"Officially, the scientists working on this megalomaniac transmitter want to study the ionosphere. Unofficially, HAARP will use the ionosphere, turning it into an energy weapon. The ionosphere is the layer located above the stratosphere and consists of highly energized ionized particles. It begins at an altitude of 48 km and ends at an altitude of 600 km above the Earth. This layer, with its high energy density, is crucial for our planet because it plays a key role as a shield, like the ozone layer. IT protects us from the Sun's harmful emissions. The ionosphere "captures" the electrically charged particles born out of solar and galactic "winds and storms." It is also known that the research carried out for the past century by a series of scientists has highlighted the fact that this "energy mantel" protecting the Earth could, using the right technology, become a strategic weapon of crucial importance."

"HAARP is based on the research of Bernard Eastlund, who was himself inspired by the work of Nikola Tesla, a Croatian scientist. (passage omitted)"

"Just under a century later, Bernard Eastlund simply adapted Tesla's initial work in the he area of electromagnetic energy. Between 1987 and 1994 he applied for 12 patents, serving as the structure of the HAARP project and the weapons technology derived from it. The real owner and operator of these patents is no longer Eastlund (who ended up getting kicked off the project for obscure reasons), but the Atpl-Arco Company-- an oil consortium serving as a front for the Navy, Air Force, and US defense Department. Since Eastlund applied for the patents, all research in the area of electromagnetic energy--for, say medical purposes-- has been blocked. As a result a vast and highly promising field of science and medicine has been monopolized by interests with ties to the US Army. (passage omitted)"

## Overall Conclusions

1. Beneficial medical research has been suppressed as a result of emr weapons development.
2. Military experts are discussing classified emr space weapons to control behavior because of the need for public accountability.
3. The information on mind control weapons is limited. All of the open sources state repetitive facts. The Soviets admit to athermal weapon effects and the existence of mind control

weapons. The U.S. position in all of the sources is that the Soviets have mind control technology. The U.S. admits to nothing else.

### Short Comments

Dr. Stefan Possony was a Stanford Hoover Institute fellow and was called "the intellectual father of `Star Wars'" and "one of the most influential civilian strategic planners in the Pentagon" (Guardian, 1995, obituary).

The following significant article was written by Dr. Possony, who was the founder of International Strategic Studies Association and former psychological warfare expert with the Office of Naval Research.

Dr. Possony was an influential scholar and public figure. He openly discussed Russian mind control and its importance as a weapon. In this article, he publicly asks the questions that few people `in the know' would ever dare to discuss in public. Dr. Possony asks his readers, "Who is so rash as to doubt that technological breakthroughs of this general type would not be put promptly to psyops use? More importantly who would seriously assume that such a technology would not be deployed to accomplish political and military surprise?" Given the history of the cold war, information on emr mind control weapons and the growing list of scientific and public figures seriously discussing emr mind control weapons, this article is a clear indicator of large, classified mind control programs in the east and west.

Dr. Possony describes the feasibility of communicating directly with the brain using emr and developing emr weapons.

Dr. Possony discussed the microwave bombardment of the Moscow Embassy and inferred that the State Department lied about athermal health effects from the microwave irradiation. Dr. Possony states that molecular vibrations caused by a stimulating extracellular electromagnetic field are non-linear and that this is the basis of new technology that will be extraordinarily significant in medicine, communications, intelligence and psychological operations and permit deliberate physiological impairment. Dr. Possony states that the "KGB is known to be interested in the program...and the USSR has a lead of approximately 25 years".

The science described in the article can be substantiated by the athermal weapons theory, the basis of the Pentagon's 1990s nonlethal emr weapons program. Looking back, the denials by the State Dept. about athermal emr health effects were lies for national security reasons, as Dr. Possony indicated. Looking back almost twenty years, Dr. Possony's article is too historically factually true to be propaganda or rumor. Given Dr. Possony's credentials, and the verified scientific facts regarding mind control weapons, this article is very serious and believable evidence. It is an extremely important point to emphasize as victims are constantly faced with denials that mind control technology exists, let alone the fact that it is developed as a weapon and tested illegally on people.

Here are a few highlights from the article.

Then the entire article, with its many research leads is presented in its entirety.

"Suppose it becomes feasible to affect brain cells by low frequency waves or beams, thereby altering psychological states, and making it possible to transmit suggestions and commands directly into the brain."

"A few years ago there was much excitement about the Soviet microwave "bombardment" of the US Embassy in Moscow. ...the KGB must have wished to harass US diplomats and cause them to worry about their health. This theory was never convincing."

"The question was raised whether the Soviets had discovered a technique of using microwaves for psychological purposes, and whether they were experimenting with this technique on US specialists on the USSR unwittingly pressed into Soviet service as guinea pigs. Impossible replied the State Department, the waves cannot break through the blood-brain barrier, and thermal effects are so negligible that the body would not be affected. Nevertheless, embassy personnel were indemnified for health damage."

"By 1979, it was known that electromagnetic fields raising body temperatures less than .1 degrees Celsius may result in somatic changes. It was most surprising that such a trivial temperature rise was having any effects, and even more astonishing that those effects were significant. Chemical, physiological and behavioral changes can occur within "windows" of frequency and energy continua. Another is at the level of the human electroencephalogram (EEG), which is in the range of extremely low radio and sound waves, around 20 Hertz."

## Conclusions

1. Dr. Possony is an academic and public policy analyst who stands behind his statements. Dr. Possony stated scientific facts that have stood the test of time, that emr athermal effects are the scientific basis for mind control weapons. He also states that Russians are interested in mind control and challenges the reader to make the conclusions that will never be revealed given that mind control is a national security issue.

Here is the full article by Dr. Possony.

Possony, Stefan.(1983,July). Scientific Advances Hold Dramatic Prospects for Psy-Strat. Defense & Foreign Affairs. P.34.

Associate Editor Dr. Stefan Possony discusses how scientists are facing the prospect of messaging directly into a target mind. Whither psy-war?

The history of psyops technology is about 200 years old, and it will continue to progress. Hence it is most important to look into the future. It is no longer really difficult to send messages to the targets; that is, the persons who are to be influenced. The target cannot be reached if he is not interested in the originator, nor in his message, or if his interest is perfunctory. He is unattainable also if he is bored, and if he finds it more pleasurable to listen to competitors, who are multiplying.

The target cannot be persuaded to listen. It is the other way around; he may listen if he already is fully or partially persuaded, and if the program is attractive in addition to informative, and if it helps him in his activities.

Psyops technology is more or less in hand. Its better utilization is at present precluded in most instances by political ineptitude and by international opposition. The importance of better programming is recognized as a theory, but new ideas and fundamental improvements are rare. Hence success often is a matter of hit or miss. At this point, let us forget about history and current events, and let us resolutely turn to the future; I want to alert you that psyops technology may advance from communicating to direct signaling. Some developments in this regard are already taking place.

X-rays and gamma rays are located at the upper end portion of the electromagnetic energy frequency spectrum. What is at the lower end? The most important of all of nature's phenomena.

Suppose it becomes feasible to affect brain cells by low frequency waves or beams, thereby altering psychological states, and making it possible to transmit suggestions and commands directly into the brain.

Who is so rash as to doubt that technological breakthroughs of this general type would not be put promptly to psyops use? More importantly who would seriously assume that such a technology would not be deployed to accomplish political and military surprise?

A few years ago there was much excitement about the Soviet microwave "bombardment" of the US Embassy in Moscow. Why did the KGB, then under Yuri Andropov's leadership, embark on this seemingly scurrilous -- and very prolonged -- effort? There was no answer to this question, except that the KGB must have wished to harass US diplomats and cause them to worry about their health. this theory was never convincing.

The question was raised whether the Soviets had discovered a technique of using microwaves for psychological purposes, and whether they were experimenting with this technique on US specialists on the USSR, unwittingly pressed into Soviet service as guinea pigs.

Impossible, replied the State Department, the waves cannot break through the blood-brain barrier, and thermal effects are so negligible that the body would not be affected. Nevertheless, embassy personnel were indemnified for health damage.

By 1979, at the latest, it was known that electromagnetic fields raising body temperatures less than .1 degrees Celsius may result in somatic changes. It was most surprising that such a trivial temperature rise was having any effects, and even more astonishing that those effects were significant.

Chemical, physiological and behavioral changes can occur within "windows" of frequency and energy continua. One of those windows is connected with navigation in marine vertebrates and with biological rhythms of humans. Another is at the level of the human electroencephalogram (EEG), which is in the range of extremely low radio and sound waves, around 20 Hertz.

Those findings remain unexplained. they seemed to require energy amplification of the initial stimulus by some 12 orders of magnitude. No such amplification was deemed to be feasible, and none was discovered.

Let us cut the story to the minimum. The original model, according to which the blood-brain barrier cannot be broken, was derived from the axiom that electromagnetic waves interact with tissue in a linear manner. However, it turned out that the molecular vibrations caused by a stimulating extracellular electromagnetic field are non-linear. Utterly unexpectedly, they take the form of soliton waves which can transfer energy along long molecular chains.

By 1982 the term "soliton" finally made it to the technical dictionaries. Here is a definition from the 1982 McGraw-Hill scientific-technical dictionary: "A soliton wave...propagates without dispersing its energy over larger and larger regions of space." As I understand it, it would be more correct to say: "A soliton wave propagates suddenly acquired energy, or energy imparted by shock, without dispersing it."

Significance? Extracellular disturbances such as acoustic or electromagnetic bursts can be propagated across the cell membrane. In this, non-linearities in molecular dynamics rather than chemical kinetics are the key. Put differently, the 12-magnitude energy deficit is overcome, not by brute force, but by the formation of solitons.

Visualize the brain and its environment as structures of waves, and assume that shock waves create solitons. Then imagine that modern electronics with their flexibility, accuracy and speed are put to work.

In addition, the range of resonances probably will be increased. Hence many frequencies, and several options for the transmission of energy across the membranes of brain cells may become available. This may imply that the brain cells will be reachable diversely and flexibly, and perhaps routinely.

The discovery of cross-membrane coupling may be compared to the discovery of oxygen in 1772, which allowed the proof that phlogiston, the supposed element of fire, does not exist. Once the phlogiston idea was buried, chemistry and the chemical industry began their triumphal march across the world.

The exploration of the cross-membrane phenomenon is only at the beginning, and it is not yet possible to anticipate practical applications. As of now a new phenomenon has been discovered, probably. Nothing is as yet known or is known publicly, on how the soliton can be aimed to produce desired effects. Only a hypothesis can be stated: If the phenomenon can be utilized, this will in due time have crucial bearing both on the body and on the brain, and on defense.

The theory of cross-coupling was formulated by A.S. Davydov who, it seems, published the first purely theoretical version in 1976, and followed this up with a study on "Solitons as energy carriers in biological systems". By 1979 Davydov appeared to be linked to the Ukrainian Academy of Science.

It should be noted that Russian mathematicians were concerned with solitons before US scientists ever got interested. It is therefore conceivable that Davydov achieved his results long before publication, and also that the experiments which involved the US Embassy, produced findings which led to subsequent progress.

In the US, the pioneering work seems to have been done by Albert F. Lawrence and w. Ross Adey, writing in *Neurological research*, Volume 4, 1982. the Max Planck Institute for

Biochemistry in Munich also discovered that cell membranes can be crossed. Eberhard Neumann and Guenther Gerisch found that a shock wave passing through an electric field may create ultra-quick processes within the membrane, and that through such "jumps in the field" (Feldsprünge: this probably means solitons) signals can be transmitted and cells fused.

There is a differential in the tension of the inner and outer membrane which averages 1/70,000 of a volt. This corresponds to 70,000 volts per (theoretical) membrane thickness of one centimeter. (The real thickness of a membrane is 0.1-8 centimeter.)

The discovery was made unexpectedly in the course of research on electric fields in membranes and their impact on vital processes. This research requires measurements of events lasting not more than one nano-second (one billionth of a second), and it suggested that solitons generally increase the permeability of membranes. Thus, new perspectives on genetic "engineering" were suddenly opened. Moreover, it was possible to fuse no less than 50 cells into one supercell with 50 nuclei and one single membrane. We might as well forego assessing this monstrous novelty.

The Max Planck Institute broke into the membrane, so to speak, either without knowing about Davydov, Lawrence and Adey, or after learning about them while pursuing a different goal. In either event, a fundamental innovation, a breakthrough discovery or invention will be made several times, at different places, and by persons working independently from one another.

It is futile to speculate on who stands where in a race which has barely begun. But it can be postulated that the USSR probably has an ambitious research program, whereas in the US, while work is being done, no program --let alone a crash program--is in existence.

It is predictable that in the wake of Andropov's upgrading of psyops, the relevant programs in the USSR will be given an early and powerful boost.

Future psyops will have to be planned for perspectives which cannot be formulated before the US embarks on a major and totally novel research and development program. Meanwhile, it must be assumed that psyops will grow world wide, in strategic importance and in new forms.

The following report appeared in "Defense & Foreign Affairs Daily" on June 7, 1983:

On May 20, 1983 US newspapers printed an Associated Press story from the Veterans Hospital at Loma Linda, California that the Soviets developed a device, called Lida, to bombard human brains with radio waves. The radio beams are expected to serve as a substitute tranquilizers, and to treat sleeplessness, hypertension, and neurotic disturbances.

It is not yet determined whether Lida affects the immune and endocrine systems. Lida is reported to change behavior in animals. At the present, the device is on loan to Dr. Ross Adey, chief of research at Loma Linda. Adey started testing the machine three months ago, and hopes to complete his investigations within a year.

According to Dr. Adey, who repeatedly visited the USSR, the Soviets have used the machine on people since at least 1960. The machine is technically described as "a distant pulse treatment apparatus". It generates 40 megahertz radio waves which stimulate the brain's electromagnetic activity at substantially lower frequencies.

Dr. Adey was quoted as saying: "Some people theorize that the Soviets may be using an advanced version of the machine clandestinely to seek a change in behavior in the United States through signals beamed from the USSR." No reference was made to the protracted microwaves bombardment several years ago of the US Embassy in Moscow.

On April 29, 1983, Associate Editor Dr. Stefan Possony, addressing the Defense 83 meeting sponsored by Defense & Foreign Affairs, reported on Dr. Adey's work and on the work by Dr. A.S. Davydov of the Ukrainian Academy of Sciences. Davydov discovered how the blood-brain barrier can be penetrated by low frequency beams and directly affect cells in the brain. Possony's remarks were delivered to a panel studying psychological warfare. [Part of that paper is printed below--Ed.]

In the US research on direct brain waves has scarcely begun, and the USSR has a lead of approximately 25 years. Once it is matured the new technology will be extraordinarily significant in medicine. It also may have major impacts on communications, intelligence, and psychological operations, and permit deliberate physiological impairment.

The KGB is known to be interested in the program. It is not known whether the US and other Governments are trying to determine whether their countries have become targets of clandestine brain waves beamed from the USSR. Nor are there indications that work on countermeasures is being contemplated, except perhaps in the USSR.

### "Opening Pandora's Box"

"Opening Pandora's Box", 1984, produced by David Jones for Fulcrum Central Productions, aired on BBC Channel 4. This is a summary of main points of an exceptionally insightful and succinct documentary, not a verbatim account. Many thanks to Harlan Girard for finding a copy of this video.

Project Pandora: The U.S. government explores whether the Soviets are using emr as a weapon

The Soviets started bombarding the American Embassy in Moscow in 1953 and the U.S. government funded Project Pandora to find out why. Project Pandora was "a top secret multimillion dollar program". Top scientific experts were consulted by the American Government "about the meaning of microwaving" of the Moscow Embassy. "Five presidents kept it secret". President Johnson complained to the Soviet Premier Kosygin who claimed that he was unaware of the signal and would be sure that it was turned off. Officially the Soviets did not admit that they were microwaving the Embassy. But the bombardment of the Moscow Embassy continued. It began in 1953 and in 1975 the signals changed. Two new transmitters were added by the Soviets.

Dr. Robert Becker was an eminent scientist and was asked if central nervous system, CNS disturbances occur by microwave radiation. The Pandora Project found that the microwave radiation interferes with decision making capacity, causes chronic stress and low efficiency. The white blood count of Embassy workers was 40% higher than normal. Monkeys exposed to microwave radiation showed a marked decreased performance of simple tasks. Making embassy personnel function less efficiently would obviously be a benefit to the Soviets.

Dr. Becker stated that the U.S. couldn't say anything about it because safety standards for the U.S. were higher than the microwave signals used by the Soviets on the Moscow Embassy. He stated that you do affect cns (central nervous system) by microwave exposure. But if the U.S. admitted bioeffects or athermal effects, meaning not heating effects as from a microwave oven, but other biological effects from the radiation, such as a high white blood count, it would throw into doubt the U.S. standard set "rather arbitrarily " in the 1950s. It would be an embarrassment to the Americans who chose to keep the public in the dark about the microwaving of the Moscow Embassy from 1953 to 1975.

Aluminum screens were put on the Embassy windows so the U.S. government had to discuss the irradiation with the employees. The U.S. public position was that there were "no hazardous levels" of microwaves being irradiated at the Embassy by the Soviets. Questions were raised and complaints made by employees in 1975. At that time, the U.S. State Department consistently lied to Embassy employees and Henry Kissinger replied with a homily about national security and trust and confidence among government employees.

#### Brief history of U.S./Soviet safety standards set for emr

The safety standards for electromagnetic radiation, emr, were set higher in the 1950s to allow the military to have unlimited use of emr technology. At the time, American science reports suggesting emr health effects of brain tumors, heart conditions, leukemia, cataracts and more, were ignored. The military was a major source of funding and reports were not followed up. The government safety levels for emr were challenged in courts all around the world. Microwave News, a journal on nonionizing radiation, for example, reported that radar men opposed microwave tower emr health dangers. Air traffic controllers and police officers filed complaints. These court cases revolved around the validity of the safety standard. Dr. Milton Zaret, another Pandora scientist explained that most government committees who set the safety standards around the world were set up the in the same way as in the U.S.. Members of the committee did not want to impede or put restraints on progress by tightening the safety standards for emr.

Joe Towne, who repaired radar on spy planes filed a lawsuit against Lockheed for health damages from the radar, for eye damage, cataracts and two heart attacks. Twenty five flyers also sued and won out of court settlements. Towne's case was settled out of court for 75,000\$. There was no admission of guilt by Lockheed.

Meanwhile, in October 1982, members of the radar industry met in a Hot Springs, Virginia resort in secret for three days and talked about how to stop the steadily increasing injury claims of service men.

As part of Project Pandora, the U.S. government conducted Operation Big Boy on Navy ships to find any health effects from radar equipment on the ships. Although effects were found, the government terminated the project.

Dr. Becker stated that there was tremendous growth of the communications and power industries and a complete lack of information or even consideration of emr health risks. Industry didn't consider bioeffects of emr until the mid seventies. There was a "complete lack of consideration" of any biological effects from electromagnetic radiation and the repeated dogma was there are "no possible biological effects."

Then there were concerns over complaints and the subsequent study results on computer VDTs and miscarriages and birth defects and powerline exposure and leukemia in adults and children living near them. Studies reported a high incidence of suicide in people living near power lines. Other studies reported that electrical workers were at risk for leukemia. Meanwhile, the U.S. standard had been virtually unchanged since the 1950s.

The Soviet standard was 1000 times lower than the U.S. position and their armed forces were exempt from the Soviet standard. The Soviets were aware of biological effects of emr in the 1950s. For example, the top Czech scientist, Dr. Karl Mahra defected to the U.S. in the 1970s. In 1958, he had discovered rats killed by pulsed emr only showed spleen damage when they were autopsied. Dr. Mahra was amazed that other rats recovered fully when exposed for an astonishingly slightly lesser amount of time than the rats who died. Dr. Mahra discovered that the rats did not die of thermal effects of emr but of the athermal emr effects. Dr. Mahra devoted a lifetime of study to the nonthermal biological effects from pulsed emr exposure.

### The Controversy over Nonthermal Effects of EMR

Nonthermal effects of emr used as psychological and biological weapons by U.S./Soviets

There is a 1976 Soviet document which stated that microwaves could cause seizures in animals. [See 20+ section for newspaper articles on the document] [A microwave frequency] could be found in human beings, to disorientate a person and a specific frequency could cause a heart attack.

David Jones stated, "Recent intelligence reports say the American army is developing emr weapons programs and predict by year 2000 armies could use them. There will be microwave weapons to disorient and immobilize opposing troops. Psychological attack is particularly effective on air pilots. There is no doubt about the potential of emr [weapons] in the Soviet Union."

Nonthermal emr effects controversy is born. U.S. denies effects, Soviets disagree

Dr. Becker commented that the U.S. safety standard presented a dilemma for U.S. military planners. Dr. Becker explained that the problem was that the U.S. population was currently being exposed to the same athermal effects level of emr that the U.S. military was using to develop classified emr weapons. This athermal level of radiation is not biologically active, according to the U.S. safety standard. But the dilemma was, how could the U.S. government develop an emr weapon system based on the athermal effects of emr when currently allowing exposure of their own people to the same athermal effects level of emr in their environment from TV and radio towers and microwave ovens, for example? It was a conundrum.

Dr. Becker stated, "A good,...the best cover story is that, based on best American scientist's [opinions],.... the [U.S.] nation has discarded [the theory of athermal] health effects from emr, entirely."

David Jones asked Dr. Koslov; "In terms of science there seems to be two possibilities, one is that behavior and health are affected by emr and the second is the creation of a new genre of weapons and that its conceivable that it is a totally black area of research. Dr. Koslov replied that back in 1965, there was a lot of conjecture and hypothesis about that. That's why it led to

Project Pandora. Since then, I don't think there is very much possibility, that there is, at this point in time, there doesn't seem to be.

Dr. Sam Koslov, director of Project Pandora continued, [We] thought about it, don't get me wrong,... but nothing was found, it doesn't look like[there is]...militarily at this time, there is no emr weapons potential. There is nothing to the biological effects claim. There is an amount of power problem."

David Jones asked Dr. Koslov why he thought that the Soviets were microwaving the Embassy. Dr. Koslov replied that "I would rather not discuss it [because] it would get into security areas."

[Today, with the nonlethal program unveiled in the 1990s and the Soviet evidence of emr nonthermal effects available today, it is clear that Dr. Koslov was lying in the name of national security. At the least, Dr. Koslov would have been aware of the classified emr nonlethal program which began in the 1960s, see US News, 1997)]

### The 1950s, the Lida Machine and Korean Brainwashing

In the 1950s, intelligence agencies were interested in changing mental states. The theory is that brain waves can be tuned to a different emr frequency and can change moods and character. The CIA sponsored LSD experiments and the MKUltra Project for 10 million dollars in the early 1960s. A CIA memo stated that they were looking for behavior control to enhance consciousness. The Soviets had realized the same thing. Dr. Ross Adey, famous emr researcher at Loma Linda Veterans Hospital, examined the Lida machine, from the Soviet Union. It was described as a machine to "rearrange consciousness". The Russians claimed to use it for treatment of emotional disorders in the 1950s. Dr. Adey stated that the Lida machine is now obsolete. It used coiled wire inside ear muffs which acted like an antenna and emitted 1/10 sec pulses of emr. Dr. Adey demonstrated that excited animals rapidly quiet down when exposed to the Lida emr frequencies. There was one account that the Lida machine was used during the Korean War for brainwashing American Prisoners.

Since the Korean war, the art of brainwashing has improved significantly, says David Jones

Dr. Becker was asked by the CIA in early 60s to determine whether pilots shot down and captured by Soviets in the 1960s could possibly have been exposed to emr without them realizing it and would that have caused personality change. The pilots were tested psychologically before and when they came home. A dramatic change in test results was found. The question posed was, can you change, entrain brainwaves with an external source? "Pilots did not report bad treatment and were not aware of any emr exposure by Soviets during debriefing sessions." They were interned by the Soviets for two to six week and returned with "considerable personality alterations". The CIA wanted to know if there was a relationship between the Moscow Embassy and flight crews that would cause personality alteration? Dr. Becker stated "yes, there is a distinct possibility, we don't know at this time for sure."

Dr. Robert Beck's (not the same person as Dr. Robert Becker) classified experiments of behavior effects of emr on human subjects for weapons use.

The mechanics of this source of personality change ( Dr. Becker's pilot study above) "fell into an area of science shrouded in the greatest of secrecy". "It is at the center of mind control programs in both the east and west." Dr. Robert Beck, an electronics engineer, is one former member of an elite corp of scientists recruited by his government to work in this area. His published work talks of "specific frequencies that cause anxiety, fear, confusion". His unpublished work include "bizarre experiments in which would disorientate other scientists and is said to include changing moods from elation to depression. He described an experiment in which electromagnetic pulses emitted from a device that looked like a wristwatch caused other diners in a restaurant to talk more loudly or quietly, depending on the em pulse emitted by the wristwatch device."

"What is technically possible?" asks David Jones. "There, I would rather not discuss some of the work that I've seen. It has been done, replicated. Replicated experiments simply done. That subject is totally dark. I've done some of that myself and I'll never do it again. There is no mystery to it. There are ethical considerations. It's part of the physical universe. Changing people's behavior by low levels [of emr], that subject is totally dark."

Dr. Beck continued, "It's possible to replicate experiments, simply, I don't approve of it, a tool to manipulate. But moral considerations are invariably not considered by governments. The Soviets are ahead [in emr research]."

David Jones asked, "As far as affecting human behavior, what is possible? Dr. Beck said, "It's possible, it's been replicated. It's a dark area of research."

The Moscow microwave bombardment is a prototype weapon of the 1977 Soviet Woodpecker Emr signal: Soviet emr weapons go public

Dr. Beck stated, "[the 1976] Russian woodpecker signal is the most powerful man made emr source ever. 10 pulses per second, 40 million watts per pulse, it is psycho active." It is generated in the Soviet Union and permeates everything in the U.S.. It was picked up by power grids and irradiated into homes."

The question is why are the Russians doing this? Dr. Becker said that there are three theories. First, that the Woodpecker signal is an over the horizon radar. No, Dr. Becker stated that a satellite is better available surveillance. Second, the woodpecker signal is for submarine communication. Dr. Becker could not answer that. Third, that the Russian woodpecker is biologically active and will have an effect on populations in U.S. and Canada. In 1976, the Soviets increased the signals and now have seven transmitters. "They are the most expensive and powerful in the world." "Dr. Becker said there are persistent rumors that the U.S. is doing the same to the Soviet Union, powerful U.S. transmitters beaming 16 cycles per second to produce the same effect as the Soviets, into the Soviet Union." "We are in the middle of electronic warfare aimed at citizens of both countries."

The Woodpecker has been beamed for six to seven years and can't be heard in Soviet Union but can be heard in Britain, Western Europe, Australia and Far East. Dr. Beck, [the electronic engineer] stated that the magnetic component can penetrate anything. "We have decoded intelligence on the signal. The 10 Hz signal is a benign frequency and we know it can be psycho active. 30% of the population will exhibit neuronal manifestations. Soviet scientists know about psychoactive effects in animals. Soviet scientists knew well before 1950s. The Soviets published research on long term effects of microwaves, extreme fatigue, loss of

coordination and sensory control. A group in American Intelligence believed that one can alter brainwaves of staff of Moscow Employees and the Moscow signal was a prototype of the Russian Woodpecker."

Dr. Beck continued, "If you drop frequency down a few hertz, it is known to be neuronally psychoactive and you could have basket cases. [This is] more terrifying and frightening than the atomic bomb. It's a brand new concept, we haven't adapted to this concept. Having done a number of experiments, one can't imagine the destructive power of these things. There were no National Institute of Health, NIH guidelines in the experiments I conducted. I know what some of these things can do to the nervous system. Most wars are fought over real estate. [It will be] better to use psyop weapons than atomic bombs- alot cleaner, more terrain left, it could just kill people. There is no defense that I know of."

Twenty years later: Passage of time reveals cold war secrets

Nonthermal effects of emr were used as a basis for weapons and is a national security issue

The main point of this documentary for victims is that the controversy over athermal effects of emr is described as a national security issue by top emr scientists such as Dr. Becker, Dr. Beck and Dr. Zaret, all of whom were consulted by the CIA about the irradiation of the Moscow Embassy. While the emr related industries and the military wanted to avoid lawsuits and have unlimited development of emr technology, that does not fully explain why the U.S. used the athermal controversy as a national security cover story for fifty years.

U.S. cover story of no provable athermal effects can no longer be credibly maintained by U.S.

In the 1990s, the nonlethal emr weapons program based in part on athermal effects of emr was unveiled by the Pentagon, (US News, 1997). The U.S. cover story can no longer be credibly maintained. With the U.N. documents, the 20+ Russian articles and the Lopatin book, Dr. Becker's theory of a classified U.S. emr mind control weapons program is now well supported. The 1979 UN Russian documents state that athermal effects are used for developing weapons. The 20+ articles discuss emr mind control weapons after the break up of the Soviet Union and Lopatin is a very high Russian government official who has advocated banning mind control weapons in Russia for the last ten years.

According to Dr. Becker, consultant to the CIA in the early 1960s, the Soviets irradiated the Moscow Embassy and U.S citizens with the Woodpecker signal at great cost and for decades. See 1988 AP article which states that microwave bombardment of Moscow Embassy and the Russian Woodpecker signals were being irradiated as of 1988. In "Opening Pandora's Box", Dr. Becker discussed the U.S. public silence about the Soviet irradiations and the rumored U.S. efforts at irradiation of the Soviet Union. Dr. Becker described these aggressive acts by the Soviets and the U.S. as an electronic war on the citizens of both countries.

In addition, the Harlan Girard articles from Russia and China on emr nonlethal weapons is further support of the fact that athermal effects of emr are the basis for nonlethal weapons. Now there is enough evidence to refute the U.S. position that there are 'no provable nonthermal biological effects from emr.

U.S. government knew of athermal emr effects at least in the 1960s

Now it can be proven; the U.S. knew of the biological athermal effects of emr at least in the 1960s, when the secret Pandora Project began (see Brodeur, Zapping of America, 1977). For further evidence of the U.S. knowledge of athermal effects, see also the thorough and well documented history of this period, written in "Electromagnetic Man" by Cyril Smith, 1989 and "Body Electric" by Dr. Becker and Gary Selden, 1985.

The U.S. made the decision to risk the health of U.S. citizens rather than to deal with the situation in another way. The U.S. did not lower the emr safety level even though they knew athermal health effects were confirmed at this time. Rather, the U.S. government perpetuated the dogma. In the mid 70s, Kissinger and the State Department held that there were no health risks from emr exposure at the Moscow Embassy. Apparently, to the U.S. government, the national security issue was more important than the health of its citizens.

U.S. government is on the record for lying about scientific facts in the name of national security and risking the health of U.S. citizens

By basing the U.S. safety standard for emr exposure on politics rather than scientific evidence, the U.S. government knowingly risked the health of U.S. citizens. The U.S. government is on the record for lying about scientific facts in the name of national security.

Evidence supports a 'Manhattan Project' mind control program based on emr athermal effects

#### Scientific evidence

A serious problem for validating the claims of victims of government mind control experiments is that even today the general public does not know of the little publicized athermal emr effects controversy or mind control weapons. The good news is that it does not take a rocket scientist to put the facts together because after fifty years, the motives and actions of the military becomes clear. Dr. Becker was right. Echoing Dr. Becker twenty years later, Dr. Louis Slesin, Microwave News editor was quoted in U.S. News, 7-7-97 article entitled "Wonder Weapons". "...the human body is essentially an electrochemical system, and devices that disrupt the electrical impulses of the nervous system can affect behavior and body functions. But these programs- particularly these involving antipersonnel research- are so well guarded that details are scarce. "People [in the military] go silent on this issue ...more than any other issue. People just do not want to talk about this." Based on Dr. Becker and Dr. Slesin's comments, there was and is a classified nonlethal weapons program that targets the brain with emr. The U.S. News article clearly states that athermal effects of emr are the basis of the nonlethal weapons. "...scientists, aided by government research on the "bioeffects" of beamed energy, are searching the electromagnetic and sonic spectrums for wavelengths that can affect human behavior."

The argument can now move to the extent that athermal biological emr weapon effects are capable of controlling the human body and behavior.

The extent of the mind control arsenals may be less difficult to prove than the athermal controversy because there is no need to wait fifty years for unclassified historical evidence. The U.S. or Russian government will never admit to classified mind control weapons, therefore one way of answering this is through open literature theories on neurology. The athermal effects of emr the biological basis for brain function is described in current

neurology research. Refer to Cahra website, "As Powerful as the Atomic Bomb for citations, [www.dcn.davis.ca.us/~welsh](http://www.dcn.davis.ca.us/~welsh).

Thanks to mind control researcher Margo Cherney, here is one stunning example of many available examples to support the theory that mind control weapons are extremely advanced. Note the cover story that the Soviets have mind control research, that brain research for weapons purposes is classified and that emr athermal effects are the basis of the brain weapons. The stunning information is that the government is funding research to produce a device that can "inject information into the brain via electromagnetic waves".

U.S. News, 1-3-2000. John Norseen. Reading-and changing-your mind. Rodolfo Llina's. A grand unification theory of the brain.

[Lockheed Martin neuroengineer in Intelligent Systems Division] Norseen's interest in the brain stems from a Soviet book he read in the mid-1980s, claiming that research on the mind would revolutionize the military and society at large. [He] coined the term "Biofusion" to cover his plans to map and manipulate [the brain] leading to advances in ...national security... and ...would be able to convert thoughts into computer commands by deciphering the brain's electrical activity. BioFusion would reveal the fingerprints of the brain by using mathematical models, [Smirnov's computer program uses mathematical models also]. It sound crazy,...The National Aeronautics and Space Administration, the Defense Advanced Research Projects Agency, ...have all awarded...research contracts to Norseen. Norseen is waiting to hear if the second stage of these contracts-portions of them classified- comes through. Norseen's theories are grounded in current science. ...By MRI, scientists can tell what the person was doing at the time of the recording...Emotions from love to hate can be recognized from the brain's electrical activity. ...Norseen predicts profiling by brain print will be in place by 2005. ...Norseen would like to draw upon Russian brain-mimicking software and American brain-mapping breakthroughs to allow that communication to take place in a less invasive way. A modified helmet could record a pilot's brainwaves. "When you say right 090 degrees...the computer would see that electrical pattern in the brain and turn the plane 090 degrees. If the pilot misheard instructions to turn 090 degrees and was thinking "080 degrees," the helmet would detect the error, then inject the right number via electromagnetic waves."

U.S. News, 1-3-2000. Rodolfo Llina's. A grand unification theory of the brain.

Dr. Rodolfo Llinas, New York University of Medicine, "believes consciousness has to do with timing, and the thalamus-rather than being a mere relay station-also functions as the brain's clock. Using an instrument called a magnetoencephalograph, or MEG-a technology Llinas helped develop-he has been studying the brain's electromagnetic waves. What he has found in broad paraphrase is that the thalamus is in constant dialogue with the brain's higher processing centers: An electromagnetic loop sends pulses from the thalamus to the cortex, but the different sensory centers of the brain also message the thalamus in return. Consciousness exists when these oscillations are in sync-pulsing at the same rate--so smells, sounds, and so forth assemble in a kind of electromagnetic symphony. ...If the theory holds up to future testing, it would point toward the possibility ...implants-neurological pacemakers-to correct the out-of-wack timing of the thalamic messaging system. Preliminary clinical work has already demonstrated the therapeutic value of thalamic stimulation in treating Parkinson's disease and depression.

Historical evidence

According to Dr. Becker, great efforts were expended by the U.S. to cover up the emr nonthermal effects while the Soviets expended huge sums of money and time targeting the Moscow Embassy with microwaves. The Russians also targeted the United States with the Russian Woodpecker signal. Dr. Becker stated that there were persistent rumors of U.S. beaming a signal over the USSR.

The Russians publicly denied the microwave bombardment and the official, transparent reason for the Russian Woodpecker signal was an over-the-horizon radar. An electronic battle of emr signals which targeted the citizens of both countries was raging without their knowledge while the U.S. remained silent and the Russians publicly asserted athermal effects of emr in UN documents and scientific literature in order to embarrass the U.S. government. Fifty years later, the Russians finally succeeded in their attempts to ruin the credibility of the Americans over the athermal controversy. But most U.S. and Russian citizens are unaware of this fact because the military and the cell phone industry still use the standard to avoid lawsuits and use emr based technology that could be limited if a more stringent standard were in place. Therefore the athermal argument is rarely publicized.

In 1984, Dr. Koslov, director of Project Pandora stated that there were no military weapons programs based on the athermal effects of emr. Then in the early 1990s, The U.S. unveiled the nonlethal emr weapons program. Dr. Koslov had to be lying, since U.S. News, 1997 reported that the nonlethal weapons programs had begun over 40 years ago. Since the break up of the Soviet Union, Russian public figures such as Lopatin, scientists such as Tsygankov and military experts are publicly discussing mind control weapons as a very serious threat. Now, in Russian and U.S. newspaper accounts, the symptoms of independent reports from U.S and Russian alleged victims of illegal experiments are being compared and match up. Hundreds of victims worldwide describe an illegal global experimentation program using an array of highly developed and powerful mind control technology.

The U.S. government is on the record for lying about this issue. The cell phone industry is on the record for upholding the athermal effects theory. The motives of money and national security are clear. Fifty years later, the truth is out. Given the body of evidence in this compilation, it is logical to conclude that there is a mind control program more secret than the Manhattan Project, as Dr. Becker theorized and that brain function is based on an athermal emr biological effects. Given the motive of national security, it is hard not to believe that very sophisticated technology has been developed to control the mind, comparable to the atomic bomb.

#### An Electronic War starting with the Moscow Embassy: Serious Implications for the World

Dr. Becker described the microwave bombardment of the U.S Moscow embassy for over 20 years and the Russian Woodpecker Signal for over 10 years as an electronic war on the citizens of both Russia and the U.S. See 1988 AP article which states that microwave bombardment of Moscow Embassy and the Russian Woodpecker signals were being irradiated as of 1988. Given Dr. Becker's discussion of U.S. pilots and their behavioral changes after being shot down by the Russians, there is no doubt many more electronic battles that are entirely out of the public view. Dr. Michael Persinger was featured on the 1998 Learning Channel, War 2020 program describing emr mind control possibilities. The announcer stated that the next war may be won without so much as a shot being fired or even a whimper. By putting the evidence together, a picture emerges of governments who ignore human rights, cover up criminal acts and conduct battles out of the public eye. Dr. Becker

stated in his 1991 book, "Crosscurrents", that it may be too late. Besides the need to stop illegal government emr weapons experiments, it is important to educate the public because of the far-reaching global effects surrounding this issue.

HAARP, the U.S. transmitter of the 1990s, EU experts fear a vast weapons system capable of modifying the weather, influencing human behavior and more.

