Recommendation 24. -- Appropriate agencies of the Department of Defense should be permitted to collect background information on their present or prospective employees or contractors. With respect to security risks or the security of its installations, the Department of Defense should be permitted to conduct physical surveillance consistent with such surveillances as the CIA is permitted to conduct, in similar circumstances, by these recommendations.

#### *Prohibitions and Limitations of Covert Techniques*

During the Army's civil disturbance collection program of the late 1960s, Army intelligence agents employed a variety of covert techniques to gather information about civilian political activities. These included covert penetrations of private meetings and organizations, use of informants, monitoring amateur radio broadcasts, and posing as newsmen. This provision is designed to prevent the use of such covert techniques against American civilians. The Committee believes that none of the legitimate investigative tasks of the military within the United States justified the use of such techniques against unaffiliated Americans.

Recommendation 25. -- Except as provided in 27 below, the Department of Defense should not direct any covert technique (e.g., electronic surveillance, informants, etc.) at American civilians.

#### *Limited investigations Abroad*

The military services currently conduct preventive intelligence investigations within the United States where members of their respective services are agents of, or are collaborating with, a hostile foreign intelligence service. These investigations are coordinated with, and under the ultimate control of, the FBI. The Committee's recommendations are not intended to prevent the military services from continuing to assist the FBI with such investigations involving members of the armed forces. They are intended, however, to place responsibility for these investigations, insofar as they take place within the United States, in the FBI, and not in the military services themselves. The military services, on the other hand, are given additional responsibility to conduct investigations of Americans who are suspected of engaging in terrorist activity or hostile foreign intelligence activity in overseas locations.

Recommendation 26. -- The Department of Defense should be permitted to conduct abroad preventive intelligence investigations of unaffiliated Americans as described in Part iv below, provided 'Such investigations are first approved by the FBI. Such investigations by the Department of Defense, including the use of covert techniques, should ordinarily be conducted in a manner consistent with the recommendations pertaining to the FBI, contained in Part iv; however, overseas locations, where U.S. military forces constitute the governing power, or where U.S. military forces are engaged in hostilities, circumstances may require greater latitude to conduct such investigations.

*iii. Non-Intelligence Agencies Should Be Barred From Domestic Security Activity*

*a. Internal Revenue Service*

The Committee's review of intelligence collection and investigative activity by IRS' Intelligence Division and of the practice of furnishing information in IRS files to the intelligence agencies demonstrates that reforms are necessary and appropriate. The primary objective of reform is to prevent IRS from becoming an instrumentality of the intelligence agencies, beyond the scope of what IRS, as the Federal tax collector, should be doing. Recommendations 27 through 29 are designed to achieve this objective by providing that IRS collection of intelligence and its conduct of investigations are to be confined strictly to tax matters. Moreover, programs of tax investigation, in which targets are selected partly because of indications of tax violations and partly because of reasons relating to domestic security, are prohibited where they would erode constitutional rights. Where otherwise appropriate, such programs must be conducted under special safeguards to prevent any adverse effect on the exercise of those rights.

These recommendations should prevent a recurrence of the excesses associated with the Special Services Staff and the Intelligence Gathering and Retrieval System.

*Targeting of Persons or Groups for Investigations or Intelligence-Gathering by IRS 39*

Recommendation 27. -- The IRS should not, on behalf of any intelligence agency or for its own use, collect any information about the activities of Americans except for the purposes of enforcing the tax laws.

Recommendation 28. -- IRS should not select any person or group for tax investigation on the basis of political activity or for any other reason not relevant to enforcement of the tax laws.

Recommendation 29. -- Any program of intelligence investigation relating to domestic security in which targets are selected by both tax and non-tax criteria should only be initiated:

- (a) Upon the written request of the Attorney General or the Secretary of the Treasury, specifying the nature of the requested program and the need therefore; and
- (b) After the written certification by the Commissioner of the IRS that procedures have been developed which are sufficient to prevent the infringement of the constitutional rights of Americans; and
- (c) With congressional oversight committees being kept continually advised of the nature and extent of such programs.

*Disclosure Procedures*

The Committee's review of disclosure of tax information by IRS to the FBI and the CIA showed three principal abuses by those intelligence agencies: (1) the by-passing of disclosure procedures mandated by law, resulting in the agencies obtaining access to tax returns and tax-related information through improper channels, and, sometimes, without a proper basis; (2) the failure to state the reasons justifying the need for the information and the uses contemplated so that IRS could determine if the request met the applicable criteria for disclosure; and (3) the improper use of tax returns and information, particularly by the FBI in COINTELPRO. Recommendations 30 through 35 are designed to prevent these abuses from occurring again.

While general problems of disclosure are being studied by several different congressional committees with jurisdiction over IRS, these recommendations reflect this Committee's focus on disclosure problems seen in the interaction between IRS and the intelligence agencies.

Recommendation 30. -- No intelligence agency should request 40 from the Internal Revenue Service tax returns or tax related information except under the statutes and regulations controlling such disclosures. In addition, the existing procedures under which tax returns and tax-related information are released by the IRS should be strengthened, as suggested in the following five recommendations.

Recommendation 31. -- All requests from an intelligence agency to the IRS for tax returns and tax-related information should be in writing, and signed by the head of the intelligence agency making the request, or his designee. Copies of such requests should be filed with the Attorney General. Each request should include a clear statement of:

- (a) The purpose for which disclosure is sought;
- (b) Facts sufficient to establish that the requested information is needed by the requesting agency for the performance of an authorized and lawful function;

(c) The uses which the requesting agency intends to make of the information;

(d) The extent of the disclosures sought;

(e) Agreement by the requesting agency not to use the documents or information for any purpose other than that stated in the request; and

(f) Agreement by the requesting agency that the information will not be disclosed to any other agency or person except in accordance with the law.

Recommendation 32. -- IRS should not release tax returns or taxrelated information to any intelligence agency unless it has received a request satisfying the requirements of Recommendation 31, and the Commissioner of Internal Revenue has approved the request in writing.

Recommendation 33. -- IRS should maintain a record of all such requests and responses thereto for a period of twenty years.

Recommendation 34. -- No intelligence agency should use the information supplied to it by the IRS pursuant to a request of the agency except as stated in a proper request for disclosure.

Recommendation 35. -- All requests for information sought by the FBI should be filed by the Department of Justice. Such requests should be signed by the Attorney General or his designee, following a determination by the Department that the request is proper under the applicable statutes and regulations.

*b. Post Office (U.S. Postal Service)*

These recommendations are designed to tighten the existing restrictions regarding requests by intelligence agencies for both inspection of the exteriors of mail ("mail cover") and inspection of the contents of first class mail ("mail opening"). As to mail cover, the Committee's recommendation is to centralize the review and approval of all requests by requiring that only the Attorney General may authorize mail cover, and to eliminate unjustified mail covers by requiring that the mail cover be found "necessary" to a domestic security investigation. With respect to mail opening, the recommendations provide that it can only be done pursuant to court warrant.

Recommendation 36. -- The Post Office should not Permit the FBI or any intelligence agency to inspect markings or addresses on first class mail, nor should the Post Office itself inspect markings or addresses on behalf of the FBI or any intelligence agency, on first class mail, except upon the written approval of the Attorney General or his designee. Where one of the correspondents is an American, the Attorney General or his designee should only approve such inspection for domestic security purposes upon a written finding that it is necessary to a criminal investigation or a preventive intelligence investigation of terrorist activity or hostile foreign intelligence activity.

Upon such a request, the Post Office may temporarily remove from circulation such correspondence for the purpose of such inspection of its exterior as is related to the investigation.

Recommendation 37. -- The Post Office should not transfer the custody of any first class mail to any agency except the Department of Justice. Such mail should not be transferred or opened except upon a judicial search warrant.

(a) In the case of mail where one of the correspondents is an American, the judge must find that there is probable cause to believe that the mail contains evidence, of a crime. 41

(b) In the case of mail where both parties are foreigners:

(1) The judge must find that there is probable cause to believe that both parties to such correspondence are foreigners, and one of the correspondents is an officer, employee or conscious agent of a foreign power; and

(2) The Attorney General must certify that the mail opening is likely to reveal information necessary either (i) to the protection of the nation against actual or potential attack or other hostile acts of force of a foreign power; (ii) to obtain foreign intelligence information deemed essential to the security of the United States; or (iii) to protect national security information against hostile foreign intelligence activity.

*iv. Federal Domestic Security Activities Should Be Limited and Controlled to Prevent Abuses Without Hampering Criminal Investigations or Investigations of Foreign Espionage*

The recommendations contained in this part are designed to accomplish two principal objectives: (1) prohibit improper intelligence activities and (2) define the limited domestic security investigations which should be permitted. As suggested earlier, the ultimate goal is a statutory mandate for the federal government's domestic security function that will ensure that the FBI, as the primary domestic security investigative agency, concentrates upon criminal conduct as opposed to political rhetoric or association. Our recommendations would vastly curtail the scope of domestic security investigations as they have been conducted, by prohibiting inquiries initiated because the Bureau regards a group as falling within a vaguely defined category such as "subversive," "New Left," "Black Nationalist Hate Groups," or "White Hate Groups." The recommendations also ban investigations based merely upon the fact that a person or group is associating with others who are being investigated (e.g., the Bureau's investigation of the Southern Christian Leadership Conference because of alleged "Communist infiltration").

The simplest way to eliminate investigations of peaceful speech and association would be to limit the FBI to traditional investigations of crimes which have been committed (including the crimes of attempt and conspiracy). The Committee found, however, that there are circumstances where the FBI should have authority to conduct limited "intelligence investigations" of threatened conduct (terrorism and foreign espionage) which is generally covered by the criminal law, where the conduct has not yet reached the stage of a prosecutable act.

The Committee, however, found that abuses were frequently associated even with such intelligence investigations. This led us also to recommend: precise limitations upon the use of covert techniques (Recommendations 51 to 60) ; restrictions upon maintenance and dissemination of information gathered in such investigations (Recommendations 64 to 68) ; and a statutory requirement that the Attorney General monitor these investigations and terminate them as soon as practical (Recommendation 69).

*a. Centralize Supervision, Investigative Responsibility, and the Use of Covert Techniques*

Investigations should be centralized within the Department of Justice. It is the Committee's judgment that if former Attorneys General had been held accountable by the Congress for ensuring compliance by the FBI and the intelligence agencies with laws designed to protect the rights of Americans, the Department of Justice would have been more likely to discover and enjoin improper activities. Furthermore, centralizing domestic security investigations within the FBI will facilitate the Attorney General's supervision of them.

Recommendation 38. -- All domestic security investigative activity, including the use of covert techniques, should be centralized within the Federal Bureau of Investigation, except those investigations by the Secret Service designed to protect the life of the President or other Secret Service protectees. Such investigations and the use of covert techniques in those investigations should be centralized within the Secret Service.

Recommendation 39. -- All domestic security activities of the federal government and all other intelligence agency activities covered by the Domestic Intelligence Recommendations should be subject to Justice Department oversight to assure compliance with the Constitution and laws of the United States.

*b. Prohibitions*

The Committee recommends a set of prohibitions, in addition to its later recommendations limiting the scope of and procedural controls for domestic security investigations.

The following prohibitions cover abuses ranging from the political use of the sensitive information maintained by the Bureau to the excesses of COINTELPRO. They are intended to cover activities engaged in, by, or on behalf of, the FBI. For example, in prohibiting Bureau interference in lawful speech, publication, assembly, organization, or association of Americans, the Committee intends to prohibit a Bureau agent from mailing fake letters to factionalize a group as well as to prohibit an informant from manipulating or influencing the peaceful activities of a group on behalf of the FBI.

Subsequent recommendations limit the kinds of investigations which can be opened and provide controls for those investigations. Specifically, the Committee limits FBI authority to collect information on Americans to enumerated circumstances; limits authority to maintain information on political beliefs, political associations, or private lives of Americans; requires judicial warrants for the most intrusive covert collection techniques (electronic surveillance, mail opening, and surreptitious entry); and proposes new restrictions upon the use of other covert techniques, particularly informants.

Recommendation 41. -- The FBI should be prohibited from engaging on its own or through informants or others, in any of the following activities directed at Americans:

(a) Disseminating any information to the White House, any other federal official, the news media, or any other person for a political or other improper purpose, such as discrediting an opponent of the administration or a critic of an intelligence or investigative agency.

(b) Interfering with lawful speech, publication, assembly, organizational activity, or association of Americans.

(c) Harassing individuals through unnecessary overt investigative techniques 42 such as interviews or obvious physical surveillance for the purpose of intimidation.

Recommendation 41. -- The Bureau should be prohibited from maintaining information on the political beliefs, political associations, or private lives of Americans except that which is clearly necessary for domestic security investigations as described in Part c. 43

*c. Authorized Scope of Domestic Security Investigations*

The Committee sought three objectives in defining the appropriate jurisdiction of the FBI. First, we sought to carefully limit any investigations other than traditional criminal investigations to five defined areas: preventive intelligence investigations (in two areas closely related to serious criminal activity -- terrorist and hostile foreign intelligence activities), civil disorders assistance, background investigations, security risk investigations, and security leak investigations.

Second, we sought substantially to narrow, and to impose special restrictions on the conduct of, those investigations which involved the most flagrant abuses in the past: preventive intelligence investigations and civil disorders assistance. Third, we sought to provide a clear statutory foundation for those investigations which the Committee believes are appropriate to fill the vacuum in FBI legal authority.

Achieving the first and second objectives will have the most significant impact upon the FBI's domestic intelligence program and indeed, could eliminate almost half its workload. Recommendations 44 through 46 impose two types of restrictions upon the conduct of intelligence investigations and civil disorders assistance. First, the scope of intelligence investigations is limited to terrorist activities or espionage, and the scope of civil disorders assistance is limited to civil disorders which may require federal troops. Second, the Committee suggests that the threshold for initiation of a full intelligence investigation be "reasonable Suspicion." 44 Preliminary intelligence investigations -- limited in scope, duration, and investigative technique -- could be opened upon a "specific allegation or specific or substantiated information." A written finding by the Attorney General of a likely need for federal troops is required for civil disorders assistance.

The Committee's approach to FBI domestic security investigations is basically the same as that adopted by the Attorney General's guidelines for domestic security investigations. Both are cautious about any departures from former Attorney General Stone's maxim that the FBI should only conduct criminal investigations. For example, neither the Committee nor the Attorney General would condone investigations which are totally unrelated to criminal statutes (e.g., the FBI's 1970 investigation of all black student unions).

However, the Committee views its recommendations as a somewhat more limited departure from former Attorney General Stone's line than the present Attorney General's guidelines. First, the Committee would only permit intelligence investigations with respect to hostile foreign intelligence activity and terrorism. The Attorney General's guidelines have been read by FBI officials as authorizing intelligence investigations of "subversives" (individuals who may attempt to overthrow the government in the indefinite future). While the Justice Department, under its current leadership, might not adopt such an interpretation, a different Attorney General might. Second, the guidelines on their face appear to permit investigating essentially local civil disobedience (e.g., "use of force" to interfere with state or local government which could be construed too broadly).

There are two reasons why the Committee would prohibit intelligence investigations of "subversives" or local civil disobedience. First, those investigations inherently risk abuse because they inevitably require surveillance of lawful speech and association rather than criminal conduct. The Committee's examination of forty years of investigations into "subversion" has found the term to be so vague as to constitute a license to investigate almost any activity of practically any group that actively opposes the policies of the administration in power.

A second reason for prohibiting intelligence investigations of "subversion" and local civil disobedience is that both can be adequately handled by less intrusive methods without unnecessarily straining limited Bureau resources. Any real threats to our form of government can be best identified through intelligence investigations focused on persons who may soon commit illegal violent acts. Local civil disobedience can be best handled by local police. Indeed, recent studies by the General Accounting Office suggest that FBI investigations in these areas result in very few prosecutions and little information of help to authorities in preventing violence.

The FBI now expends more money in its domestic security program than it does in its organized crime program, and, indeed, twice the amount on "internal security" informant operations as on organized crime informant coverage. "Subversive investigations" and "civil disorders assistance" represent almost half the caseload of the FBI domestic security program. The national interest would be better served if Bureau resources were directed at terrorism, hostile foreign intelligence activity, or organized crime, all more serious and pressing threats to the nation than "subversives" or local civil disobedience.

For similar reasons, the Committee, like the Attorney General's guidelines, requires "reasonable suspicion" for preventive intelligence investigations which extend beyond a preliminary stage. Investigations of terrorism and hostile foreign intelligence activity which are not limited in time and scope could lead to the same abuses found in intelligence investigations of subversion or local civil disobedience. However, an equally important reason for this standard is that it should increase the efficiency of Bureau investigations. The General Accounting Office found that when the FBI initiated its investigations on "soft evidence" -- evidence which probably would not meet this "reasonable suspicion" standard -- it usually wasted its time on an innocent target. When it initiated its investigation on harder evidence, its ability to detect imminent violence improved significantly.

The Committee's recommendations limit preventive intelligence investigations to situations where information indicates that the prohibited activity will "soon" occur, whereas the guidelines do not require that the activity be imminent. This limit is essential to prevent a return to sweeping, endless investigations of remote and speculative "threats." The Committee's intent is that, to open or continue a full investigation, there should be a substantial indication of terrorism or hostile foreign intelligence activity in the near future.

The Committee's restrictions are intended to eliminate unnecessary investigations and to provide additional protections for constitutional rights. Shifting the focus of Bureau manpower in domestic security investigations from lawful speech and association to criminal conduct by terrorists and foreign spies provides further protection for constitutional rights of Americans as well as serving the nation's interest in security.

#### *1. Investigations of Committed or Imminent Offenses*

Recommendation 42. -- The FBI should be permitted to investigate a committed act which may violate a federal criminal statute pertaining to the domestic security to determine the identity of the perpetrator or to determine whether the act violates such a statute.

Recommendation 43. -- The FBI should be permitted to investigate an American or foreigner to obtain evidence of criminal activity where there is "reasonable suspicion" that the American or foreigner has committed, is committing, or is about to commit a specific act which violates a federal statute pertaining to the domestic security. 45

## *2. Preventive Intelligence Investigations*

Recommendation 44. -- The FBI should be permitted to conduct a preliminary preventive intelligence investigation of an American or foreigner where it has a specific allegation or specific or substantiated information that the American or foreigner will soon engage in terrorist activity or hostile foreign intelligence activity. Such a preliminary investigation should not continue longer than thirty days from receipt of the information unless the Attorney General or his designee finds that the information and any corroboration which has been obtained warrants investigation for an additional period which may not exceed sixty days. If, at the outset or at any time during the course of a preliminary investigation the Bureau establishes "reasonable suspicion" that an American or foreigner will soon engage in terrorist activity or hostile foreign intelligence activity, it may conduct a full preventive intelligence investigation. Such full investigation should not continue longer than one year except upon a finding of compelling circumstances by the Attorney General or his designee.

In no event should the FBI open a preliminary or full preventive intelligence investigation based upon information that an American is advocating political ideas or engaging in lawful political activities or is associating with others for the purpose of petitioning the government for redress of grievances or other such constitutionally protected purpose.

The second paragraph of Recommendation 44 will serve as an important safeguard if enacted into any statute authorizing preventive intelligence investigations. It would supplement the protection that would be afforded by limiting the FBI's intelligence investigations to terrorist and hostile foreign intelligence activities. It re-emphasizes the Committee's intent that the investigations of peaceful protest groups and other lawful associations should not recur. It serves as a further reminder that advocacy of political ideas is not to be the basis for governmental surveillance. At the same time Recommendation 44 permits the initiation of investigations where the Bureau possesses information consisting of a "specific allegation or specific or substantiated information that [an] American or foreigner will soon engage in terrorist activity or hostile foreign intelligence activity."

This recommendation has been among the most difficult of the domestic intelligence recommendations to draft. It was difficult because it represents the Committee's effort to draw the fine line between legitimate investigations of conduct and illegitimate investigations of advocacy and association. Originally the Committee was of the view that a threshold of "reasonable suspicion" should apply to initiating even limited preliminary intelligence investigations of terrorist or hostile foreign intelligence activities. However, the Committee was persuaded by the Department of Justice that, having narrowly defined terrorist and hostile foreign intelligence activities, a "reasonable suspicion" threshold might be unworkable at the preliminary stage. Such a threshold might prohibit the FBI from investigating an allegation of extremely dangerous activity made by an anonymous source or a source of unknown reliability. The "reasonable suspicion" standard requires that the investigator have confidence in the reliability of the individual providing the information and some corroboration of the information.

However, the Committee is cautious in proposing a standard of "specific allegation or specific or substantiated information" because it permits initiation of a preliminary investigation which includes the use of physical surveillance and a survey of, but not targeting of, existing confidential human sources. The Committee encourages the Attorney General to work with the Congress to improve upon the language we recommend in Recommendation 44 before including it in any legislative charter. If adopted, both the Attorney General and the appropriate oversight committees should periodically conduct a careful review of the application of the standard by the FBI.

The ultimate goal which Congress should seek in enacting such legislation is the development of a standard for the initiation of intelligence investigations which permits investigations of credible allegations of conduct which if uninterrupted will soon result in terrorist activities or hostile foreign intelligence activities as we define them. It must not permit investigations of constitutionally protected activities as the Committee described them in the last paragraph of Recommendation 44. The following are examples of the Committee's intent.

Recommendation 44 would prohibit the initiation of an investigation based upon "mere advocacy:"

-An investigation could not be initiated, for example, when the Bureau receives an allegation that a member of a dissident group has made statements at the group's meeting that "America needs a Marxist-Leninist government and needs to get rid of the fat cat capitalist pigs."

The Committee has found serious abuses in past FBI investigations of groups. In the conduct of these investigations, the FBI often failed to distinguish between members who were engaged in criminal activity and those who were exercising their constitutional rights of association. The Committee's recommendations would only permit investigation of a group in two situations: first, where the FBI receives information that the avowed purpose of the group is "soon to engage in terrorist activity or hostile foreign intelligence activity"; or second, where the FBI has information that unidentified members of a group are "soon to engage in terrorist activity or hostile foreign intelligence activity". In both cases the FBI may focus on the group to determine the identity of those members who plan soon to engage in such activity. However, in both cases the FBI should minimize the collection of information about law-abiding members of the group or any lawful activities of the group.

-Where the FBI has information that certain chapters of a political organization had "action squads," the purpose of which was to commit terrorist acts, the FBI could investigate all members of a particular "action squad" where it had an allegation that this "action squad" planned to assassinate, for example, Members of Congress.

-An investigation could be initiated based upon specific information obtained by the FBI that unidentified members of a Washington, D.C., group are planning to assassinate Members of Congress.

The Committee's recommendations would not permit investigation of mere association:

-The FBI could not investigate an allegation that a member of the Klan has lunch regularly with the mayor of a southern community.

-The FBI could not investigate the allegation that a U.S. Senator attended a cocktail party at a foreign embassy where a foreign intelligence agent was present.

However, when additional facts are added indicating conduct which might constitute terrorist activity or hostile foreign intelligence activity, investigation might be authorized:

-The FBI could initiate an investigation of a dynamite dealer who met with a member of the "action squad" described above.

-Likewise, the FBI could initiate an investigation of a member of the National Security Council staff who met clandestinely with a known foreign intelligence agent in an obscure Paris restaurant.

Investigations of contacts can become quite troublesome when the contact takes place within the context of political activities or association for the purpose of petitioning the government. Law-abiding American protest groups may share common goals with groups in other countries. The obvious example was the widespread opposition in the late 1960's, at home and abroad, to America's role in Vietnam.

Furthermore, Americans should be free to communicate about such issues with persons in other countries, to attend international conferences and to exchange views or information about planned protest activities with like-minded foreign groups. Such activity, in itself, would not be the basis for a preliminary investigation under these recommendations:

-The FBI could not open an investigation of an anti-war group because "known communists" were also in attendance at a group meeting even if it had reason to believe that the communists' instructions were to influence the group or that the group shared the goals of the Soviet Union on ending the war in Vietnam.

-The FBI could not open an investigation of an anti-war activist who attends an international peace conference in Oslo where foreign intelligence agents would be in attendance even if the FBI had reason to believe that they might attempt to recruit the activist. Of course, the CIA would not be prevented from surveillance of the foreign agent's activities.

However, if the Bureau had additional information suggesting that the activities of the Americans in the above hypothetical cases were more than mere association to petition for redress of grievances, an investigation would be legitimate.

-Where the FBI had received information that the anti-war activist traveling to Oslo intended to meet with a person he knew to be a foreign intelligence agent to receive instructions to conduct espionage on behalf of a hostile foreign country, the FBI could open a preliminary investigation of the activist.

The Committee cautions the Department of Justice and FBI that in opening investigations of conduct occurring in the context of political activities, it should endeavor to ensure that the allegation prompting the investigation is from a reliable source.

Certainly, however, where the FBI has received a specific allegation or specific or substantiated information that an American or foreigner will soon engage in hostile foreign intelligence activity or terrorist activity, it may conduct an investigation. For example, it could do so:

-Where the FBI receives information that an American has been recruited by a hostile intelligence service;

-Where the FBI receives information that an atomic scientist has had a number of clandestine meetings with a hostile foreign intelligence agent.

Recommendation 45. -- The FBI should be permitted to collect information to assist federal, state, and local officials in connection with a civil disorder either

(i) After the Attorney General finds in writing that there is a clear and immediate threat of domestic violence or rioting which is likely to require implementation of 10 U.S.C. 332 or 333 (the use of federal troops for the enforcement of federal law or federal court orders), or likely to result in a request by the governor or legislature of a state pursuant to 140 U.S.C. 331 for the use of federal militia or other federal armed forces as a countermeasure; 45a or

(ii) After such troops have been introduced.

Recommendation 46. -- FBI assistance to federal, state, and local officials in connection with a civil disorder should be limited to collecting information necessary for

(1) the President in making decisions concerning the introduction of federal troops;

(2) military officials in positioning and supporting such troops; and

(3) state and local officials in coordinating their activities with such military officials.

#### *4. Background Investigations*

Recommendation 47 -- The FBI should be permitted to participate in the federal government's program of background investigations of federal employees or employees of federal contractors. The authority to conduct such investigations should not, however, be used as the basis for conducting investigations of other persons. In addition, Congress should examine the standards of Executive Order 10450, which serves as the current authority for FBI background investigations, to determine whether additional legislation is necessary to:

(a) modify criteria based on political beliefs and associations unrelated to suitability for employment; such modification should make those criteria consistent with judicial decisions regarding privacy of political association, 46 and

(b) restrict the dissemination of information from name checks 47 of information related to suitability for employment.

#### *5. Security Risk Investigations*

Recommendation 48. -- Under regulations to be formulated by the Attorney General, the FBI should be permitted to investigate a specific allegation that an individual within the Executive branch with access to classified information is a security risk as described in Executive Order 10450. Such investigation should not continue longer than thirty days except upon written approval of the Attorney General or his designee.

#### *6. Security Leak Investigations*

Recommendation 49. -- Under regulations to be formulated by the Attorney General, the FBI should be permitted to investigate a specific allegation of the improper disclosure of classified information by employees or contractors of the Executive branch. 48 Such investigation should not continue longer than thirty days except upon written approval of the Attorney General or his designee.

#### *d. Authorized Investigative Techniques*

The following recommendations contain the Committee's proposed controls on the use of investigative techniques in domestic security investigations which would be authorized herein. There are three types of investigative techniques: (1) overt techniques (e.g., interviews), (2) name checks (review of existing government files), and (3) covert techniques (which range, for example, from electronic surveillance and informants to the review of credit records).

The objective of these recommendations, like the Attorney General's domestic security guidelines, is to ensure that the more intrusive the technique, the more stringent the procedural checks that will be applied to it. Therefore, the recommendation would permit overt techniques and name checks in any of the investigative areas described above.

With respect to covert technique, the Committee decided upon procedures to apply to the use of a particular covert technique based upon three considerations: (1) its potential for abuse, (2) the practicability of applying the procedure to the technique, and (3) the facts and circumstances giving rise to the request for use of the technique (whether the facts warrant a full investigation or only a preliminary investigation). The most intrusive covert techniques (electronic surveillance, mail opening, and surreptitious entry) would be permissible only if a judicial warrant were obtained as required in Recommendations 51 through 54. FBI requests to target paid or controlled informants, to review tax returns, to use mail covers, or to use any other covert techniques in domestic security investigations would be subject to review and in some cases to prior approval by the Attorney General's office, as described in Recommendations 55 through 62. 49

The judicial warrant requirement the Committee recommends for electronic surveillance is similar in many respects to the Administration's bill, which is a welcome departure from past practice. The Committee, like the Administration, believes that there should be no electronic surveillance within the United States which is not subject to a judicial warrant procedure. Both would also authorize warrants for electronic surveillance of foreigners who are officers, agents, or employees of foreign powers, even though the government could not point to probable cause of criminal activity.

However, while the constitutional issue has not been resolved, the Committee does not believe that the President has inherent power to authorize the targeting of an American for electronic surveillance without a warrant, as suggested by the Administration bill. Certainly, if Congress requires a warrant for the targeting of an American for traditional electronic surveillance or for the most sophisticated NSA techniques, at home or abroad, then the dangerous doctrine of inherent Executive power to target an American for electronic surveillance can be put to rest at last. 49a The Committee also would require that no American be targeted for electronic surveillance except upon a judicial finding of probable criminal activity. The Administration bill would permit electronic surveillance in the absence of probable crime if the American is engaged in (or aiding or abetting a person engaged in) "clandestine intelligence activity" (an undefined term) under the direction of a foreign power. Targeting an American for electronic surveillance in the absence of probable cause to believe he might commit a crime is unwise and unnecessary.

In Part X, the Committee recommends that Congress consider amending the Espionage Act to cover modern forms of industrial, technological, or economic espionage not now prohibited. At the same time, electronic surveillance targeted at an American should be authorized where there is probable cause to believe he is engaged in such activity. Thus, the Committee agrees with the Attorney General that such activity may subject an American to electronic surveillance. But, as a matter of principle, the Committee believes that an American ought not to be targeted for surveillance unless there is probable cause to

believe he may violate the law. The Committee's record suggests that use of undefined terms, not tied to matters sufficiently serious to be the subject of criminal statutes, is a dangerous basis for intrusive investigations.

The paid and directed informant was a principal source of excesses revealed in our record. However, we do not propose the application of a judicial warrant procedure to informants. Instead, we propose a requirement of approval by the Attorney General based upon a probable cause standard. Because of the potential for abuse, however, we believe the warrant issue should be thoroughly reviewed after two years' experience.

There are some differences between the Attorney General and the Committee on the use of informants. 50 The Attorney General would permit the FBI to make unrestricted use of existing informants in a preliminary intelligence investigation. The Committee recognizes the legitimacy of using existing informants for certain purposes -- for example, to identify a new subject who has come to the attention of the Bureau. However, the Committee believes there should be certain restrictions for existing informants. Indeed, almost all of the informant abuses -- overly broad reporting, the ghetto informant program, agents provocateur, etc. -- involved existing informants.

The real issue is not the development of new informants, but the sustained direction of informants, new or old, at a new target. Therefore, the restrictions suggested in Recommendations 55 through 57 are designed to impose standards for the sustained targeting of informants against Americans.

The Committee requires that before an informant can be targeted in an intelligence investigation the Attorney General or his designee must make a finding that he has considered and rejected less intrusive techniques and that targeting the informant is necessary to the investigation. Furthermore, the Committee would require that the informant cannot be targeted for more than ninety days 51 in the intelligence investigation unless the Attorney General finds that there is "probable cause" that the American will soon engage in terrorist or hostile foreign intelligence activity, except that if the Attorney General finds compelling circumstances he may permit an additional sixty days.

Other than the restrictions upon the use of informants, the Committee would permit basically the same techniques in preliminary and full investigations as the Attorney General's guidelines, although the Committee would require somewhat closer supervision by the Attorney General or his designee. Interviews (including interviews of existing informant's), name checks (including checks of local police intelligence files), and physical surveillance and review of credit and telephone records would be permitted during the preliminary investigation. The Attorney General or his designee would have to review that investigation within one month. Under the guidelines, preliminary investigations do not require approval by the Attorney General or his designee and can continue for as long as ninety days with an additional ninety-day extension. The remainder of the covert techniques would be permitted in full intelligence investigations. Under the Attorney General's guidelines, the Attorney General or his designee only become involved in the termination of such investigations (at the end of one year), while the Committee's recommendations would require the Attorney General or his designee to authorize the initiation of the full investigation and the use of covert techniques in the investigation.

#### *1. Overt Techniques and Name Checks*

Recommendation 50. -- Overt techniques and name checks should be permitted in all of the authorized domestic security investigations described above, including preliminary and full preventive intelligence investigations.

#### *2. Covert Techniques*

##### *a. Covert Techniques Covered*

This section covers the standards and procedures for the use of the following covert techniques in authorized domestic security investigations:

- (i) electronic surveillance;
- (ii) search and seizure or surreptitious entry;
- (iii) mail opening;
- (iv) informants and other covert human sources;
- (v) mail surveillance;
- (vi) review of tax returns and tax-related information;
- (vii) other covert techniques -- including physical surveillance, photographic surveillance, use of body recorders and other consensual electronic surveillance, and use of sensitive records of state and local government, and other institutional records systems pertaining to credit, medical history, social welfare history, or telephone calls. 52

##### *b. Judicial Warrant Procedures (Electronic Surveillance, Mail Opening, Search and Seizure, and Surreptitious Entry)*

The requirements for judicial warrants, set forth below, are not intended to cover NSA communication intercepts. Recommendations 14 through 18 contain the Committee's recommendations pertaining to NSA intercepts, the circumstances in which a judicial warrant is required and the standards applicable for the issuance of such a warrant.

Recommendation 51. -- All non-consensual electronic surveillance, mail-opening, and unauthorized entries should be conducted only upon authority of a judicial warrant.

Recommendation 52. -- All non-consensual electronic surveillance should be conducted pursuant to judicial warrants issued under authority of Title III of the Omnibus Crime Control and Safe Streets Act of 1968.

The Act should be amended to provide, with respect to electronic surveillance of foreigners in the United States, that a warrant may issue if

(a) There is probable cause that the target is an officer, employee, or conscious agent of a foreign power.

(b) The Attorney General has certified that the surveillance is likely to reveal information necessary to the protection of the nation against actual or potential attack or other hostile acts of force of a foreign power; to obtain foreign intelligence information deemed essential to the security of the United States; or to protect national security information against hostile foreign intelligence activity.

(c) With respect to any such electronic surveillance, the judge should adopt procedures to minimize the acquisition and retention of non-foreign intelligence information about Americans.

(d) Such electronic surveillance should be exempt from the disclosure requirements of Title III of the 1968 Act as to foreigners generally and as to Americans if they are involved in hostile foreign intelligence activity. 53

As noted earlier, the Committee believes that the espionage laws should be amended to include industrial espionage and other modern forms of espionage not presently covered and Title III should incorporate any such amendment. The Committee's recommendation is that both that change and the amendment of Title III to require warrants for all electronic surveillance be promptly made.

Recommendation 53. -- Mail opening should be conducted only pursuant to a judicial warrant issued upon probable cause of criminal activity as described in Recommendation 37.

Recommendation 54. -- Unauthorized entry should be conducted only upon judicial warrant issued on probable cause to believe that the place to be searched contains evidence of a crime, except unauthorized entry, including surreptitious entry, against foreigners who are officers, employees, or conscious agents of a foreign power should be permitted upon judicial warrant under the standards which apply to electronic surveillance described in Recommendation 52.

*c. Administrative Procedures (Covert Human Sources, Mail Surveillance, Review of Tax Returns and Tax-Related Information, and Other Covert Techniques)*

Recommendation 55. -- Covert human sources may not be directed 54 at an American except:

(1) In the course of a criminal investigation if necessary to the investigation provided that covert human sources should not be directed at an American as a part of an investigation of a committed act unless there is reasonable suspicion to believe that the American is responsible for the act and then only for the purpose of identifying the perpetrators of the act.

(2) If the American is the target of a full preventive intelligence investigation and the Attorney General or his designee makes a written finding that 55 (i) he has considered and rejected less intrusive techniques; and (ii) he believes that covert human sources are necessary to obtain information for the investigation.

Recommendation 56. -- Covert human sources which have been directed at an American in a full preventive intelligence Investigation should not be used to collect information on the activities of the American for more than 90 days after the source is in place and capable of reporting, unless the Attorney General or his designee finds in writing either that there are "compelling circumstances" in which case they may be used for an additional 60 days, or that there is probable cause that the American will soon engage in terrorist activities or hostile foreign intelligence activities.

Recommendation 57. -- All covert human sources used by the FBI should be reviewed by the Attorney General or his designee as soon as practicable, and should be terminated 56 unless the covert human source could be directed against an American in a criminal investigation or a full preventive intelligence investigation under these recommendations.

Recommendation 58. -- Mail surveillance and the review of tax returns and tax-related information should be conducted consistently with the recommendations contained in Part iii. In addition to restrictions contained in Part iii, the review of tax returns and tax-related information, as well as review of medical or social history records, confidential records of private institutions and confidential records of Federal, state, and local government agencies other than intelligence or law enforcement agencies may not be used against an American except:

(1) In the course of a criminal investigation if necessary to the investigation;

(2) If the American is the target of a full preventive intelligence investigation and the Attorney General or his designee makes a written finding that 57 (i) he has considered and rejected less intrusive techniques; and (ii) he believes that the covert technique requested by the Bureau is necessary to obtain information necessary to the investigation.

Recommendation 59. -- The use of physical surveillance and review of credit and telephone records and any records of governmental or private institutions other than those covered in Recommendation 58 should be permitted to be used against an American, if necessary, in the course of either a criminal investigation or a preliminary or full preventive intelligence investigation.

Recommendation 60. -- Covert techniques should be permitted at the scene of a potential civil disorder in the course of preventive criminal intelligence and criminal investigations as described above. Non-warrant covert techniques may also be directed at an American during a civil disorder in which extensive acts of violence are occurring and Federal troops have been introduced. This additional authority to direct such covert techniques at Americans during a civil disorder should be limited to circumstances where Federal troops are actually in use and the technique is used only for the purpose of preventing further violence.

Recommendation 61. -- Covert techniques should not be directed at an American in the course of a background investigation without the informed written consent of the American.

Recommendation 62. -- If Congress enacts a statute attaching criminal sanctions to security leaks, covert techniques should be directed at Americans in the course of security leak investigations only if such techniques are consistent with Recommendation 55 (1), 58 (1) or 59. With respect to security risks, Congress might consider authorizing covert techniques, other than those requiring a judicial warrant, to be directed at Americans in the course of security risk 58 investigations, but only upon a written finding of the Attorney General that (1) there is reasonable suspicion to believe that the individual is a security risk, (ii) he has considered and rejected less intrusive techniques, and (iii) he believes the technique requested is necessary to the investigation.

*(d) Incidental Overhears*

Recommendation 63. -- Except as limited elsewhere in these recommendations or in Title III of the Omnibus Crime Control and Safe Streets Act of 1968, information obtained incidentally through an authorized covert technique about an American or a foreigner who is not the target of the covert technique can be used as the basis for any authorized domestic security investigation.

*e. Maintenance and Dissemination of Information*

The following limitations should apply to the maintenance and dissemination Information collected as a result of domestic security investigations.

*1. Relevance*

Recommendation 64. -- Information should not be maintained except where relevant to the purpose of an investigation.

*2. Sealing or Purging*

Recommendation 65. -- Personally identifiable information on Americans obtained in the following kinds of investigations should be sealed or purged as follows (unless it appears on its face to be necessary for another authorized investigation):

(a) Preventive intelligence investigations of terrorist or hostile foreign intelligence activities -- as soon as the investigation is terminated by the Attorney General or his designee pursuant to Recommendation 45 or 69.

(b) Civil disorder assistance -- as soon as the assistance is terminated by the Attorney General or his designee pursuant to Recommendation 69, provided that where troops have been introduced such information need be sealed or purged only within a reasonable period after their withdrawal.

Recommendation 66. -- Information previously gained by the FBI or any other intelligence agency through illegal techniques should be sealed or purged as soon as practicable.

*3. Dissemination*

Recommendation 67. -- Personally identifiable information on Americans from domestic security investigations may be disseminated outside the Department of Justice as follows:

(a) Preventive intelligence investigations of terrorist activities -- personally identifiable information on Americans from preventive criminal intelligence investigations of terrorist activities may be disseminated only to:

(1) A foreign or domestic law enforcement agency which has jurisdiction over the criminal activity to which the information relates; or

(2) To a foreign intelligence or military agency of the United States, if necessary for an activity permitted by these recommendations; or

(3) To an appropriate federal official with authority to make personnel decisions about the subject of the information; or

(4) To a foreign intelligence or military agency of a cooperating foreign power if necessary for an activity permitted by these recommendations to similar agencies of the United States; or

(5) Where necessary to warn state or local officials of terrorist activity likely to occur within their jurisdiction; or

(6) Where necessary to warn any person of a threat to life or property from terrorist activity.

(b) Preventive intelligence investigations of hostile foreign intelligence activities -- personally identifiable information on Americans from preventive criminal intelligence investigations of hostile intelligence activities may be disseminated only:

(1) To an appropriate federal official with authority to make personnel decisions about the subject of the information; or

(2) To the National Security Council or the Department of State upon request or where appropriate to their administration of U.S. foreign policy; or

(3) To a foreign intelligence or military agency of the United States, if relevant to an activity permitted by these recommendations; or

(4) To a foreign intelligence or military agency of a cooperating foreign power if relevant to an activity permitted by these recommendations to similar agencies of the United States.

(c) Civil disorders assistance -- personally identifiable information on Americans involved in an actual or potential disorder, collected in the course of civil disorders assistance, should not be disseminated outside the Department of Justice except to military officials and appropriate state and local officials at the scene of a civil disorder where federal troops are present. 59

(d) Background investigations -- to the maximum extent feasible, the results of background investigations should be segregated within the FBI and only disseminated to officials outside the Department of Justice authorized to make personnel decisions with respect to the subject.

(e) All other authorized domestic security investigations -- to governmental officials who are authorized to take action consistent with the purpose of an investigation or who have statutory duties which require the information.

#### *4. Oversight Access*

Recommendation 68. -- Officers of the Executive branch, who are made responsible by these recommendations for overseeing intelligence activities, and appropriate congressional committees should have access to all information necessary for their functions. The committees should adopt procedures to protect the privacy of subjects of files maintained by the FBI and other agencies affected by the domestic intelligence recommendations.

#### *f. Attorney General Oversight of the FBI, Including Termination of Investigations and Covert Techniques*

Recommendation 69. -- The Attorney General should:

(a) Establish a program of routine and periodic review of FBI domestic security investigations to ensure that the FBI is complying with all of the foregoing recommendations; and

(b) Assure, with respect to the following investigations of Americans that:

(1) Preventive intelligence investigations of terrorist activity or hostile foreign intelligence activity are terminated within one year, except that the Attorney General or his designee may grant extensions upon a written finding of "compelling circumstances";

(2) Covert techniques are used in preventive intelligence investigations of terrorist activity or hostile foreign intelligence activity only so long as necessary and not beyond time limits established by the Attorney General except that the Attorney General or his designee may grant extensions upon a written finding of "compelling circumstances";

(3) Civil disorders assistance is terminated upon withdrawal of federal troops or, if troops were not introduced, within a reasonable time after the finding by the Attorney General that troops are likely to be requested, except that the Attorney General or his designee may grant extensions upon a written finding of "compelling circumstances";

#### *v. The Responsibility and Authority of the Attorney General for Oversight of Federal Domestic Security Activities Must Be Clarified and General Counsels and Inspectors General of Intelligence Agencies Strengthened*

The Committee's Recommendations give the Attorney General broad oversight responsibility for federal domestic security activities. As the chief legal officer of the United States, the Attorney General is the most appropriate official to be charged with ensuring that the intelligence agencies of the United States conduct their activities in accordance with the law. The Executive Order, however, places primary responsibility for oversight of the intelligence agencies with the newly created Oversight Board.

Both the Recommendations and the Order recognize the Attorney General's primary responsibility to detect, or prevent, violations of law by any employee of intelligence agencies. Both charge the head of intelligence agencies with the duty to report to the Attorney General information which relates to possible violations of law by any employee of the respective intelligence agencies. The Order also requires the Oversight Board to report periodically, at least quarterly, to the Attorney General on its findings and to report, in a timely manner, to the Attorney General, any activities that raise serious questions about legality.

*a. Attorney General Responsibility and Relationship With Other Intelligence Agencies*

These recommendations are intended to implement the Attorney General's responsibility to control and supervise all of the domestic security activities of the federal government and to oversee activities of any agency affected by the Domestic Intelligence Recommendations:

Recommendation 70. -- The Attorney General should review the internal regulations of the FBI and other intelligence agencies engaging in domestic security activities to ensure that such internal regulations are proper and adequate to protect the constitutional rights of Americans.

Recommendation 71. -- The Attorney General or his designee (such as the Office of Legal Counsel of the Department of Justice) should advise the General Counsels of intelligence agencies on interpretations of statutes and regulations adopted pursuant to these recommendations and on such other legal questions as are described in b. below.

Recommendation 72. -- The Attorney General should have ultimate responsibility for the investigation of alleged violations of law relating to the Domestic Intelligence Recommendations.

Recommendation 73. -- The Attorney General should be notified of possible alleged violations of law through the Office of Professional Responsibility (described in c. below) by agency heads, General Counsel, or Inspectors General of intelligence agencies as provided in B. below.

Recommendation 74. -- The heads of all intelligence agencies affected by these recommendations are responsible for the prevention and detection of alleged violations of the law by, or on behalf of, their respective agencies and for the reporting to the Attorney General of all such alleged violations. 60 Each such agency head should also assure his agency's cooperation with the Attorney General in investigations of alleged violations.

*b. General Counsel and Inspectors General of Intelligence*

The Committee recommends that the FBI and each other intelligence agency should have a general counsel nominated by the President and confirmed by the Senate. There is no provision in the Executive Order making General Counsels of intelligence agencies subject to Senate confirmation. The Committee believes that the extraordinary responsibilities exercised by the General Counsel of these agencies make it very important that these officials are subject to examination by the Senate prior to their confirmation. The Committee further believes that making such positions subject to Presidential appointment and senatorial confirmation will increase the stature of the office and will protect the independence of judgment of the General Counsel.

The Committee Recommendations differ from the Executive Order in two other important respects. The Recommendations provide that the General Counsel should review all significant proposed agency activities to determine their legality. They also provide a mechanism whereby the Inspector General or General Counsel of an intelligence agency can, in extraordinary circumstances, and if requested by an employee of the Agency, provide information directly to the Attorney General or appropriate congressional oversight committees without informing the head of the agency.

The Committee Recommendations also go beyond the Executive Order in requiring agency heads to report to appropriate committees of the Congress and the Attorney General on the activities of the Office of the General Counsel and the Office of the Inspector General. The Committee believes that the reporting requirements will facilitate oversight of the intelligence agencies and of those important offices within them.

Recommendation 75. -- To assist the Attorney General and the agency heads in the functions described in a. above, the FBI and each other intelligence agency should have a General Counsel, nominated by the President and confirmed by the Senate, and an Inspector General appointed by the agency head.

Recommendation 76. -- Any individual having information on past, current, or proposed activities which appear to be illegal, improper, or in violation of agency policy should be required to report the matter immediately to the Agency head, General Counsel, or Inspector General. If the matter is not initially reported to the General Counsel, he should be notified by the Agency head or Inspector General. Each agency should regularly remind employees of their obligation to report such information.

Recommendation 77. -- As provided in Recommendation 74, the heads of the FBI and of other intelligence agencies are responsible for reporting to the Attorney General alleged violations of law. When such reports are made, the appropriate congressional committees should be notified. 61

Recommendation 78. -- The General Counsel and Inspector General of the FBI and of each other intelligence agency should have unrestricted access to all information in the possession of the agency and should have the authority to review all of the agency's activities. 62 The Attorney General, or the Office of Professional Responsibility on his behalf, should have access to all information in the possession of an agency which, in the opinion of the Attorney General, is necessary for an investigation of illegal activity.

Recommendation 79. -- The General Counsel of the FBI and of each other intelligence agency should review all significant proposed agency activities to determine their legality and constitutionality.

Recommendation 80. -- The Director of the FBI and the heads of each other intelligence agency should be required to report, at least annually, to the appropriate committee of the Congress, on the activities of the General Counsel and the Office of the Inspector General. 63

Recommendation 81. -- The Director of the FBI and the heads of each other intelligence agency should be required to report, at least annually, to the Attorney General on all reports of activities which appear illegal, improper, outside the legislative charter, or in violation of agency regulations. Such reports should include the General Counsel's findings concerning these activities, a summary of the Inspector General's investigations of these activities, and the practices and procedures developed to discover activities that raise questions of legality or propriety.

*c. Office of Professional Responsibility*

Recommendation 82. -- The Office of Professional Responsibility created by Attorney General Levi should be recognized in statute. The director of the office, appointed by the Attorney General, should report directly to the Attorney General or the Deputy Attorney General. The functions of the office should include:

- (a) Serving as a central repository of reports and notifications provided the Attorney General; and
- (b) Investigation, if requested by the Attorney General of alleged violations by intelligence agencies of statutes enacted or regulations promulgated pursuant to these recommendations. 64

*d. Director of the FBI and Assistant Directors of the FBI*

Recommendation 83. -- The Attorney General is responsible for all of the activities of the FBI, and the Director of the FBI is responsible to, and should be under the supervision and control of, the Attorney General.

Recommendation 84. -- The Director of the FBI should be nominated by the President and confirmed by the Senate to serve at the pleasure of the President for a single term of not more than eight years.

Recommendation 85. -- The Attorney General should consider exercising his power to appoint Assistant Directors of the FBI. A maximum term of years should be imposed on the tenure of the Assistant Director for the Intelligence Division. 64a

*vi. Administrative Rulemaking and Increased Disclosure Should Be Required*

*a. Administrative Rulemaking*

Recommendation 86. -- The Attorney General should approve all administrative regulations required to implement statutes created pursuant to these recommendations.

Recommendation 87. -- Such regulations, except for regulations concerning investigations of hostile foreign intelligence activity or other matters which are properly classified, should be issued pursuant to the Administrative Procedures Act and should be subject to the approval of the Attorney General.

Recommendation 88. -- The effective date of regulations pertaining to the following matters should be delayed ninety days, during which time Congress would have the opportunity to review such regulations: 65

- (a) Any CIA activities against Americans, as permitted in ii.a. above;
- (b) Military activities at the time of a civil disorder;
- (c) The authorized scope of domestic security investigations, authorized investigative techniques, maintenance and dissemination of information by the FBI; and
- (d) The termination of investigations and covert techniques as described in Part iv.

*b. Disclosure*

Recommendation 89. -- Each year the FBI and other intelligence agencies affected by these recommendations should be required to seek annual statutory authorization for their programs.

Recommendation 90. -- The Freedom of Information Act (5 U.S.C. 552 (b)) and the Federal Privacy Act, (5 U.S.C. 552 (a)) provide important mechanisms by which individuals can gain access to information on intelligence activity directed against them. The Domestic Intelligence Recommendations assume that these statutes will continue to be vigorously enforced. In addition, the Department of Justice should notify all readily identifiable targets of past illegal surveillance techniques, and all COINTELPRO victims, and third parties who had received anonymous COINTELPRO communications, of the nature of the activities directed against them, or the source of the anonymous communication to them. 65a

*vii. Civil Remedies Should Be Expanded*

Recommendation 91 expresses the Committee's concern for establishing a legislative scheme which will afford effective redress to people who are injured by improper federal intelligence activity. The recommended provisions for civil remedies are also intended to deter improper intelligence activity without restricting the sound exercise of discretion by intelligence officers at headquarters or in the field.

As the Committee's investigation has shown, many Americans have suffered injuries from domestic intelligence activity, ranging from deprivation of constitutional rights of privacy and free speech to the loss of a job or professional standing, break-up of a marriage, and impairment of physical or mental health. But the extent, if any, to which an injured citizen can seek relief either monetary or injunctive -- from the government or from an individual intelligence officer is far from clear under the present state of the law.

One major disparity in the current state of the law is that, under the Reconstruction era Civil Rights Act of 1871, the deprivation of constitutional rights by an officer or agent of a state government provides the basis for a suit to redress the injury incurred; 66 but there is no statute which extends the same remedies for identical injuries when they are caused by a federal officer.

In the landmark *Bivens* case, the Supreme Court held that a federal officer could be sued for money damages for violating a citizen's Fourth Amendment rights. 67 Whether monetary damages can be obtained for violation of other constitutional rights by federal officers remains unclear.

While we believe that any citizen with a substantial and specific claim to injury from intelligence activity should have standing to sue, the Committee is aware of the need for judicial protection against legal claims which amount to harassment or distraction of government officials, disruption of legitimate investigations, and wasteful expenditure of government resources. We also seek to ensure that the creation of a civil remedy for aggrieved persons does not impinge upon the proper exercise of discretion by federal officials.

Therefore, we recommend that where a government official -- as opposed to the government itself -- acted in good faith and with the reasonable belief that his conduct was lawful, he should have an affirmative defense to a suit for damages brought under the proposed statute. To tighten the system of accountability and control of domestic intelligence activity, the Committee proposes that this defense be structured to encourage intelligence officers to obtain written authorization for questionable activities and to seek legal advice about them. 68

To avoid penalizing federal officers and agents for the exercise of discretion, the Committee believes that the government should indemnify their attorney fees and reasonable litigation costs when they are held not to be liable. To avoid burdening the taxpayers for the deliberate misconduct of intelligence officers and agents, we believe the government should be able to seek reimbursement from those who willfully and knowingly violate statutory charters or the Constitution.

Furthermore, we believe that the courts will be able to fashion discovery procedures, including inspection of material in chambers, and to issue orders as the interests of justice require, to allow plaintiffs with substantial claims to uncover enough factual material to argue their case, while protecting the secrecy of governmental information in which there is a legitimate security interest.

The Committee recommends that a legislative scheme of civil remedies for the victims of intelligence activity be established along the following lines to clarify the state of the law, to encourage the responsible execution of duties created by the statutes recommended herein to regulate intelligence agencies, and to provide relief for the victims of illegal intelligence activity.

Recommendation 91. -- Congress should enact a comprehensive civil remedies statute which would accomplish the following: 69

(a) Any American with a substantial and specific claim 70 to an actual or threatened injury by a violation of the Constitution by federal intelligence officers or agents 71 acting under color of law should have a federal cause of action against the government and the individual federal intelligence officer or agent responsible for the violation, without regard to the monetary amount in controversy. If actual injury is proven in court, the Committee believes that the injured person should be entitled to equitable relief, actual, general, and punitive damages, and recovery of the costs of litigation. 72 If threatened injury is proven in court, the Committee believes that equitable relief and recovery of the costs of litigation should be available.

(b) Any American with a substantial and specific claim to actual or threatened injury by violation of the statutory charter for intelligence activity (as proposed by these Domestic Intelligence Recommendations) should have a cause of action for relief as in (a) above.

(c) Because of the secrecy that surrounds intelligence programs, the Committee believes that a plaintiff should have two years from the date upon which he discovers, or reasonably should have discovered, the facts which give rise to a cause of action for relief from a constitutional or statutory violation.

(d) Whatever statutory provision may be made to permit an individual defendant to raise an affirmative defense that he acted within the scope of his official duties, in good faith, and with a reasonable belief that the action he took was lawful, the Committee believes that to ensure relief to persons injured by governmental intelligence activity, this defense should be available solely to individual defendants and should not extend to the government. Moreover, the defense should not be available to bar injunctions against individual defendants.

*viii. Criminal Penalties Should Be Enacted*

Recommendation 92. -- The Committee believes that criminal penalties should apply, where appropriate, to willful and knowing violations of statutes enacted pursuant to the Domestic Intelligence Recommendations.

*ix. The Smith Act and the Voorhis Act Should Either Be Repealed or Amended*

Recommendation 93. -- Congress should either repeal the Smith Act (18 U.S.C. 2385) and the Voorhis Act (18 U.S.C. 2386), which on their face appear to authorize investigation of "mere advocacy" of a political ideology, or amend those statutes so that domestic security investigations are only directed at conduct which might serve as the basis for a constitutional criminal prosecution, under Supreme Court decisions interpreting these and related statutes. 73

*x. The Espionage Statute Should be Modernized*

As suggested in its definition of "hostile foreign intelligence activity" and its recommendations on warrants for electronic surveillance, the Committee agrees with the Attorney General that there may be serious deficiencies in the Federal Espionage Statute (18 U.S.C. 792 et seq.). The basic prohibitions of that statute have not been amended since 1917 and do not encompass certain forms of industrial, technological, or economic espionage. The Attorney General in a recent letter to Senator Kennedy (Reprinted on p. S3889 of the Congressional Record of March 23, 1976) describes some of the problem areas of the statute, including industrial espionage (e.g., a spy obtaining information on computer technology for a foreign power). The Committee took no testimony on this subject and, therefore, makes no specific proposal other than that the appropriate committees of the Congress explore the necessity for amendments to the statute.

Recommendation 94. -- The appropriate committees of the Congress should review the Espionage Act of 1917 to determine whether it should be amended to cover modern forms of foreign espionage, including industrial, technological or economic espionage.

*xi. Broader Access to Intelligence Agency Files Should be Provided to GAO, as an Investigative Arm of the Congress*

Recommendation 95. -- The appropriate congressional oversight committees of the Congress should, from time to time, request the Comptroller General of the United States to conduct audits and reviews of the intelligence activities of any department or agency of the United States affected by the Domestic Intelligence Recommendations. For such purpose, the Comptroller General, or any of his duly authorized representatives, should have access to, and the right to examine, all necessary materials of any such department or agency.

*xii. Congressional Oversight Should Be Intensified*

Recommendation 96. -- The Committee reendorses the concept of vigorous Senate oversight to review the conduct of domestic security activities through a new permanent intelligence oversight committee.

*xiii. Definitions*

For the purposes of these recommendations:

A. "Americans" means U.S. citizens, resident aliens and unincorporated associations, composed primarily of U.S. citizens or resident aliens; and corporations, incorporated or having their principal place of business in the United States or having majority ownership by U.S. citizens, or resident aliens, including foreign subsidiaries of such corporations provided, however, "Americans" does not include corporations directed by foreign governments or organizations.

B. "Collect" means to gather or initiate the acquisition of information, or to request it from another agency.

C. A "covert human source" means undercover agents or informants who are paid or otherwise controlled by an agency.

D. "Covert techniques" means the collection of information, including collection from record sources not readily available to a private person (except state or local law enforcement files), in such a manner as not to be detected by the subject.

E. "Domestic security activities" means governmental activities against Americans or conducted within the United States or its territories, including enforcement of the criminal laws, intended to:

1. protect the United States from hostile foreign intelligence activity including espionage;
2. protect the federal, state, and local governments from domestic violence or rioting; and
3. protect Americans and their government from terrorists.

F. "Foreign communications," refers to a communication between, or among, two or more parties in which at least one party is outside the United States, or a communication transmitted between points within the United States if transmitted over a facility which is under the control of, or exclusively used by, a foreign government.

G. "Foreigners" means persons and organizations who are not Americans as defined above.

H. "Hostile foreign intelligence activities" means acts, or conspiracies, by Americans or foreigners, who are officers, employees, or conscious agents of a foreign power, or who, pursuant to the direction of a foreign power, engage in clandestine intelligence activity, or engage in espionage, sabotage or similar conduct in violation of federal criminal statutes.

I. "Name checks" means the retrieval by an agency of information already in the possession of the federal government or in the possession of state or local law enforcement agencies.

J. "Overt investigative techniques" means the collection of information readily available from public sources, or available to a private person, including interviews of the subject or his friends or associates.

K. "Purged" means to destroy or transfer to the National Archives all personally identifiable information (including references in any general name index).

L. "Sealed" means to retain personally identifiable information and to retain entries in a general name index but to restrict access to the information and entries to circumstances of "compelling necessity."

M. "Reasonable suspicion" is based upon the Supreme Court's decision in the case of Terry v. Ohio, 392 U.S. 1 (1968), and means specific and articulable facts which taken together with rational inferences from those facts, give rise to a reasonable suspicion that specified activity has occurred, is occurring, or is about to occur.

N. "Terrorist activities" means acts, or conspiracies, which: (a) are violent or dangerous to human life; and (b) violate federal or state criminal statutes concerning assassination, murder, arson, bombing, hijacking, or kidnapping; and (c) appear intended to, or are likely to have the effect of:

- (1) Substantially disrupting federal, state or local government; or
  - (2) Substantially disrupting interstate or foreign commerce between the United States and another country; or
  - (3) Directly interfering with the exercise by Americans, of Constitutional rights protected by the Civil Rights Act of 1968, or by foreigners, of their rights under the laws or treaties of the United States.
- O. "Unauthorized entry" means entry unauthorized by the target.

3 Madison, Federalist No. 51. Madison made the point with grace:

"If men were angels, no government would be necessary. If angels were to govern men, neither external nor internal controls on government would be necessary. In framing a government which is to be administered by men over men, the great difficulty lies in this: you must first enable the government to control the governed; and in the next place oblige it to control itself. A dependence on the people is, no doubt, the primary control on the government; but experience has taught mankind the necessity of auxiliary precautions."

4 Directed primarily at foreigners abroad.

5 "Domestic security activities" means federal governmental activities, directed against Americans or conducted within the United States or its territories, including enforcement of the criminal law, intended to (a) protect the United States from hostile foreign intelligence activity, including espionage; (b) protect the federal, state, and local governments from domestic violence or rioting; and (c) protect Americans and their government from terrorist activity. See Part xiii of the recommendations and conclusions for all the definitions used in the recommendations.

6 "Americans" means U.S. citizens, resident aliens and unincorporated associations, composed primarily of U.S. citizens or resident aliens; and corporations, incorporated or having their principal place of business in the United States or having majority ownership by U.S. citizens, or resident aliens, including foreign subsidiaries of such corporations, provided, however, Americans does not include corporations directed by foreign governments or organizations.

7 "Foreigners" means persons and organizations who are not Americans as defined above.

8 These terms, which cover the two areas in which the Committee recommends authorizing preventive intelligence investigations, are defined on pp. 340-341.

9 S. Res. 21, Sec. 5; 2 (12).

10 See, e.g., *Youngstown Sheet and Tube Company v. Sawyer*, 343 U.S. 579 (1952).

11 "Covert human sources," means undercover agents or informants who are paid or otherwise controlled by an agency.

12 As noted in the Report on CHAOS, former Directors have had differing interpretations of the mandate of the 1947 Act, to the Director of Central Intelligence to protect intelligence sources and methods. The Committee agrees with former Director William Colby that the 1947 Act only authorizes the Director to perform a "coordinating" and not an "operational" role.

13 The activity completely prohibited to CIA includes only the interception of communications restricted under the 1968 Safe Streets Act, and would not limit the use of body recorders, or telephone taps or other electronic surveillance where one party to the communication has given his consent. For example, electronic coverage of a case officer's meeting with his agent would not be included. The prohibition also is not intended to cover the testing of equipment in the United States, when done with the written approval of the Attorney General and under procedures he has approved to minimize interception of private communications and to prevent improper dissemination or use of the communications which are unavoidably intercepted in the testing process. Nor does the prohibition preclude the use of countermeasures to detect electronic surveillance mounted against the CIA, when conducted under general procedures, and safeguards approved in writing by the CIA General Counsel.

14 Unauthorized entry" means entry unauthorized by the target.

15 As part of the CIA's responsibility for its own security, however, appropriate personnel should be permitted to carry firearms within the United States not only for courier protection of documents, but also to protect the Director and Deputy Director and defectors and to guard CIA installations.

16 "Covert techniques" means the collection of information including collection from records sources not readily available to a private person (except state or local law enforcement files) in such a manner as not to be detected by the subject. Covert techniques do not include a check of CIA or other federal agency or state and local police records, or a check of credit bureaus for the limited purpose of obtaining non-financial biographical data, i.e., date and place of birth, to facilitate such name checks, and the subject's place of employment. Nor do "covert techniques" include interviews with persons knowledgeable about the subject conducted on a confidential basis to avoid disclosure of the inquiry to others or to the subject, if he is not yet aware of CIA interest in a prospective relationship, provided the interview does not involve the provision of information from medical, financial, educational, phone or other confidential records.

17 For purposes of this section employees includes those employees or contractors who work regularly at CIA facilities and have comparable access or freedom of movement at CIA facilities as employees of CIA.

18 Recommendation 7(c) does permit background and other security investigations conducted with government credentials which do not reveal CIA involvement and, in extremely sensitive cases commercial or other private identification to avoid disclosure of any government connection.

It would also permit CIA investigators to check the effectiveness of cover operations, without revealing their affiliation, by means of inquiries at the vicinity of particularly sensitive CIA projects. If in the course of such inquiries, unidentified CIA employees or contractors' employees are observed to be endangering the project's cover, they may be the subject of limited physical surveillance at that time for the sole purpose of ascertaining their identity so that they may be subsequently contacted.

19 Such action poses serious danger of misuse. The preparation may involve the agent reporting on his associates so that the CIA can assess his credentials and his observation and reporting ability. This could become an opportunity to collect domestic intelligence on the infiltrated group even when an investigation of that group could not otherwise be commenced under the applicable standards. Obviously, without restrictions the intelligence community could use this technique to conduct domestic spying, arguing that the agents were not being "targeted" against the group but were merely preparing for an overseas operation.

This was done, for example, in the use by Operation CHAOS of agents being provided with radical credentials for use in "Project 2," a foreign intelligence operation abroad. (See the CHAOS Report and the Rockefeller Commission Report.)

One alternative would be to let the FBI handle the agent while he is preparing for overseas assignment. On balance, however, that seems less desirable. The temptation to use the agent to collect domestic intelligence might be stronger for the agency with domestic security responsibilities than it would for the area division of the CIA concerned with foreign intelligence. Also, improper use of the agent to collect such information would be more readily identifiable in the context of the foreign intelligence operation run by the CIA than it would in the context of an agent operation run by the Intelligence Division of the FBI.

19a Any further investigations conducted in connection with (b) or (c) should be conducted by the FBI, and only if authorized by Part iv.

20 In addition, the FBI should be notified of such insertions.

21 "Collect" means to gather or initiate the acquisition of information, or to request it from another agency. It does not include dissemination of information to CIA by another agency acting on its own initiative.

22 "Employees," as used in this recommendation, would include members of the employee's immediate family or prospective spouse.

23 In the case of persons unknown to the CIA who volunteer to provide information or otherwise request contact with CIA personnel, the agency may conduct a name check before arranging a meeting.

24 The CIA may only conduct a name check and confidential interviews of persons who know the subject, if the subject is unaware of CIA interest in him.

25 The CIA may only collect information by means of a name check.

26 The CIA may make a name check and determine the place of employment of persons residing or working in the immediate vicinity of sensitive sites, such as persons residing adjacent to premises used for safe houses or defector resettlement, or such as proprietors of businesses in premises adjacent to CIA offices in commercial areas.

27 The counterintelligence component of the CIA would be able to call to the attention of the FBI any patterns of significance which the CIA thought warranted opening an investigation of an American.

28 The guidelines state:

A. "Whenever information is uncovered as a byproduct result of CIA foreign targeted intelligence or counterintelligence operations abroad which makes American, suspect for security or counterintelligence reasons ... such information will be reported to the FBI ... specific CIA operations will not be mounted against such individuals; CIA responsibilities thereafter will be restricted to reporting any further intelligence or counterintelligence aspects to the specific case which comes to CIA's attention as a byproduct of its continuing foreign targeted operational activity. If the FBI, on the basis of the receipt of the CIA information, however, specifically requests further information on terrorist or counterintelligence matters relating to the private American citizens . . . CIA may respond to written requests by the FBI for clandestine collection abroad by CIA of information on foreign terrorist or counterintelligence matters involving American citizens." 29 William Nelson testimony, 1/28/76, pp. 33-34. Mr. Nelson was not addressing procedures to obtain a judicial warrant; but the time required for an ex parte application on an expedited basis to a Federal Court in Washington, D.C., would not be excessive for the investigative time frames which Nelson described.

Furthermore, the present wiretap statute authorizes electronic surveillance (for 48 hours) on an emergency basis prior to judicial authorization.

30 Recommendation 8, p. 303.

30a "Terrorist activities" means acts, or conspiracies, which: (a) are violent or dangerous to human life; and (b) violate federal or state criminal statutes concerning assassination, murder, arson, bombing, hijacking, or kidnapping; and (c) appear intended to, or are likely to have the effect of:

(1) Substantially disrupting federal, state or local government; or

(2) Substantially disrupting interstate or foreign commerce between the United States and another country; or

(3) Directly interfering with the exercise by Americans, of Constitutional rights protected by the Civil Rights Act of 1968, or by foreigners, of their rights under the laws or treaties of the United States.

30b Hostile foreign intelligence activities" means acts, or conspiracies, by Americans or foreigners, who are officers, employees, or conscious agents of a foreign power, or who, pursuant to the direction of a foreign power, engage in clandestine intelligence activity, or engage in espionage, sabotage or similar conduct in violation of federal criminal statutes. (The term

"clandestine intelligence activity" is included in this definition at the suggestion of officials of the Department of Justice. Certain activities engaged in by conscious agents of foreign powers, such as some forms of industrial, technological, or economic espionage, are not now prohibited by federal statutes. It would be preferable to amend the espionage laws to cover such activity and eliminate this term. As a matter of principle, intelligence agencies should not investigate activities of Americans which are not violations of federal criminal statutes. Therefore, the Committee recommends (in Recommendation 94) that Congress immediately consider enacting such statutes and then eliminating this term.)

31 If the CIA believes that an investigation of an American should be opened but the FBI declines to do so, the CIA should be able to appeal to the Attorney General or to the appropriate committee of the National Security Council.

32 Such information would include material volunteered by a foreign intelligence service independent of any request by the CIA.

33 See Recommendation 7, p. 302.

34 None of the Committee's recommendations pertaining to NSA should be construed as inhibiting or preventing NSA from protecting U.S. communications against interception or monitoring by foreign intelligence services.

35 "Foreign communications," as used in this section, refers to a communication between or among two or more parties in which at least one party is outside the United States, or a communication transmitted between points within the United States only if transmitted over a facility which is under the control of, or exclusively used by, a foreign government.

36 In order to ensure that this recommendation is implemented, both the Attorney General and the appropriate oversight committees of the Congress should be continuously apprised of, and periodically review, the measures taken by NSA pursuant to this recommendation.

37 The Committee believes that in the case of interceptions authorized to obtain information about hostile foreign intelligence, there should be a presumption that notice to the subject of such intercepts, which would ordinarily be required under Title I I I (18 U. S. C. 2518 (8) (d) ), is not required, unless there is evidence of gross abuse.

38 The Executive Order places no such restriction on the dissemination of information by NSA. Under the Executive Order, NSA is not required to delete names or destroy messages which are personally identifiable to Americans. As long as these messages fall within the categories established by the Order, the names of Americans could be transmitted to other intelligence agencies of the Government.

39 Based upon its study of the IRS, the Committee believes these recommendations might properly be applied beyond the general domestic security scope of the recommendations.

40 "Request" as used in the recommendations concerning the Internal Revenue Service should not include circumstances in which the agency is acting with the informed written consent of the taxpayer.

41 See recommendation 94 for the committee's recommendation that Congress consider amending the Espionage Act so as to cover modern forms of espionage not now criminal.

42 "Overt investigative techniques" means the collection of information readily available from public sources or to a private person (including interviews of the subject or his friends or associates).

43 Thus, the Bureau would have an obligation to review any such information before it is placed in files and to review the files, thereafter, to remove it if no longer needed. This obligation does not extend to files sealed under Recommendation 65.

44 "Reasonable suspicion" is based Upon the Supreme Court's decision in the case of Terry v. Ohio, 392 U.S. 1 (1968), and means specific and articulable facts which taken together with rational inferences from those facts, give rise to a reasonable suspicion that specified activity has occurred, is occurring, or is about to occur.

45 This includes conspiracy to violate a federal statute pertaining to the domestic security. The Committee, however, recommends repeal or amendment of the Smith Act to make clear that "conspiracy" to engage in political advocacy cannot be investigated. (See Recommendation 93.)

45a This recommendation does not prevent the FBI from conducting criminal investigations or preventive intelligence investigations of terrorist acts in connection with a civil disorder.

46 For example, NAACP v. Alabama, 357 U.S. 449 (1958) ; Bates v. Little Rock, 361 U.S. 516 (1960).

47 See definition of "name checks" at p. 340.

48 If Congress enacts a security leak criminal statute, this additional investigative authority would be unnecessary. Security leaks would be handled as traditional criminal investigations as described in Recommendations 42 and 43 above.

49 Review of tax returns and mail covers would also be subject to the Post Office and IRS procedures described in earlier recommendations.

49a "When the President takes measures incompatible with the expressed or implied will of Congress, his power is at its lowest ebb . . . ." (Youngstown Sheet & Tube Co. v. Sawyer, 343 U.S. 579, G37 (1952), Justice Jackson concurring.)

50 The Attorney General is considering additional guidelines on informants.

51 The period of ninety days begins when the informant is in place and capable of reporting.

52 The Committee has not taken extensive testimony on these "other covert techniques" and therefore, aside from the general administrative procedures contained in c. below, makes no recommendations designed to treat these techniques fully.

53 Except where disclosure is called for in connection with the defense in the case of criminal prosecution.

54 A "covert human source" is an undercover agent or informant who is paid or otherwise controlled by the agency. A cooperating citizen is not ordinarily a covert human source. A covert human source is "directed" at an American when the intelligence agency requests the covert human source to collect new information on the activities of that individual. A covert human source is not "directed" at a target if the intelligence agency merely asks him for information already in his possession, unless through repeated inquiries, or otherwise, the agency implicitly directs the informant against the target of the investigation.

55 The written finding must be made prior to the time the covert human source is directed at an American, unless exigent circumstances make application impossible, in which case the application must be made as soon thereafter as possible.

56 Termination requires cessation of payment or any other form of direction or control.

57 The written finding must be made prior to the time the technique is used against an American, unless exigent circumstances make application impossible, in which case the application must be made as soon thereafter as possible.

58 If Congress does not enact a security leak criminal statute, Congress might consider authorizing covert techniques in the same circumstances as security risk investigations either as an interim measure or as an alternative to such a statute.

59 Personally identifiable information on terrorist activity which pertains to a civil disorder could still be disseminated pursuant to (a) above.

60 This recommendation must be read along with recommendations contained in Part ii, limiting the authority of foreign intelligence and military agencies to investigate security leaks or security risks involving their employees and centralizing those investigations in the FBI.

61 The Inspector General and General Counsel should have authority, in extraordinary circumstances, and if requested by an employee of the agency providing information, to pass the information directly to the Attorney General and to notify the appropriate congressional committees without informing the head of the agency. Furthermore, nothing herein should prohibit an employee from reporting on his own such information directly to the Attorney General or an appropriate congressional oversight committee.

62 The head of the agency should be required to provide to the appropriate oversight committees of the Congress and the Executive branch and the Attorney General an immediate explanation, in writing, of any instance in which the Inspector General or the General Counsel has been denied access to information, has been instructed not to report on a particular activity or has been denied the authority to investigate a particular activity.

63 The report should include: (a) a summary of all agency activities that raise questions of legality or propriety and the General Counsel's findings concerning these activities; (b) a summary of the Inspector General's investigations concerning any of these activities; (c) a summary of the practices and procedures developed to discover activities that raise questions of legality or propriety; (d) a summary of each component, program or issue survey, including the Inspector General's recommendations and the Director's decisions; and (e) a summary of all other matters handled by the Inspector General.

The report should also include discussion of: (a) major legal problems facing the Agency; (b) the need for additional statutes; and (c) any cases referred to the Department of Justice.

64 The functions of the Office should not include: (a) exercise of routine supervision of FBI domestic security investigations; (b) making requests to other agencies to conduct investigations or direct covert techniques at Americans; or (c) involvement in any other supervisory functions which it might ultimately be required to investigate.

64a It is not proposed that this recommendation be enacted as a statute.

65 This review procedure would be similar to the procedure followed with respect to the promulgation of the Federal Rules of Criminal and Civil Procedure.

65a It is not proposed that this recommendation be enacted as a statute.

66 42 U. S.C. 1983.

67 *Bivens v. Six Unknown Fed. Narcotics Agents*, 403 U.S. 388 (1971).

68 One means of structuring such a defense would be to create a rebuttable presumption that an individual defendant acted so as to avail himself of this defense when he proves that he acted in good faith reliance upon: (1) a written order or directive by a government officer empowered to authorize him to take action ; or (2) a written assurance by an appropriate legal officer that his action is lawful.

69 Due to the scope of the Committee's mandate, we have taken evidence only on constitutional violations by intelligence officers and agents. However, the anomalies and lack of clarity in the present state of the law (as discussed above) and the breadth of constitutional violations revealed by our record, suggest to us that a general civil remedy would be appropriate. Thus, we urge consideration of a statutory civil remedy for constitutional violations by any federal officer; and we encourage the appropriate committees of the Congress to take testimony on this subject.

70 The requirement of a substantial and specific claim is intended to allow a judge to screen out frivolous claims where a plaintiff cannot allege specific facts which indicate that he was the target of illegal intelligence activity.

71 "Federal intelligence officers or agents" should include a person who was an intelligence officer, employee, or agent at the time a cause of action arose. "Agent" should include anyone acting with actual, implied, or apparent authority.

72 The right to recover "costs of litigation" is intended to include recovery of reasonable attorney fees as well as other litigation costs reasonably incurred.

73 E.g. *Yates v. United States*, 354 U.S. 298 (1957) ; *Noto v. United States*, 367 U.S. 290 (1961) ; *Brandenburg v. Ohio*, 395 U.S. 444 (1969).

74 The term "clandestine intelligence activity" is included in this definition at the suggestion of officials of the Department of Justice. Certain activities engaged in by the conscious agents of foreign powers, such as some forms of industrial, technological, or economic espionage, are not now prohibited by federal statutes. It would be preferable to amend the espionage laws to cover such activity and eliminate this term. As a matter of principle, intelligence agencies should not investigate activities of Americans which are not federal criminal statutes. Therefore, the Committee recommends (in Recommendation ---) that Congress immediately consider enacting such statutes and then eliminating this term.

I have no doubt at all this is TRUE, based on what we "mind control" victims go through. Those who underwent terrible torture and involuntary surgery in the MKULTRA era can tell this story first hand.

From: Bob  
Subject: [cia-drugs] US nazis cut open children,  
implant poison drugs  
To: cia-drugs@yahoogroups.com  
In AIDSsoc@yahoogroups.com

Hi all,

My name is Liam Scheff, I'm a journalist working on the AIDS diagnosis problem. I wrote a series in Boston this year called The AIDS Debate. (Links at the bottom)

I've recently been working on a story about medical/pharmaceutical abuse in an HIV pos. children's home.

The home is called Incarnation Children's Center (ICC). It's in NYC, north of Harlem. The children who are taken into ICC have mothers who used drugs. They're black and hispanic, they're poor. And because of this, as we understand that HIV tests are non-specific and cross-reactive, the children test HIV pos.

The NIH (NIAID) and various pharmaceutical companies (Glaxo, Pfizer, Biocene) are using these kids as test subjects in clinical trials at ICC.

The kids are given AZT, Protease inhibitors, etc, as well as experimental drugs, or drugs in experimental combinations. When the children refuse the drugs, they're force fed.

If the kids continue to refuse, they're given a surgery to implant a plastic tube through their abdomen into their stomach. The drugs are then injected directly into their stomachs -- no refusing.

This year a six-year-old and a twelve-year-old child had strokes because of the drugs. The 12-year-old went blind. They both died shortly after. The children walk around in various states of deformation and retardation because of lifelong exposure to AZT and Protease inhibitors.

Parents who refuse to give their children the drugs are labelled 'incompetent' by the city/state agency. The children are removed from parental custody and remanded to ICC. I've written an extensive story about this - which consists of an interview with a mother of two children at Incarnation, as well as the administering doctor at the place, who blithely confirms the practice of cutting these children open so they can be drugged.

This is a horrible, grotesque story. But it's real, it's happening now. I've been there, I've seen it, and I'm sick to death being

the only one who knows about it.

I don't have an outlet yet, and am I'm wondering if you can help put the story out there -- web, local underground papers, any friendly, or at least not-unfriendly outlet. I certainly want everybody who is aware of the problem with the AIDS diagnosis to know that this is going on.

If I had my way, every time somebody went searching for "HIV" or "AIDS" on the web, this story -- and all of your stories, would come up first.

I know the story's in NY, and most of you aren't, but it's a small world, and getting the story out there will help it find a publisher.

Any ideas or help are greatly appreciated. I'll send you a word doc of the piece upon your request.

Please feel free to pass this email along to any and all useful contacts.

Hope all's well and thanks for your time and consideration,

Liam Scheff

## **July 1999 Statement by an Italian Doctor**

### **Regarding Unusual Human Implants**

---

**This physician has requested anonymity but is well-known to the involuntary human experimentation community and can be contacted through some of us. Eleanor White**

"A physician of my acquaintance has repeatedly discovered metal objects implanted into a number of residents - normal people, workers - of small towns in the North-Western surroundings of Turin, towards the valley ending in the French frontier.

These devices, to the best of my knowledge, are not for any therapeutic purpose. Knowing that people have been used for involuntary electronic implantation experiments, these patients may have also been implanted in this way. Further investigation would be needed to learn the truth about these metallic implants."

Subject: FDA Gestapo Imprisons Parkinson's Advocate

From: "International Advocates for Health Freedom" [jham@iahf.com](mailto:jham@iahf.com)

Date: Mon, 27 Nov 2000 10:44:42 -0500

All Webmasters: Please post. Mr. Kimble was not even allowed to have his expert witness testify. He was horribly railroaded. Now they're giving him "Diesel Therapy" moving him around inside the American Gulag so he can't even be in touch with his wife and attorney.

IAHF list: I have been working hard for the past several weeks with Bill Faloon and Jo Kimble, the wife of Jay Kimball who's plight is discussed very thoroughly and movingly below by my friend Don Harkens, Editor and Publisher of the Idaho Observer, and a fellow member of the American Media Association. Jay was selling a dietary supplement: liquid deprenyl citrate, a derivative of the herb ephedra. It meets the statutory definition of a dietary supplement beyond any question because one or more of its 4 ingredients meets the definition of a dietary ingredient, the product is totally safe and very effective. FDA engaged in a conspiracy with Somerset Labs to imprison Jay. I have much more to say about Jay's situation, but think that Don's 3 articles below do a better job of introducing the issue than I could initially. Suffice it to say that Jay has been railroaded into the belly of the beast: 13 years in the Federal Pen on a trumped up "conspiracy" charge, and we must raise the funds for an appeal. After reading this, please forward it to others, especially if they have loved ones who suffer from Parkinsons' because their best hope is being horribly suppressed, and Jay is being grossly mistreated as a political prisoner.

Because of their efforts to break him for the past ten years, Mr. Kimball was forced to defend himself at his trial. Donations for his legal defense can be sent to:

The James T. Kimball Legal Defense Fund,  
C/O 29949 S.R. 54 West,  
Wesley Chapel, Florida, 33543  
or call 813-994-5968 for more information.

Dear Fellow Health Freedom Lover -

Many of you are familiar with the story of Jay Kimball. Following is an update and background in case you are not familiar. The final section of this post is a list of numbers that can be called to let the FDA, legislators and courts realize that people are watching.

Please help bring the following crimes against a decent fellow American to light. If you have any questions, my number is at the end of the first release.

Sincerely,

Don Harkins

### **Fed Marshalls prescribe diesel therapy for Kimball LDC developer, 60, returned to Tampa in damaged state**

By The Idaho Observer

TAMPA-After his October 19, 2000 conviction for violating U.S. Food and Drug Administration (FDA) labeling laws, Liquid Deprenyl Citrate (LDC) developer Jay Kimball, 60, while in the custody of the U.S. Marshal's Service, was handcuffed, waist-chained, leg-ironed and, for no apparent reason, transported 150 miles from the Hillsborough County Jail (HCJ) here to the Hendry County Jail in LaBelle. Kimball was returned to HCJ Nov. 20 with numerous injuries.

An HCJ employee reportedly stated that Kimball must have been transported in error as, considering his age and the nature of his conviction, he should never have been sent to LaBelle. LaBelle is a facility that has been described as a deplorable, inhumane and bacteria-infested hell hole.

Kimball was sentenced by Florida District Federal Judge Richard Lazzara to serve 13 years for "misbranding" LDC-a crime which would ordinarily earn a three-year prison stay. On one hand the judge said to the prosecutors, "you had thousands of names and phone numbers, you failed to produce one complaint of harm or loss, to the contrary I have seen testimony and received letters about how good the product is. NO HARM DONE."

Then on the other hand he states "Mr. Kimball does not respect authority, he does not respect the law. " Lazzara also stated that Kimball's actions were "ANARCHY" in order to justify sentencing Kimball to serve more than four times federal sentencing guidelines for such a crime.

Though the FDA has been persecuting Kimball since LDC became available to victims of degenerative diseases such as Parkinson's in 1990, the federal agency admits that there has never been one consumer complaint or even one reported adverse reaction attributable to LDC. To the contrary, the court and the FDA have been provided with the results of 3,000 clinical case studies conducted by the University of Toronto which proved the product's safety and efficacy.

The court was also provided hundreds of letters from LDC users who have had their quality of life returned to them with the help of the natural nutritive plant product derived from the

ephedra plant. After Lazzara arbitrarily passed sentence on Kimball based primarily on his defiance of non-scientific federal authority, U.S. marshals took custody of the 60-year-old man and justified further abuse with a false charging report produced by the Hillsborough County Sheriff's Department.

The report, which follows Kimball through the "justice" system, stated as of 11/20/00 that Kimball had been convicted in federal court for manufacturing, distributing, dispensing and possessing cocaine.

The speedometer in the transport van containing six male and two female prisoners with no seat belts in the vehicle except for the marshals, reportedly reached 100 mph as it careened through traffic en route to LaBelle. Kimball was catapulted out of his seat two times and suffered injuries to his shoulder for which he was denied medical attention when he arrived at the LaBelle facility. He also lost his voice and experienced difficulty breathing but was not allowed to see a doctor the entire time he was behind bars in LaBelle.

U.S. Marshal Vasquez, one of the transport deputies, reportedly subjected Kimball to a five-minute stream of extremely profane verbal abuse in front of LaBelle officials immediately prior to Kimball's return trip to Tampa. During the return trip Vasquez caused Kimball to fall again and injured his tailbone. Kimball did receive proper medical attention upon his return to HCJ.

Robin Hill of the U.S. Marshal's Service office in Tampa refuses to comment on her agency's treatment of Kimball but she did see to it that the charging report was changed. The report, which is available on-line at <http://www.hcso.tampa.fl.us/>, has been changed to reflect a conviction for the manufacture, distribution and possession of "synthesized narcotics"-which is also false as Kimball was not convicted of that crime and LDC is not a synthesized narcotic.

The U.S. Marshal's Service is apparently insistent upon incorrectly identifying the nature of Kimball's conviction so that hardened prison officials who only know Kimball by what the "official" report tells them will treat him in the worst possible manner. In the court of common sense, Kimball was convicted in federal court for helping people to overcome degenerative disease without federal approval. Since his conviction for having the courage to continue helping people regardless of his own safety, he has been physically and mentally tormented by a prison system that believes him to be a convicted drug manufacturer/dealer.

Attached for your consideration are two articles written over a year ago. They serve as an accurate overview of a decade of events that led to Kimball's federal conviction. Please help us to stop the cruel and unusual abuse of Jay Kimball. The names and numbers provided below should hear about this. Call them. We need to flood these people, particularly the politicians, with phone calls so that they understand Kimball is not alone. For more information or verification of this example of how the federal government really views its citizens, call Don Harkins of The Idaho Observer at: (208) 255-2307.

## **State, federal agents wage war against Florida company Government-confiscated trade secrets alleged to be in competitor files**

by Don Harkins

TAMPA-After withstanding nearly a decade of what appears to be a frivolous, harrassive and abusive federally-instigated, multi-jurisdictional investigation (code named "Operation Rx)," a Florida pharmaceutical researcher and manufacturer was allowed to present evidence of state and federal agent criminal conduct to a Florida federal grand jury here May 13, 1999.

Discovery Experimental and Development, Inc. (DEDI), President James Kimball, 59, seeks grand jury indictments of several state and federal officials for "criminal obstruction of justice, criminal RICO conspiracy, violations of constitutional rights, misuse of grand juries, criminal judicial misconduct" and whatever other charges could be criminally and legally applicable after the completion of a grand jury investigation, Kimball stated.

Kimball's serious charges stem from the nine-year investigation of himself and his company for developing an effective and marketable form of the naturally-derived nutritive plant product selegiline. "My testimony as to what happened to DEDI and myself will border on the unbelievable, but it will be the truth as I know it," said Kimball in his opening statement.

Kimball presented nearly 6,000 pages of documents to the grand jury in support of his claims that federal prosecutors Philip Halpern and Michael Rubenstein and Food and Drug Administration (FDA) official Dennis Degan conspired with the Florida Office of Statewide Prosecution, the Florida Department of Law Enforcement (FDLE), U.S. Customs, the Internal Revenue Service and the Florida Health and Rehabilitation Service (HRS) to drive DEDI and Kimball out of business and steal DEDI trade secrets. The confiscated (stolen) trade secrets primarily pertain to the development and production of DEDI's scientific breakthrough selegiline product Liquid Deprenyl Citrate (LDC).

Selegiline is a dopamine-boosting substance that is derived from the ephedra plant and has been used to treat Parkinson's and other degenerative diseases. Other documents seized by authorities include personal papers and effects that have no apparent relevance to a grand jury investigation of Kimball's business activities.

Kimball's summary of evidence specifically mentioned HRS (now the Department of Health) employees Jerry Hill, Gregg Jones, Deborah Orr and Attorney Robert Daniti as playing instrumental roles in the federally-directed investigation. Kimball presented 16 exhibits which indicate HRS complicity in "Operation Rx." The list of exhibits include the deposition of HRS Supervisor Jones and his admission that government agents agreed to violate the law and Kimball's constitutional rights prior to the raids of his personal residence and DEDI offices in early 1993.

Kimball estimates that over 100 state and federal government employees have participated in this "investigation." Contaminated Eldepryl Somerset Pharmaceuticals, owned by Mylan Pharmaceutical and Watson Pharmaceuticals, produced a contaminated selegiline hydrochloride product with the brand name Eldepryl. According to Kimball, the exhibits presented to the grand jury "clearly reveal that the FDA, HRS and Somerset knew that

Somerset's product selegiline hydrochloride (Eldepryl) was contaminated with methamphetamine."

The contamination was reported in 1990 by the U.S. Pharmacological Conference, the entity used by the FDA to test products seeking FDA approval.

Further studies indicated that Eldepryl also contained other contaminants including the as yet publicly unidentified neurotoxin "Compound X." The grand jury was also provided with the results of the five-year Lee study, published in the December 16, 1995 edition of the British Medical Journal, which "revealed a death rate of almost 2 to 1 with Parkinson's patients using FDA approved protocol selegiline hydrochloride with levadopa (Eldepryl) vs. Parkinson's patients using levadopa alone without selegiline hydrochloride." Kimball believes that the contaminants, which are not added to

Eldepryl but are a condition of its manufacture, could be "washed out" but that doing so was likely considered by Somerset to be cost prohibitive. Kimball also believes that the purpose of this ongoing "investigation" was to secure DEDI trade secrets regarding the production of LDC so that they could be given illegally to the competing company, Somerset Pharmaceuticals.

Liquid Deprenyl Citrate  
The healing properties of the ephedra plant have been documented for centuries. The ephedra-derived product selegiline had never been manufactured for human use because it loses its effectiveness within a couple of hours. Scientists had tried unsuccessfully for 30 years to "stabilize" selegiline. After five years of research, DEDI was able to stabilize selegiline with a specially formulated citra gel. In 1990, Kimball named his new experimental product Liquid Deprenyl Citrate and sent samples to the University of Toronto for test trials.

The result was a selegiline product that was more effective than any selegiline hydrochloride product ever tested. According to reports published by University of Toronto scientists and submitted in evidence to the grand jury, adverse side effects were documented as being negligible to none at all.

After researching all applicable state, federal and international commerce laws and determining that LDC could be legally manufactured, sold and used by the public, DEDI invested tremendous time and resources into constructing an international network that would manufacture and market the product worldwide. Before LDC was even ready to market, Somerset filed complaints against DEDI with the FDA, HRS, U.S. Customs and the Department of Justice. Somerset complaints resulted in Kimball being arrested in December, 1990, for selling LDC.

The case was dismissed prior to trial for lack of evidence-Kimball could not possibly have sold LDC because marketable LDC had not yet been produced. Kimball also believes that the case was dismissed to avoid public disclosure of illegal acts committed by government agents and law enforcement officers during the "investigation" and his subsequent arrest.

## THE CONSPIRACY

DEDI began producing and selling LDC for the Mexican marketplace in 1991. Under the authority of a grand jury investigation, DEDI and Kimball's personal residence were raided by HRS. The IRS seized all bank accounts under suspicion of alleged money laundering. The U.S. Postal Service opened a mail fraud investigation. "The IRS returned the money but

forced me to sign papers which agreed that I would not sue them for wrongfully confiscating my company's money," said Kimball.

According to Kimball, there was serious grand jury abuse as subpoenaed parties were simply interrogated by government agents and flown home. To Kimball's knowledge, the grand jury never received any "evidence" provided by subpoenaed witnesses. Kimball believes the evidence proves that copies of documents seized from his home and business, including personal information and trade secrets protected by law, under the veil of a grand jury investigation, were given to HRS and Somerset by the federal prosecutor's office in San Diego.

Somerset filed suit against DEDI in 1993. The case was settled at the request of Somerset which agreed to pay DEDI and Kimball's court costs of \$55,000.

"Before the ink was dry on the settlement papers, Somerset applied to the FDA for approval of a product that was almost, if not identical to our product Liquid Deprenyl Citrate," said Kimball. Kimball explained that DEDI immediately countered Somerset's action by filing suit against Somerset for theft of trade secrets and that the suit has yet to be resolved in court.

"We sued the prosecuting attorney, U.S Customs agents, IRS agents and HRS agents, FDA agents and took it [the lawsuits] all of the way through the judicial system to the U.S. Supreme Court. We have learned that all government agents enjoy the privilege of prosecutorial immunity," commented a disgusted Kimball.

## **CONNECTING THE DOTS**

In 1995 DEDI began its investigations into the conspiracies that had forced it to be in perpetual litigation for three years and its trade secrets made available to a marketplace competitor. DEDI, under the authority of its suit against Somerset, began obtaining its immense collection of incriminating documents through the discovery process. "We found that federal 'task force' meetings had been held before DEDI and my home were raided.

At these 'federal' task force meetings, we uncovered evidence-evidence that has been submitted to the grand jury-that HRS officials and attorneys and FDLE agents were also in attendance. The Jones deposition and other documents describe how the raid was to be conducted for maximum efficiency," said Kimball.

Florida state law provides that "They [government agents] must knock and announce," before entering a business for inspection, during normal business hours, that they must identify themselves and their intentions and that the business has the right of refusal. "After all employees had been removed from the premises by federal agents in the first wave, there wasn't anybody left to identify themselves to. In deposition, several state and federal agents admitted that they did not identify themselves nor did they announce their intention to search the business and the confiscations continued until after 7 p.m., Kimball recalled.

"The government's plan was to get HRS and FDA agents into my home and my business unnoticed as members of the federal task force search team second wave. Once HRS and FDA agents were inside, they could all become HRS inspectors operating illegally under Florida law," explained Kimball. According to Florida law, as confirmed by previous

administrative court rulings Kimball provided to the grand jury, it was illegal for HRS agents to conduct an inspection of his residence.

DEDI, with its records, research, chemicals and computer equipment seized, its mail being investigated, its bank accounts confiscated and an injunction placed against its business activities by HRS, was also being forced to fight an ultimately frivolous civil action initiated by Somerset. Curiously, the FDA, the agency that apparently instigated this total war attack on a small Florida company, filed nothing against DEDI. "They did their job well," commented Kimball, "they conned everybody else into doing their dirty work."

Kimball did mention that the FDA visited all of DEDI's accounts and threatened them with prosecution and legal fees if they planned to continue doing business with DEDI. Somerset attorneys also sent threatening communications to DEDI accounts and customers with the request that recipients "complete the enclosed information sheet [to be filled out voluntarily in lieu of a 'subpoena, court order or court-ordered depositions'] ," to "save both you and Somerset Pharmaceuticals a great deal of time and expense."

DEDI customer Annetta Freeman, who attributes her nearly complete recovery from Parkinson's to LDC, received such a letter dated February 17, 1995, from Somerset Attorney Arthur J. Mahoney from Gunster, Yoakley, Valdes-Fauli & Stewart of Stuart, Florida, warning her to immediately discontinue using LDC. The letter stated that Somerset is the only company that is licensed to sell "all deprenyl products sold for human consumption," and that, "Somerset has authorized our law firm to undertake whatever actions are necessary to prevent the illegal distribution of deprenyl products in the United States."

The attack waged against DEDI should be familiar to tens of thousands of Americans who have, through no fault of their own, been driven out of business by legions of bureaucrats and attorneys from endless government agencies and powerful corporations. The government and Somerset obviously conspired to use their combined resources to drive DEDI out of business and failed. All suits, investigations and injunctions, both civil and criminal, were dropped and the FDA didn't even send DEDI a letter of complaint.

The damage, however, had been done as Kimball maintains that DEDI's credibility had been destroyed and many of its vendors and customers were afraid to resume business relations with the embattled company. In June, 1997, a federal court ordered the return of all items seized in the 1993 raids. According to Kimball, computers that had been under warranty when seized, were returned damaged with expired warranties. "We were advised that government agencies are immune from having to pay damages. Too bad. You and I would have to pay if we damaged other peoples' goods," said Kimball. In apparent violation of the court order, not all items have been returned as of this writing.

Kimball filed suit against the state and federal agents. "Again, all agents are immune from damages they cause, even individually," Kimball noted for the grand jury.

DEDI LDC not under FDA jurisdiction As far as Kimball or the FDA has been able to determine, selegiline has never been considered as a drug either legally or scientifically as rendered into law or as determined by peer reviewed literature.

According to the Dietary Supplement Act of 1994, any product not deemed to be a drug prior to 1994 but identified as a supplement prior to 1994 will remain a supplement even if the

product is deemed a drug after 1994. The act, according to Kimball, also allows the medical benefits of vitamins, herbs and botanicals to be stated on product labels.

Regardless of whether or not the FDA has jurisdiction over DEDI, Kimball and the development, production and sale of LDC, Kimball has submitted hundreds of pages of documents in 87 exhibits to the grand jury which illustrate an almost decade-long FDA effort to discredit, destroy and bankrupt DEDI corporately and Kimball personally. One of the exhibits was nearly 3,000 pages of clinical trials reports for deprenyl.

Kimball explained that scientists have recognized the value of selegiline for the last 30 years and had attempted unsuccessfully to make the substance stable enough to be marketable. By 1991 DEDI had stabilized pure selegiline with a citrate gel, named the product Liquid Deprenyl Citrate and sent it out for test trials at the University of Toronto.

"Our theory was that pure selegiline, which is a different chemical entity than selegiline hydrochloride, would be more effective [in the treatment of terminal disease] as hydrochloric acid changes the chemical structure of selegiline," explained Kimball.

Available evidence shows that the FDA has been "investigating" Kimball and DEDI since 1990 due to his attempts to develop LDC for the marketplace. "The test results came back much better than any selegiline hydrochloride they had ever tested. LDC effectiveness was far superior and adverse side effects were negligible to none," Kimball explained to the grand jury.

According to Kimball, the federal government has implied that DEDI would be breaking the law if any of its officers should even recommend to a friend how to get LDC-even if no money exchanges hands.

"That means we have all lost our freedom of speech, Kimball explained to the grand jurors. "If you recommend a product to friends you are now [according to the government] selling it and should somewhere, sometime it be deemed that the product you recommended to your friend be illegal, you are now [according to the government] guilty of a crime," he added.

When asked by the grand jury if Kimball or DEDI had ever been sued over LDC, Kimball stated, under oath, that to this day not one consumer has ever filed a complaint from anywhere in the U.S. about the quality or performance of LDC or any other product that DEDI has ever developed or sold. To the contrary, customer comments expound upon the quality of life extending and enhancing virtues of LDC.

## **LOOSE ENDS**

Of the five leading causes of preventable death as reported by Public Citizen magazine (May/June, 1994) medical malpractice was the third most frequent killer at 80,000 deaths per year, or one every seven minutes. According to a 1985 report from the University of Southern California, published in The Journal of Clinical and Hospital Pharmacy, the FDA had approved "A list of 37 anticancer drugs with reported carcinogenicity or co-carcinogenicity..."

The December 18, 1996 edition of American Medical News reported that [FDA approved] drugs kill as many as 198,815 people each year, put 8.8 million people into the hospital and

account for up to 28 percent of all hospital admissions. The same article estimated pharmaceutical companies revenues at \$182 billion annually.

In his opening statement to the grand jury Kimball commented that statistics have been released which rate FDA approved drugs as the sixth largest killer of American citizens.

The FDA is the federal agency that has been charged with dictating what products or procedures you will be permitted to use to save your life or improve the quality of your life. The FDA has been given the authority to oversee the implementation of policies that will punish you for using products and procedures that it has forbidden-even if they save your life or improve your quality of life.

"The FDA not only restricts your right to products and procedures that can save your life, they restrict the information that exists while wiping out any private research company such as ours so they can, as they already do, maintain control of 99 percent of the medical research and the medicinal products that are currently being developed," said Kimball.

Kimball, who has also been in contention with the FDA over the approval of other very effective and naturally-derived remedies, including mild silver protein and trans resveratrol, believes that the "trickle down effect" of FDA policy "has directly and unnecessarily caused the deaths of tens of thousands of people in this country."

## **Florida Grand jury hears murder tale FDA, DOJ, Somerset aware of contaminated Eldepryl**

by Don Harkins

TAMPA-A Florida federal grand jury heard testimony and received in evidence hundreds of pages of documents May 13, 1999, which indicate that the Food and Drug Administration (FDA) and the U.S. Department of Justice (DOJ) and the Florida Department of Health and Rehabilitation Services (HRS) permitted Somerset Pharmaceuticals to manufacture and sell to the public its contaminated selegiline hydrochloride product Eldepryl.

"We tested the FDA-approved Eldepryl in 1990 and found that it was contaminated with, among other things, methamphetamine. We also isolated a suspected unidentified neurotoxin contaminant (Compound X)," said Discovery Experimental and Development, Inc. (DEDI), President James Kimball, 59.

Federal law requires that any product containing a controlled substance be registered with the Drug Enforcement Agency (DEA). According to Kimball's grand jury testimony and exhibits #10 and #20, it is clear that "the FDA, HRS and Somerset knew that Somerset's product selegiline hydrochloride (Eldepryl) was contaminated with methamphetamine."

The U.S Pharmacological Conference, the entity that the FDA relies upon to test products for approval, learned in 1990 that Eldepryl was contaminated with a controlled substance, claims Kimball who contacted all of the parties involved and feels that news of contaminated Eldepryl fell on deaf ears.

Annetta Freeman of Los Angeles was diagnosed with Parkinson's in 1990 and was prescribed Eldepryl by her doctor. "I was taking 5 mg. [of Eldepryl] per day for awhile and when my dosage was increased to 10 mg., I began to feel as if I were being stabbed in the stomach with a knife," Freeman said. After about a year of taking Eldepryl, Freeman, now 62, "could barely even get out of bed."

Almost immediately after discontinuing the use of Eldepryl, the stomach pains stopped. Freeman began treating her Parkinson's with another selegiline product, Liquid Deprenyl Citrate, and her Parkinson's symptomology has "almost totally disappeared," she said. News of Freeman's miraculous recovery has traveled around the world and she gets "thousands of phone calls" from people "all over" and has become a popular speaker among Parkinson's groups throughout the LA area.

Since becoming an advocate for Parkinson's victims, Freeman has accumulated the stories of hundreds of people who have been damaged by Eldepryl. "Several people have contacted me and said that somebody they know with Parkinson's seemed to be fine one week and dropped dead for no apparent reason the following week. The only common denominator between them all was [the use of] Eldepryl," Freeman explained.

The grand jury was also provided with the results of the five-year Lee study, published in the December 16, 1995 edition of the British Medical Journal, which "revealed a death rate of almost 2 to 1 with Parkinson's patients using FDA approved protocol selegiline hydrochloride with levadopa (Eldepryl) vs. Parkinson's patients using levadopa [manufactured by DuPont and marketed under trade name Sinamet] alone without selegiline hydrochloride."

"Eldepryl was misbranded by law, unlawfully unregistered with the DEA, making the product illegally imported, distributed and sold to the public. The FDA and its agents, the HRS and its agents and Somerset and its employees all conspired in 1990 to conceal these violations of federal law from public knowledge.

They did this with the full knowledge that the contaminants within Eldepryl could, and more than likely would, injure the unsuspecting public already afflicted with a debilitating and deadly disease [such as] Parkinson's," Kimball wrote in his four-page summary of evidence that was submitted to the grand jury.

Selegiline, a natural, nutritive product derived from the ephedra plant, stimulates the system to produce dopamine. Younger people produce dopamine in quantities that provide for good health, mental alertness and youthful exuberance. "Selegiline made properly enhances the quality of life in older people by working with the body rather than circumventing it to produce youthful and regenerative amounts of dopamine," said Kimball.

Kimball firmly believes that the contaminated Eldepryl manufactured by Somerset and sold to the public, particularly between 1989 and 1994, may have been responsible for the deaths of thousands of people.

## **Jeanette Westbrook's '99 Conference Presentation**

This page has been put on the web by S.M.A.R.T., P O Box 1295, Easthampton, MA 01027 E-mail: [smartnews@aol.com](mailto:smartnews@aol.com)

This transcript is from a presentation by Jeanette Westbrook at The Second Annual Ritual Abuse, Secretive Organizations and Mind Control Conference, August 14 - 15, 1999 at the DoubleTree Hotel in Windsor Locks, CT. Some of the topics discussed may be triggering. The conference is educational and not intended as therapy or treatment. All accusations are alleged. Our providing the information below does not necessarily constitute our endorsement of it. Click here to return to our home page:

<http://members.aol.com/smartnews/index2.html>

Neil Brick: Jeannette Westbrook will be speaking now. Some of the topics discussed may be triggering. The conference is educational and not intended as therapy or treatment. Please remember this presentation is being recorded. Anything said will be recorded. Thank you for coming to Jeannette's presentation.

Jeannette Westbrook, MSW, CSW, works with victims of ritual crime and mind control. She is a survivor of ritual-based mind control which she believes involved Mormons, Masons and high-ranking local officials. She has pursued criminal prosecution of some of her perpetrators. She has served on the Kentucky Attorney General's Task Force on Child Sexual Abuse. She will speak about "Getting Justice in an Unjust System." Thank you very much.

Jeannette Westbrook: Thank you, Neil, and welcome to the S.M.A.R.T. conference. I'm Jeannette Westbrook and I'm going to talk to you about a variety of things. I was asked to speak at the last minute, so I was trying to put together what I thought I'm going to talk about today. I think this is one of the things that needs to be talked about because there are so few . . . it's one of those topics that's talked about very infrequently primarily because there are very few of us who have been able to do anything in the criminal justice system. To get any semblance of justice when I am ...I definitely would like to tell you folks: there is no justice; it is a crapshoot.

The number one thing that you need to realize when you are pursuing a case is that you are a victim/witness for the state. A lot of prosecutors are concerned about a winnable case, a notch on the belt. Does anybody wonder why he or she doesn't like to pursue these types of cases? Because it's very hard to get a conviction. It's even very hard to bring charges. But I found out how it was done and I found out how it was possible because a law enforcement officer and another survivor way across the country let me know. I was able to get somewhere with it and

I'm here today to pass that information on. Because if I don't do it, I assure you no one in the criminal justice system is going to tell you how to do these types of cases.

I do tend to throw a few jokes in here because it gets kind of serious and I try to punctuate some of what happens in here with some jokes. I'm a little burned out and cynical at this point. I'll just give you a little background on myself. I'm an MSFW, a clinical social worker. I was working with women in a substance abuse treatment program, both in-patient, out-patient, where we found a lot of, guess what? Multiples! Yes, tons and tons of them. Due to management health care, they laid off forty-two of us. Less and less service is going to folks like myself and folks in this room. I tell you, things are rough out there--to the extent that I had my supervisor come to me with some mandates from on up the chain. Because I was working with the survivors, they wanted me to put in writing and make sure I wasn't doing "empty-chair" work, guided imagery, hypnosis, and God forbid, don't talk about abuse. I tell you, folks, I'm not going to work under those types of mandates and conditions. I'm not going to do it. So I started a little practice in Louisville; if anybody needs a resource for Kentucky, I am one of those folks.

Let's get back to the criminal justice crapshoot. (visual) It's a roll of the dice, and.... Law enforcement and prosecutors and such are interested in this (visual) and in this order (visual). But I assure you, this last one here, why? They don't give a damn. If it was done in the name of God, Satan, and little green men from Mars, they want to know who did it? What did they do? Their concerns are time, place, dates and location. You've got to be specific and you've got to know this. That's hard, too. It's very, very difficult to know all of these things. The reason I'm telling you this is: if you don't have this in, you go in there, you get shot down, you get re-victimized...over, and over, and over again. Before you do any of this, one of the things that you need to do is investigate the cop that's going to investigate your case. Find out what judge it's going to go before? There's never been a dichotomy as true as 'good-cop/bad-cop.' I've worked with plenty of cops--nice cops, cult cops--love them. I love them to death and would lay my life down for them, as they would me. But you have to know who's playing what side of the fence.

Collect collaborative evidence. Some of the things include other relatives. That's a really hard thing--to ask your siblings (if they would even tell you) or other family members (if they would even tell you.) "This happened to me; did it happen to you?" And you want to see if that happened because that's collaborative evidence that can go into building your case. I'll show in my own case how that came about, what I mean by that. Ask those childhood friends. But you know what? When I started asking around, boy, did I get some collaborative evidence. That goes into building a case. Teachers--get those old school records, they're very, very important, and you know what? You're going to have to do most of this work, because I've got to tell you, there isn't a cop anywhere who's got enough time to do all of this on every single case. It isn't possible. It's really not possible and I know that as a social worker. You've got eighty or a hundred cases going at the same time--juggling things. It depends on what unit you're working in and where you're working. So get those school records. Coaches can be very important (if they're not the perp.) The blind ad in the newspaper--in the Father Porter case, that was utilized. Frank Fitzpatrick used the blind ad to locate other victims. When it comes to going through the criminal justice crapshoot, there is victory in numbers. If you can get enough victims of the same perpetrator together it goes a long way towards building a case. (Question: What's a blind ad?) A blind ad is when you put a publication in a local newspaper (I think it's better to use like the alternative newspapers in town, because it seems like most of us read those a lot more than the regular paper--you know, the mind-control

paper--the one that wants us to believe everything and it isn't happening today!) Go to the alternative paper and you might place an ad in there to a post-office box only--one that's untraceable if you can get it. Or to somebody, maybe an attorney's post-office box. You might say something like "Jane Doe, alleged victim. Were you perpetrated X Y& Z youth organization from 1965-1975?" Or you might say "Were you a member of Boy Scout Troup such-and-such? Contact me." Then you've got them on the phone and you can start asking some of those questions. You don't even have to reveal in this ad why you're trying to get this information. Just to try to get people to talk to you first, because if you've got people calling you with the time and place, then you've got somewhere to go with that. And it's even better when you're placing a blind ad to have somebody doing that screening and not you, the victim. So it doesn't look like you're contaminating the case, because God knows, we all talk to each other! You know that, right? And we've all read The Courage to Heal, and it's caused us to have like false memories and all that bullshit. You know that, right? Believe me, those types of questions are going to be asked. You want to be stupid, you 'don't know nothing.' All you know is what happened to you and who, what, when, where. Just kind of leave out the why. And if people ask you if you have some kind of 'dsm2345' label, it's none of their business. Let their attorneys try to get that information--don't give it up. Make them fight for it, because these psychiatric diagnoses are used against the victim in the criminal justice system. So you 'don't know nothing!' You are 'Jane Doe in a pinafore.' You're not like me, burned out and cynical, you know. Look at them in the face. You want to be 'innocent.' But the collaborative work that you've got to do with law enforcement is to find that cop that's going to be on your side, and a good cop, who'll work these kinds of cases, is going to use your resources. And that means resources to build this kind of collaborative evidence. That's what a good cop's going to do. A good cop is not going to have the attitude of "Well, I'm in charge..." Guess what? He definitely is in charge of the case, but he doesn't have enough time to get all this, and all this is absolutely necessary.

OK. Photographs, letters from the perp--I've got postcards and stuff the man sent me from all over the world...you know...triggering stuff. Here's a nice little Christmas card. You can look at these closer up here. They're nice. Real cute. It has a picture of Santa Claus leaning over these two kids, holding up a book "Good Boys and Girls" and inside it says "May the wonder and magic of Christmas fill your heart with joy. Love, Dad. Stockholm, Sweden." Stockholm...victimization. That was 1980. Here's another one: Santa Claus in his long johns (his underwear), holding a whip, OK. December the 25th. It says, "When the holiday hustle and bustle has passed." and this is the card that was sent to me after I received a phone call "Go to the airport. Get on a plane. Go to New York City." Which I did. "Blah, blah, blah, go to a certain hotel," which I did. It says, "When the holiday hustle and bustle has passed, hope old of your jolly old ...he writes in here New York ...memories will last. Dear Jeannette: Hope you and everybody has a very, very Merry Christmas. Love you all. P.S. I don't need anything." And this one is from France, no, pardon me, Austria. This one's from Austria, but it's clearly a postcard from France. This one's from '74 that was sent to me. "Wish you were here" type of thing. So those are the kinds of things, objects, letters, and cards, any of those things that were used.

And even though law enforcement was aware of all this, the ritual abuse, the mind control programming, all of that, we filed only rape charges. Rape in the first degree, that carries the highest penalty. Not incest, even though incest may have occurred to you--you file rape. Because incest carries with it all kinds of connotations that have lower penalties. Did you all know, at least in the state of Kentucky, the closer the relationship of the victim to the perpetrator, the less time you get. Even though there's more damage done, you get less time.

And that in itself is another whole hour just on why that is. I don't have time to go into that right now. In many, many states the closer the relationship of victim to perpetrator, the less time. As a matter of fact, I had to go to the state legislature and get something done about the Crime Victims' Compensation Fund which exists in every state, by federal law. When I went to the Crime Victims' Compensation Fund, cause I thought I might ask for some money for therapy costs, right? Well, they told me I wasn't eligible because I was related to my perpetrator. And they told me, "You might collude with your perpetrator to defraud the Fund." Bizarro, right?

OK. Now, here we go. More information to gather for your case. Medical records--get the medical records. Psychiatric medical records--get those. You want to have those, but don't be showing those and flashing those around. Even to your cop, until after he really gets to know you and the people you're working with really get to know you. They need to be sure you're not, you know, way out there like I am. But somehow they came to believe me. I had four police officers, four cops, go with me to the prosecutor's office. There's power in numbers. Get medical records, school records, church or religious records. I had a little bit of hard time getting some of that, but fortunately I had some of it left. I was in the Mormon Church until I was 13. I'm now a 'Mormon girl gone bad.' So I have been fighting cults all my life, trying to get out of that one. But I assure you, my father was not a practicing Mormon, it was just another organization that he used to procure victims. In the Mormon priesthood, a Grand Master Mason in the State of Kentucky, a Boy Scout leader, you know, just raking them in. Criminal records--hopefully you don't have a criminal record when you go forward. I was fortunate because I had no criminal record, but they had made sure I didn't have one. Meaning that there was a whole lot of coverage in the local area to make sure that we didn't get busted even though my brother and I were supplying the whole high school with every kind of drug there was. Not to mention my father was funding my brother as a major drug dealer to the creme de la creme in the state. So you got them---blackmail. So that left me free to basically run the streets without anything happening to me. Fortunately, as I later told the Attorney General and the Task Force on Child Sexual Abuse in a deposition I gave to all those state legislators, I'm lucky I'm not a prostitute, a drug addict, or a serial killer. I've got everything in my background that makes it possible. It's hard to accept, but it's true. Luckily, I did not act out in that way. I did have some other interests that kept me going. Use marriage records, if you have that. I know that many survivors have multiple marriages because of the inability to maintain stable relationships. I didn't have that; I've been married 17 years to one person, but you know, my thing was that I wasn't going to be involved in any controlling, what I thought could possibly be a controlling, relationship. I fortunately married a very supportive gentleman who's one of 13 children. This is how good it gets: I think he's got the best comment of all time, to a psychiatrist he said, when I was brought into a hospital that was inappropriate.... I had called the crisis line and they couldn't get hold of my therapist, and they went "Oh my God, it's a multiple, call the police, get the EMS." So here comes the paddy wagon, three cop cars, you know..."Get the multiple." So they take me, put me in, the psychiatrist comes, and my husband comes to the hospital and says "I'm getting my wife out of here before you kill her." And the psychiatrist sets down in this quote family exit interview unquote and I'm sitting there with my husband and he looks at my husband and he says, "how can you stand being married to a woman like this, all these personalities?" And my husband looks at him and he says, "You don't know what the Hell you're talking about. I'm one of thirteen people in my family and I'm used to living with a lot of people." Is that the best? That's the best. OK So this guy, he's very supportive, he lets me do what he does, there's many people in this room that have talked to him. He'd be happy to talk to you and he's not a therapist, he's not trained, but I think he goes a long way in having a lot of good training and it

comes from a non-abusive background. And God forbid, he has eight sisters. Pray for me--I have eight sisters-in-law. I'm joking; I'm trying to keep this light. I always wanted to be a stand up comedienne; just think, a stand-up comedienne about satanic ritual abuse and mind control!

Let me just briefly tell you all what it took. It was a three-year journey through the criminal justice system. Even though I had four police officers going with me to the prosecutor. This is after I contacted, did some information, cause remember, this information was given to me. I started asking around, what's the best cop? Who's the cult cop? And found out who that was: Officer B\_\_\_\_. And I began to talk to him, and even though I didn't know this, I would go in and talk to him, the next thing you know, here's another part goes in and talks to him. I didn't even know that, cause I had a lot of my alters to go in and talk to the cops without me knowing about it. 'Cause that part's going, "oh, she needs to tell the kids." All of those things that survivors have; they want you to be silent, they want you to not tell and the whole system at least, that I had the whole system of not telling whose main purpose sabotaged therapy, sabotaged relationships, sabotage, sabotage, sabotage... in order to not tell. They're all going in to protect the perpetrators.

So after you checked out your cop, you've got your information together, here we go. Four of us go to the prosecutor's office, lay it out on the line, the prosecutor calls me in and I'm supposed to have a 'Victim's Advocate.' Supposed to have a "Victim's Advocate," folks! OK. OK, if you're not assigned one, you're supposed to have one. Well, I had one assigned to me, but I went in and the prosecutor dismissed her. He had the door blocked open with some bricks. You know how my head is going to spin around, spew green vomit and kill, or something. So he has the door blocked open, and basically the prosecutor was scared to death, didn't want to take this case, didn't want anything to do with it. So the next thing is you've got to bug the Hell out of them. The squeaky wheel will get somewhere. You get all those advocates, those state advocates, yada, yada, you get on TV, yada, yada, yada, and apply that kind of pressure, you know, any kind of people pressure you can marshal...do that. I want to tell you some things straight up that were a little bit unusual about my ability to do that. I do not have any children. One of four children in my sibling group, none of us has any children. That's statistically very rare. WOW. So that makes a difference, because they couldn't blackmail me, couldn't threaten my children. What are they going to do? Kill me? So after I did all of this, finally it came down to blackmailing the D.A. You may have to use blackmail. And I pulled a card on that, because that District Attorney could have arrested me right then for blackmail. Could have, but they all knew it was true and they all knew I had a lot of people on my side and didn't want to get anything else stirred up. The Attorney General from the State of Kentucky had appointed the Protection and Advocacy. They sent a whole contingent of people to get jurisdiction to grab that...get that case away from the local DA and take it to the state level. Which they eventually did, but not without me blackmailing the DA. I called him up one day and he just happened to answer the phone...it was just one of those rare things that happen...he answered the phone so I didn't have to go through that game of trying to reach somebody on the telephone. He answered and I said, "Why won't you release my case? The Attorney General wants to prosecute this case. Why won't you release it?" He said, "Well, you know, you've got MPD; you've got MPD and you're mentally ill." I said, "That's interesting cause I'm working for the same governmental agency you are, as a social worker. It's OK. I'm sane enough to be a social worker in the same governmental system, but I'm too crazy for justice." Kind of interesting, isn't it? So, I say to the DA, "If you won't release my case, I'll get five reporters lined up ready to roll." That's blackmail, folks. And I did it. I pulled the card; I didn't have anything else to lose because I was losing my sanity.

When you have all these system authorities--the highest authority system, the criminal justice system telling you you're crazy, you can't get justice, you're raped and oh, you're related to the perpetrator, so just suffer, suffer, suffer, and I wasn't going to take it. That happened, they released it to the Attorney General, they appointed a Special Prosecutor, meanwhile, everybody knowing what this is.

But they had a couple of good things. For instance, my sister and these other collaborative witnesses, the detective set up a phone taping with my sister confronting my father and they got it on tape. Kind of interesting, isn't it? Well, here's what happened: the extradition papers, signed, ready to bring him back to the State of Kentucky. He was living in Ohio where the national board was located. He, at the time, had just come back that weekend from speaking to the Parliament of Hungary and what was then Yugoslavia, for their nuclear program, and he was found dead at home. It was...there was no autopsy done; it was signed off by a private physician, so exit stage left. He gets bumped off, that's the end of the case. It was kind of interesting, another one of my alleged perpetrators who was my father's personal attorney, who later became the Mayor of Louisville. The Mayor, we're talking about all the locals, that kind of stuff is what you're up against.

And interestingly enough as it turned out, because of this lady sitting right over here, in the yellow, I got kind of involved in her case of this protective mother trying to protect her children and it's a very interesting story and if you get a chance to talk to her, please talk to Debby. It's very interesting what she had to go through. It's not interesting; it's tragic and heartbreaking. But, by getting involved in this case, I ended up working with the cops I'm working with now, because her case brought the FBI to my door. My husband is so cool. He goes down and asks the FBI agent for his ID. He takes it out of his wallet and checks all of that out. Tells me what it's related to this case over here, so I bring him up into my office and torture the man for two hours. Verbally, like what's happening, what's really going on, blah, blah, hand him a copy of the Franklin Cover-Up, "Read this and let's talk about it." And when I revealed to him there were a bunch of lies told about this woman and her husband. Her husband was a former CID agent at the time and he had active credentials, so when I told the FBI agent, "Hey, he's a CID agent working on this case," they said, "Oooh, I didn't know that!" Criminal Investigative Division of the US Army. A beautiful relationship. And remember what Neil was saying today--they're not all the bad guy. Remember the dichotomy, good cop/bad cop. There's a bunch of them out there who are the really, really good guys and who really, really want to help us. But there are a couple of things. Many of them aren't educated; some of them, even if they could help us, are under an administration where politically these crimes don't exist. They won't even hardly prosecute 'garden-variety' sexual abuse. That's the kind of political pressure they're under. They're walking around like this; they're tiptoeing through the tulips. When these cops become involved with us, they're commonly called what? "Cult cops, cult cops!" They're like, "Oh, shiiiiittt!" It blows their minds, too. They become another secondary trauma victim. They get secondary PTSD. It's true.

So, this FBI agent calls me about a year later and says, "The local police department needs an expert in ritual crime to work with the local intelligence unit." I said, "Well, I can't recommend anybody." And they said, "Well, we chose you!" And I thought "Well, this is cool, they checked my ass out real good, they must have cleared me; either they think I'm

legit or they think I'm nuts." So the cop that I ended up getting paired with thirty years ago investigated the case against my father's attorney (who later became the Mayor of Louisville,) regarding a pedophile ring case. They had the video tapes, all of that and they shut down the investigation. So he knew I was telling the truth, because he knew, he'd investigated the case. So the more you talk, the more you network, the more you're going to find out. And I know it's hard to talk. And I know it's hard to reveal. And it is not without its consequences if you do this. If you try to prosecute, your life is changed forever because it's in the public record and anybody can get access to that. Everybody knows you're MPD, everybody knows you're blah, blah, blah. And it's what you choose. And I was able to choose that, having a supportive husband and no children who could have their lives devastated by having this out in the public. It's very difficult and you're going to be harassed in these kinds of cases.

Boy, was I harassed. Here's a little message that was on the wall next to our house. This is a piece of commercial property next to the house we lived at and this was on the wall. "Life is short but love is long" With a skull and bones. There's a heart. Those are my initials right there. "We're just watching you!" Doesn't mean anything to me, it's just a nasty message. Some of the pictures and stuff that were turned over to law enforcement, it's very common for them to say, "Draw me a picture of where it happened." That's a very common tactic they use because if you tell them that it happened here in the investigation they're going to go. Specifically they want you to draw about someplace you've not been since it happened, because they're going to go and check and see if it matches. And it says, "That is a little girl. She is being raped. It hurt very bad. Ropes hung from the rafters." Altered states. But I do have childhood pictures. I apologize if this is triggering...but it is going to be triggering because it's what is, it's what happened. I'm sorry for that if it happens. This is an example of switching alters and switching handwriting. "Tie her down. I left..." This is one alter talking about dissociation. "Tie her down. I left her there. We went to another place. He laughed at me as he raped her." I put this drawing on the cover of my tape of "Holocaust"; has anybody got my song "Holocaust?" The song that's been...(unintelligible)

Oh yeah, this is...we were sort of talking about this last night, a group of us, asking why and these absurd answers we give ourselves. Why, why, why, why, why me, and why me? Because you were 'stupid.' I have an alter named 'Stupid.' OK. Here's the old pie-in-the-sky letter. "Don't do this unless you ...it takes a lot of serious work with a therapist, and I didn't have what I needed at the time and shouldn't have been writing these kinds of letters. And once again, switching to different alters. Look at the spelling. "There is a serious matter that needs to be addressed. Because of the emotional, physical and sexual abuse that you inflicted upon me throughout my childhood I have needed intensive psychotherapy once again, in order to help me overcome the lasting effects of this treatment by you. Even though, to undo the damage that was done to me, I believe that you can, and it would be right, for you to provide some restitution by paying for the bills I have incurred for the psychotherapy and persistent on-going therapy. I would suggest that you seek psychotherapy with a therapist who has expertise in working with someone who is engaged in sexual abuse." It isn't going to happen, folks! OK. Another example. "No one sees the lightning bolt that kills them. Only thunder tells them when danger is near." Ha, ha, ha, stupid, it's one of those alters..."don't tell, don't tell..." Another one of those 'shut-up' types of things... I'm going to stop right there because I could go on literally hours telling you about this. These examples I gave you are collaborative pieces that do make a difference and you have to be willing to share those. And can you trust the person you're willing to share this information with? It is a crapshoot, it really is. And you know, it's very hard to trust people in this, but we must trust someone. I'd like to open it to questions right now.

(?) unintelligible

Jeannette: Well, that's just another collaborative piece and through the criminal justice system it's really going to be up to those sparring partners--defense attorney vs. plaintiff--whether that's going to be admitted into court. That's questionable. But, there is...law enforcement can help me on this...in some cases it can be...in child sexual abuse cases it can...is admissible in court.

(?) unintelligible

Jeannette: Does that answer your question? I think that's when Neil came in. Yes, we recorded it. But you've got to remember, the person recording is the police officer. The police officer uses a separate phone...the police officer and my sister...without me present...he wants to make sure that it's different, that we're not contaminating it, that I'm not saying to her, 'well, ask him this and ask him that.' That's one piece in building a case. This is a police officer and he's building a case and he's using a tool that is available to him. So, I don't know where you were but after we went through that, I talked about going to the DA even though we had all of these pieces, you know the part about having four police officers, my main detective being one of them, going to the prosecutor to present this information. They'd go with me one time, then the prosecutor would ask me to come back alone. That's when I should have had my Victims' Advocate with me, but he'd dismissed the Victims' Advocate. That's not normal procedure. Oh, this is something very important that I need to tell you all about because it's very pivotal in getting through this system, and that is: When you're prosecuting a perpetrator...the prosecutor's supposed to represent you, OK. He's the attorney for the state and supposedly for you. That's not the case...he represents the state. So I hired my own attorney. I had an attorney who did it pro bono. Pretty amazing. And her job, even though she's not the prosecutor, is to make those phone calls and to let those prosecutors in the system know that I've got somebody watching the procedural issues of the court system.

(?) How do you figure out...(unintelligible)?

Jeannette: Call around...the good people to call is you know, a CPS worker that has a lot of experience or somebody in the office of public advocacy or protection and advocacy...most states have that. Just do a lot of asking around and see what name comes up over and over. Cause when they're good and you can get convictions...the administrative office of the courts try to get access to child sexual abuse or adult rape case data. To your rape crisis centers, ask in that manner.... who comes up. And it's still no guarantee as to who comes up, but you've got to keep asking. You don't throw all your cards down on the table the first time you meet somebody...that somebody being a cop. Because remember, a lot of these cases are so traumatic, and even though this cop has, maybe detective, has been on a hundred child sexual abuse cases, he's never come across a case like what you've got, and it's very traumatic. If you lay it all out there on the table for him, you know, all these 'who's who's' are involved in this and he's going to freak. He's going to get scared so hold back some of those cards.

(?) (unintelligible)

Jeannette: Absolutely. Absolutely, the question is "Were the tapes that were recorded between law enforcement with my sister asking the perpetrator...were those incriminating?" Yes. There are a lot of tools that detectives use, polygraphs and all kinds of things that may not be admissible, but they're tools that they use and I might add, they're intimidating tools that they use to see what kind of statements a perpetrator is going to give.

(?) (unintelligible)

Jeannette: Yes, first-degree rape charges. Yes. Presented to the grand jury. Grand jury...my detective...now here's another thing...the charges that were filed because I couldn't get the DA to file them. In my state, guess what, guess who filed them? I went down and filed a warrant against my father on first-degree rape charges. I could do that. My detective went down with me, cause he was frustrated. He said, "Jeannette, the DA, you know, they're stonewalling you, they're not going to do this, let's go, we'll file ourselves." He had the right to do that in my state. And we filed those charges and that forced the District Attorney to appoint a prosecutor to the case. Then after that, the local prosecutors in that jurisdiction were still stonewalling, so that's when I went to the next level, to the Attorney General's office and they took jurisdiction of that case. They wrenched it away, but only after I blackmailed the DA.

(?) (unintelligible) said to me was the fact that with the criminal justice system you have to remember that you have to find an incidence that there is actually a law for and I think a lot of people don't realize that there are not necessarily the laws that they need.... (unintelligible)

Jeannette: Correct me if I'm wrong on this, but I believe that there are only 7 states in the United States that have ritual abuse statutes. There no laws in most states...so you have to be specific. Is it child pornography? Is it rape in the first, second, third degree? Is it child sexual abuse? Is it incest charges? Go for the highest charge that you've got proof, that you know, or at least you think, is winnable in court. So you're right, a lot of people don't realize that there's a lot of 'no laws.'

(?) unintelligible

Jeannette: Yes, three days before extradition, and he would have been extradited except he was out of the country presenting to the parliament in Yugoslavia. As soon as he got back into the States, literally that night, he died at home, signed off by a private physician. The private physician said he died of a heart attack; there were no physical problems. There was no autopsy and law enforcement can answer this...that would be very rare, somebody who was going to be extradited for felony charges...

(?) How old was he?

Jeannette: Sixty-four.

(?) (unintelligible)

Jeannette: Right. There would normally be an autopsy to prove that, and it was not done, and it was signed off at home by a private physician. Usually that's done by the coroner.

(?) How do you feel about that? Do you have questions that are unanswered, or are you satisfied that he was going to be extradited and (unintelligible)?

Jeannette: At first, I was really disappointed, but kind of like "Oh, happy day..." But, I have a completely different perspective on that now, and that perspective is I am so fortunate. So very few people even get close to this. It's rare. And I did not know that, I did not know that for a few years, but it's very difficult and rare, but it can be done. What I'm hoping, if not for yourself, if you know of another survivor, you too can pass on some of this information that can help them get through the criminal justice system. It can be done. I got to this point, but maybe it was OK. And even though he's dead, dead men do tell tales.

(?) Do you think that he is in, or was in, any organized group of...?

Jeannette: Yes. He was the Executive Director of a quasi-governmental agency. My father was a Merchant Marine, he was on one of these ships that was watching the hydrogen bombs blow up and then he came back and helped build (he was an engineer) helped build the uranium processing plant in Paducah, Kentucky. That's where they processed most of the uranium that went into making nuclear bombs for this country. And now, in the paper, there's all kinds of talk...I've talked to a couple of reporters and attorneys who are involved in it, and yeah, they're aware of radiation experiments being conducted on people there. My father, being a 33+ degree Mason, a Grand Master Mason, I got that document and that evidence...I got sneaky, too! Even after my father had died, I asked, and they sent a whole Masonic contingent from Kentucky to do their rituals at his funeral. Ooooh, yeah! So I got them and I talked (little girl's voice) "Oh, I am Mr. McDonald's daughter." "We're sorry for your loss." "But, I would like to get any documents that you have related to his funeral..." And so they complied! And they put on the back...I can't believe I used that word 'they complied'...so they put on the back all of the signatures in their handwriting of who was there performing the rituals. So...there's little tricks. I'm devious, I'm telling you, and that's the way you have to be, and that's where I came from, you know, 'the little Mormon girl who has gone bad!' that became the cynical...it's more than surviving. I'm going to be thriving! So now, you know what I like doing most of all is helping other survivors try to get through this and I really like getting through the criminal justice system. I really like that. I like working with cops a whole lot and it's kind of wild. My husband will say, "Who're you talking to?" and I'll say, "I'm talking to a cop, you know, FBI...." It's another world, but if we don't help the cops to help us then who will? (Applause) I think it's time. It's time. I could go on and on. If anybody needs any assistance or wants to talk to me or anything, I'm very open to that. I apologize because I do go at 'warp factor 9' and do try to get through this as fast as I can. I literally could go a whole day with this kind of stuff, but we just don't have the time and I've taken hours. Professor Pepinsky over here...I'll take what? Three hours on a presentation or more. And I mean it could go on, and it does go on because after it's over it's not over! Let's have something to drink and let's have something to eat and let's keep on keeping on. I thank you all very, very much. What Neil said earlier...we need each other, we need the strength, everybody's got a little piece of the puzzle to help us in this. It takes a tremendous amount of courage just to tell about what you've been through.

(?) (Unintelligible)

Jeannette: Exactly. A visual witness.

Jeannette: Thank you. Thank you for sharing that. And that's exactly, exactly right. We chose a different path...could have been, could have been. And thank you all so very much.

# Letter to 180 Media Outlets

By Judy Wall, Summer 1999

Editor, RESONANCE

Newsletter of The MENSA Bioelectromagnetics Special Interest Group

---

Judy Wall is a bioelectromagnetics researcher, who has published a series of articles outlining the history and capabilities of neuro-electromagnetic weapons. She is also recipient of one of the summer 1999 Citizens Against Human Rights Abuse awards for her ongoing efforts to warn the world about the extreme potential for atrocities.

[Lo-res image](#) of her plaque inscription.

IMPORTANT NOTE: Ms. Wall writes here about the "piggybacked ultrasound" variant in mind control technology, one of the simplest to accomplish. Words only the subconscious can hear are shifted upwards in frequency to the "low ultrasound" frequency range, just above human hearing. These consciously-inaudible words are then simply added to a normal broadcast program.

What makes such words so effective as a way to carry hypnotic commands is that the target cannot resist them because the target can't hear them.

This IS DIFFERENT from, and far more effective than, the early attempts at subliminal sound, which used tiny slices of normal, audible words, inserted into regular programming. The reader must keep this clear: The ultrasound method is FAR more effective, as the U.S. Army's experience in the Gulf War demonstrated.

The reader should also be keenly aware that while publicized uses to date are benevolent, when this technology is focussed on one individual around the clock, it is capable of putting the target into inescapable personal Hell, causing a mis-diagnosis of mental illness. Eleanor White.

---

Dear Editor,

## MIND CONTROL WEAPONS

Say the words "Mind Control" and most people think of *science fiction* or *lunatic fringe*. Yet, incredible as it may seem, mind altering technology is real.

The mind altering feat is accomplished by using standard radio and/or television broadcasts to carry and electronic subliminal

message that is perceived by the subconscious mind. Another method directly alters the brainwave patterns of the recipient to induce specific emotional states. This subliminal carrier technology is described in U.S. patent [#5, 159, 703](#), "Silent Subliminal Presentation System". According to company literature, this technology has been leased out to six U.S. government agencies, (including the U.S. Army's Psychological Warfare Operations), selected music and movie companies, and various other governments of the world, including Germany and former Soviet Union countries.

The U.S. Military has developed this highly sophisticated mind-altering technology for use as a weapon. It was used during Operation Desert Storm against Iraqi troops to induce in them feelings of hopelessness and despair that resulted in "mass surrenders". The use of this Psy-Ops weapon was reported by ITV News Bureau (London) in two bulletins, dated March 23 and 26, 1991 but the U.S. press was subject to military censorship that suppressed this information.

In addition to land based broadcasts, this mind altering technology has been incorporated into USAF aircraft EC-130E, code named *Commando Solo*. The USAF **acknowledges** use of this technology in the following operations: Urgent Fury, Just Cause, Desert Shield, Desert Storm, Desert Thunder, Uphold Democracy, and Joint Guard. The last two were directed against civilian populations to influence elections in Haiti and Bosnia.

The mind altering technology is officially listed as part of the new "non-lethal" weapons. These non-lethal weapons are being transferred by the Department of Defense over to the Department of Justice to be available to the local police force.

Dr. Michael A. Persinger, a neuroscientist at Laurentian University, Canada has warned of the possibility of this technology being used for global mind control. Independent researchers have determined that the HAARP (High-frequency Active Auroral Research Program) in Alaska could be used to achieve this far-reaching effect.

Dr. Igor Smirnov of the Institute of Psycho-Correction in Moscow says in regard to this technology, "It is easily conceivable that some Russian 'Satan', or let's say an Iranian, or any other, as long as he owns the appropriate means and finances, can inject himself into every conceivable computer network, into every conceivable radio or TV broadcast with relative technological ease, even without disconnecting cables. You can intercept the waves in the aether and modulate every conceivable suggestion into it."

In recognition of this threat, the Parliament of the European Union has passed a resolution calling for "an international convention introducing a global ban on all developments of weapons which might enable any form of manipulation of human beings" as well as having the new 'non-lethal' weapons technology... covered and regulated by international conventions.

If you would like more information about this technology, see my article in *Nexus*, Oct-Nov 1998, pp. 11-16.

Sincerely, Judy Wall

## **Timeline: Electromagnetic Weapons** **by Judy Wall, Editor, *Resonance Newsletter***

---

Electromagnetic (EM) weapons are of recent invention. They utilize the various frequencies of the electromagnetic spectrum to disable or kill the target.

Today a new type of weapon is being touted, the "non-lethal" weapon. The idea behind this is to spare human life without actually losing the war. These weapons are also earmarked for use in civil disorders in which the goal is simply crowd control rather than annihilation. Some EM weapons fall in this category. However, even though these weapons are labelled "non-lethal" does not mean that they are not harmful, or cannot be lethal under certain conditions.

Paul Bartch mentioned in his letter "Non-Hertzian Waves ...", written in 1992, that there was nothing mentioned in the report on non-lethal weapons about the Low Frequency EM weapons. Small wonder. The government has been keeping these weapons to itself in top secrecy classification. Only recently have they been brought into the public spotlight.

The following is an overview of the development of electromagnetic research as relevant to weapons, as best we are able to put together, considering the cloak of secrecy that surrounds these weapons.

### **ELECTROMAGNETIC WEAPONS TIMELINE**

1934 "A method for Remote Control of Electrical Stimulation of the Nervous System", a monograph by Drs. E. L. Chaffee and R. U. Light

1934 Experiments in Distant Influence, book by Soviet Professor Leonid L. Vasiliev

Vasiliev also wrote an article, "Critical Evaluation of the Hypogenic Method" concerning the work of Dr. I. F. Tomashevsky on experiments in remote control of the brain.

1945 After World War II, the Allies discovered the Japanese had been developing a "death ray" utilizing very short radio waves focussed into a high power beam. Tests were done on animals. The Japanese denied ever testing it on humans. (From the Strategic Bombing Survey, Imperial War Museum, London. Cited with photocopies in "Japanese Death Ray", by Peter Lewis, Resonance #11, pp 5-9)

1950 The French conducted research on infrasonic weapons. (From "The Road From Armageddon", by Peter Lewis, Resonance #13, pp 9-14)

1953 John C. Lilly, when asked by the director of the National

Institute of Mental Health (NIMH) to brief the Central Intelligence Agency (CIA), Federal Bureau of Investigation (FBI), National Security Agency (NSA), and the various military intelligence services on his work using electrodes to stimulate directly the pleasure and pain centers in the brain, refused.

He said, "Dr. Antione Redmond, using our techniques in Paris, has demonstrated that this method of stimulation on the brain can be applied to the human without help of the neurosurgeon ... This means that anybody with the proper apparatus can carry this out covertly, with no external signs that electrodes have been used in that person. I feel that if this technique got into the hands of a secret agency, they would have total control over a human being and be able to change his beliefs extremely quickly, leaving little evidence of what they had done." (From "Mind Control and the American Government", by Martin Cannon in Lobster #23, pp 2-10. Cannon quotes Lilly from his book, The Scientist, Berkeley, Ronin publishers, 1988, also Bantam Books 1981. Research by Peter Lewis.)

After a statement like that of Dr. Lilly's, how long do you think it would take the agencies, FBI, CIA, NSA, etc. to contact Dr. Redmond in Paris?

1958, 1962 The U.S. conducts high-altitude Electromagnetic Pulse (EMP) bomb tests over the Pacific. (From "The Road From Armageddon" by Peter Lewis.)

1960 Headlines read "Khrushchev Says Soviets Will Cut Forces a Third; Sees 'Fantastic Weapon' ". (From article of same title, by Max Frankel, New York Times, Jan. 15, 1960, p 1 as cited in "Tesla's Electromagnetics and Its Soviet Weaponization", paper by T. E. Bearden.)

1965 A "Death Ray" weapon was developed by McFarlane Corporation, described as a modulated electron gun X-ray nuclear booster, could be adapted to communications, remote control and guidance systems, EM radiation telemetry and death ray. McFarlane claimed NASA stole the patent in 1965. Reported hearings before the House Subcommittee on Department of Defense Appropriations, chaired by Rep. George Mahon (Dem. - Texas). (From "Hearing Voices" by Alex Constantine, Hustler, Jan. 1994, pp 102-104, 113, 120, 134. Research by Harlan Girard.)

1965 "A project in the U.S. called Project Pandora ... was undertaken in which chimpanzees were exposed to microwave radiation. The man who was in charge of this project said, 'the potential for exerting a degree of control on human behaviour by low level microwave radiation seems to exist' and he urged that the effects of microwaves be studied for 'possible weapons applications' ". (From "Electromagnetic Pollution: A Little Known Health Hazard. A new means of control?" by Kim Besley, Great Britain, p 14. Research from Woody Blue.)

1968 Dr. Gordon J. F. MacDonald, science advisor to President Lyndon Johnson, wrote, "Perturbation of the environment can produce changes in behavioural patterns." He was referring to low frequency EM waves in the ionosphere affecting human brain wave patterns. (From his book, Unless Peace Comes, a Scientific Forecast of New Weapons, cited in "New World Order ELF Psychotronic Tyranny", a paper by C. B. Baker.)

1970 Zbigniew Brzezinski, President Jimmy Carter's National Security Director, said in his book, Between Two Ages, weather control was a new weapon that would be the key element of strategy. "Technology will make

available to leaders of major nations a variety of techniques for conducting

secret warfare..." He also wrote "Accurately timed, artificially excited electronic strokes could lead to a pattern of oscillations that produce relatively high power levels over certain regions of the Earth ... one could develop a system that would seriously impair the brain performance of a very large population in selected regions over an extended period." (Cited in Baker's "ELF Psychotronic Tyranny" paper.)

1972 The Taser, first electrical shock device developed for use by law enforcement, delivers barbed, dart shaped electrodes to a subject's body, and 50,000 volt pulses at two millionths of an amp over 12-14 seconds time. (From "Report on the Attorney General's Conference on Less Than Lethal Weapons", by Sherry Sweetman, 1987, p 4, which cites "Non-Lethal Weapons for Law Enforcement: Research Needs and Priorities. A Report to the National Science Foundation by the Security Planning Corporation, 1972. Research by Harlan Girard.)

1972 "A U.S. Department of Defense document said that the Army has tested a microwave weapon. It was an extremely powerful 'electronic flamethrower'. " (From "Electromagnetic Pollution")

1972 "A study published by the U.S. Army Mobility Equipment Research and Development Center, titled 'Analysis of Microwaves for Barrier Warfare' examines the plausibility of using radio frequency energy in barrier counter-barrier warfare ... The report concludes that (a) it is possible to field a truck-portable microwave barrier system that will completely immobilize personnel in the open with present day technology, (b) there is a strong potential for a microwave system that would be capable of delaying or immobilizing personnel in vehicles, (c) with present technology, no method could be identified for a microwave system to destroy the type of armoured material common to tanks." (From "Electromagnetic Pollution" by Kim Besly, p 15, quoting The Zapping of America by Paul Brodeur.)

The report further documents the ability to create third-degree burns on human skin using 3 Gigahertz at 20 watts/square centimeter in two seconds.

1972 Dr. Gordon J. F. MacDonald testified before the House Subcommittee on Oceans and International Environment, concerning low frequency research: "The basic notion there was to create between the electrically charged ionosphere in the higher part of the atmosphere and conducting layers of the surface of the Earth this neutral cavity, to create waves, electrical waves that would be tuned to the brainwaves ... about ten cycles per second ... you can produce changes in behavioural patterns or in responses." (From Baker's "ELF Psychotronic Tyranny" paper.)

1973 Sharp and Grove transmit audible words via microwaves [EW: That is, voice to SKULL] (See "Synthetic Telepathy" in this issue of Resonance)

[EW: On my web site, the relevant paragraphs of Judy's source article are transcribed in: [v2succes.htm](#) ]

1975 - 1977 "Unpublished analyses of microwave bioeffects literature were disseminated to the U.S. Congress and to other officials arguing the case for remote control of human behavior by radar." (From the Journal of Microwave Power, 12(4), 1977, p320. Research by Harlan Girard.)

1978 Hungarians presented a state-of-the-art paper on infrasonic weapons

to the United Nations, "Working Paper on Infrasound Weapons", United Nations CD/575, 14 Aug 1978. (From "The Road From Armageddon" by Peter Lewis.)

1981 - 1982 "Between 1981 and September 1982, the Navy commissioned me to investigate the potential of developing electromagnetic devices that could be used as non-lethal weapons by the Marine Corp for the purpose of 'riot control', hostage removal, clandestine operations, and so on." Eldon Byrd, Naval Surface Weapons Center, Silver Spring MD. (From "Electromagnetic Pollution" by Kim Besly, p 12.)

1982 Electromagnetic weapons for law enforcement use in Great Britain:

A 10-30 Hz strobe light which can produce seizures, giddiness, nausea, and fainting was developed by Charles Bovill of the now defunct British firm, Allen International. Addition of sound pulses in the 4.0 - 7.5 Hz range increases effectiveness, as utilized in the Valkyrie, a "frequency" weapon advertised in British Defense Equipment Catalogue until 1983.

The squawk box or sound curdler uses two loudspeakers of 350 watt output to emit two slightly different frequencies which combine in the ear to produce a shrill shrieking noise. The U.S. National Science Foundation report says there is "severe risk of permanent impairment of hearing."

(From "Electropollution" by Kim Besley, citing the Manchester City Council Police Monitoring Unit document.)

1982 Air Force review of biotechnology:

"Currently available data allow the projection that specially generated radiofrequency radiation (RFR) fields may pose powerful and revolutionary antipersonnel military threats. Electroshock therapy indicates the ability of induced electric current to completely interrupt mental functioning for short periods of time, to obtain cognition for longer periods and to restructure emotional response over prolonged intervals.

"... impressed electromagnetic fields can be disruptive to purposeful behavior and may be capable of directing and/or interrogating such behavior. Further, the passage of approximately 100 milliamperes through the myocardium can lead to cardiac standstill and death, again pointing to a speed-of-light weapons effect.

"A rapidly scanning RFR system could provide an effective stun or kill capability over a large area."

(From Final Report on Biotechnology Research Requirements for Aeronautical Systems Through the Year 2000. AFOSR-TR-82-0643, vol 1, and vol 2, 30 July 1982. See below.)

1986 "The Electromagnetic Spectrum in Low-Intensity Conflict" by Captain Paul Tyler, MC, USN quotes the above passage and further elaborates on the theme. (Published in Low Intensity Conflict and Modern Technology Lt. Col. David J. Dean, USAF, ed., Air University Press, Maxwell AFB, AL. Research by Harlan Girard.)

1983 Nikolai Khokhlov, a Soviet KGB agent who defected to the West in 1976, interviews recently arrived scientists and reports: "The Soviet mind-control program is run by the KGB with unlimited funds." (From The Spectator, Feb 5, 1983, reported in "New World Order Psychotronic

Tyranny" by C. B. Baker.)

1984 "USSR: New Beam Energy Possible?", possibly associated with early Soviet weather engineering efforts over the U.S. (From "Tesla's Electromagnetics and Its Soviet Weaponization" by T. E. Bearden.)

1985 Women in the peace camps at Greenham Common began showing various medical symptoms believed to be caused by EM surveillance weapons beamed at them. (See "Zapping: The New Weapon of the Patriarchy", Resonance #13, pp 22-24. Research by Woody Blue.)

1986 Attorney General's Conference on Less Than Lethal Weapons. Reviews current weapons available, most date back to 1972: the Taser, the Nova XR-5000 Stun Gun (can interrupt a pacemaker); the Talon, a glove with an electrical pulse generator; the Source, a flashlight with electrodes at the base. These devices are useful only at close range, except for the Taser, and are generally restricted to correctional institutions.

Photic driving strobe lights tested by one conference delegate on 100 subjects, produced discomfort. Closed eyelids to not block the effect. Evidence that ELF produces nausea and disorientation. Suggestion to develop fast acting electrosleep inducing EM weapon.

Discusses problem of testing weapons on animals and human "volunteers". (From "Report on the Attorney General's Conference on Less Than Lethal Weapons", by Sherry Sweetman, March 1987, prepared for the National Institute of Justice. Research by Harlan Girard.)

How many of you will volunteer to get zapped by 50,000 volts from this little Taser gun we're testing?

1988 The Pentagon is ordered by courts to cease EMP tests at several locations due to a lawsuit filed by an environmental group. (From The Washington Post, May 15, 1988, see "US and Soviets Develop Death Ray", Resonance 11, p 10. Research by Remy Chevalier.)

1992 December. "The U.S. Army's Armament Research, Development and Engineering Center is conducting a one-year study of ACOUSTIC BEAM TECHNOLOGY ... the command awarded the one year study to Scientific Applications and Research Associates of Huntington Beach CA. Related research is conducted at the Moscow based Andreev Institute." (From "U.S. Explores Russian Mind Control Technology", by Barbara Opal, Defense News, Jan 11-17, 1993. Research by Harlan Girard and others.)

1993 The Russian government is offering to share with the United States in a bilateral Center for Psychotechnologies the Soviet mind-control technology developed during the 1970s. The work was funded by the Department of Psycho-Correction at the Moscow Medical Academy.

"Acoustic psycho-correction involves the transmission of specific commands via static or white noise bands into the human subconscious ...". The Russian experts, among them former KGB General George Kotov, present in a paper a list of software and hardware available for \$80,000. (From Opal article, "U.S. Explores Russian Mind Control Technology".)

[EW Comment: Circa 1996, I came across an advertisement by way of a Yahoo search on mind control for "A genuine mind control device, \$80,000, FOB Singapore, from Gunderson International." Ring any bells? Could not get the ad to display again.]

1993 February 28, beginning of 51 day siege on the Branch Davidians at Waco Texas, which ended in the death of more than 80 people.

Until this incident, the electromagnetic weapons had kept a very low profile.

But in the documentary video, "Waco: The Big Lie Continues", footage from the

British Broadcasting (BBC) shows at least three EM weapons used by U.S. government agents. First, the noise generators used against the Davidians. Second, a powerful strobe light, shown during a nighttime sequence.

And the third was the Russian psychoacoustic weapon, considered, but agents deny use of this weapon against the Waco people. FBI agents met with Dr. Igor Smirnov in Arlington VA to discuss the possibility of using the weapon

against the Davidians. (From "A Subliminal Dr. Strangelove", by Dorinda Elliot and John Barry, Newsweek, Aug 22, 1994)

---

Note (EW): "ELF" frequencies, as we know now, are not the most invasive weapons-capable frequencies. Doses of ELF can act as either sedatives or stimulants, entraining the target's EEG as with the Russian LIDA machine. Weapons which can transmit hypnotic commands silently and untraceably, over distance and through walls, can cause a far wider spectrum of effects. **In other words, victims, don't assume that "ELF" is the only form of electromagnetic signal which can do damage.**

<http://www.raven1.net/katead-1.htm> revived by [www.hearingvoices-is-voicetoskull.com](http://www.hearingvoices-is-voicetoskull.com)

Original link: <http://www.researchsaveslives.org/survivorstories/>

Before her stroke in June of 1995, Kate Adamson was a mother, a wife, an athlete, and a person deeply attached to her community. She still fulfills all these roles, yet she does so without the use of the left side of her body. She suffered a double brain stem stroke, which left her totally paralyzed -- unable to even blink.

" I spent 50 days in the ICU after my stroke, suffering from 'locked-in' syndrome." Kate was conscious and able to feel everything, but was unable to move any part of her body. She was literally trapped in her own body. " Miraculously, I lived and overcame the locked-in syndrome. " Once she left the ICU, Kate began the road to recovery with countless hours of physical therapy. "Physical therapy has advanced to its present state due to funds provided in part by the government." She told her story to Congress in April 1997, asking for research funds for heart disease and stroke.

Kate doesn't speak of, or, elaborate on, the physical pain she endured, [SEE BELOW] but considers that time "transitory." Today, Kate has two daughters, is a motivational speaker, has written a book, and is a volunteer for the American Heart and Stroke Association.

Information provided by Jackie Patru, host of "Sweet Liberty", a shortwave and Internet radio show, who interviewed Kate on the air:

<http://www.sweetliberty.org>

Subject: At age 33, Kate suffered from a massive stroke, which paralyzed her. Even though she was unable to move or speak, she could think, hear and feel. Her feeding tube was turned off for 8 days. She described this period as "torture". Kate's testimony is a timely and inspiring illustration of how someone who is deemed to be in a "persistent vegetative state" can recover, if given the proper therapy, care, and love.

## **Woman Learned How To Kill As A Child**

While most children were playing on the playground, Cheryl Hersha says that she was learning how to kill as a child.

NewsChannel5's Brad Harvey reports that Hersha, a registered nurse, tells a story of an abusive military father who forced her and her sister into a CIA child spy program called MK Ultra. A program at the height of the Cold War involved mind control, torture, sex and murder.

"The military training began when I was about eight and that consisted of teaching us weapons, knives, revolvers and shooting," Hersha says.

Harvey reports that there were different names for different personalities. The child prostitute was sexy Sadie. That program turned into the black widow, which was a seductress assassin.

A real life La Femme Nikita, Hersha, who now lives in Arizona with her family, says that she would seduce and then drug top foreign diplomats and then take them to a secret location.

"Sometimes he would be passed out and they would take pictures and that would be enough to blackmail them into compliance," she says.

But she never completed her missions. She never pulled the trigger on her victims. And because she didn't kill her victims, WEWS reports that an assassin was sent to take her out.

"And he got distracted and I got a hold of the knife. And I did defend my life at that point and plunged the knife into his neck," she says.

The memories were locked deep inside her brain for about 10 years, surfacing after she had a child of her own. She once believed that she was crazy. Nevertheless, she contacted Ohio private investigator Dale Griffis. He claims other MK Ultra survivors have contacted him with similar stories.

Griffis says that after many hours of listening, he realized that there was a pattern and overlapping data.

Griffis and Cleveland-author Ted Schwarz teamed up for a book based on Hersha's story. Beyond the interviews, both men admit that the evidence is thin.

"There is nothing on record that identifies this program by a name with 'x' number of children and identifies the people involved," Hersha says.

Shwarz claims that most of the documentation on MK Ultra was destroyed in the 1970s, but he says that Hersha's story is evidence enough. "At this point, what is provable is so provable

that what is not provable I do accept," says Hersha. "I wouldn't ask anyone to believe me straight up at face value."

Hersha and the authors warn that people are capable of doing many things under the guise of patriotism.

"A lot of things are done in the name of patriotism under circumstances that people think are right that in hindsight are not. In hindsight they are the horrors of the damned," she says.

The CIA has acknowledged that there is a program called MK Ultra, but officials insist that the group does not include children.

The agency says that Hersha's accusations are without any foundation.

# **MICROWAVE MIND CONTROL: MODERN TORTURE AND CONTROL MECHANISMS ELIMINATING HUMAN RIGHTS AND PRIVACY**

**by Dr. Rauni Leena Kilde, MD**

**September 25, 1999**

---

Eleanor White's comments: Dr. Rauni Kilde, formerly the Chief Medical Officer for Lapland (northern Finland), is one of our bravest professional supporters. She was given an award from CAHRA for her appearance on a now-unavailable video by Transmedia Productions in London, England.

See the text of the award plaque at: [award1st.htm](#)

She has given us permission to post this article, an example of the most vigorous support we have ever received. We thank Dr. Kilde most sincerely.

---

HELSINGIN SANOMAT, the largest newspaper in Scandinavia, wrote in the September 9, 1999 issue that Scientific American magazine estimates that after the Millenium perhaps ALL people will be implanted with a "DNA microchip".

How many people realize what it actually means? Total loss of privacy and total outside control of the person's physical body functions,

mental, emotional and thought processes, including the implanted person's subconscious and dreams! For the rest of his life!

It sounds like science fiction but it is secret military and intelligence agencies' mind control technology, which has been experimented with for almost half a century. Totally without the knowledge of the general public and even the general academic population.

Supercomputers in Maryland, Israel and elsewhere with a speed of over 20 BILLION bits/sec can monitor millions of people simultaneously. In fact, the whole world population can be totally controlled by these secret brain-computer interactions, however unbelievable it sounds for the uninformed.

Human thought has a speed of 5,000 bits/sec and everyone understands that our brain cannot compete with supercomputers acting via satellites, implants, local facilities, scalar or other forms of biotelemetry.

Each brain has a unique set of bioelectric resonance/entrainment characteristics. Remote neural monitoring systems with supercomputers can send messages through an implanted person's nervous system and affect their performance in any way desired. They can of course be tracked and identified anywhere.

Neuro-electromagnetic involuntary human experimentation has been going on with the so-called "vulnerable population" for about 50 years, in the name of "science" or "national security" in the worst Nazi-type testing, contrary to all human rights. Physical and psychological torture of mind control victims today is like the worst horror movies. Only, unlike the horror movies, it is true.

It happens today in the USA, Japan, and Europe. With few exceptions, the mass media suppresses all information about the entire topic.

Mind control technology in the USA is classified under "non-lethal" weaponry. The name is totally misleading because the technology used IS lethal, but death comes slowly in the form of "normal" illnesses, like cancer, leukemia, heart attacks, Alzheimer's disease with loss of short term memory first. No wonder these illnesses have increased all over the world.

When the use of electromagnetic fields, extra-low (ELF) and ultra-low (ULF) frequencies and microwaves aimed deliberately at certain individuals, groups, and even the general population to cause diseases, disorientation, chaos and physical and emotional pain breaks into the awareness of the general population, a public outcry is inevitable.

*[Eleanor White comment: ELF/ULF frequencies on their own cannot be focussed and are practically impossible to transmit in the usual manner of radio transmissions. ELF/ULF cannot carry voice.]*

*ELF/ULF CAN be carried on radio and ultrasound carrier signals, however, and are effective in things like setting up a target to be more receptive to hypnosis, force a target to be unable to sleep, and force a target to fall asleep daytime. This is like the reverse process of reading the brain's natural ELF/ULF electrical activity using biofeedback.]*

Who is behind a sinister plan to microchip and control and torture the general population?

*[Eleanor White's comment: Reports from persons targetted by neuro-*

*electromagnetic experimentation show that not everyone is implanted. The fact that those few victims who have had implants removed cannot get custody of the implants means someone has a keen interest in controlling the use of covert implants and preventing the publication of this practice.]*

The Patent Office of the U.S.A. has granted patents for purposes of mental monitoring and mind alteration.

Apparatus and method for remotely monitoring and altering brainwaves, methods for inducing mental, emotional and physical states of consciousness, in human beings. Method of and apparatus for desired states of consciousness are among some of them.

People who have been implanted, involuntarily or through deception voluntarily have become biological robots and guinea pigs for this activity under the guise of national security.

The real consequences of microchip implantation (or with today's advanced hidden technology, using only microwave radiation for mind control,) are totally hidden from the public. How many know the real dangers of microwaves through mobile phones?

How many believe the disinformation that microwave radiation is not causing health problems? The economic issues in the mobile phone industry are enormous. Therefore health issues are deliberately brushed aside.

However, the same thing is inevitable in the future as with the tobacco industry. When economic compensation for health damages becomes big enough, as in the tobacco industry, health hazards will be admitted and users are then responsible for their tobacco-related illnesses.

Today, already about 50% of Finns, Swedes and Norwegians use mobile phones, especially the young population.

Mobile phones used in mind control was a brilliant idea. Military and police agencies can follow every user, influence their thoughts through microwaves, cause healthy people to hear voices in their heads and if needed burn their brains in a second by increasing the current 20,000 times.

That probably happened to Chechnyan leader General Dudayev who died talking to a mobile phone.

Heating effect of tissues with the speed of light is a known effect of high power microwave and electromagnetic pulse weapons.

According to Navy studies they also cause fatigue states, depression, insomnia, aggressiveness, long and especially short term memory loss, short catatonic states, cataracts, leukemia, cancer, heart attacks, brain tumors and so forth.

Alteration of behavior and attitudes has been demonstrated as well.

Dr. Ross Adey has found out that by using 0.75 milliwatts per square centimeter intensity of pulse modulated microwave at a frequency of 450 MHz it is possible to control ALL aspects of human behaviour!

Microwave radiation excites the hydrogen bond in the cells and can interfere with meiosis, which leads to tumors.

All our emotions, moods, and thoughts have a specific brain frequency which has been catalogued. If these records fall into the wrong hands, our behaviour and attitudes can be manipulated by persons whose ethics and morals are not in our best interest.

Both military and intelligence agencies have been infiltrated with such persons. The Director of the Swiss Secret Service had to resign in September 1999 because of his agency's involvement in illegal arms deals and a plan to create an ORGANIZATION within the legal Secret Service.

This globally infiltrated organization has "octopus type" activities in all major intelligence services in the world, working together with the Mafia and terrorists. It has recruited people from all important government institutions, state and local administrations.

It owns Star Wars technology which is used against military and civilian populations, claiming it is "non-lethal" weaponry.

"Down and out" people, jobless, freed prisoners, mental outpatients, students and orphans are trained by this organization to harass, follow, and torture innocent people, who for whatever reason have been put on the organization's hit list. They are ALREADY in every apartment block!

*[Eleanor White comment: This gang-like colour-coding is not reported in all areas. Dr. Kilde's experience is with northern Europe.]*

Deception is the name of the game, so recruits are told untrue sinister stories of their victims to keep them motivated. They have a military order and get rewarded for their evil actions, which include Satanism, and symbols and yellow-orange-black colors. However, fresh recruits must wear pink - and the highest elite wears yellow ties with dark suits.

Even dashes of yellow or orange in their ties may signal their recruitment as well as yellow shirts or other objects with that color for signalling.

Too many world leaders fit into this signalling. However, it is quite possible they are only used as fronts for this global organization without any knowledge of it's criminal activity in the field against innocent people. Mass media and big industry are also infiltrated.

Who are the targets? Experimentation with soldiers and prisoners may continue, as well as handicapped children, mental patients, homosexuals and single women. They are still experimental guinea pigs for electronic and chemical warfare. But today ANYONE can become a target, even those who invented the system.

Researchers who find out about this secret radiation of the population become targets themselves.

The U.S. Senate discussed the issue on January 22, 1997. The U.S. Air Force's "Commando Solo" aircraft have been used to send subliminal radio frequency messages to manipulate even the minds of foreign nations in their elections. Haiti and Bosnia are a couple of recent examples.

In July 1994 the U.S. Department of Defense proposed the use of "non-lethal" weapons against anyone engaged in activities the DoD opposes. Thus opposing political views, economic competitors, counterculture individuals and so forth can be beamed to sickness or death.

The Psychiatric Diagnostic Statistical Manual (DSM) for mental disorders

has been a brilliant cover up operation in 18 languages to hide the atrocities of military and intelligence agencies' actions towards their targets. THE MANUAL LISTS ALL MIND CONTROL ACTIONS AS SIGNS OF PARANOID SCHIZOPHRENIA.

