based on 10 or fewer sample cases.

~Not applicable.

^aHarassment victims, by definition, were not frightened as the unwanted behaviors progressed.

^bHarassment victims, by definition, did not report feeling suicidal as a result of the unwanted behaviors.

About 16% of all victims suffered property damage in conjunction with the stalking (table 12). Among stalking victims, the most common type of violent crime experienced in conjunction with stalking was to be hit, slapped, or knocked down (12.3%). About 6% of the stalking victims had a family member, friend, or co-worker who was attacked.

Weapon involvement and injuries

About 139,000 stalking victims were attacked with a weapon. Stalkers were equally likely to use a knife, blunt instrument, or other object, and 23% of the weapons used were handguns. Of the 279,000 victims who were injured in an attack, nearly all (99%) of these victims sustained minor bruises and other injuries. About a fifth sustained serious injuries, including gunshot or knife wounds, internal injuries, or broken bones.

Weapon used in attack	138,630	100%
Knife/other sharp object	58,850	42.4
Handgun	31,610	22.8*
Blunt or other object	52,670	38.0

*Estimate based on 10 or fewer sample cases.

Injuries sustained in attacks	278,580	100%
Rape/sexual assault	38,590	13.9*
Serious injuries	52,080	18.7
Minor or other injuries	276,440	99.2

Note: Details sum to more than 100% because multiple responses were permitted.

*Estimate based on 10 or fewer sample cases.

Threats

Stalkers made one or more threats to 43% of victims (table 13). Stalking offenders were most likely to threaten to hit, slap, or otherwise harm the victim (13.6%) or to kill the victim (12.1%). Somewhat less likely was the stalker threatening to kill himself or herself (9.2%). Less than 5% of the threats involved harm to a child, friend, co-worker, pet, or the threat of rape or sexual assault.

Stalking victimization was equally likely to be reported to police whether the victim was male or female

For violent crime more generally, victimizations experienced by females are more likely to be reported to the police than those experienced by males. However, this pattern of reporting by gender is not observed for the crime of stalking. Male and female stalking victimizations were equally likely to be reported to the police (table 14). Thirty-seven percent of male and 41% of female victimizations were reported to the police by the victim or another person aware of the crime.

The most common reasons for not reporting stalking victimization to the police were that it was a private or personal matter or that it was a minor incident (appendix table 12).

About 40% of victims stated that police were contacted once regarding the stalking, while 3% of victims stated that police were contacted in excess of 15 times (appendix table 13). Stalking victimization was most often reported to the police by the victim (83%), the victim's family (26%), or a friend or neighbor (12%) (appendix table 14).

Table 12. Other crimes perpetrated by the offender against the stalking or harassment victim

	Percent of victims		
	All	Stalking	Harassment
Property damage	15.9%	24.4%	4.0%
Damaged property of victim or someone in victim's household	9.5	15.0	1.8
Illegally entered house/apartment	8.6	13.2	2.2
Illegally entered car	3.8	6.3	0.5*
Attacked victim	12.3%	21.0%	0.0%
Hit/slapped/knocked down	7.2	12.3	~
Choked or strangled victim	2.4	4.2	~
Attacked victim with a weapon	2.4	4.0	~
Chased or dragged with a car	2.1	3.5	~
Raped/sexually assaulted victim	0.9	1.6	~
Attacked or attempted to attack in some other way	4.3	7.3	~
Attacked person/pet other than victim	8.8%	15.0	4.0%
Attack or attempt to attack a family member	3.5	6.0	~
Attack or attempt to attack a friend or co-worker	3.4	5.8	~
Attack or attempt to attack a pet	2.2	3.7	~
Attack or attempt to attack a child	2.2	3.7	~
Number of victims	5,857,030	3,424,100	2,432,930

*Based on 10 or fewer sample cases.

~Not applicable. Harassment victims by definition were not attacked, nor were their friends, co-workers, family members, or pets.

Table 13. Threats offenders made against stalking victims

	Percent of victims	
	Number	Percent
Total	3,392,520	100%
No threats made	1,927,020	56.8%
Threatened to—	1,465,510	43.2%
Hit/slap/harm	462,610	13.6
Kill victim	411,830	12.1
Harm or kill self	313,580	9.2
Harm with a weapon	242,420	7.1
Harm another family member	209,770	6.2
Harm or kidnap child	166,230	4.9
Harm friend or co-worker	151,460	4.5
Harm a pet	87,020	2.6
Rape/sexually assault	56,050	1.7
Other way	511,530	15.1

Note: Table excludes 0.9% of stalking victims due to missing data. Details sum to more than 100% because multiple responses were permitted.