The article, "Apocalypse Now? HAARP or How the US Military is Playing the Sorcerer's Apprentices", by Alain Gossens, Bussels Telemoustique, 22-5-97 was translated by FBIS from french,(see foia section for whole article). The article describes the controversy surrounding the HAARP project. "Unofficially, HAARP will use the ionosphere, turning it into an energy weapon." Similar to the Moscow Embassy microwave bombardment and the Russian Woodpecker, the public is never told what is really going on. It is difficult to not believe that these are powerful weapons because both countries continue for decades to develop them. According to Dr. Becker and now other experts such as Dr. Bertell, (see foia section, last article) and the numerous articles on HAARP, there is a scientific basis for mind control.

Here is an article to show how the health standards for emr controversy continues.

March/April 2001

Views on the News: Weapons Development and Public Health Should Not Mix

The Pentagon's new microwave weapon has been brought to you by the U.S. Air Force and Raytheon. These are the same organizations that control the IEEE's SCC-28 committee that writes the standard for exposures to RF and microwaves.

Dr. John Osepchuk, the chair of SCC-28, worked for Raytheon for most of his professional career. And three of the other five members of the SCC-28 executive committee work either at Brooks Air Force Base or for Raytheon.

In the 1980s, during the last major revision of the IEEE standard, Osepchuk was among those who argued for doubling the limit, from 5 to 10 mW/cm<sup>2</sup>, for frequencies above 3 GHz (see MWN,J/A86). The rationale -which we never understood- was to make it consistent with the infrared standard all the way up at 300 GHz. This change, though challenged, was adopted.

At the time it appeared to be somewhat of an academic concern, given the paucity of radiation sources above 30 GHz. But few were privy to the designs of military contractors. The loosening of the IEEE standard must have facilitated the development of the military's new zapper at 95 GHz.

It seems obvious, but it's worth repeating: Health standards should be written by medical and public health professionals, not those who make weapons for the military-industrial complex.

2000 Video by Council on Wireless Technology Impacts, "Public Exposure" More evidence of the athermal emr health effects controversy

Thanks goes to Betsy Manning a behind -the-scenes mind control researcher who is always coming up with new leads. Betsy found this excellent 2000 video, "Public Exposure, DNA, Democracy and the Wireless Revolution" by the Council on Wireless Technology Impacts,

(website at [www.ccwti.org](http://www.ccwti.org). A website link provided ordering information on the book "The Electric Wilderness" by biophysicist Andrew Marino and Joel Ray, forward by Dr. Robert Becker, San Francisco Press, 1986. The book details the 25 year battle over emf effects and the politics of science in the four year New York State hearing on a 765 TV power line, 1974-1978.)

This video exposes emr industry abuses similar to the tobacco industry. For example, the cell phone industry has billions of dollars at stake and this is the explanation for the industry's complete lack of concern for the health of consumers. Marin's rate of breast cancer is the highest in the world, (Northern California Cancer Center, 1995) and this motivated the Marin Breast Cancer Watch to sponsor an epidemiology study to see if there is an association between and reported cancer cases and cell phone towers, military radar and other sources of emr. There is a study by another group to determine if there is a connection between emr exposure and the 300% increase in brain tumors worldwide.

#### Explosion of EMR sources in last hundred years

The video began with the fact that in the last one hundred years, exposure to emr has increased 10,000 times. "Human cells of the body are like antennas; they receive and emit emr and are extremely sensitive " The video continued with a short history on the explosion of emr development, beginning with WWII. Military personnel such as radar workers experienced abnormalities in blood count, mutation, headaches and cataracts. This data was ignored by the U.S. government mainly because there was a war.

Dr. John Goldsmith, an epidemiologist from Israel described the Soviet microwave bombardment of the Moscow Embassy from 1953 to 1976. He said that the Soviets could have been trying to produce radio frequency sickness in the U.S. embassy staff by causing interference with the "ability to think, to concentrate and to sleep". The Soviets conducted scientific studies of workers who were exposed to emr emissions in the 1940s and 1950s and found detrimental health effects such as the above. The Soviets called the set of symptoms 'Radiofrequency sickness syndrome'. Dr. Goldsmith believed that the Soviets were experimenting and testing radio frequency radiation as a weapon. The U.S. government's epidemiologist documented high white blood counts, leukemia in two of the Ambassadors and other health problems in the embassy employees. Then the U.S. government ignored the findings.

The wireless revolution now continues with the fast growing cell phone market worldwide. The Council on Wireless Technology Impacts asked the question, what are the environmental effects of the wireless revolution?

How the U.S. safety limit for emr exposure puts the U.S public health at risk.

The next segment was filmed at an April 2000 California Senate hearing sponsored by Senator Tom Hayden on cell phone safety. The U.S. safety limit does not take into account athermal health effects of emr which are occurring below the U.S. safety level. The cell phone industry completely disregards scientific studies of cell phone emission levels falling below the government safety standard. Cell phones are placed on the market as a safe product when in reality there may be health risks from their use.

Cindy Sage, a California environmental policy consultant explained that reliable studies show detrimental health effects from exposure to radio frequencies way below the safety standard set by the U.S. government. The cell phone industry spokesman testified at the California Senate hearing that the cell phone industry was in compliance with FCC and other government standards and there were no health risks associated with cell phone use. But using a chart, Cindy Sage explained that the cell phone industry claim did not include research of cell phone emissions in the nonthermal range, which is below the safety level established by the FCC. This is the cause of the controversy.

Dr. Jerry Phillips, Research Biochemist, Colorado testified that Motorola was suppressing research. Dr. Phillip's research for Motorola found DNA damage associated with cell phone emission levels. He also stated that the brain was exquisitely sensitive to RFR or radio frequency radiation. Motorola was not happy with the results and told Dr. Phillips how to write abstracts, conduct his work and finally urged him not to publish. Dr. Phillips published the study in 1998.

Now Dr. Phillips recommends caution because no money is available for research except from the cell phone industry. He has no faith in their results. The cell phone industry earned \$20 billion in 1996 and \$475 billion in 2000. Senator Hayden commented that the "buying of science" was what caused him the greatest concern. He had a strong opinion for the "corrupting influence of money on science". Hayden stated that the FDA have not been able to scientifically certify cell phone technology as safe or not safe and therefore, he urges caution.

#### Analogy to tobacco industry and health risks of smoking

California Senator Tom Hayden stated that an association between the exposure to emr from cell phones and the risk of detrimental health effects is established. A direct cause and effect, as in scientific proof has not been established but like the 'cigarettes do not cause cancer' scientific controversy, there is enough proof to warrant a warning to the public.

Cindy Sage described three levels of proof, the scientific level of proof, which is the highest level, almost 100%, the legal standard of proof, or 51%, the more probable than not standard and the environmental law standard, in the 10 to 30% range. Ms. Sage stated that the environmental law standard is the level at which public decision making on environmental issues takes place, i.e., at the potential level for a significant impact. Ms. Sage believes that the emr controversy should be judged by the environmental law standard of proof and she mentioned the California Environmental Quality Act. [Note, I took an environmental law class in summer 2001 and the 2001 environmental law text book listed emr under toxic substances and described it as a controversial topic.]

Business tactics include conscious disregard for health risks of consumer products.

Science author B. Blake Levitt wrote "Electromagnetic Fields", 1995 and stated that the cell phone industry "cynically knows" it will take twenty years for scientific evidence to prove damaging health effects from cell phone emr exposure. Brain tumors are beginning to show up in cell phone users. It will probably take ten to fifteen years for brain cancer to show up in people who live near cell towers. It will take two years to gather data, three years for peer review and four years to end up in journals. In the meantime, billions of dollars are pocketed by the cell phone industry. This is similar to the business tactics of the tobacco companies in

which many smokers died of lung cancer, while the companies suppressed clear scientific evidence of an association of health risks to smoking and also the addictive qualities of nicotine in cigarettes. The emr controversy is following the same pattern. Two brain tumor victims whose emr exposures occurred in the cell phone industry were interviewed.

Telecommunications Act bars consideration of health factors in local government decisions on cell tower location.

Another highlight in this video were the protest marches around the country against section 704 of the Telecommunications Act of 1996. Linda Evans, TV star of "Dallas" explained. Section 704 states that local governments are banned from taking into consideration the health effects of microwave, TV, radio and other emr towers that are to be located in their area.

"People just didn't know, like myself, I was ignorant and we have lost our rights." The laws need to be changed.

### Conclusion

In conclusion, the U.S. safety standard is too high to protect the U.S. public. The standard is outdated and needs to include the well-established athermal health effects. It is critical that impartial research into nonthermal health effects is funded adequately. Public safety is at stake and politics and money do not belong in science.

The cigarette industry used the scientific standard of proof, saying there is no link between smoking and lung cancer. The cell phone industry is using the same tactic. Environmental issues are decided at the 10-30% level of potential harm in order to protect public health. The cigarette industry's scientific standard of proof did not protect the public. Today, it is a proven fact that many smokers died from lung cancer as a result of smoking and the addictive qualities of nicotine. Therefore the environmental standard of proof should be used in the emr research evaluations in order to protect the public.

---

## Section III

Conclusion: What this information means to victims of nonconsensual government experiments

1.

Where does the Russian translation Project fit in to the evidence?

A. A Few Conclusions

B. Short overview: The scientific basis for emr mind control weapons, athermal effects of emr. Plenty of evidence in mainstream press

1. Davis Enterprise, 3-1-2001 "Frankengenes': The Dark Side of Biotechnology" by Lee Bowman

2. Parade Magazine, Dec. 29, 1996, Reuters: "Best News for Mortals" "British scientists say they're working on a "Soul-Catcher" memory chip, which would record human memories and thoughts, and expect it to be working within 30 years." Open literature discusses scientists interested in futuristic technology.

3. New York Times Magazine, Sept 29, 1996, "The Altered State" by Elizabeth Rotte. "Michael Persinger, a psychologist and neuroscientist at Laurentian University in Ontario, ...solenoids, which create gently fluctuating fields ...The impulses move through ...the brain, where they interfere and interact with the complex electrical patterns of the subject's neural fields. Persinger aims...switches ...they sense a sexual arousal.. negative presence, a benevolent force , opiate effects,..."

4. Bulletin of Atomic Scientist, Sept/Oct 1994 by Barbara Hatch Rosenberg, "The Soft Kill Fallacy". "Many of the non-lethal weapons under consideration utilize infrasound or electromagnetic energy...These weapons are said to cause ...interference with mental processes, modification of behavior and emotional response,...severe pain... The current surge of interest in electromagnetic and similar technologies makes the adoption of a protocol explicitly outlawing the use of these dehumanizing weapons an urgent matter."

5. US. News Jan 3/10 2000 by Douglas Pasternak, "John Norseen, Reading your mind and injecting smart thoughts" "BioFusion would be able to convert thoughts into computer commands, predicts Norseen, by deciphering the brain's electrical activity. ... Norseen's theories are grounded in current science. Mapping human brain functions is now routine..."

#### C. American victim's accounts match Russian accounts

1. U S District Court Eastern District of CA No Misc. 94-097-WBS John M. Ginter, Plaintiff, v. California Department of Corrections, et al., Defendants. John Ginter, San Quentin prisoner with high school education described in his 1967 court case that Dr. Schmidt, the San Quentin psychiatrist called the equipment used on John, "M.I.N.D. or Magnetic Integrated Neuron Duplicator".

2. Los Angeles Times, 3-28-88 part 2 page 1, "A Fearful Fix Grips Figure in Kickbacks" by Kim Murphy, Rex Niles, an FBI informant in a defense contractors kick back case in Los Angeles, CA. Photo caption stated, "His aluminum foil hat has tiny holes in it, says Rex Niles, proof that the government is bombarding him with microwaves in an attempt to kill him." He had detected microwave signals but was still labeled mentally ill."

3. New York Times Magazine, Aug. 31, 1997, "Atomic Guinea Pigs" by Michael D'Antonio "At the Department of Energy, which oversees America's nuclear-weapons research, these people [radiation experiment victims] were referred to collectively as "the Crazies." But the opening of the cold-war archives has brought the Crazies in from the fringe." The mind control victims in Russia and the U.S. are both labeled mentally ill.

#### A Few Conclusions

Victims have two strong arguments for demanding an investigation into their allegations. If the Russians have mind control weapons, the U.S. undoubtedly has a mind control arsenal.

The evidence in this compilation spans 50 years, includes several independent, mainstream sources, and credible professionals, all stating that mind control in Russia exists. The historical and scientific evidence also supports a very long-term, large and classified emr weapons program in Russia and the U.S. The U.S. government is on record for lying to the U.S. public about lack of proof of nonthermal effects while the Russians claim that nonthermal effects of emr are being used for weapons. Now in the 1990s, the U.S. reveals the nonlethal weapons program and claims in U.S. News and World Report, 7-7-97, that "scientists, aided by the military research on the 'bioeffects' of beamed energy are searching the electromagnetic and sonic spectrums for wavelengths that can affect human behavior." The translation of the 1999 Lopatin book is the best evidence yet, a top Russian politician and scientist claim Russian mind control weapons exist and should be under international control.

Second, the athermal controversy is equally convincing historical evidence of a classified U.S. mind control program.

The number of victims in the U.S. and Russia, not to mention other countries is growing. For the first time, victims as a group can now organize and go to their congressional representatives, human rights groups, lawyers and investigative reporters and present an adequate level of proof of their claims, never before possible. The evidence now meets the standard of proof required for mainstream journalism, public knowledge and investigations such as a GAO investigation or a congressional hearing or a human rights investigation. Please see below for evidence and citations.

Electronic warfare since 1953, without public knowledge

In "Project Pandora", Dr. Becker, an eminent scientist consulted by the U.S. government on emr national security issues has warned of the electronic war on the citizens of the U.S and U.S.S.R. Many experts including Oppenheimer have warned that the Orwellian dangers of mind control are worse than the atomic bomb,(American Psychological Association). Information warfare using the mind as a target was described in the tv program, War 2020. War would be fought without even knowledge of a war taking place, (See Cahra International Campaign section).

In his 1990s book, "Crosscurrents", Dr. Becker wrote that it may be too late to stop the ongoing weapons programs. Unlike peace, electronic warfare resembles another cold war with its resultant high costs. Experts and public officials from the east and west warn of the dangers of psychotronic weapons or nonlethal emr weapons, the need for international control and of the need for open public debate.

What can be done?

Cahra does not have the resources to organize victims but I hope that others will. If this issue is presented as the international human rights issue that it is, public officials will be able to use their authority to ask for an investigation. Cahra will send this compilation with original articles and translation at cost for xeroxing and postage to anyone interested in stopping nonconsensual government experiments.

Finally, thank you to all of the victims who generously donated to this project and also to those who shared their information included in this article. I could not have done it without you. The Russian translation project is a major step forward. I hope that much more research

can be done and that as a result, a better strategy to stop illegal government experiments will be found in our lifetime.

Citizens Against Human Rights Abuse, Cahra  
a nonprofit 501(c)3 human rights group

## Printer Problems

Though we live in the computer age, we continue to use paper, a lot. We often need to get paper copies of something in our computer. So when something goes wrong with the printer, that is a serious Computer Problem.

Most of my printer problems were annoying, but temporary, and showed no physical evidence of any cause. But one of my printer problems was very different.

In late summer of 2004 my printer began jamming badly. Every page jammed near the rear of the printer. This problem did not go away, and the printer was useless.

I investigated and discovered that the paper was jamming because rollers at the back of the printer had been damaged.

The above image is a side rear view of two printers. Their rear output trays have been folded down to expose the 5 rollers each that transport printed pages out of the printing mechanism.

- The printer on top is my printer that jammed. It is an HP LaserJet 6MP,
- The printer underneath is a mechanically identical HP LaserJet 6P that I got to cannibalize for parts.

The above image is a close up of the rear of the parts printer. It shows 2 white plastic rollers and 3 black rubber rollers, all in good condition.

The above image is a close up of the rear of the printer that jammed. The 2 white rollers are fine. But the 3 black rollers are severely damaged. They were soft, sticky, and deformed. No

page could go past them without sticking, jamming, and being marked with black stripes, one from each black roller.

The black rubber roller on the far left was the worst. It was more of a blob than a roller. It was so soft that the nearby white roller had pressed a groove into it.

I contacted several companies to ask about this roller problem. Nobody had seen it before. One of them said that the rubber rollers could have been damaged that way by somebody applying "rubber rejuvenator" to them. But I had never applied anything to them, and I was the only person with access to the printer.

I did some research on HP printers and learned that these rollers do not normally wear out or fail. They are not part of widely available "roller kits" recommended for refurbishing these printers after 100,000 printed pages. This makes the roller damage more remarkable, because:

- the jamming printer with the bad rollers had printed less than 14,000 pages;
- the parts printer with the good rollers had printed almost 51,000 pages.

I concluded that my roller damage was the result of sabotage.

## Signal Decoying

February 21, 2008

**This page contains information which is speculative, and is taken from the personal experiences and opinions of Eleanor White and perhaps 50 other targets of electronic harassment. This information is NOT supported by mainstream documentation, and must NOT be tendered to the public and public officials as fact. It is posted here as possibly helpful to other targets in avoiding false accusations of neighbours based on detection of advanced signals.**

[See illustration below] This page is to describe one way in which the electronic harassment perpetrators may cause confusion among targets who are trying to detect and locate the source of the signals which carry harassment into their homes and bodies. The first source of confusion is that shielding experiments have shown that the electronic harassment signals can penetrate excellent electromagnetic shielding, and perform precision effects which are beyond the capabilities of as-taught-in-school signals (i.e. electromagnetic and acoustic) through the walls of a home.

There ARE cases where acoustic effects can be recorded, and unusual radio signals are detected, including apparently coming from neighbouring homes.

When [conventional](#) signals are detected, many targets logically assume that they require conventional acoustic or electromagnetic shielding (or jamming) to counteract those seemingly conventional signals. Often, cures for conventional signals are pursued with great zeal and expenditure of time, strength, and money EVEN AFTER hearing that the genuine [advanced](#) perp signals are known to penetrate top quality conventional shielding. Conventional shielding includes sound deadening to absorb acoustic harassment.

The purpose of this short page and the image below are to share my own opinion of how the perps [DECOY](#) victims into believing all that is needed is conventional countermeasure techniques. By personal experience, my perps have delivered, as if by an "invisible pipe", loud and crystal clear acoustics to a point in mid air in my living room. (This was NOT [acoustic heterodying](#), aka "audio spotlight" technology, as acoustic heterodyning cannot penetrate walls. That technology can make sound appear to come from right next to your ear, but not from mid air, as it requires a solid surface to spill its acoustic content.)

Likewise, I, Eleanor White, have had all sorts of advanced effects operate through a four-layer, total bed enclosing shielded cylinder of this type of construction:

- solid sheet steel outside
- aluminum foil
- heavy galvanized steel mesh

- 3M Velostat semi-conductive foam sheet as a radio signal absorber to prevent reflection inside the cylinder

This shielding was very effective in killing signals to battery operated AM and FM and TV receivers, and a cell phone. But the shielding was totally INeffective in stopping or even diminishing the various harassment effects.

This shows that the perpetrator advanced equipment uses signal type (or types) far beyond what is known among commercial and scientific circles, at least those who are not involved in classified (secret) black projects. This advanced equipment can apparently set up virtual, invisible "pipes" through which all sorts of effects can be transmitted, and these "pipes" can penetrate walls, the target's body, and excellent electromagnetic shielding.

I do not know how such "pipes" could be created, but from direct observation, some sort of means of invasively carrying attacks into a target's private space, even shielded space, is being used.

With such effect-carrying, effect-injecting "pipes", the perps can cause conventional signals seem to come from a source or direction which may very well be false. For example, using a highly directional loopstick AM radio antenna, I found that a very electrically noisy ELF signal has been "injected" from a point ten inches above my bed pillow for some years. This signal fills my apartment, but drops to zero in the hallway just outside my apartment. I do not know its purpose.

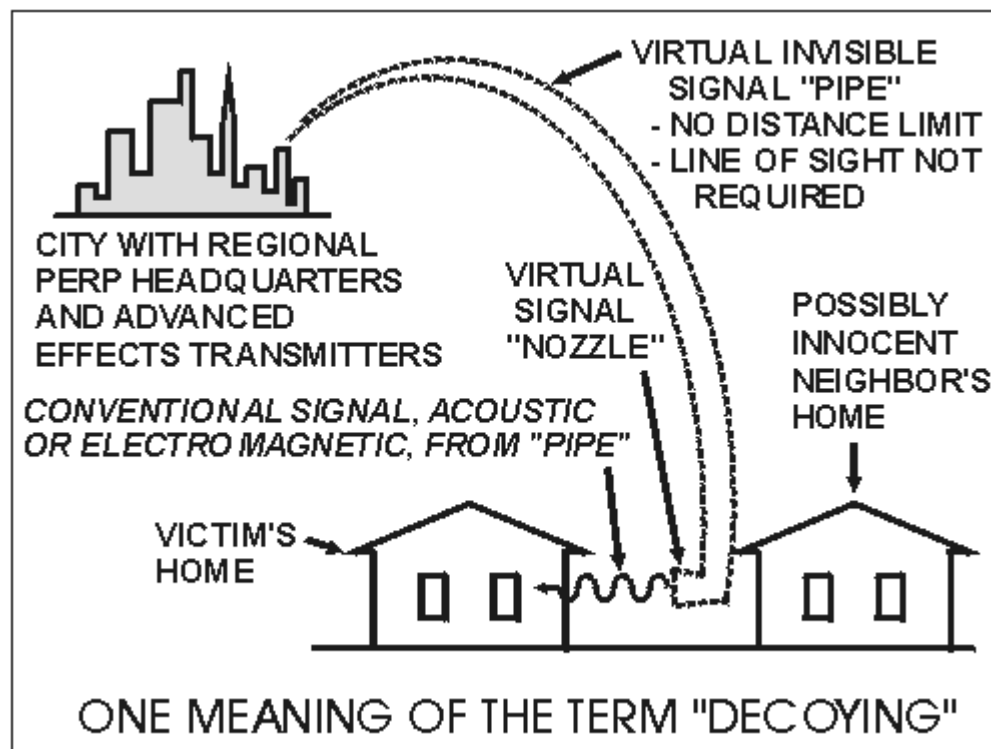

This is why I urge victims to not be so sure that if they find, say, "K-band microwave coming from a neighbor's house", that in fact it is coming from that house. It can be injected from MID-AIR, with the intent of causing the target to accuse neighbors of "microwaving" the target.

The possible end result of such decoying is to set the target up for a diagnosis of paranoia and delusionality, which will discredit that target.

This matter of decoying should never be taken lightly. I recommend a rule of thumb that every single effect, or signal detection, that we observe should be considered as at least a 50% chance of being a DECOY.

The perps are closely related to intelligence agencies (and may in fact be working for intelligence agencies on a day to day basis.) Intelligence agencies use decoying all the time. It is their stock in trade. I urge the reader to never ignore the possibility that what is observed is a decoy.

Here below is a diagram to illustrate how one kind of signal delivery decoying system may work:

The information on this page is presented to show the public that invasive, silent, deniable electronic harassment technology has been available to anyone for decades now. When someone claims they are being targeted by unexplainable, disabling effects, weapons such as

these listed below could be responsible. Instead of ridiculing the person claiming the attacks, the public should assist by asking officials to do a thorough investigation of every such case.

These are older, not secret technologies capable of extreme destruction of the ability to earn a living, and the quality of life of a target, listed below. None of these technologies require implants, and all can be transmitted silently, through walls, and leave no trace evidence.

[RIGHT click here](#) for an Adobe Acrobat (PDF) tailored-for-printing (6 pages) version of this page.

[click here](#) for an HTML web page browser-viewable standalone version of this page. For viewing only, not for printing. (Apologies - economy software doesn't do perfect file type conversions.)

Since few targets will acquire the correct detection equipment, destruction of a target's life even using these older technologies is a perfect crime under today's justice system. Today's justice system denies that any effective through wall harassment technologies exist, probably because they tacitly approve of the activities of the "anti crime" organized stalking groups who sometimes use this equipment.

Here is the list:

- A simple microwave oven, door removed, with the door interlock switch bypassed, and held against the bedroom wall of a target in an apartment building or semi-detached house. This device can cause a variety of disabling medical symptoms.

[Article](#)

MODIFIED microwave oven weapon for improved focus of the microwave radiation, from the article above

Some of the symptoms of microwave exposure are:

Asthma, cataracts, headaches, memory loss, early Alzheimer's, bad dreams, depression, fatigue, concentration loss, appetite loss, heart and blood pressure problems, and cancer.

## **Microwave Ray Gun Controls Crowds with Noise**

By DAVID HAMBLING

July 4, 2008

A US company claims it is ready to build a microwave ray gun able to beam sounds directly into people's heads.

The device dubbed MEDUSA (Mob Excess Deterrent Using Silent Audio) exploits the microwave audio effect, in which short microwave pulses rapidly heat tissue, causing a shockwave inside the skull that can be detected by the ears. A series of pulses can be transmitted to produce recognisable sounds.

The device is aimed for military or crowd-control applications, but may have other uses.

Lev Sadovnik of the Sierra Nevada Corporation in the US is working on the system, having started work on a US navy research contract. The navy's report states that the effect was shown to be effective.

#### Scarecrow Beam?

MEDUSA involves a microwave auditory effect "loud" enough to cause discomfort or even incapacitation. Sadovnik says that normal audio safety limits do not apply since the sound does not enter through the eardrums.

"The repel effect is a combination of loudness and the irritation factor," he says. "You can't block it out."

Sadovnik says the device will work thanks to a new reconfigurable antenna developed by colleague Vladimir Manasson. It steers the beam electronically, making it possible to flip from a broad to a narrow beam, or aim at multiple targets simultaneously.

Sadovnik says the technology could have non-military applications. Birds seem to be highly sensitive to microwave audio, he says, so it might be used to scare away unwanted flocks.

Sadovnik has also experimented with transmitting microwave audio to people with outer ear problems that impair their normal hearing.

#### Brain Damage Risk

James Lin of the Electrical and Computer Engineering Department at the University of Illinois in Chicago says that MEDUSA is feasible in principle.

He has carried out his own work on the technique, and was even approached by the music industry about using microwave audio to enhance sound systems, he told New Scientist.

"But is it going to be possible at the power levels necessary?" he asks. Previous microwave audio tests involved very "quiet" sounds that were hard to hear, a high-power system would mean much more powerful and potentially hazardous shockwaves.

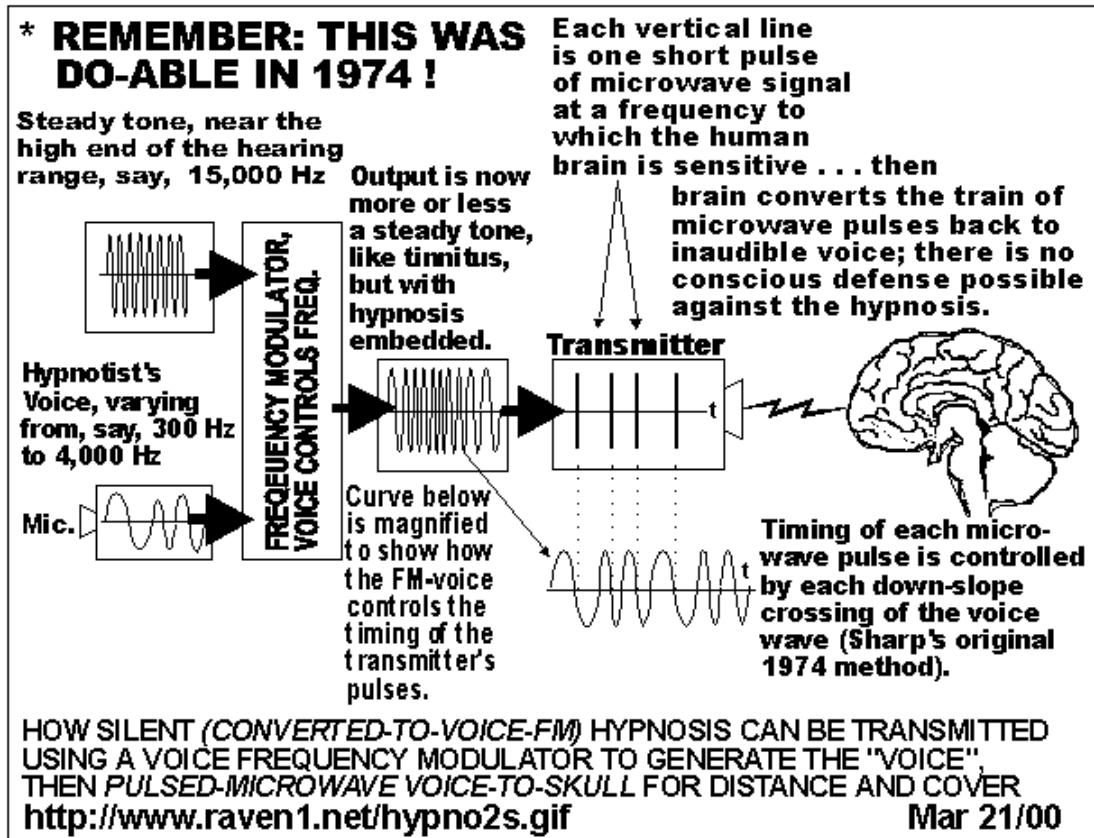

"I would worry about what other health effects it is having," says Lin. "You might see neural damage."

Sierra Nevada says that a demonstration version could be built in a year, with a transportable system following within 18 months. They are currently seeking funding for the work from the US Department of Defence.

- Lowery's silent sound, [patent 5,159,703](#) and used for self-help subliminal hypnosis tapes and CDs and by the U.S. Army in Gulf War One (1991).

Together with Sharp's voice to skull, Silent Sound projected through a bedroom wall can hypnotize a target in their bed with the target being unaware. Unaware hypnosis is CLEARLY electronic harassment in the EXTREME!

### [Silent Sound in Gulf War One](#)

Concept diagram, combined voice to skull and Silent Sound

- An old medical device, the Russian LIDA machine, a pulsed 40 watt, 40 MHz radio transmitter which can be used to make a target exhausted on the job when pulsing at the rate consistent with sleep, and with a pulse rate increase, DEPRIVE a target of sleep too!

[U.S. Patent 3,773,049](#) describing the LIDA operating principle.

[Notes on the LIDA machine](#)

[Tactical through wall radar](#), Xaver 800 sales video, January 2010.

[Tactical through wall radar](#), BACKUP COPY, Xaver 800 sales video, January 2010.

- Code name EPIC through wall coordination/balance disruptor weapon may become technology #6, once it has been announced as having been successfully demonstrated. ([Article](#), dated May 21, 2007)

Electronic harassment targets have reported suddenly having their balance and coordination disrupted.

The CLASSIFIED equipment, coming into wider use in the 1980s, operates at a much more invasive performance level. Our group as yet does not have solid information as to how these classified devices work.

## Article about MKULTRA perpetrator Dr. Jose Delgado

Magazine: ANO/CERO

Date: April-1997

Issue number: 81

**They are already applied secretly.  
Technology to alter our behavior  
The dictatorship of the minds  
Are we all in danger?**

Author: Enrique de Vicente

They are overwhelming the tests that the intelligence services have developed for half century multitude of investigations guided to the physical control of the mind. When these were object of two investigations managing parliamentarian, the director of the CIA assured that had put an end to the investigations. But there are evidences that they have continued ahead. Are the electromagnetic and psycotronics weapons acquired to the Russians being used to alter the behavior of problematic individuals? Does one plan to use those and other means to control our minds and to behave toward A Brave World?

In the last years they have come appearing news, murmurs and articles, according to which this type of experiments and investigations have not only continued ahead but rather have materialized in a series of weapons and effective methods of manipulation -of character fundamentally electronic-that they could already to be used against North American citizens and of other countries, that they are uncomfortable for the System for diverse reasons.

They would be camouflaged in the tangle of the denominated weapons non-lethals, that allow to disable the enemy and their facilities without necessity of destroying them. Though, when it was revealed the existence of these weapons officially it offered that the press to highlight-for provoking - some so innocent ones as stink-bombs or nets and sticky substances that would immobilize to the enemy, in so ambiguous concept fit tod it joins diversity of systems of modern armament that go from the virus computer and the rays laser to the infrasound generators and of electromagnetic radiations, capable of causing all kinds of psycobiological disfunctions and alterations of the human behavior... and, according to diverse evidences, the mysterious psycothronic arms developed in the extinct Soviet Union and acquired by the North Americans to equip with them to their police forces, they would be too.

Surprisingly, the existence of these weapons was given to know openly at the beginning of 1993, soon after that the Project of Electronic Surveillance, private organization that studies the

allegations of those who assure to be victims of experiments of mental control and harassment by means of microwaves, gives to know the initial conclusions of its investigations and the government replies that not exists such class of technology anti - personal.

Not very before it had taken place in the University John Hopkins a secret conference on these new weapons, to which attended the fiscal general attorney of the State, noted scientific, specialists in armament and bosses police. The meeting was organized by the National Laboratory of Los Alamos, where one works in new projects that include systems psychothronics and of mental control, under the direction of the retired colonel John Alexander.

Considered today one of the best expert in the matter, Alexander published in 1980 the first article on it applies them warlike applications of the parapsycology and the psychothronic in a military magazine, where he stands out ban the Soviet investigations directed to alter the behavior of the combatants, recommending that is carried out an investigation more coordinated in this field (AO/CERO, 38, 68, 70, 72 and 75 )

It was quick mind encouraged to continue their studies for several high military bosses and he worked under the orders of the general Stubbelbine, one of the biggest enthusiasts in the use of pranormal means and participant in Programming Neurolinguistics seminar (PNL) imparted by Alexander in 1983, to which you was their current friend and vice-president Al Gore.

In 1988 he retired of the Army and began to work in Los Alamos in the use of microwaves against the terrorists. At the moment, Alexander also directs the Project Jedi that looks for to elaborate models of personal excellence that can become trained to it interests them two like one makes with the PNL, besides an institute for the study of the border scientific topics, financed by a multimillionaire.

Finally, he cans boasting of having achieved the American government to acquire some of the denominated Soviet psychothronic devices, and that certain positions of the administration Clinton and expert antiterrorist interview with Russian specialists in this field.

#### TO REPRESS DISSIDENTS

These new weapons have been presented as the ideal solution against the crime, for what the Pentagon has consented to share them with the organizations police , and according to unofficial declarations they will be able to be used to repress the terrorism, the ethnic violence, the crime rate and to dissident groups as the arms ones,,extremist Christian and patriotic, the sects and other dissidents. In a recent article, titled «police State of the mind» and published in the magazine Fortean Times, the investigator David Guyatt mentions a couple of military documents that locate in a next future something that presently seems already to be a terrible reality.

One is the extensive study about future warlike possibilities, published for the Air Force of the United States in 1996, where it is indicated that the enormous advances current neuroscientists allow us to foresee «the development of sources of electromagnetic energy» that would allow to control the emotions, to cause

paralysis and dream, to transmit suggestions, to alter the memory and to induce experiences or fictitious memories in the conscience.

The other one is a book published in 1994 by the School of the American Army, where it is explained that the modification of the behavior is a half important one to impose the peace and it intends that, in a next, new future «systems of directed energy» and other electrical means like the manipulation of the images of the television - they would allow to avoid social protests inconvenient and to influence appropriately on who you opposes to the immediate changes that it imposes the future. Does this maybe a new step toward the covert imposition of a new socio-economic order?

HIGH SECRET

For incredible that seems it would not be only perfectly possible to maintain hidden an operation of similar magnitude, but rather there is numerous before grantors of black projects in the history of the American intelligence services.

The first one of these was the ultrasecret Project Manhattan that in 1941 began to work in the development of the atomic bomb, Roosevelt and Churchill were who knew only this project, spite of the immense investments that required. This sat down a precedent that it was broadly taken advantage by the CIA to be buried in hidden operations of psychological war against the communists, to the margin of all democratic control. In the same absolute secret the vast program of mental control was developed, developed from 1949 by the CIA, the Army and the Navy, and whose diversified projects they adopted names-key successively as Bluebird, Artichoke, MK-delta, Third Chance, Chatter, MK-ultra, MK-Naomi, MK-Search, MK-Ofen and MK-Chichwitt.

Under the excuse of counteracting the investigations of the Russians, the American secret services began us their own program of control mental, que it was a continuation of the experiments with drugs and hypnosis that made with the prisoners of Dachau and Auschwitz for Nazi scientists, to those that it was recruited and introduced ilegally in the United States -together with specialists in other areas - through the operations Paperclip and Blowback.

After two years of journalistic and parliamentarian revelations related with these projects whose existence was uncovered after the Watergate, in 1977 the new director of the CIA was to declare before the Senate. According his revelations, in the MK-ultra 185 scientists that developed 149 different experiments on the human behavior in 59 universities, laboratories and different foundations, twelve hospitals and three prisons participated. The investigation fields included the erased of the memory, the creation of dependences, the alteration of the sexual behavior, the diverse forms of suggestion and hypnosis, as well as their potential applications to the espionage and counterespionage; and it was experienced with diverse technicals, like drugs, narcohypnosis, electronic stimulation of the brain, ultrasounds, infrasounds, microwaves and sensorial deprivation.. For they were used multitude of human cobayas, unaware to what they were making them, in a sinister and unconstitutional violation that has sat down precedent for successive cruelties, none of the responsible ones was punished by it.

PERFECT MURDERERS

The secret of this operation was guaranteed for the decentralization of the investigations and because most of those implied ignored the last end pursued. According to the senatorial investigation, the initial intention of the project was to investigate what there was behind the Soviet techniques of brainwashing becoming an offensive program then. And certainly the soviets have come to developed multitude of investigations on the manipulation of the behavior and the development of mysterious psychothronic arms (AÑO/CERO, 70).

To the investigations of the CIA it is necessary to add the similar projects driven by other agencias of North American intelligence and other many features that have not left to the light, as the hypnotizers use for diverse operations. One of the most interesting aspects is the combined experimentation of drugs and hypnosis that it would allow provoked a dissociation in some individuals, programming them different personalities and degrees of knowledge and ability that would belong together with different hypnotic levels. When being induced one of these, by means of some key or external stimulus, they convert in spies or perfect murderers. The investigations carried out by Bowart, Marks, Bain and others indicate that this technique would have been used to program to numerous military, former-agents and North American civils and probably also foreigners. They also exist the numerous evidences that it could be programmed this way presumed murderers of John and Robert Kennedy and M. Luther King

(AÑO/CERO, 6, 10 and 21).

Another isolated murderer, Mark D. Chapman, executed John Lennon in December of 1980, without apparent cause. This episode acquires another shade when you examines the documents from the FBI relatives to the celebrated musician, in those that he is qualified as "revolutionary activist of the new left" that should be considered dangerous", attributing him nonexistent plans.