If a target is under surveillance with modern technology via TV, radio, telephone, loudspeakers, lasers, microwaves, poisoned with mind altering drugs via airducts, giving familiar smells which cause headache, nausea and so forth, if he claims his clothes are poisoned, his food or tap water as well --- all medical schools teach their students that the person is paranoid, ESPECIALLY if he believes intelligence agencies are behind it all.

Never is the medical profession told that these are routine actions all over the world by intelligence agencies against their targets. Thus, victims of mind control are falsely considered mentally ill and get no help since they are not believed and their suffering is doubled by ignorant health professionals.

The unethical abuses of power by individuals in charge of biomedical telemetry are incomprehensible to normal people.

The goal of mind control is to program an individual to carry out any mission of espionage or assassination even against their will and self-preservation instinct and to control the absolute behavior and thought patterns of the individual. The purpose of mind control is to disrupt memory, discredit people through aberrant behavior, to make them insane or to commit suicide or murder.

How is it possible that this technology is not stopped by political top authorities? They themselves will also be targets someday, a fact they have not always realized. How much are they involved?

This year the 1999 European Parliament in "Resolution on Environment, Security, and Foreign Policy", in paragraphs 23, 24, and 27 calls for "non-lethal" weapons technology and development of new arms strategies to be covered and regulated by international conventions.

Also, it calls for an international convention introducing a GLOBAL BAN on all developments and deployments of weapons which might enable ANY FORM OF MANIPULATION OF HUMAN BEINGS.

Project HAARP in Alaska is a global concern, and calls for its legal, ecological, and ethical implications to be examined by an international independent body before any further research and testing.

It is possible that the USA will ignore those resolutions. The dangers of non-lethal mind control weapons were already revealed in an expert meeting of the International Committee of the Red Cross in Geneva, in July 1994.

Only increased public awareness of the microchip implants, their frightful consequences to privacy by influencing of individuals' thoughts and actions, causing people to become biological robots with physical and emotional pain whenever the supercomputer technician so wishes, is enough reason to refuse to take the chip into your body for whatever reason.

It is the biggest threat to humanity and the most sinister plan to enslave the human race forever.

If you have a choice and want to remain a normal human being with privacy, do not have your children nor yourself implanted with a DNA microchip.

Otherwise your vision, hearing, sensing, thoughts, dreams and subconscious will be influenced by an outsider, who does not have your best interests in mind.

MICROWAVE MIND CONTROL WITH "NON-LETHAL" WEAPONS IS THE BIGGEST CRIME IN THE HISTORY OF MANKIND AGAINST THE POPULATION OF PLANET EARTH. IT MUST BE STOPPED BY ALL PEOPLES OF THIS GLOBE.

# Microchip Implants, Mindcontrol, and Cybernetics

**SPEKULA, 3rd Quarter, October 23, 1999**

---

Eleanor White's comments: Dr. Rauni Kilde, formerly the Chief Medical Officer for Lapland (northern Finland), is one of our bravest professional supporters. She was given an award from CAHRA for her appearance on a now-unavailable video by Transmedia Productions in London, England.

See the text of the award plaque at: [awardlst.htm](#)

She has given us permission to post this article, an example of the most vigorous support we have ever received. We thank Dr. Kilde most sincerely.

---

The following article was originally published in the 36th-year edition of the Finnish-language journal, SPEKULA (3rd Quarter, 1999). SPEKULA is a publication of Northern Finland medical students and doctors of Oulu University OLK (OULUN LAAKETIETEELLINEN KILTA). It is mailed to all medical students of Finland and all Northern Finland medical doctors. Circulation 6500.

MICROCHIP IMPLANTS, MINDCONTROL AND CYBERNETICS  
by Rauni-Leena Luukanen-Kilde, MD  
Former Chief Medical Officer of Finland

In 1948 Norbert Wiener published a book, CYBERNETICS, defined as a neurological communication and control theory already in use in small circles at that time. Yoneji Masuda, "Father of Information Society," stated his concern in 1980 that our liberty is threatened Orwellian-style by cybernetic technology totally unknown to most people. This technology links the brains of people via implanted microchips to satellites controlled by ground-based super-computers.

The first brain implants were surgically inserted in 1974 in the state of Ohio, U.S.A., and also in Stockholm, Sweden. Brain electrodes were inserted into the skulls of babies in 1946 without the knowledge of their parents. In the 50's and 60's, electrical implants were inserted into the brains of animals and humans, especially in the U.S., during research into behavior modification, and brain and body functioning. Mind control (MC) methods were used in attempts to change human behavior and attitudes. Influencing brain functions became an important goal of military and intelligence services.

Thirty years ago brain implants showed up in xrays the size of one centimeter. Subsequent implants shrunk to the size of a grain of rice. They were made of silicon, later still of gallium arsenide. Today they are small enough to be inserted into the neck or back, and also intravenously in different parts of the body during surgical operations, with or without the consent of the subject. It is now almost impossible to detect or remove them.

It is technically possible for every newborn to be injected with a microchip, which could then function to identify the person for the rest of his or her life. Such plans are secretly being discussed in the U.S. without any public airing of the privacy issues involved. In Sweden, Prime Minister Olof Palme gave permission in 1973 to implant prisoners, and Data Inspection's ex-Director General Jan Freese revealed that nursing-home patients were implanted in the mid- 1980's. The technology is revealed in the 1972:47 Swedish state report, STATENS OFFICIELLA UTRADNINGER (SOU).

Implanted human beings can be followed anywhere. Their brain functions can then be remotely monitored by supercomputers and even altered through the changing of frequencies. Guinea-pigs in secret experiments have included prisoners, soldiers, mental patients, handicapped children, deaf and blind people, homosexuals, single women, the elderly, school children and any group of people considered "marginal" by the elite experimenters. The published experiences of prisoners in Utah State Prison, for example, are shocking to the conscience.

Today's microchips operate by means of low-frequency radio waves that target them. With the help of satellites, the implanted person can be tracked anywhere on the globe. Such a technique was among a number tested in the Iraq war, according to Dr. Carl Sanders, who invented the intelligence-manned interface (IMI) biotic, which is injected into people. (Earlier during the Vietnam War, soldiers were injected with the Rambo chip, designed to increase adrenaline flow into the bloodstream.) The U.S. National Security Agency's (NSA) 20 billion bits/second supercomputers could now "see and hear" what soldiers experience in the battlefield with a remote monitoring system (RMS).

When a 5-micromillimeter microchip (the diameter of a strand of hair is 50 micromillimeters) is placed into optical nerve of the eye, it draws neuroimpulses from the brain that embody the experiences, smells, sights and voice of the implanted person. Once transferred and stored in a computer, these neuroimpulses can be projected back to the person's brain via the microchip to be re-experienced. Using a RMS, a land-based computer operator can send electromagnetic messages (encoded as signals) to the nervous system, affecting the target's performance. With RMS, healthy persons can be induced to see hallucinations and to hear voices in their heads.

Every thought, reaction, hearing and visual observation causes a certain neurological potential, spikes, and patterns in the brain and its

electromagnetic fields, which can now be decoded into thoughts, pictures and voices. Electromagnetic stimulation can therefore change a person's brainwaves and affect muscular activity, causing painful muscular cramps experienced as torture.

The NSA's electronic surveillance system can simultaneously follow and handle millions of people. Each of us has a unique bioelectrical resonance frequency in the brain, just like we have unique fingerprints. With electro-magnetic frequency (EMF) brain stimulation fully coded, pulsating electromagnetic signals can be sent to the brain, causing the desired voice and visual effects to be experienced by the target. This is a form of electronic warfare. U.S. astronauts were implanted before they were sent into space so their thoughts could be followed and all their emotions could be registered 24 hours a day.

The Washington Post reported in May 1995 that Prince William of Great Britain was implanted at the age of 12. Thus, if he were ever kidnapped, a radiowave with a specific frequency could be targeted to his microchip. The chip's signal would be routed through a satellite to the computer screen of police headquarters, where the Prince's movements could be followed. He could actually be located anywhere on the globe.

The mass media have not reported that an implanted person's privacy vanishes for the rest of his or her life. S/he can be manipulated in many ways. Using different frequencies, the secret controller of this equipment can even change a person's emotional life. S/he can be made aggressive or lethargic. Sexuality can be artificially influenced. Thought signals and subconscious thinking can be read, dreams affected and even induced, all without the knowledge or consent of the implanted person.

A perfect cyber-soldier can thus be created. This secret technology has been used by military forces in certain NATO countries since the 1980's without civilian and academic populations having heard anything about it. Thus, little information about such invasive mind-control systems is available in professional and academic journals.

The NSA's Signals Intelligence can remotely monitor information from human brains by decoding the evoked potentials (3.50HZ, 5 milliwatt) emitted by the brain. Prisoner experimentees in both Gothenburg, Sweden and Vienna, Austria have been found to have [missing word] brain lesions. Diminished blood circulation and lack of oxygen in the right temporal frontal lobes result where brain implants are usually operative. A Finnish experimentee experienced brain atrophy and intermittent attacks of unconsciousness due to lack of oxygen.

Mind control techniques can be used for political purposes. The goal of mind controllers today is to induce the targeted persons or groups to act against his or her own convictions and best interests. Zombified individuals can even be programmed to murder and remember nothing of their crime afterward. Alarming examples of this phenomenon can be found in the U.S.

This "silent war" is being conducted against unknowing civilians and soldiers by military and intelligence agencies. Since 1980 electronic stimulation of the brain (ESB) has been secretly used to control people targeted without their knowledge or consent. All international human rights agreements forbid nonconsensual manipulation of human beings – even in prisons, not to speak of civilian populations. Under an initiative of U.S. Senator John Glenn, discussions commenced in January

1997 about the dangers of radiating civilian populations. Targeting people's brain functions with electromagnetic fields and beams (from helicopters and airplanes, satellites, from parked white vans, neighboring houses, telephone poles, electrical appliances, mobile phones, TV, radio, etc.), is part of the radiation problem that should be addressed in democratically elected government bodies.

In addition to electronic MC, chemical methods have also been developed. Mind-altering drugs and different smelling gasses affecting brain function negatively can be injected into air ducts or water pipes. Also, bacteria and viruses have been tested this way in several countries.

Today's supertechnology, connecting our brain functions via microchips (or even without them, according to the latest technology) to computers via satellites in the U.S. or Israel, poses the gravest threat to humanity. The latest supercomputers are powerful enough to monitor the whole world's population. What will happen when people are tempted by false premises to allow microchips into their bodies? One lure will be a microchip identity card. Compulsory legislation has even been secretly proposed in the U.S. to criminalize removal of an ID implant.

Are we ready for the robotization of mankind and the total elimination of privacy, including freedom of thought? How many of us would want to cede our entire life, including our most secret thoughts, to Big Brother? Yet the technology exists to create a totalitarian "New World Order." Covert neurological communication systems are in place to counteract independent thinking and to control social and political activity on behalf of self-serving private and military interests.

When our brain functions are already connected to supercomputers by means of radio implants and microchips, it will be too late for protest. This threat can be defeated only by educating the public, using available literature on biotelemetry and information exchanged at international congresses.

One reason this technology has remained a state secret is the widespread prestige of the psychiatric DIAGNOSTIC STATISTICAL MANUAL IV produced by the U.S. American Psychiatric Association (APA), and printed in 18 languages. Psychiatrists working for U.S. intelligence agencies no doubt participated in writing and revising this manual. This psychiatric "bible" covers up the secret development of MC technologies by labelling some of their effects as symptoms of paranoid schizophrenia.

Victims of mind control experimentation are thus routinely diagnosed, knee-jerk fashion, as mentally ill by doctors who learned the DSM "symptom" list in medical school. Physicians have not been schooled that patients may be telling the truth when they report being targeted against their will or being used as guinea pigs for electronic, chemical and bacteriological forms of psychological warfare.

Time is running out for changing the direction of military medicine, and ensuring the future of human freedom.

# **Timmy McVeigh Was Telling the Truth!**

## **It's Not Your Father's Mind Control Technology**

**by Kathy Kasten**

---

**\*\* Kathy Kasten is a researcher and targetted individual living in Los Angeles, on the staff at the University of California, Los Angeles. Four years as Staff Liaison to the Human Subject Protection Committee/Institution Review Board developed an awareness of worldwide need for human subject protection policies.**

---

When those of us who have been researching and investigating rumors of microchip implants for the last 10 years heard that Timothy McVeigh was claiming to have been implanted by the U.S. Army, we could only nod our heads.(1) The mainstream could barely contain their laughter at McVeigh's allegations of being implanted by the military. They pretended he was another "lone gunman."

However, many researchers knew that it was not above our government to use unwitting American citizens in "field testing." There had been reports from private citizens since the 1940s of the implantation of humans.(2) The only thing we could add to McVeigh's statement was that before the microchips were implanted by the military in soldiers it was suspected that there were many years of covert testing in an unwitting human subjects. In recent years, government documentation has been released showing past and present atrocities committed by the U.S. government and its contracted private corporations funded by public monies. These documents show a pattern of utilizing unwitting citizens in covert "field testing."

The possible proof that McVeigh was speaking the truth is suggested in public documents. A document which proves that the military is quite familiar with microchip implantation in human subjects is pointedly referred to in the U.S. Air Force's 2025 Research Paper(3), quoted as follows:

"Chapter 4-1: "IIC

The IIC is a constellation of integration or "smart" satellites that receives all-source information. Within the IIC, resident intelligent software will run decision support tools, correlate and fuse data into useful information, identify inconsistencies and information gaps, and task collectors to seek data to fill information gaps.

### **Implanted Microscopic Chip**

The implanted microscopic brain chip<sup>110</sup> performs two functions. First, it links the individual to the IIC, creating a seamless interface between the user and the information resources (in-time collection data and archival databases). In essence, the chip relays the processed information from the IIC to the user. Second, the chip creates a computer-generated mental

visualization based upon the user's request. The visualization encompasses the individual and allows the user to place himself into the selected battlespace."

Do not be fooled by its forward-looking statement. That statement would not be made if the technology were not already in place. Remember the above statements as we put the pieces together to show control of individual via electronic harassment. The following statement from the same source more directly relates to McVeigh and other soldiers whom I have heard from during my investigations:

"Ethical and Public Relations Issues. Implanting "things" in people raises ethical and public relations issues. While these concerns may be founded on today's thinking, in 2025 they may not be as alarming. We already are evolving toward technology implanting. For example, the military currently requires its members to receive mandatory injections of biological organisms (i.e., the flu shot). In the civilian world, people receive mechanical hearts and other organs. Society has come to accept most of these implants as a fact of life. By 2025 it is possible medical technology will have nerve chips that allow amputees to control artificial limbs or eye chips that allow the blind to see. The civilian populace will likely accept an implanted microscopic chips that allow military members to defend vital national interests. Further, the US military will continue to be a volunteer force that will freely accept the chip because it is a tool to control technology and not as a tool to control the human."

I hardly know what to make of that last sentence. After all the reassurance that microchip implantation is good for you, why make statements about controlling humans? Could the authors be anticipating that some readers might think the microchip would be utilized for human mind control; i.e. readers who are knowledgeable enough to know that the brain cortex needs to be accessed/controlled in order to control the physical part of the human? There is no way to separate physical control from mind control. Such powerful technology that can control humans invites misuse; pushing the envelope to see what will work. (Perhaps, creating the perfect crime using a "patsy"?)

For those still doubting that this type of mind control technology (which utilizes a radio frequency called microwave) is just science fiction, an announcement was made on a mainstream public radio station that the Los Angeles Police Department, just before New Year's - in December, 1999, had purchased equipment from a company called WesCam. From the WesCam website we read the following:

"In use by most of the biggest names in broadcasting in the U.S. and abroad, the PRO-300 has become the industry standard in long range, microwave receive systems for reliable, continuous, high quality reception of video and audio transmissions. The antenna is typically installed on a tower or rooftop at a location selected for best continuous line-of-sight coverage to the potential transmitting sites (terrestrial and / or airborne). The equipment rack containing the microwave receiver and controller can be located up to 1,500 feet away, and the control location can be situated just about anywhere to which video, audio and data links can be established.

Related TouchStar options now available include integrated searchable maps (dependant on location), networked Master Controllers, on screen Real Time Video window, remote access modems enabling a remote diagnostics capability, integrated single or multiple ground camera control, and remote switcher control."

These advertising statements mean that there is now a link between satellites, ground control and covert accessing of humans. As alluded to by the U.S.A.F. 2025 report, the American public is being utilized in "field testing" with the clear prospect of collecting data on the targeted individual. What is more important is that the Los Angeles Police Department, along with other major cities' police departments, has been declared an arm of the Department of Justice.

I have personal knowledge of this fact. How that happened had nothing to do with the war on drugs. Briefly, it was alleged that I was jaywalking. I was not carrying any identification on my person. Therefore, I was detained by the University of California-Los Angeles Campus Police and taken to their campus headquarters. After being kept in a holding cell, I was photographed and fingerprinted. When asked where this material was going to be filed, I was told that it would be sent to the Department of Justice. And, yes, there is now a law on the books that individuals must carry identification at all times. Originally, this law applied only to drivers of vehicles. Apparently, the law is being stretch to cover pedestrians walking on the sidewalks. Unbelievable? If someone had told me such an incident was possible, I would have not believed it.

We have President Ronald Reagan to thank for the fact that local police departments are now arms of the federal government. This includes university campus officers. Just to make sure that Reagan's executive order was clear to everybody in law enforcement, the U.S. Code was "updated" recently. (U.S. Code Annotated Title 10, Sect. 124.)

To help local law enforcement stay abreast of the activities of the American public, just in case citizens were doing drugs or something else that might be illegal, monies were allocated to allow those units to carry out the U.S. Code for the Department of Justice. The following is from the WesCam website(4), which describes a tracking unit mounted on a helicopter, used no doubt to watch everybody and anybody without a search warrant, wiretap, or any messy legal stuff:

"The SKYPOD V airborne microwave system is the next generation of long range airborne video microwave transmission and relay systems from WesCam, providing reliable, continuous, high quality video and audio signals in real time to fixed or mobile ground receive sites. The system includes an externally mounted antenna pod integrated with its own microwave transmitter, receiver, channel filter and up to three separate antennas: an autotracking directional high gain antenna (using GPS and aircraft heading sensors for tracking control), an omnidirectional antenna and a downlooking antenna. This configuration provides maximum operational flexibility while still maintaining optimum signal quality for superior image transmission. Antenna selection is performed remotely from the operator position inside the aircraft. Each antenna can be configured for simplex or duplex operation, allowing the system to also be operated as an airborne microwave repeater."

The announcement declaring that the Los Angeles Police Department would be watching Los Angelenos using WesCam technology was mentioned only once on a major public radio station in Los Angeles, presumably to meet the U.S. Code that requires local officials to make a public announcement before using the public in "field testing." Section 1805 of Title 50 of the U.S. Code (5) reads as follows:

"(f) Testing of electronic equipment; discovering unauthorized electronic surveillance; training of intelligence personnel. Notwithstanding any other provision of this subchapter,

officers, employees, or agents of the United States are authorized in the normal course of their official duties to conduct electronic surveillance not targeted against the communications of any particular person or persons, under procedures approved by the Attorney General, solely to - (1) test the capability of electronic equipment, if - (A) it is not reasonable to obtain the consent of the persons incidentally subjected to the surveillance; (B) the test is limited in extent and duration to that necessary to determine the capability of the equipment; (C) the contents of any communication acquired are retained and used only for the purpose of determining the capability of the equipment, are disclosed only to test personnel, and are destroyed before or immediately upon completion of the test; and: (D) Provided, That the test may exceed ninety days only with the prior approval of the Attorney General; (2) determine the existence and capability of electronic surveillance equipment being used by persons not authorized to conduct electronic surveillance, if - (A) it is not reasonable to obtain the consent of persons incidentally subjected to the surveillance; (B) such electronic surveillance is limited in extent and duration to that necessary to determine the existence and capability of such equipment; and (C) any information acquired by such surveillance is used only to enforce chapter 119 of title 18, or section 605 of title 47, or to protect information from unauthorized surveillance; or (3) train intelligence personnel in the use of electronic surveillance equipment, if - (A) it is not reasonable to - (i) obtain the consent of the persons incidentally subjected to the surveillance; (ii) train persons in the course of surveillances otherwise authorized by this subchapter; or (iii) train persons in the use of such equipment without engaging in electronic surveillance; (B) such electronic surveillance is limited in extent and duration to that necessary to train the personnel in the use of the equipment; and (C) no contents of any communication acquired are retained or disseminated for any purpose, but are destroyed as soon as reasonably possible."

Notice the statement "if consent cannot be obtained," and the statement that electronic technology will be used only for the purposes of "testing." If it is just a test, why is there a problem with obtaining consent? How about the statement that nothing will be done with the information gathered from "testing"? Are you reassured by these paragraphs in the U.S. Code? I understand this: There is a group of people claiming they are/have been under electronic surveillance/harassment. Are these people classified as guinea pigs for government field testing, or perhaps even as terrorists? If individuals are classified as "terrorists" (whether they truly or not), this means that they can be targeted in any way shape or form, because they are enemies of the state. Therefore, is it okay to do whatever - torture, harass, etc. using microwave technology - in the name of "field testing"? Is the American public so fearful of possible crimes that they would give up all their privacy?

WesCam is microwave technology that can "access," listen in on conversations, using RF/microwave radiating through walls at a distance. The dome-like shell surrounding the equipment is shown on their website. The device is mounted on the roofs of vans, the roofs of police stations, and on the undercarriage of helicopters. Be sure to watch for this equipment coming to a neighborhood near you. A fellow researcher sent me a list of 20 outlets for the WesCam in the Los Angeles area. That means your next door neighbor can, and probably some of them will, own this equipment.

Along with WesCam, there is a company called Millivision that sells "infrared" equipment which it claims can "see" through walls. The Millivision website(6) states the following:

"Millimeter wave technology offers the opportunity for developing a new generation of security and safety products. Millimeter waves can pass through walls, clothing, and

packaging to detect hidden people and objects. Not limited to metal, millimeter-wave-based systems allow the detection of ceramic weapons, plastic explosives, drugs, and other contraband. Millivision is developing a line of passive millimeter wave security products that are: Non-invasive: Passive systems use only the natural radiation present in the scene. Safe: Using no man-made radiation ensures complete safety for subjects, operators, and bystanders. Difficult to countermeasure: Inanimate objects emit different radiation signatures than living beings, making attempts to disguise contraband ineffective. Effective: Advanced imaging software overcomes resolution and visualization limitations.

Millivision's line of passive millimeter wave security products currently in development are: Surveillance camera - overt or covert monitoring and contraband detection in interior or exterior spaces; Gateway scanner - contraband and concealed weapons detection for secure portals; Handheld scanner - portable contraband and concealed weapons detection."

Feel safer now that Millivision devices are on the scene? Wondering whether that passing van is scanning your house? Do you think this will not happen because you think you have nothing to hide? Think again.

The Los Angeles Airport claims it owns one of these devices. Checking individuals to see if they are . . . what, carrying guns after going through the metal detector? After news of this device was published in the Los Angeles Times, people were concerned that the device was being used to see through women's clothes - just for the fun of it. As a matter of fact, a recent TV news program discovered that airport security personnel do single out Los Angeles African American women traveling alone for questioning in a special room at the Los Angeles Airport. There was concern that this was the room where the Millivision device was located. The suspicion was confirmed by Los Angeles Airport Security with the promise it will never happen again.

Just recently, in the mainstream press, there was public outrage over a satellite system called "Echelon." The sinister nature of this satellite has produced a group called "Echelon Watch" run by the ACLU.(7) This satellite system has generated hearings in Western governments by legislators who want to know Echelon's capabilities, as well as how to stop it from spying without regard to national boundaries or nationality of targeted individuals. But long before there was Echelon there was the National Reconnaissance Organization's (NRO) Rhyolite satellite system.(8) This was part of a group of satellite technologies referred to as ferrets, designed for electronic surveillance. All of the world powers have had satellite spy systems since the early 1960s.

In February of 1997, the New York Times published an article by William Broad called "Private Ventures Hope for Profits on Spy Satellites," ("Privacy is seen as Issue; Images Can Show Warships or Hot Tubs, Halting a Long Government Monopoly"). The article informed readers that a new policy allowed them to request satellite images and pay for them with a credit card. It was claimed by federal officials that "the risks and benefits were carefully weighed before the 1994 decision and that economic gains will offset military or diplomatic losses." A vibrant economy, they say, is "one of the most important elements of national security." Does the preceding statement anticipate the trading of satellite technology with the Chinese? With the claim that so-called "leaks" of this technology "bring about a new age of peacefulness"? Or, the more realistic stance that this technology will allow accessing any individual anywhere on Earth.

Because of the interest in espionage from space, ultra long distance high altitude accessing optics were developed and installed in satellites. The most recent public access satellite company is IKONOS(9). The one-meter resolution black-and-white image of Washington, D.C., collected by Space Imaging's IKONOS satellite, has unprecedented clarity and detail for commercial space imagery. As the IKONOS web site sales pitch goes: "The potential uses for IKONOS imagery are vast and we have just begun to scratch the surface," said Copple. "The value of this new source of information will create a demand like we've never seen before for imagery of the Earth." So, if you have the money, this company will spy for you. This technology can search for the target, capture their images and relay the image to a ground base in real time. Please be aware that this is merely the latest technology that has been allowed to go public.

Let's recap: The technology has been around since the early 60s which transmits and receives imagery from space; human implantable transmitters/receivers have been in development since the 50s; and experimental "field testing" using its tax-paying citizens has been a regular activity of the U.S. Government - and the British and Russian governments. How do we directly link the above technology to a targeted individual (TI) on the ground, esp. since so far no "smoking gun" document has been found? And, how is it possible to manipulate the TI physically and access the human mind to implant ideas/commands? Let's start with a brief history of telemetry and monitoring of humans. The following quotes by Dean C. Jutter are from *Engineering in Medicine and Biology*, dated March 1983(10):

"In 1903 Einthoven transmitted electrocardiogram voltage over Leiden Telephone System wires about a mile to a string galvanometer. In 1921 Winters transmitted heart sounds over a marine radio link as a demonstration for ships without a physician. External transmitters of various signals evolved as electronic methods evolved to produce smaller transmitters. Later, several groups inserted small coils and electrodes into the skulls of animals so alternating currents could be induced for a primitive form of telestimulation.

Stuart Mackay was in biotelemetry from the very beginning and gives us a glimpse of the early developments and evolution of the field. Dr. Mackay's message is replete with examples and applications to an impressively wide variety of animal species. Miniature and micropower are two cornerstones of modern biotelemetry design and construction. Improvements in these areas have closely paralleled the evolution of semiconductor and microcircuit technologies. He has been involved with reliable, stable integrated sensors and biotelemeters on microcircuit designs and implementations in recent years. The work is truly state-of-the-art.

Eli Fromm has provided an example of a "poor man's" hybrid biotelemeter to illustrate that some rather sophisticated circuit operations can be done on a low budget and without extensive microcircuit capabilities. His comments focus on a design for a two channel, FM-FM formatted implanted biotelemeter for multiple channel monitoring using resistance type transducers. Biomedical telemetry like many other things began as a "laboratory curiosity" but has evolved to a useful, reliable tool for data gathering. It has become an important, often complex, part of physiologic monitoring, but it also can be exciting and a lot of fun."

The scientists who worked on this study, I am sure thought their research would be utilized for the highest and most ethical purposes. Jutter's paper was published in 1983; however, it probably took 5 years to reach publication. The following paragraph from this previously cited paper provides a clue as to how many years this technology had been in development/research:

"The transmission of signals from within a subject was a technique that evolved slowly. On July 2, 1952 William Shockley and Bell Labs sent me [Dr. Jutter] four experimental point-contact transistors, which were difficult to power in a small package. (Junction transistors were only available for military use.) Thus, another approach was developed to provide for the totally passive transmission of information. Figure 2 is taken from Markevitch's 1954 undergraduate research report. The tuned circuit could be placed in the mouth and its frequency monitored from outside the face by the grid-dip meter. Thus the circuits tested by Markevitch showed that signals could be transmitted through the tissues of the body from quite small coils placed within the body."

The closing paragraphs of the journal article discuss implants:

"Implantable transducers. With this type of package, the biomaterial must meet two basic requirements. First, it must protect the device from the influx of body fluids; second, it should provide minimal interference with the transduction of the desired signal. In packaging most biomedical transducers, an insulating conformal layer is deposited onto the device - in particular, over electrically conductive and potentially corrosive areas. The material (usually an adhesive rubber or resin) provides a thin, but tough, film capable of guarding against environmental effects. Also, foreign material or bacteria may remain on objects if the parts are not adequately cleaned beforehand.

A minimal weight is required for any implantable package. The pressure (amplitude, duration, etc), produced by the implant on the surrounding tissue may alter the blood circulation at the implant site, possibly affecting tissue reaction. One reason titanium is used commonly as an implantable metal is because it possesses a low specific gravity and an excellent strength-to-weight ratio compared to other metals such as tantalum, tungsten, and stainless steel. Blunt corners and sharp edges should be eliminated because they irritate tissues locally. A streamlined contour is desirable. Implant location and implant technique also influences the local reaction at the site."

The article also provides a chart with "Biomedical frequency allocation in the United States for Research and Patient Monitoring." The following citation from this 1981 report by the US electronic research provides details of the types of implants that were available for study in 1981(11):

"Microelectronics has made possible immensely complicated feed-back and logic controls, so consequently the current difficulties lie primarily in the detecting and sensing aspect of the system. . . . There are reports in the literature regarding the development of other prosthetic devices such as pain suppressors, urological controllers, blood sugar measurement for diabetic control, auditory prosthesis and intracranial pressure measurement. This is not a complete list of devices currently being developed, but merely an indication of the wide variety of prostheses that will be available in the future. . . . Telemetry systems with multiple sensor inputs, but with a single radiofrequency transmitter link are also available. The sophisticated microelectronics currently available makes the electrical amplification and signal condition relatively easy."

The above citations provide documentation that the specific knowledge and technology for accessing various physical systems in humans has been available for many years. What about accessing a human mind to manipulate it? Dr. Jose Delgado was the first publicly recognized scientist to implant an animal and manipulate it from a distance. Based on Dr. Delgado's

work, other research scientists came later. For example, the following is from a paper discussing manipulation of human emotions by researchers in 1978 at the University of California-Los Angeles (12) possibly utilizing, in addition to patients, volunteers from the Reed Brain Institute's Sleep Lab:

"Electrical stimulation of the human brain may evoke reports by patients of a wide variety of simple and complex sensations, emotions, and cognitions. These mental phenomena have been primarily considered in relation to the localization of function within the human brain. Penfield, in his pioneering studies describing the mental phenomena evoked by stimulation of the human temporal lobe, interpreted these evoked phenomena in a manner analogous to those evoked by specific sensory cortex stimulation. Penfield found, and others have confirmed, that the most common categories of mental phenomena evoked by temporal by stimulation include complex hallucinations. When discussing the hallucinations, which he considered to be memories, Penfield labeled the temporal cortex "memory records" (Penfield and Jasper, 1954, p. 145). When considering the *deja vu* other misinterpretations of present sensations, Penfield (1958) referred to this cortex as "perceptual" in analogy to "visual" or "motor" cortex, because stimulation there evoked "psychical responses" corresponding to the visual sensations or movements evoked by stimulation of the specific cortices."

The closing paragraphs of the above article suggest that, if required, emotional phenomena can be stimulated by directly accessing the temporal lobe electronically. As this paper states:

"Most of the mental phenomena reported by our patients during temporal lobe stimulation could be categorized as a hallucinated image or scene, an emotion, usually fear or anxiety, a visceral sensation, usually epigastric, or an informed sensory sensation (visual, auditory, or somesthetic).

Of 3495 stimulations of the medial temporal lobe of 36 psychomotor epileptics, 266 were accompanied by reports of mental phenomena, including hallucinations of complete scenes, *deja vu*, anxiety, visceral sensations, amnesia, and unformed sensory experiences. Olfactory and frankly aggressive responses were not observed. Our findings suggest that, in contrast to the primary visual or somatosensory areas, where the evoked mental phenomena are highly predictable and are closely related to the anatomical site, the mental phenomena evoked by medial temporal lobe stimulation are idiosyncratic and variable, and are related to the personality of the patient stimulated."

In light of the research cited above, it is possible to explain remotely controlled hallucinations or synthetic scenarios referred to as virtual realities. But, how can a targeted individual hear "voices" from external sources? Over the years, even though it appears the research went "black" in the early 1980s, information has come forward, usually in academic journals. One of the breakthrough papers, authored in 1962 (13) by Allan H. Frey, entitled "Human Auditory System Response to Modulated Electromagnetic Energy," is the link. This was the breakthrough. It must have been like watching movies for the first time. People made of light moving across a wall. . . Only this time, people in a laboratory could "hear" without a radio/transmitter. What they heard at first was only clicks and buzzes. The operator controlled the clicks and buzzes. Dr. Frey had figured out how microwave signals created sound in the head of a target.

In 1975, Dr. Don R. Justesen published a paper in the American Psychologist called "Microwaves and Behavior."(14) This is the only journal article mentioning an experiment by

Dr. Joseph C. Sharp. Dr. Sharp does not seem to have published the results of his experiment anywhere. Or, maybe, he requested not to. Following is the quote from Justesen's paper regarding the experiment:

"Sharp and Grove (note 2) found that appropriate modulation of microwave energy can result in "wireless" and "receiverless" communication of speech. They recorded by voice on tape each of the single-syllable words for digits between 1 and 10. The electrical sine-wave analogs of each word were then processed so that each time a sine wave crossed zero reference in the negative direction, a brief pulse of microwave energy was triggered. By radiating themselves with these "voice modulated" microwaves, Sharp and Grove were readily able to hear, identify, and distinguish among the 9 words. The sounds heard were not unlike those emitted by persons with artificial larynxes."

The research results discussed in Sharp's paper prove that the human being has had the capacity for many years to receive audible signals without being implanted. It should be apparent that humanity has had both the technology and the will to manipulate each other remotely. Information about the possibility of mind control has surfaced with regularity every few years. Yet, there is no public outcry en masse of the incredible invasion of privacy, and emotional and physical manipulation of everybody on the planet. In the next installment we will look at the possible reasons why there is no angry public demanding an end to this technology.

## **In Memory of Kui Griffin**

**by Elizabeth Ball**

---

Kui was born May 19, 1952 in Oceanside, California. Having a father in the Marine Corps, Kui and her family traveled across the nation until settling in Hawaii in 1958. She was a beautiful and kind person, even when she was angry, Kui was kind. She came to have a relationship with Christianity in her early adult life and her beliefs grew stronger each day, even up to her death. Three weeks before her suicide on November 22, 2002, Kui wrote an e-mail message to her sister, saying "God wants us to have lots of joy in our lives and to cry a little". She ended the note with "Lately, I have been crying a lot". Kui developed a headache shortly after midnight on the fatal day. She informed her husband of the headache. Only Kui, her husband, and God knows what transpired between the time she got out of bed to "deal with the headache" and 5:00 a.m. when her husband found her hanging in the garage.

Kui was convinced that the headaches and other unusual somatic sensations were a result of technology the perpetrators were using against her. Her husband grew frustrated and angry with her complaints, even blaming Kui's sister for "the way she is". He did little, if anything to help Kui, other than having an extramarital affair, which complicated my dear sister's fragile mind.

Now Kui is at peace. No further attacks by the perps. No more painful memories. Only peace with her father, who was an MK-Ultra Victim, and who's birthday was on November 22, Kui's passing day.

God bless you, Kui. Peace to you. I hope to see you soon.

Your Loving Sister,

Elizabeth Ball

---

[To that I add my own Amen. I am personally aware of Kui's kindness; she sent me some very useful items to help with the on-line campaign to expose the criminals who are responsible for her death. Eleanor White.]

# Kinds of Torture Endured in Ritual Abuse and Trauma-Based Mind Control

Kinds of Torture Endured in Ritual Abuse and Trauma-Based Mind Control (Ellen P. Lacter, Ph.D., January 7, 2004)

Knowledge of the methods of torture used within ritual abuse and trauma-based mind control provides a basis for recognition of related trauma disorders. Individuals subjected to these forms of torture may experience intense fear, phobic reactions, or physiological symptoms in response to associated stimuli. In some cases, the individual, or particular dissociated identities, experience a preoccupation with, or attraction to, related stimuli.

Victims may be able to describe the torture they have endured, or they may fear doing so. In many cases of ritual abuse and mind control trauma, the abuse remains dissociated when the individual first seeks treatment. Typically, the initial presenting problems are symptoms of anxiety, depression, or trauma derived from childhood sexual abuse, usually by a family member, who is eventually understood as a participant in the abuser group.

The following is a partial list of these forms of torture:

1. Sexual abuse and torture.
2. Confinement in boxes, cages, coffins, etc, or burial (often with an opening or air-tube for oxygen).
3. Restraint; with ropes, chains, cuffs, etc.
4. Near-drowning.
5. Extremes of heat and cold, including submersion in ice water, and burning chemicals.
6. Skinning (only top layers of the skin are removed in victims intended to survive).
7. Spinning.
8. Blinding light.
9. Electric shock.
10. Forced ingestion of offensive body fluids and matter, such as blood, urine, feces, flesh, etc.

11. Hung upside down or in painful positions.
12. Hunger and thirst.
13. Sleep deprivation.
14. Compression with weights and devices.
15. Sensory deprivation.
16. Drugs to create illusion, confusion, and amnesia, often given by injection or intravenously.
17. Ingestion or intravenous toxic chemicals to create pain or illness, including chemotherapy agents.
18. Limbs pulled or dislocated.
19. Application of snakes, spiders, maggots, rats, and other animals to induce fear and disgust.
20. Near-death experiences; such as by drowning or suffocation with immediate resuscitation.
22. Forced to perform or witness abuse, torture and sacrifice of people and animals, usually with knives.
23. Forced participation in child pornography and prostitution.
24. Raped to become pregnant; the fetus is then aborted for ritual use, or the baby is taken for sacrifice or enslavement.
25. Spiritual abuse to cause victim to feel possessed, harassed, and controlled internally by spirits or demons.
26. Desecration of Judeo-Christian beliefs and forms of worship; Dedication to Satan or other deities.
27. Abuse and illusion to convince victims that God is evil, such as convincing a child that God has raped her.
28. Surgery to torture, experiment, or cause the perception of physical or spiritual bombs or implants.
29. Harm or threats of harm to family, friends, loved ones, pets, and other victims, to force compliance.
30. Use of illusion and virtual reality to confuse and create non-credible disclosure.

To illustrate, ritual abuse survivors may experience intense phobic reactions to spiders or maggots (item 19). They may fear water and baths (item 4). They often fear hypodermic needles (item 16). They become easily too cold, too hot (item 5), or thirsty (item 12). They

may have aversive reactions to cameras (item 23). They may become upset upon seeing babies, dolls, or particular animals, or they may strongly identify with abused and abandoned animals and children (items 22 and 24). Sexual aversions are common (items 1, 23, and 24), as are vulnerability to repeated sexual victimization, sexual compulsions, and in some cases, paraphilias, such as sadism (Young, Sachs, Braun, & Watkins, 1991).

Food aversions and eating disorders are common. Ritual abuse survivors may not be able to eat food that is brown or red because these remind them of feces and blood. They are often repulsed by meat, are vegetarian, or fast excessively, or regurgitate food, derived from forced ingestion of body matter and fluids (item 10).

Ritual abuse survivors, by and large, believe in the presence and power of spiritually evil forces, and often feel personally plagued by these (items 25, 26, 27, and 28). They may experience anxiety or an aversion to God and religion (item 26 and 27), or may alternatively be devout in their spiritual beliefs and practices.

Art productions, creative writing, and sandtrays, will often reflect their torture; including knives, religious symbols, frightening figures, coffins, burials, etc. Children unconsciously reenact elements of torture they have witnessed or experienced with toys and other objects. For example, a 3-year-old boy wrapped a rope three times around his neck and pulled upward, as if to hang himself. A 3-year-old girl sang about marrying Satan.

External or internal reminders of torture-related stimuli often precipitate dissociative responses, such as entering a trance state, falling asleep, or an other personality taking executive control of the individual. Torture-associated stimuli may also elicit disturbing impulses to re-enact unprocessed trauma, such as impulses to self-mutilate, or thoughts of stabbing or sexually assaulting an other person.

Somatoform and conversion reactions occur frequently in response to ritual abuse and mind control trauma-reminders. Individuals often experience localized pain, especially genitourinary, musculoskeletal, and gastrointestinal, motor inhibitions, nausea, or even swelling in the affected area, prior to retrieval of any visual or narrative memory of the related torture. These are generally very distressing to the affected individual. Once the trauma is re-associated and processed within the context of psychotherapy or other forms of support, these somatoform and conversion reactions usually dissipate.

Survivors of trauma-based mind control often respond with anxiety to fluorescent lighting, since so much programming utilizes intense lighting (item 8). They may startle in response to a telephone ringing, related to programming to receive or make calls to abusers. They may believe they have microphones inside their heads that will relay their disclosures to their abusers (item 27). Fears of electronic or spiritual surveillance, and threats to loved ones (item 29) inhibit their ability to defy and escape their abusers or to disclose their abuse.

Victims of trauma-based mind control also usually experience intense or odd reactions to benign stimuli that were used in their programming. For example, they may have been programmed to remember to forget every time they see an apple, or to remember they are being watched every time they hear a police or fire siren. Similarly, they may make repetitive, robotic statements that do not make sense in the context of dialogue, e.g., "I want to go home", a common programmed statement intended to keep them obedient to the abuser group.

and reporting to their abusers. Specific songs may be compulsively sung for similar programmed purposes.

All of these symptoms can occur prior to the individual having any conscious understanding of the related abuse. This point is critical. Dissociative and neurobiological responses to overwhelming trauma (van Der Kolk, McFarlane, & Weisaeth, 1996) often prevent these experiences from being processed into a coherent narrative memory. The diagnostician cannot rely on the patient to put the pieces together of their clinical picture.

Finally, generalized guilt and survivor guilt are strongly associated with ritual abuse, since participation in victimization of others is a mainstay of ritual abuse and mind control torture (items 22 and 29).

For more on recognition of symptoms specific to ritual abuse trauma, see Boyd (1991); Coleman (1994); Gould (1992); Hudson (1991); Mangen (1992); Oksana (2001); Pulling and Cawthorn, 1989; Ross (1995); Ryder (1992); Young (1992); and Young and Young (1997).

## **LIFE ASSESMENT DETECTOR SYSTEM (LADS)**

Patent Pending

---

The Life Assessment Detector System (LADS), a microwave Doppler movement measuring device, can detect human body surface motion, including heartbeat and respiration, at ranges up to 135 feet (41.15 meters). The primary function of the LADS is to provide a reliable method by which medical and emergency personnel can locate personnel buried in building collapses or injured on the military battlefield. LADS can detect such signs of life as movement, heartbeat, or respiration.

**\*\* NOTE: These referenced images are no longer available at the <http://www.vsecorp.com> web site. What the showed was mainly a small dish antenna mounted on the top of a tripod. (August 9, 1998)**

[Click to view a larger image](#)

Originally designed to detect heartbeat and respiration of military personnel wearing chemical-biological warfare protective overgarments, the LADS has been restructured, greatly increasing its operational range and providing a means for eliminating "nuisance alarms" which could mimic human life signs, such as fans, wind drafts, or swaying trees. This is accomplished through neural network technology, which "trains" the system to recognize human motion and heartbeat/respiration functions. If these functions are not detected, the reasonable assumption is that there are no survivors. Operating under such an assumption, the rescue team can now proceed without fear of further loss of life; i.e., rescue and medical personnel and equipment can be deployed more effectively and efficiently.

The LADS consists of a sensor module, a neural network module, and a control/monitor module. The sensor module is an x-band (10 GHz) microwave transceiver with a nominal output power of 15 milliwatts, operating in the continuous wave (CW) mode. The neural network module device can store many complex patterns such as visual waveforms and speech templates, and can easily compare input patterns to previously "trained" or stored patterns. The control/monitor module provides the LADS' instrument controls, such as on-off switches, circuit breakers, and battery condition, as well as motion, heartbeat waveform, pulse strength, and pulse rate displays.

LADS provides life assessment capabilities for people who are:

- Trapped in building rubble;
- Battlefield casualties in a chemical/biological warfare environment;
- Victims of airline, train, or automobile crashes;
- Trapped in an avalanche or mud slide;
- Trapped on a mountain ledge;
- Trapped under a collapsed tent structure; or
- Hostages being held in a nonmetallic room.

---

For more information about the LADS, send E-mail to: [info@vsecorp.com](mailto:info@vsecorp.com)

<http://www.raven1.net/laws.htm> revived by [www.hearingvoices-is-voicetoskull.com](http://www.hearingvoices-is-voicetoskull.com)

VISITORS: THIS PAGE IS MAINTAINED IN A VERY ROUGH FORMAT - IT'S JUST TO LIST KNOWN ANTI-ELECTRONIC STALKING LAWS, NOT TO DISPLAY THEM IN FULL DETAIL. \*\* These laws are NOT being enforced.

If any visitor knows of an anti-stalking law section SPECIFICALLY concerning the use of electronic equipment, please contact the maintainer of this page. Thank you.

#### 1. U.S. FEDERAL ELECTRONIC ANTI-STALKING ACT OF 1995

\*\* Researcher Roy Bercaw discovered that this law did NOT pass. It's included here for those who might want to press for it's re-introduction!

File: h 1 1 2.ih  
104th CONGRESS  
1st Session  
January 4, 1995

...  
To amend section 223 of the Communications Act of 1934 to prevent the harassment by computer modem or other electronic devise.

...  
Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled.

...  
SECTION 1. SHORT TITLE.  
This act may be cited as the "Electronic Anti-Stalking Act of 1995".  
SECTION 2. AMENDMENT.

...  
For purposes of subparagraphs (B), (C), and (D) the terms 'telephone' and 'telephone call' include communications by means of computer modem or any other two-way wire or radio telecommunications devise.

[RAVEN1's Note: The voice-to-skull technology, the acoustic heterodyne (electronic ventriloquism) device, the thru-the-wall radar, and the mind-altering devices are CLEARLY "two-way radio telecommunications devices!"]

#### 2. U.S. FEDERAL ANTI-SURVEILLANCE DEVICE LAW Courtesy victim/researcher Norman Rabin

50 U.S. Code 1801(f)(4), 1809, 1810, is U.S. Federal Criminal and Civil law which makes illegal the use of a surveillance device (of any type, including satellites) in the United States, to acquire information under circumstances where a person has a reasonable expectation of privacy.

#### 3. MASSACHUSETTS GENERAL LAWS

Section 140 - 131J - July 10, 1986  
"No person shall sell, offer for sale or possess a portable device or weapon from which an electrical current, impulse,

wave, or beam may be directed, which current, impulse, wave or beam is designed to incapacitate temporarily, injure, or kill."

4. NEW YORK PUBLIC HEALTH LAW

New York Public Health Law Article 24-A, Protection of Human Subjects, Section 2442. Informed consent

"No human research may be conducted in this state in the absence of the voluntary informed consent subscribed to in writing by the human subject. ..."

5. ANNOTATED LAWS OF CALIFORNIA

Annotated Laws of California Chapter 1.3 (Protection of Human Subjects in Medical Experimentation Act)  
Section 24175. Medical experiments; informed consent

"(a) Except as otherwise provided in this section, no person shall be subjected to any medical experiment unless the informed consent of such person is obtained."

## **David Lawson's Investigation Into Organized Stalking**

**This page updated March 7, 2009**

---

"Watcher" perpetrators on station in a quiet Toronto, Ontario neighbourhood

[Click here](#) to see the 5-minute video from which the "watcher" image above was taken.

American private investigator David Lawson spent approximately 12 years investigating stalking groups in the United States and Canada, mainly in the 1990s. He wrote about his experiences "riding with" these networked community harassment groups in two books.

The first, released in 2001, was:

### **Terrorist Stalking in America**

ISBN: 0-9703092-0-1

That book is now out of print. Lawson then produced an updated book on the same subject in March 2007:

### **Cause Stalking**

ISBN-13: 978-0-9703092-3-5

While group harassment in the workplace is fairly common, and well documented in this book:

### **Mobbing: Emotional Abuse in the American Workplace**

By Dr. Noa Davenport, Ruth Distler Schwartz, Gail Pursell Elliott

... the community-based counterpart, organized stalking, is not well known to the average member of the public. This paper is to share some of David Lawson's findings so the reader can begin to grasp what appears to be a relatively new type of crime. So new, in fact, that targets of organized stalking have great difficulty getting law enforcement officials to take it seriously.

Before sharing David Lawson's findings, it should be pointed out that Lawson's books contain two types of information: his **observations**, and his **conclusions**.

David Lawson's observations of the activities of the community organized stalking groups are a perfect match for the types of harassment reported by organized stalking targets. However, Lawson's conclusions as to who is mainly responsible are puzzling to targets who have read his books.

David Lawson claims that foreign terrorists and "anti-government" groups are responsible for the growing organized stalking crimes. Very few targets of organized stalking see evidence that Lawson's conclusions match the targets' experience. Lawson may have discovered those groups operating when he rode with the harassment groups, but anyone interested in finding the backers of local harassment groups would do well to suspend judgement on Lawson's conclusions.

Right up front, targets of organized stalking report that LIES circulated about the targets are what fuel local hatred for the targets. One of the favourite lies being circulated is that the target is a child molester. This is routinely used against female targets as well as targeted men.

Other lies are that the target has a serious criminal record, or is into the drug trade, or is a prostitute. So for those reading this paper who aren't familiar with organized stalking, keep in mind that the obvious answer to "Why would people harass targets who are nobodies?" ... is that once lies are circulated that the target is a major criminal, that target is no longer a "nobody."

As to why certain people are chosen as targets, targets' reports show that whistleblowers and activists are sometimes subjected to organized stalking as "punishment" for their activities. Other cases occur when a target is in line for a large inheritance, or has turned in a well-connected spouse for criminal activity such as pedophilia, or sometimes the target just "ticked off" someone who is well-connected to groups willing to do organized stalking.

According to David Lawson, some targets are simply chosen for 'practice.'

[Click here](#) for a paragraph from a book by Dr. Debra A. Pinals, MD, which describes the personality type of some of the stalkers described by David Lawson. It is important to know that people capable of doing Lawson-type stalking really do exist and have been recognized by the field of psychiatry.

Here below are selected quotes from both of David Lawson's books, starting with a "Concepts Table" for quick-click access to relevant sections:

#### SELECTED QUOTES:

Quotes are from David Lawson's currently available book "Cause Stalking" except where noted from his original book, "Terrorist Stalking in America."

Author David Lawson did interview perpetrators, ("perps"), targetted people ("targets"), and the police. Here is what the author heard from the police he interviewed:

[pg 79] "I also spoke with a few police officers from across the country. They confirmed the existence of stalking groups across the country. In general, they said that 'cause stalking' is primarily a civil problem where the plaintiff has to prove financial loss. They also said that there are free speech and grass roots issues involved. In fact, the police themselves are targets of these groups. In small towns, the number of members in these groups can easily exceed the number of police officers. In general, the police will not talk about stalking groups. One officer did say there is a storm brewing as groups become larger and more numerous."

Author Lawson explains here how he got involved and began to interact with the 'cause stalking' perpetrators:

"One day, several years ago, I was sitting in my house, and checking out the activity on my scanner. I heard a woman say that she was following a certain vehicle. She gave the location, the make and model of the car and the license plate number. A few days later, I heard the same woman on the same frequency (84) request backup at a certain location. A few days after that I

again heard her broadcasting the position and details about another vehicle she was following. I listened to other people talking on that frequency and they didn't give any indication that they were with any government agency but they were talking about arresting people."

"On another occasion, on the same business band frequency, I heard someone complain that an African American man was crossing the street. "All we could get him for is jaywalking" responded the leader. "Leave him for the police."

"People in the group would discuss where they would go for supper, after their shift was over, so I [the author] went too. I listened to a group of people openly discussing various activities as if they were the police.

"Real police officers were also sitting in the restaurant, listening to them. I later learned that their presence was not a coincidence.

"One man who had supper with the group drove a van marked with the call letters of a local AM radio station. I started listening to it. Most of the guests were people who said they had new revelations about Waco or Ruby Ridge, or had some inside story about government corruption. It is called hate radio. I also heard advertisements for the meetings of a local political group and I attended some.

"At the first meeting I attended, one young man flashed a phony police badge at me. No one paid any attention. Some of those in attendance were the people I had seen in the local restaurant. This was my introduction to the creepy world of anti-government extremists."

David Lawson goes on to explain that he has observed "extremist groups" for several years while living in New York State, Florida, and Canada. He monitored the stalking groups' public communications, attended meetings, and rode with them.

The author defines the basic reason for being for these citizen stalking groups as CAUSE STALKING. Cause stalking means the group is assembled, under a leader with a "shadowy past", for some specific cause.

"Cause stalking has been used by extremist groups since the early 1990s. The basic system is alleged to have been developed by the Ku Klux Klan and refined through years of use."

Some details about the typical cause stalking recruit:

"Recruits tend to be blue collar workers who are at the bottom end of the job scale. They are janitors in apartments, hotels, etc., who have keys to get in any locked doors. They are security guards, who can let fellow members into places where they would not normally be allowed to go. They are city workers, who can, in many cities, follow a target around all day in their vehicles or have a noisy project underway near his [target's] residence. They are taxi drivers, who are a network that is always on the road. They are cable, telephone and

electric company employees who can interfere with a target's service and spend time on patrol with the group, while they are on the job."

Those are the author's words. Here are a few quotes from the perpetrators themselves, from the original book:

[From Terrorist Stalking in America] "We are like the police except we are ABOVE the police."

[From Terrorist Stalking in America] "We are a citizen's group that helps the police. We are trying to alert people in the area about this person [the target] before he gets to do what he did in the last place he lived." [Eleanor White talking: All the cause stalking targets I know well did not commit ANY offenses. The stalkers are filled with LIES by their leaders.]

[From Terrorist Stalking in America] "When I get the call, I go to whatever the address is. It doesn't matter what they [targets] do, they can never get away from us."

[From Terrorist Stalking in America] "Who are we? We drive the ambulances that take you to the emergency room. When your house is burning, we put out the fire. We are security guards. We protect you at night. You only have electricity, phone and cable service because of us. We are janitors. We have the keys. We fix your cars. You don't want to mess with us."

In "Cause Stalking", David Lawson provides some details about the motivations of stalking group members not in the first book:

- 25% follow the nominal "cause" they were recruited under
- 25% actually participate in the harassment
- 75% harass occasionally or not at all
- 10% join out of fear of being harassed themselves

That 10% joining out of fear of harassment is quite interesting, as one of the most difficult barriers to educating the general public about organized stalking is why anyone would volunteer to harass others.

Lawson describes recruits to these groups as "... those who feel powerless, inferior and angry." Common sense is that naturally, such people would be easy to recruit for street and adjacent to the target's home harassment, but I would comment that lots of professionals put us (targets) down at every opportunity, declaring us mentally ill for even suggesting organized stalking is possible. These professionals don't "feel powerless, inferior, and angry."

And I doubt the many utility and city employees who participate feel "powerless, inferior, and angry" either. So while David Lawson has done a great job, some aspects of organized stalking have apparently escaped him.

One comment Lawson makes is that "Firemen across the country, and even some police officers, support these groups."

I have heard a number of reports that vehicular harassment has involved an above average number of vehicles that bear stickers of firefighters, or, a few targets have traced perpetrator identities to firemen. One target discovered that a number of vehicular harassment cars, identified by licence number, were parked in a police station parking lot.

My personal take on why some firemen and police might back these groups is that many have a heightened sense of community service. If they can be persuaded that the target has a criminal record, the worst case being that of a pedophile, it would be natural for firefighters and police to "help keep the target in line".

The author concludes, as explained at a number of places in the book, that the "cause" the typical group is "working toward" is mainly an excuse to get the groups together. The main motivation of members who stay with these groups is the sense of power and belonging the group members derive. Having a "cause" enhances the feelings of power and righteousness, but group members, according to the author, are most concerned with how their fellow group stalkers feel about their "work" and accept them.

Lawson explains the attitude of the typical stalking group member towards the "cause" this way:

"Most active group members have only a general idea of the ideology of the group but they don't particularly care."

These groups come into being and are run by leaders. Here is what the author says about them in this book, a bit different and more clearly, when compared with the [original book](#):

"Group leaders do have political goals and the belief that the end justifies the means."

Lawson describes leaders as considering their members "disposable."

Lawson states that some leaders work for corporations and politicians (original book didn't mention politicians.)

Lawson states that leaders identify targets but don't directly supervise the harassment group members.

Lawson describes leaders as having an "air of mystery", "having worked for the CIA, NSA, or some other intelligence agency that doesn't reveal information about their employees." Lawson states that this "background" is likely mythology.

How about financing these groups?

Although the author states that the pay is low, there are still very large expenses to harass people as thoroughly as targets report. Here is an example of what I mean by "large expenses":

"Groups are well financed. They can afford to rent property wherever the target lives. If he drives across the country, he will be followed by supporters

of similar groups in that area. If he travels by plane, group members will meet him wherever he lands in the U.S. They may even accompany him on a plane if they know his travel plan, and there is a good chance that they do."

Here is what the author learned about their financing:

[From Terrorist Stalking in America] "The operations of many extremist groups are actually financed by corporations which use them to stalk their enemies or potential enemies. The groups are used as the private armies of those corporations. Some countries kill dissidents and in others they are jailed. In the United States, someone who is threatening to corporations or industries, like a whistleblower or activist, is likely to become the target of an extremist group."

The author makes several statements that these criminal stalking groups not only harass targets specified by their leaders, but also are FOR HIRE - a kind of "revenge service" for those wealthy enough to hire them.

There are two distinct reasons why targets are harassed:

- The initial reason targets are placed on the stalking groups' "list"
- The reason the stalkers keep it up (always involves lies)

Those two reasons should always be kept separate in your mind, reader. David Lawson's focus is mainly on the reason the stalkers continue to harass targets.

David Lawson's chapter on Selection of Targets may well be true, but it certainly doesn't describe the thousands of people who don't fit his list of targeted categories. Here are some of the categories of targets Lawson records in "Cause Stalking":

- Abortion clinic workers
- People guilty of mistreatment of animals
- County clerks and local politicians
- Police officers
- Judges
- IRS and Treasury agents
- Civil rights activists
- Government or corporate whistleblowers

One thing David Lawson makes clear in describing the targets is that "The ultimate goal of the groups is to destroy the targets." Those who have been stalked by organized citizen groups which are fed lies report that these groups do destroy targets with great efficiency.

Next, let's look at some of the typical OPERATIONS these groups carry out. Here, I have retained a number of quotes from the original book because I feel they state the situation as well or better than the new book:

- The first step, after a target has been selected, is to establish a personality profile "... which will involve an assessment of IQ, personality type, and history."

- "A target may also notice being photographed."
- [From Terrorist Stalking in America] "The primary characteristic of cause stalking is that it is done by large groups of people. A target will always be followed, but he is unlikely to see the same stalkers very often." ...

[From Terrorist Stalking in America] "Many of these groups include hundreds of people."

- "Some authors refer to cause stalking as terrorist stalking. Groups do not just stalk individuals. They employ organized programs of harassment which include break-ins, property damage, assault and occasionally, even death. The children of a target are a favorite."
- [From Terrorist Stalking in America] "Firemen across the country, and even some police departments have a long history of supporting extremist groups. Fire trucks can sometimes be seen riding in extremist convoys, with their flashing lights turned on and their sirens screaming. They will also race to greet a convoy which is entering their town. The participation of firemen, city workers and utility company workers helps give group members an illusion of legitimacy and power."
- [From Terrorist Stalking in America] "City employees can be used to harass a target in many ways including tearing up the road in front of a target's home. Employees of pest control businesses who have access to the keys for apartments and those who work for alarm and locksmith companies are also of interest."
- [From Terrorist Stalking in America] "Groups also attack targets of convenience. These people are selected because they are convenient targets, and not for any other reason. These include loners who tend to be more vulnerable to their harassment tactics than those with family and friends around them. Targets of convenience are used for practice."
- [From Terrorist Stalking in America] "In order to establish bases of operation, they will enlist the assistance of neighbors. In many areas, they can do this by intimidation. Those who do not co-operate can be targetted, which includes harassment of their families and damage to their homes and vehicles."

"If they are dealing with individuals who do not know them, they can also appeal to their sense of patriotism and they can offer drugs, friendship, home repair, free taxi rides and what ever else they have to. In some cases they may even be able to get a key to the residence from a 'patriotic' landlord."

- [From Terrorist Stalking in America] "Surveillance is conducted 24 hours a day, 7 days a week. When a target leaves his residence they will alert the group, either by cell phone or by business band radio. Other members, who are patrolling the perimeter to watch for police and other vehicles driving in the area, will race to the location to begin pursuit. In small towns, where business band radio is widely used, these activities are a local sport among a small group. Anyone with a scanner can join in. Some targets have reported hearing an announcement on their scanners as soon as they turn their lights on in the morning."

- [From Terrorist Stalking in America] "In a typical apartment setting, they will attempt to lease, sublet, or otherwise have access to apartments above, below, and on both sides of the target. They will also "guard" the vehicles of a target in the parking lot."

[From Terrorist Stalking in America] If [the target] flushes a toilet, he may hear a car horn honk, the sound of a power tool or hammering, for example. There will also be a large number of people coming and going, and accompanying rowdiness and noise."

- [From Terrorist Stalking in America] "A common ruse used by these groups is that they are a 'citizens group' which assists the police and they are 'just keeping track of' a certain individual, for whatever reason. The illusion is reinforced by the case files they carry which are complete with photos of the target and look like those used by police."
- "During a search [of the target's home or apartment] members who are on patrol anyway establish a perimeter around the residence to watch for police vehicles. In an apartment setting, entry will likely be gained through a member of the janitorial staff, pest control or alarm technician, since they have a right to enter. They may even be able to approach a landlord and gain his co-operation, after convincing him of their 'higher purpose'. He may also co-operate out of fear."
- [From Terrorist Stalking in America] "Others do not recognize that they are being harassed by an organized group. They just think that there are a lot of rude people in the world."
- "Interception of mail is standard practice." ... "Typically, targets notice that their mail is arriving late or they do not receive certain pieces of mail. They [targets] may overhear people at a nearby table in a restaurant talking about certain mail, and realize it is theirs, or someone may drive by [the target] waving their mail at them."
- "Interception of phone calls is also standard practice. This is done by telephone company employees who support the [stalking] group for ideological reasons or because they obtain some benefit." Eleanor White comment: I'd add to that one of the most likely reasons, because the phone technicians are told lies about targets."
- "An objective is to isolate the target from his family and friends. He can tell them about all the strange things happening around him, but they will not understand and perhaps will think he is crazy. Sometimes other members of the family will receive the same treatment."
- "When a target is driving, standard practice is to surround his vehicle and attempt to control his speed. He will not be followed in close proximity by the same vehicles for a long distance. They do frequent trade-offs. Vehicles line up behind the target to take their turn."

"In many parts of the country it is common to see groups of six to 30 or more vehicles driving around in convoys with their high beams on during the day. This is one of the ways a convoy can be identified."

- "Standard practice is to watch the target's vehicles and this subjects them to damage including slashed tires, scratched paint, stolen license plates, etc. Typically they would

not cut the brake lines on vehicles or commit other similar acts of sabotage, but they would drain the oil or antifreeze over a period of time."

- [From Terrorist Stalking in America] "A target will be followed on foot wherever he goes. Anyone can go to the same public places he goes, and they will attempt to get into any other restricted places he goes, including hospitals, places of employment, etc. It has been said that it is possible to go nearly anywhere if you have a clipboard in your hand and it is almost true. They also like to wear name badges on a lanyard, and some carry phony police badges."
- [From Terrorist Stalking in America] "Common harassment tactics used by those on foot include pen clicking, in which they repeatedly click a ball point pen, key rattling, and rattling change in their pockets while standing behind the target. Many tactics are tried and the result is observed. Those which evoke a response from the target are repeated. When a target sits anywhere in public, group members will attempt to sit behind him in order to create noise, by whatever means, including tapping their feet on the target's chair. The objective is to harass the target constantly."
- [From Terrorist Stalking in America] "Groups attempt to interfere with any business and personal relationships which the target has. Typically, this interference involves character assassination from some anonymous individual and is not usually taken seriously by those who know the target. It can be effective with people who don't know the target."
- "At work, the target will also experience character assassination. If he works in any position where he has to deal with the public, there will be a steady stream of customers who complain about him. If he is a real estate agent, he will have a steady stream of prospects who occupy his time but never make an offer."

Let me, Eleanor White, give you an example of how brutal and serious this "character assassination" can be.

One of our members, who prefers to remain anonymous, moved in with her husband and children to a house which, unknown to them, had been a methamphetamine lab. The chemicals used to brew meth apparently cause distinctive symptoms in the mouth. This family's dentist felt he was "helping law enforcement" by reporting them to local law enforcement as meth users. This was absolutely untrue, but the family didn't even know the report had been made and had no way to correct it. (In fact, in some places, dentists are REQUIRED to report suspected cases of meth use.)

Law enforcement in that area was apparently tied in to the citizen groups, and the family was harassed for many years. The husband died, apparently from exposure to these chemicals.

The lady, now a grandmother, steadfastly did detective work and eventually found out about her family's reputation, with some help from a policeman who was a personal friend, from a different jurisdiction. This policeman admitted off the record that "meth mouth" can result in people being submitted to citizen harassment groups for harassment.

Character assassination is complete, and has life-destroying consequences!

- "A common tactic use by groups is noise campaigns. Group members will drive by the target's residence or work place, honking their horns, squealing tires, and making whatever other noise they can."

"They will also make noise from whatever nearby properties they have access to. Typically, they will make noise when the target goes outside. Group members will also frequently knock on his door for whatever peculiar reasons they can dream up."

- "In an apartment setting, targets can expect to hear tapping on the walls in the middle of the night, hammering etc. from the upper and/or lower apartments, and possibly the apartments on both sides. They will continue to 'work' on these activities for as long as they can get away with them."
- [From Terrorist Stalking in America] "... It is not uncommon, in an apartment setting, for a target to hear someone moving from room to room as he does, from the upper or lower apartment. [Eleanor White talking: This requires commercial through wall radar or more advanced technology in many cases.]
- "Often they occupy a nearby apartment, part time, when the owner is not there and he receives some benefit. A target may notice someone leaving a nearby apartment when he leaves his, and arrive when he arrives. In addition, he will often be accompanied in elevators by a steady stream of different individuals who go to the apartments being used by the group."

What about the future, then? Let me close this review with a chilling quote from David Lawson's first book, Terrorist Stalking in America, reporting what the author learned from some of the leaders:

"The leaders ... are starting to balk at exposing their members to arrest for activities which amount to little gain for the movement. they say that anyone who is a target should be killed, and not just harassed for years."

Eleanor White

**Here is a suggested type of letter which can be written to your local legislators asking them to make some tangible, DO-able, not costly changes to laws and law enforcement:**

Dear :

In the past few months, I have written you concerning the unique problems in applying current criminal laws to the new breed of electronic surveillance and neuro-influence weapons. These weapons leave no trace, and if applied in short bursts and when no witnesses are present, are, under present law, the perfect crime.

Perpetrators using this weaponry can harass and torment a chosen vengeance or recreational victim for years and never come even close to prosecution.

I have been the target of both surveillance and acoustic weaponry for the past couple of years, and I can't even go for a walk in the woods without having unknown persons follow me with weird shrieks and whistles originating from the acoustic weapon known as an "acoustic heterodyne", currently manufactured by American Technology Corp. in Poway, CA.

(This technology was used by military intelligence during the Persian Gulf War.)

When I complain to police and police visit my premises, the activity (naturally) ceases and they say they can't help due to lack of evidence.

In response to this late-90s situation, I'd like to offer some suggestions to both legislators and to the police as to how to deal with this new and growing threat to peace and privacy.

1. The cornerstone of civilized justice is presumed innocence; that can't be changed.
2. Day-to-day POLICY, both legislative and at the law enforcement level, CAN be changed, however.

The 1990s have seen policies put in place which now make it mandatory to believe victims of domestic abuse and stalking. I suggest this same policy be extended to those who claim they are being stalked and harassed by electronic surveillance and neuro-influence weapons.

It is extremely important that WRITTEN policies plainly spell this out. Verbal won't help when someone enters a police station with a complaint of this type.

(The Jan. 22/98 article from Nature magazine, which I sent you not long ago, will remove any doubt that such weapons are feasible with

current UNclassified technology. I can furnish you with other unclassified electronic weapon articles if you wish further confirmation.)

3. Police agency policy must make the gathering of evidence by police, not the victim, an obligation of police agencies. This too must be IN WRITING.

In the matter of sophisticated surveillance and neuro-influence weapons, there is no possible way an ordinary working citizen can pay for their own evidence collection.

4. Because the cost of evidence collection is high, the forensic lab agencies at both the federal and provincial levels must be equipped with their own test equipment. Since this type of case is not likely to be continuously reported at this time, the contracting of e-weapons detection experts would be done at the times of specific need.

All police agencies should be able to request the services of these equipment and expertise "depots" AT NO COST TO THEIR LOCAL BUDGETS. This "no cost" suggestion is ESSENTIAL to ensure the willingness of busy local police, snowed under by drug cases and robberies, etc.

It will be federal and provincial taxes which will fund these e-weapon detection units, not local governments.

5. Nobody, in any line of work, likes to have nearly impossible assignments "open" on their desks for long periods of time.

This type of case is VERY likely to be of the open-for-lengthy-periods type.

In light of this, policy should require the complainant to renew their complaint every six months in order to keep the matter open.

The complainant should be able to freely add relevant information to their file, by transmitting or delivering to their local police station. In my case, any material I have submitted is returned, politely, but with the statement "I'm too busy to read that."

The officers who are assigned such cases must be allowed the time to read or view the evidence submitted, and secure storage space to keep it. This too must be IN WRITING.

6. There will be, no doubt, cases where the

complainant is not satisfied with the actions taken by their police agency.

In such cases, the policies of all of the Police Civilian Review Boards must make their services freely available to the complainants, and in such a way that the complainant does not fear additional problems coming from local police authorities.

I'd like to suggest that all of the above points can be easily added to EXISTING boards and agencies with no fear of political cost. All I'm suggesting is the ENHANCEMENT of existing policies and lab facilities, not the creation of entirely new agencies.

If such legislative and policy changes attract the attention of the media and public, such changes will very clearly paint the legislators and administrators carrying out the changes as highly forward-looking.

Remember that enough of the surveillance and neuro-influence technology has now been made public that no politician now need fear for their credibility.

The cost is not particularly high - the equipment needed to cover both radio frequency and acoustic (ultrasound) detection might run \$350,000 CDN for a federal and/or each provincial lab. That is far beyond what the victim can pay, but is not a large percentage of federal and provincial budgets.

One modern bus or street car can run close to that price.

I sincerely hope you will seriously consider taking part in preparing for this relatively new type of crime, and I stand ready to furnish detailed information on the weapons technology already in the public domain.

Sincerely,

<http://www.raven1.net/lida.htm> revived by [www.hearingvoices-is-voicetoskull.com](http://www.hearingvoices-is-voicetoskull.com)

## Russian Machine That Tranquilizes People

Associated Press (82/83)  
(See also a statement by Dr. Eldon Byrd below)

<http://www.stress.org/adey.htm>, an article on the life and work of Dr. Ross Adey

[U.S. patent #3,773,049](#), covering the technology used in the LIDA machine. (Personal opinion: The LIDA is probably not used now due to concerns about exposure to significant amounts of radio signals.)

Associated Press  
(Exact date not shown on copy but tests took place 1982/83)  
Loma Linda  
San Bernardino County

A Soviet device that bombards brains with low-frequency radio waves may be a replacement for tranquilizers and their unwanted side effects, says a researcher, but its use on humans poses ethical and political questions.

[Eleanor White's note: More recent stories state that the same brain rhythm entrainment can be done with much higher carrier frequencies as well. It is the biorhythm pulse

rate that creates the effects.]

The machine, known as the LIDA, is on loan to the Jerry L. Pettis Memorial Veterans Hospital through a medical exchange program between the Soviet Union and the United States.

Hospital researchers have found in changes behaviour in animals.

"It looks as though instead of taking a valium when you want to relax yourself it would be possible to achieve a similar result, probably in a safer way, by the use of a radio field that will relax you" said Dr. Ross Adey, chief of research at the hospital.

[Missing one line on the photocopy] ... manual shows it being used on a human in a clinical setting, Adey said. The manual says it is a "distant pulse treating apparatus" for psychological problems, including sleeplessness, hypertension and neurotic disturbances.

The device has not been approved for use with humans in this country, although the Russians have done so since at least 1960, Adey said.

Low frequency radio waves simulate the brain's own electromagnetic current and produce a trance-like state.

Adey said he put a cat in a box and turned on the LIDA.

"Within a matter of two or three minutes it is sitting there very quietly ... it stays almost as though it were transfixed" he said.

The hospital's experiment with the machine has been underway for three months and should be completed within a year, Adey said.

---

Here are some clips, not the best video quality but still viewable, of a 1985 CNN report on electromagnetic weapons. The Lida machine is featured among these clips:

---

**Below is a statement from Dr. Eldon Byrd, neuro-electromagnetic researcher, under contract to the U.S. Navy, who funded Dr. Adey's work with the LIDA machine:**

"The LIDA machine was made in the 1950's by the Soviets. The CIA purchased one through a Canadian front for Dr. Ross Adey, but didn't give him any funds to evaluate it.

"I provided those funds from my project in 1981, and he determined that the LIDA would put rabbits into a stupor at a distance and make cats go into REM.

"The Soviets included a picture with the device that showed an entire auditorium full of people asleep with the LIDA on the podium. The LIDA put out an electric field, a magnetic field, light, heat, and sound (of course light and heat are electromagnetic waves, but at a much higher frequency than the low frequencies of the electric and magnetic fields mentioned above).

"The purported purpose of the LIDA was for medical treatments; however, the North Koreans used it as a brain washing device during the Korean War. The big question is: what did they do with the technology? It could have been improved and/or made smaller. It is unlikely that they abandoned something that worked.

"Direct communication with Ross Adey: While he was testing the LIDA 4, an electrician was walking by and asked him where he got the "North Korean brain washing machine". Ross told him that is was a Russian medical device.

"The guy said he had been brain-washed by a device like that when he was in a POW camp. They placed the vertical plates alongside his head and read questions and answers to him. He said he felt like he was in a dream. Later when the Red Cross came and asked questions, he responded with what had been read to him while under the influence of the device. He said he seemed to have no control over the answers.

"The LIDA is PATENTED IN THE US. Why? They are not sold in the US--the only one I know that exists is the one that was at Loma Linda Medical Center where Adey used to work. Eldon"

[LIDA patent](#), U.S. #3,773,049

-----  
Cheryl Welsh, Davis CA, provided text from a clipping from an article by Dr. Ross Adey but without complete bibliographic references:

"Soviet investigators have also developed a therapeutic device utilizing low frequency square wave modulation of a radiofrequency field. This instrument known as the Lida was developed by L. Rabichev and his colleagues in Soviet Armenia, and is designed for "the treatment of neuropsychic and somatic disorders, such as neuroses, psychoses, insomnia, hypertension, stammering, bronchia asthma, and asthenic and reactive disturbances".

It is covered by U.S. Patent # 3,773,049. In addition to the pulsed RF field, the device also delivers pulsed light, pulsed sound, and pulsed heat. Each stimulus train can be independently adjusted in intensity and frequency.

The radiofrequency field has a nominal carrier frequency of 40 MHz and a maximum output of approximately 40 Watts. The E- field is applied to the patient on the sides of the neck through two disc electrodes approximately 10 cm in diameter. The electrodes are located at a distance of 2-4 cm from the skin.

Optimal repetition frequencies are said to lie in the range from 40 to 80 pulses per minute. Pulse duration is typically 0.2 sec. In an 8 year trial period, the instrument was tested on 740 patients,

including adults and children. Postivive therapeutic effects were  
claimed in more..." can't read the rest. Cheryl

## **Corel Draw Drawings, LIDA Demo Construction October 13, 2000**

---

**EXPERIMENTAL.** This device is much more complex to build and use than the demo silent sound devices. If used outside a radio-signal-tight anechoic chamber, it requires a ham radio licence to operate.

---

The proposed LIDA demo uses a ham radio transmitter, the U.S.-based Radio Shack catalogue #19-1110, 25 watt, 10 meter transceiver being a good candidate. This unit is small, and the LIDA case here will also accommodate a linear amplifier if 25 watts isn't enough. (The original was 40 watts, but this one can be tested closer than an auditorium distance, requiring less power.)

This project does not require radar or microwave expertise, since the original LIDA pulse rate does not go higher than 100 pulses per minute.

A transCEIVER is essential at the lower frequencies to check for a clear band prior to transmitting, and to transmit the required FCC and Industry Canada station identifications.

The several Corel Draw 3 .CDR drawings referenced below will NOT display in most browsers. The idea is that you SAVE TO YOUR LOCAL HARD DRIVE each one, then print from a compatible graphics package. This method gives the clearest quality prints.

\*\* I HAVE ALSO INCLUDED .GIF DRAWINGS, HOWEVER, DUE TO THE COARSE RESOLUTION OF MY GRAPHICS SOFTWARE, THESE MAY OR MAY NOT PRINT TO MEET YOUR NEEDS.

An office services shop should be able to print the .CDRs - BE SURE THEY SELECT "FIT TO PAGE". Most recent full featured graphics packages can read and print a Corel Draw 3 (VECTOR) drawing.

Here are the clickable references, sizes, and paper orientation. PRINTING THIS PAGE will assist the office services shop:

LINDA L. KENNEDY V. VIRGINIA STATE BAR  
(AND SUPREME COURT)

Record No: 022782

Circuit Court No.: C-02-48

THEME: IS THE STATE OF VIRGINIA  
STILL A PART OF THE UNITED STATES?

The Virginia Supreme Court has affirmed the trial courts decision to disbar Linda Kennedy, and did the usual dancing around the issues hoping the public will never know what the real issues are (see below). Not surprisingly, no judge would sign the order and the judges would not disclose how each voted.

The next step is to petition the U.S Supreme Court and ask them the same questions (see below), but the people have to let these fringe organizations and agencies, who think the below actions are permissible, know that we will not allow them to even commit crimes in order to protect their interests, b/c the Supremes think, by ignoring the issues and giving a generic opinion, that people will never learn of their deceptions. It is up to us to make sure people know what the Supremes are all about, and we need to let the state of VA know that their attempted trickery will not remain secret.

QUESTIONS LINDA KENNEDY ASKED  
THE VIRGINIA SUPREME COURT

1. Is it permissible for the Virginia State Bar (Paul Georgiadis with bar approval) to totally alter court transcripts in order to disbar Linda Kennedy?

2. Is it permissible for the Virginia Judges (Judge Glen Tyler, Judge William Winston, Judge John Clarkson) to totally alter court transcripts in order to disbar Linda Kennedy?

3. Is it permissible for the bar to knowingly make up allegations, which they were caught on tape doing, b/c it accomplished their purpose of disbaring Linda Kennedy?

4. Is it permissible for the head of ethics at the Virginia State Bar (James Mccauley) to perjure himself (after getting caught on tape), in order to disbar Linda Kennedy?

5. The Virginia Attorney General's office (Jerry Kilgore), and the Virginia State Bar (Paul Georgiadis) admitted that Linda Kennedy is being disbarred b/c she belongs to a "fringe group called Hotseat for Judges" (a radio show), and that "she has a pattern of bad thinking" and "thinks that we are corrupt." Is it permissible for legal action to be taken against someone who thinks that the the courts are unfair to the public?

6. Who is the "fringe group" here? Is it attorney Linda Kennedy who thinks it is wrong to change records, perjure oneself, make up charges, and deny basic Constitutional rights, or is it the VA Supreme Court and the Virginia State Bar who think these actions are permissible, perform and support them and cover up for those who do it when it occurs?

### ACTION TO TAKE

Tell each person you are calling that they can reach Linda Kennedy at  
[WBFLegal@aol.com](mailto:WBFLegal@aol.com)

We want written responses from anyone who  
is covering up this corruption.  
PLEASE BE POLITE BUT FIRM

1. Call Virginia Governor Mark Warner and ask the above questions, then demand that the Governor's office overrule and negate the decision against Linda Kennedy. (804 786-2211, Dial 0). Ask for "Asha."
2. Call Pat Robertson, President and Chancellor of Regent University, and ask him: (757-226-2786--Barbara Johnson is his exec secretary)
  - a) Why he has supported and even had speak to his students, Attorney General Jerry Kilgore, who supported and defended the bar and judges rewriting transcripts, fabricating evidence, etc (see above), against one of his former Regent students and a Law Professor @ Regent University?
  - b) Why he invites VA Supreme Court Chief Justice Hassell to preach to law students at Regent University when this Chief Justice is permitting the above.
  - c) Why he has a mission statement, "Christian Leadership to Change the World," but yet, when one of his law prof/former law students does just that, he is not there to support that person, and instead is supporting the very people who are lynching her.
3. Write the Washington Times ([letters@Washingtontimes.com](mailto:letters@Washingtontimes.com)) and protest this action on the part of the Virginia Supreme Court. If you have your own horror story include it by relating it to the Linda Kennedy Story (keep it short enough to get printed and focus on bad judges and bar members--not on the opposing party). We are trying to get the papers to report more against Judges and the system and need to take advantage of this opportunity. ([Click here for other letters written to the papers and others to be used as samples](#)). The story at the Washington Times can also be read at the [Idaho Observer](#)
4. Call RADIO STATIONS THE REST OF THIS WEEK AND GET THE WORD OUT THAT THE VIRGINIA SUPREME COURT THINKS THE ABOVE ACTIONS ARE PERMISSIBLE IN VA. Give out the website: [www.WBFLegalReform.com](http://www.WBFLegalReform.com) so that people can get this set of directions.
5. Anyone wanting to participate in an Amicus Curie brief submission to the U.S. Supremes should contact Linda Kennedy @ [WBFLegal@aol.com](mailto:WBFLegal@aol.com)

From: "Nancy-in-Austin" (Texas)  
Subject: An Inspirational Lesson  
Date: Tue, 1 Nov 2005 17:56:02 -0600

SEE ALSO: [Making Friends With Squirrels](#)

For about as long as she can remember, Debby Cantlon says, friends and strangers have brought her animals in need. So it wasn't much of a surprise when someone asked her if she'd care for a newborn squirrel found at the base of a tree somewhere near Renton.

Debby Cantlon, who plans to release Finnegan, the young squirrel, back into the wild, bottle-fed the infant squirrel after it was brought to her house. Cantlon, who has cancer, says rescuing injured animals is therapeutic for her.

When Cantlon took in the tiny creature and began caring for him, she found herself with an unlikely nurse's aide: her pregnant Papillon, Mademoiselle Giselle.

Finnegan was resting in a nest in a cage just days before Giselle was due to deliver her puppies.

Cantlon and her husband watched as the dog dragged the squirrel's cage — twice — to her own bedside before she gave birth.

Cantlon was concerned, yet ultimately decided to allow the squirrel out — and the inter-species bonding began.

Finnegan rides a puppy mosh pit of sorts, burrowing in for warmth after feeding, and eventually working his way beneath his new litter mates.

Two days after giving birth, mama dog Giselle allowed Finnegan to nurse; family photos and a videotape show her encouraging him to suckle alongside her litter of five pups.

Now, Finnegan mostly uses a bottle, but still snuggles with his "siblings" in a mosh pit of puppies, rolling atop their bodies and sinking in deeply for a nap.

Finnegan and his new litter mates, five Papillion puppies, get along together as if they were meant to.

Finnegan naps after feeding.

Finnegan makes himself at home with his new litter mates, nuzzling nose-to-nose for a nap after feeding.

[http://www.phys.uts.edu.au/~asearle/mind\\_switch/m\\_switch.html](http://www.phys.uts.edu.au/~asearle/mind_switch/m_switch.html)

Presents

---

*OVERVIEW*

The Mind Switch refers to the technology that has been developed which allows a person to turn on and off an electrical appliance, such as a desk lamp or TV in 2-3 seconds using EEG signals, without training. Proportional control, such as turning up or down the volume of a radio is also possible with the technology. This research is being carried at the University of Technology, Sydney ([UTS](http://www.uts.edu.au)).

*BACKGROUND - General*

Early in 1994 while studying the response of the brain to environmental factors Professor [Ashley Craig](#) and Mr Paul McIsaac of the Department of [Health Sciences](#) at UTS, noticed an effect which appears to be common among all persons. That effect is an increase in a particular brain signal when a person closes his/her eyes for more than one second. The important question that Ashley and Paul then asked was *could this effect be used to do something useful?*, ie - could the control of the brain signal be used, in turn, to control something else? At this stage Ashley contacted Professor Tony Moon, the Dean of Science at UTS, to find out if anyone could help answer the technical questions and design a system that might exploit the apparent change in the signal level when a person closes his/her eyes. Professor Moon introduced Ashley to Assoc Prof [Les Kirkup](#) who is an associate professor in the department of [Applied Physics](#) at UTS, who has experience in developing electronics and instrumentation. It was thought he could offer important input to the project. He was initially sceptical that signals as small as those that are present on the scalp, (where electrodes are placed to pick up brain activity) could be detected reliably and analysed sufficiently quickly to allow activation of an external device, such as a lamp or TV. The data that had been gathered on signal levels with eyes open and eyes closed showed that a significant increase occurred in the 8-13Hz part of the 'brain spectrum' commonly referred to as the 'alpha' region. Les built a detection, discrimination and analysis system based on Ashley and Paul's data and, much to his surprise at least, the first person (Lucy) connected to the system showed the capability of operating a switch which could control an electrical appliance.

*BACKGROUND - Technical*

Serious work done on brain signals began with Berger in 1929 [Berger 1967]. Since that time the acquisition and analysis of brain signals, referred to as Electroencephalography (EEG) has advanced to such a state that EEG is regularly used to assist in the diagnosis of schizophrenia, epilepsy and brain tumours. [Geddes and Baker, 1989]. EEG has also been used in biofeedback studies in which subjects may learn to modify their EEG signals in response to visual representation of their EEG signals. This control usually takes weeks or months to learn

and is not highly reliable. The system we have developed does NOT rely on any learned skill by an individual. It simply requires a person to close his/her eyes for more than 1 second to effect sufficient change in the signals levels to allow for the reliable operation of a switch. It turns out that it has been known for many years that increase in signal level occur upon eye closure, but this is the first example (to our knowledge) of the recognition of its potential and the exploitation of the effect. The system used to detect the change in signals consists of amplifiers, filters and other signal processing elements (full details are still classified at the moment!). As there are other sources which can generate signals which can interfere with brain signals (and hence cause intermittent switching on and off of appliances) we have developed a noise suppression system which eliminates the effect of those noise sources. This feature is very important as we are currently developing the technology for disabled persons (we have a three year grant from the Motor Accident Authority of New South Wales, MAA) and reliability is a major issue. The funding from MAA has allowed us to appoint Mr [Andrew Searle](#) who has become a key figure in the technical developments regarding the Mind Switch. In addition Mr Perez Moses is developing new noise suppression techniques to be applied in this work.

# Will Iraq Be World's First Electromagnetic 'Scalar' War?

By Bill Morgan  
10-10-2

Source material: Scientist Tom Bearden, Chenier.Org

## Scalar Potential Interferometers

With the Bush people rushing us toward war it is important for everyone to realize the true and rather frightening possibility that this war will involve the use of scalar electromagnetic weapons, by any of a number of possessors of such weapons. They are called "Longitudinal Wave Interferometers," or "Tesla howitzers", and use longitudinal (LW) electromagnetic (EM) waves to accomplish true action-at-a-distance.

These are the weapons Khrushchev spoke of 40 years ago, when he declared:

"We have a new weapon, just within the portfolio of our scientists, so to speak, which is so powerful that, if unrestrainedly used, it could wipe out all life on earth. It is a fantastic weapon." Khrushchev, to the Presidium, Jan. 1960

These are also the weapons referred to in 1997 by Defense Secretary William Cohen, when he said:

"Others [terrorists] are engaging even in an eco-type of terrorism whereby they can alter the climate, set off earthquakes, volcanoes remotely through the use of electromagnetic waves... So there are plenty of ingenious minds out there that are at work finding ways in which they can wreak terror upon other nations...It's real, and that's the reason why we have to intensify our [counter terrorism] efforts." - Defense Secretary William Cohen, 1997

One of the leading experts in the new science of scalar electromagnetics is scientist Thomas E. Bearden, and he has published many papers at his website Cheniere.Org. In a letter to a writer named "Russell" (Correspondence section) Bearden says,

"In short, Russell, the Secretary of Defense of the United States confirmed that there are indeed novel kinds of EM weapons, right now and have been for some time, which have been and are being used to (1) initiate earthquakes, (2) engineer the weather and climate, and (3) initiate the eruption of volcanoes. We wrote about those exact uses of the weaponry decades ago. Several nations now have such weapons. Three of them (two on one side and the other on a hostile side) are even firing practice shots into Western Australia, as a convenient test range."

<http://www.earthchangestv.com/ufo/0209gandor.htm>

At Cheniere.org one can find Bearden's 1990 paper Historical Background of Scalar EM Weapons and see that certain possessors of these new superweapons have been developing them for several decades now. He traces the clandestine development through the sightings of anomalous phenomena all around the globe, by the statements Soviet leaders have made, and by the development of a new electromagnetic theory which restores certain "lost equations" which had been thrown out long ago in an attempt to "simplify things." Apparently the Russians were the first to restore the lost equations which uncover the domain of scalar electromagnetics.

The new Scalar Electromagnetic weapons utilize a new type of electromagnetic waves called "longitudinal waves" or "scalar waves." They are called by other names, as Bearden points out:

"We now visualize the formation of waves of pure stress in the spacetime medium (in the vacuum). These we call scalar EM waves, Tesla waves, electrogravitational waves, longitudinal EM waves, waves of pure potential, electrostatic/magnetostatic waves, and zero-vector EM waves. All these terms are synonymous. Each sheds its own particular light upon the nature of these waves or of their original discoverer, Nikola Tesla." Tom Bearden

<http://www.cheniere.org/books/ferdelance/s23.htm>

So there are a number of names for these newly discovered waves.

The big Tesla howitzers are aimed at their targets by using a worldwide electromagnetic pattern called the "Woodpecker Grid," begun by the Russians in 1976. You can even "hear" the Woodpecker Grid at Bearden's website.

Several times during the Cold War the Russians tried to get an agreement on limiting the use of these weapons, which Brezhnev said were "more terrible than anything the world has known." And at that time, Bearden points out, nobody in the West even knew what they were talking about.

### The "Fer de Lance" Briefing

In his briefing "Fer de Lance" Slides 66-71. Bearden describes what it would be like to operate one of these longitudinal wave interferometers and aim it at place on earth using the Woodpecker Grid. By placing a "marker beacon" at that target location (the glowing orbs of plasma that are being sighted all around the world) the system can "read" the location of the target area and obtain pin-point targeting. The "Fer de Lance" briefing is a must read for anyone wanting to know what is really going on in our world today. It is a set of graphics slides with Bearden's explanations.

#### Instantaneous effect

It is hard to imagine, but a strike with longitudinal wave weapon is instantaneous as the scalar waves do not go through our "3-space" world, but around it. As Bearden puts it:

"... it is possible to focus the potential for the effects of a weapon through spacetime itself, in a manner so that mass and energy do not "travel through space" from the transmitter to the target at all. Instead, ripples and patterns in the fabric of spacetime itself are manipulated to meet and interfere in and at the local spacetime of some distant target. There interference of these ripple patterns creates the desired energetic effect (hence the term energetics) directly in and through the target itself, emerging from the very spacetime (vacuum) in which the target is imbedded at its distant location." Bearden Fer-de-Lance

### What Can These New Superweapons Do?

#### 1. Exothermic mode

In what is called an "exothermic mode" the howitzers can cause a blast of heat at the interference zone, an explosion of near-nuclear proportions. It could topple buildings and cause other destruction. Or it could be set wide and heat the atmosphere in that region. Or it could be set to simply destroy all electronics in that interference (target) zone, or to destroy the hubs of the electric power grids of a very wide area. Although it seems unbelievable, the actual energy of the blast is not traveling through space to hit the target, but actually being made to emerge from the local vacuum in the interference (target) zone.

Using the exothermic mode it is possible to make any airplane drop from the sky, anywhere. It is possible to destroy any missile, in its flight path or in its

silo. Bearden sites many instances of downed planes he believes were tests of the scalar weapons. (Gandor, Newfoundland)

"The Woodpecker grid/howitzer weapon system can be placed over the ocean and used against cruise missiles, naval surface-to-air and surface-to-surface missiles, submarine-launched ballistic and cruise missiles, etc. Placed over a carrier task force, it can also take care of the aircraft launched by the carrier as fast as they are launched. It can also handily take care of the missiles launched by guided-missile cruisers of the accompanying task force."

(Bearden <http://www.cheniere.org/books/ferdelance/s65.htm> )

Here is a slide which shows the exothermic mode of action.

## 2. Endothermic mode

In a second howitzer mode called the "endothermic" mode, the howitzer sucks energy out of the target area, essentially creating a blast of cold at the distant target. It is even capable of freezing parts of the ocean. Bearden gives a number of cases where these "cold explosions" have been witnessed, mostly by airline pilots. April 9, 1984: 1 2 3 ) A huge mushroom cloud of mostly water is seen rising miles into the sky from out of the ocean, an awesome sight.

In the endothermic mode the sucked-out energy must go somewhere, so it is vented out at some other chosen spot on the earth. These endothermic plumes have been photographed by satellite.

Bearden envisions the use of cold explosions in a scalar war:

"Cold explosions can be used to freeze tanks, personnel, and equipment. The equipment and tanks thaw out. The personnel thaw out too, but they are dead when they do." Bearden, Fer-de-Lance

Starting with this slide from Fer de Lance you can see a number of sightings of giant mushroom clouds of water vapor which Bearden believes were created by the Russians testing the howitzers in endothermic ("cold explosion") mode. (Keep clicking "Next Slide").

In another slide the endothermic mode of operation is shown.

## 3. "Mindsnapper" mode

In a third and very terrifying mode the longitudinal wave patterns can be adjusted to affect the human mind. Bearden has dubbed this mode the "Mind-snapper" mode. Use of scalar waves in this mode is also called "psychoenergetics" or "psychotronics." At low power the mind-snapper causes everyone in the interference zone to fall unconscious. At high power the mind-body connection is "snapped" and instant death occurs. Bearden describes the

manner of death:

"Those hit by the scalar EM weapon, however, have a most peculiar death mode.

"Death comes-instantly and totally. There is no convulsion, no response. The entire nervous system is destroyed instantly. Every living cell in the body is killed instantly, including all bacteria, germs, etc.

"A body hit with this thing falls like a limp rag and lies where it falls. It doesn't decay in even 30-45 days. In a macabre fashion, it's been reduced to something like food irradiated with nuclear radiation; everything is killed, so the material is preserved for an extended period before any decay can set in."

<http://www.cheniere.org/books/ferdelance/s81.htm>

In psychoenergetics mode the weapons can also induce a kind of hypnogogic trance in the minds of anyone in the target zone. In this involuntary trance state one's mind would be completely open to suggestions and orders. Bearden believes that this is what happened in the case of one Captain Button who inexplicably flew his A-10 Warthog airplane into a mountain was a test of the scalar weapons, taking over a man's mind and controlling him from a distance.

"Remember Captain Button, flying his A-10 Warthog toward the range, suddenly peeled away from his companions and flew off cross country for over an hour? He ignored all radio messages, circled at one point (probably dropped his ordnance there), then flew until he crashed into the side of a mountain and was killed.

"That was a deliberate test in the mid-U.S. to demonstrate that a human could be controlled for one hour, while doing a technical set of tasks (flying an airplane), in a hypnogogic state, successfully. The test was a total success."

<http://www.cheniere.org/misc/time.htm>

#### 4. Earthquake/Weather mode

As Secretary of Defense William Cohen pointed out, these same longitudinal wave interferometers can be used to create earthquakes in the distant target zone, as well as tornados and other storms, and the precipitation of volcanic eruptions. Weather can be manipulated by using the exothermic mode to heat the atmosphere in one place, and using endothermic mode to cool the atmosphere in another place. Even the jet stream can be pulled this way and that by these actions.

Anyone one who keeps watch of the weather radar data from an unretouched

source like weatherTAP will have seen many anomalies which MAY indicate hits by the howitzers. According to Bearden the Russians (KGB) have been manipulating weather over North America for decades. Cheniere.Org has a number of pictures of such radar anomalies, as well as some unusual cloud formations which, Bearden says, MAY be showing the effects of the scalar wave patterns traveling the channels of the Woodpecker Grid. Keep your eyes on the skies.

## 5. Death Ray

Nikola Tesla had envisioned a "Death Ray," and now it is a reality.

"Those hit by the scalar EM weapon, however, have a most peculiar deathmode.

"Death comes - instantly and totally. There is no convulsion, no response. The entire nervous system is destroyed instantly. Every living cell in the body is killed instantly, including all bacteria, germs, etc.

"A body hit with this thing falls like a limp rag and lies where it falls. It doesn't decay in even 30-45 days. In a macabre fashion, it's been reduced to something like food irradiated with nuclear radiation; everything is killed, so the material is preserved for an extended period before any decay can set in."

<http://www.cheniere.org/books/ferdelance/s81.htm>

## "Ordinary" Warfare Obsolete

Warfare has been changed forever by the development of these scalar energy longitudinal wave howitzers. Remember, the power for these weapons comes from the time domain, longitudinal EM waves in the vacuum of empty space, and the power is tremendous and mind-boggling. Being able to blast away at any target from a distant control booth is something that has never happened before. This is incredible power to be in control of and it divides the history of weaponry into "before" and "after." And the destructive power of these weapons is delivered instantaneously to the target from the local vacuum at the place of the target.

Bearden describes how the old-style machinery of war has been made obsolete. Planes can be dropped to the ground, tanks are obsolete. Bearden says of the whole "Star Wars" defense system (SDI) : "It's obsolete to Soviet scalar EM weapons that are already deployed and operationally tested in place!"

"Interference phenomena are key. One can get action at a distance -- even over hundreds of thousands of kilometers.

"One can engineer gravitational and inertial effects.

"One can engineer the nucleus, including transmute it, easily and cheaply. One could clean up all the nuclear wastes. Electromagnetic energy can be produced at a distant target, or extracted from a distant target. This is not energy transmission through space in the form of EM force fields. Instead, it is transmission through spacetime in the form of electrogravitational potentials. Conventional EM shielding is ineffective against scalar EM."

<http://www.cheniere.org/books/ferdelance/s104.htm>

The fact that these weapons can transmute atoms means they can have a metal softening effect, leaving one to wonder if it were a clandestine use of a scalar interferometer which brought down the Twin Towers. We may never know, since THAT evidence was so quickly destroyed without study.

### Tesla Domes

The Tesla howitzers can be used in a nearly impregnable defensive mode whereby they throw up a dome (Tesla Dome) or a sphere (Tesla Globe) of highly powerful electromagnetic energy, enough to "dud" or destroy missiles which try to penetrate them. Once again, this energy is not going through space from the howitzer, but being made to emerge from the local vacuum at the location of the shell. KGB tests of these domes have been witnessed by airline pilots around the world. Bearden gives many examples of the Tesla domes being sighted around the world in his briefing paper "Fer-de-Lance." (Russian dome test, another globe incident, yet another globe test). These giant electromagnetic domes can be hundreds of miles across, or narrowed down more to total impermeability.

By using nested domes one can protect the domed area even against nuclear radiation itself. Tesla globes can be used to hit airborne targets by simply placing a globe of any chosen size in the flight path of the incoming missile. It does double duty because the missile hits it going in, and then the rubble hits it again going out the other side.

Bearden cites a number of examples of these domes being tested around the world:

March 20, 1969 | March 24, 1977 | August 17, 1980 | June 17, 1966 | June 18, 1982 June 22, 1976

So while the Russians have arrived at a near perfect missile defense, the West is still messing around trying to hit an incoming missile with another missile.

## Vulnerabilities

Bearden lists some of the vulnerabilities the new weapons create:

"Almost every weapon system we presently have -- or are developing -- is totally vulnerable to scalar EM weaponry.

This includes personnel, electronics (including fuzing and warhead), explosives, propellants, fuels, ordnance, ships, submarines, torpedoes, aircraft, helicopters, missiles, drones, rockets, tanks, armored vehicles, weapons carriers, self-propelled and towed artillery, communications, [see also] satellites, radars, command and control, directed energy weapon systems, surveillance and sensor systems, mines, artillery rounds and ammunition, nuclear warheads, etc.

We are in dire straits. We need a "Manhattan Project" of the highest priority. Now!

The Soviets have already had the equivalent of seven or eight Manhattan Projects in this area."

<http://www.cheniere.org/books/ferdelance/s105.htm>

## Crop circles, Glowing Orbs, and Scalar Interferometers

Scalar interferometry may explain many unusual phenomena that are being sighted. Two immediately come to mind, the glowing orbs that are being seen in the skies around the world, and the crop circles. Both phenomena could be easily accomplished with the new scalar superweapons. Balls of plasma flying through the sky at phenomenal speeds may well be the "marker beacons" of the scalar weapons. Marker beacons are created for fine tuning the aiming of the devices. Air Force jets were recently sent aloft from Edwards AFB to chase two just glowing orbs. After chasing them a while, the orbs simply vanished. That is to say, the scalar beams creating the orb were turned off.

By feeding a graphic pattern into the aiming software such a plasma ball could be made to trace out that pattern, at the distant interference zone (target zone), making the standing crops fall over, creating a crop circle. Remember there are many modes and effects of these weapons. They are really the engineering of reality itself.

## Summary

If Tom Bearden's information is correct then we will have to reexamine world affairs in a new light, seeing the maneuvering of those forces who possess the new weapons. For one thing, there is no defense against such weapons other than having the weapons oneself. And it would appear that Russia (actually the

KGB) is the most advanced in the development of these weapons, at least according to Tom Bearden, who has briefed the U.S. Military on these issues a number of times.

With the Bush cabal about to attack Iraq, against the objection of nearly the entire rest of the world, one has to wonder if we are about to see the world's first overt scalar war.

If the U.S. is to prevail in that attack, it can only be with the tacit permission of the Russian possessors of this technology, for they could easily cause any sky or land attack to fail. They could drop the warplanes out of the sky, cause tanks and all communications to fail, cause whole battallions to drop dead like limp rags. If they wanted to they could put up a Tesla dome over Baghdad that would be impenetrable to missiles, planes and bombs.

Won't it just be too tempting for some possessor of this technology to try turn the tide of the coming war with longitudinal wave interferometers? And will that lead to an all out war with these same weapons? The world's first scalar electromagnetic war? Or will restraint be shown, by all possesors of these weapons, allowing an old-fashioned war to proceed in the old-fashioned way?

The devices called "Tesla howitzers" can be put to a myriad of peaceful uses, including reversing global warming (vent the heat to outer space), and preparing a surefire means of preventing any asteroids from hitting the earth.

Bearden says that the Russian possessors of these devices must surely have understood that the devices could wipe out all life on earth, even upsetting the scalar balance of earth and sun resulting in large storms on the sun. They can also backfire on the user of them:

"Perhaps with the free and open release of Tesla's secret, the scientific and governmental bureaucracies will be shocked awake from their slumber, and we can develop defenses before Armageddon occurs. Perhaps there is hope after all -- for even Brezhnev, in his strange July, 1975 proposal to the SALT talks, seemed to reveal a perception that a turning point in war and weaponry may have been reached, and that human imagination is incapable of dealing with the ability to totally engineer reality itself.

"Having tested the weapons, the Soviets must be aware that the ill-provoked oscillation of timeflow affects the minds and thoughts -- and the very lifestreams and even the collective species unconsciousnesses -- of all lifeforms on earth. They must know that these weapons are two-edged swords, and that the backlash from their use can be far more terrible to the user than was the original effect to his victim.

"If we can avoid the Apocalypse, the fantastic secret of Nikola Tesla can be employed to cure and elevate man, not kill him. Tesla's discovery can eventually remove every conceivable external human limitation. If we humans ourselves can elevate our consciousness to properly utilize the Tesla electromagnetics, then Nikola Tesla -- who gave us the electrical twentieth century in the first place -- may yet give us a fantastic new future more shining and glorious than all the great scientists and sages have imagined."

<http://www.cheniere.org/books/part1/teslaweapons.htm>

The secrecy with which this technology has been held from the human race can only be called a crime against humanity. Instead of using these incredible new discoveries for good, for free energy, and for healing, shadowy groups around the world have used the technology to make terrible weapons of war such as the earth has never dreamed of.

A final word from Tom Bearden:

"The "terror" in the "balance of terror" between nations has just increased by many, many orders of magnitude.

"The biblical prophecy that the Earth will be wiped out by "fire and brimstone from heaven" is very near fulfillment now.

"Put another way, the pucker factor -- even on the Russians who may contemplate unleashing Armageddon -- is higher than any Western strategic analyst has ever imagined, even in his wildest nightmares.

"Truly these weapons are "more frightening than the mind of man has imagined," as Brezhnev put it in 1975.

"The frightening scalar EM weapons can be used, but only very, very gingerly indeed. If a slight mistake is made, everybody loses everything."

Apparatus and method for remotely monitoring and altering brain waves

### Abstract

Apparatus for and method of sensing brain waves at a position remote from a subject whereby electromagnetic signals of different frequencies are simultaneously transmitted to the brain of the subject in which the signals interfere with one another to yield a waveform which is modulated by the subject's brain waves. The interference waveform which is representative of the brain wave activity is re-transmitted by the brain to a receiver where it is demodulated and amplified. The demodulated waveform is then displayed for visual viewing and routed to a computer for further processing and analysis. The demodulated waveform also can be used to produce a compensating signal which is transmitted back to the brain to effect a desired change in electrical activity therein.

### Claims

1. Brain wave monitoring apparatus comprising means for producing a base frequency signal,

means for producing a first signal having a frequency related to that of the base frequency and at a predetermined phase related thereto,  
means for transmitting both said base frequency and said first signals to the brain of the subject being monitored,  
means for receiving a second signal transmitted by the brain of the subject being monitored in response to both said base frequency and said first signals,  
mixing means for producing from said base frequency signal and said received second signal a response signal having a frequency related to that of the base frequency, and  
means for interpreting said response signal.

2. Apparatus as in claim 1 where said receiving means comprises means for isolating the transmitted signals from the received second signals.

3. Apparatus as in claim 2 further comprising a band pass filter with an input connected to said isolating means and an output connected to said mixing means.

4. Apparatus as in claim 1 further comprising means for amplifying said response signal.

5. Apparatus as in claim 4 further comprising means for demodulating said amplified response signal.

6. Apparatus as in claim 5 further comprising interpreting means connected to the output of said demodulator means.

7. Apparatus according to claim 1 further comprising means for producing an electromagnetic wave control signal dependent on said response signal, and means for transmitting said control signal to the brain of said subject.

8. Apparatus as in claim 7 wherein said transmitting means comprises means for directing the electromagnetic wave control signal to a predetermined part of the brain.

9. A process for monitoring brain wave activity of a subject comprising the steps of transmitting at least two electromagnetic energy signals of different frequencies to the brain of the subject being monitored, receiving an electromagnetic energy signal resulting from the mixing of said two signals in the brain modulated by the brain wave activity and retransmitted by the brain in response to said transmitted energy signals, and, interpreting said received signal.

10. A process as in claim 9 further comprising the step of transmitting a further electromagnetic wave signal to the brain to vary the brain wave activity.

11. A process as in claim 10 wherein the step of transmitting the further signals comprises obtaining a standard signal, comparing said received electromagnetic energy signals with said standard signal, producing a compensating signal corresponding to the comparison between said received electromagnetic energy signals and the standard signal, and transmitting the compensating signals to the brain of the subject being monitored.

---

### ***Description***

---

## BACKGROUND OF THE INVENTION

Medical science has found brain waves to be a useful barometer of organic functions. Measurements of electrical activity in the brain have been instrumental in detecting physical and psychic disorder, measuring stress, determining sleep patterns, and monitoring body metabolism.

The present art for measurement of brain waves employs electroencephalographs including probes with sensors which are attached to the skull of the subject under study at points proximate to the regions of the brain being monitored. Electrical contact between the sensors and apparatus employed to process the detected brain waves is maintained by a plurality of wires extending from the sensors to the apparatus. The necessity for physically attaching the measuring apparatus to the subject imposes several limitations on the measurement process. The subject may experience discomfort, particularly if the measurements are to be made over extended periods of time. His bodily movements are restricted and he is generally confined to the immediate vicinity of the measuring apparatus. Furthermore, measurements cannot be made while the subject is conscious without his awareness. The comprehensiveness of the measurements is also limited since the finite number of probes employed to monitor local regions of brain wave activity do not permit observation of the total brain wave profile in a single test.

## SUMMARY OF THE INVENTION

The present invention relates to apparatus and a method for monitoring brain waves wherein all components of the apparatus employed are remote from the test subject. More specifically, high frequency transmitters are operated to radiate electromagnetic energy of different frequencies through antennas which are capable of scanning the entire brain of the test subject or any desired region thereof. The signals of different frequencies penetrate the skull of the subject and impinge upon the brain where they mix to yield an interference wave modulated by radiations from the brain's natural electrical activity. The modulated interference wave is re-transmitted by the brain and received by an antenna at a remote station where it is demodulated, and processed to provide a profile of the subject's brain waves. In addition to passively monitoring his brain waves, the subject's neurological processes may be affected by transmitting to his brain, through a transmitter, compensating signals. The latter signals can be derived from the received and processed brain waves.

## OBJECTS OF THE INVENTION

It is therefore an object of the invention to remotely monitor electrical activity in the entire brain or selected local regions thereof with a single measurement.

Another object is the monitoring of a subject's brain wave activity through transmission and reception of electromagnetic waves.

Still another object is to monitor brain wave activity from a position remote from the subject.

A further object is to provide a method and apparatus for affecting brain wave activity by transmitting electromagnetic signals thereto.

## DESCRIPTION OF THE DRAWINGS

Other and further objects of the invention will appear from the following description and the accompanying drawings, which form part of the instant specification and which are to be read in conjunction therewith, and in which like reference numerals are used to indicate like parts in the various views;

FIG. 1 is a block diagram showing the interconnection of the components of the apparatus of the invention;

FIG. 2 is a block diagram showing signal flow in one embodiment of the apparatus.

## DESCRIPTION OF THE PREFERRED EMBODIMENT

Referring to the drawings, specifically FIG. 1, a high frequency transmitter 2 produces and supplies two electromagnetic wave signals through suitable coupling means 14 to an antenna 4. The signals are directed by the antenna 4 to the skull 6 of the subject 8 being examined. The two signals from the antenna 4, which travel independently, penetrate the skull 6 and impinge upon the tissue of the brain 10.

Within the tissue of the brain 10, the signals combine, much in the manner of a conventional mixing process technique, with each section of the brain having a different modulating action. The resulting waveform of the two signals has its greatest amplitude when the two signals are in phase and thus reinforcing one another. When the signals are exactly 180.degree. out of phase the combination produces a resultant waveform of minimum amplitude. If the amplitudes of the two signals transmitted to the subject are maintained at identical levels, the resultant interference waveform, absent influences of external radiation, may be expected to assume zero intensity when maximum interference occurs, the number of such points being equal to the difference in frequencies of the incident signals. However, interference by radiation from electrical activity within the brain 10 causes the waveform resulting from interference of the two transmitted signals to vary from the expected result, i.e., the interference waveform is modulated by the brain waves. It is believed that this is due to the fact that brain waves produce electric charges each of which has a component of electromagnetic radiation associated with it. The electromagnetic radiation produced by the brain waves in turn reacts with the signals transmitted to the brain from the external source.

The modulated interference waveform is re-transmitted from the brain 10, back through the skull 6. A quantity of energy is re-transmitted sufficient to enable it to be picked up by the antenna 4. This can be controlled, within limits, by adjusting the absolute and relative intensities of the signals, originally transmitted to the brain. Of course, the level of the transmitted energy should be kept below that which may be harmful to the subject.

The antenna passes the received signal to a receiver 12 through the antenna electronics 14. Within the receiver the wave is amplified by conventional RF amplifiers 16 and demodulated by conventional detector and modulator electronics 18. The demodulated wave, representing the intra-brain electrical activity, is amplified by amplifiers 20 and the resulting information in electronic form is stored in buffer circuitry 22. From the buffers 22 the information is fed to a suitable visual display 24, for example one employing a cathode ray tube, light emitting diodes, liquid crystals, or a mechanical plotter. The information may also be channeled to a computer 26 for further processing and analysis with the output of the computer displayed by heretofore mentioned suitable means.

In addition to channeling its information to display devices 24, the computer 26 can also produce signals to control an auxiliary transmitter 28. Transmitter 28 is used to produce a compensating signal which is transmitted to the brain 10 of the subject 8 by the antenna 4. In a preferred embodiment of the invention, the compensating signal is derived as a function of the received brain wave signals, although it can be produced separately. The compensating signals affect electrical activity within the brain 10.

Various configurations of suitable apparatus and electronic circuitry may be utilized to form the system generally shown in FIG. 1 and one of the many possible configurations is

illustrated in FIG. 2. In the example shown therein, two signals, one of 100 MHz and the other of 210 MHz are transmitted simultaneously and combine in the brain 10 to form a resultant wave of frequency equal to the difference in frequencies of the incident signals, i.e., 110 MHz. The sum of the two incident frequencies is also available, but is discarded in subsequent filtering. The 100 MHz signal is obtained at the output 37 of an RF power divider 34 into which a 100 MHz signal generated by an oscillator 30 is injected. The oscillator 30 is of a conventional type employing either crystals for fixed frequency circuits or a tunable circuit set to oscillate at 100 MHz. It can be a pulse generator, square wave generator or sinusoidal wave generator. The RF power divider can be any conventional VHF, UHF or SHF frequency range device constructed to provide, at each of three outputs, a signal identical in frequency to that applied to its input.

The 210 MHz signal is derived from the same 100 MHz oscillator 30 and RF power divider 34 as the 100 MHz signal, operating in concert with a frequency doubler 36 and 10 MHz oscillator 32. The frequency doubler can be any conventional device which provides at its output a signal with frequency equal to twice the frequency of a signal applied at its input. The 10 MHz oscillator can also be of conventional type similar to the 100 MHz oscillator herebefore described. A 100 MHz signal from the output 39 of the RF power divider 34 is fed through the frequency doubler 36 and the resulting 200 MHz signal is applied to a mixer 40. The mixer 40 can be any conventional VHF, UHF or SHF frequency range device capable of accepting two input signals of differing frequencies and providing two output signals with frequencies equal to the sum and difference in frequencies respectively of the input signals. A 10 MHz signal from the oscillator 32 is also applied to the mixer 40. The 200 MHz signal from the doubler 36 and the 10 MHz signal from the oscillator 32 combine in the mixer 40 to form a signal with a frequency of 210 MHz equal to the sum of the frequencies of the 200 MHz and 10 MHz signals.

The 210 MHz signal is one of the signals transmitted to the brain 10 of the subject being monitored. In the arrangement shown in FIG. 2, an antenna 41 is used to transmit the 210 MHz signal and another antenna 43 is used to transmit the 100 MHz signal. Of course, a single antenna capable of operating at 100 MHz and 210 MHz frequencies may be used to transmit both signals. The scan angle, direction and rate may be controlled mechanically, e.g., by a reversing motor, or electronically, e.g., by energizing elements in the antenna in proper synchronization. Thus, the antenna(s) can be of either fixed or rotary conventional types.

A second 100 MHz signal derived from output terminal 37 of the three-way power divider 34 is applied to a circulator 38 and emerges therefrom with a desired phase shift. The circulator 38 can be of any conventional type wherein a signal applied to an input port emerges from an output port with an appropriate phase shift. The 100 MHz signal is then transmitted to the brain 10 of the subject being monitored via the antenna 43 as the second component of the dual signal transmission. The antenna 43 can be of conventional type similar to antenna 41 herebefore described. As previously noted, these two antennas may be combined in a single unit.

The transmitted 100 and 210 MHz signal components mix within the tissue in the brain 10 and interfere with one another yielding a signal of a frequency of 110 MHz, the difference in frequencies of the two incident components, modulated by electromagnetic emissions from the brain, i.e., the brain wave activity being monitored. This modulated 110 MHz signal is radiated into space.

The 110 MHz signal, modulated by brain wave activity, is picked up by an antenna 45 and channeled back through the circulator 38 where it undergoes an appropriate phase shift. The circulator 38 isolates the transmitted signals from the received signal. Any suitable diplexer or duplexer can be used. The antenna 45 can be of conventional type similar to antennas 41 and 43. It can be combined with them in a single unit or it can be separate. The received modulated 110 MHz signal is then applied to a band pass filter 42, to eliminate undesirable harmonics and extraneous noise, and the filtered 110 MHz signal is inserted into a mixer 44 into which has also been introduced a component of the 100 MHz signal from the source 30 distributed by the RF power divider 34. The filter 42 can be any conventional band pass filter. The mixer 44 may also be of conventional type similar to the mixer 40 herebefore described.

The 100 MHz and 110 MHz signals combine in the mixer 44 to yield a signal of frequency equal to the difference in frequencies of the two component signals, i.e., 10 MHz still modulated by the monitored brain wave activity. The 10 MHz signal is amplified in an IF amplifier 46 and channeled to a demodulator 48. The IF amplifier and demodulator 48 can both be of conventional types. The type of demodulator selected will depend on the characteristics of the signals transmitted to and received from the brain, and the information desired to be obtained. The brain may modulate the amplitude, frequency and/or phase of the interference waveform. Certain of these parameters will be more sensitive to corresponding brain wave characteristics than others. Selection of amplitude, frequency or phase demodulation means is governed by the choice of brain wave characteristic to be monitored. If desired, several different types of demodulators can be provided and used alternately or at the same time.

The demodulated signal which is representative of the monitored brain wave activity is passed through audio amplifiers 50 a, b, c which may be of conventional type where it is amplified and routed to displays 58 a, b, c and a computer 60. The displays 58 a, b, c present the raw brain wave signals from the amplifiers 50 a, b, c. The computer 60 processes the amplified brain wave signals to derive information suitable for viewing, e.g., by suppressing, compressing, or expanding elements thereof, or combining them with other information-bearing signals and presents that information on a display 62. The displays can be conventional ones such as the types herebefore mentioned employing electronic visual displays or mechanical plotters 58b. The computer can also be of conventional type, either analog or digital, or a hybrid.

A profile of the entire brain wave emission pattern may be monitored or select areas of the brain may be observed in a single measurement simply by altering the scan angle and direction of the antennas. There is no physical contact between the subject and the monitoring apparatus. The computer 60 also can determine a compensating waveform for transmission to the brain 10 to alter the natural brain waves in a desired fashion. The closed loop compensating system permits instantaneous and continuous modification of the brain wave response pattern.

In performing the brain wave pattern modification function, the computer 60 can be furnished with an external standard signal from a source 70 representative of brain wave activity associated with a desired neurological response. The region of the brain responsible for the response is monitored and the received signal, indicative of the brain wave activity therein, is compared with the standard signal. The computer 60 is programmed to determine a compensating signal, responsive to the difference between the standard signal and received signal. The compensating signal, when transmitted to the monitored region of the brain,

modulates the natural brain wave activity therein toward a reproduction of the standard signal, thereby changing the neurological response of the subject.

The computer 60 controls an auxiliary transmitter 64 which transmits the compensating signal to the brain 10 of the subject via an antenna 66. The transmitter 64 is of the high frequency type commonly used in radar applications. The antenna 66 can be similar to antennas 41, 43 and 45 and can be combined with them. Through these means, brain wave activity may be altered and deviations from a desired norm may be compensated. Brain waves may be monitored and control signals transmitted to the brain from a remote station.

It is to be noted that the configuration described is one of many possibilities which may be formulated without departing from the spirit of my invention. The transmitters can be monostratic or bistatic. They also can be single, dual, or multiple frequency devices. The transmitted signal can be continuous wave, pulse, FM, or any combination of these as well as other transmission forms. Typical operating frequencies for the transmitters range from 1 MHz to 40 GHz but may be altered to suit the particular function being monitored and the characteristics of the specific subject.

The individual components of the system for monitoring and controlling brain wave activity may be of conventional type commonly employed in radar systems.

Various subassemblies of the brain wave monitoring and control apparatus may be added, substituted or combined. Thus, separate antennas or a single multi-mode antenna may be used for transmission and reception. Additional displays and computers may be added to present and analyze select components of the monitored brain waves.

Modulation of the interference signal retransmitted by the brain may be of amplitude, frequency and/or phase. Appropriate demodulators may be used to decipher the subject's brain activity and select components of his brain waves may be analyzed by computer to determine his mental state and monitor his thought processes.

As will be appreciated by those familiar with the art, apparatus and method of the subject invention has numerous uses. Persons in critical positions such as drivers and pilots can be continuously monitored with provision for activation of an emergency device in the event of human failure. Seizures, sleepiness and dreaming can be detected. Bodily functions such as pulse rate, heartbeat regularity and others also can be monitored and occurrences of hallucinations can be detected. The system also permits medical diagnoses of patients, inaccessible to physicians, from remote stations.

IMPORTANT: There is another book titled "The Manchurian Candidate" by author Richard Condon. That book was FICTION, but the book by John Marks, who was a staff member for State Department Intelligence, who worked hand in hand with the CIA, is non-fiction.

INTRODUCTION: (page vii) " 'Our guiding light is not the Hippocratic Oath', a doctor working for the Central Intelligence Agency told a classroom full of recruits back in the mid-1960s, 'but the victory of freedom' "

AUTHOR'S NOTE: (page ix) "This book has grown out of 16,000 pages of documents that the CIA released to me under the Freedom of Information Act. Without these documents, the best investigative reporting in the world could not have produced a book, and the secrets of CIA mind control would have remained buried forever, as the men who knew them had obviously intended. From the documentary base, I was able to expand my knowledge through interviews and readings in the behavioral sciences. Nevertheless, the final result is not the whole story of the CIA's attack on the mind. Only a few insiders could have written that, and they choose to remain silent. I have done the best I can to make the book as accurate as possible, but I have been hampered by the refusal of most of the principal characters to be interviewed and by the CIA's destruction in 1973 of many of the key documents."

| <b>BLUEBIRD</b><br>page 24       | Started 1950, "Security Chief Sheffield Edwards, a former Army colonel who a decade later would personally handle joint CIA-Mafia operations...", "...would use the teams to check out agents and defectors for the whole CIA.", "Each team would consist of a psychiatrist, a polygraph (lie detector) expert trained in hypnosis, and a technician."                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>ARTICHOKE</b><br>page 31      | "Between 1950 and 1952, responsibility for mind control went from the Office of Security to the Scientific Intelligence unit back to Security again. In the process, BLUEBIRD was rechristened ARTICHOKE." See BLUEBIRD above for the purpose of the ARTICHOKE program.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>MKULTRA</b><br>page 60 - 61   | <p>"On April 3, 1953, Helms proposed to Director Allen Dulles that the CIA set up a program under Gottlieb for 'covert use biological and chemical materials.' Helms made it clear htat the Agency could use these methods in 'present and future clandestine operations' " Eleanor White's note: Although MKULTRA started as 'biological and chemical' and officially ran for only 11 years, other research spun off from this core program. See <a href="#">ORD</a> and it's work in Table 3: Glossary.</p> <p>"He [Allen Dulles] approved an initial budget of \$300,000 <b>exempted from normal CIA financial controls</b>, and allowed TSS to start up research projects '<b>without the signing of contracts or other written agreements.</b>' Dulles ordered the Agency's bookkeepers to pay the costs blindly..."</p> <p>"Sid Gottlieb later testified that the purpose of these programs was 'to investigate whether and how it was possible to modify an individual's behavior by covert means.' "</p> |
| <b>MKDELTA</b><br>page 61        | "Under the code name MKDELTA, the Clandestine Services had set up procedures the year before [1953] to govern the use of CBW [chemical and biological warfare] products."                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>MKNAOMI</b><br>page 61        | "Also in 1952, TSS had made an agreement with the Special Operations Division (SOD) of the Army's biological research center at Fort Detrick, Maryland whereby SOD would produce germ warfare weapons for the CIA's use..."                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <b>CASTIGATE</b><br>page 40 - 41 | <p>[Summer of 1952] "...the CIA men agreed to furnish the human beings - in Germany - even though they had no idea what [Dr. G. Richard] Wendt had in store for his guinea pigs. The CIA named the operation CASTIGATE."</p> <p>[Eleanor White: This project was another involuntary drug testing project, like ARTICHOKE.]</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>CHATTER</b><br>page 38, 40    | <p>[p 38] "...a highly classified Navy program called project CHATTER.", "...CHATTER's goals of <b>weakening, if not eliminating free will in others.</b> The Navy program, which started in 1947, was aimed at developing a truth drug..."</p> <p>[p 40] "The drugs were to be tested on involuntary subjects. [Dr. Samuel]</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

|                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

|                                | Thompson readily admits that this procedure was 'unethical', but he says, 'We felt we had to do it for the good of the country.' "                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>MKSEARCH</b><br>page 211    | "In June 1964, MKULTRA became MKSEARCH."                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>THIRD CHANCE</b><br>page 67 | "Army researchers, as usual running about five year behind the CIA, became interested in the sustained use of LSD as interrogation device during 1961 field tests (called Operation THIRD CHANCE). The Army men tested the drug in Europe on nine foreigners and one American, a black soldier named James Thornwell, accused of stealing classified documents. While Thornwell was reacting to the drug under extremely stressful conditions, his captors threatened 'to extend the state indefinitely, even to a condition of permanent insanity." |

## TABLE 5: INTELLIGENCE-MEDIA CONNECTIONS

Evidence of connections between intelligence services and the media are extremely important to understanding why the general public have not heard full details of even the earliest, post WW II atrocities by CIA and others. That is why this table was included.

|                                 |                                                                                                                                                                                                                                             |

## TABLE 6: ORIGINS OF STREET THEATER & "PRANKS"

For people who hear about the "childish prank" type of intelligence agency operations, some of which we call "street theater", a common reaction is to disregard such "silly talk" and use these pranks as an excuse to write us off as nut cases. The entries in this table are to show that "street theater" has a long and well established history as part of intelligence agency operations. The use of kids to carry out intelligence agency "pranks" also has a long history as seen below.

Although not strictly "street theater", the "practical joke" type of bodily effects below are included too for compactness.

## PARTIAL LIST OF PARTICIPATING INSTITUTIONS

The list below is to show the public that "beautiful, ivy covered walls" have hidden some of the most gruesome, Nazi level atrocities imaginable, in the U.S. and Canada, in peacetime. The visitor is urged to consider that the bulk of MKULTRA records were destroyed, and that there have almost certainly been other atrocities not released with the documents provided to John Marks, the author of this book.

Remember too that our group's MKULTRA survivor members can back up the institutional kidnapping and torture with first hand testimony, so institutional participation is backed up by more than this book itself.

A footnote on page 211 reads: "At the 1977 Senate hearings, CIA Director Stansfield Turner summed up some of MKULTRA's accomplishments over its 11-year [??] existence: The program contracted out work to 80 institutions, which included 44 colleges or universities, 15 research facilities or private companies, 12 hospitals or clinics, and 3 penal institutions."

Base map shown here shows the geographic locations of victims known to Eleanor White by way of first person contacts or references from trusted acquaintances, shown as small red and green squares. **These squares identify only the state or province in which the victimization occurred or is occurring, not the exact location of the city or town.**

Note that if one victim experiences harassment/torture in more than one sustained place of residence (or imprisonment) one square for each such place of sustained residence will be shown.

**This map is roughly 200K and takes a few minutes to load. This map can be expected to change as new data is supplied.**

[Download](#) a zipped copy of this drawing. It is self un-zipping (run MAPALL.EXE as a program) on DOS/WINDOWS PCs.

## **The Mind Control Cover-up 10-Page Summary**

### **The Secrets of Mind Control**

### **Based on Three Books by Top Mind Control Researchers**

---

This summary is based on three landmark books: *Bluebird* by Colin A. Ross MD, a leading Canadian psychiatrist; *Mind Controllers* by Dr. Armen Victorian; and *A Nation Betrayed* by recovered mind control victim Carol Rutz. All three authors provide hundreds of footnotes to support their research. We've included footnotes here as well. A significant amount of their work is based on 18,000 pages of declassified CIA documents on mind control. You can order these documents in CD format directly from the CIA by following the directions at the end of this document. Join us in powerfully creating a better world for all by [spreading the word](#).

---

## **The Secret Agenda**

(Please note: the letters and numbers after each paragraph denote the book and page from which the information given was taken. BB stands for *Bluebird*, MC for *Mind Controllers*, and NB for *A Nation Betrayed*. To order these books, see our Resource List: [www.wanttoknow.info/resources#mindcontrol](http://www.wanttoknow.info/resources#mindcontrol))

A declassified CIA document dated 7 January 1953<sup>[1]</sup> with a section heading *Outline of Special H Cases* describes the experimental creation of multiple personality in two 19-year old girls by the CIA. "H" is used as shorthand for hypnotic, hypnotized, or hypnotism in these documents: "These subjects have clearly demonstrated that they can pass from a fully awake state to a deep H controlled state by telephone, by receiving written matter, or by the use of code, signal, or words, and that control of those hypnotized can be passed from one individual to another without great difficulty. It has also been shown by experimentation with these girls that they can act as unwilling couriers for information purposes." BB 32

After the end of World War II, German scientists were being held in a variety of detainment camps by the allies and Russians. In 1946, President Truman authorized Project Paperclip<sup>[2] [3] [4]</sup> to exploit German scientists for American research, and to deny these intellectual resources to the Soviet Union. Some reports bluntly pointed out that they were "ardent Nazis." Some of these experts were accused of participating in murderous medical experiments on human subjects at concentration camps. They were considered so vital to the "Cold War" effort, that they would be brought into the US and Canada. A 1999 report to the Senate and the House said that "between 1945 and 1955, 765 scientists, engineers, and technicians were brought to the US under Paperclip and similar programs."<sup>[5]</sup> BB 3, NB xi, xii

The concept of running a secret 'black' project was no longer novel. In 1941, Roosevelt had decided, without consulting Congress, that the US should proceed with the utmost secrecy to develop [an atomic bomb].<sup>[6]</sup> Secrecy shrouded the Manhattan Project (the atomic bomb program) to the extent that Vice President Harry Truman knew nothing about it. The project meant that by 1947, the US

Government had already gained vast experience in the initiation of secret operations. The existence of 'black projects' funded by 'black budgets' was withheld not only from the public, but also from Congress for reasons of national security. MC 8-10

According to the Central Intelligence Agency's Fact Book,<sup>[7]</sup> the NSC (National Security Council) and the CIA were established under the provisions of the National Security Act of 1947. In December 1947, the NSC held its first meeting. James Forrestal, the Secretary of Defense, pushed for the CIA to begin a 'secret war' against the Soviets. Forrestal's initiative led to the execution of psychological warfare operations (psy-ops) in Europe. It was decided that the communist threat was an issue that took priority over constitutional rights. A Presidential Secret Order had the effect of greatly increasing the CIA's powers. MC 1, 3, 7, 8

A declassified CIA document entitled, "Hypnotic Experimentation and Research, 10 February 1954"<sup>[8]</sup> describes a simulation experiment of relevance to the creation of unsuspecting assassins: "Miss [whited out] was instructed (having previously expressed a fear of firearms in any fashion) that she would use every method at her disposal to awaken miss [whited out] (now in a deep hypnotic sleep). Failing this, she would pick up a pistol nearby and fire it at Miss [whited out]. She was instructed that her rage would be so great that she would not hesitate to "kill" [whited out] for failing to awaken. Miss [whited out] carried out these suggestions to the letter including firing the (unloaded pneumatic pistol) gun at [whited out] and then proceeding to fall into a deep sleep. After proper suggestions were made, both were awakened and expressed complete amnesia for the entire sequence. Miss [whited out] was again handed the gun, which she refused (in an awakened state) to pick up or accept from the operator. She expressed absolute denial that the foregoing sequence had happened." BB 36, 37

One of the main areas to be investigated by the CIA was mind control. The CIA's human behavior control program was chiefly motivated by perceived Soviet, Chinese, and North Korean use of mind control techniques. Under the protection of 'national security', many other branches of the government also took part in the study of this area. The CIA originated its first program in 1950 under the name BLUEBIRD, which in 1951, after Canada and Britain had been included, was changed to ARTICHOKE. MKULTRA officially began in 1953.<sup>[9]</sup> Technically it was closed in 1964, but some of its programs remained active under MKSEARCH well into the 1970s. In 1973, tipped off about forthcoming investigations, CIA Director Richard Helms ordered the destruction of any MKULTRA records. MC 10, 17

Diligent use of the Freedom of Information Act (FOIA) helps to cast light on the advances that have been made in controlling the way people think and act. In 1977, through an FOIA request 16,000 pages of documents were found, held as part of the Agency's financial history. The FOIA allows the most humble citizen to demand the disclosure of documents, although inevitably some will be heavily censored or not released at all. That is how much of this information has been pieced together. MC 5 NB, xvi, xvii

Inevitably, however, it is an incomplete picture. Most of the important details were conveniently destroyed under orders of Helms to conceal wrongdoing.<sup>[10]</sup> What the mind controllers were and are doing may be only hinted at in the footnote to a memo or in the memoirs of a retired researcher. Nevertheless, there is more than enough here to show that secret new techniques are being exploited that are no longer in the realm of science fiction. We must all be aware of this threat so that those who wish to take liberties with democracy, and with our freedom to think, are deterred. MC 6, NB xvii

## The CIA Mind Control Projects

**Project BLUEBIRD was approved by the director of the CIA on April 20, 1950. In a 1951 memo, <sup>[11]</sup> Bluebird states that practical research was to be conducted and carried out. The nature of this research was to include these specific problems:**

- Can we create by post-H control an action contrary to an individual's basic moral principles?
- Can we in a matter of an hour, two hours, one day, etc., induce an H (hypnotic) condition in an unwilling subject to such an extent that he will perform an act for our benefit?
- Could we seize a subject and in the space of an hour or two by post-H control have him crash an airplane, wreck a train, etc.?
- Can we by H and SI techniques force a subject to travel long distances, commit specified acts and return to us or bring documents or materials?
- Can we guarantee total amnesia under any and all conditions?
- Can we "alter" a person's personality?
- Can we devise a system for making unwilling subjects into willing agents and then transfer that control to untrained agency agents in the field by use of codes or identifying signs?
- How can sodium A or P<sup>[12]</sup> or any other sleep inducing agent be best concealed in a normal or commonplace item, such as candy, cigarettes, coffee, tea, beer, medicines? NB 13, 14, BB 23

Officially, MKULTRA was established on 13 April 1953, at Richard Helms' suggestion as "ultra sensitive work."<sup>[13]</sup> The operational wing of MKULTRA, known as MKDELTA, had as its mission to find out how to use chemical and biological weapon ingredients to alter the human mind. Originally established as a supplementary funding mechanism to the ARTICHOKE project, MKULTRA quickly grew into a mammoth undertaking that outflanked earlier mind control initiatives. MC 69, NB 28

A memorandum from Richard Helms, <sup>[14]</sup> Acting Deputy Director to CIA Director Allen Dulles dated 3 April 1953 and entitled "Two Extremely Sensitive Research Programs" (MKULTRA and MKDELTA) includes the statement, "Even internally in CIA, as few individuals as possible should be aware of our interest in these fields and of the identity of those who are working for us. At present this results in ridiculous contracts which do not spell out the scope or intent of the work." BB 125

The following is a declassified memorandum written 10 years later to Richard Helms, who by then had become CIA Director.

26 July 1963, MEMORANDUM FOR: Director of Central Intelligence<sup>[15]</sup>  
SUBJECT: Report of Inspection, MKULTRA

It was deemed advisable to prepare the report of the MKULTRA program in one copy only, in view of its unusual sensitivity. Normal procedures for project approval, funding, and accounting were waived. The program requires and obtains the services of a number of highly specialized authorities in many fields of natural science. The concepts involved in manipulating human behavior are found by many people both within and outside the Agency to be distasteful and unethical. Nevertheless, there have been major accomplishments both in research and operational employment.

Over the ten-year life of the program many additional avenues to the control of human behavior have been designated under the MKULTRA charter, including radiation, electro-shock, harassment substances, and paramilitary devices. Some MKULTRA activities raise questions of legality implicit in the original charter. A final phase of the testing of MKULTRA products places the rights and interests of US citizens in jeopardy. Public disclosure of some aspects of MKULTRA activity could induce serious adverse reaction in US public opinion.

TSD [Technical Services Division of CIA] initiated a program for covert testing of materials on unwitting US citizens in 1955. TSD has pursued a philosophy of minimum documentation in keeping with the high sensitivity of some of the projects. Some files contained little or no data at all. There are just two individuals in TSD who have full substantive knowledge of the program and most of that knowledge is unrecorded. In protecting the sensitive nature of the American intelligence capability to manipulate human behavior, they apply "need to know" doctrine to their professional associates to a maximum degree.

The Senate Intelligence Committee did find some records during its investigation in 1976.<sup>[16]</sup> Senator Frank Church, who led the congressional investigations of the CIA's unlawful actions said that the agency was "a rogue elephant" operating above the law as it plotted assassinations, illegally spied on thousands of Americans, and even drugged our own citizens in its effort to develop new weapons for its covert arsenal." MC 18, NB 38

The focal point of MKULTRA was the use of humans as unwitting subjects [without their knowledge or consent]. The CIA sponsored numerous experiments of this kind. Regardless of a report by the CIA's Inspector General in 1963 recommending the termination of testing on unwitting subjects, future CIA Director Richard Helms continued to advocate covert testing on the grounds that "we are less capable of staying up with the Soviet advances in this field." On the subject of moral issues, Helms commented, "we have no answer to the moral issue."<sup>[17]</sup> MC 18

### **The Experience of CIA Mind Control Victim Carol Rutz**

The CIA bought my services from my grandfather in 1952 starting at the tender age of four.<sup>[18]</sup> Over the next 12 years, I was tested, trained, and used in various ways. Electroshock, drugs, hypnosis, sensory deprivation, and other types of trauma were used to make me compliant and split my personality (create multiple personalities for specific tasks). Each *alter* or personality was created to respond to a post-hypnotic trigger, then perform an act and not remember it later. This "Manchurian Candidate" program was just one of the operational uses of the mind control scenario by the CIA. Your hard earned tax dollars supported this.

As a survivor of CIA programs Bluebird/Artichoke and MKULTRA, I began my intense search to document some of the mind control experiments that I was made part of. Through a series of FOIA requests to various departments of the government, 48 years after I was first experimented on, I found solid proof of my memories—proof that was in the government vaults of the nearly 18,000 pages of declassified documents from the Bluebird/Artichoke and MKULTRA programs.

One document<sup>[19]</sup> states, "Learning studies will be instituted in which the subject will be rewarded or punished for his overall performance and reinforced in various ways—with electric shock, etc. The experimenters will be particularly interested in dissociative states [multiple personality], and an attempt will be made to induce a number of states of this kind, using hypnosis." The government had finally handed me the validation I had been searching for. NB xvii, xviii

The basic premise of the book *The Manchurian Candidate*<sup>[20]</sup> is that a group of American POWs in the Korean War is brainwashed while crossing through Manchuria to freedom. They arrive back in the US amnesic for the period of brainwashing, and one of them has been programmed to be an assassin. His target is a candidate for president of the US. His handlers control him with a hypnotically implanted trigger. BB 23

In an experiment described in a document entitled "SI and H experimentation<sup>[21]</sup> (25 September 1951)", two female subjects took part in an exercise involving the planting of a bomb. Both subjects performed perfectly and were fully amnesic for the exercise: "[Whited out] was instructed that upon awakening, she would proceed to [whited out] room where she would wait at the desk for a telephone call. Upon receiving the call, a person known as "Jim" would engage her in normal conversation. During the course of the conversation, this individual would mention a code word. When she heard this code word, she would pass into a SI trance state, but would not close her eyes and remain perfectly normal and continue the telephone conversation.

She was told that upon conclusion of the telephone conversation, she would then carry out instructions: [Whited out] was shown an electric timing device. She was informed that this device was a bomb, and was then instructed how to attach and set the device. After [whited out] learned how to set and attach the device, she was told to take the timing device which was in a briefcase, and proceed to the ladies room. In the ladies room, she would be met by a girl whom she had never seen who would identify herself by the code word “New York.” [whited out] was then to show this individual how to attach and set the timing device and further instructions would be given that the timing device was to be carried in the briefcase to [whited out] room, placed in the nearest empty electric-light plug and concealed in the bottom, left-hand drawer of [whited out] desk, with the device set for 82 seconds and turned on.” BB 37, 38

## The Mind Control Doctors

In the second half of the 20<sup>th</sup> century, mind control projects resulted in extensive political abuse of psychiatry in North America. Many thousands of prisoners and mental patients were subjected to unethical mind control experiments by leading psychiatrists and medical schools. Organized academic psychiatry has never acknowledged this history. The network of mind control doctors involved has done a great deal of harm to the field of psychiatry and to psychiatric patients. BB, pg. K

The work of the mind control doctors did not occur in a vacuum. The importation of Nazi doctors to the US through secret programs like PAPERCLIP is part of the context. Mind control experimentation was not only tolerated by medical professionals, but published in psychiatric and medical journals.<sup>[22]</sup><sup>[23]</sup><sup>[24]</sup> The climate was permissive, supportive, and approving of mind control experimentation. BB 1

Dr. William Sweet participated in both brain electrode implant experiments and the injection of uranium into medical patients at Harvard University.<sup>[25]</sup> The 925-page *Final Report. Advisory Committee on Human radiation Experiments*<sup>[26]</sup> tells the story of the radiation experiments, and their linkage to mind control. BB 1

Martin Orne is one of the leading experts on hypnosis of the 20<sup>th</sup> century. For about 30 years, he was the editor of *The International Journal of Clinical and Experimental Hypnosis*. Dr. Orne<sup>[27]</sup><sup>[28]</sup> is one of two psychiatrists professionally still active into the late 1990's who is a documented CIA mind control contractor (along with Dr. Louis Jolyon West).<sup>[29]</sup> BB 121, 124

M Janet<sup>[30]</sup> asked a “deeply hypnotized female to commit several murders before a distinguished group of judges, stabbing some victims with rubber daggers and poisoning others with sugar tablets.”<sup>[31]</sup> The hypnotized subject did all these things without hesitation. MC 160

Army doctors were actively involved in LSD testing at least until the late 1970's. Subjects of LSD experiments included children as young as five years old, and brain electrodes were implanted in children as young as 11 years of age. Four of the CIA's MKULTRA Subprojects were on children. The mind control doctors included Presidents of the American Psychiatric Association and psychiatrists who received full-page obituaries in the *American Journal of Psychiatry*. Responsibility for the unethical experimentation lies first with the individual doctors, but also collectively with the medical profession as a whole, and with academia as a whole. BB 21

The MKULTRA contractor about whom the most has been written is Dr. Ewen Cameron.<sup>[32]</sup><sup>[33]</sup><sup>[34]</sup><sup>[35]</sup><sup>[36]</sup> At various times, Dr. Cameron was President of the Quebec, Canadian, American, and World Psychiatric Associations. He was one of four co-founders of the World Psychiatric Association. Dr. Cameron began conducting unethical, unscientific, and inhumane brainwashing experiments in the 1930's. Schizophrenic patients were forced to lie naked in red light for eight hours a day for periods as long as eight months. Another experiment involved overheating patients in an electric cage until their body temperatures reached 102 degrees. BB 125, 127, 128

From January 1957 until September 1960, Dr. Cameron's project received \$64,242.44 in CIA funds.<sup>[37]</sup> When the CIA stopped funding him, Cameron received \$57,750 from the Canadian government to continue his research from 1961 to 1964.<sup>[38]</sup> The actual number of patients on whom Cameron reported trying varieties of his experimental techniques is reported as 332.<sup>[39]</sup> NB 52, 53

Linda MacDonald was a victim of Dr. Ewen Cameron's unethical, destructive mind control experiments between May 1 and September 12, 1963. Dr. Cameron used a "treatment" which involved intensive application of three brainwashing techniques; drug disinhibition, prolonged sleep treatment, and prolonged psychological isolation.<sup>[40]</sup> <sup>[41]</sup> These were combined with ECT [Electro Convulsive Therapy] treatments. The amount of electricity introduced into Linda's brain exceeded by 76.5 times the maximum amount recommended in the ECT Guidelines of the American Psychiatric Association. Dr. Cameron's "depatterning" technique resulted in permanent and complete amnesia. To this day, Linda MacDonald is unable to remember anything from her birth to 1963. Dr. Cameron proved that doctors skilled in the right procedures can erase a subject's memory. As recorded by nurses in her chart, Linda was completely disoriented. She didn't know her name, age or where she was. She didn't recognize her children. She couldn't read, drive, cook, or use a toilet. Not only did she not know her husband, she didn't even know what a husband was. BB 181-183

Life changed for Linda when the Canadian Broadcasting Corporation program, *The Fifth Estate*, aired a segment on Dr. Cameron on January 17, 1984. A Vancouver newspaper ran a full-page story on Robert Loggie, a Vancouver man who had been experimented on by Dr. Cameron. Loggie was a plaintiff in the class action suit against the CIA for Dr. Cameron's MKULTRA experiments, which was settled out of court for \$750,000, divided among the eight plaintiffs in 1988. Eventually Linda got \$100,000 plus legal fees from the Canadian government. BB 187, 188

|                                                                                                                                                                                                                                                                                                                              |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| J.G. Watkins "induced a soldier to strike a superior officer by suggesting that the officer was a Japanese soldier." <sup>[42]</sup> In another experiment, two subjects who were told to throw sulphuric acid at a laboratory assistant (protected by glass) complied with the hypnotist's commands. <sup>[43]</sup> MC 158 |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

G.H. Estabrooks is the only mind control doctor who has publicly acknowledged the building of Manchurian Candidates. In his book *Spiritism*,<sup>[44]</sup> Dr. Estabrooks describes experiments done to create multiple personality.<sup>[45]</sup> <sup>[46]</sup> In his book *Hypnotism*,<sup>[47]</sup> Dr. Estabrooks states that the creation of experimental multiple personality for operational use in military subjects, whom he refers to as super spies, is ethical because of the demands of war. BB 159, 162

In a 1971 article in *Science Digest*, Dr. Estabrooks<sup>[48]</sup> claimed to have created hypnotic couriers and counterintelligence agents for operational use. "By the 1920's not only had [clinical hypnotists] learned to apply posthypnotic suggestion, but also to split certain complex individuals into multiple personalities like Jeckyl-Hydes. During World War II, I worked this technique with a vulnerable Marine lieutenant I'll call Jones. I split his personality into Jones A and Jones B. Jones A, once a "normal" working Marine, became entirely different. He talked communist doctrine and meant it. He was welcomed enthusiastically by communist cells, and was deliberately given a dishonorable discharge by the Corps and became a card-carrying party member. Jones B was the deeper personality, knew all the thoughts of Jones A, was a loyal American and was "imprinted" to say nothing during conscious phases. All I had to do was hypnotize the whole man, get in touch with Jones B, the loyal American, and I had a pipeline straight into the Communist camp. It worked beautifully." BB 167-169

Dr. Estabrooks did experiments on children. He corresponded with FBI Director J. Edgar Hoover about using hypnosis to interrogate juvenile delinquents. His experimentation raises the possibility that he or other investigators have attempted to create Manchurian Candidates in children. Such a possibility might seem far-fetched until one considers the LSD, biological and radiation experiments conducted on children,<sup>[49]</sup> <sup>[50]</sup> <sup>[51]</sup> and the fact that four MKULTRA Subprojects were on children. BB 176, 177

## LSD Tests

From 1950 until the 1970s, the CIA collaborated closely with the US Army whilst conducting LSD and other chemical tests on humans.<sup>[52]</sup> Experiments were conducted where none of the volunteers gave their ‘informed consent’ prior to receiving LSD. There was a deliberate attempt to deny the volunteers any information that would have permitted them to evaluate the dangers involved. Most of the related records have been destroyed. MC 20, 21, 29, 32

A field test plan called for use of LSD on foreign nationals overseas. The Surgeon General “offered no medical objections to the field experimental plan.”<sup>[53]</sup> Subjects for the proposed field test were to be non-volunteer, foreign nationals. It is clear that from the start to finish the project violated Department of Defense policies, as well as specific procedures set for chemical or medical research. MC 33-36

Frank Olson was a biological warfare expert who committed suicide after being given LSD hidden in liqueur by Dr. Sidney Gottlieb, Director of MKULTRA.<sup>[54]</sup> Olson’s family determined that he had committed suicide subsequent to a bad LSD trip only after reading Nelson Rockefeller’s 1975 report on the CIA, published 22 years after Olsen’s death. They were given \$750,000 in compensation by Congress. BB 49

## Electronic Implants

Jose Delgado’s development of the Stimoceiver in the 1950s brought intelligence agencies’ ultimate dream of controlling human behavior one step closer to reality. The Stimoceiver—a miniature electrode capable of receiving and transmitting electronic signals by FM radio—could be placed within an individual’s cranium. And once in place, an outside operator could manipulate the subject’s responses. Delgado demonstrated the potential of his Stimoceivers by wiring a fully-grown bull. With the device in place, Delgado stepped into the ring with the bull. The animal charged towards the experimenter – and then suddenly stopped, just before it reached him. The powerful beast had been stopped with the simple action of pushing a button on a small box held in Delgado’s hand.<sup>[55]</sup> MC 147

Dr. Jose Delgado, a neurosurgeon and professor at Yale, received funding for brain electrode research on children and adults.<sup>[56] [57] [58] [59] [60] [61]</sup> Dr. Delgado did research in monkeys and cats, and in one paper describes the cats as “mechanical toys.” He was able to control the movements of his animal and human subjects by pushing buttons on a remote transmitter box. In 1966, Delgado asserted that his experiments “support the distasteful conclusion that motion, emotion and behavior can be directed by electrical forces, and that humans can be controlled like robots by push buttons.”<sup>[62]</sup> BB 88, 89, MC 147

An 11-year old boy underwent a partial change of identity upon remote stimulation of his brain electrode:<sup>[63]</sup> “Electrical stimulation of the superior temporal convolution induced confusion about his own sexual identity. These effects were specific, reliable, and statistically significant. For example, the patient said, “I was thinking whether I was a boy or a girl,” and “I’d like to be a girl.” After one of the stimulations the patient suddenly began to discuss his desire to marry the male interviewer. In two adult female patients stimulation of the same region was followed by discussion of marriage and expression of a wish to marry the therapist. Temporal-lobe stimulation produced in another patient open manifestations and declarations of pleasure, accompanied by giggles and joking with the therapist. BB 88, 89

Brain electrode research was also conducted independently at Harvard by Dr. Delgado’s coauthors, Drs. Vernon Mark, Frank Ervin, and William Sweet. Mark and Ervin describe implanting brain electrodes in a large number of patients at Harvard hospitals. In their book *Violence and the Brain*,<sup>[64]</sup> photographs show 18-year old Julia smiling, angry, or pounding the wall depending on which button is being pushed on the transmitter box sending signals to her brain electrodes. The mind control doctors saw their patients as biological machines, a view which made them sub-human, and therefore easier to abuse in mind control experiments. BB 88-91

Dr. Robert G. Heath,<sup>[65]</sup> <sup>[66]</sup> <sup>[67]</sup> Chairman of the Department of Psychiatry and Neurology at Tulane University, placed brain electrodes in a young homosexual man and fitted him with a box. A button on the box could be used to electrically stimulate an electrode implanted in a pleasure center. During one three-hour period, the patient, referred to as B-19, stimulated himself 1,500 times.<sup>[68]</sup> “During these sessions, B-19 stimulated himself to a point that he was experiencing an almost overwhelming euphoria and elation, and had to be disconnected, despite his vigorous protests. BB 94

Dr. John Lilly describes the technique of electrode implantation.<sup>[69]</sup> “Electrodes could be implanted in the brain without using anesthesia. Short lengths of hypodermic needle tubing equal in length to the thickness of the skull were quickly pounded through the scalp into the skull. These stainless steel guides furnished passageways for the insertion of electrodes into the brain to any desired distance and at any desired location. Because of the small size of the sleeve guides, the scalp quickly recovered from the small hole made in it, and the sleeve guide remained imbedded in the bone for months to years. At any time he desired, the investigator could palpate [rub] the scalp and find the location of each of the sleeve guides. Once one was found, he inserted a needle down through the bone. After withdrawing the needle, the investigator placed a small sharp electrode in the track made by the needle and pressed the electrode through the skull and down into the substance of the brain to any desired depth.” NB 62

## Non-Lethal Weapons

Non-lethal weapons is a broad category which includes devices for beaming various kinds of energy at human targets in order to temporarily incapacitate them, or to control or affect their behavior. Non-lethal weapons research has been conducted at universities on contract to the CIA, and has overlapped with research on hallucinogens and brain electrode implants. BB 103

Funding of the experiments began in MKULTRA. Subproject 62 documents “certain kinds of radio frequency energy have been found to effect reversible neurological changes in chimpanzees.” Subproject 54 was studying how to produce concussions from a distance using mechanical blast waves propagated through the air. Such a concussion “is always followed by amnesia for the actual moment of the accident.” It also states: “The blast duration would be in the order of a tenth of a second. Masking of a noise of this duration should not be difficult. It would be advantageous to establish the effectiveness of both of the above methods as a tool in brain-wash therapy.” BB 103-105

|                                                                                                                                                                                                                             |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| A confidential report prepared by the US Army as early as 1969 detailed the effect an infra-sonic system would have on humans. These effects range from disruption of nervous systems to death. <sup>[70]</sup> MC 199, 200 |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

That such weapons have been used can be in little doubt. When the deployment of Cruise missiles at American bases in the UK was at its height, women peace campaigners staged a series of highly publicized peaceful protests outside the perimeter wires. In late 1985, the women in the peace camps at Greenham Common began to experience unusual patterns of illness, ranging from severe headaches, drowsiness, menstrual bleeding at abnormal times or after the onset of menopause, to bouts of temporary paralysis and faulty speech coordination. *Electronics Today*<sup>[71]</sup> magazine carried out a number of measurements, and in December 1985 published their report which concluded: “Readings taken with a wide range of signal strength meters showed marked increases in the background signal level near one of the women’s camps at a time when they claimed to be experiencing ill effects.” They noted that if the women created noise or a disturbance near the fence, the signals rose sharply. MC 201

The evidence in hand suggests that the technology to produce ‘voices in the head’ does exist. The Department of Defense has already acquired the technology to alter consciousness through various projects and programs. A patent discusses methods and system for altering consciousness. The abstract from one such program states: “A system for altering the states of human consciousness involves the

simultaneous application of multiple stimuli, preferably sounds, having different frequencies and wave forms.”<sup>[72]</sup> From another: “Researchers have devised a variety of systems for stimulating the brain to exhibit specific brain wave rhythms and thereby alter the state of consciousness of the individual subject.”<sup>[73]</sup> Silent subliminal messages [were] “used throughout Operation Desert Storm (Iraq) quite successfully.”<sup>[74]</sup> MC 203, 204

A US State Department report suggested it was possible to induce a heart attack in a person from a distance with radar.<sup>[75]</sup> MC 172

By 1974, Stanford Research Institute had developed a computer system capable of reading a person’s mind by correlating the brain waves of subjects on an electroencephalograph with specific commands.<sup>[76]</sup> The concept of mind-reading computers is no longer science fiction. Neither is their use by Big Brotherly governments. Major Edward Dames of Psi-Tech said in April 1995 on NBC’s *The Other Side* program: “The US government has an electronic device which could implant thoughts in people.” Dames would not comment any further. MC 172

In 1991, Janet Morris, one of the main proponents of non-lethal weapons, issued a number of papers.<sup>[77]</sup> According one paper, US Special Operations Command already had a portable microwave weapon. “US Special Forces can cook internal organs.”<sup>[78]</sup> Another concept was ‘Infrasound’ using acoustic beams. Laboratories were developing a high power, very low frequency acoustic beam weapon projecting non-penetrating acoustic bullets. Already, some governments have used infrasound as a means of crowd control. Very low frequency (VLF) sound, or low frequency RF modulations can cause nausea, vomiting and abdominal pains. “Some very low frequency sound generators can cause the disruption of human organs and, at high power levels, can crumble masonry.”<sup>[79]</sup> The entire non-lethal weapon concept is literally a Pandora’s Box of unknown consequences. MC 178, 179

## How to Request Declassified MKULTRA and Bluebird/Artichoke Records<sup>[80]</sup>

Central Intelligence Agency  
FOIA and privacy Act Coordinator  
Washington, DC 20505

Re: Freedom of Information Act and Privacy Act Request

This letter constitutes my formal request for information pursuant to the provisions of the Freedom of Information and privacy Acts, 5 USC552. I am requesting the three-volume CD set that includes a copy of a shareware viewer of the nearly 18,000 pages of MKULTRA and Bluebird/Artichoke records. Enclosed is a check for \$30 make payable to the United States Treasurer.

Sincerely,  
[Name, address, and date required]

---

**To order these three amazing books, and to get more information on mind control and other massive, yet little known cover-ups, see our [Resource List](#). We share this information as an invitation to work together for a better world. By spreading the word, we can create a critical mass of people who demand that all of these activities be brought back under Congressional control.**

---

December 31, 1994

The Honorable William J. Clinton  
The White House  
Washington, D.C. 20500

Dear President Clinton:

I appreciated your prompt and courteous response to my letter dated November 15, 1994. Copies of these letters are attached for your immediate reference.

While I did indeed appreciate your letter, I am concerned that your National Security Council staff appears to have overlooked two major points raised in my letter to Dr. Lamb; viz., concerning the role of (clearly-unmonitored) major defense contractors in the testing and development of these directed-energy systems; and the unresolved plight of U.S. citizens who are still on the receiving end of this experimentation. Dr. Lamb has chosen not to reply to my letter. Your assistance in resolving these issues would be most gratefully appreciated.

As to DoD's claims regarding their lack of involvement in involuntary human experimentation, you might want to read DoD Directive 5240. I-R ("Procedures Governing the Activities of DoD Intelligence Components that Affect United States Persons"). According to this regulation, persons who qualify as "targets of surveillance" become fair game for the testing of all forms of communications and "non-communications" frequencies. Radar is identified in this regulation as a "non-communications" frequency. (Radar is also now being touted as a "non-lethal" asset.) Also according to this regulation, signals testing and experimentation in "targets of surveillance" may involve the joint participation of the Central Intelligence Agency.

Your Foreign Intelligence Surveillance Court (FISC) has obligingly furnished DoD and other U.S. Intelligence agencies a rubber-stamp authorization to test these technologies on more than 6,500 alleged "spies" in this country between 1979 and 1991, alone. God only knows how many additional "spies" have been added to the list since 1991. The FISC is accountable to no one. FISC surveillance authorizations serve merely to legitimize involuntary human experimentation now ongoing in this country. Rogue DoD contractors, I might add, are exercising the luxury of not having to concern themselves with these FISC formalities.

DoD has informed your National Security Council staff that it "does not conduct any human testing on *unwitting or involuntary* subjects" (emphasis mine). The involuntary human experimentees referenced in my letter to Dr. Lamb are fully "witting" - a situation compelled by the nature of the experimentation, itself. By having become "witting" (if helpless to do anything about it), these experimentees apparently meet one of DoD's two criteria for continued experimentation; namely, that either they be "witting" or that they be "voluntary." DoD's response to your National Security Council staff embodies duplicitousness.

As a matter of interest, I arrived home after spending Christmas with my family, not only to find that your letter had arrived, but, also, to find that the rubber insulation on one of my lamp cords had been deliberately shaved down during my absence for purposes of "inadvertent" ignition. The spark which "inadvertently" leaped out of the exposed copper wires last night was only inches from the fringe on my bedspread.

This is only about the tenth such (plausibly-deniable) attempt on my life since this Project commenced in mid-1992. It would appear, so far, that I have a choice of being run off of the road at a high speed, of being blown up by a gas stove, of being electrocuted or, now, of being fried in an "inadvertently"-ignited inferno.

I am bringing this to your attention because these recurrent attempts would appear to belie the officially-benign position taken by the Department of Defense regarding involuntary human experimentation. Indeed, I am being given the distinct impression that U.S. citizens who push for investigations into these experiments face a future on a morgue slab. This is not my idea of how a democracy should operate. Perhaps I am mistaken.

I frankly do not relish the thought of being assassinated for pursuing a subject which this government would obviously prefer *not* be discussed. I do not intend to stop, regardless.

As stated in my previous letter to you, you have made a fine beginning where potential revamping of our National Security Agenda might be concerned. Please do not draw the line, so to speak, where non-ionizing radiation is concerned. Lives of U.S. citizens are being destroyed because of these experiments.

Sincerely,

/Original Signed/

JULIANNE MCKINNEY  
Director,  
Electronic Surveillance Project

Encls

## THE WHITE HOUSE

### WASHINGTON

December 20, 1994

Ms. Julianne McKinney  
Director, Electronic Surveillance Project  
Association of National Security Alumni  
Post Office Box 13625  
Silver Spring, Maryland 20911-3625

Dear Julianne:

I appreciate your taking the time to write and I want to thank you for the material you enclosed.

I have had the National Security Council staff look into your account of involuntary human experimentation by the Department of Defense with regard to "non-lethal" weapons and surveillance systems. They have reported back to me that there is no involvement of the Defense Department in involuntary human experimentation with regard to those systems. In fact, the Defense Department does not conduct any human testing on unwitting or involuntary subjects.

I appreciate your interest and your concern about our national security. I assure you that these issues will continue to be addressed.

Sincerely,

[signature:] Bill Clinton

## **Psychotronic Weapons Letter To Senate Committee**

---

(The following letter is alarming and vital to the understanding of how far the issue of psychotronic weapons and projects aimed at controlling American citizens and people everywhere has progressed. This letter is dated February 9, 1994. The organization involved is no longer available at this address below. Ms. McKinney is said to be occupying a much lower profile these days. Nevertheless, this is an important document to consider)

---

Association of National Security Alumni Electronic  
Surveillance Project P. O. Box 13625  
Silver Spring, MD 20911-3625

February 9, 1994

Chairman John Glenn  
Senate Committee on Governmental Affairs  
340 Dirksen Senate Office Building  
Washington, D.C. 20510

Attention: Mr. Chris Kline

Subject: Involuntary Human Experimentation with Non-Ionizing Radiation

Dear Mr. Kline:

Senator Glenn's publicly-expressed outrage that this government has (once again) been found to be engaging in brutal forms of involuntary human experimentation, and his demand, in effect, that any and all forms of this type of experimentation be exposed was heartening.

A large and growing number of people in this country hope that the Senator's expressed outrage was sincere, and that your Committee's investigations are not simply a means of diverting attention from complaints centering on this government's long-term role in involuntary

human experiments with non-ionizing forms of radiation.

Now that the Departments of Defense, Energy and Justice have openly admitted that directed-energy weapons systems do indeed exist, complaints of experimentation with these systems can no longer be ignored.

As stated to you during our telephone conversation last week, this Project is focused on complaints concerning experiments with non-ionizing, so-called "non-lethal," directed- energy weapons, surveillance and psychotronics systems. In bringing this to your attention, I am representing the interests, currently, of some 100 U.S. citizens, who are the subjects of both vicious forms of overt harassment and concurrent directed-energy harassment.

The enclosed copy of Microwave Harassment and Mind-Control Experimentation is a preliminary investigative finding, only. The accompanying Supplement furnishes an update on the current status of this Project.

I am also enclosing copies of letters exchanged with, and directed to the Department of Defense, the Department of Justice, and the Food & Drug Administration, which are self-explanatory. I am also enclosing copies of two articles concerning John Alexander, of the Los Alamos National Laboratory's Nonlethal Weapons Division, which I will address below. Also enclosed is a letter to a woman in contact with this Project which addresses some of the effects of long-term exposure to these so-called "non-lethal" systems. Just as a matter of interest--DoD-sponsored "hy'e" in the media to the contrary notwithstanding--non-lethal weapons systems can be incredibly lethal.

They are not gentle systems, as this government would like for the public to believe. Questions which need to be asked by the Committee on Government Affairs, as a preliminary, are as follows:

1. By what formal means are U.S. Government agencies, to include the

Department of Defense, prevented from testing "non-lethal", directed-energy weapons, surveillance and psychotronics systems on U.S. citizens under involuntary circumstances?

2. By what formal means are U.S. Government contractors and sub-contractors prevented from testing "non- lethal", directed-energy weapons, surveillance and psychotronics systems on U.S. citizens under involuntary circumstances?