Stalking victims report differing experiences with the criminal justice system

When contacted about a stalking victimization, the most common police response was to take a report. More than half of police officers took a report when contacted regarding the stalking (appendix table 15). Seventeen percent of responding officers gave the victim self-protection advice, while 8% of the officers arrested the perpetrator.

Nearly 20% of victims stated the police took no action when contacted. Of this 20%, victims were equally likely to perceive that no action was taken by law enforcement because police did not want to get involved (29%), had no legal authority (18%), or were inefficient or ineffective (16%) (appendix table 16). About 50% of victims perceived the stalking situation stayed the same after contacting the police (appendix table 17). Victims were equally likely to

perceive the situation “improved” or “worsened” following a report to the police. For victims who had contacted police on more than one occasion, the survey recorded only the police action taken in response to the latest call.

A fifth of victims filed charges against the stalking perpetrator (appendix table 18). Of those individuals filing charges, 3 out of 10 victims stated the outcome was still pending or that a restraining, protection, or stay away order was issued to deal with the offender. Victims were equally likely to report being satisfied (46%) or dissatisfied (49%) with the criminal justice system’s responses to their stalking incident (appendix table 19) and were generally split on the helpfulness or lack of helpfulness of criminal justice representatives, with one exception: some victims said that victim advocates were helpful (6%) during the criminal justice process (appendix table 20).

Table 14. Percent of stalking and harassment victimizations reported to the police, by victim gender

	Percent of victims					
	All		Stalking		Harassment	
	Male	Female	Male	Female	Male	Female
Total	100%	100%	100%	100%	100%	100%
Reported	20.6	32.8	36.8	41.0	6.8	13.9
Not reported	79.4	67.2	63.2	59.0	93.2	86.1
Number of victims	1,941,650	3,637,570	892,340	2,528,990	1,049,320	1,108,580

Note: Table excludes 4.5% of all male victims, 4.9% of all female victims, 0.1% of female stalking victims, 8% of male harassment victims, and 14.2% of female harassment victims due to missing data.

Methodology

The Supplemental Victimization Survey (SVS) was administered as a supplement to the National Crime Victimization Survey (NCVS) during January through June, 2006. All NCVS respondents age 18 and older were eligible for the supplement. About 65,270 persons participated in the supplemental survey. The response rate for eligible individuals was 83%.

The estimates presented in this report are annual prevalence estimates for persons age 18 or older victimized by stalking or other harassing behaviors during the 12 months prior to the interview. Since the interviews were conducted during the first 6 months of 2006, the majority of the stalking behaviors occurred during 2005.

The Office on Violence Against Women (OVW) and the Bureau of Justice Statistics (BJS) convened a 1-day forum with experts in the area of stalking and violence against women. Researchers, law enforcement officials, prosecutors, and victim advocates comprised the expert group. Also included in the group were representatives from the Census Bureau, the federal agency that carries out survey development and data collection for BJS. The purpose of the 1-day forum was to discuss definitional and methodological issues surrounding the crime of stalking, determine where gaps in current information on stalking existed, and determine how the SVS could further research and knowledge regarding this crime.

Following this meeting, a small federal working group was formed with representatives from OVW, BJS, and the Census Bureau. The working group met weekly for approximately 12 months until a satisfactory survey instrument was completed and approved. During the last phase of the survey development, the Census Bureau conducted cognitive interviews with stalking victims around the United States to test the reliability and validity of the instrument. Changes to the instrument were made to incorporate findings from these interviews.

The name of the SVS intentionally does not indicate that the focus of the supplemental survey is stalking. This decision was made to avoid biasing the responses of individuals and the subsequent estimates. The respondents had to state that they experienced all of the following in order for a course of behavior to be counted as stalking victimization:

- at least one of the harassing behaviors in the stalking screener
- harassing behavior more than one time on separate days
- at least one of the harassing contacts occurred during the 12 months prior to the interview
- they feared for their own or a family member's safety or experienced another crime committed by the offender that would make a reasonable person fearful (see the survey screen questions on the next page).

Victim perception of whether behavior was stalking

The SVS screened victims to determine whether they met the behavioral criteria of having unwanted or harassing contacts on more than one occasion during the past year that made them feel annoyed, fearful, anxious, or concerned. Researchers specifically avoided using the term "stalked" throughout the questionnaire so as not to bias findings based on the victim's perception of what was occurring. The final question in the supplement asked whether the victim perceived the unwanted contacts or harassing behaviors to be stalking. Stalking victims were more than twice as likely as harassment victims to label the unwanted behavior as stalking (54% versus 21%).