In the sixties, the FBI and the CIA that also showed special interest in Lennon began the operation COINTELPRO (Program of Contraintelligence) and MK-Chaos, creating a complex net to infiltrate the movement that was opposed to the war of the Vietnam and other groups dissidentes. One of the main goals of COINTELPRO it was to prevent the arose of a messiah capable of «to unify and to galvanize to the masses», what took them to destroy the prestige and the lives of numerous American citizens. Surprisingly, Chapman assured to his lawyer that God -to speak him inside his head while he remained in prison - He asked him that it changes its allegation like no-guilty for mental dysfunction guilty. After the reception of this message, the communication between him and their defender it broke abruptly and inexplicabiely.

He had been a normal person until 1977 when he received in Hawai an intensive psychiatric treatment, after that which tried to commit suicide in two occasions and it was interned four times in other two sanatoriums.

When G. Armstrong and K. Skinner attempted to dilucide the details of these psychiatric treatments, they were only able to discover that Chapman, in the Hospital Castle, was developing a special program of modification of the behavior, in which were administered very potent drugs -as torazina, one of the most experimented during

the MK-ultra - and he underwent other anti-therapeutic experiments, next to the brainwashing and able to transform him into a psychopath. After receiving this treatment according to who knew him, the personality and behavior of Chapman changed in a very negative way, traveling later all over the world, being worth to say that is not known what economic means to use him-as they made other programmed murderers - before returning to New York to kill Lennon.

All his behavior remembers - according to the appointment two investigators - to somebody that has been programmed by means of drug-hypnosis and pain, spite of which -and the interest that he woke up in the CIA and the FBI there wasn't any official investigation about the treatments that he received.

#### VOICES IN THE HEAD

It is still necessary to wonder if the voice that Chapman heard in prison was product of its dysfunction, because technological means that would allow to induce voices in the brain of a person . The magazine Newsweek assures that -during the confused blockade to the Davidian of Waco - the FBI requested Soviet experts some technical means that allows them to throw imperceptible messages to the messiah of the sect, able to convince him that God spoke to him, inviting him to depose the weapons. But the evidences are plentiful according to which the military Americans already possessed, after two decades of investigations on the microwave modulation, the type of technology that would allow them to go mad to somebody, to do him to hear voices, or to give him instructions at a previously programmed murderer.

The same reasons exist to suspect that the former incident of Waco that terminated in an incomprehensible massacre, it could have completed diverse functions. Because, although in 1977 the director of the CIA assured that the Agency didn't work in any other project of mental control, there are more than enough reasons to suspect that such experiences and its practical applications have continued, driven by this or other intelligence agencies, as well as for hired companies and private groups that interrelated with those to the highest level, served probably by means not very suspicious as many sects and supposed kidnappings extraterrestrial.

In fact, senator Ryan's sons, dead when he investigated in Guayana the sect of the Temple of the Town, they accused judicially to the CIA of being responsible indirect of the death of their father and of the presumed suicide of a thousand people, suspected fundamentally that the strange colony was to experience technical of subjugation, derived of the MK-ultra.

On the other hand, like already explained thoroughly in another occasion (AÑO/CERO, 31), it's extremely suspicious that our extraterrestrial visitors are devoted to kidnap to human, subjecting to outrageous mental and genetic manipulations that leave in the witness diverse sequels and souvenirs that any hypnotizer seems capable of reviewing. And it is difficult to understand that they have waited to develop these experiments until the years 70, when they had already begun to detach the terrestrial investigations in these areas that face the barriers of the democratic control.

There are reasons to suspect that some abductions could correspond

in fact to a vast plan of operations whose executioners would work in an independent way, ignoring the complex plan of the one they are part. To pretend to be extraterrestrials would allow them to develop this type of tests without a serious attention is lent to the victims.

#### FALSE KIDNAPPINGS

To get it, there are techniques capable of provoking in somebody hallucinations able to distort their conscience to transform their perception of the reality, modeling their memory with false memories and to induce amnesias that would make them ignore their experiences. In these operations they would play a fundamental paper the mysterious vans and lacking black helicopters of identification that so soon they appear in the scenario of kidnappings and mutilations like they frequent the houses of some abducted. Such vehicles could transport the teams in charge of the execution and control of such experiences, and they could be part in a future of a system of psycho-electromagnetic war.

A key piece in this game would be the implants that many abducted sustain they have introduced them during the abduction, and that supposedly allowed to control its behavior at distance. It is suspected that these implants would have their origin in the investigations on the radioelectric stimulation of the brain carried out by the professor Rodríguez Delgado in the sixties and that they were financed for the Office of Naval Investigation (ONI).

His work was continued by other investigators and it was spoken widely included of a supposed technique of control hypnotic intracerebral electronic with erased memory (RHIC-EDOM) that would allow to force the one implanted to act of certain way under the effect of a radio-hypnotic impulse and then to forget all that happened. Some implants extracted those abducted they seem to be provided of microchips whose operation and purpose is ignored. Would it maybe of experiments in those for testing the form of conditioning the individual behavior or would they be part of a more sinister global plan? If it was this way, it would be without solving the enormous problem that represents to implant to hundred of thousands or millions of people.

Although, certainly, it could be appealed to diverse techniques, without to need that who participate in the implantation know what they are making, and much less which is the purpose pursued.

But other direct forms exist of making it. It could intend a law that imposed the subcutaneous insert from a microchip to each citizen, under the beneficent excuse of having identified and localizables to the criminals of all class and to avoid kidnappings. Also, the implants it could reprogram the organism to combat the illnesses. In fact, the electronic engineer Carl Sanders assures that the development of the microchip that he devised to implant it to those who have the damaged dorsal thorn was integrated in the government project Phoenix, having meetings with official of the CIA that seemed very interested in the possibilities that offering for the individual control...

Even, the same day in that I write this, the creation of a chip implantable is disclosed in the brain, with little nuisances that allows to help the sick persons of Parkinson! For very

inconceivable and delirious that seems us this hypothesis, their consequences would be so extremely dangerous for the freedom and human dignity that we cannot stop to examine it and to think about depth. Because I don't doubt that, sold in an appropriate way through the mass-media, in a next future a law proposition could be acceptable for a majority of the voters, in view of the growing civic insecurity.

There are some rumors and doubtful informations that point in this address, as which Kevin Ollier presents us in the number of marzo-97 of the magazine UFO Reality. An informant whose identity hiddens, assured him that from 1978 she was working in a secret project of the British Government whose objective was to develop a microchip that they will project to implant to all the Americans and Europeans before the 2005. This would substitute to the current credit cards, avoiding this way the robberies, and it would put an end to the criminals that they would be immediately located by satellite.

Days after listening this history, the English informative means announced that had intended at government level «to label electronically» to the babies because the number of missing children grows continually; and later intended to make the same thing with delinquents bigger than 10 years old... These miniaturized implants would not allow single mind to have located their payees, but like Ollier reminds us - to affect all their neuroresponse mechanisms and even to disable their nervous system completely, and -like adds lcke - these and the electromagnetic technology in general would affect to our subtle bodies that behave as electromagnetic fields of energy, causing this way diverse alterations psychophysiques.

#### MICROWAVES

But returning to the previous development, to force to act a murderous hypnoprogrammer or stops or to provoke auditory hallucinations it would not be today necessary to use any type of electronic implants; it would be enough with inducing in their brain a concrete order, with an irradiation intracranial, appropriate modulated, without leaving this clues, only interior voices that impels him to act of determined way, they come from a very terrestrial agent.

The electromagnetic waves of frequency extreme low (in English, ELF) or infrasounds, have multitude of potential effects, so much positive as negative. Among these last ones, there are diverse interferences psychophysiologicals and the possibility of influencing in the cerebral waves, causing states of anxiety, irritability, edginess, uncertainty, confusion, cerebral desynchronization and nauseas. Therefore, they could be used to alter the behaviour of big populations, and the most terrible thing is that seemingly it is impossible to be protected of the same ones, since they seem to cross everything.

In the sixties the American embassy in Moscow began to be affected by mysterious rays that affected to the health of many of its occupants, what gave place to more than an diplomatic incident. Probably, more than to carry out a test, the Soviets tried to determine to what extent their opponents knew the operation of the issuing systems of radiations, field in which the Russians are much more advanced. The Pentagon reacted to charge to their Agency of

Investigation of Advanced Projects of the Defense (DARPA) that put in march the Project Pandora whose initial purpose was to know if a controlled emission of microwaves could manipulate the mind.

One of those that participated in this, the Dr. Ross Adey, has studied diverse methods that would allow to provoke alterations in a fellow, stimulating his brain by means of a modulated frequency electromagnetic that allows to alter their cerebral waves, causing an aggressive behavior that could direct toward a concrete objective. In July of 1976, the Soviets began to emit from five facilities different waves ELF in an uninterrupted way that were known as Woodpecker, with a maximum intensity of 40 million watios and an average variation around the 10 herzios or cycles per second, seeming to be directed successively to different areas of the planet.

The American response is said they began similar emissions in 1979, with upper frecuencies to the 15 herzios, which makes suppose that pretend to alter the populations reached by the same ones causing states of concentrated excitement, while the Soviet emissions could produce a relaxation state. Possibly, both to pretend to destroy the social cohesion of the nations against those were directed, until the point that the Dr Robert Beck, expert in the topic, considered probably that this sign causes neurological changes in 30% of the populations reached by the same one.

Although such emissions ceased a while ago, the americanss have begun other projects based on the emission of electromagnetic frequencies, with equally disastrous potential consequences, as the controverted issuing system of microwaves HAARP (Project of investigation of the dawns with high frequencies), of the one that so much is spoken lately and that it could be used to irradiate to enemy populations, or the Net Omega that emits similar waves, which are part of a system of antinuclear defense, from instalations distributed by the whole planet.

#### MULTIPLE APPLICATIONS

It seems that the National Agency of Security (NSA), supposedly in charge of the security of the communications, it is developing in Fort Meade and Fort Bragg diverse technological means that allow to condition at distance the behavior of foreign leaders and terroristass. And the most terrible thing is that these can be employed in the North Americans on their own countrymen. Anyway, it is evident that these and other techniques of mental manipulation would allow that the almighty ones can model the world to their whim like David lcke explains, sport commentator of the British TV, environmentalist leader and convinced conspiranoic, the programming of individuals would allow that a Israelian to kill a group of Palestinian or their own president or that a soldier jordan makes the own thing, contributing to destabilize the area in a very opportune way, or that a perturbed organizes a massacre in a school and get that the public opinion requests bigger police and judicial hardness, that a member of certain organization makes something ridiculous or terrible, being able to discredit him. This same it is applicable, in a simpler way, to the increment of the delinquency, to the almighty traffic of drugs and, mainly to the terrorist groups that are it infiltrates and manipulated by certain services of intelligence, achieving that the civilized world claims a new surer international order, although this doesn't include the authentic freedom and solidarity.

But of that New Order, of the fascinating history of those who could pursue the installation of the same, of the means presumably used for obtaining, of their implication in the experiments of mental control, as well as of their active participation for sheltering this and the manipulation of the extraterrestrial visits, we will speak widely in another moment.

I don't discard that something of all this could be paranoia. But, if some of you requests me an advice: he/she closes the eyes, relax, visualize do it is surrounded by a shield or an armor or a luminous pyramid and protector; if he/she wants he/she meditates to That that is able to wake up in you that faith able to move mountains; he/she feel the energy that circulates for all its body and the sensation of peace and interior power that it bears , and attempt to remember that sensation in the daily life, because you are that conscience without opposite, that powerful energy ,vital and spiritual force,the whole series of conditionaments-problem-suffering-limitations and other that have put us in the head and that they will try to reinforce by all possible means who don't want that is free... Ah!, and above all don't forget to turn off the television.

## **Subject: How Bankers Control Congressmen in America**

Greetings: This is so horrible. It is hard to accept that this stuff happens in America but I do believe it and that is why I continue to fight the political issues as I do. We have corruption in all the high places in government and when ONE stands against it this is what happens to them. We must UNITE and not let this happen to anyone. The enemy gets away with this because they take us ONE at a time. We must not let this continue. Please forward this to your lists and to your Legislators - state and federal. This must not be allowed to go unnoticed. Ask for a written response so you know it has been read by your legislator.

Per request, an article from Page 1 of the April Idaho Observer...

### **Truth Surfaces in Hansen Ordeal Dept. of Finance/Judge Lodge Linked to Hansen Nightmare**

**by Don Harkins and Edward Snook**

Diesel Therapy: A prison term which describes the most inhumane, degrading and painful of punishment; normally reserved for the most violent and uncontrollable of prisoners.

A prisoner is shackled at the feet and handcuffed at the wrists, reinforced with a box-like structure which stiffens the chains and locks the wrists at a 90-degree angle. The handcuffs are connected to a waist chain that is connected to another chain which connects the shackles. Once this shackling is complete, a prisoner can barely move. The tightened manacles pinch the nerves and restrict the flow of blood causing severe pain and swelling. Legs swelling with blood are particularly damaging to the feet, as toenails under pressure from blood-blisters press up against shoes for long periods of time and soon become infected and deformed, causing

such excruciating pain that they require surgery or the pulling of the nails out by the roots.

Diesel therapy gets its name, not from the "cruel and unusual" bondage, but from being forced into bus after bus and onto plane after plane, shackled as described, and being shuttled from one prison to another, for weeks on end, 20 hours per day in chains, for no other reason than to cause pain and suffering and give the prisoner a "message."

Welcome to diesel therapy and the world of seven-term Congressman George Hansen who was found guilty in the court-room of the infamous Federal Judge Edward Lodge on bogus charges of bank fraud which were manipulated into an issue by the Idaho Department of Finance which illegally used the same agents previously employed by the IRS in their failed attempt to "get Hansen?"

People who have been reading past editions of The Idaho Observer and The Oregon Observer will recall that the Judge Lodge/Idaho Department of Finance connection has already been uncovered in the bogus securities laws violations charges levied against Boise businessman and winemaker Petro (Pete) Eliopulos.

"After Ed Snook of The Oregon Observer and I met with Hansen and he told me in a six-hour meeting what had happened to him, I was more shaken than I have ever been in my life. If (West One) bank officers Knox and Neaville had not subsequently been convicted of crimes which came to light in the bogus investigations of me and my businesses, they could have done to me what they did to Hansen," said Eliopulos, who was shocked that a U.S. Representative, or anybody for that matter, could be treated this way in America.

What could an esteemed member of the U.S. Congress have done to deserve such treatment?

#### Judge Lodge Prescribed Torture for Hansen

Congressman Hansen found innocent of crimes manufactured to thwart congressional accountability

After four years of imprisonment, after ten years of persecution, after being ruined professionally and financially and after being permanently damaged physically, in December, 1995, the 9th Circuit Court of Appeals vacated Hansen's sentence for bank fraud because the U.S. Supreme Court had ruled on May 15, 1995, that Hansen's previous conviction as a member of Congress had been overturned.

A series of events were triggered to allow crimes to be manufactured which led to the imprisonment and torture of Congressman George Hansen. Idaho District Federal Judge Edward Lodge, who has been used by bankers and government

officials for a decade to "legalize" their unethical and criminal activities, was given the job of putting Hansen away and seeing to it that he learned a lesson.

Judge Lodge saw to it that Hansen received "diesel therapy" coming and going to prison from the judge's court at great cost to the government, even though Hansen should have been allowed to make such trips at his own expense.

On the way from his hometown of Pocatello to federal prison in Petersburg, VA , Hansen was bussed and flown, nearly immovably shackled, at taxpayer expense, to jails all over the country. Not Hansen's lawyer, his wife, nor his allies in Congress were able to locate him. Hansen had simply disappeared for a month into the custody of the Federal Marshal's Service.

Hansen's wife didn't know whether he was dead or alive. And even when the Supreme Court overturned Hansen's original case and the Appeals Court vacated his current sentence, Hansen still got the Judge Lodge treatment of another dose of diesel therapy from Virginia back to Idaho.

What had Hansen, who was a model prisoner, done to deserve the most brutal, torturous and barbaric type of treatment this country's penal system is capable of inflicting on a prisoner?

#### Congressional Accountability Project

Retired Congressman Tom Kindness (R-Ohio) stated , "I believe that George's recent trial and conviction on charges of "bank fraud" was the direct result of a campaign by various members of the bureaucracy to stop the CAP."

CAP, the Congressional Accountability Project, was being launched by Hansen and a group of investors interested in good government. CAP was going to utilize nation-wide television and a national 900 number to make congresspersons instantaneously accountable to the American people for their votes on the House and Senate floors.

"This was a project which would, in my opinion, have had a major impact on the votes of congressmen since it would have made them instantaneously responsible to the people by making their votes known immediately after being cast," commented journalist John Voss.

Hansen and his associates were on the verge of making CAP fully operational and accessible to the American public when the government, through the Idaho Department of Finance with the illegal help of former IRS agents, a revenge-minded Justice Department and the corrupt Judge Lodge, manufactured bank fraud charges against him.

Judge Lodge's provably compromised court ultimately found Hansen guilty and prescribed diesel therapy to teach him a lesson.

Why did the "Honorable" Judge Lodge treat Hansen like Public Enemy #1?

George Hansen was the only member of Congress able to pull the strings necessary to visit the hostages in Iran in 1979 and expose the big-bank scam behind the crises. George Hansen was the author of the book *To Harass Our People*, an indictment of the IRS, where he demanded its dismantling. George Hansen was the congressman who was so outraged by what he discovered about the IRS while researching his book that he wrote and helped to pass the Taxpayers' Bill of Rights. George Hansen was the first man to propose the flat tax as a damage control alternative to protect the people from IRS abuses. George Hansen was the man who took on OSHA, WPPSS, and the INS, and George Hansen was the man who fearlessly and repeatedly made public his findings when investigations turned up government corruption and citizen abuse.

The "system" decided it had to teach Congressman Hansen a lesson because, had he been allowed to continue serving on Capitol Hill, he would soon likely be the chairman of the powerful House Banking Committee.

So, why did Judge Lodge, whose personal reasons for needing to keep the well-documented criminal nature of the banking industry below public scrutiny, with the help of the Idaho Department of Finance, trump up a bank fraud conviction by denying the admission of exonerating evidence in court in order to throw Hansen in prison and make sure that he was punished severely with diesel therapy?

Was it because Congressman Hansen was getting close to the truth and accumulating the political power it would take to finally and totally expose the banking industry and government for its criminal abuses of the American people?

Judge Lodge's Court of Kangaroos

CAP was apparently the final straw and abusive criminal government had to shut Hansen down. On the eve of CAP becoming fully operational, powerful special interests and political enemies derailed the project and forced a domino effect of financial repercussions upon Hansen and his associates. The government then took the situation it had created and indicted, prosecuted and convicted Hansen of bank fraud. Though the treachery of Judge Lodge and the government disdained the patriotic financial sacrifices made by Hansen's supporters for good government and callously prevented his efforts to re-pay them, it did not prevent Hansen from publicly pledging that these law breaking government bullies could never seal his lips, nor stop him from somehow paying back the people he owed and thereby keeping his word.

"Every attorney who has read the court transcripts is concerned and confounded as to how George could have been convicted on bank fraud charges when the supervising bank officers were not only acutely aware of his financial operation and transactions, but were actively assisting him in his efforts for over ten years! "George defrauded no one and we can prove it," stated Congressman Kindness.

Hansen was not really imprisoned and tortured by "our" government for bank fraud, though that was the government's excuse to lock him up and shut him down. Hansen was actually a political prisoner who was guilty of attempting to provide the American people with the ammunition of knowledge so they could successfully fight back against the senseless encroachment of government oppression which more and more is ruining the lives of all of us.

Hansen dedicated his civil service to facilitating a return to a Constitutional form of government which is of, by and for the people and "our" government felt threatened enough by his noble activities to see to it that he was imprisoned and tortured for daring to tell citizen/taxpayers the truth.

Hansen was the only U.S. statesman who cared enough to risk his own safety and political career to visit the hostages in Iran in 1979. While in Iran, Hansen saw first hand what happens to political prisoners, who were beaten mercilessly, who had finger and toe nails ripped out by the roots and who had been shackled until they were permanently disabled physically.

Hansen has also experienced first hand the same inhumane torture and it happened to him in the most "civilized" nation on earth, the only difference being that Hansen was denied treatment and pain-killers and had to rip his own deformed and infected toenails out.

.....end of forwarded article..... .

"It is not the function of our Government to keep the citizen from falling into error; it is the function of the citizen to keep the Government from falling into error." U.S. Supreme Court in American Communications Association v. Douds, 339 U.S. 382,442

## **Disinformation Agents in the Organized Stalking and Electronic Harassment Arena**

**Eleanor White  
January 9, 2008**

HEAR [Voice of America interview](#) as an example of one type of disinformation tactic, pulling the listeners' attention away from a deliberate crime against individuals, and on to a "softer" crime against the general public.

SEE ALSO [Kathleen Sullivan's comments](#)

I am not an expert in this. However, one can be circumspect about disinformation activity without being an expert by just keeping a few common sense precepts in mind.

Disinformation agents are people working for the organized stalking and electronic harassment perpetrators whose job it is to prevent the truth from getting out. It is important that those who have only recently realized they are being targetted understand that slick and seemingly helpful and credible people do exist who are working to prevent our members from ever seeing freedom again.

Never underestimate their ability to do just that. Massive black budget operations for decades have brought the very best in psychological warfare specialists to either assist the disinfo agents or to actually be disinfo agents. We are up against the best there is.

I am not trained in psychological warfare, but anyone who takes the time to take a second, more critical look at information supplied by every writer or speaker on the organized stalking and electronic harassment issue can develop a reasonably good "B.S. detector". You have to make critical thinking - that is, asking yourself if a given piece of information is "too good to be true" or if it jibes with all our experiences - a daily habit. Time will do the rest.

We know from our [MKULTRA](#) colleagues that disinfo agents often set themselves up as "helpers", "counsellors" or book authors seemingly supporting the victims. In fact, some of these "support people" hang out with the victims and attend their conferences, where they may try to trigger previous hypnotic programming, and confuse the issues. Ask any MKULTRA survivor who has attended conferences to tell you about this.

The [FBI's COINTELPRO](#) activities involved doing exactly the same thing. They infiltrated Viet Nam war protest groups, or black power groups, sowed confusion and discord with constant lies and counterfeit communications from leaders. Breaking in to organizational headquarters and character assassination was routine.

So this is not anything new.

Here are some activities you can expect from disinfo agents:

- Frequently referring to statements and proffered information from organized stalking and electronic harassment targets as "beliefs".
- Stating that they are a victim, but doing things that someone targetted would almost certainly not do. Example: Telling other victims they are not victims and that they "should find another hobby."
- Flooding of email forums and newsgroups with postings - in some instances, to such an extent it is hard to find comments by others.
- Proffering of solutions too good to be true, or which ignore widely observed phenomena, or experiments showing the solution is inadequate. Example: "Wearing a foil beanie will protect you from organized stalking and electronic harassment signals", or, guaranteeing solutions based on conventional EM signals.
- Writing articles which contain good information, but which also contain either outright falsehoods or vagueness calculated to confuse a "new" victim or member of the public.
- Attempting to "explain" organized stalking and electronic harassment as other than a deliberate program of harassment. Mainly by finding "alternative theories" that may (sort of) explain each effect but do not explain the full set of effects. These "explanations" consistently ignore the frequency of effects, and the bizarre, constant street theater, break-ins and sabotage at home and at work.
- Sending certain individuals large volumes of emails, especially argumentative, endlessly repetitive or distracting, with the purpose of tying up the recipient's time.
- Excessive nitpicking of details, especially on minor points, as a courtroom lawyer might do in trying to get his client off on a "technicality".

Experimenting with countermeasures based on conventional signals certainly does no harm, provided the experimenter has a comfortable income. Where the disinfo agent might reveal him/herself is if he/she GUARANTEES success. While there is a rare chance someone might find a successful conventional countermeasure, a truly friendly colleague will recognize that money and time spent are entirely at the spender's risk, with no guarantee.

Here's a classic example of a paragraph from a disinfo agent in a letter to the editor of a major news magazine, commenting on an article on schizophrenia, but describing a organized stalking and electronic harassment experiment:

"If externally-sourced and heard only by the ("schizophrenic") subject, we would speculate a deliberate attack of unknown, but certainly sadistic, motive is occurring which drives victims such as Yates and others to horrendous acts. The method involved is also unknown but might be accounted for by technology (not likely since this has been going on for centuries) or focussed group human remote influence. ..."

In this case, the disinfo agent cleverly does two things:

- In the larger letter, which is scholarly in style and contains the names of PhD researchers who participated in a mind control experiment, this paragraph states the writer's opinion that even in the case of deliberate voice to skull attacks, the method is not likely technology, which we know is not true.

- By sending a letter to the editor in response to an article specifically on schizophrenia, the disinfo agent cleverly gets the magazine's editors as well as the public to associate organized stalking and electronic harassment with schizophrenia, total rubbish, aimed at setting us back years in our fight for freedom.

The above examples do not GUARANTEE the person involved is a disinfo agent, but should act as caution flags. One thing it's important to do is not spend so much emotion and time on "witch hunting" that you wear yourself down worrying about disinfo agents. All this writeup aims to do is advise a degree of caution similar to that used to avoid financial scams.

See also [Facts, Fact Sources, and the "Poison Pill" Disinfo Tactic](#).

And by the way, I don't think there is "a disinfo agent behind every garbage can"!

E. W.

# THE INVISIBLE HAND OF THE MEDIA

**"You can change the channel but you cannot change the news."**

---

"A national survey of fifty local television newscasts by the Rocky Mountain Media Watch, a Denver-based nonprofit group, revealed what viewers already knew," charges Carl Jensen, author of *Censored 1996*. "Local TV news focuses on crime, disasters, sensational visuals, weather, sports, promotions and ads -- to the exclusion of real news."

With local television stations all reporting the same news simultaneously, one claiming the title "news leader", another billing itself as the one with "total news", it is apparently becoming more difficult for the public to distinguish one from the other--or from common entertainment, according to former [CIA](#) agent, Philip Agee.

"Television news is show business," declares Agee in his book, *On the Run*, Lyle Stuart Inc., 1987, "designed to entertain and intentionally or not, programmed to keep people ignorant." With an observation as this written ten years ago, George Orwell's prophetic world where "ignorance is strength" no longer seems a prophetic forecast, but a present reality.

Surfing between channels, seeking a different perspective on a particular news story, or to even see a different story, one can easily observe that not only are the reports worded nearly identically, but the photography, in many cases, is identical.

A logically sardonic question could be posed as to why the waste of resources? Why not pool them into one reporting agency and charge the advertisers two or three times the standard fee based on how many news sources were eliminated in the consolidation?

The answer, other than the obvious monetary considerations, perhaps lies with Carl Jensen's assessment of Adolph Hitler's philosophy of information control--"More than half a century ago Hitler said the masses take a long time to understand and remember, thus it is necessary to repeat the message time and time and time again. The public must be conditioned to accept the claims that are made...no matter how outrageous or false those claims might be." *Censored 1996*.

Last month Good Morning America reported that a state governor announced the Fig Newton as his state's official fruit cookie. The comment made by the program's host, amidst much laughter was, "You'd think the Governor would have a few better things to do." With such an observation, would it not seem logical that Good Morning America would have much better items to report on?

"If, however, the public does not receive all the information it needs to make informed decisions," Jensen claims, "then some form of news blackout is taking place...some issues are overlooked (what we call 'censored') and other issues are over-covered (what we call 'junk food news')."

Why does a boxer's bitten ear receive local and nationwide coverage, but we are never told about presidential [Executive Orders](#) that affect the entire nation? Why does the case of a slain child beauty queen receive daily updates, but UN sanctions that starve thousands during their "peacekeeping" operations, receive only a passing mention? One can receive minute detail on the actions of a homosexual serial killer involving a nationwide hunt for a man possibly dressed as a woman, but UN soldiers camouflaged as [peacekeepers](#) are scarcely reported?

Aldous Huxley in his book, *Brave New World*, observes, "The greatest triumphs of propaganda have been accomplished, not by doing something, but by refraining from doing. Great is truth, but still greater, from a practical point of view, is silence about truth." A child's death is certainly a tragedy. A bitten ear is painful, yet things that affect an entire nation or the world are seldom, if ever, covered. Truth, it seems, is destined to be forever buried under a flood of "cookies".

### **RULED BY MONEY NOT TRUTH**

Peter Phillips observes in his book, *Censored 1997*, why it is so difficult in this age of information to obtain true, pertinent facts that have a distinct impact upon the lives of this country's citizens?

"Corporate-owned media outlets tend to ignore or dismiss stories that run counter to corporate interests...", Phillips observes. "Why does a particular story not receive the coverage it deserves in the media? While a variety of reasons may be at cause, foremost among them...seems to be conflict of interest issues involving the financial concerns of major media advertisers."

Walter Cronkite, intimately aware that the news media is controlled by money, laments, "Those who permit such pressure to be exerted clearly are thinking purely of their pocketbooks and that alone -- not of the people's rights to know or necessity to know -- and I abhor it." Apparently, the hand that pays the news media controls the mouthpiece as well. It does not appear to be a question only of news gathering costs being supported by advertisers. The advertisers themselves are the apparent determiners of what is newsworthy based exclusively upon monetary considerations.

When this ethic is applied to [multi-national corporations](#) whose yearly revenue arguably exceeds the national budget of most third world countries, the stakes are raised to a level that far exceeds merely the success or failure in the marketplace of a new model of automobile or a diet pill.

"In the United States, in particular," says Benjamin Ginsberg, Director of the Center for Governmental Studies at Johns Hopkins University, "the ability of the upper and upper-middle classes to dominate the marketplace of ideas has generally allowed these strata to shape the entire society's perception of political reality and the range of realistic political and social possibilities. While westerners usually equate the marketplace with freedom of opinion, the hidden hand of the market can be almost as potent an instrument of control as the iron fist of the state." (From *The Captive Public*, New York: Basic Books, 1986).

While news is driven by advertising sales, there is another aspect to the proliferation of media censorship. "...A significant reason...stories were not covered has to do with the conglomeration of the mainstream press," says Peter Phillips in his introduction to the 1997

volume of Project Censored. "This has resulted in fewer media outlets, increased pressure on news divisions to produce higher ratings and profits...."

The Telecommunications Deregulation Bill, signed into law February of 1996 by President Clinton, generated significant opposition due to a piece of legislation tacked onto it called the Communications Decency Act (CDA). Most of the opposition to the bill resulted from fears of censorship, but few recognized that the CDA allowed for the creation of virtual monopolies in the communications arena from the purchase of multiple media outlets by large corporations. General Electric's ownership of the National Broadcasting Corporation with all its subsidiaries, for example, ensures that anything NBC airs will not run counter to GE's policies or conflict with its revenue base. The same principle would necessarily apply to Time Warner's ownership of Turner Broadcasting, Disney's takeover of ABC and Westinghouse's control of CBS.

### **MANIPULATORS OF THE MASSES**

"Those who manipulate the organized habits and opinions of the masses constitute an invisible government which is the true ruling power of our country", wrote Edward Bernays, assistant to William Paley, founder of CBS. "...We are dominated by a relatively small number of persons...."

"...Media corporations, practicing 'press release' journalism, have become dependent on established sources of information available through government and corporate channels. These channels sanitize and spin the news to reflect their special interests, and downsized news organizations do not expend resources to do the in-depth investigative news gathering necessary to counter these packaged versions of the news. Therefore, stories that run counter to major corporate or governmental messages tend to be ignored or discounted." *Censored 1997*.

Does a larger portrait of corporate intent emerge from this? For example, would General Electric, previously one of the nation's leading manufacturers of nuclear reactors, have allowed NBC to disseminate accurate, in-depth news critical of nuclear power? Is it also realistic to think that a government bent on world dominion would allow news releases of national and international importance if that news would prove counterproductive to its political agenda?

By observing history, can we not see that governmental and media censorship is greatest when efforts at major national control are being undertaken? Walter Cronkite addressed the issue of governmental control of the press and information flow when he said, "Limitations on press freedom are imposed by the government itself despite the very clear wording of the First Amendment that there shall be 'no law abridging the freedom of speech or of the press.'

"The government limits freedom of information through secrecy, the almost uncontrolled use of the document classification privilege," Cronkite continued in his introduction to *Censored 1996*. "It limits freedom also by limiting access to news sources. The government limits freedom when it, as the courts have from time to time, forces revelation of reporters' sources, a process which can cut off valuable, perhaps unique springs of information. And there is what I consider to be the greatest threat to freedom of information: the government licensing of broadcasting."

"A 1975 study on 'governability of democracies' by the Trilateral Commission concluded that the media have become a 'notable new source of national power,' writes Noam Chomsky in his book, *Necessary Illusions*. Samuel Huntington, a professor of international politics at Harvard and the chairman of Harvard's Institute for Strategic Planning said, in his book, *The Crisis of Democracy*, "Truman had been able to govern the country with the cooperation of a relatively small number of Wall Street lawyers and bankers." (New York University, 1975). World bankers, by pulling a few simple levers that control the flow of money, can make or break entire economies. By controlling press releases of economic strategies that shape national trends, the power elite are able to not only tighten their stranglehold on this nation's economic structure, but can extend that control world wide.

Those possessing such power would logically want to remain in the background, invisible to the average citizen. Expressing that very sentiment, David Rockefeller, founder of the aforementioned Trilateral Commission in June of 1991, addressed a meeting of that organization.

"We are grateful to *The Washington Post*, *The New York Times*, *Time Magazine*," Rockefeller told them, "and other great publications whose directors have attended our meetings and respected their promises of discretion for almost forty years. It would have been impossible for us to develop our plan for the world if we had been subject to the bright lights of publicity during those years. But, the world is now more sophisticated and prepared to march towards a world government. The supranational sovereignty of an intellectual elite and world bankers is surely preferable to the national autodetermination [read as "democracy"] practiced in past centuries."

"...A handful of us," wrote Walter Cronkite, again from his introduction to *Censored 1996*, "determine what will be on the evening news broadcasts, or, for that matter, in the *New York Times* or *Washington Post* or *Wall Street Journal*.... Indeed it is a handful of us with this awesome power.... And those [news stories] available to us already have been culled and re-culled by persons far outside our control."

## **A SICK NATION**

### **"WE ARE AS SICK AS OUR SECRETS" Kitty Dukakis**

A national survey published in *The Day America Told the Truth*, (Prentice Hall, New York, N.Y. 1991, Patterson and Kim) reveals the true character of the American people. The polls for the survey were taken assuring anonymity to the respondents so the public felt free to reveal itself. The results indicated that, "91% of us lie regularly.... The majority of us find it hard to get through a single week without lying. One in five can't make it through a single day--and we are talking about conscious, premeditated lies.... Lying does empower us to be people we aren't. It gives us the illusion of control. There are more serious liars right now (liars who do harm) than at any time in our nation's past. Lying has become a cultural trait in America. Lying is embedded in our national character. That hasn't really been understood around the world. Americans lie about everything -- and usually for no good reason." The book went on to say that of the remaining 9%, less than half would not lie because it was morally wrong. An obvious conclusion can be drawn from this data that it is not politicians, world bankers, FCC directors, presidents, the press or "someone else" who lie to get control. It is woven throughout the moral fabric of our society.

The government cloaks its secrets under the guise of "national security"; [world bankers](#) keep secrets for economic gain; the media protects its "sources" and secrets to keep its "presses" rolling; advertisers censor the news to protect product sales from damaging publicity. Occasionally, those manufacturers allow certain negative information to reach the public about a product, as in the recent fen-phen and Redux drug revelation, because to do so gives the appearance of forthrightness--also to do otherwise, in some circumstances, would be more damaging than the truth. One can be assured, however, in the light of the 1991 survey, that concern for the welfare of humanity is not the driving force behind any spasm of necessary honesty by product manufacturers, or any other sector of U.S. culture for that matter.

Can it not be concluded that the news that is finally released is so thoroughly sifted to protect government, corporate and media interests that "state cookies" and "bitten ears" are about the only substantive information that survives?

With 91% of the public habitual liars, according to the aforementioned poll, can one expect anything but intense moral and national sickness from such pervasive national lying? When 91% of a nation is infected with epidemic dishonesty, should it be surprising to witness moral sickness and declination in every part of its society?

"In fact, the way some people talk about trying to do without lies," according to Patterson and Kim, "you'd think that they were smokers trying to get through a day without a cigarette." It appears that the paparazzi, advertisers, multi-national companies and the government all supply the nation with lies just to feed its insatiable hunger for entertainment and frivolity. The citizens of this nation apparently require frequent, routine injections of lies into their moral bloodstream in order to satisfy a growing addiction to this fantasy and make-believe. Truth has become as unpopular as cold turkey to an addict because it carries with it a natural tendency to sobriety and responsibility.

From the [Protocols](#) we find an almost prophetic description, written over a hundred years ago, of the lightning rush of society to the brink of eternal ruin:

"Every man aims at power, everyone would like to become a dictator if only he could, and rare indeed are the men who would not be willing to sacrifice the welfare of all for the sake of securing their own welfare....In applying our principles let attention be paid to the [character](#) of the people in whose country you live....What is the part played by the press today? It serves to excite and inflame those passions which are needed [that already exist] for our purpose....It [the media] is often vapid, unjust, mendacious, and the majority of the public have not the slightest idea what ends the press really serves....Literature and journalism are two of the most important educative forces, and therefore our government will become proprietor of the majority of the journals. This will neutralize the injurious influence of the privately owned press and will put us in possession of the tremendous influence upon the public mind....

"In order that the masses may not guess what they themselves are about, we further distract them with amusements, games, pastimes, passions, extravagance and wealth....Growing more and more disaccustomed to reflect and form any opinion of their own, people will begin to talk in the same tone as we because we alone shall be offering them new directions for thought."

**THE MEDIA IS ONLY A MIRROR**

It is easy to point at a governor and laugh at his frivolity. It is easy to point at a large corporation as the perpetrator of media [conspiracies](#). It is easy to point at the new world order conspirators and blame them for our social and cultural sickness. But should the citizens of this nation be looking at a source outside themselves for the problem when it is determined to be the national character--a condition for which the individual is ultimately responsible?

Is it not true that one has only the government one chooses? Withholding the truth and telling lies for gain or security is not what is perpetrated upon us but, rather, what this nation has become. The invisible government is seen only by those with eyes to see. It is an unseen stamp in the forehead (the thinking) and upon the hand (what is done).

"Also it causes all, both small and great, both rich and poor, both free and slave, to be marked on the right hand or the forehead....This calls for wisdom: let him who has understanding reckon the number of the beast, for it is a human number." Revelation 13:16 & 18.

## US Dept of Justice Mentions MC Reports

As many as 720 complaints relating to what we call "mind control" effects have been acknowledged by the U.S. Department of Justice. What is noteworthy is the NUMBER of complaints. And I am sure it's only a fraction of the full number. A light at the end of the tunnel?