3. Why does the Energy Policy Act of 1992 fail to prohibit involuntary human experimentation with non-ionizing forms of radiation?
4. How many members of Congress and of the Administration have investments in firms which are engaged in the development and testing of directed-energy systems?
5. Why is Los Alamos National Laboratory, a Department of Energy agency, engaged in the development of "non-lethal", directed-energy systems?
6. Why is John Alexander--a 30-year US Army Special Forces veteran with a long-term interest in the "psychotronics" (mind-control) aspects of directed-energy systems-- regarded as being particularly qualified to direct the Non-Lethal Systems Division of Los Alamos National Laboratory?
7. Why is the Department of Energy (and John Alexander in particular) in the business of promoting "non- lethal" systems as tools for law enforcement, and as weapons systems for the military?
8. Why are these "non-lethal" systems being kept classified?
9. Where is the test data on the efficacy of these directed-energy weapons, surveillance and psychotronics systems being obtained, and who in Congress, specifically, is overseeing those experiments?
10. Why is the Department of Defense pushing for an increase in the numbers of Ground Wave Emergency Network (GWEN) towers in this country?
11. How many satellites launched under the auspices of DoD, the National Reconnaissance Office, and the Central Intelligence Agency are engaged in the surveillance of U.S. citizens? And how many of those satellites qualify as directed-energy emitters; i.e., as "amplified communications" satellites?
12. What federal constraints have been placed on the construction of microwave towers and other antennae arrays in this country; and what assurances do U.S. citizens have that emissions from those towers and antennae arrays are not being used for involuntary human experimental purposes?
14. Who in Congress is overseeing the construction and use of microwave towers and antennae arrays in this country?
15. Why is it that complaints by U.S. citizens concerning directed-energy

harassment and experimentation are being ignored?

16. Since Ms. Susan Patrick Ford, of the Department of Defense, appears to be unable to answer the questions posed in my letter to her dated November 18, 1993, can you answer these questions?

In sum, Mr. Kline, this is a problem which Congress can ill afford to ignore. There are many angry people in this country who are fed up with these experiments. (Not all experimentees are kept effectively isolated.) A number of experimentees recognize the rapidly burgeoning numbers of microwave towers and antennae arrays in this country are a part of the problem--a level of recognition which, indeed, may have prompted the destruction of two major "communications towers" in Chiapas, Mexico, shortly prior to that government's decision to close the borders to that state.

A lawless government spawns a lawlessness, generally. It is apparent to me that this country is merely "testing its wings", so to speak, where lawlessness and chaos, at this stage, is concerned. Creating more prisons and hiring more police is not the solution.

The U.S. Congress--and Senator Glenn's Committee, in particular,--is in a position to ensure that no government agency, surrogate or otherwise, has a license to run rampant over the human and civil rights of citizens of this country, and that this government, once again, learns to adhere to the principles which were the basis for this country's creation.

Please do let me hear from you concerning the foregoing.

Sincerely,

JULIANNE MCKINNEY

Director, Electronic Surveillance Project

## **Mind Control Experiments on Children**

**By Jon Rappoport**

The CIA mind-control apparatus has been well known since 1975, when 10 large boxes of documents were released pursuant to Freedom of Information Act requests.

Several good books were then written on the subject of the CIA program known as MK-ULTRA. Officially spanning ten years from 1952-62, MK-ULTRA involved the use of LSD on unwitting military and civilian subjects in the United States. LSD and more powerful compounds were given under duress as brainwashing and truth serum drugs. The program's aim was to find drugs which would irresistibly bring out deep confessions or wipe a subject's mind clean and program him or her as "a robot agent."

In experimental test situations, people were given acid without their knowledge, then interrogated under bright lights with doctors sitting in the background taking notes. Threats would be made. The test subjects were told that their LSD "downer trips" would be extended indefinitely if they refused to reveal their closely-guarded military secrets. The people being interrogated in this way were CIA employees, U.S. military personnel and, abroad, agents suspected of working for the other side in the Cold War. Long-term severe debilitation and several documented deaths resulted. Much, much more could be said about MK-ULTRA.

None of this prepared people for the explosive testimony made on March 15, 1995, in Washington, D.C., before the President's Committee on Radiation, however. In unpublicized sessions, New Orleans therapist Valerie Wolf introduced two of her patients who had uncovered memories of being part of extensive CIA brainwashing programs as young children (in one case, starting at age seven). Their brainwashing included torture, rape, electroshock, powerful drugs, hypnosis and death threats. According to their testimony, the CIA then induced amnesia to prevent their recalling these terrifying sessions.

Both Wolf and her patients stated that they recovered the memories of this CIA program without regression or hypnosis techniques. In other words, these patients spontaneously discovered this information about themselves and their pasts.

Although the committee was mainly concerned with radiation, they permitted Valerie and her patients to testify because, astonishingly, several doctors who had administered the mind-control experiments had also been identified by other Americans secretly exposed to radiation. Apparently there was a crossover.

Prominent names surfaced in the March 15 testimony: Richard Helms, former head of the CIA, Dr. Sidney Gottlieb, who ran MK-ULTRA and Dr. John Gittinger, Gottlieb's protege. These men and others were directly accused of participating in grisly mind-control efforts on children.

Predictably, this testimony received no media attention.

I now have it all, including many pages submitted to the committee that will likely never be released as part of their final report. Only a small percentage of the pages were read aloud at the hearing. Included are corroborating statements from other therapists around the country and several of their patients. I

have now released all of this testimony as a book, **U.S. Government Mind-Control Experiments On Children**.

When the sickening shock starts to wear off, deeply disturbing questions flood one's mind: just what was this CIA program? How extensive was it? What was its purpose?

From what I have been able to discover so far, many American children, as well as children from Mexico and South America, were used over a period of about 40 years, starting around 1948. In fact, the program may still be going on. Doctors and agents who administered it wanted to obtain control over the minds of these children, ostensibly to create superagents who wouldn't remember even what missions they carried out, because of hypnotically induced amnesia (which could be removed by their controllers and reinstalled at will).<sup>1</sup>

Children were trained as sex agents, for example, with the job of blackmailing prominent Americans - primarily politicians, businessmen and educators. A great deal of filming was done for this purpose. Eventually, people from the inner core of the CIA program filmed each other, and some of the centres where children were used as sex agents got out of control and turned into CIA-operated sex rings.

Some children were considered expendable and simply murdered.

One person who states that he was in this program as a child said, off the record:

"They tried out their brainwashing techniques on the kids from Mexico and South America. They were considered expendable. But on another echelon of the program, they went after the best and the brightest American kids. Making perfect agents to combat the Soviets wasn't, I don't think, their ultimate objective. I can't remember what that was."

At this point, I made a suggestion:

"Well, if they were choosing the best and brightest, maybe they figured these kids would one day rise to important positions in the society, and they wanted to gain long-term control over them, so they would be under their thumb, so they could tap them at will - a way of controlling the future society."

"Maybe," he said. "The Nazis gained control over the intelligentsia in Germany. That was a very key step in their dominance. That was the first thing they did".

"This smells very much like a Nazi program in the U.S.," I said. "I don't mean all the controllers were German, but the style of it, the insanity."

He said, "They brought over a lot of Nazi doctors after the war and not just to build rockets - for a lot of projects."

Other people who said that they had been used as children in the program remember that doctors with German accents were definitely present at the sessions. One therapist, who shared this information informally with colleagues around the country, states that, so far, the oldest person she has heard of who was in the program is now 52; the youngest is now nine.

Since a number of people who were brainwashed, tortured and drugged in these experiments try to resolve their experiences in therapy, psychiatrists and other professional therapists are hearing these stories. They are told, for example, that CIA controllers sometimes dressed up in Satanic costumes to further traumatize the children, also providing a cover that wouldn't be believed if the children ever talked.

It is worth noting that there is a movement to discredit these "recovered" memories, and the most prominent group, the False Memory Syndrome Foundation (FMSF), has several board members with CIA or military-intelligence connections - including the notorious Dr. Louis "Jolly" West of UCLA, who tried to establish a center for "the study of violence" at the university in the 1970s. This center's

specialty would have been psychosurgery, a horrendous melting of brain connections, supposedly to curb people's "violent tendencies."

FMSF maintains that a person always remembers abuse done to him or her, and therefore any new recovery of it in therapy is false and must have been fabricated through misleading suggestions by the therapist. While it is certainly true that such inducement happens in therapy, the blanket statement that all recovered memory is invented is unsubstantiated.

In a written statement to Dr. Wolf that was included in her testimony to the president's committee, well-known researcher and psychiatrist, Colin Ross said,

"Published articles in my files include descriptions of administration of 150 mcg of LSD to children age 5-10 years on a daily basis for days, weeks, months, and in a few cases even years. Neurosurgeons at Tulane, Yale, and Harvard did extensive research on brain electrode implants with intelligence funding, and combined brain implants with large numbers of drugs including hallucinogens."

Ross based his report on his more than 20 years of investigating CIA mind control.

Chris De Nicola, one of Dr. Wolf's patients who testified before the president's committee, named her controller as a Dr. Greene, a name reported by several other mind-control subjects. It may well be that this name was a cover used by various CIA and military-contracted experimenter-torturers. Here is a quote from her testimony:

"[Dr. Greene] used me in radiation experiments both for the purpose of determining the effects of radiation on various parts of my body and to terrorize me as an additional trauma in the mind-control experiments. [She was eight years old.]

"The rest of the experiments took place in Tucson, Arizona, out in the desert. I was taught how to pick locks, be secretive, use my photographic memory to remember things and a technique to withhold information by repeating numbers to myself. [She is obviously talking about being trained as an agent.]

"Dr. Greene moved on to wanting me to kill dolls that looked like real children. I stabbed a doll with a spear once after being severely tortured, but the next time I refused. He used many techniques but as I got older I resisted more and more.

"He often tied me down in a cage, which was near his office. Between 1972 and 1976 he and his assistants were sometimes careless and left the cage unlocked. Whenever physically possible, I snuck into his office and found files with reports and memos addressed to CIA and military personnel. Included in these files were project, subproject, subject and experiment names with some code numbers for radiation mind-control experiments which I have submitted in my written documentation. I was caught twice and Dr. Greene tortured me ruthlessly with electric shock, drugs, spinning on a table, putting shots in my stomach, in my back, dislocating my joints and hypnotic techniques to make me feel crazy and suicidal..."

Is there a precedent for this kind of sadistic treatment by CIA and military personnel? Indeed there is. Here is a quote from the introduction to my book, **U.S. Government Mind-Control Experiments On Children**. It contains information from reliable published sources; such as **The Search for the Manchurian Candidate**, by John Marks<sup>2</sup>, **Acid Dreams**, by Martin Lee<sup>3</sup> and **The Mind Manipulators**, by Alan Schefflin<sup>4</sup>. In part, these authors derived their information on the CIA and MK-ULTRA from the ten boxes of information released suddenly in 1975 by the agency in response to Freedom of Information Act requests:

"Dr. Robert Heath of Tulane University, as early as 1955, working for the Army, gave patients LSD while he had electrodes implanted deep inside their brains.

"Canadian researcher, Dr. Ewan Cameron, under long-term CIA contract, attempted to depattern, and reprogram his psychiatric patients' personalities wholesale. He started with 15 to 65 days of 'sleep therapy,' during which a patient was kept under nearly 24 hours a day, through the administration of

cocktails of Thorazine, Nembutal, Seconal, Veronal, and Phenergam. Throughout this sleep period, the patient would be awakened two or three times a day for electroshock treatments, given at an intensity 20-40 times the 'normal' convulsion-producing strength.

"In the mid-1950's, Paul Hoch, M.D., a man who would become Commissioner of Mental Hygiene for the State of New York, then a laborer in the field for the CIA, gave a 'pseudoneurotic schizophrenic' patient mescaline. The patient had a not-unfamiliar heaven-and-hell journey on the compound. But Hoch followed this up with a transorbital leucotomy... Hoch also gave a patient LSD, and a local anesthetic, and then proceeded to remove pieces of cerebral cortex, asking at various moments whether the patient's perceptions were changing."

Claudia Mullin, the other of Dr. Wolf's patients who testified before the President's Committee on Radiation, said her experiences with CIA mind-control experiences began when she was seven years old:

"In 1958, I was to be tested, they told me, by some important doctors coming from a place called the 'Society' [the Human Ecology Society, a CIA front]. I was told to cooperate; answer any of their questions. Then, since the test 'might hurt,' I would be given 'shots, x-rays, and a few jolts of electricity.' I was instructed not to look at anyone's face too hard and to ignore names,' as this was 'a very secret project' but to be brave and all those things would help me forget..."

"A Dr. John Gittinger tested me and Dr. Cameron gave me the shocks and Dr. Greene the x-rays... By the time I left to go home, just like every time from then on, I would recall nothing of my tests or the different doctors. I would only remember whatever explanations Dr. Robert G. Heath [of Tulane Medical School] gave me for the odd bruises, needle marks, burns on my head and fingers and even the genital soreness. I had no reason to believe otherwise. Already, they had begun to control my mind!

"The next year, I was sent to a place in Maryland called Deep Creek Cabins to learn how to 'sexually please men.' Also, I was taught how to coerce them into talking about themselves. It was Richard Helms (Deputy Director of the CIA), Dr. Gottlieb, Captain George White and Morse Allen, who all planned on filming as many high government and agency officials and heads of academic institutions and foundations as possible... I was to become a regular little 'spy' for them, after that summer, eventually entrapping many unwitting men, including themselves, all with the use of a hidden camera. I was only nine when this kind of sexual humiliation began."

Captain George White was a notorious agent for the CIA. He set up a brothel in San Francisco in the 1960s and, using hidden cameras, filmed men having sex with prostitutes. The men's drinks were "spiked" with LSD. In 1950, Morse Allen, another important CIA man, was appointed head of Project BLUEBIRD, another CIA mind-control program.

Ms. Mullin states that she was adopted when she was two years old. By the time she reached seven she had already been abused extensively by her mother. Her mother apparently turned her over for "testing" to CIA-connected people and Claudia then entered a 27-year period of what can only be called enslavement. Claudia states that she has been monitored, that she is still monitored and watched by agency related people, including a medical doctor. Now living in New Orleans, she has given information to local police authorities about her situation. In her testimony to the president's committee, Claudia remarked,

"Although the process of recalling these atrocities is certainly not an easy task, nor is it without some danger to myself and my family... I feel the risk is worth taking."

Claudia's therapist, Dr. Wolf, has written to the president's committee,

"To the best of my knowledge, [Claudia] has read nothing about mind-control or CIA covert operations. Since she decided to listen carefully and remember as much as she could about conversations among the researchers, her memories are extraordinarily complete. I have sent written copies of memories to Dr. Alan Schefflin [author of **The Mind Manipulators**] for validation and he has confirmed that she has

knowledge of events and people that are not published anywhere, that some of her memories contain new information and that some are already known and published. Some of her memories have been confirmed by family members. She has also shown me old scrapbooks where she wrote notes to remember what was happening to her and hid the notes under pictures in the scrapbook."

I spoke with Alan Schefflin in May [1995] of this year. He said he had found one piece of information Claudia had mentioned in her recollections that had no precedent in published material. It involved a connection between two government researchers.

This is just the tip of the iceberg on the 130 pages of testimony given before the President's Committee on Radiation, and it is also just the beginning of a history that will undoubtedly widen in the coming months and years. Dr. Wolf told me that when word got around she was going to testify before the president's committee, she was contacted by about 40 therapists "in just the 10 days leading up to my trip to Washington." The therapists had heard similar CIA mind-control stories from their own patients. Many of these professionals are afraid to go on the record about their patients' stories, as censure from their professional societies is a reality. The political mood these days is not conducive to granting an aura of credibility to revelations of CIA brainwashing.

So what else is new?

## **"Mind Control's" Portion of the OS/EH Crime**

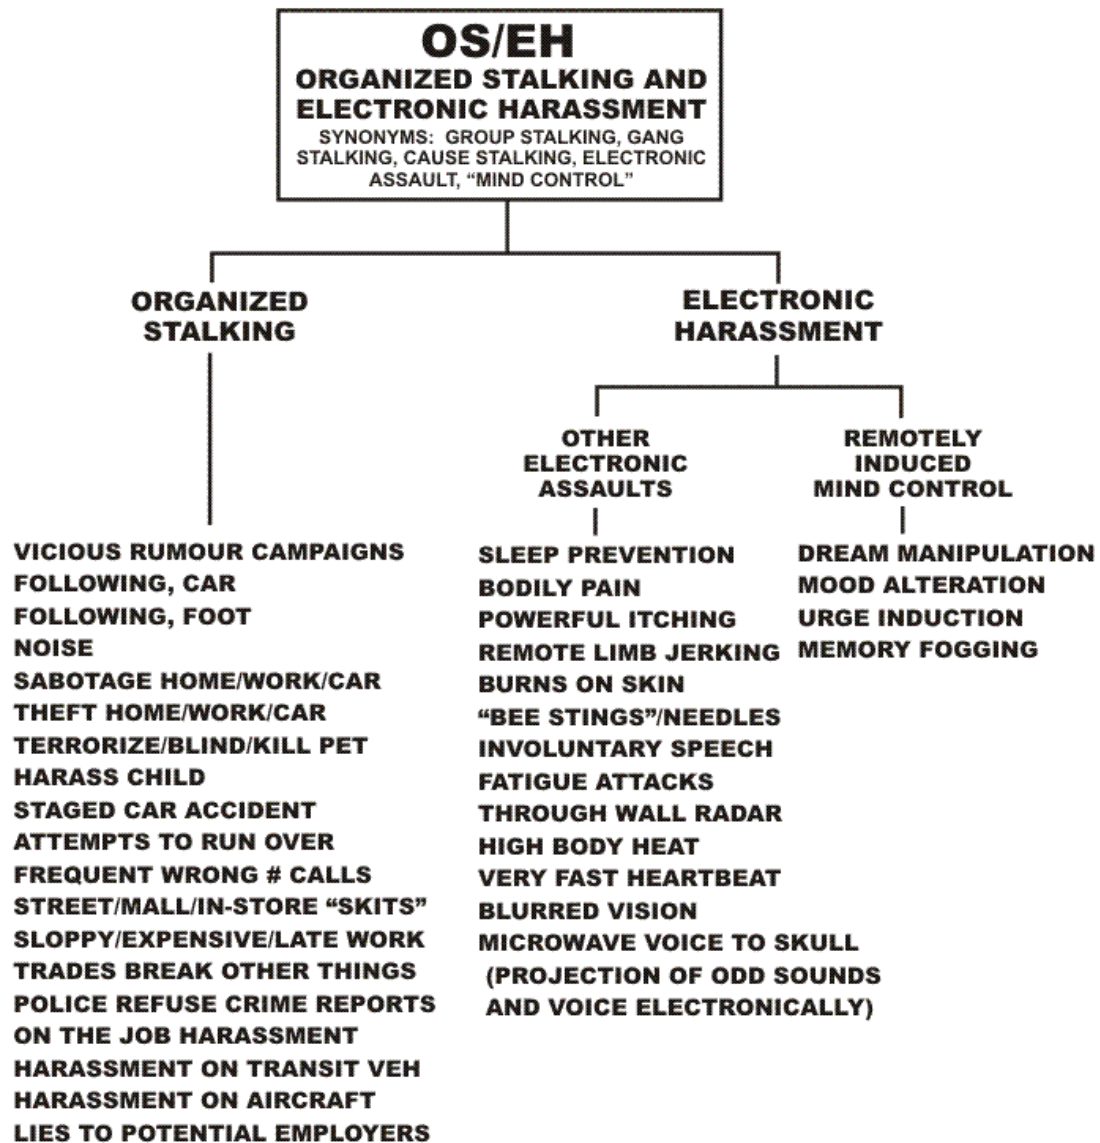

**NEVER NEVER NEVER use this chart for FIRST contact with the public! WAIT until and unless the member of the public has expressed \*genuine\* interest in learning more about OS/EH! Use of "mind control" with uninformed non-targets can and will destroy your credibility!**

Historically, because many targets of organized stalking and electronic harassment have reacted most strongly to that portion of the OS/EH crime which can be called "mind control," in the 1990s this crime acquired "mind control" as its semi-official name.

This historic name for the OS/EH crime is both confusing and discrediting when spoken or written to non-target members of the public. This is confirmed by actual face-to-face experience. It often produces the "you are a wacko" response from the public, and gives the listener or reader the excuse to ignore the message.

Because of the considerable amount of information about OS/EH on the web which uses the older "mind control" name, the diagram below has been created to assist new OS/EH targets, particularly those inclined to discuss this crime with non-targets, see that indeed there is some "mind control" activity involved, but "mind control" is only a portion of the full crime:

# **“MIND CONTROL” IS ACTUALLY ONLY ONE SPECIFIC PART OF THE FULL CRIME:**

If the OS/EH crime is new to you, here are two easy introductions:

From NameBase NewsLine, No. 12, January-March 1996:

## Mind Control and the Secret State

Last September the CIA confirmed the existence of a 20-year, \$20 million research program in "remote viewing," a subvariety of extrasensory perception. On October 29, a Jack Anderson column added more details, and Ted Koppel of ABC's Nightline weighed in with a program on November 28, by which time many newspapers and wire services had picked up the story. By December, a number of pundits began lamenting this additional evidence of the CIA's protean power to waste taxpayers' money.

Curiously, "remote viewing" was an old story, first reported by Anderson himself on 23 April 1984. Other Anderson columns of U.S. and Soviet interest in psychic research date back to 1981. Anderson's October 29 update reported that this project, which for a time was contracted out to the Stanford Research Institute (SRI), had been scaled back and put under Pentagon sponsorship, but nevertheless continued. Although the results of these experiments were reportedly mixed, the project retains its defenders in Congress: Sen. Claiborne Pell (D-RI) and Rep. Charlie Rose (D-NC). By 1995, Anderson didn't have an opinion on the merits of this research, but his 1984 column was supportive. On Nightline, former CIA director Robert Gates implied that pressure from members of Congress drove the CIA's original involvement.

Another of Ted Koppel's CIA guests, identified only as "Norm," was a technical advisor for CIA deputy director John McMahon and, until 1984, a coordinator for the SRI tests. "Norm" did mention the "eight-martini" results from some experiments; this was an in-house term for remote-viewing results so uncannily successful that observers needed eight martinis to recover. Still, the general impression from Koppel's show was dismissive. Only about "fifteen percent" of the experiments, panelists repeated, produced accurate results. Gates argued that such research, if undertaken at all, belongs in the academy.

Not for the first time, however, there's more to this story than Ted Koppel acknowledges.

Ingo Swann, who was involved in the SRI project from 1972-1988, is upset with the media's droll treatment of this revived story. Swann points out that the original motivation behind the "remote viewing" project was the fear that the Soviets were investing significant resources in applied psychic research, and might be making advances. At the time, at least, such a rationale would have been considered a plausible one to justify such a small expenditure of intelligence money.

Nevertheless, almost all mention of this element of the story, which had figured prominently in the first wave of stories on "remote viewing," was dropped in 1995.

Furthermore, Swann claims, the "fifteen percent" figure, established early in the SRI project, represented the baseline accuracy for non-gifted and untrained persons. U.S. intelligence wanted sixty-five percent accuracy, and in the later stages of the project, Swann claims, "this accuracy level was achieved and often consistently exceeded." According to Swann, the key players in the project, and the documentation supporting the real story, remain under the strictest security constraints.

However this may be, Anderson's October 29 story reminds us that ESP is very much alive as an object of intelligence-community interest. In addition to "remote viewing" (seeing people, places, and events at a distance in space and time), another area of interest is the supposed power of "micro psychokinesis" or "Micro-PK" -- the ability to affect small objects, such as electrical systems, by using the mind. Micro-PK is one step away from outright telekinesis, and its supposed power has obvious attractions for the CIA. Imagine being able to erase a computer tape from a block away, or interfere with the avionics of a jet fighter, or detonate a warhead.

Based on the evidence that's on the public record, the dream of harnessing such power, or even of establishing its existence, may be somewhat optimistic.

But this fact hasn't stopped a strange band of specialists, many of whom have government connections, from staking out careers at the intersection of, so to speak, ESP, the Pentagon, and the CIA: where people interested in parapsychology work with those interested in weapons research and mind control. These would-be psi-spooks turn up occasionally on talk shows and at conferences on "nonlethal defense." Their ranks include companies like PSI-TECH in Albuquerque, founded by Maj. Edward A. Dames, and figures such as Col. John B. Alexander of the Los Alamos National Laboratory, who was featured in the February 1995 issue of *Wired* magazine. Dames and Alexander and a dozen more blend in with spookier types who shun publicity but who show up at UFO and New Age gatherings. One is ex-Naval Intelligence officer C.B. Scott Jones, a former aide to Sen. Claiborne Pell.

Once again, it's likely that Ted Koppel doesn't have the whole story. It's also likely that he wouldn't be cleared to report it if he did. Still, the piddling pool of dollars so far devoted to this research strongly implies that, if the figure is accurate, intelligence-funded parapsychological research has been a bust.

The uncounted millions the CIA has spent on mind control suggest just the opposite. As with "remote viewing," the attraction of a successful mind control program to the CIA is obvious, and has long been explicitly acknowledged as such. The "Manchurian Candidate" scenario -- in which a programmed zombie-

assassin responds to a post-hypnotic trigger, performs the act, and does not remember it later -- is one ideal type of successful mind control. A reliable truth serum, long the object of a CIA quest, would be another. Both of these are operational uses of mind control, its so-called "second front."

This term comes from former CIA director Allen Dulles. In 1953, Dulles, speaking before a national meeting of Princeton alumni, distinguished two fronts in the then-current "battle for men's minds": a "first front" of mass indoctrination through censorship and propaganda, and a "second front" of individual "brainwashing" and "brain changing." Before an audience of fellow Ivy Leaguers, Dulles skipped the usual pieties about democracy. The same year, Dulles approved the CIA's notorious MKULTRA project, and exempted it from normal CIA financial controls.

The distinction between Dulles's "two fronts" eventually becomes difficult to sustain, like the distinction between, say, sociology and psychology. Still, this distinction can be useful in roughing out a spectrum of known mind-control techniques.

For example, one powerful tool for inducing ideological and behavioral change is social pressure in a controlled environment. The "brainwashing" employed during the Korean War did not involve the use of drugs or hypnosis. The Chinese merely used the same techniques that they employed on the population at large, but with more intensity, greater control, and additional rewards and punishments such as food and sleep deprivation. Yet this frighteningly simple program was enough to crank up the brainwashing scare in the U.S. Some researchers now suspect that this hysterical episode had its origins in CIA-generated propaganda, designed to give the CIA the political space needed to research more sophisticated mind-control techniques.

Many undergraduates learn about the experiments conducted by Solomon Asch in the 1950s, which demonstrated that expressed opinions can be easily manipulated by social pressure, even in obvious cases, such as whether Line A is longer than Line B on a particular card. And Stanley Milgram showed that many unwitting research subjects would administer a series of escalating electric shocks to another, even to the point of an apparent heart attack, simply because a white-coated lab assistant asked them to continue. Milgram's research suggests that a "Manchurian Candidate" already exists in many of us, and that all that's required to bring him out may be a bit of propaganda. The historical evidence for blind human obedience that could be cited here is very familiar, and very depressing.

Still, there's evidence that Pentagon planners are uneasy about potential unruliness among the mass populations Dulles identified as mind control's "first front." Princeton alumni may perhaps follow and accept arguments that U.S. interests are at stake in Bosnia, but their sons are unlikely to be on the scene defending those

supposed interests. The urban or Appalachian infantryman, and the family he comes from, may have other ideas.

Elite unease on this point may lie behind Pentagon enthusiasm for the new wrinkle in military force that goes by the name "nonlethal" or "less-than-lethal." Its very claim to embody a "humanitarian" form of warfare is a weapon in Dulles's "battle for men's minds."

Nonlethal technology becomes important in a discussion of mind control, as it involves something very close to it, in a form which might be used to control large populations. The propaganda aspect of "humanitarian warfare" is merely a sideshow; it's the technology itself that enlists the enthusiasm of Pentagon planners and law enforcement officials. Much of this "friendly force" technology involves electromagnetic fields and directed-energy radiation, and ultrasound or infrasound weapons -- the same technology that's currently of interest in brain-stimulation and mind-control research.

A partial list of aggressive promoters of this new technology includes Oak Ridge National Lab, Sandia National Laboratories, Science Applications International Corporation, MITRE Corporation, Lawrence Livermore National Lab, and Los Alamos National Laboratory. In the 1996 defense authorization bill, Congress earmarked \$37.2 million to investigate nonlethal technologies. And this money looks like a mere ante in the game.

U.S. interest in this "less-than-lethal" technology dates back to the early 1960s, when the State Department became aware of low-energy microwave radiation directed at the U.S. embassy in Moscow. Under the name "Project Pandora," secret research into the Moscow radiation continued for ten years -- before embassy employees were informed that they were on the receiving end. Researchers initially assumed that the microwaves were designed to activate bugging devices. But when a large number of illnesses were reported at the embassy, a review of Soviet scientific journals revealed that the Soviets believed microwaves affected cell membranes and increased the excitability of nerve cells.

Officially, the incidence of illness at the embassy was ultimately blamed on the U.S. shortwave transmitting antenna on the embassy roof, which leaked energy and contributed to the unhealthy environment. Still, the secrecy surrounding Project Pandora encouraged further speculation within the U.S. intelligence community and elsewhere. For instance, researchers knew that a low-energy microwave beam could be modulated with an "audiogram," and actually convey a recognizable message into an irradiated brain. This led some U.S. spooks to suspect that the Soviets had been attempting to practice mind control on the embassy staff.

Such history brings us back to the situation of the restless public in our own jittery, pre-millennial U.S. Today, there seems to be a dramatic increase in the number of

"wavies," those who feel they are being harassed by non-ionizing radiation such as radio or sound waves. Nevertheless, there is little evidence to support their belief that the secret state, despite its obvious interest in nonlethal technology, is supporting applied research on unsuspecting average citizens. Several alternative explanations suggest themselves.

First of all, the treatment of mental illness over the past few decades has changed dramatically -- from an institutional approach, to an out-patient, community-based system that relies on prescription drugs to control symptoms and behavior. Greater numbers of sufferers of paranoia, freed from institutions, are also free to exercise their First Amendment rights. Furthermore, the power to express oneself has been enhanced by technology -- everything from personal photocopying machines and desktop publishing, to fax machines and now the Internet. And on the Internet, almost everyone can find soulmates.

And "wavies" can make the case that they deserve the benefit of a doubt. Revelations about the Cold War secret state, from the CIA documents released in the 1970s to last year's Advisory Committee on Human Radiation Experiments (which investigated ionizing radiation only), have produced a social environment in which it can seem difficult to rule out anyone's claim, no matter how paranoid-sounding. Finally, there is the modern problem of "pollution" in the broadest sense: from electromagnetic and chemical, and including simple noise. Human reactions to this pollution, which is a new phenomenon in the history of our species, apparently vary by orders of magnitude. Those who are ultra-sensitive may feel harassed, even if no one is intentionally targeting them.

To a disinterested observer, the claims of the "wavies" are perhaps no more bizarre than the claims of those who have experienced profound religious conversions. The point is not to belittle anyone's beliefs, but rather to establish that social factors often determine what we consider to be credible. For thousands of years societies have found it useful to allow sufficient space for religion. Only recently has social space opened up for the claims of "wavies." The increase in their numbers is thus predictable, irrespective of whether the secret state is behind their problems or not. (It isn't, in my opinion.)

This brings us to the "second front" mentioned by Allen Dulles in 1953: the technology of mind control applied on an individual level. Whereas non-ionizing radiation can be "broad-cast" to large populations, techniques such as psychosurgery, implants, and electronic stimulation of the brain (ESB) are administered on a case-by-case basis. More exotic techniques, whose scientific status and potential effectiveness remain uncertain, include radio hypnotic intracerebral control and hypnotic dissolution of memory (RHIC-EDOM), and the use of induced "screen memory" and multiple personality disorder (MPD) for cover purposes.

The closest parallel to the "wavies" within this second front include those who feel that implants were forced on them, sometimes during childhood. Such beliefs obviously tap deep fears in the popular psyche. The season premier of "The X Files" showed FBI agent Scully discovering that someone had planted a microchip near the base of her skull. And accused Oklahoma City bomber Timothy McVeigh apparently claims that an implant was inserted under his skin, for tracking purposes, during the Gulf War.

Identification implants, which are passive devices that respond to an energy source and return an identification number, are similar to the bar codes at the checkout counter in a grocery store. Today's pet owners can have these devices implanted in their pets. But anyone who confuses this simple technology with a chip that tells them what to do is already in trouble. Such a person should consider turning off the television, logging off the Internet, and checking out a few books from the local library. ID technology is ominous for those concerned with surveillance and privacy, but it has little to do with mind control.

Granted, there are experimental "stimoeiver" implants that can stimulate the brain through electrodes. Mind-control enthusiast Jose Delgado became briefly famous when he stopped a charging bull in its tracks with such a device in 1964. Even allowing for electronic miniaturization since then, or for the fact that finely-tuned microwaves can achieve the same results as implanted electrodes, ESB would still seem to be impractical as a mind-control device. At best it appears to stimulate various emotions, and might be used for behavioral conditioning in a controlled environment. This is still quite crude as a control device. It would be simpler and more reliable to arrange a fatal accident.

The combination of surveillance technology and implanted aversion therapy conjures up the vision of a society of victim-robots, with monitors on every utility pole and computers administering the conditioning. But the necessary infrastructure would be frightfully expensive.

And no doubt unnecessary. Sufficient control over the flow of information in society can yield results very similar to those that could be achieved by mind-control implants installed in every individual. Thus the flaw in the reasoning of many researchers: the mind-control techniques that have them so worried are usually the most difficult techniques one can possibly imagine. For those who would seek total control, plain, old-fashioned information control -- leavened with a few fascist techniques -- will do nicely, thank you.

In 1973, former MKULTRA researcher Louis Jolyon "Jolly" West, from the Department of Psychiatry at UCLA, convinced California and federal officials to sponsor a Violence Center. Governor Ronald Reagan mentioned the proposed Center in glowing terms in a speech on January 11, and the federal Law Enforcement Assistance Administration (LEAA) approved a \$750,000 grant. By

this time the federal government, through LEAA, the National Institute of Mental Health (NIMH), the Bureau of Prisons, and the CIA, was operating or funding numerous behavior modification programs in prisons, schools, and hospitals. In response to protests from UCLA students and faculty, the LEAA announced that it would ban the use of its funds for "psychosurgery, medical research, behavior modification -- including aversion therapy -- and chemotherapy."

A year later Louis West was still hoping to obtain funds from NIMH, but by then it was too late for his proposal. Until the 1970s it was not unusual for mental health professionals to propose programs that would screen children for the purpose of early diagnosis and treatment of the potentially violent. But by the 1970s the trend was in the other direction, as some states enacted laws that made it more difficult to confine someone involuntarily as a mental patient. By the 1990s the shoe is securely on the other foot.

Twenty years ago it was fashionable for clinicians to blame urban unrest and similar phenomena on the behavior of individuals. Now, however, the individual can disclaim responsibility for his actions by blaming external agencies. Numerous persons have gone public with accusations of strange events during their childhood, suggesting that they were used as guinea pigs for mysterious men in white coats. Some of their evidence seems sufficiently solid to require further investigation, and more cases are emerging all the time.

On 15 March 1995, two patients of New Orleans therapist Valerie Wolf testified before the Advisory Committee on Human Radiation Experiments. Although this was outside the purview of the Committee, they were permitted to testify because some of the names of CIA-connected researchers they mentioned were already familiar to the Committee. These two women remembered sessions when they were around eight years old that involved electric shocks, hypnosis, shots with needles, x-rays, sexual abuse, and even training in intelligence tradecraft. One case occurred from 1972-1976 and the other in 1958. This testimony was not covered by the media.

Although the recollections of the two women were spontaneous and did not involve regression therapy, there is also a cottage industry developing around memories of child abuse in general. For the most part these are not connected with government research, and perhaps many are the result of questionable techniques used by social workers, therapists, police and prosecutors to elicit testimony from children. Juries are becoming more skeptical of many of these cases. This issue has even assumed the dimensions of a religious crusade -- Christian fundamentalists worry about evil in the New Age movement, and are on the lookout for cases of "satanic ritual abuse" of children. Others believe the CIA has turned children into split-personality sex slaves for operational use.

In 1992 the False Memory Syndrome Foundation began in Philadelphia. This organization criticizes the practice of regression therapy when it's used to bring out memories of traumatic childhood experiences. FMSF considers these repressed memories of incest and sexual abuse to be objectively false, and devastating to family life in general. There's a growing split over this issue among psychology professionals. To confuse the situation further, FMSF has some on their Board of Advisors who may want to cover up their own work. One is Louis West, another is Martin Orne, one of the key MKULTRA researchers in hypnosis, and a third is Michael Persinger, who did research on the effects of electromagnetic radiation on the brain for a Pentagon weapons project.

Regression therapy could be a threat to the techniques the CIA may have secretly developed involving the use of hypnosis. Shortly after Pearl Harbor, George Estabrooks, chairman of the Department of Psychology at Colgate University, was called to Washington by the War Department. As one of the leading authorities on hypnosis, Estabrooks was asked to evaluate how it might be used by the enemy. In 1943 he wrote a book, expanded in a second edition fourteen years later, that included a discussion of the use of hypnotism in warfare. In his opinion, one in five adult humans are capable of being placed in a trance so deep that they will have no memory of it. They could be hypnotized secretly by using a disguised technique, and given a post-hypnotic suggestion. Estabrooks suggested that a dual personality could be constructed with hypnosis, thereby creating the perfect double agent with an unshakable cover.

Estabrooks' theories regarding hypnosis are disputed by many experts today. Frequently the entire topic is dismissed with the notion, promoted by Martin Orne and others, that a hypnotist cannot induce a person to perform an act that this person would otherwise find objectionable. But this in itself appears to be a cover story; if the trance is deep enough, an imaginary social environment can be constructed through which an otherwise objectionable act becomes necessary and heroic. Murdering Hitler during wartime would not be considered criminal, for example. It may even be easier than this: in 1951 in Denmark, Palle Hardrup robbed a bank and killed a guard, and then claimed that hypnotist Bjorn Nielsen told him to do it. Nielsen eventually confessed that Hardrup was a test of his hypnotic techniques, which included telling Hardrup that the money from the robbery was a means to a noble end. Hardrup had become Nielsen's robot, and Nielsen was convicted.

In 1976 a book by Donald Bain titled "The Control of Candy Jones" was published by Playboy Press. This one-of-a-kind book is the story Candy Jones, who was America's leading cover girl during the forties and fifties. In 1960 Jones fell on hard times and agreed to act as a courier for the CIA. An excellent subject for hypnosis, Jones became the plaything of a CIA psychiatrist who used her to exhibit his mastery of mind-control techniques. This psychiatrist used hypnosis and drugs to develop a second personality within Jones over a period of 12 years. This second

personality took the form of a courier who could be triggered by telephone with particular sounds, and after the mission was completed and the normal personality resumed, did not remember anything.

These missions were elaborate, and frequently involved world travel to deliver messages. According to the book, Jones and other victims were once even subjected to torture at a seminar at CIA headquarters, as a means of demonstrating this psychiatrist's control over his subjects.

Jones married New York radio talk-show host Long John Nebel in 1972. An amateur hypnotist, Nebel stumbled onto her secret personality, and began unravelling the story over many subsequent sessions. Author Donald Bain, a family friend, was invited to reconstruct the story from more than 200 hours of taped sessions between Jones and Nebel. Various researchers have confirmed some pieces of the story, but Bain did not name the major CIA psychiatrist involved, nor did he name a second psychiatrist who Martin Cannon recently identified this second psychiatrist as the late William Kroger, who was an associate of Louis West, Martin Orne, and another MKULTRA veteran, H.J. Eysenck. Whatever the truth is behind Candy Jones -- and it's difficult to see the book as an elaborate hoax -- there's no question that hypnotist George Estabrooks raised issues that the CIA took seriously in secret research for at least 25 years.

The MKULTRA implementing documents specified that "additional avenues to the control of human behavior" were to include "radiation, electroshock, various fields of psychology, sociology, and anthropology, graphology, harassment substances, and paramilitary devices and materials." The word "radiation" gave the Advisory Committee on Human Radiation Experiments a reason to request a search of records on human experimentation from the CIA. Their final report, released last October, expressed dissatisfaction with the CIA's response, and recommended that the CIA get their act together so that legitimate requests can be accommodated better in the future.

One problem is the compartmentation of the CIA's record-keeping systems. Another is that the CIA immediately decided that the Committee's purview was restricted only to ionizing radiation -- the type of radiation of interest in nuclear testing, as opposed to the electromagnetic and sound waves that might be used for mind control. Finally, those documents that the CIA did release were heavily redacted. The Committee noted that they had "received numerous queries about MKULTRA and the other related programs from scholars, journalists, and citizens who have been >

ABOUT THE AUTHOR (from the back cover):

Like most young people her age, she was taught to respect authority and never to challenge it. But the events which she experienced led her eventually to a conclusion she would rather have never come to: Many doctors are inferior for one reason or another, and lacking the financial means to look for one with the knowledge necessary to help her, she had to find her own treatments. This is her story.

=====

REVIEW:

Janet Leih, the author of When Medicine Failed, is clearly a victim of the harassment type we popularly call "mind control". She has experienced voice to skull from her pillow. She has repeatedly had her medical prescriptions tampered with many times: When she starts a prescription with one new pharmacy, the first fill is OK, but every other refill has been tampered with and does not work. This continues until she has exhausted every single pharmacy in a given town or city.

But on top of this, she has had a very tough life with chronic medical conditions, requiring lots of medical treatment. When a mind control target has multiple chronic conditions, she or he gets to see the side of

medicine hidden from much of the public. Janet's story will reveal such incredible incompetence that anyone who is not also a mind control target will have extreme difficulty believing it.

Janet is an intelligent, persistent individual and has had to find her own cures for her chronic conditions for decades. If you also struggle with the medical establishment, or are interested in learning many naturopathic ways to fight some really nasty chronic conditions like parasites, this low priced book will be a great addition to your library.

The book is also an amazing human interest story of how a mind control target copes with a double barreled problem: mind control, and medical incompetence.

To give the reader of this review some idea of what Janet's battles have been like, I have written some quotes below. The "meat" of this book is the many very detailed descriptions of Janet's illnesses, and her experiments trying to cure what the doctors could not:

Pg 7: [After surgery on her left foot] "I got dressed and went down to the [hospital's] pharmacy with the prescription for the temporary supply of pain killer. I gave it to the pharmacist and sat down and waited for it to be filled. He came back and told me that he could not fill it. Still woozy from the operation, I asked him why, and he said that he just could not do it. I went back up to the ward and told the nurse what had happened. She did not offer any help. I was so weak and disoriented that I just asked for a cab to be called, and had to stop on the way home and get the larger prescription filled.

"I later complained about this to the doctor, but never received any explanation. I now believe that the pharmacist was an addict and took the medication for himself, or he was selling extra drugs on the street for ten or even a hundred times what he would get selling them to me. He knew that I had recently had surgery, and that I wouldn't be able to copy with a discrepancy like this."

Pg 11: [Clear sign of being a mind control target] "Sometime during this period, I really don't recall even what year it was, I woke up one night to see a beam of light coming up from under my covers in the area of my left foot." Pg 12: "I recall clumsily crawling to the foot of my bed, passing my fingers through the light over and over to see if it went through my fingers as it appeared to go through the bed. It did."

Pg 17: [Another clear sign of being an MC target] "We finally sold some more land, but no more had the deal been made, I was informed that I had to move because of highway improvements. I was almost inconsolable as my health had been better there than any place I had lived in my life, and it seemed that this was why I was being forced to move."

\*\* There is a LARGE section of 60 pages of letters of complaint written by Janet to a wide variety of recipients.

Pg 79: [On developing sinus problems in her late 50s] "Once again he [the doctor] seemed skeptical, but sent me home with samples. I later bought some more medicine at a different source, and it was, to my amazement, just like the samples the doctor had given me, safety sealed. I realized that the safety seals on the prescriptions I had been buying had apparently been removed."

Pg 84: [About Janet's son's epilepsy] "I have recently found out that

there is a treatment for epilepsy that actually cures it in young children, and that it has been in existence for eighty years or so, but nobody told me about it when my son was young and could possibly have been cured (cure rate is very high, way over 50%, and it is the only cure I have ever heard of.) Nobody ever referred me for my back pain, nobody ever referred me for my leg cramps, nobody ever referred me for my menstrual problems. I have to ask: What in Hell is wrong with the medical professionals? I am totally convinced that there were and are treatments for every one of those problems, yet nobody ever referred me for them. I think this is inexcusable."

Pg 84: [About doctors' failure to inform Janet of known cures] "Obviously, cures were available, but I can't understand why I had to find them out myself? If a cure was available and a physician who claims to know how to treat an illness does not help me find it, is this not a case of malpractice?"

Pg 88: "I am angry that I have spent so much time and money sitting in doctors' offices without getting any effective treatment. If they weren't able to treat my problems, and they chose not to refer me, then they were fraudulently taking my money. Nobody has ever paid ME to do nothing, and I don't think that doctors that are not able to treat patients' problems should take their money, either."

Pg 96: [About the Mayo Clinic] "I think the thing that impressed me most about the Mayo Clinic was that the doctors really listened to everything I said. There were no glazed eyes, no changed subjects, and they never questioned a thing I said. I told them the same things that I had been telling doctors for years. I was accustomed [to doctors] telling me that what I said could not possibly be true, but that never happened at the Mayo Clinic.

"Certainly, a patient deserves the right to say what they have experienced without being criticized or being called a liar."

Pg 97: [About the decades of problems Janet experienced trying to get her descriptions of her symptoms just listened to by doctors] "If nothing else, a doctor at least owes a patient the right to tell him the symptoms he or she actually had without any coaching. I have gotten the feeling that a medical professional wants me to tell them something they are familiar with to save them the inconvenience of learning something new. If a patient wants to be healed, that is impossible. By giving false symptoms, there is no possibility that the doctor will be able to cure their problems."

Pg 99: [Janet's discovery of sinus parasites - one of the most serious problems doctors will NOT treat] "I noticed something on the [nasal] tissue, and picked it up. To my amazement there was a small pink worm, around a quarter of an inch long, travelling around the white tissue." [Turned out this sinus parasite was a beetle larva.]

[...] "But as careless as my housekeeping is, I've never seen a worm in my house." [Worms planted in sinus via MC perpetrator hyperspace?]

Pg 103: [More sinus parasites discovered] "Then I sneezed in a tissue, and when I opened the tissue up, I found a small fly, still unable to fly, its wings still plastered to its body, and I realized that the specks [on the tissue also] were fly larvae hatching out in my sinus."

"Worms and now flies. My God, no wonder I had headaches."

"One morning when I irrigated my sinus, I found something that was very strange. It was triangular in shape, with rounded corners. ... An hour or two later, ... I gain blew my nose on a paper towel, and an identical triangle was blown out of my nose. I tested it and it seemed spongy.

Pg 104: [More on what she did with the triangles] "I brought it into the house and left it on the kitchen counter. I went back outside and did more chores for an hour or two, and when I came back in, the paper towel was there but the triangle was not. (!)"

"The [triangular spongy object] in my [locked] office was still there, and was subsequently sent to my doctor at the Mayo Clinic. It was never acknowledged nor explained." [The Mayo Clinic, the best there is, would not acknowledge, never mind explain, these anomalous triangular 'sponges'. Janet concluded these were tiny surgical sponges.]

Pg 105: [More anomalous objects from Janet's sinuses] "I then found two items which left me convinced of my own inability to cope. The first was a tiny stick maybe an eighth of an inch long with a cross piece or disk on top in a tissue after I'd blown my nose on it. It was hardly as thick as a fine human hair. ... [half an hour later] examining the tissue through my hobby light and magnifying glass, I found what appeared to be a tiny maze about a half inch square. It was composed of some pale grey fuzzy looking substance ... "

Pg 108: [More anomalous objects] "But when I finally got it out after irrigating one night, I was horrified at what I saw. It was about half an inch long, pure white, had crab-like appendages in front, the back was convex, and covered with scales or tiles and pointed. ... I probably had at least six of them in good enough shape to identify what they were."

Pg 111: [After difficulty getting sinus parasites properly treated] "It seems to me that rather than trying to cure my ailments, doctors are trying to manage my death to their own financial benefit."

Pg 120: [One of MANY health tips in the book] "One, Magnesium Potassium Asparate is very helpful in raising my energy level."

Pg 122: [BEFORE he could treat Janet's sinus parasites] "My doctor at the Mayo Clinic no longer saw patients." [Reminds me, Eleanor White, of the mind-control friendly psychiatrist, mind control friendly lawyer, and seniour editor of a Canadian national paper who 'no longer work in their fields' after enthusiastically offering to help in the mind control efforts to expose and stop.]

Pg 125-126: [Janet describes worms in a stool sample, in which she made SURE that one of the worms was in the sample vial sent for analysis. In spite of that very obvious indicator, the lab report came back FREE of worms! The trip had cost her over \$1,000.]

Pg 126: [Janet describes another case of this] "... and he said that when he was a boy, he had found worms in his stools and had shown his mother. His mother took him to the doctor, and they had told him about this. The doctor said this was not possible, that the boy had no worms."

Pg 127: [Janet includes an important health tip for others who may be fighting off parasites] "The book that contains the naturopathic cure for parasites is The Cure For All Cancers by Hulda Regehr Clark."

Pg 145-161: Proven helpful naturopathic recipes.

In Janet's Addendum, pages 133-143, Janet shows her excellent skill at experimenting to find her sources of electronic harassment. I have to say that Janet's electronic harassment, according to this book, hasn't progressed far enough for her to see that ultimately, the technology operates at the ESP/remote viewing/paranormal level, and that it is very clear to this "old hand" at being a mind control target that she was in fact being decoyed to believe various forms of conventional electromagnetic signals were responsible for her observations.

But I have to say, if I were the proprietor in any type of business, the insights and determination this lady has used to survive into her 60s would make her my first choice for hiring. If medical detective work and naturopathic cures are your interest, I recommend this book most heartily.

## Excerpts From an Article in Media Bypass Magazine

### May 1998 Issue - Pages 24-29

By Gerald A. Carroll

---

SITE MAINTAINER'S NOTE: This article below is written for the Media Bypass magazine. However, the most significant source for this article is the book written by Dr. Nick Begich and Jeanne Manning, titled **Angels Don't Play This HAARP**.

"HAARP" or "High Altitude Atmospheric Research Project" refers to a U.S. Government research project in which a large array of radio transmitters located in Alaska is intended, at least on the surface, to study the effects of massive, focussed, and powerful radio signals on the upper atmosphere.

What makes this project of grave concern to the victims of electronic neuro-influence weapons is that the same equipment which can do "research" can also be used to carry out widespread interference with the human nervous system. It is the threat of misuse of this powerful research station which makes this a subject for this web site.

For readers not familiar with the term "ELF", that stands for the lowest range of frequencies for either radio or acoustic signals, and extends below the human hearing range. Decades of research, well documented, have shown that the human nervous system is sensitive to frequencies in the ELF range.

Eleanor White

---

Magazine Page 27 - Subtitle: Utilization of ELF Waves

Begich, Dr. Richard Williams, and other noted researchers have noted that HAARP's space-generated extremely low frequency (ELF) waves, "reflecting" back down to earth from the ionosphere, can be utilized in many different ways, such as communicating with submarines or creating harmful biological and mental effects upon a specifically targetted population.

Recently, a Japanese cartoon show's special strobe-like effects made scores of youngsters ill when they viewed the show on Japanese television. [Name was "Pokemon". EW]

Similar ill effects can be induced with the proper application of ELF waves.

HAARP can also be utilized in a system of earth-penetrating

tomography, for locating hidden underground bunkers in enemy territory or the buried arms, survival supplies, and valuable coins buried by U.S. patriots and militias, Williams states.

The January 1996 edition of "Progressive" magazine reported that a 1995 article titled "Non-Lethal Technology and Air Power", appearing in the Air Command and Staff College's "Air Power Journal" describes how so-called "non-lethal psychotronic and electromagnetic weapons" will be used against civilians:

"In the very near future, it will become clear that non-lethal methods have applicability crossing the entire spectrum of conflict, including crime and terrorism...

"In this research paper, the authors reveal for the first time, the U.S. military is developing high-powered microwave weapons for use against human beings",

something within the capabilities of HAARP's remote transmitter in southeastern Alaska.

Such "microwave weapons are almost uniquely intrusive" (especially when they are pulsed at ELF frequencies) the article states. "They do not simply attack a person's body, they reach all the way into a person's mind... They are meant to disorient or upset mental stability".

... article continues

PLEASE FILE THIS COMPLAINT

My complaint of Judicial Misconduct indicates that misconduct of federal judges Dorina Ramos and Ricardo Hinojosa has helped perpetrators of hate crimes and electronic aggressions. The judicial misconduct, as evidenced by the federal record make possible that constitutional violations continue unaddressed and undeterred. The Complaint asks the Chief Judge of the Court to verify and consider whether Judge Ramos and Judge Hinojosa have displayed a deep-seated-favoritism to corruption and a deep-seated-antagonism to victims of constitutional violations.

Because judicial misconduct is detrimental to the public at large, anybody can file a Complaint of Judicial Misconduct based on the same evidence on the federal record. Your Complaint will help to prevent that aggressions to our constitutional rights continue unaddressed and undeterred.

A sample of a Complaint of Judicial Misconduct and copy of my Complaint are attached. Please file this complaint and ask others to do the same. If a complaint is mailed please send a courtesy copy to Jesus Mendoza Maldonado, 2202 E. 28th St Mission, Texas, 78574 or to Jesusmm7@hotmail.com God bless you.

UNITED STATES OF AMERICA  
UNITED STATES COURT OF APPEALS  
FOR THE FIFTH CIRCUIT

CLERK  
UNITED STATES COURT OF APPEALS  
FOR THE FIFTH CIRCUIT  
600 Camp St. Room 102, New Orleans, Louisiana, 70130  
504/ 310-7688

Dear Clerk:  
Enclosed for filing is a Complaint of Judicial Misconduct

Truly Yours,

---

UNITED STATES OF AMERICA  
UNITED STATES COURT OF APPEALS  
FOR THE FIFTH CIRCUIT

COMPLAINT OF JUDICIAL MISCONDUCT PURSUANT TO 28 U.S.C. 351(a).

CHIEF JUDGE: Now Comes \_\_\_\_\_ and respectfully files on this Court a Complaint of Judicial Misconduct pursuant to 28 U.S.C. 351(a), against the judges named on the Complaint of Judicial Misconduct filed on this Court by Jesus Mendoza Maldonado and which indicates that Judge Dorina Ramos and Judge Ricardo Hinojosa have engaged in conduct prejudicial to the effective and expeditious administration of the business of the courts.

For the reasons stated herein, I respectfully ask the Chief Judge of this Court that upon consideration and verifications of the facts on the federal record submit this complaint to the Judicial Council of this Court.

Respectfully Submitted, \_\_\_\_\_

Address \_\_\_\_\_

UNITED STATES OF AMERICA  
UNITED STATES COURT OF APPEALS  
FOR THE FIFTH CIRCUIT

COMPLAINT OF JUDICIAL MISCONDUCT PURSUANT TO 28 U.S.C. 351(a).

CHIEF JUDGE:

Now Comes Jesus Mendoza Maldonado and respectfully files on this Court a complaint pursuant to 28 U.S.C. 351(a), against US Magistrate Dorina Ramos and against US District Judge Ricardo Hinojosa, on the ground that evidence on the record indicate that Judge Ramos and Judge Hinojosa have engaged in conduct prejudicial to the effective and expeditious administration of the business of the courts as explained herein.

#### STATEMENT OF FACTS

1. On February 3, of 2003, I, filed Pro-se in the US District Court for the Southern District of Texas, a complaint seeking as relief an order to compel the defendant, the US Attorney General, John Ashcroft, to cease and desist from using directed electromagnetic surveillance on my family and on myself on the ground that defendant's malicious aggression has caused severe physical harm to my children and to myself, on the ground that defendant's investigation of my activities is retaliation for bringing claims of racial discrimination and fraud of federal funds against some members of the bar and of the judiciary, collectively called the "Cooley defendants."

2. US District Judge Ricardo Hinojosa referred the case to US Magistrate Judge Dorina Ramos for pretrial matters. (Jesus Mendoza Maldonado v. John Ashcroft, Case No. M-03-038).

3. On April 4, 2003, Judge Ramos reset hearing on my application for injunctive relief for April 15, 2003, impairing my ability to present testimony of lay and expert witnesses in support of my applications for immediate injunctive relief.

4. On April 7, 2003, I filed a motion to recuse judge Ramos on the ground that Judge Ramos had displayed a deep-seated favoritism, and a deep-seated antagonism while hearing a case of racial discrimination, fraud and retaliation against the Cooley defendants. (Docket No. 13).

5. During the litigation against the Cooley defendants Judge Ramos ignored conclusive evidence of the Cooley defendants' fraudulent activities within the Southern District of Texas; ignored conclusive evidence of Cooley defendants' fraudulent statements to defraud of venue Judge Ramos' court; ordered me not to file motions on the matter; severed the case when the live complaint states the elements of the conspiracy among the defendants; recommended transferring the case against the Cooley defendants to the state of Michigan without

considering evidence of my inability to travel long distances; struck from the record my motion to stay the proceedings and evidence of the injuries caused by the Cooley defendants after the case had been physically transferred to Michigan; and recommended dismissal of the complaint against the remaining defendants after Judge Ramos found lacking the elements of the conspiracy among the severed defendants. (Docket No. 36 at 5) (Maldonado v the Thomas M. Cooley Law School case # M-99-77 dockets 66, 67, 69, 70, 73, 74, 85, 88, 97, and 99).

6. Judge Ramos recused herself from the case, and referred the motion to another judge. (Docket No. 18)

7. On April 28, Judge Hinojosa denied the motion to recuse the Magistrate Judge and reassigned Judge Ramos for pretrial matters in violation of 28 U.S.C. 636(b)(3) which divests Judge Hinojosa of the power to assign a Magistrate judge any duty inconsistent with the Constitution and laws of the United States of America. (Docket No. 24).

8. On May 15, 2003, my wife, my oldest daughter, and my brother, gave testimony before Judge Ramos' court. My wife testified as to the swelling pain and suffering caused on me by exposure to electricity, and how this has affected our daily life. My wife testified to the suffering of my children when they are exposed to electromagnetic radiation inside our home. My wife testified as to how high readings on radiation meters inside our home decrease when I attempt to record the occurrence in a video camera. My brother, testified as to the pain and suffering, experienced by other persons after I moved into their place. My daughter, my wife, and my brother testified to my mental stability, and to my law-abiding conduct. (Docket No 29).

9. Without a hearing on defendant's motion to dismiss, Judge Ramos issued a Report and Recommendation dated July 15, 2003, which finds irrelevant the testimony presented in support of immediate injunctive relief, modifies the testimony given by my wife, and recommends dismissal of my applications for injunctive relief. (Docket No. 32).

10. My wife testified as to how high readings on radiation meters inside our home decrease when I attempt to record the occurrence on a video camera. The Report and Recommendation modified my wife's testimony into:

"Silvia Mendoza, who is Plaintiff's wife, testified that Plaintiff's has trouble breathing, among other things. She also testified that Plaintiff's difficulty seems to subside when he operates a camera." (Docket No. 32, at 5, Statement of Evidence, and my wife's affidavit denying giving that testimony, Docket No. 40).

2. On July 25, 2003, I filed objections to Judge Ramos' alteration of evidence, and objections to Judge's Ramos impartiality. (Docket No. 33).

3. On the Report and Recommendation to dismiss my case, Judge Ramos' claims reading pertinent documents from the litigation in the Western District of Michigan, and on the US Court of Appeals for the Sixth Circuit. (Docket No. 8 at 2, and Docket No. 32 at 3). The Report and Recommendation states, "The Sixth Circuit panel noted that there is

simply no doubt that Maldonado's discovery defaults have been willful and in bad faith." (Docket No. 32 at 3).

Pertinent documents of the litigation in the Western District of Michigan include uncontroverted evidence showing that the US district court in Michigan relied on the Cooley defendants' fraudulent statements, and declined to consider my timely motion seeking protection from defendants attempts to take advantage of my disability. Pertinent documents of the litigation in the Western District of Michigan show that without a hearing, the district court dismissed my claims against the Cooley defendants after my health condition prevented me from attending depositions. (Maldonado v, The Thomas M Cooley Law School et al, Case No. 5: 01 cv 93 Dockets 162, 163 179, 180, 184, and 185).

4. Pertinent documents of the litigation in the Western District of Michigan and in th US Court of Appeals for the Sixth Circuit include uncontroverted evidence of Cooley defendants' false statements to defraud of venue Judge Ramos court; evidence of the Cooley defendants' scheme that operates to defraud more than seventy-percent of minority law students of their federal loans while giving away law degrees to their affiliates, evidence of fraud of student money committed by the president of the law school and former Chief Justice of the Michigan Supreme Court, acting in concert with a law school board member and judge of the Michigan Court of Appeals; evidence of the Cooley defendants' participation on a federal investigation of my activities; evidence showing that the abusive active electronic aggression caused me severe physical harm; evidence in support of the legitimacy of the injuries caused by the aggression; and evidence of my mental stability. The evidence became conclusive as a mater of law when the US district court in Michigan denied Cooley defendants' motion for summary judgement and admonished the Cooley defendants for failing to engage claims and evidence of their wrongdoing, and when the Cooley defendants failed to engage specific claims of their fraudulent statements to the federal courts on their Appellee's Brief, and on their response to my Appellant's Motion for Sanctions. (Maldonado v Ashcroft, Case No. M-03 -038, docket No. 13 and Affidavit; docket No. 33 at 6-8; docket No. 36 at 5). (Maldonado v, The Thomas M Cooley Law School et al, U.S. District Court for the Western District of Michigan, Case No. 5: 01 cv 93, Docket No. 131, 139, and 142).

(Docket No. 2, Exhibit C4, Docket 27, Exhibit D1). (Maldonado v the Thomas M. Cooley Law School, US Court of Appeals for the Sixth Circuit, Case No. 02-2095).

5. At several times relevant to this case, Judge Ramos indicated on court documents that the Thomas M. Cooley Law School may be visited on the world wide web. (Docket No. 8 at 1; Docket No. 13; Docket No. 14, and Docket No. 32 at 2).

6. On July 31, 2003, Judge Hinojosa adopted the Magistrate Judge's Report and Recommendation to dismiss my claims. (Dockets No. 34, 35).

7. I filed a timely motion urging judge Hinojosa to reconsider the evidence in support of my claims of Judge Ramos' misconduct. (Docket No. 36).

8. On an Order dated November 17, 2003, Judge Hinojosa denied my motion for reconsideration. (Docket No. 37).

9. On January 15, 2004, I filed on the district court a timely notice of appeal. (Docket No. 38)

10. The appeal is based on the ground that Judge Ramos did not have jurisdiction to refer a motion to recuse after she had recused herself; on the ground that Judge Hinojosa did not have jurisdiction to deny or reverse a voluntary recusal; and on the ground that Judge Hinojosa did not have jurisdiction to adopt a Report and Recommendation to dismiss my claims when the judicial misconduct of Judge Ramos has been established as matter of law.

11. On January 23, I served on defendant and filed on the district court a Statement of the Evidence Pursuant to Fed. R. App. P. 10(c), including my wife's affidavit. My wife's affidavit denies testifying before Judge Ramos that my breathing difficulty seems to subside when I operate a camera. (Docket No. 40).

12. On February 2, 2004, my appeal was docketed in this Court. Jesus Mendoza Maldonado v. John Ashcroft, US Attorney General, Case No. 04-40095. 40). The appeal is pending before this Court.

13. The evidence in support of this complaint remains uncontroverted, while the judicial misconduct stated herein has allowed hate crimes against my children, myself, and others to continue undeterred.

#### RELIEF

For the reasons stated herein, I respectfully ask the Chief Judge of this Court that upon consideration and verifications of the facts on the federal record submit this complaint to the Judicial Council of this Court.

Respectfully submitted,

---

Jesus Mendoza Maldonado, Complainant.

Act No. 256

Public Acts of 2003

Approved by the Governor

December 28, 2003

Filed with the Secretary of State

December 29, 2003

EFFECTIVE DATE: January 1, 2004

STATE OF MICHIGAN

92ND LEGISLATURE

REGULAR SESSION OF 2003

Introduced by Reps. Nofs, Gaffney, Stakoe, Garfield, Stahl, Wenke, Van Regenmorter, Robertson, Ruth Johnson, Rocca, Howell, Taub, Caswell, Richardville, Palsrok, Caul, Hune, Newell, DeRoche, Bisbee, Middaugh, Brandenburg, Acciavatti, LaJoy, Pastor, Casperson, Tabor, Drolet, Milosch, Bieda, Lipsey, Gielegghem, Meisner, Moolenaar and Ward

## ENROLLED HOUSE BILL No. 4513

AN ACT to amend 1931 PA 328, entitled "An act to revise, consolidate, codify and add to the statutes relating to crimes; to define crimes and prescribe the penalties therefor; to provide for restitution under certain circumstances; to provide for the competency of evidence at the trial of persons accused of crime; to provide immunity from prosecution for certain witnesses appearing at such trials; and to repeal certain acts and parts of acts inconsistent with or contravening any of the provisions of this act," by amending section 200h (MCL 750.200h), as amended by 2001 PA 135.

The People of the State of Michigan enact:

Sec. 200h. As used in this chapter:

- (a) "Chemical irritant" means solid, liquid, or gas that through its chemical or physical properties, alone or in combination with 1 or more other substances, can be used to produce an irritant effect in humans, animals, or plants.
- (b) "Chemical irritant device" means a device designed or intended to release a chemical irritant.
- (c) "Computer", "computer network", and "computer system" mean those terms as defined in section 145d.
- (d) "Deliver" means that actual or constructive transfer of a substance or device from 1 person to another regardless of any agency relationship.
- (e) "For an unlawful purpose" includes, but is not limited to, having the intent to do any of the following:

(i) Frighten, terrorize, intimidate, threaten, harass, injure, or kill any person.

(ii) Damage or destroy any real or personal property without the permission of the property owner or, if the property is public property, without the permission of the governmental agency having authority over the property.

(f) "Harmful biological device" means a device designed or intended to release a harmful biological substance.

(g) "Harmful biological substance" means a bacteria, virus, or other microorganism or a toxic substance derived from or produced by an organism that can be used to cause death, injury, or disease in humans, animals, or plants.

(h) "Harmful chemical device" means a device that is designed or intended to release a harmful chemical substance.

(i) "Harmful chemical substance" means a solid, liquid, or gas that through its chemical or physical properties, alone or in combination with 1 or more other chemical substances, can be used to cause death, injury, or disease in humans, animals, or plants.

(j) "Harmful radioactive material" means material that is radioactive and that can be used to cause death, injury, or disease in humans, animals, or growing plants by its radioactivity.

(k) "Harmful electronic or electromagnetic device" means a device designed to emit or radiate or that, as a result of its design, emits or radiates an electronic or electromagnetic pulse, current, beam, signal, or microwave that is intended to cause harm to others or cause damage to, destroy, or disrupt any electronic or telecommunications system or device, including, but not limited to, a computer, computer network, or computer system.

(l) "Harmful radioactive device" means a device that is designed or intended to release a harmful radioactive material.

(m) "Imitation harmful substance or device" means a substance or device that is designed or intended to represent 1 or more of the following or that is alleged to be 1 of the following but that is not any of the following:

(i) A harmful biological device.

(ii) A harmful biological substance.

(iii) A harmful chemical device.

(iv) A harmful chemical substance.

(v) A harmful radioactive material.

(vi) A radioactive device.

(vii) A harmful electronic or electromagnetic device.

(n) "Serious impairment of a body function" means that term as defined in section 58c of the Michigan vehicle code, 1949 PA 300, MCL 257.58c.

(o) "Telecommunications system" means that term as defined in section 219a.

Enacting section 1. This amendatory act takes effect January 1, 2004.

Enacting section 2. This amendatory act does not take effect unless House Bill No. 4514 of the 92nd Legislature is enacted into law.

This act is ordered to take immediate effect.

Act No. 257

Public Acts of 2003

Approved by the Governor

December 28, 2003

Filed with the Secretary of State

December 29, 2003

EFFECTIVE DATE: January 1, 2004

STATE OF MICHIGAN

92ND LEGISLATURE

REGULAR SESSION OF 2003

Introduced by Reps. Van Regenmorter, Nofs, Howell, Caswell, Richardville, Palsrok, Caul, Hune, Newell, DeRoche, Bisbee, Middaugh, Brandenburg, Acciavatti, LaJoy, Pastor, Casperson, Tabor, Drolet, Milosch, Bieda, Lipsey, Gielegheem, Meisner, Moolenaar and Ward

## ENROLLED HOUSE BILL No. 4514

AN ACT to amend 1931 PA 328, entitled "An act to revise, consolidate, codify and add to the statutes relating to crimes; to define crimes and prescribe the penalties therefor; to provide for restitution under certain circumstances; to provide for the competency of evidence at the trial of persons accused of crime; to provide immunity from prosecution for certain witnesses appearing at such trials; and to repeal certain acts and parts of acts inconsistent with or contravening any of the provisions of this act," by amending sections 200i, 200k, 200l, 204, 207, 209, 210, 211a, and 212a (MCL 750.200i, 750.200k, 750.200l, 750.204, 750.207, 750.209, 750.210, 750.211a, and 750.212a), sections 200i and 200k as added by 1998 PA 207, section 200l as added by 2001 PA 135, sections 204 and 211a as amended by 1998 PA 206, sections 207, 209, and 210 as amended by 1998 PA 208, and section 212a as amended by 2002 PA 140, and by adding section 200m.

The People of the State of Michigan enact:

Sec. 200i. (1) A person shall not manufacture, deliver, possess, transport, place, use, or release any of the following for an unlawful purpose:

- (a) A harmful biological substance or a harmful biological device.
- (b) A harmful chemical substance or a harmful chemical device.
- (c) A harmful radioactive material or a harmful radioactive device.
- (d) A harmful electronic or electromagnetic device.

(2) A person who violates subsection (1) is guilty of a crime as follows:

(a) Except as provided in subdivisions (b) to (e), the person is guilty of a felony punishable by imprisonment for not more than 15 years or a fine of not more than \$10,000.00, or both.

(b) If the violation directly or indirectly results in property damage, the person is guilty of a felony punishable by imprisonment for not more than 20 years or a fine of not more than \$15,000.00, or both.

(c) If the violation directly or indirectly results in personal injury to another individual other than serious impairment of a body function or death, the person is guilty of a felony punishable by imprisonment for not more than 25 years or a fine of not more than \$20,000.00, or both.

(d) If the violation directly or indirectly results in serious impairment of a body function to another individual, the person is guilty of a felony punishable by imprisonment for life or any term of years or a fine of not more than \$25,000.00, or both.

(e) If the violation directly or indirectly results in the death of another individual, the person is guilty of a felony and shall be punished by imprisonment for life without eligibility for parole and may be fined not more than \$40,000.00, or both.

Sec. 200k. (1) Sections 200h to 200j do not apply to any of the following:

(a) A member of the military forces of the United States or of this state acting under a lawful order or while engaged in a lawful military activity.

(b) A law enforcement officer enforcing the laws of the United States or of this state or while engaged in a lawful law enforcement activity.

(c) A person engaged in self-defense or the lawful defense of another person.

(d) Unless acting with an unlawful purpose, a person acting within the scope of his or her employment under a rule or a permit or license of the United States or of this state.

(2) Unless acting with an unlawful purpose, a person who within the scope of his or her employment violates a rule or a provision of a permit or license issued by the United States or this state to manufacture, deliver, possess, transport, place, classify, label, use, or release a substance or device shall not be prosecuted under this chapter.

(3) This chapter does not prohibit the possession and use of a device that uses electro-muscular disruption technology as permitted under section 224a.

Sec. 200l. (1) A person shall not commit an act with the intent to cause an individual to falsely believe that the individual has been exposed to a harmful biological substance, harmful biological device, harmful chemical substance, harmful chemical device, harmful radioactive material, harmful radioactive device, or harmful electronic or electromagnetic device.

(2) A person who violates subsection (1) is guilty of a felony punishable by imprisonment for not more than 5 years or a fine of not more than \$10,000.00, or both.

Sec. 200m. A charge under or a conviction or punishment for a violation of this chapter does not prevent a person from being charged with, convicted of, or punished for any other violation of law arising from the same transaction.

Sec. 204. (1) A person shall not send or deliver to another person or cause to be taken or received by any person any kind of explosive substance or any other dangerous thing with the intent to frighten, terrorize, intimidate, threaten, harass, injure, or kill any person, or with the intent to damage or destroy any real or personal property without the permission of the property owner or, if the property is public property, without the permission of the governmental agency having authority over that property.

(2) A person who violates this section is guilty of a crime as follows:

(a) Except as otherwise provided in subdivisions (b) to (e), the person is guilty of a felony punishable by imprisonment for not more than 15 years or a fine of not more than \$10,000.00, or both.

(b) If the violation damages the property of another person, the person is guilty of a felony punishable by imprisonment for not more than 20 years or a fine of not more than \$15,000.00, or both.

(c) If the violation causes physical injury to another individual, other than serious impairment of a body function, the person is guilty of a felony punishable by imprisonment for not more than 25 years or a fine of not more than \$20,000.00, or both.

(d) If the violation causes serious impairment of a body function to another individual, the person is guilty of a felony punishable by imprisonment for life or any term of years or a fine of not more than \$25,000.00, or both.

(e) If the violation causes the death of another individual, the person is guilty of a felony and shall be imprisoned for life without eligibility for parole and may be fined not more than \$40,000.00, or both.

Sec. 207. (1) A person shall not place an explosive substance in or near any real or personal property with the intent to frighten, terrorize, intimidate, threaten, harass, injure, or kill any person, or with the intent to damage or destroy any real or personal property without the permission of the property owner or, if the property is public property, without the permission of the governmental agency having authority over that property.

(2) A person who violates this section is guilty of a crime as follows:

(a) Except as otherwise provided in subdivisions (b) to (e), the person is guilty of a felony punishable by imprisonment for not more than 15 years or a fine of not more than \$10,000.00, or both.

(b) If the violation damages the property of another person, the person is guilty of a felony punishable by imprisonment for not more than 20 years or a fine of not more than \$15,000.00, or both.

(c) If the violation causes physical injury to another individual, other than serious impairment of a body function, the person is guilty of a felony punishable by imprisonment for not more than 25 years or a fine of not more than \$20,000.00, or both.

(d) If the violation causes serious impairment of a body function to another individual, the person is guilty of a felony punishable by imprisonment for life or for any term of years or a fine of not more than \$25,000.00, or both.

(e) If the violation causes the death of another individual, the person is guilty of a felony and shall be imprisoned for life without eligibility for parole and may be fined not more than \$40,000.00, or both.

Sec. 209. (1) A person who places an offensive or injurious substance or compound in or near to any real or personal property with intent to wrongfully injure or coerce another person or to injure the property or business of another person, or to interfere with another person's use, management, conduct, or control of his or her business or property is guilty of a crime as follows:

(a) Except as otherwise provided in subdivisions (b) to (e), the person is guilty of a felony punishable by imprisonment for not more than 15 years or a fine of not more than \$10,000.00, or both.

(b) If the violation damages the property of another person, the person is guilty of a felony punishable by imprisonment for not more than 20 years or a fine of not more than \$15,000.00, or both.

(c) If the violation causes physical injury to another individual, other than serious impairment of a body function, the person is guilty of a felony punishable by imprisonment for not more than 25 years or a fine of not more than \$20,000.00, or both.

(d) If the violation causes serious impairment of a body function to another individual, the person is guilty of a felony punishable by imprisonment for life or for any term of years or a fine of not more than \$25,000.00, or both.

(e) If the violation causes the death of another individual, the person is guilty of a felony and shall be imprisoned for life without eligibility for parole and may be fined not more than \$40,000.00, or both.

(2) A person who places an offensive or injurious substance or compound in or near to any real or personal property with the intent to annoy or alarm any person is guilty of a felony punishable by imprisonment for not more than 5 years or a fine of not more than \$3,000.00, or both.

Sec. 210. (1) A person shall not carry or possess an explosive or combustible substance or a substance or compound that when combined with another substance or compound will become explosive or combustible or an article containing an explosive or combustible substance or a substance or compound that when combined with another substance or compound will become explosive or combustible, with the intent to frighten, terrorize, intimidate, threaten, harass, injure, or kill any person, or with the intent to damage or destroy any real or personal property without the permission of the property owner or, if the property is public property, without the permission of the governmental agency having authority over that property.

(2) A person who violates subsection (1) is guilty of a crime as follows:

(a) Except as provided in subdivisions (b) to (e), the person is guilty of a felony punishable by imprisonment for not more than 15 years or a fine of not more than \$10,000.00, or both.

(b) If the violation damages the property of another person, the person is guilty of a felony punishable by imprisonment for not more than 20 years or a fine of not more than \$15,000.00, or both.

(c) If the violation causes physical injury to another individual, other than serious impairment of a body function, the person is guilty of a felony punishable by imprisonment for not more than 25 years or a fine of not more than \$20,000.00, or both.

(d) If the violation causes serious impairment of a body function to another individual, the person is guilty of a felony punishable by imprisonment for life or for any term of years or a fine of not more than \$25,000.00, or both.

(e) If the violation causes the death of another individual, the person is guilty of a felony and shall be imprisoned for life without eligibility for parole and may be fined not more than \$40,000.00, or both.

Sec. 211a. (1) A person shall not manufacture, buy, sell, furnish, or have in his or her possession any device that is designed to explode or that will explode upon impact or with the application of heat or a flame, or that is highly incendiary, with the intent to frighten, terrorize, intimidate, threaten, harass, injure, or kill any person, or with the intent to damage or destroy any real or personal property without the permission of the property owner or, if the property is public property, without the permission of the governmental agency having authority over that property.

(2) A person who violates subsection (1) is guilty of a crime as follows:

(a) Except as provided in subdivisions (b) to (e), the person is guilty of a felony punishable by imprisonment for not more than 15 years or a fine of not more than \$10,000.00, or both.

(b) If the violation damages the property of another person, the person is guilty of a felony punishable by imprisonment for not more than 20 years or a fine of not more than \$15,000.00, or both.

(c) If the violation causes physical injury to another individual, other than serious impairment of a body function, the person is guilty of a felony punishable by imprisonment for not more than 25 years or a fine of not more than \$20,000.00, or both.

(d) If the violation causes serious impairment of a body function to another individual, the person is guilty of a felony punishable by imprisonment for life or any term of years or a fine of not more than \$25,000.00, or both.

(e) If the violation causes the death of another individual, the person is guilty of a felony and shall be imprisoned for life without eligibility for parole and may be fined not more than \$40,000.00, or both.

Sec. 212a. (1) If a person violates this chapter and the violation is committed in or is directed at a vulnerable target, the person is guilty of a felony punishable by imprisonment for not more than 20 years. The court may order a term of imprisonment imposed under this section to be served consecutively to the term of imprisonment for the underlying violation.

(2) As used in this section, "vulnerable target" means any of the following:

(a) A child care center or day care center as defined in section 1 of 1973 PA 116, MCL 722.111.

(b) A health care facility or agency as defined in section 20106 of the public health code, 1978 PA 368, MCL 333.20106.

(c) A building or structure open to the general public.

(d) A church, synagogue, mosque, or other place of religious worship.

(e) A public, private, denominational, or parochial school offering developmental kindergarten, kindergarten, or any grade 1 through 12.

(f) An institution of higher education.

(g) A stadium.

(h) A transportation structure or facility open to the public, including, but not limited to, a bridge, a tunnel, a public highway, or a railroad.

(i) An airport. As used in this subdivision, "airport" means that term as defined in section 2 of the aeronautics code of the state of Michigan, 1945 PA 327, MCL 259.2.

(j) Port facilities. As used in this subdivision, "port facilities" means that term as defined in section 2 of the Hertel-Law-T. Stopczynski port authority act, 1978 PA 639, MCL 120.102.

(k) A public services facility. As used in this subdivision, "public services facility" means any of the following facilities whether publicly or privately owned:

(i) A natural gas refinery, natural gas storage facility, or natural gas pipeline.

(ii) An electric, steam, gas, telephone, power, water, or pipeline facility.

(iii) A nuclear power plant, nuclear reactor facility, or nuclear waste storage facility.

(l) A petroleum refinery, petroleum storage facility, or petroleum pipeline.

(m) A vehicle, locomotive or railroad car, aircraft, or watercraft used to provide transportation services to the public or to provide for the movement of goods in commerce.

(n) A building, structure, or other facility owned or operated by the federal government, by this state, or by a political subdivision or any other instrumentality of this state or of a local unit of government.

Enacting section 1. This amendatory act takes effect January 1, 2004.

Enacting section 2. This amendatory act does not take effect unless House Bill No. 4513 of the 92nd Legislature is enacted into law.

This act is ordered to take immediate effect.

### **SUPPLEMENT**

**November 1993**

Through a mere preliminary investigative finding, only, Microwave Harassment and Mind-Control Experimentation has invited criticism in two areas in recent months; viz., (1) No substantive proof has been furnished in this document which confirms that directed-energy technologies exist; and (2) The persons whose circumstances are discussed in this publication may simply be mentally unbalanced.

In December 1992, when Microwave Harassment and Mind-Control Experimentation was published, the U.S. Government representatives routinely took the position that directed-energy technologies were nothing more than mere figments of physicists' imaginations, still on the drawing boards. Shortly following publication of this report, information concerning these technologies began to appear in some noteworthy organs as, The Wall Street Journal, Defense News, Aviation Week & Space Technology, Tactical Technology, Defense Electronics and, most recently, The Washington Post.

In a flurry of activity in these past 10 months, directed-energy- based surveillance and anti-personnel systems have suddenly leaped off of physicists' drawing boards into the world of reality, thus obviating the criticism, it would appear, that the attached publication concerns non-existent technologies.

Indeed, directed-energy technologies appear to have evolved at such a rapid rate that they are now being promoted as the "Final Solution" to crime -- preliminarily, at a classified conference sponsored by the Los Alamos National Laboratory, hosted by the John Hopkins Applied Physics, and supported by the American Defense Preparedness Association.

Clearly, given this conference, data concerning the efficacy of acoustical, how-power microwave, laser, ELF/RF weapons and "psychotronic" systems is sufficient to allow for their now being promoted as tools for law enforcement. What is note worthy in this sudden flurry of activity is that no one has bothered to ask the following very basic questions:

(1) Where is the test data being obtained?

(2) What, so far, has prevented this government and its contractors from testing these technologies on U.S. citizens under involuntary circumstances?

Absent answers to -- or government interest -- these questions; and because the symptoms experienced by those now in touch with this Project parallel those reported in the media as being the effects of directed-energy targeting, we conclude that no restraints have been placed on those charged with the development and testing of directed-energy systems; and the U.S. citizens are indeed being experimented upon under involuntary circumstances.

It is in this context that we note that Los Alamos strongly urges, in their brochure, that "industry" attend the aforementioned classified conference, since "(i)ndustry, particularly, will benefit from a more precise understanding of...operational constraints regarding [these] technologies." Perhaps "industry," as a minimum, will also be made to understand that a failure to comprehend that said constraints will ultimately lead to vigorous, civil rights-based prosecutions.

As to the alleged mental illness of the persons in touch with this Project, it should be noted that government-sponsored stalking and harassment, mind control experimentation and simple torture can indeed produce symptoms which might be regarded as a form of mental illness. Deliberate terrorization can take a toll. Mental illness caused by government-sponsored terrorization, however, does not invalidate that terrorization.

It should be noted that The American Psychiatric Association -- in its various revisions of the Diagnostic and Statistical of Mental Illness -- seems to have conveniently omitted all reference to harassment, stalking, mind-control experimentation and torture as a case for

mental illness. (The DSM is a psychiatric profession's diagnostic "bible.") The APA's refusal to acknowledge the impact of terrorization upon the human psyche, even given the publicity stemming from the Church Committee's findings in 1975, raises serious questions about the validity of psychiatry as a profession in this country, not to mention, the APA's ethical intent, in the long term.

Microwave Harassment and Mind-Control Experimentation, published in December 1992, furnishes an overview of complaints received from 25 individuals as of that date. During these 11 intervening months, the complaints received by this Project have more than tripled. While the majority of these "experimentees" reside in the United States, a number of virtually identical complaints have also been received from England, Canada and Australia. It would appear that these activities are also ongoing on the European Continent, and the former Soviet Union. Connections between this global pattern of activity and the objectives of the so-called New World Order remain to be determined.

All categories of types of complaints being received by this Project have also changed since publication of this report. Survivors of certain satanic cults (alleged to protect the interest of government and military "political satanists" in this country; former Vietnam-era "programmed assassins," prison inmates, and so-called "UFO abductees" are now reporting an array of experiences (and symptoms) which are remarkable similar to those addressed in this report. Experimental drugs, induce auditory input, vicious overt harassment, attempted psychiatric discrediting (unless the experimentee dutifully claims to be a UFO abductee), and an extremely painful array of externally-induced symptoms are included in this shared panoply of experiences.

The impression created by these burgeoning complaints is that mind-control experimentation in this country is being pursued in at least five specific areas. Evidence is more recently surfacing that unwitting government employees may qualify as yet another category of experimentee -- those employees, in particular, who are experiencing the effects of so-called "sick buildings."

It has been suggested that the long-term objective of all this experimentation is to develop a system by which all (surviving) citizens of this country can be monitored and tracked by a sophisticated, perhaps satellite-based cybernetics system. Certainly some of the research being dedicated to "mapping of the brain" shows this potential. We are in receipt of preliminary information which points to magnetic resonant imaging as being critical to process. Our information is that far too many physicians are urging patients to undergo unnecessary MRIs -- patients whose short-lived, if painful symptoms surfaced in so-called "sick buildings." We intend to look into this situation, of course.

The Electronic Surveillance Project is currently dedicated to helping victims of directed-energy harassment and experimentation to survive their respective ordeals until such time that Congress can be persuaded to intervene. We do believe that polite, precautionary comments concerning "a more precise understanding of...operational constraints" should be delegated to government agencies which have a primary role in development of these technologies.

/Original signed/ JULIANNE MCKINNEY Director, Electronic Surveillance Project

*The prospect of domination of the nation's scholars by federal employment, project allocations, and the power of money is ever present -- and is gravely to be regarded. Yet, in*

*holding scientific research and discovery in respect, as we should, we must be alert to the equal and opposite danger that public policy could itself become the captive of a scientific-technological elite.*

[President Dwight D. Eisenhower, January 17, 1961]

*"Covert actions are counterproductive and damaging to the national interest of the United States. They are inimical to the operation and effective national intelligence system, and corruptive of civil liberties, including the functioning of the judiciary and free press. Most importantly, they contradict the principles of democracy, national self-determination and international law in which the United States is publicly committed."*

[Credo of the Association of National Security Alumni]

by, Julianne McKinney Director, Electronic Surveillance Project Association of National Security Alumni December 1992

### **Whither the KGB?**

In February 1974, Georgetown University's Center for Strategic and International Studies (CSIS) hosted discussions on the plight of dissenters in the Soviet Union, and on a means by which the U.S. Government might most effectively intervene. highlights of these discussions are reported in "Understanding the Solzhenitzyn Affair: Dissent and its Control in the USSR," (CSIS, 1974).

KGB strategies were addressed in some detail during these discussions. It was noted that the KGB's success depended on the extensive use of informant networks and agent provocateurs; and, following Brezhnev's rise to power, on the use of drugs and psychiatrists for further purpose of manipulation and control. Shadowing, bugging, slandering, blacklisting and other related tactics were also cited as serving KGB purpose. Participants in the conference agreed that the KGB's obvious intent was to divide and isolate the populace, to spread fear, and to silent dissenters.

Agencies of our own government are on record as having employed precisely these same tactics on a recurrent basis. The Church and Rockefeller Committee Hearings in the mid-70's purportedly put an end to these practices. Based on recent developments, it would appear that the CIA's and FBI's Operations MKULTRA, MHCHAOS and COINTELPRO (the focus of these Senate Committee and Vice-President- level Hearings) were instead merely driven underground. We are now in contact with a total of 25 individuals, scattered throughout the United states, who firmly believe they are being harassed by agencies of the U.S. Government. Others have been brought to our attention whom we will be contacting in the

future. The majority of these individuals claim that their harassment and surveillance began in 1989.

The methods reportedly employed in these harassment campaigns bear a striking resemblance to those attributed to the CIA and FBI during Operations MKULTRA, MHCHAOS and COINTELPRO. The only difference now is that electronic harassment and experimentation also appear to be (more blatantly) involved.

The Berlin Wall is down, Communism is in the midst of a death rattle, and the KGB no longer poses the threat which purportedly served to justify the U.S. Government's resort to such operations as MKULTRA, MHCHAOS and COINTELPRO. The KGB, since 1989, has been reduced to an increasingly distant memory.

Reactivation of surveillance/harassment/mind-control operations in this country suggest that the KGB, as an institution, was never the real threat. A KGB "mentality," which is underlying pragmatic contempt for civil liberties, appears, instead, to have been the driving force behind MKULTRA, MHCHAOS and COINTELPRO, and the operations now being reported to us.

The KGB "mentality" is a matter of personal predilection, not ideology. Its objective is power and control, regardless of human cost. It is a corrupting, cancerous influence, which feeds on fear, conformity and government funding.

Four months ago, when this Project commenced, we approached these complaints of government harassment and experimentation with an admitted "high degree of caution." We are no longer skeptical. The growing numbers of independent complaints and the similarities between those complaints cannot be ignored. Under the circumstances, the KGB should be proud of itself. As a "mentality," the KGB appears to be accomplishing more in "burying this country" from within, than it could ever have hoped to have achieved as an institution. It would appear that this country has a serious problem on its hands which needs to be resolved.

Part I of this report, which is reprinted from the June-July edition of the association's publication, Unclassified, preliminarily addresses the complaints brought to our attention as of July 1992. Our objective, as noted, was to weigh the legitimacy of those complaints in terms of the directed-energy technologies reportedly involved. Part II discusses the overt and covert patterns of harassment identified as a result of our investigations, to date. A part of our objective, here, is to limit the success of such operations in the future, by according them widespread publicity.

In Part II, we do not identify individuals by name, both to honor their privacy and because our investigations have not been completed. Part II, like Part I, is a preliminary finding. Our focus is on the similarities of the complaints being received -- similarities which Federal and State legislators, the courts, the FBI, local law enforcement agencies, the medical and psychiatric professions, and organizations such as the ACLU and Amnesty International have so far chosen to ignore.

We frankly find it curious that more attention and creditability is being accorded purported victims of UFO experiences and spectral visitations, than to persons who complain of systematic harassment and experimentation by the U.S. Government, involving technologies which the U.S. Government is only now grudgingly admitting to possess. These complaints require investigation. In due course (and provided financial support is obtained), we hope to

be able to acquire the technology and supportive medical expertise to substantiate the claims being made. We also hope to alter the institutional mindset that U.S. Intelligence can be trusted. History, repeatedly, has proven otherwise.

## **PART 1 - THE PROBLEM SURFACES**

[Reprinted from the June-July 1992 edition of UNCLASSIFIED (Vol. IV, No. 3), published by The Association of National Security Alumni, Washington, D.C.]

The August-September 1991 issue of UNCLASSIFIED reviewed Hamline University's "Public Administration" report on the resolution of MKULTRA cases in 1988. Although the shocking details of medical ethics abuses by the U.S. and Canadian governments were amply detailed, Washington and Ottawa -- citing national security and government privilege -- stalled for so long that cases never came to trial. The surviving victims settled for a pittance in an out-of-court settlement.

Since no individuals or agencies were held legally accountable, the door was left open for possible resumption of similar "mind-control" activities.

In the context of that article, we mentioned briefly that some half-dozen people had contacted us with appeals for assistance in ending what they believe to be electronic harassment and mind-control experimentation, possibly involving the CIA. We decided to take a closer look at the situation.

We are now in touch with approximately a dozen individuals throughout the United States who appear to be targets of harassment and mind-control experimentation involving directed-energy technologies. [By mid-November 1992, the number had increased to 25.]

Typically, persons who complain of being "zapped by radio waves" and of "hearing voices" are stigmatized as psychotic, delusional or schizophrenic. Being mindful of this, as well as aware of the treatment accorded UFO and psychic phenomena "freaks," we approach this subject with a high degree of caution. Based on our preliminary investigation, including interviews with the affected individuals, we conclude that the matter is serious and should be pursued further.

### **The Existing Directed-Energy Arsenal**

Our first step was to determine what, if any technology exists which might be used for electronic harassment. The information was found in a "white paper" published in 1991 by the U.S. Global Strategy Council -- a Washington-based organization, under the chairmanship of Ray Cline, former Deputy Director of the CIA, who maintains very close ties with the U.S. Intelligence community. The "white paper" describes the foreign and domestic uses foreseen for laser weapons, isotropic radiators, infrasound, non-nuclear electromagnetic pulse generators, and high-powered microwave emitters.

The term, "non-lethal," used to describe this technology is misleading. The energy emitted from all of these weapons can kill people when appropriately amplified. At lower levels of amplification, they can cause extreme forms of physical discomfort and debilitation.

The Department of the Army (DA) identifies these same weapons as "non-conventional." They were so identified in an exhibit at a DA- sponsored symposium on "The Soldier As A System," in Crystal City, VA, on June 30, 1992. Beta wave incapacitators were separately mentioned during the symposium as being particularly interesting to the U.S. Marine Corps.

We discussed these "non-conventional" directed-energy weapons with Mr. Vernon Shisler, manager of the exhibit and the Army's delegate to NATO in matters pertaining to "The Soldier As A System." Mr. Shisler acknowledged not only that directed-energy weapons are in the DoD's arsenal, but also that the American soldier will remain vulnerable to their effects, should they be employed in the battlefield.

The U.S. Global Strategy Council recognizes the issue of vulnerability, as well, and urges ongoing research into effective countermeasures.

Interested readers may want to send for the U.S. Global Strategy Council's complete project proposal on this subject: (Title: Nonlethality: Development of a National Policy and Employing Nonlethal Means in a New Strategic Era, prepared by Janet Morris). A number of references in this Proposal to unidentified, elusive "enemies" of the U.S. Government and the potential domestic applications of this "non-lethal" technology invite serious consideration by the public at large.

The Council's address is 1800 K Street, N.W., Washington, D.C. 20006, (202) 466-6029.

## **BIOEFFECTS OF MICROWAVE RADIATION**

Research into biological and psychological effects of exposure to microwave radiation is voluminous. The U.S. public has been led to believe that the former Soviet Union leads in this research. The fact is, the CIA and DoD [Department of Defense] have jointly pursued precisely the same research since commencement of Project Pandora in the 1950's. The current primary users of this research appear to be the CIA, DoD, the National Security Agency (NSA) and the Department of Energy (DoE).

The Walter Reed Army Institute of Research (WRAIR) has participated in this research since Project Pandora. In 1973, WRAIR discovered that externally-induced auditory input could be achieved by means of pulsed microwave audiograms, or analogs of spoken words' sounds. The effect on the receiving end is the (schizophrenic) sensation of "hearing voices" which are no part of the recipients' own thought processes.

The experiment prompted the following comment in "The Body Electric: Electromagnetism and the Foundation of Life," by Robert O. Becker, M.D., and Gary Selden (Wm. Morrow & Company, NY, 1985): "Such a device has obvious applications in covert operations designed to drive a target crazy with 'voices' or deliver undetected instructions to a programmed assassin."

This research has continued, and the results are published in various publicly available scientific and technical journals. Interested readers might consult, for example: Lin, James C., Electromagnetic Interaction With Biological Systems (Plenum Press, NY, 1989). Professor Lin, then with the Department of Bioengineering, University of Illinois, Chicago, has published a number of books and articles on this subject. [He has more recently informed us that he had designed the experiment referred above in Dr. Becker's book.]

WRAIR has more recently been studying the biological effects of exposure to high power microwave radiation. WRAIR presented a paper on this subject to a DoD-sponsored symposium on "MW [microwave] Weapons" at the Naval Postgraduate School in Monterey, CA, in mid-1989.

A matter of interest to us is why WRAIR should be experimenting with auditory effects of pulsed microwave audiograms. Also, recent statements by an Army psychiatrist assigned to the Walter Reed Army Medical Center (WRAMC) suggest that WRAIR may be experimenting upon select psychiatric inpatients with microwaves. This, too, is a matter to us.

## **CONGRESSIONAL OVERSIGHT**

The Government's past record of abuses in the area of civil rights is well documented. Within the past 30 years alone, we have witnessed the effects of Operations MKULTRA, MHCHAOS and COINTELPRO.

Primarily because of MKULTRA, MHCHAOS and COINTELPRO, Executive Orders and implementing regulations were published which prohibited military and CIA domestic covert intelligence operations. Experiments on involuntary human subjects, and the surveillance of/collection of personal information on U.S. citizens, except under strictly regulated conditions were also prohibited.

Congressional committees were created to oversee compliance with these (quasi-) legal prohibitions. We have evidence that this is not being done. Moreover, where there are laws and, in this case, no laws enacted, there are loopholes, as well as individual and institutions who deliberately capitalize upon the existence of loopholes. Iran-Contra is one of the more blatant recent examples. Loopholes are also found in government resort to "black" intelligence and weapons programs, in the use of contractors, and in the absence of clear definitions of such terms as "national security" and "national security risk."

Executive Orders and regulations which currently limit U.S. Intelligence activities do not extend to non-intelligence government agencies or to their contractors. In fact, Executive Order 12333 specifies that government contractors do not need to know that their services support U.S. Intelligence objectives.

In its report of July 8, 1992, the Senate Subcommittee on Oversight of Government Management addresses the problem of tracking funds granted to government-contracted research and development (R&D) centers. The report notes that the problem is compounded by DoD's penchant for creating hard-to-monitor "shell" contractors as disbursement centers for funding programs.

Neither shell contractors nor their subcontractors are directly accountable to Congress. Being beyond Congressional oversight, they have the license to operate as Government surrogates in intelligence operations about which, "officially" they know nothing.

In this context, a publication disseminated at DA's "The Soldier As A System" symposium noted that the Army's Research and Technology Program sponsors 42 laboratories and R&D centers, employing approximately 10,000 scientists and engineers. The annual budget of \$1.3 billion is only a small part of overall DoD research spending.

Weapons research, which includes the development and testing of "non-lethal" weapons, is not governed by laws restricting the activities of U.S. Intelligence agencies, though it may be presumed that these agencies contribute to and benefit from such research.

## **PRELIMINARY FINDINGS**

1. The technology exists for the types of harassment and experimentation reported to us.
2. About a dozen U.S. citizens have informed us of continuing experiments with effects which directed-energy weapons are designed to produce.
3. U.S. Government-sponsored research into the bioeffects of exposure to microwave radiation is extensive and continuing.
4. The U.S. Government has a past record of having engaged in mind-control experimentation; and various agencies of the Government have a record of circumventing legal restrictions upon their activities.
5. Neither Congress nor the courts appear willing to look closely into "black" intelligence and weapons procurement programs.
6. A number of U.S. Government agencies might have interest in testing directed-energy technologies on U.S. citizens under non-clinical/non-controlled circumstances -- DoD, to test ranges and degrees of "non-lethality"; DoE, to explore "safety" limits; CIA, to test "mind-control" capabilities, and NSA, for technological refinement.

## **PART II -- OVERT AND COVERT HARASSMENT**

Since publication of the preceding article less than four months ago, the association of National Security Alumni/Electronic Surveillance Project has heard from an additional 13 individuals who report both overt harassment and a range of symptoms which coincide with the known effects of exposure to microwaves, electromagnetic/radio frequency (RF) radiation and/or infrasound.

The similarity of these symptoms will be addressed in greater detail in future Project reports. Suffice it to say, at this point, that the physical and psychological symptoms being reported to us are consistent with the effects which directed-energy weapons are designed to produce. Indeed, the numerous afflictions (or "infections") being reported appear to parallel standard torture "sequelae,"(1) (aftereffects).

### **OVERT HARASSMENT**

Overt Harassment -- which obviously is meant to be observed -- may be intended to "precondition" individuals for eventual long-term electronic harassment. Persons terrified by unexplained overt harassment are not likely to cope with the sudden onset of electronic harassment in any more reasoned fashion. This phased pattern of harassment is apparent in all of the cases now being investigated. The fact that the overt harassment continues in these cases even after the electronic targeting commences suggest that the objective is to maintain long-term extremes of stress.

Many of the overt harassment tactics discussed below are surfacing in cases which (so far) have not involved discernible forms of electronic harassment. These are cases involving so-called "whistleblowers" who, because of their inside knowledge of certain potentially newsworthy events, pose particular threats of embarrassment to the Government or to government-affiliated employers. We have noticed that electronic harassment is beginning to surface as a form of retaliation against persons who try to assist electronic "harassees." Retaliation suggests loss of control. Under these circumstances, we are not entirely confident that "whistleblowers" will continue to be exempted from this type of harassment in the long term.

The individuals now in touch with the Project describe their circumstances as involving most, if not all, of the following overt forms of harassment:

- \* Sudden, bizarrely-rude treatment, isolation and acts of harassment and vandalism by formerly friendly neighbors.
- \* Harassing telephone calls, which continue even after the targeted individual obtains new, unlisted telephone numbers.
- \* Mail interception, theft and tampering.
- \* Noise campaigns.

While unrelenting harassing telephone calls might be considered in this context, other tactics are employed. Blaring horns, whistles, sirens, garbage disposal (run concurrently in apartment settings, for excessively prolonged periods of time), and amplified transmissions of recorded "general racket" have been used on a recurrent basis under circumstances intended to persuade the individual that he or she is under surveillance.

In all of these cases, the individuals' neighbors apparently pretend to be oblivious and/or indifferent to these sudden, continuous explosions of noise.

Door slamming is also a popular pastime, particularly in apartment buildings. One individual reported that, during a peak period of harassment, the neighbor across the hall began entering and leaving his apartment every 10 minutes, slamming his door loudly on each occasion. This was a daily occurrence, encompassing periods of several hours, over a period of several months. It is apparently served to trigger a door-slamming "chain reaction" on the part of neighbors both on that floor and on the floors immediately above and below. When our contact politely asked her immediate neighbor to close her door more quietly, he slammed the door in her face. Prior to commencement of this harassment, the neighbor had apparently been quite friendly and courteous.

In another case, the primary door-slammer is an employee of Radix Systems, Inc., Rockville, MD, a DoD contractor engaged in the "super-secret" research and development of some type of electronic equipment.

Several individuals reported recurrent, loud, strange noises in their ventilation systems during the preliminary stages of their harassment. One individual complained of being recurrently awakened in the middle of the night by the sound of wires being fed into his (independent) ventilation system. On checking further, he found that a tubular construction had been built

into his vent system which appears to lead to the apartment upstairs. His upstairs neighbor is employed by the Department of Justice.

A number of individuals report that occupants of upstairs and downstairs apartments appear to follow them from room to room, tapping on the floor or engaging in other activities which appear intended to advertise an ongoing surveillance.

The Justice Department employee mentioned above went as far as to offer an unsolicited apology to her downstairs neighbor for an all- night "pacing about" in her bedroom (in the event he had happened to notice it). She claimed to be an insomniac. The pacing-about continued during her recent 36-hour absence from the area. When her contact politely alerted her to the fact that her apartment had apparently been entered during her absence, she told him, in effect, to mind his own business and then immediately complained to the building manager that he was stalking her.

She conveniently forgot to inform the building manager that she had assiduously "courted" this individual for several months, without success; and that she had been stealing his newspapers on a regular basis. (On one occasion, she handed him a week's accumulation of those papers, claiming that they had been left outside the door of another apartment. Her reason for collecting and saving the newspapers which had not been delivered to her directly is unknown.)

\* Recurrent confrontations by unusually hostile strangers; and comments by strangers which appear intended to evoke "paranoid" reactions.

In this context, we note that several individuals have reported confrontations with "homeless" people who, on closer examination, were found to be fastidiously clean, though garbed in offbeat fashion (wigs included). The same "eccentric" confronted two of the individuals in contact with us, at separate distant locations. He is reported as having feigned mental illness on both occasions, and as having apparently enjoyed creating a public scene.

\* Entries into the individual's residence, during late-night hours while he/she is sleeping, and/or during the day when the individual is elsewhere.

In virtually all such cases, the burglars leave evidence of their visits, such as relocating objects, or by committing petty and not- so=petty acts of vandalism. In two cases, the burglar's "calling card" was to slaughter caged pets, leaving the mangled carcasses inside their locked cages.

In one case, the burglar stole several pieces of correspondence and left a packet of crack cocaine behind as a "calling card." Our contact in this case -- an individual who has no criminal record and no history of experimentation with drugs -- is also being harassed (stalked) by a police officer of her community. One of his recent acts was to "frame" her with a drug possession charge. After pulling her off the road (a frequent pastime) and subjecting her to an illegal search (done, twice, so far), he conveniently managed to find a glassine packet of cocaine eight feet away, in front of his squad car. He retrieved the packet with his fingers and then charged her with Possession. Our contact found the packet of crack cocaine in her apartment shortly after this investigator reminded the attorney handling her case that the police officer had smudged his only piece of evidence with his own fingerprints. It would appear that someone is interested in correcting that police officer's oversight.

In another case, the individual reports that a tremendous amount of money has been stolen from a hiding place in her apartment, within hours after she had withdrawn the money from her bank. There was no obvious signs of entry into her apartment. The police conducted a cursory inquiry which failed to produce evidence of a crime worthy of investigation. (This case is an anomaly. Money is usually not stolen. Documents appear to be the preferred objects of theft, when theft occur.)

In another case, the burglars replaced installed lightbulbs with "exploding" bulbs, many of which were 'Made in Hungary.' The lightbulbs are now in our possession.

- \* Rapidly deteriorating health, generally of a digestive nature.

In two cases of the cases reported, massive rectal bleeding accompanied the sudden onset of sever gastrointestinal disturbances. One of these individuals abruptly terminated the deteriorative process simply by changing the locks on her door.

- \* Sleep disruption/deprivation

This is achieved by means of overt and electronic harassment. Sleep deprivation, as a tactic, invariably surfaces when the targeted individual begins exhibiting a strong emotional and irrational response to the other forms of harassment.

- \* Vandalism of privately-owned vehicles

Vehicles invite peculiarly ferocious attacks in these harassment campaigns -- slashed tires, smashed windows, oil drainage, oil contamination, destruction of electronic components and batteries (frequently involving wildly fluctuating, grounded fuel gages, often within range of weapons research facilities and/or other microwave emitters); and suddenly failed brakes and clutches (possible involving anti-traction polymers, which are also in DoD's "non-lethal" weapons arsenal). Recurrent auto thefts have also been reported.

Two individuals reported finding their oil contaminated immediately after having the oil changed by reputable mechanics. In one of these cases, the oil viscosified (thickened) while the individual was driving through a remote rural area. Her car ground to a halt. Getting the "gunk" cleaned out of her engine proved to be an expensive ordeal. (Viscosification agents are also lauded by the U.S. Global Strategy Council as serving "non-lethal" strategic purposes -- a topic discussed in Part I of this publication. Had this woman been assaulted while awaiting help in the said isolated area, the "non-lethal" attributes of viscosification agents might have required redefinition.)

Most of those who have experienced these attacks on a recurring basis have abandoned driving all together -- an objective apparently sought by their tormentors as a means of increasing their isolation.

- \* Staged accidents.

The majority of those in touch with us have reported these types of experiences. One individual, for example, was tailgated at a high rate of speed by two vehicles, while concurrently being threatened with a gun by one of the vehicles' occupants. Two others narrowly avoided what happened to be deliberately attempted collisions by drivers who

quickly sped away from the scene. One avoided three attempts in four days at being run off the road. One survived by being run off the road in two incidents within a one-week period, which resulted in "totaling" of her two vehicles. Another narrowly avoided being crushed into an expressway retaining wall, on four occasions, by an off-duty metro bus, as well as, within the same time frame, being "fried" by two suddenly-malfunctioned household appliances which subsequently repaired themselves. It should be noted that, in some of these cases, "accidental" deaths do occur. One individual in contact with us reported that his mother drove off a cliff to her death, during a period when he was researching evidence that a still-respected, high level State Department official had passed A-bomb secrets to the Soviet Government during World War II. The accident occurred shortly after her car had undergone routine maintenance. She was returning from a dental appointment when the accident occurred. Witnesses state that it appeared that she had suddenly stepped on the accelerator before running off the road. The accident served to terminate this person's research project.

We also look into the recent death of a woman in Lexington, MO, who was killed when the brakes on her tractor failed. We are informed that she had been collecting affidavits from persons who believe they are the targets of government harassment and experimentation when her "accident" occurred. We are also informed that these affidavits have disappeared.

Suicides might also qualify as "staged accidents," particularly where "plausibly deniable" government involvement has been surfaced. We are currently looking into the recent suicide of a man in Trappe, PA, who, as early as 1981, had asked the FBI and CIA to intervene in his case. We have copies of that early correspondence. The man, a former U.S. Army radar technician, had a highly technical and -- given date of his correspondence -- "precocious" grasp of the experimental objectives apparently being sought in his case. It is apparent from his correspondence that he had wanted to believe that the Soviets were conducting these experiments. The FBI and CIA, of course, did not intervene. We are informed that members of his family have also been targets of this experimentation.

\* Isolation of the individual from members of his/her family -- virtually assured when highly focused forms of electronic harassment commence.

The exception to this is when elderly parents and young children in the family become targets for apparent purposes of intimidation. This situation has been reported in eight of our cases, to date.

One individual (driven to extremes of stress by ongoing electronic harassment focusing on her children) killed one child in an effort to protect her from further pain.(2) It appears that lasers were being used in this individual's case. The targeting intensified after she called the Soviet Embassy to report the harassment, which she believed to be U.S. Government-sponsored. It became even more deadly when, in a further show of defiance, she then called the representative of the Iraqi Government to portray the U.S. Government's war in the Middle East as "hypocritical." She is now hospitalized in a midwestern facility, where, apparently, the experimentation is now continuing.

(That psychiatric facility is in a State where a disproportionate number of complaints of electronic harassment are beginning to surface. It is also within range of a U.S. Air Force base which houses a "super secret" research facility. We are currently looking into information that spouses and children of persons employed on that USAF base may be the targets of involuntary experimentation involving direct-energy weapons technologies.)

Another individual, during a telephone conversation, was told by an employee of a local power company that, if she valued the lives of her children, she would drop her public opposition to the company's installation of high power lines. Since receiving that threat, the individual's 11-year-old daughter has been reduced to extremes of pain, resulting in her recurrent hospitalization for treatment of illnesses which cannot be diagnosed. It is also apparent to this individual that her three-year-old son is on the receiving end of externally-induced auditory input. (DoE figures prominently in this case.)

- \* Progressive financial impoverishment, brought on by termination of the individual's employment, and compounded by expenses associated with the harassment.

The majority of those now in contact with the Project -- educated, white-collar professionals -- have lost their jobs. Termination of employment in many of these cases involved prefatory harassment by the employer and co-workers, which coincided with the other overt forms of harassment discussed above.

The overt harassment tactics are being described as recurrent, non- sequential and overlapping. As noted above, the overt harassment continues even after the electronic harassment commences.

## **FAILURE OF "ESTABLISHMENT" SUPPORT SYSTEMS**

Those individuals who have tried to resolve their respective situations through resort to "establishment" channels have invariably encountered the following:

- \* Apathy, indifference and/or professed helplessness on the part of members of Congress and state legislators.

- \* Dismissal and/or attempted discrediting by psychiatrists who refuse to include the terms, "government harassment," "mind-control experimentation" and "torture" in their vocabulary.

Several individuals, thinking the psychiatrists might help to alleviate the extreme stress associated with their harassment, and accorded "treatment" which clearly pointed to corporation between their psychiatrists and members of the U.S. Intelligence community. One such psychiatrist, in fact, bragged about being a member of the U.S. Intelligence "inner circle," informing our contact that her harassment was a "Pavlovian Experiment," intended to "break" her.

- \* Lack of interest, courage and/or competency in legal circles.

Few of those in contact with us have been able to acquire legal assistance -- not helped by their straitened financial circumstances. Most have found that few attorneys are willing to risk their careers by pursuing cases involving what is believed to be government-sponsored harassment or experimentation.

A few attorneys reportedly engaged in egregious violations of codes of professional conduct, in what appear to have been deliberate efforts at sabotaging our contacts' cases. Subsequent attempts by two individuals at obtaining legal redress were met with stonewalling, obstruction, and high-level denials of wrongdoing.

\* Refusal of the mass media to address this topic, except in those cases where suspected experimentees have been driven to committing murder or suicide.

Such cases (particularly where an individual has claimed to be a victim of CIA-directed mind-control involving auditory input) are treated by the press as "curiosities." An example of this is the individual who shot a Navy officer outside the Pentagon in mid- 1991.(3) He claimed to be a victim of CIA mind control, involving auditory input. According to the press, "he worried 'about being run over by trains'..." (ref. incident described in following paragraph). He is now permanently residing in a psychiatric facility. He, being institutionalized, and others in the preliminary stages of his predicament are no longer of interest to the media.

Another recent case which received short-lived press attention(4) involved a woman diagnosed as having "suffered from periods of confusion" who climbed over a fence onto a railroad track and walked into an oncoming train. Because the incident occurred in a community in which an unusually large number of mind-control experiments have been reported, we are looking into the situation. The woman was reportedly "under a physician's care" because of her "periods of confusion." A family member described the physician to this investigator as "a psychiatrist." We find that the alleged "psychiatrist" is a General Practitioner, otherwise non-accredited, practicing out of his home. We find also that the suicide may have been witnessed under peculiarly-timed circumstances by an alleged "homeless" person who has since disappeared. Needless to say, our interest has been whetted.

\* Refusal and/or inability of local police to intervene.

The tendency of local police is to dismiss an individual's complaints of government harassment as the ravings of a "fruitcake." In one case, discussed above, it is apparent that one police officer is actively cooperating in the harassment. Some police agencies, while acknowledging the reality of the situation, hesitate to intervene in cases involving what they believe to be U.S. Intelligence. On a few occasions, certain police officials did attempt to intervene, based on what they perceived to be evidence of a systematic harassment/illegal surveillance campaign. Absent a clear mandate to prosecute "stalkers" acting under the aegis of U.S. Intelligence, the police obviously had their hands tied.

\* Refusal of the FBI to intervene in any of the cases brought to our attention thus far.

FBI spokesmen do acknowledge that they have received a large number of requests for assistance from "mentally disturbed persons" who believe that they are being "zapped by radio waves" and/or "are hearing voices..." "from Mars, that is."

In one case, an FBI spokesman reacted in an angry, defensive and bizarre fashion when our contact briefly alluded to PROJECT SLAMMER as possibly being related to her surveillance. (PROJECT SLAMMER is a CIA-funded study, managed by CIA and FBI behavioral scientist, which explores the "mental make-up" of alleged security risks, along with their family members and close associates. Participants in PROJECT SLAMMER include NSA, DIA, and Army, Navy and Air Force Intelligence.)

Until PROJECT SLAMMER was mentioned, the FBI spokesman's approach in this case was to politely and redundantly explain that the law, as currently constructed, prevents the FBI's intervening in this individual's case. What she briefly pointed out that the surveillance activities might fall under the purview of PROJECT SLAMMER, the spokesman's response

was to abruptly and angrily declaim, "You don't know who is conducting that surveillance! You don't know if that is a state police surveillance!...or a local police surveillance! It could be a totally unrelated operation! You don't know who is conducting that surveillance! [etc., etc.]"

It was apparent from that response that the FBI was at least acknowledging the existence of a surveillance, if in somewhat emotional fashion. The individual in question subsequently furnished acquired evidence to the local police, who made it clear that they are no participants in the surveillance which, based on the evidence, pointedly suggest that our contact is the target.

\* Refusal of inability of the ACLU and Amnesty International to intervene.

Both organizations acknowledge receiving many complaints from persons claiming to be the targets of some type of electronic harassment. An ACLU spokes-woman characterized the complaints as appearing to be rational, except in a few cases. The complaints are not being investigated, she said, because of "limited resources." We have to wonder, of course, why the ACLU could recently find resources to defend the rights of prostitutes and the Ku Klux Klan, yet remains incapable of intervening in cases such as we are now pursuing.

Amnesty International recently informed one of our contacts that they could not intervene in her case because their focus is on the U.S. Government's treatment of prison inmates. While incarceration does appear to be one sought-for objective in this harassment/mind control experiments, we would like to think that protection by such organizations as Amnesty International can be achieved beforehand.

## **RELATED COVERT METHODOLOGIES**

The persons engaged in this harassment tend to become careless, possibly the result of arrogance born of an assumption that nobody can stop them. "Harassees" who have noted this carelessness have furnished us with the following insights into the covert side of these harassment activities.

\* Impersonation of military officers.

One individual found that her next-door neighbor had claimed to be a military intelligence officer, assigned to a space technology unit in California, on year-long "TDY" (temporary duty) in the individual's apartment building. It is subsequently determined that this alleged officer is not in fact a member of the U.S. Armed Forces; and that he had used this bogus status to acquire information from a major defense contractor. Our contact is certain that this person's apartment was used as a base of harassment operations.

\* Use of concealment devices, and emitters detected to date.

Several individuals and supportive associates report having seen some of the electronic devices being used in these harassment campaigns.

One saw electronic equipment concealed inside a false-front upright piano being moved out of her apartment building. She had previously noted that all of her surrounding neighbors had identical upright pianos in their apartments, not one of which was ever played.

Other suspected participants in the harassment may be concealing devices in oversized stereo speakers, measuring approximately 5' in height x 3'x3'. Several of our contacts have noted the presence of such speakers in adjacent dwellings.

One individual was told by a resident of her building that her upstairs neighbor has "microwave ovens" in his bedroom and livingroom, but none in the kitchen.

Another individual, while standing outside, looked in her neighbor's window to find that her bedroom appeared to be the target of a gray-colored, elongated box-like device, measuring approximately 1' in length x 5" in height (side view). A large, black-framed lens protruded from the end facing her window. The electrical cord, if any, was not visible from that vantage point. The equipment was being operated by a stranger in a three-piece suit, who appeared to be quite startled to find that he was being observed.

Another was given strong reason to believe that portable emitters are being concealed in oversized, extremely heavy, sometimes expandable "briefcases" for use in places of public assembly, such as meeting halls, auditoriums and restaurants. Smaller varieties are apparently being used on aircraft.

On a 3-hour flight, our contact noticed that the man sitting next to her seemed peculiarly intent on keeping the attache case on his lap propped open with his fingertips, while he gazed "blankly" into the distance during the entire flight. She believed that she was being electronically harassed while on a flight (a common complaint, in most of these cases now being investigated).

Our contact reports that, when they prepared to land, the man opened his attache case to hastily check his contents, thus disclosing the presence of a raised, built-in "concealment device" covering the entire bottom surface of the attache case. The low- slung, lift-off cover did not appear to be capable of concealing a laptop computer. At one point during the flight -- apparently aware that his "reverie" was inviting attention, -- the man devoted approximately ten minutes to scribbling assorted entries on a sheet of lined paper, which he had placed on top of the briefcase two hours previously. He devoted roughly ten minutes to the effort (obviously preferring a pen to a laptop computer). His attache case remained ajar during this process.(5)

One individual reports that mobile emitters may be installed in certain oversized, non-attributed medical emergency vehicles, possibly for the eventual use in civil disturbances. Her unsuccessful attempts at following the "medical emergency" vehicle which had surfaced in her case ended with a high-speed chase.

The phony military intelligence officer, when recently moving out of our contact's apartment building, was found to possess a device which resembles an oversized microwave oven, measuring approximately 4' in width x 2' in height x 2 1/2' in depth. A subsequent examination of his apartment revealed that he had tapped numerous additional lines into existing, in-house telephone and TV cables; and that he had gone to great pains to conceal a major excavation into one wall abutting the "harassee's." Judging from photographs taken immediately after this person's departure, the wiring suggests that he was hooked by modem into a computer network, and at least of some of his electronic equipment was situated in a large walk-in closet, again abutting the "harassee's."

When the alleged officer moved out, his equipment (except for the oversized "microwave oven") was packaged in boxes identifying the contents only as stereo components. During his year-long residency in this building, no sounds emanated from his apartment to indicate use of this "stereo" equipment.

\* Use of modified license plates and vehicle look-alikes.

Some individuals have noted that their neighbors' vehicles are periodically replaced (during peak periods of harassment) by others which qualify as "rough look-alikes." These tags on the latter closely resemble those on the homeowners' vehicles, with a difference being noted in only one digit or one letter. These modified plates appear to have been acquired through State DMV channels, thus suggesting government/intelligence agency involvement.

In one case, where the individual has obtained police assistance, tracking of one plate surfaced evidence of a drug connection. The plate rapidly disappeared from the vehicle in question, to be replaced by another, again bearing a one-letter modification.

\* Use of neighbors' residences as bases of operation and training.

One individual recently saw a team of "technicians" in the house behind hers -- a consequence of the team's failure to close the curtains and/or dim the lights when puttering around the kitchen at 5:00 in the morning. The three men (strangers to this individual, all stripped down to their T-shirts) behaved as if they were unaware that they were being watched. Their observer had long suspected that this house was being used as a base of electronic harassment operations. The harassment had been going on throughout the night.

To provoke a response from these men, the individual eventually commented aloud on their activities. They responded immediately by turning the lights off and switching to the use of flashlights. Why they failed to close the curtain is unknown.

This individual is working with the police in an effort at ending this surveillance and harassment, with mixed results.

\*\*\*

Another individual, paying a surprise visit to the apartment upstairs, overheard one of her own telephone conversations being played on a tape recorder inside that apartment. Lacking both a legitimate pretext to enter the apartment and the support of the building's management personnel and/or the police, she was prevented from pursuing this further. Her upstairs neighbor is purportedly employed by Stanford University Hospital, in Stanford, CA.

The target of surveillance and harassment in this case is still also trying to recover from the effects of exposure to potentially lethal doses of radiation, administered in the 1970's by a dangerously "incompetent" dentist. This might explain the involvement of alleged Stanford University Hospital personnel in her situation.

The government is on record as having experimented on unwitting U.S. citizens with radioactive materials during the 1970's (and earlier).(6) The House Subcommittee on Energy and Commerce based their investigation into this matter on a 30-year accumulation of documents maintained by the Department of Energy. Under the circumstances, it will come as

no surprise if it is ultimately found that DoE has been involved in this woman's surveillance and harassment.

\*\*\*

Another individual paid a surprise visit to the apartment immediately below hers, in the attempt to identify the source of tremendous racket in her ventilation system. Standing outside the door, she could hear an individual moving around, a short distance from the door. She also heard the sound of rustling paper and the steady, sonar-like "pinging" of some type of electronic device. In response to her repeated knockings on the door, the person inside simply stopped moving about. The sound of rustling paper (perhaps a printout of some type) and the steady "...pin-ng!...pin-ng!" sound continued. The occupant of this apartment resumed moving about only after it was (incorrectly) believed that our contact had departed the area. Typically, this situation could not be pursued further.

\*\*\*

All of those who live in apartment buildings report unusual patterns of occupancy in the apartments surrounding their own; i.e., upstairs, downstairs and on all sides. They have become quite convinced -- if only because of the highly focused nature of the systems being experienced -- that these surrounding apartments are being used as bases of operation. Perhaps this encirclement facilities studies of holographic human telemetries; or perhaps it is intended to increase the prospect of brain entrainment by electronic means ("entrainment" being one published objective sought in mind control experiments).(7)

In examining this situation more closely, a number of individuals have found that surrounding apartments are either permanently vacant, for unknown reasons, or that they have been "sub-let" by the original occupants to persons who are purportedly unknown to the buildings' management personnel. In one case, the surrounding renters all list two residences in the local telephone book. No one lives in the apartment building in question, though the address is identified as one of the renters' places of residence. One individual suspects that the original occupants of apartments surrounding hers have been simply relocated to other apartments in the same (large) building. Another suspects that an adjacent apartment, which has been permanently rented to the U.S. Government for use by "visitors" is also being used as a base of operations.

One individual found that an immediate neighbor's housemate has the same (unusual) name of a university professor who has engaged in extensive research on behalf of the government, studying the bioeffects of exposure to microwave radiation.

\* Use of informants/agents provocateurs, frequently members of the opposite sex.

As noted in the U.S. House of Representatives Committee on Interior and Insular Affairs' draft report, Alyeska Pipeline Service Company Covert Operation (July 1992), the Wackenhut Corporation's Special Investigations Division adopted this tactic when pursuing Alyeska's critics.

A number of individuals in touch with us report a range of experiences with new "friends" who -- apparently posing as confidants -- used acquired personalia to abruptly end these "friendships" under deliberately degrading and humiliating circumstances. When taken in the

context of ongoing surveillance and harassment, these exercises appear intended to heighten emotional trauma, perhaps to provoke an uncontrolled response and/or to enforce isolation.

\* Misuse of covert intelligence personnel (possible former case officers).

One individual while under contract to the U.S. Government, properly reported what he believed to be an approach by a hostile intelligence service. Within a few weeks, alleged U.S. Intelligence officers contacted this individual. In addition to questioning him about his background, these alleged intelligence officers asked that he keep in constant contact with them, particularly when planning to travel.

It soon became apparent that the alleged intelligence officers were intent only on forcing this individual to report to them as directed, and to account for his activities. He was not asked to assist the U.S. Government in any form of intelligence operation; he was not asked to execute any form of secrecy affirmation statement acknowledging the classified nature of these meetings; nor was he told why these meetings -- involving a total of seven alleged case officers -- were necessary.

When he began to balk at a continuation of this process, one of his "handlers" conveyed a threat, suggesting that his continued compliance might be "enforced." Finally, when this individual adamantly refused to cooperate further, massive overt harassment commenced and is currently ongoing.

The operation (clearly intended to bully this individual into submissive compliance for purposes which are still unknown) involved crude tactics formerly prized by the KGB.

Whether or not legitimate U.S. Intelligence case officers were involved in this activity remains to be determined. Some private firms retain former U.S. Intelligence case officers for contracting out as "security specialist." The founder and CEO of one such firm (Gerald P. Burke, The Parvus Company, Silver Spring, MD) has informed us that the activities of contract case officers are neither monitored nor subjected to formal restraint.

\* Use of psychotropic drugs by cooperative physicians.

Shortly after resigning from the CIA, one of our contacts underwent a range of experiences which suggested that she had been massively drugged. One of the alleged perpetrators, whom we have met, alternately claims to be employed by NASA and/or by a firm in Miami, handling, "microwave equipment." NASA has no record of this person under the name furnished.

The "experimentee" ultimately sought the assistance of a psychiatrist, whom her parents had located as a referral. The psychiatrist treated her reported "flashbacks" by immediately placing her on a regimen of Stelazine, which quickly aggravated her condition. He also made comments to this individual which suggested that he had a foreknowledge of her situation, and that he was cooperating with U.S. Intelligence. On one occasion the psychiatrist intimated that our contact might be employable as an assassin; and he repeatedly urged her to move to Great Britain where, he said, she would be put in touch with an unidentified Member of Parliament.

Interestingly, he had a tremendous computer system in his office suite, which he explained as being connected by modem into a national level system which, in turn, connected to private residences. When showing her this equipment, the psychiatrist informed our contact that she had been "CAT scanned," pointing out that she was the subject of a vast series of "A's" and "B's" being printed out by one of the many terminals at his disposal.

Our contact also found out that this psychiatrist kept a military uniform in his closet which bore the rank and insignia of a three- star general.

The individual ultimately sought psychiatric support elsewhere. Her new psychiatrist, formerly employed by DoD, immediately put her on a regimen of Haladol Decanoate, Klonopin and Benzatropine. The combined effect of these drugs was loss of memory and a state of mind which, under other circumstances, might be diagnosed as Depersonalization or Dissociative Disorder. All three drugs proved to be highly addictive. Our contact, since severing contact with this psychiatrist as well, has finally successfully overcome the addiction.

\*\*\*

Another individual -- the one whose psychiatrist had informed her of her role in a "Pavlovian Experiment" -- was subjected to attempted drugging by Trazodone, one of the strongest sedatives on the market. The psychiatrist in question kept no record of the individual's outpatient visits, nor of her Trazodone prescriptions. Being unaware that the individual was not adhering to his regimen, the psychiatrist urged her rapidly to increase her dosage, renewing her 30-day prescription after a period of only 11 days.

Though aware of her heart condition, he failed to monitor her condition, dismissing her complaints of (electronically-induced) pains in her heart as inconsequential. Trazodone is known to aggravate heart conditions. Perhaps the intent was to have this individual succumb to a "heart attack" as the result of "imagined" government harassment. Neither the appropriate psychiatric society nor the FBI would touch this case.

\*\*\*

Another individual (a clear target of retaliation) sought medical assistance to counter sudden massive headaches and recurrent attacks of vomiting -- effects which can be produced by infrasound. The physician to whom she was referred (an alleged specialist in Internal Medicine) placed her on a combination of Compazine and Xanax, prescribing dosages which the Physicians' Desk Reference warns against.

Compazine, in addition to being an anti-emetic, is used in the treatment of psychotic disorders. It can also cause dyskinesia, an irreversible syndrome involving loss of motor control. Xanax is known to induce vomiting. Both drugs can lead to dependence and a worsening of the patient's condition. The effects of all such drugs, in fact, can be mutated in high-energy fields, thus increasing the likelihood of adverse reactions.

We have recently found that this prescribing "physician" is not licensed to practice medicine in the State of which she has been practicing since at least 1989.

Our contact, being concerned about the long-term effects of Xanax and Compazine, consulted another physician in the same office. The physician immediately prescribed Prozac, failing to concurrently recommend that her patient discontinue the Xanax and Compazine prescriptions. When our contact refused to take any psychotropic drugs, the doctor became upset and asked, "Don't you want to get well?"

This second physician is a licensed practitioner in Internal Medicine, with no background in Psychiatry. We also found that she apparently refers her patients to yet a third physician in the office who claims to be a psychiatrist. She, too, is licensed to practice Internal Medicine, only. Her receptionist described this third physician as having a psychiatric "sub-specialty," ... "as an internist." The receptionist also informed us that this internist "is treating a number of psychiatric patients."

On pursuing this further, we find that these physicians are in a small "medicine group" which is not listed by specialty in standard regional telephone directories. The group bears the same name as one of the CIA's most infamous recruited physicians (perhaps best described as "the Mengele of MKULTRA").

The doctor's offices are located in a bank building, which, we have found, is a favored hiding place for security-oriented business and government agencies. Two computer firms, co-located with an attorney who represents "Island Resort Development, Ltd.," are situated immediately beneath the doctors' offices. The prospect of finding island resort developments within 500 miles of this attorney's office is limited.

Our contact, being apprised of these findings, is seeking medical help elsewhere.

\*\*\*

In two of our cases, urologist took it upon themselves to play the role of "psychiatrist"; i.e., they rendered psychiatric diagnoses and prescribed psychotropic drugs. One of these urologist, employed by The Mayo Clinic in Rochester, MN, prescribed Haldol, informing our contact that he perceived her to be "psychotic." His efforts at getting a Clinic psychiatrist to confirm this diagnosis were unsuccessful. The psychiatrist, apparently a rare individual who subscribes to codes of medical ethics, found nothing wrong with this woman, even given the nature of her complaints. The urologist's response to this was to issue his own Haldol prescription. Sensing that something was amiss, the woman refused to have the prescription filled.

\*\*\*

Yet another individual ended up in the hands of a psychiatrist who, as a purported means of ending the stress associated with her harassment, offered to put her under hypnosis. She described the hypnotic state as "equivalent to floating" and (based on her overall experiences with this physician) has not ruled out the possibility that drugs may have been surreptitiously administered. The psychiatrist claimed to be interested in psychic phenomena and demonstrated an apparently remarkable ability to read the individual's mind.

While in her "hypnotic state, the individual felt like a sharp, painful pressure inside her nose, as if something were being shoved up her nostrils to the sinus cavities. She awoke to find

blood pouring from her nostrils. The psychiatrist casually dismissed this as owing to a probable cold.

Shortly after the experience, the individual began to hear loud tones in her head, followed in due course by auditory input. Brain scans have failed to yield evidence of an implant device. (We have recommended that she undergo a scan by means of a suitably adapted non-linear junction detector, as a preliminary.) Suffice to say, this individual has severed contact with the psychiatrist and is continuing to cope with the ongoing overt electronic harassment by other non-medical means.

\* Use of medical implant devices.

The situation just described is not our first encounter with the apparent use of medical implant devices in these harassment/mind- control cases. Another of our contacts began receiving auditory input roughly 15 years after she had a 4 mm. cochlear implants placed in her ears. The "voices" claimed to be affiliated with the CIA and, among other things, expressed intentions of running this woman as an agent in denied areas by "piggybacking" their audio transmissions onto standard FM frequencies to avoid detection.

We have been unable to locate the surgeon who implanted these devices, though we do have a copy of his operative reports. A recent CAT scan of this individual failed to disclose the presence of the cochlear implants.

Several years ago, the individual (now a psychologist) applied for a position with the CIA. She was interviewed by four Langley- based, purported psychologist, who allegedly informed her that her job would involve the assessments of certain criminals for purposes of weighing their purposes for loyalty to this agency.

During these interviews, she was told to read several books by such persons as Philip Agee, Stansfield Turner and Ralph McGehee, all of whom were unknown to her. The alleged psychologist claimed that these authors had described the CIA "as it really is." Our contact was not asked to execute a security affirmation statement acknowledging the classified nature of these proceedings.

The unconventional manner of this interview process suggested that this individual was being toyed with, for reason which remain to be determined. She did not get the job and in fact more recently lost her job with a state penitentiary. She was fired on the recommendation of the prison's psychiatrist, because of her insistence that she is receiving auditory input from the CIA personnel who persist in feeding her classified information.

Interestingly, though this individual was deemed unfit to function as a psychologist in the penitentiary system, the State rehired her, assigning her to a mental health facility where, apparently, she is to develop a behavioral modification program for retarded adults with a diagnosed mental illness.

This individual claimed to be receiving and responding to externally-induced auditory "advice" while working with prison inmates. It may be presumed that the process will continue. Under the circumstances, we have to wonder if this case qualifies as a benchmark in mind-control experimentation; i.e., employment of a mind-controlled psychologist to run the

equivalent of mind-control experiments on mentally-ill retarded adults. We will continue to monitor this situation.

\*\*\*

The individual we previously identified as having challenged a local power company also appears to have been "tagged" by some type of implant device. During a recent symposium, she was approached by a man whose business card identifies him as "Program Manager, Electromagnetic Radiation Division," DoE. His approach was suitably sympathetic. Our contact ultimately accepted this man's invitation to continue discussing their common ranges of interest in his hotel room. During this meeting, she accepted the offer of a drink, blacked out after consuming it, and woke up four hours later, still in this man's hotel room, to find that the back of her ear had been punctured and was bleeding. There was no evidence of sexual assault. The man glibly evaded this woman's request for an explanation. She has since found two adjacent puncture marks behind her ear, which are not healing properly, and between which she can feel the presence of a "wire" measuring approximately 1/3" in length. We are pursuing this further.

The said DoE Project Manager has more recently initiated contact with yet another activist in touch with this Association. His call was unsolicited. He apparently wanted to know to know if this woman would be attending an upcoming conference. We have warned the individual to avoid any form of private meeting with the said Project Manager.

\*\*\*

To date, we are aware of three cases involving clandestine behavior on the part of alleged DoE employees. The CIA figures prominently (if peculiarly) in the majority of the other cases. Two of those have been discussed above.

In another, also involving auditory input, the individual is certain that the current Director of Central Intelligence (DCI) participated in the "voice transmission" process on at least one occasion. She claims to have recognized his voice. When she commented aloud on the DCI's perceived involvement in this experimentation, the "voice" responded with stammered and stammered denials. We are told that this particular "voice" has not been heard from since.

\*\*\*

In yet another case involving auditory input, the individual has allegedly been informed by her "voices" that the technologies being used against her were stolen from the CIA by a maverick employee, whose group is not targeting her from a distance of 2,000 miles. She reported this to the DCI's office and was allegedly informed by the Deputy DCI that she will be awarded millions of dollars if she can produce the equipment and any of the personnel involved in her harassment.

One usually-candid CIA spokesman also allegedly informed this individual that, "while the CIA does not deny having this equipment," they "do not use it in this country." Perhaps this explains why a number of our contacts have also been electronically harassed while traveling overseas.

This woman has also been repeatedly assured by CIA DDS (security) personnel of the Agency's sincere concern for her welfare. During a recent telephone conversation with that Office, we confirmed that she is indeed known to the CIA. Based on this, we asked that the Agency "put its money where its mouth is," so to speak, by conducting a long-term electronic sweep of this individual's premises. That was two months ago. No sweep has been conducted, though CIA spokesmen continue to "sympathize" with her predicament.

\*\*\*

Another individual, a target of harassment and experimentation since 1952 (apparently singled out because of his student activism while at Penn State University) began hearing "voices" after having most of his teeth capped. He has been more recently been informed by his "handlers" that implanted devices are no longer used for purposes of inducing auditory input. No explanation was offered. He was quite visibly surprised when informed by this investigator that auditory input can be achieved solely by means of pulsed microwave audiograms (discussed in Part I of this report).

The individual's "handlers" allegedly have also stated that their experiments on U.S. citizens are in pursuit of a variety of objectives; viz., (1) develop an effective means for creating a perfect, "robotized" soldier;

(2) alter individual sexual performances, such as by turning heterosexuals into homosexuals (they allegedly claim to be having "difficulties" reversing the process); and

(3) enhance and destroy levels of academic achievement, at will, such as by degrading the performance of otherwise brilliant students, and by drastically improving the performance of poor students.

Given the technology at the government's disposal and a predisposition of the part of certain governmental agencies to "play God" in experimental fashion with citizens' lives, these purported projects do not come across as being totally far-fetched.

\*\*\*

Another case involves a woman whose experiences suggest that she, too, is an MKULTRA experimentee being kept on the books, so to speak. The woman, apparently a "pet" experimentee, found herself being introduced to a wide array of prominent individuals whose connections with the CIA she believed to be quite apparent. One of those she states, was Robert Jay Lifton, a well-known author and expert on brainwashing, whose books include "The Nazi Doctors: Medical Killing and the Psychology of Genocide" (Basic Books, 1986).

Her experiences included a voluntary ("referral") admission to Hollywood Hospital, Vancouver, British Columbia, Canada, in 1973, during an era when MKULTRA experiments at the Alan Memorial Institute, McGill University, Montreal, Canada, were only beginning to capture the attention of the U.S. Senate.(8)

More recently, in 1990, she was transported to New York University's Cameron Medical Center, in Westchester, NY (under circumstance which qualify as an abduction), where she was forcibly wrestled to the ground by approximately six Center staffers and forcibly confined for a period of approximately three weeks. She was neither psychiatrically counseled

nor formally tested while in that facility. The psychiatrists assigned to her case appeared more intent on forcing her to take a combination of neuroleptic drugs, to include Haldol, Navane, and Cogentin. (Haldol and Navane can cause tardive dyskinesia.) She resisted those attempts.

A court ultimately ordered this woman released from the Center, stipulating that she was not to be administered drugs. On subsequently acquiring her medical records, under conditions which prevented censoring or doctoring those records, she found that her psychiatrists had planned to inject her with drugs (in defiance of the court order) on the day of her release. As luck would have it, she was released a day early.

The woman states that she has met Budd Hopkins, of the Intruders Foundation, and that she had a long-term, confiding relationship with John E. Mack, Professor of Psychiatry, Harvard Medical School, and the founding Director of the Center for Psychological Studies in the Nuclear Age (previously named, Research Program for the Study of Human Continuity; and, still previously, rumored to have cooperated with the CIA in studies of "human ecology").

At one point in their relationship, Professor Mack apparently accompanied this woman to a "support group" meeting of UFO abductees, who, she observed bemusedly, "spent their time comparing [extraterrestrially] implanted devices." Professor Mack is on record as promoting the perception that UFO abductions are legitimate.(9)

We frankly doubt that extraterrestrials who have a means to commute intergalactically would stoop to implanting comparatively devices in human beings. However, should it be proved that the psychiatrist, surgeon and DoE Project Manager above are extraterrestrials posing as humans, we will be happy to weigh that information. If it is similarly established to the vehicular "abduction" of the woman discussed above was the work of an extraterrestrial named Kaplan, who was posing as a human with Cornell Medical Center connections, we will be happy to ponder that as well.

In the meantime, it would seem reasonable that the government would want the public to believe that extraterrestrial visitations are on the upswing. Mind-altering drugs, externally-induced auditory input, holographic projections (also a DoD capability),(10) appropriately focused directed-energy targeting, device implantations, special effects and abductions are all within this government's capabilities and can be used for purposes of creating illusions of UFO experiences. Persons not cognizant of this might be more inclined to fall for the UFO mythologies now being officially "legitimized."

\*\*\*

Other cases, possibly involving U.S. Navy Intelligence, NSA, the Drug Enforcement Agency (DEA) and, peripherally, members of the former Soviet Bloc intelligence services will be discussed in further reports.

## **HARASSMENT OBJECTIVES**

In his book, *Psychiatry and the CIA: Victims of Mind Control*, Dr. Harvey Weinstein quotes the following passage from a book entitled, *A battle for the Mind: A Physiology in Conversion and Brainwashing*, by William Sergeant (Greenwood Press, Westport, CT, 1957):

"By increasing the prolonged stress in various ways, or inducing physical debilitation, a more thorough alteration of the person's thinking process may be achieved. ...If the stress or physical debilitation, or both, are carried one stage further, it may happen that patterns of thought and behavior, especially those of recent acquisition, become disrupted. New patterns can then be substituted, or suppressed patterns allowed to reassert themselves; or the subject might begin to think or act in ways precisely contradict his former ones.

"...If a complete sudden collapse can be produced by prolonging or intensifying emotional stress, the cortical slate may be wiped clean temporarily of its more recently implanted patterns of behavior, perhaps allowing others to be substituted more easily."

Dr. Weinstein then comments: "The parallel with [Dr. Ewen] Cameron's theory of differential amnesia is striking, and the relationship to brainwashing is abundantly clear." (11) Dr. Cameron, employed by McGill University's Allan Memorial Institute in Montreal, Quebec, Canada, between 1943 and 1964, conducted brainwashing experiments upon select, non-volunteer psychiatric patients on behalf of the CIA. Dr. Weinstein's father was one of Cameron's victims.

Sergeant's theorems and Cameron's associated experimental findings appear to be the driving force behind the harassment and experimentation now being reported to this Association. All of these individuals are being subjected to a series of overlapping circumstances which apparently are meant to induce and sustain long-term extremes of stress. All of these individuals have been effectively isolated. Unethical psychiatrists and physicians are involved in the majority of these cases. Mind-altering prescription drugs are being used for clearly non-therapeutic purposes. Evidence of LSD use is also beginning to surface (one of Cameron's favored mind-altering substances). And "psychic driving" techniques -- Cameron's pet brainwashing method -- are involved in all these cases, to a much greater and more potentially effective degree where auditory input is involved.

The long-term objectives of these harassment and experimentation campaigns appear to be quite fundamental; viz.,

(1) induce a sense of perverted "loyalty" toward the very agencies engaged in the individual's harassment, to confuse his or her priorities where the possibility of obtaining legal redress might be concerned;

(2) redirect the targeted individual's feelings of hopelessness, anger and frustration toward racial and ethnic groups, and toward select, prominent political figures, to include the President of the United States; and

(3) force the individual to commit an act of violence, whether suicide or murder, under conditions which he can be plausibly denied by the government.

An operation's ultimate success apparently hangs on this latter objective. We have successfully obstructed this process in a number of cases now being investigated.

## **THE "STALKER" PHENOMENON**

In recent weeks, considerable publicity has been given the trauma of the victim's of "stalkers" (persons who obsessively surveil, harass and, in some cases, kill targeted individuals for

assorted, unfathomable reasons). Movie stars that have been stalked recurrently make the news. Stalking, as a problem, is in fact becoming widespread, to a point where, in some States, the activity has finally been specifically proscribed by law.

The individuals in contact with our Association are reporting the same terrifying ranges of experiences as are now being reported by the press on behalf of other victims stalkers. The only difference in the cases reported to us is that the stalkers operate in groups over extremely long periods of time, and (it would appear) with the blessings of certain agencies of the U.S. Government. The laws being passes to protect victims of stalkers are clearly being selectively applied. We hope to put an end to this situation; that is, in addition to achieving the objects discussed above.

It should be noted that the FBI, though unwilling to intervene in the cases described above recently intervened on a massive scale to protect Joy Silverman, a Bush-appointed trustee of the J.F. Kennedy Center for the Performing Arts, from the ardent "stalkings" of her estranged paramour, Sol Wachtler, Chief Justice, Court of Appeals in the State of New York.(12)

Wachtler had apparently threatened to kidnap Silverman's daughter if not paid \$20,000. Since no kidnapping had occurred, the case qualified merely as an attempted extortion, a question arises as to why the New York State Police could not have handled this investigation. Mr. Silverman resides in New York.

It would appear that the FBI devoted more than 100 agents and technicians to the effort, resolving the case within approximately 30 days. On November 7, 1992, the day of his arrest, Wachtler ran a gauntlet of 80 FBI special agents on the Long Island Expressway. Apparently the FBI does not have enough to do, if staking out a lone stalker is their top priority. We have to wonder, of course, if the FBI's massive response was prompted by what was perceived to be Wachtler's usurpation of governmental stalking prerogatives.

Mrs. Silverman's \$300,000 donations to Republican Party causes could be considered a basis for the FBI's solicitous concern for her welfare. It would appear, under the circumstances, that the "stalking victims" discussed above -- being by now poverty-stricken-- should abandon all hope of FBI intervention in their respective situations. FBI protection appears to have a price tag, which not one of our contacts can afford.

(5) Jane's Security and Co-In [Counter-Insurgency] Equipment, (Surrey, UK, 1991-92), as a preliminary source, contains a number of references to attache-case concealment devices, for use in surveillance/communications operations. The electronic components are built into the bottom interior of these cases. Obviously the man just described could not have carried a "microcircuitried" attache case aboard a U.S. airliner without first clearing security. We were advised by a former CIA DDS (Security) employee that credential-carrying members of U.S. Intelligence can bypass airport security checks of their carry-on luggage.

R., M.D., Physical Control of the Mind: Toward a Psychocivilized Society, Harper & Row, New York, 1969; and Hutchison, Michael, Megabrain: New Tools and Techniques for Brain Growth and Mind Expansion, Ballantine Books, New York, 1986.

(8) According to a Vancouver Sun archivist, Hollywood Hospital, Ltd. (a privately-owned institution), went out of business in 1975, two years after this woman's hospitalization and after approximately 30 years of doing business. The event coincided with findings by the U.S. Senate Church Committee concerning the CIA's brainwashing experiments under MKULTRA. Our contact also identified the Director of the Hollywood Hospital as Dr. Ross MacLean -- information also confirmed by the Vancouver Sun. Nothing in these records, copies of which are being obtained, points to CIA involvement with the hospital. Perhaps a portion of history has been overlooked. Cornell Medical Center's role in MKULTRA is a matter of public record. (See, for example, Thomas, Gordon, Journey Into Madness: The True Story of the CIA Mind Control and Medical Abuse, Bantam Books, New York, 1989).

## Microwave News Clippings

**courtesy Paul Schaefer of Ground Zero Club**

1. "Microwave Weapons" MICROWAVE NEWS May/June 1998

Lawsuit charges illegal experiments... On April 15, the International Committee on Offensive Microwave Weapons charges in federal court in Washington that the Department of Defense and the CIA have conducted "classified research on human subjects without their informed consent", in efforts to develop weapons using EMFs, lasers, microwaves, and sound waves.

The lawsuit cites an article by retired Lt. Col. Timothy L. Thomas in the spring 1998 issue of PARAMETERS, the journal of the U.S. Army War College. The article, [The Mind Has No Firewall](#) appears in a section on "Future Land Warfare". The committee, headed by Harlan Girard of Philadelphia, asks for an injunction to end the alleged illegal experiments.

2. "Microwave Weapons" MICROWAVE NEWS March/April 1998

Information Warfare...The U.S. Air Force (USAF) has mounted high-power microwave generators on air-launched cruise missiles to test their usefulness in waging computer warfare, reports Aviation Week in it's January 19, 1998 issue. The tests were somewhat successful, although there were problems with range and focus, according to the magazine which has excellent sources at the Pentagon. But the information wars of the future will involve more than zapping computers. USAF GENERAL JOHN JUMPER PREDICTS THAT THE MILITARY WILL ["WILL" - WHAT A LAUGH! E.W.] THE TOOLS TO MAKE POTENTIAL ENEMIES SEE, HEAR, AND BELIEVE THINGS THAT DO NOT EXIST, according to a follow up in the March 9 issue. That same idea was contained in a 15-volume study by the USAF Scientific Advisory Board, issued in 1996, on how to maintain U.S. air and space superiority on the battlefields of the 21st century. (See MWN J/F 1997)

**Another Look at the Milgram  
Obedience Studies:  
The Role of the Graded Series of Shocks**

Steven J. Gilbert  
State University College  
Oneonta, NY

*Milgram's (1963, 1965a, 1965b) incremental shock procedure for quantifying obedience may be partly responsible for the high levels of obedience obtained. The innocuous beginning of the shock sequence (low voltage, no negative feedback) may elicit compliance before the frightening implications of the procedure are clear, and the gradual escalation in shock intensity may deprive subjects of a qualitative breakpoint needed to justify changing from obedience to disobedience. Parallels between the incremental shock and the 'foot-in-the-door' (Freedman & Fraser, 1966) techniques for obtaining compliance are discussed.*

Milgram's (1963) original obedience study is, perhaps, the best known product of experimental social psychology. Who among us was not surprised and sobered to learn that 65% of his subjects delivered the full series of painful and escalating shocks to an innocent partner? Milgram painted an unforgettable picture of a psychic battle raging between the subject's compulsion to obey the directives of a legitimate authority, and his impulse to stop hurting the victim he has been ordered to punish.

Milgram's study was actually one in a series of experiments (Milgram, 1963, 1965a, 1965b, 1974) designed to "examine the situational variables responsible for the elicitation of obedience" (Milgram, 1963, p. 73). A constant feature of these studies was the use of a shock generator containing 30 switches, each ostensibly delivering 15 more volts of shock than the one before. All subjects were instructed to deliver the next in the graded series of shocks whenever the learner made an error. This arrangement was chosen in part because it allowed a quantitative measure of the dependent variables 30-point response scale in which "maximum level of shock delivered" was taken as a measure of the construct "level of obedience."

The graded shock board also facilitated the fashioning of independent variable manipulations. By requiring the subject to deliver *increasing* levels of shock, Milgram was able to credibly attach increasingly negative and extreme reactions from the victim to successive shock administrations by the subject. Had all the shocks been ostensibly equal in

intensity (and presumed painfulness), such a manipulation would have been far less convincing.

In his original pilot work, Milgram's subjects received no feedback from the victim. This situation produced virtually perfect obedience (Milgram, 1965b). The surprising results led Milgram to devise a number of experimental conditions in which he varied the level of "immediacy" of the victim—the extent to which the pain, potential injury, and unwillingness of the victim to continue receiving shock were made obvious to the subject. Milgram hypothesized that the sooner a subject received such negative feedback from the victim (that is, the earlier in the shock series), and the "psychologically closer" that the feedback brought the subject to the victim's pain, the less likely the subject would be to show complete obedience, and the sooner he would show disobedience. The results of these studies clearly supported this hypothesis (Milgram, 1965b).

It is important to note, however, that even in the condition involving the greatest immediacy (Touch

Proximity), one in which subjects had to force the hand of the learner directly onto a shock plate, fully 30% of the subjects persevered through the entire series of shocks. The average intensity of shock that subjects chose to deliver in this condition was 270 volts (the eighteenth shock), considerably beyond the point at which the learner first declared the shocks to be painful, began emitting loud groans, and started begging to be let out of the experiment, and just at the point of the victim's first horrible "agonized scream."

The results suggest that while the immediacy experiments shed light on factors which quicken disobedience in Milgram's experimental situation, they do not explain the power of the situation itself to produce obedience, and to maintain it in the face of powerful contravening forces. It can be hypothesized that this power largely resides in one of the features of Milgram's paradigm which he did not vary—the graduated shock procedure which stands at the heart of all of his obedience experiments.

In light of contemporary ethical standards, an experimental demonstration of the role of the graduated shock procedure in producing obedience is unlikely, and probably undesirable. However, other lines of evidence can be pursued. For example, the unique capacity of this procedure to elicit obedience can be highlighted in a hypothetical experiment. Imagine an alternative design, in which there are no gradations of shock (or obedience). After receiving considerable word association training from the subject, the learner is given a major test, and fails. The subject must now deliver one "extremely dangerous" shock of 450 volts, 10 times the voltage of the sample shock which all subjects in these experiments receive. Do 65% of these subjects deliver the 450 volt shock, as in the 1963 experiment? Or 100%, as in the earlier pilot studies?

My speculation is that fewer subjects would obey, because obedience would entail a single, clear, and strongly contra-attitudinal act. Delivering this shock would be inconsistent with and qualitatively different from anything the subject is likely to have done before, and *recognized as such by the subject*. Indeed, anticipating that the learner might fail, and that this exigency would require the administration of a single, horribly painful, and possibly dangerous shock, it is probable that many subjects would refuse to begin the teaching session at all.

The graduated shock method regularly used by Milgram avoids a single, explicit confrontation of values. Instead, the subject is carefully shaped into obedience. Indeed, the first step-

delivering a small shock after a foolish mistake by the learner-may not feel particularly repugnant to subjects, because the implications of the act are unclear to them. As they press the first switch, they may not anticipate that the learner will do badly enough to require many more shocks, or that one shock will seem to "occasion" the next, or that delivering a few shocks will feel so much like publicly declaring acquiescence to the requirements of the experiment, or that such an apparent declaration will feel so personally binding (though made in functional ignorance of its consequences).

Milgram aptly characterized his obedience method as one which causes the subject to become "integrated into a situation that carries its own momentum. The subject's problem ... is how to become disengaged from a situation which is moving in an altogether ugly direction" (1965b, p. 73). In essence, I have suggested that the graded shock procedure may have two important consequences: (a) it engages subjects in committing precedent-setting acts of obedience before they realize the "momentum" which the situation is capable of creating, and the "ugly direction" in which that momentum is driving them; and (b) it erects and reinforces the impression that quitting at any particular level of shock is unjustified (since consecutive shock levels differ only slightly and quantitatively). Both consequences of the graded shock procedure may conspire to deprive subjects of the credible rationale they need to quit at any given point before completing the experiment.

If the graded shock procedure is crucial in eliciting and maintaining obedience in the Milgram studies, then it follows that when disobedience does occur, it should happen most often when the learner has just received feedback from the victim suggesting that there has been some *qualitative change* in the latter's experience of the shocks. It is when the subject believes that the next shock will really hurt (rather than simply be another degree more unpleasant), or that the learner now wants to get out (rather than seeming simply a JND sorrier that he had volunteered), that subjects should refuse to deliver any more shocks.

Milgram's results appear to be consistent with this expectation (1963, 1965b). For example, in the Remote Feedback Condition (Milgram, 1963) subjects received no feedback from the victim until hearing pounding on the wall at 300 volts. None of the 40 subjects in this condition discontinued giving shocks prior to receiving feedback at the 300-volt level. Of the 14 subjects who did not show full obedience, 5 quit after the wall pounding episode-the first qualitative change in the apparent consequences of the behavior of the subject. Four subjects stopped delivering shocks after 315 volts, when they discovered that the victim would (or could) no longer give word association answers-the second qualitative change in the effect of shocking the learner. Thus, 9 of the 14 subjects (65%) who disobeyed at all, disobeyed in response to information suggesting that delivering an additional increment of shock would have qualitatively different consequences for the victim, and a qualitatively different meaning for the perpetrator.

Another line of evidence supports the contention that much of the obedience eliciting power of Milgram's experimental situation inheres in the capacity of the graded shock procedure to channel subjects' perceptions of their actions into a unidimensional series containing no decisive, quantitative break-points. Those familiar with Milgram's original report (1963) will recall that his subjects often questioned the experimenter and asked to be allowed to stop giving shocks. The procedure called for the experimenter to reply in a calm, but quietly assertive manner, with a series of "prods"-phrases such as "please continue," and "the experiment requires that you continue."

Mixon (1972) points out that the tone and content of these prods imply that the victim is not being hurt more than participants in the experiment should expect or allow. This apparent unconcern of the experimenter may serve to disqualify or supersede the warnings which appear on the shock board (such as "Danger: Severe Shock"), and the feedback coming from the victim (such as screaming, wall pounding).

Mixon's speculations appear to be consistent with the results of a roleplaying simulation of the Milgram technique which he performed (1972). Given a description closely resembling Milgram's 1963 procedure (DM-4), 50% of the participants predicted perfect obedience. In a second condition (DM-6), subjects received an identical description of Milgram's procedure, except that instead of maintaining a calm and deliberate manner, the experimenter was described as responding to the escalating levels of negative feedback emanating from the victim with signs of increasing surprise, agitation, and worry. Only 20% of the participants in this condition predicted perfect obedience.

Some of the capacity of Nixon's DM-6 condition to "release" disobedience may have emanated from the redefinition it provided of the meaning of the act of delivering the next shock. The surprise and worry shown by the experimenter may have legitimized the interpretation that a qualitative change has taken place in the meaning of the act of pressing the shock switches. The next shock now could be judged as involving more than a simple continuation of what the subject seems to have already committed himself to. Instead, it now may be viewed as sufficiently different to justify breaking the implicit agreement with the experimenter, that "I'll keep doing this (delivering escalating shocks) as long as you keep proving that I'm not being made to do something new, different, or really worse."

Milgram's graded shock method may share important features with other instances of successful persuasion and behavior change. These include systematic desensitization using an anxiety hierarchy (Wolpe & Lazarus, 1968), the "utilization" technique in hypnosis (Haley, 1963), and selling techniques involving eliciting escalating commitments to buy (Varela, 1971). On a broader scale, mechanisms akin to Milgram's use of graded shock may be frequently used by psychotherapists (Goldfried & Davison, 1976, pp. 61-64), and may have been manifest in the escalation of the Vietnam War through gradual troop increases, and tragic obedience demonstrated at Jonestown (Osherow, 1981).

Within the mainstream of experimental social psychology can be found at least one other classic study which used a compliance-inducing method resembling Milgram's graded shock technique. In the "foot-in-the-door" experiment of Freedman and Fraser (1966), women in one group were asked to allow an investigator to place a very large and ugly sign on their front lawns for a week, and 25% complied. Women in a second group were first approached with the request that they answer a few innocuous questions (virtually all complied) and then were given the sign-on-lawn request three days later. As hypothesized, compliance was significantly greater for the second group-55% of these women agreed to have the sign placed on their lawns.

The single-request condition in the Freedman and Fraser study resembles the hypothetical alternative to the Milgram graded shock method described previously. In both "one shot" methods, compliance with an experimenter's request involves a single act with obvious consequences which clearly violate values and sensibilities (ugly sign; harmful shock), and which is probably qualitatively different from anything done by the subject in the past.

The second condition of the Freedman and Fraser study resembles the graduated shock procedure used by Milgram in the obedience research. Once again, the first step toward compliance (answering a few questions) was easily obtained because the implications of the act were unclear-in fact, unknowable. Despite the large quantitative differences in the scope and costliness of the first request (answering questions) and the second (allow ugly sign to be put on lawn), they may have been perceived by the subject as two instances of the same thing. Both involve having vs. having to refuse to help a stranger who appears to be acting under credible motives. Having psychologically declared themselves "helpers of strangers asking for a legitimate favor" by complying with the first request, many subjects may not have been able to quickly and confidently find a qualitative difference between the first and second request sufficient to justify refusing the latter. Indeed, these women may have found themselves involved in "a situation that carries its own momentum." Unable to define away the essential similarity of the second request to the first, they failed to "disengage from a situation [and a sign] which was moving in an altogether ugly direction."

The parallels between the Milgram (1963) and Freedman and Fraser (1966) experiments are not discussed in 23 social psychology texts I have sampled (e.g., Aronson, 1980; Gergen & Gergen, 1981; Freedman, Sears, & Carlsmith, 1981; Shaver, 1981; Seidenberg & Snadowsky, 1978). Typically, the Freedman and Fraser experiment is explained in terms of the effect of its unique two-stage compliance method (foot-in-the-door technique) upon subjects' coding of the situation, their self-perceptions, and their resultant behavior. In contrast, discussions of the Milgram experiment ignore the role of its graduated compliance method (the finger-on-the-switch technique?) in channeling situational definitions and self-perceptions into behavioral obedience. It is hoped that textbook authors will come to recognize that explication of the role of the graduated shock method is necessary for a full appreciation of Milgram's disquieting revelations of how much and how easily obedience to authority can be obtained.

# Frisking From Afar

**Millimeter-wave camera picks up both metallic and plastic concealed handguns.**

DEERFIELD, MA-Between microwave and infrared lies the millimeter wave band. This little-heralded portion of the electromagnetic spectrum turns out to be perfect for "remote frisking." Millitech Corp. has designed a camera to accomplish just that. The idea calls for measuring the time delay and intensity of millimeter wave energy that radiates naturally. At millimeter wavelengths, people are good emitters, while metals are very poor. Dielectric objects, such as plastics, ceramics and powdered drugs, are somewhere in between.

**Clothing and building materials, such as wallboard, are virtually transparent.**

# Mind Control

## By Harry V. Martin and David Caul

Copyright © Napa Sentinel, 1991

### **The Current Situation**

In July of 1991, two inmates died at the Vacaville Medical Facility. According to prison officials at the time, the two may have died as a result of medical treatment, that treatment was the use of mind control or behavior modification drugs. A deeper study into the deaths of the two inmates has unraveled a mind-boggling tale of horror that has been part of California penal history for a long time, and one that caused national outcries years ago.

In August of 1991, the *Sentinel* presented a graphic portrait of some of the mind control experiments that have been allowed to continue in the United States. On November 1974 a U.S. Senate Sub-committee on Constitutional Rights investigated federally-funded behavior modification programs, with emphasis on federal involvement in, and the possible threat to individual constitutional rights of behavior modification, especially involving inmates in prisons and mental institutions.

The Senate committee was appalled after reviewing documents from the following sources:

The Neuro-Research Foundation's study entitled "The Medical Epidemiology of Criminals."

The Center for the Study and Reduction of Violence at UCLA.

The Closed Adolescent Treatment Center.

### **Senate Investigations of the History of US Mind Control**

(Based on Testimony before the Senate Sub-Committee on Constitutional Rights)

A national uproar was created by various articles in 1974, which prompted the Senate investigation. But after all these years, the news that two inmates at Vacaville may have died from these same experiments indicates that though a nation was shocked in 1974, little was done to end the experimentations. In 1977, a Senate subcommittee on Health and Scientific Research, chaired by Senator Ted Kennedy, focussed on the CIA's testing of LSD on unwitting citizens. Only a mere handful of people within the CIA knew about the scope and details of the program.

To understand the full scope of the problem, it is important to study its origins. The Kennedy subcommittee learned about the CIA Operation MK.-Ultra through the testimony of Dr. Sidney Gottlieb. The purpose of the program, according to his testimony, was to "investigate whether and how it was possible to modify an individual's behavior by covert means".

Claiming the protection of the National Security Act, Dr. Gottlieb was unwilling to tell the Senate subcommittee what had been learned or gained by these experiments.

He did state, however, that the program was initially engendered by a concern that the Soviets and other enemies of the United States would get ahead of the U.S. in this field.

### **MK-ULTRA Past and Present**

(From testimony and files obtained under Freedom Of Information Act)

Through the Freedom of Information Act, researchers are now able to obtain documents detailing the M.K.-Ultra program and other CIA behavior modification projects in a special reading room located on the bottom floor of the Hyatt Regency in Rosslyn, VA.

The most daring phase of the M.K.-Ultra program involved slipping unwitting American citizens LSD in real life situations. The idea for the series of experiments originated in November 1941, when William Donovan, founder and director of the Office of Strategic Services (OSS), the forerunner of the CIA during World War Two. At that time the intelligence agency invested \$5000 for the "truth drug" program. Experiments with scopolamine and morphine proved both unfruitful and very dangerous. The program tested scores of other drugs, including mescaline, barbituates, benzedrine, cannabis indica, to name a few.

The U.S. was highly concerned over the heavy losses of freighters and other ships in the North Atlantic, all victims of German U-boats. Information about German U-boat strategy was desperately needed and it was believed that the information could be obtained through drug-influenced interrogations of German naval P.O.W.s, in violation of the Geneva Accords.

Tetrahydrocannabinol acetate, a colorless, odorless marijuana extract, was used to lace a cigarette or food substance without detection. Initially, the experiments were done on volunteer U.S. Army and OSS personnel, and testing was also disguised as a remedy for shell shock. The volunteers became known as "Donovan's Dreamers". The experiments were so hush-hush, that only a few top officials knew about them. President Franklin Roosevelt was aware of the experiments. The "truth drug" achieved mixed success.

The experiments were halted when a memo was written: "The drug defies all but the most expert and search analysis, and for all practical purposes can be considered beyond analysis." The OSS did not, however, halt the program. In 1943 field tests of the extract were being conducted, despite the order to halt them. The most celebrated test was conducted by Captain George Hunter White, an OSS agent and ex-law enforcement official, on August Del Grazio, aka Augie Dallas, aka Dell, aka Little Augie, a New York gangster.