Victim perception of whether behavior was stalking	Percent of victims		
	All	Stalking	Harassment
Total	100%	100%	100%
Considered to be—			
Stalking	40.3%	53.6%	20.7%
Not stalking	59.7	46.4	79.3
Number of victims	5,588,150	3,325,220	2,262,940

Note: Table excludes 4.6% of all victims, 2.9% of stalking victims, and 7.0% of harassment victims due to missing data.

The final question on the survey asked, "Do you consider the series of unwanted contacts or harassing behavior you told me about to be stalking?"

Victims of harassment met all the requirements for stalking victimization except those associated with induced fear or the commission of additional associated crimes. Harassing acts by bill collectors, telephone solicitors, or other sales people were excluded from the estimates of stalking and harassment.

Standard error computations

Comparisons of percentages and rates made in this report were tested to determine if observed differences were statistically significant. Differences described as higher, lower, or different passed a test at the 0.05 level of statistical significance (95% confidence level). Differences described as somewhat, lightly, marginally, or some indication passed a test at the 0.10 level of statistical significance (90% confidence level). Caution is required when comparing estimates not explicitly discussed in the report.

Screeners questions for stalking behaviors

Now, I would like to ask you some questions about any unwanted contacts or harassing behavior you may have experienced that frightened, concerned, angered, or annoyed you. Please include acts committed by strangers, casual acquaintances, friends, relatives, and even spouses and partners. I want to remind you that the information you provide is confidential.

1. Not including bill collectors, telephone solicitors, or other sales people, has anyone, male or female, EVER – frightened, concerned, angered or annoyed you by ...
 - a. Making unwanted phone calls to you or leaving messages?
 - b. Sending unsolicited or unwanted letters, e-mails, or other forms of written correspondence or communication?
 - c. Following you or spying on you?
 - d. Waiting outside or inside places for you such as your home, school, workplace, or recreation place?
 - e. Showing up at places where you were even though he or she had no business being there?
 - f. Leaving unwanted items, presents, or flowers?
 - g. Posting information or spreading rumors about you on the Internet, in a public place, or by word of mouth?
 - f. None

Questions used to identify actions that would cause a reasonable person to feel fear

1. In order to frighten or intimidate you, did this person attack or attempt to attack
 - a. a child
 - b. another family member
 - c. a friend or co-worker
 - d. a pet
2. During the last twelve months, did this person attack or attempt to attack you by...
 - a. hitting, slapping, or knocking you down
 - b. choking or strangling you
 - c. raping or sexually assaulting you
 - d. attacking you with a weapon
 - e. chasing or dragging with a car
 - f. attacking you in some other way

3. Other than the attacks or attempted attacks you just told me about, during the last 12 months, did this person threaten to...

- a. kill you
- b. rape or sexually assault you
- c. harm you with a weapon
- d. hit, slap, or harm you in some other way
- e. harm or kidnap a child
- f. harm another family member
- g. harm a friend or co-worker
- h. harm a pet
- i. harm or kill himself/herself

4. What were you most afraid of happening as these unwanted contacts or behaviors were occurring?

- a. death
- b. physical/bodily harm
- c. harm or kidnap respondent's child
- d. harm current partner/boyfriend/girlfriend
- e. harm other family members
- f. don't know what would happen

Questions used to measure fear

1. How did the behavior of (this person/these persons) make you feel when it FIRST started? Anything else?

- a. anxious/concerned
- b. annoyed/angry
- c. frightened
- d. depressed
- e. helpless
- f. sick
- g. suicidal
- h. some other way – *specify*

2. How did you feel as the behavior progressed? Anything else?

- a. no change in feelings
- b. anxious/concerned
- c. annoyed/angry
- d. frightened
- e. depressed
- f. helpless
- g. sick
- h. suicidal
- i. some other way - *specify*

Appendix table 1. Perceived age of the stalking offender, by age of the victim

Offender age	Age of the victim				
	18-20	21-29	30-39	40-49	50 or older
Total	100%	100%	100%	100%	100%
Under 18	10.9*	0.7*	1.8*	2.1*	2.0*
18-20	41.6	5.7	2.3*	2.9*	1.0*
21-29	23.3	48.2	13.8	8.8	3.8*
30-39	5.1*	23.0	37.6	16.7	16.3
40-49	6.7*	7.7	20.8	34.2	18.7
50 or older	2.4*	5.9	9.9	21.6	34.6
Age of offender unknown	10.0*	8.8	13.9	13.7	23.6
Number of victims	349,490	929,080	752,690	722,890	663,660

Note: Table excludes missing data about offenders from 0.8% of stalking victims age 30 to 39.