---

Date: Fri, 27 Feb 2004 17:28:17 -0800 (PST)  
From: harlan girard  
Subject: Report to Congress

Dear Prisoners: The Inspector General of the Department of Justice issued a report on January 27, 2004 concerning alleged violations of civil rights and civil liberties under the USA Patriot Act. In categorizing the complaints received during the June 14, 2003 through December 15, 2003 period, a separate category was established titled, "Number of 'unrelated' complaints: 720".

Footnote 5 on page 4 of the Report explains exactly what this means.

"Complaints in this category cite no improper act by a DOJ employee or contractor or no discernible nexus between the alleged conduct of the DOJ employee/contractor to any Section 1001-related civil rights or civil liberties violation. Examples of this category include complaints that the government is broadcasting harmful electronic signals to individuals, claims that the government is intercepting dreams, and allegations that the government is using subliminal messages to force people to engage in certain acts."

The whole Report is available on line at

## Mary Ann Stratton on Dr. Eldon Byrd

From: Mary Ann Stratton  
Subject: Dr. Byrd

Hi Everyone,

I have not been online that much since I been traveling most of this past week. I heard about Eldon being sick from Cheryl and got in contact with Eldon as soon as I was able to. We talked for a short time about his cancer and what the doctors were going to do which was all still questionable. He hoped he could heal and fight this but soon after his biopsy he passed away.

I am still emotional about his passing and have not wanted to write to everyone but I know I have to.

I first met Eldon 2 years ago. I spent months talking to him about coming to lecture in California and he finally accepted my proposal. When he arrived he was so enthusiastic about being able to speak on the subject of Electromagnetic energy weapons and scalar waves and their effect on human beings and animals.

He couldn't believe that we had a forum to speak out about these subjects and thought it was great that we were having this lecture.

After the lecture a huge group of us were able to go to dinner with him and we talked about many subjects.

I learned so much from his visit.

Since that time we have worked together on trying to test his device he developed to shield against ELF, Scalar, and microwave. This device worked for some and not for others. Mike Duffy and others will not go anywhere without this device. I am very sensitive to it and Eldon and I talked extensively about changing it so it would work for me. He tested the device on me over and over again attempting to change it so it works.

I also asked Eldon to write the White letter for Cheryl that is posted on her website. He did so willingly.

Then Cheryl accessed him with the Blue box and Fred. Cheryl made arrangements for victims from all over the U.S. and Eldon to be in San Francisco to participate in a research project to hear the voices.

He was going to try to listen to voices that are projected into a persons head by the government. He has picked up voices in several people and has spent many hours working on this project with Fred. He still has many pages of paperwork that he was supposed to send to Cheryl.

Since the time he had attended my lecture he has assisted our group of government harassed and tortured victims with such compassion, enthusiasm, and expertise, and with more effort than anyone I know in

such a short amount of time. He was trying to save us.

It has been an honor to know him and I know God has a place for him in Heaven. I will miss him.

Bye,

Mary Ann

## **Sweet Dreams Made by Machine**

**by Louise Knapp**

SEE PHOTOS AT END OF THIS ARTICLE

02:00 AM Jan. 23, 2004 PT

A new gadget designed to help people shape their nightly slumber means dreams could be full of whatever the sleeper desires -- whether it be a date with a movie star or winning gold at the Olympics.

Standing 35 centimeters tall, the supposed nightmare banisher has been dubbed Yumemi Kobo -- Japanese for "dream workshop" -- by its creator, Japanese toymaker Takara.

The dream machine comes equipped with a voice recorder, array of lights, picture frame, fragrance dispenser, selection of internally stored background music, two speakers and a timer.

Working in conjunction, these components allow users to design their dreams through multisensory stimuli of scents, sounds and more.

"The general concept is you'd sit down with it for a few minutes before you go to bed," said Peter Harwood, senior marketing manager with Takara USA. Once this is done, he added, you are ready to visit Venice in your dreams.

First, users attach a photograph or image of a desired dream to the Yumemi Kobo.

Then the hopeful dreamers concentrate on the image, playing out the desired dream in their head while making a voice recording of key words describing their fantasy.

Next they insert one of the dream machine's scents in the fragrance dispenser and select accompanying music from the tracks offered in the device's database.

"These (selections) are based on research done by sleep researchers who have an idea of what fragrances and music relaxes people the most -- so there is a logic behind the selections," Harwood said. "For most, listening to Guns N' Roses is not the way to go."

Now the dreamers are ready to hit the sack. They turn on the dream machine, and it starts to lull them to sleep with soft lights and serenades.

During the next eight hours, while the Yumemi Kobo's owner snoozes, the device is set to activate periodically in accordance with the user's REM sleep, the period associated with dreaming, during which the sleeper's eyeballs jerk rapidly.

"REM occurs for around an hour, an hour and a half. The machine estimates when most people achieve this," Harwood said.

This is when the dream controller is at its most active. It plays the selected music, releases the fragrance and repeats the recorded phrase. All are geared to trigger the desired dream in the sleeping subject.

Despite all this activity, Harwood said, the would-be dreamer doesn't lose any beauty sleep.

"You would think it would be distracting, but the key is that it operates on a timer that coincides with REM. It basically doesn't do anything until you are in REM phase, and then these things are very low-key," he said.

Eight hours later, sleep time is over. The dream machine gently awakens its owner with dim lights and soft music to avoid startling the sleeper and causing the dream to be forgotten.

"The way it's set up right now, it goes through a cycle of music and scents that build in a crescendo. Then it brings you out of your dream in a way you don't forget your dream -- there is no cold-water reality, but a gentle awakening," Harwood said.

## **In Memoriam: Dr. Rauni Kilde's Mother**

Received by email from Dr. Kilde, February 18, 2004:

A comment to Eleanor: I have been blocked in many ways trying to write you, so I am trying through this email: YES, do put my mother on the list her name was Eeva Valve. At her deathbed I promised her I will try to do everything possible to expose this torture of innocent people.

It was just awful what they did and I could not prevent it. The day after a very beautiful funeral service I, my houseguest and cats and dog were badly POISONED for several days by a strong poison. I have experienced this poison before but never so strong. We have been in bed for a week with no energy, vomiting, headache and we are not well yet. But we will survive and after taking my mother's ashes to Finland I will go on a long vacation. Maybe India, Jamaica or somewhere warm anyway.

Other types of pressure, harassment and theft started right on the day of the funeral.

- Greetings Rauni Kilde--

# **ELECTRONICS & BRAIN CONTROL**

**Excerpted From**

**Popular Electronics Magazine**

**July 1973, Vol. 4, Number 1**

**by L. George Lawrence**

Comments by Eleanor White: This article is excerpted mainly to provide experimenters and researchers with leads toward much better quality evidence that electronic mind control works. This article is NOT rigorously enough referenced that it will stand as evidence by itself.

Only those paragraphs which are of high relevancy have been transcribed; the article is long and since it is not a courtroom- ready document, I won't be adding to this transcription.

Items in square brackets [ ] are comments inserted by me to clarify the original text.

---

[pg 65]

It is time that we closely examined brain control now that scientists are actively seeking to unravel the mysteries that shroud that miniature bioelectric giant known as the human brain. Elements of brain control can already be found in anti-collision radar technology involving birds.

It has also been substantiated that pumping energy in the gigahertz range of frequencies through human heads, subjects can suddenly "hear" without using their ears.

[See Allan Frey's paper](#)

[SNIP]

[pg 66]

It was during these [Frey] studies that a profoundly important discovery was made: Deaf subjects often had the ability to hear radio frequency sound. The clinical criterion was that, if a given person could hear audio above 5 kHz [higher range of a piano] by bone or air conduction, then radio frequency sound could be heard as well.

This and related work has resulted in the manufacture of radio frequency [!!] type hearing aids for the deaf, one of which is made by LISTENING INC.,

6 Garden Street, Arlington, Mass., and is known as the Neurophone Model GPF-1. [Not Flanagan's Neurophone] It operates at 100 kHz [about five times the normal maximum hearing frequency] and employs crystal control.

[pg 67]

These observations tie in with the fact that some individuals can detect radio programs through fillings in their teeth. This phenomenon was technically **verified** by interposing shields between respective people who exhibited this effect and the modulated radio frequency sources.

["Modulation" means "changes" are made to an otherwise steady signal.]

When the lower half of the head was **covered**, including the maxillary dental area, the radio frequency sound was perceived. The sound **ceased** on covering the **top** half of the head. While the mechanism responsible for this phenomenon is only imperfectly understood, **it can be assumed to be the result of DIRECT cortical stimulation.**

[In other words, even when the sound seems to be coming from the teeth, it is actually being directly received and interpreted in the brain, not the teeth.]

[SNIP]

[pg 68]

**Fig. 4. Cazzamalli's brain-wave detector of some years ago is illustrated here.**

**Brain-Wave Detection.** Some 40-odd years ago, university professor F. Cazzamalli started publishing papers on the subject of brain-wave detection [using radio signals] and implied that he had detected radiations from the mind. [See image above.]

As shown in Fig. 4, he placed his subjects in a shielded room (or Faraday cage), emanated VHF radio waves through their heads, and claimed to have recorded "beat frequencies" obtained with an untuned receiver consisting of a galena crystal or diode tube [same thing for practical purposes], a fixed capacitor, an antenna, and a sensitive light beam galvanometer. [A "galvanometer" is a voltmeter; light beam types show up in physics labs and are one of the most sensitive types of voltmeter.]

The trouble is that Cazzamalli never mentioned transmitter power in his somewhat unprofessional papers [that's why we can't use this experiment directly as standalone evidence]. His oscillograms meant to show variations

of the "beat" when his subjects were emotionally aroused or engaged in creative tasks when they were in the Faraday cage. ["Beat" as used by Cazzamalli refers to EEG-frequency, i.e. ELF, traces.]

Later he told an astounded world that his subjects would hallucinate when under the influence of his "oscillatori telegrafica", it's frequency being around 300 MHz at the time. [Aviation radios are in this range.]

Tom Jaski, a noted science writer and engineer duplicated some of Cazzamalli's work with a modern low-power oscillator that was swept from 300 MHz to 600 MHz. [Cell phones start at over 900 MHz.]

His subjects could not see the dial. They were told to sound off as soon as they felt something unusual. At a certain frequency range - varying between 380 MHz adn 500 MHz - the subjects repeatedly indicated points with exact accuracy in as many as 14 out of 15 trials. At these "individual" ...

[pg 69]

...frequencies, the same subjects announced having experienced pulsing sensations in the brain, ringing in the ears, and an odd desire to *bite* the experimenters. [I'd like to do that anyway - preferably using a hungry alligator!]

The oscillator's output power was only a few **milliwatts**, while the oscillator itself was located several feet away from the subjects.

**[Any experimenters out there want to try this? Milliwatts are quite safe for short term expermiments. Kids' walkie talkies are 50 to 100 milliwatts, for example.]**

[SNIP]

IN THE LATE 1980's, IN A DECISION IT PROBABLY REGRETS, THE US PROMPTED NEW ZEALAND TO JOIN A NEW AND HIGHLY SECRET GLOBAL INTELLIGENCE SYSTEM. HAGER'S INVESTIGATION INTO IT AND HIS DISCOVERY OF THE ECHELON DICTIONARY HAS REVEALED ONE OF THE WORLD'S BIGGEST, MOST CLOSELY HELD INTELLIGENCE PROJECTS. THE SYSTEM ALLOWS SPY AGENCIES TO MONITOR MOST OF THE WORLD'S TELEPHONE, E-MAIL, AND TELEX COMMUNICATIONS.

by Nicky Hager  
from his book SECRET POWER  
Covert Action Quarterly No. 59

For 40 years, New Zealand's largest intelligence agency, the Government Communications Security Bureau (GCSB) the nation's equivalent of the US National Security Agency (NSA) had been helping its Western allies to spy on countries throughout the Pacific region, without the knowledge of the New Zealand public or many of its highest elected officials. What the NSA did not know is that by the late 1980s, various intelligence staff had decided these activities had been too secret for too long, and were providing me with interviews and documents exposing New Zealand's intelligence activities. Eventually, more than 50 people who work or have worked in intelligence and related fields agreed to be interviewed.

The activities they described made it possible to document, from the South Pacific, some alliance-wide systems and projects which have been kept secret elsewhere. Of these, by far the most important is ECHELON.

Designed and coordinated by NSA, the ECHELON system is used to intercept ordinary e-mail, fax, telex, and telephone communications carried over the world's telecommunications networks. Unlike many of the electronic spy systems developed during the Cold War, ECHELON is designed primarily for non-military targets: governments, organizations, businesses, and individuals in virtually every country. It potentially affects every person communicating between (and sometimes within) countries anywhere in the world.

It is, of course, not a new idea that intelligence organizations tap into e-mail and other public telecommunications networks. What was new in the material leaked by the New Zealand intelligence staff was precise information on where the spying is done, how the system works, its capabilities and shortcomings, and many details such as the code names.

The ECHELON system is not designed to eavesdrop on a particular individual's e-mail or fax link. Rather, the system works by indiscriminately intercepting very large quantities of communications and using computers to identify and extract messages of interest from the mass of unwanted ones. A chain of secret interception facilities has been established around the world to tap into all the major components of the international telecommunications networks. Some monitor communications satellites, others land-based communications networks, and others radio communications. ECHELON links together all these facilities, providing the US and its allies with the ability to intercept a large proportion of the communications on the planet.

The computers at each station in the ECHELON network automatically search through the millions of messages intercepted for ones containing pre-programmed keywords. Keywords include all the names, localities, subjects, and so on that might be mentioned. Every word of every message intercepted at each station gets automatically searched whether or not a specific telephone number or e-mail address is on the list.

The thousands of simultaneous messages are read in "real time" as they pour into the station, hour after hour, day after day, as the computer finds intelligence needles in telecommunications haystacks.

## **SOMEONE IS LISTENING**

The computers in stations around the globe are known, within the network, as the ECHELON Dictionaries. Computers that can automatically search through traffic for keywords have existed since at least the 1970s, but the ECHELON system was designed by NSA to interconnect all these computers and allow the stations to function as components of an integrated whole. The NSA and GCSB are bound together under the five-nation UKUSA signals intelligence agreement. The other three partners all with equally obscure names are the Government Communications Headquarters (GCHQ) in Britain, the Communications Security Establishment (CSE) in Canada, and the Defense Signals Directorate (DSD) in Australia.

The alliance, which grew from cooperative efforts during World War II to intercept radio transmissions, was formalized into the UKUSA agreement in 1948 and aimed primarily against the USSR. The five UKUSA agencies are today the largest intelligence organizations in their respective countries. With much of the world's business occurring by fax, e-mail, and phone, spying on these communications receives the bulk of intelligence resources. For decades before the introduction of the ECHELON system, the UKUSA allies did intelligence collection operations for each other, but each agency usually processed and analyzed the intercept from its own stations.

Under ECHELON, a particular station's Dictionary computer contains not only its parent agency's chosen keywords, but also has lists entered in for other agencies. In New Zealand's satellite interception station at Waihopai (in the South Island), for example, the computer has separate search lists for the NSA, GCHQ, DSD, and CSE in addition to its own. Whenever the Dictionary encounters a message containing one of the agencies' keywords, it automatically picks it and sends it directly to the headquarters of the agency concerned. No one in New Zealand screens, or even sees, the intelligence collected by the New Zealand station for the foreign agencies. Thus, the stations of the junior UKUSA allies function for the NSA no differently than if they were overtly NSA-run bases located on their soil.

**Every word of every message intercepted at each station gets automatically searched- whether or not a specific telephone number or e-mail address is on the list.**

The first component of the ECHELON network are stations specifically targeted on the international telecommunications satellites (Intelsats) used by the telephone companies of most countries. A ring of Intelsats is positioned around the world, stationary above the equator, each serving as a relay station for tens of thousands of simultaneous phone calls, fax, and e-mail. Five UKUSA stations have been established to intercept the communications carried by the Intelsats.

The British GCHQ station is located at the top of high cliffs above the sea at Morwenstow in Cornwall. Satellite dishes beside sprawling operations buildings point toward Intelsats above the Atlantic, Europe, and, inclined almost to the horizon, the Indian Ocean. An NSA station at Sugar Grove, located 250 kilometers southwest of Washington, DC, in the mountains of West Virginia, covers Atlantic Intelsats transmitting down toward North and South America. Another NSA station is in Washington State, 200 kilometers southwest of

Seattle, inside the Army's Yakima Firing Center. Its satellite dishes point out toward the Pacific Intelsats and to the east.

The job of intercepting Pacific Intelsat communications that cannot be intercepted at Yakima went to New Zealand and Australia. Their South Pacific location helps to ensure global interception. New Zealand provides the station at Waihopai and Australia supplies the Geraldton station in West Australia (which targets both Pacific and Indian Ocean Intelsats).

Each of the five stations' Dictionary computers has a code name to distinguish it from others in the network. The Yakima station, for instance, located in desert country between the Saddle Mountains and Rattlesnake Hills, has the COWBOY Dictionary, while the Waihopai station has the FLINTLOCK Dictionary. These code names are recorded at the beginning of every intercepted message, before it is transmitted around the ECHELON network, allowing analysts to recognize at which station the interception occurred.

New Zealand intelligence staff has been closely involved with the NSA's Yakima station since 1981, when NSA pushed the GCSB to contribute to a project targeting Japanese embassy communications. Since then, all five UKUSA agencies have been responsible for monitoring diplomatic cables from all Japanese posts within the same segments of the globe they are assigned for general UKUSA monitoring. Until New Zealand's integration into ECHELON with the opening of the Waihopai station in 1989, its share of the Japanese communications was intercepted at Yakima and sent unprocessed to the GCSB headquarters in Wellington for decryption, translation, and writing into UKUSA-format intelligence reports (the NSA provides the code breaking programs).

## **"COMMUNICATION" THROUGH SATELLITES**

The next component of the ECHELON system intercepts a range of satellite communications not carried by Intelsat. In addition to the UKUSA stations targeting Intelsat satellites, there are another five or more stations homing in on Russian and other regional communications satellites. These stations are Menwith Hill in northern England; Shoal Bay, outside Darwin in northern Australia (which targets Indonesian satellites); Leitrim, just south of Ottawa in Canada (which appears to intercept Latin American satellites); Bad Aibling in Germany; and Misawa in northern Japan.

A group of facilities that tap directly into land-based telecommunications systems is the final element of the ECHELON system. Besides satellite and radio, the other main method of transmitting large quantities of public, business,

and government communications is a combination of water cables under the oceans and microwave networks over land. Heavy cables, laid across seabeds between countries, account for much of the world's international communications. After they come out of the water and join land-based microwave networks they are very vulnerable to interception. The microwave networks are made up of chains of microwave towers relaying messages from hilltop to hilltop (always in line of sight) across the countryside. These networks shunt large quantities of communications across a country. Interception of them gives access to international undersea communications (once they surface) and to international communication trunk lines across continents. They are also an obvious target for large-scale interception of domestic communications.

**All five UKUSA agencies have been responsible for monitoring diplomatic cables from all Japanese posts.**

Because the facilities required to intercept radio and satellite communications use large aerials and dishes that are difficult to hide for too long, that network is reasonably well documented. But all that is required to intercept land-based communication networks is a building situated along the microwave route or a hidden cable running underground from the legitimate network into some anonymous building, possibly far removed. Although it sounds technically very difficult, microwave interception from space by United States spy satellites also occurs. The worldwide network of facilities to intercept these communications is largely undocumented, and because New Zealand's GCSB does not participate in this type of interception, my inside sources could not help either.

## **NO ONE IS SAFE FROM A MICROWAVE**

A 1994 expos of the Canadian UKUSA agency, *Spyworld*, co-authored by one of its former staff, Mike Frost, gave the first insights into how a lot of foreign microwave interception is done (see p. 18). It described UKUSA "embassy collection" operations, where sophisticated receivers and processors are secretly transported to their countries' overseas embassies in diplomatic bags and used to monitor various communications in foreign capitals.

Since most countries' microwave networks converge on the capital city, embassy buildings can be an ideal site. Protected by diplomatic privilege, they allow interception in the heart of the target country. The Canadian embassy collection was requested by the NSA to fill gaps in the American and British embassy collection operations, which were still occurring in many capitals around the world when Frost left the CSE in 1990. Separate sources in Australia have revealed that the DSD also engages in embassy collection. On the territory of

UKUSA nations, the interception of land-based telecommunications appears to be done at special secret intelligence facilities. The US, UK, and Canada are geographically well placed to intercept the large amounts of the world's communications that cross their territories.

The only public reference to the Dictionary system anywhere in the world was in relation to one of these facilities, run by the GCHQ in central London. In 1991, a former British GCHQ official spoke anonymously to Granada Television's *World in Action* about the agency's abuses of power. He told the program about an anonymous red brick building at 8 Palmer Street where GCHQ secretly intercepts every telex which passes into, out of, or through London, feeding them into powerful computers with a program known as "Dictionary." The operation, he explained, is staffed by carefully vetted British Telecom people: "It's nothing to do with national security. It's because it's not legal to take every single telex. And they take everything: the embassies, all the business deals, even the birthday greetings, they take everything. They feed it into the Dictionary." What the documentary did not reveal is that Dictionary is not just a British system; it is UKUSA-wide.

Similarly, British researcher Duncan Campbell has described how the US Menwith Hill station in Britain taps directly into the British Telecom microwave network, which has actually been designed with several major microwave links converging on an isolated tower connected underground into the station.

The NSA Menwith Hill station, with 22 satellite terminals and more than 4.9 acres of buildings, is undoubtedly the largest and most powerful in the UKUSA network. Located in northern England, several thousand kilometers from the Persian Gulf, it was awarded the NSA's "Station of the Year" prize for 1991 after its role in the Gulf War. Menwith Hill assists in the interception of microwave communications in another way as well, by serving as a ground station for US electronic spy satellites. These intercept microwave trunk lines and short range communications such as military radios and walkie talkies. Other ground stations where the satellites' information is fed into the global network are Pine Gap, run by the CIA near Alice Springs in central Australia and the Bad Aibling station in Germany. Among them, the various stations and operations making up the ECHELON network tap into all the main components of the world's telecommunications networks.

All of them, including a separate network of stations that intercepts long distance radio communications, have their own Dictionary computers connected into ECHELON.

In the early 1990s, opponents of the Menwith Hill station obtained large quantities of internal documents from the facility. Among the papers was a reference to an NSA computer system called Platform. The integration of all the UKUSA station computers into ECHELON probably occurred with the introduction of this system in the early 1980s. James Bamford wrote at that time about a new worldwide NSA computer network code named Platform "which will tie together 52 separate computer systems used throughout the world. Focal point, or 'host environment,' for the massive network will be the NSA headquarters at Fort Meade. Among those included in Platform will be the British SIGINT organization, GCHQ."

## **LOOKING IN THE DICTIONARY**

The Dictionary computers are connected via highly encrypted UKUSA communications that link back to computer data bases in the five agency headquarters. This is where all the intercepted messages selected by the Dictionaries end up. Each morning the specially "indoctrinated" signals intelligence analysts in Washington, Ottawa, Cheltenham, Canberra, and Wellington log on at their computer terminals and enter the Dictionary system. After keying in their security passwords, they reach a directory that lists the different categories of intercept available in the data bases, each with a four-digit code. For instance, 1911 might be Japanese diplomatic cables from Latin America (handled by the Canadian CSE), 3848 might be political communications from and about Nigeria, and 8182 might be any messages about distribution of encryption technology.

They select their subject category, get a "search result" showing how many messages have been caught in the ECHELON net on that subject, and then the day's work begins. Analysts scroll through screen after screen of intercepted faxes, e-mail messages, etc. and, whenever a message appears worth reporting on, they select it from the rest to work on. If it is not in English, it is translated and then written into the standard format of intelligence reports produced anywhere within the UKUSA network either in entirety as a "report," or as a summary or "gist."

## **INFORMATION CONTROL**

A highly organized system has been developed to control what is being searched for by each station and who can have access to it. This is at the heart of ECHELON operations and works as follows.

The individual station's Dictionary computers do not simply have a long list of keywords to search for. And they do not send all the information into some huge database that participating agencies can dip into as they wish. It is much more controlled.

The search lists are organized into the same categories, referred to by the four digit numbers. Each agency decides its own categories according to its responsibilities for producing intelligence for the network. For GCSB, this means South Pacific governments, Japanese diplomatic, Russian Antarctic activities, and so on.

The agency then works out about 10 to 50 keywords for selection in each category. The keywords include such things as names of people, ships, organizations, country names, and subject names. They also include the known telex and fax numbers and Internet addresses of any individuals, businesses, organizations, and government offices that are targets. These are generally written as part of the message text and so are easily recognized by the Dictionary computers.

The agencies also specify combinations of keywords to help sift out communications of interest. For example, they might search for diplomatic cables containing both the words "Santiago" and "aid," or cables containing the word "Santiago" but not "consul" (to avoid the masses of routine consular communications). It is these sets of words and numbers (and combinations), under a particular category, that get placed in the Dictionary computers. (Staff in the five agencies called Dictionary Managers enter and update the keyword search lists for each agency.)

*"We feel we can no longer remain silent regarding that which we regard to be gross malpractice and negligence within the establishment in which we operate."*  
-British intelligence operatives-

The whole system, devised by the NSA, has been adopted completely by the other agencies. The Dictionary computers search through all the incoming messages and, whenever they encounter one with any of the agencies' keywords, they select it. At the same time, the computer automatically notes technical details such as the time and place of interception on the piece of intercept so that analysts reading it, in whichever agency it is going to, know where it came from, and what it is. Finally, the computer writes the four-digit code (for the category with the keywords in that message) at the bottom of the message's text. This is important. It means that when all the intercepted messages end up together in the database at one of the agency headquarters, the messages on

a particular subject can be located again. Later, when the analyst using the Dictionary system selects the four - digit code for the category he or she wants, the computer simply searches through all the messages in the database for the ones which have been tagged with that number.

This system is very effective for controlling which agencies can get what from the global network because each agency only gets the intelligence out of the ECHELON system from its own numbers. It does not have any access to the raw intelligence coming out of the system to the other agencies. For example, although most of the GCSB's intelligence production is primarily to serve the UKUSA alliance, New Zealand does not have access to the whole ECHELON network. The access it does have is strictly controlled. A New Zealand intelligence officer explained: "The agencies can all apply for numbers on each other's Dictionaries. The hardest to deal with are the Americans. ... [There are] more hoops to jump through, unless it is in their interest, in which case they'll do it for you."

There is only one agency which, by virtue of its size and role within the alliance, will have access to the full potential of the ECHELON system the agency that set it up. What is the system used for? Anyone listening to official "discussion" of be forgiven for thinking that, since the end of the Cold War, the key targets of the massive UKUSA intelligence machine are terrorism, weapons proliferation, and economic intelligence. The idea that economic intelligence has become very important, in particular, has been carefully cultivated by intelligence agencies intent on preserving their post-Cold War budgets. It has become an article of faith in much discussion of intelligence. However, I have found no evidence that these are now the primary intelligence could concerns of organizations such as NSA.

## **QUICKER INTELLIGENCE, SAME MISSION**

A different story emerges after examining very detailed information I have been given about the intelligence New Zealand collects for the UKUSA allies and detailed descriptions of what is in the yards-deep intelligence reports New Zealand receives from its four allies each week. There is quite a lot of intelligence collected about potential terrorists, and there is quite a lot of economic intelligence, notably intensive monitoring of all the countries participating in GATT negotiations. But by far, the main priorities of the intelligence alliance continue to be political and military intelligence to assist the larger allies to pursue their interests around the world. Anyone and anything the particular governments are concerned about can become a target.

With capabilities so secret and so powerful, almost anything goes. For example, in June 1992, a group of current "highly placed intelligence operatives" from the British GCHQ spoke to the London Observer: "We feel we can no longer remain silent regarding that which we regard to be gross malpractice and negligence within the establishment in which we operate." They gave as examples GCHQ interception of three charitable organizations, including Amnesty International and Christian Aid. As the Observer reported: "At any time GCHQ is able to home in on their communications for a routine target request," the GCHQ source said. In the case of phone taps the procedure is known as Mantis. With telexes it is called Mayfly. By keying in a code relating to Third World aid, the source was able to demonstrate telex "fixes" on the three organizations. "It is then possible to key in a trigger word which enables us to home in on the telex communications whenever that word appears," he said. "And we can read a pre-determined number of characters either side of the keyword." Without actually naming it, this was a fairly precise description of how the ECHELON Dictionary system works. Again, what was not revealed in the publicity was that this is a UKUSA-wide system. The design of ECHELON means that the interception of these organizations could have occurred anywhere in the network, at any station where the GCHQ had requested that the four-digit code covering Third World aid be placed.

Note that these GCHQ officers mentioned that the system was being used for telephone calls. In New Zealand, ECHELON is used only to intercept written communications: fax, e-mail, and telex. The reason, according to intelligence staff, is that the agency does not have the staff to analyze large quantities of telephone conversations.

Mike Frost's expos of Canadian "embassy collection" operations described the NSA computers they used, called Oratory, that can "listen" to telephone calls and recognize when keywords are spoken. Just as we can recognize words spoken in all the different tones and accents we encounter, so too, according to Frost, can these computers. Telephone calls containing keywords are automatically extracted from the masses of other calls and recorded digitally on magnetic tapes for analysts back at agency headquarters. However, high volume voice recognition computers will be technically difficult to perfect, and my New Zealand-based sources could not confirm that this capability exists. But, if or when it is perfected, the implications would be immense. It would mean that the UKUSA agencies could use machines to search through all the international telephone calls in the world, in the same way that they do written messages. If this equipment exists for use in embassy collection, it will presumably be used in all the stations throughout the ECHELON network. It is yet to be confirmed

how extensively telephone communications are being targeted by the ECHELON stations for the other agencies.

**Britain's GCHQ intercept the communications of at least three charitable organizations, including Christian Aid and Amnesty International.**

The easiest pickings for the ECHELON system are the individuals, organizations, and governments that do not use encryption. In New Zealand's area, for example, it has proved especially useful against already vulnerable South Pacific nations which do not use any coding, even for government communications (all these communications of New Zealand's neighbors are supplied, unscreened, to its UKUSA allies). As a result of the revelations in my book, there is currently a project under way in the Pacific to promote and supply publicly available encryption software to vulnerable organizations such as democracy movements in countries with repressive governments. This is one practical way of curbing illegitimate uses of the ECHELON capabilities.

One final comment. All the newspapers, commentators, and "well placed sources" told the public that New Zealand was cut off from US intelligence in the mid-1980s. That was entirely untrue. The intelligence supply to New Zealand did not stop, and instead, the decade since has been a period of increased integration of New Zealand into the US system. Virtually everything the equipment, manuals, ways of operating, jargon, codes, and so on, used in the GCSB continues to be imported entirely from the larger allies (in practice, usually the NSA). As with the Australian and Canadian agencies, most of the priorities continue to come from the US, too.

The main thing that protects these agencies from change is their secrecy. On the day my book arrived in the book shops, without prior publicity, there was an all-day meeting of the intelligence bureaucrats in the prime minister's department trying to decide if they could prevent it from being distributed. They eventually concluded, sensibly, that the political costs were too high. It is understandable that they were so agitated.

Throughout my research, I have faced official denials or governments refusing to comment on publicity about intelligence activities. Given the pervasive atmosphere of secrecy and stonewalling, it is always hard for the public to judge what is fact, what is speculation, and what is paranoia. Thus, in uncovering New Zealand's role in the NSA-led alliance, my aim was to provide so much detail about the operations the technical systems, the daily work of individual staff members, and even the rooms in which they work inside intelligence facilities that readers could feel confident that they were getting close to the truth. I

hope the information leaked by intelligence staff in New Zealand about UKUSA and its systems such as ECHELON will help lead to change.

## EEG-GSR Experiment Progress

as of February 7, 2001

**This document contains emails on the subject of sensing of biological effects of psycho-electronic attacks**

---

This page is to record experiments with both EEG (electro-encephalogram) and GSR (galvanic skin response) equipment. My purpose in these experiments is to find a way of detecting the \*EFFECTS\* of the classified psycho-electronic equipment, rather than the undetectable signals themselves. By using an INDEPENDENT biological entity, such as a plant as a "sympathetic" (linked by a form of ESP) detector, it may be possible to prove that harassment is taking place without having to prove the advanced signal type(s).

SUMMARY TO DATE: I'm pleased to announce that, while the results may be decoys, as of January 14, 2001 I seem to be able to hear bursts of clicks and static corresponding with perp prevention of my falling asleep. The value as evidence is still there EVEN AS DECOYS, because there is no way the decoy bursts could be perfectly, and without exception synchronized with my falling-asleep process unless I was being minutely monitored from a distance.

The following day, January 15, 2001, there were ZERO EEG hits. The perps changed to tone triggered stay-awake programming. This shows how difficult it is to obtain evidence when the perps have equipment which does not use conventional electromagnetic signals. Work continues as ideas come to light.

The measuring equipment. I'm using to date is shown as the last item on this page.

What this implies to me is that an inexpensive way to get plant (and/or body) detectors into the hands of a number of victims is probably the only way to get out from under this flatlining by my Hamilton, Ontario perps. Toward that end, there are two future projects underway (my project is not a rush project but will continue as time permits):

- I will be working on low-cost modifications to the Thought Technology Limited's PC-mouse style economy GSR (galvanic skin response) unit to make it more sensitive and lower the current required to operate.

**(Lowering the current makes it less damaging to plants, and easier on human skin.)**

- **Another electronic experimenter, is working on a design for a home-made EEG device. EEG devices are the most sensitive and require passage of virtually no current.**

**This document will continue to be updated with progress notes, however, the sensitivities required for this work will make it difficult and we are unlikely to have results quickly. Meanwhile, the [measuring equipment](#) is described below for those who would like to try to experiment on their own. Please understand that success is not guaranteed, and that the perps are always vigilant when we experiment.**

---

AUDIO-SENSING FOR OUR MEMBERS AND OTHER CIRCUITS AND WIRING TIPS:

See [audsens.htm](#) for my efforts to equip other members of our group with audio sensing capability for detection of disturbances to our bodies, house plants, and possibly pets during psycho-electronic attacks.

LESSONS LEARNED (SOME SENT OUT AS EMAILS):

In General:

In general, former U.S. Navy bio-electromagnetic researcher Dr. Eldon Byrd reported that he has done plant response experiments and that he "has never had a plant response experiment fail."

I have also found that the plants' "EEG" traces are a bit higher in terms of voltage than my own. This causes problems with sensitive equipment like EEG units because the overloading makes it impossible to detect quiet periods vs. very active periods.

To counteract this, I found that a 1-megohm potentiometer attached to terminals from which a pair of leaf electrodes were connected and at a setting of roughly 40 K shunted across the leaf, a reasonable distinction of activity vs. quiet could be made. The fine tuning on an EEG unit is "Threshold microvolts", that is, you set the microvolt level ABOVE which the unit will "click" or "warble" is used to separate quiet periods from active periods.

Use of shielded cable (microphone cable) between the EEG unit and the electrode terminals at the flower pot eliminates most of the perp static caused by my local [ELF signal](#).

BOTH TOP & BOTTOM CLAMPING SURFACES: START WITH 24 INCHES OF SMOOTH ALUMINUM FOIL. BEGIN BY FOLDING 3/8" AND KEEP FOLDING OVER UNTIL THE 24" ARE ENTIRELY FOLDED OVER. THIS SHOULD RESULT IN A FAIRLY RIGID FOLDED "BAR" ABOUT 5/8" WIDE. EACH OF TWO ELECTRODES REQUIRES TWO OF THESE 5/8" SQUARE CLAMPING PADS.

WITH SEWING NEEDLE, OPEN CENTER OF FOIL PAD TO SLIP OVER ENDS OF HAIR CLAMP. PRESSURE SHOULD KEEP IN PLACE DURING EXPERIMENTS.

#30 "WIRE WRAP" WIRE FROM RADIO SHACK. THREAD THRU HOLE MADE BY NEEDLE AND CAREFULLY TIGHTEN STRIPPED END USING NEEDLE NOSE PLIERS.

K-Y JELLY ON LEAF SIDE OF UPPER CLAMP FACE

USING A FRESH RAZOR KNIFE BLADE, CAREFULLY CUT A 5/8" SQUARE BY ABOUT 1/8" THICK FOAM PAD FROM A FOAM PAINT BRUSH FOR THE BOTTOM CLAMPING SURFACE. RUBBER CEMENT IN PLACE.

STEEL BARRETTE, 2" LONG, WITH LIGHT CLAMPING PRESSURE. BEND TO LIGHTEN PRESSURE IF NECESSARY.

RECOMMEND PRODUCT #06572, GOODY PRODUCTS INC. (A NEWELL COMPANY), 600 WESTPARK DRIVE PEACHTREE CITY, GA 30269

**PLANT EEG EXPERIMENTS - "WEAK HAIR CLAMP" ELECTRODE**

Plant electrodes, per recommendation of Dr. Eldon Byrd, are "squares of aluminum" attached via "weak hair clamps". Dr. Byrd recommends no electrode paste of K-Y jelly to prevent infusion of ions (chemicals in solution) into the leaf interior. I've found after a couple of weeks that K-Y jelly does not seem to visibly harm the leaf.

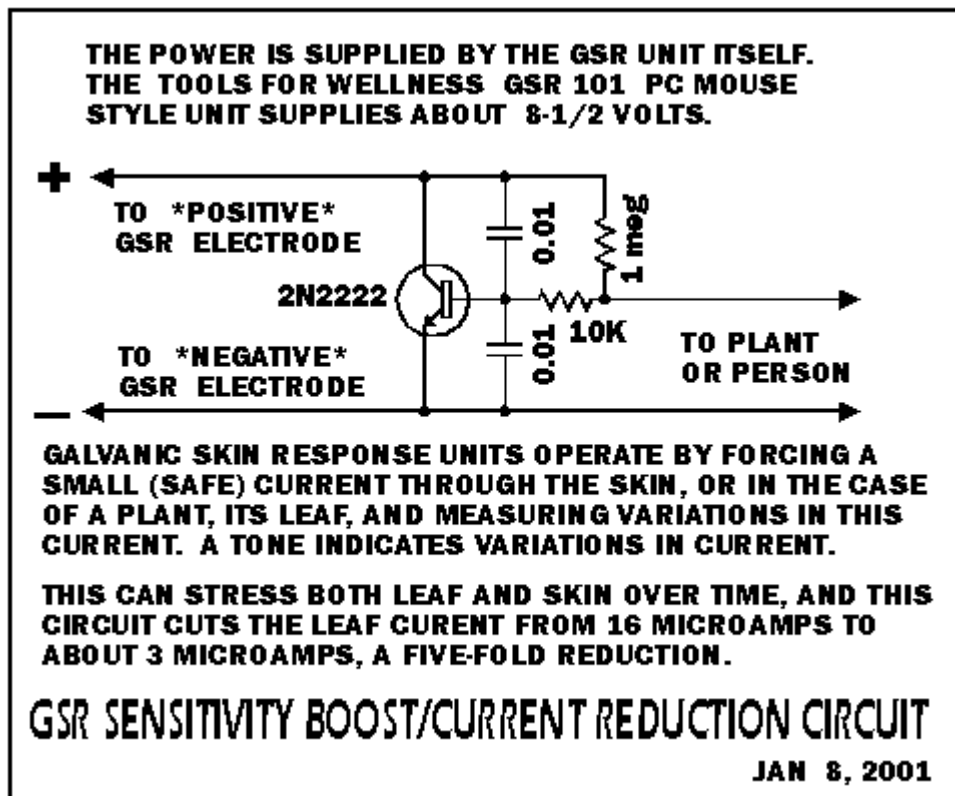

I also REMOVE the electrodes as soon as my readings, which may be as long as overnight, are finished for a session, to avoid damaging the plant.