Cigarettes laced with the acetate were offered to Augie without his knowledge of the content. Augie, who had served time in prison for assault and murder, had been one of the world's most notorious drug dealers and smugglers. He operated an opium alkaloid factory in Turkey and he was a leader in the Italian underworld on the Lower East Side of New York. Under the influence of the drug,

Augie revealed volumes of information about the underworld operations, including the names of high ranking officials who took bribes from the mob. These experiments led to the encouragement of Donovan. A new memo was issued: "Cigarette experiments indicated that we had a mechanism which offered promise in relaxing prisoners to be interrogated."

When the OSS was disbanded after the war, Captain White continued to administer behavior modifying drugs. In 1947, the CIA replaced the OSS. White's service record indicates that he worked with the OSS, and by 1954 he was a high ranking Federal Narcotics Bureau officer who had been loaned to the CIA on a part-time basis.

White rented an apartment in Greenwich Village equipped with one-way mirrors, surveillance gadgets and disguised himself as a seaman. White drugged his acquaintances with LSD and brought them back to his apartment. In 1955, the operation shifted to San Francisco. In San Francisco, "safe houses" were established under the code name Operation Midnight Climax. Midnight Climax hired prostitute addicts who lured men from bars back to the safehouses after their drinks had been spiked with LSD. White filmed the events in the safehouses. The purpose of these "national security brothels" was to enable the CIA to experiment with the act of lovemaking for extracting information from men.

The safehouse experiments continued until 1963 until CIA Inspector General John Earman criticized Richard Helms, the director of the CIA and father of the M.K.-Ultra project. Earman charged the new director John McCone had not been fully briefed on the M.K.-Ultra Project when he took office and that "the concepts involved in manipulating human behavior are found by many people within and outside the Agency to be distasteful and unethical." He stated that "the rights and interest of U.S. citizens are placed in jeopardy". The Inspector General stated that LSD had been tested on individuals at all social levels, high and low, native American and foreign."

Earman's criticisms were rebuffed by Helms, who warned, "Positive operation capacity to use drugs is diminishing owing to a lack of realistic testing. Tests were necessary to keep up with the Soviets." But in 1964, Helms had testified before the Warren Commission investigating the assassination of President John Kennedy, that "Soviet research has consistently lagged five years behind Western research".

Upon leaving government service in 1966, Captain White wrote a startling letter to his superior. In the letter to Dr. Gottlieb, Captain White reminisced about his work in the safehouses with LSD. His comments were frightening. "I was a very minor missionary, actually a heretic, but I toiled wholeheartedly in the vineyards because it was fun, fun, fun," White wrote. "Where else could a red-blooded American boy lie, kill, cheat, steal, rape and pillage with the sanction and blessing of the all-highest?"

### **The CIA and the Mafia**

(Testimony before the 1951 Sub-Committee on Organized Crime and other public sources.)

Though the CIA continued to maintain drug experiments in the streets of America after the program was officially canceled, the United States reaped tremendous value from it. With George Hunter White's connection to underworld figure Little Augie, connections were made with Mafia king-pin Lucky Luciano, who was in Dannemore Prison.

Luciano wanted freedom, the Mafia wanted drugs, and the United States wanted Sicily. The date was 1943. Augie was the go-between between Luciano and the United States War Department.

Luciano was transferred to a less harsh prison and began to be visited by representatives of the Office of Naval Intelligence and from underworld figures, such as Meyer Lansky. A

strange alliance was formed between the U.S. Intelligence agencies and the Mafia, who controlled the West Side docks in New York. Luciano regained active leadership in organized crime in America.

The U. S. Intelligence community utilized Luciano's underworld connections in Italy. In July of 1943, Allied forces launched their invasion of Sicily, the beginning push into occupied Europe. General George Patton's Seventh Army advanced through hundreds of miles of territory that was fraught with difficulty, booby trapped roads, snipers, confusing mountain topography, all within close range of 60,000 hostile Italian troops. All this was accomplished in four days, a military "miracle" even for Patton.

Senate Estes Kefauver's Senate Sub committee on Organized Crime asked, in 1951, how all this was possible. The answer was that the Mafia had helped to protect roads from Italian snipers, served as guides through treacherous mountain terrain, and provided needed intelligence to Patton's army. The part of Sicily which Patton's forces traversed had at one time been completely controlled by the Sicilian Mafia, until Benito Mussolini smashed it through the use of police repression.

Just prior to the invasion, it was hardly even able to continue shaking down farmers and shepherds for protection money. But the invasion changed all this, and the Mafia went on to play a very prominent and well-documented role in the American military occupation of Italy.

The expedience of war opened the doors to American drug traffic and Mafia domination. This was the beginning of the Mafia-U.S. Intelligence alliance, an alliance that lasts to this day and helped to support the covert operations of the CIA, such as the Iran-Contra operations.

In these covert operations, the CIA would obtain drugs from South America and Southeast Asia, sell them to the Mafia and use the money for the covert purchase of military equipment. These operations accelerated when Congress cut off military funding for the Contras.

One of the Allies' top occupation priorities was to liberate as many of their own soldiers from garrison duties so that they could participate in the military offensive. In order to accomplish this, Don Calogero's Mafia were pressed into service, and in July of 1943, the Civil Affairs Control Office of the U.S. Army appointed him mayor of Villalba and other Mafia officials as mayors of other towns in Sicily.

As the northern Italian offensive continued, Allied intelligence became very concerned over the extent to which the Italian Communists' resistance to Mussolini had driven Italian politics to the left. Community Party membership had doubled between 1943 and 1944, huge leftist strikes had shut down factories and the Italian underground fighting Mussolini had risen to almost 150,000 men. By mid-1944, the situation came to a head and the U.S. Army terminated arms drops to the Italian Resistance, and started appointing Mafia officials to occupation administration posts. Mafia groups broke up leftists rallies and reactivated black market operations throughout southern Italy.

Lucky Luciano was released from prison in 1946 and deported to Italy, where he rebuilt the heroin trade. The court's decision to release him was made possible by the testimony of intelligence agents at his hearing, and a letter written by a naval officer reciting what Luciano had done for the Navy. Luciano was supposed to have served from 30 to 50 years in prison. Over 100 Mafia members were similarly deported within a couple of years.

Luciano set up a syndicate which transported morphine base from the Middle East to Europe, refined it into heroin, and then shipped it into the United States via Cuba. During the 1950's, Marseilles, in Southern France, became a major city for the heroin labs and the Corsican syndicate began to actively cooperate with the Mafia in the heroin trade. Those became popularly known as the French Connection.

In 1948, Captain White visited Luciano and his narcotics associate Nick Gentile in Europe. Gentile was a former American gangster who had worked for the Allied Military Government in Sicily. By this time, the CIA was already subsidizing Corsican and Italian gangsters to oust Communist unions from the Port of Marseilles.

American strategic planners saw Italy and southern France as extremely important for their Naval bases as a counterbalance to the growing naval forces of the Soviet Union. CIO/AFL organizer Irving Brown testified that by the time the CIA subsidies were terminated in 1953, U.S. support was no longer needed because the profits from the heroin traffic was sufficient to sustain operations.

When Luciano was originally jailed, the U.S. felt it had eliminated the world's most effective underworld leader and the activities of the Mafia were seriously damaged. Mussolini had been waging a war since 1924 to rid the world of the Sicilian Mafia. Thousands of Mafia members were convicted of crimes and forced to leave the cities and hide out in the mountains.

Mussolini's reign of terror had virtually eradicated the international drug syndicates. Combined with the shipping surveillance during the war years, heroin trafficking had become almost nil. Drug use in the United States, before Luciano's release from prison, was on the verge of being entirely wiped out.

### **Mind Control Experiments Conducted in Our Name**

The U.S. government has conducted three types of mind-control experiments: Real life experiences, such as those used on Little Augie and the LSD experiments in the safehouses of San Francisco and Greenwich Village; experiments on prisoners, such as in the California Medical Facility at Vacaville; experiments conducted in both mental hospitals and the Veterans Administration hospitals.

Such experimentation requires money, and the United States government has funneled funds for drug experiments through different agencies, both overtly and covertly.

### **The Role of the Law Enforcement Assistance Administration** (Reportorial Sources, Including the *Washington Post*)

One of the funding agencies to contribute to the experimentation is the Law Enforcement Assistance Administration (LEAA), a unit of the U.S. Justice Department and one of President Richard Nixon's favorite pet agencies. The Nixon Administration was, at one time, putting together a program for detaining youngsters who showed a tendency toward violence in "concentration" camps.

According to the *Washington Post*, the plan was authored by Dr. Arnold Hutschnecker. Health, Education and Welfare Secretary Robert Finch was told by John Erlichman, Chief of Staff for the Nixon White House, to implement the program. He proposed the screening of

children of six years of age for tendencies toward criminality. Those who failed these tests were to be destined to be sent to the camps. The program was never implemented.

LEAA came into existence in 1968 with a huge budget to assist various U.S. law enforcement agencies. Its effectiveness, however, was not considered too great. After spending \$6 billion, the F.B.I. reports general crime rose 31 percent and violent crime rose 50 percent. But little accountability was required of LEAA on how it spent its funds.

LEAA's role in the behavior modification research began at a meeting held in 1970 in Colorado Springs. Attending that meeting were Richard Nixon, Attorney General John Mitchell, John Erlichman, H.R. Haldemann and other White House staffers. They met with Dr. Bertram Brown, director of the National Institute of Mental Health, and forged a close collaboration between LEAA and the Institute. LEAA was a product of the Justice Department and the Institute was a product of HEW.

LEAA funded 350 projects involving medical procedures, behavior modification and drugs for delinquency control. Money from the Criminal Justice System was being used to fund mental health projects and vice versa. Eventually, the leadership responsibility and control of the Institute began to deteriorate and their scientists began to answer to LEAA alone.

### **The Role of the National Institute of Mental Health**

(Source: Court Records and US Senate Subcommittee on Constitutional Rights)

The National Institute of Mental Health went on to become one of the greatest supporters of behavior modification research. Throughout the 1960's, court calendars became blighted with lawsuits on the part of "human guinea pigs" who had been experimented upon in prisons and mental institutions. It was these lawsuits which triggered the Senate Subcommittee on Constitutional Rights investigation, headed by Senator Sam Erwin. The subcommittee's harrowing report was virtually ignored by the news media.

### **The Department of Defense**

(Source: CIA Documents released under FOIA and Subcommittee Testimony)

Thirteen behavior modification programs were conducted by the Department of Defense. The Department of Labor had also conducted several experiments, as well as the National Science Foundation. The Veterans' Administration was also deeply involved in behavior modification and mind control. Each of these agencies, including LEAA, and the Institute, were named in secret CIA documents as those who provided research cover for the MK-ULTRA program.

Eventually, LEAA was using much of its budget to fund experiments, including aversive techniques and psychosurgery, which involved, in some cases, irreversible brain surgery on normal brain tissue for the purpose of changing or controlling behavior and/or emotions.

Senator Erwin questioned the head of LEAA concerning ethical standards of the behavior modification projects which LEAA had been funding.

Erwin was extremely dubious about the idea of the government spending money on this kind of project without strict guidelines and reasonable research supervision in order to protect the human subjects. After Senator Erwin's denunciation of the funding policies, LEAA announced that it would no longer fund medical research into behavior modification and psychosurgery.

### **Lobotomies Performed on Black Activists** (Committee Testimony)

Despite the pledge by LEAA's director, Donald E. Santarelli, LEAA ended up funding 537 research projects dealing with behavior modification. There is strong evidence to indicate psychosurgery was still being used in prisons in the 1980's. Immediately after the funding announcement by LEAA, there were 50 psychosurgical operations at Atmore State Prison in Alabama. The inmates became virtual zombies. The operations, according to Dr. Swan of Fisk University, were done on black prisoners who were considered politically active.

### **Veteran's Administration Practices** (Committee Testimony)

The Veterans' Administration openly admitted that psychosurgery was a standard procedure for treatment and not used just in experiments. The VA Hospitals in Durham, Long Beach, New York, Syracuse and Minneapolis were known to employ these products on a regular basis. VA clients could typically be subject to these behavior alteration procedures against their will. The Erwin subcommittee concluded that the rights of VA clients had been violated.

LEAA also subsidized the research and development of gadgets and techniques useful to behavior modification. Much of the technology, whose perfection LEAA funded, had originally been developed and made operational for use in the Vietnam War.

### **Private Companies Involved**

Companies like Bangor Punta Corporation and Walter Kidde and Co., through its subsidiary Globe Security System, adapted these devices to domestic use in the U.S. ITT was another company that domesticated the warfare technology for potential use on U.S. citizens. Rand Corporation executive Paul Baran warned that the influx back to the United State of the Vietnam War surveillance gadgets alone, not to mention the behavior modification hardware, could bring about "the most effective, oppressive police state ever created".

### **Some of the Players**

One of the fascinating aspects of the scandals that plague the U.S. Government is the fact that so often the same names appear from scandal to scandal. From the origins of Ronald Reagan's political career, as Governor of California, Dr. Earl Brian and Edward Meese played key advisory roles. Dr. Brian's name has been linked to the October Surprise and is a central figure in the government's theft of PROMIS soft ware from INSLAW. Brian's role touches from the Cabazon Indian scandals to United Press International. He is one of those low-profile key figures.

And, alas, his name appears again in the nation's behavior modification and mind control experiments. Dr. Brian was Reagan's Secretary of Health when Reagan was Governor. Dr. Brian was an advocate of state subsidies for a research center for the study of violent behavior. The center was to begin operations by mid-1975, and its research was intended to shed light on why people murder or rape, or hijack aircraft. The center was to be operated by the University of California at Los Angeles, and its primary purpose, according to Dr. Brian, was to unify scattered studies on anti-social violence and possibly even touch on socially tolerated violence, such as football or war. Dr. Brian sought \$1.3 million for the center.

It certainly was possible that prison inmates might be used as volunteer subjects at the center to discover the unknowns which triggered their violent behavior. Dr. Brian's quest for the center came at the same time Governor Reagan concluded his plans to phase the state of California out of the mental hospital business by 1982. Reagan's plan is echoed by Governor Pete Wilson today, to place the responsibility of rehabilitating young offenders squarely on the shoulders of local communities. But as the proposal became known more publicly, a swell of controversy surrounded it. It ended in a fiasco. The inspiration for the violence center came from three doctors in 1967, five years before Dr. Brian and Governor Reagan unveiled their plans.

### **The "Scientific" Basis for Psychosurgery** (Publications of the Participants)

Amidst urban rioting and civil protest, Doctors Sweet, Mark and Ervin of Harvard put forward the thesis that individuals who engage in civil disobedience possess defective or damaged brain cells. If this conclusion were applied to the American Revolution or the Women's Rights Movement, a good portion of American society would be labeled as having brain damage.

In a letter to the Journal of the American Medical Association, they stated: "That poverty, unemployment, slum housing, and inadequate education underlie the nation's urban riots is well known, but the obviousness of these causes may have blinded us to the more subtle role of other possible factors, including brain dysfunction in the rioters who engaged in arson, sniping and physical assault.

"There is evidence from several sources that brain dysfunction related to a focal lesion plays a significant role in the violent and assaultive behavior of thoroughly studied patients. Individuals with electroencephalographic abnormalities in the temporal region have been found to have a much greater frequency of behavioral abnormalities (such as poor impulse control, assaultiveness, and psychosis) than is present in people with a normal brain wave pattern."

Soon after the publication in the Journal, Dr. Ervin and Dr. Mark published their book *Violence and the Brain*, which included the claim that there were as many as 10 million individuals in the United States "who suffer from obvious brain disease". They argued that the data of their book provided a strong reason for starting a program of mass screening of Americans.

"Our greatest danger no longer comes from famine or communicable disease. Our greatest danger lies in ourselves and in our fellow humans...we need to develop an 'early warning test' of limbic brain function to detect those humans who have a low threshold for impulsive violence...Violence is a public health problem, and the major thrust of any program dealing with violence must be toward its prevention," they wrote.

The Law Enforcement Assistance Administration funded the doctors \$108,000 and the National Institute of Mental Health kicked in another \$500, 000, under pressure from Congress. They believed that psychosurgery would inevitably be performed in connection with the program, and that, since it irreversibly impaired people's emotional and intellectual capacities, it could be used as an instrument of repression and social control.

The doctors wanted screening centers established throughout the nation. In California, the publicity associated with the doctors' report, aided in the development of The Center for the study and Reduction of Violence. Both the state and LEAA provided the funding. The center was to serve as a model for future facilities to be set up throughout the United States.

The Director of the Neurophyschiatric Institute and chairman of the Department of Psychiatry at UCLA, Dr. Louis Jolyon West was selected to run the center. Dr. West is alleged to have been a contract agent for the CIA, who, as part of a network of doctors and scientists, gathered intelligence on hallucinogenic drugs, including LSD, for the super-secret MK-ULTRA program. Like Captain White, West conducted LSD experiments for the CIA on unwitting citizens in the safehouses of San Francisco. He achieved notoriety for his injection of a massive dose of LSD into an elephant at the Oklahoma Zoo, the elephant died when West tried to revive it by administering a combination of drugs.

Dr. West was further known as the psychiatrist who was called upon to examine Jack Ruby, Lee Harvey Oswald's assassin. It was on the basis of West's diagnosis that Ruby was compelled to be treated for mental disorders and put on happy pills. The West examination was ordered after Ruby began to say that he was part of a right-wing conspiracy to kill President John Kennedy. Two years after the commencement of treatment for mental disorder, Ruby died of cancer in prison.

(Note: Dr West is now a member of the Board of Directors of the False Memory Syndrome Foundation.)

### **The Violence Control Center**

(Testimony, FOIA documents, Los Angeles Times, San Francisco Bay Guardian)

After January 11, 1973, when Governor Reagan announced plans for the Violence Center, West wrote a letter to the then Director of Health for California, J. M. Stubblebine:

"Dear Stub:

"I am in possession of confidential information that the Army is prepared to turn over Nike missile bases to state and local agencies for non-military purposes. They may look with special favor on health-related applications.

"Such a Nike missile base is located in the Santa Monica Mountains, within a half-hour's drive of the Neuropsychiatric Institute. It is accessible, but relatively remote. The site is securely fenced, and includes various buildings and improvements, making it suitable for prompt occupancy.

"If this site were made available to the Neurophyschiatric Institute as a research facility, perhaps initially as an adjunct to the new Center for the Prevention of Violence, we could put it to very good use. Comparative studies could be carried out there, in an isolated but convenient location, of experimental or model programs for the alteration of undesirable behavior.

"Such programs might include control of drug or alcohol abuse, modification of chronic anti-social or impulsive aggressiveness, etc. The site could also accommodate conferences or retreats for instruction of selected groups of mental-health related professionals and of others

(e.g., law enforcement personnel, parole officers, special educators) for whom both demonstration and participation would be effective modes of instruction.

"My understanding is that a direct request by the Governor, or other appropriate officers of the State, to the Secretary of Defense (or, of course, the President), could be most likely to produce prompt results."

Some of the planned areas of study for the Center included:

Studies of violent individuals.

Experiments on prisoners from Vacaville and Atascadero, and hyperkinetic children.

Experiments with violence-producing and violent inhibiting drugs.

Hormonal aspects of passivity and aggressiveness in boys.

Studies to discover and compare norms of violence among various ethnic groups.

Studies of pre-delinquent children.

It would also encourage law enforcement to keep computer files on pre-delinquent children, which would make possible the treatment of children before they became delinquents.

The purpose of the Violence Center was not just research. The staff was to include sociologists, lawyers, police officers, clergymen and probation officers. With the backing of Governor Reagan and Dr. Brian, West had secured guarantees of prisoner volunteers from several California correctional institutions, including Vacaville. Vacaville and Atascadero were chosen as the primary sources for the human guinea pigs. These institutions had established a reputation, by that time, of committing some of the worst atrocities in West Coast history. Some of the experimentations differed little from what the Nazis did in the death camps.

Dr. Earl Brian, Governor Ronald Reagan's Secretary of Health, was adamant about his support for mind control centers in California. He felt the behavior modification plan of the Violence Control Centers was important in the prevention of crime.

The Violence Control Center was actually the brain child of William Herrmann as part of a pacification plan for California. A counter insurgency expert for Systems Development Corporation and an advisor to Governor Reagan, Herrmann worked with the Stand Research Institute, the RAND Corporation, and the Hoover Center on Violence. Herrman was also a CIA agent who is now serving an eight year prison sentence for his role in a CIA counterfeiting operation. He was also directly linked with the Iran-Contra affair according to government records and Herrmann's own testimony.

In 1970, Herrmann worked with Colston Westbrook as his CIA control officer when Westbrook formed and implemented the Black Cultural Association at the Vacaville Medical Facility, a facility which in July experienced the death of three inmates who were forcibly subjected to behavior modification drugs. The Black Cultural Association was ostensibly an education program designed to instill black pride identity in prisons, the Association was

really a cover for an experimental behavior modification pilot project designed to test the feasibility of programming unstable prisoners to become more manageable.

Westbrook worked for the CIA in Vietnam as a psychological warfare expert, and as an advisor to the Korean equivalent of the CIA and for the Lon Nol regime in Cambodia. Between 1966 and 1969, he was an advisor to the Vietnamese Police Special Branch under the cover of working as an employee of Pacific Architects and Engineers.

His "firm" contracted the building of the interrogation/torture centers in every province of South Vietnam as part of the CIA's Phoenix Program. The program was centered around behavior modification experiments to learn how to extract information from prisoners of war, a direct violation of the Geneva Accords.

Westbrook's most prominent client at Vacaville was Donald DeFreeze, who between 1967 and 1969, had worked for the Los Angeles Police Department's Public Disorder Intelligence unit and later became the leader of the Symbionese Liberation Army. Many authorities now believe that the Black Cultural Association at Vacaville was the seedling of the SLA. Westbrook even designed the SLA logo, the cobra with seven heads, and gave De Freeze his African name of Cinque. The SLA was responsible for the assassination of Marcus Foster, superintendent of School in Oakland and the kidnapping of Patty Hearst.

As a counterinsurgency consultant for Systems Development Corporation, a security firm, Herrmann told the Los Angeles Times that a good computer intelligence system "would separate out the activist bent on destroying the system" and then develop a master plan "to win the hearts and minds of the people". The San Francisco-based Bay Guardian, recently identified Herrmann as an international arms dealer working with Iran in 1980, and possibly involved in the October Surprise. Herrmann is in an English prison for counterfeiting. He allegedly met with Iranian officials to ascertain whether the Iranians would trade arms for hostages held in Lebanon.

The London Sunday Telegraph confirmed Herrmann's CIA connections, tracing them from 1976 to 1986. He also worked for the FBI. This information was revealed in his London trial.

In the 1970's, Dr. Brian and Herrmann worked together under Governor Reagan on the Center for the Study and Reduction of Violence, and then, a decade later, again worked under Reagan. Both men have been identified as working for Reagan with the Iranians.

The Violence Center, however, died an agonizing death. Despite the Ervin Senate Committee investigation and condemnation of mind control, the experiments continued. But when the Watergate scandal broke in the early 1970's, Washington felt it was too politically risky to continue to push for mind control centers.

Top doctors began to withdraw from the proposal because they felt that there were not enough safeguards. Even the Law Enforcement Assistance Agency, which funded the program, backed out, stating, the proposal showed "little evidence of established research ability of the kind of level necessary for a study of this cope".

Eventually it became known that control of the Violence Center was not going to rest with the University of California, but instead with the Department of Corrections and other law enforcement officials. This information was released publicly by the Committee Opposed to

Psychiatric Abuse of Prisoners. The disclosure of the letter resulted in the main backers of the program bowing out and the eventual demise of the center.

Dr. Brian's final public statement on the matter was that the decision to cut off funding represented "a callous disregard for public safety". Though the Center was not built, the mind control experiments continue to this day.

### **The Victims of MK-ULTRA** (Court Records, Senate Testimony and FOIA Documents)

The Central Intelligence Agency held two major interests in use of LSD. to alter normal behavior patterns. The first interest centered around obtaining information from prisoners of war and enemy agents, in contravention of the Geneva Accords. The second was to deter the effectiveness of drugs used against the enemy on the battlefield.

The MK-ULTRA program was originally run by a small number of people within the CIA known as the Technical Services Staff (TSS). Another CIA department, the Office of Security, also began its own testing program. Friction arose and then infighting broke out when the Office of Security commenced to spy on TSS people after it was learned that LSD was being tested on unwitting Americans.

Not only did the two branches disagree over the issue of testing the drug on the unwitting, they also disagreed over the issue of how the drug was actually to be used by the CIA. The office of Security envisioned the drug as an interrogation weapon. But the TSS group thought the drug could be used to help destabilize another country, it could be slipped into the food or beverage of a public official in order to make him behave foolishly or oddly in public. One CIA document reveals that L.S.D. could be administered right before an official was to make a public speech.

Realizing that gaining information about the drug in real life situations was crucial to exploiting the drug to its fullest, TSS started conducting experiments on its own people. There was an extensive amount of self-experimentation. The Office of Security felt the TSS group was playing with fire, especially when it was learned that TSS was prepared to spike an annual office Christmas party punch with LSD, the Christmas party of the CIA. L.S.D. could produce serious insanity for periods of eight to 18 hours and possibly longer.

One of the "victims" of the punch was agent Frank Olson. Having never had drugs before, L.S.D. took its toll on Olson. He reported that, every automobile that came by was a terrible monster with fantastic eyes, out to get him personally. Each time a car passed he would huddle down against a parapet, terribly frightened. Olson began to behave erratically. The CIA made preparation to treat Olson at Chestnut Lodge, but before they could, Olson checked into a New York hotel and threw himself out from his tenth story room. The CIA was ordered to cease all drug testing.

Mind control drugs and experiments were torturous to the victims. One of three inmates who died in Vacaville Prison in July of 1991 was scheduled to appear in court in an attempt to stop forced administration of a drug, the very drug that may have played a role in his death.

Joseph Cannata believed he was making progress and did not need forced dosages of the drug Haldol. The Solano County Coroner's Office said that Cannata and two other inmates died of

hyperthermia, extremely elevated body temperature. Their bodies all had at least 108 degrees temperature when they died. The psychotropic drugs they were being forced to take will elevate body temperature.

Dr. Ewen Cameron, working at McGill University in Montreal, used a variety of experimental techniques, including keeping subjects unconscious for months at a time, administering huge electroshocks and continual doses of L.S.D.

Massive lawsuits developed as a result of this testing, and many of the subjects who suffered trauma had never agreed to participate in the experiments. Such CIA experiments infringed upon the much-honored Nuremberg Code concerning medical ethics. Dr. Camron was one of the members of the Nuremberg Tribunal.

L.S.D. research was also conducted at the Addiction Research Center of the U.S. Public Health Service in Lexington, Kentucky. This institution was one of several used by the CIA. The National Institute of Mental Health and the U.S. Navy funded this operation. Vast supplies of L.S.D. and other hallucinogenic drugs were required to keep the experiments going.

Dr. Harris Isbell ran the program. He was a member of the Food and Drug Administration's Advisory Committee on the Abuse of Depressant and Stimulants Drugs. Almost all of the inmates were black. In many cases, L.S.D. dosage was increased daily for 75 days.

Some 1500 U.S. soldiers were also victims of drug experimentation. Some claimed they had agreed to become guinea pigs only through pressure from their superior officers. Many claimed they suffered from severe depression and other psychological stress.

One such soldier was Master Sergeant Jim Stanley. L.S.D. was put in Stanley's drinking water and he freaked out. Stanley's hallucinations continued even after he returned to his regular duties. His service record suffered, his marriage went on the rocks and he ended up beating his wife and children. It wasn't until 17 years later that Stanley was informed by the military that he had been an L.S.D. experiment. He sued the government, but the Supreme Court ruled no soldier could sue the Army for the LSD. experiments. Justice William Brennan disagreed with the Court decision. He wrote, "Experimentation with unknowing human subjects is morally and legally unacceptable."

Private James Thornwell was given L.S.D. in a military test in 1961. For the next 23 years he lived in a mental fog, eventually drowning in a Vallejo swimming pool in 1984. Congress had set up a \$625,000 trust fund for him. Large scale L.S.D. tests on American soldiers were conducted at Aberdeen Proving Ground in Maryland, Fort Benning, Georgia, Fort Leavenworth, Kansas, Dugway Proving Ground, Utah, and in Europe and the Pacific. The Army conducted a series of L.S.D. tests at Fort Bragg in North Carolina. The purpose of the tests were to ascertain how well soldiers could perform their tasks on the battlefield while under the influence of L.S.D.

At Fort McClellan, Alabama, 200 officers in the Chemical Corps were given L.S.D. in order to familiarize them with the drug's effects. At Edgewood Arsenal, soldiers were given L.S.D. and then confined to sensory deprivation chambers and later exposed to a harsh interrogation sessions by intelligence people. In these sessions, it was discovered that soldiers would cooperate if promised they would be allowed to get off the L.S.D.

In Operation Derby Hat, foreign nationals accused of drug trafficking were given L.S.D. by the Special Purpose Team, with one subject begging to be killed in order to end his ordeal. Such experiments were also conducted in Saigon on Viet Cong POWs.

One of the most potent drugs in the U.S. arsenal is called BZ or quinuclidinyl benzilate. It is a long-lasting drug and brings on a litany of psychotic experiences and almost completely isolates any person from his environment. The main effects of BZ last up to 80 hours compared to eight hours for L.S.D. Negative after-effects may persist for up to six weeks.

### **Psychological Warfare Drugs**

(Court Records, FOIA Documents, General Accounting Office investigations)

The BZ experiments were conducted on soldiers at Edgewood Arsenal for 16 years. Many of the "victims" claim that the drug permanently affected their lives in a negative way. It so disorientated one paratrooper that he was found taking a shower in his uniform and smoking a cigar. BZ was eventually put in hand grenades and a 750 pound cluster bomb. Other configurations were made for mortars, artillery and missiles. The bomb was tested in Vietnam and CIA documents indicate it was prepared for use by the U.S. in the event of large-scale civilian uprisings.

In Vacaville, psychosurgery has long been a policy. In one set of cases, experimental psychosurgery was conducted on three inmates, a black, a Chicano and a white person. This involved the procedure of pushing electrodes deep into the brain in order to determine the position of defective brain cells, and then shooting enough voltage into the suspected area to kill the defective cells. One prisoner, who appeared to be improving after surgery, was released on parole, but ended up back in prison. The second inmate became violent and there is no information on the third inmate.

Vacaville also administered a "terror drug", Anectine, as a way of "suppressing hazardous behavior". In small doses, Anectine serves as a muscle relaxant; in huge doses, it produces prolonged seizure of the respiratory system and a sensation "worse than dying". The drug goes to work within 30 to 40 seconds by paralyzing the small muscles of the fingers, toes, and eyes, and then moves into the the intercostal muscles and the diaphragm. The heart rate subsides to 60 beats per minute, respiratory arrest sets in and the patient remains completely conscious throughout the ordeal, which lasts two to five minutes. The experiments were also used at Atascadero.

Several mind altering drugs were originally developed for non-psychoactive purposes. Some of these drugs are Phenothiazine and Thorazine. The side effects of these drugs can be a living hell. The impact includes the feeling of drowsiness, disorientation, shakiness, dry mouth, blurred vision and an inability to concentrate. Drugs like Prolixin are described by users as "sheer torture" and "becoming a zombie".

The Veterans Administration Hospital has been shown by the General Accounting Office to apply heavy dosages of psychotherapeutic drugs. One patient was taking eight different drugs, three antipsychotic, two antianxiety, one antidepressant, one sedative and one anti-Parkinson. Three of these drugs were being given in dosages equal to the maximum recommended.

Another patient was taking seven different drugs. One report tells of a patient who refused to take the drug. "I told them I don't want the drug to start with, they grabbed me and strapped

me down and gave me a forced intramuscular shot of Prolixin. They gave me Artane to counteract the Prolixin and they gave me Sinequan, which is a kind of tranquilizer to make me calm down, which over calmed me, so rather than letting up on the medication, they then gave me Ritalin to pep me up."

Prolixin lasts for two weeks. One patient describes how the drug does not calm or sedate nerves, but instead attacks from so deep inside you, you cannot locate the source of the pain. "The drugs turn your nerves in upon yourself. Against your will, your resistance, your resolve, are directed at your own tissues, your own muscles, reflexes, etc.." The patient continues, "The pain grinds into your fiber, your vision is so blurred you cannot read. You ache with restlessness, so that you feel you have to walk, to pace. And then as soon as you start pacing, the opposite occurs to you, you must sit and rest. Back and forth, up and down, you go in pain you cannot locate. In such wretched anxiety you are overwhelmed because you cannot get relief even in breathing."

**Doctor Jose Delgado: "Man does not have the right to develop his own mind."**  
(Congressional Record, New York Times)

"We need a program of psychosurgery for political control of our society. The purpose is physical control of the mind. Everyone who deviates from the given norm can be surgically mutilated.

"The individual may think that the most important reality is his own existence, but this is only his personal point of view. This lacks historical perspective.

"Man does not have the right to develop his own mind. This kind of liberal orientation has great appeal. We must electrically control the brain. Some day armies and generals will be controlled by electric stimulation of the brain."

These were the remarks of Dr. Jose Delgado as they appeared in the February 24, 1974 edition of the Congressional Record, No. 262E, Vol. 118.

Despite Dr. Delgado's outlandish statements before Congress, his work was financed by grants from the Office of Naval Research, the Air Force Aero-Medical Research Laboratory, and the Public Health Foundation of Boston.

Dr. Delgado was a pioneer of the technology of Electrical Stimulation of the Brain (ESB). The New York Times ran an article on May 17, 1965 entitled Matador With a Radio Stops Wild Bull. The story details Dr. Delgado's experiments at Yale University School of Medicine and work in the field at Cordova, Spain. The New York Times stated:

"Afternoon sunlight poured over the high wooden barriers into the ring, as the brave bull bore down on the unarmed matador, a scientist who had never faced fighting bull. But the charging animal's horn never reached the man behind the heavy red cape. Moments before that could happen, Dr. Delgado pressed a button on a small radio transmitter in his hand and the bull braked to a halt. Then he pressed another button on the transmitter, and the bull obediently turned to the right and trotted away. The bull was obeying commands in his brain that were being called forth by electrical stimulation by the radio signals to certain regions in which fine wires had been painlessly planted the day before."

According to Dr. Delgado, experiments of this type have also been performed on humans. While giving a lecture on the Brain in 1965, Dr. Delgado said, "Science has developed a new methodology for the study and control of cerebral function in animals and humans."

### **Russian Experiments in Hypnotism and Radio Control of the Mind** (Scientific papers and books)

The late L.L. Vasiliev, professor of physiology at the University of Leningrad wrote in a paper about hypnotism: "As a control of the subject's condition, when she was outside the laboratory in another set of experiments, a radio set was used. The results obtained indicate that the method of using radio signals substantially enhances the experimental possibilities." The professor continued to write, "I.F. Tomashevsky (a Russian physiologist) carried out the first experiments with this subject at a distance of one or two rooms, and under conditions that the participant would not know or suspect that she would be experimented with. In other cases, the sender was not in the same house, and someone else observed the subject's behavior. Subsequent experiments at considerable distances were successful. One such experiment was carried out in a park at a distance. Mental suggestions to go to sleep were complied with within a minute."

The Russian experiments in the control of a person's mind through hypnosis and radio waves were conducted in the 1930s, some 30 years before Dr. Delgado's bull experiment. Dr. Vasiliev definitely demonstrated that radio transmission can produce stimulation of the brain. It is not a complex process. In fact, it need not be implanted within the skull or be productive of stimulation of the brain, itself. All that is needed to accomplish the radio control of the brain is a twitching muscle. The subject becomes hypnotized and a muscle stimulant is implanted. The subject, while still under hypnosis, is commanded to respond when the muscle stimulant is activated, in this case by radio transmission.

Lincoln Lawrence wrote a book entitled *Were We Controlled?* Lawrence wrote, "If the subject is placed under hypnosis and mentally programmed to maintain a determination eventually to perform one specific act, perhaps to shoot someone, it is suggested thereafter, each time a particular muscle twitches in a certain manner, which is then demonstrated by using the transmitter, he will increase this determination even more strongly. As the hypnotic spell is renewed again and again, he makes it his life's purpose to carry out this act until it is finally achieved. Thus are the two complementary aspects of Radio-Hypnotic Intracerebral Control (RHIC) joined to reinforce each other, and perpetuate the control, until such time as the controlled behavior is called for. This is done by a second session with the hypnotist giving final instructions. These might be reinforced with radio stimulation in more frequent cycles. They could even carry over the moments after the act to reassure calm behavior during the escape period, or to assure that one conspirator would not indicate that he was aware of the co-conspirator's role, or that he was even acquainted with him."

### **US Experiments in Radio Control of the Mind** (Public Statements of the Principals)

RHIC constitutes the joining of two well known tools, the radio part and the hypnotism part. People have found it difficult to accept that an individual can be hypnotized to perform an act which is against his moral principles. Some experiments have been conducted by the U.S. Army which show that this popular perception is untrue.

The chairman of the Department of Psychology at Colgate University, Dr. Estabrooks, has stated, "I can hypnotize a man without his knowledge or consent into committing treason against the United States." Estabrooks was one of the nation's most authoritative sources in the hypnotic field.

The psychologist told officials in Washington that a mere 200 well trained hypnotists could develop an army of mind-controlled sixth columnists in wartime United States. He laid out a scenario of an enemy doctor placing thousands of patients under hypnotic mind control, and eventually programming key military officers to follow his assignment. Through such maneuvers, he said, the entire U.S. Army could be taken over. Large numbers of saboteurs could also be created using hypnotism through the work of a doctor practicing in a neighborhood or foreign born nationals with close cultural ties with an enemy power.

Dr. Estabrooks actually conducted experiments on U.S. soldiers to prove his point. Soldiers of low rank and little formal education were placed under hypnotism and their memories tested. Surprisingly, hypnotists were able to control the subjects' ability to retain complicated verbal information. J. G. Watkins followed in Estabrooks steps and induced soldiers of lower rank to commit acts which conflicted not only with their moral code, but also the military code which they had come to accept through their basic training. One of the experiments involved placing a normal, stable army private in a deep trance. Watkins was trying to see if he could get the private to attack a superior officer, a cardinal sin in the military. While the private was in a deep trance, Watkins told him that the officer sitting across from him was an enemy soldier who was going to attempt to kill him. In the private's mind, it was a kill or be killed situation. The private immediately jumped up and grabbed the officer by the throat. The experiment was repeated several times, and in one case the man who was hypnotized and the man who was attacked were very close friends. The results were always the same. In one experiment, the hypnotized subject pulled out a knife and nearly stabbed another person.

Watkins concluded that people could be induced to commit acts contrary to their morality if their reality was distorted by the hypnotism. Similar experiments were conducted by Watkins using WACs exploring the possibility of making military personnel divulge military secrets. A related experiment had to be discontinued because a researcher, who had been one of the subjects, was exposing numerous top-secret projects to his hypnotist, who did not have the proper security clearance for such information. The information was divulged before an audience of 200 military personnel.

### **Dr. Watson's Experiments on Babies**

In man's quest to control the behavior of humans, there was a great breakthrough established by Pavlov, who devised a way to make dogs salivate on cue. He perfected his conditioning response technique by cutting holes in the cheeks of dogs and measured the amount they salivated in response to different stimuli. Pavlov verified that "quality, rate and frequency of the salivation changed depending upon the quality, rate and frequency of the stimuli."

Though Pavlov's work falls far short of human mind control, it did lay the groundwork for future studies in mind and behavior control of humans. John B. Watson conducted experiments in the United States on an 11-month-old infant. After allowing the infant to establish a rapport with a white rat, Watson began to beat on the floor with an iron bar every time the infant came in contact with the rat. After a time, the infant made the association between the appearance of the rat and the frightening sound, and began to cry every time the

rat came into view. Eventually, the infant developed a fear of any type of small animal. Watson was the founder of the behaviorist school of psychology.

"Give me the baby, and I'll make it climb and use its hands in constructing buildings or stone or wood. I'll make it a thief, a gunman or a dope fiend. The possibilities of shaping in any direction are almost endless. Even gross differences in anatomical structure limits are far less than you may think. Make him a deaf mute, and I will build you a Helen Keller. Men are built, not born,"

Watson proclaimed. His psychology did not recognize inner feelings and thoughts as legitimate objects of scientific study, he was only interested in overt behavior.

Though Watson's work was the beginning of man's attempts to control human actions, the real work was done by B.F. Skinner, the high priest of the behaviorists movement. The key to Skinner's work was the concept of operant conditioning, which relied on the notion of reinforcement, all behavior which is learned is rooted in either a positive or negative response to that action. There are two corollaries of operant conditioning" Aversion therapy and desensitization.

Aversion therapy uses unpleasant reinforcement to a response which is undesirable. This can take the form of electric shock, exposing the subject to fear producing situations, and the infliction of pain in general. It has been used as a way of "curing" homosexuality, alcoholism and stuttering. Desensitization involves forcing the subject to view disturbing images over and over again until they no longer produce any anxiety, then moving on to more extreme images, and repeating the process over again until no anxiety is produced. Eventually, the subject becomes immune to even the most extreme images. This technique is typically used to treat people's phobias. Thus, the violence shown on T.V. could be said to have the unsystematic and unintended effect of desensitization.

Skinnerian behaviorism has been accused of attempting to deprive man of his free will, his dignity and his autonomy. It is said to be intolerant of uncertainty in human behavior, and refuses to recognize the private, the ineffable, and the unpredictable. It sees the individual merely as a medical, chemical and mechanistic entity which has no comprehension of its real interests.

Skinner believed that people are going to be manipulated. "I just want them to be manipulated effectively," he said. He measured his success by the absence of resistance and counter control on the part of the person he was manipulating. He thought that his techniques could be perfected to the point that the subject would not even suspect that he was being manipulated.

Dr. James V. McConnel, head of the Department of Mental Health Research at the University of Michigan, said, "The day has come when we can combine sensory deprivation with the use of drugs, hypnosis, and the astute manipulation of reward and punishment to gain almost absolute control over an individual's behavior. We want to reshape our society drastically."

### **The Navy's Murderers**

(Statements of Lt. Commander Thomas Narut, *The London Times*)

A U.S. Navy psychologist claims that the Office of Naval Intelligence had taken convicted murderers from military prisons, used behavior modification techniques on them, and then

relocated them in American embassies throughout the world. Just prior to that time, the U.S. Senate Intelligence Committee had censured the CIA for its global political assassination plots, including plots against Fidel Castro. The Navy psychologist was Lt. Commander Thomas Narut of the U.S. Regional Medical Center in Naples, Italy. The information was divulged at an Oslo NATO conference of 120 psychologists from the eleven nation alliance.

According to Dr. Narut, the U.S. Navy was an excellent place for a researcher to find "captive personnel" whom they could use as guinea pigs in experiments. The Navy provided all the funding necessary, according to Narut.

Dr. Narut, in a question and answer session with reporters from many nations, revealed how the Navy was secretly programming large numbers of assassins. He said that the men he had worked with for the Navy were being prepared for commando-type operations, as well as covert operations in U.S. embassies worldwide. He described the men who went through his program as "hit men and assassins" who could kill on command.

Careful screening of the subjects was accomplished by Navy psychologists through the military records, and those who actually received assignments where their training could be utilized, were drawn mainly from submarine crews, the paratroops, and many were convicted murderers serving military prison sentences. Several men who had been awarded medals for bravery were drafted into the program.

The assassins were conditioned through "audio-visual desensitization". The process involved the showing of films of people being injured or killed in a variety of ways, starting with very mild depictions, leading up to the more extreme forms of mayhem. Eventually, the subjects would be able to detach their feelings even when viewing the most horrible of films. The conditioning was most successful when applied to "passive-aggressive" types, and most of these ended up being able to kill without any regrets. The prime indicator of violent tendencies was the Minnesota Multiphasic Personality Inventory. Dr. Narut knew of two Navy programming centers, the neuropsychiatric laboratory in San Diego and the U.S. Regional Medical Center in Italy, where he worked.

During the audio-visual desensitization programming, restraints were used to force the subject to view the films. A device was used on the subjects eyelids to prevent him from blinking. Typically, the preliminary film was on an African youth being ritualistically circumcised with a dull knife and without any anesthetic. The second film showed a sawmill scene in which a man accidentally cut off his fingers.

In addition to the desensitization films, the potential assassins underwent programming to create prejudicial attitude in the men, to think of their future enemies, especially the leaders of these countries, as sub-human. Films and lectures were presented demeaning the culture and habits of the people of the countries where it had been decided they would be sent.

After his NATO lecture, Dr. Narut disappeared. He could not be located. Within a week of so after the lecture, the Pentagon issued an emphatic denial that the U.S. Navy had "engaged in psychological training or other types of training of personnel as assassins." They disavowed the programming centers in San Diego and Naples and stated they were unable to locate Narut, but did provide confirmation that he was a staff member of the U.S. Regional Medical Center in Naples.

Dr. Alfred Zitani, an American delegate to the Oslo conference, did verify Narut's remarks and they were published in the Sunday Times.

Sometime later, Dr. Narut surfaced again in London and recanted his remarks, stating that he was "talking in theoretical and not practical terms." Shortly thereafter, the U.S. Naval headquarters in London issued a statement indicating that Dr. Narut's remarks at the NATO conference should be discounted because he had "personal problems". Dr. Narut never made any further public statements about the program.

During the NATO conference in Oslo, Dr. Narut had remarked that the reason he was divulging the information was because he believed that the information was coming out anyway. The doctor was referring to the disclosure by a Congressional subcommittee which were then appearing in the press concerning various CIA assassination plots. However, what Dr. Narut had failed to realize at the time, was that the Navy's assassination plots were not destined to be revealed to the public at that time.

### **Electromagnetic Control of Human Behavior** (Published scientific papers and press reports)

There were three scientists who pioneered the work of using an electromagnetic field to control human behavior. Their work began 25 years ago. These three were Dr. Jose Delgado, psychology professor at Yale University; Dr. W. Ross Adey, a physiologist at the Brain Research Institute at UCLA; and Dr. Wilder Penfield, a Canadian.

Dr. Penfield's experiments consisted of the implantation of electrodes deep into the cortexes of epilepsy patients who were to undergo surgery; he was able to drastically improve the memories of these patients through electrical stimulation. Dr. Adey implanted transmitters in the brains of cats and chimpanzees that could send signals to a receiver regarding the electrical activity of the brain; additional radio signals were sent back into the brains of the animals which modified their behavior at the direction of the doctor. Dr. Delgado was able to stop and turn a charging bull through the use of an implanted radio receiver.

Other experiments using platinum, gold and stainless steel electrode implants enabled researchers to induce total madness in cats, put monkeys into a stupor, or to set human beings jerking their arms up and down. Much of Delgado's work was financed by the CIA through phony funding conduits masking themselves as charitable organizations.

Following the successes of Delgado's work, the CIA set up their own research program in the field of electromagnetic behavior modification under the code name Sleeping Beauty. With the guidance of Dr. Ivor Browning, a laboratory was set up in New Mexico, specializing in working with the hypothalamus or "sweet spot" of the brain. Here it was found that stimulating this area could produce intense euphoria.

Dr. Browning was able to wire a radio receiver-amplifier into the "sweet spot" of a donkey which picked up a five-micro-amp signal, such that he could create intense happiness in the animal. Using the jolts of happiness as an "electronic carrot", Browning was able to send the donkey up a 2000 foot New Mexico mountain and back to its point of origin. When the donkey was proceeding up the path toward its destination, it was rewarded; when it deviated, the signal stopped. "You've never seen a donkey so eager to keep on course in your whole life," Dr. Browning exclaimed.

The CIA utilized the electronic carrot technique in getting trained pigeons to fly miniature microphone-transmitters to the ledge of a KGB safe house where the devices monitored conversations for months. There was a move within the CIA to conduct further experiments on humans, foreigners and prisoners, but officially the White House vetoed the idea as being unethical.

In May 1989, it was learned by the CIA that the KGB was subjecting people undergoing interrogation to electromagnetic fields, which produced a panic reaction, thereby bringing them closer to breaking down under questioning. The subjects were not told that they were being placed under the influence of these beams. A few years earlier, Dr. Ross Adey released photographs and a fact sheet concerning what he called the Russian Lida machine. This consisted of a small transmitter emitting 10-hertz waves which makes the subject susceptible to hypnotic suggestion. The device utilized the outmoded vacuum-tube design. American POWs in Korea have indicated that similar devices had been used for interrogation purposes in POW camps.

### **The ELF Connection**

The general, long term goal of the CIA was to find out whether or not mind control could be achieved through the use of a precise, external, electromagnetic beam. The electrical activity of the brain operates within the range of 100 hertz frequency. This spectrum is called ELF or Extremely Low Frequency range. ELF waves carry very little ionizing radiation and very low heat, and therefore do not manifest gross, observable physical effects on living organisms. Published Soviet experiments with ELF's reveal that there was a marked increase in psychiatric and central nervous system disorders and symptoms of stress for sailors working close to ELF generators.

In the mid-1970s, American interest in combining EMR techniques with hypnosis was very prominent. Plans were on file to develop these techniques through experiments on human volunteers. The spoken word of the hypnotist could be conveyed by modulated electromagnetic energy directly into the subconscious parts of the human brain without employing any technical devices for receiving or transacting the messages and without the person exposed to such influence having a chance to control the information input consciously.

In California, it was discovered by Dr. Adey that animal brain waves could be altered directly by ELF fields. It was found that monkey brains would fall in phase with ELF waves. These waves could easily pass through the skull, which normally protected the central nervous system from outside influence.

In San Leandro, Dr. Elizabeth Rauscher, director of Technic Research Laboratory, has been doing ELF/brain research with human subjects for some time. One of the frequencies produces nausea for more than an hour. Another frequency, she calls it the marijuana frequency, gets people laughing. "Give me the money and three months," she says, "and I'll be able to affect the behavior of eighty percent of the people in this town without their knowing it."

### **The Devastating Mental and Physical Effect of Microwaves** (Soviet Research, State Department Admissions, Public Record)

In the past, the Soviet Union has invested large sums of time and money investigating microwaves. In 1952, while the Cold War was showing no signs of thawing, there was a secret meeting at the Sandia Corporation in New Mexico between U.S. and Soviet scientists involving the exchange of information regarding the biological hazards and safety levels of EMR. The Soviets possessed the greater preponderance of information, and the American scientists were unwilling to take it seriously. In subsequent meetings, the Soviet scientists continued to stress the seriousness of the risks, while American scientists downplayed their importance.

Shortly after the last Sandia meeting, the Soviets began directing a microwave beam at the U.S. embassy in Moscow, using embassy workers as guinea pigs for low-level EMR experiments. Washington, D.C. was oddly quiescent, regarding the Moscow embassy bombardment.

Discovered in 1962, the Moscow signal was investigated by the CIA, which hired a consultant, Milton Zaret, and code named the research Project Pandora. According to Zaret, the Moscow signal was composed of several frequencies, and was focused precisely upon the Ambassador's office. The intensity of the bombardment was not made public, but when the State Department finally admitted the existence of the signal, it announced that it was fairly low.

There was consensus among Soviet EMR researchers that a beam such as the Moscow signal was destined to produce blurred vision and loss of mental concentration. The Boston Globe reported that the American ambassador had not only developed a leukemia-like blood disease, but also suffered from bleeding eyes and chronic headaches. Under the CIA's Project Pandora, monkeys were brought into the embassy and exposed to the Moscow signal; they were found to have developed blood composition anomalies and unusual chromosome counts. Embassy personnel were found to have a 40 percent higher than average white blood cell count. While Operation Pandora's data gathering proceeded, embassy personnel continued working in the facility and were not informed of the bombardment until 10 years later. Embassy employees were eventually granted a 20 percent hardship allowance for their service in an unhealthy post. Throughout the period of bombardment, the CIA used the opportunity to gather data on psychological and biological effects of the beam on American personnel.

The U.S. government began to examine the affects of the Moscow signal. The job was turned over to the Defense Advanced Research Projects Agency (DARPA). DARPA is now developing electromagnetic weaponry. The man in charge of the DARPA program, Dr. Jack Verona, is so important and so secretive that he doesn't even return President George Bush's telephone calls.

The American public was never informed that the military had planned to develop electromagnetic weapons until 1982, when the revelation appeared in a technical Air Force magazine.

The magazine article stated, "....specifically generated radio-frequency radiation (RFR) fields may pose powerful and revolutionary anti-personnel military trends." The article indicated that it would be very easy to use electromagnetic fields to disrupt the human brain because the brain, itself, was an electrically mediated organ. It further indicated that a rapidly scanning RFR system would have a stunning or killing capability over a large area. The system was developable.

Navy Captain Dr. Paul E. Taylor read a paper at the Air University Center for Aerospace Doctrine, Research and Education, at Maxwell Air Force Base, Alabama. Dr. Taylor was responsible for the Navy's Radiation Laboratory and had been studying radiation effects on humans. In his paper, Dr. Taylor stated, "The ability of individuals to function (as soldiers) could be degraded to such a point that would be combat ineffective." The system was so sophisticated that it employed microwaves and millimeter waves and was transportable by a large truck.

Lawrence Livermore National Laboratory in the South Bay, are working on the development of a "brain bomb". A bomb could be dropped in the middle of a battlefield which would produce microwaves, incapacitating the minds of soldiers within a circumscribed area.

Applications of microwave technology in espionage were available for over 25 years. In a meeting in Berkeley of the American Association for the Advancement of Science as early as 1965, Professor J. Anthony Deutsch of New York University, provided an important segment of research in the field of memory control. In layman terms, Professor Deutsch indicated that the mind is a transmitter and if too much information is received, like too many vehicles on a crowded freeway, the brain ceases to transmit. The Professor indicated that an excess of acetyl choline in the brain can interfere with the memory process and control. He indicated excess amounts of acetyl choline can be artificially produced, through both the administration of drugs or through the use of radio waves. The process is called Electronic Dissolution of Memory (EDOM). The memory transmission can be stopped for as long as the radio signal continues.

As a result, the awareness of the person skips over those minutes during which he is subjected to the radio signal. Memory is distorted, and time-orientation is destroyed.

According to Lincoln Lawrence, author of *Were We Controlled*, EDOM is now operational. "There is already in use a small EDOM generator/transmitter which can be concealed on the body of the person.

Contact with this person, a casual handshake or even just a touch, transmits a tiny electronic charge plus an ultra-sonic signal tone which for a short period will disturb the time-orientation of the person affected....it can be a potent weapon for hopelessly confusing evidence in the investigation of a crime "

### **Microwave Transmission of Voices Direct to the Brain**

Thirty years ago, Allen Frey discovered that microwaves of 300 to 3000 megahertz could be "heard" by people, even if they were deaf, if pulsed at a certain rate. Appearing to be originating just in back of the head, the sound boomed, clicked, hissed or buzzed, depending upon the frequency. Later research has shown that the perception of the waves take place just in front of the ears. The microwaves causes pressure waves in the brain tissue, and this phenomenon vibrates the sound receptors in the inner ear through the bone structure. Some microwaves are capable of directly stimulating the nerve cells of the auditory pathways.

This has been confirmed with experiments with rats, in which the sound registers 120 decibels, which is equal to the volume of a nearby jet during takeoff. Aside from having the capability of causing pain and preventing auditory communication, a more subtle effect was demonstrated at the Walter Reed Army Institute of Research by Dr. Joseph C. Sharp. Dr.

Sharp, himself, was the subject of an experiment in which pulsed microwave audiograms, or the microwave analog of the sound vibrations of spoken words, were delivered to his brain in such a way that he was able to understand the words that were spoken. Military and undercover uses of such a device might include driving a subject crazy with inner voices in order to discredit him, or conveying undetectable instructions to a programmed assassin.

But the technology has been carried even a step further. It has been demonstrated by Dr. Ross Adey that microwaves can be used to directly bring about changes in the electrical patterns of different parts of the brain. His experiments showed that he could achieve the same mind control over animals as Dr. Delgado did in the bull incident. Dr. Delgado used brain implants in his animals, Dr. Adey used microwave devices without preconditioning. He made animals act and look like electronic toys.

### **Nazi Mind Control Experiments** (Report from the US Naval Technical Mission)

At the conclusion of World War Two, American investigators learned that Nazi doctors at the Dachau concentration camp in Germany had been conducting mind control experiments on inmates. They experimented with hypnosis and with the drug mescaline.

Mescaline is a quasi-synthetic extract of the peyote cactus, and is very similar to LSD in the hallucinations which it produces. Though they did not achieve the degree of success they had desired, the SS interrogators in conjunction with the Dachau doctors were able to extract the most intimate secrets from the prisoners when the inmates were given very high doses of mescaline.

There were fatal mind control experiments conducted at Auschwitz. The experiments there were described by one informant as "brainwashing with chemicals". The informant said the Gestapo wasn't satisfied with extracting information by torture. "So the next question was, why don't we do it like the Russians, who have been able to get confessions of guilt at their show trials?" They tried various barbiturates and morphine derivatives. After prisoners were fed a coffee-like substance, two of them died in the night and others died later.

The Dachau mescaline experiments were written up in a lengthy report issued by the U.S. Naval Technical Mission, whose job it was at the conclusion of the war to scour all of Europe for every shred of industrial and scientific material that had been produced by the Third Reich. It was as a result of this report that the U.S. Navy became interested in mescaline as an interrogation tool. The Navy initiated Project Chatter in 1947, the same year the Central Intelligence Agency was formed. The Chatter format included developing methods for acquiring information from people against their will, but without inflicting harm or pain. At the conclusion of the war, the OSS was designated as the investigative unit for the International Military Tribunal, which was to become known as the Nuremberg Trials. The purpose of Nuremberg was to try the principal Nazi leaders. Some Nazis were on trial for their experiments, and the U.S. was using its own "truth drugs" on these principal Nazi prisoners, namely Goring, Ribbentrop, Speer and eight others. The Justice in charge of the tribunal had given the OSS permission to use the drugs.

The Dachau doctors who performed the mescaline experiments also were involved in aviation medicine. The aviation experiments at Dachau fascinated Heinrich Himmler. Himmler followed the progress of the tests, studied their findings and often suggested improvements.

The Germans had a keen interest in several medical problems in the field of flying, they were interested in preventing pilots from slowly becoming unconscious as a result of breathing the thin air of the high altitudes and there was interest in enhancing night vision.

The main research in this area was at the Institute of Aviation in Munich, which had excellent laboratories. The experiments in relationship to the Institute were conducted at Dachau. Inmates had been immersed in tubs of ice water with instruments placed in their orifices in order to monitor their painful deaths. Dr. Hubertus Strughold, who ran the German aviation medicine team, confirmed that he had heard humans were used for the Dachau experiments. Hidden in a cave in Hallein were files recording the Dachau experiments.

### **Nazi Altitude and Cold Endurance Experiments**

On May 15, 1941, Dr. Sigmund Rascher wrote a letter to Himmler requesting permission to use the Dachau inmates for experiments on the physiology of high altitudes. Rascher lamented the fact that no such experiments have been done using human subjects. "The experiments are very dangerous and we cannot attract volunteers," he told Himmler. His request was approved.

Dachau was filled with Communists and Social Democrats, Jews, Jehovah's Witnesses, Gypsies, clergymen, homosexuals, and people critical of the Nazi government. Upon entering Dachau, prisoners lost all legal status, their hair was shaved off, all their possessions confiscated, they were poorly fed, and they were used as slaves for both the corporations and the government. The SS guards were brutal and sadistic. The idea to test subjects at Dachau was really the brain child of Erich Hippke, chief surgeon of the Luftwaffe.

Between March and August of 1942 extensive experiments were conducted at Dachau regarding the limits of human endurance at high altitudes. These experiments were conducted for the benefit of the German Air Force. The experiments took place in a low-pressure chamber in which altitudes of up to 68,000 feet could be simulated. The subjects were placed in the chamber and the altitude was raised, many inmates died as a result. The survivors often suffered serious injury. One witness at the Nuremberg trials, Anton Pacholegg, who was sent to Dachau in 1942, gave an eyewitness account of the typical pressure test:

"The Luftwaffe delivered a cabinet constructed of wood and metal. It was possible in the cabinet to either decrease or increase the air pressure. You could observe through a little window the reaction of the subject inside the chamber. The purpose of these experiments was to test human energy and the subject's capacity...to take large amounts of pure oxygen, and then to test his reaction to a gradual decrease in oxygen. I have personally seen through the observation window of the chamber when a prisoner inside would stand a vacuum until his lungs ruptured. Some experiments gave men such pressure in their heads that they would go mad and pull out their hair in an effort to relieve the pressure. They would tear their heads and face with their fingers and nails in an attempt to maim themselves in their madness. They would beat the walls with their hands and head and scream in an effort to relieve pressure in their eardrums. These cases of extreme vacuums generally ended in the death of the subjects."

The former prisoner also testified, "An extreme experiment was so certain to result in death that in many instances the chamber was used for routine execution purposes rather than an experiment." A minimum 200 prisoners were known to have died in these experiments.

The doctors directly involved with the research held very high positions: Karl Brandt was Hitler's personal doctor; Oskar Schroeder was the Chief of the Medical Services of the Luftwaffe; Karl Gebhardt was Chief Surgeon on the Staff of the Reich Physician SS and Police and German Red Cross President; Joachim Mrugowsky was Chief of the Hygienic Institute of the Waffen SS; Helmut Poppendick was a senior colonel in the SS and Chief of the Personal Staff of the Reich Physicians SS and Police; Siegfried Ruff was Director of the Department of Aviation Medicine.

The first human guinea pig was a 37 year old Jew in good health. Himmler invited 40 top Luftwaffe officers to view a movie of an inmate dying in the pressure chamber. After the pressure chamber tests, the cold treatment experiments began. The experiments consisted of immersing inmates in freezing water while their vital signs were monitored. The goal was to discover the cause of death. Heart failure was the answer. An inmate described the procedures:

"The basins were filled with water and ice was added until the water measured 37.4 F and the experimental subjects were either dressed in a flying suit or were placed in the water naked. The temperature was measured rectally and through the stomach. The lowering of the body temperature to 32 degrees was terrible for experimental subjects. At 32 degrees the subject lost consciousness. They were frozen to 25 degrees. The worst experiment was performed on two Russian officer POWs. They were placed in the basin naked. Hour after hour passed, and while usually after a short time, 60 minutes, freezing had set in, these two Russians were still conscious after two hours. After the third hour one Russian told the other, 'Comrade, tell that officer to shoot us.' The other replied, 'Don't expect any mercy from this Fascist dog.' Then they shook hands and said goodbye. The experiment lasted at least five hours until death occurred.

"Dry freezing experiments were also carried out at Dachau. One subject was put outdoors on a stretcher at night when it was extremely cold. While covered with a linen sheet, a bucket of cold water was poured over him every hour. He was kept outdoors under sub-freezing conditions. In subsequent experiments, subjects were simply left outside naked in a court under freezing conditions for hours. Himmler gave permission to move the experiments to Auschwitz, because it was more private and because the subjects of the experiment would howl all night as they froze. The physical pain of freezing was terrible. The subjects died by inches, heartbeat became totally irregular, breathing difficulties and lung edema resulted, hands and feet became frozen white."

As the Germans began to lose the war, the aviation doctors began to keep their names from appearing in Himmler's files for fear of future recriminations.

The Nazi doctors who experimented on the inmates of prison camps during World War Two were tried for murder at the Nuremberg Tribunal. The accused were educated, trained physicians, they did not kill in anger or in malice, they were creating a science of death. Ironically, in 1933, the Nazis passed a law for the protection of animals. The law cited the prevention of cruelty and indifference to animals as one of the highest moral values of a people, animal experimentation was unthinkable, but human experimentations were acceptable. The victims of the crime of these doctors numbered into the thousands.

### **US Contempt for International Human Experimentation Protocols**

In 1953, while the Central Intelligence Agency was still conducting mind control and behavior modification on unwitting humans in this country, the United States signed the Nuremberg Code, a code born out of the ashes of war and human suffering. The document was a solemn promise never to tolerate such human atrocities again. The Code maintains three fundamental principles:

1. The subjects of any experimentation must be volunteers who thoroughly understand the purpose and the dangers of the experiments.
2. They must be free to give consent and the consent must be without pressure and they must be free to quit the experiments at any time.
3. The experiments must be likely to yield knowledge which is valuable to everyone. The knowledge must be such that it could not be gained in any other way.

The experiments must be conducted by only the most competent doctors, and they must exercise extreme care.

The Nazi aviation experiments met none of these conditions. Most inmates at Dachau knew that the experiments in the pressure chamber were fatal. From the very beginning, control of the experiments was largely in the hands of the SS, which was later judged to be a criminal organization by the Nuremberg Tribunal.

Despite our lessons from Nuremberg and the death camps, the CIA, U.S. Navy and the U.S. Army Chemical Corps targeted specific groups of people for experimentation who were not able to resist, prisoners, mental patients, foreigners, ethnic minorities, sex deviants, the terminally ill, children and U.S. military personnel and prisoners of war.

They violated the Nuremberg Code for conducting and subsidizing experiments on unwitting citizens. The CIA began its mind control projects in 1953, the very year that the U.S. signed the Nuremberg Code and pledged with the international community of nations to respect basic human rights and to prohibit experimentation on captive populations without full and free consent.

Dr. Cameron, a CIA operative, was one of the worst offenders against the Code, yet he was a member of the Nuremberg Tribunal, with full knowledge of its testimony. In 1973, a three judge court in Michigan ruled, "experimental psychosurgery, which is irreversible and intrusive, often leads to the blunting of emotions, the deadening of memory, the reduction of affect, and limits the ability to generate new ideas. Its potential for injury to the creativity of the individual is great and can infringe on the right of the individual to be free from interference with his mental process.

"The state's interest in performing psychosurgery and the legal ability of the involuntarily detained mental patient to give consent, must bow to the First Amendment, which protects the generation and free flow of ideas from unwarranted interference with one's mental processes."

Citing the Nuremberg Code, the court found that "the very nature of the subject's incarceration diminishes the capacity to consent to psychosurgery."

In 1973, the Commonwealth of Massachusetts enacted regulations which would require informed written consent from voluntary patients before electroshock treatment could be performed.

Senator Sam Ervin's Committee lashed out bitterly at the mind control and behavior modification experiments and ordered them discontinued, they were not.

The New England Journal of Medicine states, that the consent provisions now in place are "no more than an elaborate ritual." They called it "a device that when the subject is uneducated and uncomprehending, confers no more than a semblance of propriety on human experimentation."

The Nuremberg Tribunal brought to light that some of the most respected figures in the medical profession were involved in the vast crime network of the SS. Only 23 persons were charged with criminal activity in this area, despite the fact that hundreds of medical personnel were involved. The defendants were charged with crimes against humanity. They were found guilty of planning and executing experiments on humans without their consent, in a cruel and brutal manner which involved severe torture, deliberate murder and with the full knowledge of the gravity of their deeds. Only seven of the defendants were sentenced to death and hanged, others received life sentences. Five who were involved in the experiments were not tried. Ernest Grawitz committed suicide, Carl Clauberg was tried in the Soviet Union, Josef Mengele escaped to South America and was later captured by Israeli agents, Horst Schumann disappeared and Siegmund Rascher was executed by Himmler.

### **US Use of Dachau Data and "Friendly" Nazi Doctors**

There were 200 German medical doctors conducting these medical experiments. Most of these doctors were friends of the United States before the war, and despite their inhuman experiments, the U.S. attempted to rebuild a relationship with them after the war. The knowledge the Germans had accumulated at the expense of human life and suffering, was considered a "booty of war", by the Americans and the Russians. The Americans tracked down Dr. Strughold, the aviation doctor who was in charge of the Dachau experiments.

With full knowledge that the experiments were conducted on captive humans, the U.S. recruited the doctors to work for them. General Dwight D. Eisenhower gave his personal approval to exploit the work and research of the Nazi's in the death camps.

Within weeks of Eisenhower's order, many of these notorious doctors were working for the U.S. Army at Heidelberg. Army teams scoured Europe for scientific experimental apparatus such as pressure chambers, compressors, G-force machines, giant centrifuges, and electron microscopes. These doctors were wine and dined by the U.S. Army while most of Germany's post-war citizens virtually starved.

The German doctors were brought to the U.S. and went to work for Project Paperclip. All these doctors had been insulated against war crime charges. The Nuremberg prosecutors were shocked that U.S. authorities were using the German doctors despite their criminal past.

Under the leadership of Strughold, 34 scientists accepted contracts from Project Paperclip, and were moved to Randolph Air Force Base at San Antonio, Texas. The authorization to hire these Nazi scientists came directly for the Joint Chiefs of Staff. The top military brass stated that they wished to exploit these rare minds. Project Paperclip, ironically, would use Nazi doctors to develop methods of interrogating German prisoners of war.

As hostilities began to build after the war between the Americans and the Russians, the U.S. imported as many as 1000 former Nazi scientists.

In 1969, Americans landed on the moon, and two groups of scientist in the control center shared the credit, the rocket team from Peenemunde, Germany, under the leadership of Werner von Braun, these men had perfected the V-2s which were built in the Nordhausen caves where 20,000 slave laborers from prison camp Dora had been worked to death. The second group were the space doctors, lead by 71-year-old Dr. Hubertus Strughold, whose work was pioneered in Experimental Block No. 5 of the Dachau concentration camp and the torture and death of hundreds of inmates. The torture chambers that was used to slowly kill the prisoners of the Nazi's were the test beds for the apparatus that protected Neil Armstrong from harm, from lack of oxygen, and pressure, when he walked on the moon.

## "Mind Drive" Thought Controlled Computer Games

The scanned page below is page 3 of the Winter 2000 [Tools For Wellness](#) catalogue. In case the image won't load for you, so I'll highlight some of the text here:

- Just below "MindDrive" in the top left image: "The first computer product operated by human thought"
- Major heading just below top left image: "How do you control a computer with just your thoughts?"
- Catalog number and price: #74050 MindDrive \$299.00, includes "MindSkier" software
- More software includes:
  - MindFlight, #74052, \$69.95
  - FIB (lie detector), #74053, \$69.95
  - MindMusic, #74056, \$49.95
  - MindGames, #74058, \$69.95
  - MindBowling, #74054, \$69.95
  - MindArt, #74057, \$39.95

This mind game uses differences in galvanic skin response of the fingers, not the head. This takes advantage of the fact that different thoughts cause differences in skin resistance. Before the reader is tempted to say "Aaaaah ... that's not mind reading", yes it IS mind reading, as while playing these games, your mind is controlling your finger skin resistance.

And do keep in mind that there are other measurable body parameters, such as thermal patterns of the face, and even the direct magnetic field patterns around the head which are in use at airports to pick up potential criminal intent. It is not necessary to directly read the brain via implants to do bona fide primitive thought reading.

Keep in mind also these other cases of mind reading:

- Glass cone implants to provide thought controlled appliances for the paralyzed
- The wire implants into the brains of blind people to create low resolution images for them
- The [wire implant pickup](#) of images from the brain of a cat, so what the cat sees could be displayed on a screen
- The [warning](#) given to a seminar at the Paris, France Pasteur institute that unclassified imaging technology was close to reading thoughts in 1998

With the information above in support, here is the image:

## MindDrive™

CONTROL YOUR COMPUTER WITH YOUR THOUGHTS

I have been very fortunate to have a very good relationship with a very good person, and I have been very fortunate to have a very good relationship with a very good person.

Verfahren in der Natur

Although people in America believe science and reason are essential, using rational thought to better understand and act on has been but a dream. Since then, people have become a million different things, some more rational, some less so. The dream of a more rational society has been replaced by a more realistic one, one that is more aware of its own limitations.

Using MaxDrive is astonishingly simple.

When we read the First Book, we will begin exploring the Middle Ages – an era immediately following the end of the ancient world, which we will explore in more detail later in the year.

**Sanctuary in the forests of ever mind**

What's the long-term goal? "We're not just getting involved in all new forms of transportation, and the related equipment. There are patterns in all sorts of markets, where we're focused on how to get the most out of things — not just how to build them, as a provider," says Maschino. "I call this developing new game plans in very particular but a wide variety of markets, like energy, defense, and high performance computing."

# Mind Control & MK-ULTRA

By: *Richard G. Gall*

---

## Word from Jeroen Wierda:

This very interesting article is about the mind control projects that the USA has been conducting over the years.

This article is written by Richard G. Gall and placed at PUFORI with permission. All rights remain with Richard.

---

## Mind Control & MK-ULTRA

by *Richard G. Gall*

On 28 November 1953, a delusional and depressed Dr Frank Olson threw himself out of the tenth floor window of his New York hotel. Olson was a long-serving scientist for the US Army's secretive Chemical Corps Special Operations Division, whose problems began at a meeting 9 days earlier. The meeting had been orchestrated by Sidnet Gottlieb, Head of the CIA's Technical Services Staff. Unknown to those present at the meeting, Gottlieb had acquired a quantity of LSD and secretly wanted to test it. Spiking Olson's drink with the LSD, he passed the bottle around and sat back waiting for results. Olson, an outgoing personality who loved practical jokes, soon began to suffer jarring side effects. One of those present at the meeting, Ben Wilson, later recalled that Olson 'was psychotic'.

Gottlieb and his boss, the Director of Central Intelligence, Allen Dulles, initiated a 20-year cover-up of the circumstances surrounding Olson's death.

At stake was the CIA's super secret project, **MK-ULTRA**. The project had grown out of an earlier secret programme, known as **Bluebird**, that was officially formed to counter Soviet advances in brainwashing. In reality the CIA had other objectives. An earlier aim was to study methods 'through which control of an individual may be attained'. The emphasis of experimentation was 'narco-hypnosis', the blending of mind altering drugs with careful hypnotic programming.

Ever evolving, project Bluebird was later renamed Project **Artichoke**, after a vegetable that Dulles was particularly fond of. Artichoke was an 'offensive' programme of mind control that gathered

together the intelligence divisions of the Army, Navy, Air Force and FBI.

The scope of the project was outlined in a memorandum dated January 1952 that ominously asked: *"Can we get control of an individual to the point where he will do our bidding against his will and even against fundamental laws of nature such as self preservation?"* The race was on to create a programmable assassin!

A crack CIA team was formed that could travel, at a moment's notice, to anywhere in the world. Their task was to test the new interrogation techniques, and ensure that victims would not remember being interrogated and programmed. All manner of narcotics, from marijuana to LSD, heroin and sodium pentathol (the so called 'truth drug') were regularly used.

Despite poor initial results, CIA-sponsored mind control programmes flourished. On 13 April 1953, the super-secret project MK-ULTRA was born. Its scope was broader than ever before, and only those in the top echelon of the CIA were privy to it. Official CIA documents describe MK-ULTRA as an *'umbrella project'* with 149 'sub-projects'. Many of these sub-projects dealt with testing illegal drugs for potential field use. Others dealt with electronics. One explored the possibility of activating 'the human organism by remote control'. Throughout, it remained a major goal to brainwash individuals to become couriers and spies without their knowledge.

When it was formed in 1947, the CIA was forbidden to have any domestic police or internal security powers. In short, it was authorized only to operate 'overseas'. From the very start MK-ULTRA staff broke this Congressional stipulation and began testing on unwitting US citizens.

Precisely how extensive illegal testing became will never be known. Richard Helms, CIA Director and chief architect of the programme, ordered the destruction of all MK-ULTRA records shortly before leaving office in 1973. Despite these precautions some documents were misfiled and came to light in the late 1970's. They laid bare the spy agency's cynicism.

One particularly odious project was run by Dr Harris Isabel, Director of the Public Service Hospital in Lexington, Kentucky - a facility specializing in drug abuse. Asked by the CIA to discover a range of 'synthetic' drugs, Isabel began experimenting on captive black inmates. Anxious to please his CIA bosses he daily fed his guinea pigs large doses of LSD, mescaline, marijuana, scopolamine and other substances. In exchange for participating in the experiments, the inmates received injections of high quality morphine, sometimes getting 'shot-up' three times a day, depending on their co-operation. Brought before the Senate subcommittees in 1975, Isabel saw no contradiction in providing hard drugs to the very addicts he was employed to cure.

Following public outrage, the CIA announced it had ceased its mind manipulation programmes. Victor Marchetti, a CIA veteran of 14 years who turned 'whistle-blower', exposed this to be untrue.

In 1977, Marchetti said the CIA claims to have ceased were a cover story. Under scrutiny, the agency were quick to downplay the success of MK-ULTRA - claiming no real advances were achieved. Miles Copeland, another long-serving CIA officer disputed this. Speaking to a reporter, Copeland revealed that 'the congressional subcommittee which went into this sort of thing only got the barest glimpse'. Another source within the intelligence community says that after 1963, CIA efforts increasingly focused on psychoelectronics. Narcohypnosis had been drained dry.

Dr Jose Delgado, a neurophysiologist at Yale University School, was especially interested in Electronic Stimulation of the Brain. By implanting a small probe into the brain, Delgado discovered that he could wield enormous power over his subject. Using a device he called the 'stimoveiver' which operated by FM radio waves, he was able to electrically orchestrate a wide range of human emotions. These included rage, lust and fatigue.

Artichoke Project  
Bluebird Project  
Pandora Project  
Mk-Delta Project  
Mk-Naomi Project  
Mk-Action Project  
Mk-Search Project  
Mk-Ultra Project

During 1966, Delgado announced that his findings supported 'the distasteful conclusion that motion, emotion and behaviour can be directed by electrical forces'. He added that 'humans can be controlled like robots by push buttons'. Funded by the Office of Naval Research, Delgado looked forward to a future when society could be 'psychocivilised'. Despite the miniturization of implants, the next major advance forward was microwaves.

By placing a volunteer (???) in an electromagnetic field, Dr Ross Adey of the University of California, made a startling discovery. Using specific radio waves, Adey was able to influence his subjects' brainwaves.

Another scientist, Allen Frey, took this research a step further. Frey found he could remotely induce sleep in his subjects by subjecting them to electromagnetic waves. He also learned he could produce acoustic noises - booming, buzzing and hissing, directly inside a volunteer's (????) head. **Developing on Frey's earlier work, Joseph Sharp, a doctor at the Walter Reed Army Institute of Research, was able to transmit spoken words via pulsed microwaves. Sitting inside an electromagnetic field, Sharp clearly heard and understood words transmitted to him by a colleague. For the medical profession this was a major breakthrough, and would be of immense benefit to the deaf.**

[Could the buzzing and hissing got anything to do with what people hear in the USA with regard to the HAARP project? Lots of people told me that they were hearing humming sounds both inside and outside their homes. We know that HAARP uses EM waves, but still don't know for FACT what HAARP is capable of - Jeroen]

However, the US military and interlligence community were quick to capitalize on these new discoveries. Secret research programmes on electromagnetics have never been made available under the Freedom of Information Act.

In 1974, J. F. Scapitz, a scientist funded by the Department of Defense, had a chilling vision. He sought to combine earlier MK-ULTRA hypnosis studies with emerging microwave technologies. In an outline to the DoD, Scapitz said "It will be shown the spoken word of the hynotist my be conveyed by modulated electromagnetic energy directly into the subconscious parts of the brain". He claimed this could be achieved without employing any technical devices for 'receiving or transcoding messages'.

For the first time, US agents had the ability to remotely tamper with an individual's mind. Scapitz went even further, claiming that this could be achieved without the target even becoming aware of what was happening.

Since then, little public information has been revealed in scientific literature, following the imposition of the strict security classification. Despite this, significant pieces of information - more usually from non-US sources - continue to be published. What is available paints a bleak picture.

Evidence exists that mind-control and behaviour modification technology is presently concealed behind Non Lethal Defense (NLD) initiatives. In announcement in 1995 that non-leathal weapons - including high powered microwaves and radio frequency devices - are to be 'transited' to the law enforcement sector was met with dismay in some quarters. This joint programme, known as 'Operations Other Than War', opens the way for the military to move into the civilian domain - a move precluded by the American constitution. The stated aim is to more effectively tackle narcotics

trafficking, terrorism and other criminal activity.

Many citizens consider this to be a lame excuse. They fear of widespread use of mind-altering technologies, and believe democracy is under serious assault. In the light of past government evilness and abuse, who could blame them???

Date sent: Tue, 11 Mar 1997 08:30:03 -0700 (MST)  
From: BARR DOUG  
To: raven1@netaccess.on.ca  
Subject: Re: Request for backup information  
about the 1977 hearings by Congress  
on the "MK" series of covert test  
programmes.

The following are excerpts from the Congressional record titled HUMAN DRUG TESTING BY THE CIA, 1977, Subcommittee on Health and Scientific Research of the Committee on Human Resources. This Committee met on September 20, 1977. This information was found on Microfiche CIS785411-19, with the call #KF49.C6. IT IS AN OFFICIAL US DOCUMENT.

Opening Statement by Chairman: Today the Health and Scientific Research Subcommittee resumes it's inquiry into the biologic and behavioral activities off the Central Intelligence Agency and the Department of Defense. The events we will hear about over the next 2 days occurred between 1952 and 1972. They had their origin in a different time which had differnt values and realities. But it is important for us to fully understand these events today--because they raise fundamental quesitons about what kind of society we are and what we want to become.

.....

Individual Americans from all social levels, high and low, were made the unwitting subjects of drug tests; scores of Universities were used to further CIA research objectives without their knowledge, thus threatening in a fundamental way their traditional independence and integrity; other Government agencies such as the Bureau of Narcotics, the National Institute of Health, and the Internal Revenue Service, were used to further the programs and mission of the Central Intelligence Agency. These projects were not the creation of low-level agency bureaucrats working against the wishes or without the knowledge of the Agency's leadership.

...

on to page 158

### I. CODEWORD PROJECTS IDENTIFIED BY THE CENTRAL INTELLIGENCE AGENCY

In testimony on August 3, 1977, before a joint session of the Senate Select Committee on Intelligence and the Senate Committe on Health and Scientific Research, the Director of Central Intelligence reported that the Central Intelligence Agency has located a number of boxes of documents, consisting largely of financial records, relating to

experiments using human subjects in which drugs were tested for mind-control and behavior modification purposes. The Director testified that it appeared that three of the projects described by these documents--projects designated MKSEARCH, MKOFTEN and MKCHICKWIT--were Department of Defense programs with which the CIA had had some contact. The Director also described three other projects -- designated MKULTRA< MKDELTA and MKNAOMI -- which were primarily CIA projects but which might have had some Department of Defense involvement. It appears from the available documents that these projects cover subjects matters as follows:

MKDELTA: This was apparently the first project established by the CIA in October, 1952, for the use of biochemicals in clandestine operations. It may never have been implemented operationally.

MKULTRA: This was a successor project to MKDELTA established in April, 1953, and terminating some time in the late 1960's probably after 1966. This program considered various means of controlling human behavior. Drugs were only one aspect of this activity.

MKNAOMI: This project began in the 1950's and was terminated at least with respect biological projects, in 1969. This may have been a successor to MKDELTA. Its purpose was to stockpile severely incapacitating and lethal materials, and to develop gadgetry for the dissemination of these materials.

MKSEARCH: This was apparently a successor project to MKULTRA, which began in 1965 and was terminated in 1973. The objective of the project was to develop a capability to manipulate human behavior in a predictable manner through the use of drugs.

MKCHICKWIT: This was apparently a part of the MKSEARCH program. Its objective was to identify new drug developments in Europe and Asia and to obtain information and samples.

MKOFTEN: This was also apparently a part of the MKSEARCH project. Its objective was to test the behavioral and toxicological effects of certain drugs on animals and humans.

## II. ARMY PROGRAMS

It appears from the available documents that the Army was involved in one aspect of the CIA project designated as MKCHICKWIT and two aspects of a counterpart project designated MKOFTEN. The document search is described in section A below, and each of the Army programs is described in section B below.

...

(The report continues for over 100 pages, you will have to look it up yourself but it does feature original testimony by the people involved as well as revealing original

documents. It is these documents that were the source of Marks book "In Search of the Manchurian Candidate")

CONTRARY TO WHAT MANY PEOPLE CONCLUDED, THIS TYPE OF RESEARCH DID NOT STOP IN THE 1970'S NOR HAS IT STOPPED TODAY. FOR AN UPDATE ON WHAT IS HAPPENING TODAY READ CONSTANTINE'S "PSYCHIC DICTATORSHIP OF THE USA".

MIND CONTROL IN CANADA -- PRESS RELEASE

CKLN 88.1 FM radio series on Canadian involvement in U.S. CIA and military mind control programs and the links to ritual abuse.

-----

Interviews with survivors, therapists, researchers, and writers regarding unethical mind control experiments carried out by Canada and the United States on Toronto radio station CKLN-FM 88.1 Sunday mornings at 9:30 AM.

On Sunday, March 16 at 9:30 AM the International Connections program will begin the radio series 'Mind Control In Canada.' Every Sunday morning 9:30-10:30 AM on CKLN-FM 88.1 for the following eight months will focus on different issues of military and government use of mind control with a focus on the Canadian involvement in the experimental programs including:

- \*The documented history of CIA/military mind control programs including the funding of projects at Canadian institutes across the country (Including the Allen Memorial Institute in Montreal).

- \*The military and intelligence uses of mind control including using the child victims for sexual blackmail, message delivery, information stealing, coercion and assassination.

- \*The use of Multiple Personality Disorder for mind control programming and the links to the MPD effects of ritual abuse, sexual abuse and severe trauma

- \*The public debate around recovered memories of abuse

- \*The nature of the mind control experiments from survivors' accounts

**\*\*PARTIAL\*\* LIST OF INTERVIEWS AND LECTURES:**

Dr. Colin Ross -- proves that mind control has been used operationally since World War II in a lecture of the history of U.S. CIA and military mind control experiment programs.

Lynne Moss-Sharman -- survivor of mind control experimentation and ritual abuse as a child by CIA-funded doctors. Lynne describes electricity, drugging, brain implants, sexual abuse and other brutalities that were committed on her and other children and adults in Canada and United States.

Ronald Howard Cohen -- survivor of abduction and severe drugging by CIA and military and subsequent harrassment in attempting to publish a book about his ordeal.

Valerie Wolf -- therapist of mind control survivors who gave testimony about mind control experiments in the 1995 US Presidential hearings on radiation experiments.

Dr. Connie Kristiansen, Carleton University -- feminist psychologist talks about the backlash against therapists working with abuse survivors.

Linda MacDonald -- survivor of Dr. Cameron's electroshock, drugging, forced

sleep, and psychic driving 'treatment' at McGill University in Montreal and has successfully pursued compensation from the Canadian government.

Alex Constantine -- researcher, author of 'Psychic dictatorship in the USA' speaks about high-tech mind control technology and the legacy of damaged survivors it has created.

## CATALOGUE OF CKLN TAPES

### TAPE ORDER FORM

Each tape is 60 minutes on good quality normal tape.

Tape selections (catalog numbers follow this form):

---

---

---

Number of tapes: \_\_\_\_\_ x \$8.00 CDN per tape = \_\_\_\_\_ CDN

Nbr of transcripts: \_\_\_\_\_ x \$3.00 CDN per show = \_\_\_\_\_ CDN

Postage ..... \_\_\_\_\_ CDN

[Postage is \$3 CDN for 1 tape plus 75 cents for each add'l tape  
or, \$2 CDN for 1 transcript plus 50 cents for each add'l  
transcript]

Total ..... \_\_\_\_\_ CDN

Name: \_\_\_\_\_

Address: \_\_\_\_\_

City: \_\_\_\_\_ Prov/State: \_\_\_\_\_

Postal/Zip code: \_\_\_\_\_ Country: \_\_\_\_\_

- \* Make cheques or CDN-\$ money orders payable to CKLN Radio Inc.
- \* Mail to: CKLN-FM, 380 Victoria Street, Toronto ON M5B 1W7  
Canada
- \* Call 416-595-1477 or fax order to 416-595-0226 or email order  
to scw@web.net
- \* Tapes can be purchased directly at the office of CKLN Toronto  
during normal business hours

Full index also available at the [Mind Control Forum](#).

## PARTIAL Listing of Available Tapes

MK RADIO 1 - Colin Ross lecture part 1

MK RADIO 2 - Colin Ross lecture part 2

MK RADIO 3 - Colin Ross lecture part 3

A lecture by Dr. Colin Ross entitled "The CIA and Military Mind Control Research: Building the Manchurian Candidate" given April 18, 1995 in Orange County, California. Dr. Ross discusses the history of US CIA and military mind control experimentation, particularly the use of creating mind controlled agents using hypnosis and trauma-based dissociation.

MK RADIO 4 - Interview with Colin Ross

MK RADIO 5 - Interview with Colin Ross

Wayne Morris interviews Dr. Colin Ross about dissociation and the many CIA mind control projects including those that involved creating dissociation or multiple personalities in children. We discuss Canada's involvement in the mind control projects, the involvement of doctors, universities, hospitals, prisons, and other institutions across Canada and the U.S. in CIA mind control experiments.

MK RADIO 6 - Claudia Mullen and radiation hearings mind control testimony

Claudia Mullen describes the experience of giving testimony at the Presidential hearings on radiation experiments. The second half of this tape is given in 1995 to President Clinton's Advisory Committee on Human Radiation Experiments by Claudia Mullen, Chris DeNicola Ebner, and their therapist Valerie Wolf regarding government mind control experimentation. This historic testimony broke the silence about government mind control experiments on children.

MK RADIO 7 - Ronald Howard Cohen 1

MK RADIO 8 - Ronald Howard Cohen 2

Ronald Howard Cohen, writer and activist, talks about his experience of being abducted while hitchhiking, taken to a military base in Maryland and being severely drugged there in the late 60s. Ronald Tells about having his book about this experience and his life's writings stolen by the US government. Agents of CIA, FBI, and US Army Intelligence informed Ronald that his book would not be published and offered him a job at the New York Times to keep him quiet.

MK RADIO 9 - Overview of Mind Control - Bowart, Schefflin, Noblitt

A panel presentation at the Cult and Ritual Abuse, Trauma-Based Mind Control and Dissociation Symposium. Walter Bowart, author of "Operation Mind Control" talks about his research into mind control and the CIA's and

military's use of mind control. Alan Schefflin addresses therapists dealing with clients with recovered memories of abuse in today's atmosphere of intimidation with the false memory movement. Schefflin states that therapists now must recognise therapy as a social influence setting and must be knowledgeable about social influence and police interrogation literature. Randy Noblitt speaks about cult and satanic ritual abuse and the use of trauma in religious ritual.

MK RADIO 10 - History of Mind Control - Alan Schefflin - 1

MK RADIO 11 - History of Mind Control - Alan Schefflin - 2

Alan Schefflin presents "The History of Mind Control - What We Can Prove and What We Can't", which documents the several centuries of history of mind control from the use of the Malleus Malificarum in the Inquisition to the CIA's extensive mind control projects. He talks about the use of hypnosis, trauma-based dissociation, drugs, sensory deprivation, electroshock, and other methods of mind control experimentation.

MK RADIO 12 - Interview with Valerie Wolf, Claudia Mullen, Chris Ebner

Immediately after giving the historic testimony of mind control experimentation to the Presidential Advisory Committee on Human Radiation Experiments, Will Snodgrass interviews Valerie Wolf, Claudia Mullen and Chris Ebner. They expand on their testimonies with information about the CIA doctors and locations involved in their experimentation and abuse.

MK RADIO 13 - Interview with Claudia Mullen - 1

MK RADIO 14 - Interview with Claudia Mullen - 2

MK RADIO 15 - Interview with Claudia Mullen - 3

Wayne Morris interviews Claudia Mullen about her experience as a mind controlled slave for the US government. Claudia alleges that doctors primarily at Tulane University, New Orleans, had experimented on her starting when she was 8 years old and trained her to be a sex slave for political blackmail purposes. She talks of being used to compromise military officers, politicians, and other prominent officials in sex situations which were videotaped by the CIA. We discuss her testimony at the radiation hearings and her memories of experimentation including drugs, electroshock, severe traumatising and abuse by CIA doctors such as Robert Heath, Martin Orne, Ewen Cameron, Sidney Gottlieb and others.

MK RADIO 16 - Valerie Wolf presentation - 1

MK RADIO 17 - Valerie Wolf presentation - 2

Valerie Wolf presents "Assessment and Treatment of Survivors of Sadistic Abuse" at the Believe the Children conference in April 1997. Valerie gave testimony at the radiation hearings about mind control experimentation with her clients. In this presentation, Valerie describes her methods and approach to treating survivors of mind control. She talks about the different programs and techniques used to traumatise and reinforce programming. She explains her

belief that in trauma-based conditioning, remembering what caused the trauma disables the mind control programming.

#### MK RADIO 18 - Jon Rappoport lecture - 1

Investigative journalist Jon Rappoport gives a talk entitled "The CIA, Mind Control and Children" about the CIA's use of children for creating mind control agents. Author of "U.S. Government Mind Control Experiments on Children" talks about the impact of the mind control testimony submitted to the Presidential hearings on radiation experiments. Jon speaks about the mindset of those responsible for these horrors and the implications on society.

#### MK RADIO 19 - Jon Rappoport -2, Valerie Wolf interview - 1

#### MK RADIO 20 - Valerie Wolf interview - 2

Wayne Morris interviews Valerie Wolf about her experiences giving mind control testimony at the radiation hearings and treating mind control survivors. We discuss dissociation, healing processes, and her therapeutic approaches that have enabled survivors to overcome the devastating effects of trauma-based mind control. We also discuss the effect of the activities of the False Memory Syndrome Foundation on therapy and access to survivors.

#### MK RADIO 21 - Jeanette Westbrook presentation - 1

#### MK RADIO 21 - Jeanette Westbrook presentation/interview - 2

Jeanette Westbrook talks about how to prosecute a perpetrator of ritual abuse and mind control. She speaks from the experience of attempting to prosecute her father who allegedly sexually and ritually abused her as a child and throughout her teen years. Her father was a high ranking Freemason, a deacon in the Mormon church, and was the Executive Director of the organization responsible for inspecting all nuclear power stations in the U.S. Jeanette's father died suddenly just before being made to stand charges in court.

#### MK RADIO 23 - Dr. Stephen Kent interview - 1

#### MK RADIO 24 - Dr. Stephen Kent interview - 2, Judy Steed interview, Peter Tooley interview

Dr. Stephen Kent is a professor of sociology at U. of Alberta, Edmonton, who specializes in controversial religious cults and the allegations of ritual abuse by these groups. We discuss the alleged elements of Freemasonry in ritual abuse, issues regarding police investigations of ritual abuse crimes, and the backlash against people coming forward with accounts of abuse by groups like the False Memory Syndrome Foundation.

Toronto Star journalist Judy Steed, in an interview with CBC Thunder Bay, talks about cases involving ritual and sexual abuse such as the Prescott, Ontario case.

#### MK RADIO 25 - Lynne Moss-Sharman - 1

#### MK RADIO 26 - Lynne Moss-Sharman - 2

Lynne Moss-Sharman is the Canadian co-ordinator of ACHES-MC (Advocacy Committee for Human Experimentation Survivors of Mind Control) and the Stone Angels, a ritual abuse support group in Thunder Bay. Lynne alleges she was experimented on by CIA MKULTRA doctors Jose Delgado and Ewen Cameron among others in horrific experiments. She also alleges that she was sexually and ritually abused by Freemasons. We discuss her experiences in organizing conferences for ritual abuse survivors and professionals dealing with these issues and with ACHES-MC's current campaign to call for U.S. government hearings on mind control experimentation.

MK RADIO 27 - Kathleen Sullivan - 1

MK RADIO 28 - Kathleen Sullivan - 2

MK RADIO 29 - Kathleen Sullivan - 3

In this extraordinary interview, Kathleen tells her story of being used for assassination, bodyguarding, smuggling, and other illegal activities for the White House, CIA, NASA, and the Mafia. She alleges that her father, a CIA agent, had tortured and programmed her starting in her childhood. She describes the types of operations and project code names she was used for and names some of the people involved in her abuse as a mind controlled operative, particularly George Bush and Henry Kissinger. We discuss the mind control techniques that she alleges were used on her and the involvement of the entertainment industry in mind control. We also discuss the mind control connections to the "New World Order" implementation.

---

Overall, "My Life Changed Forever" is an exceptional testimonial by a married lady, a mother, who has been through the Hell of organized stalking since 1994. Overall, I am really impressed by Elizabeth Sullivan's obvious respect for terminology and content chosen for maximum clarity and credibility.

The fact that she chose the CATCH (Citizens Against Technological and Community-based Harassment) web site for her backup material in her appendices is also first rate. The CATCH web site is the only site as of the date of this review which has been reported as helping targets convince family and doctors of the reality of organized stalking. Normally, family and doctors, along with police, are nearly impossible to persuade.

At its price of around \$12 US, I consider this book a bargain, and its clarity and matter-of-factness should be of considerable help in persuading any non-targets of the reality of organized stalking.

Let me explain that there are a some abbreviations that are commonly used among organized stalking targets and which I will use here:

OS: Organized stalking, sometimes called group stalking, "gang" stalking, "cause" stalking, "mobbing" (organized stalking in the workplace)

EH: Electronic harassment, occurs when organized stalkers use advanced technology to ensure organized stalking targets are harassed invasively, including through walls in their homes

PERP: Perpetrators of the organized stalking crimes; group stalkers

STREET THEATER: Annoying actions by people in the community making targets uncomfortable, late, and in a few cases actually endangering the target; these happen daily; typically based on "life's normal breaks" situations but with good observation, discernable as harassment and not just "bad luck"; objective to make target aware they are "being had" but not often seen as deliberate by bystanders

TI: Targeted individual, a target of organized stalking and/or electronic harassment; not used in this book but used among targets to describe themselves

Elizabeth Sullivan has focussed this book essentially on OS (organized stalking,) and this can be a good thing in terms of educating the unaware. Everyone has some idea what stalking is, and how nasty people can be in terms of harassing those they have a grudge against.

EH (electronic harassment) technology is not well known to many non- targets, and many targets don't have technology backgrounds. To bring EH into public education, particularly first contact public education, risks questionable, or outright nonsensical, statements being made. This can set back the cause of educating the public about organized stalking.

Many targets rank EH (electronic harassment) as the top priority, and I'm not disparaging their public education attempts which focus on EH, rather, I'm just expressing my opinion that a book like this one devoted to OS may well prove out to be the easiest way to introduce the

basic crime of OS/EH to unaware non-targets. That's just my opinion based on 13 years of face to face activism.

Time will tell, and I'm really looking forward to hearing how well this book performs in the education and persuasion role.

Elizabeth Sullivan is a thorough investigator, and reports many incidents which are persuasive because of her ability to record careful observations. Elizabeth, I would imagine, is as close to being "the perpetrators' worst nightmare" as a target can be.

The perpetrators have presented Elizabeth with a long series of crimes or antagonistic actions which, when described well, actually provide her, and the rest of us, with top-notch testimonial form evidence.

Elizabeth's observation and communication abilities make it easy for a reader to discern the difference between random bad luck, and deliberately set-up harassment. And that is key to any testimonial's usefulness in educating the unaware.

For example, she reports on a home security alarm upgrading job she hired a local firm to perform. After some promising initial encounters with the alarm company, the very familiar "everything-that-could-go-wrong-did-go-wrong" experience took hold. (Ask any OS target.)

For starters, thirty-three appointments for which Elizabeth had to be at home were made and cancelled, often on the day of the appointment. Excuses, such as "problems with equipment," requiring the installation company to "do more testing on" before they could install. Elizabeth researched the excuses and eventually found them to be untrue.

The installer claimed he was "working with his boss" to resolve the problems.

Elizabeth took full advantage of the huge, 5-month history of this monstrous heap of lies and threatened a call to police. This actually brought a confession from the installer. The installer apologized for all the now-admitted lies, saying he got "involved with people he shouldn't have." The installer's boss reported to Elizabeth that the installer was fired.

Usually, targets get lies but not a statement that the perpetrator "got involved with people he shouldn't have." More such admissions should be helpful to us, as such statements take these harassment incidents out of the "ineptitude" category and point much more clearly to crime.

I have high praise for one place in the book where Elizabeth describes "loud banging noises" which seem to come from her TV set, typically when her husband is out of town. These noises occur just as she is falling asleep (very common) and can sometimes be used to jolt the target awake from being asleep.

We in the OS/EH target community do not know how these loud banging noises, which have been recorded, are accomplished. They are too frequent and too perfectly cued to our falling asleep to be random noises, and they are at least as loud as a cap gun going off.

Many targets will create a personal "mental model" how this is done, and tell the world, including non-targets, that their "mental model" is fact. Many "mental models" cannot happen as described based on physics as taught in school, because many targets don't have technology

education and experience. This is not their fault, of course, but it can be problematic when personal theories are presented as fact to public officials, police, doctors, politicians and the like.

What's great about Elizabeth's book is that she is willing to say she doesn't know how something is done, instead of concocting a dubious "explanation." That is somewhat rare among targets, and it is very welcome that this intellectual honesty found its way into a published book.

Another harassment incident described persuasively took place in a motor vehicle licence office. The waiting room was "stacked" with people who filled the chairs, but had no numbers from the take-a-number system. It's almost as if Elizabeth's perps wanted to give her clear cut incidents which are obvious harassment. And we who own the book benefit.

For non-targets reading this, "stacking" public service places, and especially stores, with large numbers of perpetrators is common.

How do I know that crowded stores are one of the perpetrator tactics?

I was having crowded store problems mid-morning and mid-afternoon, well outside rush hour, consistently. Way, way beyond random chance. I then created a colour poster, with a picture of two group stalkers and a link to my own organized stalking web site ([multistalkervictims.org](http://multistalkervictims.org)), had it laminated and mounted it on my backpack. INSTANT cessation of ALL crowded store problems. I mean literally INSTANT. First day out with the poster.

Apparently, the perpetrators don't want their community-based harassers to look at our web sites, and learn the true scope of the crime they are involved with.

Both from comments occasionally heard by targets, and from the investigation by American private investigator [David Lawson](#), many of the community level harassment perps are told vicious lies about the target. Because web sites about OS (organized stalking) reveal that such things are lies, it's understandable that the perpetrator supervisors would not want their local harassers to learn what they are actually involved in.

I could go on relating Elizabeth's testimonials, but there is no need - she does a beautiful job of coherently laying out evidence, and not concocting explanations and calling them fact.

I rate this book as a definite "BUY" for targets, and in fact, multiple copies may be helpful for targets to loan to family, friends, co-workers and officials who may be skeptical but open minded.

Well done, Elizabeth!

Eleanor White

"Homemaker's Recipe" for a Successful Revolution in Military Affairs

By Julianne McKinney

January 1995

January 8, 1995

Steven Metz, Ph.D.  
LTC James Kievit  
Strategic Studies Institute  
U.S. Army War College  
Carlisle Barracks, PA 17013-5050

Dear Dr. Metz and LTC Kievit:

I read your \_Revolution in Military Affairs and Conflict Short of War\_ with great interest. Noting that you encourage discussion and debate on this subject (and presuming that the average U.S. citizen is not to be excluded from these discussions and debates), I would like to comment on this paper.

First, I noticed a rather curious omission in your paper, namely, the impact of a "revolutionized" military upon the rights of U.S. citizens as they might be inferred to exist under Article IX of the United States Constitution. True, you have expressed some concern about potential "ethics" violations resulting from unconstrained evolutionary or revolutionary processes; however, I see no reference anywhere in your paper to the military's primary responsibility in upholding, protecting and defending the U.S. Constitution.

Absent any such reference, your use of the term, "ethics," becomes relativistic, in my opinion--more suited, perhaps, to discourses by followers of Nietzsche. This is not a criticism, incidentally. If you are unprepared to discuss an RMA in the context of its impact on the U.S. Constitution, then I will spare you the hassle, since what I am about to propose is similarly bereft of any such considerations.

At the conclusion of your paper, you expressed a concern that the U.S. Army is being left in the wake, so to speak, of our far more technologically-oriented U.S. Navy and U.S. Air Force. I frankly do not see that the Army is being left behind. To the contrary, the Army has the potential for playing quite a major role in the scenario which I am about to propose, thanks to \_posse comitatus\_.

You raised a number of questions concerning the RMA as an evolutionary or a revolutionary process; and, concerning the latter, in the context of "chicken or egg" assessments (e.g., "Can military revolutions cause strategy to change, do strategic changes somehow generate military revolutions, or must they always occur simultaneously?" etc.) The scenario which I am presenting for your consideration involves a calculated evolutionary process culminating in a revolutionary event which will sweep the U.S. Army into its midst before appropriate (Army) strategies have been even vaguely contemplated.

Your paper contains all of the right elements for a successful (psychotechnologies, profit motives, manipulation of public opinion, deniability, crime as the public's inducement to sacrifice privacy, spiritual insurgency, etc. etc.); however, your timing is off. These are not matters which should only now be considered; that is, not unless you are looking for an RMA some 30 years hence. These are matters which should have been considered 30 years ago and which, indeed, were.

I am not a military strategist, incidentally, so please consider the following as input from an ordinary U.S. citizen who wishes to be heard in the debate(s) focusing on RMAs. My proposal is a "homemaker's recipe" for a successful RMA if you will--embodying not only the ingredients which you have furnished in The Revolution in Military Affairs and Conflict Short of War, but, also, a few additional which you had not thought to discuss. My "recipe" is as follows:

#### A Successful RMA

^^^^^^^^^^^^^^^^^^

##### Ingredients:

Satanic Cults  
UFO Cults  
Directed-Energy Technologies  
Neurocybernetics/Psychotechnologies  
Biotechnologies/Experimental Drugs  
Multinational Government Contractors and Subsidiaries  
Investment Portfolios and Other Financial Inducements  
Imported East Bloc Mercenaries and Military Equipment  
Imported Foreign National Scientists  
A Controlled and Compliant Media  
Decentralized U.S. Government Control  
An Induced Crime Wave

##### Instructions:

1. Raise one or two generations of children under the auspices of government-approved satanic cults, such as COL (USA ret.) Michael Aquino's Temple of Set. Violent sexual, physical and psychological abuse of these children over a period of 15 years will produce generations of dissociative automatons who will comply with instructions in obedient, unquestioning fashion. Their required adherence to cult tenets precludes any consideration of laws governing U.S. society, generally. Cult-programmed "graduates," among other things, will be expected to participate in contrived UFO abduction scenarios.

2. Create a global UFO cult, which will involve the abduction of citizens so as to foster an illusion that this earth is facing an extraterrestrial invasion. UFO abductees-of-preference will have an expertise in computer technologies, since that expertise will be required in future technocratic RMA scenarios. Use of experimental drugs, holographic projection capabilities, directed-energy technologies, induced auditory input, experimental aircraft, and special effects costuming and stagecraft, among other things, will be used to persuade abductees of the reality of their circumstances. Official denials regarding these events will employ reverse psychology, to ensure that all such denials are taken as official confirmation of an imminent and/or ongoing extraterrestrial invasion. UFO abductees will be persuaded to worship their anticipated extraterrestrial "conquerors" in cult-enforced religious fashion. UFO cult networks will be controlled by U.S. Intelligence to limit infiltration and ensure that dissidents do not disrupt UFO Cult long-term agendas. Uncontrollable dissidents will be assassinated, preferably by directed-energy means. Dissociative satanic cult graduates will handle all such executions; i.e., when not actively lending logistical and

theatrical support to UFO abduction operations.

3. Directed-energy surveillance and weapons technologies of ALL types will be used for purposes of spreading fear and confusion in the population at large (under deniable circumstances); for eliminating persons deemed "adversarial" to U.S. national security interests; and for spotting, assessing and manipulating potential recruits to RMA causes.

4. Neurocybernetics and other psychotechnologies will be used to sow confusion and hypochondria in the population at large. The symptoms and effects produced by these and other directed-energy technologies will parallel the effects produced by various microbes, viruses and chemical imbalances, thus compelling a large segment of society to seek medical intervention, which, in turn, will be a basis for their being used for medical experimentation under "voluntary" circumstances. Psychiatrists and psychologists will play an important role in these experiments, particularly where denying the efficacy of neurocybernetics/psychotechnologies is concerned. Citizens complaining of "hearing voices" will be used as a basis for (generously) government-funded, schizophrenic-related brain research, since comprehension and control of the human brain is critical to the sustained success of any long-term RMA. (Total control of the human mind may have to wait another century or so.) Satanic cult graduates, drug dealers, gang members recruited off the streets, and foreign nationals will be housed at black-funded government expense (under comparatively luxurious circumstances) and trained in the use of these directed-energy technologies. (Technicians who may be obliged to drive targeted U.S. citizens insane or to their deaths do not need to be burdened by considerations of morality, ethics or the U.S. Constitution.) (... Well, okay, maybe one reference to the Constitution.)

5. Mix biotechnologies and experimental drugs generously throughout all of these ingredients. The unsuspecting U.S. citizen of today may be the cyborg soldier of tomorrow.

6. Multinational corporations under contract to the U.S. Government play a very important role in this recipe--particularly those engaged in the development of directed-energy surveillance and weapons technologies, and those in the business of telecommunications. Corporations and their subsidiaries will have the primary responsibility of experimenting on U.S. citizens with directed-energy technologies under appropriately-deniable circumstances; and of maintaining all records concerning the results of that experimentation. Corporations will also systematically install surveillance and directed-energy targeting systems in government and other office buildings, in public establishments, in educational institutions, in apartment buildings, in neighborhoods, on streets and highways, and in prisons, jails and psychiatric institutions. The public's attention will \*not\* be drawn to the antenna arrays and other ground-based devices and wiring configurations being used for this purpose. The Ground Positioning Satellite (GPS) system will play an important part in these activities, with the expense to be sustained by government-funded contractors. Centralized control of these surveillance and targeting systems will be maintained in appropriately deployed bunkers, at an expense to be assumed by black-funded corporate contractors.

Contractors may toy with these systems on an occasional basis, such as by bringing down an airliner or two for test purposes (such as, recently, near Pittsburgh); by inducing occasional targets of surveillance to erupt into acts of violence involving mass murder; and by assassinating occasional sports and public figures who exceed agreed-upon standards of mediocrity. However, no concerted large-scale effort is permitted until the ingredients of this recipe have obtained a "proper mix."

7. Investment portfolios and other financial inducements are critical to the long-term success of this pending RMA. There is much money to be had in the development of directed-energy systems and biotechnologies. Lucrative investment portfolios have a way of keeping Members of Congress, owners of the Major Media and other public officials silent. (Satanic cult "kiddies" trained as porn stars serve an equally useful purpose, as do demonstrations of the effectiveness of directed-energy technologies on more obstreperous types; however, greed has long been recognized as the primary mover and shaker in matters covert and should be exploited accordingly.) Financial inducements otherwise have a way of buying the continued cooperation of all persons participating in or directly knowledgeable of the ingredients in this recipe.

8. Out-of-work East Bloc military personnel and their vehicles and other equipment will be brought into this country under the guise of a "U.N." logo, to be housed under comparatively luxurious circumstances at black-funded corporate expense, for specialized urban/LIC training under otherwise-deniable DoD auspices. Use of a U.N. logo on incoming vehicles and uniforms is to spread confusion and fear in the populace at large, thus facilitating efforts by this government at eliminating that institution as a potentially effective tool for peaceful change. Imported East Bloc soldiers will be paid as mercenaries, for employment in this country only when a proper mix of this recipe's ingredients has been obtained.

9. Foreign national scientists, predominantly from the Far and Near East, and from Germany and Russia will be brought into this country to participate in such activities as brain and biophysics research as they pertain to the further development of neurocybernetics and other directed-energy technologies. Foreign national scientists, unlike most Americans, are not burdened by early indoctrination concerning human rights vis-a-vis lethal forms of involuntary human experimentation. Foreign national scientists have also demonstrated a greater capacity for imaginative (and obedient) scientific research than exists indigenously in this country. Their brains must be picked.

10. A controlled and compliant media is critical to sustained deniability in this evolutionary process. The media will ignore complaints from U.S. citizens regarding growing evidence of police state actions in this country, while concurrently lauding the military's advanced technologies as being the "gentle" supplement to existing conventional weapons systems. The media will also ensure that the public's attention is kept diverted from more serious issues and, instead, that it is focused on hyped-up "sleaze" events, such as, The Kneecapping of Nancy Kerrigan, O.J. Simpson's Problems With Satanic Cult Murders, The Bobbing of Bobbitt, etc, etc. When pondering the national

security implications of an Amy Fischer, the public is not likely to notice the antenna arrays springing up around this country like mushrooms, the inducing of "sick" office buildings and public establishments by directed-energy means on an ever-widening basis, or other similar indicators of an evolving RMA.

11. Decentralized government control--a panacea currently being sought by a befuddled American public to relieve their (contrived) economic woes--is one means by which FCC oversight can be permanently eliminated. FCC monitoring of communications frequencies might ultimately result in an untimely disclosure that those frequencies are being used to facilitate implementation of a successful RMA and should therefore be squelched. Decentralization will be employed selectively and with much diverting Congressional fanfare. Law enforcement agencies will be subjected to centralized control, as will those agencies and institutions such as the FDA which are currently engaged in biomedical research. With the help of a compliant media, the centralization of these latter types of agencies will elude public attention.

12. Crime in this country will be induced. The sales of illegal drugs and weapons reap profits which help to fund the foregoing. This activity is the preferred alternative to increased taxes, since tax increases tend to alienate a public which already has doubts about where its money is going. Drug dealers will be protected, since they play an important role in this recipe. Widespread addiction to illegal drugs and drug-sale profits will serve to eliminate and neutralize a large (parasitic) segment of society which might otherwise make undue demands for a "piece of the American Pie" (employment, education, etc.) Drug addiction fosters a certain degree of crime; however, to ensure that the public comprehends the need for martinet laws, expanded law enforcement capabilities and greater numbers of prisons, crimes of a sensational nature will be induced on a periodic basis which, with the help of the media, will lead to the public's voluntarily agreeing to sacrifice its privacy for safety. Neurocybernetics, psychotechnologies, biochemicals and directed-energy weapons and surveillance systems will be used to induce acts of violence, ranging from simple one-time mass murders (such as, in post-offices and on subway systems) to long-term serial killings involving cannibalism and other gruesome deeds. Rape and child molestation will be facilitated by means of directed-energy (radar) targeting of reproductive organs. The perpetrators of these crimes, by claiming to hear "voices" and to be the targets of radio-frequency harassment, will serve two distinct purposes; viz., (1) they will enhance official deniability, since the public is not yet prepared to believe their claims of mind-control experimentation; and (2) they will hasten the process of the public's abandoning privacy for the sake of safety. Prison inmates will routinely be targeted for experimentation. Those sociopathic and psychopathic prisoners who show the greatest potential for future social disruption will be the most likely to be paroled or to be allowed to escape before we proceed with Step 12, below.

13. Mix the foregoing ingredients in calculated fashion until the order is given (in or about the late 1990s) to commence with Total Chaos. On that day, the order will be given to activate ALL directed-energy systems at maximum amplitudes; i.e., in office

buildings, private residences, on the streets and highways, in psychiatric wards, in prison and jail systems, and in public establishments. Satanic cult members, who, until now, have been held in relative abeyance, will be given the order to concurrently run rampant, for purposes of raping and butchering U.S. citizens \_a la Rwanda\_, while the latter are preoccupied with trying to comprehend their extreme throes of pain, radio frequency burns and rupturing internal organs. Satanic cult members will be aided in this process by escaped prison inmates and psychiatric patients who, on the day in question, will find that the doors in their detention facilities are no longer locked. Once this (relatively low-level) Chaos has commenced, all previously-regulated communications frequencies will be overridden by a single transmission, coming from an underground bunker, specifically, the voice of an "extraterrestrial" announcing that this country has been invaded from outer space. TVs and radios which are not operating at the time of this announcement will be activated by means of technologies recently adopted for "national emergency" purposes. Viewers of TVs will be addressed by a person garbed in special-effects extraterrestrial costuming and make-up. The average U.S. citizen, being gullible in cases involving "War of the Worlds" scenarios and having no knowledge of the effects produced by highly-amplified directed-energy systems, will firmly believe that an extraterrestrial invasion is underway. UFO cultists, persuaded that their equivalent of a God has arrived, will rush to their terminals and assigned directed-energy emitters (on which they have been systematically trained), to assist the "invaders" in this takeover (while saving their own necks). Imported East Bloc mercenaries will also be set loose upon the terrorized public, to wreak their own uniquely-brutal brand of Havoc.

14. Now comes your RMA. The DoD will intervene to put an end to the carnage merely hinted at under Step 12, above. It is here that the Army will be brought into the process. Being of the opinion that upholding and defending the U.S. Constitution is his or her first priority, the average U.S. Army soldier will willingly and obediently obey any order to intervene, particularly if the order is given in the context of a \_posse comitatus\_. Simply put, the military will be induced to take over this government in unsuspecting fashion, for purposes of trying to restore order to circumstances which evolved over the past 30 years under their very noses. Uncorrupted law enforcement officers will take part in this activity just as enthusiastically as the military, in the belief that their services are needed to restore law and order. U.S. citizens who are currently tagged as "dissident" will be re-tagged as "terrorist" for removal to the concentration camps which are rumored be under construction in this country, guarded by government-contracted security firms such as Wackenhutt. The average soldier, having no basis for disbelief, will readily participate in these roundups. Because the U.S. military has demonstrated a remarkable inability to handle concentration camps on a long-term basis, particularly when disruptive elements are housed in the detainee population (ex: Guantanamo and Florida), executions of detainees will commence. From then on, ...it really doesn't matter, does it? The Revolution is underway.

In the foregoing, I have described a scenario in which the U.S. Army will find itself playing a very important role in an RMA; i.e., without having to alter current doctrine and leadership

training programs. I would be interested in hearing your views regarding the feasibility and/or acceptability of this proposed scenario.

Sincerely,

/Original Signed/

July 27, 1995

John Gregory Lambros  
Reg. No. 00436-124  
U.S.P. Leavenworth  
P.O. Box 1000  
Leavenworth, KS 66048-1000

Dear Mr. Lambros:

My apologies for the extreme delay in responding to your letter dated March 5, 1995. Being required to earn a living by means other than this Project, I have had to refocus my priorities. Letters such as yours have fallen by the wayside, as a consequence.

For financial reasons, I am in the process of closing up shop where this Project is concerned. I do not intend to leave a forwarding address with the Post Office when I depart this area on August 31, 1995. Harlan Girard, being aware of this has asked that I at least try to respond to your letter before departing. I am aware that Harlan and your attorney had a rather heated exchange at some time in the past. He nevertheless remains concerned about your situation which is why I have agreed to write to you.

Since I am hard-pressed for time, I trust that the following will not come across as being too "hurried." I do not intend to devote a lot of time to editing its contents, since I have a lot of packing to do. Glean from it what you can, and ignore the tone, should it grate.

What you describe as being an ongoing form of neurocybernetic control and experimentation in your situation is in fact extremely widespread on a global basis. Implanted electrodes are not a necessary aspect of these experiments, whether for purposes of inducing auditory input or for monitoring the thoughts of targeted experimentees. This is not to say that electrodes have not been implanted in your case.

They probably have been, which is why you have been denied the opportunity to undergo an MRI or other form of scan.

There are disadvantages to your arguing your position exclusively from a standpoint of what has been written about these types of experiments in such publications as Schefflin's The Mind Manipulators or Delgado's The Psychocivilization of Society. The argument, "What's discussed in these books seems to parallel what is happening in my case," does not hold much water in a courtroom setting. Certainly it did not in your proceedings before the District Court back in January 1993.

It would seem to me that your best approach to exposing these experiments would be to prove that their effects can be neutralized and/or obstructed. These experiments are indeed susceptible to sabotage. For starters, what I suggest is that you arrange with Mr. Orren and/or Mr. Faulkner to equip you with the following items, as a minimum: (1) a radio frequency scanner which has the capacity to pick up frequencies in the Megahertz range; (2) a portable acoustical frequency detector, (3) a portable EMF detector with a loop antenna; and (4) a substantial quantity of copper wire mesh.

My reasons for suggesting that you acquire these items are as follows:

First, the auditory input is being conveyed to you on microwave frequencies which can be picked up, if not immediately deciphered, on relatively sophisticated radio frequency scanners (something above a standard police scanner, in other words).

What sounds to you like "voices in the head" can be discerned by the astute casual bystander as a classic high-pitched microwave "hum"; that is, assuming this bystander is not equipped with cochlear implants (receivers) which operate on the same frequency or frequencies being employed in your case; and assuming, absent cochlear implants, that the bystander's skull and brain are not structured like yours and, thus, are non-responsive to the auditory signal embedded in the frequency being aimed at you.

Your scanner should have the capacity to track broad-band spectrum transmissions, in the event the transmissions being aimed at you are being rotated from one frequency to another for disguise purposes. My current suspicion is that some of these auditory transmissions are occurring in the 27-29 Megahertz range --a frequency range being rather too-ferociously protected by the U. S. Government, given their assaults on outlaw CB'rs who try to communicate on these frequencies so as to avoid having to pay FCC licensing fees.

When I say that the auditory input may be picked up but may not necessarily be decipherable on a scanner, I am alluding to the fact that some of these induced voices in the head involve the transmission of speech analogs, which, in effect, are encryptations of human speech which the brain has been found capable of deciphering. I refer to this preliminarily in the enclosed monograph, Microwave Harassment and Mind Control Experimentation. If it happens that you have been equipped with cochlear implants, then the analog process should not be necessary--in which case, you should have a fair amount of success in picking up decipherable transmissions on a high-frequency scanner.

I recommend the acquisition of portable acoustic and electromagnetic frequency detectors because I rather doubt that you, your family and or your friends can afford to acquire a more sophisticated spectrum analyzer and non-linear junction detector. These experiments, as a rule, involve highly-focused directed energy, which can be detected by all of the equipment just mentioned.

A spectrum analyzer would let you know what frequencies are involved; however, spectrum analyzers cost about \$25,000 to \$50,000 and are probably beyond your means.

The loop antenna on a portable EMF detector will give you some limited direction-finding capability, but will not identify the frequencies involved. Me thinks that you will probably find a significant amount of focused energy coming from the air/air-conditioning ventilation systems in your cell, which are usually covered by a screen. Surveillance systems are usually also built into those vents, and into adjacent sprinkler systems. (A few "thwacks" at any sprinkler devices hanging in your cell,

such as with a book or broom handle, should have the security guards on your back in no time.)

One thing these freaks are having a terrible time overriding is copper-wire mesh. In order for a focused signal to have the desired impact in these directed-energy experiments the signal must remain focused. Copper-wire mesh deflects focused EMF in the Hertz to Megahertz ranges.

Other types of frequencies can be physically obstructed/deflected by other physical means for examples, mirrors can deflect certain forms of lasers. Radar is susceptible to absorption and/or deflection by heavy-duty plasticized rubber and rubberized fabric.

Ultrasound and infrasound--acoustical frequencies used in these experiments--can be disrupted abruptly by means of loud FM or AM radio broadcasts--so abruptly as to suggest that this method may damage acoustical transmitters. "Bee-sting" laser burns can be neutralized by commonly available forms of dental anesthetics (Anbesol or SensoGuard) and can be deflected by generous applications of medicated Vaseline on the area being targeted. I could go on and on; however, I think you get my point.

Copper-wire mesh, incidentally, is readily available in the form of such things as Brillo pot scrubbers. The pot scrubbers are in fact tubes of copper wire mesh, measuring about 10-12" in length by about 7" in circumference, held into a wadded shape by a metal ring, or glue.

I suggest that, if it can be arranged, you start with about 30-50 of those mesh tubes in constructing your assorted barriers to directed-energy harassment. The barrier effect is instantaneous. Covering any area of your body being targeted by EMF will result in an instant "cure" of the symptoms being experienced. All-day headaches focused in one area of your brain will be immediately cured without resort to pain medications. Arthritic and bursitis-like pains in your joints and spinal nerves (under the shoulder blades) will disappear abruptly, as will sudden muscle "spasms" in your upper arms and thighs when the areas are covered with copper-wire mesh.

Rest assured that, if you are even allowed to bring these materials into your cell, you will incur the wrath of the freaks involved in these experiments. Expect them to try to make your life miserable by other means.

The freaks may be able to knock you out by targeting the back of your skull with highly-intense EMF (an exercise which does not require implants); however, once you start using these barriers, you will find that they cannot communicate with you quite as effectively as has been the case, so far; nor will they be quite so successful in monitoring your speech and thought patterns. (My policy is, "Make them work.")

The induced dreams, incidentally, are also easy to obstruct. The activity occurs when you have reached the REM (rapid-eye movement) stage of sleep. Your brain, at that stage, is entrained by ELF, which deepens your sleep, thus eliminating the prospect of your being cognizant of the quasi-subliminal auditory input being pumped into the back of your skull by bone-conducted

means. The quasi-subliminal auditory input is what influences the course of your dreams. In a semi-conscious state, you can physically recognize this attempted input as resembling short-burst transmissions which, when impacting upon the back of your skull, create a hissing sound, rather like "PF-FFT! ...PF-FFT!" at five-second intervals. This can be blocked. All that is required is that you protect the back of your skull with the aforementioned materials before you fall asleep.

I would assume that you are also subjected to recurrent thermal heating, usually caused by microwaves or--the big thing now --infrared lasers. (The Air Force is trying to create a battlefield communications systems which exploits this latter phenomenon.) Thermal heating of the brain leaves outward evidence. Your hair and hair follicles are heated at the point of frequency impact. I recommend you keep your hair somewhat longer than a brushcut if you want to effectively monitor this effect. You will also want to have your cell equipped with a couple of large fans, which can quickly neutralize the more unpleasant aspects of this heating.

What long-term microwave and infrared laser targeting do to the brain and other organs is cause "autolysis" (a softening brought on by the destruction of surface capillaries). This destructive process should be discernible by means of properly conducted scans, such as an MRI, (...which are being denied to all obstreperous mind-control experimentees).

Again, the foregoing is for starters.

Now to the matter of your public appeals. You might want to change your strategy there. What I suggest is that, instead of asking the public to intervene in your case specifically, you alert the public to the widescale nature of these abuses, generally. As a lone convicted felon, you are not likely to garner any type of broad public support in our current environment, simply because the public sentiment today is to toss criminals in jail and throw away the key.

Given the horrendous nature of the crimes now being deliberately induced and perpetrated in this country, the American public's inclination is to view all criminals as scum who deserve to be tortured to death. What they need to be reminded of is that our Bill of Rights proscribes cruel and unusual punishment. They will be less likely to remember this if there is no evidence that these prison-based human and civil rights abuses are as widespread as they in fact are.

Clearly you have the writing skills to be able to make the public sit up and take notice. I would hope that you have touched bases with other inmates who have similar writing skills and a strong basis for supporting your own efforts. As a suggestion, you might want to contact David Fratus at Utah State Prison (ID #17886, P.O. Box 250, USD, Draper, UT 84020), if you haven't already done so. You and your more combative colleagues might also want to begin working with other, more vulnerable inmates who are on the receiving end of this b.s., if only to eliminate the prospect of their committing suicide.

Speaking of b.s., the garbage being conveyed through you to the Court by your "handlers," according to your transcripts, was just

that. Garbage, b.s. and the blowing of smoke. Theater. Hokum. You are not being manipulated by Brazilian government officials who have an axe to grind with the U.S. Department of Justice.

This is global fascist movement involving major multinational corporations, persons within the broad spectrum of government agencies worldwide (with emphasis being on the military), satanic cults, academic researchers who are bypassing restrictions on involuntary human experimentation, BIG money and a number of other things. You are just a drop in the bucket where experimentation is concerned.

The psychological operations associated with these experiments invariably involve attempts at focusing an experimentee's attention (and hatred) on a decoy, to the exclusion of all else. Your decoy is the Brazilian government and a couple of American stooges. The use of foreign nationals is standard in these operations. Keep in mind the fact that, at a moment's notice, the freaks running you can switch their input for purposes of re-persuading you that extraterrestrials, Satan and/or the U.S. military are in fact involved. Whatever turns them on. Your best approach is to ignore the attempts at controlling your beliefs and perceptions; and that you instead focus on their tantrums when you start obstructing their activities and running up their expenses. (You got a taste of that when you threw water on their microwave emitter down in Brazil. ...Lot's of fun, wasn't it?)

Incidentally, if you want to make a dramatic appearance in your next court proceeding, should there be one, you might want to purchase your own handy-dandy hand-held microwave emitter from Consumertronics down in Alamogordo, NM, beforehand. For a mere \$4,000, according to this firm's catalogue, you, TOO, can "scramble the brains" of your neighbor, even "from a distance of one kilometer." AND, for a mere \$350, you can purchase a phasor pain field generator from Information Unlimited, up in Amherst, NH. Take these items into the courtroom with you and aim them at the genitals of the government's attorneys while you argue your case, and you will have them making a few concessions, no doubt.

If you wish to continue pursuing the issue of your suspected brain implants, your attorney should consider focusing his attention on the research being conducted by (and publications being put out by) such agencies as FDA and NIH. This is the Decade of the Brain, don't forget. These agencies are doling out millions of dollars to grantees who, among other things, are testing out the efficacy of brain implants. Since this research is being funded by taxpayers' dollars, the information is public domain. Many, many types of biomedical implants are being tested by researchers under the auspices of these agencies.

Finally, regarding the government's defense against your allegations, as addressed in your transcripts, I note that no one addressed the obvious fact that you were held incommunicado in a foreign prison system for a prolonged period of time under apparently unjustifiable circumstances. Unless you were engaged in drug trafficking while in Brazil, your being detained for this unnecessarily prolonged period of time undoubtedly violated the spirit and intent of U.S. laws, which invites media publicity.

Also if you were apprehended in Brazil because of a U.S. warrant, I trust that you have seen the warrant and found it to have been

legally issued, and that you have weighed the associated actions of U.S. officials in terms of their to-the-letter compliance with U.S. laws governing extradition. If the warrant was illegal, and if the government can be found to have violated specific U.S. laws during the extradition process, you might want to get that into the press, as well. (You won't get anywhere in court on these matters.)

In closing, and assuming you don't mind, I am sending a copy of this letter to Mr. Orren and to David Fratus, at Utah State Prison, as well as to Marlene Smith (KBOO, Portland, OR), who conducted one helluva an interview of me last week, and to Glenn Krawczyk, down in Australia, who published one helluva an article about my letter to the Army War College (see below) in NEXUS New Times not too long ago. (The publicity being accorded these experiments is becoming more and more widespread.) Since I do not expect to be corresponding with you again, I trust that the foregoing has been of some assistance and wish you luck with your future endeavors.

Sincerely,

[original signed]  
JULIANNE MCKINNEY  
Director,  
Electronic Surveillance Project

Department of Defense DIRECTIVE

January 1, 1995

Number xxxx.xx

DRAFT: 21 July 1994

SUBJECT: Policy for Non-lethal Weapons

#### A. Purpose

This Directive issues Department of Defense policies and procedures governing the role of non-lethal weapons in U.S. national security, their acquisition, and employment.

#### B. Definition

Non-lethal weapons are discriminate weapons that are explicitly designed and employed so as to incapacitate personnel or materiel, while minimizing fatalities and undesired damage to property and the environment.

Unlike weapons that permanently destroy targets through blast, fragmentation or penetration, non-lethal weapons have relatively reversible effects on targets and/or are able to discriminate between targets and non-targets in the weapon's area of impact.

#### C. Applicability

This directive applies to all non-lethal technology research and development programs, non-lethal weapon procurement procedures programs, OSD oversight of these programs, and modes of employment of non-lethal weapons.

Precision lethal weapons are outside the scope of this Directive. In addition, policy governing information warfare systems is addressed in separate channels and is not covered by this Directive.

#### D. Policy

##### 1. General

In order to allow the maximum possible flexibility in the employment of U.S. military forces across the spectrum of conflict, it is essential that additional options short of the use of lethal force be provided. Non-lethal weapons can make available significant new capabilities in some circumstances to achieve military objectives while minimizing human fatalities and undesired damage to property and the environment. At the lower end of the spectrum of conflict (Operations Other Than War), non-lethal weapons can allow us to discourage, delay, or prevent hostile actions by prospective opponents; limit escalation; take military action in situations where intervention is desirable but use of lethal force would be inappropriate; and better protect our forces once deployed. Non-lethal weapons are especially suited to operations such as peacekeeping, humanitarian missions, and other operations short of war. At the higher regions of the spectrum of conflict, including major regional conflicts, non-lethal weapons can provide an effective, reversible, or more humanitarian means of denying an enemy the use of some of his human and material assets. They also may help reduce the post-war economic cost of rebuilding infrastructure.

Non-lethal weapons reinforce deterrence and expand our range of options. The presence of non-lethal weapons in America's arsenal can strengthen deterrence by making potential adversaries aware that the United States can thwart aggression and achieve humanitarian aims in ways that do not entail prohibitive political costs, thus enabling us to act earlier, more freely, and more decisively.

A non-lethal weapons arsenal and the additional options it provides does not negate the fact that many situations require overwhelming lethal military force as the most appropriate means to accomplish a mission. Particularly in situations involving large-scale aggression by an adversary, overwhelming force may ultimately be the best means of minimizing fatalities and collateral damage by ensuring that the conflict comes to a rapid and uncontested conclusion. In such cases, the roles of non-lethal weapons are to contribute to the overall success of the operation while helping to limit war damage.

It is understood that when employed, some non-lethal weapons may inadvertently cause fatalities, since we will not have perfect control over all factors. Complete avoidance of fatalities cannot be guaranteed and should not be expected. However, non-lethal weapons when properly employed dramatically reduce fatalities as compared with physically destroying the same intended target. Thus the intent is to be able to achieve military or politically objectives while causing the minimum possible harm to personnel, materiel, and the environment.

To the extent that non-lethal weapons reduce the likelihood of loss of life and incidental damage to property in comparison with conventional systems, they are not only politically and operationally attractive options, but they are also consistent with international law and further the professional military responsibility to employ force proportionally and discriminately.

It is not envisioned that non-lethal weapons will supplant or replace other classes of weapons, consume disproportionate amounts of resources, or cause a major shift in the way wars are fought. Rather, the intention is to allow the Department of Defense to cost-effectively exploit non-lethal technologies in order to provide the United States with significant strategic, political, and operational advantages in conducting existing missions.

## 2. Acquisition

A wide variety of non-lethal technologies have been suggested, spanning a broad range of anti-personnel and anti-materiel effects. In order to be most useful as instruments of national policy, the highest priority should be placed on developing and acquiring systems to support the following tasks (in descending order of importance):

- \* Neutralize combatants intermingled with non-combatants
- \* Control crowds
- \* Disable or disrupt military logistics
- \* Disable or disrupt elements of, or the entirety of, a regional

civil/military communications, transportation, and energy infrastructure.

- \* Disable or destroy weapons or weapon development/production processes, including suspected weapons of mass destruction

These tasks may arise at virtually any level of the full spectrum of operations. This list will be reviewed and modified as necessary by the Undersecretary of Defense for Policy.

In addition to the priorities listed above, only those non-lethal weapon programs that satisfy the general requirements for technical feasibility, operational utility, and policy acceptability will be considered for support. Specifically, in order for any non-lethal weapon program to receive funding, it must be explicitly found by the Non-Lethal Weapons Steering Committee to satisfy the following criteria:

- \* Contribute to the accomplishment of a task or tasks that may be assigned to U.S. military forces
- \* Be consistent with established U.S. policies including arms control agreements or other international legal commitments that the U.S. is committed to observe
- \* Be technologically and operationally feasible
- \* Be affordable
- \* Have an acceptably low probability of being fatal or inflicting permanent disablement on personnel, and causing undesired damage to property and the environment
- \* Could not be easily defeated by enemy countermeasures once known; or if they could, the benefits of a single opportunity to use them in a given context would be so great as to outweigh that disadvantage
- \* Can achieve an effect that is worth the cost of the intelligence support they require

All other things being equal, non-lethal weapons that show significant promise of dual-use by U.S. law enforcement agencies as well as by the military Services will receive higher priority than those that do not.

Oversight authority over all non-lethal weapon development and acquisition programs will be exercised by a Non-Lethal Weapons Steering Committee. This committee will be co-chaired by the Office of the Undersecretary of Defense for Acquisition and Technology (Deputy Director, Tactical Warfare Programs), and the Office of the Assistant Secretary of Defense for Special Operations and Low-Intensity Conflict (Deputy Assistant Secretary for Policy and Missions), and will consist of senior officials from the following organizations:

- \* Office of the Under Secretary of Defense for Acquisition and Technology
- Office of Munitions
- Office of the Director of Defense Research and Engineering

- Office of the Deputy Under Secretary for Advanced Technology
- \* Office of the Under Secretary of Defense for Policy
- Office of the Deputy Assistant Secretary of Defense for Strategy  
(Strategy and Requirements)
- Office of the Deputy Assistant Secretary of Defense for Policy and Missions  
(Special Operations and Low-Intensity Conflict)
- Office of the Deputy Assistant Secretary of Defense for Counterproliferation  
(International Security Policy)
- \* Office of the Comptroller of the Department of Defense
- \* The Joint Staff
- \* The Military Services
- \* Defense Nuclear Agency
- \* Other Defense agencies (as determined by the co-chairs)

In addition, representatives of other U.S. Government departments or agencies may be invited to participate in Steering Committee discussions. These organizations may include, but are not necessarily limited to, the Department of Justice, the Department of Energy, the Central Intelligence Agency, and the Environmental Protection Agency.

The Non-Lethal Weapons Steering Committee will conduct an annual review, phased appropriately with respect to the POM cycle, of all non-lethal weapon programs, in order to provide oversight and guidance. This committee will have the authority to initiate, direct changes in, or terminate these programs, in order to ensure that the priorities and criteria listed above are enforced. In so doing, any validated military requirements presented to the committee will be duly considered. The Comptroller of the Department of Defense will issue Program Budget Decisions implementing the decisions of the committee. The committee will also have the authority to task the Services to undertake such studies and analyses as are needed to support its deliberations.

The Non-Lethal Weapons Steering Committee will adopt terms of reference, issue an annual Non-Lethal Weapons Master Plan, and issue security and classification guidance for non-lethal weapon programs.

A Non-Lethal Weapons Working Group will assist the Non-Lethal Weapons Steering Committee. This group will consist of officials from the organizations represented on the Steering Committee, and will undertake activities as directed by that committee. The Office of the Undersecretary of Defense for Acquisition and Technology will assure that funding is available to support these bodies, and that all members of both bodies are cleared in a timely manner into any and all non-lethal weapon development and acquisition programs.

The Joint Program Office will support the Non-Lethal Weapons

Steering Committee, by providing studies, analyses, and recommendations as directed by that committee. Its charter will be modified as necessary to provide for this role. The Non-Lethal Weapons Steering Committee will ensure that the costs of necessary support provided by the Joint Program Office and other sources are met.

The Military Services will develop and acquire weapons specific to their particular mission area or expertise, and will develop and implement doctrine, employment concepts, tactics, training, and logistic support for fielded non-lethal weapon systems.

### 3. Employment

In developing policy for specific cases of current or planned military operations, officials from the Office of the Undersecretary of Defense for Policy will ensure that options for use of applicable non-lethal weapons are given due consideration. This will include making the President aware of such options, as appropriate.

Any direction given regarding the conduct of U.S. military operations to employ non-lethal weapons will not restrict self-defense measures by our forces to non-lethal means. Although our forces might be allowed to employ only non-lethal weapons to achieve mission objectives in some cases, they will in all cases be allowed to use necessary lethal force to protect themselves from deadly threats.

In order to improve the military effectiveness and deterrent value of non-lethal weapon employment, full consideration will be given to appropriate psychological operations before, during or after that employment.

Non-lethal weapons can be employed either alone or in conjunction with lethal weapons.

When a plan to employ non-lethal weapons in a specific case is submitted for approval, it must be explicitly stated to all concerned that some fatalities might inadvertently result.

Non-lethal weapons may be employed to achieve a variety of objectives, including, but not necessarily limited to, the following:

- \* Neutralization - to make an adversary's assets useless
- \* Denial - to deny an adversary the attainment of his ends
- \* Control - to eliminate an adversary's ability to control his assets, and/or to seize control of them ourselves
- \* Limit escalation - prevent an increase in the scale or intensity of a conflict
- \* Enticement - to help persuade an adversary to act in a way that is congruent with U.S. interests
- \* Demonstration - to display U.S. resolve or concern, but without crossing the threshold of lethal force or significant destruction

- \* Countermobilization - to retard or frustrate mobilization of an adversary's military forces in order to provide more time for diplomatic actions or for deployment of U.S. or allied military reinforcements to the area in question
- \* Interdiction in ambiguous situations - were we suspect that activity inimical to U.S. interests is underway and would like to take steps to frustrate it but where we may not have convincing intelligence confirming our suspicions
- \* Highly specific attack - where the target is proximate to a significant non-military asset that must not be damaged under any circumstances, such as a religious, cultural, or historical symbol
- \* Synergism - to accelerate and intensify the effects of lethal measures, used in conjunction with non-lethal systems weapons

The term "adversary" is used above in it broadest sense, including those who are not declared enemies but who are engaged in activities we wish to stop. This policy does not preclude legally authorized domestic use of non-lethal weapons by U.S. military forces in support of law enforcement.

Commanders of combat organizations will incorporate options for use for fielded non-lethal weapon systems into their contingency plans as appropriate.

#### 4. Additional Policy Guidance

Requests for policy guidance on non-lethal weapons matters not addressed in this Directive should be forwarded to the Office of the Assistant Secretary of Defense for Special Operations and Low-Intensity Conflict (Deputy Assistant for Policy and Missions).

#### E. Public Affairs Guidance

Information provided to the public and the media should be in keeping with the policies put forth in Section D.1 of this Directive. Authorization for release of specifics about the types of non-lethal weapons in our arsenal or under development, or the circumstances in which they would be used, will be considered on a case-by-case basis by OUSD(P) or by the Non-Lethal Weapons Steering Committee, as appropriate.

Public affairs statements should emphasize that although the use of non-lethal weapons us intended to avoid fatalities and collateral damage in the course of achieving mission objectives, some fatalities or collateral damage could inadvertently result. It is important that the public understand that just as lethal weapons do not achieve perfect lethality, neither will "non-lethal" weapons always be capable of precluding fatalities and undesired collateral damage.

#### F. Effective Date

This Directive will become effective upon signature.

William J. Perry, Secretary of Defense

#####Upton  
#####  
#####

Dear Mr. Upton:

I appreciated your having sent me the paper, "Silent Weapons..." Has anyone determined whether or not this economic theory was in fact addressed in the September 1980 issue of Scientific American? Actually, the concept of refocused wealth is not all that farfetched. I think we saw a couple of "test runs" on this theory just a few short months ago, when a number of municipalities and major investors began complaining of tremendous losses (and bankruptcy) suffered as a result of investments in "derivatives." What I found even more interesting was the smirky manner in which an ABC commentator observed that nobody seems to understand how derivatives work, and nobody seems to know where all their money disappeared to. He obviously was trying to convey the impression that he knew more about derivatives than he was willing to state.

On hearing these reports, my immediate instinct was that derivatives were the work of economic wargames in the bowels of the Pentagon, whose highly sophisticated computer programs were based on the monitoring and manipulation of the international exchange rates. At that time, some 147 separate derivative "wargames" -- or "scenarios," according to Leontief -- were known to exist. How many forms of derivatives exist at this present time is unknown, simply because our controlled media have been told to drop the subject.

Curiously, I was asked to comment on this by Stan Solomon, during my last radio interview. I say, "curiously," because I am not an economist, have never pretended to be, and had been brought on air to discuss the abuse of directed-energy systems, not economic misadventures. It was after that interview, incidentally, that derivatives suddenly became a non-word in the media. Apparently no one else wanted to ponder the Pentagon's potential involvement in this area of economics.

The "Silent Weapons" paper tends to support my theory regarding the Pentagon's becoming involved in economic "wargaming," particularly on page 2, where is stated, "The simultaneous solution of these equations by a computer...provides a numerical way of calculating possible future states of the economy. The time variable derivatives of that model -- the \*manipulation\* and feedback automation of the World Economic Model -- produces various options (scenarios) for New Economic World Orders." (Emphasis mine.)

Actually, and as noted, Leontief (if real) is not all that farfetched. We are in the early stages of seeing his alleged theories of refocused wealth being implemented -- and not just in the form of derivatives. The lesson learned from the derivatives scam is that angry investors tend to make too much noise. These investors have the advantage because their misappropriated investments were made in good faith, which would thus give them a justifiable basis for demanding a full-scale investigation. (Interestingly, I have heard of no such investigation, which says to me that noisier complainers were probably bought off.)

There are better ways of stripping the international populace of vast sums of money under circumstances that invite no outbursts of righteous indignation or threats of a large-scale investigation. Gambling, drugs, consumer fraud, sophisticated philanthropic scams, and arms purchases are amazingly effective as alternative means.

The State of Connecticut, for example, is purportedly receiving \$77,000,000/week in taxes from gambling revenues, yet Hartford is on the verge of bankruptcy. Where indeed is that money going?

Lotteries throughout the country are supposed to be used for improvements in state and municipal facilities and in educational facilities and programs. After 10-15 years of experience with a lottery, Detroit's city planners (for example) are only now beginning to repair some of the city's main expressways. The city's schools, meanwhile, remain notoriously substandard. Where is *that* money going?

Drug addictions are bringing in billions of dollars. Where is *that* money going?

CNN just mentioned, a couple of minutes ago, that consumer fraud costs the taxpayer about \$44,000,000/year. Where is *that* money going?

The most sophisticated and yet amazingly primitive philanthropic scam took place only a few months ago, when major educational, medical, and research institutions lost many millions of dollars to the Foundation for New Era Philanthropy. The money is unrecoverable, and one or two fall guys took the hit. Where did *that* money go?

Then we have third world countries selling their souls for arms so they can decimate their and/or their neighbor's populations. Where is *that* money going?

And now we have Congress rechanneling all of the taxpayer's money into the Department of Defense, to the exclusion of all else. That money, in turn, is channeled to major contractors who produce products which are of limited use to the average consumer, which in many cases are being used to subjugate large segments of the population on a graduated basis (directed-energy systems), and which will inspire all sorts of foreign governments to sell their nations down the river, as is now happening in Bosnia. And nary a peep from the average taxpayer.

And then we have the innovative lone wolves who run centuries-old British banks into the ground from offices in Singapore, by misappropriating billions of dollars which are redirected into that mysterious ether where disappearing funds seem to be going.

In sum, many trillions of dollars are being redirected into the hands of a relative few on a gradually-intensified basis, with the average citizen happily helping the process, blithely unaware of what the long-term consequences might be. Leontief's mathematically-based scenarios really aren't necessary at this stage, since tapping the wellspring of human gullibility, greed, and foolishness is proving sufficiently profitable. Regardless, I do anticipate that, at some point during the next few years, all stops will be pulled, the Pentagon's computers will be geared up, and a total derivatives plunder will take place. What we saw previously, as stated, was only a test run. (You can add that to my "homemaker's recipe for a successful Revolution in Military Affairs.")

Be that as it may, the nice thing about human nature is that people who have tasted freedom don't adapt all that well to enslavement, as a general rule. A global takeover -- much less, a takeover of this government -- is not going to be easy.

Well, on that note, I'd better get back to my packing. (As noted in my correspondence to Gordon Phillips, I am in the process of closing up shop.)

Incidentally, I gather from one of your notes that you do in fact have a copy of the Report From Iron Mountain. If I am mistaken, let me know (as soon as possible, since I am not leaving a forwarding address), and I will get a complete copy to you.

Regards,

[original signed]

JULIANNE MCKINNEY  
Director,  
Electronic Surveillance Project

(Addendum)

P.S. This is the morning following my having drafted the preceding. Apparently this letter caused some sort of uproar amongst those who have me under 24-hour surveillance. Aside from being kept awake until 4:00 a.m. under very painful circumstances, I was knocked unconscious by directed-energy means and conjointly reduced to a bizarre "convulsive" process which did not quite succeed in producing massive vomiting. A variation on grand mal seizures, I would say.

This is a first. I thought I'd been subjected to the gamut of incredibly painful directed-energy effects these past several years. Apparently not. Suffice to say, it is not a nice experience -- less so considering that I came very close to slamming my head against the sharp corner of a chair when crashing to the ground.

Be that as it may, I have to conclude from the assault that my letter has raised some questions which now warrant consideration by the public-at-large, so, do not be surprised to hear that this letter has been circulated. It would appear that the questions in this letter need to be answered. As a courtesy to you, I am censoring the address block and headers on this letter, since I do not have your permission to identify you, specifically, as the source of the "Silent Weapons" report.

-----  
"...Covert actions are counterproductive and damaging to the national interest of the United States. They are inimical to the operation of an effective national intelligence system and corruptive of civil liberties, including the functioning of the judiciary and a free press. Most importantly, they contradict the principles of democracy, national self-determination and international law to which the United States is publicly committed." (Credo of the Association of National Security Alumni)

Price printed on back cover: \$15.95 US dollars

This review will comment on and quote some parts of this book which are most similar to, and potentially helpful in, the campaign to expose and stop organized stalking. One way, in general, to use this book, and use the reality of workplace mobbing in anti organized stalking work, is to use an explanation something like:

"Organized stalking is mobbing which has 'leaked' from the workplace into the community."

In my (Eleanor White's) view, having this book in hand can be a great way for organized stalking targets to begin the process of educating one's friends and family as to the reality of this seemingly 'taboo' side of contemporary human behaviour.

Both mobbing and organized stalking are vicious, illegal harassment of selected targets by multiple harassers.

The unique characteristic of mobbing, and organized stalking too, is that the origin is NOT the more familiar harassment due to gender bias, or motivated by sexual interest in the target, or due to racism or the sexual orientation of the target. This is hard for the general public to grasp.

When a mobbing or organized stalking target reports the harassment, the unaware listener consistently tries to find a "reason" among the popular ones just stated. Mobbing can INCLUDE sexual harassment, or racism but it is quite distinct, a separate crime entirely.

The advantage of using mobbing to assist in exposing and stopping organized stalking is that mobbing has been formally studied since the 1980s by Dr. Heinz Leymann's examination of group violence among adults in the Swedish workplace. The book refers to other more recent research projects as well. Thus, mobbing has the professional validation which organized stalking still lacks at this time.

Those of us who are experienced in organized stalking know that organized stalking is in fact a separate phenomenon, but the explanation above is helpful in getting the unaware public started along the road to understanding what is going on in the lives of their neighbours, family members, friends, co-workers, or people in the news.

Let me quote the blurb from the back cover of this book, which summarizes the book's subject quite well:

"An insidious and powerful subculture is thriving in the American workplace. Every day, in all sorts of workplaces, mean spirited mobs [groups of co-workers] are forcing capable, hard working employees to flee from jobs they love. Despite historic successes of unions and civil- and human-rights movements, and the best efforts of enlightened managers, millions of Americans suffer the dignity- robbing trauma now known as mobbing.

"Mobbing extracts staggering economic and emotional costs from victims, their families and society. In many cases, the victims are literally mobbed by co-workers, not only old-fashioned bullying bosses. Many of the victims are managers and supervisors, attacked or undermined by jealous or unscrupulous subordinates or peers, often with approval of higher management. The mobs intentionally target -- and ultimately destroy -- innocent individuals."

And now, let me list the table of contents for those who may be interested in purchasing a copy of this book. I, Eleanor White, heartily recommend purchasing this book! I have discovered in my picketing experience that having a physical book in hand is highly persuasive when dealing with the skeptical public:

## PART I

### CHAPTER 1: What Mobbing Is and How It Happens

Describes, analyzes and defines the syndrome. What mobbing entails. Mobbing behaviors. Degrees of mobbing and how it evolves over time. The role of management. Why mobbing is different from any other form of harassment or discrimination.

|                                                          |    |
|----------------------------------------------------------|----|
| * Aggression Against "Anyone": Workplace Expulsion ..... | 34 |
| * Injury Not Illness .....                               | 34 |
| * Mobbing Typology .....                                 | 34 |
| * Mobbing as a Process .....                             | 38 |
| * Degrees of Mobbing .....                               | 39 |
| * The Mobbing Syndrome .....                             | 40 |
| * Ten Key Factors .....                                  | 41 |
| * Conclusion .....                                       | 55 |

### CHAPTER 2: Why Mobbing Occurs and Persists

Presents reasons from different points of view and attempts to understand the phenomenon in the context of systems thinking. The personality of the instigators, group dynamics, links to workplace structures and the wider society. The role the victim may play in the mobbing. Why mobbing behaviors are allowed to persist.

|                                                                                          |    |
|------------------------------------------------------------------------------------------|----|
| * The Psychology and Circumstances of the Mobbers .....                                  | 58 |
| - Evil Personality                                                                       |    |
| - Divine Right                                                                           |    |
| - Threatened Egotism, Inflated Self-Appraisal                                            |    |
| - Narcissistic Personality                                                               |    |
| - Why Do Mobbers Seldom Come Alone?                                                      |    |
| - Why Does the Mobbing Continue Even After Resignation or Expulsion?                     |    |
| * The Organizational Culture and Structure .....                                         | 65 |

| * Early Warning Signs -- Changes in Behaviors .....        | 123 |
| * The Difficulty of Communicating and Giving Support ..... | 123 |

|                                        |     |
|----------------------------------------|-----|
| * Affirmation Is the Key .....         | 126 |
| * The Helping Art of Being There ..... | 126 |

### PART III

#### CHAPTER 6: How Mobbing Affects the Organization -- Impact and Prevention, The Bottom Line

Discusses the impact on the organization. Offers suggestions for strategies to detect, halt and prevent mobbing from occurring. Recommends modifications to existing human resource policies and procedures.

|                                                                                                     |     |
|-----------------------------------------------------------------------------------------------------|-----|
| * All Types of Organizations .....                                                                  | 132 |
| * Warning Signals .....                                                                             | 132 |
| - Significant Changes Without Preparing Employees                                                   |     |
| - One Individual Has Suddenly Become a Target                                                       |     |
| - Alliances Across the Hierarchy                                                                    |     |
| - "Anarchy"                                                                                         |     |
| - Use of Consultants                                                                                |     |
| * A House of Cards .....                                                                            | 138 |
| - Reduction in Quality and Quantity of Work                                                         |     |
| - Loss of Organization's Reputation                                                                 |     |
| - Increased Employee Turnover                                                                       |     |
| - Increased Sick Leave                                                                              |     |
| - Unemployment Insurance Claims                                                                     |     |
| - Workers' Compensation                                                                             |     |
| - Litigation or Settlement                                                                          |     |
| * Prevention .....                                                                                  | 141 |
| - Giving It a Name -- Creating Awareness                                                            |     |
| - Education and Training                                                                            |     |
| - Establishing an Anti-Mobbing Policy                                                               |     |
| - Risk Assessment                                                                                   |     |
| - Conflict Management Procedures                                                                    |     |
| * Systems That Already Exist and Good Examples .....                                                | 146 |

=====

Now, about the book's content:

In his Foreword, Dr. Heinz Leymann notes that

[Page 16]

"This is the first book in the U.S. that presents the research of the last two decades [1980s-90s] on mobbing -- also known as bullying -- in a comprehensive way.

"Though this phenomenon has been recognized among children, before 1982 it was totally unidentified as such in the work world of adults."

As an organized stalking target, with the first book on the limited topic of workplace mobbing not coming out until 1999, it's no wonder that we have had such difficulty getting heard since organized stalking (often with electronic harassment) began to happen in a big way circa 1990.

In the Introduction, the authors explain the reasons mobbing has stayed 'in the closet' for so long:

[Page 20]

"One is that mobbing behaviors are ignored, tolerated, misinterpreted, or actually instigated by the company or the organizations management as a deliberate strategy.

"The second reason is that this behavior has not yet been identified as a workplace behavior clearly different from sexual harassment or discrimination.

"Thirdly, more often than not, the victims are worn down, feel destroyed and exhausted. They feel incapable of defending themselves, let alone initiating legal action."

Whew! "Misinterpreted." "Clearly different from sexual harassment or discrimination." And "worn down."

That really describes the situation of the in-community organized stalking target! But, reader, the in-community organized stalking target has one more HUGE barrier: The justice and medical systems are almost seamlessly biased towards labelling organized stalking targets as mentally ill. By that I mean, even though they damn well know better, they refuse to officially acknowledge the reality of organized stalking.

This reviewer, Eleanor White, believes that this is because when one has a large group (hundreds in many cases) of people part-time harassing them, it's impossible for ordinary police work to prove it because there isn't just one perpetrator, or even a small, identifiable group. In organized stalking, it's common for one member of the group of hundreds to do one harassment act and then virtually never be seen again.

Justice system employees do not like to work cases where they can't be assured of a "good collar", in their jargon.

**Let me make one distinction here for the reader: With workplace mobbing, one can usually leave the problem behind by leaving the company. For the organized stalking target, however, there is no way to leave the group harassment behind - even moving to another country on another continent does not stop the harassment. This is why we in the anti organized stalking community are working hard to raise your awareness - both problems are equally urgent.**

For readers who may want to do more research, this book has a 5-page bibliography of other references in the field of mobbing and bullying in the workplace.

Another researcher quoted in this book is Dr. Carroll Brodsky, who did research on "the harassed worker" in the 1970s. Here is a quote which makes a very relevant point for organized stalking targets also:

[Page 22]

"The person who is mobbed is pushed into a helpless and defenseless position. These actions occur on a very frequent basis and over a long period of time.

"Both Brodsky and Leymann stress the frequency and duration of what is done."

Now, one of the most difficult problems facing organized stalking targets is that the human psyche has a quirk: When you tell someone that you are being harassed "all the time", the listener automatically discards that phrase. Because of this, and because organized stalkers design their attacks to look like "bad luck" events that really do happen to non- targets, it is simply not possible to convey with words that when "life's normal mishaps" start happening daily, it is no longer "bad luck", it is deliberate, non-random harassment. Because of this, I was overjoyed to see these two mobbing researchers stress frequency and duration.

This book (Special thanks to the authors!) provides mobbing statistics we can compare with organized stalking:

[Page 25]

"Extensive research conducted in Sweden in 1990 extrapolated that 3.5% of the labor force of 4.4 million persons, i.e. 154,000, were mobbing victims at any given time. Dr. Leymann also estimated that 15% of the suicides in Sweden are directly attributed to workplace mobbing.

"If we transpose these figures to the U.S. work force, comprising some 127 million people, well over 4 million people yearly are, or may become, victimized by mobbing."

If the U.S. at time of writing has about 300 million people, that means about 1.3 people per 100 are victims of mobbing at any one time. That is a very interesting figure. In 2002, a short survey of symptoms of organized stalking (with electronic attacks too) of about 12,000 people returned a rate of about one person per hundred saying they had most or all of the organized stalking symptoms. In other words, these figures for mobbing back up our organized stalking statistic quite well.

On a web site of an international detective agency (late 2004), a statistic stated that in the United Kingdom, at any one time there are about 990,000 targets of harassment including single-stalker stalking. The United Kingdom has maybe 70 million people, meaning about 1.4 people per 100 are being stalked or harassed at any one time. That too, backs up our organized stalking estimate of one person in a hundred as of the year 2002. [The British figure was a quote from the official government source, the Home Office.]

The book brings us the good news that, as of 1999:

[Page 26]

"Sweden, Norway, Finland and Germany have enacted new proactive and protective occupational safety laws, including emotional well-being, to legally address the mobbing behavior. For example, in 1993, the Swedish National Board of Occupational Safety and Health adopted an *Ordinance Concerning Victimization at Work*.

It is further reported that Dr. Leymann had treated some 1,700 mobbing patients, mainly in Germany, Sweden, and Norway, in conjunction with Dr. Michael Becker, a German psychiatrist and neurologist.

The authors chose "mobbing" over "bullying" for this book because they felt that "bullying" implies aggression by an individual, as opposed to a group.

Here, the authors summarize their take on why mobbers do what they do:

[Page 58]

"... we suggest that the mobber's actions derive from his/her inability to value life and difference, from pretense and dishonesty, from an inflated sense of self, i.e., from a need for self aggrandizement. The personality of the mobber has been described with such traits as excessively controlling, cowardly, neurotic, and power hungry. Many of his or her actions may be driven by jealousy and envy derived from feelings of insecurity and fear. Mobbing occurs because people, sometimes without even realizing their harmful ways, act in an evil manner."

Dr. Leymann is quoted as saying that people resort to mobbing to cover up their own deficiencies.

Here's an item dear to the hearts of organized stalking targets:

[Page 70]

"Can mobbees be held responsible for what happens to them? Researchers debate the question of whether there is anything in the person's background, behavior, attitude, character, or circumstance that predisposes them to become mobbees. There is no case for this in the mobbing literature. ...

"Yet, we found that the people [targets] we interviewed were exceptional individuals. They demonstrated throughout their professional careers many positive qualities: intelligence, competence, creativity, integrity, accomplishment, and dedication."

Nice someone recognizes we're really good folks!

Of course, organized stalking targets don't often talk to people who think we are "really good folks."

Especially, most unfortunately, family members. Family members are sometimes even co-opted to help with the organized stalking, and usually, the best an organized stalking target can hope for is for a family member to merely tolerate the target's talking about his or her experiences. Here is a quote from one of the mobbees illustrating this:

[Page 123]

*Joan: I tried to talk to my mother, but she said, "You need to tell all this to your counselor." And [Joan] said, "You know, if I had someone in my family I could talk to, I would not need a counselor. But you do not want to hear it, you do not want to listen."*

"As a crisis lingers on, partners may feel overwhelmed by continuously being cast into the care-giver role and being unable to eliminate the actual problem. They [partners] become needy and can't receive support. It is this imbalance, over too long a period, that may eventually lead to separation or divorce."

Separation and divorce are not uncommon in the organized stalking target community either. The chapter on Family and Friends contains quite a bit of discussion about how family and friends can provide support, and tells them which deeds and language are supportive and which are not. The organized stalking situation is much more severe, however, and an organized stalking target should not assume that every proposed support method applies. The difference is that the organized stalking perpetrators make efforts to tell vicious lies, sometimes backed up by official looking "police records" to family members, friends, neighbours, and co-workers.

Organized stalking groups may also try to bribe family members, friends, neighbours and co-workers, and if the group members don't get cooperation, they may intimidate the associates of the target to get the cooperation they want. They are often successful.

However, an organized stalking target's family member might, if they were willing to scan Chapter 5, at least begin to realize that the team of authors put quite a bit of effort into methods for supporting victims of mobbing. That might help to impress on family members just how serious and real group harassment actually is.

Chapter 7 is about conflict resolution. Organized stalking members wish that conflict resolution could be accomplished, but one way in which organized stalking differs from workplace mobbing is that often, in fact a great deal of the time, the organized stalkers do not allow the target to know what the reason was which started the long term harassment. In fact, if an organized stalking target challenges one of his/her harassers, the perpetrator will deny having any knowledge that the target is even being harassed.

Deniability is assured by designing organized stalking attacks which always are either "life's normal mishaps", or, covert sabotage or theft which only occurs while the organized stalking target is away from his/her home, locked car, or workplace. Neither can be traced to the stalking group members.

Even when a target does know what started the harassment, because new people are constantly brought in to carry on the harassment, no tie-in to the original problem can be persuasively made if the target complains to the authorities.

What this adds up to is that the chief value of this book is to prove the EXISTENCE of coordinated multi stalking attacks, something that a great many people, particularly law enforcement and medical people, consistently deny.

In the same sense, Chapter 8, "Mobbing and the Law", is likewise of limited direct value to organized stalking targets because until law enforcement admits coordinated multi stalking attacks EXIST, laws on the books are of very limited use.

In conclusion, at 215 pages, this book is a valuable resource for those who are mobbing targets in their workplace. But the CHIEF advantage for organized stalking targets is that if others -- family, friends, co-workers, police or doctors -- read even a little of any chapter, they will quickly find that harassment by groups is something that has a base of ongoing professional study, and canNOT be denied.

This book, along with David Lawson's [Terrorist Stalking in America](#), is like a very powerful and accurate "activist's sidearm." My advice to organized stalking targets who contemplate being in a place where discussion of organized stalking is likely to happen is, "don't leave home without it", i.e. don't leave home without your copy!

Eleanor White

## Letter to Human Rights Organizations

**Drafted by Mojimir Babacek**

From: "Mojimir Babacek"  
Subject: imortant new information included  
Date sent: Tue, 8 Jan 2002 20:39:13 +0100

What follows is a draft of the letter to the world human rights organizations (important new information is included on the Russian disclosure of electromagnetic mind control installation). Please correct it or send some suggestions how to make it sound better. I believe it should be signed by all the anti-mind control organizations .

Mojimir Babacek

To the Amnesty International, Human Rights Watch,... And who else? (write the addresses if you know them those may be other than human rights organizations as well)

Dear Sirs

We are convinced that the following important new evidence will persuade you of the necessity to get engaged in the struggle for the worldwide enactment of the legislation prohibiting the use of means based on new principles of physics, biology and neurophysiology mentioned as Informational, Remote Mind Control, Behavior Control and in Russia Psychotronic Weapons.

In December 1997 nine states of the Union of Independent States addressed Organization of United Nations, OBSE and the states of the Interparliamentary Union with the proposal to place on the agenda of the General Assembly of the Organization of United Nations the preparation and conclusion of an international convention "On Prevention of Informational Wars and Limitation of Circulation of Informational Weapons".

A year later, on January 28, 1999 the European Parliament passed a resolution On Ecology, Security and Foreign Affairs, where in item 27 "calls for an international convention introducing global ban on all developments and deployment of weapons which might enable any form of manipulation of human beings." The obvious way to effect those calls would be the enactment of laws, in all the states, which would prohibit the use of such weapons.

On September 9, 2000 the Russian president Vladimir Putin approved of the "Doctrine of the Informational Security of the Russian Federation". In this doctrine, among the dangers threatening the informational security of Russia, ther is listed "the threat to the constitutional rights and freedoms of people and citizens in the sphere of spiritual life. individual, group and societal consciousness" and "illegal use of special means affecting individual, group and societal consciousness". Among the major directions of the international cooperation toward the guaranteeing

of the informational security is listed "the ban of production, dissemination and use of 'informational weapons' ".