*Based on 10 or fewer sample cases.

Appendix table 5. Stalking victims' perceptions of offenders' previous problems with the law

	Percent of victims
Total	100%
Offender had problems with the law	35.9
Offender did not have problems with the law	26.3
Victim unable to determine if offender had problems with the law	37.8
Number of victims	3,410,710

Note: Table excludes data about offenders from 0.4% of stalking victimizations.

Appendix table 6. Frequency of stalking during the 12 months prior to the interview

	Number	Percent of victims
Total	3,416,100	100%
1-2 times/year	381,540	11.2
1-2 times/month	565,790	16.6
1-2 times/week	770,380	22.6
Almost every day	576,960	16.9
At least once a day	204,860	6.0
No set pattern	864,920	25.3
Don't know	51,650	1.5

Note: Table excludes 0.2% of stalking victims due to missing data.

Appendix table 2. Perceived race of the stalking offender, by race of the victim

Offender race	Victim race		
	White	Black	Some other race
Total	100%	100%	100%
White	82.8	12.5*	45.4
Black	5.2	65.6	16.0*
Some other race	7.6	11.8*	29.8
Race of offender unknown	4.3	10.1*	8.8*
Number of victims	2,582,360	328,900	160,400

*Based on 10 or fewer sample cases.

Appendix table 3. Number of stalking offenders perceived by victim

	Percent of victims
Total	100%
One	62.1
Two	18.2
Three or more	13.1
Number unknown	6.5
Number of victims	3,398,630

Note: Table excludes 0.7% of stalking victims due to missing data.

Appendix table 4. Employment status of the stalking offenders, as perceived by victims

	Percent of victims
Total	100%
Employed	42.1
Unemployed	24.9
Sometimes employed/unemployed	6.4
Victim unable to determine employment status	26.6
Number of victims	3,420,450

Note: Table excludes 0.1% of stalking victims due to missing data.

Appendix table 7. Victims' perceptions of whether stalking had stopped and reasons it stopped

	Number	Percent of victims
Total	3,404,110	100%
Stalking ongoing	1,234,330	36.3%
Stalking stopped	1,976,050	58.0%
Respondent took measures		
Victim talked to stalker	263,790	13.3%
Victim moved	214,150	10.8
Victim changed phone or email	210,910	10.7
Restraining/protection/stay away order	187,220	9.5
Victim got married or started new relationship	40,390	2.0
Perpetrator stopped behavior		
Stalker moved	172,220	8.7%
Stalker was arrested or incarcerated	129,470	6.6
Stalker started a new relationship	80,580	4.1
Stalker got help/counseling	48,130	2.4
Stalker died	9,320	0.5*
Others intervened		
Police warned stalker	309,080	15.6%
Friend or relative intervened	240,350	12.2
Others intervened	163,020	8.2
Employer intervened	105,490	5.3
School staff intervened	42,230	2.1
Other reason	501,730	25.4%
Don't know why stalking stopped	297,230	15.0%
Don't know whether stalking stopped	208,940	10.6%

Note: Table excludes 0.6% of stalking victims due to missing data. Details sum to more than 100% because multiple responses were permitted.

Appendix table 8. Time lost from work for any reason as a result of stalking victimization

	Number	Percent of victims
Total	3,388,550	100%
Not working	708,070	20.9
Working	2,680,470	79.1
Reason for time lost from work		
Fear or concern for safety	350,940	13.1%
Getting a restraining/protection order or testifying in court	320,450	12.0
Changing phone number/moving/fixing damaged property	183,120	6.8

Note: Table excludes 1% of cases due to missing data. Details sum to more than 100% because multiple responses were permitted.

Appendix table 9. Amount of time victims lost from work for any reason as a result of stalking

	Number	Percent of victims
Total	540,360	100%
Less than a day	76,060	14.1
1 day	51,920	9.6
2 days	57,540	10.6
3 days	42,830	7.9
4 days	24,900	4.6*
5-9 days	77,350	14.3
10-24 days	60,690	11.2
25 or more days	78,420	14.5
Don't know	70,650	13.1

Note: Table excludes 2.5% of stalking victims due to missing data. Total based on victims who had a job and lost time from work. Detail may not sum to 100% due to rounding.

*Estimate based on 10 or fewer sample cases.

Appendix table 10. Out-of-pocket costs to victims as a result of stalking

	Number	Percent of victims
Total	3,358,800	100%
\$0	2,080,230	61.9
\$1-99	193,060	5.7
\$100-249	151,460	4.5
\$250-499	90,420	2.7
\$500-999	89,730	2.7