GSR units push a small amount of current hence the GSR is more likely to stress the plant than the EEG unit, which draws virtually no current.

January 8, 2001:

Completed design and testing of a low-cost, easy-to-build add on gadget which increases the sensitivity and reduces the current used by the GSR (galvanic skin response) unit. It does not "turn the GSR into an EEG, but it does help if an experimenter wants to do testing over time.

\*\* IT IS CRITICAL WHEN USING THIS INCREASED SENSITIVITY ADD-ON GADGET THAT MOVEMENT OF EITHER YOUR BODY OR CABLES BE PREVENTED WHEN YOU ARE LISTENING CLOSELY FOR TONE VARIATIONS. When a sensitive device is in use, the magnetic fields in your body and other large objects can cause warbling which is not from the plant (or body part) being monitored.

Chronology of Experiments:

Specifics:

Date sent: Sun, 10 Dec 2000 01:40:13

Hi -

Today/tonight was my first 24 hours with my new GSR or galvanic skin response unit. This unit is the cheaper of the two (EEG being way more expensive) and is essentially an ohm meter, with the meter

scale replaced with a varying tone.

The first thing I learned was: Either I am dead, or, plants have one hell of a more interesting life than I do.

This unit is very similar in size and shape to a PC mouse. In place of the two buttons are two shallow, lightly concave grooves, for your fingers.

This unit has an elastic strap which helps keep a constant pressure between your fingers and the chrome or stainless electrodes.

It is difficult to generate a whole lot of emotions when you are standing a 12-hour watch in an empty school, and there will have to be quite a bit of familiarization and experimentation before anything of use to our war effort comes out of this. (The used 2-channel EEG unit is waiting for a manual before I even think of touching that unit.)

The first order of business is to make up some electrode extension cables for me and my plant.

By "I am dead", I mean that, in that emotionally sterile environment, my tone varied very slowly. No blips or chirps, and not much in the way of fast changes. I did get one fairly rapid rise in tone when I saw a really funny cartoon in the paper.

This school has several types of plants in the hallways.

When I pressed the upper side of a leaf, the flatter side, against the electrodes with my fingers behind (and therefore not really part of the circuit) I heard all sorts of warbles and chirps. That's when I surmised the plants were having more fun than I was.

But that very preliminary result is VERY promising. Electrodes, as bio-electronic researchers hint in their papers, are a real pain. The problem is that the chemistry at the contact surface usually degrades, that is, makes for higher resistance, with time. This is true for heart pacemakers, for example.

(If metals which give up their ions easily, like copper, are used, the living material can be invaded by metallic ions which can cause damage.

By the way, leaves which are naturally more moist do better - no surprise. If you are ever making similar tests with a drier, waxier leaf, breathe on it a bit to moisten the surface and you will have your contact.

I'm hoping aluminum is selfish enough with its ions that foil electrodes, moistened with K-Y jelly, will give enough time for meaningful results.)

I also placed the unit against my cheek and the back of my neck. Big difference! Being closer to nerves I would guess, I heard some of the same type of chirping as with the plants.

The nice thing about this mouse-sized unit is that you can take it with you. It is on all the time - but doesn't produce sound until it senses something across the electrodes. The instruction book says battery (9 volt) varies with use, but you can expect 6 months

to 2 years on one battery.

It is not loud, but loud enough. For privacy the unit comes with monaural bud-style head phones. It requires some experimenting with the "tuning" knob to get into the audible frequency range.

Sueann Campbell suggested there are plants whose LEAVES will live for a very long time detached from the plant.

Since the REAL evidentiary value of any gadget like a GSR or EEG is when ANOTHER living thing, not yourself, is affected by the harassment signals you feel.

So this mouse-sized gadget, hooked to a long-lived leaf could be a tidy little portable evidence gatherer.

I'll have to read "Secret Life of Plants" more carefully, but I believe Cleve Backster, the original polygraph expert who started plant monitoring in 1966, got results from fruit as well.

!!! WARNING !!! WARNING !!! WARNING !!!

Before reading beyond this point let me caution you that this gadget and all the other stuff in the 106-page catalogue I purchased from are >>> IDEAL <<< perp decoy items. Perps would just LOVE to see us all invest in all kinds of biofeedback and pop-science items. They will CERTAINLY do at least SOME decoy successes to cause us to blow our wad on useless junk. I've been stung, so has Cheryl, and so have others.

I'm NOT recommending this item for immediate purchase - unless you have the price "to burn."

There has to be quite a bit of tinkering before I have any clear idea whether this purchase is useful or not.

Having given that warning, I'll tell you about this unit and some other things in the catalogue which MIGHT be useful. (Personally, I'd give odds at least 90% of the stuff in the catalogue is snake oil.)

\*\* YOU MAY NOT FIND ALL THE CATALOGUE ITEMS ON THE WEB SITE.

The vendor is a relative of "Tools for Exploration" called "Tools For Wellness" and their web site is at:

<http://www.ToolsForWellness.com>

The unit I'm experimenting with is the:

#BG101 - Basic GSR2 Biofeedback System

The price is \$59.95 US dollars.

Here are some other items which MIGHT be useful, and as you read, keep in mind the perps may make such items appear to work better than they actually can:

#72076 Magnetic Pulser \$299.95 US This is apparently a lower powered version of that new "magnetic shock treatment" thing some shrinks are [mercifully] using in place of ECT. It has a box, and

a cord-connected "hand paddle" which contains the actual magnetic coil. (You won't want this one if you have a pacemaker or a history of epilepsy!)

#72033 Magnetic field "sleep enhancer" \$159.95 Similar to the pulser above except the paddle is wide and flat to fit under your pillow. This is straight brain rhythm entrainment to the sleep-enhancing lower frequencies. A home made gadget DID WORK for me, but the perps smoked it after 5 minutes.

#LF002 Full spectrum 48" fluorescent tubes \$12.50 US

#LS203 Full spectrum standard screw base \$39.95  
light bulb, 75 watt, 10,000 hour  
(lasts about as long as a dozen  
regular bulbs, and 39.95/12  
is about \$3.33 for each bulb it  
replaces.)

#SL001 Subliminal Message Encoder, 90-sec \$499.95  
>>> THIS IS (?) THE LOWERY SILENT SOUND DEVICE <<<  
...or at least the description seems to point  
to use of the same technology - I'll bet it is.  
This is probably the gadget we heard a rumour  
about being available through that hypnotists'  
guild.

(Not a bad markup on that Lowery device, eh?)

After the first night, testing the PC mouse-like galvanic skin response unit, I got two NEGATIVE results.

1. I inserted the "mouse" into the ace bandage collar I wear to keep the perps from moving my jaw as I rest. The electrodes were pressed against my neck, just above the shoulder, and just below the ear.

As with the quicker experiments while on my job site, I got the chirping sounds.

One thing I noticed was that the chirps are always accompanied by a RISE in the average frequency. Well a RISE in frequency indicates a LOWERING of electrical resistance. This probably means that the chirps are not any unusual nervous system activity, but rather, local spots on my skin "opening up new channels" for the current from the 9 volt battery.

The chirps stopped after a few minutes, and the tone didn't vary at all for 4 or 5 hours. There were no bursts of small electric shocks,

hot needles in the flesh, or body limb forced motion.

When I did get up to use the bathroom, only at the point where I physically rose from the cot did the tone move up substantially.

So, I still don't have any idea if the GSR's tone would change during perp attacks. I removed the unit at that point for the following reason.

2. When I examined the skin on the side of my neck, I discovered the chrome electrodes had left two dark, scar-like stripes.

This was not unexpected. I had a similar result years ago when I built what was called then the "Russian Electrosleep Machine". That unit is two 9-volt batteries in series, and outputs pulses into various points on the scalp. It did NOT do anything to help me sleep. It DID produce a nifty "scalp massage" feeling.

That unit too left these marks.

\*\*\* THIS SUGGESTS THAT REAL PROGRESS MAY REQUIRE THE USE OF THE EEG UNIT, FOR WHICH I'M WAITING ON THE MANUAL.

The oscilloscope experiment showed that there is varying voltage for an EEG unit to sense and convert to an audible tone.

I doubt if a plant would enjoy the current any more than my skin.

The ORIGINAL, Cleve Backster polygraph used the GSR (ohm meter, with current) method and that is why I felt it was important to try this.

\*\*\* FINGERS ARE OK. So there may be some use in carrying or resting with this unit during perp attacks. I will let you know.

Eleanor

Hi -

THOUGHT: Both the GSR unit and the EEG unit are amplifiers. As such, both of them should, with appropriate settings, GIVE AN AUDIO OUTPUT DESCRIBING WHAT IS BEING SENSED BY A PICKUP COIL.

From previous experiments, I found that a coil wrapped through edge slots on a sturdy wood or two-ply piece of corrugated cardboard 24" x 24" or LARGER will give you a view on a scope of the ELF signal (sawtooth waveform) which has followed me through three apts.

You can view that waveform at:

<http://www.raven1.net/scoptrac.gif> (no "e's")

The large, air core coils seem to let the 60 Hz power line frequencies floating around every household cancel out and not distort what is being picked up too badly.

\*\*\* THE EEG UNIT IS ESPECIALLY SENSITIVE AND WOULD NEED A VERY LARGE AMOUNT OF ATTENUATION (SIGNAL REDUCTION.) The GSR unit would probably need that 1/2 megohm series resistor, but will be far less sensitive than the EEG unit.

I urge anyone who doesn't understand the above attenuation and series resistance paragraph have a local technician CONTACT ME before connecting any pickup coils to expensive gadgets. I can explain in terms the technician can understand what it is I'm saying there.

[Measuring equipment specs](#)

Date sent: Sun, 10 Dec 2000 17:33:49

Hi -

Even though my Cyclamen bulb plant is slipping into its "rest phase", meaning the stems and leaves are drooping very low over the side of the pot, "Theresa" has enough life that the same low frequency average, but WITH THE WARBLE activity I reported using an ohm-meter and oscilloscope a while back. This is using the healthiest, largest leaf, this time through the GSR unit instead of my ohm meter and scope. That is hopeful but not conclusive.

The electrodes are several folds of aluminum foil, to an area of 3/4" long by 3/8" wide.

This is folded over to make a 3/8" x 3/8" top-and-bottom of leaf contact. #30 wire wrap wire is poked thru the fold and twisted tight with needle nose pliers. This #30 wire is necessary to avoid pulling on the leaf.

The #30 wire is soldered to a refrigerator food dish under the pot, two terminals. The foil around the pot is connected to the negative electrode of the GSR unit to minimize 60 Hz interference, and that seems to be working well.

The electrode leads have two alligator clips at the refrigerator dish terminal end.

Inside each electrode is K-Y jelly.

The electrodes are folded over the right and left edges of the biggest leaf, and held gently in place with two of those little plastic time-setting clips from those hardware store "time switches" for home use.

The half-megohm resistor is used to minimize the current through the leaf.

The questions now are:

1. How long will the elctrodes remain in good enough contact?
2. Will the plant do what oysters do, and build a protective shield (a "pearl") around the electrodes to isolate them?
3. Will this plant entering rest phase provide enough flutters to tell us if it reacts when the perps zap me hard?

Letcha all know.

Eleanor

[Top](#)  
[Measuring equipment specs](#)

Date sent: Tue, 12 Dec 2000 05:30:12

Yesterday I had about 8 free hours between guard assignments. After doing errands, I took a two-hour rest. During that rest, my plant was four feet from the head of my cot, in its usual place in front of a balcony door with a full-length window, for light.

No particular activity was heard with the GSR unit, plant 4 feet from the cot.

I tried moving the plant, which sits on a banker's box, right next to my head, a distance of about one foot. For about an hour, I was delighted to hear a change in the GSR tone pattern.

About half the time, the warbles actually tracked my HEARTBEAT. There was no physical contact with me or the cot.

(These "warbles" are "steady state", meaning they are not the "chirps" which result at initial contact with a living entity, leaf or skin, and indicate the opening up of new, successive, low resistance paths. Such "opening up chirps" are not significant in indicating emotional state.)

After the rest, I got up and made supper and did other chores. When I retired for the night, I again brought the plant close by the cot.

This time, the tone was strictly "flatline", that is, no warbling at all. Furthermore, in spite of fresh K-Y jelly being applied to the electrodes, and changing to a leaf which hadn't yet been tapped, the tone was also reduced in volume, and kept drifting off scale (inaudible) in the direction of higher resistance. VERY different from daytime when normal "chatter" is heard, with nominal frequency remaining stable.

I had less than normal harassment overnight, and the small electric shocks, remote manipulation of body parts, and wrenching of walls produced \*NO\* warble whatsoever.

\*\* BUT: The MOMENT the alarm clocks went off, the plant IMMEDIATELY returned to NORMAL, with a normal amount of warbling, and loud, clear and stable nominal frequency.

This IS EVIDENCE, though not usable in court. It does show the unmistakable intervention by the perps. Apparently the fact that the plant could echo my heartbeat worries them.

Now this GSR unit, being tested because of its low cost, is not particularly sensitive.

In "Secret Life of Plants", which among other experimenters describes Cleve Backster's original experiments, these points are made:

1. The "ohm meter" style of resistance measuring, of which the GSR is an example, is NOT the most sensitive. Backster was able to get companies to provide him EEG type units, which according to Backster were "ten times as sensitive" to plant activity.

I do have a used EEG unit here, but am stuck waiting for the manual before I can begin experimenting with it.

The main thing about the "mouse style" GSR unit is (a) it's cheap, and (b) it's very portable. Thus the potential for others to repeat the experiments.

2. A professor assigned three groups of students to try to duplicate Backster's results. They could NOT, even though the professor showed the students he COULD.

Therefore, there is apparently some need for a personality plants "like". My hope is that the echoing of my heartbeat indicates I am "liked" enough that the plant will let me hear it's "secret electrical life". The daytime warbling and previous ohm-meter and oscilloscope tests seem to indicate that.

(One Canadian scientist who visited Backster's lab got nothing but "flatline" results on all of Backster's plants. When asked if he mistreated plants, he replied that yes, when he finished his experiments, he would put his plants into an oven and cremate them to obtain their "dry weight".

When this prof departed, about 20 minutes later, Backster's plants resumed "talking".)

So ... more to do and try.

Just for fun, I wound three 4-inch diameter COUNTER WOUND coils, fastened them into a 3-coil orthogonal "sphere" arrangement, hooked them in series, and connected them via a 470K resistor to the GSR unit. COUNTER WOUND coils (equal number of turns carrying current in opposite directions to cancel out all normal electromagnetic field pickup) are alleged to pick up "scalar" signals.

Shortly after walking away from the GSR unit connected to these coils, I got one wild flurry of activity, then flatline.

My perps have always had a very rigid protocol when they either introduce a new form of harassment, or, disable any of my detection attempts: They give me one or two REALLY WILD burst(s) of activity then either nothing (detection attempts) or low-but-I-know-the-effects-are-from-them harassment for months or years thereafter.

Therefore, it is clear the wild burst of GSR activity followed by flatline was perp protocol.

Eleanor

Date sent: Wed, 10 Jan 2001 09:01:15 +0000  
Subject: First synch'd harassment-with-EEG !

Hi -

I'm quietly conducting electronic experiments without much fanfare on the email circuit with the goal of detecting harassment effects. Be assured those experiments are continuing and will continue as ideas become available.

DIFFERENT FROM DETECTING SIGNALS, my experiments look for effects that happen indirectly as a result of the harassment having been dumped into my body, out of that undetectable classified "pipe".

The best I can come up with is for a living plant to sense my distress and show it on an EEG or GSR device. That has not happened, and from where I sit, it appears that the perps are flatlining either the plant, the equipment, or both.

(I have succeeded, however, in coming up with a simple circuit that makes the tools4wellness.com "PC mouse style" galvanic skin response (GSR) unit 5 times more sensitive (i.e. drawing less current) and that BG101 unit (\$59.95 US) can be augmented with the circuit shown at:

<http://www.raven1.net/gsr-sens1.gif> (that's a one) )

>> But the news is: Last night, I may have got the first SYNCHRONIZED harassment effects picked up on my more sensitive EEG unit.

The EEG unit has two advantages, even though it is expensive (used, cost me \$500 US):

- very sensitive, down to 1/2 of a MICROvolt
- FILTERED. This gets rid of extraneous signals that mask what you are looking for in a simple high-gain amplifier

So last night, I set the unit to 2 Hertz, which forces only signals in the "brain rhythm" range to trigger the unit's "geiger counter like" clicks. (2 Hertz actually covers just above zero up thru about 4 Hertz.)

I connected it to a large section conventional pickup coil, 24" x 30", 12 turns, positioned on the floor under the head of my cot.

On a usual night, the perps rotate among several choices of ways to keep popping me wide awake each time I slip towards falling asleep, with perfect timing. They use such methods as rattling objects, snapping the walls and doors by remote manipulation, short "voice" to skull door knocks, phone ringing, pager beeping (I no longer have one so they have stopped that one), drilling into masonry directly below my bed, body limb flailing (both muscles-participating and NON- muscles-participating), shaking the cot, and so forth.

One all-time favourite has been "electronic caffeine", meaning, some sort of signal that affects me as if I'd been mainline-injected with caffeine. It is a powerful one and when they first introduced it a few years ago, one shot of this stuff could keep me wide awake all night.

Last night, they chose electronic caffeine at the first falling-asleep instance, and the last one, with other methods used in between.

Well, the EEG machine picked up "geiger counter clicking" on BOTH occasions, which was SYNCHRONIZED with the shot of electronic "caffeine". Furthermore, for about two minutes afterward, bursts of geiger clicks showed up about every 1-1/2 second, then ceased. At that point I was really wide awake.

Since the EEG unit was on maximum sensitivity - 1/2 MICROvolt, and since I was perfectly still, I'm betting that this was my own body's reaction being sensed by the pickup coil under my head and upper torso.

CAUTION: THIS ENTIRE SCENARIO COULD BE A DECOY. I DO NOT RECOMMEND SPENDING SUBSTANTIAL MONEY TO CHASE IT IN YOUR OWN CASE.

What I DO recommend, however, is to think seriously about an AUDIO OUTPUT for your various "Tri Field Meters" and similar equipment.

Anything you have to WATCH is not too useful for observations OVER TIME or WHEN YOU ARE TRYING TO SLEEP.

Ideally, you would have an extension to your tri-field meter that drove a high-impedance amplifier connected to a TONE OSCILLATOR, in which the bottom of the meter movement scale put out a low frequency tone, and the top, a high frequency tone.

That way, you could observe yourself and your electromagnetic environment all night with your eyes shut.

The \$59.95 BG101 GSR unit is such a device, but even with my ../gsrsens1.gif circuit added, it is FAR from as sensitive as an EEG device. I would guess that the Tri- Field meters are closer to the EEG in sensitivity.

\*\*\* IF ANYONE WOULD LIKE ME TO WORK ON AN AUDIO EXTENSION FOR THEIR TRI-FIELD METER, please get me the MANUFACTURER's name and country, and I will correspond with them about how to connect such an extension.

\* REMEMBER: I'm not talking about direct detection of harassment signals, but rather, independent detection of the electromagnetic disturbances in your own body and nearby environment triggered when you are hit by the harassment.

This INDIRECT scanning totally gets around the problem of undetectable signals!

Cheers,

Eleanor

Subject: Success: More EEG sync'd to harassment bursts

EVEN IF YOU SKIP THE DETAILS SECTION, PLEASE READ THE TITLES "WHAT I FOUND" AND "INTERPRETATION".

Hi -

Last night was a night in which the perps used "electronic caffeine injections", i.e. the repeated sensation of being injected with caffeine to keep me wide awake, using electronic stimulation of the brain to do so.

POSITIVE results. Details follow:

I used an around-the-chest pickup coil, since the spinal cord passes through such a coil and any major bursts of current along the spinal cord should show up as bursts.

While both an EEG unit and a [Tri] Field Meter are not specifically designed for this, both are very sensitive instruments and both work fine for this application. It is essential to have an audio indication so you don't have to watch the instrument.

This coil consisted of twelve turns of #22 clear (essential so you can tell one side from the other) speaker zip cord, Radio Shack #278-1385. The coil is wound "in air", no core, and when stretched like a rubber band, the length is 22 inches, to go over most body parts. That is, each turn is 44 inches of wire.

The clear speaker zip cord is SPLIT, i.e. pulled apart to give you a single strand for each turn. You can make a coil using double strands, but unless you are experienced in electronics, I recommend splitting the clear zip cord in half before winding your coils.

The loose coil is bound at two points with Elastoplast fabric adhesive tape.

I'm going to post a detail drawing for a very neat way to put connector pins on the ends of this coil and any other wiring to be used for experimental measurements. The basic method is to crimp and solder "D-submini" pins (male) and sockets (female) on to wire ends, then heat shrink tubing over the pins for insulation and to make the pins smooth against the skin. (The female sockets need a slight bit of squeezing together and forced lateral misalignment to

assure tight connections over time.)

See [audsens.htm](http://audsens.htm) for the promised drawings.

"D-submini" pins and sockets are made by the AMP corporation and can be found in catalogues of electronic supply houses. Heat shrink can be had from electronic supply houses, TV/VCR repair parts shops, and Radio Shack.

[A sloppy fit is fine - pickup coils do not need to be tightly wrapped on what they are attempting to measure - this is why "clamp-on" AC ammeters fit loosely around a wire in which current is to be measured.]

The 44-inch turns will fit over the larger body parts. For smaller body parts, like your neck, arms, and legs, this loose coil can be twisted into a figure-eight pattern. (For the NECK, slip each lobe of the eight over your head separately - this is especially important if you have a large ego.)

The figure eight pattern doubles the effective number of turns.

To keep your instrument from being overloaded with routine noise from your nervous system and environmental "hash", I use a 10 K potentiometer IN THE LEADS FROM THE COIL TO THE INSTRUMENT. This "pot" is mounted in the cover of a large prescription pill vial, and:

- provides a fixed resistance of 10 K across the pickup coil itself. This seems to be an essential part of noise suppression.
- allows you to adjust from zero to 100% of the coil's output for passing on to your measuring instrument. Over a number of different experiments, this adjustment seems to be quite important. I will also post a diagram of how to make up this device.

#### WHAT I FOUND:

The coil was positioned around my upper chest all night, with the wires passing through my arm pits.

Any movement of the bed clothes and the coarse paint-removal scrubber pads would cause static discharge "artifacts".

("Artifacts" in instrumentation jargon are indications on the measuring device which are not from the system being measured. A spot on a photo which is not in the scene is an example.)

But when you are attempting to rest it is not that hard with your ear to separate the occasional movement artifact from the real bursts of nervous system activity.

So last night, I had hours of time during which I was being fed "maintenance doses" of "electronic caffeine" and they all faithfully registered.

The falling asleep process, as we all know, starts out as a period

where your head empties itself of any particular thoughts, followed by the "falling off the edge" into sleep.

With the coil in the chest position, I found that there were bursts of activity more in the "thought emptying phase" than the other night when electronic caffeine was only used twice. I was never allowed to reach that "falling off the edge" phase.

Now the bursts of whatever were absolutely perfectly timed to the first moments of each "thought emptying" phase. If I had a stronger "thought emptying" phase than average, I'd get TWO bursts of whatever.

There were no exceptions.

I didn't run the EEG all night, to conserve expensive batteries. Battery power is essential to get as far away from 60 Hz AC line noise as possible. But I did get from 2 to 3 hours of monitoring in. (I don't watch the clock - that makes for stress.)

INTERPRETATION:

Yes, THIS COULD BE A DECOY EFFECT.

But think about it this way: The fact that every single period of "thought-emptying" was flagged, even with a decoy pulse, IN ITSELF SEEMS TO BE EVIDENCE that my brain state was being monitored to a very "microscopic" level, and being done so FROM A DISTANCE.

THAT IS \*REALLY\* SIGNIFICANT IN AND OF ITSELF, ISN'T IT?

Furthermore, NO HUMAN OPERATOR COULD HAVE POSSIBLY CAUGHT EVERY SINGLE THOUGHT-EMPTYING INSTANCE SO PRECISELY.

Therefore, this points to sleep deprivation as a HIGHLY AUTOMATED form of harassment, doesn't it? One of the most highly automated, in fact.

To my mind, such automation brings the perps closer to a smaller number of tortur-ers being able to control and keep disabled a larger number of torture-ees.

I would say not only is there evidence in these readings, but the automation involved shows intent to keep winnowing out the entire population of the world into torturers or torture-ees.

\*\* THE EFFORT TO GET OUR MEMBERS WITH [TRI] FIELD METERS EQUIPPED FOR THIS TYPE OF MEASUREMENT SEEMS TO BE AN IMPORTANT STEP IN EVIDENCE COLLECTION.

What I'm hoping is that the anonymous but very highly qualified supporters helping Cheryl with the medical aspects of mind control can use this EEG/[Tri] Field Meter evidence to strengthen their report.

\*\* By the way, this EEG sensing works equally well on all filter settings from 2 Hz up thru 40 Hz.

Date sent: Mon, 15 Jan 2001 20:09:18 +0000  
Subject: Classic perp mode switch: EEG silent Jan 15/01

Classic example of how difficult it is to obtain evidence. Today, while resting for tonight's guard shift, the EEG and coil setup produced ZERO indications of any kind. It was working properly, as it continued to show the body/bedclothes/paint-scrubber-pad movement artifacts.

Instead of the "darts" of the last two EEG sessions, today the chosen mode of keeping me awake was tone triggering of hypnotic stay-awake programs, which have been installed in my brain some years back. These tone-triggers are also the NORMAL method for the perps.

See: <http://www.raven1.net/perptone.htm>

...for details.

I don't know if the last two sessions were examples of decoys, or actual stay-awake bursts using older technology.

I plan to continue working on ways to equip OTHER victims who own Tri Field meters with audio indicator add-on devices. Since the perps are known to switch harassment modes, at least some, possibly isolated, possibly decoy, readings may yet provide usefule evidence that we are being electronically "played with". Also, results from several experimenters at different locations, with different perp crews, will better show the scope of the problem of detection.

There are other experiments I will continue to try - this issue is so important all methods deserve trying.

Subject: EEG summary, and EEG-to-head experiments

Hi -

When I purchased an el-cheapo PC-mouse-style GSR unit and a biofeedback-style EEG unit a couple of months back, my purpose was to try a new approach to gathering evidence: Trap the biological effects of the harassment signals, rather than the undetectable, exotic classified mind control signals themselves.

SUMMARY TO DATE:

Having read in "Secret Life of Plants", Tompkins and Bird, about SIX researchers who found that plants mimic the full range of animal nervous activity without having an actual nervous system, I

planned to start there.

My plant DOES exhibit EEG like traces - there is no doubt about that, regardless of those who claim "plant EEG-like activity is a hoax". It is NOT. In fact, the plant EEG like activity is slightly higher in voltage than my own.

However, I've been stopped short of serious evidence collection by these factors:

- Serious data collection, for my daily routine, means during rest periods, where the perps keep me awake by various means, since that is when the worst bodily harassment occurs, and is when undisturbed time is available
- The GSR unit pushes from 3 to 16 microamps through whatever it's testing. This causes irritation and visible marking of skin if used overnight, and visible marking on the leaves of plants it's connected to. (MICROamps, very surprising, but undeniable.)
- The plant/equipment setups are consistently "flatlined" the moment I drop on to my cot for rest. I don't know whether the plant or the equipment is being suppressed. However, given the very frequent manipulation of animals as we walk about the city, it is quite possible the perps can suppress plant activity directly.
- As a double barrier, the perps also avoid sharp, obvious harassment effects when I have the plant hooked to either device.
- My own psychological barrier: Now that I know plants "think", and do so with great perception and sophistication, I can not try the harm-the-plant type of experiments.

I've also tried a number of COUNTER-WOUND pickup coils, which as some theory goes, will not detect conventional magnetic fields but will detect "scalars". Nothing at all. Doesn't mean there are no scalars around, could be the perps are flatlining those setups too.

So over the last few days, I've been trying to monitor my own body's activity in response to harassment. I've used two pickup systems:

- Pickup coils around the body (simple)
- Coin electrodes, K-Y jellied, taped to body parts

(There is one coil type I want to try eventually but haven't taken the time nor gathered the materials for, and that is a TOROIDAL coil around my neck or torso. A toroidal coil is better for picking up the magnetic fields generated by the spinal nerves. This is speculative, and I don't plan to rush into that one.)

The body-coil experiments produced confusing results, not unexpectedly, given the perps' long demonstrated ability to disrupt electronic equipment.

Two nights in a row, I got very forceful bursts of EEG activity,

broad band meaning filter settings of anywhere from 2 Hz to 40 Hz produced about the same audible clicking and static bursts from the unit's speaker. These "darts" coincided perfectly with the familiar "electronic caffeine injections". These are sudden awakenings, with no "tones" or any other stimulus, but which snap you awake immediately and are usually used to do so just before you "fall off the edge" into sleep.

Then, the following night, NOTHING whatsoever.

This strongly suggests the "darts" were DECOYS.

We need to keep in mind that our perps are not simply harassing us. They are PSYCHOLOGICAL warriors and DECEPTION is a large portion of their effort.

They want us divided and arguing over the technology, and this is why we get so many confusing variations of effects, and appearance that "TV" or "telephone" or "computer" or "house wiring" are the carriers of the harassing signal.

The ideal victim, from the perps' standpoint, is one who does one or more of the following:

- complains in public that they have a CIA tooth implant
- wears a foil beanie in public
- complains in public that their "TV" is harassing them

... EVEN IF THOSE CLAIMS ARE TRUE, doesn't matter, the public has been quietly coached to react immediately with "nut case".

So I recommend this response to perp deception:

- State that the classified weapons can imitate a very wide spectrum of technologies and delivery sources
- Claim only that "In my case the harassment MAY or SEEMS TO be coming from the AC outlets, FOR THE MOMENT"  
... but that  
OTHER TARGETS GET VERY DIFFERENT  
APPARENT ATTACKS AND SOURCES"
- State clearly that you DON'T KNOW how the harassment from the CLASSIFIED weapons works, but it penetrates all shielding and can evade detection when the operators want it to
- State clearly that DECEPTIVE USE of the classified weapons is widespread, so you cannot say for sure what the source or signal type is

By being very circumspect and not "taking the bait" on the deceptive attacks, you will maintain your own credibility and contribute substantially to the credibility of the group.

SERIOUS ATTEMPT USING ELECTRODES:

So last night I tried to make a serious attempt to monitor my own

EEG using taped coin electrodes, moistened with K-Y jelly. The hookup worked properly.

However, the moment I lay down to start observing, the perps snapped my nose shut, forcing me to breathe very uncomfortably through my mouth.

Furthermore, they dramatically scaled up the sensation of electric shocks all over my body, which are only sensations and not actual shocks. This is a common way to make sure I don't sleep, but last night I had to writhe around constantly - I felt like the poor duck in the store window who was forced to "dance" for passers by because he was confined to standing on a hot surface.

Additionally, the perps used jamming equipment to force me to keep the microvolt threshold knob set about three times higher than my true brain activity. If I pulled it down to where the brain activity should have been - it sounded like one of the most violent attacks of static you've ever heard in an old beat-up AM radio.

After a couple of hours this way, I gave up.

Know what? MY NASAL PASSAGES INSTANTLY POPPED OPEN THE MOMENT I GAVE UP.

Artificially induced breathing trouble, like a pinched nose, is standard perp fare among many of us, from reports I hear.

\*\* By the way, later on that night, there was a 2-hour power failure. All of the usual harassment effects CONTINUED.

A couple of years ago, the effects would stop with a power failure. Having seen all the deceptive practices I and others have experienced, I don't believe that difference in power failure experience was/is an actual change in technology. Rather, it indicated deception, to fool me into thinking the "power grid" has something to do with the harassment.

So in conclusion, the perps don't want me doing bio-sensing, that much is clear.

I will now turn my attention to getting any other victims who have sensitive meters, as of the Tri-Field variety, equipped with audio sensing, so they can do some serious bio-sensing experiments without having to watch the meter face. That significantly extends the usefulness of these expensive meters.

(I recommend not attempting to add either audio sensing or external coil/electrode jacks to any meter still in the warranty period. I will furnish audio units to interested meter owners, with instructions to be carried out by a LOCAL, NEAR-YOU technician, for \$50 US including one-way Fedex shipment of the audio indicator add-on unit. If the meter owner is a "plant person" I will also furnish plant leaf electrodes.)

As a final note, Sueann Campbell from Austin TX has an original Tri Field meter. Sueann has been able to watch her meter face during serious attacks and she reports \*\*NOT A SINGLE INDICATION\*\* for the electrostatic, magnetic, or electromagnetic signal types. Sueann's experience is, for me, one more very bold confirmation that we are NOT dealing with conventional signal types.

And by the way, Sueann's meter, like others in their product line, SUMS fields in ALL directions, so these meters are NOT like a directional radio receiver. You won't miss a conventional signal if it is there.

<http://www.trifield.com> ....for more info.

IF ANYONE WOULD LIKE TO CONFIRM RECEIPT OF THIS COMPREHENSIVE SUMMARY, I'd be grateful. Since November 2000, I and others have experienced rotating email blockages at a very high level.

From: Eleanor White  
Subject: New plant EEG find  
Date sent: Wed, 31 Jan 2001 15:36:03

Hi -

Discard this email if you are not interested in experiments designed to detect the biological effects of the undetectable classified harassment signals.

I've always wanted to pick up the EEG-type activity in my plant's root system but of course, that's very difficult.

I tried two stainless teaspoons pushed down on either side of the plant, and I could feel some of the root branches snapping so I know I engaged close to the broken ends.

Flatline. Nada.

So I've just tried taking a strip of folded-once aluminum foil, cut to a half inch width, then cutting to about 1-1/2" long and wrapped around one of the more mature STEMS of my Cyclamen plant.

The wrapping was very loose. The stem is about 3/16" diameter and the wrapping is loose enough to allow a second stem passing through.

Before wrapping, I had applied a generous coating of fresh K-Y jelly to the stem.

After wrapping, I gathered the slack on one side of the stem and pinched the slack part flat, so a flattened tab projected out from the stem.

I placed an alligator clip on this flat tab as close to the stem as I could get it, and this caused the foil band around the stem to moderately tighten - no slack was left.

I am finding that the EEG trace from this new electrode setup - the hot electrode on the stem and the ground electrode on one stainless spoon pushed down into the root system PRODUCES VERY LIVELY EEG ACTIVITY - MUCH MORE SO THAN A LEAF.

This is not too big a surprise - after reading "Secret Life of

Plants", apparently the root system is equivalent to our vascular system and actually contracts and expands to force water and nutrients up the stems.

Since our heart muscle's electrical output is tops in our bodies, it is reasonable to expect that a plant's root system might have a good deal of electrical activity too.

Some bad news: The perps "cooperated" as I was trying this while resting last night and gave me several jabs of burst type harassment, such as limb flailing and hot needles in the flesh.

Since the electrical activity was high anyway, and the perps were possibly the ones sending at least some of this activity as a cover or decoy, I heard NOTHING different in sync with their jolts and jabs.

This could mean the lively activity was cover, meaning there was a plant response but the perps were covering it up with fake, higher level EEG signals from the plant.

Or, it could be that, not being a "plant person" myself, my plant simply doesn't get upset if I get zapped.

This is a reason why I say this effort to detect biological responses may take a fair bit of time and patience, and more than one experimenter. This is why I'm offering to anyone with a Tri-Field meter to equip them with the audio sensing output so others can have the equivalent of an oscilloscope but for far less money.

Obviously, the perps are keenly interested, and that much means there may be something to it they are trying to hide from us. I'd bet on that.

Eleanor

Description from web site:

The GSR meter instantly and accurately measures your emotional and physical arousal. Simply hold it in your hand, resting two fingers on the sensing plates. It turns itself on automatically at the touch of your fingertips and emits a tone. The more stress you feel, the higher the tone. Includes the GSR2 biofeedback unit plus instructional cassette.

\*\* GSR units are like OHM METERS, that is, they depend on passing a small current through the person or plant being tested. This current though safe and small, can irritate skin and leaves, and this is why a current-lowering circuit modification is being worked on. Meanwhile, a 470K (470,000 or "half meg") resistor in series with one of the leads can be used to lower current without preventing the pickup of skin response or leaf response.

Here is a December 10, 2000 email to the group with a couple of bits of advice on connecting this GSR2 PC-mouse style unit for use with plants:

Today making up electrode sets for both the GSR and the EEG units for further experimentation. Couple of thoughts:

1. Discovered that by placing a series resistor of value 470,000 ohms (aka "470K" or "half a megohm") ...the tone range is still within the dial's travel to bring up the audible tones.

One full megohm is too high.

What a half-meg resistor does is to reduce the current through your own skin, or, through a plant, no doubt to the plant's relief, and yours as well!

2. I'm avoiding drilling the unit for proper external terminals as it has a 1-year warranty.

Instead, I've used contacts against the chrome finger electrodes made from six 3/4" long folds of copper solder removal braid. Copper coaxial cable shielding cut to 3/4" would do also.

The braid is held against the chrome by two small pieces, about 3/8" wide, 3/16" thick, and 3/4" long, of the spongy stuff those foam paint brushes are made of. It is springier than other foams and is cheap and easy to find.

On top of that, there are a couple of wraps of Scotch "green label" Magic tape, 3/4" wide. (This tape really IS MAGIC, imo.)

The 3/4" length chosen still gives an inch of chrome electrode for direct experimentation with your fingers.

Soldering to the braid is a challenge, because it is designed to instantly fill with solder, making it less effective as a contact material.

First, one end of the six-wrap pattern has three folds side by side.

That can be opened up a bit with a sewing needle to allow a stripped wire end to pass thru. Next, grip most, all but the top 1/16" or so in a VISE. Insert the wire end with enough length to fold the stripped end back on the braid's end loops.

Solder with this assembly in the vise. The soldering will take more heat and time, but the solder will not run down and fill the braid.