Those definitions are rather unclear to convince anyone that the remote control of human psyche is feasible. However according to the article of the Russian newspaper Segodnya (February 11,2000) in 1996 the leadership of the Russian governmental information agency FAPSI reported that the effects of the use of informational weapons is comparable to the effects of the use of the weapon of mass destruction.

In 1999 the Russian politician Vladimir Lopatin (a staff member of the Prosecutor General of the Russian Federation at present time) together with Vladimir Tsygankov (a Russian scientist working for over thirty years on the development of neurocomputers) published a book "Psychotronic Weapons and the Security of Russia" (publishing house SINTEG <http://www.sinteg.ru/cataloghead.htm> , Moscow, Russian Federation, ISBN 5-89638-006-2-A5-2000-30).

In the book they propose as a principle of the Russian defense conception in the area of remote influence on human mind to admit this possibility as a fact, as well as the fact that this influence can be not only local, but global as well and to admit "the realistic feasibility of informational psychotronic war (which as a matter of fact is actually taking place without declaration of war) and the feasibility of application of power by means of psychotronic weapon." For that matter they propose the declassification of all works on this technology and warn that as a result of the classification the arms race is speeding up and that only if the declassification is enacted the psychotronic war can be prevented.

The authors list among the possible sources of remote influence on human psyche the "generators of physical fields" "of known as well as unknown nature". Among the greatest dangers for human psyche they define "the blocking of the freedom of will of human being on subliminal level" "instillation on the conscious or subconscious level, into the human psyche, of the information which will cause faulty perception of reality" (The source of this information is defined in the note 3: "Lopatin. V.N. Legislative Problems of Guaranteeing Informational-Psychological Security of Personality - verbatim record of the round table in the Council of the Federation FS of the Russian Federation on informational-psychological security of personality, 27th of January, 1995").

The authors also inform that since the seventies the research projects are under development in the best laboratories of the whole world: in the USA, Russia, Germany, Austria, France, Italy, Japan, Israel, China etc.

Vladimir Lopatin certainly can not be considered an uninitiated layman staying outside of the loop of events. Already in 1990 he served as a chairman of the Subcommittee for Military Reform of the Supreme Soviet's Committee for the Issues of Defense and State Security in the USSR. In 1995 he was appointed as a chairman of a Russian State Duma Committee which should draft a law "On Security of the Individual" which, among others should impose "state controls on all equipment in private hands which can be used as "psychotronic weaponry" " (The Moscow Times, July 11, 1995, Owen Matthews: "Soviets Used Top-Secret "Psychotronic" Weapons") .

As well it was the very same man, who, in 1996 formed , in the Russian State Duma, the original initiative which translated into the initiative of the Union of Independent States at the Organization of United Nations, mentioned above. And again it was Vladimir Lopatin, who presented to the Russian State Duma the draft of the law "On Informational-Psychological Security of the Russian Federation" which was evidently predrafted in the book we are quoting.

On February 11, 2000, in the Russian newspaper Segodnya was published an article entitled "The Riders of Psychotronic Apocalypse" (by Andrei Soldatov) where it quotes the Lopatin's draft of the law: "the mysterious means of informational-psychological influence are capable not only to induce the health problems, but as well cause "the blocking of freedom of will of human being on subliminal level, the loss of ability of political, cultural and other selfidentification of human being, the manipulation of the societal consciousness" and even "destruction of united informational and spiritual space of Russia". The newspaper wrote that this draft of the law, after the two previous drafts of laws on the same subject by other authors, has got a good chance to be passed.

However in the conclusion of the article the author notes that secret services declined to comment on the chances of the draft to be passed though one of their colleagues took part in the preparation of the draft.

What is the reason why the Russian Doctrine of Informational Security does not contain the declassification of the "informational weapon"? Did the Russian secret services oppose it? It is questionable, since if Vladimir Lopatin wrote his book without their, at least, informed consent, he could not be on the staff of the Prosecutor General in Russia at present time. The idea that the Union of Independent States did not find understanding enough among the other states owning this technology sounds much more realistic. It would certainly threaten the security of the Russian state if they prohibited the military equipment which other states could use against them.

The newspaper Segodnya quotes the Russian governmental information agency FAPSI as informing that, in the last fifteen years, the U.S. expenses on the development and acquisition of the means of informational war grew four times and at present time they occupy the first place among all military programs. Of course this budget pertains to many weapons meant to put out of order the enemies electronic and informational systems, but is not a man an informational system?

Vladimir Lopatin and V. Cygankov, in their book, write "In the USA the devices and methods were created capable to introduce into the subconsciousness of a man the information needed to make the man execute the orders which were introduced there. Those are new man and computer complexes and their objective is the control of the intellect". As well, in the book, there is a description of German devices: "construction of special generators of biofields under the direction of professor V. PESCHKE and research of their influence at the change of character of the personality of human being (the city of Stuttgart, Germany)".

Among the Russian devices we will name the generator "Radioson"

(Radiosleep). The documents pertaining to this generator were obtained by the citizen's commission "Phenomenon", established by the Russian newspaper Trud. With the help of the colonel general of the Soviet Air Force Vladimir Nikitovitch Abramov and twice hero of the USSR, marshal of the Air Force Ievgenii Iakovlevitch Savitski several documents were found.

On January 31, 1974 this generator was registered by the Government Committee of the USSR on the Matters of Inventions and Discoveries under the description "Method of Inducing the Artificial Sleep by Means of Radiowaves". Another document was found in the Laboratory of Bioelectronics of the Institute of Radioelectronics of the Academy of Sciences of the USSR. It states: "Effects on biological objects by means of electric and electromagnetic pulses. In 1973, in the military unit 71592, in the city of Novosibirsk, the first installation of "Radioson " was created and preliminary approbation was carried out. The positive results were received during the tests with the military unit." This information was published in the book by G. Gurtovoi and I. Vinokurov: "Psychotronic War, from Myths to Reality" (publisher: the Society for Learning of Secrets and Mysteries of the Earth, "Mysteries", Moscow 1993.) and confirmed in the book by V. Lopatin and V. Tsygankov.

The authors of the book "Psychotronic War, from Myths to Reality" publish as well the information they obtained, together with the journalist from the newspaper Trud, from one of the authors of the invention who declined to publish his last name. According to Ivan Antonovitsch several successful experiments were carried out on the authors of the invention as well as on the volunteers among the soldiers, the calculation of the authors of the invention proved that with the generator Radioson a city with the area of 100 square kilometers could be made asleep. Ivan Antonovitsch also claims that contemporary technology makes it feasible to place such a generator on the satellite and affect still larger areas while the effects may vary on a large scale - from artificial sleep until the complete regeneration of all the cells inside of the human organism. It is important to state that this is not only the electromagnetic energy which can be used to manipulate human psyche.

V. Lopatin and V. Tsygankov dedicated a large portion of their book to the explanation of "torsion fields" which can be used for the manipulation of human psyche with still greater ease since those fields propagate in nature without obstacles. The American military researcher, nuclear physicist Tom Bearden, ascribes the same effects to "scalar fields" in the interview for the magazine Megabrain Report

The preliminary draft of the law published in the book by V. Lopatin and V. Tsygankov counts with the verification of the complaints of citizens who claim to have fallen victims to the experiments with psychotronic or informational weapons and their compensation in the court trials. In this way the authors indirectly admit that the experiments on unwitting citizens are actually taking place in the Russian Federation.

Other Russian authors, G. Gurtovoi and I. Vinokurov (V. Lopatin and V. Tsygankov write in their book that those two men carry out "a research full of initiative in the area of psychotronic weapon") wrote, in the book "Psychotronic War, from Myths to Reality", that

Russian newspapers and courts receive thousands of letters and complaints from people who claim that they have fallen victims to the experiments with psychotronic weapons.

According to the information from the American organization CAHRA (Citizens Against Human Rights Abuse) there are at least 1700 such people in the USA. According to the information of the respected Czech psychiatrist, expert on schizophrenia, dr. Baudys there could be no more than 3 people complaining that their mind is subjected to the remote control by secret services in the Czech Republic (10 millions of inhabitants). Projected to the population of the USA or Russia this number should not be higher than 80 people.

We recommend that you verify dr. Baudys figure with the psychiatrist in some country not known to experiment with mind control technology on people (Poland, Norway, Greece, Iceland). In the USA several court trials took place where people, in vain, tried to stop those alleged mind control experiments ("alleged" since so far there is no law in the USA, or any other country, which would admit the existence of the evidence of the use of the mind control technology that could be presented in the trial). As well in other developed countries (Great Britain, France, Netherlands, Australia, Germany etc.) the numbers of alleged victims of those experiments are constantly growing.

This is what V. Lopatin writes on this subject: classification "this is in the first place the way to secure the cruel control of people. the way to curtail their creativity, turn them into biorobots".

As follows from this text, at present time only the pressure of the informed world general public may result in a legislation providing a verifiable ban of the use of technical means of manipulation of human psyche which is in sharp contrast with the rights and freedoms guaranteed to the citizens of democratic countries by their constitutions. We believe that your organization owes to take part in this effort due to your dedication to the cause of human rights.

# **International Movement for the Ban of Manipulation of Human Nervous System by Technical Means**

"In the past the individual could face risks and pressures with preservation of his own identity. His body could be tortured, his thoughts and desires could be challenged by bribes, by emotions, and by public opinion, and his behavior could be influenced by environmental circumstances, but he always had the privilege of deciding his own fate, of dying for an ideal without changing his mind...New neurological technology, however, has a refined efficiency. The individual is defenseless against direct manipulation of the brain..." (Jose Delgado, 1969, neurophysiologist at the Yale University)

**"Neuroscience is being increasingly recognized as posing potential threat to human rights"**

(from the article on the annual public meeting of the French National Bioethics Committee in magazine Nature, volume 391, January 22, 1998)

**On January 1999 the European Parliament passed a resolution where it (in paragraph 27) calls "for an international convention introducing a global ban on all developments and deployments of weapons which might enable any form of manipulation of human beings".**

([http://www.europarl.eu.int/home/default\\_en.htm?redirected=1](http://www.europarl.eu.int/home/default_en.htm?redirected=1) click on Plenary sessions, scroll down to Reports by A4... number - click, choose 1999 and fill in 005 to A4). It is our conviction that this ban can not be implemented without the global pressure of the informed general public on the governments. Our major objective is to get across to the general public the real threat which those weapons represent for human rights and democracy and to apply pressure on the governments and parliaments around the world to enact legislature which would prohibit the use of those devices to both government and private organizations as well as individuals.

***Why the movement must be international?***

**For the simple reason that no state will abandon its mind control technology, fearing that other states will use it against itself, for as long as other states will not abandon it as well.**

**"Russian army major I. Chernishev, writing in the military journal Orienteer in February 1997, asserted that "psy" weapons are under development all over the globe".**

Parameters, pp 38 - 46, U.S. Army War College Quarterly - Spring 1998, Timothy L. Thomas: The Mind Has No Firewall Against PSI Warfare and Thought Control")

**For that matter national organizations for the ban of radiofrequency weapons enabling the control of human nervous functions should be formed all over the globe and cooperate their efforts. We can only encourage you to form one. If you wish to join the international movement for the ban of radiofrequency weapons controlling human nervous system just e-mail your name, city where you reside and the state to one of the e-mail addresses above. The list of those who support the ban of those weapons you will find below the references of the following article. You can add your name to the list using the same procedure (we will not publish your street address).**

**Important new information - excerpts from the book of the Russian politician Vladimir Lopatin you will find behind the list of supporters at the end of this site.**

## **PSYCHOELECTRONIC THREAT TO DEMOCRACY**

### **THE SECRET ARMS RACE**

***THE RUSSIAN FEDERATION AND THE USA BUILT RADAR SYSTEMS THAT COULD ENABLE THEM TO CONTROL THE MINDS OF WHOLE POPULATIONS***

SCIENTIFIC INFORMATION, MILITARY DOCUMENTS,

WARNINGS BY CIVILIAN AND MILITARY RESEARCHERS

### **CONTENTS**

1) The History – the scandal in the USA and electrical stimulation of the brain.

- 2) Mind stimulating devices can alter our psyche
- 3) Scientific experiments and patents - effects of electromagnetism on animal and human organisms and brains
- 4) American military documents on the development of radiofrequency weapons –the nervous system function is not much different from the radio receiver
- 5) The Secret arms race and hushed up scandal in the USSR
- 6) Thought control and the invention of Igor Smirnov
- 7) American radar system HAARP could be used for the global control of human minds
8. A secret conference organized by the American National Laboratory in Los Alamos
9. Have the radiofrequency weapons been put to use yet?
10. The Revolution in military affairs may result in the destruction of democracy
11. Warnings by civil and military scientists

## HISTORY - THE SCANDAL IN THE USA IN THE SEVENTIES AND THE ELECTRICAL BRAIN STIMULATION

When in 1951 American secret services started work on the project Artichoke they have set their goals as follows: "Evolution and development of any method by which we can get information from a person against his will and without his knowledge... Can we get control of an individual to the point where he will do our bidding against his will and even against such fundamental laws of nature such as self preservation?" This publication in the New York Times (1) was a result of the scandal caused by the abuse of the patients of the Canadian mental hospital Allan Memorial Institute. In another CIA report quoted in the New York Times article it is stated: "Many phases of the research in the control of human behavior involve a high degree of sensitivity. The professional reputations of outside researchers are in jeopardy since the objectives of such research are widely regarded as anti-ethical or illegal" (2) The patients of the Allan Memorial Institute were used for the experiments with drugs and drastic psychological experiments inspired by the Soviet political processes. They were placed in total isolation and deprived of sensory perception. When the CIA learned that they intend to start legal proceedings against the Allan Memorial Institute, they issued an order to destroy all the documents on the MKULTRA project. The reason was to get rid of the evidence of their involvement in the experiments and to protect other secret subprograms of the MKULTRA project from leaking in the public. Even if this order might have been only fictitious the CIA omitted to destroy the financial records of the MKULTRA project (3). In this way in August 1977 the scandal broke out and some of the secret documents on the research leaked out. Among them were CIA memorandums on the experiments with cats used as remote controlled microphones and dogs used as remote controlled bombs.

The signals in the nerves, in the brain and the whole body are carried by weak electrical impulses. The scientists who experimented since 1930 with the electrical stimulation of the brain inserted tiny wires (electrodes) into the brains of animals and humans and stimulated the nerves in different points of the brain by impulses of weak electrical current. In this way they produced reactions normally aroused by sensory perceptions or events inside of the organism. In the early sixties the CIA experimented with the use of dogs and cats as guided microphones and bombs. The report on MKULTRA subproject 94 issued in October 1960 read : "Initial biological work on techniques and brain locations essential to providing conditioning and control of animals has been completed...The feasibility of remote control of activities in several species of animals has been demonstrated. The present investigations are directed toward improvement of techniques" (4). The CIA research staff memorandum for the deputy director of the agency of April 21, 1961 states a production capability: "At present time we feel that we are close to having debugged a prototype system whereby dogs can be guided along specific courses through land areas out of sight and at some distance of the operator... In addition to its possible practical value in operations, this phenomenon is a very useful research tool in the area of the behavioral sciences. Dr. {blanked out} is taking appropriate action to exploit our knowledge of this area and provide adequate background for the development of future Agency applications in the general areas of Influencing Human Behavior, Indirect Assessment and Interrogation Aids" (4)

In 1969 Dr. Jose Delgado, a Yale psychologist, published a book "Physical Control of the mind, Toward a Psychocivilized Society" (5). In this book he presented the results of the 30 years long research. The scientists had succeeded in mapping out the relations between different points in the brain and all kinds of activities, functions and sensations of humans and animals. 100 stimulations of one point in the bull's brain made him 100 times bellow. The stimulation of the motion center in the cat's brain by electric current of 1,2 miliampere made it raise his hind foot above the floor, at 1,5 miliampere it raised the foot by 4 cm, at 1,8 miliampere it raised the foot all the way up, at 2 miliamperes it raised the foot even during the jump and landed badly. When a man was asked to straighten his hand the bending of which was stimulated he replied "I think your electricity is stronger then my will." By means of electrical stimulation of the brain the rhythm of breathing and heart beat [this was even stopped for several pulses] was affected as well as the function of the most of the viscera - alike the secretion of the gall bladder. As well frowning, opening and closing of eyes and mouth, chewing, yawning, sleep, dizziness, epileptic seizures in healthy persons etc. were induced. The behavior aroused by stimulation was purposeful - a cat with whom the licking was induced was looking for something to lick. Stimulation of more superior nerves in the brain produced more complex movements: a monkey got to walk whenever the stimulation of a point in the brain started and sat back to eat its food whenever the stimulation was stopped. The stimulation of points in the brain where feelings and emotions reside produced decisions. A passive, depressed woman tore up a piece of paper when her center of anger was stimulated: "I did not control myself. I had to get up and tear.", she commented. An aggressive woman, with the same point stimulated, got up and smashed against the wall the guitar she was playing until the moment of stimulation. The intensity of feelings could be controlled by turning the knob which controlled the intensity of the electric current. When the pleasure center was stimulated women offered marriage to therapists. Stimulation of a point in a monkey's brain stopped her maternal behavior toward a newborn baby. When the limbic system was stimulated the patients vigilance weakened, they lost capacity to think, often they began to undress or grope and when the stimulation stopped they did not remember it. The closest of human inventions to nature documents the best experiment when the electrodes were implanted in the cat's internal ear and connected with an amplifier and loudspeakers.

The cat's internal ear then functioned as a microphone converting the sounds into electrical impulses which were collected by electrodes and from the loudspeakers sounded the words whispered into the cat's ears [remember the use of cats by the CIA as guided microphones].

John Stanton Yeomans, in his book "Principles of Brain Stimulation" (6) of 1990 describes an experiment where, by the electrical stimulation of visual brain center the perception of Braille characters in blind persons was induced. They have learned to read them. John Stanton Yeomans writes that by the electrical stimulation of the brain hundreds of reactions were produced including complex thoughts.

Jose Delgado himself became world known when he faced a charging bull, fitted with electrodes and with no other protection save the small black box in his hands with which he had goaded the bull to become further enraged. Then with the bull almost upon him, he pressed another button and the animal promptly stopped in its tracks. At the end of his book Jose Delgado states that the hope that the new power acquired by the behavioral science will remain limited to scientists or some charitable elite does not raise neither distant nor recent past and that the control of human behavior will quickly progress in methodology as well as in applicability. He proposed to employ this new knowledge to create a "psychocivilized society".

Gordon Thomas (the author of the book inspired by the abuse of mental patients in Montreal used for the CIA drug and psychological research) who, besides the CIA documents, based his book on interviews with the former CIA employees describes the visit of the director of the CIA Office of Research and Development at the CIA directors office in 1972 where he enthused that the electrical stimulation of the brain was the key to creating not only a psychocivilized person but an entire psychocivilized society - a world where every human thought, emotion, sensation and desire could be actually controlled by electrical stimulation of the brain. If the CIA tried to use the electrical brain stimulation to produce the new generation of the lie detector they would have to implant the electrodes in the points in the brain where the thoughts origin in both the investigator and the interrogated and connect them. In the same way if they wished to control somebody's behavior he would have to "obey" his "boss's" thoughts. Of course this would be a very clumsy way to do it. But the methods of brain stimulation and registration of brain activity were progressing fast. Gordon Thomas describes in his book on the CIA mind control research (3) a "Schwitzgebel machine" which allegedly the CIA produced in 1972. "Using the latest computer technology (dr. Aldrich) developed Rubenstein's earlier work on radio telemetry and the unfulfilled dream... of a world of electrically monitored people became that much more of a reality..." The Schwitzgebel machine consisted of a Behavior Transmitter-Reinforcer fitted to a body belt that "received from and transmitted signals to a radio module". The Schwitzgebel machine was able "to record all physical and neurological signs in a subject from up to a quarter of a mile" (7).

That sounds incredible, but may be it will help if we start with an explanation how the mind stimulators, which are available on the market, work.

## MIND STIMULATORS CAN CHANGE THE STATE OF OUR MIND

At present time there is more than 40 types of mind stimulating machines on the market. Historically the first method to influence the performance of human mind was called biofeedback. A man could see on the screen the course of his electroencephalographic recordings and tried to make prevail certain waves. On the electroencephalograph the brain

waves are divided into alpha, beta, theta and delta waves. The beta waves oscillate 14 - 40 times per second. This means their frequency is 14 - 40 Herz. They prevail in the brain activity when a man is concentrated on some task. The alpha waves frequency is 8 -13 Hz and they prevail with the eyes closed when a man is inactive. Theta waves oscillate at a frequency of 4 to 8 times per second and they dominate on electroencephalograph only shortly before a man falls asleep. But during the childhood the brain activity is dominated by those waves. The delta waves frequency is from 0 to 4 Hz and prevail while a man is asleep. When a man, trying to master his brain waves, succeeds in transfer to theta rhythm while being awake, often it happens to him that he is invaded by vivid memories from his childhood, which refers to the stage of life when theta waves are dominant in the brain activity. If he succeeds in getting into the alpha rhythm he can remember much better what he is learning. The dominance of alpha waves recedes between 16 and 18 years of age. Already in the 30s it was found out that the brain waves synchronize their activity to the pulsed light. If a stroboscope, blinking at the frequency of 10 times per second, is aimed at the human eyes the EEG recordings will show the same prevalent frequency in the brain activity. This is also documented by the recent mass occurrence of epileptic seizures in Japan to the people watching on TV an animated cartoon where suddenly certain frequency of light signals appeared. In scientific language this kind of stimulation is called photic driving and it is well known that an epileptic seizure can be produced by certain frequency of orange light. By pulsed light signals it is also feasible to tune the brain into alpha waves in order to remember well what is one learning or into theta waves in order to get into a state of deep relaxation.

The same effect on the human brain can produce rhythmic sound. It is well known how the aborigines get into trance while dancing to drums. The modern science found other ways how to influence human brain by sound frequencies. For example if you deliver to one ear a sound in the frequency of 200 Hz and into the other one the sound in the frequency of 210 Hz , the electric frequency of 10 Hz will dominate in the brain, since large portions of neurons in the brain will synchronize the frequency of their activity to this external impulse. This phenomenon is called entrainment. In other words by means of external stimulation it is possible to change our brain activity and our frame of mind. How does this change happen? All the brain activity is a system of electric and chemical reactions. The neuroscientist Norman Shealy measured the chemical changes in the brain at the frequency of 7,8 Hz which is the frequency at which the ionosphere oscillates. Norman Shealy found out that if the brain is tuned (by light or sound stimulation) to this frequency the production of growth hormones increases by 25 % as well as the production of gonadoliberin (which influences sexual organs and hormones) and oxytocin (which produces the feelings of love). The production of betaendorphin (which causes feeling of euphoria) increased substantially as well. This goes to prove that different brain frequencies cause the production of different chemicals in the brain and body which influence our mood and motivation.

Apart from light and sound stimulators cranial electric brain stimulators are on the market. They act directly upon the electric frequencies in the brain. Michael Hutchinson, in the book *Megabrain Power* (8), predicts that soon there will be on the market the systems with biofeedback which will make possible to watch one's dominant brain frequencies on the screen. Those systems will store in their memories thousands of programs enabling the user to get in whatever state of mind and pass all kinds of experiences in the same way as when you are switching the channels on TV. Michael Hutchinson writes that the technology for such systems is already in existence. It is quite a serious question whether he is not talking here about the military technology.

In 1986 the United States Attorney General held a conference on the Less than Lethal Weapons. In the report on this conference among others is stated: "Participants also discussed the use of various wave lengths and forms of administration of electromagnetic energy as a non-lethal weapon. A substantial amount of preliminary research has been conducted in this area... One conference participant noted that scientific knowledge of human physiology is progressing to the point where it may soon be possible to target specific physiologic systems with specific frequencies of electromagnetic radiation to produce much more subtle and fine-tuned effects than those produced by photic driving (9)."

## SCIENTIFIC EXPERIMENTS AND PATENTS - EFFECTS OF ELECTROMAGNETIC RADIATION ON ANIMAL AND HUMAN ORGANISMS AND BRAINS

In 1831 English scientist M. Faraday discovered that flowing electricity induces magnetism and magnetism in motion induces the flow of electric current. The condition for the transformation of electromagnetic energy into electrical energy is that the "receiver" is tuned to the same frequency in which the electromagnetic energy is emitted. So radio waves which belong among electromagnetic waves can also produce the flow of electric current in the brain if they are tuned to the frequencies in which the nerve impulses are transferred. There are two objections opposed to this theory. First the extra low frequencies which are produced by the activity of human brain are way too long to make it feasible to target such a small object like the human being is - a 10 Hz wave is about 20.000 miles long. This problem circumvented the scientists by the use of microwaves pulsed at extra low frequencies. But there the second objection comes in question - such signals have microwave properties and can not penetrate the human tissue. For the answer to that question the scientists are searching until present time, but in the meanwhile they experiment with the frequencies of microwaves at which the electromagnetic radiation affects organisms and brains.

The evidence for the effects of electromagnetic signals on isolated neurons published in 1975 H. Wachtel in the Annals of New York Academy of Sciences (10). The whole volume of this issue (over 500 pages) is dedicated to the Conference on "Biological Effects on Non-ionizing Radiation". The introductory lecture was delivered by captain Paul Tyler, director of the U.S. Navy Electromagnetic Radiation Project between 1970 and 1977. Among the reasons for his presence at the conference was an effort to persuade the scientists to hire psychologists on the research teams. In the experiment of H. Wachtel the microwaves in the frequencies of 1,5 and 2,45 Ghz, pulsed and not pulsed induced the activity of isolated neurons. In 1966 Juri Chlodov and R. A. Chizenkova noted a desynchronization in the dominant rhythm of electroencephalogram with rats and rabbits whenever a magnetic field of 200 - 1000 gauss was turned on or off (11).

The specialized effect of electromagnetic radiation on individual brain system was proved by experiments repeated by many scientists. The irradiation of dogs, cats, rabbits, rats and frogs by electromagnetic fields of 2 - 5 milliwatts per square centimeter density produced desynchronization in basal rhythm in the brain (12). The interaction of electromagnetic radiation and chemicals in the brain is documented by the experiment of McAfee (1961, 1962 and 1970) when irradiation of rats heads by 20 and 40 mW/cm<sup>2</sup> microwaves pulsed at 300, 600 and 1000 Hz during 5 minutes woke the rats up from narcosis (13).

At a conference on "Emerging Electromagnetic Medicine" in 1989 Cpt. Tyler in his lecture quoted the research of Dr. Merrit who measured the decrease of norepinephrine, serotonin and dopamin when a field of 80 mW/cm<sup>2</sup> was applied. All those hormones act as

neurotransmitters into the cortex. Dopamin influences the ability to learn and other cognitive abilities (14). In another experiment a 500Hz signal produced release of noradrenaline in sympathetic neurons. Since those neurons control the muscles of internal organs and noradrenaline acts there as a neurotransmitter, this signal should be able to influence the activity of internal organs (15).

The publication of the World Health Organization on the effects of electromagnetic radiation on living organisms from 1981 gives many examples of the effects of this radiation on the excretion of glands, chemical composition of blood, eyes (for example corneal cataract), molecules of DNA and genetics, the development of organisms and behavior of animals (16). Robert Becker, in the book *Cross Currents* (17) refers to the work of A. Liboff who proved that it is possible, by means of electromagnetic radiation, to stop the process of the division of the cell in the moment when the cell is dividing.

One of the military uses of those discoveries is perhaps derived from the experiment of B. Servantie, who in 1974 found out that rats exposed during 10 - 15 days to microwaves pulsed at 500 Hz were significantly less susceptible to paralyzing curare like drugs than normal rats (18). In the Final Report on Biotechnology Research Requirements for Aeronautical Systems Through the Year 2000 it is stated: "Using relatively low-level RFR (radiofrequency radiation), it may be possible to sensitize large military groups to extremely dispersed amounts of biological or chemical agents to which the unirradiated population would be immune" (19). In other words, if the enemy troops breathe in or drink in water those agents, it is possible to produce effects in their organisms which will not be produced in the organisms of our own troops or civil population. Similarly dangerous is the finding of Allan Frey that RFR can weaken the blood-brain barrier which prevents poisonous chemicals from the access into the brain (20).

Jose Delgado also abandoned research of electrical stimulation in favor of electromagnetic stimulation. In 1985 Kathleen McAuliffe visited him in his laboratory in Spain and then wrote an article for the magazine OMNI. Jose Delgado showed her how he can make an ape fall asleep or make her overactive or how he can calm down the fighting fish by radiofrequency radiation. Important is also his experiment where the irradiation of chicken embryos by 10, 100 and 1000 Hz stopped their development including the development of hearts and veins. The experiment was replicated by the American Navy with the same results (21).

The Office of Naval Research has been collecting scientific reports on the biological effects of RFR since 1974. At present time their collection is growing by over 1000 papers each year (22). The great majority of published experiments was performed on animals. The experiments with people (as we will see later) are most probably reserved to secret military projects. In the already mentioned report of the World Health Organization (16) it is stated that the first studies on the effects of radio frequencies on human beings were performed in Poland, Czechoslovakia and USSR in the fifties. The research was carried out in clinics and industrial environment and the authors of publications (Bartanski, Czerski, Marha and Presman) concluded that microwaves can cause headaches, fatigue, weakness of the body, dizziness, changes of the mood, confusion and sleeplessness.

In the already quoted article in the magazine OMNI (21) Capt. Tyler says: "Probably many things that can be done chemically could also be done electrically. With the right electromagnetic field, for example, you might be able to produce the same effects as psychoactive drugs". Apparently he refers to the work of English Dr. Patterson who he talked

about in his lecture at the conference on Emerging Electromagnetic Medicine. Dr. Patterson is using the cranial electrical brain stimulator which is fully programmed and automated for different groups of drugs, their combinations and long-term abstinence syndromes such as depression and sleeplessness.

In the already mentioned experiment by McAfee (13) the microwaves pulsed at 300, 600 and 1000 Hz produced uneasiness to breath (leading even to suffocation) in rats. Capt. Tyler in his contribution to the book "Low Intensity Conflict and Modern Technology" writes: "It has also been shown that normal breathing takes place at certain frequencies and amplitudes and not at others. Animals forced to breath at certain unnatural frequencies develop severe respiratory distress." In the context of his paper those are rather the effects on people that are in question.

In 1968, the Russian academician A.S. Presman published a book "Electromagnetic Fields and Life" (23) where he presented theory that electromagnetic signals have for the living matter the meaning of information, e.g. that they exert control over its intrinsic processes. In his book he mentions the experiment of S. Turlygin from the year 1937 where centimeter waves induced in people feelings of sleepiness and feebleness. A. S. Presman also gives in his book the history of the progress of knowledge on the effects of electromagnetic fields on the cerebral visual system (24). Already in 1893 a Frenchman D'Arsonval noticed that the electromagnetic field can produce in people a perception of a flash of light. In the following years many other scientists have made the same observation. In 1960 T. Jaski produced by electromagnetic signals at the frequencies 380 - 500 MHz simple visual hallucinations. The list of literary sources at the end of the book of A.S. Presman is already 28 pages long.

The founder of cybernetics Norbert Wiener lately also concentrated on brain research. He exposed volunteers who did not know the principle of experiment to electric fields at 10 Hz frequency. When the field was turned on they complained of the feelings of uneasiness and anxiety (17).

One of the highly respected experts working in this field, Ross Adey, who admits that he is working in military research, published in 1974 the results of experiments with microwaves at frequency 147 MHz pulsed at 6 - 10 Hz and 50 MHz pulsed at 16 Hz. Those signals increased the efflux of calcium ions from nerve cells (25).

Robert Becker, who has been twice nominated for the Nobel prize for the work in this field of science, writes in the book "Body Electric" (26) that Ross Adey have publicly expressed his expectation that this efflux of calcium ions would interfere with concentration on complex tasks, disrupt sleep patterns, and change brain function in other ways that can not be predicted yet." (The calcium ions play a key role in the transmission of nerve impulses).

In 1962 published Allan H. Frey in the "Journal of Applied Physiology" (27) the results of experiments with transmission of sounds into the brain by electromagnetic radiation at a distance of up to 1000 feet. The "electromagnetic" sounds were heard by deaf as well as sound people. The radiofrequency sound was "described as being buzz, clicking, hiss or knocking, depending on several transmitter parameters, i.e. pulse width and pulse repetition rate" (frequency) . In his report A. Frey writes that so far only the visual system has been shown to respond to electromagnetic energy and he notices that "With somewhat different transmission parameters we can induce the perception of severe buffeting of the head.." and "Changing ... parameters again, one can induce a "pins-and-needles" sensation." His experiment was replicated several times by other scientists (28). W. A. Guy and others

combined the experiment with an experiment with cats (29). They were anaesthetized, paralyzed and placed on artificial ventilation. With their nervous system "immobilized" in this way the recording were made by means of electrodes of the reactions in their medial geniculate nucleus on the "radiofrequency" and normal sounds. The reactions were identical and ceased to appear when the cochlea was disabled. So it appears that radiofrequency signals produced their effects in the cochlea and from there spread into other parts of the brain just like normal auditory sensations.

Another, more advanced, experiment with the transmission of radiofrequency sounds into the brain was published only inadvertently. Don R. Justesen used, in the article on "Microwaves and Behavior" (30), the result of an experiment described to him over the telephone conversation by his colleague J. C. Sharp, who worked on a military project. Joseph C. Sharp was employed on the project Pandora of the American Navy, officially designed to research of the radiofrequency radiation emitted on the American Embassy in Moscow from the 60s until the beginning of 80s. At the Walter Reed Army Institute he improved the method of A. Frey to the point that he transmitted into his brain words which he could understand.

The scientific personality, which was apparently on the cutting edge at this time, was Patrick Flanagan. An independent researcher who in 1958, in 14 years of his age, presented to the United States Patent Office a neurophone, the invention which made it possible for deaf people to hear (31). The device converts sound into electrical impulses that propagate along the skin into the brain. For the employees of the patent office the invention was incredible and Patrick Flanagan managed to persuade them that the invention could work only after 6 years when he demonstrated it making a deaf employee of the Office hear the first time after 15 years. But even then the invention did not get to the deaf people. Patrick Flanagan improved the invention technically and submitted it under a new patent number 3,647,970. Though his device emitted radiofrequency waves into the brain through the skin, he added to the accompanying text the sentences: "The simplified speech waveform can be transmitted directly through the earth or water and be understood either directly from the medium or after simple amplification. The simplified waveform can easily be encoded by scrambling to provide secure voice communications." Patrick Flanagan believes that it was due to those lines that the United States Defense Intelligence Agency placed his invention under a secrecy order as a matter of national security. Patrick Flanagan was forbidden from conducting further research or even talking about his technology for another four years. In the 1990s the American company Earthpulse Press who was selling neurophones had set up its business representation in Germany. In 1996, all the same, evidently out of the fear that the secret military technology could get understood by the general public, the neurophone was put under a secrecy order by the U.S. Defense Intelligence agency (the news was published in Earthpulse Flashpoints No1, Earthpulse, Alaska, USA, 1996. At present time the neurophone is again on the market in the USA and several other countries of the world. In the accompanying text to his patent P. Flanagan also writes: "The present invention involves discovery that certain electromagnetic waves induce responses in the nervous system of mammals... Each individual nervous system is at least somewhat selective in respect to the frequencies to which it is most responsive.

There are other four patents registered with the U.S. Patent Office using the microwave hearing phenomenon. The patent #4877027 with the title Hearing system by Wayne B. Brunkan, issued on October 31, 1989. In the abstract we read: "Sound is induced in the head of a person by radiating the head with microwaves in the range of 100 MHz to 10.000 MHz that are modulated with particular waveform" <http://164.195.100.11/netahtml/srchnum.htm> (choose

the search by patent number and search for the number 4877027) This patent was bought by the IBM <http://www.delphion.com/cgi-bin/patsearch> (and search for the number 4877027). In the abstract of the patent # 4858612 by Philip L. Stocklin, issued on August 22, 1989 entitled "Hearing device" we read: "A method and apparatus for simulation of hearing in mammals by introduction of a plurality of microwaves into the region of the auditory cortex" <http://164.195.11/netahtml/srchnum.htm> (and search for patent number 4858612). The patent # 3766331 by Zink, issued on October 10, 1973 is entitled - "Hearing aid for producing sensations in the brain" and patent # 3629521 by Andrija Puharich, December 1971 is entitled "Hearing systems".

Other renowned experts in this field are Elisabeth Rauscher and ing. William Van Bise. (Elisabeth Rauscher served as a consultant with SRI International, NASA and the Navy (32).) Their patent number 4,889,526 was granted in 1989 and it presents the invention of wireless heart stimulator and pain reliever (33). In the text we read: "the beginning of the normal cardiac cycle and response to pain cycle originates in the mid brain and the hypothalamus with the excitation of the Purkinje cells and is oscillatorily propagated to the heart or source of pain respectively.... the present invention relates to non invasive devices which emit magnetic pulses that can penetrate through and interact with biological materials and potentially all systems of the body in what is known as the ELF/VLF frequency range. These devices operate... without direct contact with the material affected... these waves at other frequencies, wave forms and intensities can increase dispersion and hence introduce disruption and biological damage in the system." The pain reliever functions at the mixed frequencies 7,6 and 76 Hz. Robert Becker, in his book "Body Electric" writes about an experiment by J. F. Schapitz in 1974. It was released voluntarily on basis of Freedom of Information

Act and for that matter R. Becker takes it "with a pillar of salt". J. F. Schapitz stated: "In this investigation it will be shown that the spoken word of hypnotist may also be conveyed by modulated electromagnetic energy directly into the subconscious parts of the human brain - i. e. without employing any technical devices for receiving or transcoding the messages and without the person exposed to such influence having a chance to control the information input consciously." In one of the four experiments subjects should have been given a test of hundred questions, ranging from easy to technical ones. Later, not knowing they were being irradiated they would be subjected to information beams suggesting the answers to the questions they had left blank, amnesia for some of their correct answers and memory falsification of their correct answers. After 2 weeks they had to pass the test again. The results of those experiments were never published. Later on we will discuss the possibilities how this could be done.

#### AMERICAN MILITARY DOCUMENTS ON THE DEVELOPMENT OF RADIOFREQUENCY WEAPONS - THE NERVOUS SYSTEM CAN BE COMPARED TO A RADIO RECEIVER

In the 1986 the American Air Force issued a book "Low Intensity Conflict and Modern Technology" (19). In the foreword Newt Gingrich, member of the U.S. House of Representatives writes: "The United States is on the verge of a dramatic change in its ability to cope with low-intensity conflict... This book is a serious effort to make thinking about and working on low-intensity conflict easier, more understandable and more effective." The chapter on the "Electromagnetic Spectrum in Low Intensity Conflict" wrote Capt. Paul Tyler. At the beginning he quotes "Final Report on Biotechnology Research Requirements for

Aeronautical Systems Through the Year 2000" issued by American Air Force in 1982: "Currently available data allow the projection that specially generated radiofrequency radiation (RFR) fields may pose a powerful and revolutionary antipersonnel military threats... the increasing understanding of the brain as an electrically mediated organ suggested the serious probability that impressed electromagnetic fields can be disruptive to purposeful behavior and may be capable of directing and or interrogating such behavior. Further, the passage of approximately 100 miliamperes through the myocardium can lead to cardiac standstill and death... A rapidly scanning RFR system could provide an effective stun or kill capability over a large area. System effectiveness will be a function of wave form, field intensity, pulse width, repetition frequency, and carrier frequency."

The last line defines the technical principle of the control of cerebral functions. Though it is too short to provide the understanding of how such a technology may work. It is generally known that the information inside of the brain is "translated" and transferred by a number and frequency of nerve impulses, while the intensity of the feeling or perception usually corresponds to the intensity of electrical current. Another phenomenon generally accepted in the modern scientific literature is a synchronization of frequencies of emitted nerve impulses in different parts of the brain in reaction to the stimuli which catch the attention of the brain (34). Per E. Roland from the Laboratory for Brain Research and Positron Emission Tomography at the Karolinska Institute in Stockholm, Sweden, engaged in the research of brain activation in reaction to different stimuli. He studied the influx of blood, bringing the nutrition to the activated areas of the brain. In this way he was finding the different areas or columns of neurons which got activated in reaction to different stimuli. He writes that looking at the distribution of those activated areas in the brain, he can tell what is the subject a person is thinking about. Then he asks a question whether those so called "metabolical columns" have common electrophysiological properties, e.g. whether their electrical activity is identical. The reply to this question he finds in the work of German scientists Schopman and Stryker from 1981 who "showed that in the visual cortex of the cat, the metabolic columns corresponded with electrophysiologically defined columns in which the neurons had orientation specificity for the stimulus used." This means that different stimuli produce in the brain different electrical events. In the opposite direction Whitsel and Juliano (1989) found that "metabolic columns only occurred at cortical locations where the neurons possessed electrophysiologically defined functional properties related to the stimulus." Skarda and Freeman (1987) and Singer (1990) "advanced the concept that neurons in different active columns synchronize their electrical oscillatory activity in response to optimal inputs" (35). Or, in other words, the neurons in those areas synchronize their firing in the same frequency. Wolf Singer (36) describes an experiment where two different stimuli produced at the same time are observed in the brain. They were "represented by two independently oscillating assemblies of cells". According to Wolf Singer the differences in brain activity in reaction to different stimuli are represented by different groups of neurons oscillating in different frequencies. Walter J. Freeman, who has already for years measured the brain activity in reaction to different stimuli by many microelectrodes at the same time, presented already in 1975 a hypothesis "that a novel external stimulus is broadly transmitted from the primary sensory cortex or thalamus to other parts of the cortex... transmission occurs at some characteristic frequency, and... reception occurs in... sets tuned to that frequency" (37). (Electroencephalographers have no doubt that those are those synchronizations which appear on the EEG recordings and are already capable to recognize on EEG recordings the single words perceived by the subject - see Continuous Wave-Form Analysis, journal: Electroencephalography and Clinical Neurophysiology, supplement no. 45, 1996, page 64).

And what happens when an external electromagnetic frequency is applied to the brain? H. Frolich from the Department of Physics at the University of Liverpool, England, writes: oscillations produced by coherent excitation of a single polar mode "yield long range, frequency selective, interactions between systems with equal excitation frequencies" (38). In other words it is basically the frequency of nerve impulses e.g. frequency of electrical currents e.g. - from military point of view - frequency of electromagnetic waves that defines the activity of the brain, and we can always bypass the physical perception by electromagnetic signals which will produce, in the brain, the same electrophysiological events as would be produced by the perception or other events in the organism. It means the events in the brain can be produced "synthetically" from the outside. Those findings are supported as well by the experiments of Allan Frey and W. Guy where electromagnetic "acoustic" signals, when tuned to the electrophysiological properties of cochlea or to its natural frequencies and pulse widths, produced in the brain the same events as a normal sound. The same, though electrical, procedure are using cochlear implants which are, at present time, implanted to deaf people. When the parameters of the transmitter (i.e. frequency, pulse width etc.) were changed, it was another brain area which resonated with the electromagnetic signals and so the feeling of severe buffeting on the head or pins and needles sensation was induced. The changed transmitter parameters resonated with another receiver in the brain, which caused there different type of frequency synchronizations. The same effect reflects also the note of Capt. Tyler that "normal breathing takes place at certain frequencies and amplitudes but not at others." The radiofrequency radiation, when tuned to its frequencies and amplitudes, hits the part of the brain which controls the breathing and imposes another rhythm of breathing or even stops it (remember that Jose Delgado could produce the same effect by means of electric stimulation of the brain). So the Patrick Flanagan's neurophone works in pretty much the same way as a radio transmitter whose broadcasting is adjusted to the "receiver" picking up the signal which, in this case, appears to be cochlea. If we want to broadcast for another "receiver" in the nervous system, we only need to know its parameters to be able to broadcast the information or frequency to which the receiver is tuned up. Just like when tuning our radio receiver we choose the frequency at which its internal circuits will resonate and the result is that we listen to the radio station which we have chosen. John Marks, in his book on CIA mind control research quotes one of CIA research veterans recalling a colleague's joke: "If you could find the natural radio frequency of a person's sphincter, you could make him run out of the room real fast. (43)"

Different frequencies used in his experiments with animals also Jose Delgado. But this time the only case when the results of his work were presented to public was the article by Kathleen McAuliffe in OMNI magazine. Robert Becker, since she is friend of his, instructed her before her trip to Spain, what questions she should ask Jose Delgado (17). One of those questions was whether, aside of frequencies, other parameters of the transmitter can make difference. Probably being bound by national security information law, Jose Delgado did not answer most of the questions prepared by R. Becker. Anyway the waveforms, intensity of the electric current, the pulse width and carrier frequency are being quoted in the scientific papers on experiments.

Captain Tyler, in the continuation of his paper on Electromagnetic Spectrum in Low Intensity Conflict also quotes a scientific work (39) presenting the evidence (though not very important) that the biological effects of millimeter waves depend on the applied frequency and comes forward with the conclusion: "Because of many parameters involved and the apparent specificity of each parameter one can tailor a specific response. The ability to have this kind of flexibility provides an enormous range of options to the user. It opens the door for

providing an appropriate response in warfare, be it conventional or unconventional.” Of course he does not support this statement by the results of secret military experiments. Frequently he took part in scientific conferences, but he talked there only about the work of other scientists which is unusual. Normally every scientist talks about his own research., but again it is not difficult to understand that he can not publish the secret military research. If you object that the range of frequencies in which the human nervous system works is too narrow to provide for so wide choice of reactions, Capt. Tyler writes: ”There are unconfirmed reports that change of 0.01 Hz can make a difference.” The word ”unconfirmed” he uses rather inappropriately since many experiments and patents are defining the used frequencies in hundredths of Hertz. In addition in the neocortex (the latest layer of the human brain) apparently prevail frequencies from 35 to 75 Hz (34, 35) (those frequencies do not appear on EEG so they were until recently unknown).

Jose Delgado also told to Kathleen McAuliffe that electromagnetic radiation, causing reactions in the brain, produces there electric currents hundreds of times weaker than necessary to induce the nerve impulse. Capt. Tyler answers this question as well, using his knowledge of modern scientific literature, he writes: ”intrinsic electromagnetic fields play a key role in a wide range of biological functions, including... information transfer and storage, particularly in the central nervous system.” Those lines mean a revolution in the understanding of the nervous system functioning: ”Some recent theoretical research has looked at the classical neuronal synapse and proposed that... it must be a quantum mechanical event.” This aims to support the results of experiments with entrainment of brain activity by external electromagnetic radiation. The scientific research based on those experiments is theorizing that the nerve impulse is evoked not only by electrical impulses advancing along nerve fibers, but also by the effect of electromagnetic waves coming from surrounding neurons and perineuronal cells. Ross Adey supports this theory by measurements of electromagnetic oscillations in pericellular fluid and glia cells by means of microelectrodes (40). Of course, if it is true that electromagnetic oscillations play a role in the transfer of information inside of the brain, we can understand why the external electromagnetic radiation can control the activity of the brain. (Note: still in 1983 at the conference on the Nonlinear Electrodynamics in Biological System (41) the scientists only theorized on how this radiation propagates inside of the tissue and how does it get there. Ross Adey himself, in the introduction to the book covering this conference admits that: ”Experimental knowledge in this area has grown rapidly in the past decade, and in some respects has outstripped theoretical models adequate to explain these new observations.” - To complete the information - in the brain functioning the nonlinear wave mechanics are at work and for the computations the mathematics of chaos are applied. Also the brain does not react to the radiation that does not carry the biological information (43)).

From the paper of captain Tyler we did not learn anything about the projects of the American Navy he was working for. Robert Becker, in his book Cross Currents presents the report coming from the Microwave Research Department at the Walter Reed Army Institute, where J.C. Sharp carried out his experiment with the transmission of words into the brain by radiofrequency radiation. The report deals with the effects of pulsed microwaves on nervous system and describes the division of testing program into four parts: 1) prompt debilitating effects, 2) prompt stimulation auditory effects (remember J.C. Sharp one more time) 3) work interference (stoppage effects) 4) effects on stimulus controlled behavior. The report presents this conclusion: ”Microwave pulses appear to couple to the central nervous system and produce stimulation similar to electrical stimulation unrelated to heat” (42). The idea that with

the electromagnetic stimulation of the brain the same effects can be produced as with electric stimulation, as Jose Delgado described it, is dismaying, but apparently true.

American Air Force, according to the Final Report on Biotechnology Research Requirements for Aeronautical Systems Through the Year 2000, divided the research of radiofrequency weapons into three areas:

- 1) Pulsed RFR Effects” - projected research since 1980 until 1995
- 2) ”Mechanisms of RFR with Living Systems” referred to as ”continuation of ongoing research” beginning in 1980 and forecast to conclude around 1997
- 3) ”RFR forced disruptive phenomena” - starting around 1986 with the projected

continuation until 2010. In the second volume of this report it is stated that the work on the project is progressing according to the schedule or in advance. The last area of research is in the second volume redefined: ”While initial attention should be toward degradation of human performance through thermal loading and electromagnetic field effects, subsequent work should address the possibilities of directing and interrogating mental functioning, using externally applied fields...” (44). This formulation is probably not clear on purpose, but the message looks clear - the intent of the project should be to collect electromagnetic waves emanating from the brain and to transmit them into another brain that would read a person’s thoughts or to use the same procedure in order to impose somebody else’s thoughts on another person’s brain and in this way direct his actions. If it is true what Wolf Singer tells about brain events always differing by frequencies of synchronizations among different brain cells then it is not impossible to find the thoughts frequencies. From the layman’s point of view the most difficult task is to pick up the brain waves. On Internet pages of IBM Intellectual Property Network you can find a patent number 03951134 (<http://www.delphion.com/cgi-bin/patsearch> and search for the patent number 03951134). The device, described in the patent, is capable to pick up at distance the brain waves of a person, process them by a computer and emit correcting waves which will change the original brain waves.

The military documents quoted here are accessible to the public though they are not published in the newspapers. Our guess is that they are there in order to get the public ready to accept the use of the technology that is already at hand and sometimes in use. If you will just only read this text, without following up with an action, you will support this course of events.

## THE SECRET ARMS RACE AND THE HUSHED UP SCANDAL IN THE USSR

Robert Becker, in the book ”Body Electric” was probably the first American to publish the presence of the Soviet, so called psychoactive, signal in the USA. According to him the signal appeared on the bicentennial celebration of July 4, 1976. Robert Becker writes that the signal varies up and down through the frequencies between 3.26 and 17.54 MHz and is pulse-modulated at a rate of several times a second. Its source was located at a giant transmitter near Kiev in the USSR. As to the effects of the radiation, Robert Becker is not quite sure, but he writes: ”The available evidence... suggests that the Russian woodpecker is a multipurpose radiation that combines a submarine link with an experimental attack on the American people” (20). Officially the Soviet radiation was never decoded as well as the radiation broadcasted at the American Embassy in Moscow, though for the analysis of this radiation the project Pandora was launched by the American Navy. Robert Becker mentions also the

possible American retaliation. He writes about an American reporter, Stefan Rednip, who claimed, in 1978, that he gained access to purloined CIA documents "proving the existence of a program called Operation Pique, which included bouncing radio signals off the ionosphere to affect the mental functions of people in selected areas, including Eastern European nuclear installations."

John Marks, in the book "CIA and Mind Control - the Search for Manchurian Candidate" quotes one of the CIA researchers from the era of MKULTRA project: "The rest of the world didn't ask until 1976 the type of questions we we're facing in 1965... Everybody was afraid of building the supersoldier who would take orders without questioning like the kamikaze pilot. Creating a subservient society was not out of sight. (45)"

It is difficult to assess which of the superpowers was behind in this area in 1976 and which one is behind today. Certainly since the appearance of the Soviet signal in the USA several articles appeared in the U.S. press publicizing the Soviet national security information pertaining to the development of the equipment influencing human body and psyche since the Soviet signal appeared in the USA in 1976. According to the information I did not manage to verify already in November 1976 the Los Angeles Herald-Examiner published an article entitled "Mind-Altering Microwaves, Soviets Studying Invisible Ray". The author of the article writes: "A newly declassified U.S. Defense Intelligence Agency report says - extensive Soviet research into microwaves might lead to methods of causing disoriented human behavior, nerve disorders or even heart attacks..."

Another article on this subject wrote John B. Alexander, who later became the director of Los Alamos National Laboratory, in 1980 for the monthly Military Review. He writes: "... there are weapon systems that operate on the power of the mind and whose lethal capacity has already been demonstrated... the ability to heal or cause disease can be transmitted over distance thus inducing illness or death for no apparent cause... The application of large-scale ELF (extra low frequency) behavior modification could have horrendous impact... mind-to-mind thought induction techniques are also being considered..." As a source of information John B. Alexander indicates two Defense Intelligence Agency reports released through the Freedom of Information Act (or in other words declassified). On the American research he writes: "The U.S. government is reported to have funded some research projects, but these have not been published" (46).

In about 1985 the American CNN TV station broadcasted in the "Special Assignment" series a program on Russian electromagnetic weapons (47). The first part concentrated on directed energy weapons. There was talk about weapons capable to cook people alive (recall microwave oven) and knock out computers and electronic surveillance and communications gear. In this way the airplanes and guided missiles could be placed out of use. The directed energy weapons could also produce the explosions in the extent of nuclear explosions which would not cause radioactivity. The American military experts asserted that the Soviets are ahead of the USA in this research.

The second part of the broadcasting was dedicated to Soviet research of radiofrequency mind control weapons. Though from the beginning, the subject was the Soviet research, the American scientists conveyed rather their own research experiences. Jose Delgado said: "Any function of the brain - emotions, intellect, personality - could we perhaps modify by this non-invasive technology" and "the beauty is that now we are not using electrodes." Instead of the expert from the American Navy who wished not to reveal his identity spoke an actor. He

repeated in short what captain Tyler told to Kathleen McAuliffe about the substitution of psychoactive drugs by radiofrequency radiation and what captain Tyler wrote in the book *Low Intensity Conflict and Modern Technology*: "Apparently there are specific sites involved, specific functions involved. It's a matter of matching up just like it is with a pill or a drug, to cause an effect you could have a cause and effect relationship between a magnetic field and a biological function". Next eng. William Van Bise and Elisabeth Rauscher demonstrated on the moderator the induction of visual hallucinations by "RF (radiofrequency) mind interference machine". The blindfolded moderator can see parabola and then a spike. Eng. Van Bise and E. Rauscher assert that they constructed the machine using the data found in Soviet scientific literature, but Robert Becker, in his book "Cross Currents" (17) writes about this machine being invention of eng. Van Bise and E. Rauscher themselves. It is difficult to believe that such instructions could be found in the Soviet scientific literature, as well.

Next, in the CNN program perhaps the first time in the American mass media, the presence of the Soviet "psychoactive" signal in the USA was disclosed. Robert Becker, in contrast with what he wrote in his book, said that "The signal range within which the Woodpecker operates is that which has been reported by many investigators to produce a tranquilizing effect on animals". "Captain Tyler" commented on it that "It's possible to entrain a certain percentage of a population, apparently, with weak magnetic fields."

In the conclusion "Paul Tyler" and dr. Fraser from the American Air Force assert that they worked on American projects of radiofrequency weapons, but that the Navy as well as the Air Force "never followed up". This is in contradiction with the project of the American Air Force quoted in the last chapter of this booklet.

In April 1993 the Russia declassified the electromagnetic weapon capable to destroy any object in the atmosphere "no matter whether it is a missile... an airplane or any other artificial or real heavenly object of the type of meteorite" (48). It means that so far only the first part of the CNN broadcasting, on directed energy weapons, was declassified in Russia.

According to another report "made available" by the U.S. Defense Intelligence Agency to the magazine *The Enquirer*: "Russia is deeply involved in researching ways to use microwaves to induce disease, control minds and even kill..." The article states that "Microwaves have been used to produce heart attacks in frogs" (but according to Robert Becker (20) the same experiments carried out Allan H. Frey), and in people "headaches, fatigue, perspiring, dizziness, menstrual disorders, irritability, tension, drowsiness, sleeplessness, depression, forgetfulness, and lack of concentration" (49) - recall Ross Adey. According to the report by the peace activist Kim Bealy, the women who at the end of 70s and beginning of 80s blocked the American base at Greenham Common in Great Britain suffered from severe headaches, drowsiness, menstrual bleeding at abnormal times,... temporary paralysis, faulty speech coordination..., vertigo, retinal bleeding, burnt face (even at night), nausea, sleep disturbances, lack of concentration, irritability, disorientation, loss of memory and a sense of panic in non-panic situations (I underlined the concurrent symptoms - it is a matter of question whether the American Defense Intelligence Agency had ever gained access to the Soviet secret research documents.) From the same symptoms suffered the women's visitors in the course of their visits. Strong signals up to one hundred times the normal background level were detected by members of Electronics for Peace and by others... signals 10 times stronger than those felt to be emanating from normal base transmitting systems were found. In the *Enquirer's* article

also another Pandora researcher, dr. Milton Zarret, admitted that the U.S. Navy experimented with human volunteers inducing "an early stage of heart disease".

At the end of 1990 the American daily Washington Post brought an article voicing the American armed forces and intelligence services alarm over the Russian progress in the development of extrasensorial capacities: "According to the communications of Russian defectors Russians have success in influencing human behavior, changing human feelings and health condition, incurring unconsciousness and even killing people... In one of the documents from the headquarters of the Intelligence Service at the American Department of Defense it is stated that the Soviet experiments impose on the recipient disquietude combined with shortwindedness (recall the remark by Capt. Tyler about the respiratory distress) , and the feeling of severe buffeting on the head (recall the experiment of Allan Frey)... Some western observers of extrasensorial developments are alarmed... by inauspicious effects of methods of subconscious influencing when used against the U.S. staff operating the nuclear missiles" (50).

This time, with the central power in the Soviet Union weakened under the Gorbachov's regime, the Russian daily Komsomolskaya Pravda opened an investigation into the facts justifying these hints. In an article of November 14, 1990 A. Ochtarin, the candidate of technical sciences, expressed the opinion that in principle it is feasible to construct the "enslaving machine" and that it is not out of question that it is under construction. But already in the article of January 25, 1991 (51) the director of the Institute of Neurology of the Soviet Academy of Sciences told the journalists that it is possible to change the mood of a man by means of electric signals, but not to break his self-control , thus denying the results of research of Jose Delgado. At the question whether it is possible to produce the same effect by influencing the electromagnetic field of the brain he replied that he does not know anything about it.

Anyway, during the failed putsch against Gorbachov, in August 1991, the general Kobets warned the defenders of the Russian White House against the possible use of psychotronic weapons (52). Shortly after the putsch, on August 27, Komsomolskaya Pravda published the statement by Victor Sedletski, the vice president of the League of Independent Scientists of the USSR, where he wrote: "As an expert and juridical personality I declare: In Kiev (and this is serious) the mass production ... of psychotronic biogenerators was launched. I can not assert that during the coup d'etat exactly the Kiev generators were used... All the same the fact that they were used is evident to me. What are the psychotronic generators? It is an electronic equipment producing the effect of guided control in human organism. It affects especially the left and right hemisphere of the cortex. This is also the technology of the U.S. project Zombie 5. Similar work is done in the Soviet Union (especially in Kiev in the Institute for the Research of Materials. The laboratory of one of its sections is located in the living quarters of the city. There are located biogenerators produced by the Octava factory. I am drawing on my personal experience and I can tell that I am myself the author of the model of such a generator. I completed my work in August 1990... Why the system failed in the days of the putsch? The putschists, having no experience, did not know, that to get the desired reaction the brainwashed soldiers must not be allowed to mingle with the crowd in the streets" (53).

When the reporters from Komsomolskaya Pravda, after the publication of this statement, tried to reach Victor Sedletski, the director of the Institute for the Research of Materials, where V. Sedletski worked, V. Trefilov, told them that Victor Sedletski left Kiev and it is not known, when he returns. He also denied that his institute possesses a psychotronic generator.

Paradoxically if Viktor Sedletski was put on trial for disclosing a National Security Information, it would have for effect the confirmation of his statement and the National Security Information would be broken.

Having failed with V. Trefilov the reporters visited in Kiev the Institute of Interdisciplinary Scientific-Engineering Center "Natural Resources". Its director, A. Krasyanienko told them that he knows in the USSR at least 10 teams capable to construct such a device. On September 27 appeared in Komsomolskaya Pravda another article where parts of the government project for the development of those weapons were published: "remote medicobiological influence on troops and population by means of torsional radiation, remote psychophysical influence on troops and population by torsional radiation" (Komsomolskaya Pravda admits the electromagnetic radiation as a synonym to torsional radiation). The government project presented to the journalists E. Alexandrov, the member correspondent of the Soviet Academy of Sciences. For the realization of those projects the center Vent was established by the State Council for Science and Technology. The center was financed by the Ministry of Defense and according to its director A. Akimov the funding, coming also from Military-Industrial Commission at the Ministerial Cabinet of the USSR and KGB, amounted to half a billion of the Soviet rubles. Under the direction of the Center Vent was working 26 scientific institutions, but the leading institute was the Institute for the Research of Materials in Kiev where Victor Sedletski worked, and whose director had denied that they would be in possession of a psychotronic generator. The list of the institutes working on the project was a result of work of the reporter of the daily Nezavisimaya Gazeta O. Volkov. Those information's were confirmed also by the daily Troud in an article of April 4, 1992. This daily found the confirmation of the budget of half a billion rubles in the directive of the Committee for the Science and Technology of the USSR, dated July 4, 1991. On November 11, 1992 another Russian daily, Pravda, printed an article on this subject where the director of the Center Vent, A. Akimov, told that "as a result of experimental work there is at the hands everything necessary to produce the factory samples" and that "torsional fields... are capable to relay information with no barriers to stop them" (55). Perhaps he was talking about the communication system "proposed" to the American military by Patrick Flanagan in the second version of his patent. As well it is possible that the term "information" had here a broader meaning as defended by A.S. Presman: "electromagnetic field exerts an influence on the informational interactions in the organism".

#### IGOR SMIRNOV'S DEVICE AND THE THOUGHT CONTROL

In the years 1993 and 1994 American weeklies Defense Electronics (56), Newsweek (57) and Village Voice (58) published the information that Igor Smirnov from Moscow Academy of Medicine demonstrated for the U.S. secret services and FBI experts a device which was capable to subliminally implant thoughts in peoples minds and in this way control their actions. According to those news the FBI considered the use of this device against David Koresh during the siege in Waco.

In reaction to this publication of the Russian National Security Information first the Russian newspaper Pravda (59) wrote on March 6, 1994: "Village Voice printed "scandalous news" that Russians are capable to control human behavior..." Two weeks later the Russian weekly the Moscow News (60) printed a long article on Igor Smirnov. The author writes that Igor Smirnov uses, for medical purposes, a device broadcasting into the human ears "noises" which contain questions. Those questions are not audible for the patient but perceptible to his brain and the brain answers those questions. The answers are registered by the

electroencephalograph and analyzed by a computer. In this way Igor Smirnov performs a very fast psychoanalysis. Then, again using the "noises" played together with music, the healing messages are sent into the human brain, which the patient will obey. According to the author of the article Igor Smirnov added: "Do not forget, in your denigrating note, to precise our goals - to heal and to teach. And do not assign us others - inhuman ones."

A participant in the meetings with Igor Smirnov in the USA (wishing to remain in anonymity) is quoted in the article in the Defense Electronics as saying: "the intelligence agencies... had been tracking Smirnov for years..., we know there is evidence the Soviet Army's special Forces used the technology during the conflict in Afghanistan."

Anyway the article in Moscow News does not explain in which way Igor Smirnov creates the noises broadcasted into the brain. The French doctor, Alfred Tomatis, played into the ears of children, suffering from autism, hyperactivity etc. the voice of their mother and other sounds in the frequencies higher and lower than those that can be heard, and it was a successful treatment (8). In 1984 the American House of Representatives had forbidden the use of high frequency inaudible messages in the East Coast chain of supermarkets. Mixed into the music they played to customers inaudible messages of the kind: "Do not steal. Make a lot of shopping." Within 9 months they saved in this way 600.000 dollars. Most probably this is the way Igor Smirnov creates his "noises". But there is still another possibility how to deliver them into the human brain - and this is electromagnetic transmission. It can not be a very complicated problem to transcode those high frequency messages into electromagnetic signals just the same way the radiofrequency sound can be transmitted into the human brain.

When the journalist from the Moscow News asked Igor Smirnov whether he could make people vote for certain person in the elections he replied: "In principle it can be done. And it is not difficult. But not interesting." He could have in mind either placing of ultrasound "noises" into the radio or TV broadcasting or, as well, electromagnetic implanting of those noises into brains by means of special radars. About his participation in Waco Igor Smirnov narrated: "I suggested that voices of children and families inviting the suicidal people back home could be mixed with the noise of police car engines (the building was surrounded with them)." FBI then did not proceed with his proposition when he guaranteed only 70% of a chance for success.

This account is in keeping with what the Defense Electronics wrote. Half a year later the Newsweek wrote: "Sources tell Newsweek that the FBI consulted Moscow experts on the possible use of a Soviet technique for beaming subliminal messages to Koresh. The technique uses inaudible transmissions that could have convinced Koresh he was hearing the voice of God inside his head" (57). Let us assume that "inaudibility" meant that no one else would hear the voice of God but Koresh and that even him would hear it only inside his head. When Allan Frey did his experiments with beaming sounds into people's brains they located them inside their heads or just behind it. So in Newsweek's account David Koresh would hear inside his head electromagnetic broadcasting of the "voice of God". A month later the deputy chief of the FBI's technical services division, Steve Killion, told the journalists from Village Voice: "In the normal course of your negotiation with the individual by telephone, you can impress a coded message... It is not realized consciously by the individual, but subconsciously, subliminally they understand it" (58). This time it could have been done again by means of "noises" played into telephone. Another half a year later, in August 1994, the Newsweek published an interview with Igor Smirnov. In the introduction they write that FBI asked advice from Smirnov during the siege at Waco and the solution proposed by

Smirnov they describe as follows: FBI wanted to "pipe subliminal messages from sect member's families through the telephone lines into the compound. For David Koresh the group's leader... the FBI had in mind a special voice: God as played by the venerable actor Charlton Heston" (61). In this case the sect members would be influenced by "electromagnetic" (otherwise they would not be transmitted through the telephone lines) high frequency voices of their relatives, and David Koresh would hear in his head the radio broadcasting of the voice of God played by Charlton Heston. The FBI would have to find the individual frequencies of the sect members if the idea was to work out.

The electromagnetic broadcasting of inaudible speech could have been used in the experiment of J. F. Schapitz. He spoke about electromagnetic transmission. But since he wanted, as an introductory experiment, to record brain waves of a man who took drugs and then emit those waves back into the brain of this man instead of the drugs, it seems possible that he had in mind transmission of thoughts from one brain into another.

In October 1994 appeared, again in Moscow News (62), an article on American Non-lethal weapons where we can find the following lines: "The FBI, in 1994, studied the possibility of the use of nonlethal technology against David

Koresh. FBI then informed Russians about technology that enables them to transmit to Koresh subconscious signals. In this way the FBI wanted to assume the role of the voice of God." The author of the article gives as his source of information the American and French press. It is possible that at Waco two different technologies were considered: one American and the other Russian (according to the Judy Wall article in Nexus magazine - October/November 1998, "Military use of Mind Control Weapons", the BBC program on events in Waco contained video footage of three EM weapons) . But as well it is possible that those lines served as a warning for Americans that the Russians, too, may disclose the American National Security Information. I am not aware of another breach of this Russian national security information in the American mass media since then until April 5 1999 when The New York Times, probably in reaction to the split with Russia over the crisis in Yugoslavia wrote "Under a top-secret project known as Bonfire, Soviet scientists in 1989 discovered "a new class of weapons"... that could "damage the nervous system, alter moods, trigger psychological changes and even kill" (The New York Times, April 5, 1999, William J. Board, Judith Miller: "Defector tells of Soviet and Chinese Germ Weapons). (To be complete, according to the article in the Defense Electronics, the rights to Igor Smirnov's technology bought the American Psychotechnologies Corp. in Richmond, Virginia).

In the same issue of the Moscow News where the interview with Igor Smirnov appeared there was another strange article (63). In the introduction is printed the invitation letter from the deputy director of the factory producing for the Russian Department of Defense. The deputy director writes: "In the course of the last 20 years our enterprise specialized in the production of psychotronic apparatus for defense systems, design of navigation equipment for intercontinental missiles and cosmic apparatur..." and he invites the journalists to get acquainted with "biophysical reinforcer (metatron) Miranda designed with the use of the newest fundamental discoveries in the area of psychotronics." During the visit the people from the management of the factory told the journalists that Miranda is one of the side products of psychotronic weapons and the deputy director of the Medical research center of the factory, Vladimir Niestierov told them that it is produced in the American licence on basis of the agreement signed by KGB and CIA on September 24, 1990 and providing for joint research in the area of psychotronics. The Miranda device emits on the patient sound

electromagnetic impulses and in case that his body does not resonate with them it starts with the diagnosis of his ailment. However the representatives of the factory invited the journalists to get acquainted with a machine which was not in working order - when the journalist asked for the demonstration of the machine, they were told that Armenia does not supply one important part of the machine.

#### THE AMERICAN SYSTEM HAARP COULD BE USED FOR THE IMPLEMENTATION OF GLOBAL MIND CONTROL

In 1992 the Independent Moscow Institute for Foreign Affairs published in the weekly *Stolitsa* the communication by Victor Sedletski that already in 1982 in the USSR began the development of the new radar system which could be used to create "psychotronic field for mind control" (64).

At the end of 1994 the first tests of the most powerful radar system in the world were carried out in Alaska. This year its power should reach 10 billion watts. Among the main features of the system belongs its ability to heat the ionosphere and in this way change its altitude. By this kind of manipulation of the ionosphere it is possible to bounce the electromagnetic waves back from the ionosphere to whichever region on the planet. According to the official information by the U.S. government the system HAARP is designed for scientific research. Anyway there are too many facts suggesting that the major reason for its construction are military purposes. The building of the system started the E-Systems corporation which in 1992 made 2,1 billion dollars in sales out of which 1,8 billion were for classified projects. The whole project is financed by the American Navy and Air Force. The main patent of Bernard J. Eastlund (number 4,686,605) proposes the use of the system among others for destruction of navigation systems of airplanes and missiles wherever in the atmosphere, interference with all communication systems wherever on the planet (remember the CNN programme on Russian electromagnetic weapons), the global weather control and creation or repair of the ozone holes. Other patents connected with the system propose the use of the system for induction of detonations in the extent of nuclear explosions (again recall the CNN programme) and other military uses.

In 1995 the U.S. government stopped financing of the project until the army will develop the application of the system for the earth penetrating tomography. In this application the system HAARP should be able to find, using extra low frequency electromagnetic radiation, deposits of minerals underneath the Earth surface, but as well the underground shelters, factories, tunnels and other facilities. At the end of 1995 the authors of the book *Angels don't Play This HAARP* visited the director of the HAARP program, Hecksher. He told them that in this application the HAARP system will use frequencies between 12 and 20 Hz or perhaps 1 Hz. Those are frequencies which affect human nervous system. It is true those waves are too long to make it possible to aim them at human beings and most probably they will not carry the biological information to affect human brains, but still their effects on human nervous system are not altogether predictable.

Anyway, with the versatility of the system, it is no problem to emit pulsed microwaves with the intention to influence the human psyche. The inventor of neurophone, Patrick Flanagan, in the foreword to the book *"Angels Don't Play This HAARP"* wrote: "As a result of... personal research experiences I am acutely aware of the potential misuse of HAARP technology for the implementation of global electronic mind control" (22). The European Parliament in its resolution of January 28, 1999 is apparently addressing also this capability of the HAARP

system. This resolution of the European Parliament is a result of the testimony presented to European Parliament by Nick Begich, the author of the above mentioned book.

## THE SECRET CONFERENCE ORGANIZED BY THE AMERICAN NATIONAL LABORATORY IN LOS ALAMOS

In 1993 in the December issue of the American bimonthly Microwave News (65) appeared the report that in November of the same year, at the John Hopkins University (engaged in research of radiofrequency radiation - for example Samuel Koslov, one of the researchers in the project Pandora, replicated there experiment where rabbits exposed to microwave radiation developed corneal cataracts (41)), a secret conference took place, sponsored by the National Laboratory in Los Alamos, involved in the development of non lethal weapon systems. In the invitation to this conference we read: "The purpose of this conference is to bring together industry, government, and academia to explore the potential of non lethal defense and identify requirements so that the defense community can work together in leveraging the non-lethal concept. Industry, particularly, will benefit from a more precise understanding of requirements and operational constraints regarding non-lethal defense technologies. All attendees will have the opportunity to embrace a new perspective in international relations." in simple words the objective of the conference was to convince the industry about the lucrativity of the production of non-lethal weapons which will be used in the international relations.

On Wednesday, November 17, 1993 at 9 AM the lecture by Dr. George Baker from Defense Nuclear Agency was scheduled. The lecture was entitled "RF Weapons: A Very Attractive Non-Lethal Option". At 11.10 AM of the same day, Dr. Clay Easterly from Oak Ridge National Laboratory lectured on "Application of Extremely Low Frequency Electromagnetic Fields to Non-Lethal Weapons". Clay Easterly told the Microwave News that since the conference was closed to anyone without security clearance, he could not discuss the specific effects he referred to in his talk, but he admitted that his presentation dealt with the possibility of developing measures that would affect people.

On the lecture by Dr. George Baker the Microwave News comment that "it is difficult to know, based on unclassified information, whether this "option" has ever been used" and "That there were also allegations that non-ionizing radiation was used against the women's peace activist encampment at Greenham Common in the U.K. in the mid-1980s".

Since four and half years have passed since that conference it is logical to suppose that the mass production of those weapons was launched in the USA as well as in Russia according to Victor Sedletski.

## ARE THE RADIOFREQUENCY WEAPONS ACTUALLY USED ?

It goes without saying that for as long as the existence of those weapons remains subjected to the National Security Information laws there will be no confirmed reports of their use. But we should not afford to take easy the facts suggesting that those weapons have been in use already for years. About the strange symptoms from which the women at Greenham Common Base suffered there was talk here already twice. The article in the Defense Electronics (56) on Igor Smirnov quotes an employee of the U.S. intelligence agencies, wishing to remain in anonymity, as saying that this equipment was used by the special forces of the Soviet Army in Afghanistan to prepare them for the operations requiring atrocities against civilian population.

According to the Nexus magazine (October/November 1998, Judy Wall: "Military Use of Mind Control Weapons") British ITV News Bureau Ltd., in the March 23 1991 newsbrief entitled "High-Tech Psychological Warfare Arrives in the Middle East" describes the use of silent sound technology (as it was described in the chapter on Igor Smirnov's device) in the Gulf War where the imperceptible sound messages were broadcast by the U.S. special units to Iraqi soldiers over their communication lines, making them surrender.

An independent researcher and freelance writer from England, David G. Guyatt, quotes, in the synopsis prepared for the ICRC symposium "The Medical Profession and the Effects of Weapons" a medical engineer from the U.S. Department of Defense as saying in 1989 on CNN program on electromagnetic weapons that microwaves and other modalities had regularly been used against Palestinians.

In 1986 two Palestinian terrorists were tried in West Berlin, Germany. On the first day of the proceedings both defendants revoked confessions they made during the pre-trial hearings. One of them said that he somewhat recalls having made some confession, but he does not remember its contents, because at this time he was not quite himself. The other declared that into their cells voices were beamed that paralyzed their brains. When the judge objected that in response to his written complaint his cell was searched with no voices being found there, the defendant replied that those voices were beamed into his head by means of some waves by western secret services (66).

During the conference on Nonlinear Electrodynamics in Biological Systems E. Del Giudice from the Department of Physics at the university in Milano, Italy, spoke about the possibility to create blood clots by coherent propagation of electric waves in the supporting medium when the fibrinogen is present in the blood (recall the interactions of electromagnetism and chemicals). Several American newspapers (68) published the news that the son of Saddam Hussein, in his newspaper Babel, printed the news that American secret services attempted to kill his father, trying to form a blood clot in his heart or brain by means of "psychotronics and biocommunication".

According to the former director of the Freedom of Thought Foundation (now the director of the CAHRA organization), Cheryl Welsh, in the USA over 1600 people complaining about being subjected to mind control experiments are documented.

Also in Russia the Association of Victims of Mind Control Experiments was formed. Its director is Emilia Cherkina, former deputy in the Russian city of Zelenograd. Most probably it was her case that inspired a group of Zelenograd deputies to mail to the president Yeltsin a petition signed by 150 people demanding that he opens an investigation into the use of bioelectronic weapons (69). In the same article is a quotation of one of the alleged victims: "They controlled my laughter, my thoughts and caused pain in different parts of my body."

On Internet on the Mind Control Forum anads More Than Conquerors pages every month new people from mostly English speaking, Echelon, countries assert that they have fallen victims to experiments with mind control weapons. The most common symptoms are: hearing of voices inside their heads, sudden changes of mental states and disturbed sleep. Some of them also realize the presence of somebody else's thoughts in their minds. Many experiences described on the pages of Mind Control Forum make impression that they were written by a mentally ill person. But for as long as the mind control technology remains subjected to the National Security Information laws, it is impossible to decide whether they are mentally ill or

whether they fell victims to inhuman experiments. Many of those people acquired, on basis of the Freedom of Information Act, documents stating that there is a National Security information pertaining to their persons. (The World Organization Against Torture, in their annual report for the year 1998, demands independent investigation of those claims.) The only proof that, at least in the past, such experiments were performed, are the roentgen photographs of brain implants in the heads of some of the people who complained about those troubles. The parents of one of those victims are convinced, that it was implanted into the brain of their son during the operation of tonsils at the age of 4 years, after which they had not seen him for 48 hours, and then found on his palate a big scar after a surgical incision. The operation was performed in 1982 (for the roentgen photographs see the Mind Control Forum pages on Internet). It is very probable that the implants functioned as antennas, before the progress of technology made them unnecessary.

Some idea of how such manipulation can feel we can get from the lecture of Friedman Kaiser, from the Department of Theoretical Physics in Stuttgart, Germany. At the conference on Nonlinear Electrodynamics in Biological Systems (70), in his lecture he described how does the "entrainment" of biological system (including the brain) to the external stimulation develop: "Regular external perturbations interact with the internal oscillations, the system can be synchronized to the external drives (entrainment). A sharp frequency response results, exhibiting... rather irregular behavior near the entrainment region. On the route from the free to the forced oscillations one finds near the region of entrainment a nonlinear superposition of free and forced oscillations... the occurrence of strongly periodic states with submultiples of the external frequency enables the system to couple to other frequencies or to decouple partially from the driving field." In simple words a man or woman who will fall victim to complex manipulation of the type of "strategic personality simulation" which we will talk about in the next chapter, will live in the condition comparable to military occupation of a state. If this radiation hits the whole population, it should be the similar situation. From what we know it is not difficult to make them unable to concentrate or to disturb them by implanting "thoughts" into their minds.

Paul Tyler, in his paper on Electromagnetic Spectrum in Low Intensity Conflict, writes that electromagnetic systems "are silent and countermeasures to them may be difficult to develop."

## REVOLUTION IN MILITARY AFFAIRS MAY RESULT IN THE DECLINE OF DEMOCRACY

John B. Alexander, in his article in the Military Review from 1980, writes: "whoever makes the first major breakthrough in this field will have a quantum lead over his opponent, an advantage similar to sole possession of nuclear weapons" (45). Samuel Koslov, a leading personality of the project Pandora of the American Navy and researcher at the John Hopkins University where the secret conference took place, in the closing speech at the conference on Nonlinear Electrodynamics in Biological Systems in 1983 said that the conference had proven that the external electric fields can "become a key to the cellular control console. The implications, social, economic, and even military are enormous." Samuel Koslov then continued: "If much of what we have heard is indeed correct, it may be not less significant to the nation than the prospects that faced the physics community in 1939 when the long-time predicted fissionability of the nucleus was actually demonstrated. You may recall the famous letter of Albert Einstein to President Roosevelt. When we're in a position to do so in terms of our proofs, I would propose that an analogous letter is required."

From this perspective of the revolutionary event in the science is derived also the book "Revolution in Military Affairs and Conflict Short of War", issued by the Strategic Studies Institute at the U.S. Army War College (71). Since the national security information is in question, the book can not tell the readers what technology exactly is making this revolution feasible. From the beginning the authors are aware that the use of this technology may run counter to basic moral and political values of the American society and in consequence the revolution in military affairs would require a moral and political revolution to come first. Since it is difficult for them to imagine that the American Society would accept the ethical and political revolution that would deprive the citizen of his privacy, they develop a scenario of events which would lead the American political leaders to back this revolution.

The scenario is placed into the year 2000 and is based on the situation of growing terrorism, drug trafficking and criminality: "The president was thus amenable to the use of the sort of psychotechnology which formed the core of the RMA (revolution in military affairs) in conflict short of war...As technology changed the way force was applied, things such as personal courage, face-to-face leadership, and the "warfighter" mentality became irrelevant." So the psychotechnology, which formed the core of the RMA, provided new methods how to influence the psyche of the adversary in place of the classical strategy to make him fear the death. "In the pre-RMA days, psychological operations and psychological warfare were primitive. As they advanced into the electronic and bioelectronic era, it was necessary to rethink our ethical prohibitions on manipulating the minds of enemies (and potential enemies) both international and domestic... Through persistent efforts and very sophisticated domestic "consciousness raising", old-fashioned notions of personal privacy and national sovereignty changed." It means creation of a society where thinking is reserved to power elite's as it is in totalitarian states and that the new totalitarian state should extend all over the planet. In which way the central power would be administered? "Potential or possible supporters of the insurgency around the world were identified using the comprehensive Interagency Integrated Database. These were categorized as "potential" or "active", with sophisticated personality simulations used to develop, tailor and focus psychological campaigns for each."

That this is not altogether a science fiction proves the American Department of Defense Directive establishing The Non-Lethal Weapons Steering Committee, issued on January 1, 1995 (74). There we read: "The term "adversary" is used above in its broadest sense, including those who are not declared enemies but who are engaged in activities we wish to stop." As well, if the United States in mid eighties were capable to eavesdrop telephonic and other communications around the world, why would not they be able to read minds or impose thoughts on whichever person in the world whose brain frequencies they will be able to determine, in the year 2000.

In the conclusion of the book on the Revolution in Military Affairs the authors return to reality. They admit that the American public and government may not be willing to accept this kind of revolution, but they are, as well, aware of the fact that as the use of this technology will be growing "we may eventually stumble into change as ultimately profound as deliberate revolution." But even in this realistic part they write: "... conflict short of war, ... is most often won or lost through the manipulation of images, beliefs, attitudes and perceptions. These things... are the key military targets in conflict short of war. This makes psychological technology much more important than strike technology. Ways must be found to use the emerging technology including advanced artificial intelligence and information dissemination systems, to help military strategists develop, implement, and continually improve methods of influencing opinion, mobilizing public support, and sometimes

demobilizing it. There is also potential for defensive psychotechnology such as "strategic personality simulations" to aid national security decision makers." As a reference for the last sentence we read : "See Norman D. Livergood and Stephen D. Williams, "Strategic Personality Simulation: A New Strategic Concept", unpublished draft paper, Carlisle Barracks, PA: U.S. Army War College, 1994". The conclusion of the authors is: "Whether we opt for revolution or evolution, change will occur." In their futuristic scenario they expect that this psychotechnology will gradually appear "on the domestic black market and, increasingly, in American schools and workplaces", they do not mention the fact that this technology can be used for murders that could not ever be proved in the court (people would be dying from heart attacks, blood clots etc.). To master this kind of civilization crisis would require the further tightening of the totalitarian regime which could have for effect the gradual decline of the civilization.

If the reader would like to believe that such a scenario has nothing in common with the reality and so he has no reason to fear anything, Igor Smirnov, in his interview for the Newsweek as well as in the interview for the Moskovskie

Novosti (here not quite openly) admitted that the Russian Mafia is interested to get his technology. That even the Russian government does not take this for a joke proves the fact that there exists in Russia the law imposing state controls on all equipment in private hands which can be used as "psychotronic weaponry" (69). This formulation certainly does not prohibit to Russian government the use of such weaponry.

On the leaflet of an American corporation (we will not name it since we do not support the dissemination of those weapons) we read: "Ever want to forcibly, yet secretly project YOUR THOUGHTS into another people-or animals as an overpowering EM signal?...Range is about 50 feet. Portable, battery operated..." The range of another system marketed on this leaflet "used in theoretical and applied research into EM weaponry... and mind control... exceeds 1 km." On the same leaflet an ultrasound apparatus was offered to be bought. Since the corporation does not offer those devices any more, there is one distinct possibility that the sales were banned by the National Security Agency just the same way as the Neurophone of Patrick Flanagan. By this baning procedure the U.S. government is bypassing the necessity to enact the laws which would prohibit production and use of mind control devices to both private and government organizations.

In their futuristic scenario the authors of the book on the Revolution in Military Affairs also write that "Whenever possible, profitability was used to encourage private and quasi private enterprises to develop appropriate technology... especially advanced psychotechnology." But the last chapter of this paper was dedicated to one such conference, which took place in 1993. So are we talking about the future or about the past?

The concept of the "strategic personality stimulation" is probably tested on some of the people who claim to be mind control experiment's victims. And even the idea that the concept of the revolution in military affairs is limited only to few people in the American Strategic Studies Institute may not be that correct. In 1996 Paul G. Kaminski, the secretary from the U.S. Department of Defense said in front of the House of Representatives National Security Committee: "Cosmic forces play a key role in the emerging revolution in military affairs and this thanks to their unique capacity to gather, transfer and disseminate information" (72), it is possible that he was talking about the system HAARP capable to target whichever region of

the Earth (by means of the manipulation of the ionosphere) and its use for psychological operations.

#### WARNINGS BY MILITARY AS WELL AS CIVILIAN SCIENTISTS

In May 1999 the neuroscientists conference, sponsored by the UN, took place in Tokyo. This conference resulted in a declaration addressing the ethics of consciousness studies. In the declaration we read: "Today we have intellectual, physical and financial resources to master the power of the brain itself, and to develop devices to touch the mind and even control or erase consciousness...We wish to profess our hope that such pursuit of knowledge serves peace and welfare."

In January 1999 an annual public meeting of the French National Bioethics Committee was held in Paris, France. Its chairman Jean- Pierre Changeux, a neuroscientist at the Institute Pasteur in Paris, told the meeting that "advances in cerebral imaging make the scope for invasion of privacy immense. Although the equipment needed is still highly specialized, it will become commonplace and capable of being used at a distance... That will open the way for abuses such as invasion of personal liberty, control of behavior and brainwashing. These are far from being science-fiction concerns... and constitute "a serious risk to society"" (73). At the same meeting Denis Le Bihan, a researcher at the French Atomic Energy Commission said "we can almost read people's thoughts". Those are apparently civilian scientists.

In October 1992 the Russian weekly Stolitsa (64) published an article on the development of "psychotronic weapons" where is mentioned the declaration of the Russian academician Kazancheyev. According to the unconfirmed news from the times of the Russian scandal (54) this academician had signed for the Russian part the international agreement of 20 states where they obliged themselves not to use this technology against each other. That he does not have a great trust in this agreement proves the fact that he writes about a "psychic war" which, in his view, is more dangerous than any other kind of warfare and that the military may use extrasensory perception to paralyze the will of other people, "turning them into obedient slaves". He insists on placing this kind of research under international control.

In June 1995 the article "On the Possibility of Directly Accessing Every Human Brain by Electromagnetic Induction of Fundamental Algorithms" appeared in the monthly Perceptual and Motor Skills (43). The author, Dr. Michael Persinger from the Behavioral Neuroscience Laboratory at Laurentian University in Canada, was mentioned by Paul Tyler in his lecture at the conference on Emerging Electromagnetic Medicine (15). In his experiment he exposed students to 5 Hz fields which had for consequence diminution of perspiring, drought in the mouth, stomach pains and increased relaxation. According to unconfirmed reports he was employed on the U.S. Army project "Sleeping Beauty" directed towards the battlefield use of mind-altering electromagnetic weapons. In his article Michael Persinger describes the ways how the individual differences among human brains can be overcome and comes to a conclusion: "Within the last two decades... a potential has emerged which was improbable but which is now marginally feasible. This potential is the technical capability to influence directly the major portion of the approximately six billion brains of the human species without mediation through classical sensory modalities by generating neural information within a physical medium within which all members of the species are immersed. The historical emergence of such possibilities... resulted in major changes in the social evolution that occurred inordinately quickly after the implementation. Reduction of the risk of the

inappropriate application of these technologies requires the continued and open discussion of their realistic feasibility and implications within the scientific and public domain.”

The American as well as the Russian governments protect themselves against such discussions by the National Information Security laws. In the article "The Mind Has No Firewall Against PSI warfare and Thought Control" (Parameters, U.S. Army War College Quarterly - Spring 1998) Timothy L. Thomas writes that "according to a Russian TV broadcast, the strategic rocket forces have begun anti-ESP training...to construct a firewall around the heads of the operators" and goes on to say "The time has come to ask why we appear to be ignoring the operators of our systems...the operator... is the weak spot in any nation's military assets... the game is about protecting or affecting signals, waves and impulses that can influence the data processing elements of systems, computers, or people". Are the Russian and U.S. armies going to protect themselves against non/existing weapons? The already quoted Directive on Policy for Non-Lethal Weapons assigns the Non-Lethal Weapons Steering Committee the task to "issue security and classification guidance for non-lethal weapons programs" (74). In the response to a letter by Eleanor White, Joan K. Christensen from the Assembly State of New York writes: "Thank you for contacting me with your concerns regarding the neuro-disruptive electronic weapon that you detailed in your correspondence. Unfortunately, information concerning what was referenced in your letter is highly classified, and I am not at liberty to divulge such information to the general public" (75). (The fact that this wide range of the U.S. public officials is acquainted with those weapons is also alarming, because their use may be much more widespread than is assumed in this paper. ) Under those circumstances the only way, how the public discussion on this topic can be

provoked, is to make the largest possible portion of the world population aware of those provocatively classified facts. It is our conviction that only the global prohibition of the use of this technology under the international surveillance can prevent the crisis of the civilization which would result from the continuing use of this technology. The parents should decide whether they want to bear children into the world where they could not guarantee for them even the biological independence.

## **V. Lopatin , V. Cygankov: Psychotronic Weapon and the Security of Russia**

Publishing house : SINTEG, Moscow, Russian Federation, 1999

### CHAPTER 6

#### STATE DEFENSE INITIATIVE AND THE CONCEPTION OF ARMAMENT

Page 96 and 97

Any party is obliged to oppose adequate means of power to the means of power

pressure illustrated above. Such a power for our country, in the area of PSW (psychotronic weapon), in my opinion, will be STATE DEFENSE INITIATIVE which should translate into GLASNOST, OPENNESS, disclosing of full INFORMATION and KNOWLEDGE to each interested citizen of our country.

Into formation of POWERFULL PUBLIC OPINION concerning INTOLERABILITY OF SECRET WORKS in the area of PSW, ban of such works and DESTRUCTION of the

SAMPLES and ... of PSW

Into an open work on the CONSTRUCTION of the MEANS of DEFENSE against the effects of PSW under the full and most strict INTERNATIONAL CONTROL

Into an immediate signature of an international agreement on the organization of collective work of INSPECTION of research establishments and state territories where the PSI research is carried out.

Into establishment of collective interstat, international SCIENCE CENTERS ...

for coordination of projects and programs for the solution of complications

of the gloval formate of PSI-problem.

Based on the ideas presented above we wijll formulate proposals on the conception of PSI-armament

### 6.3 The Conception of PSI Armament

.....

## Fundamental principles

To admit THE EXISTENCE OF PSI PHENOMENA AS A REAL FACT as well as their not only at place, local influence and importance, but as well the global noospherical influence on all the mankind. To admit the REAL FEASIBILITY of informational, PSYCHOTRONIC war (as a matter of fact it is already taking place without declaration of war secretly) and the FEASIBILITY of the use of violence by means of THE USE of PSW.

7) DECLASSIFICATION of all the works on PSI problem... The arms race is speeding up as a consequence of classification. Secrecy - this is in the first place the way to secure cruel control over the people... the way how to curtail their creativity, turn them into biorobots...

## Chapter 7 - Legislative Problems and the Psychotronical Weapon

Page 106 - 126

We believe that ... an appropriate federal legislative act is necessary. In response to numerous addresses by Moscow Committee on Ecology of Housing to the organs of the prosecutor's office on the matter of experiments of psychotronic type with the population, the Moscow prosecutor's office, in its response No. 32-7-15-97 from April 7th, 1997, divides dealing with this problem directs "corresponding information" to the office of Prosecutor General of Russian Federation, but while doing this it is obliged to state: "The presented documents testify that basic need comes for the establishment of legal control over the research in this area. However there is no legislation concerning the above mentioned question. With respect to this the prosecutor's office is not in power to secure in whichever way the defense of the rights of citizens who are subject to the effects of psychotronic technology."

.....

Since the seventies the research projects are under development in the best laboratories of the whole world: in USA, Germany, Austria, France, Italy, Japan, Izrael, China etc. In the report on the research by the committee of authority of American Society for Physics, published in the USA, the conclusion is presented that similar systems of weapons (Psychophysical Weapons Systems) may be effectively used for the slution of large number of military missions. They can be used for the construction of prinicipally new military means and methods, including the construction of the strategical weapon of the new type (informational weapon in informational war).

/note 3: on this subject see: Materials of Parliamentary Hearings "Threats and Challenges in the Area of Informational Security", Moscow, July 1996, Informational Weapon as a Threat to National Security of Russia (Analytical Report of SVR of the Russian Federation, Moscow 1996), To Whom will Belong the Consciencious Weapon in the 21st century?, Moscow, 1997, V.N. Tsygichko, G.L. Smolian, D. Ts. Chereskin - "Informational weapon as a geopolitical factor and instrument of the politics of power", Moscow, 1997..../

Those facts prove the necessity to work out the national as well as international legislation designed for the defense of human psyche against subliminal, destructive informational effects.

7.2 The Concept of Information-Psychological Security and Particularities of the Ways of its Guaranteeing Information-psychological security we understand as a condition where the human psyche is protected against destructive informational effects (the instillation of destructive information into the consciousness or subconsciousness of human being, having for effect inadequate perception of reality).

Note 3 - Lopatin, V.N. Legislative problems of guaranteeing information-psychological security of personality (verbatim record of the round table in the Council of the Federation FS of the Russian Federation on information-psychological security of personality, 27th of January, 1995. Information-psychological security appears to be the fundamental portion of informational security and must occupy a special place in the state politics towards its guaranteeing.

This special place is defined by the specificity of threats and their sources in the area of information-psychological security, special character of principles and tasks in the realization of state policy in this area..

Note 5 - on this subject see as well: project of the Conception of Information-psychological Security, Institute of Psychology of the Russian Academy of Sciences, Moscow, 1995

Potential sources of threats in the area of information-psychological security appear to be.....sources of information programs for EVM generators of physical fields and radiations (stressed by the translator)

.....

The fundamental threats to information-psychological security appear to be blocking, on subliminal level, of the freedom of will of human being,

artificial introduction of the syndrome of dependence

research, construction and use of special technical and programming means for destructive effects on the human psyche

manipulation of societal consciousness with the use of special means of effects

.....

destruction of indivisible informational and spiritual space of Russia, traditional foundations of the society and societal morality

The activity, in the area of information-psychological security must be construed on the following principles:

.....

.....

.....

.....

priority of human rights in the informational area and ensuring of the state guarantees of the realization of those rights

state and citizens control over the construction and use of special means of effects at the human psyche

state monopoly for the development of the means and methods of subliminal informational effects

obligatory licensing... of the activity, connected with the use of means and methods of subliminal influence upon the human psyche and as well their certification

availability of psychological expertise

.....As a standard of psychological expertise we understand parameters of informational environment showing no destructive effects on the human psyche.

Guaranteeing of information-psychological security appears to be the most important task of the state, therefore state guarantees of the defense of human being against destructive informational effects must be established.

The state must guarantee:

subliminal informational influence (including hypnotical influence) at human psyche can not be performed without the person's consent except for cases defined by the law....

.....

the means of mass communication may not be used as instruments for realization... of destructive informational influence at human psyche

the government of the Russian Federation will make sure that the citizens, organizations, agencies of power and local self-government will be informed on the possibility of the use, against people, of subliminal (subconscious) informational influence....

The plenipotentiary organs and organizations organize education in methods of defense of people from subconscious destructive informational influence.....

The State System of Guaranteeing of Information-psychological Security

.....

Psychological expertise must be a state expertise and realized only by the agencies of the state system, empowered to this task by the government of the Russian Federation. Psychological expertise may be performed at the orders of the State System of guaranteeing of information-psychological security or as well in the sequence of requests of citizens or persons without citizenship.

If, as a result of psychoecological expertize, the destructive informational influence at human psyche is determined, having for consequence inadequate perception of reality by the person subjected to such an influence, the medical help must be rendered with respect to the existing legislation. Compensation of damages and losses connected with social rehabilitation of persons suffering from destructive informational influence must be realized in legal trial....

.....

page 113

According to the data by FAPSI, in the past 15 years the expenses at the acquisition of the means of informational war in the USA were increased 4 times and occupy the first place among all of the armament programs.

.....

Page 126

In the past year the author presented an initiative which was supported by the parliamentary commissions of the State Duma, and in December 1997 was turned into a political initiative of nine states of the Union of Independent States. MPA of the Union of Independent States approved the address to the Organization of United Nations, OBSE, to the countries of Interparliamentary Union, with the proposal to include on the agenda of General Assembly the question of preparation and conclusion of an international convention "On Averting of Informational Wars and Limitation of Circulation of Informational Weapon".

Note of the translator:

This initiative of the Russian Federation was confirmed in the article by the Russian newspaper Segodnya of February 11, 2000, the article by Andrei Soldatov

"The Riders of the Psychotronic Apocalypse", the article announces the presenting of the draft of the law by V. Lopatin to the Russian State Duma stating that this is the third draft of such a law presented to the Russian State Duma and that this one has a good chance to be passed. At the end of the article it is stated that the position of the Russian secret services on the passage of the law is not clear, though their representative took part in its preparation.

On September 9, 2000 the Russian president Putin approved the Doctrine of Informational Security of the Russian Federation. There is practically no mention of possible mind control operations carried out by whichever state:

## I. INFORMATIONAL SECURITY OF THE RUSSIAN FEDERATION

### Paragraph 2 "Types of Threats to the Informational Security of Russia"

.....

threats to constitutional rights and freedoms of human being and citizen in the area of spiritual life and informational activity, individual, group and societal consciousness, spiritual renaissance of Russia

.....

.....illegal use of special means of effects on individual, group and societal consciousness.

#### Paragraph 4 Status of Informational Security of the Russian Federation and Fundamental Principles of its Ensuring

.....

Fixation in the Constitution of the Russian Federation of the rights of citizens to inviolability of their personal life, personal and family secrecy, secrecy of correspondence, practically do not have legal, organizational and technical guarantees.

## II. METHODS OF GUARANTEEING OF INFORMATIONAL SECURITY OF THE RUSSIAN FEDERATION

.....

In the sphere of internal politics

.....

work on special legal and organizational mechanisms of non-admissibility of illegal information-psychological effects on the mass consciousness of the society....

In the Sphere of Defense

To the objects of guaranteeing of informational security of the Russian Federation in the sphere of defense relate:.....

diversional-undermining activity of secret services of foreign governments realized by methods of information-psychological effects

.....

Perfection of methods and ways of strategical and operative camouflage, espionage and radioelectric war, methods and means of active countermeasures against information-propagandistic and psychological operations of the possible enemy.

.....

International Cooperation of Russian Federation in the Area of Guaranteeing of Informational Security

The basic direction of the international cooperation of Russian Federation in the area of guaranteeing of informational security appears to be ban on the works, dissemination and use of "informational weapon"

.....

Note of the translator

This my work is not intended to blame Russia, who, at least in the person of V. Lopatin, made an effort to declassify their work on mind control weapons. This my work is meant to blame all the governments who are hiding their mind control research from their citizens and, obliged by the international competition, carry out experiments on them..

Here are few more quotations from the book by V. Lopatin and V. Cygankov (the Russian scientist, who is for more than thirty years developing neurocomputers):

Page 97

The Conception of mind-control armament

.....

DECLASSIFICATION - of all the works on mind control problem... The arms race

is speeding up as a consequence of classification. Secrecy - this is in the first place the way to secure cruel control over the people... the way how to curtail their creativity, turn them into biorobots...

Conclusions for chapter 6

.....

3. Only if the work on mind control problem is no more covered by the screen of secrecy, extraordinariness, mysteriousness, if complex, open scientific research with international participation, is carried out, the psychotronic war including the use of psychotronic weapon can be prevented.

Chapter 1

Page 23 "In the USA the devices and methods were created capable to introduce into the subconsciousness of a human being the information needed to make him execute the orders which were introduced there. Those are new man-and-computer complexes and their objective is the control of the intellect..."

And the last important information : Vladimir Lopatin is no more the deputy of the Russian State Duma (the reason is not known to me so far).

Few notes, from the press, of his political life:

Interfax News Agency

Interfax Russian News

August 16, 1999, Monday

Headline: Duma to debate PM's Confirmation , Dagestan on Monday .....The Communist party of Russia... group's coordinator Sergei Reshulsky suggested that the Dagestan issue be included in the agenda. Defense committee Chairman Roman Popkovich, our home is Russia, and Vladimir Lopatin, Russia's regions, support him. Lopatin went so far as to suggest skipping speeches by party group leaders in debating Putin's confirmation so as to allow time for debating a resolution on Dagestan."

The Xinhua General Overseas News Service

Xinhua News Agency

October 11, 1990, Thursday

.....Williams also disclosed today that yesterday, Cheney, met with a young soviet military "reformer", major Vladimir Lopatin, and had a "private conversation" with him. He declined to reveal the contents of the conversation. Lopatin, who addressed a press conference at the national press club here today, is in the United States on a visit hosted by "Global Outlook", a research institute. Lopatin, currently chairman of the military reform subcommittee of the USSR Supreme Soviet Committee for Issues of Defense and State Security is the "leader of a new breed of Soviet dissidents", according to the organizer's introduction.

Text of the document from the NTC System

N 3829-II GD

Moscow, April 2, 1999

State Duma of the Federal Assembly of the Russian Federation

Resolution

"In connection with the rejection by the President of the Russian Federation... of the federal law "On Commercial Secrecy"... the State Duma decides To agree with the proposal of the Committee of the State Duma on Informational Politics and Communications to create a special comission...To chose as members of that commission the Deputies of the State Duma Nesterov Jurij Mikhailovitsch., Kolomeiec Nikolai Vasilievitsch, Lopatin Vladimir Nikolaevitsch ...

V. Lopatin, V. Cygankov: Psychotronic Weapon and the Security of Russia

Chapter 1

"Theoretical works appeared, confirming the reality of PSI-phenomena, the existence of so called torsion component in the right part of of the gravitational equation by A. Einstein (19), and the construction of technical models of the torsion fields radiation generators is reported in some works (20, 2). All such publications and communications talk about the possibility to use the presented PSI-phenomena with the intent to attack as well as with the intent of the perfection of the defense of the government and its means of armament....

The following PSI phenomena of human being and animals are the object of the study:

x prediction of future

x secret reading of the present and past time

x hypnotical effects and zombieng

x search and finding of indicated lost objects

The basic problems of the construction and areas of the use of psychotronic weapon result from those:

x construction and use of military PSI generators

x collecting of intelligence (PSI-detectors)

x construction and use of battlefield PSI generators

x construction and use of TSULIPs - centers for control of people and apparatus

- basic system of communication: networks of telephone, radio and television broadcasting; system of torsion communication and radiation, i.e. networks of PSI effects.

x construction of bioautomats-robots

Building of models and analogs of PSI-abilities and phenomena - the task whic is nowadays in the order of the day.

PSI weapon this is the "ray weapon" (powerfull generators, radiating pencils of rays, serving as a striking factor) and ENERGO-INFORMATIONAL CURRENTS OF RADIATION ORGANIZED IN A SPECIAL WAY (coherently), of known as well as unknown physical nature.

...

To make the reader understand everything what will follow we will give some definitions and a short survey of the PSW problem. The first level - this is the psychological problem. I would call it a MACRO-problem. This is the problem of the control of the state of the consciousness of human being and society and, consequently, depending from the consciousness - of the psychology of the behavior of human being as a person, group, socium. This is the problem of the use of internal biological mechanisms and laws controling such or other psychological condition or behavior.

With respect to numerous manifestations of anomalous, unusual (for the classical psychology) or parapsychological phenomena as is the case of clairvoyance, extrasensory perception, telekinesis, phenomenal memory and out of the ordinary calculating abilities (the experiments by Messing, Kuna, Gorin) and other mysterious qualities of the psyche, the new direction of scientific research and technical design (construction of technical means of registration, measurement and influencing of the brain) came into being called PARAPSYCHOLOGY.

.....

The second level - MICRO-problem. The designation of this problem as a PSI problem is derived from the use of mathematical apparatus, methods and means of measurement of the QUANTUM MECHANICS (QM) for the research on AP (anomalous phenomena) of the psyche. The fundamental wave equation of QM, the equation by Schrodinger, contains the mathematical symbol of the greek letter PSI defining the wave function which describes the undulatory behavior of quantum mechanical object (ensemble).

It is believed that the processes and the mechanisms of consciousness (thinking), the processes of subconsciousness (under the threshold processes), i.e. all psychic processes in the brain, are governed by quantum-mechanical laws. Aside from that a much more sophisticated scientific discipline came into being - scientific and technical PSI-quantum mechanical discipline of the research and control of the mechanisms and laws of thinking and psyche at the MICRO-level - the level of elementary particles and physical vacuum (19). So the two apparently opposed worlds or levels, MACRO world and MICRO world, enter the worlds of thinking, consciousness and psyche. The ways and methods of their research and the control of their intimate mechanisms merged into a single, more sophisticated problem, the problem of identification and control of the condition of consciousness and psyche.

....

... The theory of physical vacuum by G.I. Shipov (19) unites the general theory of relativity by A. Einstein and quantum mechanics by Heisenberg, Schrodinger, Dirac and offers to the designers and researchers the key to the construction of the power means which could act upon the topology and structure of the space-time. The possibility emerges to build unusually powerful and effective means of coherent radiation and destruction of targets and as well of high-maneuvrable and economic flying apparatus (FA) and aero-cosmic complexes (of the type of flying saucers ... (23), see appendix 1 as well).

....

As a result of the solution of the PSI problem numerous means usable with mercenary objectives as means of violence, attack, subjugation and blackmail have been produced and their production continues intensively.

## 1.2 Psychotronic Weapon and Psychotronic War

Definition 1. Psychotronic weapon (PSW) - any means of intensive effect upon the brain of a single human being or mass of people, upon the flora and fauna, upon plants, animals, upon the environment (liquid and gaseous)...with the objective of the disturbance of their normal condition and functioning

Definition 2. Psychotronic war - the mass use of PSW against the state or its part.

....

We will begin by presenting one of the possible classification of PSW:

According to their use: strategic, tactical, individual (personal)

According to the strategy and tactics of the use: offensive, defensive

According to the scale of the destructive effect: mass destruction, highly targeted local effect

According to energetical factor: - subliminal, extrasensory, subliminal (unenergetical) - weak electromagnetic biofields and other radiations ..... - superstrong coherent power-energy fields and radiations, producing catastrophic perturbations of ecological scale - topological means, deforming structure and characteristics of the space-time

According to the target in the living object - sensory, extrasensory influences at the system of perception (inputs) - psychokinestetical - motor influences at motions and displacement (output) - extrasensory effects at the processes of decision making, at the personal "I" (central)

According to the duration of the effect - short time, reversible - longtime effects - irreversible, pathological effects, defeating the psyche

According to the outcome of the effect - non lethal -lethal (with lethal outcome)

According to the controllability - controllable by an inductor or generator with the use of commands - uncontrollable, of a single effect

According to the distance of the effect - local, neareffect (radius up to 1 km) - medium distance (until 10.000 km) - superdistance, global, all-earth scale

10. According to the speed of propagation - - - - slow, lowspeed (of the type of epidemics, panics) fast of the speed of electromagnetic waves - immediate effects (superfast) .....

.....

## The Research Abroad

Government structures, organizations and companies preoccupied with the PSI problem in the USA (28):

x The Department of Defense of the USA

x Office of Intelligence at the Department of Defense of the USA

x DARPA agency at the Department of Defense of the USA

x Airforce, Navy and land forces of the army of the USA

x The Center of Military Research (Redstone)

x Research and Science Institute of behavioral and social sciences of land forces of the USA

x American Association for the Development of Science

x The company RAND

x The company Westinghouse

x The company General Electric

x The company Bell Telephone Company

x Stanford Science Research Institute and many tens of other institutions

The following countries carry out research in this area: USA, Great Britain, France, Germany, Japan, China, Vietnam, Izrael, Italy, Hungary, Roumania, Bulgaria, Russia, Ukraine (more than 30 countries in the world).

Five basic directions of military research in the area of bioenergoinformatics and PSI phenomena can be defined:

Works on methods of premeditated influence at psychical activity of human being (29)

Fundamental theoretical and experimental research studying the clairvoyance and telekinesis in military applications (gathering of intelligence and sabotage activity) (29)

Study of the influence of bioradiation on military and commercial control and communication systems, on military electronic apparatus, work on bioenergetic generators capable to influence the staff of armies. (30)

Work on systems capable to detect and control (systems of monitoring) artificial and factual dangerous bioradiations and methods of active and passive defense against them. (103,104). Work on measuring devices and metrological services and methods of evaluation of such phenomena and effects. Modeling of PSI effects and biocommunication. (28)

Construction, on the line of aerospace agencies and NASA in the USA, of power systems destined for military defense of the type of newer effective lethal apparatus (LA), making use of the possibility of the transformation of topology of the space-time and the control of gravitation. (23)

Aside of that the evaluations of the strategic potential of the probable enemy possessing the PSW are taking place. The higher effectivity of the PSW, in comparison with the thermonuclear weapon has been proved already. The evaluation of the probability of the "psychic invasion" from the part of states - potential enemies is taking place.

.....

Let us take a look at a small part of the numerous works carried out abroad in the area of psychotronics:

.....

x Expansion of the bulk of the works in the area of parapsychology and bioenergetics in the USA. Today more than 150 organizations work on this subject.

After the successful experiments with deciphering of photographs by extrasensors (28), the U.S. Congress evaluated them as serious for the security of the country and the research was placed under the National Information Security law. The military experts analyzing the

potential of the research in parapsychology in the USA admitted still in the 80's, that the PSI phenomenon - this is a reality and it can be used for the construction of principally new methods of warfare, not inferior to thermonuclear warfare, i.e. for the development of strategic forms of armament.

In the USA the devices and methods were created capable to introduce into the subconsciousness of a man the information needed to make the man execute the orders which were introduced there. Those are new man-and-computer complexes and their objective is the control of the intellect. The concentration of great doses of psychic energy of the determined spectrum acts destructively on the brain. (28)

x Construction of special biofield generators, headed by professor V. Peschke and research of their influence at the change of character of the personality of a human being (Stuttgart, Germany)

x The use of quantum mechanics laws for the explanation of the experimental work in psychotronics (dr. Puharich, collaborator of NASA)

x Research on bioenergetics and telepathical transmission of information, with the budget of 6 million dollars (Pentagon, D.o.D., USA). The work was placed under the National Security Information law.

.....

On the Works in Russia and the Union of Independent States

.....

Targets for the PSW means

To understand more profoundly the PSW problem we will select FOUR essential "TARGETS" - the locations or areas of application and influence of PSW means:

GENETICAL APPARATUS of cells (chromosomes, mitochondria, molecules of DNA and RNA)

LIQUID CRYSTAL MEDIUM of the cell, intercellular liquids, liquids of organism surrounding environment (aquaducts, liquid food products)

BRAIN (centers regulating the state of consciousness and functions of "subconscious") and by its mediation other organs, cells and functions

Biological and psychical fields surrounding living organisms and plants

Every "target" has got its s p e c i f i c affectable parts with their qualitative and quantitative indices and markings on the part of the means of PSW and as well there is g e n e r a l , universal (unspecific) location of influence of the PSW for any type of "target".

The following text is really difficult to make out and it is certainly not written in the way to make it feasible to use the information to build the neurocomputer (for sure in the West the

electronic neuronal networks are built as well). Though, there is one important statement at the end of the text - the torsion field detectors are manufactured in Russia and Ukraine.

neurocomputers and torsion or scalar fields

V. Lopatin, V. cygankov: "Psychotronic weapon and the security of Russia"

### Chapter 3

biophysical principles of psw

page 44

"Unexcited physical vacuum represents a quasi-crystal composed of firmly packed spherical particles - fitons, having two compensated spins directed in the opposite direction and for that matter absolutely neutral in the outside space.

Birth or materialization (according to Yuzvishin) of electric, gravitational or spin-torsion fields and particles - this is charging (E), spin-longitudinal or gravitational (G) and spin transverse torsion (S), SL-left or SR-right, polarization of physical vacuum, or modulation (excitation) of neutral state of fitons. Three modes of fields take birth: E-field, electric field and charge q, G-field, gravitational field and gravitation or inert mass m and S-field, spin-torsion field with two, SL and SR, varieties. From here takes its title the EGS of A. E. Akimov as well (20).

As we can see, all the phenomenons of quantum transformations and changes in the world of elementary particles takes place at the fiton level, at the frontier of the change "unexcited vacuum" - observable physical 4-dimensional world of the ordinary physical reality. The components of reality... are composed of multitudes of a) b) c) d) - primary elements and fields... and out of those, in compliance with the known physical laws, the ordinary material particles and fields are formed (85,86,87,88 - authors P. Dirac, R. Feinman, G. Myakishev, L. Okunj).

Among them occur well known quantum-mechanical interactions of radiation and matter (108).

But there are inordinary interactions as well - on November 29,1996, in the Government Institute of Astronomy (GAISH) the experimental results of the effects of torsion fields on gravimeter were reported, on its probe metalon mass... the curve of the decline of the excited state E slows down in the moments when the torsion generator is turned on and the micro oscillations of fon are strenghtened up by the torsion effect.

The effects at the gravimeter were executed from the distance of 20cm, 3 meters, without screening and throught 30 mm iron screen which did not show any screening effect as well as the distance."

### CHAPTER 4

Neurocomputer as a possible PSI-means

Neurocomputer as a model of nervous-psycho activity of the brain, if it is built and works on the same principle as the living brain, as an unbalanced, unstable system of multitude of interacting - in the mode of chain reactions - elementary neurons, may manifest PSI phenomena and can be used as a means of PSW (psychotronic weapon). It may serve as a means of disclosure, detection, registration, interpretation or generation of PSI-fields or PSI-effects.

As an example the neurocomputer "EMBRION" may be pointed out which works on this principle (49,50). The neurocomputer generates, in the moment of the propagation of excitation in the neuronal network, multichannel coherent spectrum of radiation-frequencies which, interacting among themselves, create a rotating PSI-field or an informational whirlwind (fig. 14)...

In this whirlwind torsion radiations take birth due to the mass alteration of spins of elementary particles during the quantum transitions between the levels of excitation. Quasiparticles or informatinal whirlwinds those are informatinal whirlwinds of Yuzvishin or inertionees of Shipov (chapter 2 and 3). They are directionaly radiated into the space and can get upon the subcortical brain structures...

....

Fig. 16 I can not draw on my computer so: there are 2 inputs into the neurocomputer. One comes from the environment or is substituted by artificial inputs - this input is processed by the "sensory matrix" of the neurocomputer.

The other input are the motives or goals which are processed by the "block of bringing out of hypotheses". From here the information is fed again into the sensory matrix. All the information processed in the sensory matrix proceeds to "memory". The memory has got an other input from the "block of energetic potential". So in the memory are mixed the informations (or waves or pulses - this is my understanding) coming from sensory matrix and block of energetic potential. What sorts out of the memory is called "reactions" (in my understanding those are waves).

....

"Neuronal network (fig.15), as a branching stochastic proces of the type of Markov's flail, is realized as a result of the equal-probability scanning by impulses NS from the BLOCK OF ENERGETIC POTENTIAL, of the separate discharges of L-dischargeable register R0 of the inner memory and transmission of the information in the mode of the picture  $(S)=(S1,S2)$  from the SENSORY MATRIX (SM) in correspondance with the hypothesis of perception inside of it. Here  $n=3$  - dischargeability of the NC (neurocomputer),  $m=2$  - the number of lines of the sensory matrix (SM). Double codes of the flowing condition of the register of the inside memory R0 represent virtual quasineuronal networks, number of steps  $(U)=(U1,U2)$  of the scanning of the two lines of SM, called the hypothesis of perception, introduced from the BLOCK OF BRINGING OUT OF HYPOTHESES (BBH), defines the number of layers of neurons or the depth of the network.

The probability of the transfer - this is the synaptic weight at the entrance of the neuron, and when the probability is X - than this is the level of excitation or its starting frequency. For the maximal possible number (2 on P) of neurons X

- this is the REACTION or the SPECTRUM of frequencies. If we vary the figure-code R0 and figure-codes SM and as well present such or other hypothesis (U), we can receive or synthesize all kinds of variations of neuronal networks (stochastically branching processes) and variants of their activity.

At figure 16 there are variants of synthesized neuronal networks or modes of virtual PSI-processes or PSI-fields and their coherent spectra on condition showed on figure 15 and especially:

dischargeability of NC  $n=3$

starting condition of the inner memory  $(R0)=(0,0,0)$

number of lines of SM  $m=2$

figure on SM (S)=  $\{S1=[1,1,0]; S2=[0,0,1]\}$

the hypotheses of perception  $(U)=(U1=2; U2=2)$

number of layers of the neuronal network  $U1+U2=4$

number of scanning impulses  $NS>10*2n=81$

In the neurocomputer "EMBRION" there are 3 basic, cyclic, rotating electronic processes which may act as generators of torsion fields (49,50,168 - Tsygankov's publications are referenced here)

(From the appendix to the book by V. Lopatin and V. Tsygankov: "Psychotronic Weapon..." - this chapter is written by V. Tsygankov, page 138 - 145)

"We will suppose that the events in neurocomputers (NC) take place in the space of events of the physical vacuum and that the geometry of the absolute parallelism corresponds to them (geometry A4)"....

...

(What follows are 3 pages of mathematical equations which only an expert physicist can understand. If anybody knows somebody like that I will gladly mail him the copies of those three pages with the English translation of the accompanying text. It should be noted that the theory of torsion fields starts from vacuum as well as the theory of scalar fields presented by Tom Bearden in the interview for Megabrain Report.)

.... a

The energy-impulse of the matter T of the probable field of virtual excitation

of

bk

quasineurons of the neurocomputer "Embrion" (NC "E") (4) may represent the SOURCE OF TORSION FIELD or FIELD OF INERTIA.

NC"E" represents an active quasineuronal network realized in the mode of virtual discrete-wave field of a complicated organization. NC "E" - this is a multichannel generator of coherent pulse currents and wide band radio-radiations(5).

In NC"E" there are realized 3, coupled in the space (figure 2) spin, circle or cyclic processes of the movement of electromagnetic activity (energy):

c(p)-cycle, where p is the dischargeability of NC

m-cycle, where m is the number of lines in the sensory matrix

NS-cycle, where NS is the number of realizations of accidental proces or  
number of circular trajectories

.....

During the apparatus realization of p-dischargeable register (P0) of the inner memory and the field of registers  $m \times p$  SM in the mode of CIRCLE and TOR correspondingly, the conditions of circular spaceous organization of the coherent field are realized, which may appear to be a variety of TORSION

(SPINORY) FIELD (1).

The virtual field of NC "E" can be understood as some QUASIPARTICLE, SHIPOV'S INERTION (5) and this quantum object must satisfy the requirement of non-holonomy (2).

## 2. THE AREAS OF POSSIBLE USE OF NC "EMBRION" IN PSI-PROCESSES

### 2.1 Remote hidden informational communication. Cards of K.E. Zener

If we start from adequacy of NC "E" and non-holonom object (1) when it radiates torsion fields, then we can, with the use of NC, affect biological receiver, for example, the human brain, transmitting there remote information in the mode of the sequence of codes.

As the source of a such sequence of codes may serve, for example, the radiations of the NC, when the cards of the American psychologist K.E. Zener (fig. 3 - figure 3 shows cross, jewish star, circle, square and sinusoides) are projected on its sensory matrix in sequence.

The spectrum of radiation of the NC may be registered in two ways: either by means of apparatus with the help of the PSI-detector (it will be discussed later) or in the mode of protocole of verbal responses of a man as a receiver of PSI information, or in the mode of figures drawn by the experimentee.

### 2.2 Force and Informational Coherent Interaction of Space and Time (ST) for the Control of Flying Apparatus (FA)

In the virtual field of radiation of the NC "E" the coordinate  $x$  is the U-component of the field or the coordinate of the proper time which can be controlled with the use of BBH - block of bringing out of hypotheses.

We can create, with the use of NC "E", our LOCAL UNIVERSES (5), our SPACE-TIME, we KNOW HOW, with the use of the Block of Advancement of Hypotheses (BBH), to CONTROL the SPACE and TIME (U).

In the PSI-proces is the block PK-psychokineses-proces the force effect of the PSI-source on the environment.

And why not to use our NC "E" for the control of the ENGINES of A.K. Holt, the co-worker of the center of Space Research NASA, the member of the American

Institute of Aeronautics and cosmonautics (AIAA), the Society of Transport Engineering (SAE), the American Institute of Mechanics and Engilneers (ASME) (6)?

Holt presents two types of engines for space systems:

GRAVITATIONAL systems - multipurpose motion installations, using "gravitational" effects of ALTERNATING FORMS of electromagnetic energy.

Systems with the RESONATION of the FIELD - motion installations for the deep space provoking limit, but LOCALIZED ALTERATIONS OF QUALITIES OF NON-LINEAR

TRANSFORMATIONS OF COORDINATES OF THE SPACE-TIME ("HYPERSPACE JUMPS" ).

Those motion installations use, in the A. Holt's conception the interaction of the space-time with the FIELD ( $ST + F$ ).

...

Those perfected motion installations must be construed with the use of COHERENT

ELECTROMAGNETIC CONFIGURATIONS or DISTRIBUTIONS GENERATED INSIDE of them in order to alter the gravitational forces acting on the flying apparatus (FA).

The theoretical model developed by A. Holt (7) of the interaction of electromagnetic and gravitational fields proposes the creation of artificial highenergetic DISTRIBUTION of ENERGY, coherent in space and time. If, in every point of ST field of the NC "E", we place at the output of every quasineuron controlable energetic sources of Holt and CONTROL with the use of R0, Sensory Matrix and Block of Advancement of Hypotheses, their coherent distribution of energy, then we receive CONTROLABLE SYSTEM for the Holt's engines.

As a result of interactions of the field ( $NS*U$ ), space-time ( $RxU$ ) of the neurocomputer and energetic fields of the motion installation THREE MODES OF EFFECTS come into existence:

diminution or augmentation of the SUMMARY ENERGY in the system of the matters takes place as a result of the RESONANCE WITH "VIRTUAL" STRUCTURE of remote points of the Space-Time (ST) (1).

- The TRANSPORTATION of the OBJECT in the ST takes place by the way of

ALTERATION of COHERENT DISTRIBUTION as a result of RESONANCE with the virtual distribution (field).

Availability of the ACTUALLY WORKING NEUROCOMPUTER OF THE TYPE OF "EMBRION" permits already AT PRESENT TIME to BEGIN WITH THE EXPERIMENTAL RESEARCH ON THE CONTROL OF THE SPACE-TIME and the evaluation of different theoretical models of the Universes (models of FRIEDMAN, EINSTEIN, de SITTER etc.) (8,9)...

### 3. The Organization of the Works the Detector of A.E. Akimov

As follows from the above, all the premises are fulfilled for the development and experimentation with the means using the properties of the physical vacuum and capabilities of the NC.

Such work should be expediently carried out according to the following project

Preparation of theoretical model and execution of calculations for the program-apparatus complex making possible the evaluation of spectrum and magnitude of the torsion component of the field of radiation of NC and formulate requirements for the apparatus part of the NC.

Preparation and manufacture of experimental models of NC for experiments

Execution of experimental research and tests of NC in order to learn the effects and registrate the fields of radiation of the NC. As a detector of torsion radiation of the NC use fully the rich experience and apparatus of A.E. Akimov (2) which is being produced by the number of enterprises in Russia and Ukraine (3)

The works should be expediently executed by the academic institutes and industrial enterprises.

**RE: President Bush's Vicious Nationwide Attack on Whistleblowers Comes to Berkeley Via An All Too Obliging City Council, Mayor, and Police Department**

COINTELPRO outsourced to Law Enforcement and Neighborhood Watch

Since becoming a Livermore Nuclear Weapons Lab whistleblower in 1991, I have worked diligently and effectively for the past six years as an independent scientist, to educate the global community on radiation issues both locally and internationally. The dark legacy of Dr. Strangelove, former Livermore Nuclear Weapons Lab Director Edward Teller, is the fact that the University of California will forever be known as "the University that poisoned the world". The hopeful and happy freshmen faces of University of California students, and its institutional mission to educate, provide a convenient cover for the deadly legacy of exotic weapons, too horrific to use and their global impact on the environment and public health. The two highest rates of breast cancer in the world are in the area of Dr. Strangelove's "Teller Tech". The University of California has turned Planet Earth into a Death Star.

The problems with my cars and the Berkeley Police Department started after I did a presentation on radiation and depleted uranium on September 11, 2005, for Physicians for Social Responsibility. The presentation was put on the internet <http://www.art101.com/radiation/index.html> in April and within three weeks 30,000 visitors from 70 countries had seen it. More than 9000 were visitors with "unidentified" IPs. The google hits on my name increased from 43,000 to 178,000 three weeks after the film was posted.

When I left the Livermore Nuclear Weapons Lab in 1991, I was told "You're in a police net for the rest of your life", and to a reasonable person it seems I have been. I have been subjected to car theft, damage to personal property, the University of California/Homeland Security special "gangstalking", and very frequently experienced documents missing from my home, almost all of which pertain to University of California/Nuclear Weapons Labs and radiation. My daughter was kidnapped when she was 13, facilitated by the University of California and Livermore Lab, and I did not see her for 5 years <http://www.multistalkervictims.org/moret.pdf>

On three occasions in the past several years my cars have been towed by Berkeley Police Department using selective enforcement, the timing of which coincided with major radiation

disclosures I have made. Some would think they were related since the Berkeley Police Department "Red Squad" was actively killing the Free Speech Movement in the 60's, and I have observed them covertly spying on demonstrations recently.

1. 2002 I was leafleting with members of the Committee to Minimize Toxic Waste at the Lawrence Hall of Science, about tritium exposure to visitors from radioactive gas and liquid emissions from the Lawrence Berkeley Lab. An unknown faculty member I did not know walked out of Lawrence Hall of Science and suddenly handed me two parking tickets. We succeeded in shutting down the Tritium Facility with the help of Congresswoman Barbara Lee. Soon after, I received two additional parking tickets and my car was immediately towed. The officer on site at the time of the towing told me "I've been waiting to get you... you've got 5 tickets on your car now so I can tow it." I was out the inconvenience of a towed car charge.
2. November 15, 2004 On the day I took custody of a recently declassified document in Nevada my car was towed in Berkeley. The declassified document disclosed the existence of a secret EPA dairy at the Nevada Test Site during atmospheric testing, where radiation levels were measured in milk and tissues of dead cattle. The US government knowingly exposed the entire US population to internal radiation damage, then the University of California/Livermore Nuclear Weapons Lab studied them and watched them die while they covered up the terrible truth. The day after I gave the declassified document to Manhattan Project and former Livermore Nuclear Weapons Lab scientist, Marion Fulk, the Fulk family dog was killed. The towed car was parked in the vicinity of a car that sat parked on the street without an engine in it for two years and it was never moved or towed. Other cars belonging to a man named Rich were only moved once a month for street sweeping, but they were never towed. After returning from Nevada with the declassified document, Rich's father repeated parts of a phone conversation to me that I had with the woman who got the document declassified. I had never spoken to the man before. When I gave the declassified document to Marion Fulk, and Dr. Ernest Sternglass (who helped to convince the Senate to sign the Partial Test Ban treaty in 1963) they both said "I've been waiting 50 years for this..."
3. May 16, 2006 I am an international depleted uranium expert and appeared in 5 international documentary films last year, which caused extreme levels of University of California/Livermore Lab and Berkeley Police Department harassment. In July 2005, my housemate, a University of California student with a Defense Information Agency scholarship, was deliberately knocked down on his bike by a hit-and-run driver. The student was on his way to the premiere of my new documentary on depleted uranium weapons, *BEYOND TREASON*. After a year of break-ins, thefts, sabotage to my cars, and economic sabotage (including piling tickets on my cars for not having 2006 tags despite paid registration fees). It was impossible for me to clear the tickets. I was harassed and stopped twice and given tickets for faulty equipment which DID work, both times when Dr. Sternglass was in the car. In March I was invited to a Genocide Conference at the Hiroshima Peace Institute. I invited Dr. Ernest Sternglass to go to the conference and then on a month long radiation speaking tour of Japan. During that month I did not receive a single ticket on my cars despite nearly daily tickets before and after the trip. Dr. Sternglass was harassed by the IRS upon return, which in his 80's was for the first time in his life. On May 15 I found a 12" long chalk mark on my front tire, not a standard mark for meter maids to leave. On May 16 my car was towed, I was told by Towing Sergeant Randy Files, "because the DMV said you had five tickets on it". When I pointed out that the 11/15/04 ticket

("EPA Dairy" tow) was paid because I could not register my car in 2005 without clearing it, he ignored me. At the time the car was towed I was preparing and sending a press release exposing a "global depleted uranium diabetes epidemic disaster" confirmed by government data from the US, Japan, India and Britain to the Italian media. As we were finishing our conversation Sergeant Files said, "Well I worked at Livermore Lab for 8 years and I handled depleted uranium all the time... and there is nothing harmful about it." Again, a reasonable person would assume a connection.

I am not the only whistleblower to experience University of California/Nuclear Labs severe retaliation:

*"Chet Holifield and Craig Hosmer of the Joint Committee (on Atomic Energy) came in and turned to me and said: 'Just what the hell do you think you two are doing, getting all those little old ladies in tennis shoes up in arms about our atomic energy program.? There are people like you who have tried to hurt the Atomic Energy Commission program before. We got them and we'll get you.'"*

Interview with Gofman, DOE/OHRE Oral History Project, December 1994, pp.49-50 of official transcripts.

"Livermore Engineer's Mysterious Death: Investigators in the brutal slaying of Lee Scott Hall -- who found a flaw in a billion-dollar project -- are exasperated by the lab's lack of cooperation"

<http://www.sfgate.com/cgi-bin/article.cgi?file=/chronicle/archive/2000/02/15/MN48178.DTL>

"Los Alamos whistle blower hospitalised in attack"

[http://www.theregister.co.uk/2005/06/07/los\\_amos\\_geek\\_hate/](http://www.theregister.co.uk/2005/06/07/los_amos_geek_hate/)

It is clear to a reasonable person that I have been subjected to University of California/Livermore Lab whistleblower retaliation and that City of Berkeley employees have been involved, in collaboration with University of California/Livermore Lab/Lawrence Berkeley Lab. Yesterday I attempted to settle this matter with the City Manager but he refused to meet with me. I was sent in what has been a continuous feedback loop to the Berkeley PD, where the retaliation and corruption is coming from. My car will be auctioned on Monday if it is not released to me. I request that you do the right thing and release my car to me, free and clear, since this is obviously a COINTELPRO type of retaliation. The University of California has a well deserved reputation for making it IMPOSSIBLE for opponents to do anything once they become a target.

Since I have high visibility and am a well known investigative reporter with my own Berkeley Community

Access TV program "GLOBAL RADIATION COVERUP", I have decided during the upcoming election campaign to investigate corruption in City Hall and the despicable ties and actions some City Council members have taken on behalf of the University of California. Mayor Bates \$Half-A-Billion \$ gift and the giveaway of the downtown area of Berkeley to University of California Berkeley has to take the proverbial cake for Alumni donations. The only problem is that downtown Berkeley wasn't his to give away and he violated the City

Charter. I very successfully took on the nuclear weapons program, nuclear power industry, and the Pentagon. My work is appreciated around the world.... but not by the University of California, Livermore Nuclear Weapons Lab, Lawrence Berkeley Nuclear Weapons Lab, and some members of City Hall. Since I have personally observed and experienced corrupt practices at City Hall, I have a duty to inform Berkeley citizens in the near future.

Sincerely yours,

Leuren Moret

### Microwave Technology And Its Use Against Humanity

We've been telling you that advanced microwave technology is being used against the human race. We've taken many beatings from skeptics but things are finally coming to light on this subject. We're including material here which should make the subject clearer.

In the book, "Cross Currents", by Robert O. Becker, M.D. (Jeremy P. Tarcher, Inc., 5858 Wilshire Blvd., Suite 200, Los Angeles, CA, 90036), the author covers the perils of electromagnetic radiation, as well as the promises of electro-medicine.

His appendix is: "The Hidden Hand on the Switch: Military Uses of the Electromagnetic Spectrum".

### The New Killing Fields: Electromagnetic Weapons

While the military was vigorously denying the very existence of bioeffects from electromagnetic-field exposure, such bioeffects were actually being explored as potential weapons -- weapons with the enormous advantage of being totally silent and imperceptible.

The EMP [electromagnetic pulse] concept has been extended through the development of devices that generate EMP pulses without the need for nuclear explosions. Such devices could be deployed for use against enemy command and control centers and against aircraft in order to produce failure of electronic equipment. A derivative of this program is HPM (high-power pulsed microwave), a system producing intense, extremely short pulses of microwave. Several types, ranging in frequency from 1200 MHz to 35 GHz with powers up to 1000 megawatts, are being tested. These are also considered for potential use as weapons against human beings.

A recent report derived from the testing program of the Microwave Research Department of the Walter Reed Army Institute of Research states, "Microwave energy in the range 1 to 5

GHz, a militarily important range, penetrates all organ systems of the body and thus puts all organ systems at risk." Effects on the central nervous system are considered very important. The testing program, begun in 1986, is divided into four parts: (1) prompt debilitation effects; (2) prompt stimulation through auditory effects; (3) work interference/stoppage effects; and (4) effects on stimulus-controlled behavior. The report goes on to state, "Microwave pulses appear to couple to the central nervous system and produce stimulation similar to electrical stimulation unrelated to heat." It appears that HPM is capable of altering behavior in the same fashion as Delgado's electrical stimulation.

The production of cognitive and behavioral alteration by HPM [high-power pulsed microwave] is a sledgehammer effect in comparison to the subtle alterations produced by ELF [extra low frequency] fields. According to a 1982 Air Force review of biotechnology, ELF has a number of potential military uses, including "dealing with terrorist groups, crowd control, controlling breaches in security at military installations, and antipersonnel techniques in tactical warfare." The same report states, "[Electromagnetic] systems would be used to produce mild to severe physiological disruption or perceptual disruption or disorientation. They are silent, and countermeasures to them may be difficult to develop.

Anthony Lake, National Security Advisor-Elect

Madeleine Albright, U.N. Ambassador-Elect

Judy Abdo, Mayor of Santa Monica, CA; SM is hit by the planes.

Timothy Walsh, manager, Santa Monica Airport

Ron Dellums, Chairman, House Armed Services Committee.

PS: I heard on our listener sponsored station that the Los Alamos national laboratories said it could make electromagnetic weapons to stun or kill people. Also that FEMA has a martial law plan, and a lot of unmarked black helicopters which have been sighted, especially in Colorado etc.

I discovered these references in Cross Currents:

Tyler, Paul E: "The Electromagnetic spectrum in Low-Intensity Conflict." In Low Intensity Conflict and Modern Technology, edited by Lt. Col. David J. Dean, U.S.A.F. Center for Aerospace Doctrine, Research, and Education, Maxwell Air Force Base, Ala.: Air University Press, 1986. This article discusses the direct use of electromagnetic fields against personnel.

"Walter Reed's Microwave Research Department: Its History and Mission [Part I of two parts]." In Bioelectromagnetics Society Newsletter, January- February 1989. Discusses high-power pulsed microwave as it relates to antipersonnel use. The Bioelectromagnetics Society has strong links to the military establishment and is considered to be an authoritative source.

Steneck, Nicholas H. The Microwave Debate. Cambridge, Mass.: MIT Press, 1984. History of military microwave technology. Details of secret projects presenting radiation hazards.

## **Military Implanting Humans and Microwave Technology**

[If the above file isn't enough there's more to this than most ever thought possible. Along with ETs implanting people it appears the military has their own program. Read on.]

There is currently an electronic mind control system extremely effective and very difficult to detect. It is definitely being used on at least one person in California and probably many more in America. It is most likely being used by members of the U.S. Government (Central Intelligence Agency, National Security Agency, Department of Defense), The Illuminate, Freemasons, The Brotherhood, or the secret "Greek Society." Essentially, the above groups overlap and may be viewed as the "The Organization." They are experts at secrecy, cover-up, terrorism and mind control. They view themselves as "enlightened." They are essentially organized criminals who commit massive abuses, terrorism, torture, mind control, slavery, and murder.

Their most common techniques are to use behavior modification and hypnosis on a person under ether gas or another general anesthetic. It causes a person to be extremely under their mind control when given an auditory or visual posthypnotic signal. They call this creating a "slave" or putting them into a "Greek sleep." Because of the techniques and drugs the person has complete amnesia for the conditioning. As well, frequently the victim has complete amnesia for the behaviors they are instructed to do while in the hypnotic trance. Then members of The Organization financially, mentally, physically, and sexually abuse the victim or "slave." If a person begins to recall the conditioning or abuses they are told "It was only a dream," or "you are crazy, it didn't happen." Often the victim is also given memory blocking drugs and electric shock to the head to erase the memories.

The Organization extensively uses the above techniques. Unfortunately, several extremely sophisticated advanced techniques have been developed and have been in use for several years:

1. A person is taken under a general anesthetic to a surgery location. This is usually done at night while the victim is sleeping. Ether gas is injected into his or her bedroom and the victim is drugged and taken away.

The above involuntary sedation is also how other conditioning, torture, and abuses are often done. Alternately, the victim is simply told lies about the need for surgery.

2. An incision is made just behind the ear or inside the ear canal with cosmetic surgery techniques. When healed it just looks like a fold in the skin. The entire procedure is often done without the person realizing it.

3. Incredibly, a miniaturized electrode plate is inserted under the skull and next to the brain near the pre-speech area of the brain. It has the latest extremely small and powerful microchip sensors, battery, and transmitter.

4. The sensors-transmitter, which is EEG micro technology, read the brain waves and transmit a digital signal. The signal is extraordinarily strong for such a small device. The signal can travel several miles. It is picked up by a relay receiver and transmitted to a computer, where instantaneously the software reads the digits and converts them into language. This is all done at radio wave speed, or the speed of light.

5. Effectively, A PERSON WITH THE INVOLUNTARY IMPLANT HAS EVERY THOUGHT READ WITHOUT KNOWING IT. It sounds like science fiction or paranoia doesn't it? It is not fiction and it is not the product of a psychosis. It is absolutely true. The technology is this advanced, and the criminal organization is this psychopathic. The Organization relies on it sounding so bizarre and heinous that no one would believe it. It is extremely cruel high technology reality. ANY ONE WHO DISCLOSES THEIR DIABOLICAL METHODS IS EASILY DISCREDITED, TERRORIZED, MIND CONTROLLED, OR MURDERED by The Organization.

6. Accompanying the above "thought reading" technique are the "thought inserting" techniques. Very low frequency subliminal sound has been used for years for "inserting" ideas into one's mind. Basically, very low frequency subliminal sound is perceived by the victim as one's own thinking. It bypasses the normal auditory system, but the content of the words is perceived. Because it is so subtle, if a broadcast is in first person language, an unaware person finds it impossible to discriminate the subliminal broadcast from one's own thoughts.

One disadvantage of the above "low frequency subliminal sound" technique is that others in the area also experience the same broadcast. Sometimes people have simultaneous thoughts with another person in a situation, it may reflect that someone in the area is using a "low frequency subliminal sound" technique.

7. The mind control "sound" broadcast is now accompanied by an incredible "radio" broadcast technique. They make use of another surgery technique for this "thought inserting." Cosmetic surgery is used to insert a microchip receiver-speaker under the skin near the ear drum. Essentially, it is a very tiny radio receiver with a tiny battery and speaker. Usually one is placed near each ear drum, and behind the ear canals so they won't be detected. A very low volume broadcast is used so the person does not perceive it as sound, but as one's own thoughts. Effectively, A PERSON WITH THE INVOLUNTARY IMPLANTS HAS THOUGHTS INSERTED WITHOUT KNOWING IT.

8. Summarizing, there are two basic advanced techniques: 1.) Thought reading implant 2.) Thought inserting implants. Along with the standard mind control techniques there is a complete grievous human slave technology. The surgeries are done under general anesthetics, which often includes time for the incisions to heal. The person is told he or she had a severe flu or some other illness to account for the time of unconsciousness. Alternately, the victim is simply lied to about the surgery. The victim unknowingly has involuntary implants that "read" thoughts and "insert" thoughts electronically. The person is not even aware they have the implants.

9. Most people unfamiliar with The Organization's methods find it difficult to believe the above. I have found that many people with whom I have discussed the above are also victims of basic terrorism or mind control. Part of the mind control process is to strongly condition people to the idea that you are psychotic or in danger for thinking such things happen.

There are firemen, police, military, lawyers, doctors, engineers, clergy, teachers, journalists, and other members of communities who conspire to commit atrocities. Unsuspecting victims are kept defenseless. The Organization is without conscience and their acts are so evil it is difficult to believe. They are very secretive, well organized, and have the latest technology. Members of The Organization are extremely proficient at lying, deceit, impersonation, and mind control.

God as my witness, I give you my word the above is true and accurate to the very best of my ability.

*Name and address withheld*

[We were so impressed with Mr. --'s account we called California and had a long talk with him. He said that as a psychologist he worked with people that went over the edge or had emotional problems relating to their jobs or work assignments. We feel the man is very intelligent and sincere in his efforts to educate the public about this technology and its use on an unsuspecting public. What you have just read is but a very small portion of what we have amassed with Glenda Stocks unfaltering help on this diabolical approach to enslaving humanity.]

## **Real Life Death Rays**

By Joe Vialls

[The following article is taken from New Dawn magazine - a magazine exposing consensus reality and publishing suppressed information. 6 issue subscription for US\$30 can be obtained from: GPO Box 3126FF, Melbourne, 3001, AUSTRALIA.]

There is very strong circumstantial evidence suggesting that new psychetronic weapons have been developed to "control" innocent citizens without their knowledge or consent, with research showing the U.S. leading the field. Does such weaponry already exist at Pine Gap and Nurrungar and, if so, is it intended for use against Australians exercising their democratic right to protest peacefully?

Research into the use of electromagnetic waves as potential weapons to distort human perception and/or cause direct psychophysiological damage started shortly after the end of World War II. Although the U.S. intelligence officials claimed the Soviets had the whip hand in this field, it is significant that the Soviets proposed a total ban on electromagnetic warfare at one of the arms talks. Equipment has already been tested in the U.S. on rats at short range, successfully inducing nausea, tumors and many other symptoms. Closed lectures at various U.S. defense establishments have already discussed specific frequency effects that have been logged for use in operational situations. In other words, the Americans already know exactly which frequency to apply to gain a precise reaction within targeted areas of the human brain. The U.S. has a problem with testing at the human level. It has been stated clearly that the White House point blank refused the request to test on human subjects at all. Counter claims insist the White House does approve such testing, but only on prisoners and non-Americans.

## **How Psychetronic Weapons Work**

By the '60s, weapon research had split into two distinctly different fields. The first of these fields involved weapons operation on frequencies in the same range as the human brain's electrical activity of 14 Hertz (or 14 cycles old values). These were and still are called E(L)F, standing for Extraordinarily (L)ow Frequency. Design was intended to induce illness by upsetting the electrical patterns in specific areas of the brain, resulting in nausea, faintness, panic attack and possible unconsciousness at short range; depression and other symptoms at long range. The ambition was to identify which precise frequency was needed for each individual human reaction. Under the Reagan administration's top secret Project Sleeping

Beauty, Dr. Michael Persinger, chief neurologist at Laurentian University's Environmental Physiology Laboratory in Ontario, was "quietly" funded to find the answers. Using what are called time-varying fields of low intensity in the extraordinary low frequency range from one to ten hertz, Persinger was consistently able to make a cage of rats sick. The E(L)F field he generated had stimulated the MAST histamine-producing brain cells into inducing instant nausea. Specific research on E(L)F weapons was continued by Dr. Elizabeth Rauscher, a nuclear physicist and boss of the Technic Research Laboratory in San Leandro, California. Rauscher had already identified specific frequency effects to induce not only nausea but also happiness, for example. Clearly, Dr. Rauscher was an enthusiast: "Give me the money and three months", she boasted, "and I'll be able to affect the behavior of 80 per cent of the people in this town without their knowing it. Make them happy or at least they'll think they're happy. Or aggressive." Much later, in March 1984, Captain Paul Tyler, a U.S. Navy doctor responsible for all research into the effects of radiation on humans, presented a paper at the Air University Centre for Aerospace Doctrine. Tyler confirmed that "specific biological effects can be achieved" with electromagnetic fields. He made it very clear that the required fields had already been identified for operational use. Massive power generation required for E(L)F transmission is still a problem, apparently. So far the U.S. "underground" is not aware of any proven incidents where E(L)F has been used against the general public in a hostile manner. Examples do exist (on both sides) where massive transmitters have been bombarding specific areas of the U.S. and USSR for decades. Those areas are so large that if data exists on long term effects, the "underground" has no known access to it. Unsubstantiated rumors persist that the U.S. F117A "stealth" fighter bomber can be fitted with E(L)F weaponry inside its internal bomb bay. Whether or not the equipment was used against specific targets in Iraq during the U.S. attack is unknown. It should be remembered that E(L)F waves are invasive. Unlike EHF, which reflects off hard surfaces, E(L)F can and does penetrate extremely dense substances, including reinforced concrete etc. Defensive measures remain unknown at the general level against this kind of radiation though, presumably, lead (Pb) would act as an effective barrier.

The other field of weapons research concerns those weapons operating in the micro or millimetric frequencies and also referred to as "Barrier Warfare Microwave Tech". Such weapons operate at the opposite end of the electromagnetic wave lengths from E(L)F, i.e. at Extraordinarily High Frequencies. Microwaves are those commonly used in radar sets and microwave ovens, for example. The principal advantage of EHF over E(L)F lies in the fact that its transmissions are "straight line" and can thus be beamed with ease into small or tiny areas. E(L)F, by comparison, tends to scatter widely. Microwaves are generated by a device known as a "Magnetron" in which electrons, generated by a heated cathode, are moved by the combined force of a magnetic and electrical field. The cathode is a hollow cylinder with the outside coated with barium and strontium oxide electron emitters. Arranged concentrically around the outside of the cathode is a large cylindrical anode containing a large number of "resonant cavities", normally of quarter- wavelength, on the inner surface. When switched on, the magnetron generates an electrical field radially between anode and cathode, while the magnetic field is coaxial with the cathode. The complete assembly is sealed inside a vacuum enclosure. The maximum power output is naturally limited by the size of the individual Magnetron but research indicates the largest can generate a stream of microwave "pulses" at up to ten million watts per pulse. The resulting microwave pulsed beam can be focused in much the same way as a camera lens - from ultra wide angle to telephoto - creating area or pinpoint capability. Fortunately the Magnetron is not a small device. Informed sources indicate a portable Magnetron powerful enough to harm a large group of demonstrators, for example, would require space equal to a small truck.

## **Amount of Injury**

Walter Bowart, American author of Operation Mind Control, claims that by 1989, at least one group of female British demonstrators had been exposed to Barrier Warfare of the EHF microwave variety. Bowart's claim fell in line with covert approval from the White House to test such systems on non-American citizens. His claim was given further credibility by the savage mind control experiments funded by the CIA, and carried out by notorious psychiatrist Ewen Cameron on Canadians in Montreal - once again, non-Americans and thus expendable. Specific symptoms presented by the females, who were demonstrating against American nuclear weapons or waste in Britain, were as follows:

1. Anomalies with menstrual cycles;
2. Spontaneous abortion;
3. Other (unspecified) feminine problems;
4. Retinal burning;
5. Inner ear problems;
6. Rapidly growing tumors.

At the time the demonstrators were camped for an extended period of time in tents, indicative of "low level" wide angle bombardment designed to produce severe discomfort in the long term, rather than acute discomfort or death in the short term.

## **Detecting the Weapons**

Unfortunately for the British females, no device was available on the open market to detect any form of psychetronic bombardment. In Australia such devices are available from Dick Smith and known as "Microwave Leak Detectors", costing A\$23.95. They were originally designed to be run around the rubber seal of microwave ovens to detect a potentially dangerous radiation leak. If a leak was found, then the seal had to be changed immediately. The microwave leak detector is directional and capable of picking up psychetronic microwave output as low as one milliwatt per square centimetre. In other words, it is very sensitive. Medical research in the U.S. has already proven that sustained exposure to low-level leaks from domestic microwave ovens can cause serious problems with the eyes, including cataracts. The research was carried out on a large group of women who had been exposed to such a leak in an open plan office over a period of many months. The level of damage in each case was directly proportional to the distance from the leaking microwave oven.

## **Defense Against Psychetronics**

In the case of the British females, Bowart suggested they cover their tents with standard grade cooking foil. They did so and the effects stopped immediately. At low to medium power settings, the psychetronic microwave beam can be stopped in the same way as a layer of cooking foil placed over food in a microwave oven - reflecting the waves back and preventing the food from cooking. The fact that microwaves cook by vibrating the molecules in the food

until they heat up, goes a long way toward explaining the wide ranging problems experienced by the British team of demonstrators. The precise neurological damage discussed by the U.S. armed forces referred only to E(L)F transmissions, on exact tested wavelengths. EHF effects are unfortunately more generalized. If demonstrating along the perimeter of a U.S. installation, it would be wise to have a few dozen rolls of cooking foil and a microwave detector available, no matter how silly it might feel to walk around looking like a bright silver robot. At the same time, be aware that any radar transmitter inside the base will also activate the microwave detector, but only if it is in line with the transmitting aerial in question.

Eleanor White's Comments: The value of this table is to closely define power levels (watts per square cm) at pulse peaks which were successful or close to successful with a microwave carrier frequency of 3 GHz.

This information is displayed here in the event that any victim or supporter is able to find funding, facilities, and willingness to try to construct and demonstrate an Allan Frey type voice-to-skull transmitter. This table seems to lack the duty cycle (ratio of pulse-ON to pulse-OFF time) however with a test setup, that can easily be found by trial and error.

Signals like those shown in the table below were for experiments using a steady train of uniform pulses. To convey voice, some sort of variation in pulse width or rate needs to be tried, which again, like duty cycle, can rapidly be found by experimentation if facilities are available.

---

Carol Rutz was one of the \*child\* victims of the MKULTRA and related government "behaviour modification" programs. While A Nation Betrayed does contain her first-person story, a prospective reader should not assume it is just a testimonial.

By comparison with another top-notch source book on the MKULTRA atrocities, [Search for the Manchurian Candidate](#) by John Marks, you could say that Manchurian Candidate is a good image, while Carol's book is a much sharper image of the MKULTRA atrocities. Carol's research is at least as extensive as Marks'. Carol Rutz provides some testimonial but the testimonial is supported by a very substantial framework of well documented facts.

The main uses of this book for psycho-electronic experimentees are:

- to provide the experimentee with historical knowledge which can defeat the excuse, used by police and psychiatrists, that anyone who thinks government harasses citizens needs psychiatric treatment
- to provide the experimentee with historical precedent for public education efforts

This book shows clearly that morally bankrupt people in positions of authority are not particularly rare, and the moral bankruptcy extends even to torturing children.

The book is organized into these sections:

- 103 pages of combined factual and testimonial information
- 104 pages of transcribed MKULTRA and related documents
- 22 pages/299 referenced footnotes
- alphabetical index

The large amount of factual material makes this book very handy.

I wholeheartedly recommend that psycho-electronic experimentees obtain a copy of this book for use as a "pocket" or "handbag" reference for use when discussing mind control. I can tell you from personal experience while picketing that this book is a very powerful weapon on the side of truth and justice.

---

Note: Throughout the excerpted texts below, when you see a passage written IN UPPER CASE, that is my emphasis added. Text inserted in square [ ] brackets is primarily mine. Eleanor White

HISTORICAL PRECEDENTS

PREFACE - Page xiii and following:

- The government admitted wrongdoing in the 1932 Tuskegee experiments, where poor black African-American sharecroppers from Macon County, Alabama were allowed to go untreated for their syphilis so the effects could be studied.
- ...
- [!] THIS STUDY DID NOT END UNTIL 1972... twenty years after penicillin had been identified as an effective treatment for syphilis. On May 16, 1997, President Clinton apologized to the survivors and families of hundreds of men used in this research project.
- Twelve human "guinea pigs" were secretly injected with radioactive Plutonium 239 and uranium in government experiments in the 1940s. Energy Secretary Hazel O'Leary, in announcing the settlement of \$4.8 million to be paid to their families, said the government was "grateful" to the victims for "the tough lessons they have taught us about trust, responsibility, and accountability between the government and the people."
- Less known were such experiments as the feeding of radioactive cereal in the 1940s and 1950s to young male children who were institutionalized at the Fernald School in

Massachusetts.

...

The parents as well as the children were simply being told they were being fed a diet rich in iron.

...

...they were told they belonged to the Science Club to make them feel special and then taken to the MIT facility where it was easier to control them.

...

...and they had to eat a meal - every drop of it, because you wanted to be sure they got 100 percent of the radio-activity ...

- During the 1950s and 1960s Dr. Saul Krugman of New York University conducted studies of hepatitis at the Willowbrook State School, an institution for the severely mentally retarded. Krugman and his staff systematically infected newly arrived children between the ages of three and eleven with strains of the virus obtained from the feces of Willowbrook hepatitis patients.

...

Franz Ingelfinger, who later became the editor of the New England Journal of Medicine went even further by saying, "By being allowed to participate in a carefully supervised study and by receiving the most expert attention available for a disease of basically unknown nature, the patients themselves benefitted . . . How much better to have a patient with hepatitis accidentally or deliberately acquired under the guidance of a Krugman, than under the care of a RIGHTS-MINDED ZEALOT."

- Retarded children at D.C. Children's Center in Laurel MD in a section called the District Training School were used as human guinea pigs for both private industry and the government.

...They [thyroxin pills] ...caused tremors, nervousness, insomnia, and tachycardia. ... In October 1964 the FDA found the drug was not safe for use.

In 1962 the children were again used to test a drug for skin diseases, which doctors strongly suspected caused serious side effects to the human liver. More than half the children tested suffered some liver dysfunction. Eight were admitted to D.C. General Hospital for intensive care. That same year, 17 Laurel Center children were ...injected with thyroxin mixed with radioactive iodine.

...

As you can see, there was a clear pattern of using innocent children who had no way to protect themselves.

- Alexander Cockburn describes a 1960 Army Chemical Corps experiment where mosquitoes with yellow fever and dengue fever were dispersed in Savannah, Georgia and Avon Park, Florida. According to Cockburn, Carver Village, which was exclusively black, was the target for these experiments. Residents at the time reported fevers, bronchitis, typhoid, encephalitis, stillbirths, also mysterious deaths.

Dr. Alan W. Schefflin, Professor of law at Santa Clara University Law School, and a judicially recognized expert in mind and behaviour control, states in a letter dated March 9, 1995, that secret government mind control experimentation IS ONGOING and vastly more expansive than the government authorities are willing to admit. He is also co-author of a non-fiction book entitled The Mind Manipulators, which was published in a dozen countries. He says that he has been studying these secret programs since 1975 and it is his conclusion that there are at minimum hundreds, and most likely thousands of American citizens who were used as guinea pigs against their will in government research projects. WHAT HE DOES NOT SAY IS THAT MOST OF THE CHILDREN USED IN THESE EXPERIMENTS WERE SOLD BY ONE OF THEIR CARETAKERS IN THE NAME OF "NATIONAL SECURITY" AND SUBJECTED TO UNTOLD HORRORS AT THE HANDS OF THEIR GOVERNMENT. In light of so many abuses of power coming before the public in recent years, many adult survivors of these childhood experiments are stepping forward to be heard.

In October 1995 the President's Advisory Committee on Human Radiation Experiments reported that secret radiation experiments on indigent patients and mentally retarded children were not only done, but that these people were deceived about the nature of their treatments. Dr. William Silverman asserted that performing NONTHERAPEUTIC experiments on children without authorization from parents was part of a "broader ethos of time" in which "EVERYONE was a draftee in a national war on disease."

CAROL RUTZ IS DRAFTED

PREFACE - Page xvii:

As a survivor of CIA programs BLUEBIRD/ARTICHOKE and MKULTRA, I began my intense search to document some of the mind control experiments that I was made part of, STARTING AT THE TENDER AGE OF FOUR. Through a series of FOIA requests to various departments of the government, I have amassed an incredible amount of material that validates my personal experiences. THE CIA BOUGHT MY SERVICES FROM MY GRANDFATHER IN 1952.

Over the next twelve years, I was tested, trained, and used in various ways. Electroshock, drugs, hypnosis, sensory deprivation, and other types of trauma were used to MAKE ME COMPLIANT AND SPLIT MY PERSONALITY.

...

YOUR HARD EARNED TAX DOLLARS SUPPORTED THIS, as well as experiments on extrasensory perception and remote viewing, all of which I was tested and trained for.

CIA personnel were not opposed to working with [ex] Nazi doctors who had proven to be proficient in breaking the mind and rebuilding it.

Page xviii:

[FOIA documents from the CIA state:] "Learning studies will be instituted in which the subject will be rewarded or punished for his overall performance and reinforced in various ways - by being told whether he was right, by being told what the target was [in remote viewing experiments], WITH ELECTRIC SHOCK, ETC."

The [experiment] proposal then goes on to say, "In other cases drugs and psychological tricks will be used to modify his attitudes.

...

["Dissociative states" = "multiple personalities"]  
"The experimenters will be particularly interested in dissociative states, from the abaissement de niveau mental, to multiple personality in so-called mediums [ESP-focussed coercive experiments]; and AN ATTEMPT WILL BE MADE TO UNDUE A NUMBER OF STATES OF THIS KIND, USING HYPNOSIS."

Page 25:

[Carol speaking] Maybe my baby sister could take my place and I wouldn't have daddy's awful thing stuck in my face and mouth any more.

AMERICA IMPORTS NAZI SCIENTISTS

Chapter 1 - THE SPOILS OF WAR - Page 1 and following:

[Around V-E Day, May 7, 1945] Increasing attention was being given to shaping the postwar world. In 1943, the Allies felt compelled to issue a warning to those participating in atrocities, saying they would be hunted down and brought to justice. The Moscow Declaration said, "Let those who have hitherto not imbued their hands with innocent blood beware, lest they join the ranks of the guilty. For most assuredly, the three Allied powers will pursue them to the utmost ends of the Earth and will deliver them to their accusers in order that justice may be done.

HOW IRONIC THAT TWO YEARS LATER, THE UNITED STATES WAS MAKING ARRANGEMENTS FOR NAZI SCIENTISTS TO COME TO AMERICA.

On July 6, 1945, the Joint Chiefs of Staff specifically authorized an effort under the top secret project code-named OVERCAST, to "exploit... chosen, rare minds whose continuing intellectual productivity we wish to use." The Chiefs [of Staff] directed that up to 350 specialists, mainly from Germany and Austria, should immediately be brought to the United States.

...

In 1946 President Truman authorized PROJECT PAPERCLIP, whose code name was said to have originated because scientific recruits' papers were paper clipped with regular immigration forms. PAPERCLIP had two aims:

- to exploit German scientists for American research, and
- to deny these intellectual resources to the Soviet Union

In a confidential letter to President Truman's chief science advisor, RCA Chief David Sarnoff argued "the security for any nation henceforth depends ... to a very large extent on its place in the scientific sun. ... It is not only important that we get [Germany's] scientific information, but that we lay hands on the scientists as well..."

[Joint Intelligence Objectives Agency] JOIA Director Bosquet Wev was in charge of presenting dossiers to the U.S. Departments of State and Justice for approval. Some of the reports attached to the dossiers pointed out that they were "ardent Nazis." Some of the experts were accused of participating in murderous medical experiments at concentration camps. One was a fugitive from formal murder charges, and another was known to have established an institute for biological warfare on humans in Poland. Director Wev DECIDED TO START WITHHOLDING RECORDS AND NOT SUBMITTING THE CANDIDATES TO STATE AND JUSTICE.

In a wire to the director of intelligence at the U.S. European Command he wrote "[T]here is very little possibility that the State and Justice Departments will agree to immigrate any specialist who has been classified as an actual or potential security threat to the United States. This may result in the return [to] Germany of specialists whose skill and knowledge should be denied to other nations in the interest of national security. He then requested "THAT NEW SECURITY REPORTS BE SUBMITTED WHERE SUCH ACTION IS APPROPRIATE."

[I.E. HOLD BACK THE BAD STUFF!]

That one action by Wev would allow new dossiers to be made with the offending language taken out. How many Nazis were let into this country is still making headlines.

From page xi in the PREFACE:

A 1999 report to the Senate and the House said "that between 1945 and 1955, 765 scientists, engineers, and technicians were brought to the United States under OVERCAST, PAPERCLIP, and similar programs. It has been estimated that at least half, and perhaps as many as 80 percent of the imported specialists were former Nazi party members.

#### DOCUMENTED GOALS - MKULTRA AND RELATED EXPERIMENTS

Page 13:

After a while, when my grandfather started doing the same things and worse [sexual abuse], I learned to DISSOCIATE even more. I began creating separate parts or personalities to hold the memories of this trauma. The technical term is ALTERS. In a memo [CIA Mori ID 140401] dated six months before I was first used in experiments, BLUEBIRD [the project] states that practical - non-theoretical research be conducted and carried out. The nature of this research to include these specific problems:

1. Can we "condition" by post-hypnotic suggestion, agency employees (or persons of interest to this agency) to prevent them from giving information to any unauthorized source or for committing any act on behalf of a foreign or domestic enemy?

2. Can we, in a matter of an hour, two hours, one day, etc. induce a hypnotic condition in an UNwilling subject to such an extent that he will perform an act for our benefit? (Long range)
3. Can we create by post-hypnotic control an action contrary to an individual's basic moral principles?
4. Could we seize a subject and in the space of an hour or two by post-hypnotic control have him crash an airplane, wreck a train, etc.? (Short, immediate activity)

[The list continues for a total of 20 items like these.]

Page 28 - 29:

The 15 categories of subprojects were:

13. Single subprojects in such areas as the effects of electroshock, HARASSMENT TECHNIQUES FOR OFFENSIVE USE, ...

Under [Allen] Dulles, MKULTRA funnelled funds to 185 non-government researchers and assistants working for 80 institutions. These institutions included 44 colleges or universities, 15 research foundations or chemical or pharmaceutical companies and the like, 12 hospitals or clinics, and 3 penal institutions.

THE SHADOW GOVERNMENT

Page 31:

As High Commissioner of occupied Germany, John McCloy was instrumental in the early release and commutation of numerous Nazi war criminals. In October 1950, he commuted the five-year sentence of Baron Ernst von Weizsacker, who as a Nazi Foreign Office official had been convicted of complicity in the deportation of some six thousand Jews from France to Poland. In January of the following year, McCloy announced that five of the fifteen death sentences from the Nuremburg judgements would be carried out. He then reduced the sentences of sixty four of the remaining seventy four war criminals. One third of these were to be released immediately.

He also reduced the sentences of all the remaining convicted doctors who had experimented on concentration camp inmates. One SS officer who confessed to having personally executing fifteen hundred Jews was reprieved because he had later refused to carry out any further murders.

...

Page 32:

One must ask the question, "How could a man who was responsible for such actions, rise to such power in the government and private circles of the United States? Prior to the War, McCloy was a senior partner with Milbank, Tweed, whose most important client was the Rockefeller family's bank, Chase National. ...

...

In 1947, McCloy was named to head the World Bank, which was made up of 40 countries with \$8 billion in assets. McCloy and two other board members spent three months in Nelson Rockefeller's personal home organizing the bank along commercial lines.

In 1948, McCloy participated in a classified study of the CIA. He attended weekly meetings where he questioned CIA Director Rear Admiral Roscoe H. Hillenkoetter, George Kennan, Frank Wisner, and many other officials of the State Department and National Security Council. He recommended that the CIA should be given autonomy...

...

In the 50s McCloy became chairman of the Chase National Bank and David Rockefeller became his protege. He and David were both members of the COUNCIL ON FOREIGN RELATIONS. Also members of the CFR were [CIA head] Allen Dulles, Henry Kissinger [accused as an MKULTRA perp by another victim], and Henry Heald, president of the Ford Foundation.

...