My unit was used and cost \$495.00 US

Specifications:

#### AMPLIFIER

Type: Differential Amplifier.  
Input Sensitivity: 0.5 microvolts RMS.  
Input Impedance: over 1 Megohm. System Gain: 100 dB.  
System Noise: less than 1 microvolt R.M.S.

#### FILTERS

Center Frequencies: Separate filters at 2,5,7,8.5,10,12,14,20, 30, 40 Hertz.  
(Delta, Theta, Alpha and Beta frequencies.)  
Filter Roll-Off: 12dB Per Octave. Filter Band width: 2.5 Hz.  
Notched: 40dB, rejection at 60 Hz. Common Mode Rejection: 110 dB.

#### FEEDBACK

Meter: Instantaneous EEG amplitude indication 0-50 microvolts.  
Audio: Amplitude and Frequency Modulated tone.

## CONTROLS

Volume Control                      Threshold: 4 to 140 microvolts.

Test: Push button battery test and electrode contact test.

## ELECTRODES:

Saline Solution Fiber Electrodes: for best electrode contact and ease of application.

## POWER

Batteries: three 9-volt transistor radio type batteries.

Battery Life: 50 to 100 hours.

WARRANTY: ONE YEAR, INCLUDING PARTS AND LABOR.

## PHYSICAL APPEARANCE

Handsome wood cabinet, brushed metal face plate.

Size: 12" x 5.5" x 6" deep.

## OUTPUTS

Audio: Headphone jack, internal speaker.

Signals: External meter jack, oscilloscope outputs both before (raw) and after filter.

PRICING: \$795 Complete. Shipping \$15 in US (Used units, if available \$595)

The Braintrainer is equipped with filters which monitor beta, alpha, theta, and delta brainwaves. This unit's circuitry provides 10 separate 12-db per octave filters designed to give feedback whenever the amplitude in microvolts of the brainwave signal is above the threshold setting.

These filters are centered around the most useful brainwave frequencies of 2.5, 5, 7, 8.5, 10, 12, 14, 20, 30, 40 Hertz.

Separate filtering is a necessity in brainwave monitoring, a feature which traditionally only the more expensive models have provided. In most cheaper instrumentation there is no way to identify precisely which brainwave frequencies are actually being produced. For most purposes this is inadequate. The Braintrainer alleviates this problem by offering a specific filter to monitor each frequency range that may be desired.

The Braintrainer circuitry includes a differential amplifier which decreases the amount of noise and artifacts in the brainwave signal from such sources as 60-cycle background noise and radio frequency interference, yielding common mode rejection greater than 110 db. This noise reduction allows more accurate discrimination of smaller changes in electrical brainwave than would otherwise be possible.

The Braintrainer EEG includes both amplitude modulated and frequency modulated audio feedback. The feedback tone is amplitude modulated so that the larger the amplitude of the brainwave activity produced, the louder the tone. The tone is also frequency modulated so that the repetition rate (number of beats per second) of the tone accords with the frequency of the monitored brainwave. The Braintrainer provides a calibrated threshold control which ranges from 4 to 140 microvolts. The threshold microvoltage scale was especially chosen to include the complete range of possible brainwave amplitudes.

In addition to the above features the Braintrainer EEG includes many other important features:

- Notch Filter at 60 Hz. with 40 db. rejection to prevent environmental noise interference with brainwave measurements. This is in addition to the 110db. common mode rejection.
- Meter readout of brainwave levels.
- Battery and electrode test push buttons.
- Output for oscilloscope both after filters and before filters ('raw') brainwave output).
- Auxiliary output jack. For light display, special sound feedback unit, digital integrator, percent time units. (All optional extras).
- Volume control for comfortable audio feedback.

A complete saline electrode set and headband are included with each unit. It consists of two ear clips and one active fiber electrode which can be placed anywhere (crown, forehead, left or right temporal regions). Ear clip electrodes minimize artifacts and false signals due to eye blinking or muscle contractions of the forehead. The placement of these electrodes is very easy, regardless of the amount or density of hair on the subject's head. The saline solution is not messy as are electrodes which use electrode pastes or creams. Like the units themselves, the electrodes are rugged and will afford frequent and extended use.

## **Quick read for those tight on time**

### **The Robot With the Mind of an Eel**

Scientists Start to Fuse Tissue and Technology in Machines

*By Guy Gugliotta*

Washington Post Staff Writer

Tuesday, April 17, 2001; Page A01

CHICAGO -- The cyborg aims for the light and wheels forward. Another light flashes and the cyborg turns. Again and again, like a bull in a ring, the cyborg charges, sometimes veering right, sometimes left, sometimes moving straight ahead, always looking for the light.

The cyborg is no RoboCop, but it is a revolutionary experiment in combining a mechanical device with living tissue. The robot is controlled by an immature lamprey eel brain that was removed, kept alive in a special solution and attached to the hockey-puck-sized robot by wires so it can receive signals from the device's electronic eyes and send commands to move the machine's wheels.

"Until the recent past, people were using biological nervous systems to inspire technology," said physiologist Sandro Mussa-Ivaldi of Northwestern University's Rehabilitation Institute of Chicago. "Now we've gone one step beyond, to tap into the nervous system itself."

Mussa-Ivaldi's lamprey larvae are one of a large number of creatures whose supple sensory resources are being put to work in a new generation of animal/machine hybrids.

Mussa-Ivaldi is testing the lamprey brain's ability to control a robot, but the long-term possibilities could be much more spectacular: learning more about how brains work so electronic microprocessors can be developed to help compensate for damage from strokes and other types of nerve trauma.

A wide variety of other similar experiments are unfolding in labs across the country, where rapid advances in electronics and other fields have enabled scientists to integrate animals and microelectronics. These experiments envision a range of applications -- using bacteria attached to computer chips to map pollutants, insects as part of sensors to detect land mines, chemical weapons and narcotics, and rodent brains to help identify new medicines.

"There's a couple of things making this happen," said electrical engineer Michael Simpson of the Oak Ridge National Laboratory. "Even before the mapping of the human genome was completed, there was an explosion in our understanding of genomics and neural pathways in other animals."

"At the same time, [microelectronic] devices keep getting smaller and denser," Simpson added. "Single chips are beginning to get complex enough so that they can begin to work with biological systems."

In Tennessee, Simpson and colleague Gary Sayler have genetically engineered bacteria to glow in the presence of chemical agents and affixed them to microchips. The Rockville, Md.-based company Dynamac is licensing their "critters on a chip" for applications that could include highlighting the boundaries of toxic waste plumes, monitoring air quality or analyzing body fluids to test for signs of disease.

In Iowa, entomologist Tom Baker has built a device for finding land mines using tiny moth antennae that emit signals to microprocessors, which transform them into different tones. The signals drop in pitch when the antennae encounter the odor of high explosives used in mines or unexploded ordnance.

In Los Angeles, neuroscientist Michel Baudry is using brain slices from mice and rabbits to develop a system for warning soldiers about the presence of chemical or biological weapons. The system creates an electronic blueprint for a normal environment, so that when the balance is upset, an alarm will tell soldiers to don gas masks.

Formidable barriers remain before scientists will fully benefit from critter science. Animals must be trained and maintained. Shelf life of natural tissue is a problem.

And so is size. University of Montana entomologist Jerry Bromenshenk has trained bees to find explosives, and the Agricultural Research Service's Joe Lewis has done the same in Georgia with parasitic wasps, but there is not yet a practical method for tracking such tiny sentinels when they are flying free.

And at Iowa State University in Ames, Baker can read the reactions of his moth antennae on an oscilloscope, but he doesn't yet have the electronics that a soldier needs to discriminate between the signal he wants and other odor sources.

Using animals to serve humankind is as old as training falcons to hunt and dogs to fetch. The impulse is always to take advantage of animals' superior qualities, and if scientists couldn't use the animals themselves, they have tried -- and often failed -- to make devices that mimic their expertise.

Harold Hawkins, head of the Office of Naval Research's bioacoustics program, notes that a dolphin can map the sea bottom in its mind's eye with "one, or two, or three" pings from its echo-location system, while the world's fanciest side-scan sonar needs dozens of slow passes to build the same picture.

Other animals are just as sophisticated, but science is catching up: "We are getting the engineering tools that allow us to plug into living systems," said Alan Rudolph of the federal government's Defense Advanced Research Projects Agency, which has funded a number of critter projects. "We are asking the question, 'Can we make machines with living components and make them work?' "

Mussa-Ivaldi's experiments in "biology as technology" brought him and colleague Simon Alford to the lamprey because it is a well-studied creature with very large nerve cells and a brain stem that can survive for several days in an oxygenated and refrigerated salt solution.

Using a microscope, Mussa-Ivaldi or his colleagues extract brain stems from the squiggly, pencil-thin, 6-inch-long lamprey larvae under anesthetic. They put the half-inch-long brain stem on a stand, connect electrodes to both sides of it, and run wires to each side of the robot, an off-the-shelf miniature from Switzerland called a Khepera. The robot is placed in the center of a circular arena about 3 1/2 feet in diameter -- like a tiny bull ring.

As lights mounted at 45-degree intervals flash on and off around the pit's rim, the robot's light sensors send signals to microprocessors that transform them into impulses the lamprey brain can interpret. The brain sends signals back through another set of microprocessors, which produce the electric impulses that drive the wheels. When the lights don't flash, the robot doesn't move.

The lamprey ordinarily uses this mechanism for balance -- to keep itself centered and upright in the water. As a result, the animal's brain will seek equilibrium, and, indeed, in most cases the robot will turn to the light and run toward it.

But if assistant Karen Fleming masks one of the eyes, the robot will first travel in circles, since only one side of the brain receives signals -- "but we hope it will compensate," and straighten out. It usually does, after a few practice runs.

The effect is eerie, for it is clear that the brain senses the light. In darkness, an oscilloscope picture is stationary, but when a light flashes, the display spikes dramatically and the robot's wheels begin to turn.

"As you see it here," said Mussa-Ivaldi, watching the robot scoot across the pit, "the lamprey brain is the only thing that makes it move." While the team appears to have established that the brain can learn, Mussa-Ivaldi said, it has not yet been able to keep brain function stable long enough to test its memory. Mussa-Ivaldi is optimistic that whatever he learns will eventually help researchers develop high-tech prostheses for stroke victims and others who suffer nerve damage.

Training unusual animals to serve human ends has proved surprisingly easy, in part because of the extensive research that scientists have done simply to find out why they do what they do.

In Tifton, Ga., the Department of Agriculture's Lewis and several colleagues had studied parasitic wasps for 30 years as a way to kill caterpillars in farm crops before Rudolph's DARPA funded him to see if he could transform his charges into sensors.

Lewis knew the wasp responded to smells it identified with food and with reproduction. By feeding the wasps sugar water as he exposed them to the odor of di-nitro toluene, an explosive akin to dynamite, he was able to teach the insects to seek di-nitro toluene in the field. In Montana, Bromenshenk has done the same thing with bees, also a DARPA project.

But having trained his "miniature bloodhounds," Bromenshenk had to be able to track them electronically. Radio transmitters were too heavy, and although scientists had had some

success gluing microchips on the bees, the process took too long. Bromenshenk is waiting for someone to produce a "spray-on" chip.

In Georgia, Lewis has patented a hand-held "biosensor," and puts his wasps -- much smaller than the bees -- inside. When the insects smell an odor, they duck their heads to receive the reward, tripping an electric eye. Lewis said such a device could work well searching for explosives at airports, cocaine at the border, or even traces of disease in odors from the human body.

Baker's experiment with moth antennae, also funded by DARPA, may offer a solution to the size dilemma, for it uses only tissue from the insect, rather than the whole animal, and mounts the detector in a vehicle.

Moths use their antennae to detect different odors. Baker attaches electrodes to the base of the antennae to try to develop an olfactory "signature" for any odor he seeks, including high explosives. The eventual goal is to put the antennae in a mobile cyborg that can both sense a land mine and flag the target.

The system now works with a remote-controlled vehicle, Baker said, but a trained researcher has to walk beside it to listen for the tonal patterns that signal "hits," and find their source by assessing the wind direction.

In the insect experiments, researchers are trying to pick one odor from a barrage of competing signals, but in Los Angeles, the University of Southern California's Baudry has reversed the approach by modeling hundreds of thousands of signals that describe a normal environment. When something doesn't fit -- a biological agent or a toxic pesticide -- a warning alarm sounds.

Baudry does this using slices from the hippocampus of a rabbit or mouse, a section of the brain that forms new, long-term memory -- in humans, for example, it links a face with a name.

The sophistication of the mammalian brain, coupled with modern computer capacity, has given this research almost unlimited potential, for once scientists assemble a library of responses, they can screen for practically anything, including testing thousands of chemicals to see if one might produce a novel medicine.

One barrier to the practical exploitation of critter devices is the need to increase their life span. Baudry said his team has "almost, but not quite," developed a way to suspend the slice in a gelatinized nutrient that can be activated with heat -- extending the shelf life to several weeks or months.

In simpler organisms, this hurdle can be lower. Oak Ridge's Simpson and Saylor, a University of Tennessee microbiologist, were able to freeze-dry and encapsulate bacteria so that they would activate when water was added to the chip.

The Simpson-Saylor "critter on a chip," being marketed by Dynamac as an environmental biosensor, grew out of Saylor's ability to transplant a luminescent gene from a marine bacterium into another bacterium that degrades pollutants.

When the second bacterium ate the pollutant, it glowed, demonstrating that it was doing its job. If the researchers pasted a bunch of bacteria on a chip, the microcircuitry could detect the luminescence and send a signal to a remote display.

By salting a site with bacteria, scientists might map the extent of a toxic plume. Installed sensors could monitor pollutants at water purification plants, check air quality on spacecraft or warn of chemical or biological warfare attacks.

"We're turning the bacteria into microelectronic components to detect different substances," said Saylor. "You can engineer the organisms to eat almost anything."

# Eye's Visions Electronically Read And Displayed

---

Eleanor White's comments: Over decades of experience and among around 300 involuntary neuro-electromagnetic experimentees, there have been instances where two types of thought reading were evidently performed by the experimenters:

- Electronic reading of thoughts "said to one's self"
- Electronic viewing through the eyes of the experimentee

This article is about picking up recognizable images from a living brain (a cat's) and displaying those images on a screen. Keeping in mind that classified projects can be 20 or more years ahead of unclassified work (e.g. the SR-71 aircraft), the claims of the involuntary experimentees become much closer to believable in light of the unclassified work described below.

*A Cat's Eye Marvel* - EXCERPT:

by Leander Kahney

3:00 a.m. 7.Oct.99.PDT

In a dramatic demonstration of mind reading, neuroscientists have created videos of what a cat sees by using electrodes implanted in the animal's brain. Garrett Stanley of Harvard, and Fei Li and Yang Dan of the University of California, Berkeley, were able to reconstruct in startling detail scenes flashed before a cat's eyes.

-----  
Read ongoing Med-Tech coverage  
-----

The reconstructed scenes clearly demonstrate the scientist's ability to decode the language of the cat's visual system.

The researchers attached electrodes to 177 cells in an anesthetized cat's thalamus, a region of the brain falling about half-way in the visual processing pathway.

Having recorded patterns of firing as various scenes were flashed before the cat's eyes, the team was able to reconstruct very closely what the animal saw, which varied from people's faces to scenes of a dark forest.

The research was applauded by other neuroscientists.

"The demonstration that you can reconstruct a movie from the multiple cells in the thalamus is an important step in our understanding of how signals are represented in the activity of populations of cells," said Fred Rieke, an assistant professor of physiology and biophysics at the University of Washington.

Stanley, an assistant professor of biomedical engineering, said the research provides clues about how prosthetics may one day be wired into the mammalian nervous system. By understanding the language of the brain, scientists will be able to create devices that talk to it, he said.

"Trying to understand how the brain codes information leads to the possibility of replacing parts of the nervous system with an artificial device," he said.

Stanley predicted that in the next couple of decades, as more and more of the neural code is decoded, brain interfaces may start to appear.

But he cautioned it may take a lot longer. He noted that the team also recorded the activity of cells higher up in the cat's visual pathway -- in the visual cortex -- but the results were not as startling because of the greater complexity of the cells.

"So little is understood about thoughts, perceptions, dreams, it's impossible to predict how much progress we'll make in understanding them," he said.

However, Ken Miller, as associate professor at the University of California, San Francisco, said researchers around the world are using similar techniques to decode higher brain functions.

"These methods could be applied to further up the visual pathway," he said. "It will become more difficult ... but it's a promising direction."

The experiments were reported in the September issue of the Journal of Neuroscience.

# Effects of 6-10 Hz ELF on Brain Waves

David S. Walonick

There is evidence that ELF magnetic waves can affect brain waves. These set of experiments were designed to study the effects of ELF rotating magnetic fields on the brain.

The specific ELF frequencies I was interested in studying are 6-10 Hertz. These frequencies are the same as those produced by the human brain in the theta and alpha states. Generally, specific brain wave frequency ranges can be associated with mood or thought patterns. Frequencies below 8 Hertz are considered theta waves. While these seem to be some of the least understood frequencies, they also seem to be associated with creative, insightful thought. When an artist or scientist has the "aha" experience, there's a good chance he or she is in theta. Alpha frequencies are from 8 to 12 Hertz and are commonly associated with relaxed, meditative states. Most people are in an alpha state during the short time immediately before they fall asleep. Alpha waves are strongest during that twilight state when we're half asleep and half awake. Beta frequencies (above 12 Hertz) coincide with our most "awake" analytical thinking. If you are solving a math problem, your brain is working at beta frequencies. Most of our waking hours as adults are spent in the beta state.

A question of importance is: "If we can electronically shift the brain wave frequencies to alpha or theta, will a person's moods or thought patterns change to those commonly associated with those frequencies?". In other words, if we can electronically move a person's brain waves to the alpha frequencies, will they become more relaxed? Will their state of consciousness change to coincide with their brain waves, even if those brain waves were electronically induced? These are important questions with far reaching implications.

When I began these experiments, I was well aware of the possible ethical implications involved in ELF research. For example, if I were carrying an ELF transmitter operating at alpha frequencies, would the people around me be affected as well? Would they unconsciously gravitate toward me because they'd become more relaxed as they moved closer to me? Would they like me more because they felt "good" when they were around me? What if a salesman were carrying an ELF transmitter? Would people be influenced to buy something because they were more relaxed around the salesman? Could entire populations be influenced to be comfortable with ideas they would normally reject? These, and many others, are serious ethical considerations involved with ELF research. They cannot be taken lightly.

I decided to undertake this research with full knowledge of the ethical implications. While there is the potential for misuse, a desire for knowledge and understanding are part of being human, and the potential benefits to humanity are great. What if we could treat depression, insomnia, anxiety, stress and tension with ELF magnetic fields? What if we could increase intelligence or improve learning? As in any scientific endeavor, there are both positive and negative potential uses for any discovery. One only need look at the development of atomic

energy to understand the benefits/misuse dichotomy. It is my personal belief that the potential benefits to humanity justify the research.

I began by collecting all the available research on ELF fields. Lana Harris, a secondary research specialist, did an excellent job in acquiring virtually all the available research in this area. In addition to a multitude of published journal articles, several military and NASA research reports were ordered. A review of the research showed that most studies had been performed to determine the effects of 50-60 Hertz high voltage power-line fields. Since these are the frequencies of most of the world's electrical power distribution systems, the importance of understanding the effects on plant and animal life are evident. To a much lesser degree, a few researchers had concentrated on lower power and lower frequencies (the focus of this study).

### **Equipment**

The equipment required for this research was easily attainable, with the notable exception of a stable frequency counter with .01 Hertz resolution. Accurate frequency measurements were essential for this research, so I designed and built a digital frequency counter capable of measuring frequency to the hundredth of a Hertz (plus or minus .005 Hertz). A 100 KHz crystal Colpitt's oscillator (calibrated with WWV) was used as a time base and divided by ten to the seventh power to attain the desired resolution.

Other equipment used is: a Biosone II Brainwave Monitor and Myosone 404 EMG Monitor (Bio-Logic Devices, Inc., 81 Plymouth Rd., Plainview, NY 11803); a Model 3011 Digital Display Function Generator (BK Precision Dynascan Corp., 6460 West Cortland St., Chicago, IL 60635); and IBM PC compatible computer with a clock speed of 7.16 MHz (the faster the clock speed the better); a SAC-12 A to D signal acquisition board (Qua Tech, Inc., 478 E. Exchange St., Akron, OH 44308); a Cudas II video board and software release 3 (Dataq Instruments, Inc., 825 Sweitzer Ave., Akron OH 44311); a Fluke 77 digital multimeter (John Fluke Mfg. Co., Inc., PO Box C9090, Everett, WA 98260); and StatPac Gold statistical analysis software (Walonick Associates, Inc., 6500 Nicollet Ave. S., Minneapolis, MN 55423).

The transducer was a 24" diameter hand-wound coil, consisting of 1000' of #25 magnetic wire. The coil had a DC resistance of 32.4 ohms. It was mounted on a 26" square piece of bakelite board for stability. Two dowels were mounted with plastic ties onto the board so they extended 24" from opposite sides of the board and the entire apparatus was secured by two microphone stands.

### **Experimental**

### **Design**

All twenty-two subjects were friends or acquaintances of the author. There was no remuneration to participants. The excitement or novelty of participating in a brain wave research experiment seemed to provide sufficient reward in and of itself.

Subjects were sent a pre-experiment letter briefly describing the intent of the experiment and what they could expect. They were asked not to use any drugs or alcohol for 24 hours before their appointment, and not to wear any metal jewelry. (It was thought that metal jewelry might distort the magnetic field, thus creating uncontrolled inconsistencies between subjects.)

Upon arrival at the laboratory, participants were given a short orientation to the procedure and any questions they had were answered. They were hooked up to the EEG monitor (frontal to

occipital, midline) and then allowed to listen to a relaxation tape for five minutes. The purpose of the relaxation tape was to establish a "relaxation level" baseline and to relieve some of the anxiety associated with the experiment. At the end of five minutes, the headphones were removed and the subject was told they were at a relaxation level of 5 on a scale from zero to ten (0 being very tense and 10 being very relaxed). This was the baseline they were to use for reporting their relaxation level following each ELF exposure. Subjects were told that they could choose to stop the experiment at any time.

Each ELF exposure consisted of a ten second, sine-wave transmission separated from one another by 45 - 60 seconds of no exposure. The voltage fed to the coil was 3.1 VAC (RMS). The coil was positioned 18" in front of the subjects head. The outputs from the ELF transmitter (function generator) and the brain wave monitor were fed directly into the computer A to D board, allowing both to be displayed on the computer monitor (and recorded on disk) simultaneously. The sampling rate of the A to D converter was set at 2000 samples per second for the entire experiment. This was sufficient to visually detect differences of .1 Hertz between the ELF and brain wave frequencies. Subjects were not told when a transmission was beginning. However, at the end of each transmission, they were asked to "report". This was their current relaxation level based on the zero to ten scale. They also reported any feelings they had experienced and these were recorded verbatim. Twenty-one frequencies were presented to each subject (from 6 to 10 Hertz in increments of .2 Hertz. For half the subjects, these frequencies were randomly selected. For the other subjects, they began at 10 Hertz and were decreased by .2 Hertz with each transmission. Subjects were not told the order of frequencies that would be presented to them.

Post acquisition software was used to visually examine the coherence (frequencies) and synchronously (phase relationship) between the transmitted ELF and prominent brain waves.

## **Results**

Examination of the computer data revealed substantial differences between subjects. Some subjects showed lock-on (entrainment) over a wide frequency range, while other subjects showed no lock-on whatsoever. In general, lock-on occurred most frequently from 8.6 to 10 Hertz and less frequently below 8.6 Hertz.

One subject displayed lock-on for all frequencies from 7.4 to 10 Hertz. Two subjects displayed no lock-on over the entire frequency range. While I did not test a sufficient number of subjects to be statistically significant, I suspect that susceptibility to ELF entrainment follows the normal (bell-shaped) curve. At this time, I do not have any hypothesis that would allow us to predict who is susceptible and who is not.

Several interesting observations were readily apparent. Lock-on generally occurred very rapidly... within a quarter of a second in most cases. If lock-on did not occur at a specific frequency in the first second, it didn't at all. When the brain did lock on, the amplitude of the brain waves increased to nearly double their normal size. This is typical for naturally (non-ELF) produced alpha patterns. The brain locked on to higher frequencies (9-10 Hertz) more readily, and maintained the lock-on for the entire duration of the transmission. As the frequency was lowered (below 8.6 Hertz), lock-on for most subjects occurred in bursts, rather than being continuous. For example, there might be immediate lock-on for two seconds; then the brain would "fight" the ELF frequency for a quarter of a second, and then lock-on again for another few seconds, etc.. I use the word "fight" because it looked like the brain was fighting the ELF to maintain its own frequency. The "fight" was characterized by low

amplitude beta frequencies in the 15-20 Hertz range. These may, of course, have simply been analytical type thoughts, but they were not observed when the frequency was in the 9-10 Hertz range. This "fight" became more frequent as the frequency was lowered, until no lock-on was observed at all.

None of the subjects were able to consciously detect the presence of the ELF field. One female subject was able to detect whenever the field started or ended, but could not accurately say when if it was on or off at any given time. In other words, she was able to detect the change in the magnetic field, but not the presence or absence of the magnetic field itself. She thought she felt it because it aggravated her sinuses. When lock-on occurred, the brain waves lagged behind the transmitted ELF. This appeared to have been the "reaction time" of the brain to the ELF waves (approximately 60-80 milliseconds). More accurate experimentation is needed to explore this relationship.

Subjects verbatim reports were quite revealing. (Keep in mind that none of the subjects actually said they felt the ELFs.) The most common verbatim reports occurred between 8.6 and 9.6 Hertz. Common statements were subtle "tingling" sensations in the fingers, arms, legs, teeth, and roof of the mouth. Two subjects reported a "metallic" feeling in their mouth. One subject reported a "tightness" in the chest and another subject reported a "tightness" in the stomach. Several subjects also reported sensations when the ELF frequency was between 6 and 7 Hertz. The verbatim responses in this range were "ringing" in the ears, "flushed" face, "fatigued", "tightening" in the chest and "increasing" pulse.

Lock-on occurred at lower frequencies more often when the transmitted frequencies were progressively lowered, rather than randomly presented. It would seem that the brain prefers a gradual lowering of frequency rather than a sudden or abrupt change in frequency. This may have been due to the extremely short duration of each transmission (10 seconds). It may be that this effect would disappear if longer transmission times were used.

There was no significant correlation between subjects reported level of relaxation and the ELF frequency or the occurrence of lock-on. Again, this may have been due to the extremely short duration of each transmission.

## **Summary**

It is clear from these experiments that brain waves do in fact lock on to artificially produced ELFs in the 6 - 10 Hertz range. It is equally clear that the 10 second transmission was not sufficient to alter subjects moods to any consistent degree.

## **Additional Observations**

Since my original experiment, I have continued to study the interaction of ELF's and brain waves. These mini-experiments were conducted more informally than my original experiment and the observations are based on only one or two subjects. They should be considered only observations until confirmed by additional study.

1. A sine wave produces lock-on more readily than a square wave or a triangle wave. A sine wave output produces a rotating magnetic field where there is a gradual build up, collapse and reversal of the field intensity. A square wave output produces a pulsed alternating magnetic field where the build-up, collapse and reversal of the magnetic field is more abrupt.

2. The brain is sensitive to a wide range of intensities. I have observed lock-on with power settings down to one half of a milliwatt.
3. Psychics and "sensitives" are neither more or less prone to lock-on than anyone else. I have tested two well-known psychics and a Kahuna from Hawaii. While all three subjects produced more alpha than usual, it was not related to the ELF generator and they did not show unusual lock-on. It is interesting to note, that the woman who could "feel" when the field switched off and on (in my first experiment) was one of these psychics.
4. Extended exposure to ELF's does alter moods, but the effect is subtle. I was not able to duplicate the "dramatic psychoactive" effect that Robert Beck has reported. Low frequencies (below 8 Hz) seem to produce a general agitation or uneasiness, while higher frequencies (8.6-10 Hz) produce a general feeling of relaxation. These are not profound effects like drug induced mood changes. The subject is not aware of any change in his consciousness or mood. From his perspective, nothing has changed. However, an outside observer can detect subtle changes (e.g. body movement). I have confirmed this by monitoring muscle activity with an EMG monitor.
5. I have exposed myself to ELF's for one and two hour durations and have found that the frequencies from 8.6 to 9.8 Hertz to be sleep inducing; however, it is impossible to eliminate the placebo effect from experiments I performed on myself.
6. I built and distributed several portable ELF generators for testing. I have received many reports that indicate that falling asleep with the ELF generator operating is probably not a good idea. People don't feel rested when they sleep with the ELF generator on. My personal experience supports this. ELF's may inhibit dreaming which is necessary for normal brain functioning.
- 7) I have found three definite beneficial uses for the ELF generator: a) for relaxation, b) to eliminate jet lag, and c) the elimination of seizures in a dog.

### **The Story of Maynooth**

Shortly after completing my first experiments, my neighbor's dog began to have seizures. Maynooth was a one year old, 190 pound Irish Wolfhound. His seizures were occurring four to five times a week. A seizure by a 190 pound dog is not a small affair. He would trash around wildly with no awareness of his surroundings. The seizures would last 10-30 minutes. My neighbors took Maynooth to the vet, who prescribed phenobarbital to control the seizures. The drug was not effective and Maynooth continued to have regular seizures.

After discussing Maynooth's condition with my neighbor, we decided to try a portable ELF generator that Maynooth could wear to control his seizures. Seizures are accompanied by wild fluctuations in brain wave activity. We hypothesized that a portable ELF generator could control the seizures by stabilizing Maynooth's brain waves. If we could get Maynooth's brain to lock-on to an ELF frequency, we could in effect, eliminate the seizures.

I constructed a portable ELF generator about the size of a pack of cigarettes. The ELF generator was powered by a nine volt battery and had two frequencies, selectable by a toggle switch (10.0 Hz and 7.83 Hz). The 10 Hz frequency was chosen because previous experiments had shown that lock-on was more likely to occur at higher frequencies (i.e.,

closer to the prominent frequency of the brain). The 7.83 Hz frequency was chosen because it is the resonant frequency of the Earth and naturally occurring low intensity magnetic radiation can be detected at this frequency (Schumann, 1952).

The schematic for the portable ELF generator is illustrated. It is a twin-T oscillator followed by a high power 386 amplifier. The twin-T was chosen because of its high stability and low distortion sign wave. Construction is straight forward and the placement of parts is not critical. All parts are readily available. The two 10K frequency adjustment pots should be 10-20 turn trim pots to allow precise frequency adjustment. The 10K output level adjustment pot should be set so that the output feeding the coil is less than 100 milliwatts to comply with FCC regulations (I set Maynooth's to 10 milliwatts). The coil itself is not critical and can be wound on any iron core. Use only an alkaline or nickel-cadmium battery.

Maynooth began wearing the generator in the spring of 1988. We tried the 10 Hz frequency first. The results of the experiment were astounding to say the least. Maynooth's seizures stopped immediately when he began wearing the generator. Furthermore, Maynooth was able to completely stop taking the phenobarbital and the seizures have remained in remission. For the first three months, Maynooth wore the generator all the time in a cloth pouch from his collar. After that, the generator was only used at night and simply placed near his sleeping area.

Maynooth has had a total of three seizures following his first use of the generator. Two of these could be traced to malfunctions with the generator. The first was a broken wire from the battery connector and the second was a dead battery. The third seizure could not be explained by a hardware malfunction, although Maynooth was only using the generator during the night and the seizure occurred during the day. It should be noted, however, that this seizure was mild in comparison to his prior episodes.

Maynooth's owners were so convinced of the efficacy of the ELF generator, that they asked me to make a spare generator in case the one they had broke. Maynooth's vet (at the University of Minnesota) showed curiosity in the generator, but not enough to explore it further. They preferred to remain with a drug treatment, even though it had proven to be ineffective. Fortunately, Maynooth's owners had more sense.

Maynooth still uses the ELF generator in his sleeping area at night. The rechargeable battery is charged during the day so it is fresh each night. (The battery lasts about 6-8 hours at a 10 milliwatt power setting).

### **Andrija Puharich's Watch**

Dr. Andrija Puharich sells a watch that he claims will work a shield for ambient high frequency ELF's (40-100 Hz). An important feature of this watch would include shielding from 60 Hz power lines. I had the opportunity to try one of his watches for a few days. The owner was quite reluctant to part with it so I had to run all tests over just one weekend.

It is quite easy to monitor ambient 60 Hz radiation being absorbed by your body. Simply touch the probe of any oscilloscope and you can watch the 60 Hz wave. Your body is acting as an antenna and the amplitude on the oscilloscope is an indication of the amount of radiation you're absorbing. I found no difference in the amplitude when I was wearing the watch or when it was removed by a distance of four miles.

I attempted to determine if there was any measurable magnetic output from the watch. I used a large roll of magnetic wire as a pickup coil and connected it to the input of an EEG monitor with five microvolt sensitivity. The EEG voltage was fed directly to the A to D board of the computer. The equipment was tested for proper functioning by bringing a magnet in proximity to the pickup coil. A weak magnet moving within six inches of the pickup coil would drive the EEG monitor into saturation. The watch was placed against the coil but I could not pick up any magnetic fields from the watch. This surprised me because I was using very sensitive equipment and the watch had to be producing a magnetic field because it was using a battery. Anytime there is a current flowing (even the small current required to power a watch), there is always a magnetic field created. Either the watch was cancelling it's own magnetic field or my equipment was not sensitive enough to measure it. (It turned out to be the latter).

The final test was to hook myself up to the EEG monitor while I was wearing the watch. The output was fed into the computer so that I could do *posthoc* analysis. I wore the watch for 15 minutes and recorded my brain waves. The incidence of beta and alpha frequencies was not different from my "usual" brain waves. I could not substantiate Puharich's claim that the watch would act as a filter with a center frequency of 10 Hz. This particular finding may not be accurate because my excitement with the experiment may have inhibited the alpha centering that Puharich refers to.

Since I had told the person I borrowed it from that I'd take good care of the watch, that precluded the idea of disassembling it. I carried the watch with me in my backpack that weekend. As luck would have it, the back cover of the watch fell off and I got to examine the inside.

It is a digital "over-the-counter" type watch. As far as I could tell, the watch was normal in every way except that there was a square sheet of copper (about 1 cm square), wrapped in plastic packing tape inside the back cover. The tape was obviously used to insulate the copper from the electronics of the watch and the back cover.

With the copper removed, my equipment could still not detect the magnetic fluctuations produced by the watch. If the copper sheet does do anything, my equipment was not sensitive enough to measure it. This indicates that the amplitude of the magnetic field produced by the watch was very low, probably around the amplitude of the naturally occurring magnetic fluctuations of the earth.

I do not know whether Puharich's watch works. It did not reduce the electromagnetic radiation that my body was absorbing, nor did it alter my brain wave pattern in any way I could detect. My current understanding of ELF's, electronics and magnetics does not provide a theoretical foundation for the efficacy of the watch.

## **Electromagnetic Pollution**

When I began my research, I was only interested in the effects of ELF's on brain waves. I have since come to believe that ELF's are only the tip of the iceberg. Electromagnetic radiation may be the most harmful pollutant in our society. There is mounting statistical evidence that cancer and other diseases can be triggered by electromagnetic waves.

ELF pulse-modulated radio waves work at the cellular level. Cancer and birth defects have been increasing in this country since about 1950 (as television became popular). The average resonant frequency of the body is around 82 MHz. It is no coincidence that this is near the middle of the VHF TV band.

Even low intensity 60 Hz fields are capable of causing DNA damage and weakening the immune system. Cancer cells exposed to 60 Hz electromagnetic fields for 24 hours show a sixfold increase in their growth rate.

The evidence is becoming overwhelming that cellular functions can be switched on and off through frequency specific electromagnetic radiation that induces nuclear magnetic resonance in the cell. We may find that many diseases can be caused or cured by frequency specific radiation that is ELF pulse modulated.

In our technological society, there are few places to go where you will not be exposed to electromagnetic radiation. Television, radio and microwave radiation are abundant in all metropolitan areas. High voltage 60 Hz power lines crisscross the country. Microwaves (one of the most dangerous) are becoming increasingly common. The FCC has started to grant licences to use microwaves for cellular phones.

The powers that control the energy and communications industries will stop at no end to prevent the public from learning the truth. Their financial health depends on it. Since the military is one of the largest producers of high power electromagnetic radiation, it is not likely that we can count on government intervention.

We have probably reached a point where the only solution is in the form of a portable shield device. ELF generators may be one possible solution. My current research is in this area.

# **Electromagnetic Radiation (emr) Weapons: As Powerful As The Atomic Bomb**

By [Cheryl Welsh](#), president  
Citizens Against Human Rights Abuse,  
Copyright Feb. 2001

[CAHRA Home Page](#)

---

Fifty years of an East/West scientific controversy reveals a still classified cold war secret; nonthermal emr weapon effects are the basis for massive East/West mind control projects

The 1989 Breakup of the Soviet Union leads to US admission of classified mind control technology and exposes massive Russian mind control arsenal

US government takes extreme measures to keep this powerful weapon under wraps; refuse to acknowledge alleged weapon testing on US citizens, while Russian government admits to mind control weapons and experiment victims take their case to the Russian government, the Duma and Soviet press

After fifty years, the truth is now out: Control of your mind is a military capability

What follows are the supporting facts from several independent and reputable mainstream publications and experts.

As a result, the horrific human rights abuses of illegal and classified experiments in the US and Russia continuing to this day are becoming public knowledge.

---

## **Electromagnetic Weapons: As Powerful As The Atomic Bomb**

### **Outline of paper with footnotes**

**I. A fifty year electromagnetic arms race between Russia and the U.S.: Russia & East Block say nonthermal electromagnetic biological effects used for new weapons, U.S. policy says emr nonthermal effects not proven.**

10 July 1979 *Committee on Disarmament* 1-52, V.L. Issraelyan,  
Representative of the USSR to the Committee on Disarmament.

### Electromagnetic Weapons: As Powerful As The Atomic Bomb

**A fifty year electromagnetic arms race between Russia and the U.S.: Russia & East Block say nonthermal electromagnetic biological effects used for new weapons, U.S. says nonthermal emr effects are not proven.**

- 10 July 1979 Committee on Disarmament 1-52, V.L. Issraelyan, Representative of the USSR to the Committee on Disarmament. “Assessments quoted in international literature of the potential danger of the development of a new weapon of mass destruction are based on the results of research into the so-called “non-thermal” effects of electromagnetic radiation on biological targets. These effects may take the form of damage to or disruption of the functioning of the internal organs and systems of the human organism or of changes in its functioning.”
- H.P. Schwan was a German scientist who came to the US under a military recruitment program after the war. He has worked at the University of Pennsylvania on numerous government contracts and set the first health and safety standards for electromagnetic radiation, adopted by the US government. In *Physical Properties of Biological Matter*:

Some History, Principles, and Applications by Herman P. Schwan, 1982. "...Rajewsky and I had published a paper on the conductivity of erythrocytes, reporting, for the first time, dielectric measurements on biological materials extending up to 1,000 MHz. ...I mention all of these things to indicate the decisive role that the Navy and NIH played. Navy support has been available to me, in one form or another, ever since 1947, and NIH support since 1952." The book continues, "...While a young physics student, financial problems forced me to interrupt my studies until I found employment as an electronics technician at the Oswalt Institute for Physics in Medicine, now the Max Planck Institute for Biophysics....cell membranes are not likely to be affected directly by microwaves since fields of interest can only apply potentials across the membranes that are vanishingly small in comparison with potentials needed to yield significant membrane responses. And significant responses of biopolymers require field strength levels very much higher than those causing undue heating." Schwan has worked extensively in the biomedical engineering field. He has claimed up to the 1990s that the nonthermal effects of electromagnetic radiation have not been proven.

- H.P. Schwan's March 22, 2000 email response to the issue of classified electromagnetic, neurological weapons stated. "I am not aware of military antipersonnel weapons using em radiation. There was a lot of talk about it some years ago. I believe the potential for such weaponry is small since em radiation field strength decreases inversely with the distance square in the "distant" field.
- *Washington AP*, May 22, 1988, Barton Reppert Associated Press Writer, *Looking at the Moscow Signal, the Zapping of an Embassy 35 years later, The Mystery Lingers*. Reppert stated, "Since the early 1980s, however, federal government support for non-ionizing radiation bioeffects research has declined markedly. W. Ross Adey, a leading researcher based at the Veteran's Administration Medical Center in Loma Linda, Calif., told a House subcommittee last Oct. 6 that current levels of government funding -now about \$7 million a year- are "disastrously low. There is reason to believe that this situation has arisen in part through a well-organized activity on the part of major corporate entities from the consumer and military electronic industries to discredit all research into athermal biological and biomedical effects," Adey said"
- *Neurological Research*, Vol. 4, No 1/2, 1982, Dr. Ross Adey, "It is now well established that intrinsic electromagnetic fields play a key role in a broad range of tissue functions including ...information transmission in the nervous system."
- Dr. Stefan Possony was a Hoover Institute fellow and was called "the intellectual father of 'Star Wars' and "one of the most influential civilian strategic planners in the Pentagon" (*Guardian*,1995,17). Dr. Possony wrote about "messaging directly into a target mind" with low frequency waves. *Defense & Foreign Affairs*. P.34(1983,July), "Scientific Advances Hold Dramatic Prospects for Psy-Strat", Possony, Stefan. "Associate Editor Dr. Stefan Possony discusses how scientists are facing the prospect of messaging directly into a target mind. Whither psy-war? Suppose it becomes feasible to affect brain cells by low frequency waves or beams, thereby altering psychological states, and making it possible to transmit suggestions and commands directly into the brain. Who is so rash as to doubt that technological breakthroughs of this general type would not be put promptly to psyops use? More importantly who would seriously assume that such a technology would not be deployed to accomplish political and military surprise? A few years ago there was much excitement about the Soviet microwave "bombardment" of the US Embassy in Moscow. Why did the KGB, then under Yuri Andropov's leadership, embark on this seemingly scurrilous -- and very prolonged --effort? There was no answer to this question, except that the KGB must have wished to harass US diplomats and cause them to worry about their health.

This theory was never convincing. The question was raised whether the Soviets had discovered a technique of using microwaves for psychological purposes, and whether they were experimenting with this technique on US specialists on the USSR, unwittingly pressed into Soviet service as guinea pigs. Impossible, replied the State Department, the waves cannot break through the blood-brain barrier, and thermal effects are so negligible that the body would not be affected. Nevertheless, embassy personnel were indemnified for health damage. By 1979, at the latest, it was known that electromagnetic fields raising body temperatures less than .1 degrees Celsius may result in somatic changes. It was most surprising that such a trivial temperature rise was having any effects, and even more astonishing that those effects were significant. Chemical, physiological and behavioral changes can occur within "windows" of frequency and energy continua. Another is at the level of the human electroencephalogram (EEG), which is in the range of extremely low radio and sound waves, around 20 Hertz. Let us cut the story to the minimum. The original model, according to which the blood-brain barrier cannot be broken, was derived from the axiom that electromagnetic waves interact with tissue in a linear manner. However, it turned out that the molecular vibrations caused by a stimulating extracellular electromagnetic field are non-linear. In the US, the pioneering work seems to have been done by Albert F. Lawrence and W. Ross Adey, writing in *Neurological Research*, Volume 4, 1982."

- *Defense & Foreign Affairs Daily*, June 7, 1983. "On April 29, 1983, Associate Editor Dr. Stefan Possony, addressing the Defense 83 meeting sponsored by Defense & Foreign Affairs, reported on Dr. Adey's work and on the work by Dr. A.S. Davydov of the Ukrainian Academy of Sciences. Davydov discovered how the blood-brain barrier can be penetrated by low frequency beams and directly affect cells in the brain. Possony's remarks were delivered to a panel studying psychological warfare. [Part of that paper is printed below--Ed.] In the US research on direct brain waves has scarcely begun, and the USSR has a lead of approximately 25 years. Once it is matured the new technology will be extraordinarily significant in medicine. It also may have major impacts on communications, intelligence, and psychological operations, and permit deliberate physiological impairment. The KGB is known to be interested in the program. It is not known whether the US and other Governments are trying to determine whether their countries have become targets of clandestine brain waves beamed from the USSR.

### **Suppression of nonthermal emr research by US government and emr industry for fifty years is documented**

- *Microwave Debate* by Nicholas Steneck, 1984, MIT Press, page 84. Following the UCLA conference, the military, which controlled the RF bioeffects pursestrings and therefore made the major policy decisions, decided both to fish and cut bait. Publicly talk of athermal effects was downplayed. Open contracts were not awarded for athermal or central nervous system studies, and in fact efforts were even made to keep information about central nervous system research from circulating too widely. Privately, however, the military and the State Department began work to try to determine whether there was any factual basis for a belief in the direct effect of RF radiation on human behavior and whether perhaps the Soviets had gotten the jump in exploiting such effects for espionage and military purposes. The primary motivation for the work was a desire to find out the purpose of a beam of microwave radiation that was being directed at the U.S. embassy in Moscow. This and all subsequent

information on the UCLA meeting is taken from the unpublished minutes: "Neurological Responses to External Electromagnetic Energy (A Critique of Currently Available Data and Hypotheses)," co sponsored by the Brain Research Institute, UCLA and the Air Force Systems Command, July 11, 1963, USAF Contract 18(600)-2057.

- *Zapping of America* by Paul Brodeur, 1977. [The following comments are by Milton Zaret, an ophthalmologist who was paid by the Air Force to examine the eyes of military radar technicians in 1959. Zaret has documented that the posterior capsular cataract was a "marker disease", "a medical indication", of sustained exposure to low-level microwaves. This finding was hotly disputed by the military. After Zaret published these findings, the Air Force announced it had no intention of pursuing the matter. Dr. Zaret is now bitterly suspicious of the military's motives in this whole business. Zaret believes that the military is eager to suppress studies of low-level microwave hazards.] "By this time, I had been approached on a number of occasions by the Central Intelligence Agency. The contacts were innocuous to begin with. At first, the CIA people wanted to know about research I had performed on the ophthalmological effects of microwave and laser radiation. They also wanted me to analyze some of the foreign and American literature on the subject of radiation for them. In 1964, however, they started asking me about the possible behavioral effects of microwaves. They wanted to know, for example, whether I thought that electromagnetic radiation beamed at the brain from a distance could affect the way a person might act. I said that from what I had read primarily in Soviet literature on the subject it seemed conceivable. During 1964 and 1965, I had a number of visits from a medical doctor who worked for the agency. He wanted to know if a device that took pictures at night with an invisible laser beam instead of a conventional flashbulb was safe to use. When I exposed the eye of a rabbit to the beam I found that it produced an immediate retinal hemorrhage, so I told him that in my opinion the device was not safe. He also wanted answers to a number of theoretical questions. For instance, would a laser beam directed at a listening device planted on a windowsill be liable to injure anyone inside the room that was being bugged? And could microwaves be used to facilitate brainwashing or to break down prisoners under interrogation?"
- *Trial 8-90* page 32, Bruce H. DeBoskey, "Non-Ionizing Radiation: Hidden Hazards". It summarizes the litigation surrounding prolonged exposure to NIEMR or non-ionizing electromagnetic radiation. This is a good reference article and it demonstrates the difficulty involved in court cases filed by victims. The article stated "the potential for hazards from NIEMR has long been known to the industries involved." "...Some industries have been funding research designed to show the absence of harm to workers or the general public."

**Fifty years later, nonthermal effects of emr are the scientific basis for weapons and biological basis of brain function, human rights professionals, military, civilian and top government science advisor say**

- *International Review of the Red Cross* 279, 1, Nov. 1990 entitled "The Development of New Antipersonnel Weapons by Louise Doswald-Beck and Gerald C. Cauderay. "Directed Energy Weapons. ...Research work in this field has been carried out in almost all industrialized countries, and especially by the great powers, with a view to using these phenomena for anti-materiel or anti-personnel purposes. ...It is possible today to generate a very powerful microwave pulse (e.g., between 150 and 3,000 megahertz), with an energy level of several hundreds of megawatts. Using specially adapted

antenna systems, these generators could in principle transmit over hundreds of metres sufficient energy to cook a meal. However, it is important to mention that the lethal of incapacitating effects which can be expected from weapons systems using this technology can be produced with much lower energy levels. Using the principle of magnetic field concentration, which permits the control of the geometry on the target, by means of antenna systems especially designed for the purpose, the radiated energy can be concentrated on very small surfaces of the human body, for example the base of the brain where relatively low energy can produce lethal effects....In spite of the rarity of publications on this subject, and the fact that it is usually strictly classified information, research undertaken in this field seems to have demonstrated that very small amounts of electromagnetic radiation could appreciably alter the functions of living cells. Research work has also revealed that pathological effects close to those induced by highly toxic substances could be produced by electromagnetic radiation even at very low power, especially those using a pulse shape containing a large number of different frequencies. ...Some research seem to have confirmed that lo-level electromagnetic fields, modulated to be similar to normal brainwaves, could seriously affect brain function. Experiments with pulsed magnetic fields carried out in animals have reportedly produced specific effects such as inducing sleep and triggering anxiety or aggressiveness, depending on the modulation of the frequency used. It is, on the other hand, well known that lethal effects can also be produced by using higher power levels than those used for the experiments on behaviour modification. An anti-personnel weapon based on such biophysical principles could produce similar effects to those of a nerve gas, but would have no secondary effects and leave no lasting trace."

- *US News & World Report*, 7-7-97, "Wonder Weapons", an article on emr weapons by Douglas Pasternak, page 40. "In fact, the military routinely has approached the national Institutes of Health for research information. "DARPA (Defense Advanced Research Projects Agency) has come to use every few years to see if there are ways to incapacitate the central nervous system remotely," Dr. F. Terry Hambrecht, head of the Neural Prosthesis Program at NIH, told U.S. News. "But nothing has ever come of it," he said, "That is too science fiction and far-fetched."
- *US News & World Report*, Jan3/Jan 10 2000, Page 67, "Reading your mind and injecting smart thoughts", John Norseen, "The Lockheed Martin neuroengineer hopes to turn the "electrohypnomentalphone," a mind reading machine...into science fact. Norseen's interest in the brain stems from a Soviet book he read in the mid-1980s, claiming that research on the mind would revolutionize the military and society at large. The former Navy pilot coined the term "BioFusion" to cover his plans to map and manipulate gray matter, leading (he hopes) to advances in medicine, national security, and entertainment. BioFusion would be able to convert thoughts into computer commands, predicts Norseen, by deciphering the brain's electrical activity. electromagnetic pulsations would trigger the release of the brain's own neurotransmitters to fight off disease, enhance learning, or alter the mind's visual images, creating what Norseen has dubbed "synthetic reality." ...The key is finding "brain prints." "Think of your hand touching a mirror," explains Norseen. "It leaves a fingerprint." BioFusion would reveal the fingerprints of the brain by using mathematical models. "Just like you can find one person in a million through fingertips," he says, "you can find one thought in a million. "It sounds crazy, but Uncle Sam is listening. The National Aeronautics and Space Administration, the Defense Advanced Research Projects Agency, and the Army's National ground Intelligence center have all awarded small basic research contracts to Norseen, who

works for Lockheed Martin's Intelligent Systems Division. Norseen is waiting to hear if the second stage of these contracts--portions of them classified--comes through. Norseen's theories are grounded in current science. ...By viewing a brain scan recorded by a magnetic resonance imaging (MRI) machine, scientists can tell what the person was doing at the time of the recording--say, reading or writing. Emotions from love to hate can be recognized from the brain's electrical activity. "If this research pans out, says Norseen, "you can begin to manipulate what someone is thinking even before they know it." Thought police. He has submitted a research-and -development plan to the Pentagon, at its request, to identify a terrorist's mental profile. A miniaturized brain-mapping device inside an airport metal detector would screen passengers' brain patterns against a dictionary of brain prints. Norseen predicts profiling by brain print will be in place by 2005. ...Norseen would like to draw upon Russian brain-mimicking software and American brain-mapping break-through to allow that communication to take place in a less invasive way. A modified helmet could record a pilot's brain waves. ...If the pilot misheard instructions to turn 090 degrees and was thinking 080 degrees," the helmet would detect the error, then inject the right number via electromagnetic waves. If this research pans out, say Norseen, "you can begin to manipulate what someone is thinking even before they know it."

- *US News & World Report*, Jan 3-10, 2000, Page 68, Rodolfo Llinas. "A grand unification theory of the brain" . "...Using a Meg--a technology Llinas helped develop--he has been studying the brain's electromagnetic waves. What he has found in broad paraphrase is that the thalamus is in constant dialogue with the brain's higher processing centers: An electromagnetic loop sends pulses from the thalamus to the cortex, but the different sensory centers of the brain also message the thalamus in return. Consciousness exists when these oscillations are in sync--pulsing at the same rate--so smells, sounds, and so forth assemble in a kind of electromagnetic symphony."
- Freeman Dyson of the Institute for Advanced Study at Princeton is a physicist and was quoted in the Bill Joy article in April 2000 *Wired Magazine* on the dangers of technology. Dr. Dyson coined the word "radiotelepathy", i.e. "something like a cordless phone inside your head" Dyson wrote this comment. "After the organization of the central nervous system has been explored and understood, the way will be open to develop and use the technology of electromagnetic brain signals." This quote was from *International Herald Tribune*, Rudy Rucker, April 25, 1997 page 4, book review of *Imagined Worlds*,
- Freeman Dyson was a member of the elite Jason Division, the 40-odd leading scientists-including some Nobel laureates, -who in 1959 and 1960 banded together to work on national security matters in the summertime under the aegis of the Institute for Defense Analyses (IDA). Jason originated as an enabling mechanism to keep younger physicists in touch with defense problems, but it rapidly evolved into a club. "We were all bright young men together; we were all precocious 30 years ago," recalled Dyson. (Excerpt from *Science*, February 1973 page 460.)
- In reply to a question by email from Cheryl Welsh, concerning classified brain research on March 18, 2000, Freeman Dyson wrote, " Nothing important in science stays secret for long. ...The Russians had hundreds of secret projects.... Luckily we are not so good as the Russians at hiding stupid stuff. So stop worrying about imaginary scares. ..One of my friends ...cures his patients with magnets. ...But this had nothing to do with science."
- *Wired magazine*, April 2000, article on the peril of technology. Nearly 20 years ago, in the documentary "The Day after Trinity", Freeman Dyson summarized the scientific

attitudes that brought us to the nuclear precipice: "I have felt it myself. The glitter of nuclear weapons. It is irresistible if you come to them as a scientist. To feel it's there in your hands, to release this energy that fuels the stars, to let it do your bidding. To perform these miracles, to lift a million tons of rock into the sky. It is something that gives people an illusion of illimitable power, and it is, in some ways, responsible for all our troubles-this, what you might call technical arrogance, that overcomes people when they see what they can do with their minds."

- Dyson, Freeman, 1997, *Imagined Worlds* President and Fellows of Harvard College. Acknowledgments. "This book grew out of a set of lectures given in May 1995 at the Hebrew University of Jerusalem... The idea of radiotelepathy first appeared, so far as I know, in the science-fiction novel *Last and First Men*, written by Olaf Stapledon, in 1931, ...in which the cells of a multicellular creature communicate with each other by means of electric and magnetic fields... The chief barrier to progress in neurophysiology is the lack of observational tools. To understand in depth what is going on in the brain, we need tools that can fit inside or between the neurons and transmit reports of neural events to receivers outside. ...observing instruments...with rapid response, high band-width and high spacial resolution...There is no law of physics that declares that such an observational tool to be impossible. We know that high-frequency electromagnetic signals can be propagated through brain tissue for distances of the order of centimeters. We know that microscopic generators and receivers of electromagnetic radiation are possible. We know that modern digital data-handling technology is capable of recording and analyzing the signals emerging from millions of tiny transmitters simultaneously. All that is lacking in order to transform these possibilities into an effective observational tool is the neurological equivalent of integrated-circuit technology. We need a technology that allows us to build and deploy large arrays of small transmitters inside a living brain, just as integrated-circuit technology allows us to build large arrays of small transistors on a chip of silicon. ...Radioneurology is in principle only an extension of the existing technology of magnetic resonance imaging, which also used radio-frequency magnetic fields to observe neural structures. A rough estimate based on the available band-width indicates that a million transmitters could be monitored through each patch of brain surface with size equal to the radio wave-length. The factor of a million is the ratio between the radio band-width, of the order of hundreds of millions of cycles per second, and the band-width of a neuron, of the order of hundred of cycles...."

## **US says Russians have mind control emr capabilities**

- *Los Angeles Herald-Examiner, The Associated Press*, "Mind-Altering Microwaves, Soviets Studying Invisible Ray," 22 Nov. 1976, Sec A-."A newly declassified U.S. Defense Intelligence Agency report says- extensive Soviet research into microwaves might lead to methods of causing disoriented human behavior, nerve disorders or even heart attacks.... A copy of the study was provided by the agency to The Associated Press in response to a request under the Freedom of Information Act. The Pentagon agency refused to release some portions of the study, saying they remain classified on national security grounds."
- *NBC Magazine with David Brinkley*, July 16, 1981 No. 47592. DB (David Brinkley): "It is known the Russians are working hard on controlling the human mind by remote electronic means. ...As I say I find it hard to believe, it is crazy and none of us here know what to make of it: the Russian Government is known to be trying to change human behavior by external electronic influences. We do know that much. and we

know that some kind of Russian transmitter is bombarding this country with extreme low frequency radiowaves. “ Garrick Utley: ...The theory is the fact that the brain does emit electronic energy energy which can be harnessed and used. And, by the same token, the electronic field of the brain can be interfered with in order to change-affect human behavior, attitudes, opinions. ...To what extent can you disrupt the mental process, the brain through the use of electronic fields, microwaves? William Bise, radio engineer, “Well I would think that the easiest way to do it would be with microwaves. “

- *Military Review* (official publication of the U.S. Army Command and General Staff College), "The New Mental Battlefield", Lt. Col. John B. Alexander, U.S. Army, Ph.D. [He is a leading proponent of and spokesman for nonlethal weapons. Col. Alexander worked at Los Alamos Lab on nonlethal weapons.] "(Soviet) mind-altering techniques, designed to impact on an opponent are well-advanced. The procedures employed include manipulation of human behavior through the use of psychological weapons effecting sight, sound, smell, temperature, electromagnetic energy, or sensory deprivation." He further stated, "Soviet researchers, studying controlled behavior, have also examined the effects of electromagnetic radiation on humans and have applied these techniques against the U.S. Embassy in Moscow." Also, "Researchers suggest that certain low-frequency (ELF) emissions possess psychoactive characteristics. These transmissions can be used to induce depression or irritability in a target population. The application of large-scale ELF behavior modification could have horrendous impact."

## **US government claims emr mind control weapons are classified**

- *U.S. News and World Report* July 7, 1997, Wonder Weapons” , page 38; “Scores of new contracts have been let, and scientists, aided by government research on the “bioeffects” of beamed energy, are searching the electromagnetic and sonic spectrums for wavelengths that can affect human behavior.” “...Louis Slesin, editor of the trade journal Microwave News stated “That’s because the human body is essentially an electrochemical system, and devices that disrupt the electrical impulses of the nervous system can affect behavior and body functions. But these programs-particularly those involving antipersonnel research-are so well guarded that details are scarce.” “People [in the military] go silent on this issue,” says Slesin, “more than any other issue. People just do not want to talk about this.”
- *Bulletin of Atomic Scientist*, Sept/Oct 1994, “The Soft-Kill Fallacy” by Steven Aftergood, “Details about programs to develop so called “non-lethal “weapons are slowly emerging from the U.S. government’s secret “black budget”. “...The concept of non-lethal weapons is not new; the term appears in heavily censored CIA documents dating from the 1960s.”

## **Why the public is in the dark about electromagnetic weapons**

- *The Washington Post* article by George Lardner, 4-27, 5-3-92, page 34, reported on a 1992 CIA report on *Greater CIA Openness*" Director Joseph DeTrani stated “PAO [CIA’s Public Affairs Office] now has relationships with reporters from every major wire service, newspaper, news weekly and television network in the nation, “ the report said. “This has helped us turn some ‘intelligence failure’ stories into ‘intelligence success stories, and it has contributed to the accuracy of countless others. “In many instances,” the report continued, “we have persuaded reporters to postpone,

change, hold or even scrap stories that could have adversely affected national security interests or jeopardized sources and methods,”

- In *The Bulletin of Atomic Scientist* article entitled, The Soft-Kill Fallacy, Sept/Oct 94 page 43 Steve Aftergood wrote; "The government secrecy system as a whole is among the most poisonous legacies of the Cold War. ...the Cold war secrecy system also mandates ACTIVE DECEPTION." The article continues, "A security manual for special access programs authorizes contractors to employ "cover stories" to disguise their activities. The only conditions is that "cover stories must be believable." Even the government is starting to recognize that official cover and deception programs are getting out of hand and need to be curtailed. A Joint Security Commission established by the secretary of defense and the director of central intelligence reported in March that "the use of cover to conceal the existence of a government facility or the fact of government research and development interest in a particular technology is broader than necessary and significantly increases costs." One cover story for electromagnetic nonconsensual experimentation is mental illness.
- *Boston Globe*, 7-7-89, Larry Collins, "Can we influence human emotions and behavior? Are there or were such experiments now going on?" William Casey, Director, CIA, "This is not a subject we're going to discuss with you or anyone else."
- *Open Verdict An account of 25 mysterious deaths in the defense industry*, Tony Collins, Sphere Books Ltd., a division of MacDonald & Co. Publishers London, 1990. Twenty five Star Wars Marconi defense workers mysteriously died by suicide and strange accidents in the early 1980s in England. Collins wrote, "This book is about a new type of war, electronic war. ...It is fought by ...research students in universities and electronics engineers working for defense contractors. ...It is a war that must be waged constantly during peacetime to maintain the upper hand. It is a war that must be waged in secrecy." Tony Collins is executive editor of Computer Weekly. He worked for the BBC and national newspapers, such as Sunday Mirror. The editor of the Collins book, Stephen Arkell described the discrepancies found during his investigation and problems such as the following. "The companies and establishments where they worked are reluctant to give out details of any projects, even those already in the public domain. In addition, there are many other project, so called 'black' projects, which these organizations cannot even officially admit to. The secrecy surrounding the peacetime preparations for a future electronic war ensures that any attempt to prove or disprove a definite work link can be not more than a calculated stab in the dark. ...In May 1989, for example, eleven Russians and four Czechs were expelled from the UK for allegedly trying to obtain highly sensitive information about powerful microchips, radar, laser technology and advanced materials such as titanium and carbon fibres. These agents were reported to have approached the executive of defense contractors in a series of 'cash for secrets' deals. ...Another theory ...concerns the investigation into alleged fraud at Marconi. ...This investigation [by the Ministry of Defense Police] has since resulted in charges being brought, ...However there is not one scrap of evidence to suggest that any of the scientists named in the book were involved in fraud. ...the deaths and disappearances of 28 defense workers is one of the most bizarre and enigmatic stories of the past decade."
- *Hustler Magazine*, June 1989, "Who's Killing the Star Wars Scientists", suggests that "the Russians are using a death ray to drive the scientists to suicide. The British press blames stress. This wave of suspicious fatalities in the ultrasecret world of sophisticated weaponry has not gone unnoticed by the US government. Late last fall, the American embassy in London publicly requested a full investigation by the British

Ministry of Defense. (MoD). ...The Pentagon refuses comment on the deaths. But according to Reagan administration sources, "We cannot ignore it anymore."

**With the break up of the Soviet Union in 1989, US declassify and promote nonlethal emr weapons which have been classified since the 1960s. Several mainstream Soviet press articles claim Russian top secret and massive mind control technology program in chaos. Electromagnetic weapons: more powerful than the atomic bomb, scientists say**

- *Washington AP*, May 22, 1988 by Barton Reppert Associated Press Writer, entitled, "Looking at the Moscow Signal, the Zapping of an Embassy 35 years later, The Mystery Lingers", Richard S. Cesaro, deputy director for advanced sensors at the Pentagon's Advanced Research Projects Agency, in an interview prior to his death two years ago, contended that "in our experiments we did some remarkable things. And there was no question in my mind that you can get into the brain with microwaves. ...If you really make the breakthrough, you've got something better than any bomb ever built, because when you finally come down the line you're talking about controlling people's minds,"
- *New York Times*, Dec. 29, 1965 p.28 covered speakers at an American Association for the Advancement of Science meeting. Entitled "Controlling the Mind", Professor David Krech of the University of California suggested that probable future capabilities for controlling human minds contain more serious implications than even the successes of the nuclear physicists."
- *Defense Electronics*, July 1993, "DOD, Intel Agencies Look at Russian Mind Control Technology, Claims FBI considered Testing on Koresh", by Mark Tapscott, "In a series of closed meetings beginning March 17 in suburban Northern Virginia with Dr. Igor Smirnov of the Moscow Medical Academy, FBI officials were briefed on the Russian's decade-long research on a computerized acoustic device allegedly capable of implanting thoughts in a person's mind without that person being aware of the source of the thought. ...Officials from the Central Intelligence Agency (CIA) Defense Intelligence Agency (DIA) and the Advanced Research Projects Agency (ARPA) were also present, according to the source. ...The memo went on to note that meeting attendees were also interested in whether "psycho-correction detection, decoding and counter-measures programs should be undertaken by the U.S."
- *The Guardian* "The Future Art of War", May 25, 1995. Nic Lewer, peace researcher at the University of Bradford, in the latest issue of *Medicine and War*, lists "more than 30 different lines of research into 'new age weapons'..." the article further states, "Some of the research sounds even less rational. There are, according to Lewer, plans for 'pulsed microwave beams' to destroy enemy electronics, and separate plans for very-low-frequency sound beams to induce vomiting, bowel spasm, epileptic seizures and also crumble masonry." Further the article states, "There are plans for 'mind control' with the use of 'psycho-correction messages' transmitted by subliminal audio and visual stimuli. There is also a plan for 'psychotronic weapons' - apparently the projection of consciousness to other locations- and another to use holographic projection to disseminate propaganda and misinformation."

**Several mainstream Soviet press articles claim Russian top secret and massive mind control technology program in chaos.**

- *The Herald (Glasgow)* No reporter listed. "Brainwash killers 'still in use'". , 26 May 1995, 8. "'A TOP-SECRET project in the former Soviet Union in the 1970s turned soldiers and security agents into programmable 'human weapons' and is now being exploited by mobsters and private firms, it was claimed today. The psychological weapons project relied on hypnosis and high-frequency radio waves to turn members of the Soviet security forces and military into fearless, conscienceless fighting machines, said a programme on German television. The Psychotronic Influence System relied on passwords and numbers to activate its subjects. After the KGB project's existence was made public hundreds of former Soviet soldiers, police, and KGB members have sought health damages. However the programme said some special Russian police units still use the system today and it has found its way on to the free market, where mobs and private security firms are using it, the programme reported."
- *Stolitsa*, Myasnikov, Alexei. "MC-Ultra Program, Use of mind-control equipment by armed forces not ruled out by Moscow-based Foreign Policy Institute." , No.43, 2 Nov. 1992, 40. Also, Copyright 1992 RUSSICA Information Inc. RusData DiaLine Russian Press Digest. "'A certain Human Rights Union demands that the development of mind-control weapons be banned,' writes the STOLITSA weekly. The Union refers to various foreign and local sources and personal evidence to prove that the development of such weapons does take place.... A group of researchers claim that a MC-Ultra (mind-control) program was carried out in the Soviet Union and, possibly, by far outpaced a similar U.S. program.... There is reliable information, the MFPI review says, that the CIA offered to the KGB to jointly control the development of 'psychotronics' in the United States and the Soviet Union."
- TV program, ZDF, *Geheimes Russland*, TV-Tagestip, Der Dienstag im ZDF: Dec, 22, 1998, entitled *Secret Russia*. "Since the years of Soviet rule people have spoken furtively in Russia of secret research and experiments, which the Army and the KGB sponsor. ... Rumours are making the rounds, the talk is about victims [of government mind control experiments]. Anatolij Iwanytsch, a 47 year-old former boxer and dissident... His organization has in the meantime grown to about a thousand members from all over Russia."
- *The Moscow Times* July 11, 1995, "Report: Soviets Used Top-Secret 'Psychotronic' Weapons", Owen Matthews. There may be a scientific explanation for the rigid-faced inflexibility of Soviet-era boarder guards and soldiers, after all. Reports have emerged of a top secret program of "psychotronic" brainwashing techniques developed by the KGB and the Ministry. The techniques, which include debilitating high frequency radio waves, hypnotic computer-scrambled sounds and mind-bending electromagnetic fields, as well as an ultrasound gun capable of killing a cat at fifty meters, were originally developed for medical purposes and adapted into weapons, said journalist Yury Vorobyovsky, who has been investigating the program for three years. Ecology and Living Environment," an environmental and civil liberties group which claims a membership of 500 people in Moscow, has set up an association of "Victims of Psychotronic Experimentation," who have filed damages claims against the Federal Security Service, or FSB, and the government. Unfortunately, since by definition many of the victims are psychologically disturbed, there is a problem of verification. "The Health Ministry and the FSB are doing medical experiments on over a million innocent people," said Ecology and Living Environment President Yemilia Cherkova, an ex-member of Zelenograd's local council. Cherkova wears a lead helmet in bed to protect herself against the rays she says the government beams into her flat. "They put chemicals in the water and use magnets to alter your mind. We are fighting to prove to

the authorities that we are not mad." Despite these somewhat far-fetched testimonies, there is strong evidence that some kind of psychotronic warfare program did exist in the Soviet period, and that the technology may be falling into the wrong hands. Official confirmation was first hinted at in the 1991 Soviet budget, which mentioned that 500 million rubles of the state security budget had been spent on "psychological warfare technology" over an unspecified period of years, said Vorobyovsky. Former state security and interior minister General Viktor Barannikov, sacked for supporting the 1993 coup attempt, warned in an Interior Ministry memorandum earlier that year that he had information that the Mafia had got hold of the technology, though little concrete evidence has been found by police. "We have no evidence that our local Mafia has psychotronic weapons; they have enough ordinary ones," said Gennady Melnik of the Moscow Police Department. "They are not the most technologically advanced Mafia in the world. It must be cheaper just to use guns." Nevertheless, the State Duma is taking the matter seriously enough to draft a law on "security of the individual," which will include regulation of subliminal advertising and pseudo-religious sects, as well as imposing state controls on all equipment in private hands which can be used as "psychotronic weaponry." The legislation brings Russia into line with Bulgaria, the only other country to outlaw such equipment specifically. "The law is pre-emptive," said Vladimir Lopatkin, chairman of the drafting committee. "The equipment that now exists in laboratories must be very strictly controlled to prevent it from being sold to the private sector." "One could call this 'Black Science.' Research scientists whose funding has been cut have resorted to putting equipment costing millions of rubles to any use that will pay," said Vorobyovsky. "Of course this project is surrounded with a lot of hysteria and conjecture," said Lopatkin, of the Duma committee. "Something that was secret for so many years is the perfect breeding ground for conspiracy theories."

### **Gorbachev concerns never reach U.S. mainstream press**

- *BBC Summary of World Broadcasts*, 1986, January 21. Press Conference on Gorbachev's Nuclear Arms Elimination Proposals. Tass for abroad. Part1 The USSR; A. International Affairs; 1.General and Western Affairs;SU/8162/A1/1. Lexis-Nexis. "Weapons based on new physical principles would include, amongst others, means in which physical principles which have not been used hitherto are used to strike at personnel, military equipment and objectives. Amongst weapons of this kind one might include beam, radio-wave, infrasonic, geophysical and genetic weapons. In their strike characteristics these types of weapons might be no less dangerous than mass strike weapons. The Soviet Union considers it necessary to establish a ban on the development of arms of this kind."

### **U.S. wins electromagnetic arms race**

- *The Defense News*, Jan.11-17, 1993 article U.S. Explores Russian Mind-Control Technology by Barbara Opall stated, "Known as acoustic psycho-correction, the capability to control minds and alter behavior of civilians and soldiers may soon be shared with U.S. military, medical and political officials, according to U.S. and Russian sources. ...Therefore, the Russian authors have proposed a bilateral Center for Psycho-technologies where U.S. and Russian authorities could monitor and restrict the emerging capabilities."

## **A serious public issue: control of your mind is a classified military capability**

### **Electromagnetic weapons: concerns and warnings by human rights experts**

- *British Medical Journal* Vol. 315, 7-12-97 page 78. Robin M. Coupland, Surgeon, International Committee of the Red Cross stated: "...will the soldiers who have survived battlefields of the future return home with psychosis, epilepsy, and blindness inflicted by weapons designed to do exactly that?"
- Dr. Barbara Hatch Rosenberg wrote in Sept/Oct 1994 *Bulletin of Atomic Scientists*, page 45, "Many of the non-lethal weapons under consideration utilize infrasound or electromagnetic energy (including lasers, microwave, or radio-frequency radiation, or visible light pulsed at brain-wave frequency) for their effects. These weapons are said to cause temporary or permanent blinding, interference with mental processes, modification of behavior and emotional response, seizures, severe pain, dizziness, nausea and diarrhea, or disruption of internal organ functions in various other ways."
- *International Review of the Red Cross* 279, 1, Nov. 1990 entitled The Development of New Antipersonnel Weapons by Louise Doswald-Beck and Gerald C. Cauderay. "Research work in this field [electromagnetic weapons] has been carried out in almost all industrialized countries, and especially by the great powers, with a view to using these phenomena for anti-materiel or anti-personnel purposes"
- *Aviation Week & SpaceTechnology*, 144(25)1996, June 17, Mann, Paul, "Mass Weapons Threat Deepens Worldwide" "A Harvard molecular geneticist and biological/chemical warfare specialist, Matthew S. Meselson warned: 'We're going to learn how to manipulate every life process, genetic ones, mental ones, the emotional ones, ...If our inevitably increasing knowledge of life process is also harnessed to hostile purposes, that will completely change the nature of the expression of human hostility.'"

## **Allegations of nonconsensual experimentation, illegal foreign and domestic intelligence operations and illegal military use of new weapons of mass destruction**

- *World Organization Against Torture*, 1998 report entitled "Torture in the United States", included a section on involuntary human scientific experimentation involving new forms of classified research and testing of high technology military weaponry, including microwave and laser equipment. The report called for a "thorough impartial investigation."
- *The European Parliament* Resolution A4-005/99, Environment, Security and Foreign policy passed on Jan 29, 1999. It included the following: "Calls for international convention introducing a global ban on all developments and deployments of weapons which might enable any form of manipulation of human beings."
- A preliminary Dr. Bertell Study of medical claims of victims is now underway. Dr. Rosalie Bertell has a doctorate degree in Biometry, the design of epidemiological research and the mathematical analysis of bio-medical problems. She has documented military microwave zapping of Greenham Commons women nuclear protesters in 1980s. See London Guardian, March 10, 1987 page 3, entitled "Peace Women fear electronic zapping at base".
- Dr. Alan Schefflin, law professor at Santa Clara Law School and author of the 1978 Paddington Press book, "Mind Manipulators" and Dr. Colin Ross, psychiatrist appeared on the History Channel, Fall, 2000 on "Mind Control: America's Secret War" (800 708-1776 to order). Both Dr. Schefflin and Dr. Ross commented that it is

plausible that electromagnetic and nonlethal weapons on being used in experiments on US citizens without their consent today.

- Please see Cahra website, [www.calweb.com/~welsh](http://www.calweb.com/~welsh), for further examples.

### **Nonconsensual experimentation and electromagnetic weapons, no codification of the Nuremberg Code or penalties under U.S. law. Few laws or treaties to control the use of electromagnetic weapons.**

- Ethicist, Jonathan Moreno wrote *Undue Risk Secret State Experiments on Humans*, 1999, W.H. Freeman and Co., a book on radiation and other unethical experiments. Moreno named "...microwave weapons as a source of future illegal experimentation . " Moreno stated; "in the next century, as in the past, military-medical research involving human subjects will be dictated by the limits of information available from other sources."
- Lawyer-ethicist, George Annas, Boston University author of *Nazi Doctors and the Nuremberg Code* that not one of the Nazi doctors on trial at Nuremberg expressed remorse, forgiveness or regret. Eileen Welsome, author of the 1999 book, *The Plutonium Files*, reached the same conclusion about the radiation scientists. They have not admitted guilt, wrongdoing or immoral behavior. It is likely that electromagnetic weapons are being developed by the same cold war mentality today.

### **Recognizing victims**

- *New York Times Magazine*, 8-31-97, page 38, stated; "For decades, those who claimed to be victims of clandestine radiation experiments conducted by the United States government were dismissed as paranoid." Recognition of the growing numbers of worldwide human rights abuse cases is important, especially in light of the fact that electromagnetic weapons target the brain and nervous system.
- *Such Things are Known*, a book by victim Dorothy Burdick, 1981. Burdick was a college professor in a northern California community college. She was targeted with 'microwave hearing, see below, unclassified technology. Stephen X, whose father was a professor at UC Berkeley, says that the whole family was targeted because his father came from Iran. Author of *Mass Mind Control* and several other self published books, Betsy Russell-Manning, describes several California victims with average backgrounds. Cheryl Welsh, a college student believes she was targeted when she signed papers for entering the military in 1986. She believes she is a baseline study for brain studies on stress, or for military purposes such as psychological operations.
- *Kansas City Pitch Weekly*, April 13-19, 1995, Ex-engineer Against Adverse Energy by Mike Taylor. "He,[Paul Schaefer, engineer] cites numerous examples of occasions when "adverse energies," 'beams' or 'substances' have been 'shot' at him. "A neighbor called me over to her porch one day, to tell me she'd seen a beam of light come out of the sky and shoot into one of my windows," said Schaefer. "I could see the path through the garden where the leaves turned yellow. .... when asked why they want to attack him, he said it was because of his radical activities and writings."
- Carole Sterling committed suicide in order to escape the torture of electromagnetic technology. Here is an article in *The Star Beacon*, October 1996 page 2 by Carole. "It totally scrambled my brain, leaving me unable to think properly, simply functioning on sheer shock and horror, with total incomprehension of what was going on. It actually was debilitating. The room felt like a torture chamber. This forced me out of my home. I believe that the technology used, be it some type of a frequency assault,

some sort of directed energy, in addition to whatever was injected in me, has caused damage to my brain. [I have] been living with this debilitating and excruciating pain for the last eight months so far.”