Page 33:

To say that John McCloy rubbed shoulders with some of the most influential people of that decade (1950s) is an understatement.... In fact, Henry [Kissinger] served as a consultant to the president's PSYCHOLOGICAL STRATEGY BOARD, which [J. Edgar] Hoover regarded as a RIVAL INTELLIGENCE GROUP. C.D. Jackson, the chief of the Psychological Strategy Board, frequently consulted with McCloy. Kai Bird referred to this as "A NEW RATHER SHADOWY EXECUTIVE AGENCY THAT WAS SUPPOSED TO HELP COORDINATE COVERT INTELLIGENCE WITH SOPHISTICATED PROPAGANDA PROGRAMS."

...

[C.D.] Jackson said, "The three big ingredients of 'psychological warfare' [TOWARD OUR ALLIES] are money, no holds barred and no questions asked."

Page 34:

... In fact, years later when President Gerald Ford established a presidential commission to investigate the CIA, Vice-President Nelson Rockefeller was named to head it. John Loftus reports that knowledgeable observers compared the appointment to setting the fox to guard the hen house, because of Rockefeller's links to the intelligence community and his knowledge of covert activities.

...

Page 35:

Shadow Government was indeed an appropriate name for the people who would move behind the scenes TO ENLIST CHILDREN to fight the Cold War for them by making them guinea pigs, and in some cases HYPNOTIZED OPERATIVES, spies, assassins and couriers.

TRAINING FOR THE AGENCY

Page 37:

Precautions must be taken not only to protect operations from exposure to enemy forces BUT ALSO TO CONCEAL THESE ACTIVITIES FROM THE AMERICAN PUBLIC IN GENERAL. The knowledge that the Agency is engaging in unethical and illicit activities would have serious repercussions in political and diplomatic circles and would be detrimental to the accomplishment of its mission.

-- CIA Inspector General in assessing the benefits of Mind Control Reserch

[Carol:] I was told that I worked for "The Agency". It was in actuality key men and women in the CIA AND OTHER BRANCHES OF GOVERNMENT, IN LEAGUE WITH CERTAIN EXTREMELY WEALTHY INDIVIDUALS who wanted to REMAIN IN THE SHADOWS SHAPING THE OUTCOME OF WORLD EVENTS.

...

Page 38:

Early on, an information hot line was established between these people of money and power, and people like Allen Dulles, Sidney Gottlieb, Richard Nixon, and others. This hot line enabled them to be kept informed of the content of these [mind control] experiments and who was participating. They, in turn, found ways of blackmailing certian of these politicians, doctors, and scientists, so that they could manipulate some of these experiments. They hoped to eventually benefit PERSONALLY from certain research findings.

MANY OF THE EXPERIMENTS STARTED UNDER BLUEBIRD, ARTICHOKE, AND MKULTRA CONTINUED BEHIND THE SCENES, COVERTLY AND INDEPENDENT OF THE FUNDING AND KNOWLEDGE OF MOST OF OUR GOVERNMENT BLACK PROJECTS WITH BLACK BUDGETS. Berton Herish, describes the no-questions-asked as giving "rise to that generation's intelligence barons, its mysterious mission-oriented professionals who held themselves accountable to nobody, UNCONCERNED WITH CONSTITUTIONAL LIMITATIONS."

Page 41:

The Agency arranged with Grandfather to start my sexual training in 1954. Being the pedophile that he was, I'm sure he thoroughly enjoyed the part they gave him in my training.... I was forced to participate in a traumatizing rite of manhood for my twelve year old brother on Grandfather's pool table in the basement....

Page 42:

Ashes are all that would remain of me [Carol] if I didn't cooperate.

Page 44:

Peter Breggin in *Toxic Psychiatry* tells how H. C. Tien, a Michigan psychiatrist, would draw attention in the late 1970s and early 80s by using electroshock to OBLITERATE AND REPROGRAM THE MIND OF A WOMAN TO MAKE HER A MORE SUITABLE HOUSEWIFE. He would utilize ECT (electro convulsive therapy) to REASE MEMORY AND PERSONALITY, thereby eradicating the woman's identity; in order to REPROGRAM it according to a "blueprint" WORKED OUT WITH THE HUSBAND PRIOR TO THE SHOCK. Tien called his method "ELT", explaining that E is for electricity, L is for LOVE, and T is for therapy. I'm quite sure this is what [Carol's] daddy had hoped to accomplish with momma, but it never lasted....

Pages 47 - 48:

These were the methods that Ewen Cameron used on me while my mother was institutionalized. I was about twelve years old and what Dr. Cameron did to me became burned into my mind. First, I was given a shot of curare and placed in a box in a converted stable behind the hospital that housed a behavioural laboratory. THEN SNAKES WERE PUT OVER MY BODY AND THE LID WAS CLOSED ON THE BOX...

...

In 1991 at the time I "relived" this, I had no knowledge of who Dr. Cameron was, let alone his inclusion in the MKULTRA CIA experiments. When I first saw a picture of this man, I became violently ill.

Page 50:

xxxiv ... In September 1985 an article appeared in Advanced Technology Report - Defense & Foreign Affairs page 35 saying "...In California, it is rumored, a University sponsored experiment [in psychokinesis] has found that brain waves emitted by patient volunteers in a mental hospital have successfully controlled the switching of electric trains, making them go and stop at will. Sources said it even has a name by which it is known around DARPA (Defense Advanced Research Projects Agency) as "PSYCHOTRONICS".

Page 53:

[MKULTRA hearings testimony by psychologist John Gittinger] In further testimony he said, "By 1962 and 1963, the general idea we were able to come up with is that BRAINWASHING was largely a process of ISOLATING a human being [FAMILIAR, fellow in-community psycho-electronic targets?], PUTTING HIM UNDER LONG STRESS in relationship to interviewing and interrogation, and that they could produce any change that way without having to resort to any kind of esoteric means.

[Eleanor White: BUT, esoteric means sure make the job easier!]

Pages 56 - 57:

On May 26, 1995, The Herald (Glasgow) broke a story "Brainwash Killers Still in Use". They reported that a top-secret project in the former Soviet Union in the 1970s turned soldiers and security agents

into programmable "human weapons". They said the psychological weapon project relied on hypnosis and high frequency radio waves to turn members of the Soviet security forces into fearless, conscienceless fighting machines. The PSYCHOTRONIC INFLUENCE SYSTEM RELIED ON PASSWORDS [i.e. "TRIGGERS"] AND NUMBERED CODES TO ACTIVATE ITS SUBJECTS.

After the KGB project's existence was made public, hundreds of former Soviet soldiers, police, and KGB members sought health damages. Not so different from what the Agency [CIA] was attempting to do to me [Carol].

Page 58:

[Eleanor White: Possible link to [plant ESP phenomena.](#)]

An April 1972 document says "It may be worth considering that psychokinesis [psychic movement of objects] occurs via an energy 'exchange' or communication between the experimenter and the object." Then a P.S. is added ... "Would like to file with PLANT SENSORS file."

[Back to Carol's testimony:]

The experiments Ewen Cameron used with me were similar to what Dr. Bekhtereva was doing at the Bekhtereva Brain Institute in Leningrad. Instead of using radioactive isotopes, she bored tiny holes into the patients' skulls and inserted gold electrodes (bunches of six to eight coated wires) that were each one twelfth of an inch shorter than the next. As a result, each then monitored a different level of cells....

...

...Her methods were also very similar to the experiments Dr. Wilder PENFIELD of McGill University performed on me sometime between 1957 and 1960. Dr. Penfield worked with Dr. Donald Hebb at Montreal Neurological Institute (MNI).... Dr. Hebb went on to become chairman of the Psychology Department of McGill University during the 50s and WORKED CLOSELY WITH CANADIAN AND U.S. INTELLIGENCE. He had a special CIA security clearance issued to him in the early 1960s. Hebb's study TO INVESTIGATE THE EFFECTS OF ISOLATION ON ATTITUDE CHANGE was commissioned by the Canadian Government in 1951. I mention this because there will be great skepticism that the esteemed Wilder Penfield would have taken part in any such experiments. It seems many doctors in Montreal WERE WILLING TO BE FUNDED BY COVERT MEANS.

...

Page 60:

The memories of Dr. Penfield's experiments on me began with my arrival in Canada aboard a plane met by the Royal Canadian Mounted Police. There was a red carpet out for the dignitaries aboard this plane. Before we landed I was given a shot and smuggled into [Canada] in a box. I was taken to Braehead on McGill [University's] campus. I had recurring dreams of this place for the next 30 years...

Page 61:

Maitland Baldwin, a former student of Dr. Penfield ... Baldwin agreed to do sensory deprivation experiments for the CIA if they would PROVIDE COVER and the SUBJECTS for this "terminal type" experiment. According to [McGill experimentee Anne Collins]

account in *In The Sleep Room*, Baldwin pressed for an "ANTAGONISTIC SUBJECT that he could force to a TOTAL BREAKDOWN in the box..." ... He went so far as to say that "ANYONE GOING THROUGH A COMPLETE BREAKDOWN WOULD COME OUT WITH SOMEWHAT LOWERED MENTAL FACULTIES."

Page 62:

At any time he desired, the investigator could palpate the scalp and find the location of each of the [previously planted via drilled holes] sleeve guides [through the experimentee's skull]. Once one was found, he inserted a needle so through the scalp into the sleeve guide, down through the bone, and penetrated the dura [the brain's cover]. After withdrawing the needle, the investigator placed a sharp electrode in the track made by the needle and pressed the electrode through the scalp, through the skull, through the dura, and down into the substance of the brain itself to any desired depth. I feel blessed that I have been spared this memory.

Page 64:

This drawing [on page 64] of the experiment that Wilder Penfield performed on me was made before I found this picture of a stereotaxic instrument that is attached to the head before surgery. This was not the first time I had left my body and watched from above when things were too intolerable to bear. I was quite shocked to find an actual medical instrument that matched my drawing.

Page 65:

[Santa Clara Law Professor] Alan Schefflin reports on some of the children who received stereotaxic surgery ... because they suffered from behavior problems such as "wandering". ... Two groups were as young as two and four years old when surgery took place for "violent behavior".

Page 67:

Gordon Cooper, one of the original seven Mercury astronauts, CONFIRMED THE EXISTENCE OF A MIND CONTROL PROGRAM ADMINISTERED BY NASA... He went on to describe how NASA's mind control program emphasized cultivation of the children's psychic abilities and that it involved telepathy, remote viewing, and out of body experiences.

Nowadays remote viewing is routinely discussed over coffee as a means to find buried treasure under the ocean. Remote viewing seemed part and parcel of the supernatural to many in the fifties, sixties, and seventies, but now it has become commonplace.

I [Carol] am but one of the many children who were the CIA's convenient experimental subjects, used to try and perfect similar results here in the United States. [I.e. the psychic results.] Because of our youth and the severe traumatization we were put through, these men felt we would never tell our stories; and if we did, they felt we would never be believed. OUT OF RESPECT FOR MY ADULT CHILDREN, I HAVE NOT INCLUDED SOME OF THE TRAINING I WAS FORCED TO ENDURE. LIKEWISE, I HAVE NOT NAMED SOME OF THOSE LIVING AND DEAD WHO PERPETRATED HEINOUS DEEDS OF WHICH I WILL NOT SPEAK. I wish to remain among the living.

[Eleanor White: If you endured heinous deeds so bad they are worse than what you write about in this book, they are BAD deeds!]

Page 67 and following:

Dr. Corydon Hammond delivered a lecture in 1992 describing some of the programming he had encountered. Many other doctors have likewise found these same types of programmed alters [multiple personalities] in survivors of government mind control. Most survivors seem to have more than one level of programming.

- ALPHA is general programming within the control personality.
- BETA is sexual programming, i.e. child pornography, prostitution, and sexual training use for the benefit of a handler for blackmail or personal use. This programming eliminates all learned moral conviction from the survivor, so that the function can be carried out without inhibition.
- DELTA is a trained killer, a sleeping assassin. Delta survivors feel no fear and have been trained in the use of specialized arms and alternative methods of disposal. Sirhan Sirhan had total amnesia of the killing of Robert Kennedy, but under hypnosis remembered it. Mr. Sirhan's lawyer, Lawrence Teeter, says his client was programmed to kill Kennedy by government agents who wanted to prolong the Vietnam war.
- THETA is PSYCHIC killing, such as the training I [Carol] was involved in. Most survivors with THETA programming exhibit an unusually high level of ESP in their day to day lives....
- OMEGA is self-destruct programming installed in the event a survivor would start remembering. It was used to prevent them from going public....

Page 68:

...

As explained in *Secret Weapons*, a second area of funded research was the programming Sidney Gottlieb cobbled together for the purpose of turning children into warriors who would be perfect [Manchurian Candidates](#), perfect spies, and assassins who are IGNORANT OF THEIR ORDERS, fitting into a society easily and anonymously; until a code or TRIGGER is used to awaken them and send them into action.

THE NAZI DR. JOSEF MENGELE'S MKULTRA EXPERIMENTS

[ELEANOR WHITE'S NOTE: CAROL REFERS TO THE MAN SHE IS CERTAIN WAS DR. JOSEF MENGELE AS "DR. BLACK" IN THIS BOOK.]

Page 10:

Genetic research was indeed one of the major interests of Dr. Joseph Mengele. During one of the experiments I was forced to endure at the hands of Dr. Black, he referred to me as a "Mengele kid". After seeing photographs of him from the fifties and sixties, I believe Dr. Black was an alias that the "Angel of Death", Josef Mengele, used while doing mind control experiments under Project MKULTRA, after his disappearance from Auschwitz on January 18, 1945.

Page 69:

Mind Control Survivors have identified different doctors used by the CIA under Project MKULTRA as having different ALIASES. It seems COLORS were one of the most commonly used themes. Claudia Mullen and Chris Denicola, two survivors who testified before the President's Advisory Committee on [Human Radiation Experiments](#) in March 1995 identified a Dr. Green. Claudia Mullen identified Dr. Green as an alias used by Dr. L. Wilson Green, Technical Director of the U.S. Army Chemical and Radiological Laboratories. Chris Denicola was FOUR YEARS OLD when she says Dr. Green used electroshock in conjunction with other forms of torture and drugs to program her. Some survivors say that Dr. Ewen [Cameron](#) went by the alias Dr. White.

MANY SURVIVORS have identified [Nazi torturer] JOSEF MENGELE as using the aliases Dr. Green, Dr. Black, Dr. Swartz (black in German), Father Joseph, or Vaterchen (daddy) when he did their programming. The experiments and programming he used on us were of such a heinous nature that they were not unlike some of those performed at AUSCHWITZ. I have personally spoken and corresponded with many of these child Cold War survivors who have agreed to let me recount some of THEIR mind control and brainwashing experiments by the man they believed to be Josef Mengele using one of the above aliases and other CIA or military doctors.

[ELEANOR WHITE'S NOTE: THIS IS NOT IDLE CONJECTURE. CAROL HAS COLLECTED FOUR PHOTOGRAPHS OF DR. JOSEF MENGELE FROM A WEB SITE DEVOTED TO CRIME RESEARCH: <http://www.crimelibrary.com/mengele/research.htm> AND INCLUDED THEM ON PAGE 99. She has included in this book considerable research which follows the career of this consummately evil man.]

Page 70:

After an abortion performed on me in Montreal, Canada when I was twelve, Dr. Black harvested eggs. I can only assume from what he showed me a few years later that he was playing God and tampering with genes to create a "Super Race". He undoubtedly was doing test tube fertilization with those eggs. Unfortunately his early experiments produced children with GROSSLY ENLARGED HEADS. He showed me two of these poor children when I was 16 years old and told me they were mine. I still grieve for them and what has become of them remains a mystery to me...

...

It usually takes twenty years or more before tests conducted secretly by the government become known to the public via privately researched tests....

Page 71:

French Government documents state that the Americans had captured Mengele in late 1946. According to the French, Mengele was known to be the "notorious camp doctor from Auschwitz, and was released without explanation by the Americans on November 19, 1946." The French claimed that the American authorities confirmed the Mengele arrest AND RELEASE on Feb. 29, 1947. [EW note: Can't be Feb. 29 in 1947]

Page 74:

John Loftus said, "A pentagon official acknowledged recently that Military Intelligence sent so many Nazis to South America that one

government [of South America] 'passed the word that they would not take any more.' " ...

Page 80:

FROM A SURVIVOR WHO CONFIDED THIS TO CAROL:

As he [Mengele, aka Dr. Black] got older and turned gray, he called himself 'Grandfather'. ... I think the insidious part of his work with me was the LOVE thing. He would LOVE me, and TORTURE me. Whatever he did had that element. ... One of Mengele's favorite phrases was, "PAIN IS PLEASURE, AND PLEASURE IS PAIN, MY DEAR. I AM HERE TO MAKE YOU HAPPY. YOU WILL LOVE ME FOREVER."

...

FROM A SURVIVOR WHO CONFIDED THIS TO CAROL:

I remember being on the floor with him playing piano in nothing but his boots and a tuxedo coat with tails, as he ordered the men working with him TO SHOCK ME WITH CATTLE PRODS WHILE HE PLAYED. IT WAS SORT OF LIKE MUSICAL CHAIRS -- WHEN HE STOPPED PLAYING, THEY STOPPED SHOCKING...

Page 81:

BACK TO CAROL TALKING:

[In 1956] I had a rude awakening when I didn't go directly home [from a "vacation" in Ohio], but was taken on a long drive by my dad to a rural looking place with a winding road that let up to an airplane hangar. Inside, suspended from the rafters in the ceiling (operated by pulleys) WERE CAGES WITH NAKED KIDS IN THEM. It seemed like most were younger than I. I was placed in one of these cages, and like the others, deprived of food and water. I became very cold and continually hunched over to hide my nakedness. EVERY TIME I TRIED TO SLEEP, SOMEONE WITH A CATTLE PROD REACHED THROUGH THE BARS AND POKED ME. [FAMILIAR, FELLOW PSYCHO-ELECTRONIC TARGETS?] He had very long nails and seemed to enjoy this torture....

When he wasn't torturing one of us kids, he stood on the ground with Dr. Black. They both smiled evil grins, and our tears had absolutely no impact on them.

Page 82:

The purpose of all this torture was TO PREPARE US FOR PROGRAMMING. There was a hospital where each of us was taken after the torture made us COMPLIANT. The training I had involved easels and blackboards. This was where I was taught about the meridians of the body, and shown how to run energy up and down these meridians. It was preparation for later experiments in which I would use my mind to PSYCHICALLY KILL...

Trauma based programming was theoretically the reason for some of the torturous things perpetrated on survivors. It was the cruelest form of mental brainwashing, and left the child completely disassociated and open to programming. Josef Mengele was a master at this.

Page 83:

A Canadian survivor remembers Mengele showing up at a Catholic orphanage three times a year for two weeks in 1959, 60, 61 and 62. He went by the

name of Father Joseph and USED DRUGS AND HYPNOSIS in his programming of this [Canadian] survivor to connect ELECTRONIC TONES [FAMILIAR, PSYCHO-ELECTRONIC IN-COMMUNITY EXPERIMENTEES?] to colored geometrically shaped building blocks.... The scents were later connected to tuning-fork tones for the purpose of specialized programming. This was done by selecting certain vertebrae for electric shock, while playing the tone and administering the scent.

FROM ANOTHER SURVIVOR WHO CONFIDED THIS TO CAROL:

Page 86:

[Possibly the summer of 1959] (Author's note: I have intentionally left the sexual trauma part of [this survivor's] memory out do as to not traumatize those readers who are survivors.)

She continues: "I came too and the room was darker. The doctor's penis no longer stuck out. He was playing with a long black electrical cord. It may have been 240 volts because the two exposed wires were rounder and harder looking than a conventional 120 volt cord. He made it wiggle along the floor like a snake while I watched it slither around on the floor (wooden, I believe). He told me alternately that it was his "pet" and his "friend". He said he had "tamed" it and wanted to use it to "tame" me. Several times he touched the ends to my arm. It was not live yet, so there was no discomfort. I relaxed more when I realized it wasn't on (dad had tortured me previously with electrified wires.)

Dr. Black even tickled my right underarm with the end and I giggled.

Page 87:

...

The next thing I could remember, he made me lay on my stomach on the floor. He somehow attached chains to my wrists and ankles using rather wide, black leather restraints. He then took what may have been a cattle prod and put it on my back. I screamed internally and strained at the restraints, but I already - as previously conditioned by my father - knew not to physically scream or cry. I already knew that if I did, the man might be that much crueler. I believed it was in my best interest to bear the intense pain until it was over.

Then Dr. Black inserted the object into me 'down there' from behind. It was so painful that I still do not know if it was rectal or vaginal. It doesn't seem to matter anyway, because the electric charge hits the nervous system, everything hurts and contracts in a hellish fashion.

I did start saying aloud over and over again, 'I'm sorry' (for what didn't matter) and 'I'll be a good girl, I promise, I promise.'

Page 88:

Dr. Black reinforced this alter state [one of multiple personalities invoked by experiments as described above] by having [her] dad bring in a baby bird that was so new that its eyes weren't even open yet. ... Because the rage made me much stronger than I usually am, I pulled the baby bird's head off...

### **Subvocal Speech Demo**

NASA scientists have begun to computerize human, silent reading using nerve signals in the throat that control speech. In preliminary experiments, NASA scientists found that small, button-sized sensors, stuck under the chin and on either side of the 'Adam's apple,' could gather nerve signals, send them to a processor and then to a computer program that translates them into words.

"What is analyzed is silent, or sub-auditory, speech, such as when a person silently reads or talks to himself," said Chuck Jorgensen (pictured), a scientist whose team is developing silent, subvocal speech recognition at NASA Ames Research Center in California's Silicon Valley.

NASA scientists have begun to computerize human, silent reading using nerve signals in the throat that control speech. In preliminary experiments, NASA scientists found that small, button-sized sensors, stuck under the chin and on either side of the 'Adam's apple,' could gather nerve signals, send them to a processor and then to a computer program that translates them into words.

"What is analyzed is silent, or sub-auditory, speech, such as when a person silently reads or talks to himself," said Chuck Jorgensen (pictured), a scientist whose team is developing silent, subvocal speech recognition at NASA Ames Research Center in California's Silicon Valley.

*Please credit photo to NASA Ames Research Center, Dominic Hart.*

Photo No. **ACD04-0024-002**

To learn more about what is in the patterns of the nerve signals that control vocal chords, muscles and tongue position, NASA Ames scientists are studying the complex nerve signal patterns. "We use an amplifier to strengthen the electrical nerve signals. These are processed to remove noise, and then we process them to see useful parts of the signals to show one word from another," Jorgensen said.

After the signals are amplified, computer software 'reads' the signals to recognize each word and sound. "We use neural network software to learn and classify the words," Jorgensen said. "It's recognizing the pattern of a word in the signal."

*Please credit photo to NASA Ames Research Center, Dominic Hart.*

Photo No. **ACD04-0024-003**

In their first experiment, scientists 'trained' special software to recognize six words and 10 digits that the researchers 'repeated' subvocally. Initial word recognition results were an average of 92 percent accurate. The first sub-vocal words the system 'learned' were 'stop,'

‘go,’ ‘left,’ ‘right,’ ‘alpha’ and ‘omega’ and the digits ‘zero’ through ‘nine.’ Silently speaking these words, scientists conducted simple searches on the Internet by using a number chart that represents the alphabet to control a Web browser program. Please credit photo to NASA Ames Research Center, Dominic Hart.

"We took the alphabet and put it into a matrix -- like a calendar. We numbered the columns and rows, and we could identify each letter with a pair of single-digit numbers," Jorgensen said. "So we silently spelled out ‘NASA’ and then submitted it to a well-known Web search engine. We electronically numbered the Web pages that came up as search results. We used the numbers again to choose Web pages to examine. This proves we could browse the Web without touching a keyboard," Jorgensen explained.

*Please credit photo to NASA Ames Research Center, Dominic Hart.*

Photo No. **ACD04-0024-004**

A second demonstration will be to control a mechanical device using a simple set of commands, according to Jorgensen. His team is planning tests with a simulated Mars rover. "We can have the model rover go left or right using silently ‘spoken’ words," Jorgensen said.

*Please credit photo to NASA Ames Research Center, Dominic Hart.*

**22 January 1998**

**Advances in neuroscience 'may threaten human rights'**

**Paris.** Neuroscience is being increasingly recognized as posing a potential threat to human rights, just as another area of biology - research in human genomics -- may lead to an excessive focus on genetic determinism and raises the spectre of genetic discrimination. This was one of the conclusions to emerge from the annual public meeting of the French national bioethics committee held last week in Paris on the theme of 'Science and Racism'.

Jean-Pierre Changeux, the chairman of the committee and a neuroscientist at the Institut Pasteur in Paris, told the meeting that understanding the working of the human brain is likely to become one of the most ambitious and rich disciplines of the future.

But neuroscience also poses potential risks, he said, arguing that advances in cerebral imaging make the scope for invasion of privacy immense. Although the equipment needed is still highly specialized, it will become commonplace and capable of being used at a distance, he predicted. That will open the way for abuses such as invasion of personal liberty, control of behaviour and brainwashing. These are far from being science-fiction concerns, said Changeux, and constitute "a serious risk to society".

Denis Le Bihan, a researcher at the French Atomic Energy Commission, told the meeting that the use of imaging techniques has reached the stage where "we can almost read people's thoughts".

The national bioethics committee is taking such threats so seriously that it is launching a study to consider the issues and recommend possible precautions. The study will also cover more immediate issues such as the legal question of whether criminals are responsible for their actions; Changeux predicts an increase in defence arguments based on irresponsibility due to a genetic predisposition to certain types of behaviour.

In closing the meeting, Claude Allègre, the minister for national education, research and technology, hinted at the creation of a revamped parliamentary office of technology assessment, arguing that the national bioethics committee's approach in the life sciences needed to be applied to other areas of science.

## **Calls to NCVC Show Huge Scale of Organized Stalking Crimes in the U.S.**

**October 30, 2009**

Below is an affidavit of an organized (sometimes called "gang") stalking target who made a series of calls to the U.S. National Center for Victims of Crime (NCVC). The NCVC is a non-government organization which receives support and cooperation from the U.S. government in the area of services to victims of crime.

The NCVC maintains a stalking victim resource branch, to serve victims of stalking, and, to educate the public and other organizations about the crime of stalking.

For a couple of decades, targets have been repeatedly told that organized or group stalking doesn't happen. That may be changing a little, thanks to [these statistics](#) from the U.S., Canada, and the United Kingdom. The NCVC has been asked for help for targets of organized stalking and to date has not offered any.

A target, Keith, recently pressed NCVC staff for at least an estimate of the size of the organized (or as Keith called it, "gang") stalking calls NCVC receives. He made several calls, and here below is Keith's affidavit describing the responses of NCVC staff.

As to credibility, I don't know Keith well, but I do have his contact information and I know where I can access the original affidavit. I suggest that as a minimum, the sworn testimony of a target is as credible as the testimony of sworn witnesses in a court of law. Furthermore, from my almost 30 years as a target and almost 14 years as an activist, Keith's statement below sounds reasonable to me.

Here are redacted scans of the affidavit:

AFFIDAVIT OF KEITH [REDACTED]

I swear that the following is true and correct under the pains and penalties of perjury pursuant to the laws of these United States:

1. My name is Keith [REDACTED], and I reside at [REDACTED], New York. [REDACTED] I am a licensed attorney in the state of New York.
2. On or about October 29, 2008 I called the National Center for Victims of Crime's ("NCVC") telephone help-line at 800-394-2255 and spoke to a victim advocate employee. I asked her if she was aware of gang stalking and if she offered any help. During that conversation she told me she was aware of gang stalking, but, that it was not a crime that NCVC provided any referral or help for. She also acknowledged that a large number of calls were regularly coming through the hotline regarding gang stalking from all around the United States. Upon being asked to estimate the number of gang stalking calls she received, she said ten (10) percent of the average call volume during her shift. She also admitted that NCVC kept "tallies" on the different types of complaints it received over the hotline from victims. Shortly thereafter I called back and spoke with another hotline advocate and she also estimated that 10 (ten percent) of the calls she received were gang stalking complaints. She admitted this meant thousands of calls per month. No victim advocate I spoke with, at this point or thereafter, would identify themselves, even by first name, unless I asked them to. I spoke with at least a total of seven victims advocates in the course of my conversations with NCVC.
3. Shortly thereafter, I called a third hotline advocate and asked her whether she could send me information regarding gang stalking complaints received by NCVC including statistics and/or tally numbers if she received supervisory approval. She informed me I would have to speak to her supervisor who she identified as Colleen. I asked when Colleen would be available to speak and she told me the next day.
4. On or about October 30, I called NCVC several times and finally got through to Colleen. I had a conversation with her and she acknowledged that she was familiar with the gang stalking calls being regularly received by NCVC. When I asked her to put something in writing regarding the gang stalking complaints being regularly received by NCVC, preferably with statistics, and send it to me, she told me she would not "memorialize" it in such a manner. I then asked for her supervisor's name and contact information. She then took my name and contact information, including my e-mail address. She first refused to tell me her supervisor's name. After I complained that she had taken my name and contact information she relented and told me his name was "Kevin". I found this type of secrecy in a non-governmental organization peculiar.
5. Later that same day, on or about October 30, 2008, I spoke with Kevin via a phone call I received from him. He identified himself as the Director of Victim's Services at NCVC. He acknowledged that organized gang stalking complaints were regularly

coming in to the hotline, and, further stated that no help or referral was being given. He said he had no organization to refer these complaints to for help, and, the role of NCVC was largely that of a referral service to government and private victim support organizations. He told me he would put together some information related to the gang stalking problem, and, try to include statistics. We agreed that said letter would be e-mailed by NCVC to my e-mail address on NCVC's letterhead. He said that he would first have to clear the transmission of this information with the United States Department of Justice "DOJ" because there was a clause in NCVC's federal funding contract with DOJ that made all of NCVC's internal information and records subject to DOJ control. When I clarified that this meant that DOJ had a property right to the information he agreed this was accurate. He said, however, that he did not foresee this being a problem and expected I would receive the information on gang stalking. The conversation was wholly amiable in tone from start to finish.

6. The next day, on or about October 31, 2008, I received an e-mail from The Executive Director of NCVC Mary Lou Leary denying my request. I later learned that Ms. Leary was a former U.S. Attorney and Assistant Attorney General for the United States Department of Justice.
7. On August 17, 2009 I made a follow-up call to the NCVC's Stalking Forum and told them I was having a problem with gang stalking in New York City. The telephone Victim's Advocate was kind enough to respond that her name was Paula. She was very knowledgeable about gang stalking, which she also referred to as group stalking. She admitted that the management of the NCVC were aware of gang stalking. When pressed for an anecdotal ballpark figure about the percentage of calls related to gang stalking she reflexively became very vague. She stated that she was instructed not to give out statistics on gang stalking even orally to a victim. She did state that it could be thousands of calls, but, because of afore-mentioned instructions by management she could not verify an actual number.

Dated: October, 20 2009  
Queens, New York

Keith [redacted], Esq.  
Keith [redacted], Esq.

Sworn before me this 20 day of  
October, 2009

Maria E. Cusenza  
NOTARY

Maria E. Cusenza  
Notary Public, State of New York  
No. 01C6158964  
Qualified in Queens County  
Commission Expires 1/16/2011

Bottom line: NCVC indicated to Keith by phone, but refused to commit in writing, that "gang" or "organized" or "group" stalking could well account for 10% of their calls, and that would indicate thousands of calls per month, as this is a large national organization.

For an online booklet about organized stalking, (which is often accompanied by electronic harassment,) see: [osatv.pdf](#)

## **Mind Control & Related Articles by Writer Nessie of the San Francisco Bay Guardian**

---

The articles referenced below are by San Francisco Bay Guardian's on-line columnist "Nessie", a pseudonym. "Nessie" writes on many topics including involuntary psycho-electronic experimentation, aka "mind control". He also writes about "micro-radio" aka "pirate radio" aka "free radio", which is broadcasting at low power levels without a licence. Since the mainstream media refuse to report on mind control, micro-radio is a related topic.

Both mind control and micro-radio articles are included here.

For the record, I, Eleanor White, do not necessarily agree with everything Nessie writes, but it is still uplifting to imagine a world in which most or all journalists are as honest as "Nessie" is.

Emory University asked to Halt Neuromarketing Experiments

[Emberton](#), 12/18/2003 - [Add a comment](#)

Commercial Alert and prominent psychology experts sent a letter today to Emory University President James Wagner, requesting that Emory stop conducting neuromarketing experiments. These medical experiments on human subjects are unethical because they will likely be used to promote disease and human suffering.

If Emory University is found to have violated federal ethics rules regarding experiments on human subjects, it may lose its federal research funding.

Neuromarketing is a controversial new field of marketing which uses functional Magnetic Resonance Imaging (fMRI) – a medical technology -- not to heal, but to sell products. A BrightHouse Institute for Thought Sciences news release issued June 22, 2002 explains that it uses fMRI “to identify patterns of brain activity that reveal how a consumer is actually evaluating a product, object or advertisement. Thought Sciences marketing analysts use this information to more accurately measure consumer preference, and then apply this knowledge to help marketers better create products and services and to design more effective marketing campaigns.”

The BrightHouse Institute’s neuromarketing experiments are conducted in the neuroscience wing of the Emory University Hospital.

The letter to Emory University President James Wagner follows.

Dear Mr. Wagner:

The realm of marketing and market research has never been a model of ethical scruple. But recent developments there are truly macabre in their implications. The hucksters have enlisted research labs to map the brain’s activation responses in order prod desires for particular products.

This new field is called “neuromarketing.” It seeks, in the words of Forbes magazine, to “find a buy button inside the skull.” It sounds like something that could have happened in the former Soviet Union, for the purposes of behavior control. Yet it is happening right here in America, at a major university – your university. “The neuroscience wing at Emory University,” the New York Times reports, “is the epicenter of the neuromarketing world.”

That is a dubious honor. Universities exist to free the mind, and enlighten it. They do not exist to find new ways to subjugate the mind and manipulate it for commercial gain. Emory’s quest for a “buy button” in the human skull is an egregious violation of the very reason that a university exists. It also likely violates the principles of the Belmont Report, which sets out guidelines for research on human subjects in the United States.

Emory's descent into neuromarketing is a project of something called the BrightHouse Institute for Thought Sciences, which is the leading neuromarketing research firm. (The name itself is Orwellian: the whole point of neuromarketing is to bypass thought, not encourage it.) The Institute in turn is part of BrightHouse, an advertising agency whose clients have included Coca-Cola, Pepperidge Farm, K-Mart and Home Depot. BrightHouse uses the Emory University Hospital's Magnetic Resonance Imaging machine to conduct its neuromarketing experiments.

The BrightHouse website boasts of having the "most-advanced neuroscientific research capabilities and understanding of how the brain thinks, feels and motivates behavior." This knowledge of the brain enables corporations to "establish the foundation for loyal, long-lasting consumer relationships," the website says. Loyalty through brain mapping, in other words.

The founder and chief executive officer is Joseph Alden Reiman, an adjunct professor at Emory University's Goizueta Business School. According to the BrightHouse website, Reiman is also Senior Research Fellow in the Department of Psychiatry and Behavioral Sciences at Emory University School of Medicine. The "chief scientist" at the Institute is Clinton D. Kilts, professor and vice-chair for research in the Department of Psychiatry and Behavioral Sciences.

Dr. Kilts is an expert in addiction. He has published such articles as "Neural activity related to drug craving in cocaine addiction," and "Imaging the roles of the amygdala in drug addiction."

Dr. Kilts's research interests include "drug craving induced by mental imagery of drug use-related scenes," according to his Emory University School of Medicine web page. Is Dr. Kilts now using his knowledge of addiction to sell products such as Coke? Is he working on mental mapping to induce product cravings through the use of product-related scenes? Dr. Kilts has declined to respond to repeated calls regarding his neuromarketing research.

The Belmont Report requires a systematic assessment of risks and benefits in research on human subjects, and that the benefits outweigh the risks. The risks of this research are obvious, as is the moral repulsiveness. The benefits are more questionable, except to corporations such as Coca-Cola.

At the most basic physical level, neurological marketing research relies on the use of Magnetic Resonance Imaging on human subjects. Strong magnets can harm human subjects if they have metal in their bodies (e.g. cardiac pacemaker, aneurism clips, intrauterine devices, some dental work, body piercings) or are carrying metal, such as coins or jewelry. Such harm is not likely but the possibility does exist. Research subjects occasionally report dizziness or nausea when their heads are moved within the bore of the magnet.

That's on top of any unknown adverse effects of placing a human subject in the intense magnetic field required for an MRI. It is hard to believe that this procedure is helpful when not medically required.

But such potential physical harms are secondary. The real risk of neuromarketing research is to the people – including children – who are the real targets of this research. Already, marketing is deeply implicated in a host of pathologies. The nation is in the midst of an

epidemic of marketing-related diseases. Our children are suffering from extraordinary levels of obesity, type 2 diabetes, anorexia, bulimia, and pathological gambling, while millions will eventually die from the marketing of tobacco. Such illnesses affect also the population at large, as does chronic debt that people incur to support the consumption that the marketing industry encourages.

Neurological marketing is a tool to amplify these trends. It is hard to think of a single benefit that could result from teaching corporate marketers how to press a “buy button” in the minds of individual Americans. Is there really a person in America who is insufficiently impelled to eat more Pepperidge Farm cookies or drink more Coke? Where would you rank the task of increasing this impulsion on the list of the nation’s pressing needs?

Some might protest that neuromarketing research could be used to shut a buy button off as well as on. Conceivably. But it is not clear why corporations would support research that will cause people to buy less of their products. If the university and the researchers involved were to sign written statements promising that this research would be used only for such purposes, on pain of stiff financial penalties, the argument might become remotely credible. But even then, the prospect of behavior control at that level has totalitarian implications that require much more discussion than has occurred to date.

Given the prospect of dubious social benefit and almost certain social harm, it is hard to see how Emory’s neuromarketing research meets the ethical standards of the Belmont Report for experimentation on human subjects.

As you know, if Emory University has run afoul of the Belmont Report, it may lose all federal research funding. If necessary, we may ask the federal Office for Human Research Protections to investigate whether Emory University’s neurological marketing research violates the principles of the Belmont Report.

But more importantly, it is hard to see how neuromarketing research meets the ethical standards for university research, especially a university such as Emory.

Emory was founded by the Methodist Church in 1836 upon a core of ethical and religious values. Its mission is to “create, preserve, teach, and apply knowledge in the service of humanity.” Last year, Emory’s Board of Trustees affirmed that this includes a “commitment to use knowledge to improve human well-being.”

The Emory School of Medicine has a particular responsibility under that declaration. Its own mission statement commits it to “advance the detection, treatment and prevention of disease processes.” Emory Medical School exists to eliminate disease, not encourage it. It certainly does not exist to produce research that can – and predictably will – be used to for marketing that tends to increase disease and human suffering.

If Emory University takes its own mission seriously, it should challenge this abuse of medical knowledge and technology to manipulate people for commercial purposes.

At this time, we ask that you immediately:

- 1) Forbid the BrightHouse Institute, or any other entity, from using any Emory University property, equipment, office space or facilities, including its MRI, for the purposes of conducting neuromarketing research; and,
- 2) Publicly release Emory University's Institutional Review Board reviews of the neuromarketing research.

Sincerely,

Rev. Tom Grey, Executive Director, National Coalition Against Legalized Gambling  
Jane M. Healy, PhD, author, Failure to Connect and Endangered Minds  
Susan Linn, EdD, Instructor in Psychiatry, Harvard Medical School; Co-founder, Stop  
Commercial Exploitation of Children  
Jonathan Rowe, Director, Tomales Bay Institute  
Gary Ruskin, Executive Director, Commercial Alert  
V. Susan Villani, MD, Assistant Professor of Psychiatry, Johns Hopkins Medical School

### Picture showing size of nerve activation currents:

Below is a section of an electrical diagram from a neurobiology textbook. You don't need to be a scientist to understand the point of this diagram. Those electrical current scales on the left of each curve show current in NANOamperes. One NANOampere is one BILLIONTH of one ampere.

Radio signals can induce such currents without much trouble. This shows what the covert weapons developers have done: Just substitute radio signals for directly connected wires. We all know what a wide and amazing range of effects can be caused when wires are connected to our nervous systems.

Considering the tiny currents helps the reader to see that the TORTURE effects we victims experience are not really that hard to generate from even long distances, when the signals are tightly focussed by dish antennas or masers.

# On the Need for New Criteria of Diagnosis of Psychosis in the Light of Mind Invasive Technology

Carole Smith

---

For those of us who were trained in a psychoanalytical approach to the patient which was characterised as patient centred, and which acknowledged that the effort to understand the world of the other person entailed an awareness that the treatment was essentially one of mutuality and trust, the American Psychiatry Association's Diagnostic Criteria for Schizotypal personality was always a cause for alarm. The Third Edition (1987) of *Diagnostic and Statistical Manual of Mental Disorders* (DSM) required that there be at least four of the characteristics set out for a diagnosis of schizophrenia, and an approved selection of four could be: magical thinking, telepathy or sixth sense; limited social contact; odd speech; and over-sensitivity to criticism. By 1994, the required number of qualifying characteristics were reduced to two or more, including, say, hallucinations and 'negative' symptoms such as affective flattening, or disorganised or incoherent speech – or only one if the delusions were bizarre or the hallucination consisted of a voice keeping up a running commentary on the person's behaviour or thoughts. The next edition of the DSM is not due until the year 2010.

In place of a process of a labelling which brought alienation and often detention, sectioning, and mind altering anti-psychotic medication, many psychoanalysts and psychotherapists felt that even in severe cases of schizoid withdrawal we were not necessarily wasting our time in attempting to restore health by the difficult work of unravelling experiences in order to make sense of an illness. In this way, psychoanalysis has been, in its most radical form, a critic of a society, which failed to exercise imaginative empathy when passing judgement on people. The work of Harry Stack Sullivan, Frieda Fromm-Reichmann, Harold Searles or R.D. Laing - all trained as psychiatrists and all of them rebels against the standard procedures – provided a way of working with people very different from the psychiatric model, which seemed to encourage a society to repress its sickness by making a clearly split off group the carriers of it. A psychiatrist in a mental hospital once joked to me, with some truth, when I commented on the number of carrier bags carried by many of the medicated patients around the hospital grounds, that they assessed the progress of the patient in terms of the reduction of the number of carrier bags. It is too often difficult to believe, however, when hearing the history of a life, that the "schizophrenic" was not suffering the effects of having been made, consciously and unconsciously, the carefully concealed carrier of the ills of the family.

For someone who felt his mind was going to pieces, to be put into the stressful situation of the psychiatric examination, even when the psychiatrist acquitted himself with kindness, the situation of the assessment procedure itself, can be ‘an effective way to drive someone crazy, or more crazy.’ (Laing, 1985, p 17). But if the accounting of bizarre experiences more or less guaranteed you a new label or a trip to the psychiatric ward, there is even more reason for a new group of people to be outraged about how their symptoms are being diagnosed. A doubly cruel sentence is being imposed on people who are the victims of the most appalling abuse by scientific-military experiments, and a totally uncomprehending society is indifferent to their evidence. For the development of a new class of weaponry now has the capability of entering the brain and mind and body of another person by technological means.

Harnessing neuroscience to military capability, this technology is the result of decades of research and experimentation, most particularly in the Soviet Union and the United States. (Welsh, 1997, 2000) We have failed to comprehend that the result of the technology that originated in the years of the arms race between the soviet Union and the West, has resulted in using satellite technology not only for surveillance and communication systems but also to lock on to human beings, manipulating brain frequencies by directing laser beams, neural-particle beams, electro-magnetic radiation, sonar waves, radiofrequency radiation (RFR), soliton waves, torsion fields and by use of these or other energy fields which form the areas of study for astro-physics. Since the operations are characterised by secrecy, it seems inevitable that the methods that we do know about, that is, the exploitation of the ionosphere, our natural shield, are already outdated as we begin to grasp the implications of their use. The patents deriving from Bernard J. Eastlund’s work provide the ability to put unprecedented amounts of power in the Earth’s atmosphere at strategic locations and to maintain the power injection level, particularly if random pulsing is employed, in a manner far more precise and better controlled than accomplished by the prior art, the detonation of nuclear devices at various yields and various altitudes. (ref High Frequency Active Auroral Research Project, HAARP).

Some patents, now owned by Raytheon, describe how to make “nuclear sized explosions without radiation” and describe power beam systems, electromagnetic pulses and over-the-horizon detection systems. A more disturbing use is the system developed for manipulating and disturbing the human mental process using pulsed radio frequency radiation (RFR), and their use as a device for causing negative effects on human health and thinking. The victim, the innocent civilian target is locked on to, and unable to evade the menace by moving around. The beam is administered from space. The Haarp facility as military technology could be used to broadcast global mind-control, as a system for manipulating and disturbing the human mental process using pulsed radio frequency (RFR). The super-powerful radio waves are beamed to the ionosphere, heating those areas, thereby lifting them. The electromagnetic waves bounce back to the earth and penetrate human tissue.

Dr Igor Smirnov, of the Institute of Psycho-Correction in Moscow, says: “It is easily conceivable that some Russian ‘Satan’, or let’s say Iranian – or any other ‘Satan’, as long as he owns the appropriate means and finances, can inject himself into every conceivable computer network, into every conceivable radio or television broadcast, with relative technological ease, even without disconnecting cables...and intercept the radio waves in the ether and modulate every conceivable suggestion into it. This is why such technology is rightfully feared.”(German TV documentary, 1998).

If we were concerned before about diagnostic criteria being imposed according to the classification of *recognizable symptoms*, we have reason now to submit them to even harsher

scrutiny. The development over the last decades since the Cold War arms race has included as a major strategic category, psycho-electronic weaponry, the ultimate aim of which is to enter the brain and mind. Unannounced, undebated and largely unacknowledged by scientists or by the governments who employ them – technology to *enter and control minds from a distance* has been unleashed upon us. The only witnesses who are speaking about this terrible technology with its appalling implications for the future, are the victims themselves and those who are given the task of diagnosing mental illness are attempting to silence them by classifying their evidence and accounts as the symptoms of schizophrenia, while the dispensers of psychic mutilation and programmed pain continue with their work, aided and unopposed.

If it was always crucial, under the threat of psychiatric sectioning, to carefully screen out any sign of confused speech, negativity, coldness, suspicion, bizarre thoughts, sixth sense, telepathy, premonitions, but above all the sense that “others can feel my feelings, and that *someone seemed to be keeping up a running commentary on your thoughts and behaviour*,” then reporting these to a psychiatrist, or anyone else for that matter who was not of a mind to believe that such things as mind-control could exist, would be the end of your claim to sanity and probably your freedom. For one of the salient characteristics of mind-control is the running commentary, which replicates so exactly, and surely not without design, the symptoms of schizophrenia. Part of the effort is to remind the victim that they are constantly under control or surveillance. Programmes vary, but common forms of reminders are electronic prods and nudges, body noises, twinges and cramps to all parts of the body, increasing heart beats, applying pressures to internal organs – all with a personally codified system of comments on thoughts and events, designed to create stress, panic and desperation. This is mind control at its most benign. There is reason to fear the use of beamed energy to deliver lethal assaults on humans, including cardiac arrest, and bleeding in the brain.

It is the government system of secrecy, which has facilitated this appalling prospect. There have been warning voices. “...the government secrecy system as a whole is among the most poisonous legacies of the Cold War ...the Cold War secrecy (which) also mandate(s) Active Deception...a security manual for special access programs authorizing contractors to employ ‘cover stories to disguise their activities. The only condition is that cover stories must be believable.” (Aftergood & Rosenberg, 1994; Bulletin of Atomic Scientist). Paranoia has been aided and abetted by government intelligence agencies.

In the United Kingdom the fortifications against any disturbing glimmer of awareness of such actual or potential outrages against human rights and social and political abuses seem to be cast in concrete. Complete with crenellations, ramparts and parapets, the stronghold of nescience reigns supreme. To borrow Her Majesty the Queen’s recent observation: “There are forces at work of which we are not aware.” One cannot say that there is no British Intelligence on the matter, as it is quite unfeasible that the existence of the technology is not classified information. Indeed it is a widely held belief that the women protesting against the presence of cruise missiles at Greenham Common were victims of electro-magnetic radiation at gigahertz frequency by directed energy weapons, and that their symptoms, including cancer, were consistent with such radiation effects as reported by Dr Robert Becker who has been a constantly warning voice against the perils of electro-magnetic radiation. The work of Allen Frey suggests that we should consider radiation effects as a grave hazard producing increased permeability of the blood-brain barrier, and weakening crucial defenses of the central nervous system against toxins. (Becker, 1985, p. 286). Dr Becker has written about nuclear magnetic resonance as a familiar tool in medicine known as magnetic resonance

imaging or MRI. Calcium efflux is the result of cyclotronic resonance which latter can be explained thus: If a charged particle or ion is exposed to a steady magnetic field in space, it will begin to go into a circular or orbital, motion at right angles to the applied magnetic field. The speed with which it orbits will be determined by the ratio between the charge and the mass of the particle and by the strength of the magnetic field. (Becker, 1990,p.235) The implications of this for wide scale aggression by using a combination of radar based energy and the use of nuclear resonating are beyond the scope of the writer, but appear to be worth the very serious consideration of physicists in assessing how they might be used against human beings.

Amongst medical circles, however, it has so far not been possible for the writer to find a neuroscientist, neurologist or a psychiatrist, nor for that matter, a general medical practitioner, who acknowledges *even the potential* for technological manipulation of the nervous system as a problem requiring their professional interest. There has been exactly this response from some of England's most eminent practitioners of the legal profession, not surprisingly, because the information about such technology is not made available to them. They would refer anyone attempting to communicate mind- harassment as a psychiatric problem, ignoring the crime that is being committed.

The aim here is not to attempt a comprehensive history and development of the technology of mind control. These very considerable tasks - which have to be done under circumstances of the most extreme difficulty - have been addressed with clarity and courage by others, who live with constant harm and threats, not least of all contemptuous labelling. Their work can be readily accessed on the internet references given at the end of this paper. For a well-researched outline of the historical development of electro-magnetic technology the reader should refer to the timeline of dates and electromagnetic weapon development by Cheryl Welsh, president of Citizens against Human Rights Abuse. (Welsh 1997; 2001). There are at least one and a half thousand people worldwide who state they are being targeted. Mojmir Babacek, now domiciled in his native Czech Republic, after eight years of residence in the United States in the eighties, has made a painstakingly meticulous review of the technology, and continues his research. (Babacek 1998, 2002)

We are concerned here with reinforcing in the strongest possible terms:

- i) The need for such abuses to human rights and the threats to democracy to be called to consciousness, and without further delay.
- ii) To analyse the reasons why people might defend themselves from becoming conscious of the existence of such threats.
- iii) To address the urgent need for intelligence, imagination, and information - not to mention compassion - in dealing with the victims of persecution from this technology, and
- iv) To alert a sleeping society, to the imminent threats to their freedom from the threat from fascist and covert operations who have in all probability gained control of potentially lethal weaponry of the type we are describing.

It is necessary to emphasise that at present there is not even the means for victims to gain medical attention for the effects of radiation from this targeting. Denied the respect of credulity of being used as human guinea pigs, driven to suicide by the breakdown of their

lives, they are treated as insane – at best regarded as ‘sad cases’. Since the presence of a permanent ‘other’ in one’s mind and body is by definition an act of the most intolerable cruelty, people who are forced to bear it but who refuse to be broken by it, have no other option than to turn themselves into activists, their lives consumed by the battle against such atrocities, their energies directed to alerting and informing the public of things they don’t want to hear or understand about evil forces at work in their society. It is necessary, at this point, to briefly outline a few – one might say the precious few – attempts by public servants to verify the existence and dangers inherent in this field:

- In January 1998, an annual public meeting of the French National Bioethics Committee was held in Paris. Its chairman, Jean-Pierre Changeux, a neuroscientist at the Institut Pasteur in Paris, told the meeting that “advances in cerebral imaging make the scope for invasion of privacy immense. Although the equipment needed is still highly specialized, it will become commonplace and capable of being used at a distance. That will open the way for abuses such as invasion of personal liberty, control of behaviour and brainwashing. These are far from being science-fiction concerns...and constitute “a serious risk to society.” (“Nature.” Vol 391, 1998.
- In January 1999, the European Parliament passed a resolution where it calls “ for an international convention introducing a global ban on all development and deployment of weapons which might enable any form of manipulation of human beings. It is our conviction that this ban can not be implemented without the global pressure of the informed general public on the governments. Our major objective is to get across to the general public the *real threat which these weapons represent for human rights and democracy and to apply pressure on the governments and parliaments around the world to enact legislature which would prohibit the use of these devices to both government and private organisations as well as individuals.*” (Plenary sessions/Europarlament, 1999)
- In October 2001, Congressman Dennis J. Kucinich introduced a bill to the House of Representatives which, it was hoped would be extremely important in the fight to expose and stop psycho-electronic mind control experimentation on involuntary, non-consensual citizens. The Bill was referred to the Committee on Science, and in addition to the Committee on Armed Services and International Relations. In the original bill a ban was sought on ‘exotic weapons’ including electronic, psychotronic or information weapons, chemtrails, particle beams, plasmas, electromagnetic radiation, extremely low frequency (ELF) or ultra low frequency (ULF) energy radiation, or mind control technologies. Despite the inclusion of a prohibition of the basing of weapons in space, and the use of weapons to destroy objects or damage objects in space, there is no mention in the revised bill of any of the aforementioned mind-invasive weaponry, nor of the use of satellite or radar or other energy based technology for deploying or developing technology designed for deployment against the minds of human beings. (Space Preservation Act, 2002)

In reviewing the development of the art of mind-invasive technology– there are a few outstanding achievements to note:

In 1969 Dr Jose Delgado, a Yale psychologist, published a book: “Physical Control of the Mind: Towards a Psychocivilized Society”. In essence, he displayed in practical demonstrations how, by means of electrical stimulation of the brain which had been mapped out in its relations between different points and activities, functions and sensations, - by means of electrical stimulation, how the rhythm of breathing and heartbeat could be changed,

as well as the function of most of the viscera, and gall bladder secretion. Frowning, opening and closing of eyes and mouth, chewing, yawning, sleep, dizziness, epileptic seizures in healthy persons were induced. The intensity of feelings could be controlled by turning the knob, which controlled the intensity of the electric current. He states at the end of his book the hope that the new power will remain limited to scientists or some charitable elite for the benefit of a “psychocivilized society.”

In the 1980's the neuromagnetometer was developed which functions as an antenna and could monitor the patterns emerging from the brain. (In the seventies the scientists had discovered that electromagnetic pulses enabled the brain to be stimulated through the skull and other tissues, so there was no more need to implant electrodes in the brain). The antenna, combined with the computer, could localize the points in the brain where the brain events occur. The whole product is called the magnetoencephalograph.

In January 2000 the Lockheed Martin neuroengineer Dr John D. Norseen, was quoted (US News and World Report, 2000) as hoping to turn the electrohypnamentalaphone, a mind reading machine, into science fact. Dr Norseen, a former Navy pilot, claims his interest in the brain stemmed from reading a Soviet book in the 1980's claiming that research on the mind would revolutionize the military and society at large. By a process of deciphering the brain's electrical activity, electromagnetic pulsations would trigger the release of the brain's own transmitters to fight off disease, enhance learning, or alter the mind's visual images, creating a 'synthetic reality'. By this process of BioFusion, (Lockheed Martin, 2000) information is placed in a database, and a composite model of the brain is created. By viewing a brain scan recorded by (functional) magnetic resonance imaging (fMRI) machine, scientists can tell what the person was doing at the time of recording – say reading or writing, or recognise emotions from love to hate. “If this research pans out”, says Norseen, “you can begin to manipulate what someone is thinking even before they know it.” But Norseen says he is ‘agnostic’ on the moral ramifications, that he's not a mad scientist – just a dedicated one. “The ethics don't concern me,” he says, “but they should concern someone else.”

The next big thing looks like being something which we might refer to as a neurocomputer but it need not resemble a laptop – it may be reducible to whatever size is convenient for use, such as a small mobile phone. Arising from a break-through and exploitation of PSI-phenomena, it may be modelled on the nervous-psychic activity of the brain – that is, as an unbalanced, unstable system of neurotransmitters and interacting neurones, the work having been derived from the creation of a copy of a living brain – accessed by chance, and ESP and worked on by design.

On receiving a communication from the writer on the feasibility of a machine being on the horizon which, based on the project of collecting electromagnetic waves emanating from the brain and transmitting them into another brain that would read a person's thoughts, or using the same procedure in order to impose somebody else's thoughts on another brain and in this way direct his actions – there was an unequivocal answer from IBM at executive level that there was no existing technology to create such a computer in the foreseeable future. This is at some variance with the locating of a patent numbered 03951134 on the Internet pages of IBM Intellectual Property Network for a device, described in the patent, as capable of picking up at a distance the brain waves of a person, process them by computer and emit correcting waves which will change the original brain waves. Similar letters addressed to each of the four top executives of Apple Inc., in four individual letters marked for their personal attention,

produced absolutely no response. This included the ex- Vice President of the United States, Mr Al Gore, newly elected to the Board of Directors of Apple.

Enough people have been sufficiently concerned by the reports of victims of mind control abuse to organise The Geneva Forum, in 2002, held as a joint initiative of the Quaker United Nations Office, Geneva; the United Nations Institute for Disarmament Research; the International Committee of the Red cross, and the Human Rights Watch (USA), and Citizens against Human Rights Abuses (CAHRA); and the Programme for Strategic and International Security Studies, which was represented by the Professor and Senior Lecturer from the Department of Peace Studies at the University of Bradford.

In England, on May 25, 1995, the Guardian newspaper in the U.K. carried an article based on a report by Nic Lewer, the peace researcher from Bradford University, which listed “more than 30 different lines of research into ‘new age weapons’...”some of the research sounds even less rational. There are, according to Lewer, plans for ‘pulsed microwave beams’ to destroy enemy electronics, and separate plans for very-low-frequency sound beams to induce vomiting, bowel spasm, epileptic seizures and also crumble masonry.” Further, the article states, “There are plans for ‘mind control’ with the use of ‘psycho-correction messages’ transmitted by subliminal audio and visual stimuli. There is also a plan for ‘psychotronic weapons’ – apparently the projection of consciousness to other locations – and another to use holographic projection to disseminate propaganda and misinformation.” (Welsh, *Timeline*). Apart from this notable exception it is difficult to locate any public statement of the problem in the United Kingdom.

Unfortunately, the problem of credulity does not necessarily cease with frequent mention, as in the United States, in spite of the number of reported cases, there is still not sufficient public will to make strenuous protest against what is not only already happening, but against what will develop if left unchecked. It appears that the administration believes that it is necessary and justifiable, in the interests of national security, to make experimental human sacrifices, to have regrettable casualties, for there to be collateral damage, to suffer losses in place of strife or war. This is, of course, totally incompatible with any claims to be a democratic nation which respects the values of human life and democracy, and such an administration which tutors its servants in the ways of such barbaric tortures must be completely condemned as uncivilised and hypocritical.

#### Disbelief as a Defence Mechanism

In the face of widespread disbelief about mind-control, it seems worth analysing the basis of the mechanisms employed to maintain disbelief:

i) In the sixties, Soviet dissidents received a significant measure of sympathy and indignant protest from western democracies on account of their treatment, most notably the abuse of psychiatric methods of torture to which they were subjected. It is noteworthy that we seem to be able to access credulity, express feelings of indignant support when we can identify with victims, who share and support our own value system, and who, in this particular historical case, reinforced our own values, since they were protesting against a political system which also threatened us at that time. Psychologically, it is equally important to observe that support from a safe distance, and the benefits to the psyche of attacking a split-off ‘bad father’, the soviet authorities in this case, presents no threat to one’s internal system; indeed it relieves internal pressures. On the other hand, recognizing and denouncing a similar offence makes

very much greater psychic demands of us when it brings us into conflict with our own environment, our own security, our own reality. The defence against disillusion serves to suppress paranoia that our father figure, the president, the prime minister, our governments - might not be what they would like to be seen to be.

ii) The need to deposit destructive envy and bad feelings *elsewhere*, on account of the inability of the ego to acknowledge ownership of them - reinforces the usefulness of persons or groups, which will serve to contain those, disowned, projected feelings which arouse paranoid anxieties. The concepts of mind-invasion strike at the very heart of paranoid anxiety, causing considerable efforts to dislodge them from the psyche. The unconscious identification of madness with dirt or excrement is an important aspect of anal aggression, triggering projective identification as a defence.

iii) To lay oneself open to believing that a person is undergoing the experience of being invaded mentally and physically by an unseen manipulator requires very great efforts in the self to manage dread.

iv) The defence against the unknown finds expression in the split between theory and practice; between the scientist as innovator and the society who can make the moral decisions about his inventions; between fact and science fiction, the latter of which can present preposterous challenges to the imagination without undue threat, because it serves to reinforce a separation from the real.

v) Identification with the aggressor. Sadistic fantasies, unconscious and conscious, being transferred on to the aggressor and identified with, aid the repression of fear of passivity, or a dread of punishment. This mechanism acts to deny credulity to the victim who represents weakness. This is a common feature of satanic sects.

vi) The liberal humanist tradition which denies the worst destructive capacities of man in the effort to sustain the belief in the great continuity of cultural and scientific tradition; the fear, in one's own past development, of not being 'ongoing', can produce the psychic effect of reversal into the opposite to shield against aggressive feelings. This becomes then the exaggerated celebration of the 'new' as the affirmation of human genius which will ultimately be for the good of mankind, and which opposes warning voices about scientific advances as being pessimistic, unenlightened, unprogressive and Luddite. Strict adherence to this liberal position can act as overcompensation for a fear of envious spoiling of good possessions, i.e. cultural and intellectual goods.

vii) Denial by displacement is also employed to ignore the harmful aspects of technology. What may be harmful for the freedom and good of society can be masked and concealed by the distribution of new and entertaining novelties. The technology, which puts a camera down your gut for medical purposes, is also used to limit your freedom by surveillance. The purveyors of innovative technology come up with all sorts of new gadgets, which divert, entertain and feed the acquisitive needs of insatiable shoppers, and bolster the economy. The theme of "Everything's up to date in Kansas City" only takes on a downside when individual experience – exploding breast implants, say – takes the gilt off the gingerbread. Out of every innovation for evil (i.e. designed for harming and destroying) some 'good' (i.e. public diversion or entertainment) can be promoted for profit or crowd-pleasing.

viii) Nasa is sending a spacecraft to Mars, or so we are told. They plan to trundle across the Martian surface searching for signs of water and life. We do not hear dissenting voices about its feasibility.

Why is it that, when a person accounts that their mind is being disrupted and they are being persecuted by an unseen method of invasive technology, that we cannot bring ourselves to believe them? Could it be that the horror involved in the empathic identification required brings the shutters down? Conversely, the shared experience of the blasting of objects into space brings with it the possibilities of shared potency or the relief that resonates in the unconscious of a massive projection or evacuation – a shared experience which is blessed in the name of man's scientific genius.

ix) The desire 'not to be taken in', not to be taken for a fool, provides one of the most powerful and common defence mechanism against credulity.

### Power, Paranoia and Unhealthy Governments

The ability to be the bearer and container of great power without succumbing to the pressures of latent narcissistic psychoses is an important matter too little considered. The effect of holding power and the expectation and the need to be seen as capable of sustaining it, if not exercising it, encourages omnipotence of thought. In the wake of this, a narcissistic overevaluation of the subject's own mental processes may set in. In the effort to hold himself together as the possessor, container and executor of power, he (or indeed, she) may also, undergo a process of splitting which allows him, along with others, to bear enthralled witness of himself in this illustrious role. This may mean that the seat of authority is vacated, at least at times. The splitting process between the experiencing ego and the perceiving ego allows the powerful leader to alternate his perception of himself inside and outside, sometimes beside, himself. With the reinforcement of himself from others as his own narcissistic object, reality testing is constrained. In this last respect, he has much in common with the other powerful figure of the age, the movie star. or by those, in Freud's words, who are "ruined by success."

In a world, which is facing increasing disillusion about the gulf between the public platforms on which governments are elected, and the contingencies and pragmatics of retaining defence strategies and economic investments, the role of military and intelligence departments, with their respective tools of domination and covert infiltration, is increasingly alarming. Unaccountable to the public, protected from exposure and prosecution by their immunity, licensed to lie as well as to kill, it is in the hands of these agents that very grave threats to human rights and freedom lies. Empowered to carry out aggression through classified weapon experimentation which is undetectable, these men and women are also open to corruption from lucrative offers of financial reward from powerful and sinister groups who can utilize their skills, privileged knowledge and expertise for frankly criminal and fascist purposes.

Our information about the psychological profiles of those who are employed to practice surveillance on others is limited, but it is not difficult to imagine the effects on the personality that would ensue with the persistent practice of such an occupation, so constantly exposed to the perversions. One gains little snatches of insight here and there. In his book on CIA mind control research (Marks, 1988), John Marks quotes a CIA colleague's joke (always revealing for personality characteristics): "If you could find the natural radio frequency of a person's sphincter, you could make him run out of the room real fast." (One wonders if the same amusement is derived from the ability to apply, say infra-sound above 130 decibels, which is

said to cause stoppage of the heart, according to one victim/activist from his readings of a report for the Russian Parliament.)

Left to themselves, these servants of the state may well feel exempt from the process of moral self-scrutiny, but the work must be dehumanising for the predator as well as the prey. It is probably true that the need to control their agents in the field was an incentive to develop the methods in use today. It is also an effectively brutalising training for persecuting others. Meanwhile the object, the prey, in a bid for not only for survival but also in a desperate effort to warn his or her fellows about what is going on, attempts to turn himself into a quantum physicist, a political researcher, a legal sleuth, an activist, a neurologist, a psychologist, a physiologist – his own doctor, since he cannot know what effects this freakish treatment might have on his body, let alone his mind. There are always new methods to try out which might prove useful in the search to find ways of disabling and destroying opponents – air injected into brains and lungs, lasers to strike down or blind, particle beams, sonar waves, or whatever combination of energies to direct, or destabilise or control.

### Science and Scepticism

Scientists can be bought, not just by governments, but also by sinister and secret societies. Universities can be funded by governments to develop technology for unacceptably inhumane uses. The same people who deliver the weapons - perhaps respected scientists and academics - may cite the acceptable side of scientific discoveries, which have been developed by experimenting on unacknowledged, unfortunate people. In a cleaned up form, they are then possibly celebrated as a break-through in the understanding of the natural laws of the universe. It is not implausible that having delivered the technical means for destruction, the innovator and thinker goes on, wearing a different hat, to receive his (or her) Nobel Prize. There are scientists who have refused to continue to do work when they were approached by CIA and Soviet representatives. These are the real heroes of science.

In the power struggle, much lies at stake in being the first to gain control of ultimate mind-reading and mind-controlling technology. Like the nuclear bomb, common ownership would seem by any sane calculations to cancel out the advantage of possession, but there is always a race to be the first to possess the latest ultimate means of mass destruction. The most desirable form is one that can be directed at others without contaminating oneself in the process - one that can be undetected and neatly, economically and strategically delivered. We should be foolish to rule out secret organisations, seeing threat only from undemocratic countries and known terrorist groups.

As consumers in a world which is increasingly one in which shopping is the main leisure activity, we should concern ourselves to becoming alert to the ways in which human welfare may have been sacrificed to produce an awesome new gadget. It may be the cause for celebration for the ‘innovator’, but brought about as the result of plugging in or dialling up the living neuronal processes of an enforced experimentee. If we are concerned not to eat boiled eggs laid by battery hens, we might not regard it morally irrelevant to scrutinise the large corporations producing electronically innovative ‘software.’ We might also be wary about the origins of the sort of bland enticements of dating agencies who propose finding your ideal partner by matching up brain frequencies and ‘bio-rhythms’.

We do not know enough about the background of such technology, nor how to evaluate it ethically. We do not know about its effects on the future, because we are not properly

informed. If governments persist in concealing the extent of their weapon capability in the interests of defence, they are also leaving their citizens disempowered of the right to protest against their deployment. *More alarmingly, they are leaving their citizens exposed to their deployment by ruthless organisations whose concerns are exactly the opposite of democracy and human rights.*

## Back in the United Kingdom

Meanwhile, back in England, the Director of the Oxford Centre for Cognitive Neuroscience, Professor Colin Blakemore, also the elective Chief Executive of the Medical Research Council writes to the author that he "... knows of no technology (not even in the wildest speculations of neuroscientists) for scanning and collecting 'neuronal data' at a distance." (Blakemore, 2003, ) This certitude is at distinct variance with the fears of other scientists in Russia and the United States, and not least of all with the fears of the French neuroscientist, Jean-Pierre Changeux of the French National Bioethics Committee already quoted (see page 5). It is also very much at odds with the writing of Dr Michael Persinger from the Behavioural Neuroscience Laboratory at Laurentian University in Sudbury, Ontario, Canada. His article "On the Possibility of Directly Accessing Every Human Brain by Electromagnetic Induction of Algorithms" (1995), he describes the ways that individual differences among human brains can be overcome and comes to a conclusion about the technological possibilities of influencing a major part of the approximately six billion people on this planet without mediation through classical sensory modalities but by generating electromagnetic induction of fundamental algorithms in the atmosphere. Dr Persinger's work is referred to by Captain John Tyler whose work for the American Air Force and Aerospace programmes likens the human nervous system to a radio receiver. (1990)

Very recently the leading weekly cultural BBC radio review had as one of its guests, the eminent astro-physicist and astronomer royal, Sir Martin Rees, who has recently published a book, "Our Final Century", in which he makes a sober and reasoned case for the fifty-fifty chance that millions of people, probably in a 'third-world country' could be wiped out in the near future through biotechnology and bio-terrorism – "by error or malign release." He spoke of this devastation as possibly coming from small groups or cults, based in the United States. "...few individuals with the right technology to cause absolute mayhem." He also said that in this century, human nature is no longer a fixed commodity, that perhaps we should contemplate the possibility that humans would even have implants in the brain.

The other guests on this programme were both concerned with Shakespeare, one a theatre producer and the other a writer on Shakespeare, while his remaining guest was a young woman who had a website called "Spiked", the current theme of which was Panic Attack, that is to say, Attack on Panic. This guest vigorously opposed what she felt was the pessimism of Sir Martin, regarding his ideas as essentially eroding trust, and inducing panic. This reaction seems to typify one way of dealing with threat and anxiety, and demonstrates the difficulty that a warning voice, even from a man of the academic distinction of Martin Rees, has in alerting people to that which they do not want to hear. This flight reaction was reinforced by the presenter who summed up the morning's discussion at the end of the programme with the words: "We have a moral! Less panic, more Shakespeare!"

## The New Barbarism

Since access to a mind-reading machine will enable the operator to access the ideas of another person, we should prepare ourselves for a new world order in which ideas will be, as it were, up for grabs. We need not doubt that the contents of another's mind will be scooped up, scooped out, sorted through as if the event was a jumble sale. The legal profession would therefore be well advised to consider the laws on Intellectual Property very judiciously in order to acquit themselves with any degree of authenticity. We should accustom ourselves to the prospect of recognizing our work coming out of the mouth of another. The prospect of wide-scale fraud, and someone posturing in your stolen clothes will not be a pretty sight. The term "personal mind enhancement" is slipping in through the back door, to borrow a term used by the Co-Director of the Center for Cognitive Liberty and Ethics, and it is being done through technologically-induced mental co-ercion – mind raping and looting. In place of, or in addition to, cocaine, we may expect to see 'mind-enhanced' performances on "live" television.

The brave new science of neuropsychiatry and brain mapping hopes to find very soon, with the fMRI scanner - this "brand new toy that scientists have got their hands on" - "the blob for love" and "the blob for guilt", (BBC Radio 4: All in the Mind, 5 March, 2003). Soon we will be able to order a brain scan for anyone whose behaviour strikes us as odd or bizarre, and the vicissitudes of a life need no longer trouble us in our diagnostic assessments. In his recent Reith Lectures for the BBC (2003), Professor Ramachandran, the celebrated neuroscientist from the La Jolla Institute in San Diego, California, has demonstrated for us many fascinating things that the brain can do. He has talked to us about personality disorders and shown that some patients, who have suffered brain damage from head injury, do not have the capacity to recognise their mothers. Others feel that they are dead. And indeed he has found brain lesions in these people. In what seems to be an enormous but effortless leap, the self-styled "kid in a candy store" is now hoping to prove that all schizophrenics, have damage to the right hemisphere of the brain, which results in the inability to distinguish between fantasy (sic) and reality. Since Professor Ramachandran speaks of schizophrenia in the same breath as denial of illness, or *agnosia*, it is not clear, and it would be interesting to know, whether the person with the head injury has been aware or unaware of the head injury. Also does the patient derive comfort and a better chance at reality testing when he is told of the lesion? Does he feel better when he has received the diagnosis? And what should the psychoanalysts – and the psychiatrists, - feel about all those years of treating people of whose head injuries they were absolutely unaware? Was this gross negligence? Were we absolutely deluded in perceiving recovery in a sizeable number of them?

It is, however, lamentable that a neuroscientist with a professed interest in understanding schizophrenia should seek to provide light relief to his audience by making jokes about schizophrenics being people who are "convinced that the CIA has implanted devices in their brain to control their thoughts and actions, or that aliens are controlling them." (Reith Lecture, No 5, 2003).

There is a new desire for concretisation. The search for meaning has been replaced by the need for hard proof. If it doesn't light up or add up it doesn't have validity. The physician of the mind has become a surgeon. "He found a lump as big as a grapefruit!"

Facing up to the Dread and Fear of the Uncanny

Freud believed that an exploration of the uncanny would be a major direction of exploration of the mind in this century. The fear of the uncanny has been with us for a very long time. The

evil eye, or the terrifying double, or intruder, is a familiar theme in literature, notably of Joseph Conrad in *The Secret Sharer*, and Maupassant's short story, *Le Horla*. Freud's analysis of the uncanny led him back to the old animistic conception of the universe: "...it seems as if each one of us has been through a phase of individual development corresponding to the animistic phase in primitive men, that none of us has passed through it without preserving certain residues and traces of it which are still capable of manifesting themselves, and that everything which now strikes us as 'uncanny' fulfils the condition of touching those residues of animistic mental activity within us and bringing them to expression." (Freud: 1919. p.362)

The separation of birth, and the childhood fear of 'spooks in the night', also leave their traces in each and every one of us. The individual experience of being alone in one's mind – the solitary fate of man which has never been questioned before, and upon which the whole history of civilised nurture is based - is now assaulted head-on. Since growing up is largely synonymous with acceptance of one's aloneness, the effort to assuage it is the basis for compassion and protection of others; it is the matrix for the greatest good, that of ordinary human kindness, and is at the heart of the communicating power of great art. Even if we must all live and die alone, we can at least share this knowledge in acts of tenderness which atone for our lonely state. In times of loss and mental breakdown, the starkness of this aloneness is all too clear. The best of social and group constructiveness is an effort to allay the psychotic anxieties that lie at the base of every one of us, and which may be provoked under extreme enough conditions.

The calculated and technological entry into another person's mind is an act of monumental barbarism which obliterates – perhaps with the twiddling of a dial – the history and civilisation of man's mental development. It is more than an abuse of human rights, it is the destruction of meaning. For any one who is forced into the hell of living with an unseen mental rapist, the effort to stay sane is beyond the scope of tolerable endurance. The imaginative capacity of the ordinary mind cannot encompass the horror of it. We have attempted to come to terms with the experiments of the Nazis in concentration camps. We now have the prospect of systematic control authorised by men who issue instructions through satellite communications for the destruction of societies while they are driving new Jaguars and Mercedes, and going to the opera.

This is essentially about humiliation, and disempowerment. It is a manifestation of rage acted out by those who fear impotence with such dread, that their whole effort is directed into the emasculation and destruction of the terrifying rival of their unconscious fantasies. In this apocalypse of the mind the punitive figure wells up as if out of the bowels of the opera stage, and this phantasmagoria is acted out on a global scale. These men may be mad enough to believe they are creating a 'psychocivilised world order'. For anyone who has studied damaged children, it is more resonant of the re-enactment from the unconscious, reinforced by a life devoid of the capacity for empathic identification, of the obscenities of the abused and abusing child in the savage nursery. Other people -which were to them like Action Man toys to be dismembered, or Barbie Dolls to be obscenely defiled - become as meaningless in their humanity as pixillated dots on a screen.

Although forced entry into a mind is by definition obscene, an abbreviated assessment of the effects that mind-invaded people describe testifies to the perverted nature of the experiments. Bizarre noises are emitted from the body, a body known well enough by its owner to recognise the noises as extrinsic; air is pumped in and out of orifices as if by a bicycle pump. Gradually the repertoire is augmented - twinges and spasms to the eyes, nose,

lips, strange tics, pains in the head, ringing in the ears, obstructions in the throat, pressure on the bowel and bladder causing incontinence; tingling in the fingers, feet, pressures on the heart, on breathing, dizziness, eye problems leading to cataracts; running eyes, running nose; speeding up of heart beats and the raising of pressure in the heart and chest; breathing and chest complaints leading to bronchitis and deterioration of the lungs; agonizing migraines; being woken up at night, sometimes with terrifying jolts ; insomnia; intolerable levels of stress from the loss of one's privacy. This collection of assorted symptoms is a challenge to any medical practitioner to diagnose.

There are, more seriously, if the afore-going is characterised as non-lethal, the potential lethal effects since the capability of ultrasound and infra-sound to cause cardiac arrest, and brain lesions, paralysis and blindness, as well as blinding by laser beam, or inducing asphyxia by altering the frequencies which control breathing in the brain, epileptic seizure – all these and others may be at the fingertips of those who are developing them. And those who do choose to use them may be sitting with the weapon, which resembles, say, a compact mobile telephone, on the restaurant table next to the bottle of wine, or beside them at the swimming pool.

Finally – if the victims at this point in the new history of this mind-control, cannot yet prove their abuse, it must be asserted that, faced with the available information about technological development – it is certainly not possible for those seeking to evade such claims – to *disprove* them. To wait until the effects become widespread will be too late.

- For these and other reasons which this paper has attempted to address, we would call for an acknowledgement of such technology at a national and international level. Politicians, scientists and neurologists, neuroscientists, physicists and the legal profession should, without further delay, demand public debate on the existence and deployment of psychotronic technology; and for the declassification of information about such devices which abuse helpless people, and threaten democratic freedom.
- Victims' accounts of abuse should be admitted to public account, and the use of psycho-electronic weapons should be made illegal and criminal,
- The medical profession should be helped to recognise the symptoms of mind-control and psychotronic abuse, and intelligence about their deployment should be declassified so that this abuse can be seen to be what it is, and not interpreted automatically as an indication of mental illness.

If, in the present confusion and insecurity about the search for evidence of weapons of mass destruction, we conclude that failure to locate them - whatever the truth of the matter – encourages us to be generally complacent, then we shall be colluding with very dark forces at work if we conclude that a course of extreme vigilance signifies paranoia. For there may well be other weapons of mass destruction being developed and not so far from home; weapons which, being even more difficult to locate, are developed invisibly, unobstructed, unheeded in our midst, using human beings as test-beds. Like ESP, the methods being used on humans have not been detectable using conventional detection equipment. It is likely that the signals being used are part of a physics not known to scientists without the highest level of security clearance. To ignore the evidence of victims is to deny, perhaps with catastrophic results, the only evidence which might otherwise lead the defenders of freedom to becoming alert to the development of a fearful new methods of destruction. Manipulating terrorist groups and governments alike, these sinister and covert forces may well be very thankful for the professional derision of the victims, and for public ignorance.

## Technology Projects

National Law Enforcement and Corrections Technology Center  
A Program of the National Institute of Justice

### Project Title: Radar-Based Through-the-Wall Surveillance System

#### Project Description:

The National Institute of Justice (NIJ), through the Joint (Justice - Defense) Program Steering Group (JPSG), is funding improvement of a portable (briefcase-sized) through-the-wall surveillance device developed by Raytheon (formerly Hughes Missile Systems) for use by law enforcement officials when investigating a crime scene. This device is a modification of a commercial motion detector sold by Hughes. It employs a radar that can locate and track an individual through concrete or brick walls. It measures and displays the distance to that individual, a capability improvement over the commercial device.

Download a video demonstration of the motion detector:

[Real Video File \(1.4 MB, 7 min.\)](#)

[Video Transcript](#)

[Download RealPlayer](#)

#### Status Report:

This device was successfully demonstrated with the Los Angeles County (California) Sheriff's Department and Albuquerque (New Mexico) Police Department under quasi operational conditions. It demonstrated the ability to consistently track the activity of an individual moving behind an eight-inch thick concrete wall to a range of more than 75 feet from the radar. NIJ anticipates receiving a number of prototypes of the redesigned device before the end of FY2000. A nationwide demonstration of the system is planned for FY2001.

### **Project Title: Radar Flashlight**

#### **Project Description:**

The National Institute of Justice (NIJ), through the Joint (Justice-Defense) Program Steering Group (JPSG), is sponsoring Georgia Tech Research Institute (GTRI) in developing an inexpensive, handheld, low-power radar that will enable law officers to detect individuals through interior building walls. It works by sensing the motion of an individual's chest when they breath.

#### **Status Report:**

GTRI is currently designing and refining the first prototype unit. A laboratory test area has been constructed consisting of a section of home siding and drywall, a wooden front door, and a section of brick and mortar. The laboratory model shown here, was able to detect individuals through each of these materials. It also demonstrated the ability to detect an individual through the laboratory's cinder block walls. GTRI is working to combine the two parts of this device into a single unit. NIJ plans on demonstrating the Radar Flashlight with law enforcement agencies through its National Law Enforcement and Corrections Technology Center (NLECTC) (Southeast Regional Center) before the end of 1999.

## **NLPA Is Working On It**

Scan courtesy of Cheryl Welsh, <http://www.calweb.com/~welsh>

OBVIOUS QUESTION: If there's no such thing as mind control, why is a lawyers' organization actively working on the problem?

---

NATIONAL LEGAL PROFESSIONAL ASSOCIATES

Case Analysis and Research Division  
7 Mariners Cove  
Cincinnati, Ohio 45249  
Fax (513) 247-9580  
Telephone (513) 247-8092

MEMORANDUM

To: All Interested Counsel and Their Clients  
Fr: National Legal Professional Associates  
Dt: July 11, 1998  
Re: Mind Control, Radio-implants, CIA Tracking Chips

Secretly the reality of a totally controlled society has been in place. While we were looking at political control, the technological mechanisms for a Big Brother state are being installed, secretly in the hope no one will notice.

NLPA's information comes from clients that are claiming and have proven, ~~(by BOP X-Rays)~~ that brain control implants and tracking devices are being used by international police and U.S. Government agencies for data surveillance, known as biomedical telemetry, mind control, optical electronic surveillance and brain-computer interaction. L

The properties of this technology enable the monitoring of mental functions, thoughts, deeds and associated cerebral neurophysiological changes as well as the manipulation of behavior, values and personality from limitless geographical distances.

These implantations take place "in unwitting patients" during hospital operations and in patients at psychiatric clinics. In Sweden, elderly persons are implanted when "taken into long term care" and in persons taken into police custody or in prison.

Because of this problem, National Legal Professional Associates has been actively involved in the battle to overturn the case of U.S. v. Lambros, 85 F3d 698 (8th Cir. 1995), in which NLPA assisted counsel on direct appeal and were successful in overturning his statutory life sentence. Lambros was tortured and forced implanted in Brazil while awaiting extradition to the United States.

Since our initial January 18, 1998, Memorandum, NLPA is pleased to inform our clients that U.S. Senator Jesse Helms from North Carolina and ranking member of the Foreign Relations Committee has contacted the proper authorities of the Bureau of Prisons as to Lambros' torture and forced implantation in Brazil while awaiting extradition to the United States. Also a renowned British researcher with a long history in investigating implanted humans has written NLPA as to his files, x-rays, medical testimony by various independent sources and actual implants recovered from the victims.

NLPA is still gathering information for its database on individuals that have been implanted with tracking devices, radio implants or have been subjected to mind control technology. If you are interested in obtaining further information concerning this matter, you may review the Web at <http://www.nlpainc.com>

# **Convict Chip Idea Stirs Ire**

## **Lawyer: Gov. Eyes Inmate Implants**

**By Colleen Heild, Albuquerque Journal Staff Writer  
Autumn 99 - Issue No. 244**

Eleanor White's comments: Current, late-90's electronic mind control technology in the classified realm does not require implants. However, implants are still very significant for two reasons:

1. Not all electronic mind control perpetrators possess, apparently, the implant-LESS technology. This is evident from the fact that several involuntary implantees have had implants removed but not one has ever been given custody of the removed implant. Someone apparently wants them kept out of our hands.
2. Not every level of government even knows about implant-LESS technology, and therefore, these non-privileged levels of government are obviously attracted to the degree of control which can be had by implanting populations. The following article makes that chillingly clear!

---

Gov. Gary Johnson has hopes that rapidly advancing computer technology someday could help solve the problem of New Mexico's overcrowded prisons.

Much to the dismay of inmate lawyers, Johnson at a private meeting in May [1999] raised the possibility that a futuristic form of incarceration could include implanting microchips in convicted felons.

Johnson made the comments during an informal meeting with the chief federal judge in New Mexico, top state corrections officials, and lawyers involved in an 18-year-old lawsuit over prison conditions, according to three people who attended the gathering.

Johnson said during an interview this week that he wasn't implying the state could implement such a program anytime soon. But, he said, with "the technology advancing all the time, we're going to have in the future to ... be able to implement innovative ways of parole and work release."

Peter Cubra, one of the lawyers representing inmates in the prison lawsuit testified about the remarks earlier this month at the Legislature's Interim Courts, Corrections, and Criminal Justice Committee. Cubra didn't divulge where Johnson made the comments, but two ...

[TEXT MISSING FROM PHOTOCOPY]

According to Cubra, Johnson responded by saying technology is evolving to the point that microchip implants WOULD be performed, and someday would be relatively inexpensive.

"What the governor literally said ... was, he took his index finger and thumb and held them about a half an inch apart and he said 'We are this close to the time when we will have microchips available' and then he took his left hand, took it to his temple and said 'AND WE CAN INSERT THE MICROCHIPS INTO PEOPLE'S BRAINS AND CONTROL THEIR BEHAVIOR THAT WAY'" Cubra told the legislative committee Aug. 18 in Albuquerque.

Apparently it wasn't the first time Johnson made such remarks.

People who attended the Santa Fe meeting said Johnson mentioned that he had raised the issue during his campaign for governor. After Johnson's statements in May [1999] those in the room were stunned, said Cubra and another person at the meeting.

However a third person who attended but refused to be identified said the governor was obviously joking.

A spokesman for Conway said Thursday that the judge wouldn't comment on any matter related to pending litigation. Cubra brought up Johnson's remarks urging the legislative committee to take the lead in setting prison policy. "This is the most ridiculous thing I've ever heard, he said.

He told the committee "it appeared the executive branch didn't have any realistic attitudes about it. A spokeswoman for the governor said last week that Johnson was speaking in "very broad terms" when he mentioned the microchip concept.

"He said he was talking very broadly, very future-oriented, like what are the technologies that are being developed for prisoners, what applications in general for new technology might there be" said Catherine Bedell, a deputy chief of staff.

Asked whether Johnson has any specific proposals, she said, "not yet" and referred further questions to Corrections Secretary Karl Sannicks.

Sannicks, through a spokesman, said he hadn't heard about microchips being used on prisoners and "it probably would be something he would not implement."

When asked about the May meeting, Johnson said Wednesday "I was talking about bracelets and being able to track felons out of jail, that that technology is going to exist if it doesn't exist already.

"But it's going to exist in an affordable state and that may revolutionize parole, that may revolutionize incarceration as far as we know it. In that context, that technology certainly is in the future, is going to play a role in parole, in incarceration, and work release."

Asked whether he specifically brought up microchips, Johnson said, "Well, talking about microprocessors, the advance in microprocessors, again, that is technology in essence."

Dr. Michael Hollifield, director of the Special Problems Clinic at the University of New Mexico medical school, said HE KNEW OF NO RESEARCH ANYWHERE IN THE COUNTRY ON THE USE OF MICROCHIPS TO CONTROL HUMAN BEHAVIOR. [*Eleanor White's comment: CROCK*]

"There's a lot of myth and innuendo about this stuff" Hollifield said.

Hollifield's clinic offers short term cognitive and behavioral therapies for psychiatric disorders.

**Book Review:**  
**None Dare Call It Conspiracy**  
**by Gary Allen, Larry Abraham**

**Reviewed by Eleanor White**  
**March 28, 2004**

=====

NONE DARE CALL IT CONSPIRACY  
by Gary Allen, Larry Abraham  
Third printing  
Copyright 1971  
Concord Press  
P.O. Box 2686  
Seal Beach CA  
USA 90740  
Paperback, 143 pages

ABOUT THE AUTHOR:

Gary Allen is [in the 1970s] a California based free-lance journalist. After majoring in history at Stanford University and doing graduate work at California State College at Long Beach, he became aware through independent research that his college courses had been highly slanted. Many of the most important facts had been left out. This book is the result of his personal "post graduate studies" in finding out "who's whose" in American politics. [That WHOSE is not a typo!]

=====

REVIEW:

This is not a complete review. The excerpt which follows is very important to people undergoing the type of government-covered-up torture which is popularly called "mind control" but in fact is total immersion covert destruction of every facet of the chosen targets' lives. This excerpt dates from the early 1970s - please keep that in mind. It explains how such brutal crimes can be carried out with impunity here in the early 21st century, and the ultimate motivation behind them:

Page 123-25, discussing the planning activities of the ultra rich shadow owners of all the world's governments, which the author terms the "Insiders" in the 1970s and which are now labelled the New World Order. This text is being written during the Nixon administration:

"Not surprisingly, the Insiders [NWO] have their pet planners preparing to administrate their world dictatorship. Under an immense geodetic dome at Southern Illinois University is a completely detailed map of the world which occupies the space of three football fields. Operating under [finanical] grants from the Ford, Carnegie and Rockefeller foundations (all extensively interlocked with the Council on Foreign Relations) a battery of scientists including every discipline from geographers, psychologists and behavioral scientists to natural scientists, biologists, biochemists and agronomists are making plans TO CONTROL PEOPLE.

"These elite planners conduct exercises in what they call 'The World Game'.

...

"The World Game people run exercises on GLOBAL CONTROL. If you plan on running the world, you cannot go about it haphazardly. That is why the Insiders of the Ford, Carnegie and Rockefeller foundations are making these plans. The real name of the game is "1984". We will have SYSTEMATIC POPULATION REDUCTION, FORCED STERILIZATION OR ANYTHING ELSE WHITH THE PLANNERS DEEM NECESSARY TO ESTABLISH ABSOLUTE CONTROL IN THEIR HUMANITARIAN UTOPIA.

"But to enforce these plans, you must have an all-powerful world government. You can't do this if individual nations have sovereignty. And before you facilitate the Great Merger, you must first centralize control within each nation, DESTROY THE LOCAL POLICE [in the U.S. they are quietly being federalized, starting with sheriffs] and REMOVE GUNS from the hands of the citizenry. You must replace our once free Constitutional Republic with an all-powerful central government. And that is what is happening today [early 70s] with the Nixon Administration. Every action of any consequence, despite the smokescreen, has centralized more power in what is rapidly becoming an all-powerful central government.

"What we are witnessing is the Communist tactic of pressure from above and pressure from below, described by historian Jan Kozak as the device used by the Reds to capture control of Czechoslovakia. The pressure from above comes from secret, ostensibly respectable Comrades in the government and the Establishment, forming, WITH the radicalized mobs in the streets below [remember this was the early 1970s] A GIANT PINCER AROUND MIDDLE CLASS SOCIETY. The street rioters are pawns, shills, puppets and dupes for an OLIGARCHY OF ELITIST CONSPIRATORS working above to turn America's limited government into an Unlimited government with TOTAL CONTROL OVER OUR LIVES AND PROPERTY.

...

[The radicalized mobs are described as the SDS (Students for a Democratic Society), the Black Panthers, the Yippies, and the Young Socialist Alliance.]

...

"Instead we find that most of these radicals are the recipients of largesse [support and money] from major [financial] foundations or are receiving money from the government through the War on Poverty. The Rothschild-Rockefeller-CFR Insiders at the top 'surrender to the demands' for Socialism from the mobs below. The mobs are doing the work of those whom they hate the most.

"Remember Baukunin's charge that Marx' followers [early communists] 'had one foot in the bank and the other in the Socialist movement'."

And from page 126:

"THAT IS THE STRATEGY. THE [SHADOW GOVERNMENT] 'LANDSCAPE PAINTERS' FOCUS YOUR ATTENTION ON THE KIDS IN THE STREET WHILE THE REAL DANGER IS FROM ABOVE."

Cover Story 1/3/00

## John Norseen

*Reading your mind-and injecting smart thoughts*

**By Douglas Pasternak**

Buck Rogers, meet John Norseen. Like the comic-strip hero, a 20th-century man stuck in the 25th century, Norseen feels he's not quite in the right time: His brain-research ideas are simply too futuristic. And he admits his current obsession seems to have been lifted from a Rogers saga. The Lockheed Martin neuroengineer hopes to turn the "electrohypnamentalophone," a mind-reading machine invented by one of Buck's buddies, from science fiction into science fact.

Norseen's interest in the brain stems from a Soviet book he read in the mid-1980s, claiming that research on the mind would revolutionize the military and society at large. The former Navy pilot coined the term "BioFusion" to cover his plans to map and manipulate gray matter, leading (he hopes) to advances in medicine, national security, and entertainment. He does not do the research but sees himself as the integrator of discoveries that will make BioFusion a reality.

BioFusion would be able to convert thoughts into computer commands, predicts Norseen, by deciphering the brain's electrical activity. Electromagnetic pulses would trigger the release of the brain's own neurotransmitters to fight off disease, enhance learning, or alter the mind's visual images, creating what Norseen has dubbed "synthetic reality."

The key is finding "brain prints." "Think of your hand touching a mirror," explains Norseen. "It leaves a fingerprint." BioFusion would reveal the fingerprints of the brain by using mathematical models. "Just like you can find one person in a million through fingerprints," he says, "you can find one thought in a million."

It sounds crazy, but Uncle Sam is listening. The National Aeronautics and Space Administration, the Defense Advanced Research Projects Agency, and the Army's National Ground Intelligence Center have all awarded small basic research contracts to Norseen, who works for Lockheed Martin's Intelligent Systems Division. Norseen is waiting to hear if the second stage of these contracts—portions of them classified—comes through.

Norseen's theories are grounded in current science. Mapping human brain functions is now routine. By viewing a brain scan recorded by a magnetic resonance imaging (MRI) machine, scientists can tell what the person was doing at the time of the recording—say, reading or writing. Emotions from love to hate can be recognized from the brain's electrical activity.

Thought police. So could the murderous thoughts of a terrorist, asserts Norseen, who wrote his thesis at the Naval War College on applying neuroscience research to antiterrorism. He has submitted a research-and-development plan to the Pentagon, at its request, to identify a terrorist's mental profile. A miniaturized brain-mapping device inside an airport metal detector would screen passengers' brain patterns against a dictionary of brain prints. Norseen predicts profiling by brain print will be in place by 2005.

A pilot could fly a plane by merely thinking, says Norseen. Scientists have already linked mind and machine by implanting electrodes into a paralyzed man's brain; he can control a computer's cursor with his mind. Norseen would like to draw upon Russian brain-mimicking software and American brain-mapping breakthroughs to allow that communication to take place in a less invasive way. A modified helmet could record a pilot's brain waves. "When you say right 090 degrees," says Norseen, the computer would see that electrical pattern in the brain and turn the plane 090 degrees. If the pilot

misheard instructions to turn 090 degrees and was thinking "080 degrees," the helmet would detect the error, then inject the right number via electromagnetic waves.

If this research pans out, says Norseen, "you can begin to manipulate what someone is thinking even before they know it." But Norseen says he is "agnostic" on the moral ramifications, that he's not a mad scientist—just a dedicated one. "The ethics don't concern me," he says, "but they should concern someone else."

## NSA Admits There's Something To Mind Control After All!

Scan courtesy of Cheryl Welsh, <http://www.calweb.com/~welsh>

OBVIOUS QUESTION: If there's no such thing as mind control, why are papers relating to it classified TOP SECRET?

NATIONAL SECURITY AGENCY      Serial: J9728-96  
CENTRAL SECURITY SERVICE  
FORT GEORGE G. MEADE, MARYLAND 20755-8000      19 March 1997

Ms. Cheryl Welsh  
915 Zaragoza St.  
Davis, CA 95616

**Obvious question:  
If government-sponsored  
mind control is not happening,  
then why could it "reasonably  
be expected to cause  
exceptionally grave damage  
to national security"!?**

Dear Ms. Welsh:

This responds to your Freedom of Information Act (FOIA) request dated 28 July 1995 submitted to the Defense Intelligence Agency (DIA) for records pertaining to yourself and other various topics. A copy of your request is attached for your convenience. On 21 October 1996 the DIA referred one responsive NSA-originated document relating to a Soviet mind control system to this Agency for our review and direct response to you.

The document has been reviewed by this Agency pursuant to the provisions of the FOIA and has been found to be currently and properly classified in accordance with Executive Order 12958. This document meets the criteria for classification as set forth in subparagraphs (c) and (g) of section 1.5 and remain classified **TOP SECRET** as provided in section 1.3 of Executive Order 12958. The information is classified because its disclosure could reasonably be expected to cause exceptionally grave damage to the national security. Because the information is currently and properly classified, it is exempt from disclosure pursuant to the first exemption of the FOIA (5 U.S.C. section 552(b)(1)).

In addition, this Agency is authorized by various statutes to protect certain information concerning its activities. We have determined that such information exists in this document. Accordingly, those portions are also exempt from disclosure pursuant to the third exemption of the FOIA which provides for the withholding of information specifically protected from disclosure by statute. The specific statutes applicable in this case are

FAS Note: The following Report was required by the FY 2000 Intelligence Authorization Act, and was transmitted to Congress at the end of February 2000.

---

### **Legal Standards for the Intelligence Community in Conducting Electronic Surveillance**

(U) Electronic surveillance is conducted by elements of the Intelligence Community for foreign intelligence and foreign counterintelligence purposes. Because of its potential intrusiveness and the implications for the privacy of United States persons,<sup>1</sup> such surveillance is subject to strict regulation by statute<sup>2</sup> and Executive Order<sup>3</sup> and close scrutiny. The applicable legal standards for the collection, retention, or dissemination of information concerning U.S. persons reflect a careful balancing between the needs of the government for such intelligence and the protection of the rights of U.S. persons, consistent with the reasonableness standard of the Fourth Amendment,<sup>4</sup> as determined by factual circumstance.

<sup>1</sup> "United States person" means a citizen of the United States, an alien lawfully admitted for permanent residence (as defined in section 101(a)(20) of the Immigration and Nationality Act), an unincorporated association a substantial number of members of which are citizens of the United States or aliens lawfully admitted for permanent residence, or a corporation which is incorporated in the United States, but does not include a corporation or an associated which is a foreign power, as defined in 50 U.S.C. §1801(a)(1), (2), or (3). See 50 U.S.C. §1801(i).

<sup>2</sup> The Foreign Intelligence Surveillance Act, 50 U.S.C. §1801 et seq.

<sup>3</sup> Exec. Order No. 12333, 3 C.F.R. 200 (1982), reprinted in 50 U.S.C. §401 note.

<sup>4</sup> The Fourth Amendment provides:

The right of the people to be secure in their persons, houses, papers, and effects, against unreasonable searches and seizures, shall not be violated, and no Warrants shall issue, but upon probable cause, supported by Oath or affirmation, and particularly describing the place to be searched, and the persons or things to be seized. U.S. Const. Amend. IV.

(U) In the Foreign Intelligence Surveillance Act (FISA) and Executive Order (E.O.) 12333, Congress and the Executive have codified this balancing. Both documents reflect a deference to U.S. persons' rights by closely regulating the conduct of electronic surveillance that either targets U.S. persons or may result in the acquisition of information to, from, or about U.S. persons. For example, in order to conduct electronic surveillance against a U.S. person located within

the United States, FISA requires the intelligence agency to obtain a court order from the Foreign Intelligence Surveillance Court. If the United States person is abroad, the Executive Order requires that the Attorney General approve such surveillance. In both instances, generally speaking there must be probable cause<sup>5</sup> that the target is an agent of a foreign power.<sup>6</sup> In addition, the information sought by the surveillance must be foreign intelligence that cannot be obtained by other less intrusive collection techniques. Furthermore, even if a U.S. person is not the target, all foreign intelligence electronic surveillance must be conducted in a manner that minimizes the acquisition, retention, and dissemination of information about unconsenting U.S. persons.<sup>7</sup> Information about a U.S. person who is not an approved target, if lawfully acquired incidental to the authorized collection, may be retained and disseminated if it amounts to foreign intelligence or counterintelligence; otherwise, it may not be retained or disseminated.

<sup>5</sup> Probable cause exists when facts and circumstances within the applicant's knowledge and of which he/she has reasonably trustworthy information are sufficient to warrant a person of reasonable caution to believe that the proposed target of the surveillance is an agent of a foreign power. See generally, United States v. Cavanagh, 807 F.2d 787 (9th Cir. 1987).

<sup>6</sup> Pursuant to §2.3 of E.O. 12333, there may be other instances where U.S. person information may be collected, such as with the consent of the person concerned or where the information is needed to protect the safety of any persons or organizations, including those who are targets, victims, or hostages of international terrorist organizations.

<sup>7</sup> Pursuant to §2.3 of E.O. 12333, Intelligence Community agencies are authorized to retain and disseminate incidentally acquired information that may indicate involvement in activities that may violate federal, state, local, or foreign laws.

(U) As alluded to above, FISA is the statutory regime governing electronic surveillance within the United States for foreign intelligence purposes. Enacted in 1978, FISA defines four types of electronic surveillance requiring Court authorization. The Act further mandates the filing of an application approved by the Attorney General setting forth probable cause that the target of the proposed electronic surveillance is either a foreign power or an agent of a foreign power as defined by the statute. The purpose must be to gather foreign intelligence information, and a certification to that effect by a senior Executive Branch official must accompany every application. If a U.S. person, acting as an agent of a foreign power, is the target of the proposed surveillance, the government must satisfy a more stringent standard than that which pertains when the target is not a U.S. person. It is sufficient in the case of a non-U.S. person to show that the information to be acquired is merely *related* to the national defense or security of the United States or the conduct of foreign affairs; where a U.S. person is involved, the contents of the application must include a showing that the acquisition of such information is *necessary* to national defense or security or the conduct of foreign affairs.

(U) In addition, FISA requires the government generally to minimize the amount of information acquired or retained and prohibits, with limited exception, the dissemination of nonpublic information about nonconsenting U.S. persons, consistent with the need of the United States to obtain, produce, and disseminate foreign intelligence information.<sup>8</sup> The Attorney General, as required by statute, has adopted and filed with the Court specific procedures designed to effectuate the statutory minimization procedures. These procedures are also reported to the intelligence committees of Congress. Among other things, the procedures ensure that the surveillance technique employed minimizes the likelihood of acquiring information, and the amount of information acquired, concerning U.S. persons. The procedures also limit the retention of incidentally acquired information concerning U.S. persons. Finally, the procedures restrict the dissemination of U.S. person-identifying information to the statutorily prescribed bases.

<sup>8</sup> 50 U.S.C. §1801(h)

(U) While FISA provides the statutory basis for conducting electronic surveillance within the United States for foreign intelligence purposes, E.O. 12333 establishes the overall framework for the conduct of intelligence activities by U.S. intelligence agencies, including the use of electronic surveillance. The Order, which was issued by President Reagan in 1981, governs the conduct of intelligence activities applicable to all intelligence agencies, and also identifies specific responsibilities for each of the agencies.

(U) The overall scheme of the Order is premised upon the determination that the "[c]ollection of [foreign intelligence information] is a priority objective and will be pursued in a vigorous, innovative and responsible manner that is consistent with the Constitution and applicable law and respectful of the principles upon which the United States was founded." <sup>9</sup> Primary among these principles is the need to respect the rights of U.S. persons. The Order mandates that intelligence agencies "shall use the least intrusive collection techniques feasible within the United States or directed against U.S. persons abroad."<sup>10</sup> It proscribes the acquisition of information concerning the domestic activities of U.S. persons.<sup>11</sup> And, it forbids intelligence agencies from requesting other parties to undertake activities that are forbidden in the Order.<sup>12</sup>

<sup>9</sup> E.O. 12333 §2.1.

<sup>10</sup> E.O. 12333 §2.4.

<sup>11</sup> E.O. 12333 §2.3(b).

<sup>12</sup> E.O. 12333 §2.12.

(U) E.O. 12333 prohibits the collection, retention, or dissemination of information about U.S. persons except pursuant to procedures established by the head of the agency and approved by the Attorney General. Each of the intelligence agencies has promulgated such procedures. (See the appendices in the classified version of this report.) The CIA procedures are embodied in

Headquarters Regulation (H.R.) 7-1 entitled, "Law and Policy Governing the Conduct of Intelligence Activities." NSA is governed by Department of Defense Directive 5240.1-R, "DoD Activities that May Affect U.S. Persons," including a classified appendix particularized for NSA. The guidelines are further enunciated within NSA through an internal directive, U.S. Signals Intelligence Directive 18. The FBI procedures are contained in "Attorney General Guidelines for FBI Foreign Intelligence Collection and Foreign Counterintelligence Investigations." Any changes to the procedures implemented pursuant to the Order require Attorney General approval, and such changes are also brought to the attention of the congressional intelligence committees as well as the Intelligence Oversight Board of the President's Foreign Intelligence Advisory Board. Each agency's procedures contains specific provisions that address the conduct of electronic surveillance, to include the acquisition, retention, and dissemination of information to, from, or concerning United States persons.

## **Legal Standards**

### *A. The Legal Standards for Interception of Communications When Such Interception May Result in the Acquisition of Information from a Communication to or from United States Persons.*

(U) The legal standards are reflected in the Attorney General minimization procedures mandated by FISA and in the Attorney General-approved procedures mandated by E.O. 12333. The procedures are designed to ensure that electronic surveillance is conducted in a reasonable manner such that a minimum amount of information about U.S. persons who are not authorized targets will be acquired. <sup>13</sup> The procedures are designed to ensure that electronic surveillance is conducted in a reasonable manner. Information about a U.S. person who is not an approved target, if lawfully acquired incidental to the authorized collection, may be retained and disseminated if it amounts to foreign intelligence or counterintelligence; otherwise, it may not be retained or disseminated.

<sup>13</sup> DoDD 5240.1-R, Classified Annex §4.A.3; USSID 18 §5 and Annex A; FBI FISA Minimization Procedures §3.

### *B. The Legal Standards for Intentional Targeting of the Communications to or from United States Persons.*

(U) The legal standards governing the targeting of U.S. persons in the United States are set forth in FISA and in Attorney General minimization procedures mandated by FISA. With respect to U.S. persons outside the United States, section 2.5 of E.O. 12333 establishes the standards, and the Attorney General-approved procedures required under E.O. 12333 <sup>14</sup> provide the implementing guidelines. The requirements in both instances include a finding, by a Foreign Intelligence Surveillance Court judge in the former case and the Attorney General in the latter instance, that on the basis of the facts submitted there is probable cause to support a finding that an individual is an agent of a foreign power.

<sup>14</sup> H.R. 7-1, Annex A(V)(D); DoDD 5240.1-R, Classified Annex §4.A.1(a)(4); Attorney General Guidelines for FBI Foreign Intelligence Collection and Foreign Counterintelligence Investigations.

*C. The Legal Standards for Receipt from Non-United States Sources of Information Pertaining to Communication to or from United States Persons.*

(U) Receipt of U.S. person information from non-United States sources is governed by section 2.12 of E.O. 12333, which precludes an agency of the Intelligence Community from participating in or requesting any person to undertake activities forbidden by the Order. As discussed above, the Intelligence Community is not permitted to target U.S. persons absent specific authorization. Agencies in the Intelligence Community similarly are prohibited by section 2.12 of E.O. 12333 from having other parties engage in activities to circumvent these authorization requirements on their behalf. The Intelligence Community, having secured Attorney General approval to engage in electronic surveillance against a U.S. person abroad, may request that a foreign government conduct the collection. The Intelligence Community may also accept incidentally acquired information about U.S. persons from foreign governments. In both cases, the retention and dissemination of U.S. person information from non-U.S. sources is treated in accordance with E.O. 12333 and the Attorney General-approved implementing procedures.<sup>15</sup>

<sup>15</sup> For NSA, DoDD 5240.1-R, Procedure 2 defines collection to include receipt or acceptance by an intelligence community employee of information from a foreign government. Thus all of the restrictions contained in Procedure 2 regarding Collection, Procedure 3 regarding Retention, Procedure 4 regarding Dissemination and Procedure 5 regarding Electronic Surveillance are applicable to the receipt from non-U.S. sources of information pertaining to the communications of U.S. persons.

*D. The Legal Standards for Dissemination of Information Acquired Through the Interception of the Communications to or from United States Persons.*

(U) The dissemination of information about U.S. persons that was obtained through electronic surveillance authorized by FISA is governed by the statute and the Attorney General-adopted minimization procedures mandated by the statute. Information about U.S. persons that was obtained pursuant to the provisions of E.O. 12333, including incidentally acquired information, may be disseminated only in accordance with Attorney General-approved procedures.<sup>16</sup> The overarching standard as implemented in both E.O. 12333 and FISA minimization procedures<sup>17</sup> is that to disseminate personally identifiable information concerning a U.S. person, the information must be found necessary to understand a particular piece of foreign intelligence or assess its importance.

<sup>16</sup> See §2.3 of E.O. 12333 for other instances where dissemination of this information is permitted.

<sup>17</sup> H.R. 7-1, Appendix D; NSA's FISA Minimization Procedures §6; DoDD 5240.1-R, Classified Annex §4.A.4; USSID 18 §7; Attorney General Guidelines for FBI Foreign Intelligence Collection and Foreign Counterintelligence Investigations; FBI FISA Minimization Procedures §5.

### **Appendices**

(To accompany classified report only)

Appendix A: CIA Headquarters Regulation 7-1, "Law and Policy Governing the Conduct of Intelligence Activities."

Appendix B: DoD Directive 5240.1-R, "DoD Activities that May Affect U.S. Persons," including Classified Annex (Attorney General Procedures for NSA).

Appendix C: U.S. Signals Intelligence Directive 18.

Appendix D: Attorney General Guidelines for FBI Foreign Intelligence Collection and Foreign Counterintelligence Investigations.

Appendix E: FBI's FISA Minimization Procedures.

## **DIRECTIVES FOR HUMAN EXPERIMENTATION**

The Nuremberg Military Tribunal's decision in the case of the United States v Karl Brandt et al. includes what is now called the Nuremberg Code, a ten point statement delimiting permissible medical experimentation on human subjects. According to this statement, humane experimentation is justified only if its results benefit society and it is carried out in accord with basic principles that "satisfy moral, ethical, and legal concepts." To some extent the Nuremberg Code has been superseded by the Declaration of Helsinki as a guide for human experimentation.

--"Permissible Medical Experiments." Trials of War Criminals before the Nuremberg Military Tribunals under Control Council Law No. 10. Nuremberg October 1946 - April 1949, Washington. U.S. Government Printing Office (n.d.), vol. 2., pp. 181-182.

- 1. The voluntary consent of the human subject is absolutely essential. This means that the person involved should have legal capacity to give consent; should be situated as to be able to exercise free power of choice, without the intervention of any element of force, fraud, deceit, duress, over-reaching, or other ulterior form of constraint or coercion, and should have sufficient knowledge and comprehension of the elements of the subject matter involved as to enable him to make an understanding and enlightened decision. This latter element requires that before the acceptance of an affirmative decision by the experimental subject there should be made known to him the nature, duration, and purpose of the experiment; the method and means by which it is to be conducted; all inconveniences and hazards reasonably to be expected; and the effects upon his health or person which may possibly come from his participation in the experiment.

The duty and responsibility for ascertaining the quality of the consent rests upon each individual who initiates, directs or engages in the experiment. It is a personal duty and responsibility which may not be delegated to another with impunity.

- 2. The experiment should be such as to yield fruitful results for the good of society, unprocurable by other methods or means of study, and not random and unnecessary in nature.
- 3. The experiment should be so designed and based on the results of animal experimentation and a knowledge of the natural history of the disease or other problem under study that the anticipated results will justify the performance of the experiment.
- 4. The experiment should be so conducted as to avoid all unnecessary physical and mental suffering and injury.
- 5. No experiment should be conducted where there is an a priori reason to believe that death or disabling injury will occur; except, perhaps, in those experiments where the experimental physicians also serve as subjects.

- 6. The degree of risk to be taken should never exceed that determined by the humanitarian importance of the problem to be solved by the experiment.
- 7. Proper preparations should be made and adequate facilities provided to protect the experimental subject against even remote possibilities of injury disability or death.
- 8. The experiment should be conducted only by scientifically qualified persons. The highest degree of skill and care should be required through all stages of the experiment of those who conduct or engage in the experiment.
- 9. During the course of the experiment the human subject should be at liberty to bring the experiment to an end if he has reached the physical or mental state where continuation of the experiment seems to him to be impossible.
- 10. During the course of the experiment the scientist in charge must be prepared to terminate the experiment at any stage, if he has probable cause to believe, in the exercise of the good faith, superior skill and careful judgement required by him that a continuation of the experiment is likely to result in injury, disability, or death to the experimental subject.

**2 Feb. 2004 -- New York State Government has a huge database on citizens it considers likely targets of forced outpatient psychiatric drugging. View the form here. Are you on the BAF list? Will you be?**

New York State is using the combination of two powerful methods to force their citizens to take psychiatric drugs out in the community. First, they use court orders, called Involuntary Outpatient Commitment (IOC) or Assisted Outpatient Treatment (AOT). Second, they use teams that monitor whether you're taking your drugs, called Assertive Community Treatment (ACT). All this "assisting" and "assertiveness" through the double-whammy of AOT and ACT could -- bottom line -- mean you being forcibly drugged in your own living room, for years, with chemicals that can cause brain damage.

Several MindFreedom members are being forcibly drugged now in their own homes.

For the story of one of those members, Donald Chambers of New York City, see [Donald's story of forced drugs.](#)

NY State has started a huge database of NY citizens who are in ACT or AOT or case management, many of whom are considered potential targets of these forced outpatient psychiatric drug procedures, now or even in the future. To gather the information for their web-based computer database, NY State uses an elaborate document called the "Baseline Assessment Form" or BAF. Through anonymous sources, MindFreedom has obtained a copy of a BAF, and you can see they are pulling in a lot of data on these thousands of citizens.

For a basic introduction to this by the Director of MindFreedom go to [David Oaks background on NY State forced drugs.](#)

MindFreedom member Jay Fickling of New York State actually quit his job as an ACT team member in protest of this blacklist that threatens thousands of NY State residents. If you live in NY State, you have to ask yourself, "Am I on the BAF list? Will I be?"

You can read about Jay's personal story in his [MindFreedom exclusive, here.](#)

You can also download your own PDF copy of a the form to create the blacklist by clicking here:

[PDF of the Official Baseline Assessment Form Used in NY State to Create Database of Likely Suspects for Forced Outpatient Psychiatric Drugs](#)

You will need the Adobe Acrobat Reader to view these poster. If you do not have Acrobat installed on your computer, you can [download it here.](#)

Iris Holling coordinates the Runaway House in Berlin, Germany. The Runaway House is the only one of its kind, offering a place for folks to recover from their experience in the psychiatric system. At the podium Iris spoke passionately on how labels aren't helping, and people need alternative healing services. She offered the Runaway House as an example. (Outside the World Assembly for Mental Health (WAMH) in Vancouver, Canada, July 22, 2001.

PHYSIOLOGICAL RESPONSES APPLICABLE TO DEVELOPMENT OF  
LESS-THAN-LETHAL WEAPONS

Oak Ridge National Laboratory

-----  
Physiological Responses Applicable to Development of  
Less-Than-Lethal Weapons

Sponsored by National Institute of Justice

Oak Ridge National Laboratory

Less-than-lethal weapons have a variety of applications in law enforcement, including rescuing hostages, stopping fleeing felons, and quelling prison disturbances. The National Institute of Justice is sponsoring a broad program to develop new techniques for "friendly force" as an alternative to the use of deadly force. As part of this program, Oak Ridge National Laboratory (ORNL) is examining approaches based on known physiological responses to certain types of stimuli. These "weapons" would temporarily incapacitate an individual or a group with no lasting physiological damage. These concepts are based on ORNL's experience and expertise in biological-based systems and biophysical responses, particularly in evaluating the physical responses of humans to a variety of chemical, physical and radiological agents. ORNL also has extensive experience and expertise in risk analysis and in risk assessment and modeling.

The ORNL less than-lethal weapons project sponsored by the National Institute of Justice began in September 1993. The following tasks are being performed:

- \* Locate and compile data from tests, accidents, medical literature, etc. on biological and biophysical responses to energetic stimuli (such as electromagnetic fields).
- \* Analyze the information and identify promising candidate mechanisms for further development for a friendly force
- \* Evaluate the applicability of the proposed approaches to several realistic scenarios (such as hostage rescue or riot control).

ORNL has already examined several possible concepts for less-than-lethal weapons based on known physiological responses to energetic stimuli, including a thermal gun, a seizure gun, and a magnetophosphene gun. A thermal gun would have the operational effect of heating the body to 105 to 107F, thereby incapacitating any threat, based on the fact that even a slight fever can affect the ability of a person to perform even simple tasks. This approach is built on four decades of research relating radio frequency exposure to body heating. A seizure gun would use electromagnetic energy to induce epileptic-like seizures in persons within the range of a particular electromagnetic field. The magnetophosphene gun is designed around a biophysical mechanism which evokes a visual response and is thought to be centered in the retina, known as magnetophosphenes. This effect is experienced when a person receives a blow to the head and sees "stars". This same effect can be produced with electromagnetic energy. While there are a number of technical challenges to be overcome in building devices of these types, less-than-lethal weapons based on physiological responses to energetic stimuli would provide a safe and effective means of dealing with a number of law enforcement situations where use of deadly force is not desirable.

### **Open Air Testing with Simulated Biological and Chemical Warfare Agents**

---

**Original link:** <http://personalpages.tds.net/~kknowlto/openair.htm>

---

By Leonard A. Cole, Ph.D.

My name is Leonard A. Cole, and I teach science and public policy at Rutgers University in Newark. My research interests include biological and chemical warfare policies, and I have written in particular about testing done in the U.S Army's biological defense program.

I appreciate your invitation, Senator Rockefeller, to testify about experiments involving simulated biological and chemical warfare agents. These agents, which the army calls simulants, are intended to mimic more lethal bacteria and chemicals that might be used in actual warfare.

As described in my book, *Clouds of Secrecy*, the army began a program in 1949 to assess the nation's vulnerability to attack with biological weapons. During the next 20 years, the army released simulant agents over hundreds of populated areas around the country. Targets included portions of Hawaii and Alaska, San Francisco, St. Louis, Minneapolis, New York City, Washington, D.C., Key West, and many other cities. The purpose was to see how the bacteria spread and survived as people went about their normal activities.

Evidence suggested that the tests may have been causing illness to exposed citizens. Nevertheless, as army spokesmen subsequently testified, the health of the millions of people exposed was never monitored because the army assumed that the bacteria and chemicals were harmless.

Vulnerability testing continues at Dugway Proving Ground, 70 miles from Salt Lake City. Several smaller communities are closer to the base, and Dugway itself is home to hundreds of civilians and military personnel and their families. The stated purpose of the tests is to evaluate biological detector systems and protective gear.

Since tests involve spraying simulants outdoors, it is important to understand how much risk they pose to humans who are exposed. Official statements have not always been clear on this matter. A July 1993 news release by the Dugway Public Affairs Office indicates that "no specific safety controls or protection are required for testing with simulants." The statement implies, erroneously, that the simulants are harmless.

In fact, during 45 years of open air testing, from time to time the army has stopped using certain simulants for reasons of safety. In each instance the army belatedly recognized they could be causing disease and death, although such information had long been available in the medical literature. This was the case in the 1950s when it ceased using the fungus *Aspergillus fumigatus* as a simulant. The fungus had long been known to cause aspergillosis, a disease that can be fatal. Similarly, in the 1960s the army stopped using zinc cadmium sulfide, a chemical that had been known for years to cause cancer.

In the 1970s, the bacterium *Serratia marcescens*, a source of infections that can lead to death, was taken out of service as a simulant. And in the 1980s, dimethyl methylphosphonate, a chemical known as DPP, was removed from use as a simulant because of its carcinogenic and other toxic potential. I understand that one of today's witnesses, Earl Davenport, was exposed to DMMP at Dugway in 1984 and may still be suffering health problems as a result.

Indeed, simulants now used at Dugway continue to pose risks. The chemical ethylene oxide, which is present in some of the mixtures used in outdoor spraying, is a known carcinogen. The bacterium *Bacillus subtilis*, while not generally seen as dangerous, is cited in medical textbooks as able to cause serious infections. In truth any microorganism that seems harmless under some circumstances may cause illness under others.

Exposure to high concentrations of any microorganism can be critically dangerous to people in weakened conditions. The elderly, the very young, people with AIDS and others who have weakened immune systems are more susceptible to life threatening infections. Nevertheless, the army has not monitored the health of citizens who may have been exposed during its tests while maintaining that its bacterial agents cause no harm.

In addition to people who are unwittingly exposed to the army's bacteria and chemicals, human research subjects may not be receiving appropriate information. A test at Dugway in November 1993, for example, raises important questions in this regard. The test was intended to assess the ability of chemical agents to penetrate protective clothing.

Test subjects wore special outer garments and were then sprayed with chemicals in simulated battle conditions. An army Environmental Assessment before the test indicated that some of the chemicals could be toxic. Yet the consent form that the subjects signed in advance of the test said nothing about any of the chemicals.

Subsequently, two of the test subjects said they were asked to sign another consent form sometime after the test had been completed. The second form described the chemicals. But having the subjects sign a consent form after an experiment, rather than before, makes little ethical sense. The procedure renders meaningless the notion of informed consent.

Finally, several physicians at the University of Utah Medical School in Salt Lake City continue to express concern about the tests at Dugway. They do not feel they have information that would enable them optimally to handle infections and complications that might be caused by the tests. Dugway officials have thus far not satisfied their concerns either about field tests involving simulants or indoor tests with highly pathogenic agents.

These are a few of the disconcerting issues associated with testing at Dugway. If such tests must continue, several policy suggestions seem appropriate:

- Inform people in the area before each test that they may be exposed to the army's biological and chemical agents.
- For a substantial period after each test, monitor the health of the exposed population.
- Provide comprehensive information in understandable language to human subjects before they participate in any test.
- Fully inform the neighboring medical community about the nature of each test and its possible medical complications.
- Above all, strive for safety, candor, and openness.

Push my button

Electronic implants may help women who can't org@sm any other way

IN THE Woody Allen comedy *Sleeper*, a machine called an org@smatron delivers an org@sm at the push of a button--without the hassle of sex. Now life is imitating art as scientists in the US have patented an implant that achieves the same effect for women whose lives have been blighted by an inability to achieve org@sms naturally.

Org@smic dysfunction is not uncommon among women, says Julia Cole, a psychosexual therapist and consultant with Relate, the relationship counselling service. And a number of issues can cause it, says Jim Pfaus, who studies the neurobiology of sexual behaviour at Concordia University in Montreal. "Some women confuse what's called sympathetic arousal, like increased heart rate, clammy hands, nerves and so on, with fear," he explains. "That makes them want to get out of the situation." Psychotherapy is a common treatment for the condition, although if anxiety is a factor, patients may also be prescribed valium. "But valium can actually delay org@sm," says Pfaus.

Stuart Meloy, a surgeon at Piedmont Anesthesia and Pain Consultants in Winston-Salem, North Carolina, got the idea for an org@sm-producing device while performing a routine pain-relief operation on a woman's spine. "We implant electrodes into the spine and use electrical pulses to modify the pain signals passing along the nerves," he says. The patient remains conscious during the operation to help the surgeon find the best position for the electrodes. Meloy's breakthrough came one day when he failed to hit the right spot. "I was placing the electrodes and suddenly the woman started exclaiming emphatically," he says. "I asked her what was up and she said, 'You're going to have to teach my husband to do that'."

Meloy expects clinical trials to begin later this year with Medtronic, a company based in Minneapolis. Meloy says the stimulating wires could connect to a signal generator smaller than a packet of cigarettes implanted under the skin of one of the patient's buttocks. "Then you'd have a hand-held remote control to trigger it," he says. "But it's as invasive as a pacemaker, so this is only for extreme cases," he says.

Meloy believes the device could help couples overcome problems caused by organic dysfunction. "If you've got a couple who've been together for a while and it's just not happening any more, maybe they'll get through it a bit easier with this," he says.

He's quick to add that the device will be programmed to limit its use. "But whether it's once a day, four times a week--who am I to say?"

But would women subject themselves to such invasive surgery? "If young women of 15 or so are having painful operations to enlarge their breasts when they don't have to, are you kidding? Of course it'll be used," says Pfau. Cole agrees that some women would try it if they felt the problem was severe enough. "I feel about this the way I feel about Viagra," says Cole. "It may help some people, but they should also address the underlying reasons for the problem."

Meloy has yet to test the device on men, but says there's no reason it shouldn't work in the same way. Ian Sample

# **ORGANIZED STALKING:**

## **A TARGET'S VIEW**

Eleanor White

Revision of January 20, 2009

This writer has been a target of organized stalking for over two decades, and has been in contact with other targets of organized stalking since 1996.

I'm a retired engineer. This booklet relates my opinions and conclusions, and readers should be aware that other targets may hold different opinions.

# Table of Contents

|                                                                 |    |
|-----------------------------------------------------------------|----|
| Chapter 1: What is "Organized Stalking?" . . . . .              | 3  |
| Chapter 2: Why Are Organized Stalking Targets Chosen? . . . . . | 10 |
| Chapter 3: David Lawson's Landmark Investigation . . . . .      | 14 |
| Chapter 4: Through-Wall Electronic Weapons . . . . .            | 22 |
| Chapter 5: Experiences of the Targets . . . . .                 | 28 |
| Chapter 6: Conclusion . . . . .                                 | 35 |

# Chapter 1: What is "Organized Stalking?"

Before I answer that question, let me say that this booklet is written to introduce the general public and public officials to an old crime, "ganging up" on someone, which has been "improved" to the point where targets not only cannot escape it, but it can be done in ways that people around the target, who witness some of the harassing acts, will deny it is even happening.

While any type of "ganging up" is organized, the "organized stalking" described in this booklet makes full use of instant electronic communication, and through-wall electronic harassment technology, and willingness of corrupt officials to look the other way, to achieve an environment in which the target can never escape some degree of harassment.

This is new. This is why I am writing this booklet. The world needs to know that some citizens are experiencing Hell on Earth which uses highly developed tactics and silent, no-trace technology. Stalking has been brought to new level of both impact on the target, and deniability.

## **Deniability is Easy**

Once a group of stalkers starts "working over" a target, deniability increases dramatically.

Imagine a group of school students who decide to "work over" a target. Each member of the group can do something minor, maybe once a day. "Accidentally" bumping into the target, passing a remark in the hall which can be said was not intended for the target, spilling something on the target's back in the lunchroom, stealing items of small value over time belonging to the target, and the familiar rumour campaign. No one member of the group ever does anything serious.

But from the target's viewpoint, they never have a nice day. There are always "minor" things going wrong. The rumour campaign turns formerly friendly schoolmates against the target.

## **The Mental Health System Makes Things Even Worse**

Because the blame is spread out over a large group, if the student complains, school staff will very likely assume the target is the problem, that they are just "oversensitive", and perhaps that the target "needs mental health counselling." Such a slick, smooth "solution" to a "problem student."

With the participation of a large group, the targeted student's life can be ruined, and the target can get no help from the staff who are paid to resolve student problems. Complaints will bring the full weight of the mental health system down on the totally innocent target. And all this can be accomplished without any actual physical assault.

That group dynamic makes all this possible.

## **The Need For This Booklet**

Perhaps. reader, you can see why a booklet of this sort is essential, to get organized stalking cases acted upon as seriously as single stalking cases have been.

This booklet has a revision date. That is essential, as this booklet will be updated as new information becomes available. Its e-booklet format means that a publisher is not required. A reader can have a local office services shop download print a hard copy.

## **Organized Stalking Defined**

**"Organized stalking", in the current-day sense, is surveillance and harassment of a designated target by stalkers who are members of groups, which are networked throughout the industrialized nations of the world.**

Organized stalking, then, has three essential elements as the term is applied in this booklet:

**\*\* Organized stalking is harassment by a substantial number of people, not by an obsessed single stalker, nor by helpers recruited by an obsessed single stalker**

**\*\* Organized stalking group members are given targets' names and/or have the target identified for them; they do not usually know the target beforehand**

**\*\* Organized stalking community groups are tightly networked, within state or province, and internationally**

## **Historical Roots?**

Organized stalking in that sense, by reports I've seen, has been operating internationally at some level since at least the early 1990s. There may be a link to the similar FBI counterintelligence crimes which began under the program name COINTELPRO; certainly the tactics are similar. However, we do not at this time have evidence tying organized stalking to any specific government or private entity. We can say positively that government is ignoring all complaints of organized stalking, and to that extent is participating.

This sounds bizarre, however it is happening, and this booklet is to present information available about these crimes. Please withhold judgement until you have finished this booklet.

## **The Apparently Conflicting Stories and Theories**

The reader needs to understand that the tactics and technologies used by today's organized stalkers are customized, taking elements from a huge "master menu," for each individual target. This, in turn, means that targets will tell different stories, and relate many different theories as to who is responsible, why they, personally, are being targeted, and how the technological harassment is being carried out. Readers should understand that these sometimes seemingly conflicting reports by targets are not an indication that organized stalking "isn't real," but rather a result of the customization of individual harassment programs.

Readers also need to understand that organized stalking has been designed to operate in a fashion where any one casual observer will see only a tiny part of the full stalking regimen. Stalking attacks which are visible are always designed to appear to a casual observer as "life's normal breaks."

This is deliberate. It is done to make the target appear to be "complaining about nothing" to people who know the target.

## **Secrecy Makes It All Work**

Secrecy is the reason why organized stalking has continued and grown for about two decades, as of the time of writing, and why targets can hardly ever get public officials to take organized stalking as seriously as they do single stalker stalking. It is time for the anti-stalking laws of the early 1990s to finally be applied to organized stalking groups. Legislators should facilitate this by adding specific references to organized stalking, and related tactics, into the stalking laws.

This writer believes that if organized stalking were to become sufficiently well known to the general public, that it's unlikely it could continue.

### **For Readers Who Want to Learn More**

To readers who may look up organized stalking on the Internet, you need to be aware that there are alternate names and concepts used.

For the organized stalking side (as opposed to the electronic harassment side):

- \*\* group stalking

- \*\* multistalking

- \*\* gang stalking (organized stalking groups are NOT youth/race/biker/Mafia gangs)

- \*\* cause stalking (stalkers use a "cause" for recruitment)

- \*\* mobbing (organized stalking in the workplace)

- \*\* street theater (harassment skits done in view of the target out in the community)

For the electronic harassment side:

- \*\* electronic harassment

- \*\* electronic assault

- \*\* directed energy weapons ("DEWs")

- \*\* non-lethal weapons

- \*\* mind control (the through-wall electronics can affect the mind)

- \*\* voice to skull (U.S. Army designation "V2K")

The reader also needs to know that many web sites about organized stalking contain information and claims which are not backed up by mainstream documentation.

I ask the reader to understand the position of targets of organized stalking. Out of the blue, they see a blizzard of harassment for which there is no apparent cause. Every facet of their lives has come under attack, both by strangers and even some of their acquaintances. They can be forced out of their jobs by unceasing harassment. Their children, pets, and family members can be harassed as well. All in ways carefully designed so that outside observers can dismiss complaints as "over-active imagination."

It is a perfectly natural response for a target to grasp at any article at all that mentions organized stalking or electronic harassment, and post it.

It is perfectly natural to develop personal theories as to why this is suddenly happening to them, because there is almost no official information available.

Just as a drowning person will sometimes try to force a rescuer under water in a desperate bid to get above the water, organized stalking targets will proclaim their information and claims loudly, on the Internet, trying to get public attention to end their nightmare. They are not able to exercise the laid back critical thinking that they could before the targeting began.

So for you, reader, it is essential to understand that the many sites with unsupportable claims are not necessarily an indication of delusion, but instead, the natural result of desperation, perpetrator secrecy, and having all public officials deny organized stalking is even possible.

### **Separating Fact From Opinion**

Within the target community, I urge targets to use the following criterion in deciding whether a claim made by anyone can be presented as fact:

**Has the claim been DEMONSTRATED, and has the DEMONSTRATION been published by a mainstream organization under their name/logo?**

If yes, present it as fact. If no, present it as someone's opinion.

This criterion has been forced on us by public officials who almost always have denied every statement we make to them. We are held to a much higher standard of evidence than targets of other crimes.

So I recommend readers adopt that same criterion when browsing web sites dealing with organized stalking and/or electronic harassment. Not everything stated as a fact qualifies as fact, per the above criterion.

### **Disinformation Tactics?**

There are a few web sites which appear, and we can't prove or disprove this, which appear to be attempts to trivialize the crime of organized stalking, by presenting minor acts of harassment (such as "brighting") or totally unprovable acts of harassment ("air stalking" - stalking by aircraft) at the top of the list. Attempts to discredit the victims of the MKULTRA mind control experiments, or the COINTELPRO harassment programs, show that criminals who depend on public ignorance do work to discredit victims.

Another potential (I can't know anyone's true motive, so I have to use the term "potential") disinformation tactic may be the publication of books, DVDs and even tee shirts which contain valid organized stalking material but which are titled using the alleged mind control program name "MONARCH." According to actual survivors of MKULTRA-era mind control experiments, "MONARCH" is allegedly the name of a program of torturing captive children to force them to develop multiple personalities. (Hypnotically programming someone with multiple personalities is much easier.) Unlike "MKULTRA", MONARCH has never been admitted to by any government authority as their program.

To the reader, if you come across this MONARCH-labelled information about organized stalking, please know that organized stalking is not about torture of physically captive

children, and in my opinion, trying to blur MONARCH with organized stalking at least has the appearance of deliberate disinformation.

It's reasonable to assume that the organized stalking perpetrators will post sites to discredit organized stalking targets. Stick to the mainstream organization publication criterion for determining fact, noted above, so fact can be separated from opinion or disinformation easily.

## Statistics

While public officials continue to deny that organized stalking happens, official statistics indicate that multiple stalker cases are being handled by the justice system. For example:

**\*\* A U.S. Department of Justice special report**, January 2009, NCJ 224527, titled Stalking Victimization in the United States, which is available at this link (as of January 2009):

<http://www.ojp.usdoj.gov/bjs/pub/pdf/svus.pdf>

... reported the following statistics showing the occurrence of multiple stalking cases within the total of all U.S. recorded stalking cases in the 2005-2006 time range:

\* 11% of victims said they had been stalked for 5 years or more.

[Eleanor White commenting: "5 years or more" is very characteristic of organized stalking, which usually never stops because the justice systems refuse to acknowledge this crime.]

An average of 10.6 percent of some 4.6 million stalking and harassment victims don't know the stalkers, since they're complete strangers.

[Eleanor White commenting: Almost all organized stalking is carried out by strangers, or people the target may know by sight but has never interacted with. The "4.6 million" figure above includes both stalking and harassment victims.]

Appendix table 3. Number of stalking offenders perceived by victim:

One 62.1%  
Two 18.2%  
Three or more 13.1%  
Number unknown 6.5%  
Total Number of victims 3,398,630

[Eleanor White comment: Adding three or more to number unknown, gives 19.6%. That could suggest something like half a million U.S. stalking victims may be organized stalking targets.]

**\*\* From Statistics Canada:** The following statistic covers all reports to police relating to infractions of Canada's "Criminal Harassment" law, which covers stalking. Statistics Canada, the federal agency which maintains statistics for all areas of Canadian life, including policing. The following statement was in response to Eleanor White's request for a checkoff item on Canada's Uniform Crime Reporting (UCR) system denoting harassment reports involving simultaneous multiple harassers (Chief, Policing Services Program responding):

*"Thank you for e-mail of Jan. 17. There is no need to add a new field to the national Uniform Crime Reporting (UCR) survey to collect information on multiple harassers, as a*

*field already exists for the identification of multiple accused persons for all criminal incidents reported to police. As an example, of the 10,756 incidents of criminal harassment reported to police in 2006, 1,429 of these (or 13%) involved more than one accused."*

That is one criminal harassment report in eight, a very significant percentage. While not all of these would strictly fall under the organized stalking category, this rate of simultaneous multiple harassment reports at least hints that organized stalking may not be as rare as the general public seems to think.

**\*\* A report on stalking posted by the American Journal of Psychiatry** on their web site, journal reference 158:795-798, May 2001, states ... 6 out of 201 (3%) respondents reported multiple stalkers... Compare that with the 13% in criminal harassment cases above, reported by Statistics Canada, and clearly, stalking by multiple stalkers is a very real crime, acknowledged by mainstream professionals.

Note carefully: There is such a thing as stalking by PROXY, in which a single stalker, motivated by amorous interest or mental illness, enlists helpers. Organized stalking is NOT stalking by proxy, but rather is stalking by a group totally independent of whomever originally submitted the target's name to the stalking group. The stalking group typically has no knowledge of why the target's name was submitted, and instead is given a lie, often that the target is a pedophile, to motivate the group stalking effort.

Link to the AJP article: <http://tinyurl-com/3fa3yw>

**\*\* Article: "The Course and Nature of Stalking: A Victim Perspective"**, Authors: Sheridan, Davies, Boon

Source: Howard Journal of Criminal Justice, Volume 40, Number 3, August 2001 , pp. 215-234(20)

In 5% of the cases (5/95), there was more than one stalker. pp.219

"In 5 cases perpetrators were part of a group..", pp.219

"... [40%] of victims (38) said that friends and or family of their stalker had also been involved in their harassment... This is a surprising find as the popular view of a stalker is of a lone and secretive individual." pp.222 [COMMENT: This suggests that the above "5%" cases may have been groups other than family or friends, which is suggestive of organized stalking as opposed to simple proxy stalking. Organized stalking involves groups which are networked everywhere, while proxy stalking has a single stalker who has a very personal focus on the target. Organized stalking groups also work on more than one target, unlike proxy stalking.]

Typical of organized stalking: "In 15% of cases, the victim could provide no possible reason for their harassment" pp.226

**\*\* Statistics from the book Mobbing: Emotional Abuse in the American Workplace** show that in Sweden, about 3.5% of the working population is subject to mobbing, which is organized stalking in the workplace. 3.5% of working people is roughly 1 person in a hundred total, and is in line with the organized stalking survey above.

**\*\* Statistics from the U.S. Centers for Disease Control** concerning harassment and stalking cases give an overall figure for the U.S. of 4.5 people per 100 as having been harassed or stalked at one time. Our informal survey's result of about one person per 100

being targeted by organized stalking fits well within that 4.5 per 100 figure. (Source, ABC News)

**\*\* Statistics from the British (government) Home Office** state that 1,900,000 people in the United Kingdom were victims of stalking or harassment at any one time as of the year 2001. That is about 3 people per hundred. Here again, the organized stalking survey's 1 person in a hundred is not out of line. Most interesting is that roughly 45% of the stalking victims are MEN! That suggests a very different picture from the conventional view of stalking victims being mostly women, and may well point toward the type of stalking described in this booklet. (Graph below shows all harassment offences, not specifically stalking.)

Here's another British stalking statistic:

Home Office Research Study 210 (1998 data):

#### THE OFFENDERS

The majority (79%) of incidents involved only one perpetrator.

[...]

Strangers were responsible in 34 per cent of incidents.

Those statistics are strongly suggestive of organized stalking, 79% involved one perpetrator means 21% involved more than one perpetrator. And stalking by strangers is the usual situation with organized stalkers. Even if only 5% of stalking cases are organized, 5% of a million cases could mean 50,000 organized stalking cases in the United Kingdom alone.

## Chapter 2: Why Are Organized Stalking Targets Chosen?

The question "Why would a large group of people want to harass YOU?" is the big one. This "Why YOU" question is, in my view, the greatest barrier to exposing and stopping organized stalking.

The majority of organized stalking targets do not know for certain why they were chosen, in my experience corresponding with other targets. (I don't know why I was chosen either.) The majority of targets are not high profile people, or people with very sensitive knowledge of government secrets or corporate misdeeds.

Under the FBI's COINTELPRO ("counterintelligence") programs against activists in the 1960s, those who were targeted by FBI harassers were activists, for example, the Black Panthers.

We have a few government or corporate whistleblowers in the organized stalking target community. We have a few who were set to inherit large estates. We have some who found themselves targets during or after a hostile divorce. We have a few who were witnesses to crime. Some organized stalking targets are talk show hosts who broadcast about government and corporate crimes. Some organized stalking targets apparently "just ticked someone off."

But the barrier to credibility is the large number of targets who are "nobodies." I would estimate that perhaps 70% of organized stalking targets can't point with any certainty to the reason they were chosen to be targets. When these "nobodies" try to complain to the authorities about the harassment, they are told that stalking and harassment by groups never happens. I was told by the police officer hosting a group of stalking victims that because I could not name my ONE stalkER, I was not welcome to attend the support group.

"Nobodies" reporting organized stalking are told there is no such thing as an organized, well funded group, nor could there ever be, just to harass innocent individuals. And this is very logical sounding, to people who are not organized stalking targets. Such a glib dismissal is also a very easy way for a public official to "get rid of a problem person."

The end result is that the "system" heaps the ultimate "punishment" on the already desperate target - the target is often forced to undergo psychiatric treatment. This injustice pretty well disables further attempts by the target to get the crime remedied.

Organized stalking targets are never told why they were chosen, with a literal handful of exceptions. There is no visible accuser, no formal charges, no opportunity to defend one's self at trial, no appeal process. One day everything is fine, and suddenly you start to realize that you're experiencing unending hostile acts in the community, on the job or in school, in commercial establishments, and in the privacy of your home.

While some of the harassers say things to the target, if pressed, they consistently deny there is any harassment going on.

So the "Why YOU?" question remains the number one barrier to justice for targets. The "Why YOU?" question appears, as best we targets can discern, to have multiple parts to the answer.

## Why Initially Versus Why Continue

"Why YOU?" covers two very different phases (time points during) of the target selection process:

\*\* Why the target was initially **chosen** for organized stalking

\*\* Why the target's harassers **continue** to commit the crimes against the target

### Why Initially?

We've already listed some answer categories for the "why initially chosen" question:

\*\* Government/corporate whistleblowers

\*\* Inheritance disputes

\*\* Hostile divorce

\*\* Witnesses to crime

\*\* Ticked someone off (revenge)

\*\* Truth-telling talk show hosts

\*\* Unknown (I estimate at roughly 70%)

Over time, large numbers of harassers participate. In fact, by rotating the harassers, the target is unable to finger one or even a few specific individuals as "the" criminal(s). A large number of the harassers are not known to the target, being seen by the target rarely, or only once.

### Why Continue?

Clearly, this large, diverse, frequently rotating group of harassers are not all motivated, say, by taking sides in a hostile divorce, wishing to retaliate for a crime report by the target, or disagreement with what a talk show host has to say.

So WHY would the large, diverse group of harassers keep the harassment up for years and decades in some cases? And from city to city, state to state, and even country to country?

A very few targets get to see and hear enough, over the years, to know that for them, an ongoing LIE CAMPAIGN is what the harassers use to justify the harassment among themselves. Vicious rumours are told such as the target has a long criminal record, the target is a thief, the target is a prostitute, the target is doing drugs, the target sells drugs, and when the harasser supervisors really want maximum effort from their "troops," the target is a pedophile.

The pedophile lie is their ultimate weapon, and is used on both male and female targets.

The pedophile lie has been used on me, as while outdoors, away from witnesses, I've been called that to my face by some of the perpetrators. I had a neighbour, who had been actively

harassing me with noise, take pornography to my place of work one day while I was home sick, and announce loudly to the receptionist that I had asked for the material.

They don't know (or possibly don't care) that I have no criminal record, have had no such sexual inclinations ever, and my total "police record" consists of two parking tickets, both paid on time.

Another lady in the same province has also been hounded by the pedophile lie, quite severely.

So at the LOCAL level, the answer as to why a "nobody" is harassed constantly is that once a vicious lie is circulated in the community, that target is no longer a nobody. They are high profile from that point onwards.

### **Why Continue Knowing the Target is Innocent?**

Vicious lies explain why the often rotated local harassment "troops" keep harassing the target. But what about the supervisors and some of the harassers who can see, over time, that the individual they have been detailed to harass really isn't, say, a pedophile, or other criminal?

(Interestingly, a few of my repeatedly-seen harassers have in fact stopped the harassment and become friendly. But there are still the hard core supervisors (and some of the repeatedly-seen perpetrators) who keep it up in spite of becoming aware their official lie about the target is a lie.)

Why do they keep it up? Why do they willingly take on additional targets in their area, knowing that lies about targets are being used?

Interestingly, one investigation turned up evidence that some harassers depend heavily on support of their peers, and they simply keep harassing targets to maintain approval by their peers, the feeling of being in the "in" crowd so to speak.

But this question shows that there are not only two parts relating to the to the "Why YOU?" question regarding initially then later on, but also that motive varies with the harassment organization LEVEL:

\*\* The community level, frequently rotated harassment "troops"

\*\* The supervisor and above levels

At this point in time, we have no detailed information about the supervisor and above levels of the harassment organization which we can prove in court. The incredibly seamless coordination of harassment groups from one town to the next, up to internationally, shows that there definitely are supervisors, and many levels above them. The fact that every single official repeats the same reply "There is no organized stalking. You need to see a psychiatrist." seems to indicate some sort of official cover is in effect.

### **The Official Cover Up**

The question is, why would there be an official cover in effect?

We targets cannot answer that with any degree of certainty. At this time, I can only offer the reader an observation that local thuggery which is ignored by officials is a classic, repeating symptom of a dictatorship in the making. Criminal activity IGNORED BY OFFICIALS is very telling - it's exactly what happened in Nazi Germany and Soviet Russia during the runup to overt dictatorship.

Since we targets network with one another in all industrialized nations, we know that organized stalking is a crime which is world wide in scope, with the same master menu of tactics showing up everywhere.

Can this mean that citizens of this planet are witnessing the formation of a world wide dictatorship? From where I sit, that's about the only answer that makes sense, in light of what I observe.

History's dictators have often stated the wish to expand their control world-wide. Here in the early 21st century, it appears the technology and tactics are available to accomplish that.

My best guess as to why a large, well funded, internationally networked organization of "control freak" thugs exists is to work towards the common dream of past and no doubt current dictators or would-be dictators. That is pure guesswork at this point in time.

## **Summary**

To summarize the parts of the "Why YOU?" question:

### **WHY ARE TARGETS INITIALLY CHOSEN?**

- \*\* Government/corporate whistleblowers
- \*\* Inheritance disputes
- \*\* Hostile divorce
- \*\* Witnesses to crime
- \*\* Ticked someone off (revenge)
- \*\* Truth-telling talk show hosts
- \*\* Unknown (estimated at roughly 70%)

### **WHY ARE TARGETS HARASSED FOR YEARS AFTER BEING CHOSEN?**

#### **WHY DO THE LOCAL HARASSERS KEEP IT UP?**

- \*\* Harasser wants to be with the "in crowd"
- \*\* Lies that the target has a long criminal record
- \*\* Lies that the target is a thief
- \*\* Lies that the target is a prostitute

\*\* Lies that the target is a drug user

\*\* Lies that the target is a drug dealer

\*\* Lies that the target is a pedophile (child molester)

WHY ARE TARGETS HARASSED FOR YEARS BY PERPETRATORS WHO KNOW THE LIES ARE LIES?

\*\* Unknown. Similarity to political thuggery during the formative stages of dictatorships is noted.

## Chapter 3: David Lawson's Landmark Investigation

Shortly after the 9/11 attacks on the World Trade Center in New York City, organized stalking targets became aware of a book titled "Terrorist Stalking in America" by private investigator David Lawson. A sequel was published a few years later titled "Cause Stalking."

Both books cover the same topic, which Lawson calls "cause stalking," and which is a perfect match for the "organized stalking" discussed in this booklet.

Lawson worked for more than a decade with a Florida detective agency. It appears that his investigative work involved travel throughout the U.S. and Canada. He stated that his investigation covered 12 years, and likely was a spare time activity for him.

David Lawson reports in his books that he was casually listening to his public service radio scanner, and discovered a group using police-like terminology, but which did not sound as if they were actual police officers. Eventually, he learned of a restaurant where they met for meals, and visited one of this group's gatherings there.

This provided the curious David Lawson with a chance to gain the confidence of the group, and Lawson found that they were, in fact, carrying out organized stalking on designated targets. This group assumed the role of some sort of "special community police."

I'm going to discuss here David Lawson's essential findings. But first, I need to explain that while David Lawson's investigation is a godsend for targets of organized stalking, there are frankly some problems with his books. Lawson presents **observations**, and his personal **conclusions**.

From my experience in the organized stalking target community, Lawson's observations are a perfect match for what targets experience from people in their community (or people encountered while travelling.) But Lawson's conclusions, as to who is responsible, do not match what I know about organized stalking, and in fact don't match his own reports about the members of the stalking groups and their recruiting procedures.

Should a reader acquire one of Lawson's books, I beg you, separate his observations while "riding with" the harassment groups, from his personal declarations as to who is responsible.

Lawson lays the blame at "extremist groups," "foreign terrorists," and "anti-government groups." Some "extremist groups" may be responsible; we targets cannot be sure because the people seen by us appear to be normal citizens, with really aggressive behaviour against us, often fuelled by lies about us.

We have seen no indications I'm aware of that any "foreign terrorists" are responsible.

But I am able to comment on one group in the United States which Lawson names, and that is the U.S. Patriot Movement. The Patriot Movement is not a tightly organized group, and its members are spread out throughout the U.S. What I know about them is mainly what I have heard their shortwave and Internet (with some AM/FM affiliates) broadcasters report about their goals and activities, since I began listening to them in 2002.

What I have heard consistently from perhaps 50 commentators over that time span is that they are people who research government documents, scientific reports, and under-reported mainstream media reports both from the U.S. and foreign. They reference published history.

The Patriot commentators have been warning since the mid-1990s that a world dictatorship is in the works. They present evidence which if true, very well shows there is reason to be concerned about that. They give source details and urge listeners to not accept their word, but to look up the original sources.

If what the broadcasters say is representative of the movement, these Patriots would be very much against organized stalking.

Lawson insinuates that the Patriots are "anti-government." That is absolutely untrue based on my years of regular listening. The Patriots are opposed to crime in government, not government itself. They seek strict application of the U.S. Constitution.

I have appeared on a number of their shows, as have several other organized stalking targets. While we targets don't feel the Patriots give our issue sufficient air time, we feel that the Patriots do support our work to expose and stop these crimes. In fact, at time of writing, 20 of the Patriot hosts have reported to me, either on the air or privately, that they also experience some of the things we do. In their case, they are essentially whistleblowers of government and corporate misdeeds, so it is not surprising that they would also be targeted.

Now it is possible that some people calling themselves "Patriots" may also be members of organized stalking groups. I have no way of knowing. But Lawson mentions the broadcasters as being involved in organized stalking, and unless he comes up with actual evidence, I will not accept that conclusion. That is my major reservation about David Lawson's books.

There is a secondary problem - Lawson told me directly that in his 12 year investigation, he found no evidence whatsoever that through-wall electronic harassment weapons were ever used.

For, (I would estimate 95% of,) targets of organized stalking, the electronic harassment is an integral part of their harassment regimen. Personally, I suspect Lawson does know about electronic harassment, but may have been threatened or "bought off." His books certainly would be much more helpful if he were to cover both the in-person harassment and the electronic harassment.

The main message I have for readers, should they acquire one of Lawson's books, is to suspend judgement about his conclusions as to who is responsible, but note that we targets give him excellent marks for his observations while "riding with" the harassment groups.

Here are some quotes from David Lawson's two books, which illustrate organized stalking as he observed while "riding with" the harassers:

"I also spoke with a few police officers from across the country. They confirmed the existence of stalking groups across the country. In general, they said that 'cause stalking' is primarily a civil problem where the plaintiff has to prove financial loss. They also said that there are free speech and grass roots issues involved. In fact, the police themselves are targets of these groups. In small towns, the number of members in these groups can easily exceed the number of police officers. In general, the police will not talk about stalking groups. One officer did say there is a storm brewing as groups become larger and more numerous."

That statement by police, "In general, they said that 'cause stalking' is primarily a civil problem where the plaintiff has to prove financial loss" shows that police are definitely not interested in trying to go after organized stalkers. Since the early 1990s, there have been anti-stalking laws on the books. From that point forward, stalking is a criminal offence.

True, stalking, even by a known single stalker, is difficult to investigate and prosecute because no single act by a stalker needs to be seriously criminal. It takes quite a bit of investigative effort to prosecute what people who are not stalking targets consider something relatively minor. And when the "labour" of stalking is divided among members of a group, it is even more difficult to prove culpability.

But the fact remains that stalking is a criminal offence, and that 'civil problem' statement by police is what could be called a "cop out", pun intended.

Next, listen to what Lawson discovered about recruitment of the perpetrators:

"Recruits tend to be blue collar workers who are at the bottom end of the job scale. They are janitors in apartments, hotels, etc., who have keys to get in any locked doors. They are security guards, who can let fellow members into places where they would not normally be allowed to go. They are city workers, who can, in many cities, follow a target around all day in their vehicles or have a noisy project underway near his [target's] residence. They are taxi drivers, who are a network that is always on the road. They are cable, telephone and electric company employees who can interfere with a target's service and spend time on patrol with the group, while they are on the job."

Keep in mind that organized stalking includes TWO phases - organized stalking by people, and attacks using advanced through-wall electronic technologies. The recruits described above, according to Lawson, had no knowledge of the electronic attacks. There is apparently a separate "elite corps" of electronic stalkers, based on the experiences of targets.

Lawson reports a few quotes from the harassers themselves, expressing their attitude and motivation:

\*\* "We are like the police except we are ABOVE the police."

\*\* "We are a citizen's group that helps the police. We are trying to alert people in the area about this person [the target] before he gets to do what he did in the last place he lived."

\*\* "When I get the call, I go to whatever the address is. It doesn't matter what they [targets] do, they can never get away from us."

\*\* "Who are we? We drive the ambulances that take you to the emergency room. When your house is burning, we put out the fire. We are security guards. We protect you at night. You only have electricity, phone and cable service because of us. We are janitors. We have the keys. We fix your cars. You don't want to mess with us."

Lawson reports some statistics he gathered regarding what motivates the perpetrators:

\*\* 25% follow the nominal "cause" they were recruited under

\*\* 25% actually participate in the harassment

\*\* 75% harass occasionally or not at all

\*\* 10% join out of fear of being harassed themselves

Lawson describes recruits to these groups as "... those who feel powerless, inferior and angry."

Common sense is that naturally, such people would be easy to recruit for street and adjacent to the target's home harassment, but I would comment that lots of professionals put us (targets) down at every opportunity, declaring us mentally ill for even suggesting organized stalking is possible. These professionals don't "feel powerless, inferior, and angry."

And I doubt the many utility and city employees who participate feel "powerless, inferior, and angry" either. So while David Lawson has done a great job, some aspects of organized stalking have apparently escaped him.

One comment Lawson makes is that "Firemen across the country, and even some police officers, support these groups."

I have heard a number of reports that vehicular harassment has involved an above average number of vehicles that bear stickers of firefighters, or, a few targets have traced perpetrator identities to firemen. One target discovered that a number of vehicular harassment cars, identified by licence number, were parked in a police station parking lot.

My personal take on why some firemen and police might back these groups is that many have a heightened sense of community service. If they can be persuaded that the target has a criminal record, the worst case being that of a pedophile, it would be natural for firefighters and police to want to "help keep the target in line".

The author concludes, as explained at a number of places in the book, that the "cause" the typical group is "working toward" is mainly an excuse to get the groups together. The main motivation of members who stay with these groups is the sense of power and belonging the group members derive. Having a "cause" enhances the feelings of power and righteousness, but group members, according to the author, are most concerned with how their fellow group stalkers feel about their "work" and accept them.

Lawson explains the attitude of the typical stalking group member towards the "cause" this way:

"Most active group members have only a general idea of the ideology of the group but they don't particularly care."

These groups come into being and are run by leaders. Here is what the author says about them:

"Group leaders do have political goals and the belief that the end justifies the means."

Lawson describes leaders as considering their members "disposable." He states that some leaders work for corporations and politicians. Lawson states that leaders identify targets but don't directly supervise the harassment group members.

Lawson describes leaders as having an "air of mystery", "having worked for the CIA, NSA, or some other intelligence agency that doesn't reveal information about their employees." Lawson states that this "background" is likely mythology. If organized stalking is the leading edge of a world dictatorship, however, he may be wrong on the mythology idea.

How about financing these groups?

Although the author states that the pay is low, there are still very large expenses to harass people as thoroughly as targets report. Here is an example of what I mean by "large expenses":

"Groups are well financed. They can afford to rent property wherever the target lives. If he drives across the country, he will be followed by supporters of similar groups in that area. If he travels by plane, group members will meet him wherever he lands in the U.S. They may even accompany him on a plane if they know his travel plan, and there is a good chance that they do."

Here is what the author learned about their financing:

"The operations of many extremist groups are actually financed by corporations which use them to stalk their enemies or potential enemies. The groups are used as the private armies of those corporations. Some countries kill dissidents and in others they are jailed. In the United States, someone who is threatening to corporations or industries, like a whistleblower or activist, is likely to become the target of an extremist group."

The author makes several statements that these criminal stalking groups not only harass targets specified by their leaders, but also are FOR HIRE - a kind of "revenge service" for those wealthy enough to hire them.

There are two distinct reasons why targets are harassed:

\*\* The initial reason targets are placed on the stalking groups' "list"

\*\* The reason the stalkers keep it up

Those two reasons should always be kept separate in your mind, reader. David Lawson's focus is mainly on the reason the stalkers **continue** to harass targets.

David Lawson's chapter on Selection of Targets may well be true, but it certainly doesn't describe the thousands of people who don't fit his list of targeted categories. Here are some of the categories of targets Lawson records in "Cause Stalking":

\*\* Abortion clinic workers

\*\* People guilty of mistreatment of animals

\*\* County clerks and local politicians

\*\* Police officers

\*\* Judges

\*\* IRS and Treasury agents

\*\* Civil rights activists

\*\* Government or corporate whistleblowers

One thing David Lawson makes clear in describing the targets is that "The ultimate goal of the groups is to destroy the targets." Those who have been stalked by organized citizen groups which are fed lies report that these groups do destroy targets with great efficiency.

Next, let's look at some of the typical OPERATIONS these groups carry out. Here, I have retained a number of quotes from the original book because I feel they state the situation as well or better than the new book:

\*\* The first step, after a target has been selected, is to establish a personality profile "... which will involve an assessment of IQ, personality type, and history."

\*\* "A target may also notice being photographed."

\*\* "The primary characteristic of cause stalking is that it is done by large groups of people. A target will always be followed, but he is unlikely to see the same stalkers very often." ...

\*\* "Many of these groups include hundreds of people."

\*\* "Some authors refer to cause stalking as terrorist stalking. Groups do not just stalk individuals. They employ organized programs of harassment which include break-ins, property damage, assault and occasionally, even death. The children of a target are a favorite."

\*\* "Firemen across the country, and even some police departments have a long history of supporting extremist groups. Fire trucks can sometimes be seen riding in extremist convoys, with their flashing lights turned on and their sirens screaming. They will also race to greet a convoy which is entering their town. The participation of firemen, city workers and utility company workers helps give group members an illusion of legitimacy and power."

\*\* "City employees can be used to harass a target in many ways including tearing up the road in front of a target's home. Employees of pest control businesses who have access to the keys for apartments and those who work for alarm and locksmith companies are also of interest."

\*\* "Groups also attack targets of convenience. These people are selected because they are convenient targets, and not for any other reason. These include loners who tend to be more vulnerable to their harassment tactics than those with family and friends around them. Targets of convenience are used for practice."

\*\* "In order to establish bases of operation, they will enlist the assistance of neighbors. In many areas, they can do this by intimidation. Those who do not co-operate can be targeted, which includes harassment of their families and damage to their homes and vehicles.

"If they are dealing with individuals who do not know them, they can also appeal to their sense of patriotism and they can offer drugs, friendship, home repair, free taxi rides and what ever else they have to. In some cases they may even be able to get a key to the residence from a 'patriotic' landlord."

\*\* "Surveillance is conducted 24 hours a day, 7 days a week. When a target leaves his residence they will alert the group, either by cell phone or by business band radio. Other members, who are patrolling the perimeter to watch for police and other vehicles driving in the area, will race to the location to begin pursuit. In small towns, where business band radio is widely used, these activities are a local sport among a small group. Anyone with a scanner

can join in. Some targets have reported hearing an announcement on their scanners as soon as they turn their lights on in the morning."

\*\* "In a typical apartment setting, they will attempt to lease, sublet, or otherwise have access to apartments above, below, and on both sides of the target. They will also "guard" the vehicles of a target in the parking lot."

\*\* If [the target] flushes a toilet, he may hear a car horn honk, the sound of a power tool or hammering, for example. There will also be a large number of people coming and going, and accompanying rowdiness and noise."

\*\* "A common ruse used by these groups is that they are a 'citizens group' which assists the police and they are 'just keeping track of' a certain individual, for whatever reason. The illusion is reinforced by the case files they carry which are complete with photos of the target and look like those used by police."

\*\* "During a search [of the target's home or apartment] members who are on patrol anyway establish a perimeter around the residence to watch for police vehicles. In an apartment setting, entry will likely be gained through a member of the janitorial staff, pest control or alarm technician, since they have a right to enter. They may even be able to approach a landlord and gain his co-operation, after convincing him of their 'higher purpose'. He may also co-operate out of fear."

\*\* "Others do not recognize that they are being harassed by an organized group. They just think that there are a lot of rude people in the world."

\*\* "Interception of mail is standard practice." ... "Typically, targets notice that their mail is arriving late or they do not receive certain pieces of mail. They [targets] may overhear people at a nearby table in a restaurant talking about certain mail, and realize it is theirs, or someone may drive by [the target] waving their mail at them."

\*\* "Interception of phone calls is also standard practice. This is done by telephone company employees who support the [stalking] group for ideological reasons or because they obtain some benefit." Eleanor White comment: I'd add to that one of the most likely reasons, because the phone technicians are told lies about targets.

\*\* "An objective is to isolate the target from his family and friends. He can tell them about all the strange things happening around him, but they will not understand and perhaps will think he is crazy. Sometimes other members of the family will receive the same treatment."

\*\* "When a target is driving, standard practice is to surround his vehicle and attempt to control his speed. He will not be followed in close proximity by the same vehicles for a long distance. They do frequent trade-offs. Vehicles line up behind the target to take their turn."

\*\* "In many parts of the country it is common to see groups of six to 30 or more vehicles driving around in convoys with their high beams on during the day. This is one of the ways a convoy can be identified."

\*\* "Standard practice is to watch the target's vehicles and this subjects them to damage including slashed tires, scratched paint, stolen license plates, etc. Typically they would not cut the brake lines on vehicles or commit other similar acts of sabotage, but they would drain the oil or antifreeze over a period of time."

\*\* "A target will be followed on foot wherever he goes. Anyone can go to the same public places he goes, and they will attempt to get into any other restricted places he goes, including hospitals, places of employment, etc. It has been said that it is possible to go nearly anywhere if you have a clipboard in your hand and it is almost true. They also like to wear name badges on a lanyard, and some carry phony police badges."

\*\* "Common harassment tactics used by those on foot include pen clicking, in which they repeatedly click a ball point pen, key rattling, and rattling change in their pockets while standing behind the target. Many tactics are tried and the result is observed. Those which evoke a response from the target are repeated. When a target sits anywhere in public, group members will attempt to sit behind him in order to create noise, by whatever means, including tapping their feet on the target's chair. The objective is to harass the target constantly."

\*\* "Groups attempt to interfere with any business and personal relationships which the target has. Typically, this interference involves character assassination from some anonymous individual and is not usually taken seriously by those who know the target. It can be effective with people who don't know the target."

\*\* "At work, the target will also experience character assassination. If he works in any position where he has to deal with the public, there will be a steady stream of customers who complain about him. If he is a real estate agent, he will have a steady stream of prospects who occupy his time but never make an offer."

\*\* Let me, Eleanor White, give you an example of how brutal and serious this "character assassination" can be:

One of our members, who prefers to remain anonymous, moved in with her husband and children to a house which, unknown to them, had been a methamphetamine lab. The chemicals used to brew meth apparently cause distinctive symptoms in the mouth. This family's dentist felt he was "helping law enforcement" by reporting them to local law enforcement as meth users. This was absolutely untrue, but the family didn't even know the report had been made and had no way to correct it. (In fact, in some places, dentists are REQUIRED to report suspected cases of meth use.)

Law enforcement in that area was apparently tied in to the citizen groups, and the family was harassed for many years. The husband died, apparently from exposure to these chemicals.

The lady, now a grandmother, steadfastly did detective work and eventually found out about her family's reputation, with some help from a policeman who was a personal friend, from a different jurisdiction. This policeman admitted off the record that "meth mouth" can result in people being submitted to citizen harassment groups for harassment.

Character assassination is complete, and has life-destroying consequences!

\*\* "A common tactic use by groups is noise campaigns. Group members will drive by the target's residence or work place, honking their horns, squealing tires, and making whatever other noise they can."

\*\* "They will also make noise from whatever nearby properties they have access to. Typically, they will make noise when the target goes outside. Group members will also frequently knock on his door for whatever peculiar reasons they can dream up."

\*\* "In an apartment setting, targets can expect to hear tapping on the walls in the middle of the night, hammering etc. from the upper and/or lower apartments, and possibly the apartments on both sides. They will continue to 'work' on these activities for as long as they can get away with them."

\*\* "... It is not uncommon, in an apartment setting, for a target to hear someone moving from room to room as he does, from the upper or lower apartment. [Eleanor White talking: This requires commercial through wall radar or more advanced technology in many cases.]

\*\* "Often they occupy a nearby apartment, part time, when the owner is not there and he receives some benefit. A target may notice someone leaving a nearby apartment when he leaves his, and arrive when he arrives. In addition, he will often be accompanied in elevators by a steady stream of different individuals who go to the apartments being used by the group."

David Lawson's observations, excerpted here, very accurately represent what targets of organized stalking experience from human stalkers. Please keep in mind that targets do not consider Lawson's conclusions that "anti-government groups," "Patriots," "extremist groups" or "foreign terrorists" are responsible, as accurate.

From the viewpoint of many targets, it is more likely that ordinary citizens from all age groups and walks of life are harassing us in an organized way, probably based on lies. Some targets have evidence that police play a role. In one case, someone claiming to be a retired police officer stated on a mainstream talk show about organized stalking that retired officers "sometimes make life hell" for targets who have done things they don't approve of.

Bottom line: In spite of David Lawson's excellent observations, we still can't explain with certainty what entity is overseeing this global harassment organization. David Lawson presented us few hints about that.

To locate a purchase source for his book, you can try a web search for:

"Cause Stalking" "David Lawson"

... keeping those quote marks as they are above. The book has been intermittently available by way of the amazon.com Internet bookseller.

## Chapter 4: Through-Wall Electronic Weapons

Private investigator David Lawson presented us a thorough look at organized stalking by human beings in the community of the target. Most targets who have been targets for several years also experience a very invasive, inescapable form of harassment by through-wall electronic technology. (In virtually all cases to date, organized stalking appears to be a life sentence.)

In this chapter we will present some silent, through-wall, virtually zero trace evidence electronic technologies which can be used to literally destroy any quality of life a target may hope to have, **in the privacy of the target's home.**

Surprisingly, those technologies are not government secrets, and have been available to anyone with upper middle class income for one to five **decades!** Again, decades! The reason, reader, you may not be aware of them is that they were developed for legitimate uses, and some have not been widely publicized. And you, reader, have one of them right now in your home.

These technologies use the ability of radio signals to penetrate non-conducting walls, and use frequencies and modulation ("signal shaping") methods, which produce effects which are useful for covert harassment.

Here is the list through-wall harassment technologies currently available:

### **Weaponized microwave oven**

A simple microwave oven, door removed, with the door interlock switch bypassed, and held against the bedroom wall of a target in an apartment building or semi-detached house. This device can cause a variety of disabling medical symptoms.

MODIFIED microwave oven weapon for improved focus of the microwave radiation

Some of the symptoms of microwave exposure are:

Asthma, cataracts, headaches, memory loss, early Alzheimer's, bad dreams, depression, fatigue, concentration loss, appetite loss, heart and blood pressure problems, and cancer.

Targets do report those symptoms, however, doctors almost never admit to patients that electronic harassment is even possible, never mind actually happening.

## Voice to Skull

Joseph Sharp's voice to skull success, performed with Dr. James C. Lin's pulsed microwave transmitter, and publicly announced in 1974 at the University of Utah, at a seminar presented to the faculties of engineering and psychology.

That seminar, and the operating principle of Sharp's successful experiment, were described in the March 1975 "American Psychologist" journal. The operating principle, which has been improved upon in the more than three decades since Sharp's success, is based on the fact that one microwave radar pulse of medium to high power can produce an audible click in the hearing sense of a person in line with the signal. That effect has been called "radar hearing" since World War II.

Dr. Joseph Sharp used a computer to cause one microwave radar-like pulse to be transmitted every time a speaker's voice wave form swung from high to low, as illustrated below:

The result was that when Joseph Sharp sat in line with a microwave transmitter transmitting pulses as shown above, he could hear a "robotic" voice speaking the numerals 0 to 9. He did not carry the experiment further, at least according to available records. Sharp's experiment took place in 1973, and although the potential for microwave radiation to cause cancer wasn't as widely known, it may be that radiation danger is the reason this technology has not, at least publicly, been developed further.

Research into radar hearing by Dr. Allen Frey in the 1960s established that roughly three-tenths of a watt per square centimeter of skull surface is required to generate the clicks from which the voice is synthesized. Synthesis of voice from clicks is a primitive form of "digital audio."

For some years in the 1990s and early 2000s, the United States Army recognized "voice to skull" technology, which they abbreviated as "V2K," in their on line thesaurus. For reasons unknown, the Army removed that thesaurus entry circa 2007.

Some references to developing more advanced types of voice to skull can be found among patents, and rare United States Air Force references to the technology in the late 1990s forward.

Voice to skull (V2S/V2K), a commercial version dubbed MEDUSA - "Mob Excess Deterrent Using Silent Audio", was proposed for commercial development for military and police use, per ABC news in summer 2008.

Targets report invasive sound transmissions of good fidelity at various times of day. Voices saying profane and disparaging things are common. False sounds of telephones ringing, pagers beeping, alarm clocks going off, knocking on the target's door, and other sounds have been reported. The fidelity of these transmissions indicates improvement over the method demonstrated by Dr. Joseph Sharp.

## Silent Sound

Oliver Lowery's silent sound, U.S. patent 5,159,703, is the current method for "subliminal sound." "Silent Sound" replaced "time slice" subliminal sound, in which small slices of a subliminal message were inserted into an audio stream, such as at a movie or on TV, to influence the listener. Silent Sound is mixed with audio in places like department store Muzak systems to discourage shoplifting.

Although enhancements have been developed, at its simplest, a Silent Sound voice encoder takes a spoken message, and uses a circuit similar to a telephone voice changer to raise the frequency of the voice up near (but not exceeding) the upper limit of human hearing. The listener hears a fluctuating high-pitched tone, and any words cannot be discerned, consciously.

However, the brain can subconsciously decode the words. The brain takes advantage of the fact near the upper limit of hearing, the sensitivity to frequencies drops off. The sensitivity curve is sloped downwards in the Silent Sound frequency range, roughly 14,000 to 16,000 Hertz (cycles per second.) For readers with knowledge of radio detector circuits, recovering audio from a frequency modulated (FM) converted voice signal is done using "slope tuning." A concept diagram of how this works with Silent Sound is shown here:

"Silent Sound" is not a through-wall device by itself. However, when Silent Sound is transmitted to a target by way of a voice to skull through-wall transmitter, if the target is susceptible to hypnosis (many people are), the target's thought processes and personality could be severely disrupted over time, and the target would have no idea why this was happening, as the sound is essentially silent. The target may hear a high pitched tone or hiss, but no words. The target would be much less able to resist hypnotic suggestions than with audible speech.

It should be noted that many targets report hearing frequent or constant high-pitched tones or hissing.

"Silent Sound" subliminal hypnotic suggestion can also be piggybacked on to a target's cable TV or radio listening, as well as transmitted on a voice to skull signal.

### **The LIDA Machine**

An old medical device, the Russian LIDA machine, a pulsed 40 watt, 40 MHz radio transmitter, which can be used to make a target exhausted on the job when pulsing at the rate consistent with sleep, and with a pulse rate increase, DEPRIVE a target of sleep too.

This device is a radio transmitter version of other types of trance induction devices, such as a swinging watch, or pulsing lights, or pulsing sound. Trance induction works using any low speed, regular stimulus. Even slowly swinging in a hammock or rocking in a rocking chair can induce sleep.

But if someone comes along and suddenly rocks a snoozing person's rocking chair at a high rock rate, that person is going to be forced awake. Same with a slowly beeping tone changing to a rapidly beeping tone. Alarm clocks use rapid beeps, for example.

The LIDA was originally designed as a drugless sedation machine. It was featured in a 1985 edition of a CNN "Special Report." An Associated Press photo of a LIDA machine, with one of the scientists who studied it, Dr. Ross Adey, is here:

The original LIDA machine uses not only a pulsing radio signal, but pulsing lights, sound and even radiant heat as well. It was designed to be used near the patient. The earliest report of the LIDA being in use I'm aware of is the report of a Korean prisoner of war who saw one in operation at a prison camp. That's half a century ago in terms of a radio harassment technology, which is quite simple, having been available for half a century.

(Note: Dr. Ross Adey and Dr. Eldon Byrd were scientists who studied the LIDA machine for possible weapons potential. There is no evidence that Dr. Adey or Dr. Byrd were ever associated with unethical activity.)

Organized stalking targets report overwhelming fatigue on the job at times. I'm retired now, but I was hit so hard with some sort of fatigue that I would have to find a room at work and lie down for as long as 30 minutes to just carry on. Concurrent with this, doctors could find no disease which could explain these very sudden, drop-you-in-your-tracks attacks.

Organized stalking targets also report extreme trouble sleeping, describing the sensation as "being injected with caffeine." I have experienced that too.

### **Through-Wall Radar**

Through clothing (and through non-conductive wall) RADAR, widely used at airports and by police to look through clothing for hidden weapons. The harassment potential of this technology in the hands of organized stalking gangs is obvious.

Through wall/clothing radar images

The same security scanning radar used at airports, and now coming into use by police, can also view a target through a non-conductive wall. In the late 1990s, I pretended to be willing and able to buy such a unit, and was told by a salesman for the Millivision company, then making this equipment, no longer in business, that if I had the cash, then around \$100,000, I could have the equipment. I stated plainly that I was a private individual with no ties to law enforcement.

Many targets report being "followed" in their apartments by rapping noises from an adjacent apartment, particularly the one below. As the target walks about, rapping noise which sounds as if the occupant of the adjacent apartment is doing "work" on something, will move as the target moves. This may go on for say, 15 minutes. It does seem as if someone has through-wall radar and is "enjoying" its use.

Once in a while, a target will experience a few weeks where every time they sit on the toilet, the water in the bathroom below theirs will be turned on at the exact time the target starts to urinate, and the water is turned off when the target's urine stream stops. Even throughout the night.

Those through-wall harassment technologies can all be proven to exist.

## **EPIC**

There are some as yet to be demonstrated technologies as well, which are interesting in terms of harassment potential. One, code named EPIC, was announced on Fox News as under development by Houston, Texas firm Invocon, with funding by the U.S. Marine Corps.

EPIC, it is claimed, has the potential to disrupt the inner ear with an electromagnetic signal,

through walls. Targets report disrupted balance, sometimes as they try to do delicate work, or work with the potential to spill things, which does happen regularly.

## **Implants**

There has long been a suspicion by organized stalking targets that their disruptive effects may be due to implants in the body. There is very limited evidence that a handful of targets may be implanted, but by and large, targets do not report unexplained wounds, missing time, or medical scans with artificial objects which don't have a legitimate medical purpose. At time of writing, there are two targets who have had monitoring/tracking/control implants diagnosed by doctors and removed. Two out of thousands.

There are several who have medical scans which they claim show non-therapeutic, non-medical objects in their bodies. Without a professional diagnosis, I'm unwilling to claim those undiagnosed scans represent monitoring/tracking/control implants, though under the MKULTRA "mind control" crimes carried out in the 1950s-1970s by CIA contractors and affiliates, there was some implantation of the involuntary experimentees.

For today's organized stalking targets, the question of implants, possibly nano (microscopic) sized, or even made of biological material, is wide open. My advice to organized stalking targets is to avoid compulsive worry that they are implanted without a high quality medical scan, at least. Because there are through-wall harassment technologies which do not require implants, implants should not be assumed, in my view.

### **Classified Technologies**

It should be noted that while the five proven to exist, proven to work, through wall harassment technologies can severely disrupt a target's quality of life, they are easy to detect if a target has the right test equipment, and can be shielded against. Today's targets find that good quality shielding against electromagnetic signals does work now and then, temporarily, or partially, or, not for all who try shielding.

By contrast, materials that do not block electromagnetic (radio) signals do sometimes provide some relief. Examples are leather, rubber, and the common blue gel freezer ice packs.

The fidelity of today's through-wall sound projection weapons ("voice to skull") is much higher than Dr. Joseph Sharp's pulsed microwave method could produce.

Clearly, from the target's experiences, there is equipment in use now that is advanced beyond the proven technologies discussed here. This makes it much more difficult for targets to credibly prove the electronic harassment phase of the organized stalking crime.

## Chapter 5: Experiences of the Targets

In this chapter, I'm going to relate some experiences of my own, and those of other targets.

No identities will be revealed here. It is strictly up to individual targets as to if or when they decide to publicly identify themselves. To maintain anonymity, I will not identify places or employer names. These experiences will be summarized, and may have taken place anywhere on planet Earth, as organized stalking has been reported in all industrialized countries.

Let me start by sharing some anecdotes about when targets first become aware they are being deliberately harassed. That is, the moment when they wake up to the fact that they are not simply experiencing incredible "bad luck."

\*\* In my own case, I was working in the city of Toronto, Ontario, Canada, in 1980.

One day a rather nasty looking middle aged man on a bicycle brushed past me on the sidewalk in front of my apartment house, screeched to a stop, turned around, and stared intently at me until I entered the building. When I got home, I discovered my underwear had holes punched in the crotches. I found some supplies which had been nearly full were now nearly empty. There was no evidence of a break-in, so clearly, someone had used a key.

No valuable items, like my TV set, were taken.

I began to pop wide awake every single night, and no matter how still I laid there, no matter how quiet it was, no matter how physically comfortable I was, sleep was absolutely impossible until daybreak, then I had to get up to go to work.

Formerly friendly residents would no longer talk to me, but give me icy stares. Up until perhaps 11 pm each night, endless loud radios and banging noises became my constant companions. Before that, the apartment house had been quiet, and friendly.

Clearly "something was up," but I had no idea what. It wasn't until I read a paper on the Internet by former U.S. Army intelligence officer Julianne McKinney about organized stalking and electronic harassment activity, 16 years later, that I had any idea there were others going through this. No known cause for starting the harassment.

\*\* A social worker reported that her harassment started when she was hired to care for a young girl who had been through Hellish ritual abuse torture, and had developed multiple personalities as a result. (This is normal for children who are severely tortured.) The social worker found that she was being followed. Her house was broken into and the intruders were going through her possessions. Verbal harassment by strangers followed. No obvious cause for starting the harassment.

\*\* A mother of three grown children, who had done forensic accounting and had inexplicable difficulty on some of her assignments, suddenly experienced an "electrical sensation" around her head. She began hearing "tones" (a commonly reported experience) seeming to originate inside her head. She received voice to skull transmissions from a man claiming to be a physicist "experimenting" on her. No known cause for starting the harassment.

\*\* A man reports that his harassment began when he turned down an attempt to recruit him to do illegal things like running drugs, fixing elections, and witness tampering by a prominent government agency. Apparent cause, his refusal to play along.

\*\* A former prison inmate reported his harassment originated with a system called "the Inmate Computerized Tracking System." He reports that once this system was implemented unusual things happened in the institution, including suicides and suicide attempts, and numerous inmates being labelled mentally ill. When this man attempted to seek help from outside agencies, intense harassment by guards resulted. Apparently caused by this government surveillance program.

\*\* A man who had held responsible jobs was driving along the interstate, when he received a voice to skull transmission saying "It's going to break." This was followed by a popping sound in the vehicle's steering mechanism. The left turn signal was then permanently broken. No known cause for starting the harassment.

\*\* A middle-aged man with no criminal record and no habits which would engender suspicion became aware of his targeting when he accepted a job on a work visa to a neighbouring country. Initial clues included being singled out by customs for detailed questioning, and treatment for mild depression by doctors which didn't actually seem related to the problem. The odd, not relevant treatment by doctors continued. Strange signs of entry into the target's apartment began, including damage to blinds and cable ties showing up on lamp cords. Sounds of wires "scraping" in his apartment wall, always exactly at his bed time. No known cause for starting the harassment.

\*\* A man moved to a new city and immediately began experiencing hostile behaviour of neighbours, "strange things" happening around his house, and harassing telephone calls. He then began to receive manipulated dreams, a common complaint. (Note: Even sleeping near a radio or TV can influence dreams, so influencing dreams by way of voice to skull and silent sound is not difficult.) No known cause for starting the harassment.

\*\* A target noticed harassment starting just after telephone linemen were seen working just outside the target's home. The target began experiencing unusual clicks while talking on the phone, and when the target said "It seems someone is listening" the calls were cut off. (Noise and disruption on target telephones is common.) The target discovered their door unlocked or even open on returning from work, several days in a row. The television remote disappeared for a month. A man claiming to live in a motel overlooking the target's house offered to mow the lawn; obviously someone mowing lawns isn't going to be able to afford to live in a high quality motel. No known cause for starting the harassment.

\*\* A female member of the army of a major country dated senior non-commissioned officers who were "revenge prone." Single stalking began which became organized stalking with electronic harassment. This female soldier reports hearing an attitude expressed by senior NCOs that single female soldiers need to be "managed." Apparent cause revenge, possibly related to a terminated relationship.

\*\* A female software engineer began getting harassed on the job in the information technology security field. She had been getting top marks for her work prior to that. She began getting blacklisted, and heard specifically from one prospective employer that she was in fact blacklisted. There is an epidemic of severe abuse of foster children that you, reader, may not be aware of because foster children are doled out by agencies ostensibly there to genuinely help children in distress. This software engineer's child was removed from her,

something that happens to a number of organized stalking targets. Her child turned up in a hospital emergency room displaying sunken eyes and emaciation from starvation, with sores all over her mouth. No known cause for starting the harassment, however, from the targets' viewpoint, jealousy on the job is sometimes suspected.

\*\* Two organized stalking targets report that their harassment began when they entered alcoholics anonymous or narcotics anonymous "12 step" residential programs. They report that these agencies apparently feel perfectly justified in "punishing" addicts. One such target reported that the operative phrase for targets who try to leave these programs is "We [the agency] will refund your misery."

\*\* A single mom of a pre-teen boy began getting heavy fatigue attacks at work. Then began massive sabotage of multiple computers, her telephone service, and belongings in her home. An external roof drain pipe was repeatedly crushed or pried apart to flood the basement. Clothing was ripped, and even spots of engine oil were placed throughout her home and on her son's bed. Her bank account information kept being sabotaged. Telephone customer service people were strangely hostile and not helpful, actually lying about service calls. No known cause for her harassment, however she suspects a strange encounter with a man at a dance hall may have triggered the start of the harassment.

\*\* A lady, with teenage daughter, had to enter alcoholics anonymous, a residential program, due to her alcoholism threatening her marriage. While there she met, and began a relationship with an ostensibly clean cut, intelligent, former drug addict. This man had criminal affiliations, and the target came into inside knowledge about a major crime. When she reported her inside knowledge to police, full fledged organized stalking began, including electronic attacks on her health, and murder of her pets. Moving to widely separated locations did not stop the harassment.

\*\* A target's harassment was first noticed as sensitivity to bright lights at night. This was followed by transmissions of faked cell phone ringing (by voice to skull technology.) Actual voices followed, accompanied by tones. Balance difficulty (see the EPIC weapon in the chapter about through wall weapons) and vibration of the teeth began. Her significant other began to hear some of the voice to skull transmissions. Only minimal stalking by people reported. No known cause for starting the harassment.

\*\* A man's start of harassment happened when one night, he was forced wide awake, with a pounding heart, at 3:00 am. (This is common.) His wife was sound asleep. He was on the wrong side of the bed, and the ceiling fan had been switched off by a cord switch instead of the outlet switch they normally used. No known cause for starting the harassment.

\*\* Like the testimony above from a man whose harassment started with a voice to skull transmission that his vehicle's turn indicator was about to break, this man received a voice to skull transmission while a teenager undergoing dental work. He spoke about the transmission to the dentist, who got the man forced into the mental health system. The organized stalking program followed. No known cause for starting the harassment.

\*\* A postal letter carrier accidentally hit the fence of a house connected to postal inspectors who were apparently involved in drug trafficking. That was enough to have the letter carrier's name turned over to organized stalkers, apparently because the letter carrier had become aware of criminal activity there. Once organized stalking begins, it is virtually always for life.

\*\* A registered nurse's harassment began after she accidentally linked to a local pornography network with a new computer. Heavy, invasive electronic harassment started immediately. No known cause for starting the harassment.

\*\* A lady's voice to skull harassment began by perpetrators representing themselves (via voice to skull transmissions) as part of a "self help program." The perpetrators also contacted some of her family members, telling them the lady target had "ordered the service." No known cause for starting the harassment.

\*\* A man reports organized stalking with electronic harassment for his entire life. No known cause for starting the harassment.

\*\* A boarding house roomer's harassment started when people around him began discussing private things he had never discussed with anyone. This was followed by the classic harassment by members of the community, such as store clerks, and bank tellers. No known cause for starting the harassment.

\*\* A lady's harassment started out as unexplained insults by neighbours, escalating into heavy electronic weapons harassment. No known cause for starting the harassment.

That's what it's like to have organized stalking and electronic harassment start up, for a sampling of targets.

Many targets have people or groups they suspect of being responsible for their harassment, but few actually know for sure. Because organized stalking and electronic harassment is so overwhelming, so total, so inescapable, and because virtually all officials deny that such a crime is possible, and because of known government criminal programs like MKULTRA (mind control by a variety of methods) or COINTELPRO (organized stalking to discredit activists,) many targets assume organized stalking is a government program.

The end result of the secrecy is that if you should come across target testimonials on the Internet, you can expect to see a lot of blame placed on government. This writer suspects government is indeed involved, but I have no evidence that today's organized stalking is in fact being done by government.

To my mind, the most important task ahead of targets of organized stalking is not speculating about whom to blame, but educating the general public. An aware public could apply enough pressure to get these crimes investigated seriously, and in all likelihood stopped.

One interesting occurrence relating to how targeting starts - several targets report actually being warned they were about to be targeted before the targeting started. In one case, a person photographed a harassment "skit" being performed on another target. A warning note was discovered on the photographer's vehicle saying "Do not interfere in what you do not know about."

Let's continue by relating some of the ongoing experiences reported by targets of organized stalking:

\*\* Targets find that attempts are made to spoil every family, friendship and business relationship they have. Investigator David Lawson did mention lies and fake criminal records being used. While estranged family, friends and business associates aren't inclined to discuss reasons why with targets, bribes and threats have been known to cause

estrangement too. Whichever cause of the estrangement is used, it is almost always very effective. A number of targets who owned their businesses have lost their businesses to harassment of their customers.

\*\* Groups of harassers sometimes swarm into a store, either just before a target arrives or just after the target arrives. These stalkers will crowd areas the target attempts to select items at, and will queue up at the checkout ahead of the target. This becomes obvious when it happens mid-day at times when shopping traffic is light. If a target operates on a regular schedule and visits, say, a convenience store on the way home from work regularly, the target is very likely to encounter constant long lineups indefinitely, even when the store is not in an area where high traffic occurs.

\*\* Signs informing the public about organized stalking, as on targets' cars or even clothing or backpacks, have resulted in striking reductions in harassment in areas where the signs are displayed. This has been an effective technique in eliminating the store crowding skit described above. It is a guess, but possibly, the perpetrators don't want their local "troops" to visit web sites describing these crimes.

\*\* One of the worst target experiences, thankfully not frequent, is the entry to the target's home while the target is out, and terrorizing the pet, giving the pet severe mental illness. Some pets are poisoned (one dog given antifreeze, making it blind.) Some pets and some wildlife are butchered and left on the target's doorstep.

\*\* A sometimes intensely repeated skit, over perhaps a few weeks, is endless walking intercepts. Strangers will synchronize their walking speed and direction to force the target to take evasive action to avoid a collision. Several times over a short time span. Synchronized even to the point of turning the lock at exactly the same instant.

\*\* A sometimes intensely repeated skit, over weeks, months or even years, also described by David Lawson's books, is highway harassment. This is especially true of targets who must commute to work by highways. Not only do perpetrators "box in" targets on the highway and force targets to drive more slowly than they had planned, but outright attempts to run the target off the road also happen. Targets occasionally collide with perpetrator vehicles and once in a while a target does run off the road. It appears that perpetrators may be given immunity by government for such attacks, however, I'm not aware of any explicit evidence to prove that.

\*\* A sometimes intensely repeated skit, over weeks or months, are periods when perpetrators in vehicles will attempt to hit a target in a crosswalk, especially when no other traffic or witnesses are present. I've had several such encounters in 2007-2008. The drivers have been looking directly at me, not distracted, daytime, no visibility problems. I was entirely legal, all light signals being obeyed. The perpetrators entered the intersection and actually accelerated so as to hit me. The engines revved up noticeably. The drivers were middle-aged adults, not kids showing off. These are deliberate attempts, and not just imagining an attempt to hit is taking place. Other targets report the same.

\*\* A sometimes intensely repeated skit, over perhaps a few weeks, is synchronized leaving and or arriving. Whenever the target leaves, a nearby neighbour will leave at exactly the same time. This can also happen whenever the target arrives home. Another variation is, when the target does a lot of walking, to have someone on the opposite side of the street perfectly keep pace with the target for several blocks. While this happens in normal life, it doesn't happen day in and day out on streets that are nearly deserted.

\*\* A skit by targets' neighbours is to start up noisy activity, such as a leaf blower when there are no leaves to be blown, the instant the target goes to their deck or back yard to relax.

\*\* Another skit by targets' neighbours is to dump trash in the targets' yard while the target is away or not in a position to see the act.

\*\* An ongoing skit is the entry to a target's home (usually) or sometimes automobile or workplace, when the target is absent. Furniture and objects are simply moved, as if to tell the target that the target is powerless to stop the entries. Once in a while the old "practical joke" of removing the screws holding a chair together will be performed.

\*\* A strange experience by some targets is doctors who look at a clearly abnormal lab report, which the target can plainly see has very abnormal readings, and tell the target everything is fine. Confirmed by targets with medical training.

\*\* Tradesmen hired by targets, or who are hired by say the target's employer to do work at the target's work area, "just always make mistakes." Mistakes that cost time, money, and create inconvenience for the target. By the time a target reaches middle age, they have a good idea of what the normal mistake probability is, and these cases are well outside that range.

For example, while I was in charge of the computer system at an employer, the telephone technician wrapped a cable spirally around a large group of computer data cables, making it impossible to move them as was sometimes needed. There was no need to do that. The normal way to handle that job would have been to use cable ties. We had to push the telephone company to return and re-do the job.

Another "mistake" occurred for a target when their car was towed away "by mistake."

\*\* One somewhat common experience is that both by in-person approaches to the target, and voice to skull transmissions, the perpetrators attempt to convince the target that the target is in fact homosexual. This is a recurring "theme" in the harassment master menu.

\*\* A lady videotaping harassment activity from her front porch was arrested for that legal act, on her front porch. When she read the report, the report stated she was actually around the corner on the sidewalk, taping one of the perpetrator's homes.

\*\* Entry to targets' homes and moving objects into odd hiding places is done, probably to make the target think their mental faculties are deteriorating.

\*\* Dumping of all sorts of consumable supplies is a regular experience for some targets. When a container is down to, say, 1/3 remaining, that's a time when the perpetrators will dump all but a small trace of the product. Labelling containers with the date purchased, the date opened, and in some cases, levels of product remaining and date, can reduce this activity.

\*\* Ripping of clothing, and destruction of zippers, can be a common experience for some targets. Some targets experience emphasis on crotch and underarm places. One day I came home from work to find the crotches ripped out of every piece of underwear I owned. Sometimes, instead of a single rip, a small rip will be widened daily until the garment is

destroyed. Sometimes, a crotch or underarm area will start out with many circular holes punched by a tapered awl, and these holes will be progressively widened over time.

\*\* Destruction of furniture can happen to some targets. Items only a few weeks old will have welds, for example, snapped while the target is out. In one instance, I arrived home from work to find the back of my folding metal chair hacksawed off. In other instances, I have had folding chair legs bent, as if over a foot, while out at work.

\*\* Thefts happen, but they are carefully done so that the value of the item is too low for the target to get police to take the incidents seriously. Theft of important personal papers is one type of theft experienced. While items of value are often not touched, there have been instances of moderate amounts of money (up to a couple of hundred dollars) stolen. It's not uncommon for stolen items to be returned AFTER the target replaces them.

\*\* At work, targets experience sabotage of their work. At one job where I looked after the computer system, any programs I had written were frequently sabotaged overnight. Equipment "failed" at a rate far in excess of normal. "Failures" would sometimes be by way of someone working an equipment plug out just far enough to cause failure, and these tended to happen just as I was headed home, or about to bite into my sandwich at lunch time.

\*\* Some targets report periods where everywhere they go, they are accompanied by very loud bird calls. This is true even where no birds are visible. While not a through-wall weapon, there is ultrasound technology which can project sound in a narrow beam, causing the impact point of the silent beam to appear to be the source of the projected sound. (Trade names such as "Acoustic Spotlight" or "HyperSonic Sound" are commercial versions of this technology.)

\*\* Quite a few targets report at least one of the following through-wall electronic attacks:

\*\* "Bee sting" sensations, particularly on the feet, particularly while trying to sleep

\*\* Arms and/or legs jerking wildly when trying to sleep

\*\* Extremely powerful, unquenchable, itching, no rash, no explanation from doctors

\*\* Sudden extremely fast and heavy heartbeat, when fully relaxed

\*\* Sudden extremely high body heat, fully relaxed, not after exercise

\*\* Vibration of body parts and/or bed

Some of these may be high power microwave beams, which can penetrate walls, however, we cannot explain how some of these common attacks are done. These attacks do suggest that there is classified (secret) technology in use in some cases.

## Chapter 6: Conclusion

If you've stayed with me this far, you may be asking, along with us targets, what the heck can we actually do about this?

Clearly, the government officials who are paid (well) and sworn to serve and protect are providing cover for these crimes. That makes it really, really difficult.

Several targets have been told PRIVATELY by sympathetic police officers that they are under explicit orders to REFUSE to help us. One who contacted me was a chief of detectives. He told me privately that the orders to his department came from well above his local department, but he was not informed of the actual source of the orders.

There are numerous cases of police officers who refuse to log any complaints of organized stalking or electronic harassment in writing, or who become "unavailable" for subsequent inquiries by the targets. David Lawson reported that some departments actually support the organized stalkers.

Some targets have been heavily harassed by police under false charges, and a couple have been sent to state prison, having been framed by the authorities. (They were anti-organized stalking and electronic harassment activists.)

Many targets have posted their stories and their theories on web sites, in an attempt to engage public interest. Many of these sites state either theories about what technology is in use on them, or which organization is doing the harassment, as FACT, without having any solid evidence at all to back up their assertions. There are so many sites that I can't possibly review them all to separate those which offer simple testimonials minus the theories stated as facts, from the sites which are primarily guesswork.

And there are some sites which function as deliberate disinformation sites (and I am unable to prove the motives of the posters. I can only report the functionality of these sites.)

For these reasons, I have not included an extensive page with Internet links (site addresses.)

But at the time of writing this, I can give you a couple of recommended sites which will give a reader who is a member of the general public, and is not a target, a good introduction to activism by targets trying to expose these crimes:

The Freedom From Covert Harassment and Surveillance (FFCHS) web site is currently the North American activism hub for attempts to get the attention of both the public, and officials who are able to see that there is a serious crime happening that the world's justice systems are ignoring. The FFCHS organization also lists networking opportunities, and information about various activists and their efforts. The link for FFCHS is:

<http://www.freedomfchs.com>

There is a web site by a now inactive activist organization, (Citizens Against Technological and Community-based Harassment, or CATCH) which is very well written and continues to be maintained by the lady who started CATCH. This is the only site I am aware of which has been reported by targets as playing a tangible role in convincing officials that organized stalking is a "real crime" and deserves being taken seriously. That link is:

<http://www.catchcanada.org>

To the reader, I recommend you evaluate targets' web sites on the CITED REFERENCE MATERIALS, and if there is no mainstream cited reference for an assertion by a target about what organization is carrying out the stalking, or what technology is in use, consider those assertions as the personal opinion of the target.

As to what you, reader, can actually do to help?

The answer is simple and not expensive. Learn about organized stalking and electronic harassment, and discuss it with as many friends, family members and associates as you can comfortably. It is this writer's belief that the only way the crime of organized stalking can be stopped is to make the general public fully aware. And you, reader, can help with that easily.

And thank you for taking the time to read this booklet.

# **ORGANIZED STALKING: A TARGET'S VIEW**

Eleanor White  
Revision of January 21, 2009

This writer has been a target of organized stalking for over two decades, and has been in contact with other targets of organized stalking since 1996.

I'm a retired engineer. This booklet relates my opinions and conclusions, and readers should be aware that other targets may hold different opinions.

## Chapter 1: What is "Organized Stalking?"

Before I answer that question, let me say that this booklet is written to introduce the general public and public officials to an old crime, "ganging up" on someone, which has been "improved" to the point where targets not only cannot escape it, but it can be done in ways that people around the target, who witness some of the harassing acts, will deny it is even happening.

While any type of "ganging up" is organized, the "organized stalking" described in this booklet makes full use of instant electronic communication, and willingness of corrupt officials to look the other way, to achieve an environment in which the target can never escape some degree of harassment.

This is new. This is why I am writing this booklet. The world needs to know that some citizens are experiencing Hell on Earth which uses highly developed tactics, specifically developed so that observers will think the target is only complaining about "life's normal breaks." Stalking has been brought to new level of both impact on the target, and deniability.

### **Deniability is Easy**

Once a group of stalkers starts "working over" a target, deniability increases dramatically.

Imagine a group of school students who decide to "work over" a target. Each member of the group can do something minor, maybe once a day. "Accidentally" bumping into the target, passing a remark in the hall which can be said was not intended for the target, spilling something on the target's back in the lunchroom, stealing items of small value over time belonging to the target, and the familiar rumour campaign. No one member of the group ever does anything serious.

But from the target's viewpoint, they never have a nice day. There are always "minor" things going wrong. The rumour campaign turns formerly friendly schoolmates against the target.

## **The Mental Health System Makes Things Even Worse**

Because the blame is spread out over a large group, if the student complains, school staff will very likely assume the target is the problem, that they are just "oversensitive", and perhaps that the target "needs mental health counselling." Such a slick, smooth "solution" to a "problem student."

With the participation of a large group, the targeted student's life can be ruined, and the target can get no help from the staff who are paid to resolve student problems. Complaints will bring the full weight of the mental health system down on the totally innocent target. And all this can be accomplished without any actual physical assault.

That group dynamic makes all this possible.

## **The Need For This Booklet**

Perhaps, reader, you can see why a booklet of this sort is essential, to get organized stalking cases acted upon as seriously as single stalking cases have been.

This booklet has a revision date. That is essential, as this booklet will be updated as new information becomes available. Its e-booklet format means that a publisher is not required. A reader can have a local office services shop download print a hard copy.

## **Organized Stalking Defined**

**"Organized stalking", in the current-day sense, is surveillance and harassment of a designated target by stalkers who are members of groups, which are networked throughout the industrialized nations of the world.**

Organized stalking, then, has three essential elements as the term is applied in this booklet:

**\*\* Organized stalking is harassment by a substantial number of people, not by an obsessed single stalker, nor by helpers recruited by an obsessed single stalker**

**\*\* Organized stalking group members are given targets' names and/or have the target identified for them; they do not usually know the target beforehand**

**\*\* Organized stalking community groups are tightly networked, within state or province, and internationally**

## **Historical Roots?**

Organized stalking in that sense, by reports I've seen, has been operating internationally at some level since at least the early 1990s. There may be a link to the similar FBI counterintelligence crimes which began under the program name COINTELPRO; certainly the tactics are similar. However, we do not at this time have

evidence tying organized stalking to any specific government or private entity. We can say positively that government is ignoring all complaints of organized stalking, and to that extent is participating.

This sounds bizarre, however it is happening, and this booklet is to present information available about these crimes. Please withhold judgement until you have finished this booklet.

### **The Apparently Conflicting Stories and Theories**

The reader needs to understand that the tactics and technologies used by today's organized stalkers are customized, taking elements from a huge "master menu," for each individual target. This, in turn, means that targets will tell different stories, and relate many different theories as to who is responsible and why they, personally, are being targeted. Readers should understand that these sometimes seemingly conflicting reports by targets are not an indication that organized stalking "isn't real," but rather a result of the customization of individual harassment programs.

Readers also need to understand that organized stalking has been designed to operate in a fashion where any one casual observer will see only a tiny part of the full stalking regimen. Stalking attacks which are visible are always designed to appear to a casual observer as "life's normal breaks."

This is deliberate. It is done to make the target appear to be "complaining about nothing" to people who know the target.

### **Secrecy Makes It All Work**

Secrecy is the reason why organized stalking has continued and grown for about two decades, as of the time of writing, and why targets can hardly ever get public officials to take organized stalking as seriously as they do single stalker stalking. It is time for the anti-stalking laws of the early 1990s to finally be applied to organized stalking groups. Legislators should facilitate this by adding specific references to organized stalking, and related tactics, into the stalking laws.

This writer believes that if organized stalking were to become sufficiently well known to the general public, that it's unlikely it could continue.

### **For Readers Who Want to Learn More**

To readers who may look up organized stalking on the Internet, you need to be aware that there are alternate names and concepts used:

\*\* group stalking

\*\* multistalking

\*\* gang stalking (organized stalking groups are NOT youth/race/biker/Mafia gangs)

\*\* cause stalking (stalkers use a "cause" for recruitment)

\*\* mobbing (organized stalking in the workplace)

\*\* street theater (harassment skits done in view of the target out in the community)

The reader also needs to know that many web sites about organized stalking contain information and claims which are not backed up by mainstream documentation.

I ask the reader to understand the position of targets of organized stalking. Out of the blue, they see a blizzard of harassment for which there is no apparent cause. Every facet of their lives has come under attack, both by strangers and even some of their acquaintances. They can be forced out of their jobs by unceasing harassment. Their children, pets, and family members can be harassed as well. All in ways carefully designed so that outside observers can dismiss complaints as "over-active imagination."

It is a perfectly natural response for a target to grasp at any article at all that mentions organized stalking and post it. It is perfectly natural to develop personal theories as to why this is suddenly happening to them, because there is almost no official information available.

Just as a drowning person will sometimes try to force a rescuer under water in a desperate bid to get above the water, organized stalking targets will proclaim their information and claims loudly, on the Internet, trying to get public attention to end their nightmare. They are not able to exercise the laid back critical thinking that they could before the targeting began.

So for you, reader, it is essential to understand that the many sites with unsupportable claims are not necessarily an indication of delusion, but instead, the natural result of desperation, perpetrator secrecy, and having all public officials deny organized stalking is even possible.

## **Separating Fact From Opinion**

Within the target community, I urge targets to use the following criterion in deciding whether a claim made by anyone can be presented as fact:

**Has the claim been published by a MAINSTREAM ORGANIZATION, under their name/logo?**

If yes, present it as fact. If no, present it as someone's opinion.

This criterion has been forced on us by public officials who almost always have denied every statement we make to them. We are held to a much higher standard of evidence than targets of other crimes.

So I recommend readers adopt that same criterion when browsing web sites dealing with organized stalking. Not everything stated as a fact qualifies as fact, per the above criterion.

### **Disinformation Tactics?**

There are a few web sites which appear, and we can't prove or disprove this, which appear to be attempts to trivialize the crime of organized stalking, by presenting minor acts of harassment (such as "brighting") or totally unprovable acts of harassment ("air stalking" - stalking by aircraft) at the top of the list. Attempts to discredit the victims of the FBI COINTELPRO harassment programs, show that criminals who depend on public ignorance do work to discredit victims.

It's reasonable to assume that the organized stalking perpetrators will post sites to discredit organized stalking targets. Stick to the mainstream organization publication criterion for determining fact, noted above, so fact can be separated from opinion or disinformation easily.

### **Statistics**

While public officials continue to deny that organized stalking happens, official statistics indicate that multiple stalker cases are being handled by the justice system. For example:

**\*\* A U.S. Department of Justice special report**, January 2009, NCJ 224527, titled Stalking Victimization in the United States, which is available at this link (as of January 2009):

<http://www.ojp.usdoj.gov/bjs/pub/pdf/svus.pdf>

... reported the following statistics showing the occurrence of multiple stalking cases within the total of all U.S. recorded stalking cases in the 2005-2006 time range:

**\*\* 11% of victims said they had been stalked for 5 years or more.**

[Eleanor White commenting: "5 years or more" is very characteristic of organized stalking, which usually never stops because the justice systems refuse to acknowledge this crime.]

An average of 10.6 percent of some 4.6 million stalking and harassment victims don't know the stalkers, since they're complete strangers.

[Eleanor White commenting: Almost all organized stalking is carried out by strangers, or people the target may know by sight but has never interacted with. The "4.6 million" figure above includes both stalking and harassment victims.]

Appendix table 3. Number of stalking offenders perceived by victim:

One 62.1%  
Two 18.2%  
Three or more 13.1%  
Number unknown 6.5%  
Total Number of victims 3,398,630

[Eleanor White comment: Adding three or more to number unknown, gives 19.6%. That could suggest something like half a million U.S. stalking victims may be organized stalking targets.]

**\*\* From Statistics Canada:** The following statistic covers all reports to police relating to infractions of Canada's "Criminal Harassment" law, which covers stalking. Statistics Canada, the federal agency which maintains statistics for all areas of Canadian life, including policing. The following statement was in response to Eleanor White's request for a checkoff item on Canada's Uniform Crime Reporting (UCR) system denoting harassment reports involving simultaneous multiple harassers (Chief, Policing Services Program responding):

*"Thank you for e-mail of Jan. 17. There is no need to add a new field to the national Uniform Crime Reporting (UCR) survey to collect information on multiple harassers, as a field already exists for the identification of multiple accused persons for all criminal incidents reported to police. As an example, of the 10,756 incidents of criminal harassment reported to police in 2006, 1,429 of these (or 13%) involved more than one accused."*

That is one criminal harassment report in eight, a very significant percentage. While not all of these would strictly fall under the organized stalking category, this rate of simultaneous multiple harassment reports at least hints that organized stalking may not be as rare as the general public seems to think.

**\*\* A report on stalking posted by the American Journal of Psychiatry** on their web site, journal reference 158:795-798, May 2001, states ... 6 out of 201 (3%) respondents reported multiple stalkers... Compare that with the 13% in criminal harassment cases above, reported by Statistics Canada, and clearly, stalking by multiple stalkers is a very real crime, acknowledged by mainstream professionals.

Note carefully: There is such a thing as stalking by PROXY, in which a single stalker, motivated by amorous interest or mental illness, enlists helpers. Organized stalking is NOT stalking by proxy, but rather is stalking by a group totally independent of whomever originally submitted the target's name to the stalking group. The stalking group typically has no knowledge of why the target's name was submitted, and instead is given a lie, often that the target is a pedophile, to motivate the group stalking effort.

Link to the AJP article: <http://tinyurl-com/3fa3yw>

**\*\* Article: "The Course and Nature of Stalking: A Victim Perspective"**, Authors: Sheridan, Davies, Boon

Source: Howard Journal of Criminal Justice, Volume 40, Number 3, August 2001 , pp. 215-234(20)

In 5% of the cases (5/95), there was more than one stalker. pp.219

"In 5 cases perpetrators were part of a group..", pp.219

"... [40%] of victims (38) said that friends and or family of their stalker had also been involved in their harassment... This is a surprising find as the popular view of a stalker is of a lone and secretive individual." pp.222 [COMMENT: This suggests that the above "5%" cases may have been groups other than family or friends, which is suggestive of organized stalking as opposed to simple proxy stalking. Organized stalking involves groups which are networked everywhere, while proxy stalking has a single stalker who has a very personal focus on the target. Organized stalking groups also work on more than one target, unlike proxy stalking.]

Typical of organized stalking: "In 15% of cases, the victim could provide no possible reason for their harassment" pp.226

**\*\* Statistics from the book Mobbing: Emotional Abuse in the American Workplace** show that in Sweden, about 3.5% of the working population is subject to mobbing, which is organized stalking in the workplace. 3.5% of working people is roughly 1 person in a hundred total.

**\*\* Statistics from the U.S. Centers for Disease Control** concerning harassment and stalking cases give an overall figure for the U.S. of 4.5 people per 100 as having been harassed or stalked at one time. Our informal survey's result of about one person per 100 being targeted by organized stalking fits well within that 4.5 per 100 figure. (Source, ABC News)

**\*\* Statistics from the British (government) Home Office** state that 1,900,000 people in the United Kingdom were victims of stalking or harassment at any one time as of the year 2001. That is about 3 people per hundred. Here again, the organized stalking survey's 1 person in a hundred is not out of line. Most interesting is that

roughly 45% of the stalking victims are MEN! That suggests a very different picture from the conventional view of stalking victims being mostly women, and may well point toward the type of stalking described in this booklet. (Graph below shows all harassment offences, not specifically stalking.)

Here's another significant British stalking statistic:

Home Office Research Study 210 (1998 data):

### THE OFFENDERS

The majority (79%) of incidents involved only one perpetrator.  
[...]

Strangers were responsible in 34 per cent of incidents.

Those statistics are strongly suggestive of organized stalking, 79% involved one perpetrator means 21% involved more than one perpetrator. And stalking by strangers is the usual situation with organized stalkers. Even if only 5% of stalking cases are organized, 5% of a million cases could mean 50,000 organized stalking cases in the United Kingdom alone.

## Chapter 2: Why Are Organized Stalking Targets Chosen?

The question "Why would a large group of people want to harass YOU?" is the big one. This "Why YOU" question is, in my view, the greatest barrier to exposing and stopping organized stalking.

The majority of organized stalking targets do not know for certain why they were chosen, in my experience corresponding with other targets. (I don't know why I was chosen either.) The majority of targets are not high profile people, or people with very sensitive knowledge of government secrets or corporate misdeeds.

Under the FBI's COINTELPRO ("counterintelligence") programs against activists in the 1960s, those who were targeted by FBI harassers were activists, for example, the Black Panthers.

We have a few government or corporate whistleblowers in the organized stalking target community. We have a few who were set to inherit large estates. We have some who found themselves targets during or after a hostile divorce. We have a few who were witnesses to crime. Some organized stalking targets are talk show hosts who broadcast about government and corporate crimes. Some organized stalking targets apparently "just ticked someone off."

But the barrier to credibility is the large number of targets who are "nobodies." I would estimate that perhaps 70% of organized stalking targets can't point with any certainty to the reason they were chosen to be targets. When these "nobodies" try to complain to the authorities about the harassment, they are told that stalking and harassment by groups never happens. I was told by the police officer hosting a group of stalking victims that because I could not name my ONE stalkER, I was not welcome to attend the support group.

"Nobodies" reporting organized stalking are told there is no such thing as an organized, well funded group, nor could there ever be, just to harass innocent individuals. And this is very logical sounding, to people who are not organized stalking targets. Such a glib dismissal is also a very easy way for a public official to "get rid of a problem person."

The end result is that the "system" heaps the ultimate "punishment" on the already desperate target - the target is often forced to undergo psychiatric treatment. This injustice pretty well disables further attempts by the target to get the crime remedied.

Organized stalking targets are never told why they were chosen, with a literal handful of exceptions. There is no visible accuser, no formal charges, no opportunity to defend one's self at trial, no appeal process. One day everything is fine, and suddenly you start to realize that you're experiencing unending hostile acts in the community, on the job or in school, in commercial establishments, and in the privacy of your home.

While some of the harassers say things to the target, if pressed, they consistently deny there is any harassment going on.

So the "Why YOU?" question remains the number one barrier to justice for targets. The "Why YOU?" question appears, as best we targets can discern, to have multiple parts to the answer.

### **Why Initially Versus Why Continue**

"Why YOU?" covers two very different phases (time points during) of the target selection process:

\*\* Why the target was initially **chosen** for organized stalking

\*\* Why the target's harassers **continue** to commit the crimes against the target

### **Why Initially?**

We've already listed some answer categories for the "why initially chosen" question:

\*\* Government/corporate whistleblowers

\*\* Inheritance disputes

\*\* Hostile divorce

\*\* Witnesses to crime

\*\* Ticked someone off (revenge)

\*\* Truth-telling talk show hosts

\*\* Unknown (I estimate at roughly 70%)

Over time, large numbers of harassers participate. In fact, by rotating the harassers, the target is unable to finger one or even a few specific individuals as "the" criminal(s). A large number of the harassers are not known to the target, being seen by the target rarely, or only once.

### **Why Continue?**

Clearly, this large, diverse, frequently rotating group of harassers are not all motivated, say, by taking sides in a hostile divorce, wishing to retaliate for a crime report by the target, or disagreement with what a talk show host has to say.

So WHY would the large, diverse group of harassers keep the harassment up for years and decades in some cases? And from city to city, state to state, and even country to country?

A very few targets get to see and hear enough, over the years, to know that for them, an ongoing LIE CAMPAIGN is what the harassers probably use to justify the harassment among themselves. Vicious rumours are told such as the target has a long criminal record, the target is a thief, the target is a prostitute, the target is doing drugs, the target sells drugs, and when the harasser supervisors really want maximum effort from their "troops," the target is a pedophile.

The pedophile lie is their ultimate weapon, and is used on both male and female targets.

The pedophile lie has been used on me, as while outdoors, away from witnesses, I've been called that to my face by some of the perpetrators. I had a neighbour, who had been actively harassing me with noise, take pornography to my place of work one day while I was home sick, and announce loudly to the receptionist that I had asked for the material.

They don't know (or possibly don't care) that I have no criminal record, have had no such sexual inclinations ever, and my total "police record" consists of two parking tickets, both paid on time.

Another lady in the same province has also been hounded by the pedophile lie, quite severely.

So at the LOCAL level, the answer as to why a "nobody" is harassed constantly is that once a vicious lie is circulated in the community, that target is no longer a nobody. They are high profile from that point onwards.

### **Why Continue Knowing the Target is Innocent?**

Vicious lies explain why the often rotated local harassment "troops" keep harassing the target. But what about the supervisors and some of the harassers who can see, over time, that the individual they have been detailed to harass really isn't, say, a pedophile, or other criminal?

(Interestingly, a few of my repeatedly-seen harassers have in fact stopped the harassment and become friendly. But there are still the hard core supervisors (and some of the repeatedly-seen perpetrators) who keep it up in spite of becoming aware their official lie about the target is a lie.)

Why do they keep it up? Why do they willingly take on additional targets in their area, knowing that lies about targets are being used?

One investigation turned up evidence that some harassers depend heavily on support of their peers, and they simply keep harassing targets to maintain approval by their peers, the feeling of being in the "in" crowd so to speak.

But this question shows that there are not only two parts relating to the to the "Why YOU?" question regarding initially then later on, but also that motive varies with the harassment organization LEVEL:

\*\* The community level, frequently rotated harassment "troops"

\*\* The supervisor and above levels

At this point in time, we have no detailed information about the supervisor and above levels of the harassment organization which we can prove in court. The incredibly seamless coordination of harassment groups from one town to the next, up to

internationally, shows that there definitely are supervisors, and many levels above them. The fact that every single official repeats the same reply "There is no organized stalking. You need to see a psychiatrist." seems to indicate some sort of official cover is in effect.

## **The Official Cover Up**

The question is, why would there be an official cover in effect?

We targets cannot answer that with any degree of certainty. At this time, I can only offer the reader an observation that local thuggery which is ignored by officials is a classic, repeating symptom of a dictatorship in the making. Criminal activity IGNORED BY OFFICIALS is very telling - it's exactly what happened in Nazi Germany and Soviet Russia during the runup to overt dictatorship.

Since we targets network with one another in all industrialized nations, we know that organized stalking is a crime which is world wide in scope, with the same master menu of tactics showing up everywhere.

Can this mean that citizens of this planet are witnessing the formation of a world wide dictatorship? From where I sit, that's about the only answer that makes sense, in light of what I observe.

History's dictators have often stated the wish to expand their control world-wide. Here in the early 21st century, it appears the technology and tactics are available to accomplish that.

My best guess as to why a large, well funded, internationally networked organization of "control freak" thugs exists is to work towards the common dream of past and no doubt current dictators or would-be dictators. That is pure guesswork at this point in time.

## **Summary**

To summarize the parts of the "Why YOU?" question:

### **WHY ARE TARGETS INITIALLY CHOSEN?**

\*\* Government/corporate whistleblowers

\*\* Inheritance disputes

\*\* Hostile divorce

\*\* Witnesses to crime

\*\* Ticked someone off (revenge)

\*\* Truth-telling talk show hosts

\*\* Unknown (estimated at roughly 70%)

WHY ARE TARGETS HARASSED FOR YEARS AFTER BEING CHOSEN?

WHY DO THE LOCAL HARASSERS KEEP IT UP?

\*\* Harasser wants to be with the "in crowd"

\*\* Lies that the target has a long criminal record

\*\* Lies that the target is a thief

\*\* Lies that the target is a prostitute

\*\* Lies that the target is a drug user

\*\* Lies that the target is a drug dealer

\*\* Lies that the target is a pedophile (child molester)

WHY ARE TARGETS HARASSED FOR YEARS BY PERPETRATORS WHO KNOW THE LIES ARE LIES?

\*\* Unknown. Similarity to political thuggery during the formative stages of dictatorships is noted.

## Chapter 3: David Lawson's Landmark Investigation

Shortly after the 9/11 attacks on the World Trade Center in New York City, organized stalking targets became aware of a book titled "Terrorist Stalking in America" by private investigator David Lawson. A sequel was published a few years later titled "Cause Stalking."

Both books cover the same topic, which Lawson calls "cause stalking," and which is a perfect match for the "organized stalking" discussed in this booklet.

Lawson worked for more than a decade with a Florida detective agency. It appears that his investigative work involved travel throughout the U.S. and Canada. He stated that his investigation covered 12 years, and likely was a spare time activity for him.

David Lawson reports in his books that he was casually listening to his public service radio scanner, and discovered a group using police-like terminology, but which did not sound as if they were actual police officers. Eventually, he learned of a restaurant where they met for meals, and visited one of this group's gatherings there.

This provided the curious David Lawson with a chance to gain the confidence of the group, and Lawson found that they were, in fact, carrying out organized stalking on

designated targets. This group assumed the role of some sort of "special community police."

I'm going to discuss here David Lawson's essential findings. But first, I need to explain that while David Lawson's investigation is a godsend for targets of organized stalking, there are frankly some problems with his books. Lawson presents **observations**, and his personal **conclusions**.

From my experience in the organized stalking target community, Lawson's observations are a perfect match for what targets experience from people in their community (or people encountered while travelling.) But Lawson's conclusions, as to who is responsible, do not match what I know about organized stalking, and in fact don't match his own reports about the members of the stalking groups and their recruiting procedures.

Should a reader acquire one of Lawson's books, I beg you, separate his observations while "riding with" the harassment groups, from his personal declarations as to who is responsible.

Lawson lays the blame at "extremist groups," "foreign terrorists," and "anti-government groups." Some "extremist groups" may be responsible; we targets cannot be sure because the people seen by us appear to be normal citizens, with really aggressive behaviour against us, often fuelled by lies about us.

We have seen no indications I'm aware of that any "foreign terrorists" are responsible.

But I am able to comment on one group in the United States which Lawson names, and that is the U.S. Patriot Movement. The Patriot Movement is not a tightly organized group, and its members are spread out throughout the U.S. What I know about them is mainly what I have heard their shortwave and Internet (with some AM/FM affiliates) broadcasters report about their goals and activities, since I began listening to them in 2002.

What I have heard consistently from perhaps 50 commentators over that time span is that they are people who research government documents, scientific reports, and under-reported mainstream media reports both from the U.S. and foreign. They reference published history. The Patriot commentators have been warning since the mid-1990s that a world dictatorship is in the works. They present evidence which if true, very well shows there is reason to be concerned about that. They give source details and urge listeners to not accept their word, but to look up the original sources.

If what the broadcasters say is representative of the movement, these Patriots would be very much against organized stalking.

Lawson insinuates that the Patriots are "anti-government." That is absolutely untrue based on my years of regular listening. The Patriots are opposed to crime in government, not government itself. They seek strict application of the U.S. Constitution.

I have appeared on a number of their shows, as have several other organized stalking targets. While we targets don't feel the Patriots give our issue sufficient air time, we feel that the Patriots do support our work to expose and stop these crimes. In fact, at time of writing, 20 of the Patriot hosts have reported to me, either on the air or privately, that they also experience some of the things we do. In their case, they are essentially whistleblowers of government and corporate misdeeds, so it is not surprising that they would also be targeted.

Now it is possible that some people calling themselves "Patriots" may also be members of organized stalking groups. I have no way of knowing. But Lawson mentions the broadcasters as being involved in organized stalking, and unless he comes up with actual evidence, I will not accept that conclusion. That is my major reservation about David Lawson's books.

The main message I have for readers, should they acquire one of Lawson's books, is to suspend judgement about his conclusions as to who is responsible, but note that we targets give him excellent marks for his observations while "riding with" the harassment groups.

Here are some quotes from David Lawson's two books, which illustrate organized stalking as he observed while "riding with" the harassers:

"I also spoke with a few police officers from across the country. They confirmed the existence of stalking groups across the country. In general, they said that 'cause stalking' is primarily a civil problem where the plaintiff has to prove financial loss. They also said that there are free speech and grass roots issues involved. In fact, the police themselves are targets of these groups. In small towns, the number of members in these groups can easily exceed the number of police officers. In general, the police will not talk about stalking groups. One officer did say there is a storm brewing as groups become larger and more numerous."

That statement by police, "In general, they said that 'cause stalking' is primarily a civil problem where the plaintiff has to prove financial loss" shows that police are definitely not interested in trying to go after organized stalkers. Since the early 1990s, there have been anti-stalking laws on the books. From that point forward, stalking is a criminal offence.

True, stalking, even by a known single stalker, is difficult to investigate and prosecute because no single act by a stalker needs to be seriously criminal. It takes quite a bit of investigative effort to prosecute what people who are not stalking targets consider something relatively minor. And when the "labour" of stalking is divided among members of a group, it is even more difficult to prove culpability.

But the fact remains that stalking is a criminal offence, and that 'civil problem' statement by police is what could be called a "cop out", pun intended.

Next, listen to what Lawson discovered about recruitment of the perpetrators:

"Recruits tend to be blue collar workers who are at the bottom end of the job scale. They are janitors in apartments, hotels, etc., who have keys to get in any locked doors. They are security guards, who can let fellow members into places where they would not normally be allowed to go. They are city workers, who can, in many cities, follow a target around all day in their vehicles or have a noisy project underway near his [target's] residence. They are taxi drivers, who are a network that is always on the road. They are cable, telephone and electric company employees who can interfere with a target's service and spend time on patrol with the group, while they are on the job."

Lawson reports a few quotes from the harassers themselves, expressing their attitude and motivation:

\*\* "We are like the police except we are ABOVE the police."

\*\* "We are a citizen's group that helps the police. We are trying to alert people in the area about this person [the target] before he gets to do what he did in the last place he lived."

\*\* "When I get the call, I go to whatever the address is. It doesn't matter what they [targets] do, they can never get away from us."

\*\* "Who are we? We drive the ambulances that take you to the emergency room. When your house is burning, we put out the fire. We are security guards. We protect you at night. You only have electricity, phone and cable service because of us. We are janitors. We have the keys. We fix your cars. You don't want to mess with us."

Lawson reports some statistics he gathered regarding what motivates the perpetrators:

\*\* 25% follow the nominal "cause" they were recruited under

\*\* 25% actually participate in the harassment

\*\* 75% harass occasionally or not at all

\*\* 10% join out of fear of being harassed themselves

Lawson describes recruits to these groups as "... those who feel powerless, inferior and angry."

Common sense is that naturally, such people would be easy to recruit for street and adjacent to the target's home harassment, but I would comment that lots of professionals put us (targets) down at every opportunity, declaring us mentally ill for even suggesting organized stalking is possible. These professionals don't "feel powerless, inferior, and angry."

And I doubt the many utility and city employees who participate feel "powerless, inferior, and angry" either. So while David Lawson has done a great job, some aspects of organized stalking have apparently escaped him.

One comment Lawson makes is that "Firemen across the country, and even some police officers, support these groups."

I have heard a number of reports that vehicular harassment has involved an above average number of vehicles that bear stickers of firefighters, or, a few targets have traced perpetrator identities to firemen. One target discovered that a number of vehicular harassment cars, identified by licence number, were parked in a police station parking lot.

My personal take on why some firemen and police might back these groups is that many have a heightened sense of community service. If they can be persuaded that the target has a criminal record, the worst case being that of a pedophile, it would be natural for firefighters and police to want to "help keep the target in line".

The author concludes, as explained at a number of places in the book, that the "cause" the typical group is "working toward" is mainly an excuse to get the groups together. The main motivation of members who stay with these groups is the sense of power and belonging the group members derive. Having a "cause" enhances the feelings of power and righteousness, but group members, according to the author, are most concerned with how their fellow group stalkers feel about their "work" and accept them.

Lawson explains the attitude of the typical stalking group member towards the "cause" this way:

"Most active group members have only a general idea of the ideology of the group but they don't particularly care."

These groups come into being and are run by leaders. Here is what the author says about them:

"Group leaders do have political goals and the belief that the end justifies the means."

Lawson describes leaders as considering their members "disposable." He states that some leaders work for corporations and politicians. Lawson states that leaders identify targets but don't directly supervise the harassment group members.

Lawson describes leaders as having an "air of mystery", "having worked for the CIA, NSA, or some other intelligence agency that doesn't reveal information about their employees." Lawson states that this "background" is likely mythology. If organized stalking is the leading edge of a world dictatorship, however, he may be wrong on the mythology idea.

How about financing these groups?

Although the author states that the pay is low, there are still very large expenses to harass people as thoroughly as targets report. Here is an example of what I mean by "large expenses":

"Groups are well financed. They can afford to rent property wherever the target lives. If he drives across the country, he will be followed by supporters of similar groups in that area. If he travels by plane, group members will meet him wherever he lands in the U.S. They may even accompany him on a plane if they know his travel plan, and there is a good chance that they do."

Here is what the author learned about their financing:

"The operations of many extremist groups are actually financed by corporations which use them to stalk their enemies or potential enemies. The groups are used as the private armies of those corporations. Some countries kill dissidents and in others they are jailed. In the United States, someone who is threatening to corporations or industries, like a whistleblower or activist, is likely to become the target of an extremist group."

The author makes several statements that these criminal stalking groups not only harass targets specified by their leaders, but also are FOR HIRE - a kind of "revenge service" for those wealthy enough to hire them.

There are two distinct reasons why targets are harassed:

- \*\* The initial reason targets are placed on the stalking groups' "list"

- \*\* The reason the stalkers keep it up

Those two reasons should always be kept separate in your mind, reader. David Lawson's focus is mainly on the reason the stalkers **continue** to harass targets.

David Lawson's chapter on Selection of Targets may well be true, but it certainly doesn't describe the thousands of people who don't fit his list of targeted categories. Here are some of the categories of targets Lawson records in "Cause Stalking":

- \*\* Abortion clinic workers

- \*\* People guilty of mistreatment of animals

- \*\* County clerks and local politicians

- \*\* Police officers

- \*\* Judges

- \*\* IRS and Treasury agents

- \*\* Civil rights activists

- \*\* Government or corporate whistleblowers

One thing David Lawson makes clear in describing the targets is that "The ultimate goal of the groups is to destroy the targets." Those who have been stalked by

organized citizen groups which are fed lies report that these groups do destroy targets with great efficiency.

Next, let's look at some of the typical OPERATIONS these groups carry out. Here, I have retained a number of quotes from the original book because I feel they state the situation as well or better than the new book:

\*\* The first step, after a target has been selected, is to establish a personality profile "... which will involve an assessment of IQ, personality type, and history."

\*\* "A target may also notice being photographed."

\*\* "The primary characteristic of cause stalking is that it is done by large groups of people. A target will always be followed, but he is unlikely to see the same stalkers very often." ...

\*\* "Many of these groups include hundreds of people."

\*\* "Some authors refer to cause stalking as terrorist stalking. Groups do not just stalk individuals. They employ organized programs of harassment which include break-ins, property damage, assault and occasionally, even death. The children of a target are a favorite."

\*\* "Firemen across the country, and even some police departments have a long history of supporting extremist groups. Fire trucks can sometimes be seen riding in extremist convoys, with their flashing lights turned on and their sirens screaming. They will also race to greet a convoy which is entering their town. The participation of firemen, city workers and utility company workers helps give group members an illusion of legitimacy and power."

\*\* "City employees can be used to harass a target in many ways including tearing up the road in front of a target's home. Employees of pest control businesses who have access to the keys for apartments and those who work for alarm and locksmith companies are also of interest."

\*\* "Groups also attack targets of convenience. These people are selected because they are convenient targets, and not for any other reason. These include loners who tend to be more vulnerable to their harassment tactics than those with family and friends around them. Targets of convenience are used for practice."

\*\* "In order to establish bases of operation, they will enlist the assistance of neighbors. In many areas, they can do this by intimidation. Those who do not co-operate can be targetted, which includes harassment of their families and damage to their homes and vehicles.

"If they are dealing with individuals who do not know them, they can also appeal to their sense of patriotism and they can offer drugs, friendship, home repair, free taxi rides and what ever else they have to. In some cases they may even be able to get a key to the residence from a 'patriotic' landlord."

\*\* "Surveillance is conducted 24 hours a day, 7 days a week. When a target leaves his residence they will alert the group, either by cell phone or by business band radio. Other members, who are patrolling the perimeter to watch for police and other vehicles driving in the area, will race to the location to begin pursuit. In small towns, where business band radio is widely used, these activities are a local sport among a small group. Anyone with a scanner can join in. Some targets have reported hearing an announcement on their scanners as soon as they turn their lights on in the morning."

\*\* "In a typical apartment setting, they will attempt to lease, sublet, or otherwise have access to apartments above, below, and on both sides of the target. They will also "guard" the vehicles of a target in the parking lot."

\*\* If [the target] flushes a toilet, he may hear a car horn honk, the sound of a power tool or hammering, for example. There will also be a large number of people coming and going, and accompanying rowdiness and noise."

\*\* "A common ruse used by these groups is that they are a 'citizens group' which assists the police and they are 'just keeping track of' a certain individual, for whatever reason. The illusion is reinforced by the case files they carry which are complete with photos of the target and look like those used by police."

\*\* "During a search [of the target's home or apartment] members who are on patrol anyway establish a perimeter around the residence to watch for police vehicles. In an apartment setting, entry will likely be gained through a member of the janitorial staff, pest control or alarm technician, since they have a right to enter. They may even be able to approach a landlord and gain his co-operation, after convincing him of their 'higher purpose'. He may also co-operate out of fear."

\*\* "Others do not recognize that they are being harassed by an organized group. They just think that there are a lot of rude people in the world."

\*\* "Interception of mail is standard practice." ... "Typically, targets notice that their mail is arriving late or they do not receive certain pieces of mail. They [targets] may overhear people at a nearby table in a restaurant talking about certain mail, and realize it is theirs, or someone may drive by [the target] waving their mail at them."

\*\* "Interception of phone calls is also standard practice. This is done by telephone company employees who support the [stalking] group for ideological reasons or because they obtain some benefit." Eleanor White comment: I'd add to that one of the most likely reasons, because the phone technicians are told lies about targets.

\*\* "An objective is to isolate the target from his family and friends. He can tell them about all the strange things happening around him, but they will not understand and perhaps will think he is crazy. Sometimes other members of the family will receive the same treatment."

\*\* "When a target is driving, standard practice is to surround his vehicle and attempt to control his speed. He will not be followed in close proximity by the same vehicles

for a long distance. They do frequent trade-offs. Vehicles line up behind the target to take their turn."

\*\* "In many parts of the country it is common to see groups of six to 30 or more vehicles driving around in convoys with their high beams on during the day. This is one of the ways a convoy can be identified."

\*\* "Standard practice is to watch the target's vehicles and this subjects them to damage including slashed tires, scratched paint, stolen license plates, etc. Typically they would not cut the brake lines on vehicles or commit other similar acts of sabotage, but they would drain the oil or antifreeze over a period of time."

\*\* "A target will be followed on foot wherever he goes. Anyone can go to the same public places he goes, and they will attempt to get into any other restricted places he goes, including hospitals, places of employment, etc. It has been said that it is possible to go nearly anywhere if you have a clipboard in your hand and it is almost true. They also like to wear name badges on a lanyard, and some carry phony police badges."

\*\* "Common harassment tactics used by those on foot include pen clicking, in which they repeatedly click a ball point pen, key rattling, and rattling change in their pockets while standing behind the target. Many tactics are tried and the result is observed. Those which evoke a response from the target are repeated. When a target sits anywhere in public, group members will attempt to sit behind him in order to create noise, by whatever means, including tapping their feet on the target's chair. The objective is to harass the target constantly."

\*\* "Groups attempt to interfere with any business and personal relationships which the target has. Typically, this interference involves character assassination from some anonymous individual and is not usually taken seriously by those who know the target. It can be effective with people who don't know the target."

\*\* "At work, the target will also experience character assassination. If he works in any position where he has to deal with the public, there will be a steady stream of customers who complain about him. If he is a real estate agent, he will have a steady stream of prospects who occupy his time but never make an offer."

\*\* Let me, Eleanor White, give you an example of how brutal and serious this "character assassination" can be:

One of our members, who prefers to remain anonymous, moved in with her husband and children to a house which, unknown to them, had been a methamphetamine lab. The chemicals used to brew meth apparently cause distinctive symptoms in the mouth. This family's dentist felt he was "helping law enforcement" by reporting them to local law enforcement as meth users. This was absolutely untrue, but the family didn't even know the report had been made and had no way to correct it. (In fact, in some places, dentists are REQUIRED to report suspected cases of meth use.)

Law enforcement in that area was apparently tied in to the citizen groups, and the family was harassed for many years. The husband died, apparently from exposure to these chemicals.

The lady, now a grandmother, steadfastly did detective work and eventually found out about her family's reputation, with some help from a policeman who was a personal friend, from a different jurisdiction. This policeman admitted off the record that "meth mouth" can result in people being submitted to citizen harassment groups for harassment.

Character assassination is complete, and has life-destroying consequences!

\*\* "A common tactic use by groups is noise campaigns. Group members will drive by the target's residence or work place, honking their horns, squealing tires, and making whatever other noise they can."

\*\* "They will also make noise from whatever nearby properties they have access to. Typically, they will make noise when the target goes outside. Group members will also frequently knock on his door for whatever peculiar reasons they can dream up."

\*\* "In an apartment setting, targets can expect to hear tapping on the walls in the middle of the night, hammering etc. from the upper and/or lower apartments, and possibly the apartments on both sides. They will continue to 'work' on these activities for as long as they can get away with them."

\*\* "... It is not uncommon, in an apartment setting, for a target to hear someone moving from room to room as he does, from the upper or lower apartment. [Eleanor White talking: This requires commercial through wall radar or more advanced technology in many cases.]

\*\* "Often they occupy a nearby apartment, part time, when the owner is not there and he receives some benefit. A target may notice someone leaving a nearby apartment when he leaves his, and arrive when he arrives. In addition, he will often be accompanied in elevators by a steady stream of different individuals who go to the apartments being used by the group."

David Lawson's observations, excerpted here, very accurately represent what targets of organized stalking experience from human stalkers. Please keep in mind that targets do not consider Lawson's conclusions that "anti-government groups," "Patriots," "extremist groups" or "foreign terrorists" are responsible, as accurate.

From the viewpoint of many targets, it is more likely that ordinary citizens from all age groups and walks of life are harassing us in an organized way, probably based on lies. Some targets have evidence that police play a role. In one case, someone claiming to be a retired police officer stated on a mainstream talk show about organized stalking that retired officers "sometimes make life hell" for targets who have done things they don't approve of.

Bottom line: In spite of David Lawson's excellent observations, we still can't explain with certainty what entity is overseeing this global harassment organization. David Lawson presented us few hints about that.

To locate a purchase source for his book, you can try a web search for:

"Cause Stalking" "David Lawson"

... keeping those quote marks as they are above. The book has been intermittently available by way of the amazon.com Internet bookseller.

## Chapter 4: Experiences of the Targets

In this chapter, I'm going to relate some experiences of my own, and those of other targets.

No identities will be revealed here. It is strictly up to individual targets as to if or when they decide to publicly identify themselves. To maintain anonymity, I will not identify places or employer names. These experiences will be summarized, and may have taken place anywhere on planet Earth, as organized stalking has been reported in all industrialized countries.

Let me start by sharing some anecdotes about when targets first become aware they are being deliberately harassed. That is, the moment when they wake up to the fact that they are not simply experiencing incredible "bad luck."

\*\* In my own case, I was working in the city of Toronto, Ontario, Canada, in 1980.

One day a rather nasty looking middle aged man on a bicycle brushed past me on the sidewalk in front of my apartment house, screeched to a stop, turned around, and stared intently at me until I entered the building. When I got home, I discovered my underwear had holes punched in the crotches. I found some supplies which had been nearly full were now nearly empty. There was no evidence of a break-in, so clearly, someone had used a key.

No valuable items, like my TV set, were taken.

I began to pop wide awake every single night, and no matter how still I laid there, no matter how quiet it was, no matter how physically comfortable I was, sleep was absolutely impossible until daybreak, then I had to get up to go to work. I don't know how that was caused.

Formerly friendly residents would no longer talk to me, but give me icy stares. Up until perhaps 11 pm each night, endless loud radios and banging noises became my constant companions. Before that, the apartment house had been quiet, and friendly.

\*\* A social worker reported that her harassment started when she was hired to care for a young girl who had been through Hellish ritual abuse torture, and had developed multiple personalities as a result. (This is normal for children who are severely tortured.) The social worker found that she was being followed. Her house was broken into and the intruders were going through her possessions. Verbal harassment by strangers followed. No obvious cause for starting the harassment.

\*\* A man reports that his harassment began when he turned down an attempt to recruit him to do illegal things like running drugs, fixing elections, and witness tampering by a prominent government agency. Apparent cause, his refusal to play along.

\*\* A former prison inmate reported his harassment originated with a system called "the Inmate Computerized Tracking System." He reports that once this system was implemented unusual things happened in the institution, including suicides and suicide attempts, and numerous inmates being labelled mentally ill. When this man attempted to seek help from outside agencies, intense harassment by guards resulted. Apparently caused by this government surveillance program.

\*\* A middle-aged man with no criminal record and no habits which would engender suspicion became aware of his targeting when he accepted a job on a work visa to a neighbouring country. Initial clues included being singled out by customs for detailed questioning, and treatment for mild depression by doctors which didn't actually seem related to the problem. The odd, not relevant treatment by doctors continued. Strange signs of entry into the target's apartment began, including damage to blinds and cable ties showing up on lamp cords. Sounds of wires "scraping" in his apartment wall, always exactly at his bed time. No known cause for starting the harassment.

\*\* A man moved to a new city and immediately began experiencing hostile behaviour of neighbours, "strange things" happening around his house, and harassing telephone calls. No known cause for starting the harassment.

\*\* A target noticed harassment starting just after telephone linemen were seen working just outside the target's home. The target began experiencing unusual clicks while talking on the phone, and when the target said "It seems someone is listening" the calls were cut off. (Noise and disruption on target telephones is common.) The target discovered their door unlocked or even open on returning from work, several days in a row. The television remote disappeared for a month. A man claiming to live in a motel overlooking the target's house offered to mow the lawn; obviously someone mowing lawns isn't going to be able to afford to live in a high quality motel. No known cause for starting the harassment.

\*\* A female member of the army of a major country dated senior non-commissioned officers who were "revenge prone." Single stalking began which became organized stalking. This female soldier reports hearing an attitude expressed by senior NCOs that single female soldiers need to be "managed." Apparent cause revenge, possibly related to a terminated relationship.

\*\* A female software engineer began getting harassed on the job in the information technology security field. She had been getting top marks for her work prior to that. She began getting blacklisted, and heard specifically from one prospective employer that she was in fact blacklisted. There is an epidemic of severe abuse of foster children that you, reader, may not be aware of because foster children are doled out by agencies ostensibly there to genuinely help children in distress. This software engineer's child was removed from her, something that happens to a number of organized stalking targets. Her child turned up in a hospital emergency room displaying sunken eyes and emaciation from starvation, with sores all over her mouth. No known cause for starting the harassment, however, from the targets' viewpoint, jealousy on the job is sometimes suspected.

\*\* Two organized stalking targets report that their harassment began when they entered alcoholics anonymous or narcotics anonymous "12 step" residential programs. They report that these agencies apparently feel perfectly justified in "punishing" addicts. One such target reported that the operative phrase for targets who try to leave these programs is "We [the agency] will refund your misery."

\*\* A single mom of a pre-teen boy began getting heavy fatigue attacks at work. Then began massive sabotage of multiple computers, her telephone service, and belongings in her home. An external roof drain pipe was repeatedly crushed or pried apart to flood the basement. Clothing was ripped, and even spots of engine oil were placed throughout her home and on her son's bed. Her bank account information kept being sabotaged. Telephone customer service people were strangely hostile and not helpful, actually lying about service calls. No known cause for her harassment, however she suspects a strange encounter with a man at a dance hall may have triggered the start of the harassment.

\*\* A lady, with teenage daughter, had to enter alcoholics anonymous, a residential program, due to her alcoholism threatening her marriage. While there she met, and began a relationship with an ostensibly clean cut, intelligent, former drug addict. This man had criminal affiliations, and the target came into inside knowledge about a major crime. When she reported her inside knowledge to police, full fledged organized stalking began, including murder of her pets. Moving to widely separated locations did not stop the harassment.

\*\* A postal letter carrier accidentally hit the fence of a house connected to postal inspectors who were apparently involved in drug trafficking. That was enough to have the letter carrier's name turned over to organized stalkers, apparently because the letter carrier had become aware of criminal activity there. Once organized stalking begins, it is virtually always for life.

\*\* A registered nurse's harassment began after she accidentally linked to a local pornography network with a new computer.

\*\* A man reports organized stalking for his entire life. No known cause for starting the harassment.

\*\* A boarding house roomer's harassment started when people around him began discussing private things he had never discussed with anyone. This was followed by the classic harassment by members of the community, such as store clerks, and bank tellers. No known cause for starting the harassment.

\*\* A lady's harassment started out as unexplained insults by neighbours, escalating into heavy harassment as described in the David Lawson chapter. No known cause for starting the harassment.

That's what it's like to have organized stalking start up, for a sampling of targets.

Many targets have people or groups they suspect of being responsible for their harassment, but few actually know for sure. Because organized stalking is so overwhelming, so total, so inescapable, and because virtually all officials deny that such a crime is possible, and because of known government criminal programs like COINTELPRO (organized stalking to discredit activists,) many targets assume organized stalking is a government program.

The end result of the secrecy is that if you should come across target testimonials on the Internet, you can expect to see a lot of blame placed on government. This writer suspects government is indeed involved, but I have no evidence that today's organized stalking is in fact being done by government.

To my mind, the most important task ahead of targets of organized stalking is not speculating about whom to blame, but educating the general public. An aware public could apply enough pressure to get these crimes investigated seriously, and in all likelihood stopped.

One interesting occurrence relating to how targeting starts - several targets report actually being warned they were about to be targeted before the targeting started. In one case, a person photographed a harassment "skit" being performed on another target. A warning note was discovered on the photographer's vehicle saying "Do not interfere in what you do not know about."

Let's continue by relating some of the ongoing experiences reported by targets of organized stalking:

\*\* Targets find that attempts are made to spoil every family, friendship and business relationship they have. Investigator David Lawson did mention lies and fake criminal records being used. While estranged family, friends and business associates aren't inclined to discuss reasons why with targets, bribes and threats have been known to cause estrangement too. Whichever cause of the estrangement is used, it is almost always very effective. A number of targets who owned their businesses have lost their businesses to harassment of their customers.

\*\* Groups of harassers sometimes swarm into a store, either just before a target arrives or just after the target arrives. These stalkers will crowd areas the target attempts to select items at, and will queue up at the checkout ahead of the target. This becomes obvious when it happens mid-day at times when shopping traffic is light. If a target operates on a regular schedule and visits, say, a convenience store

on the way home from work regularly, the target is very likely to encounter constant long lineups indefinitely, even when the store is not in an area where high traffic occurs.

\*\* Signs informing the public about organized stalking, as on targets' cars or even clothing or backpacks, have resulted in striking reductions in harassment in areas where the signs are displayed. This has been an effective technique in eliminating the store crowding skit described above. It is a guess, but possibly, the perpetrators don't want their local "troops" to visit web sites describing these crimes.

\*\* One of the worst target experiences, thankfully not frequent, is the entry to the target's home while the target is out, and terrorizing the pet, giving the pet severe mental illness. Some pets are poisoned (one dog given antifreeze, making it blind.) Some pets and some wildlife are butchered and left on the target's doorstep.

\*\* A sometimes intensely repeated skit, over perhaps a few weeks, is endless walking intercepts. Strangers will synchronize their walking speed and direction to force the target to take evasive action to avoid a collision. Several times over a short time span. Synchronized even to the point of turning the lock at exactly the same instant.

\*\* A sometimes intensely repeated skit, over weeks, months or even years, also described by David Lawson's books, is highway harassment. This is especially true of targets who must commute to work by highways. Not only do perpetrators "box in" targets on the highway and force targets to drive more slowly than they had planned, but outright attempts to run the target off the road also happen. Targets occasionally collide with perpetrator vehicles and once in a while a target does run off the road. It appears that perpetrators may be given immunity by government for such attacks, however, I'm not aware of any explicit evidence to prove that.

\*\* A sometimes intensely repeated skit, over weeks or months, are periods when perpetrators in vehicles will attempt to hit a target in a crosswalk, especially when no other traffic or witnesses are present. I've had several such encounters in 2007-2008. The drivers have been looking directly at me, not distracted, daytime, no visibility problems. I was entirely legal, all light signals being obeyed. The perpetrators entered the intersection and actually accelerated so as to hit me. The engines revved up noticeably. The drivers were middle-aged adults, not kids showing off. These are deliberate attempts, and not just imagining an attempt to hit is taking place. Other targets report the same.

\*\* A sometimes intensely repeated skit, over perhaps a few weeks, is synchronized leaving and or arriving. Whenever the target leaves, a nearby neighbour will leave at exactly the same time. This can also happen whenever the target arrives home. Another variation is, when the target does a lot of walking, to have someone on the opposite side of the street perfectly keep pace with the target for several blocks. While this happens in normal life, it doesn't happen day in and day out on streets that are nearly deserted.

\*\* A skit by targets' neighbours is to start up noisy activity, such as a leaf blower when there are no leaves to be blown, the instant the target goes to their deck or back yard to relax.

\*\* Another skit by targets' neighbours is to dump trash in the targets' yard while the target is away or not in a position to see the act.

\*\* An ongoing skit is the entry to a target's home (usually) or sometimes automobile or workplace, when the target is absent. Furniture and objects are simply moved, as if to tell the target that the target is powerless to stop the entries. Once in a while the old "practical joke" of removing the screws holding a chair together will be performed. Some targets find pennies left at different places in the home, and/or cigarette butts.

\*\* A strange experience by some targets is doctors who look at a clearly abnormal lab report, which the target can plainly see has very abnormal readings, and tell the target everything is fine. Confirmed by targets with medical training.

\*\* Tradesmen hired by targets, or who are hired by say the target's employer to do work at the target's work area, "just always make mistakes." Mistakes that cost time, money, and create inconvenience for the target. By the time a target reaches middle age, they have a good idea of what the normal mistake probability is, and these cases are well outside that range.

For example, while I was in charge of the computer system at an employer, the telephone technician wrapped a cable spirally around a large group of computer data cables, making it impossible to move them as was sometimes needed. There was no need to do that. The normal way to handle that job would have been to use cable ties. We had to push the telephone company to return and re-do the job.

\*\* Another "mistake" occurred for a target when their car was towed away "by mistake."

\*\* One somewhat common experience is that by in-person approaches to the target, the perpetrators attempt to convince the target that the target is in fact homosexual. This is a recurring "theme" in the harassment master menu.

\*\* A lady videotaping harassment activity from her front porch was arrested for that legal act, on her front porch. When she read the report, the report stated she was actually around the corner on the sidewalk, taping one of the perpetrator's homes.

\*\* Entry to targets' homes and moving objects into odd hiding places is done, probably to make the target think their mental faculties are deteriorating.

\*\* Dumping of all sorts of consumable supplies is a regular experience for some targets. When a container is down to, say, 1/3 remaining, that's a time when the perpetrators will dump all but a small trace of the product. Labelling containers with the date purchased, the date opened, and in some cases, levels of product remaining and date, can reduce this activity.

\*\* Ripping of clothing, and destruction of zippers, can be a common experience for some targets. Some targets experience emphasis on crotch and underarm places. One day I came home from work to find the crotches ripped out of every piece of underwear I owned. Sometimes, instead of a single rip, a small rip will be widened daily until the garment is destroyed. Sometimes, a crotch or underarm area will start out with many circular holes punched by a tapered awl, and these holes will be progressively widened over time.

\*\* Destruction of furniture can happen to some targets. Items only a few weeks old will have welds, for example, snapped while the target is out. In one instance, I arrived home from work to find the back of my folding metal chair hacksawed off. In other instances, I have had folding chair legs bent, as if over a foot, while out at work.

\*\* Thefts happen, but they are carefully done so that the value of the item is too low for the target to get police to take the incidents seriously. Theft of important personal papers is one type of theft experienced. While items of value are often not touched, there have been instances of moderate amounts of money (up to a couple of hundred dollars) stolen. It's not uncommon for stolen items to be returned AFTER the target replaces them.

\*\* At work, targets experience sabotage of their work. At one job where I looked after the computer system, any programs I had written were frequently sabotaged overnight. Equipment "failed" at a rate far in excess of normal. "Failures" would sometimes be by way of someone working an equipment plug out just far enough to cause failure, and these tended to happen just as I was headed home, or about to bite into my sandwich at lunch time.

## Chapter 5: Conclusion

If you've stayed with me this far, you may be asking, along with us targets, what the heck can we actually do about this?

Clearly, the government officials who are paid (well) and sworn to serve and protect are providing cover for these crimes. That makes it really, really difficult.

Several targets have been told PRIVATELY by sympathetic police officers that they are under explicit orders to REFUSE to help us. One who contacted me was a chief of detectives. He told me privately that the orders to his department came from well above his local department, but he was not informed of the actual source of the orders.

There are numerous cases of police officers who refuse to log any complaints of organized stalking in writing, or who become "unavailable" for subsequent inquiries

by the targets. David Lawson reported that some departments actually support the organized stalkers.

Many targets have posted their stories and their theories on web sites, in an attempt to engage public interest. Many of these sites state theories about which organization is doing the harassment, as FACT, without having any solid evidence at all to back up their assertions. There are so many sites that I can't possibly review them all to separate those which offer simple testimonials minus the theories stated as facts, from the sites which are primarily guesswork.

And there are some sites which function as deliberate disinformation sites (and I am unable to prove the motives of the posters. I can only report the functionality of these sites.)

**\*\* IMPORTANT:** There are people on the Internet who claim they are electronically harassed. This booklet is about organized stalking, and makes no comment on possible electronic harassment, except to say that there is quite a bit of surveillance technology available on the commercial market and organized stalker groups probably do use it.

I have not included an extensive page with Internet links (site addresses) because many organized stalking sites also discuss electronic harassment.

To the reader, I recommend you evaluate targets' web sites based on the CITED REFERENCE MATERIALS, and if there is no mainstream cited reference for an assertion by a target about what organization is carrying out the stalking, or other assertions, consider those assertions as the personal opinion of the target.

As to what you, reader, can actually do to help?

The answer is simple and not expensive. Learn about organized stalking, and discuss it with as many friends, family members and associates as you can comfortably. It is this writer's belief that the only way the crime of organized stalking can be stopped is to make the general public fully aware. And you, reader, can help with that easily.

And thank you for taking the time to read this booklet.

Nighttime talk shows and [shortwave broadcasts](#) and books by their guests are good places to learn about major government and corporate crimes. [The Indymedia system](#) is another excellent place to monitor such crimes and activism efforts.

While some of these crimes are carried out by non-government entities (chiefly corporations), they are severe enough that without government collusion, these crimes could not continue. In many cases, complaints have been loudly and repeatedly made to government, yet no action has been taken to stop the crimes.

The SOURCES of the below crime information are often the mainstream wire services, Freedom of Information Act and other government documents, and first person testimony from government employees and the crime victims. The information often reaches me by way of the shortwave newscasts, where mainstream news items that don't receive wide publicity are broadcast.

The shortwave broadcasters present sufficient evidence that citizens with reasonably open minds would likely conclude the evidence points to government and/or corporate crimes. Most crimes below are being worked on by patriotic activism groups, to bring about exposure.

Not all U.S. citizens realize that the machinery for dictatorship already exists. The Executive Branch can collapse the legislative and judicial authorities by invoking Presidential Executive Orders. [Click here](#) for some sample Executive Orders. In non-emergency times, the public may not even know about these Orders, but if a government is elected which has dictatorship as a goal, Executive Orders are a quick and legal way to accomplish it. Remember, Hitler rose to power LEGALLY.

I would hope that, should this page come under the scrutiny of government censors, they will realize that people trying to expose and stop all crimes are ON THEIR SIDE. Government censors are people, and I hope that they also favour exposure and stoppage of crime. Personally, I believe the overwhelming majority of government employees are honest, and that crimes like these below result from infiltration of the leadership ranks by people with extreme wealth, connections, and private, covert agendas.

Here is a web site dedicated to publishing evidence of corruption in government:

<http://www.defraudingamerica.com>

Here below is my listing of some major government and corporate crimes:

- The writing IN SECRET of the USA Patriot Acts I and II, which basically give the United States government the same type of dictatorial powers seen in Nazi Germany and the Soviet Union, and which are not necessary to protect the U.S. from terrorists. Some weeks after the leaking of Patriot Act II, government officials denied its existence. This in spite of the prospective law being registered with the Senate as S.22, according to Patriot broadcaster [Alex Jones](#).

Alex analyzes the leaked copy of this tyrannical proposed law, and his analysis can be read [HERE](#). For any government to "help themselves" to such powers I regard as a government crime, contrary to the U.S. Constitution, and which clears the path for more crimes against U.S. citizens. The Patriot Act II guts the U.S. Constitution, and its predecessor, the U.S. Patriot Act of 2001, was withheld from most members of Congress so that they could not read it before voting on it.

[Back to quick click menu](#)

- The deliberate engineering of the 9/11 terrorist attacks by the U.S. government, clear from the obvious use of internal demolition charges in the two World Trade Center main towers and a third not hit by an aircraft or even heavy sections of the main towers. Fire Chief on the floor where the first aircraft penetrated a main WTC tower reported by radio very little fire in that zone. FEMA admitted on TV news "arriving the night before". People in the WTC towers who were talking by telephone just before the buildings collapsed reported "There are explosions going off all over the place" - a unique characteristic of timed explosions used to implode old buildings. Source:

[U.S. Patriot Movement broadcasts.](#)

<http://www.letsroll911.org> ... for video footage.

<http://www.physics911.org> ... for independent analysis.

An exceptional job of collecting evidence supporting the domestic criminal aspects of the 9/11 attacks by investigative journalist Tom Flocco at <http://www.tomflocco.com>.

Interesting report from Database Administrator Scott Forbes who worked in one of the World Trade Center towers. He was working over the weekend prior to 9/11 and reported that from the 50th floor to the top, the power was shut off (shutting off security cameras) on the excuse that "computers were being upgraded to a higher speed." As a former computer system manager, I can tell you there is no need to shut off power to install faster data cabling. This, of course, provided easy, undetected access for installation of demolition charges. Forbes was off work the day of the building collapses, but was in touch by phone with his colleagues who reported to him "bomb like explosions going off" prior to the collapse.

[Back to quick click menu](#)

- The [killing of the Constitutional right of free speech](#) in the United States, by ordering police to quarantine protesters with signs in penned off areas too far away to be seen by presidential motorcades. This may sound trivial, but added to the iron-fisted control of the mainstream media, free speech has been killed in such a slick manner the public, wrapped up in their entertainment culture, didn't even notice.

[Back to quick click menu](#)

- The murder of alleged "terrorists" in the unnecessary 2003 invasion and bombing of Iraq. This photo of one of the "terrorists" says it all:

Ali Ismail Abbas, wounded in a bombing in which his parents were killed, lies in a hospital bed in Baghdad. The 12-year-old suffered third-degree burns to over 60 per cent of his body. Infection is a problem and doctors say his chances of survival are 50-50.

According to [Alex Jones](#), perhaps half a million more children, and a million more adults, have suffered injury or death in the bombings between 1991 and the 2003 Iraqi invasion.

[Back to quick click menu](#)

- The killing by cancer of future millions of foreigners as well as U.S. troops through the use of "depleted" uranium ammunition at many war sites in Europe and the Middle East, not to mention training sites in the United States. "Depleted" uranium is in the form of fine dust and cannot be cleaned up. It has a half life of 4.5 BILLION (with a "B") years.

Read about [Dr. Leuren Moret](#), formerly of Livermore National Labs (California), who is one of the foremost whistleblowers against this brutal ongoing crime. Her whistleblowing earned her becoming a target of electronic harassment and organized stalking!

[Back to quick click menu](#)

- The Nazi-level BRUTALITY, the burning, exploding, and every other painful type of death human imagination can come up with on INNOCENT ANIMALS by the U.S. and other military services to develop new weapons. No animal has any choice whatsoever as to whether to be born, or into which species. There is no possible

twisted logic which can justify these atrocities. If you can stomach it, here is a web site about these crimes: <http://www.stopanimaltests.com/r-fsae9.html>

And another ... <http://www.peta.org/feat/military/>

These crimes ALONE should be sufficient to justify the removal of every government responsible for such activity.

Here's more: [here](#) is an example of the brutal crimes government commits on animals.

[Back to quick click menu](#)

- [Terri Schindler Memorial Web Site](#)

If your dog had to be euthanized, would you want it chained to a stake and denied water until it died of thirst? Well exactly such a painful death was mandated for FULLY CONSCIOUS, NOT VEGETATIVE brain damage victim Terri Schindler, not once, but THREE TIMES, by CRIMINAL "judge" george greer, of the sixth circuit probate court in Clearwater, Florida. The third of the three brutal execution attempts by denial of water resulted in Terri's death on March 31, 2005. and you can visit <http://www.terrisfight.org> for information from Terri's family and supporters which has NOT been "filtered" (TWISTED) by the corrupt mainstream media. The Terri Schindler Foundation will be fighting other similar cases, of which there are many.

This shocking situation pointed up that MANY disabled people considered "no longer useful" have been FALSELY represented as in a "permanent vegetative state" in order to kill them by DENIAL OF WATER!

Judicial corruption activist [Linda Kennedy](#) has a fact sheet about the Terri Schindler Schiavo case [here](#).

["The Conspiracy to Kill Terri Schiavo"](#), a Windows Media Player documentary on this case.

[Kate Adamson](#) is another victim of denial of water.

NO PERSON IS SAFE FROM THIS METHOD OF EXECUTION UNTIL LAWS ARE IN PLACE BANNING THIS FORM OF EXECUTION BY TORTURE!

[Judges organize to fight judicial reform movements](#), in the U.S. Grass roots "pro se" (represent self) litigants are increasingly challenging the corrupt judges, such as

george greer, who stood by as Michael Schiavo TORTURED Terri Schiavo for over a decade by forced neglect, then TORTURED Terri for two weeks by denying this conscious woman who had expressed a wish to stay alive WATER. It is encouraging to know these judicial criminals are worried.

[Back to quick click menu](#)

- The outrageous treatment of patients in nursing homes. Joyce Riley, in an April 8, 2004 interview with nursing home crime activist Dr. Edward Watters, describes first what she learned about when she was both a director of nursing for a nursing home and an expert witness in nursing home cases. RAPES, by BOYFRIENDS OF NURSING HOME STAFF have been documented. In one case, the police record for a particularly bad nursing home printed out a ONE FOOT HIGH STACK OF PAPER, yet NOTHING was done about ANY of those complaints. That is one of the most extreme and hidden government crimes I've ever heard about.

Dr. Watters' web site is:

<http://www.MemberoftheFamily.net>

Dr. Watters has written a book on these crimes titled "Danger Zone" and is available from his web site or by calling 1-410-421-9100.

Think nursing home crime is rare? Check out this quote from a board member of [Hospice Patients Alliance](#):

"I am the one who went to all 58 Counties in California, pulling death certificates on deceased victims of nursing home care. From 1986 to 1993, in California only, I found 2,085 deaths from bedsores, 6,688 deaths from starvation, 4,044 deaths from dehydration, 786 deaths from fecal impaction, and 9,746 deaths from urinary tract infections. If you times this count by all 52 states in the United States, then you get a bird's eye view of the great killing fields in US Nursing Homes."

[Urinary tract infections are often associated with restriction of water intake, as, for example, to prevent patients from "urinating too often", another nursing home crime.]

"Our politicians won't do anything, they are receiving too much money from this industry, so they turn their heads to all the abuse and neglect. The police don't do anything, because they say the nursing homes are under the Ombudsmen and the Department of Health, Licensing and Certification, ... so these nursing homes are getting away with murder! I have all the death certificates here in my home."

-- Ila Swan, HPA Board member

REPEAT: "The police don't do anything..." about crimes at the Nazi or Soviet level. This is a government crime.

[Back to quick click menu](#)

- The destruction of Dr. Ramona Miller's ability to earn a living as a successful, respected surgeon by shutting off the blood supply to her hands by tight handcuffs for several hours following a false arrest in Missouri.

Dr. Miller was accosted by police officers in civilian clothes on her way home from work along a rural road after midnight, and terrorized, dragged from her car, and arrested on absolutely false charges of reckless driving. While being held in the jail, Dr. Miller's career as a surgeon was ended by tight handcuffs holding her hands to the cell bars.

Dr. Miller had earlier blown the whistle on police brutality.

<http://www.drmillertruth.org> for details.

[Back to quick click menu](#)

- The illegal imprisonment of dentist Dr. Charles Thomas Sell, and Soviet-style groundless accusations that Dr. Sell is "mentally unfit to stand trial" for alleged "Medicaid billing improprieties". Such "billing improprieties" were discovered by way of a raid on Dr. Sell's office after Dr. Sell had been sent to the Waco massacre site.

This United States citizen, and U.S. Army reservist has been, as of summer 2003, imprisoned without trial for six years, one and a half of those years included torture by way of solitary confinement without cause.

Dr. Sell's delusion? He dared criticize the government of advance knowledge of the Waco massacre, that is, the government had planned an attack they knew would result in badly mutilated bodies requiring the services of a forensic dentist to identify. Dr. Sell, a forensic dentist, was ordered to the Waco standoff site BEFORE the day of the assault and fire. Dr. Sell's "delusion" was to accurately report objective historic facts which painted the government in a bad light.

Now, reader, ask yourself if SIX YEARS in prison, one and a half of which is solitary confinement, is a fair sentence for "billing improprieties"? Ask, too, if you feel that blowing the whistle using first hand, directly observed FACTS, is grounds for wanting to force drug someone for being "delusional", perhaps yourself?

This information was broadcast by the general counsel for AAPS (American Association of Physicians and Surgeons) who appeared on the [American Freedom News shortwave radio show](#), Rick Wiles host, on June 27, 2003. For additional information visit the [AAPS web site](#).

[Click here](#) if the above link no longer carries information about this case.

[Clicke here](#) if the above link, via the "Legal Matters" item, no longer carries information on forced drugging.

[Back to quick click menu](#)

- The blatant railroading of former FBI agent Richard M. Taus into federal prison for two consecutive sentences of 32 then 90 years.

When on duty as an FBI agent in the 1980s, Richard M. Taus became aware of massive drug importation by corrupt officials in the United States government to fund unauthorized "black" programs. He made official requests to be allowed to work towards the arrest and prosecution of people involved. FBI local and Washington DC headquarters management ordered Mr. Taus to drop the matter, destroy all written records of his investigation, and literally "terminate" his confidential informants.

The drug running to support covert intelligence operations was documented some years ago in the San Jose Mercury news, by reporter Gary Webb. Gary Webb later committed "suicide" by shooting himself in the head with a 38 caliber pistol - TWICE.

Richard M. Taus was arrested and framed on two charges:

- unauthorized use of a government credit card

- molestation of two young boys, a charge made by the father, who it turns out just happened to beat a federal rap of his own right afterwards

For the "unauthorized use of a government credit card", he received a 32 year sentence. For the molestation charge, he received 90 years.

During the "trial", the judge refused to let Mr. Taus present ANY evidence, and he had plenty, that he was OUT OF TOWN the weekend the molestation allegedly took place.

Why was Richard M. Taus out of town? He was attending U.S. Army Reserve exercises and could have had any number of witnesses testify to that. Richard M. Taus was a Lieutenant-Colonel in the Army Reserve, and had a record of bravery in Viet Nam as a helicopter pilot. Yet the crooked federal judge would not let him present that evidence.

Officer Jack McLamb asks his fellow police officers a question about the 90 year sentence for child molestation: "How many officers have ever heard of such a sentence?" Child molesters on average serve between 5 and 7 years before they are on the street again.

Anyone wishing to send letters of support to Richard Taus, now behind bars for 15 years, can send to this address:

Richard M. Taus #91A1040-LH  
Clinton Correctional Facility  
Dannemora, NY  
USA 12929

Source: Officer Jack McLamb's [police and military associations](#).

[Back to quick click menu](#)

- The deliberate planting of INTERNAL bombs in the Oklahoma City federal building bombing (shown on CNN), and necessary according to bomb blast experts. Local officials stated on CNN that they had two unexploded bombs retrieved from inside the building, but that was later covered up by the federal government and national media. Source: [U.S. Patriot Movement broadcasts](#).

On [The Power Hour](#) of December 9, 2003, host Dave von Kleist played SEVERAL audio clips from news reporters on the scene, and Oklahoma governor Frank Keating. They ALL spoke CLEARLY AND AT LENGTH about how lucky it was that two INTERNAL explosive devices were found and defused. Officials declared this bombing was THE WORK OF AN EXPLOSIVES EXPERT.

Another government crime: Oklahoma City federal building employee, witness, and survivor, V. Z. Lawton, states that officials BARRED THE POLICE CANINE RESCUE UNIT FOR SIX HOURS from rescuing the injured so they could "retrieve sensitive documents". During this six hours, injured people could be HEAR SCREAMING!

[Back to quick click menu](#)

- International government-backed war on farmers, let by Monsanto, which has amassed a large "police force" to intimidate farmers. Basic purpose is to require farmers to use ONLY Monsanto genetically modified "terminator" seeds, which are extremely expensive (\$100,000 per year for example) and will grow only ONE season. Basic method is for Monsanto "cops" to enter a farm without the farmer's permission, then "find" (plant and find?) a few of the Monsanto terminator seeds and sue the farmer for illegal use of the Monsanto product.

Canadian farmer [Percy Schmeiser](#) has been through a court battle with Monsanto, using the tactics above, since 1998. The Canadian courts decided in favor of Monsanto, saying that it does not matter that some of Monsanto's terminator seeds "accidentally" were carried by wind over on to Schmeiser's property. Schmeiser has been held to be using Monsanto's terminator seeds without a licence.

Monsanto's agents, at the 2002 UN Conference on Sustainable Development held in Johannesburg, South Africa, approached Mr. Schmeiser and told him that Monsanto "would destroy" him. A speaker actually spoke openly about using the "contamination" or "accidental" cross pollination with Monsanto terminator seeds as a way "to remove CHOICE from the world's farmers". Nice guys.

[Back to quick click menu](#)

- Unethical and illegal INVOLUNTARY medical research.

[Alliance for Human Research Protection](#), web site of a group devoted to exposing and stopping involuntary and not fully informed research on human beings.

[Back to quick click menu](#)

- The blatant destruction of INNOCENT lives under the FBI COINTELPRO crimes in the 1950s-60s. People who spoke out against U.S. government policy during that time were threatened, had their homes and offices broken into and sabotaged, false, anonymous and delayed letters disrupted the lives of their targets, and reputations were smeared in the CORRUPT MEDIA to the point of suicide. These crimes can be read about in the [GOVERNMENT DOCUMENTS](#), Senate Report 94-755, over 1,900 pages. Excerpts and other documentation are found on this web site:

<http://www.cointel.org>

More about the COINTELPRO crimes can be read in the book [War At Home](#), by author Brian Glick.

Although there were investigations into these crimes, not one of the perpetrators were ever charged. COINTELPRO-like activity is a major indicator that government organized stalking activity may be occurring.

There have been hints that COINTELPRO is being reinitiated under the current day anti "terrorist" laws.

[Back to quick click menu](#)

- Planned forced reduction of standard of living by exporting JOBS (as opposed to products) from North American countries. This goes under the guise of "free trade". Source: Those who have lost their jobs. Often professionals like engineers and computer programmers have been forced to train their own replacements from south Asian countries before being terminated.

[Illegal tactics](#) and [suspension of Constitutional rights](#) have accompanied demonstrations protesting this sly, covert program to return feudalism and serfdom to this world.

[Back to quick click menu](#)

- Repeated stories continue to be broadcast by shortwave broadcasters [Rick Wiles](#) and [Alex Jones](#) about other illegal "accidental contamination" programs by which "PHarming" will result in the world food supply containing actual medication, including vaccines. And as in the [Percy Schmeiser](#) case outlined above, giant multinational corporations have the private "police" forces and corrupt courts to make it happen.

[Back to quick click menu](#)

- The serious consideration of CITIZEN CONCENTRATION CAMPS, based on manufactured hype about terrorists. The claim that citizens must lose their Constitutional rights because terrorism is a problem is blatantly false, because the U.S. Government has thrown the Mexican border wide open and states are rapidly providing illegal aliens with means for gaining citizen privileges and substantial monetary benefits. That is not the act of a government concerned about terrorism.

[Cover page of U.S. military document](#) showing this has been part of real and serious government planning.

<http://www-commondreams.org/views02/0814-05.htm>

[Click here](#) if the above link is broken.

[Back to quick click menu](#)

- The execution of DECORATED Gulf War veteran Louis Jones on March 18, 2003, for murder. While Jones was guilty of murder, he was also a member of a group of 1991 Gulf War Vets who were exposed to nerve agents which were dispersed over U.S. troops when a large cache of chemical and biological weapons was blown up. These veterans have severe brain damage as a result. The crime is that the U.S. Government will not allow this mitigating evidence to be heard in the trials of any of these veterans. Source: [The Power Hour](#), the shortwave show of Joyce Riley (former military RN) and Dave Von Kleist. [A press release](#) describing this condition.

[Back to quick click menu](#)

- The premeditated attack by unmarked Israeli aircraft and motor torpedo boats on the USS Liberty on June 8th, 1967. Not only did the attacks exceed 4 HOURS, but a grievous war crime was committed in that the motor torpedo boats machine gunned three life boats, sinking two, and dragging one away. 34 men died and 171 were wounded. The ship was almost sunk.

The skipper of the aircraft carrier USS Saratoga launched fighter aircraft to relieve the Liberty, but President Lyndon Johnson IN PERSON ordered these aircraft to return to the Saratoga. Johnson is quoted as saying he did not care if EVERY sailor on the Liberty was killed. That is HIGH TREASON. Saratoga skipper CAPT Joe Tully and air wing commander ADM Larry Geiss were HEROES in that they refused to recall the aircraft until Johnson came on the phone and bypassed their authority.

The conclusion of investigators as recently interviewed was that the attack by UNMARKED Israeli aircraft was intended to give the U.S. an excuse to attack EGYPT.

Source: Captain Ward Boston, USN, a legal officer who investigated the incident. Also Admiral Thomas Moorer who had just stepped down as Joint Chiefs of Staff chairman. Most of the interviews have been heard on [The Power Hour](#), and [The Alex Jones Show](#), during autumn 2003.

[Back to quick click menu](#)

- The [TORTURING PATIENTS](#) everywhere by denying medical patients in extreme pain inexpensive and readily available pain killers. And rewarding nurses who prevent patients from getting the pain relief they require. Government's crime here is IGNORING this for DECADES, based on the proven falsehood that adequate pain medication produces addicts.

[Back to quick click menu](#)

- The mixing of an organic solvent and Lewisite for "insertion" into the Waco Branch Davidian building, knowing full well that kerosene lamps were in use, fire was likely, and that CYANIDE GAS would be produced, making survival unlikely. Bodies in horrible contortions were found, including small children, showing the brutal effects of cyanide gas poisoning. (Mixing of Lewisite crystals with any liquid is not normal procedure.)

[Back to quick click menu](#)

- Chemtrails (<http://www.spectranet.ca/~popcorn/CTs/cmtrlsto.html>) containing Barium and Aluminum compounds, accelerating global warming, causing less rainfall and drought, and likely to cause an epidemic of Alzheimer's. All the while, the USAF refuses to discuss this program.

[Chemtrail vs. contrail](#), a photo from the [U.S. chemtrail tracking site](#). This site is a Yahoo group, established for the purpose of gathering data nation wide from people observing chemtrails.

[Chemtrails](#) as photographed in the Florida Keys skies.

[Rain killing powder test](#), using a product of [Dyn-O-Mat](#), a Florida environmental absorber company, shows that killing rain is a do-able technology, and vindicates reports from all over the world reporting massive spraying of chemicals are repeatedly seen killing badly needed rain storms.

[Chemtrail page](#) from Jeff Rense's web site describing the extent of the problem.

[Click here](#) for a radar indication of chemtrails in Minnesota.

<http://www.rense.com/general63/plane.htm>, a page on Jeff Rense's site showing some whistleblower photos of what is almost certainly a chemtrail test (prototyping) aircraft of the Batelle Foundation. Batelle Foundation also has links to the controversial anthrax vaccine, and chemtrail researchers have found biological material including blood components in places where chemtrail residue is heavy enough to be visible on vehicle surfaces. [Click here](#) if the above link doesn't work.

Visit <http://www.carnicom.com/contrails.htm> for considerable detail on this crime-in-the-open.

<http://www.bariumblues.com>

<http://www.rense.com/general45/ital.htm>, a page describing the efforts of an Italian film team to document chemtrails.

[Back to quick click menu](#)

- HAARP weather manipulation (<http://www.earthpulse.com> see books "Angels Don't Play This HAARP" and "Earth Rising"), very likely involved in the current-day drought in the U.S. and Canada.

[Back to quick click menu](#)

- The refusal of the United States government, along with the state and local governments, to patrol the border with Mexico, and to track, prosecute, and deport illegal immigrants who now simply walk in to the U.S. unchallenged, acquire ID without going through ANY immigration queueing, and work, go to college with GREATER subsidies than American citizens and legal residents are eligible for, and receive free medical care.

Border patrol officers, according to [Alex Jones](#), are stationed at points known to NOT be used by illegals, and are forbidden from positioning themselves so as to intercept illegals along their known routes.

The illegals destroy ranchers' fences and other property, and have been known to invade ranchers' homes and threaten the property owners. Alex Jones reports that Mexicans, including members of the Mexican military, have shot at Border Patrol officers and have shot up Border Patrol vehicles.

My interpretation of this, and this is shared by some of the U.S. Patriot broadcasters, is that this massive uncontrolled influx of illegal immigrants is to force the American standard of living down to the level based on the wages the illegals will accept in the workplace. In other words, total destruction of the United States of America as it was during its first two centuries of existence. Who benefits? The ultra rich.

More alarming, illegal immigrants who have aggravated felony records are ACTIVELY BEING SOUGHT FOR MEMBERSHIP IN THE U.S. ARMED FORCES.

Learn about the extremely grave international consequences of this deliberate act of non-enforcement in the book: [The Silent Invasion](#).

Learn about private citizens' efforts to protect properties near the Mexican border at: <http://www.ranchrescue.com>

[Article](#) showing government OPENLY refuses to enforce the immigration laws they are sworn to uphold, as of May 2004.

[Back to quick click menu](#)

- The refusal of government to honestly investigate, or even talk publicly about, the school shootings, such as the [Columbine shootings](#).

[Back to quick click menu](#)

- Knowingly housing prisoners in crowded, understaffed private facilities, based on promises of performance the private sector cannot fulfill. One article on this crime is titled:

[Gilded Cage: Wackenhut's Free Market in Human Misery](#)

[Click here](#) if the above link is broken.

[U.S. prison conditions](#) not much better than the U.S. run prisons for Iraqi prisoners (posted May 14, 2004).

[Back to quick click menu](#)

- OPENLY allowing prisoners to brutally torture other, weaker inmates, in spite of repeated requests by the torture victims to be moved to protective custody. Even children in adult prisons. Even to the point of the victims committing suicide, while prison authorities remain convinced they have done the right thing.

This can't happen in America, you say? [Read this.](#)

Think that government murder-by-suicide is unique? [Read this.](#)

[Back to quick click menu](#)

- Failing to FIRE IMMEDIATELY police officers who like to use high voltage shocking devices on 9 year old girls who are already IN HANDCUFFS.

This can't happen in America, you say? [Read this.](#)

[Back to quick click menu](#)

- [Diana Napolis' court declaration](#) outlining the massive cover up, assisted by psychology professionals, of ritual abuse in San Diego County, California. Ms Napolis was a court appointed investigative social worker whose attempts to publicize the truth caused her to become an organized stalking target.

[An article from the Halifax, Nova Scotia Herald](#) about childhood ritual abuse and torture - the crime that officialdom always says never happens. Ritual Abuse is slated for a presentation in March 2004 at the U.N., but you can bet the mainstream media will print nothing about it. [Click here](#) if the link above doesn't work.

"Ritual abuse" is usually performed on young [children](#) and is typically performed by Satan worshippers who are exceedingly good at covering up their activities. RA was one tactic used by the MKULTRA mind control perpetrators to force involuntary child experimentees to develop multiple personalities. A similar cover up exists in the field of [pedophilia](#).

If you think criminal atrocities can't be covered up in high places, [see this article](#) about pedophile cover up.

If you think the justice system can be depended on to protect kids, [read this article](#).

For a list of TYPES of torture endured by victims of ritual abuse, (as well as survivors of government MKULTRA-era torture) [see this article](#) by Dr. Ellen Lacter. If that link doesn't work, [click here](#).

If you think children are not easy to obtain for these atrocities, [check out this page](#).

If you think pedophilia and the trafficking in child sex slaves is not a HUGE, international problem, visit the web site of Dr. David Race Bannon:

<http://www.davidbannon.net>

... formerly of the Interpol Archangel Subdirectorate. You might also read his book "Race Against Evil". You will then see how many Nazi level brutal atrocities against children, especially POOR children, are being IGNORED by governments everywhere. This makes it abundantly clear that what electronic stalking targets report is tame by comparison and obviously more than just "possible."

If you believe Satanism isn't widespread, read [this article](#) about Satanism in the U.S. Army.

[Back to quick click menu](#)

- The world-wide efforts of governments, in conjunction with the pharmaceutical industry, to bring ALL naturopathic medicines, INCLUDING EVEN SPICES, under the same control as pharmaceutical medicine. This has been going on for a long time and will literally remove these powerful medicines from the public's reach without a prescription. Poor people won't even be able to afford these medicines that really work and work well.

European Union medical directives are being used to bring this about as of Spring 2004. Health food trade associations have been infiltrated and are cooperating as "controlled opposition groups".

The covert effort to remove naturopathic medicines from the reach of people of modest means is being carried out under the excuses of "effectiveness" and "safety" studies. The United States has been quietly brought under the rulings of international trade bodies on this issue. Congress cannot interfere, except on the basis of "safety".

Visit: <http://www.iahf.com> ... to keep informed about the heroic fight against this crime.

[Back to quick click menu](#)

- Vaccines with health-damaging components like mercury or cancer viruses, ineffective pharmaceuticals (some pushed as "happy pills"), and the faulty vaccines given to members of the armed service. Some CHILDREN develop AUTISM within a week of vaccination, currently. Autism is up from 1,000% to 1,500% depending on location in the U.S. according to a report by [Alex Jones](#)

Excellent research on vaccines and their hazards can be found here: <http://www.thinktwice.com>

According to [Dr. Stanley Monteith](#), in the early days of polio vaccination, NINETY MILLION doses of Salk vaccine were laced with a cancer virus, "SD-40", yet government has yet to admit to this.

Also according to [Dr. Monteith](#), during the 1970s, the available smallpox vaccines were so toxic that the U.S. manufacturers were being heavily sued for vaccine induced autism and other health effects. At the SAME time, both German and Japanese smallpox vaccines were readily available which did not have the toxic components. Even worse, TODAY'S U.S. smallpox vaccine is the very same leftover toxic vaccine, which is being suggested for FORCED injection into "every American" by the Bush regime.

<http://www.drcarley.com>, web site by former Dr. Rebecca Carley, who lost her licence because of her local TV show on which she tried to expose pedophilia, including among medical professionals. An activist against all forms of abuse including BAD VACCINES.

Bad vaccines are responsible for some cases of permanent brain damage and convulsions in cases where parents are forced to allow the vaccination of their infants. Sometimes the convulsions have occurred in the car, on the way home. Disturbing reports from several of the [Patriot radio](#) broadcasters indicate that in some cases, the medical facility has falsely had the parents arrested for "shaken baby syndrome". This is every bit as atrocious a crime as the Soviet use of the psychiatric system to silence dissenters and whistleblowers.

<http://freemendez-org>, one of MANY cases where a baby's father faces the DEATH PENALTY for a WRONG, NO EVIDENCE diagnosis of shaken baby syndrome when the baby had been zapped with SEVEN mercury-laden vaccines in one day, 33 days prior to the baby's coma and death. This paragraph was posted November 19, 2004 and the parents, Alejandro Mendez and Lisa Mullenax desperately need legal help to obtain a true autopsy and free this entirely innocent husband. This is NOT A UNIQUE CRIME!

[Back to quick click menu](#)

- According to [Dr. Len Horowitz](#) and other broadcasters, fluoride has no studies showing dental value, but IS an agent which calms the populace, making them less interested in what is going on around them. This has been backed by animal studies.

[Back to quick click menu](#)

- The government harassment of Dr. Stanislaw Burzynski, of Houston, Texas, who has been trying for more than a decade to get his cancer drugs, which have a 65 percent success rate for some types of cancer untreatable with conventional technology. His story is documented in the book [The Burzynski Breakthrough](#), by author Thomas Elias.

[Back to quick click menu](#)

- The artificial creation of the AIDS virus, part of a U.S. Army biowarfare program authorized by the U.S. Congress. This program started in 1962 and extended until the late 1970s under the guise of a "special cancer program". AIDS and other artificially engineered viruses showed up in vaccines produced by Merck, and were given to a "test group" of gay men in New York City, and to a population in Africa. Amnesty International USA is S-L-O-W-L-Y assessing the proposal to independently investigate the AIDS origin matter, with an eye towards starting such investigation in 2004. Dr. Leonard Horowitz, a volunteer consultant for these deliberations is working to expose this government crime. Dr. Horowitz' web site is <http://www.tetrahedron.org>. A prominent researcher who has uncovered much FOIA material to support this allegation is Dr. Boyd Graves, JD (lawyer). whose web site is <http://www.boydgraves.com>

Another medical doctor, [Dr. Stanley Monteith](#), has also gathered information to support the man-made origin of the AIDS virus, and others.

In an outrageous Soviet-style use of psychiatry to control dissidents, Dr. Boyd Graves was falsely arrested and incarcerated - get this - ON JULY 4, 2003, just as his petition was being denied. [Details](#).

[Back to quick click menu](#)

- The OUTRAGEOUS [police eviction](#) of activist Dr. Boyd Graves from his home for merely SPEAKING OUT about the probable U.S. Government role in the artificial creation of the AIDS virus.

[Back to quick click menu](#)

- The reported FORCED INVOLUNTARY [use of poor children](#) as AIDS treatment test subjects. This is a chapter in U.S. history as terrible as the experiments on children in Nazi concentration camps.

[More involuntary AIDS research](#) on children of the poor.

[Back to quick click menu](#)

- Extreme ELECTION FRAUD. See James Collier's web site and book "Votescam", ISBN 0-9634163-0-8:

<http://www.votescam.com>

Here's a quote from the site:

"After uncovering a massive vote scam in Dade County, Florida in 1970, journalists James and Kenneth Collier spent the next quarter century investigating America's

multi-billion dollar vote rigging industry -- and confronting the corporate government and media officials who control it.

"The Colliers now challenge every American to answer a new question:

"Who counts your vote?

"The truth is, there is no way for you to know. In fact, you are not allowed to know."

Election fraud is how corrupt politicians get elected and stay elected, decade after decade.

[Back to quick click menu](#)

- Allowing "insurance reserve account fraud" to take place.

In this fraud, insurance companies are allowed by corrupt government officials to place estimated payments to major injury, pain and suffering claims in a reserve account, pending outcome of the final award. This is very logical. Such deposits to that account are not only tax-free (logical) but are NOT SUBJECT TO OUTSIDE OR GOVERNMENT SCRUTINY.

What then happens is dishonest "players" in the case, the insurance company executives, the lawyers, and the judges, drag the case out and eventually convince the injured party they really don't have a case. "Case dismissed", in other words, is what they tell the injured party. The sanitized legalese for this is that the injured party was "separated from the claim".

The judges help because they make sure the case never reaches a jury. If a jury convenes and decides the case, this scam can't work.

BEHIND THE SCENES, though, the case is continued administratively and a settlement IS REACHED, but the money is taken from this non-scrutinized reserve account and paid, but NOT TO THE INJURED PARTY.

According to lawyer Linda Kennedy, who aired this issue in detail on her broadcast of her "Precious Time" show on April 6-7, 2004, MILLIONS of dollars are "laundered" this way and end up in the pockets of people who are not even parties to the case. The injured party gets NOTHING and doesn't even know about these behind the scenes activity.

Linda's web site: <http://www.WBFLegalReform.com>

Linda's show info: [This site's shortwave page](#)

[Judges organize to fight judicial reform movements](#), in the U.S. Grass roots "pro se" (represent self) litigants are increasingly challenging the corrupt judges, such as George Greer, who stood by as Michael Schiavo TORTURED Terri Schiavo for over a decade by forced neglect, then TORTURED Terri for two weeks by denying this

[Back to quick click menu](#)

- The withholding of advanced energy sources (energy from sources unknown to the current-day commercial world) technology, desperately needed today (<http://www.cheniere.org/foreward.htm> and <http://www.free-energy.cc>)

Physicist Dr. Tom Bearden, who has worked in the field of free energy, describes severe harassment and threats on his life, warnings to stop work in this field.

IMPORTANT NOTE: The term "free" energy is a misnomer. Researchers working on advanced energy sources are not trying to create perpetual motion, nor are they trying to get something for nothing. What is being done is to seek energy predicted by theoretical physics but not yet demonstrated in such a public way that it cannot be denied. The barrier to researchers is that humanity does not yet know all there is to know in the field of physics.

[Back to quick click menu](#)

- The refusal to admit that "Gulf War Syndrome" is actually a predictable reaction to chemical warfare agents used by Saddam Hussein in the Gulf War..... agents which were given to Saddam by the United States Government to aid in his earlier war against Iran. See the web site of [Joyce Riley](#).

[Back to quick click menu](#)

- The refusal to admit to MKULTRA crimes, and to compensate ALL the victims including [CHILD victims](#), and to prosecute the known perpetrators

[Back to quick click menu](#)

- The unjustified and sometimes brutal confiscation of children on flimsy evidence of parental unfitness by Child Protective Services, and failure to investigate possible pedophile ring connections in this activity (Alex Jones, [patriotradio.htm](#))

[One example](#) of the epidemic of pedophiles who live double lives. This is a major problem. The entire police force (12 members) of Cornwall, Ontario was fired in the 1990s as a result of allegations of covering up a kiddie porn ring. These members were never prosecuted, interference from the Ontario government being one reason. Source: Mainstream media in Ontario.

<http://www.drcarley.com>, web site by former Dr. Rebecca Carley, who lost her licence because of her local TV show on which she tried to expose pedophilia, including among medical professionals. An activist against all forms of abuse including bad vaccines.

A similar cover up in high places exists in the field of [ritual abuse](#).

[Organization](#) for victims of the corrupt courts where CRIMINAL judges award custody of children abused by their pedophile fathers TO THE FATHERS!

[Judges organize to fight judicial reform movements](#), in the U.S. Grass roots "pro se" (represent self) litigants are increasingly challenging the corrupt judges, such as George Greer, who stood by as Michael Schiavo TORTURED Terri Schiavo for over a decade by forced neglect, then TORTURED Terri for two weeks by denying this conscious woman who had expressed a wish to stay alive WATER. It is encouraging to know these judicial criminals are worried.

["For-Sale-Age-3"](#), an article from the British Sunday Mirror, describing a ready source of children for sale to pedophiles.

[Back to quick click menu](#)

- The criminal ignoring of child abuse claims by judges, who are, in the current legal environment, above the law.

[One example](#), which resulted in suicide of a child victim.

The criminal ignoring of Satanic Ritual Abuse, often a child abuse issue, which is covered up by wealthy and well-connected abusers. See [some sample news clips about SRA here](#).

If you believe Satanism isn't widespread, read [this article](#) about Satanism in the U.S. Army.

[Judges organize to fight judicial reform movements](#), in the U.S. Grass roots "pro se" (represent self) litigants are increasingly challenging the corrupt judges, such as George Greer, who stood by as Michael Schiavo TORTURED Terri Schiavo for over a decade by forced neglect, then TORTURED Terri for two weeks by denying this conscious woman who had expressed a wish to stay alive WATER. It is encouraging to know these judicial criminals are worried.

President Bill Clinton made this statement in the year 2000:

"Every day around the world and even here in the United States, children are sold into virtual slavery or trafficked for the worst forms of sexual abuse." It is a major crime that government is not actively looking in to, stopping, and bringing charges against the perpetrators.

From this site:

<http://www.acf.hhs.gov/trafficking/about/index.html>

"Human trafficking is a form of modern-day slavery. Victims of human trafficking are young children, teenagers, men and women. Approximately 800,000 to 900,000 victims annually are trafficked across international borders world wide, and between 18,000 and 20,000 of those victims are trafficked into the U.S., according to the U.S. Department of State. Victims of human trafficking are subjected to force, fraud, or

coercion, for the purpose of sexual exploitation or forced labor. After drug dealing, trafficking of humans is tied with arms dealing as the second largest criminal industry in the world, and is the fastest growing."

It is encouraging to know these judicial criminals are worried.

[Back to quick click menu](#)

- The falsification of DNA evidence by the FBI crime lab:

"Ex-FBI biologist enters guilty plea  
The Associated Press May 19, 2004

"WASHINGTON - A former biologist in the FBI laboratory pleaded guilty yesterday to submitting falsified DNA analysis reports in more than 100 cases.

"Jacqueline A. Blake, 40, of Upper Marlboro, Md., pleaded guilty in U.S. District Court in Washington to a single count of making false statements on official government reports she prepared. The case is part of a broader investigation by Glenn A. Fine, the Justice Department inspector general, into the FBI lab unit in which Blake worked."

[Back to quick click menu](#)

- The horrible conditions in some Veterans Administration hospitals such as free-roaming rats (Alex Jones, [patriotradio.htm](http://patriotradio.htm))

[Back to quick click menu](#)

- The late 2002 U.S. federal court decision allowing the U.S. Government to cut off all Veterans Administration benefits to veterans who are 65 or older. Source [Alex Jones](#)

[Back to quick click menu](#)

- The destruction of archaeological sites by the U.S. military where such sites show evidence of very advanced technology in ancient times, and the total ignoring by archaeologists of an ancient city site in India apparently levelled by a nuclear weapon some 8,000 years ago

[Click here](#), then click on "Links" for research sites recommended by Glen Kimball demonstrating the immensity of ancient history cover up.

[Back to quick click menu](#)

- U.S. Navy experiments with sonar at intensities of **215 decibels**, which are the probable cause of beachings of whales and dolphins where the animals have massive **brain bleeding**, a symptom of extreme noise exposure (for reference, 90 decibels is a jet fighter taking off - source: [Dr. Len Horowitz](#)' broadcast of November 17, 2002)

[Back to quick click menu](#)

- Probable U.S. Navy development of fungus for military defoliant purposes, having stripped central Australia of evergreen forest, now killing evergreens in western U.S. and Canada (source [Dr. Len Horowitz](#)' broadcast of November 17, 2002)

[Back to quick click menu](#)

- The refusal to acknowledge the abandonment (stoppage of efforts to re-patriate) U.S. prisoners of war in major conflicts since World War I. (~3,000 in WW I, ~22,000 in WW II, ~8,000 in Korea, ~4,400 in Viet Nam) Source is a number of broadcasters and guests on [shortwave news](#).

One possible motive for enemies of the U.S. doing this is to have a captive group of Americans for use as post-hostilities "bargaining chips". A possible motive for the U.S. not pursuing the issue is that the U.S. government would not want the citizenry to know that some soldiers have been left behind while the U.S. government did nothing to recover them.

One activist in the field of exposing these government atrocities (on both sides) is: [Dr. Joseph Douglass](#)

See also <http://MissingPresumedDead-com> which is the web site about the DVD/VHS documentary "Missing Presumed Dead: The Search for America's POW's", by Bill Dumas. This documentary is not speculation, instead, it's on camera testimony by many officials involved in investigating the missing POWs.

[Back to quick click menu](#)

- The refusal to acknowledge the overpowering political control and perpetual "national debt" inherent in the issuance of fiat money by the PRIVATE banks making up the

U.S. Federal Reserve System, and the fact that government indebtedness to these functionally private banks and banking families is what gives these banks total control over government

President John F. Kennedy tried to have the U.S. Treasury issue NON-debt backed currency shortly before he was assassinated.

Nominations for directors of these banks are given to the U.S. Senate Banking Committee by the largest campaign donors who are often? The banks themselves. The President gets to pick from that list. Kind of incestuous, wouldn't you say?

The Federal Reserve bank regulators meet IN PRIVATE with the Federal Reserve officers, and there is NO OTHER OVERSIGHT.

The Federal Reserve balance sheets are guaranteed by your tax dollars. Which means if the well-paid directors screw up, you pay for their screw ups.

Source: Dr. Lawrence Parks of the [Foundation for the Advancement of Monetary Education](#)

And just for fun, go to your favourite search engine and search to find out when the last inventory of the gold in Fort Knox was!

[Back to quick click menu](#)

- The disbarment by the Supreme Court of Virginia of lawyer and long time activist against judicial corruption Linda L. Kennedy. The Virginia Supreme Court affirmed her disbarment on the grounds that Ms. Kennedy "was a member of a fringe group" responsible for her radio show "Hot Seat For Judges", ... and ... because Ms. Kennedy "believes the Virginia justice system is corrupt".

This action took place shortly after Ms. Kennedy proved, by rummaging through courthouse trash, that the official transcript of her disbarment had been CHANGED from the original, recovered in the trash. Evidently the Virginia Supreme Court feels that tampering with transcripts, which are evidence, is OK.

Linda Kennedy's case both typifies and exemplifies the new ruling principle for current day U.S. justice: "The facts and the law don't matter." All that DOES matter are the agendas of judges, prosecutors, and police. Defendants are ROUTINELY denied the ability to present evidence on their behalf. Defendants' evidence is routinely whisked away by the judge saying "Trivial." Today's corrupt judges (NOT every judge) take advantage of the lack of workable checks and balances on the judiciary. The problem is that there are many corrupt justice officials, so many that a fair trial is becoming a rarity.

If you hear Linda Kennedy speak, you will hear a lot about "Plan B". Plan B is where a defendant comes up against a corrupt judge, and/or prosecutor and/or enforcement agency, and you discover that the law and the facts don't matter. Plan B states that is the time to "publicize the dirt" which is always available when one faces corrupt justice officials.

[Back to quick click menu](#)

- <http://unpsych.8m.com/>, a site listing resource articles/books for fighting illegal oppression by the mental health industry. IF LINK FAILS, [here](#) is a local copy, which will not be updated.

Psychiatry, in real life function, is the most powerful arm of law enforcement. Though I believe psychiatry has a legitimate place in the medical system, all too often psychiatry is invoked by public officials to make problems they don't want to admit to or deal with "go away".

Once "charged" with mental illness, there is no defence, no trial, and the person thus "charged" can be shot full of drugs which produce terrible side effects, deprived of freedom, and worst of all, stripped of his or her credibility.

Psychiatrists act on the presumption that they always know more than their patients about every aspect of the patient's experience. This is outright malpractice. Psychiatrists are not trained in, nor are they updated in, covert criminal activity by government, corporate, or private entities. If someone complains of, say, [COINTELPRO-style harassment](#), psychiatrists will deem that individual "delusional"

and "in need of help" without the slightest actual evidence. Psychiatrists will ignore any evidence offered by the patient, because of course, the patient is "delusional."

Unfortunately, most members of the public want very badly to believe everyone who has "MD" after his or her name is blessed with exceptional wisdom and only intends to do what is "best" for their patients. The public does not realize that in all countries, psychiatry often plays the role of silencer of protest, as people who have been caught in the mental health system are unable to fight back against this covert injustice and the public's apathy.

[Back to quick click menu](#)

It is very likely that the [New World Order](#), i.e. the world's ultra-rich and ultra-greedy, are the ones responsible for all of the above issues. For a year 2000 copyright book explaining the roots of the New World Order, and illustrating how such horrendous crimes are made possible, check out [Rule by Secrecy](#), by Jim Marrs.

It is important to say here that I am not opposed to government, but to CORRUPTION in government. I'm sure the majority of honest government workers will also support efforts to expose and stop these crimes.

Eleanor White

## Other Web Sites

March 25, 2008

### **\*\* ANNOUNCEMENT \*\***

I regret to announce that due to health difficulties, I am unable to do the considerable amount of ongoing work to periodically review other sites, to see if the information there is of good quality. This is essential, because at this point in time, there are web sites about the crime of organized stalking and electronic harassment (which includes the sub-crime called "mind control") which display either serious misinformation (not intentionally false) or serious disinformation (intentionally false.)

Without being able to do the necessary review of the many sites now on the web, I have decided to withdraw this "other sites" listing.

For credibility ratings for web sites and articles that come into widespread usage by targets for activism purposes, please visit this site:

<http://www.creviews.net>

For an "e-handbook" on various aspects of information handling, please see:

["Information Handling"](#)

["Tech Talk"](#)

["Local Group Presentations"](#)

For two e-booklets written to explain organized stalking and electronic harassment to members of the public who are willing to read such material:

["Organized Stalking"](#) (INcludes electronic harassment)

["Organized Stalking"](#) (EXcludes electronic harassment)

There are some situations where a booklet without any information about electronic harassment may be preferable.

For an "e-handbook" on coping:

["Coping"](#)

For an "e-handbook" on countermeasure and detection experiments:

## "Countermeasure and Detection Experiments"

## Outrage Page

April 3, 2004

(See the opposite, the [Petty Page](#))

This page is to collect very short references to the more serious outrages suffered by victims of organized stalking, aided by advanced electronics and the ignoring and covering up of these crimes by public officials.

-----  
For outrages specifically in the form of threats, see:

[The Satanic Connection page](#)

[Threats, other than cult or Satanic](#)

-----  
Some of the more outrageous effects reported by victims of current day high tech criminal harassment by REMOTE CONTROL:

- burns to various body parts
- electric shocks
- extreme pain with no trace
- total prevention of sleep
- sensations of hot needles in flesh
- violent motion of body parts
- forced org@sms in public
- heavy fatigue, esp on the job

-----  
Outrageous occurrences other than high tech:

- sabotage of home, car, work
- theft, property and supplies
- children elec tortured
- vicious rumor campaigns
- imprisonment on false charges
- theft, delay, damage to mail
- staged auto accidents, close calls
- children taken from victim parents by child protective services

-----  
From an email, February 2004:

Dear Eleanor,

I cannot seem to answer the [effects survey](#) on-line, but suffice it to say, I can answer YES to almost every question, both your survey and the alternate one. What can I do to help stop this? I have no money...they've seen to that. They caused my oldest son to commit suicide six years ago, and have been working on my six year old son since the day he was born. Actually, I think since before he was born, when I was pregnant. It is so horrible, so unthinkable to do this to children, how can we stop this.

My little guy suffers so, as do I. My partner is also subject to this. Please, what can I do to make it stop?

Blessings,

---

From [The Power Hour](#) radio show, March 3, 2004:

Mr. Jesus Mendoza, with children ages 2 and 3, is hit so hard with powerful electromagnetic signals that he suffers a number of serious health effects. He and his children are tortured and kept awake by these signals. [Hear his 3 year old daughter in pain](#) from the attacks.

Mr. Mendoza is (at date of broadcast) suing the U.S. Attorney General for harassment and torture. He reports that the government has admitted to "monitoring" him. The Mendosas live in Mission, Texas.

---

From an organized stalking victim who also experiences the effects of high tech harassment:

Lissa: I discovered my husband had been molesting, and had been allowing associates molest, my daughter Jennifer. When I called the police, my husband said "You have no idea what you have done." I then took Jennifer to a pediatrician, then to a children's hospital.

By the time I was done, the authorities twisted the story around so that \*I\* was declared mentally ill, and the childrens' custody given to my husband [the pedophile abuser]. A year later I am still fighting this, and from conversations I understand that if I win, I will probably be killed. The public has no idea how corrupt the justice system is, and what a stranglehold organized pedophile rings have on public officials.

---

From a multiple stalker victim who also experiences the effects of high tech harassment:

Sally: Frequent thefts and sabotage of my belongings to the point that I now can't afford three meals a day. I experience theft and sabotage of my food and kitchenware.

---

From author Janet Leih, who lives in rural South Dakota, and had a chemical analysis done on her well water AND DISTILLED WATER:

"They show that my tap (well) water has softener salts, motor oil, heavy metals, azo dyes, asbestos, benzene, PCBs and clorox bleach in it. And my distilled water has all the same substances in it."

Review of Janet's book [When Medicine Failed](#)

---

From Margo: Hi. Here's a list of symptoms I go through. It's not even close to being complete:

1. I feel a debilitating fatigue then wide awake instantaneously, and vice versa. Any time.
2. When I lie down to go to sleep, I'm always awake. I have no feeling

of fatigue anymore. They don't let me drift off to sleep. That's "too much pleasure," they say [via [voice to skull](#)]. I go from wide awake to being sleep instantly. Same with waking up. I used to slowly become conscious, and then lie there and think for awhile before getting up.

3. I listen to the radio all day. They force me hear the speakers in a perverted manner. Letter R like a person with a speech impediment, letter S like "sh" or "th." Force me to hear "is" as "was" and similar things. Been going on a long time. Now doing it so my own voice sounds peculiar.
4. Whatever they do to me seems to put me in a dazed state. In this state, they can transmit entire sentences in any voice they want, such as the speakers on the radio or family members. Just now beginning to transmit things using my own voice.
5. Since 1997 to the present they have gradually perverted the taste of soft drinks. This has cost me literally \$100s. I kept trying to force them down. But for seven years they've kept it up. The taste is unknown and completely unpalatable. There is absolutely nothing resembling the original taste left now. Now they are causing even healthful drinks such as milk and juices to taste unpalatable.
6. They've put a feeling of fullness on me for well over a couple of years. I don't eat when they do this. It's having negative health effects.
7. Really enhanced negative emotions.
8. Since 1997 to the present they've gradually taken my ability to remember away. I cannot look up a phone number and remember it long enough to dial it. When driving I cannot look left to check the traffic then look right and remember if the way is clear. It's that short space of time - looking from the left to the right - that I forget. They are inclined to do this when I'm talking to someone to make me look bad. This particular crime is done to me continuously.
9. They can stop long-term habits. I know full well how they do this. While I would be thinking about the thing I would be doing, i.e., turning on the light over the plants at a certain time after getting up, they will talk about something else at that time and therefore MY OWN THOUGHTS CANNOT GET IN.
10. For the past year or so I've had an oily substance in my urine.
11. Force me to feel wetness as dryness, and vice versa, either on my body or in my mouth.
12. Since 1997 to the present they've taken my ability to smell or touch anything, period. I can pick things up but that's not the same as feeling. My own body, my cat's fur, a piece of paper - they all feel the same way. It's sort of a rubbery feeling.

I could go on and on. They have given me serious and sometimes dangerous sensory deprivation for many years. Because my hearing is interfered with, I cannot hear sirens, for instance. A neighbor came to my house and smelled gas which I couldn't smell. I scratch myself and don't know how, because I CAN'T FEEL. [Her sensation of touch

has been electronically taken away.]

---

Chris: The stalkers attack me with vicious attacks during the night. I am interrogated, I am ridiculed, I am insulted, I am cursed, I am threatened and I am physically beat from the stalkers voice to skull attacks against me in the early AM hours of March 15, 2004. It is one of the worst nights of stalkers' voice to skull attacks against me this entire year.

---

Joe: I'm remembering the last time I consulted a mental health practitioner on the matter of mind control. I told him that I had been experiencing bizarre harassment for a number of years. I told him that I was having trouble getting legal help because no one believed me. I wanted to use psychological testing to prove that I was not psychotic. I said I knew my grip on reality was sound and that testing should show this. His response was the most chilling to date: He said that he was not there to help me get out of my situation; he was there to help me ACCEPT my situation. Consulting a psychiatrist can have DIRE consequences.

[Eleanor White talking: This is because in the matter of covert government, government-sponsored, or government-covered-up programs, psychiatrists are NOT QUALIFIED to judge if a given individual is being targetted or not. Technically, when they base a diagnosis solely on someone's claim they are being surveilled and harassed as "not possible", they are committing malpractice. The field of psychiatry, unlike law enforcement, has NO checks and balances. Once a psychiatrist deems you in need of 'help' there is no appeal.

[Click here](#) for one way around this outrageous problem.]

---

From Bob [March 2004]:

I am still alive but just barely. I have been in a state of constant emergency since you last heard from me.

I have had very major harassment problems requiring enormous amounts of work. The work has been prevented by constant computer sabotage which forced me to spend thousands of hours working to solve continuous strange problems which tech support people never heard of.

I have had to reformat and reinstall XP over and over because no other solution was possible. After I have reinstalled and reconfigured the software, strange new problems start again. I try to live with the problems as long as possible but when I can no longer function, I must spend the time to reformat and then face a new set of unsolvable problems. I have spent dozens of hours talking to tech support people who have never heard of the problems I have; and who have no solutions for any of them other than reformatting. Reformatting solves one set of strange problems, but I soon have a new set of strange problems.

[Eleanor White talking: This situation is not unusual in our group.]

---

Michael reports [March 2004]:

I know personally TWO people here in Western New York state who are being harrassed(sic) \_ both female - one is 75 and is blind from macular degeneration - the other is blind from retinitis pigmentosa - both feel/hear/"see" many of the same tricks that many group members endure - their visual impairments seem to only minimally limit the disturbances, and they report no more sensitivity to sound than my own situation -- they would never join our group because they don't want any more of whatever this is - and also because they're scared, maybe??!?

-----

Letters like this from a young man forced to abandon his education because of exceptionally powerful advanced technology vibrations bring thoughts of his perpetrators burning in Hell to mind. If I sometimes write extreme-sounding messages to you, it's because I get this type of report constantly. Having experienced such things myself, over and over, I know he is telling the truth:

=====

Eleanor White,

I have been a full time student and a mind control victim being abused from burning of his body to constant painful vibrations of his body parts at the same time being threatened.

After communicating with you a round November last year, I decided to drop out of school because i realized my grades were dropping and teachers and students were getting distracted by the vibrations of my head and body when the teacher was teaching. I had no explanation for this.

At the moment I am not in school but I am still experiencing the same thing. Will I ever complete college? I don't know. Will I ever be genuinely happy with some form of privacy? I don't know.

Ms. White any help you can give will be appreciated.

Thank you.

Victor

=====

I had to write him regrets that I can't answer his question.

Eleanor

## **The State of Unclassified and Commercial Technology Capable of Some Electronic Mind Control Effects**

Eleanor White, P.Eng.

March 30, 2000

<http://www.raven1.net/uncom.htm> ..or.. <http://www.bestnet.org/~raven1/uncom.htm>

**To help the reader appreciate the importance of this matter...**

"We need a program of psychosurgery and political control of our society. The purpose is physical control of the mind. Everyone who deviates from the given norm can be surgically mutilated.

"The individual may think that the most important reality is his own existence, but this is only his personal point of view. This lacks historical perspective.

"Man does not have the right to develop his own mind. This kind of liberal orientation has great appeal. We must electrically control the brain. Some day armies and generals will be controlled by electrical stimulation of the brain."

Dr. Jose Delgado (MKULTRA experimenter who demonstrated a radio- controlled bull on CNN in 1985)

Director of Neuropsychiatry, Yale University Medical School  
Congressional Record No. 26, Vol. 118, February 24, 1974

Monkeys in restraint, wires coming out of top of skull, left image "normal", right image with electric current being fed into the monkey's brain - note pupil sizes and clenched teeth! These images portray Dr. Delgado's ruthless disregard for life, pain, and suffering!

=====

I.      LIMITATIONS

The author acknowledges that this article falls short of a rigorous academic paper. This is explained by the fact that all involuntary neuro-electromagnetic experimentees are kept in a sort of "barely alive" condition, with significant health problems, and either unable to work or just barely able to hold a job with limited earning potential.

Furthermore, since the perpetrators constantly work to prevent the public from knowing anything about electronic mind control, evidence is obtainable with great difficulty, and often the only evidence is of lower quality than would be accepted for a scientific treatise.

In short, everything in this article represents a struggle against immense odds. We ask readers to understand this and hope that those who are not under electronic attack and surveillance will try through independent channels to find better quality proof.

=====

II.     INTRODUCTION

Electronic mind control technology had it's start in the 1950s, as an obscure branch of the CIA's MKULTRA project group. Just as organized crime is not stopped by hearings and court cases, neither did this originally obscure branch of MKULTRA activity, when the institutional/drug/child abuse phases were exposed by the U.S. Senate's Church-Inouye hearings in the late 1970s. No criminal proceedings followed, and only two civil law suits (Orlikow and Bonacci) have succeeded.

This assembly of unclassified and commercial literature is to show investigators and concerned citizens that in spite of the tightest possible information blackout imposed in the early 1970s, enough of the classified mind control technology has leaked out to show that significant classified accomplishments are overwhelmingly likely, and in need of disclosure, here at the end of the 20th century.

It is hoped that government and media, who have shied away from this topic for decades, preferring the warm fuzzy feelings that "this can't be true", will read about the unclassified and commercial devices and understand the implications of continued turning the other way.

=====

III. MIND CONTROL EFFECTS

Since government-backed electronic mind control is classified at the highest levels in all technologically capable governments, the description of effects is taken from the personal experiences of over 300 known involuntary experimentees. The experimentees without exception report that once the "testing" begins, the classified experiment specification apparently requires that the "testing" be continued for life. Many are young seniors, some in their 70s and 80s.

Some have children and the children are often subjected to the same "testing" as their parent(s).

The effects pattern:

This article is about unclassified/commercial technologies which can produce some of the effects of the classified equipment, not testimonials, but this much has become clear over time:

- All "testing" consists of unique, carefully engineered-unprovable events to produce psychological stress in the victim. There are no events which do not fit that apparent purpose.
- In every series of stress event type, ONE introductory event of very high energy/effect is staged. The obvious purpose is to be certain the victim KNOWS this is external harassment, and not just "bad luck". From that time forward, the experimenters appear to apply "Pavlovian training" so that they can get the victim to "jump" (or react in some way) to the same effect at a tiny fraction of the initial "introductory" event.
- This type of testing started during the Cold War, and shows every characteristic of being for military and intelligence psychological warfare purposes.
- This type of testing all points to CONTROL of the test subject. Endlessly repeated words generated inescapably within the skull are just one hypnosis-like experience.
- Given that CONTROL is the likely ultimate purpose, INVOLUNTARY test subjects become a necessity. Thus, the phenomenon of people apparently being chosen at random for this "work".
- Given a requirement for INVOLUNTARY test subjects, the ONLY group with the necessary funds and legal powers is GOVERNMENT. Private contractors are no doubt the main perpetrators to keep the "work" well covered, but without secret complicity of GOVERNMENT, this expensive, extensive, and illegal atrocity simply could not happen.

The effect types categorized:

Here is a list of most of the common effects. It is not exhaustive, but is intended to show the reader how the perpetrators' palette of stress effects is broken down. Indent levels are used to show categories and sub-categories:

1. Invasive At-a-Distance Body Effects (including mind)
  - a. Sleep deprivation and fatigue
    - i. Silent but instantaneous application of "electronic caffeine" signal, forces awake and keeps awake
    - ii. Loud noise from neighbours, usually synchronized to attempts to fall asleep
    - iii. Precision-to-the-second "allowed sleep" and "forced awakening"; far too precise and repeated to be natural
    - iv. Daytime "fatigue attacks", can force the victim to sleep and/or weaken the muscles to the point of collapse
  - b. Audible Voice to Skull (V2S)
    - i. Delivered by apparent at a distance radio signal
    - ii. Made to appear as emanating from thin air
    - iii. Voices or sound effects only the victim can hear
  - c. Inaudible Voice to Skull (Silent Sound)
    - i. Delivered by apparent at a distance radio signal; manifested by sudden urges to do something/go somewhere you would not otherwise want to; silent (ultrasonic) hypnosis presumed
    - ii. Programming hypnotic "triggers" - i.e. specific phrases or other cues which cause specific involuntary actions
  - d. Violent muscle triggering (flailing of limbs)
    - i. Leg or arm jerks to violently force awake and keep awake
    - ii. Whole body jerks, as if body had been hit by large jolt of electricity
    - iii. Violent shaking of body; seemingly as if on a vibrating surface but where surface is in reality not vibrating
  - e. Precision manipulation of body parts (slow, specific purpose)
    - i. Manipulation of hands, forced to synchronize with closed-eyes but FULLY AWAKE vision of previous day; very powerful and coercive, not a dream
    - ii. Slow bending almost 90 degrees BACKWARDS of one toe at a time or one finger at a time
    - iii. Direct at-a-distance control of breathing and vocal cords; including involuntary speech
    - iv. Spot blanking of memory, long and short term
  - f. Reading said-silently-to-self thoughts
    - i. Engineered skits where your thoughts are spoken to you by strangers on street or events requiring knowledge of what you were thinking

- ii. Real time reading subvocalized words, as while the victim reads a book, and BROADCASTING those words to nearby people who form an amazed audience around the victim
- g. Direct application of pain to body parts
  - i. Hot-needles-deep-in-flesh sensation
  - ii. Electric shocks (no wires whatsoever applied)
  - iii. Powerful and unquenchable itching, often applied precisely when victim attempts to do something to expose this "work"
  - iv. "Artificial fever", sudden, no illness present
  - v. Sudden racing heartbeat, relaxed situation
- h. Surveillance and tracking
  - i. Thru wall radar and rapping under your feet as you move about your apartment, on ceiling of apartment below
  - ii. Thru wall radar used to monitor starting and stopping of your urination - water below turned on and off in sync with your urine stream
  - iii. Loud, raucous artificial bird calls everywhere the victim goes, even into the wilderness
- 2. Invasive Physical Effects at a Distance, non-body
  - a. Stoppage of power to appliances (temporary, breaker ON)
  - b. Manipulation of appliance settings
  - c. Temporary failures that "fix themselves"
  - d. Flinging of objects, including non-metallic
  - e. Precision manipulation of switches and controls
  - f. Forced, obviously premature failure of appliance or parts
- 3. External Stress-Generating "Skits"
  - a. Participation of strangers, neighbours, and in some cases close friends and family members in harassment
    - i. Rudeness for no cause
    - ii. Tradesmen always have "problems", block your car, etc.
    - iii. Purchases delayed, spoiled, or lost at a high rate
    - iv. Unusually loud music, noise, far beyond normal
  - b. Break-ins/sabotage at home
    - i. Shredding of clothing
    - ii. Destruction of furniture
    - iii. Petty theft
    - iv. Engineered failures of utilities

- c. Sabotage at work
  - i. Repetitive damage to furniture
  - ii. Deletion/corruption of computer files
  - iii. Planting viruses which could not have come from your computer usage pattern
  - iv. Delivered goods delayed, spoiled, or lost at a high rate
  - v. Spreading of rumors, sabotage to your working reputation
  - vi. Direct sabotage and theft of completed work; tradesmen often involved and showing obvious pleasure

=====

IV. MAJOR TECHNOLOGY CLASSES

These technology classes are for the UNclassified and commercial equipment which can emulate the "real" classified mind control equipment. Effect section 2, "Invasive Physical Effects at-a-Distance", clearly establishes the existence of remote precision manipulation of objects which is far beyond the capabilities of unclassified and commercial equipment at the time of writing.

REMOTE PHYSICAL MANIPULATION is not covered in this article, but the reader should know that both NASA and IEEE have noted successes in creating very small antigravity effects (which are not due to simple magnetism.)

TRANSMISSION METHODS FOR NEURO-EFFECTIVE SIGNALS:

- pulsed microwave (i.e. like radar signals)
- ultrasound and voice-FM (transmitted through the air)

While transmission of speech, dating from the early 1970s, was the first use of pulsed microwave, neuro-effective signals can now cause many other nerve groups to become remotely actuated. At time of writing, that technology appears to be classified.

PAVLOVIAN HYPNOTIC TRIGGERS:

A [Pavlovian] hypnotic trigger is a phrase or any other sensory cue which the victim is programmed to involuntarily act on in a certain way. The 50s-70s MKULTRA survivors can still be triggered from programming done decades ago. A name "manchurian candidate", from a novel by John Marks, is used to describe a person who carries Pavlovian triggers.

One of the main goals of the institutional/drug/child abuse phases of the CIA MKULTRA atrocities (1950's through 1970's) was to implant triggers using a "twilight state" (half-conscious) medication and tape recorded hypnosis. The ultimate goal was to have the acting out of Pavlovian triggers erased from the victim's memory.

Using one of the two transmission methods above, these triggers are now planted using either of the above two transmission methods, but with the words moved up just above (or near the top of) the audible frequency range. The result is that hypnotic triggers are planted without the subject being aware. This technology was used in the Gulf War and has a name: "Silent Sound"

THROUGH-WALL SURVEILLANCE METHODS:

So-called "millimeter wave" scanning. This method uses the very top end of the microwave radio signal spectrum just below infra-red. To view small objects or people clearly, the highest frequency that will penetrate non-conductive or poorly- conductive walls is used. Millimeter wave scanning radar can be used in two modes:

- passive (no signal radiated, uses background radiation already in the area to be scanned, totally UNdetectable)
- active (low power millimeter wave "flashlight" attached to the scanner just as a conventional light mounted on a camcorder), or, the use of archaeological ground penetrating radar

THOUGHT READING:

Thought reading can be classed as a "through wall surveillance" technology. Thought reading, in the unclassified/commercial realm, can be broken down as follows:

- thru-skull microwave reading
- magnetic skull-proximity reading

BRAIN ENTRAINMENT:

The reverse of biofeedback. Those low frequency electrical brain rhythms which are characteristics of various moods and states of sleep can not only be read out using biofeedback equipment or EEG machines, but using radio, sound, contact electrodes, or flashing lights, the moods and sleep states can be generated or at least encouraged using brain entrainment devices.

Brain entrainment signals cannot carry voice, which is a much higher frequency range. Brain entrainment can, however, be used to "set up" a target to make him/her more susceptible to hypnosis.

These major technology classes can produce some of the observed mind control effects, FROM HIDING AND UNDETECTABLY, with the exception of remote physical manipulation.

IMPLANTATION is sometimes used to assist the above technologies but with current devices, implants are no longer required.

Diagram showing the overall method, based entirely on unclassified 1974 technology, of how SILENT hypnosis may be transmitted to a target without the target's being aware. This technique is probably the most insidious, because it allows months and years of programming and Pavlovian trigger-setting, while the target cannot resist.

=====

V. PULSED MICROWAVE

Pulsed microwave voice-to-skull (or other-sound-to-skull) transmission was discovered during World War II by radar technicians who found they could hear the buzz of the train of pulses being transmitted by radar equipment they were working on. This phenomenon has been studied extensively by Dr. Allan Frey, whose work has been published in a number of reference books.

What Dr. Frey found was that single pulses of microwave could be heard by some people as "pops" or "clicks", while a train of uniform pulses could be heard as a buzz, without benefit of any type of receiver.

Dr. Frey also found that a wide range of frequencies, as low as 125 MHz (well below microwave) worked for some combination of pulse power and pulse width. Detailed unclassified studies mapped out those frequencies and pulse characteristics which are optimum for generation of "microwave hearing".

Very significantly, when discussing electronic mind control, is the fact that the PEAK PULSE POWER required is modest - something like 0.3 watts per square centimeter of skull surface, and this power level is only applied for a very small percentage of each pulse's cycle time. 0.3 watts/sq cm is about what you get under a 250 watt heat lamp at a distance of one meter. It is not a lot of power.

When you take into account that the pulse train is OFF (no signal) for most of each cycle, the average power is so low as to be nearly undetectable.

Frequencies that act as voice-to-skull carriers are not single frequencies, as, for example TV or cell phone channels are. Each sensitive frequency is actually a range or "band" of frequencies. A technology used to reduce both interference and detection is called "spread spectrum". Spread spectrum signals have the carrier frequency "hop" around within a specified band.

Unless a receiver "knows" the hop schedule in advance, there is virtually no chance of receiving or detecting a coherent readable signal. Spectrum analyzers, used for detection, are receivers with a screen. A spread spectrum signal received on a spectrum analyzer appears as just more "static" or noise.

My organization was delighted to find the actual method of the first successful UNclassified voice to skull experiment in 1974, by Dr. Joseph C. Sharp, then at the Walter Reed Army Institute of Research.

Dr. Sharp's basic method is shown in Appendix PM6, below. A Frey-type audible pulse was transmitted every time the voice waveform passed down through the zero axis, a technique easily duplicated by ham radio operators who build their own equipment.

A pattern seems to be repeated where research which could be used for mind control starts working, the UNclassified researchers lose funding, and in some cases their notes have been confiscated, and no further information on that research track is heard in the unclassified press.

Pulsed microwave voice-to-skull research is one such track.

VI. ULTRASOUND AND VOICE-FM

Ultrasound is vibration of the air, a liquid, or a solid, above the upper limit of human hearing which is roughly 15,000 Hz in adults. Voice-FM uses a tone at or near that upper limit, and the speaker's voice VARIES the frequency slightly. Either a "tinnitus-like sound" or nothing is heard by the target.

Ultrasound/voice-FM can be transmitted in these ways:

- directly through the air using "air type transducers"
- directly to the brain using a modulated microwave pulse train
- through the air by piggybacking an ultrasound message on top of commercial radio or television

The use of commercial radio or television requires that the input signal at the transmitter be relatively powerful, since radio and TV receivers are not designed to pass on ultrasound messages. However, the average radio and TV receiver does not simply stop ultrasound, rather, the ability to pass ultrasound messages "rolls off", i.e. degrades, as the frequency is increased.

Today's radios and TVs can carry enough ultrasound messaging to be "heard" by the human brain (though not the ear) to be effective in conveying hypnosis. This was proven by the U.S. military forces in the Gulf War.

Ultrasound's (and voice-FM's) main advantage in mind control work is that it can carry VERBAL hypnosis, more potent than simple biorhythm entrainment.

The brain CAN "hear" and understand this "inaudible voice", while the ear cannot. Once you can convey hypnotic suggestion which cannot be consciously heard, you have eliminated a major barrier to the subject's acceptance of the words being transmitted.

In previous decades, "subliminal advertising" using voice and images at normal frequencies were "time sliced" into an apparently normal radio or TV broadcast. This apparently did not work well, and now voice-FM "subliminal learning tapes" commercially available have superseded the time slice method.

Illustration showing the operation of "silent sound" with the human hearing system, using near-ultrasound, FREQUENCY MODULATED voice

One method for projecting either audible voice or voice-FM over long distances, virtually undetectable if line of sight, is the "acoustic heterodyne" or "HyperSonic Sound" system, patented by American Technologies Corporation, San Diego CA, <http://www.atcsd.com>

[Up to Contents](#)

=====

VII. THROUGH-WALL RADAR

When "millimeter wave" microwave signals are received, the waves are so small that they can display a two-dimensional outline of an object. Lower frequency radar can only show a "blip" which indicates an object's presence or motion, but not it's outline.

A millimeter wave dish acts as a camera lens to focus incoming millimeter wave signals on to a plate with a two-dimensional array of elements sensitive to millimeter wave frequencies, in exactly the same way a camera focusses light on to a piece of film. Each of the sensitive elements is scanned in a definite order, just as with a TV camera and screen, and a picture showing the outline of an object is formed.

If no signal is sent out by the scanner, it is called "passive" millimeter wave radar. If the subject is illuminated by a separate source of millimeter wave signals, it is an "active" scanner. Since passive systems can penetrate clothing and non-conductive walls UNDETECTABLY, it is obvious that with just a small millimeter wave "flashlight", non-conductive walls can be scanned through and still very little detectable signal is present.

Millimeter wave through-clothing, through-luggage is currently in use at airports.

In addition to mind control experimental observation, millimeter wave scanners are ideal for stalkers and voyeurs, since the subject is portrayed in the nude.

Millimeter wave scanners can be purchased from Millivision Corp., Northampton MA, info at <http://www.millivision.com>

=====

VIII. THOUGHT READING

"Thought reading" appears to be one of the EASIER components of electronic mind control, given that commercial and unclassified thought reading devices are available and being actively developed. Thought reading is an enhanced version of computer speech recognition, with EEG waves being substituted for sound waves.

The easiest "thought" reading is actually remote picking up of the electro-magnetic activity of the speech-control muscles.

When we "say words to ourselves, silently", or, read a book, we can actually FEEL the slight sensations of those words in our vocal muscles - all that is absent is the passage of air. Coordinated speech signals are relatively strong and relatively consistent.

The other kind of "thought reading", i.e. "MINING" someone's brain for information from a distance is SPECULATIVE. We targetted individuals have no way to verify that is happening, however, we do know that we are "fed" hypnotic signals to force consistent "neutral" content (but of different character than prior to becoming test subjects,) DREAMS.

These forced, neutral content ("bland" content) dreams occur every single night and may represent the experimenters' efforts to have our experiences portray themselves in such dreams, in effect, MINING our experiences. Again, this is SPECULATION, but it seems very logical.

Appendix TR4, referenced below, confirms the ability of current unclassified technology to actually see what a living animal sees, electronically. It is therefore extremely likely that these forced dreams can be displayed on the experimenters' screens in an adjacent apartment or adjacent house, (which are made obvious to the involuntary experimentee.)

Finally, among the 300 known neuro-electromagnetic experimentees, we often have strangers either tell us what we are thinking, say they can pick up our broadcast thoughts, or tell us about events inside our homes at times when they could not have seen from the outside. BUGS are not used, and they have been searched for.

=====

IX. IMPLANTS

Electronic implants are actually one of the older forms of electronic mind control technology. Implants can either receive instructions via radio signals, passing them to the brain, or, can be interrogated via external radio signals to read brain activity at a distance.

Many of the about 300 known involuntary neuro-electromagnetic experimentees do not have implants, but have an aggressive and thorough regimen of mind control effects anyway. IMPLANTS ARE STILL SIGNIFICANT, though, for these reasons:

1. Their use, since World War II and continuing to the present day, associated with MKULTRA atrocities, is a crystal clear indication that a MOTIVE POOL of unethical researchers has existed through the late 1970s. The same people, none jailed, are still working, by and large. The reader can see that the existence of the same motive pool is overwhelmingly likely, given that no social changes have occurred which would prevent that.
2. The fact that to date (autumn 1999) no victim who has had implants removed has ever been able to get custody of the removed implant shows that research programmes using implants are still quite active and obviously quite important to someone.

See <http://www.ritualabuse.net/MCF/>, the Mind Control Forum for details on involuntary experimentees' implantation and removal experiences.

3. The use of implants shows that, in the field of involuntary human experimentation, not every perpetrator group has access to the most sophisticated (implant-less) technology. Since implants for beneficial purposes are actively being promoted by NIH, it is obvious they will not disappear any time soon.

Appended articles:

IMP1 <http://www.raven1.net/centneur.htm>, an article showing that human implantation is being done and even encouraged by the U.S. NIH (National Institutes of Health). While this public information is for the public good, it is a small step to move from publicly known and VOLUNTARY implantation to CONCEALED implantation for INVOLUNTARY and criminal purposes.

IMP2 <http://www.raven1.net/italydoc.htm>, a testimonial by an Italian psychiatrist who has been assisting involuntary experimentees; this doctor began by assisting [Satanic or other] ritual abuse victims.

Apparently involuntary brain implantation is alive and well in Italy, why not elsewhere?

=====

X. CONCLUSION

Conclusion? While the documentary evidence in this report does not exactly "prove" we are being targetted by intelligence/defence contractors using classified electronic weapons, it certainly eliminates the argument that such devices are impossible, don't exist, or that government has "no interest" in them, or that the "were tried years ago but didn't work".

Add in the experiences of victims of the Tuskegee untreated syphilis experiments, the feeding of radioactive food to uninformed U.S. citizens, and the atrocities perpetrated under the institutional/drug/child abuse phases of the CIA's MKULTRA programmes, and you have more than enough grounds to petition for an independent, open investigation.

No doubt there were citizens of ancient Pompeii who argued that Vesuvius could not possibly erupt in their lifetimes.

Faced with all the evidence, no honest government can afford to take the risk that electronic mind control activity may be happening, controlled from their own "back rooms".

Eleanor White

If any doubts as to the importance of this issue remain, please see below what the U.S. NSA (National Security Agency) says would be the result of releasing information on electronic mind control, see next page:

NATIONAL SECURITY AGENCY  
CENTRAL SECURITY SERVICE  
FORT GEORGE G. MEADE, MARYLAND 20755-6000

Serial: J9728-96

19 March 1997

Ms. Cheryl Welsh  
915 Zaragoza St.  
Davis, CA 95616

**Obvious question:  
If government-sponsored  
mind control is not happening,  
then why could it "reasonably  
be expected to cause  
exceptionally grave damage  
to national security"!?**

Dear Ms. Welsh:

This responds to your Freedom of Information Act (FOIA) request dated 28 July 1995 submitted to the Defense Intelligence Agency (DIA) for records pertaining to yourself and other various topics. A copy of your request is attached for your convenience. On 21 October 1996 the DIA referred one responsive NSA-originated document relating to a Soviet mind control system to this Agency for our review and direct response to you.

The document has been reviewed by this Agency pursuant to the provisions of the FOIA and has been found to be currently and properly classified in accordance with Executive Order 12958. This document meets the criteria for classification as set forth in subparagraphs (c) and (g) of section 1.5 and remain classified TOP SECRET as provided in section 1.3 of Executive Order 12958. The information is classified because its disclosure could reasonably be expected to cause exceptionally grave damage to the national security. Because the information is currently and properly classified, it is exempt from disclosure pursuant to the first exemption of the FOIA (5 U.S.C. section 552(b)(1)).

In addition, this Agency is authorized by various statutes to protect certain information concerning its activities. We have determined that such information exists in this document. Accordingly, those portions are also exempt from disclosure pursuant to the third exemption of the FOIA which provides for the withholding of information specifically protected from disclosure by statute. The specific statutes applicable in this case are

APPENDIX PM1 ... THE LIDA MACHINE

Associated Press (Exact date not shown on copy but tests took place 1982/83) Loma Linda (Veterans Hospital research unit) San Bernardino County

A Soviet device that bombards brains with low-frequency [Eleanor White's note: More likely radio frequency carrier which is modulated or pulsed at brain-entrainment rates] radio waves may be a replacement for tranquilizers and their unwanted side effects, says a researcher, but its use on humans poses ethical and political questions.

The machine, known as the LIDA, is on loan to the Jerry L. Pettis Memorial Veterans Hospital through a medical exchange program between the Soviet Union and the United States.

Hospital researchers have found in changes behaviour in animals.

"It looks as though instead of taking a valium when you want to relax yourself it would be possible to achieve a similar result, probably in a safer way, by the use of a radio field that will relax you" said Dr. Ross Adey, chief of research at the hospital.

[Missing one line on the photocopy] ... manual shows it being used on a human in a clinical setting, Adey said. The manual says it is a "distant pulse treating apparatus" for psychological problems, including sleeplessness, hypertension and neurotic disturbances.

The device has not been approved for use with humans in this country, although the Russians have done so since at least 1960, Adey Said.

Low frequency radio waves simulate the brain's own electromagnetic current and produce a trance-like state.

Adey said he put a cat in a box and turned on the LIDA.

"Within a matter of two or three minutes it is sitting there very quietly ... it stays almost as though it were transfixed" he said.

Tho hospital's experiment with the machine has been underway for three months and should be completed within a year, Adey said.

Eleanor White's comments (Dr. Byrd's statement follows):

1. Heavy "fatigue attacks" are a very common experience among involuntary neuro-electromagnetic experimentees. The LIDA device could, right out of the box, be used as a fatigue attack weapon, FROM HIDING, thru non- or semi-conductive walls.
2. If the LIDA machine is tuned for tranquilizing effect, then it might also be tuned for "force awake" and other effects too. This device is a psychotronic weapon, AS IS. A TV documentary stated the Russian medical establishment considers this 1950s device obsolete. (Wonder what has taken it's place?)

Below is a statement from Dr. Eldon Byrd, U.S. psychotronic researcher who funded Dr. Adey's work with the LIDA machine:

"The LIDA machine was made in the 1950's by the Soviets. The CIA purchased one through a Canadian front for Dr. Ross Adey, but didn't give him any funds to evaluate it.

"I provided those funds from my project in 1981, and he determined that the LIDA would put rabbits into a stupor at a distance and make cats go into REM.

"The Soviets included a picture with the device that showed an entire auditorium full of people asleep with the LIDA on the podium. The LIDA put out an electric field, a magnetic field, light, heat, and sound (of course light and heat are electromagnetic waves, but at a much higher frequency than the low frequencies of the electric and magnetic fields mentioned above).

"The purported purpose of the LIDA was for medical treatments; however, the North Koreans used it as a brain washing device during the Korean War. The big question is: what did they do with the technology? It could have been improved and/or made smaller. It is unlikely that they abandoned something that worked.

"Direct communication with Ross Adey: While he was testing the LIDA 4, an electrician was walking by and asked him where he got the "North Korean brain washing machine". Ross told him that is was a Russian medical device.

"The guy said he had been brain-washed by a device like that when he was in a POW camp. They placed the vertical plates alongside his head and read questions and answers to him. He said he felt like he was in a dream. Later when the Red Cross came and asked questions, he responded with what had been read to him while under the influence of the device. He said he seemed to have no control over the answers.

"The LIDA is PATENTED IN THE US. Why? They are not sold in the US--the only one I know that exists is the one that was at Loma Linda Medical Center where Adey used to work. Eldon"

.....

Involuntary neuro-experimentation activist Cheryl Welsh, Davis CA, sent in this clipping from an article by Dr. Ross Adey but without complete bibliographic references:

"Soviet investigators have also developed a therapeutic device utilizing low frequency square wave modulation of a radiofrequency field. This instrument known as the Lida was developed by L. Rabichev and his colleagues in Soviet Armenia, and is designed for "the treatment of neuropsychic and somatic disorders, such as neuroses, psychoses, insomnia, hypertension, stammering, bronchia asthma, and asthenic and reactive disturbances".

It is covered by U.S. Patent # 3,773,049. In addition to the pulsed RF field, the device also delivers pulsed light, pulsed sound, and pulsed heat. Each stimulus train can be independently adjusted in intensity and frequency.

<http://www.raven1.net/p31.htm> revived by [www.hearingvoices-is-voicetoskull.com](http://www.hearingvoices-is-voicetoskull.com)

The radiofrequency field has a nominal carrier frequency of 40 MHz and a maximum output of approximately 40 Watts. The E- field is applied to the patient on the sides of the neck through two disc electrodes approximately 10 cm in diameter. The electrodes are located at a distance of 2-4 cm from the skin.

[Eleanor White's comment: The fact that Dr. Ross Adey mentioned an "audience" being put to sleep by the LIDA suggests that the "E-field" electrodes may not play an essential role. The radio signal appears to be the primary cause of the sleep/trance effect.]

Optimal repetition frequencies are said to lie in the range from 40 to 80 pulses per minute. Pulse duration is typically 0.2 sec. In an 8 year trial period, the instrument was tested on 740 patients, including adults and children. Postivive therapeutic effects were claimed in more..."

APPENDIX PM2 - FREY'S PAPER

## **Human Auditory System Response To Modulated Electromagnetic Energy**

**ALLAN H. FREY**

**General Electric Advanced Electronics Center Cornell University Ithaca, New  
York**

TRANSCRIPTION, Courtesy of MindNet Archives, Mike Coyle  
posted at <http://www.ritualabuse.net/MCF/>

Frey, Allan H., Human Auditory system response to modulated  
electromagnetic energy. J. Appl. Physiol. 17(4): 689-692. 1962.

(\*) Asterisks indicate unreadable characters in the original copy.

NOTE: In 1962, frequencies were expressed as kiloCYCLES,  
megaCYCLES, etc., with abbreviations being kc, mc

--The intent of this paper is to bring a new phenomena to the  
attention of physiologists. Using extremely low average power  
densities of electromagnetic energy, the perception of sounds was  
induced in normal and deaf humans. The effect was induced several  
hundred feet from the antenna the instant the transmitter was turned  
on, and is a function of carrier frequency and modulation. Attempts  
were made to match the sounds induced by electromagnetic energy and  
acoustic energy.

The closest match occurred when the acoustic amplifier was driven by  
the rf transmitter's modulator. Peak power density is a critical  
factor and, with acoustic noise of approximately 80 db, a peak power  
density of approximately 275 mw / rf is needed to induce the  
perception at carrier frequencies 125 mc and 1,310 mc. The average  
power density can be at rf as low as 400  $\mu$ w/cm<sup>2</sup>. The evidence for  
the various positive sites of the electromagnetic energy sensor are  
discussed and locations peripheral to the cochlea are ruled out.

Received for publication 29 September 1961.

A significant amount of research has been conducted with the effects  
of radio-frequency (rf) energy on organisms (electro- magnetic energy  
between 1 kc and \*\* Gc). Typically, this work has been concerned with  
determining damage resulting from body temperature increase. The  
average power densities used have been on the order of 0.1-t w/cm<sup>2</sup>  
used over many minutes to several hours.

In contrast, using average power densities measured in microwatts per square centimeter, we have found that \*\*\*\*r effects which are transient, can be induced with rf energy. Further, these effects occur the instant the transmitter is turned on. With appropriate modulation, the perception of different sounds can be induced in physically deaf, as well as normal, in human subjects at a distance of inches up to thousands of feet from the transmitter. With somewhat different transmission parameters, you can induce the perception of severe buffeting of the head, without such apparent vestibular symptoms as dizziness or nausea. Changing transmitter parameters down, one can induce a "pins-and-needles" sensation.

Experimental work with these phenomena may yield information on auditory system functioning and, more generally, in the nervous system function. For example, this energy could possibly be used as a tool to explore nervous system coding, possibly using Neider and Neff's procedures (1), and for stimulating the nervous system without the damage caused by electrodes.

Since most of our data have been obtained of the "rf sound" and only the visual system has previously been shown to respond to electromagnetic energy, this paper will be concerned only with the auditory effects data. As a further restriction, only data from human subjects will be reported, since only this data can be discussed meaningfully at the present time. The long series of studies we performed to ascertain that we were dealing with a biological significant phenomena (rather than broadcasts from sources such as loose fillings in the teeth) are summarized in another paper (2), which also reports on the measuring instruments used in this work.

The intent of this paper is to bring this new phenomenon to the attention of physiologists. The data reported are intended to suggest numerous lines of experimentation and indicate necessary experimental controls.

Since we are dealing with a significant phenomenon, we decided to explore the effects of a wide range of transmitter parameters to build up the body of knowledge which would allow us to generate hypotheses and determine what experimental controls would be necessary. Thus, the numbers given are conservative; they should not be considered precise, since the transmitters were never located in ideal laboratory environments. Within the limits of our measurements, the orientation of the subject in the rf field was of little consequence.

Most of the transmitters used to date in the experimentation have been pulse modulated with no information placed on the signal. The rf sound has been described as being a buzz, clicking, hiss, or knocking, depending on several transmitter parameters, i.e., pulse width and pulse-repetition rate (PRF). The apparent source of these sounds is localized by the subjects as being within, or immediately behind the head. The sound always seems to come from within or immediately behind the head no matter how the subjects twists or rotates in the rf field.

Our early experimentation, preformed using transmitters with very short square pulses and high pulse-repetition rates, seemed to indicate that we were dealing with harmonics of the PRF. However, our later work has indicated that this is not the case; rather, the rf sound appears to be incidental modulation envelope on each pulse, as shown in Fig 1.

Some difficulty was experienced when the subjects tried to match the rf sound to ordinary audio. They reported that it was not possible to satisfactorily match the rf sound to a sine wave or to white noise. An audio amplifier was connected to a variable bypass filter and pulsed by the transmitter pulsing mechanism. The subjects, when allowed to control the filter, reported a fairly satisfactory match. The subjects were fairly well satisfied with all frequencies below 5-kc audio were eliminated and the high- frequency audio was extended as much as possible. There was, however, always a demand for more high-frequency components. Since our tweeter has a rather good high-frequency response, it is possible that we have shown an analogue of visual phenomenon in which people see farther into the ultraviolet range when the lenses is eliminated from the eye. In other words, this may be a demonstration that the mechanical transmission system of the ossicles cannot respond to as high a frequency as the rest of the auditory system. Since the rf bypasses the ossicle system and the audio given the subject for matching does not, this may explain the dissatisfaction of our subjects in the matching.

FIG. 1. Oscilloscope representation of transmitter output over time (pulse-modulated).

FIG. 2. Audiogram of deaf subject (otosclerosis) who had a "normal" rf sound threshold.

FIG. 4. Threshold energy as a function of frequency of electromagnetic energy (ambient noise level 70-90 db).

At one time in our experimentation with deaf subjects there seemed to be a clear relationship between the ability to hear audio above 5 kc and the ability to hear rf sounds. If a subject could hear above 5 kc, either by bone or air conduction, then he could hear the rf sounds. For example, the threshold of the subject whose audio gram appears in Fig. 2 was the same average power density as our normal subjects. Recently, however, we have found people with a notch around 5 kc who do not perceive the rf sounds generated by at least one of our transmitters.

#### THRESHOLDS

As shown in Table 1, we have used a fairly wide range of transmitter parameters. We are currently experimenting with transmitters that radiate energy at frequencies below 425 mc, and are using different types of modulation, e.g., pulse-repetition rates as low as 3 and 4/sec.

In the experimentation reported in this section, the ordinary noise level was 70-90 db (measured with a General Radio Co. model 1551-B sound level meter.) In order to minimize the rf energy used in the experimentation, subjects wore Flent antinoise ear stoppers whenever measurements were made. The ordinary noise attenuation of the Flents is indicated in Fig. 3. Although the rf sounds can be heard without the use of Flents, eventhough they have an ambient noise level of 90 db, it appears that the ambient noise to some extent "masked" the rf sound.

Table 2 gives the thresholds for the perception of the sounds. It shows fairly clearly that the critical factor in the perception of the rf sound is the peak power density, rather than the average power density. The relatively high value for transmitter B was expected and will be discussed below. Transmitter G has been omitted from the table since the 20-mw/cm<sup>2</sup> reading for it can be considered only approximate. The field-strength-measuring instruments used in that experiment did not read high enough to give an accurate reading. The energy from transmitter H was not perceived, even when the peak power density was as high as 25 w/cm<sup>2</sup>.

When the threshold energy is plotted as a function of the rf energy (Fig. 4), a curve is obtained which is suggestive of the curve of penetration of rf energy into the head. Figure 5 shows the calculated penetration, by frequency of rf energy, into the head. Our data indicate that the calculated penetration curve may well be accurate at the higher frequencies but the penetration at the lower frequencies may be greater than that calculated on this model.

<http://www.raven1.net/p40.htm> revived by [www.hearingvoices-is-voicetoskull.com](http://www.hearingvoices-is-voicetoskull.com)

As previously noted, the thresholds were obtained in a high ambient noise environment. This is an unusual situation as compared to obtaining thresholds of regular audio sound. One recent experimentation leads us to believe that, if the ambient noise level were not so high, these threshold fields strengths would be much lower. Since one purpose of this paper is to suggest experiments, it might be appropriate to theories as to what the rf sound threshold might be if we assumed that the subject is in an anechoic chamber. It is also assumed that there is no transducer noise.

Given: As a threshold for the rf sound, a peak power density of 275 mw/cm<sup>2</sup> determined in an ambient noise environment of 80 db. Earplugs attenuate the ambient noise 30 db.

If: 1 mw/cm<sup>2</sup> is set equal to 0 db, then 275 mw/cm<sup>2</sup> is equal to 24 db.

Then: We can reduce the rf energy 50 db to -26 db as we reduce the noise level energy from 50 db to 0 db. We found that -26 db rf energy is approximately 3  $\mu$ w/cm<sup>2</sup>.

Thus: If an anechoic room, rf sound could theoretically be induced by a peak power density of 3  $\mu$ w/cm<sup>2</sup> measured in free space. Since only 10% of this energy is likely to penetrate the skull, the human auditory system and a table radio may be one order of magnitude apart in sensitivity to rf energy.

[Up to Contents](#)

#### RF DETECTOR IN AUDITORY SYSTEM

One possibility that seems to have been ruled out in our experimentation is that of a capacitor-type effect with the tympanic membrane and oval window acting as plates of a capacitor. It would seem possible that these membranes, acting as plates of a capacitor, could be set in motion by rf energy. There are, however, three points of evidence against this possibility. First, when one rotates a capacitor in an rf field, a rather marked change occurs in the capacitor as a function of its orientation in the field. When our subjects rotate or change the positions of their heads in the field, the loudness of the rf sound does not change appreciably. Second, the distance between these membranes is rather small, compared with the wavelengths used. As a third point, we found that one of our subjects who has otosclerosis heard the rf sound.

Another possible location for the detecting mechanism is in the cochlea. We have explored this possibility with nerve-deaf people, but the results are inconclusive due to factors such as tinnitus. We are currently exploring this possibility with animal preparations.

The third likely place for the detection mechanism is the brain. Burr and Mauro (6) presented evidence that indicates that there is an electrostatic field about neurons. Morrow and Sepiel (7) presented evidence that indicates the existence of a magnetic field about neurons. Becker (personal communication) has done some work indicating that there is longitudinal flow of charged carriers in neurons. Thus, it is reasonable to suspect that possibly the electromagnetic field could interact with neuron fields. As yet, evidence of this possibility is inconclusive. The strongest point against it is that we have not found visual effects although we have searched for them. On the other hand, we have obtained other nonauditory effects and have found that the sensitive area for detecting rf sounds is a region over the temporal lobe of the brain. One can shield, with a 2-in.2 piece of fly screen, a portion of the stippled area shown in Fig. 6 and completely cut off the rf sound.

Another possibility should also be considered. There is no good reason to assume that there is only one detector site. On the contrary, the work of Jones et al. (8), in which they placed electrodes in the ear and electrically stimulated the subject, is sufficiently relevant to suggest the possibility of more than one detector site. Also, several sensations have been elicited with properly modulated electromagnetic energy. It is doubtful that all of these can be attributed to one detector.

As mentioned earlier, the purpose of this paper is to focus the attention of physiologists on an unusual area and stimulate additional work on which interpretations can be based. Interpretations have been deliberately omitted from this paper since additional data are needed before a clear picture can emerge. It is hoped that the additional exploration will also result in an increase in our knowledge of nervous system functions.

Abstract:

A decoy and deception concept presently being considered is to remotely create the perception of noise in the heads of personnel by exposing them to low power, pulsed microwaves. When people are illuminated with properly modulated low power microwaves the sensation is reported as a buzzing, clicking, or hissing which seems to originate (regardless of the person's position in the field) within or just behind the head. The phenomena occurs at average power densities as low as microwatts per square centimeter with carrier frequencies from 0.4 to 3.0 GHz. *By proper choice of pulse characteristics, intelligible speech may be created.* Before this technique may be extended and used for military applications, an understanding of the basic principles must be developed. Such an understanding is not only required to optimize the use of the concept for camouflage, decoy and deception operations but is required to properly assess safety factors of such microwave exposure.

Eleanor White's comments: I have received this report in it's entirety and I find that the article itself is about the title: Cerebral blood flow in rats. We involuntary experimentees are extremely lucky that the authors mentioned the success of microwave voice to skull transmission in this official document.

Below I have extracted some of the references to the full document which appear to be more promising and specific. This sub-list is guesswork since the references omit article titles, but any articles by Frey or Justesen are potentially useful.

Communicating Via the Microwave Auditory Effect

Web address:

[http://es.epa.gov/ncerga\\_abstracts/sbir/other/monana/kohn.html](http://es.epa.gov/ncerga_abstracts/sbir/other/monana/kohn.html)

Awarding Agency: Department of Defense

SBIR Contract Number: F41624-95-C-9007

Title: Communicating Via the Microwave Auditory Effect

Principal Investigator: Mr. Brian Kohn

Company Name:

Science & Engineering Assoc, Inc.

6100 Uptown Blvd NE

Albuquerque, NM 87110

Telephone Number: 505-884-2300

Business Representative:

Project Period:

Project Amount: \$739,995

Research Category: Monitoring/Analytical

Description:

An innovative and revolutionary technology is described that offers a means of low-probability-of-intercept Radio frequency (RF) communications. *The feasibility of the concept has been established* using both a low intensity laboratory system and a high power RF transmitter. Numerous military applications exist in areas of search and rescue, security and special operations.

Supplemental Keywords: small business, SBIR,

BONE CONDUCTION THERMOELASTIC  
COCHLEAR MICROPHONICS

Abstract:

In this research program, we plan to investigate a revolutionary new form of communication based on the microwave auditory effect. This proposed communication idea satisfies the requirements for an innovative, natural interface requiring no learning or training for efficient operation and effective communications. The purpose of the program proposed here is to extend the results of a recent feasibility study, performed for the Armstrong Laboratory/OEDR. *The study found that voice communications, via the microwave auditory effect, are highly feasible.* In Phase I of this SBIR, we propose to investigate the range of potential applications for this radically different form of voice communication and recommend hardware and systems concepts suitable for laboratory and brassboard demonstrations to be built under Phase II.

APPENDIX PM5 - BIOLOGICAL AMPLIFICATION

Electromagnetic Interaction With Biological Systems

edited by Dr. James C. Lin, University of Illinois  
1989 Plenum Press, New York

Proceedings of the Joint Symposium on Interactions of  
Electromagnetic Waves with Biological Systems, held as part  
of the Twenty-Second General Assembly of the International  
Union of Radio Science, Aug 25 - Sept 2, 1987, in Tel Aviv,  
Israel.

ISBN 0-306-43109-2

612.01448-dc19 88-38957  
CIP

Eleanor White's comments on this posting:

This book focusses on NON-ionizing radiation, and contains  
detailed texts about NON-THERMAL effects. In other words,  
"right up our alley".

The main use of this book is to show that it is easy for  
electromagnetic signals to cause radio frequency hearing and other  
effects at LOW power levels. This in turn can be used to explain why  
DETECTION is so very difficult.

I don't understand the biological jargon, however, a few of the more  
plain-language paragraphs STUNNINGLY verify that with careful choice  
of signal frequency and modulation, not only can the body's cells  
detect the modulation envelope of an incoming radio signal (i.e.  
function as a "cellular crystal set") but even AMPLIFY these  
carefully formed signals. (Amplification of other effects, such as  
proneness to disease, is also covered in the book.)

"Detection", in terms of radio signal reception, means that some  
portion of the reciever "rectifies", that is, turns the AC of the  
incoming signal into varying DC. If this conversion is not done,  
voice to skull wouldn't work.

The book touches also on ways in which cells communicate, and  
shows that electromagnetic fields of relatively weak power levels  
can affect intercellular communication, which is, as I understand  
the subject, what the brain is "all about".

Bio-amplification is apparently why radio signals of very low average  
power ("MICROwatts" per NASA) can still produce audio effects,  
and no doubt plays a part in difficulties in detection.

When two more characteristics of voice to skull are factored in:

1. The carrier signal can be "hopped" continuously within the bioeffective bandwidth, known as "spread spectrum" transmission, and,
2. The voice modulation most effective for undetectable hypnosis is evidently a voice shifted just above normal hearing, but still audible to the brain,

...you have a recipe for incredibly difficult signals to detect.

This book is a mainstream publication, very well suited to use in our publicity and persuasion campaigns, and our dealings with authorities who claim radio signals don't affect living tissue except to heat it.

Finally, many thanks to Blanche Chavoustie for providing me photocopies of this book - a saintly work!

.....

Page 110:

...

At that time [1953] excitatory mechanisms in nerver fibers and nerve cells were grouped under a common rubric of ionic equilibrium mechanisms. There was little interest in the possibility that functional organization of mebranes of cell bodies might involve threshold sensitivities to both oscillating EM fields and to molecular stimuli *at energy levels substantially lower than predicted by Hodgkin-Huxley models, and substantially below typical threshholds in nerve fibers.*

Much recent research cited below has shown that imposed weak low frequency fields (*and radiofrequency fields amplitude-modulated at ELF frequencies*) that are *many orders of magnitude weaker in the pericellular fluid [fluid between adjacent cells] than the membrane potential gradient [voltage across the membrane] can modulate actions of hormone, anti-body neurotransmitter and cancer-promoter molecules at their cell surface receptor sites.*

*From their electrical characteristics, these sensitivities appear to involve nonequilibrium and highly cooperative processes that mediate a major amplification of initial weak triggers associated with binding of these molecules at their specific cell surface receptor sites.*

(Adey, 1983, 1986, 1987; Adey and Lawrence, 1984; Lawrence and Adey, 1982).

Page 122:

Cooperative Modification of Calcium Binding by RF Fields  
at Cell Surfaces with Amplification of Initial Signals

Initial stimuli associated with weak perpendicular EM fields and with binding of stimulating molecules at their membrane receptor sites elicit a HIGHLY COOPERATIVE modification of Ca++ binding to glycoproteins along the membrane surface.

As noted above, a longitudinal spread is consistent with the direction of extracellular current flow associated with physiological activity and imposed EM fields. This cooperative modification of surface Ca++ binding is an AMPLIFYING STAGE, with evidence from concurrent initial molecular binding events by imposed RF fields that there is a far greater increase in Ca++ efflux than is accounted for in the events of receptor-ligand binding (Bawin and Adey, 1976; Bawin et al, 1975; Liu-Liu and Adey, 1982).

Page 124:

...

Enzymes are protein molecules that function as catalysts, initiating and enhancing chemical reactions that would not otherwise occur at tissue temperatures. This ability resides in the pattern of electrical charges on the molecular surface. In the fashion of more familiar chemical catalysts, such as the hydrocarbon oxidation systems which function only at very high temperatures in automotive exhaust systems, a catalyst emerges unchanged from these reactions and is thus able to participate indefinitely in a specific reaction.

Activation of these enzymes and the reactions in which they participate involve energies millions of times greater than in the cell surface cell surface triggering events initiated by the EM fields, emphasizing the MEMBRANE AMPLIFICATION inherent in this trans-membrane signaling sequence.

Page 131:

...

Stimulus Amplification in Cooperative Systems

...

It is therefore clear that OBSERVED EM field interactions with cells and tissues based on oscillating ELF tissue gradients between 10 E-7 and 10 E-1 volts per centimeter would involve cooperativity MANY ORDERS OF MAGNITUDE GREATER than envisaged in the examples just cited.

In part this discrepancy appears to relate to far greater sensitivities to low-frequency EM fields [EW: ELF, that is, the "entrainment" frequencies] and to RF fields with low-frequency amplitude-modulation [EW: this includes radar hearing signals] than to imposed step functions or DC gradients [EW: common with contact electrodes, not of interest in mind control at a distance] used in many electrochemical experiments and models to test levels of cooperativity in biological systems. (Blank, 1972)

[EW: In plain language, both entrainment (ELF) fields and pulsating radar-like (RF) fields are a hell of a lot more influential on cells than some experimental work using DC and electrode methods.]

Page 95:

[EW: This section is not part of the demonstration that EM signals can be biologically amplified, as above. It's main interest is that a magnetophosphene "gun" was under consideration by the U.S. National Institute of Justice in 1993, along with a "fever" gun and a "convulsion" gun, both using microwave technology. As of 1999, nothing has been heard from NIJ on this development, however, page 95 here suggests that such a microwave weapon is feasible.]

#### Magnetophosphenes

An effect of time-varying magnetic fields on humans was first described by d'Arsonval (1896) [EW: Anyone doubt there has been some progress since 1896?] is the induction of a flickering illumination within the visual field known as magnetophosphenes. This phenomenon occurs as an immediate response to stimulation by either pulsed or sinusoidal magnetic fields with frequencies less than 100 Hz, and the effect is completely reversible with no apparent influence on visual acuity. The maximum visual sensitivity to sinusoidal magnetic fields has been found at a frequency of 20 Hz in human subjects with normal vision.

[EW: Radio signals are a combination of electric and magnetic fields. To radiate a 20 Hz signal would require such huge antennas that it is impractical to do so. I'd recommend that if someone has the facilities and skills, I'd try some VHF (or microwave) pulsing at 20 Hz on an RF carrier at, say, the 2-meter (144-148 MHz) ham band with a duty cycle, say, of 20% pulse-ON time.]

APPENDIX PM6 - VOICE TO SKULL, 1974 SUCCESS

Microwaves and Behavior  
Dr. Don R. Justesen  
Laboratories of Experimental Neuropsychology  
Veterans Administration Hospital  
Kansas City, Missouri  
as published in  
American Psychologist  
Journal of the American Psychological Association  
Volume 30, March 1975, Number 3

..... Eleanor's comments .....  
This LAYS TO REST ANY DOUBTS THAT VOICE TO SKULL  
TECHNOLOGY DOES NOT EXIST OR IS "IN THE FUTURE"!  
PERIOD!

This article describes in precise terms how Dr. Joseph C.  
Sharp and staff transmitted the WORDS for the digits 1 to 10  
using a modulated version of an Allan Frey type pulsed  
microwave transmitter. A detailed description of Frey  
transmitters can be viewed at:

[Appendix PM2](#)

The relevant text is below.

.....  
Page 396:

...

The demonstration of sonic transduction of microwave energy  
by materials lacking in water LESSENS the likelihood that a  
thermohydraulic principle is operating in human perception  
of the energy. Nonetheless, some form of thermoacoustic  
transduction probably underlies perception. If so, it is  
clear that simple heating is NOT a sufficient basis for the  
Frey effect; the requirement for pulsing of radiations  
appears to implicate a thermodynamic principle.

Frey and Messenger (1973) and Guy, Chou, Lin, and Christen-  
sen (1975) confirmed that a microwave pulse with a slow rise  
time is INeffective in producing an auditory response; only  
if the rise time is SHORT, resulting in effect in a square  
wave with respect to the leading edge of the envelope of  
radiated radio-frequency energy, does the auditory response  
occur.

[Eleanor's comment: This is why we don't "hear" ordinary radio and TV signals.]

Thus the rate of change (the first derivative) of the waveform of the pulse is a CRITICAL factor in perception. Given a thermodynamic interpretation, it would follow that information can be encoded in the energy and "communicated" to the "listener".

Communication has in fact been demonstrated. A. Guy (Note 1), a skilled telegrapher, arranged for his father, a retired railroad telegrapher, to operate a key, each closure and opening of which resulted in a pulse of microwave energy. By directing the radiations at his own head, complex messages via the Continental Morse Code were readily received by Guy.

Sharp and Grove (note 2) found that appropriate modulation of microwave energy can result in "wireless" and "receiverless" communication of SPEECH. The recorded by voice on tape each of the single-syllable words for digits between 1 and 10. The electrical sine-wave analogs of each word were then processed so that each time a sine wave crossed ZERO REFERENCE IN THE NEGATIVE DIRECTION, a brief pulse of microwave energy was triggered.

[Eleanor's comment: This is, in effect a form of what is called pulse-RATE modulation.]

By radiating themselves with these "voice modulated" microwaves, Sharp and Grove were READILY able to hear, identify, and distinguish among the 9 words. [Typo?] The sounds heard were not unlike those emitted by persons with artificial larynxes.

Communication of more complex words and of sentences was not attempted because the averaged densities of energy required to transmit longer messages would approach the current 10 milliwatts per square centimeter limit of safe exposure.

The capability of communicating directly with a human being by "receiverless radio" has obvious potentialities both within and without the clinic. But the hotly debated and unresolved question of how much microwave radiation a human being can safely be exposed to will probably forestall applications within the near future.

TEXT:

(((FBIS EDITORIAL REPORT)) MOSCOW RUSSIAN PUBLIC TELEVISION  
FIRST CHANNEL NETWORK IN RUSSIAN AT 1610 GMT ON 6 OCTOBER DURING THE  
"MAN AND LAW" PROGRAM CARRIES A FIVE-MINUTE FEATURE ON MIND-CONTROL  
TECHNOLOGY.

ANNOUNCER YURIY VOROBYEVSKIY BEGINS BY SAYING THE FBI HAS ALREADY  
USED A "PSYCHOTRONIC" DEVICE DEVELOPED BY A MOSCOW SCIENTIST, IGOR  
SMIRNOV. VOROBYEVSKIY THEN SHOWS VIDEO FOOTAGE FILMED AT SMIRNOV'S  
LABORATORY. A MAN IN A SPECIALLY FITTED HELMET WITH ELECTRIC CABLES  
ATTACHED IS SITTING IN FRONT OF A SPECIAL SCREEN ON WHICH VARIOUS  
ENCODED MESSAGES FLASH. VOROBYEVSKIY SAYS: "THE CODED SIGNAL IS  
BEING PICKED UP THROUGH EARPHONES AS A LIGHT RUSTLE. HOWEVER, THIS  
IMPERCEPTIBLE COMMAND REACHES THE BOTTOM LAYERS OF CONSCIOUSNESS.  
THIS METHOD IS USED FOR TREATING NERVOUS, PSYCHIATRIC, AND OTHER  
DISORDERS. BUT THE QUESTION IS: COULD THIS BE USED AS THE NOTORIOUS  
PSYCHOTRONIC WEAPON?"

NEXT, VOROBYEVSKIY INTRODUCES VIDEO FOOTAGE WHICH HE SAYS WAS  
FILMED THREE YEARS AGO AT A RESEARCH INSTITUTE OF THE RUSSIAN  
MINISTRY OF INTERNAL AFFAIRS. IT SHOWS A CLASS OF OMON SPECIAL-  
PURPOSE TROOP RECRUITS APPARENTLY IN A HYPNOTIC TRANCE LOOKING AT A  
TELEVISION SCREEN. THIS SHOWS A MAN DRESSED IN BLACK WHO IS  
ENCOURAGING FEELINGS OF CONFIDENCE IN HIS AUDIENCE. AN IMAGE OF A  
FEMALE NUDE IS USED TO REINFORCE THE DESIRE FOR SUPERIORITY AND MALE  
DOMINANCE.

UNCLASSIFIED

UNCLASSIFIED

PAGE:0051

IGOR SMIRNOV, CAPTIONED AS MEMBER OF THE COMPUTER PSYCHOTECHNOLOGY INSTITUTE, PROPOSES THE USE OF "INDIRECT METHODS" TO FIGHT DRUG ADDICTION. HE SAYS: "THIS COULD BE DONE STRAIGHT FROM THE TELEVISION SCREEN, IN A SPECIAL PROGRAM, AT AN APPOINTED TIME OF THE WEEK. THE TIME SHOULD BE ANNOUNCED IN ADVANCE, WITH A WARNING THAT SPECIAL SUBLIMINAL COMMANDS WILL BE BROADCAST, SO THAT THOSE WHO ARE AFRAID SOMETHING COULD HAPPEN TO THEM CAN SWITCH OFF AT THAT TIME."

ANOTHER SCIENTIST, VALERIY KANYUKA, HEAD OF A PSYCHOTRONIC RESEARCH CENTER NEAR MOSCOW, DISAGREES WITH SUCH METHOD, STATING: "UNTIL ALL THE COUNTRIES OF THE WORLD AGREE ON THIS, UNTIL INTERNATIONAL LEGISLATION BANNING PSYCHO-PHYSICAL MANIPULATION OF THE HUMAN MIND AND INFLUENCE ON HUMAN BEHAVIOR HAS BEEN DEVELOPED, THERE SHOULD BE A MORATORIUM ON SUCH RESEARCH." VOROBYEVSKIY SAYS KANYUKA APPEALED WITHOUT SUCCESS TO THE FORMER RUSSIAN SUPREME SOVIET IN A LETTER MENTIONING "CLASSIFIED DECISIONS OF THE CPSU CENTRAL COMMITTEE ON THE SUBJECT OF REMOTE INFLUENCING OF THE MIND." VIDEO SHOWS KANYUKA AND A TYPED LETTER.

VOROBYEVSKIY THEN INTRODUCES ALEKSANDR KACHUROV, CAPTIONED AS MEMBER OF MOSCOW PSYCHOTRONIC INSTITUTE. KACHUROV OPENS A BRIEFCASE WITH SOME DEVICE INSIDE AND SAYS: "ANYONE WHO WANTS TO POSSESS SOMEONE'S SECRETS IS WELCOME TO ORDER A SPECIAL DEVICE FOR THEMSELVES, AS LONG AS THEY ARE PREPARED TO PAY FOR IT. ANYTHING CAN BE MADE. WHAT ABOUT THE MORAL ASPECT, PEOPLE MIGHT ASK. SOME SAY: IT IS WRONG, YOU ARE MAKING PSYCHOTRONIC WEAPONS." VOROBYEVSKIY INTERJECTS: "LET'S SAY, THE MILITARY ORDERS YOU TO DESIGN A CERTAIN TYPE OF EQUIPMENT?" KACHUROV SAYS: "YES, BUT, EXCUSE ME, THE MILITARY-INDUSTRIAL COMPLEX IS THE MOST POWERFUL INDUSTRIAL GROUP THERE IS. WHAT ARE WE TALKING ABOUT? WE ARE ALL DEVELOPING WEAPONS OF THIS KIND. ARE NUCLEAR WEAPONS ANY WORSE?"

VOROBYEVSKIY SAYS LAWS ARE BADLY NEEDED TO PROTECT THE INDIVIDUAL FROM ALL TYPES OF MIND CONTROL.

A STATE DUMA EXPERT, YURIY LOPATIN SAYS: "PSYCHOTRONIC TECHNOLOGY IS SPREADING ILLEGALLY. A LAW BANNING THE ILLEGAL DEVELOPMENT, PRODUCTION, RETAILING, AND SPREADING OF PSYCHOTRONIC DEVICES WHICH INFLUENCE THE MINDS AND BEHAVIOR OF CITIZENS IS BADLY NEEDED." HE GOES ON TO SAY: "THE USE OF THE MASS MEDIA FOR PSYCHOLOGICAL EXPERIMENTS SHOULD BE BANNED AND ALL THE STATE-ORDERED RESEARCH IN HUMAN GENETIC EXPERIMENTS SHOULD BE STRICTLY REGISTERED. THIS WAS APPROVED BY GEORGIY GEORGIYEVICH ROGOZIN, FIRST DEPUTY HEAD OF THE PRESIDENTIAL SECURITY SERVICE."

VOROBYEVSKIY QUESTIONS WHAT MIGHT HAPPEN WERE SUCH TECHNOLOGY TO FALL INTO THE HANDS OF UNSCRUPULOUS PEOPLE. HE SAYS NO ONE CAN FEEL SECURE UNTIL SPECIAL LAWS ARE PASSED.

NO FURTHER PROCESSING PLANNED. 07/1631Z OCT WC 638

PHYSIOLOGICAL RESPONSES APPLICABLE TO DEVELOPMENT OF  
LESS-THAN-LETHAL WEAPONS

Oak Ridge National Laboratory

Physiological Responses Applicable to Development of  
Less-Than-Lethal Weapons

Sponsored by National Institute of Justice

Oak Ridge National Laboratory

Less-than-lethal weapons have a variety of applications in law enforcement, including rescuing hostages, stopping fleeing felons, and quelling prison disturbances. The National Institute of Justice is sponsoring a broad program to develop new techniques for "friendly force" as an alternative to the use of deadly force. As part of this program, Oak Ridge National Laboratory (ORNL) is examining approaches based on known physiological responses to certain types of stimuli. These "weapons" would temporarily incapacitate an individual or a group with no lasting physiological damage. These concepts are based on ORNL's experience and expertise in biological-based systems and biophysical responses, particularly in evaluating the physical responses of humans to a variety of chemical, physical and radiological agents. ORNL also has extensive experience and expertise in risk analysis and in risk assessment and modeling.

The ORNL less than-lethal weapons project sponsored by the National Institute of Justice began in September 1993. The following tasks are being performed:

- \* Locate and compile data from tests, accidents, medical literature, etc. on biological and biophysical responses to energetic stimuli (such as electromagnetic fields).
- \* Analyze the information and identify promising candidate mechanisms for further development for a friendly force
- \* Evaluate the applicability of the proposed approaches to several realistic scenarios (such as hostage rescue or riot control).

ORNL has already examined several possible concepts for less-than-lethal weapons based on known physiological responses to energetic stimuli, including a thermal gun, a seizure gun, and a magnetophosphene gun. A thermal gun would have the operational effect of heating the body to 105 to 107F, thereby incapacitating any threat, based on the fact that even a slight fever can affect the ability of a person to perform even simple tasks. This approach is built on four decades of research relating radio frequency exposure to body heating. A seizure gun would use electromagnetic energy to induce epileptic-like seizures in persons within the range of a particular electromagnetic field. The magnetophosphene gun is designed around a biophysical mechanism which evokes a visual response and is thought to be centered in the retina, known as magnetophosphenes. This effect is experienced when a person receives a blow to the head and sees "stars". This same effect can be produced with electromagnetic energy. While there are a number of technical challenges to be overcome in building

<http://www.raven1.net/p60.htm> revived by [www.hearingvoices-is-voicetoskull.com](http://www.hearingvoices-is-voicetoskull.com)

devices of these types, less-than-lethal weapons based on physiological responses to energetic stimuli would provide a safe and effective means of dealing with a number of law enforcement situations where use of deadly force is not desirable.

Los Angeles Herald Examiner, Section A, November 22, 1976

#### Mind-Altering Microwaves: Soviets Studying Invisible Ray

A newly declassified U.S. Defense Intelligence Agency report  
says extensive Soviet research into microwaves might lead to  
methods of causing disoriented human behavior, nerve disorders,  
and even heart attacks.

...

A copy of the study was provided by the agency to the Associated  
Press in response to a request under the Freedom of Information  
Act.

...

Sounds and possibly even words which appear to be originating  
intercranially (within the head) can be induced by signal  
modulation at very low average power densities, the study said.

...

One physiological effect which has been demonstrated is heart  
seizure, the report said.

It said this has been accomplished experimentally in frogs  
by synchronizing the pulses of a microwave signal with the  
animal's heartbeat and beaming the radiation at the chest  
area.

.....  
Microwave News, January-February 1987

ZAP!

Six hundred scientists and engineers with security clearances spend the first week of December at Kirtland Air Force Base in New Mexico examining the potential of high-power microwaves to zap enemy electronics...

... Many branches of the Department of Defense were represented, including the Air Force, the Army and the Navy, together with DARPA, DIA, and DNA. The Lawrence Livermore Labs were also well represented, as were most of the big defense contractors - General Dynamics, Physics International and TRW each have a high-power microwave testing facility.

In addition to these sources, susceptibility and hardening, there was one on biological effects: Dr. David Erwin and Major Robert Downs represented the Air Force and Howard Bassen and Dr. John D'Andrea described the Army and Navy programs, respectively. Dr. Frank Barnes of the University of Colorado in Boulder presented a poster paper on his and Dr. Howard Wachtel's research on the effects of pulsed microwaves.

Chuck de Caro, a former correspondent for the Cable News Network, considers the possibility that the U.S. is falling behind the U.S.S.R. in microwave weapons in "The Zap Gap", to be published in the March issue of "The Atlantic" (see also MWN November-December 1986).

.....  
Microwave News, January-February 1996

#### RF WEAPONS - Disabling People and Electronics

The military continues to explore development of RF weapons for the conflicts of the future. For instance, the "First Directed Energy Warfare (DEW) Conference", held last year at the Mitre Corp. in McLean VA, featured Dr. David Erwin of the Armstrong Lab at Brooks AFB, San Antonio, TX, on "Directed Energy Warfare RF Effects", and Dr. Jose Pina of the CIA on "Ground Combat Applications of RF". Other topics included "Personnel Vulnerability" and Directed Energy Warfare Biological Effects".

The June meeting was organized by the Association of Old Crows, whose members are specialists in electronic warfare. Conference participants had to have security clearances of "Secret" or higher, as has been the case at similar meetings in the past (See MWN, J-F 87 and N-D 93).

Public discussions of RF/MW weapons have focussed on disrupting technology. But a recent Article in the Airpower Journal revealed "for the first time that the military is developing high-powered microwave weapons for use against human beings", reports Peter Cassidy in the January 1996 "Progressive" (see p. 14).

RF/MW and EMF-based weapons are also being studied for civilian law enforcement. Oak Ridge National Laboratory (ORNL) in Oak Ridge TN will soon complete a literature review for the National Institute of Justice on the feasibility of "thermal guns" which could heat the body to 105 to 107 degrees F and incapacitate the target; "seizure guns" which would use EM energy to induce epileptic-like seizures; and "magnetophosphene guns" which would cause the target to "see stars".

The institute's Ray Downs in Washington cautioned that the report may not be made public. ORNL's Dr. Clay Easterly has said that some effects not associated with heating could be useful in developing nonlethal weapons. (See MWN, N-D 93.)

.....  
Microwave News, September-October 1996, page 19

#### Stop That Car or We'll Zap You

They're the sexiest gadgets in this year's action movies: EMP weapons, which use electromagnetic pulses to zap electronics. They have starring roles in Goldeneye, the latest James Bond movie, as well as in Broken Arrow, Escape From LA, and Eraser. And soon they may be coming to a police car near you.

Law Enforcement News (September 30) reports that the U.S. Army and the National Institute of Justice are running a \$500,000 field test to see if EMP guns can force a car to stop by disabling its electrical systems. The plan is to use EMP to do away with high speed chases (another Hollywood staple). This is another example of the growing interest in using nonlethal weapons developed by the military.

...

-----  
APPENDIX US1 - SILENT SOUND

Eleanor White's comments:

This article shows clearly the military's intent to use every possible thought-influencing technology. This technology is largely classified but there are leaks, like this article. We involuntary test subjects can tell you from first hand experience that far more invasive devices now exist.

This article represents one of the two parallel "tracks" on which thought-influencing technology is being used and further developed:

- Radio frequency signals, based on the WW II phenomenon called "radar hearing"
- Ultrasound signals, which can be transmitted through the air or piggybacked on to radio/TV signals

Military Use of Mind Control Weapons  
Judy Wall 1998

PSY-OPS WEAPONRY USED IN THE PERSIAN GULF WAR

For years, rumours have persisted that the United States Department of Defense has been engaged in research and development of ultra-sophisticated mind- altering technology. Confirmation of this came to me recently in the form of two ITV News Bureau Ltd (London) wire service bulletins.[1]

The March 23, 1991 newsbrief, "High-Tech Psychological Warfare Arrives in the Middle East", describes a US Psychological Operations (PsyOps) tactic directed against Iraqi troops in Kuwait during Operation Desert Storm. The manoeuvre consisted of a system

in which subliminal mind-altering technology was carried on standard radiofrequency broadcasts. The March 26, 1991 newsbrief states that among the standard military planning groups in the centre of US war planning operations at Riyadh was "an unbelievable and highly classified PsyOps program utilising 'silent sound' techniques".

The opportunity to use this method occurred when Saddam Hussein's military command-and-control system was destroyed. The Iraqi troops were then forced to use commercial FM radio stations to carry encoded commands, which were broadcast on the 100 MHz frequency. The US PsyOps team set up its own portable FM transmitter, utilising the same frequency, in the deserted city of Al Khafji. This US transmitter overpowered the local Iraqi station. Along with patriotic and religious music, PsyOps transmitted "vague, confusing and contradictory military orders and information".

Subliminally, a much more powerful technology was at work: a sophisticated electronic system to 'speak' directly to the mind of the listener, to alter and entrain his brainwaves, to manipulate his brain's electroencephalographic (EEG) patterns and artificially implant negative emotional states-feelings of fear, anxiety, despair and hopelessness. This subliminal system doesn't just tell a person to feel an emotion, it makes them feel it; it implants that emotion in their minds.[2]

I noticed that the ITV wire service was from outside the United States. Readers of Resonance may recall that in the Electromagnetic Weapons Timeline in issue no. 29, reference is made to the documentary video, Waco: The Big Lie Continues, which contained video footage of three EM weapons. This segment of the film was from the British Broadcasting Corporation (BBC). I wondered if there was any significance to this.

At the library I pulled up back issues of my local newspaper for the same time-period of the Gulf War to see what the American wire services had said, if anything, about the use of this special PsyOps weapon. There was nothing said about it directly, but three news articles seemed related. In a news release from Associated Press during the same timeframe of the Gulf War truce, I read:

"The American pilot who shot down the second Iraqi warplane in 48 hours said Friday that continued Iraqi flights suggested that US warnings were not filtering down to Iraqi pilots... He said he hopes Saddam gets the message now. 'It's really too bad that these people have to die for their unwillingness to heed our warnings... What I really think is, they don't communicate down to the people,' he said. 'If they have a communications problem, I suggest they fix it.'"[3]

<http://www.raven1.net/p66.htm> revived by [www.hearingvoices-is-voicetoskull.com](http://www.hearingvoices-is-voicetoskull.com)

That may have been coincidence but two earlier news articles, dated March 1, 1991, apparently have a common origin with the ITV news bulletin. The first article[4] tells us that approximately 100 members of the US 101st Airborne Division, fluent in Arabic, talked the enemy into surrendering. These soldiers rode in the Apache helicopter gunships that were involved in the longest helicopter-borne assault in history. They told the Iraqi troops that they would be slaughtered if they didn't give up.

"They got the point," one soldier is quoted as saying.

This all sounds very unremarkable, except when you read the editor's note: "The following dispatch was subject to US military censorship." Now why would they want to censor such a mundane tactic, except out of embarrassment that the US Army fighting forces had fallen to the level of a cheer-leading squad? ... in which case they would have nixed the thing entirely.

But upon re-reading the article, we may pick out certain key phrases (emphasised in italics):

"He [the soldier interviewed] was one of dozens of Arabic speakers that played a key role in the allied ground attack against Iraq, and part of an attempt by the US Army to use finesse, intelligence work and tactics to complement brute strength."

If we fill in the missing blanks with such descriptions as "the megaphone was used to direct psychoacoustic frequencies that engaged the neural networks of the enemy's brain, causing him to think any thought and feel any emotion that the Americans chose to lay on him", then it starts to make sense. And it would no longer seem so surprising that one soldier could talk 450 enemy soldiers into surrendering. The possibilities are there, and, as the next article[5] documents, that is exactly what happened. Iraqi troops gave up en masse.

We quote: "They were surrendering in droves, almost too fast for us to keep up with..."; "...two Iraqi majors, both brigade commanders, who gave up their entire units..."; and "...one of them gave up to an RPV [remotely piloted vehicle]. Here's this guy with his hands up, turning in a circle to give himself up to a model airplane with a camera in it."

Irrational? Not if there was also a voice being beamed into his head from that little flying toy, saying, "Give up, give up!" Otherwise, how do we account for the editor's note at the beginning of the article: "The following is based on pool dispatches that were subject to military censorship." Without that note, we could smugly think that the Iraqi soldiers were cowards or crazy, but why censor that idea?

<http://www.raven1.net/p67.htm> revived by [www.hearingvoices-is-voicetoskull.com](http://www.hearingvoices-is-voicetoskull.com)

#### MIND CONTROL WITH SILENT SOUNDS

The mind-altering mechanism is based on a subliminal carrier technology: the Silent Sound Spread Spectrum (SSSS), sometimes called "S-squad" or "Squad". It was developed by Dr Oliver Lowery of Norcross, Georgia, and is described in US Patent #5,159,703, "Silent Subliminal Presentation System", dated October 27, 1992. The abstract for the patent reads:

"A silent communications system in which nonaural carriers, in the very low or very high audio-frequency range or in the adjacent ultrasonic frequency spectrum are amplitude- or frequency-modulated with the desired intelligence and propagated acoustically or vibrationally, for inducement into the brain, typically through the use of loudspeakers, earphones, or piezoelectric transducers. The modulated carriers may be transmitted directly in real time or may be conveniently recorded and stored on mechanical, magnetic, or optical media for delayed or repeated transmission to the listener."

According to literature by Silent Sounds, Inc., it is now possible, using supercomputers, to analyse human emotional EEG patterns and replicate them, then store these "emotion signature clusters" on another computer and, at will, "silently induce and change the emotional state in a human being".

Silent Sounds, Inc. states that it is interested only in positive emotions, but the military is not so limited. That this is a US Department of Defense project is obvious.

Edward Tilton, President of Silent Sounds, Inc., says this about S-squad in a letter dated December 13, 1996:

"All schematics, however, have been classified by the US Government and we are not allowed to reveal the exact details... .. we make tapes and CDs for the German Government, even the former Soviet Union countries! All with the permission of the US State Department, of course... The system was used throughout Operation Desert Storm (Iraq) quite successfully."

The graphic illustration, "Induced Alpha to Theta Biofeedback Cluster Movement", which accompanies the literature, is labelled #AB 116-394-95 UNCLASSIFIED" and is an output from "the world's most versatile and most sensitive electroencephalograph (EEG) machine". It has a gain capability of 200,000, as compared to other EEG machines in use which have gain capability of approximately 50,000. It is software-driven by the "fastest of computers" using a noisenulling technology similar to that used by nuclear submarines for detecting small objects underwater at extreme range.[6]

<http://www.raven1.net/p68.htm> revived by [www.hearingvoices-is-voicetoskull.com](http://www.hearingvoices-is-voicetoskull.com)

The purpose of all this high technology is to plot and display a moving cluster of periodic brainwave signals. The illustration shows an EEG display from a single individual, taken of left and right hemispheres simultaneously. The readout from the two sides of the brain appear to be quite different, but in fact are the same (discounting normal left/right brain variations).

#### CLONING THE EMOTIONS

By using these computer-enhanced EEGs, scientists can identify and isolate the brain's low-amplitude "emotion signature clusters", synthesise them and store them on another computer. In other words, by studying the subtle characteristic brainwave patterns that occur when a subject experiences a particular emotion, scientists have been able to identify the concomitant brainwave pattern and can now duplicate it. "These clusters are then placed on the Silent Sound[™] carrier frequencies and will silently trigger the occurrence of the same basic emotion in another human being!"

[Up to Contents](#)

#### SYSTEM DELIVERY AND APPLICATIONS

There is a lot more involved here than a simple subliminal sound system. There are numerous patented technologies which can be piggybacked individually or collectively onto a carrier frequency to elicit all kinds of effects.

There appear to be two methods of delivery with the system. One is direct microwave induction into the brain of the subject, limited to short-range operations. The other, as described above, utilises ordinary radio and television carrier frequencies.

Far from necessarily being used as a weapon against a person, the system does have limitless positive applications. However, the fact that the sounds are subliminal makes them virtually undetectable and possibly dangerous to the general public.

In more conventional use, the Silent Sounds Subliminal System might utilise voice commands, e.g., as an adjunct to security systems. Beneath the musical broadcast that you hear in stores and shopping malls may be a hidden message which exhorts against shoplifting. And while voice commands alone are powerful, when the subliminal presentation system carries cloned emotional signatures, the result is overwhelming.

Free-market uses for this technology are the common self-help tapes; positive affirmation, relaxation and meditation tapes; as well as methods to increase learning capabilities.

<http://www.raven1.net/p69.htm> revived by [www.hearingvoices-is-voicetoskull.com](http://www.hearingvoices-is-voicetoskull.com)

In a medical context, these systems can be used to great advantage to treat psychiatric and psychosomatic problems. As a system for remediating the profoundly deaf, it is unequalled. (Promises, promises. This is the most common positive use touted for this technology over the past 30 years. But the deaf are still deaf, and the military now has a weapon to use on unsuspecting people with perfectly normal hearing.)

#### OFFICIAL DENIALS

In fact, the US Government has denied or refused to comment on mindaltering weapons for years. Only last year, US News & World Report ran an article titled "Wonder Weapons", basically a review of the new so-called 'non-lethal' or 'less-than -lethal' weapons.' Not one word about S-quad, although the technology had been used six years earlier!

Excerpts from the article read:

"Says Charles Bernard, a former Navy weapons-research director: 'I have yet to see one of these ray-gun things that actually works...'; and

DARPA (Defense Advanced Research Projects Agency) has come to us every few years to see if there are ways to incapacitate the central nervous system remotely,' Dr F. Terry Hambrecht, head of the Neural Prostheses Program at NIH, told US News, 'but nothing has ever come of it,' he said. 'That is too science-fiction and far-fetched.'"

It may sound "science fiction and far-fetched" but it is not. However, that is just what the powers-that-be want you to believe, so as to leave them alone in their relentless pursuit of...what?

The idea behind non-lethal weapons is to incapacitate the enemy without actually killing them, or, in the case of riot control or hostage situations, to disable the participants without permanent injury, preferably without their knowing it. The electromagnetic mind-altering technologies would all fall into this class of weapons, but since they are all officially non-existent, who is to decide when and where they will be used?

And why should selected companies in the entertainment industry reportedly be allowed access to this technology when the very fact of its existence is denied to the general public?

As recently as last month [February], this stonewall approach of total denial or silence on the subject still held fast, even toward committees of the US Congress!

<http://www.raven1.net/p70.htm> revived by [www.hearingvoices-is-voicetoskull.com](http://www.hearingvoices-is-voicetoskull.com)

- The Joint Economics Committee, chaired by Jim Saxton (R-NJ), convened on February 25, 1998 for the "Hearing on Radio Frequency Weapons and Proliferation: Potential Impact on the Economy". Invited testimony included statements by several authorities from the military:

- Dr Alan Kehs, of the US Army Laboratories, discussed the overall RF threat.

- Mr James O'Bryon, Deputy Director of Operational Testing and Director of live fire testing for the Office of Secretary of Defense at the Pentagon, discussed the role of Live Fire Testing and how it plays a role in testing military equipment with RF weapons.

- Mr David Schriner, Principal Engineer of Directed Energy Studies with Electronic Warfare Associates and recently retired as an engineer with a naval weapons testing facility, talked about the difficulty in building an RF weapon and about the terrorist threat.

- Dr Ira Merritt, Chief of Concepts Identification and Applications Analysis Division, Advanced Technology Directorate, Missile Defense and Space Technology Center, Huntsville, Alabama, discussed the proliferation of RF weapons primarily from the former Soviet Union.

Although these statements gave information of technical interest, they are perhaps more important for the information they did not give: information on the existence of radiofrequency weapons that directly affect the human brain and nervous system.

#### KGB PSYCHOTRONICS

This technology did not spring up overnight. It has a long history of development and denials of development-by the US Government and probably half of the other governments of the world as well.

We know that the former Soviet Union was actively engaged in this type of research. In a previous article we reported that during the 1970s the Soviet KGB developed a Psychotronic Influence System (PIS) that was used to turn soldiers into programmable 'human weapons'. The system employed a combination of highfrequency radiowaves and hypnosis. The PIS project was begun in response to a similar training scheme launched in the US by President Carter, according to Yuri Malin, former security adviser to USSR President Gorbachev.[8]

<http://www.raven1.net/p71.htm> revived by [www.hearingvoices-is-voicetoskull.com](http://www.hearingvoices-is-voicetoskull.com)

In my Electromagnetic Weapons Timeline[9] I covered a period of 60 years of interest and development in EM weapons—information gathered from the many articles and news clippings sent in by readers of Resonance. In my article on synthetic telepathy[10] I traced the development of the 'voice in your head' technology dating back to 1961, all my references coming from the open scientific literature.

#### POWER OF THE MILITARY-INDUSTRIAL COMPLEX

Jan Wieseemann has written an apt description of the situation which now exists in the United States, about the 'forces that be' and how the situation came about:

"During the Cold War the United States not only engaged in a relatively open nuclear arms race with the Soviet Union, but also engaged in a secret race developing unconventional weapons. As the intelligence agencies (which prior to the Second World War had merely played a supporting role within the government) continued to increase their power, so did the funds spent on developing techniques designed to outsmart each other.

"And as the US intelligence community began to grow, a secret culture sprang about which enabled the intelligence players to implement the various developed techniques to cleverly circumvent the democratic processes and institutions...

"Like many other democracies, the US Government is made up of two basic parts the elected constituency, i.e., the various governors, judges, congressmen and the President; and the unelected bureaucracies, as represented by the numerous federal agencies.

"In a well-balanced and correctly functioning democracy, the elected part of the government is in charge of its unelected bureaucratic part, giving the people a real voice in the agenda set by their government.

"While a significant part of the US Government no doubt follows this democratic principle, a considerable portion of the US Government operates in complete secrecy and follows its own unaccountable agenda which, unacknowledged, very often is quite different from the public agenda. "[11]

Jan goes on to quote one of the United States' most popular war heroes: Dwight D. Eisenhower, who served as Supreme Commander of Allied Forces during World War II and was later elected 34th President of the United States. In his farewell address to the nation in 1961, President Eisenhower said:

"...we have been compelled to create a permanent armaments industry of vast proportions. Added to this, three and a half million men and women are directly engaged in the defence establishment. We annually spend on military security more than the net income of all United States corporations.

"This conjunction of an immense military establishment and a large arms industry is new in the American experience. The total influence-economic, political, even spiritual-is felt in every city, every state house, every office of the federal government. We recognise the imperative need for this development. Yet we must not fail to comprehend its grave implications. Our toil, resources and livelihood are all involved; so is the very structure of our society.

"In the councils of government, we must guard against the acquisition of unwarranted influence, whether sought or unsought, by the military -industrial complex. The potential for the disastrous rise of misplaced power exists and will persist. We must never let the weight of this combination endanger our liberties or our democratic processes."

#### INTERNATIONAL CONCERNS OVER NEW WEAPONS

The United Nations was established in 1945 with the aim of "saving succeeding generations from the scourge of war". In 1975 the General Assembly considered a draft first proposed by the Soviet Union: "Prohibition of the Development and Manufacture of New Types of Weapons of Mass Destruction and New Systems of Such Weapons".

In 1979 the Soviet Union added a list of some types of potential weapons of mass destruction:

- 1) Radiological weapons (using radioactive materials) which could produce harmful effects similar to those of a nuclear explosion;
- 2) Particle beam weapons, based on charged or neutral particles, to affect biological targets;
- 3) Infrasonic acoustic radiation weapons;
- 4) Electromagnetic weapons operating at certain radio-frequency radiations which could have injurious effects on human organs.[12]

In response, the US and other Western nations stalled. They gave a long, convoluted reason, but the result was the same.

<http://www.raven1.net/p73.htm> revived by [www.hearingvoices-is-voicetoskull.com](http://www.hearingvoices-is-voicetoskull.com)

In an article entitled "Non-Lethal Weapons May Violate Treaties", [13] the author notes that the Certain Conventional Weapons Convention [14] covers many of the non-conventional weapons—"those that utilize infrasound or electromagnetic energy (including lasers, microwave or radiofrequency radiation, or visible light pulsed at brainwave frequency) for their effects".

Harlan Girard, Managing Director of the International Committee Against Offensive Microwave Weapons, told me he believes the strategy behind the government's recent push for less-than-lethal weapons is a subterfuge. The ones that are now getting all the publicity are put up for scrutiny to get the public's approval. The electromagnetic mind-altering technologies are not mentioned, but would be brought in later under the umbrella of less-than-lethal weapons.

These weapons were recently transferred from the Department of Defense over to the Department of Justice. Why? Because there are several international treaties that specifically limit or exclude weapons of this nature from being used in international warfare.

In other words, weapons that are barred from use against our country's worst enemies (notwithstanding the fact that the US did use this weapon against Iraqi troops!) can now be used against our own citizens by the local police departments against such groups as peaceful protestors of US nuclear policies.

#### TOWARDS GLOBAL MIND CONTROL

The secrecy involved in the development of the electromagnetic mind-altering technology reflects the tremendous power that is inherent in it. To put it bluntly, whoever controls this technology can control the minds of men—all men.

There is evidence that the US Government has plans to extend the range of this technology to envelop all peoples, all countries. This can be accomplished, is being accomplished, by utilising the nearly completed HAARP project [15,16] for overseas areas and the GWEN network now in place in the US. The US Government denies all this.

Dr Michael Persinger is a Professor of Psychology and Neuroscience at Laurentian University, Ontario, Canada. You have met him before in the pages of Resonance where we reported on his findings that strong electromagnetic fields can affect a person's brain.

"Temporal lobe stimulation," he said, "can evoke the feeling of a presence, disorientation, and perceptual irregularities. It can activate images stored in the subject's memory, including nightmares and monsters that are normally suppressed." [17]

<http://www.raven1.net/p74.htm> revived by [www.hearingvoices-is-voicetoskull.com](http://www.hearingvoices-is-voicetoskull.com)

Dr Persinger wrote an article a few years ago, titled "On the Possibility of Directly Accessing Every Human Brain by Electromagnetic Induction of Fundamental Algorithms".[18] The abstract reads:

"Contemporary neuroscience suggests the existence of fundamental algorithms by which all sensory transduction is translated into an intrinsic, brain-specific code. Direct stimulation of these codes within the human temporal or limbic cortices by applied electromagnetic patterns may require energy levels which are within the range of both geomagnetic activity and contemporary communication networks. A process which is coupled to the narrow band of brain temperature could allow all normal human brains to be. affected by a subharmonic whose frequency range at about 10 Hz would only vary by 0. 1 Hz."

He concludes the article with this:

"Within the last two decades a potential has emerged which was improbable, but which is now marginally feasible. This potential is the technical capability to influence directly the major portion of the approximately six billion brains of the human species, without mediation through classical sensory modalities, by generating neural information within a physical medium within which all members of the species are immersed.

"The historical emergence of such possibilities, which have ranged from gunpowder to atomic fission, have resulted in major changes in the social evolution that occurred inordinately quickly after the implementation. Reduction of the risk of the inappropriate application of these technologies requires the continued and open discussion of their realistic feasibility and implications within the scientific and public domain."

It doesn't get any plainer than that. And we do not have open discussion because the US Government has totally denied the existence of this technology.

#### Acknowledgements

I would like to give special thanks to: Jan Wieseemann for sending the Silent Sounds[TM] statement and patents which were the keystone of this article; Mike Coyle, whose computer search turned up many more related patents; Harlan Girard, who has provided numerous official government documents; and to the many who have provided newsclippings and articles, moral and financial support to Resonance, without which we'd have ceased publication long ago.

Eleanor White's comments: This hard hitting article by Judy Wall, who is NOT a mind control victim and in fact avoids victim testimonials in favour of only factual objective material, contains some POWERFUL items not widely known among involuntary mind control experimentees.

The most important facet of this article is that Judy Wall presents evidence unknown to most of the public IN SPITE OF ITS BEING UN-CLASSIFIED, and in the public domain for the past two decades.

The main technology used is a mix of ultrasonic voice or brain entrainment, mixed with microwave voice-to-skull or ordinary radio and TV signals, described in detail in Appendix US1:

US1.....SILENT SOUND, BRITISH ITV & NEXUS MAGAZINE

The microwave voice-to-skull technology is described in the 1974 article from American Psychologist magazine, Appendix PM6:

PM6.....DR. DON R. JUSTESEN'S REPORT: 1974 VOICE TO SKULL SUCCESS

.....  
USAF COMMANDO SOLO: AERIAL MIND CONTROL BROADCASTS

The United States Air Force uses aerial mind-control broadcasts against civilian population as well as enemy troops. Some of these actions against civilians are done with the intent of influencing public opinion and the outcome of elections.

<http://www.raven1.net/p77.htm> revived by [www.hearingvoices-is-voicetoskull.com](http://www.hearingvoices-is-voicetoskull.com)

In a previous article, we examined mind-control technology, especially that utilizing Silent Sound [TM], in which radio-frequency broadcasts carry subliminal patterns that entrain the listener's brainwaves into a pre-selected emotional state. According to ITV wire service reports, this technology was used during Operation Desert Storm in 1991, as part of the US Psychological Operations (PsyOps) directed against Iraqi troops. [1,2]

To the Desert Storm offensive we can now add several other incidents. Alex Horvat, editor of The Probe, calls to our attention the 1998 video, *Exotic Weapons of Mass Control*, produced by Bob Fletcher.

"The excerpt played on Fletcher's video is from TLC (The Learning Channel) and clearly states that Commando Solo was used in Haiti for what was called Operation *Uphold Democracy*. As the general populace was violently opposed to Aristide and most in favor of his ouster, it took nearly a year of this clandestine counter-programming to get them to change their minds. Instead of butchering a population physically, we can now manipulate them mentally, virtually enslaving their thoughts with a criss-cross pattern of flights by an EC-130 (which is just a C-130 heavily laden with electronic hardware.) [3]

We were not at war with the citizens of Haiti, yet the U.S. Government directed military weapons against this friendly, or at least neutral, civilian population. The U.S. Government sanctioned the "rigging" of the Haitian election by mental control of the people, programming them to cast their votes for the Americans' favored candidate. And they had the nerve to call it "Operation *Uphold Democracy*". Some sense of humor! Stalin would have loved it. Hitler would have loved it. Why is the U.S. Government doing this? Who is behind this flagrant violation of civil liberties? Is it the U.S. Central Intelligence Agency (CIA) which has a long history of interfering in foreign government politics? Or has this become standard military procedure?

The rationale is always the same: "to make the world safe for democracy". Yet what is democracy if not freedom? Freedom to think your own thoughts; freedom to express your own opinions; freedom to vote for the candidate of your own choice.

Fletcher's video also mentions that the same technology was used against the Bosnia population for a week to influence their election. [4] This was probably done during Operation *Joint Guard* in 1995. [5]

The questions arise: If they have used mind-control broadcasts against foreign civilian populations to influence elections, will they use them against American citizens -- or have they already? What other countries may be the recipients of this innovative technology?

<http://www.raven1.net/p78.htm> revived by [www.hearingvoices-is-voicetoskull.com](http://www.hearingvoices-is-voicetoskull.com)

Just what is this EC-130E Commando Solo? The United States Air Force has helpfully published a fact sheet that describes the Lockheed built aircraft. [6] This 1995 bulletin states that the "unit flyaway cost" is more than US \$100 million each, and that there are eight in the inventory. Its primary function is "Psychological operations broadcasts". The crew consists of four officers (pilot, copilot, navigator, control chief/EWO) and seven enlisted members (flight engineer, loadmaster, five mission crew.)

According to the fact sheet:

"Air Force Mission: Commando Solo conducts psychological operations and civil affairs broadcast missions in the standard AM, FM, HF, TV and military communications bands. Missions are flown at maximum altitudes possible to ensure optimum propagation patterns. The EC-130 flies during either day or night scenarios with equal success, and is air refueable. A typical mission consists of a single ship orbit which is offset from the desired target audience. The targets may be either military or civilian personnel.

"Secondary missions include command and control communications counter-measures (C3CM) and limited intelligence gathering.

"Air Force Features: Highly specialized modifications have been made to the latest version of the EC-130. Included in these modifications are enhanced navigation systems, self-protection equipment, and the capability of broadcasting color television on a multitude of world-wide standards throughout the TV VHF/UHF ranges.

"Air Force Background: Air National Guard EC-130 aircraft flown by the 193rd Special Operations Group were deployed to both Saudi Arabia and Turkey in support of Desert Storm. Their missions included broadcasts of 'Voice of the Gulf' and other programs intended to convince Iraqi soldiers to surrender.

"The EC-130 was originally modified using the mission electronic equipment from the EC-121, known at the time as the Coronet Solo. Soon after the 193rd SOG received its EC-130s, the unit participated in the rescue of US citizens in Operation Urgent Fury, acting as an airborne radio station informing those people on Granada of the US military action.

"Volant Solo, as the mission is now known, was instrumental in the success of coordinated psychological operations in Operation Just Cause, again broadcasting continuously throughout the initial phases of the operation."

<http://www.raven1.net/p79.htm> revived by [www.hearingvoices-is-voicetoskull.com](http://www.hearingvoices-is-voicetoskull.com)

Operation *Just Cause*? this is another propaganda name, applied to the U.S. invasion of Panama to take out that country's leader, General Noreiga, the CIA's erstwhile partner in drug smuggling. Apparently the General had made someone mad -- how else to account for the massive invasion of this tiny tourist country? To wit: "A superpower whipped the poop out of 10 percent of the police force of a Third World nation. You are supposed to be able to do that. It was done well, and I credit those who did it. But it is important that we draw the right lessons from it" according to an anonymous US Marine. [7]

Our Commander-in-Chief had another point of view: "...the roll call of glory, the roster of great American campaigns -- Yorktown, Gettysburg, Normandy, and now Panama."

--President George Bush, March 1990 [8]

#### MILITARY PSYOPS AGAINST CIVILIANS

In a phone call to the USAF Special Operations Command Public Affairs Office, I questioned the legitimacy of using these subliminal broadcasts against civilian populations. [9]

[Judy Wall's article on [Silent Sound](#) for details.]

I was told that it was all perfectly legal, having been approved by the U.S. Congress (!). It may be okay by Congress, but I sincerely doubt that it would be approved by the recipient populations.

That conversation also elicited more information concerning the Commando Solo units. For instance, the Air National Guard of the individual states in the U.S. can also operate Commando Solo aircraft, should the Governor of a state request assistance. That means the PsyOps mind-control technology can be directed against U.S. citizens.

The Commando Solo aircraft have participated in the following missions--possibly more, as the early missions of Volant Solo 1 were not known to this spokesperson:

- Operation *Urgent Fury* (Grenada, Oct-Nov 1983, Jan-Jun 1985)
- Operation *Just Cause* (Panama, late December 1989)
- Operation *Desert Shield* (Kuwait, Iraq, from August 1990)
- Operation *Desert Storm* (Saudi Arabia, Turkey, Iraq, 1991)
- Operation *Uphold Democracy* (Haiti, 1994-1995)
- Operation *Joint Guard* (Part of a UN operation in Bosnia-Herzegovina, 1995)
- Operation *Desert Thunder* (part of a UN operation in Iraq)
- Operation *Desert Fox* (Iraq, 2 to 3 days in December 1998)

<http://www.raven1.net/p80.htm> revived by [www.hearingvoices-is-voicetoskull.com](http://www.hearingvoices-is-voicetoskull.com)

Other countries are known to have a similar aircraft, but the PR officer declined to identify them, suggesting that I check out *Jane's Defence Weekly* for such information. Not having access to that particular publication, I searched through my copy of *Jane's Radar and Electronic Warfare Systems 1993094*. [10] The Commando Solo unit was not listed, but a browse through the book was informative as to the numerous types of electronic offence and defence systems available. These include stationary and mobile land units (many housed in large trucks), shipboard and airborne models as well as space-based technology. If the military is spending US \$100 million per airborne unit (times eight, we're talking US \$800 million here), I think it is safe to assume that they have tried out mind control equipment with less expensive, roving land units (trucks), but use the airplanes to cover wider areas and hard-to-reach locations of the world.

And I might add, we can assume that they have tried out the efficacy of this mind-control technology. Even the US military would not waste \$800 million on something unless it has been proven to work, and work effectively, even under the adverse situation of military combat. This is an important point.

The initial research into mind control in the USA was conducted under the auspices of the CIA. The flagrant abuse of human rights in experimenting on unsuspecting persons was based on the supposition that the veracity of experiments would be compromised if a subject knew that he was participating in an experiment. In the case of mind-control technology, this supposition might very well be true. But that does not justify its use -- or so said the Nuremberg Code, the tenets of which were used as a legal basis to prosecute Nazi scientists for war crimes. However the US seems to have excused its own military and scientific community from adhering to that Code. [11]

#### MANIPULATING MIND AND BODY BY SATELLITE

The next logical step in mind control would be to incorporate this technology into satellite communications. Since other countries are known to have similar capabilities, there could occur a situation in which electronic mind control warfare is waged against a civilian population, receiving conflicting mental manipulation from both sides. What would be the mental state of individuals so targeted? Would it cause a rise in mental aberrations and schizophrenia? And what are the limits of mind manipulations? Can people be forced to commit suicide? Can physical ailments or psychosomatic illnesses be induced?

A March 1990 report from Bosnia-Herzegovina in the former Yugoslavia suggests the latter may have already happened. The report concerns 2,990 ethnic Albanians who were admitted to hospital with complaints of lung and skin problems for which doctors could find no physical cause. [12]

<http://www.raven1.net/p81.htm> revived by [www.hearingvoices-is-voicetoskull.com](http://www.hearingvoices-is-voicetoskull.com)

It is not a far step from manipulating a person's emotional state to influencing bodily functions. Indeed, much of the literature on documenting microwave effects on biological systems deals with precisely this phenomenon. In fact, studies of the physical effects of microwave exposure (including radio frequencies) generally preceded studies of mental effects.

A meeting sponsored by *Defense & Foreign Affairs* and the International Strategic Studies Association was held in Washington DC in 1983. High-level

officials from many countries met for this conference. They discussed psychological strategies related to government and policymaking. A summary of the agenda reads: "The group will be discussing the essence of future policymaking, for it must be increasingly clear to all that the most effective tool of government and strategy is the mind... If it's any consolation

to the weapons-oriented among defense policymakers, the new technologies of communications -- satellites, television, radio, and mind-control beams -- are 'systems' which are more tangible than the more philosophically based psychological strategies and operations.

*[Eleanor White's comment: Anyone know where to get a copy?]*

"But we should make no mistake; it will be the 'psychologically based' systems which determine the world's fate in coming years: the condition of the minds of populations and leaders. And we should not ignore the fact that the USSR [*this was in 1983*] is working on electronic systems to 'beam' messages directly into the brain. What good, then, are conventional systems if these types of weapons are not countered? And, on a more basic level, what good is a weapon system if public opinion or political constraints prohibit its deployment?" [13]

It is obvious that they found the answer to that last question. If the public does not know about a weapon system, it cannot prohibit its deployment. This is the situation that applies to mind-control technology.

#### MIND CONTROL AGAINST 'POTENTIAL' ENEMIES

The US military is aware that certain actions or procedures may not be acceptable to the American public. Metz and Kievit express these concerns in their paper, "The Revolution in Military Affairs and Short Conflict War."

[14] "The use of new technology may also run counter to basic American values. Information age -- and in particular, information warfare -- technologies cause concerns about privacy... American values also make the use of directed-energy weapons ... morally difficult, perhaps unacceptable. The advantage of directed-energy weapons over conventional ones is deniability.

"Against whom is such deniability aimed? ... deniability must be aimed at the American people."

<http://www.raven1.net/p82.htm> revived by [www.hearingvoices-is-voicetoskull.com](http://www.hearingvoices-is-voicetoskull.com)

Later they state: "We must decide whether innovative military capabilities are, in fact, acceptable and desirable. That can only happen through open debate. The military must be a vital participant, but not the sole one."

But there has been no open debate.

On July 21, 1994, the US Department of Defense proposed that non-lethal weapons be used not only against declared enemies, but against anyone engaged in activities that the DOD opposed. That could include almost anybody and anything. Note that the mind-control technology is classified under non-lethal weapons. [15]

A 1998 news item states that US Air Force General John Jumper "predicts that the military will have the tools to make potential enemies see, hear, and believe things that do not exist" and that "The same idea was contained in a 15-volume study by the USAF Scientific Advisory Board, issued in 1996, on how to maintain US air and space superiority on the battlefields of the 21st century". [16,17]

It seems that, in military parlance, a "prediction" means: "Don't be surprised when you find out we've already got this, but it's classified and we can't admit to it just yet."

Notice that General Jumper predicts that mind control technology will be used against *potential* enemies. The military and government agencies may apply this term to any group or individual they perceive as a threat to their own interests. Potential enemies may be counter-culture individuals, those of opposing political viewpoints, economic or financial competitors, biological undesirables, etc. It is part of the military agenda to identify potential threats so as to be prepared to meet them. Experience has shown that the US Government (the CIA and FBI, for example) has moved against these people or groups, slandering, harassing, even killing them, without adequate cause or legal sanction.

A weapon that can be used in secret lends itself to abuse by unethical individuals in positions of power. The military and secret services have shown themselves often to be lacking in ethical constraints. After all, the job of the military is war; it is killing people; and so, just how this is accomplished may be considered irrelevant. Lesser evils, like mind control, pale by comparison.

Of course, it can be argued that it is far more humane to brainwash a person via mind control technology than it is to torture or kill them. Others vehemently deny this. They'd rather be dead than a mental slave to Big Brother! That is what revolutions are about. And if I recall correctly, that is the idea behind the US Bill of Rights.

<http://www.raven1.net/p83.htm> revived by [www.hearingvoices-is-voicetoskull.com](http://www.hearingvoices-is-voicetoskull.com)

#### EUROPEAN PARLIAMENT WARNS OF DANGERS

Awareness of the existence of mind-control technology, and hence its dangers and possibility for misuse, seems to be more prevalent than in Europe than in other areas. The European Parliament recently passed a "Resolution on environment, security, and foreign policy". [18] This document includes these articles:

"23. Calls on the European Union to seek to have the new 'non-lethal' weapons technology and the development of new arms strategies also covered and regulated by international conventions..."

"27. Calls for an international convention introducing a global ban on all developments and deployments of weapons which might enable any form of manipulation of human beings."

The United States will ignore these resolutions, of course, as it has other EP requests; for example, as mentioned in the same document:

"24. Considers HAARP (High Frequency Active Auroral Research Project) by virtue of its far-reaching impact on the environment to be a global concern and calls for it's legal, ecological and ethical implcations to be examined by an international independent body before any further research and testing; regrets the repeated refusal of the United States Administration to send anyone in person to give evidence to the public hearing or any subsequent meeting to be held by its competent committee into the environmental and public risks connected with the HAARP programme currently being funded in Alaska..."

One of HAARP's potential uses is a communications system. The military officially acknowledges two communications-related applications: (1) to replace the existing Extremely Low Frequency (ELF) submarine communications system now operating in Michigan and Wisconsin; (2) to provide a way to wipe out communications over an extremely large area, while keeping the military's own communications system working. [19]

As we have seen, the mind-control subliminal messages are carried on radio-frequency broadcasts.

*[Judy Wall's article on [Silent Sound](#) for details.]*

The HAARP facility could be used to broadcast global mind-control messages, or such messages could simply be inserted into existing systems.

Dr. Igor Smirnov, of the Institute of Psycho-correction in Moscow, says in regard to this technology: "It is easily conceivable that some Russian 'Satan', or let's say Iranian [or any other 'Satan'], as long as he owns the appropriate means and finances, can inject himself [intrude] into every conceivable computer network, into every conceivable radio or television broadcast, with relative technological ease, even without disconnecting cables.

<http://www.raven1.net/p84.htm> revived by [www.hearingvoices-is-voicetoskull.com](http://www.hearingvoices-is-voicetoskull.com)

You can intercept the [radio] waves in the aether and then [subliminally] modulate every conceivable suggestion into it. If this transpires over a long enough time period, it accumulates in the heads of people. And eventually they can be artificially manipulated with other additional measurements, to do that which this perpetrator wants [them to do]. This is why [such technology] is rightfully feared." [20]

#### A WORLDWIDE MIND CONTROL MISSION

To return to the USAF Fact Sheet, it concludes: "In 1990 the EC-130 joined the newly formed Air Force Special Operations Command and has since been designated Commando Solo, with no change in mission. This one of a kind aircraft is consistently improving its capabilities.

The next few years should see continued enhancements to the EC-130 and its worldwide mission."

TITLE:  
Parametric Difference Waves for Low Frequency Acoustic Propagation

ABSTRACT/BENEFITS:

Prior research indicates that an array of ultrasonic sources operated with an offset in frequency will produce infrasonic or very low frequency energy. This energy is useful because it is omni-directional, and it propagates well with little absorption. With sufficient energy, the resulting infrasonic waves can be disabling or lethal. Synetics proposes an approach toward developing infrasonic waves that can ultimately be incorporated into future man-portable small arms weapon systems. This approach utilizes modernized pneumatic technology which produces an extremely high-powered ultrasonic source. The resulting frequency generated is precisely controlled such that the desired high power infrasound frequency can be generated at the target by beating two focused ultrasonic sources.

BENEFITS:

The potential post applications of the parametric difference wave generator include non-lethal crowd control, non-lethal self defense units for police and personal use, and soot and crustacean removal devices for commercial industries.

APPENDIX US4 ... SILENT HYPNOSIS, VOICE-FM COMMERCIAL METHOD

Altered States Ltd commercial site clearly demonstrates the very thin line between "subliminal learning" using "Voice FM", and "silent hypnosis" as experienced by involuntary experimentees.

The reader is invited to scan the sample phrases from these so-called "learning tapes". Whether it's "learning" or "hypnosis" is left for the reader to decide.

Image shows how voice is transformed to an inaudible signal.

#### SILENT SUBLIMINALS

Only your mind can hear. Your ears hear nothing but your mind  
hears and accepts the powerful suggestions.

You can safely play these tapes anywhere - in a car, while  
watching TV or listening to your favorite music, while working  
or even as silent sleep programming.

Warning: Everyone within listening range of the tape will be  
programmed by the suggestions. To assure yourself that strong  
suggestions are recorded on the tape, take it to any Radio  
Shack store, play it on their stereo and read the output with  
a Radio Shack Sound Level Meter (Item 33-2050)

How To Use The Tapes: Increase the volume until it is just  
below any tape noise. If your stereo deck has treble and bass  
controls, you can boost the subliminal output by increasing  
the treble and decreasing the bass. The player then emits a  
strong but inaudible frequency - modulated 60 - 90 decibel  
signal that is received and demodulated by the human ear.

Technical Information The Suggestions are delivered on a  
carrier frequency of 14,800 cps, via a low-distortion sinewave  
signal. This frequency is slightly above the audible hearing  
range but the frequency-modulated (FM) signal is still  
strongly impinging upon the diaphragm of the ear. The listener  
can expect his subconscious mind to accept the suggestions  
with repeated listening.

[EW: Note the similarity to Lowery patent, [US 5,159,703](#)]

How To Use The Tapes: Increase the volume until it is just below any tape noise. If your stereo deck has treble and bass controls, you can boost the subliminal output by increasing the treble and decreasing the bass. The player then emits a STRONG BUT INAUDIBLE frequency-modulated 60 to 90 decibel signal that is received and demodulated by the human ear.

The Silent Subliminals is a new brain / mind technology developed by an aerospace engineer. This new technique has been licensed to Valley of the Sun Audio /

Video for this incredible new tape series. Patent pending.  
Note: Because the frequency is beyond normal recording range, the tape cannot be duplicated:

Examples of Suggestions:

- "Every day you become thinner and thinner"
- "You now lose weight and full fill your goals"
- "You attain your weight goals and the body you desire"
- "You have the power and ability to attain the perfect weight and body you desire"
- "You have the self-discipline to lose all the weight you want"
- "You live a healthy lifestyle and eat a proper diet"
- "You now quit smoking because it serves you"
- "You lose all desire to smoke"
- "You accept that you now quit smoking"
- "You are a non-smoker"
- "Quit smoking. Quit smoking. Quit smoking"
- "You have the willpower to do anything you want to do"
- "You have great self- discipline and you use it to quit smoking"
- "Cigarettes disgust you"
- "You are very sure of yourself"
- "You accept that you have great inner courage"
- "You are self-reliant and self-confident"
- "You are full of independence and determination"
- "You have great inner courage"
- "Every day in every way, you become more and more self-confident"
- "You feel good about yourself"
- "You project a very positive self-image"
- "You are relaxed and at ease"
- "You detach from worldly pressures and experience an inner calm"
- "Negativity flows through you without affecting you"
- "You accept other people as they are"

- "You peacefully accept the things you cannot change, and change the things you can"
- "You are at peace with yourself, the world and everyone in it"
- "Your mind is like calm water"
- "You direct your time and energy to manifest your desires"
- "You have the self-discipline to accomplish your personal and professional goals"
- "Every day, you increase your self-discipline"
- "You do what you need to do and stop doing what doesn't work"
- "You freely choose to do what you need to do"
- "You are assertive and feel good about yourself"
- "You now focus your energy upon attaining success"
- "You know exactly what you want and you go for it"
- "You can accomplish whatever you set out to do"
- "Be ultra-successful. Be ultra-successful and become wealthy"
- "Every day in every way, you become more successful"
- "Your creative thinking opens the door to monetary abundance"
- "You easily achieve and maintain a penile erection"
- "Your body performs perfectly during sex without thinking about it"
- "A hard, firm erection is your natural response to sexual stimulation "
- "You can make love for a long before you ejaculate"
- "Every day you feel better about your sexual prowess and your ability to achieve and maintain a hard, firm erection"

US5....."ACOUSTIC SPOTLIGHT" CAN TARGET ONE PERSON IN CROWD

THIS IS THE TEXT PORTION ONLY OF THE ORIGINAL WEB PAGE  
POSTED BY F. JOSEPH POMPEII, MIT MEDIA LAB. The image  
below, posted by Eleanor White, describes nearly identical  
technology being commercially developed by American  
Technologies Corp., San Diego CA, (as of March 22, 2000):

The ORIGINAL LINK FOR THIS PAGE (As of March 22, 2000):  
<http://sound.media.mit.edu/~pompei/spotlight/>

<http://www.raven1.net/p93.htm> revived by [www.hearingvoices-is-voicetoskull.com](http://www.hearingvoices-is-voicetoskull.com)

Machine Listening Group Digital Life Consortium

A beam of light can be controlled in many ways - it can be aimed at one person in a crowd, spread to fill a room, or projected to create rich, distant imagery.

We can now do these very same things with sound.

To my friends in the UK:

Thanks to those who have contacted me regarding the BBC piece; I'm happy it was so well received. I recently had a very polite British visitor, who seemed to enjoy the demonstration a great deal... click the photo to see who it was.

The Audio Spotlight<sup>TM</sup>, invented and developed at the MIT Media Lab, is a device which uses subtle nonlinear properties of the air to create an extremely narrow Sound Beam<sup>TM</sup>. This beam of sound behaves just like a beam of light - 'shining' it at a specific listener allows only that person to hear it, and projecting it against a surface creates an acoustic 'image' at the point of reflection. It is the first device that provides total control over both the location and distribution of high quality sound, something impossible to achieve with traditional loudspeakers.

The circular transducer is very thin, and can be constructed in a variety of sizes and configurations as needed. A typical Audio Spotlight transducer has an active area of approximately 1 foot diameter, and, depending on size and frequency content, projects an approximately three-degree wide beam of sound audible to well over 100 meters. Harmonic distortion has been reduced to close to that of a traditional loudspeaker, sound level is quite appreciable (on the order of 80-90dBA) at several meters, and frequency response, depending on size, extends down to a few hundred Hertz, and upwards beyond the range of hearing. Continued research is being conducted on all facets of the technology.

While still under development, we are testing applications of the device in collaboration with several of our Media Lab Sponsors in preparation for eventual commercial release.

Put sound wherever you want it.<sup>TM</sup>

F. Joseph Pompei [pompei@media.mit.edu](mailto:pompei@media.mit.edu)

## Usage

The Audio Spotlight can be used in two major ways: As directed audio, sound is directed at a specific listener or area, to provide a private or area specific listening space. As projected audio, sound is projected against a distant object, creating an audio image. This audio image is literally a projected loudspeaker - sound appears to come directly from the projection, just like light.

The Audio Spotlight consists of a thin, circular transducer array and a specially designed signal processor and amplifier. The transducer is about half an inch thick, nonmagnetic, and lightweight. The signal processor and amplifier are integrated into a unit about the same size as a traditional audio amplifier, and has similar power requirements.

## Technology

Because it is impossible to generate extremely narrow beams of audible sound without extremely large loudspeaker arrays, we instead generate the sound indirectly, using the nonlinearity of the air to convert a narrow beam of ultrasound into a highly directive, audible beam of sound.

The device transmits a narrow beam of ultrasound (blue), which, due to the inherent nonlinearity of the air itself, distorts (changes shape) very slightly as it travels. This distortion creates, along with new ultrasonic frequencies, audible artifacts (green) which can be mathematically predicted, and therefore controlled. By constructing the proper ultrasonic beam, this nonlinearity can be used to create, within the beam itself, an audible sound beam containing any sound desired. This is presently done in real-time using low cost circuitry, a specially designed amplifier, and transducers developed at MIT specifically for this project.

## Hyperdirectivity

The directivity, or narrowness, of an acoustic wave generated by a circular transducer is proportional to the ratio of the diameter of the transducer to the wavelength of the sound. So a transducer much larger than the wavelength of the sound creates a very narrow beam.

-----  
APPENDIX TR4 - ELECTRONICS SEES WHAT A CAT SEES

Eye's Visions Electronically Read And Displayed

Eleanor White's comments: Over decades of experience and among around 300 involuntary neuro-electromagnetic experimentees, there have been instances where two types of thought reading were evidently performed by the experimenters:

- Electronic reading of thoughts "said to one's self"
- Electronic viewing through the eyes of the experimentee

This article is about picking up recognizable images from a living brain (a cat's) and displaying those images on a screen. Keeping in mind that classified projects can be 20 or more years ahead of unclassified work (e.g. the SR-71 aircraft), the claims of the involuntary experimentees become much closer to believable in light of the unclassified work described below.

(\*\* NOTE: While pondering the technology here, the reader should also reflect on the apparent ease with which these experimenters can cut up a cat's skull, restrain it, in obvious discomfort and extreme unwillingness, to obtain this data. We 300 victims would like to point this out to show the world that this same callous attitude is what enables similar covert experimenters to torture us around the clock and completely shatter our lives.)

A Cat's Eye Marvel - EXCERPT:

by Leander Kahney

3:00 a.m. 7.Oct.99.PDT

In a dramatic demonstration of mind reading, neuroscientists have created videos of what a cat sees by using electrodes implanted in the animal's brain. Garrett Stanley of Harvard, and Fei Li and Yang Dan of the University of California, Berkeley, were able to reconstruct in startling detail scenes flashed before a cat's eyes.

In the early 1980's, several Japanese companies, such as Nippon Columbia, Ricoh, and Matsushita, attempted to develop the parametric array for the reproduction of broadband audible sound. They typically deployed large arrays containing hundreds of piezoelectric transducers, such as the one to the right [3], to transmit simple AM modulated audible signals. While successful in reproducing sound, tremendous problems with cost, robustness, and extremely poor sound quality (up to 50% total harmonic distortion) caused them to abandon the technology as unfeasible.

More recently in mid 1996, an American company produced their own version of this device and proclaimed it 'a revolution' in audio. In fact, this device, contrary to their claims and unbeknownst to the popular press, was very similar to those described in audio journals a decade earlier (shown to the left), and of course suffered from the very same problems of poor sound quality and lack of robustness that plagued the earlier researchers [4]. Since then, there has been no published evidence of progress towards a practical device.

#### Background

Since his days as a part-time musician and young acoustics engineer at Bose in the early 1990's, Mr. Pompei recognized that a key ingredient missing from audio reproduction was the ability to reliably spatialize sound. While in a natural environment, sound occurs all around us, giving us a tremendously strong impression of our environment, the reproduction of sound over loudspeakers, at best, provides a very vague and limited spatial impression. Similarly, what was missing from music, he decided, was the ability to choreograph musical instruments in space, just as you would dancers.

While pursuing as a Master's student techniques related to '3D Audio' technologies, he realized that this method would simply not work in an uncontrolled acoustic environment - if the listener moved out of the small 'sweet spot', the illusion would vanish, and there were no practical remedies to this problem, so long as traditional loudspeakers were used. The solution, then, was to not rely on psychoacoustic illusions, but instead to create sound independently of the loudspeaker. One of several ideas he had at the time was the use of interacting ultrasound beams to produce audible sound.

<http://www.raven1.net/p97.htm> revived by [www.hearingvoices-is-voicetoskull.com](http://www.hearingvoices-is-voicetoskull.com)

After briefly researching the idea, he discovered the numerous papers describing the underwater parametric array and the earlier attempts of its application as an audible sound source. From these papers, he saw that there were two key concepts which were overlooked in the previous attempts, mitigating their success:

#### Preprocessing

Earlier attempts used simple AM modulation to generate the ultrasound signal, which does create audible byproducts, but also substantial distortion. The nonlinear transformation from ultrasound to audible sound is much more complex than AM demodulation. Therefore, in order to reduce distortion, this specific transformation needed to be mathematically modeled, inverted, and then applied as a preprocessing algorithm. The lowest-order preprocessing method, used in the earliest MIT prototypes, was derived from a simple model [5] proposed in 1965.

#### Transducer Design

The transducers used in previous attempts were common piezoelectric transducers used for ultrasonic ranging. These transducers are highly resonant, and do not have sufficient bandwidth to reliably reproduce the preprocessed ultrasonic signal. Thus, even with a preprocessing algorithm, substantial distortion would continue to result until we developed transducers capable of reliably reproducing the broadband preprocessed signal.

As a side project during his Master's work, he continued his development of these ideas, studying nonlinear wave interactions and ultrasonic transducer design, eventually deciding to pursue the area as the focus of a doctoral dissertation. Of all the universities that he applied to, he decided that the free-wheeling nature of the MIT Media Lab was the ideal environment for developing the idea.

The first full size prototype was demonstrated in April 1998 to our Media Lab Sponsors, and performed beyond all expectations. The first demonstration was a John Coltrane solo, whose saxophone was heard loud and clear, projected like a spotlight all around a movie theater, and flying right over the audience. Power consumption was nominal (

<http://www.raven1.net/p98.htm> revived by [www.hearingvoices-is-voicetoskull.com](http://www.hearingvoices-is-voicetoskull.com)

A paper [6] describing the results of the first prototype, as well as a live demonstration, were presented at the 105th Convention of the Audio Engineering Society in September, 1998, and received a standing ovation. While the parametric array itself is not patentable, MIT has applied for patents on key aspects of the technology which make it a practical device.

This directivity plot of a prototype clearly illustrates the extreme narrowness of the beam. (Published in [6]). During the summer of 1998, we compared distortion of prior devices with our prototype. Note that distortion has been reduced nearly to that of a traditional loudspeaker. (Published in [6]).

Since then, development has been remarkably productive, with engineering and mathematical advances resulting in more sound output, better sound quality, and reliable performance.

"Everything you do with light, you can now do with sound."TM

#### About the Inventor:

Beginning his career in acoustics at 16 while in high school, starting as the first high school co-op and becoming the youngest engineer at Bose Corporation, Frank Joseph Pompei continued working part-time and summers for Bose while earning a degree in Electrical Engineering with an Electronic Arts Minor from Rensselaer Polytechnic Institute. Recognizing the importance and underutilization of spatialized sound, he decided to pursue research in psychoacoustics and application of auditory localization at Northwestern University, earning a Master's degree. Acutely aware of the limitations of traditional loudspeakers, he had the idea of using ultrasound as an acoustic projector, and is now developing such a device at the MIT Media Lab, continuing his education in pursuit of a Ph.D.

<http://www.raven1.net/p99.htm> revived by [www.hearingvoices-is-voicetoskull.com](http://www.hearingvoices-is-voicetoskull.com)

Mr. Pompei is honored to have been chosen as a British Telecom fellow for his second year in a row.

For More Information:

A technical paper [6] describing the basic device (along with a live demo) was presented at the Audio Engineering Society's 105th Convention (September, 1998). Please contact them directly with preprint requests. The same paper was just published in the September 1999 issue of the Journal of the Audio Engineering Society.

APPENDIX TWR1 - THE LADS DEVICE

Tuesday, September 09, 1997 10:20:09 AM

VSE CORP. LIFE ASSESMENT DETECTOR SYSTEM (LADS)  
Patent Pending

The Life Assessment Detector System (LADS), a microwave Doppler movement measuring device, can detect human body surface motion, including heartbeat and respiration, at ranges up to 135 feet (41.15 meters). The primary function of the LADS is to provide a reliable method by which medical and emergency personnel can locate personnel buried in building collapses or injured on the military battlefield.

LADS can detect such signs of life as movement, heartbeat, or respiration.

\*\* NOTE: The referenced image of the LADS device is no longer available at the <http://www.vsecorp.com> web site. What it showed was mainly a small dish antenna mounted on the top of a tripod.  
(August 9, 1998)

Originally designed to detect heartbeat and respiration of military personnel wearing chemical-biological warfare protective overgarments, the LADS has been restructured, greatly increasing its operational range and providing a means for eliminating "nuisance alarms" which could mimic human life signs, such as fans, wind drafts, or swaying trees. This is accomplished through neural network technology, which "trains" the system to recognize human motion and heartbeat/respiration functions. If these functions are not detected, the reasonable assumption is that there are no survivors. Operating under such an assumption, the rescue team can now proceed without fear of further loss of life; i.e., rescue and medical personnel and equipment can be deployed more effectively and efficiently.

The LADS consists of a sensor module, a neural network module, and a control/monitor module. The sensor module is an x-band (10 GHz) microwave transceiver with a nominal output power of 15 milliwatts, operating in the continuous wave (CW) mode. The neural network module device can store many complex patterns such as visual waveforms and speech templates, and can easily compare input patterns to previously "trained" or stored patterns.

The control/monitor module provides the LADS' instrument controls, such as on-off switches, circuit breakers, and battery condition, as well as motion, heartbeat waveform, pulse strength, and pulse rate displays.

<http://www.raven1.net/p101.htm> revived by [www.hearingvoices-is-voicetoskull.com](http://www.hearingvoices-is-voicetoskull.com)

LADS provides life assessment capabilities for people who are:

- Trapped in building rubble;
- Battlefield casualties in a chemical/biological warfare environment;
- Victims of airline, train, or automobile crashes;
- Trapped in an avalanche or mud slide;
- Trapped on a mountain ledge;
- Trapped under a collapsed tent structure; or
- Hostages being held in a nonmetallic room.

For more information about the LADS, send E-mail to:

APPENDIX TWR2 - THE RADAR FLASHLIGHT

Project Title: Radar Flashlight

Project Description:

The National Institute of Justice (NIJ), through the Joint (Justice-Defense) Program Steering Group (JPSG), is sponsoring Georgia Tech Research Institute (GTRI) in developing an inexpensive, handheld, low-power radar that will enable law officers to detect individuals through interior building walls. It works by sensing the motion of an individual's chest when they breath.

Status Report:

GTRI is currently designing and refining the first prototype unit. A laboratory test area has been constructed consisting of a section of home siding and drywall, a wooden front door, and a section of brick and mortar. The laboratory model shown here, was able to detect individuals through each of these materials. It also demonstrated the ability to detect an individual through the laboratory's cinder block walls. GTRI is working to combine the two parts of this device into a single unit. NIJ plans on demonstrating the Radar Flashlight with law enforcement agencies through its National Law Enforcement and Corrections Technology Center (NLECTC) (Southeast Regional Center) before the end of 1999.

APPENDIX TWR3 - MILLIVISION RADAR

Current Millivision information at: <http://www.millivision.com>

PM: TECH UPDATE: Frisking From Afar: OCT 95 Popular Mechanics magazine

**OCTOBER 1995**

Millimeter-wave camera picks up both metallic and plastic concealed handguns.

DEERFIELD, MA-Between microwave and infrared lies the millimeter wave band. This little-heralded portion of the electromagnetic spectrum turns out to be perfect for "remote frisking." Millitech Corp. has designed a camera to accomplish just that.

[MILLITECH HAS SOLD THE RIGHTS TO MILLIVISION, NORTHAMPTON MA]

The idea calls for measuring the time delay and intensity of millimeter wave energy that radiates naturally. At millimeter wavelengths, people are good emitters, while metals are very poor. Dielectric objects, such as plastics, ceramics and powdered drugs, are somewhere in between. *Clothing and building materials, such as wallboard, are virtually transparent.*

TWR4.....GROUND [\*\*OR HOME/APT WALL\*\*] PENETRATING RADAR

THIS IS TEXT EXCERPTED FROM GROUND-PENETRATING RADAR MANUFACTURER  
PATRIOT SCIENTIFIC CORPORATION. THE PURPOSE OF INCORPORATING THIS  
TEXT IS THAT GROUND-PENETRATING RADAR SYSTEMS OVERCOME THE PARTLY-  
CONDUCTIVE-WALL BARRIER TO PASSIVE MILLIMETER WAVE THRU-WALL RADAR.

The original link for this text (as of March 22, 2000) is:  
<http://www.ptsc.com/radar/index.html>

Patriot Scientific Corporation

Patriot Scientific Corporation has developed radar  
technologies with a wide range of possible applications.

This description below will highlight possibilities for use in:

- Ground Penetrating Radar (GPR)
- Communications
- Surveillance
- Ordnance Detection
- Stealth Radar

The Demonstration System:

...is a diagram of the demonstration system. A pulse generator  
is used to drive the transmit antenna. The pulse is a positive  
spike going up to 100V then falling back to ground in one and  
a half nanoseconds corresponding to a pulse transmit frequency  
of 750 MHz.

<http://www.raven1.net/p105.htm> revived by [www.hearingvoices-is-voicetoskull.com](http://www.hearingvoices-is-voicetoskull.com)

The return signal is read by the receive antenna. At this point some simple analog processing is done and the signal is digitized at a resolution of 6 GHz, and sent to a PC.

The PC correlates the data into a conventional waveform, does some processing, then transmits the data over an ethernet cable to a Pentium workstation (not shown).

The Pentium workstation is used to apply different digital filters, combine waveforms, and display the results. This system can be used to demonstrate detection of small targets buried in sand, people behind walls, and other targets.

Patriot has used its antenna system to demonstrate detection of objects as small as a coke can buried in sand, through a wall. Even small targets disturb the wavefront of the pulse, producing reflections and modifying the field in measurable ways.

Patriot will be testing this technology for suitability for mine detection. We will be acquiring sample casings and running further tests.

#### Advantages of Patriot's Impulse Radar System

The key to Patriot's Radar system is its ability to transmit and receive pulses barely longer than single cycles at the transmit frequency. The first waveform shown here is a pulse generated by an earlier Patriot Design, based on "off the shelf" antenna technology. The waveform on the bottom was produced and received by Patriot's current Design.

The current Patriot antenna system produces a pulse at the desired frequency with little leading or trailing noise. The Patriot antenna system provides many advantages over pulse-based systems.

Patriot originally developed the impulse radar system to allow time domain processing in Patriot's GPR systems. Because the impulse is extremely short (3 nanoseconds), the time to return can be used to gauge the distance traveled by the pulse.

Furthermore, the transmit and receive antenna's are very directional, eliminating much of the multipath components of the return signal.

The short pulse combined with the directional transmit and receive to provide us with a number of important advantages:

- Very low average power during transmission
- Low interference from other transmitters
- Transmission invisible to conventional receivers
- High bandwidth digital data transmission possible
- Difficult detection by other impulse receivers

Interference with other sources and receivers is further reduced by using directional antennas. The antenna design shown is highly directional.

When penetrating the ground, we wish to eliminate as much of the multipath signal as possible. The directional antennas reduce the multipath signals detected to those that are relatively inline with the wave path, and eliminate much of the multipath signal that returns at odd angles.

Impulse radar uses low power inherently because the transmissions occur in pulses separated by periods of no transmission. The power of the pulses is offset by the dead time between the pulses. The average output of the current system is about 300 MICROWatts. THE LOW AVERAGE POWER OF AN IMPULSE SYSTEM EFFECTIVELY HIDES THE TRANSMISSIONS FROM CONVENTIONAL RECEIVERS.

Interference can be further reduced in an impulse system by using random interval spacing. As long as the transmit and receive antennas are in sync, the period between pulses can be varied to prevent aliasing with other continuous- or pulse-transmission systems that might be operating in the same locale. Furthermore, if an impulse system is being used to transmit data, varying the intervals between pulses prevents other impulse systems from locking onto the signal. Patriot Scientific's current GPR system does not use random interval spacing.

APPENDIX TR1 - COMMERCIAL THOUGHT READING DEVICES

.....  
<http://www.mindmouse.com/> The Cyberlink Mind Mouse:  
Hands-Free, Brain-Wave Control for your Computer

### The Cyberlink Mind Mouse

#### What is it?

The Cyberlink Mind Mouse is a revolutionary hands-free computer controller which allows you to move and click a mouse cursor, play video games, create music, and control external devices, all without using your hands.

#### How does it work?

A headband with three sensors detects electrical signals on the forehead resulting from subtle facial muscle, eye, and brain activity. This headband connects to an interface box which amplifies and digitizes the forehead signals and sends them to your computer. The Cyberlink software decodes the forehead signals into ten BrainFingers for continuous cursor control. It also decodes eye motion and facial gestures into mouse button clicks, keystrokes, and cursor resolution control. With a little practice, most or all of these commands can be mastered to operate virtually all computer functions.

#### I can do what...?

By learning to change the energy levels of your BrainFingers, you will be able to do just about anything on a computer, except turn it on! The Cyberlink Mind Mouse supports hands-free mouse, keyboard and joystick cursor control, switch closure, video game control, and music and art synthesis.

#### ...and it works with my software?

The Cyberlink Mind Mouse features a Windows 95 Mouse Driver for hands-free control of third party software like games, business software, Internet browsers, and a range of assistive technologies, such as the X-10 Home Controller and special needs word- processing and communication software, including WiVik2, Words Plus, and Clicker Plus.

<http://www.raven1.net/p109.htm> revived by [www.hearingvoices-is-voicetoskull.com](http://www.hearingvoices-is-voicetoskull.com)

What kind of computer does it take?

The Cyberlink Mind Mouse has the following PC requirements:

- Pentium Processor
- 16 MB RAM
- 20 MB Disk Space
- VGA or better Display
- Windows 95

What comes with the Mind Mouse?

The Cyberlink Mind Mouse consists of the following components:

- Cyberlink Interface Unit
- Cyberlink Headband/Sensor Harness with 3 Sensors
- Cybergel
- Cyber Trainer Software
- Windows 95 "Mouse" Driver
- Cables
- User manual

How much is it?

The Cyberlink Mind Mouse is priced at \$1495.00 (US\$) plus shipping. Free upgrades are included for one year.

SIGHTINGS

# Implants Can Now Allow Humans To Control Computers

By Nigel Hawkes  
Science Editor  
The Times (London)  
[www.the-times.co.uk](http://www.the-times.co.uk)

AN AMERICAN scientist has entered the world of science fiction by implanting electrodes in the brains of disabled people so that they can control a computer by the power of thought.

The implants have enabled two paralysed people to move the cursor on the screen simply by thinking about moving part of their body. They were able to convey messages such as "I'm thirsty" or "please turn off the light" by pointing the cursor at different icons.

The hope is that eventually patients will be able to communicate complex ideas just by thinking about them. "If you can run a computer, you can talk to the world," Dr Ray Bakay of Emory University in Atlanta, whose team developed the implants, said.

A number of laboratories around the world are working on brain implants, but the only devices licensed for use so far are bionic ears for the profoundly deaf and chips which can control the tremor caused by Parkinson's disease.

The Emory implants go much further. They consist of two hollow glass cones, each the size of a ballpoint pen tip, placed into the brain's motor cortex, which controls body movements. The cones are covered in chemicals that encourage nerve growth, extracted from the patient's knees. Once installed, nerve cells grow into the cones and attach themselves to tiny electrodes inside.

The location of each cone is determined by monitoring the patient's brain using scanners and identifying the most active regions. Once the cones are in place and surrounded by nerve cells, the patient is asked to think about moving some part of the body, and signals from the electrodes are picked up by a small transmitter-receiver, amplified, and used to control a computer. Depending upon which nerves grow into the cones, each patient may have to think about moving a different part of the body to achieve the same effect.

<http://www.raven1.net/p111.htm> revived by [www.hearingvoices-is-voicetoskull.com](http://www.hearingvoices-is-voicetoskull.com)

They are trained by listening to a buzzer which becomes faster and louder when they are thinking along the right lines. Dr Bakay says that controlling the cursor soon becomes second nature.

The first two patients, New Scientist reports, were a woman with motor neuron disease, who was given the implants 18 months ago and has since died, and a 57-year-old man paralysed by a stroke.

They were taught very simple commands, with one cone being used to move the cursor up and down and the other from left to right. If they could give more complex commands, disabled people could use them to make the computer speak for them. Dr Bakay warns that this could still be years off. But he has secured funding from the US National Institutes of Health to continue the research with three more patients.

The British Telecom laboratories near Ipswich have also done research into implantable chips, including a possible memory chip which would take data from the eye and store it for a computer. "There is a raft of wonderful benefits to bringing chips and circuits inside human beings," said Dr Peter Cochrane, head of research.

.....  
Communicating with 'thought power'

"Bionic brain implants allowing a computer to be operated by the power of thought, have been developed by American scientists," reports BBC News. Read all about it here:

[http://www.news.bbc.co.uk/hi/english/sci/tech/newsid\\_193000/193946.stm](http://www.news.bbc.co.uk/hi/english/sci/tech/newsid_193000/193946.stm)

The BBC report states that "the [brain] implant becomes naturally 'wired' into the patient's brain as neurones grow into the cones and attach themselves to the electrodes mounted inside," and that "An FM transmitter under the scalp transmits the signal without wires, and...no batteries," to operate the cursor on a computer... hard to believe!

APPENDIX TR2 - RATS CONTROL DEVICES WITH THOUGHT

[Eleanor White comments: This article shows clearly that the reading of minds is almost accomplished in the UNclassified world. Since CLASSIFIED technology is always a decade or two ahead of the unclassified world, imagine what exists now in the black areas of defense contractors and government labs!]

Rats Control Robot by Thought Alone

By Maggie Fox  
Reuters

WASHINGTON (June 23) - It sounds like something out of science fiction -- a rat with a small electrode sticking out of its head decides it wants a drink and, without touching anything at all, gets a robotic arm to bring it some water.

Still, a team of neurobiologists say their rats can control a machine with brainpower alone, and they think their technology may someday help paralyzed people.

'The people in the lab started calling the experiment the 'thinking about drinking experiment,' John Chapin of Hahnemann Medical College in Philadelphia, who led the research, said in a telephone interview. 'But we don't know whether rats think.'

Whatever the rats are doing, they are controlling the robotic arm without touching anything, said Chapin, who worked with colleagues at Duke University in North Carolina.

Reporting in the July issue of the journal Nature Neuroscience, they said they implanted tiny electrodes, no thicker than a hair, into the brains of six rats.

'It doesn't hurt the animal,' Chapin said. 'All there is is a little plug coming out of the animal's head. He runs around the cage and everything.'

The electrode is recording the activity of neurons -- on average 46 -- which Chapin found was important to making the experiment work. Earlier studies that recorded the activity of just one or a few brain cells did not work.

'We trained the rat initially to put his paw on a lever and to press the lever down. When the lever got pressed down there was a robot arm that moved over to a water dropper and then brought the water back to the animal's mouth,' Chapin said.

The rats had to carefully control the lever -- if they only pushed the lever halfway, it would only bring the arm halfway to them.

Chapin's team then recorded the brain activity associated with the movement of pressing the lever.

'We have an electronic device that converted those patterns of activity in the brain of the animal into a single electronic signal that could move the robot arm,' Chapin said.

Soon they disconnected the lever from the robot arm and hooked it up to the converting device alone.

They found, as other researchers have, that the brain activity controlling the movement came before the actual movement.

'When control of the robot arm was switched to the brain, the robot arm went over and brought water to the animal's mouth before the animal even started to move,' Chapin said.

'After a couple of days, the animals began to recognize that and they stopped actually pressing the lever.'

Chapin said if the technique can be proven safe and reliable in animals such as monkeys, which have bigger and more complex brains than rats, it might eventually be tested in people with severe paralysis.

'If this really becomes a workable thing, I think there are a lot of people that could use it,' he said.

It is important to record the signals from many neurons and not just a few, Chapin said. Of the six rats tested, he added, just four could get the arm to work. 'Two rats would do it a few times and then they would stop,' he said.

'The reason was we were not recording enough neurons in those animals. The robot arm would jerk around a lot and it wasn't smooth. When the animal tried to get his mouth around it, it would kind of bop him on the nose. They didn't like it.'

For complex movements, such as those made by an artificial limb, even more neurons will be required, he said.

'In principle, it should be possible to tap this information and control a prosthetic limb,' Dr. Eberhard Fetz of the University of Washington in Seattle wrote in a commentary on the findings.

-----  
APPENDIX TR3 - THOUGHT READING BY RADIO SIGNAL

ELCTRONICS & BRAIN CONTROL  
Excerpted From  
Popular Electronics Magazine  
July 1973, Vol. 4, Number 1  
by L. George Lawrence

Comments by Eleanor White: This article is excerpted mainly to provide experimenters and researchers with leads toward much better quality evidence that electronic mind control works. This article is NOT rigorously enough referenced that it will stand as evidence by itself.

Only those paragraphs which are of high relevancy have been transcribed; the article is long and since it is not a courtroom-ready document, I won't be adding to this transcription.

Items in square brackets [ ] are comments inserted by me to clarify the original text.

[pg 65]

It is time that we closely examined brain control now that scientists are actively seeking to unravel the mysteries that shroud that miniature bioelectric giant known as the human brain. Elements of brain control can already be found in anti-collision radar technology involving birds.

It has also been substantiated that pumping energy in the gigahertz range of frequencies through human heads, subjects can suddenly "hear" without using their ears.

See Allan Frey's paper

[SNIP]

[pg 66]

It was during these [Frey] studies that a profoundly important discovery was made: Deaf subjects often had the ability to hear radio frequency sound. The clinical criterion was that, if a given person could hear audio above 5 kHz [higher range of a piano] by bone or air conduction, then radio frequency sound could be heard as well.

This and related work has resulted in the manufacture of radio frequency [!!!] type hearing aids for the deaf, one of which is made by LISTENING INC., 6 Garden Street, Arlington, Mass., and is known as the Neurophone Model GPF-1. [Not Flanagan's Neurophone] It operates at 100 kHz [about five times the normal maximum hearing frequency] and employs crystal control.

[pg 67]

These observations tie in with the fact that some individuals can detect radio programs through fillings in their teeth. This phenomenon was technically *verified* by interposing shields between respective people who exhibited this effect and the modulated radio frequency sources.

["Modulation" means "changes" made to an otherwise steady signal.]

When the lower half of the head was *covered*, including the maxillary dental area, the radio frequency sound was perceived. The sound *ceased* on covering the *top* half of the head. While the mechanism responsible for this phenomenon is only imperfectly understood, *it can be assumed to be the result of DIRECT cortical stimulation.*

[In other words, even when the sound seems to be coming from the teeth, it is actually being directly received and interpreted in the brain, not the teeth.]

[SNIP]

[pg 68]

**Fig. 4. Cazzamelli's brain-wave detector of some years ago is illustrated here.**

*Brain-Wave Detection.* Some 40-odd years ago, university professor F. Cazzamalli started publishing papers on the subject of brain-wave detection [using radio signals] and implied that he had detected radiations from the mind. [See image above.]

As shown in Fig. 4, he placed his subjects in a shielded room (or Faraday cage), emanated VHF radio waves through their heads, and claimed to have recorded "beat frequencies" obtained with an untuned receiver consisting of a galena crystal or diode tube [same thing for practical purposes], a fixed capacitor, an antenna, and a sensitive light beam galvanometer. [A "galvanometer" is a voltmeter; light beam types show up in physics labs and are one of the most sensitive types of voltmeter.]

The trouble is that Cazzamalli never mentioned transmitter power in his somewhat unprofessional papers [that's why we can't use this experiment directly as standalone evidence]. His oscillograms meant to show variations of the "beat" when his subjects were emotionally aroused or engaged in creative tasks when they were in the Faraday cage. ["Beat" as used by Cazzamalli refers to EEG-frequency, i.e. ELF, traces.]

Later he told an astounded world that his subjects would hallucinate when under the influence of his "oscillatori telegrafica", it's frequency being around 300 MHz at the time. [Aviation radios are in this range.]

Tom Jaski, a noted science writer and engineer duplicated some of Cazzamalli's work with a modern low-power oscillator that was swept from 300 MHz to 600 MHz. [Cell phones start at over 900 MHz.]

His subjects could not see the dial. They were told to sound off as soon as they felt something unusual. At a certain frequency range - varying between 380 MHz and 500 MHz - the subjects repeatedly indicated points with exact accuracy in as many as 14 out of 15 trials. At these "individual" ...

[pg 69]

...frequencies, the same subjects announced having experienced pulsing sensations in the brain, ringing in the ears, and an odd desire to *bite* the experimenters. [I'd like to do that anyway - preferably using a hungry alligator!]

The oscillator's output power was only a few *milliwatts*, while the oscillator itself was located several feet away from the subjects.

*[Any experimenters out there want to try this? Milliwatts are quite safe for short term experiments. Kids' walkie talkies are 50 to 100 milliwatts, for example.]*

[SNIP]

APPENDIX TR4 - ELECTRONICS SEES WHAT A CAT SEES

Eye's Visions Electronically Read And Displayed

Eleanor White's comments: Over decades of experience and among around 300 involuntary neuro-electromagnetic experimentees, there have been instances where two types of thought reading were evidently performed by the experimenters:

- Electronic reading of thoughts "said to one's self"
- Electronic viewing through the eyes of the experimentee

This article is about picking up recognizable images from a living brain (a cat's) and displaying those images on a screen. Keeping in mind that classified projects can be 20 or more years ahead of unclassified work (e.g. the SR-71 aircraft), the claims of the involuntary experimentees become much closer to believable in light of the unclassified work described below.

(\*\* NOTE: While pondering the technology here, the reader should also reflect on the apparent ease with which these experimenters can cut up a cat's skull, restrain it, in obvious discomfort and extreme unwillingness, to obtain this data. We 300 victims would like to point this out to show the world that this same callous attitude is what enables similar covert experimenters to torture us around the clock and completely shatter our lives.)

*A Cat's Eye Marvel*

by Leander Kahney

3:00 a.m. 7.Oct.99.PDT

In a dramatic demonstration of mind reading, neuroscientists have created videos of what a cat sees by using electrodes implanted in the animal's brain. Garrett Stanley of Harvard, and Fei Li and Yang Dan of the University of California, Berkeley, were able to reconstruct in startling detail scenes flashed before a cat's eyes.

.....  
Read ongoing Med-Tech coverage  
.....

The reconstructed scenes clearly demonstrate the scientist's ability to decode the language of the cat's visual system.

<http://www.raven1.net/p118.htm> revived by [www.hearingvoices-is-voicetoskull.com](http://www.hearingvoices-is-voicetoskull.com)

The researchers attached electrodes to 177 cells in an anesthetized cat's thalamus, a region of the brain falling about half-way in the visual processing pathway.

Having recorded patterns of firing as various scenes were flashed before the cat's eyes, the team was able to reconstruct very closely what the animal saw, which varied from people's faces to scenes of a dark forest.

The research was applauded by other neuroscientists.

"The demonstration that you can reconstruct a movie from the multiple cells in the thalamus is an important step in our understanding of how signals are represented in the activity of populations of cells," said Fred Rieke, an assistant professor of physiology and biophysics at the University of Washington.

Stanley, an assistant professor of biomedical engineering, said the research provides clues about how prosthetics may one day be wired into the mammalian nervous system. By understanding the language of the brain, scientists will be able to create devices that talk to it, he said.

"Trying to understand how the brain codes information leads to the possibility of replacing parts of the nervous system with an artificial device," he said.

Stanley predicted that in the next couple of decades, as more and more of the neural code is decoded, brain interfaces may start to appear.

But he cautioned it may take a lot longer. He noted that the team also recorded the activity of cells higher up in the cat's visual pathway -- in the visual cortex -- but the results were not as startling because of the greater complexity of the cells.

"So little is understood about thoughts, perceptions, dreams, it's impossible to predict how much progress we'll make in understanding them," he said.

However, Ken Miller, as associate professor at the University of California, San Francisco, said researchers around the world are using similar techniques to decode higher brain functions.

"These methods could be applied to further up the visual pathway," he said. "It will become more difficult ... but it's a promising direction."

The experiments were reported in the September 99 issue of the Journal of Neuroscience.

TR5.....MIND SWITCH - THINK APPLIANCES ON, OFF, OR ADJUST

Original link (March 2000):

[http://www.phys.uts.edu.au/~asearle/mind\\_switch/m\\_switch.html](http://www.phys.uts.edu.au/~asearle/mind_switch/m_switch.html)

#### OVERVIEW

The Mind Switch refers to the technology that has been developed which allows a person to turn on and off an electrical appliance, such as a desk lamp or TV in 2-3 seconds using EEG signals, without training. Proportional control, such as turning up or down the volume of a radio is also possible with the technology. This research is being carried at the University of Technology, Sydney (UTS).

#### BACKGROUND - General

Early in 1994 while studying the response of the brain to environmental factors Professor Ashley Craig and Mr Paul McIsaac of the Department of Health Sciences at UTS, noticed an effect which appears to be common among all persons. That effect is an increase in a particular brain signal when a person closes his/her eyes for more than one second. The important question that Ashley and Paul then asked was could this effect be used to do something useful?, ie - could the control of the brain signal be used, in turn, to control something else?

At this stage Ashley contacted Professor Tony Moon, the Dean of Science at UTS, to find out if anyone could help answer the technical questions and design a system that might exploit the apparent change in the signal level when a person closes his/her eyes. Professor Moon introduced Ashley to Assoc Prof Les Kirkup who is an associate professor in the department of Applied Physics at UTS, who has experience in developing electronics and instrumentation.

It was thought he could offer important input to the project. He was initially sceptical that signals as small as those that are present on the scalp, (where electrodes are placed to pick up brain activity) could be detected reliably and analysed sufficiently quickly to allow activation of an external device, such as a lamp or TV. The data that had been gathered on signal levels with eyes open and eyes closed showed that a significant increase occurred in the 8-13Hz part of the 'brain spectrum' commonly referred to as the 'alpha' region.

Les built a detection, discrimination and analysis system based on Ashley and Paul's data and, much to his surprise at least, the first person (Lucy) connected to the system showed the capability of operating a switch which could control an electrical appliance.

#### BACKGROUND - Technical

Serious work done on brain signals began with Berger in 1929 [Berger 1967]. Since that time the acquisition and analysis of brain signals, referred to as Electroencephalography (EEG) has advanced to such a state that EEG is regularly used to assist in the diagnosis of schizophrenia, epilepsy and brain tumours. [Geddes and Baker, 1989]. EEG has also been used in biofeedback studies in which subjects may learn to modify their EEG signals in response to visual representation of their EEG signals.

This control usually take weeks or months to learn and is not highly reliable. The system we have developed does NOT rely on any learned skill by an individual. It simply requires a person to close his/her eyes for more than 1 second to effect sufficient change in the signals levels to allow for the reliable operation of a switch. It turns out that it has been known for many years that increase in signal level occur upon eye closure, but this is the first example (to our knowledge) of the recognition of its potential and the exploitation of the effect.

The system used to detect the change in signals consists of amplifiers, filters and other signal processing elements (full DETAILS ARE STILL CLASSIFIED at the moment!). As there are other sources which can generate signals which can interfere with brain signals (and hence cause intermittent switching on and off of appliances) we have developed a noise suppression system which eliminates the effect of those noise sources. This feature is very important as we are currently developing the technology for disabled persons (we have a three year grant from the Motor Accident Authority of New South Wales, MAA) and reliability is a major issue. The funding from MAA has allowed us to appoint Mr Andrew Searle who has become a key figure in the technical developments regarding the Mind Switch.

<http://www.raven1.net/p122.htm> revived by [www.hearingvoices-is-voicetoskull.com](http://www.hearingvoices-is-voicetoskull.com)

In addition Mr Perez Moses is developing new noise suppression techniques to be applied in this work.

-----  
APPENDIX IMP1 - PROMOTION OF HUMAN IMPLANTATION BY NIH

THIS TEXT WAS COPIED FROM THE ORIGINAL NIH/CNCT WEB SITE AT THIS ADDRESS:

<http://www.engin.umich.edu/center/cnct/orgind.html>

Center for Neural Communication Technology Organization

The NIH NCRR requires that its Centers have several basic components: internal research projects, collaborative research projects, and service to external investigators in the form of distribution and training. The organization of the Center for Neural Communication Technology (CNCT) will be described here with links to more details on individual projects.

The underlying goal for all of the work conducted by the CNCT is to make multichannel recording and stimulation devices available to researchers which will enable them to more efficiently communicate with the brain. Micromachined electrodes offer the potential to extend small ensemble studies to tissue volume studies consisting of dozens if not hundreds of cells.

#### Internal Research Projects

There are three internal research projects under the Center which are designed to enhance the capability of the base technology:

##### Project 1, Extensions of Micromachined Microelectrode Technology:

Extend the basic structure of the device to include fluid carrying channels for delivery of fluids to tissue volume, and/or to lesion at recording/stimulation site locations.

##### Project 2, Biological Neural Networks:

Develop techniques for data acquisition from and analysis of neural circuits in the volume surrounding arrays of recording devices. The direction which has been proposed for this project over the next grant period will be to study the relationships between the physical characteristics of the devices and the architecture of the neural tissue to rationalize the process of design and experimentally explore and model the deterioration of chronic implants over time to improve their behavior. A recent poster presentation on data collected from the cochlear nucleus can be seen [on the original site.]

<http://www.raven1.net/p124.htm> revived by [www.hearingvoices-is-voicetoskull.com](http://www.hearingvoices-is-voicetoskull.com)

Project 3, Morphological Visualization and Assessment:

Explore the envelope of tissue surrounding stimulation, recording and/or chemical delivery probes for histological evidence of deterioration of probe performance which has been observed electrophysiologically in vivo.

#### Collaborative Research Projects

In addition to internal projects, there are multiple collaborative research projects with investigators outside the Center. Collaborators contribute significantly toward improving and expanding the use of the technology in areas including optimization of device designs, evaluation of chronic connectors, interconnects and cranial chambers, improvement of implantation methods, development of protocols for chronic electrode site maintenance, testing of advanced devices, and exploration of new application areas.

Here are links to webpages of some of our collaborators (more to come.....):

<http://osiris.rutgers.edu/Buzsaki.html>

Gyorgy Buzsaki, M.D., Ph.D., Rutgers University, Neural network activity in the hippocampal formation

<http://www.dbbs.wustl.edu/RIB/Highstein.html>

Steven Highstein, M.D. Ph.D., Washington University, Effects of microgravity upon the labyrinth

[http://msewww.engin.umich.edu/people/milty/protein\\_polymers.html](http://msewww.engin.umich.edu/people/milty/protein_polymers.html)

David Martin, Ph.D., University of Michigan, Microstructure and processing of bioactive protein polymers

<http://www.med.umich.edu/khri/censys/jmiddleb.htm>

John Middlebrooks, Ph.D., University of Michigan, Cortical representation of auditory space

Service to investigators outside of the CNCT is provided in the forms of distribution of probes, and training in their use.

Distribution has been a key component of the CNCT since its inception. In fact, it provided the main motivation for applying for the first NIH NCRR grant in 1994. To receive probes, we require that investigators fill out an application. Details of the variety of devices which we offer to the research public are outlined in a catalog. Standard devices are provided packaged appropriate for acute

<http://www.raven1.net/p125.htm> revived by [www.hearingvoices-is-voicetoskull.com](http://www.hearingvoices-is-voicetoskull.com)

use. Prior to receiving additional batches of probes, we require the submission of a feedback form so that we may track progress and use the data to better understand and improve the technology.

The CNCT offers several training opportunities to provide education and experience in the design, handling and application of multichannel probes.

APPENDIX IMP2 - ITALIAN DOCTOR REPORTS HUMAN IMPLANTATION

July 1999 Statement by an Italian Doctor Regarding Unusual Human Implants

This physician has requested anonymity but is well-known to the involuntary human experimentation community and can be contacted through some of us. Eleanor White

..... statement by Italian physician .....

"A physician of my acquaintance has repeatedly discovered metal objects implanted into a number of residents - normal people, workers - of small towns in the North-Western surroundings of Turin, towards the valley ending in the French frontier.

"These devices, to the best of my knowledge, are not for any therapeutic purpose. Knowing that people have been used for involuntary electronic implantation experiments, these patients may have also been implanted in this way. Further investigation would be needed to learn the truth about these metallic implants."

-----  
APPENDIX IMP3 - IMPLANT TRANSMITS PHYSIO- AND PSYCHO- PARAMETERS BY RADIO

Unclassified Read-by-Radio Implant Development Project

Eleanor White's comments on this posting: This posting describes unclassified wireless telemetry of bodily functions, used for benign and beneficial purposes. This is about monitoring BY RADIO.

The reason it is of interest to involuntary neuro-electromagnetic experimentees (military and intelligence) is that development programmes like this one show that both the WILL and the MEANS to track someone's bodily functions by radio EXIST, and exist RIGHT NOW.

People seeking to discredit us will say that such technology could not possibly be in use now, or in some cases, even exist. Keeping in mind the typical 20-year spread between classified and unclassified technology, as demonstrated by the SR-71 reconnaissance aircraft, it is clear that classified military and intelligence programmes have highly advanced methods of tracking a target's body functions.

ABSTRACT; Biopotential recordings of human psycho-physiological parameters are hampered in many field settings, and some laboratory and clinic settings, by the sensor technology.

*[Eleanor White's comment: Take SPECIAL NOTE of that word "PSYCHO"... that has great significance for neuro-electromagnetic experimentees!]*

Conventional electrodes which tether the subject to the signal amplification and recording equipment, are cumbersome to apply, often interfere with normal movements, are easily dislodged, and induce electrical noise due to the movement of the electrode wires carrying low level signals.

This project seeks to design essentially wireless electrode recording systems that use radio frequency telemetry to transmit the biopotential signal from the recording site to a body-worn transceiver and then to a remotely located receiver.

*[Eleanor White's comment: That means, radio signals THROUGH THE FLESH to an externally worn transceiver. The only difference between this UNclassified project and the involuntary neuro-electromagnetic experimentees is distance, which can be overcome with time.]*

The present subcontractor has developed transceiver and receiver technology that will be reviewed and customized as needed for the present application. The focus here will be on developing a generic design for the sensor subsystem ("telectrodes") to include the transducer interface with the skin, miniaturized amplifier and filter circuitry, an optimal connection between the transducers providing differential inputs to the amplifier, a longlasting but compact battery, and transmitter.

Phase I will consist of a design specification, development of a bench-top engineering prototype, design trade-off studies using the prototype, and the delineation of a detail design.

Intracerebral Radio Stimulation and Recording in Completely Free Patients  
Dr. Jose M. R. Delgado  
[EW: An MKULTRA perpetrator, yet unpunished. Intracerebral = in the brain]

Diagnosis and treatment of focal brain dysfunction associated with behavioral abnormalities are complex tasks which require more effective exploratory techniques. Intracerebral electrodes, electrocorticographical studies, and subsequent discrete neurosurgery have given the epileptologist and stereotaxic surgeon new possibilities for clinical investigation which as yet have been applied to only a small percentage of the patients suffering from neurological disorders including temporal-lobe epilepsy and related episodic behavior problems.

In these therapeutic studies, recordings and <i>stimulation</i> of any chosen cerebral structure can be performed over a period of days or weeks, and neuronal sites identified as triggers for abnormal electrical patterns associated with behavioral disturbances can be destroyed by electrolysis or resection.

Unfortunately in some patients episodic behavior disorders may be more disabling than their epileptic seizures, and focal lesions may improve one syndrome without modifying the other. Furthermore, recording and stimulation are usually performed under conditions which qualify their usefulness, because the patients' mobility is limited by connecting leads, and the behavior is likewise altered by the stressful and artificial environment of the recording room.

[Inset] Reprinted from <i>The Journal of Nervous and Mental Disease</i>, copyright [copy unreadable] by the Williams and Wilkins Company, Vol. 147, No. 4. Reproduced by permission.

1 Research and instrumental development from the construction of the stimoeiver was supported by the United States Air Force, 6571st Aeromedical Research Laboratory F 29600-67-C-0058. Additional support for our research was provided by the United States Public Health Service, M-2004, and the Office of Naval Research, 609 (48).

The circuit for EEG recording is a modified version of the unit described by Meehan (1965), and his help in providing us with the information and one of his units is gratefully acknowledged. The help of Mr. Per Ha...[unreadable] developing telestimulation is also gratefully acknowledged.

During the last few years, methodology has been developed to stimulate and record the electrical activity of the brain in completely unrestrained monkeys and chimpanzees (Delgado, 1967; Delgado and Mir, in press). This procedure should be of considerable clinical interest because *it permits exploration of the brain for unlimited periods* without disturbing their rest or normal spontaneous activities. [EW: Dr. Delgado, you are all heart!]

This paper reports instrumentation used and clinical application in four patients with psychomotor epilepsy in whom electrodes had been implanted in the temporal lobes. To our knowledge, this is the first use of intercerebral radio stimulation and recording in man.

#### METHODS

page 185

##### *Implantation of electrodes*

Electrodes were constructed and stereotaxically implanted according to methods previously described (Mark & Ervin, 1969). The electrode assemblies which were connected to a McPherson skull plug, consisted of a plastic stylet, 1.2 mm in diameter, with 15 stainless steel 1 mm wide contacts at 3 mm intervals, plus one thermistor and three other contacts at the tip.

Using a McPherson Type 2 stereotaxic machine (Mark & Ervin, 1969), electrode assemblies were implanted bilaterally into the anterior medial amygdala of each patient.

##### *Radio Stimulation*

This system consists of two instruments: (1) the RF transmitter that measures 30 cm x 25 cm x 15 cm and includes the circuitry for controlling repetition rate, duration, and amplitude (intensity) of the stimulating pulse. The repetition rate may be varied in steps between 10 and 100 Hz and the duration between 0.1 and 1.5 millisecc. Single pulses may also be generated.

Intensity control is accomplished by varying the frequency of the three subcarrier oscillators that operate in the 100 to 200 kHz frequency range. A 100 MHz oscillator is turned on and off by the pulse train from the subcarrier oscillators. The duration of this pulse is determined by the pulse-duration switch. These bursts of 100 MHz RF energy are received by (2) the receiver-stimulator which is carried by the subject, measures 3.7 cm x 3.0 cm x 1.4 cm, and weighs 20 grams.

The solid-state circuitry is encapsulated in epoxy resin which provides it with very good mechanical strength and makes it waterproof. Space for the 9 volt mercury battery is included in the size mentioned above.

After RF detection, the resulting subcarrier frequency is demodulated into an amplitude. This amplitude controls the current intensity of the stimulation pulse by means of a constant current transistor in the output circuit of the receiver. This method makes the pulse intensity independent of biological impedance changes over a wide range. Under average stimulation conditions, the battery life is approximately one week.

*Operating range is up to 100 feet.*

[EW: This is prototype equipment, unclassified, and operating sometime in the 1970s. Imagine classified equipment at the end of the 20th century!]

Three channels of stimulation are available. The pulse intensity of each channel can be controlled individually from the transmitter. The pulse duration and repetition rate are the same for all three channels.

#### *Encephalographic (EEG) Telemetry*

A miniature FM-FM amplifier-transmitter combination and telemetry receiver are used for this purpose. (1) The transmitting circuitry, carried by the subject, consists of an EEG amplifier with a gain of 100, input impedance of 2 megohms, frequency response from 2 to 200 Hz, and a voltage-controlled oscillator (VCO) for each channel. The VCO operates in one of the frequency bands assigned for subcarrier oscillators by the IRIG standards.

In these studies, a three-channel system was used which operated on IRIG channels (Delgado & Hamlin, 1962; Delgado & Mir, in press; Fonberg and Delgado, 1961). The outputs of all three subcarrier oscillators were summed and connected to the single RF transmitter module.

The miniaturized RF transmitter operates at 216 MHz and its range is 50 to 200 feet, depending on the environment. The size of the three channel unit, including the battery, is 4.5 cm x 4.5 cm x 1.5 cm and it weighs 50 grams.

<http://www.raven1.net/p133.htm> revived by [www.hearingvoices-is-voicetoskull.com](http://www.hearingvoices-is-voicetoskull.com)

The signals from the depth electrodes are received by the amplifier. The output signal of the amplifier controls the frequency of the subcarrier oscillator, and the oscillator output in turn controls the frequency of the transmitter.

(2) After amplification of the received signal from the transmitter has been demodulated, the composite subcarrier signals are connected to the inputs of the three discriminators, which then separate and demodulate their respective subcarriers to obtain the telemetered analog information. In the instrumentation used in this instance, a 100 microvolt signal at the input of EEG amplifier resulted in a 1-volt output from the corresponding discriminator in the receiver.

The analog output signals from the receiver were connected to the inputs of an EEG recorder and a magnetic tape recorder.. A microphone was also mounted in the room with the subjects and conversation was also recorded along with the EEG on magnetic tape.

[EW: So much for the idea that human implantation and MILITARY PARTICIPATION therein is only a myth.]

-----  
APPENDIX IMP5 ... UNCLASSIFIED SATELLITE TRACKING HUMAN IMPLANT SYSTEM

SIGHTINGS

World's First Satellite-Tracked Human Implant Device

Applied Digital Solutions, Inc.

12-17-99

Eleanor White's comments: This article clearly shows both availability of technology, (the classified world has certainly had this for some time), and intent to produce satellite-based human tracking implants.

Unequivocally.

.....  
PALM BEACH, FLORIDA - Applied Digital Solutions, Inc. today announced that it has acquired the patent rights to a miniature digital transceiver - which it has named "Digital Angel" -- that can be used for a variety of purposes, such as providing a tamper-proof means of identification for enhanced e-business security, locating lost or missing individuals, tracking the location of valuable property and monitoring the medical conditions of at-risk patients.

In the agreement signed last week, ADS acquired the right to develop this unique product itself for all of its applications or to sublicense the development of specific applications to other entities. A special technology group has been formed within ADS to supervise the development of the device.

The implantable transceiver sends and receives data and can be continuously tracked by GPS (Global Positioning Satellite) technology. The transceiver's power supply and actuation system are unlike anything ever created. When implanted within a body, the device is powered electromechanically through the movement of muscles, and it can be activated either by the "wearer" or by the monitoring facility. A novel sensation feedback feature will even allow the wearer to control the device to some degree. The "smart" device is also small enough to be hidden inconspicuously on or within valuable personal belongings and priceless works of art.

Commenting on Digital Angel's many potential applications, Richard J. Sullivan, Chairman and CEO of Applied Digital Solutions, Inc. (ADS), said: "We believe its potential for improving individual and e-business security and enhancing the quality of life for millions of people is virtually limitless. Although we're in the early developmental phase, we expect to come forward with applications in many different areas, from medical monitoring to law enforcement. However, in keeping with

<http://www.raven1.net/p135.htm> revived by [www.hearingvoices-is-voicetoskull.com](http://www.hearingvoices-is-voicetoskull.com)

our core strengths in the e-business to business arena, we plan to focus our initial development efforts on the growing field of e-commerce security and user ID verification."

Sullivan added that the multi-purpose technology would enable ADS to tap into a vast global market, through licensing and other commercial arrangements, with an estimated total value in excess of \$100 billion. "The e-business to business security market alone could reach as high as \$10 to \$12 billion in the near future," Sullivan added.

ADS is actively seeking joint venture partners to help develop and market the unique technology. The company expects to create a working prototype by the end of next year.

Applied Digital Solutions, Inc. is an e-business to business solutions provider offering Internet, telecom, LAN and software services to a wide variety of businesses throughout North America. For more information, visit the Company's web site at:

POSTSCRIPT

Advances in neuroscience 'may threaten human rights'  
Nature Magazine - January 22, 1998

Paris. Neuroscience is being increasingly recognized as posing a potential threat to human rights, just as another area of biology -- research in human genomics -- may lead to an excessive focus on genetic determinism and raises the spectre of genetic discrimination. This was one of the conclusions to emerge from the annual public meeting of the French national bioethics committee held last week in Paris on the theme of 'Science and Racism'.

Jean-Pierre Changeux, the chairman of the committee and a neuroscientist at the Institut Pasteur in Paris, told the meeting that understanding the working of the human brain is likely to become one of the most ambitious and rich disciplines of the future.

"But neuroscience also poses potential risks", he said, arguing that advances in cerebral imaging make the scope for invasion of privacy immense. Although the equipment needed is still highly specialized, it will become commonplace and capable of being used at a distance, he predicted. That will open the way for abuses such as invasion of personal liberty, control of behaviour and brainwashing. These are far from being science-fiction concerns, said Changeux, and constitute "a serious risk to society".

Denis Le Bihan, a researcher at the French Atomic Energy Commission, told the meeting that the use of imaging techniques has reached the stage where "we can almost read people's thoughts".

The national bioethics committee is taking such threats so seriously that it is launching a study to consider the issues and recommend possible precautions. The study will also cover more immediate issues such as the legal question of whether criminals are responsible for their actions; Changeux predicts an increase in defence arguments based on irresponsibility due to a genetic predisposition to certain types of behaviour.

In closing the meeting, Claude Allegre, the minister for national education, research and technology, hinted at the creation of a revamped parliamentary office of technology assessment, arguing that the national bioethics committee's approach in the life sciences needed to be applied to other areas of science.

TOTAL POLICE STATE TAKEOVER  
The Secret Patriot Act II Destroys What Is Left of American Liberty

A Brief Analysis of the Domestic Security Enhancement Act 2003, Also Known as Patriot Act II

By [Alex Jones](#)

[www.infowars.com](http://www.infowars.com)

(Posted Feb 10, 2003)

[Congressman Ron Paul](#) (R-Tex) told the Washington Times that no member of Congress was allowed to read [the first Patriot Act](#) that was passed by the House on October 27, 2001. The first Patriot Act was universally decried by civil libertarians and Constitutional scholars from across the political spectrum. William Safire, while writing for the New York Times, described the first Patriot Act's powers by saying that President Bush was seizing dictatorial control.

On February 7, 2003 the [Center for Public Integrity](#), a non-partisan public interest think-tank in DC, revealed the full text of the Domestic Security Enhancement Act of 2003. The classified document had been leaked to them by an unnamed source inside the Federal government. The document consisted of a 33-page section by section analysis of the accompanying 87-page bill.

\*Note: On February 10, 2003 I discovered that not only was there a house version that had been covertly brought to Hastert, but that many provisions of the now public Patriot Act II had already been introduced as pork barrel riders on Senate Bill S. 22. Dozens of subsections and even the titles of the subsections are identical to those in the House version. This is very important because it catches the Justice Department in a bald-faced lie. The Justice Department claimed that the secret legislation brought into the House was only for study, and that at this time there was no intention to try and pass it. Now upon reading S. 22, it is clear that the leadership of the Senate is fully aware of the Patriot Act II, and have passed these riders out of their committees into the full bill. I spent two hours scanning through S. 22 and, let me tell you, it is a nightmare for anyone who loves liberty. It even contains the Our Lady of Peace Act that registers all gun owners. It bans the private sale of all firearms, creates a Federal ballistics database, and much more.

There are other bills in the Senate that grant the Federal government sweeping powers. S.45 states in section one that the office for State and local government coordination for Homeland Security will no longer just oversee, but that now local cities critical functions will be headed by a Federal director. On Tuesday, February 11th, we noted a story in *The Times-Picayune* with the headline: Nagin announces major overhaul of City Hall --New Homeland Security office to oversee cops, firemen, emergency agency. The Federal power-grab taking place is widespread and all Americans must mobilize to resist it.

Another interesting bill is S. 16. S. 16 is a smorgasbord of Federal funding and control over local police departments and needs to be examined closely.

S. 89, The Universal National Service Act of 2003 is the hallmark of an authoritarian society. The description of the bill is, "To provide for the common defense by requiring that all young persons in the United States, including women, perform a period of military service or civilian service in furtherance of the national defense and homeland security, and for other purposes." We have looked at some of the programs that the Federal government has already been setting up for service here in the "homeland" and they include East German-style tattletale squads of every type, which are just basically a super TIPS program. The nightmare goes on and on. Check it out for yourself.

The Patriot Act II bill itself is stamped "Confidential -Not for Distribution." Upon reading the analysis and bill, I was stunned by the scientifically crafted tyranny contained in the legislation. The Justice Department Office of Legislative Affairs admits that they had indeed covertly transmitted a copy of the legislation to Speaker of the House Dennis Hastert, (R-IL) and the Vice President of the United States, Dick Cheney as well as the executive heads of federal law enforcement agencies.

It is important to note that no member of Congress was allowed to see the first Patriot Act before its passage, and that no debate was tolerated by the House and Senate leadership. The intentions of the White House and Speaker Hastert concerning Patriot Act II appear to be a carbon copy replay of the events that led to the unprecedented passage of the first Patriot Act.

There are two glaring areas that need to be looked at concerning this new legislation:

1. The secretive tactics being used by the White House and Speaker Hastert to keep even the existence of this legislation secret would be more at home in Communist China than in the United States. The fact that Dick Cheney publicly managed the steamroller passage of the first Patriot Act, insuring that no one was allowed to read it and publicly threatening members of Congress that if they didn't vote in favor of it that they would be blamed for the next terrorist attack, is by the White House's own definition terrorism. The move to clandestinely craft and then bully passage of any legislation by the Executive Branch is clearly an impeachable offence.

2. The second Patriot Act is a mirror image of powers that Julius Caesar and Adolf Hitler gave themselves. Whereas the First Patriot Act only gutted the First, Third, Fourth and Fifth Amendments, and seriously damaged the Seventh and the Tenth, the Second Patriot Act reorganizes the entire Federal government as well as many areas of state government under the dictatorial control of the Justice Department, the Office of Homeland Security and the FEMA NORTHCOM military command. The Domestic Security Enhancement Act 2003, also known as the Second Patriot Act is by its very structure the definition of dictatorship.

I challenge all Americans to study the new Patriot Act and to compare it to the Constitution, Bill of Rights and Declaration of Independence. Ninety percent of the act has nothing to do with terrorism and is instead a giant Federal power-grab with tentacles reaching into every facet of our society. It strips American citizens of all of their rights and grants the government and its private agents total immunity.

Here is a quick thumbnail sketch of just some of the draconian measures encapsulated within this tyrannical legislation:

**SECTION 501** (Expatriation of Terrorists) expands the Bush administration's "enemy combatant" definition to all American citizens who "may" have violated any provision of Section 802 of the first Patriot Act. (Section 802 is the new definition of domestic terrorism, and the definition is "any action that endangers human life that is a violation of any Federal or State law.") Section 501 of the second Patriot Act directly connects to

Section 125 of the same act. The Justice Department boldly claims that the incredibly broad Section 802 of the First USA Patriot Act isn't broad enough and that a new, unlimited definition of terrorism is needed.

Under Section 501 a US citizen engaging in lawful activities can be grabbed off the street and thrown into a van never to be seen again. The Justice Department states that they can do this because the person "had inferred from conduct" that they were not a US citizen. Remember Section 802 of the First USA Patriot Act states that any violation of Federal or State law can result in the "enemy combatant" terrorist designation.

**SECTION 201** of the second Patriot Act makes it a criminal act for any member of the government or any citizen to release any information concerning the incarceration or whereabouts of detainees. It also states that law enforcement does not even have to tell the press who they have arrested and they never have to release the names.

**SECTION 301 and 306** (Terrorist Identification Database) set up a national database of "suspected terrorists" and radically expand the database to include anyone associated with suspected terrorist groups and anyone involved in crimes or having supported any group designated as "terrorist." These sections also set up a national DNA database for anyone on probation or who has been on probation for any crime, and orders State governments to collect the DNA for the Federal government.

**SECTION 312** gives immunity to law enforcement engaging in spying operations against the American people and would place substantial restrictions on court injunctions against Federal violations of civil rights across the board.

**SECTION 101** will designate individual terrorists as foreign powers and again strip them of all rights under the "enemy combatant" designation.

**SECTION 102** states clearly that any information gathering, regardless of whether or not those activities are illegal, can be considered to be clandestine intelligence activities for a foreign power. This makes news gathering illegal.

**SECTION 103** allows the Federal government to use wartime martial law powers domestically and internationally without Congress declaring that a state of war exists.

**SECTION 106** is bone-chilling in its straightforwardness. It states that broad general warrants by the secret FSIA court (a panel of secret judges set up in a star chamber system that convenes in an undisclosed location) granted under the first Patriot Act are not good enough. It states that government agents must be given immunity for carrying out searches with no prior court approval. This section throws out the entire Fourth Amendment against unreasonable searches and seizures.

**SECTION 109** allows secret star chamber courts to issue contempt charges against any individual or corporation who refuses to incriminate themselves or others. This sections annihilate the last vestiges of the Fifth Amendment.

**SECTION 110** restates that key police state clauses in the first Patriot Act were not sunsetted and removes the five year sunset clause from other subsections of the first Patriot Act. After all, the media has told us: "this is the New America. Get used to it. This is forever."

**SECTION 111** expands the definition of the "enemy combatant" designation.

**SECTION 122** restates the government's newly announced power of "surveillance without a court order."

**SECTION 123** restates that the government no longer needs warrants and that the investigations can be a giant dragnet-style sweep described in press reports about the Total Information Awareness Network. One passage reads, "thus the focus of domestic surveillance may be less precise than that directed against more conventional types of crime."

\*Note: Over and over again, in subsection after subsection, the second Patriot Act states that its new Soviet-type powers will be used to fight international terrorism, domestic terrorism and other types of crimes. Of course the government has already announced in Section 802 of the first USA Patriot act that any crime is considered domestic terrorism.

**SECTION 126** grants the government the right to mine the entire spectrum of public and private sector information from bank records to educational and medical records. This is the enacting law to allow ECHELON and the Total Information Awareness Network to totally break down any and all walls of privacy.

The government states that they must look at everything to "determine" if individuals or groups might have a connection to terrorist groups. As you can now see, you are guilty until proven innocent.

**SECTION 127** allows the government to takeover coroners' and medical examiners' operations whenever they see fit. See how this is like Bill Clinton's special medical examiner he had in Arkansas that ruled that people had committed suicide when their arms and legs had been cut off.

**SECTION 128** allows the Federal government to place gag orders on Federal and State Grand Juries and to take over the proceedings. It also disallows individuals or organizations to even try to quash a Federal subpoena. So now defending yourself will be a terrorist action.

**SECTION 129** destroys any remaining whistleblower protection for Federal agents.

**SECTION 202** allows corporations to keep secret their activities with toxic biological, chemical or radiological materials.

**SECTION 205** allows top Federal officials to keep all their financial dealings secret, and anyone investigating them can be considered a terrorist. This should be very useful for Dick Cheney to stop anyone investigating Haliburton.

**SECTION 303** sets up national DNA database of suspected terrorists. The database will also be used to "stop other unlawful activities." It will share the information with state, local and foreign agencies for the same purposes.

**SECTION 311** federalizes your local police department in the area of information sharing.

**SECTION 313** provides liability protection for businesses, especially big businesses that spy on their customers for Homeland Security, violating their privacy agreements. It goes on to say that these are all preventative measures – has anyone seen Minority Report? This is the access hub for the Total Information Awareness Network.

**SECTION 321** authorizes foreign governments to spy on the American people and to share information with foreign governments.

**SECTION 322** removes Congress from the extradition process and allows officers of the Homeland Security complex to extradite American citizens anywhere they wish. It also allows Homeland Security to secretly take individuals out of foreign countries.

**SECTION 402** is titled "Providing Material Support to Terrorism." The section reads that there is no requirement to show that the individual even had the intent to aid terrorists.

**SECTION 403** expands the definition of weapons of mass destruction to include any activity that affects interstate or foreign commerce.

**SECTION 404** makes it a crime for a terrorist or "other criminals" to use encryption in the commission of a crime.

**SECTION 408** creates "lifetime parole" (basically, slavery) for a whole host of crimes.

**SECTION 410** creates no statute of limitations for anyone that engages in terrorist actions or supports terrorists. Remember: any crime is now considered terrorism under the first Patriot Act.

**SECTION 411** expands crimes that are punishable by death. Again, they point to Section 802 of the first Patriot Act and state that any terrorist act or support of terrorist act can result in the death penalty.

**SECTION 421** increases penalties for terrorist financing. This section states that any type of financial activity connected to terrorism will result to time in prison and \$10-50,000 fines per violation.

**SECTIONS 427** sets up asset forfeiture provisions for anyone engaging in terrorist activities.

There are many other sections that I did not cover in the interest of time. The American people were shocked by the despotic nature of the first Patriot Act. The second Patriot Act dwarfs all police state legislation in modern world history.

Usually, corrupt governments allow their citizens lots of wonderful rights on paper, while carrying out their jackbooted oppression covertly. From snatch and grab operations to warrantless searches, Patriot Act II is an Adolf Hitler wish list.

You can understand why President Bush, Dick Cheney and Dennis Hastert want to keep this legislation secret not just from Congress, but the American people as well. Bill Allison, Managing Editor of the Center for Public Integrity, the group that broke this story, stated on my radio show that it was obvious that they were just waiting for another terrorist attack to opportunistically get this new bill through. He then shocked me with an insightful comment about how the Federal government was crafting this so that they could go after the American people in general. He also agreed that the FBI has been quietly demonizing patriots and Christians and "those who carry around pocket Constitutions."

I have produced two documentary films and written a book about what really happened on September 11<sup>th</sup>. The bottom line is this: the military-industrial complex carried the attacks out as a pretext for control. Anyone who doubts this just hasn't looked at the mountains of hard evidence.

Of course, the current group of white collar criminals in the White House might not care that we're finding out the details of their next phase. Because, after all, when smallpox gets released, or more buildings start blowing up, the President can stand up there at his lectern suppressing a smirk, squeeze out a tear or two, and tell us that "See I was right. I had to take away your rights to keep you safe. And now it's your fault that all of these children are dead." From that point on, anyone who criticizes tyranny will be shouted down by the paid talking head government mouthpieces in the mainstream media.

You have to admit, it's a beautiful script. Unfortunately, it's being played out in the real world. If we don't get the word out that government is using terror to control our lives while doing nothing to stop the terrorists, we will deserve what we get - tyranny. But our children won't deserve it.

## **When Judges Ignore Abuse, Suicide Can Result**

**May 2003**

The story below demonstrates the urgent need for ongoing review of and punishment for judges who ignore abuse claims by children and effectively sentence the children to more atrocities. In this case, a theory by a child psychiatrist which has no merit and has been used to mete out gross INjustice to thousands of abused children, has been used by judges on an ongoing basis, corrupting case law for future cases too.

This kind of government crime is why we have badly needed organizations to monitor and protest. Here are some such organizations:

<http://www.judicialwatch.org>

[http://www.jail4judges.org/national\\_001.htm](http://www.jail4judges.org/national_001.htm)

<http://www.skolnicksreport.com>

Even though some allegations of abuse may be spiteful, no judge has the right to ignore the allegations. This is especially true where the children involved either confirm the allegations, or get defensive and silent when asked. The case below actually had corroborating evidence and the judge STILL ignored it.

[One example](#) of how judges and other powerful people can be corrupted beyond belief, and actually have pedophilic motives and connections.

"Parental Alienation Syndrome". The theory - one of the most insidious pieces of junk science to be given credence by US courts in recent years"

Dr Richard A. Gardner - Child psychiatrist who developed the theory of Parental Alienation Syndrome 5/31/03 (deceased 5/25/03) "In a contentious child custody dispute in the suburbs of Pittsburgh a few years ago, three teenage boys begged a family court judge not to force them to continue visits to their father because, they said, he was physically abusive towards them. Rather than believe the boys, the judge relied on the testimony of an expert witness retained by the father, a Columbia University professor of clinical psychiatry, Richard A. Gardner.

Gardner insisted the boys were lying as a result of brainwashing by their mother and recommended something he called "threat therapy".

Essentially, the Grieco boys were told they should be respectful and obedient on visits to their father and, if they were not, their mother would go to jail. Shortly afterwards, 16-year-old Nathan Grieco, the eldest of the brothers, hanged himself in his bedroom, leaving behind a diary in which he wrote that life had become an "endless torment".

Both Gardner and the court were unrepentant even after the suicide, and it was only after an expose in the local newspaper that custody arrangements for the two surviving boys were changed.

This "threat therapy" was part of a much broader theory of Gardner's known in family courts across the United States as "Parental Alienation Syndrome". The theory - one of the most insidious pieces of junk science to be given credence by US courts in recent years - holds that any mother who accuses her spouse of abusing the children is lying more or less by definition. She tells these lies to "alienate" the children from their father, a shocking abrogation of parental responsibility for which she deserves to lose all custody rights in favour of the alleged abuser. This is not only tawdry logic, guaranteed from the outset to protect the interests of divorcing fathers, by far Gardner's most enthusiastic constituency, but it has also destroyed the lives of hundreds, maybe thousands, of American families over the past 15 years.

In state after state, courts deferred to Gardner's academic credentials and put children in the custody of their alleged abuser, even in cases where police records, medical records and testimony by teachers and social workers supported the mother's accusations. By now, the concept of "parental alienation" has entered case law and swayed thousands of disputes in which Gardner himself played no part. Yet it has no scientific basis whatsoever. It is not recognised by the American Psychiatric Association or any other professional body."

An obituary for Richard A. Gardner, MD:

Richard Gardner, 72, Dies; Cast Doubt on Abuse Claims By Stuart Lavietes "His theory has provoked vehement opposition from some mental health professionals, child abuse experts and lawyers. Critics argue that it lacks a scientific basis, noting that the American Psychiatric Association and the American Medical Association have not recognized it as a syndrome. They also say that the theory is biased against women, as allegations of abuse are usually directed at fathers, and that it is used as a weapon by lawyers seeking to undermine a mother's credibility in court."

<http://www.nytimes.com/2003/06/09/obituaries/09GARD.html>

Selected Quotes from Richard A. Gardner, M.D.

"At the present time, the sexually abused child is generally considered to be the victim," though the child may initiate sexual encounters by 'seducing' the adult."

Gardner, Richard A., Child Custody Litigation (1986), p.93

Sexualizing children can have procreative purposes, because a sexualized child is more likely to reproduce at an earlier age. "The younger the survival machine at the time sexual urges appear, the longer will be the span of procreative capacity, and the greater the likelihood the individual will create more survival machines in the next generation."

Gardner, Richard A., True and False Accusations of Child Sex Abuse (1992), pp.24-25

"It is of interest that of all the ancient peoples it may very well be that the Jews were the only ones who were punitive toward pedophiles."

Ibid. pp.46-47

Many child advocates are "charlatans, and/or psychopaths, and/or incompetents."

Ibid. p.526

"It is extremely important for therapists to appreciate that the child who has been genuinely abused may not need psychotherapeutic intervention."

Ibid. p.535

"There is a whole continuum that must be considered here, from those children who were coerced and who gained no pleasure (and might even be considered to have been raped) to those who enjoyed immensely (with orgasmic responses) the sexual activities."

Ibid. p.548

"Older children may be helped to appreciate that sexual encounters between an adult and a child are not universally considered to be reprehensible act. The child might be told about other societies in which such behavior was and is considered normal. The child might be helped to appreciate the wisdom of Shakespeare's Hamlet, who said, 'Nothing's either good or bad, but thinking makes it so.' In such discussions the child has to be helped to appreciate that we have in our society an exaggeratedly punitive and moralistic attitude about adult-child sexual encounters."

Ibid. p.549

"If the mother has reacted to the abuse in a hysterical fashion, or used it as an excuse for a campaign of denigration of the father, then the therapist does well to try and 'sober her up'... Her hysterics... will contribute to the child's feeling that a heinous crime has been committed and will thereby lessen the likelihood of any kind of rapprochement with the father. One has to do everything possible to help her put the 'crime' in proper perspective. She has to be helped to appreciate that in most societies in the history of the world, such behavior was ubiquitous, and this is still the case."

Ibid. p.584-585

"Mothers who have been sexually abused as children may have residual anger toward her molesting father or other sexual molester, and this may be interfering with her relationship with her husband. This should be explored in depth, and she should be helped to reduce such residual anger... Perhaps she can be helped to appreciate that in the history of the world his behavior has probably been more common than the restrained behavior of those who do not sexually abuse their children."

Ibid. p.585

"It is likely that the mother has sexual problems... In many cases she herself was sexually molested as a child... She may never have achieved an orgasm -- in spite of the fact that she was sexually

molested, in spite of the fact that she had many lovers, and in spite of the fact that she is now married. The therapist, then, does well to try to help her achieve such gratification. Verbal statements about the pleasures of orgasmic response are not likely to prove very useful. One has to encourage experiences, under proper situations of relaxation, which will enable her to achieve the goal of orgasmic response... Vibrators can be extremely useful in this regard, and one must try to overcome any inhibition she may have with regard to their use... her own diminished guilt over masturbation will make it easier for her to encourage the practice in her daughter, if this is warranted. And her increased sexuality may lessen the need for her husband to return to their daughter for sexual gratification."

Ibid. pp.584-585

"If he [the molesting father] doesn't know this already, he has to be helped to appreciate that pedophilia has been considered the norm by the vast majority of individuals in the history of the world. He has to be helped to appreciate that, even today, it is a widespread and accepted practice among literally billions of people. He has to appreciate that in our Western society especially, we take a very punitive and moralistic attitude toward such inclinations... He has had a certain amount of back [sic] luck with regard to the place and time he was born with regard to social attitudes toward pedophilia. However, these are not reasons to condemn himself."

Ibid. pp.593

"Of relevance here is the belief by many of these therapists that a sexual encounter between an adult and a child -- no matter how short, no matter how tender, loving, and non-painful -- automatically and predictably must be psychologically traumatic to the child... The determinant as to whether the experience will be traumatic is the social attitude toward these encounters."

Ibid. pp.670-71

"I believe it is reasonable to say that at this time there are millions of people in the United States who are either directly accusing or supporting false sex-abuse accusations and/or are reacting in an extremely exaggerated fashion to situations in which bona fide sex abuse has occurred."

Ibid. p.688

Mandated reporting of child abuse has resulted in the "reporting of the most frivolous and absurd accusations by two- and three-year-olds, vengeful former wives, hysterical mothers of nursery school children, and severely disturbed women against their elderly fathers."

Gardner, Richard A., Issues in Child Abuse Accusations, 5(1), p.26

"We need well-publicized civil lawsuits against incompetent and/or overzealous psychologists, psychiatrists, social workers, child protection workers, 'child advocates,' police, and detectives whose ineptitude has promulgated a false accusation."

Ibid. p.26