- *Pennsylvania Inquirer*, 199?, “According to the affidavit, the letter tells Clinton to “tell the Philadelphia Naval Base to stop trying to brainwash me into killing people with covert E.L.F. electronic weaponry and asks for “compensation for being a research test victim.”
- *Los Angeles Times*, 3-28-88. Government officials estimate that [Rex] Niles had handed over millions in under-the-table payments to employees of leading contractors in exchange for lucrative subcontracts before he secretly turned government witness and began an undercover campaign with the FBI to sting the crooked buyers who had depended on his largess. Niles’ work as an informant led to the conviction of 19 industry buyers and supervisors on fraud, tax evasion and kickback charges, and Niles retired in triumph in April of 1987, lauded for his “unprecedented cooperation,” into the Federal Witness Protection Program. But in the way stories have of not ending the way they are supposed to, ... Instead, he is living in a suburban home outside Los Angeles, sleeping under a makeshift foil tent fashioned to block the microwaves he believes are killing him. “His aluminum foil hat has tiny holes in it, says Rex Niles, proof that the government is bombarding him with microwaves in an attempt to kill him. ...He has produced testimony from his sister, a Simi Valley woman who swears that helicopters have repeatedly circled over her home. An engineer measured 250 watts of microwaves in the atmosphere inside Niles’ house and found a radioactive disc underneath the dash of his car. ...The noises started again, he said. “you know, in the middle of the night at 2 in the morning, when they wouldn’t allow me to sleep; when they were aggravating my conscious as well as my subconscious mind, I would hear what sounded like large groups of people ...that sounded like a bottle breaking in the street. “So I would go to the window, or one time I was dressed because I couldn’t sleep, so I went down, and the street was absolutely empty.” Niles became convinced that the marshals had set up an elaborate speaker system around his room to confuse him with artificial sounds. In intricate detail, he has worked out his theory of what happened. The marshals, he said, were attempting to make it appear as though he were crazy, setting him up in order to make off with his money. They kept him awake at night to minimize his resistance, he theorized. “...This has been a very tough story to tell people,” Niles admitted. They have a hard time believing me and wonder how could I have this much audacity and this much vanity, to think that I’m worth this kind of a push, this much manpower, equipment, airplanes, helicopters, at one point 14 lasers. “It isn’t that I’m worth it. It’s because they’ve got so much to protect. ...”
- Featured on 1997 CNN TV program, *American Edge*, a U.S. group, Cahra, now networks with over 500 alleged victims. Other U.S. groups declare thousands are targeted.”

## **Unclassified information supports victim claims**

including mind reading, manipulation of emotions and memory, forced dreams and visual hallucinations, microwave hearing, post hypnotic suggestions implanted subliminally and very sophisticated technology such as seeing through the eyes of the victim, as a camera can see.

- *Los Angeles Times*, March 29th 1976 “Mind Reading Machine Tells Secrets of the Brain Sci-Fi Comes True” by Norman Kempster, Washington-In a program out of

science fiction, the government is developing mind-reading machines that can show, among other things, whether a person is fatigued, puzzled or daydreaming. Since 1973, a little-known Pentagon agency has been studying ways to plug a computer into an individual's brain waves or electroencephalograph (EEG) signals in the scientist's lexicon. The Advanced Research Projects Agency says the \$1 million-a-year program has passed its initial laboratory tests and is ready for determination of its military uses. Scientist working under agency contracts at the University of Illinois, UCLA, Stanford, Massachusetts Institute of Technology and the University of Rochester and in laboratories other facilities have been able to determine an individual's alertness from his brain waves. They can tell also how he perceives colors and shapes. But there may come a day when the EEG will be used to perform more bizarre tasks. It may be only a matter of time before the machines will be able to read a person's brain waves to determine just what he is thinking. Within two to five years, the Advanced Research Projects Agency hope to test the EEG-computer hookups in a wide range of military uses ranging from pilot training to interpretation of satellite photos of earth. George H. Heilmeier, director of the research agency, dropped tantalizing hints about the EEG program in his annual report to Congress. Although he has provided few details, enough has been said about the program to raise some questions. For example, could these systems be used to read the minds of prisoners of war or to pick the brains of unsuspecting American citizens. Highly unlikely, agency scientists say.

- *New York Times Magazine*, Sept 29, 1996, on magnetic therapy. "scientists realized the key was rapidly pulsing the current on and off. ...Here's how it might work: A hand-held computer programs the pattern at which the fields will fluctuate. The impulses move through the temporal lobe and penetrate deep into the brain, where they interfere and interact with the complex electrical patterns of the subject's neural fields. "
- *ABCNEWS.com World News Tonight* with Peter Jennings March 19, 1998 "A Closer Look, Magnetic Therapy for Depression". with Forrest Sawyer, John McKenzie An ABC News transcript described magnetic therapy for depression, "technology that can be used to manipulate people's thought processes, their mood, their memories and possibly even their will, if it is developed sufficiently."
- *CNN news broadcast*, Special Assignment, Nov.-1985, by Chuck DeCaro," Weapons of War, Is there an RF Gap?" This program features Dr. Robert O. Becker, two time Nobel prize nominee, scientist and researcher of electromagnetic radiation effects on the body and author of *Body Electric*, summarized, "The government has never disproved the psychological effects of electromagnetic radiation." Dr. Jose Delgado and his Yale University experiments of brain implants to control a charging bull. Dr. Ross Adey discussed a demonstration of the 1950s Russian lida machine, which used electromagnetic energy to put Russian psychiatric patients to sleep. A demonstration by Dr. Elizabeth Rauscher and Dr. William van Bise, directed magnetic signals into the brain of reporter Chuck DeCaro and created visual images as in a hallucination, and more. For a 55\$ copy of this tape call CNN at 404 827 2712 and ask for R2501 #13, R2747 #33, R2501 #15, R2501-#17. It runs about 20 minutes.
- *Ultrascience*, "Weapons of War", Learning Channel, 1997, Featured Dr. Michael Persinger, Laurentian University. He described weapons using "psycho or influence technology" and electromagnetic radiation frequencies to control what people think, for psychological warfare purposes.
- *Ultrascience*, "War 2020", Beyond Productions, Learning Channel, 1998, Dr. Michael Persinger, Laurentian University demonstrated a helmet with solenoids which induce magnetic fields into the brain and cause panic, fear, God and UFO experiences. He

stated that with current technology it is possible to use mind control on the mass populations.

- *Ultrascience III*, Spies are us” Featured Dr. James C. Lin, PhD. biomedical and electrical engineer, educator, author of *Microwave Auditory Effects and Applications*, 1978. Lin demonstrated microwave hearing, a symptom of many of the victims, hearing voices. Also featured Cheryl Welsh on the issue of mind control experimentation.
- *International Defense Review*, 3-1-93, “Special Operations Survives Pentagon budget Constraints”, Ramon Lopez. “JASORS, Joint Advanced Special Operations Radio System is being developed by Harris Corporation. ...is a very ambitious, leading-edge technology program, ...Whiles JASORS is a near-term SOF, (Special Operations Forces) enhancement, SORDAC,(Special Operations Research Development and Acquisition Center), is also investigating long-range (1998-2010) and “far-future” (2011 and beyond) weaponry and support equipment. [SORDAC’s director, Army Colonel Douglas J.] Richardson said one far-future communications system being investigated is “synthetic telepathy.” One day, SOF commandos may be capable of communicating through thought processes.”
- Margo Cherney FOIA request for complete NASA abstract Report Number: AD-A090426.,June 1, 1980. Brooks Air Force Base, Jan.25, 2000. The requested information is fully denied under 5 U.S.C. 552(b)(1)..." NASA abstract in part stated, “A decoy and deception concept presently being considered is to remotely create the perception of noise in the heads of personnel by exposing them to low power, pulsed microwave. When people are illuminated with properly modulated low power microwaves the sensation is reported as a buzzing, clicking, or hissing which seems to originate (regardless of the person’s position in the field) within or just behind the head. The phenomena occurs at average power densities as low as microwatts per square centimeter with carrier frequencies from 0.4 to 3.0 GHz. By proper choice of pulse characteristics, intelligible speech may be created. Before this technique may be extended and used for military applications, an understanding of the basic principles must be developed. Such an understanding is not only required to optimize the use of the concept for camouflage, decoy and deception operations but is required to properly assess safety factors of such microwave exposure.”
- *Microwave News*, editor, Louis Slesin, Jan/Feb 1997 p 14. “U.S. Air Force Looks to the Battlefields of the Future: Electromagnetic Fields That Might "Boggle the Mind" "It would also appear possible to create high fidelity speech in the human body, raising the possibility of covert suggestion and psychological direction. When a high power microwave pulse in the GHz range strikes the human body, a very small temperature perturbation occurs. This is associated with a sudden expansion of the slightly heated tissue. This expansion is fast enough to produce an acoustic wave. If a pulse stream is used, it should be possible to create an internal acoustic field in the 5-15 kHz range, which is audible. Thus it may be possible to “talk” to selected adversaries in a fashion that would be most disturbing to them."
- *Federal Times*, Dec. 13, 1976 "Microwave Weapons Study by Soviets Cited." The Defense Intelligence Agency has released a report on heavy Communist research on microwaves, including their use as weapons. Microwaves are used in radar, television and microwave ovens. They can cause disorientation and possibly heart attacks in humans. Another biological effect with possible anti-personnel uses is "microwave hearing." "Sounds and possibly even words which appear to be originating intracranially (within the head) can be induced by signal modulation at very low average power densities," the report said. According to the study, Communist work in

this area "has great potential for development into a system for disorienting or disrupting the behavior patterns of military or diplomatic personnel." No mention was made of the still-unexplained microwave bombardment of the American Embassy in Moscow. The study dealt largely with long-term exposure of days or weeks in industrial situations, which usually produce mild effects. Short exposure to intense radiation can cause heart seizure and a wide range of physical disorders.

- CIA FOIA search for documents on 'Auditory' listed the following document."F80-0547, 1974-12-02 untitled (Discusses A Highlight of the Conference on Auditory or Noise-In-The-Head Effect)
- *BBC News Online* Oct 11, 1999, "Looking Through Cats' Eyes Fuzzy But Recognizable", Dr. David Whitehouse,

[http://news.bbc.co.uk/hi/english/sci/tech/newsid\\_471000/471786.stm](http://news.bbc.co.uk/hi/english/sci/tech/newsid_471000/471786.stm) A BBC News article reported on the first pictures from an experiment to see through the eyes of a cat.

### **A serious public concern: Control of your mind is a classified military capability**

- Excerpts from Cahra website military journals and government document quotes: "...to control the will and perception of adversaries ...by applying a regime of shock and awe...It is about effecting behavior." "A decoy and deception concept [using microwaves] to "create intelligible speech ' in the head, 'raising the possibility of covert suggestion and psychological direction." "tools that could...make potential enemies see, hear and believe things that don't exist." "...crowd control and urban warfare devices that temporarily could paralyze an entire village."

### **Conclusions**

- The Soviet government's admission to mind control programs comparable to the atomic bomb and to a lesser extent, the US government's admission, became public knowledge because of the break up of the Soviet Union. In addition, the US government declassified some of their 40 year old classified emr nonlethal weapons and began to promote them to the public. This information coupled with the fifty year history of the East/West scientific dispute over nonthermal bioeffects is evidence of an East/West mind control arms race. The US and Russian governments admit that mind control technology is classified. The Russian and US victims of illegal mind control programs have clear proof of government involvement and motive. The growing and already massive program of alleged, illegal experimentation and the use of mind control on the unsuspecting public is a serious human rights issue in need of a thorough and impartial investigation.

137 Telephones frequently have static or tones or  
72% echoes; you have lots of "wrong number" calls

|||||

91 Street lights going out as you pass under them,  
48% walking or driving

|||||  
70 Your watch and other batteries going dead often,  
37% far too soon to be "natural" deaths

|||||  
107 You find that you are coming suddenly awake at  
56% precisely the SAME TIME, middle of every night

|||||  
70 Inescapable voice in your head and you are not  
37% mentally ill

|||||  
128 Ringing in ears - may start|stop when switching  
67% on or off electronic devices

|||||  
89 Fake telephone or clock ringing or fake knocking  
47% on your door

|||||  
42 Fake, loud bird calls, outdoors, which follow  
22% you everywhere

|||||  
53 Hot needles deep in your flesh, especially when  
28% trying to sleep (also called "bee stings")

|||||  
93 Limbs jerking wildly, especially when trying to  
49% sleep

|||||  
80 Extremely powerful itching which may start as  
42% small electrical shocks

|||||  
96 Very fast heartbeat while relaxed (not having  
51% exercised recently)

|||||  
87 Very high body heat, no fever, relaxed, cool  
46% surroundings

|||||  
61 Vibration, large area of your body, or, nearby  
32% objects which should not vibrate normally

|||||  
110 Forced awakening, can't go back to sleep, as if  
58% on high doses of caffeine

|||||  
66 Vivid 3-D images while awake, occasionally even  
35% with eyes open

|||||  
91 Urges to go somewhere you don't need to or at  
48% times you would not go there

|||||  
36 Neighbors can see thru walls, possibly by sounds  
19% from them which "follow" you

|||||  
91 Repeated instances where it seems your mind is  
48% being read

|||||  
59 Repeated evidence of breakins, small scale thefts,  
31% and sabotage both at home and at work

|||||  
118 Sudden "drop-you-in-your-tracks" fatigue at  
62% times you should not be tired

# Do you think you are targetted by organized stalking and electronic harassment?

December 25, 2007

---

## What this form may do for you

This form is designed as a SELF-TEST. If you check off several of the items below, you may be a target of organized stalking, aggravated by electronic harassment. To network with others in this situation, visit this activism web site:

<http://www.freedomfchs.com>

Some of the symptoms below are also symptoms of "mental illness". However, today's electronic harassment equipment can duplicate symptoms of mental illness, and you may be completely free of mental illness and still experience these symptoms. Making you seem mentally ill is part of the cover used by those who have and use this equipment.

In April 2002, a survey of about 12,000 North Americans using these questions produced a one percent return rate. Thus we know such symptoms may be common to perhaps three million North Americans, and an unknown number of others world wide.

Although I, Eleanor White no longer tally these forms (due to very heavy fatigue and artificial illness attacks) you can see the results for forms sent in during 2002 here:

<http://www.raven1.net/emresul2.htm>

START OF FORM -----

- \_\_\_ You find that all of your family, friendship,  
and business relationships are going sour  
and you have done nothing to cause this
- \_\_\_ You find that "accidental" blocking of you as  
you walk or drive about, by strangers, has  
increased dramatically and every day brings  
several "blocking" incidents. E.g., someone  
slips ahead of you at the bank machine or  
grocery checkout, or with cars in unexpected  
places in parking lots. This is part of  
what targets call "street theater". THIS IS  
ABOUT BLOCKING \*FAR\* MORE FREQUENT THAN THAT  
WHICH OCCURS IN NORMAL LIFE, NOT THE USUAL  
OCCASIONAL OCCURENCES.
- \_\_\_ Telephones frequently have static or tones or  
echoes; you have lots of "wrong number" calls
- \_\_\_ Street lights going out as you pass under them,  
walking or driving

— Your watch and other batteries going dead often  
— far too soon to be "natural" deaths  
— You find that you are coming suddenly awake at  
— precisely the SAME TIME, middle of every night  
— Inescapable voice in your head and you are not  
— mentally ill  
— Ringing in ears - may start/stop when switching  
— on or off electronic devices  
— Fake telephone or clock ringing or fake knocking  
— on your door  
— Fake, loud bird calls, outdoors, which follow  
— you everywhere  
— Hot needles deep in your flesh, especially when  
— trying to sleep (also called "bee stings")  
— Limbs jerking wildly, especially when trying to  
— sleep  
— Extremely powerful itching which may start as  
— small electrical shocks  
— Very fast heartbeat while relaxed (not having  
— exercised recently)  
— Very high body heat, no fever, relaxed, cool  
— surroundings  
— Vibration, large area of your body, or, nearby  
— objects which should not vibrate normally  
— Forced awakening, can't go back to sleep, as if  
— on high doses of caffeine  
— Vivid 3-D images while awake, eyes open or  
— closed  
— Urges to go somewhere you don't need to or at  
— times you would not go there  
— Neighbors can see thru walls, possibly by sounds  
— from them which "follow" you  
— Repeated instances where it seems your mind is  
— being read  
— Repeated evidence of breakins, small scale thefts,  
— and sabotage both at home and at work  
— Sudden "drop-you-in-your-tracks" fatigue at  
— times you should not be tired

## **Book Review: Electronic Projects from the Next Dimension**

**November 15, 2002**

---

Electronic Projects from the Next Dimension provides details for quite a few detectors of activity in what the author speculates may be "parallel dimensions." Since we targets do not know how some of the more advanced electronic attacks can be done, there is some chance that some of the techniques in this book might serve to detect them.

For the intended purpose of the book, it gets a five star rating (out of five possible) from me. **YOU CAN STILL BENEFIT FROM THIS BOOK IF YOU KNOW NOTHING ABOUT ELECTRONICS.** The circuits are there, but so is a lot of historical and methodological information anyone can understand and appreciate.

I find especially valuable the EXPERIMENT SETUP diagrams.

The obviously very advanced electronic harassment effects suggest some speculative detection attempts might be worth trying.

For example, the advanced electronic harassment signals:

- can penetrate excellent EM and acoustic shielding as if the shielding were not there
- can move body parts, from tiny gas bubbles in the victim's respiratory tract, through yanking legs out from under the victim as the victim walks
- can cause objects and body parts to vibrate, even though the underlying surface is not vibrating
- seem to be able to force house/building structure to cause loud snapping or crackling noises, often done at precisely the point where a victim is starting to doze off to sleep
- can apply thousands of pounds tension to metal stock or welds in excellent condition, causing breakage, yet no tool marks are left on the soft paint finish
- inexplicable (from conventional technology standpoint) "lights" on and close to victims, especially from the MKULTRA era. Some are seen by nearby witnesses (like two cases of brightly glowing hands) or show on photos. Burns on the victim sometimes show afterwards.

The bibliographic information is as follows:

**Title: Electronic Projects from the Next Dimension**

**Paranormal Experiments for Hobbyists**

**Author: Newton C. Braga**

**Publisher: Newnes Press, <http://www.newnespress.com>**

**Copyright: 2001**

**ISBN: 0-7506-7305-2**

**Available November 2002 from <http://www.amazon.com>  
at \$24.49 US dollars.**

### HUMAN EXPERIMENTATION

In Oct 1998, the World Organization Against Torture, Washington DC, published "Torture in the United States." In "Involuntary Human Scientific Experimentation" it says:

"Similar concerns also are being raised about involuntary human experimentation involving new forms of classified research and testing of high technology military weaponry including microwave and laser equipment. Groups working on these issues cite, among other evidence of the existence of these unauthorized testing procedures, a White House inter-governmental memorandum dated March 27, 1997, establishing stronger guidelines prohibiting non-consensual testing for classified research, but suggesting, by implication, that this type of human subject research may, in fact, be taking place. Because of the classified nature of these activities, it is very difficult to confirm or disprove that they are taking place. Given the serious negative impacts on non-consensual human subjects that classified research of this type is capable of producing, and given the past history of secret experimentation by the government, these allegations of continuing improprieties involving secret government sponsored human testing should not be dismissed without more thorough, impartial investigation."

Participating was the American Friends Service Committee, the American Civil Liberties Union, and Amnesty International. + + +

On Nov 15-18, 1998 the Boston Globe published four articles about human experimentation. The focus is indicative of the problem with many reports of consent through deception. If the subject was deceived there is no informed consent. The experiments were non consenting, involuntary, illegal, and criminal. The customary refusal of researchers to divulge records of such questionable experiments is attributed to protecting patient privacy.

Though a welcome beginning of much needed and long overdue scrutiny of experimentation abuses by prominent professionals at prestigious institutions, the series does not mention two widespread abuses in this area. They focused on testing new drugs. They omit the growing field of new high technology devices for cutting-edge treatment. Earlier perversions began in the 1930's with the untreated syphilis experiments on prisoners. In the 1950's, experiments using LSD on unsuspecting civilians were common. Since about 1970 intelligence agencies began testing and developing microwave technologies, lasers, and electromagnetic radiation devices for use on humans to control behavior. Researchers can create symptoms of mental illness, can and do provoke violence in their test subjects.

Unlike talk the-rapists, behaviorist psychiatrists and psychologists consider man a piece of meat. By pushing and shoving the meat in desired directions, they believe they can obtain their desired results of controlling

human behavior. (John Marks, Search for the Manchurian Candidate) Using drugs and high tech devices they can achieve their objectives without the subject knowing he is being manipulated.

It is possible to condition a subject as portrayed in Stanley Kubrick's film of Anthony Burgess' novel, A Clockwork Orange. This book is banned in England. In Nicholas Begich and Jeane Manning, Angels Don't Play this HAARP, it is explained how these weapons were originally developed by and for the military. The International Red Cross reported in July, 1994 these electronic weapons are prohibited under international law.

The US government transferred development and testing to the Department of Justice under the guise of law enforcement. They are authorized for use on "domestic adversaries," defined as "those who are not declared enemies but who are engaged in activities we wish to stop." (Begich and Manning)

In view of the difficulty finding humans to volunteer to be tormented and sleep deprived intentionally, this is being done without the consent of the subjects. Customarily they choose persons who are unlikely to mount a defense to being a non consenting human subject. The usual categories of mental patients, prisoners, persons with AIDS, and/or HIV are chosen today.

Treatment without consent and experimentation on humans without consent is battery, a crime in all fifty states. Assaults using electronic devices are no less a crime. But getting evidence of the assaults is difficult. It is no different than battery with no bruises showing. It is trespass on the person a tort in all fifty states. It is a violation of the Fourth Amendment to the US Constitution.

The Globe series failed to state that federal laws concerning experimentation using human subjects have no penalties for non compliance. The authors describe some abuses and a few deaths.

Three states have laws to cover federal loopholes. New York, California and Virginia. California regulates behavior conditioning and experimentation on prisoners. Mass does neither.

Harvard University, MIT, Mass General Hospital and McLean's Hospital conduct substantial amounts of human research. There is no accountability for the abuses of misguided doctors who conduct such research. One might conclude from the Globe series that the technology used on civilians is not available in this state; that the gene pool in this area was cleansed of evil researchers, misguided doctors, dishonest leaders, mendacious academics and lawyers. Do you believe that?

Doctors and researchers earn substantial fees and prestige in the name of science and benefitting humanity. There are many people who love humanity but hate people. Some of them are medical researchers. Like the Nazi doctors before them, contemporary medical researchers believe they do no wrong. They believe the benefit to society outweighs the irreparable harm to individuals used as guinea pigs. Lawyers seldom litigate these abuses except where death or severe injury leaves the subject in a vegetative state.

The pattern is that 40 or 50 years after the fact the government admits what they did. The survivors are awarded money. Lawyers earn substantial fees for doing no more than reading government documents. They denounce human rights violations.

The human guinea pigs get a portion of the award. They did the suffering, not the reading. In George Annas and Michael Grodin's book, The Nuremberg Code and the Nazi Doctors, they explain one defense of the Nazi doctors was that they did no wrong. Seven of the Nazi doctors were hanged.

Another defense was that they got their ideas from American doctors who were conducting their own human experimentation in the 1930's on prisoners.

Some states extend protections to prisoners. Persons with disabilities have no protections. Pharmaceutical companies offer substantial rewards for doctors to recruit persons with disabilities.

I petitioned Mr. Thomas Birmingham, President of the Mass State Senate from May to Dec, 1998. I made 23 phone calls, sent five lengthy letters with copies of laws from other states and four personal visits to his offices. I cited substantial literature on government deceptions and coverups of human experimentation abuses.

In Nov, 1998 Mr. Birmingham's aide spoke to me at the Cambridge City Hall. He told me he thought I was "extreme." I proposed that state laws are needed to cover the federal loopholes. He told me that President Birmingham's "initial reaction [to a new law] was negative."

Why are doctors and researchers unaccountable for irreparable harm to citizens? Why are there no penalties for non compliance with federal laws on

human experimentation?

Perhaps Mr. Birmingham's aide called me "extreme" because I want to make the doctors and researchers who conduct such experiments liable. In Mass elitists believe that some people are "more equal than others." "A bureaucracy is an organization in which people get paid a salary for following routines and not getting caught violating the rules. What the actual consequences of their actions are for other people matters very little." (Thomas Sowell, NYPost Nov 27 '98)

The Boston Globe deserves praise for their series. In May, 1998 I contacted radio and television stations in Mass. Only one news director, Peter Brown at WBZ-TV, responded to my letter with a phone call. He admitted that experimentation was a difficult subject.

The Boston Phoenix wrote an article about sleep experiments going on in the Boston area. The NYPost ran a series of nine articles about human experimentation abuses in New York in Apr 1998. I wrote to the executive editor of The NYTimes in May a month after the Post series asking why they omitted it. They ran six articles about the subject in May and June 1998.

The Mollen Commission investigated police corruption in New York City. One conclusion was that the nature of police require perpetual scrutiny to root out corruption. Unless it is under such scrutiny corruption will take over the entire force.

In New York City the police are investigated every 20 or 25 years. About 100 to 200 police officers are put in jail or dismissed from the force. In Boston the police are never scrutinized. In the suburbs of the rest of the country there is no watchdog for the local police departments. In recent years some chiefs-of-police ran drug rings. The pattern described in the films, The Usual Suspects, L.A. Confidential apply to most police departments.

Doctors and researchers who conduct human experimentation need at least as much scrutiny as police departments. Police are sometimes held accountable for their errors. If not by their own departments, by federal agencies or private attorneys. When humans are abused by researchers and misguided doctors, there is no accountability.

The Globe authors report that private corporations exist to oversee ethical violations of such research. They operate outside of an academic community which is required to have an Institutional Review Board to oversee federally funded human experiments. State and private funded experiments have no regulations except in NY, VA and CA.

But even under federal law there are no penalties for non compliance. All laws on human experimentation are useless without severe penalties for the doctors and the researchers. After the trial in Nuremberg, seven of the Nazi doctors were hanged. But unless the laws are enforced, they will remain useless.

Pervasive bias against persons with disabilities is why they are chosen as non consenting subjects. The President of the United States and Harvard University promote white racism as the highest priority of all discrimination. Most people are unaware of prejudice against persons with disabilities, or they enjoy it. Laws do not discriminate among kinds of bias. Prioritizing one form of bias is itself a violation of anti discrimination laws.

Laws discriminate against persons with disabilities. They are denied the right to access to the courts to get relief from many abuses including discrimination itself. This is a First Amendment right. The Americans with Disabilities Act, the Rehabilitation Act of 1973 and state anti discrimination laws make lawyers, courts and legislators liable for their bias. Without an attorney laws remain a paper tiger.

In Nov, 1998 the Human Rights Commission in Cambridge, Mass. refused to take complaints about persons with disabilities who were denied access to police protection and relief from abuses by medical and legal professionals. Judges openly express their bias in court. One US judge openly insulted me in a landlord tenant case in 1985, 13 years after the Rehabilitation Act became law. In order to end this bias such persons need access to the courts. Attorneys and judges must be punished for their bias. Researchers using human subjects must be held accountable for harm done.

This is a radical notion for those in power unable to see their own biases. In 1998 Acres of Skin by Allen H. Hornblum was published. It is about human experiments conducted at the University of Pennsylvania by Dr. Albert Kligman on prisoners at Holmesburg State prison. When he was told that what he did was like what the Nazi doctors did, he said, "How can you say I am

like the Nazi doctors? I am Jewish." Kligman would say his questioner was "extreme."

Experiments using human subjects is a multi-billion-dollar-a-year business with no regulation. According to the fundedresearch website dated Nov 4, 1998, Boston area colleges get the following amounts from the National Science Foundation: (More than)

|                       |               |
|-----------------------|---------------|
| Harvard University    | \$230 million |
| MIT                   | \$460 million |
| Boston University     | \$94 million  |
| Woods Hole Ocean Inst | \$319 million |
| Univ of Mass Amherst  | \$132 million |
| Northeastern Univ     | \$53 million  |

The Boston Phoenix runs regular ads seeking human subjects. Radio spots are broadcast and signs are on MBTA vehicles. Bulletin boards solicit subjects frequently.

Journalists rely on self-serving statements by persons who conduct and benefit from human experimentation. Quoting from members of the National Bioethics Advisory Commission (NBAC), the Globe team omitted that all of the members are academics, Phds. or MD's with an interest in relaxed standards. One member is the "chief business officer" of a pharmaceutical company. That is an ethics commission.

The chairman is the President of Princeton University one of many prestigious institutions which get billions of dollars each year in federal grants to conduct human experimentation. Is this a disinterested party? Is it "extreme" to question the bona fides of the president of a major research institution whose primary role is to raise funds for his institution?

This is like asking prison guards to write regulations protecting the rights of prisoners. It is like asking the KKK to write laws regulating racism and anti Semitism. Or like allowing prisoners to write rules for their own deportment.

In 1978 the US Senate investigated abuses by CIA researchers and doctors who conducted involuntary LSD experiments on human subjects. The intelligence community regularly and openly lied to the oversight committee about what they did. (See John Marks' Search for the Manchurian Candidate)

Considering the makeup of the NBAC, and those who testified before the US House Subcommittee on Human Resources, the medical profession, the pharmaceutical industry, and the academic community control the legislative process regarding their own conduct. Where is the oversight? Only the most egregious abuses are noted, addressed or investigated, and only some of them!

Recognizing that there are no penalties for non compliance with federal laws on human experimentation is one thing. Why they were written in that manner is another issue. Considering the makeup of the NBAC it is obvious. All 12 persons who testified before the US House of Representatives subcommittee on Human Resources Chaired by US Rep. Christopher Shays (R-CT) in June, 1998 were all from the same groups. Why were no persons harmed by human experiments invited to testify? Why no persons opposed to such research? Or why no person from other industries? Do carpenters and plumbers have less common sense or morality? The NBAC supports the status quo with no accountability for abusive researchers, negligent doctors and incompetent students.

Alleged advocates for persons with disabilities, who they call mentally ill, prevent real advocates from being heard. How can you treat a person said to be ill, normally? Do we call others the physically ill? The National Alliance for the Mentally Ill conducts exacerbation studies on mental patients. They are funded by the NIMH and the pharmaceutical industry. Yet they claim to be advocates for the mentally ill.

Why do only three states have such laws to protect their citizens from federally funded abuses? "The one thing that all bureaucrats have in common is the notion that the bureaucracy is never wrong. If anything has gone wrong, it had to be someone else's fault, preferably the fault of whoever complains about the bureaucracy. Evidence that would prove them wrong is likely to be kept under wraps." (Thomas Sowell, NYPost, Nov 27 '98) The United States is a large bureaucracy.

Why were no local institutions studied by the authors of the Boston Globe series? Kong said their focus was on exacerbation studies because they are intentionally abusive. Robert Whitaker said, "That's just how it worked out."

On Dec 31, '98 Ms. Kong wrote "such studies do not appear to have been

done in Mass ... " Perhaps, but no other kinds of experiments were mentioned.

There are several national and international groups which denounce experiments on animals. They are silent about the same abuses on humans. The level of acceptance of abuses by professionals on persons with disabilities is outrageous. Is that an "extreme" position?

The reasoning process of those who defend the present system of unaccountability is worrisome. The Globe series reports Gary Ellis, director of the Office of Protection from Research Risks, who testified before the Human Resources subcommittee, said that because there are "six or more layers" of review boards, that insures that there will be no "failure[s] in human judgment." If you cannot trust one level, why can you trust six? In spite of these six layers, human subjects still get harmed, and still die from abuses.

On Nov 15, 1998 the Globe reported that psychiatric researchers "are being asked to account for how that knowledge [in-sights into the biology of psychotic illnesses] was gained." The authors refer to "the remarkable achievements of US medical researchers in the 20th century." Were the achievements of the Nazi doctors any less remarkable? Were their methods any different?

The authors mention the Tuskegee untreated syphilis experiments and the World War II radiation experiments. They do not mention the CIA LSD experiments, nor the Ewen Cameron brainwashing experiments at McGill University funded by the CIA through the Human Ecology Society at Cornell University. They do not mention involuntary experiments, nonconsenting experiments, those done without any volunteering on the part of subjects at all.

This series focuses on "symptom-exacerbation and medication withdrawal experiments." The Globe found that research at the NIMH and "close to a dozen leading medical schools, [drew] their subjects largely from out patient clinics, Veteran's Affairs hospitals, state mental institutions and emergency rooms[,] places that provide services to poor and uninsured persons. These institutions "have routinely failed to fully disclose the true purposes of their experiments, and withheld information about risks." US government consent forms were deceptive.

George Annas at Boston University's School of Public Health, said, "We let researchers do things to people with mental illnesses that we would never let them do to people with physical illnesses." Franklin Marquit, founder of the National Artists for Mental Health said, "Someone who doesn't experience this traumatizing feeling, how would they know? ... If a person had an arrhythmia problem, would you speed up the heart and say that it is OK because they are used to it?"

Persons with physical disabilities and advocates for persons with physical disabilities openly discriminate against persons alleged to have a non physical disability. This is true not only in medical research but also in law enforcement, the courts and the law itself.

Dr. Peter Breggin said, "If they are mentally unbalanced, and their condition is worsened by doctors for the purpose of serving the doctors' scientific careers, of course that is going to make it harder for them to trust anyone again." The Globe says, "The voices that are hardest to find are those that matter the most: the mentally ill patients who have been the subjects of these ... experiments." (Nov 15 '98) One reason persons with disabilities are "hard to find" is that journalists too are biased and use their words for the purpose of serving the journalists careers. Exploitative persons are everywhere. A University of Maryland Professor of Biochemistry asks, "How could people give informed consent if they are psychotic and delusional? ... It is an oxymoron." When admitted, one patient was said to "have illogical thoughts." What about researchers who say that such persons gave informed consent? Isn't that illogical? Most elected officials, psychologists, psychiatrists, journalists, judges and lawyers make such statements every day and are not thought be mentally ill. What is the standard?

Some researchers say "they can tell the difference between psychotic patients who are able to give informed consent and those who cannot." Dr. Jeffrey Lieberman now at the University of North Carolina says, "If you have psychotic symptoms, it doesn't mean incompetence. They can still have the necessary cognitive wherewithal to understand what is being communicated to them and to determine the meaning of things on a factually-accurate basis, even though they are undergoing symptoms that affect their attention and

judgment. It is a matter of magnitude." Huh? This is Clintonian. Dr. Paul Appelbaum of the University of Mass Medical School reports that he "has researched the ability of psychotic patients to consent." He said, "patients who are having psychotic symptoms often can function 'quite well' in many areas of their lives."

"They may have delusions and odd ideas about the CIA investigating their backgrounds, or the FBI trailing them on .... [but that does not prevent] them from understanding what they need to buy at the supermarket that night to make dinner, from understanding what is being proposed regarding their entering into a research study." (Nov 16, 1998)

If he made that statement while being interviewed for admission to a hospital would that be noted as an illogical statement? I think so. Dr. Appelbaum equates shopping for dinner which persons with an IQ of 50 can do. But can they also understand the unknown risks of taking drugs and not taking drugs? This is another case of wishful thinking on the part of researchers. Is this a case of neurosis on the part of Dr. Appelbaum? Or full blown psychosis?

George Annas said, "Physicians who are doing this stuff don't think they're doing bad things to people, ... They want to do good." That is the same attitude held by the Nazi doctors. They also believed they did no wrong. They were helping their war effort, being patriotic. The same was said of the researchers at MIT who conducted non consenting radiation experiments on retarded students for 30 years. MIT President Charles Vest said, "They think they did no wrong."

George Bernard Shaw said, "The road to hell is paved with good intentions." Pre-Homeric Greek philosopher Cleobulos said, "The chief source of evil among men is excessive good." Fifty five years after the Nuremberg Code was written there are still no penalties for non compliance with US federal laws on human experimentation. Contemporary doctors and researchers are not identified after doing irreparable harm to their defenseless subjects.

Annas added, "when scientists get caught up in the lofty goal of advancing research to benefit humankind, 'they forget about the humans right in front of them. They're overly enthusiastic. They can't do both -- research and protect human subjects. They just can't do it.' Some people love mankind but hate people. This applies to researchers who do human experiments."

On Jan 10 '99 in the NYPost Doug Montero reported the death of Joseph Santana while in custody of the Bronx Psychiatric Center. He was used as a guinea pig for an experimental drug.

Though considered schizophrenic Santana "gave informed consent" according to the researchers who used him as a guinea pig for an experimental drug. They said, "federal guidelines [which require informed consent] were followed." But even if there was no consent at all, present laws impose no penalties for the researchers who cause irreparable harm to their subjects.

Edward Dolnick, in Madness on the Couch states that since 1910 a parade of saviors claimed cures for schizophrenia. None of the barbaric attempts including lobotomy and electro-shock have done anything but destroy the minds of their subjects. That does not stop contemporary researchers from continuing the brutish behavior on defenseless patients like Mr. Santana.

Another remarkable (illogical?) pleading in the Globe is that "Researchers say that the omission or minimizing of risk in consent forms during the 1980's was in keeping with standards of the day ..." But the Nuremberg Code was written and well publicized in 1943 at the end of the Doctor's Trial.

As he was about to be discharged, a doctor said, 'Andy holds the record. We have done more procedures on him in 13 months [than ever before]. His veins were good, his arteries were good, his spine was good.'" The next day the doctor said to him, "Thanks for your time, and thanks for your body fluids." + + +

One fabulous statement in the Dec 31st Globe is, "The mentally ill, at least in theory would be aided by any knowledge gained about the biology of psychosis." Ms. Kong does not explain this. I suspect she believes that because she was told that by a researcher.

Subjects in a ketamine study reported feelings "of having a transistor radio implanted in the ear." This is a symptom psychiatrists attribute to schizophrenia. But it can also be the use of a neurophone or similar device on subjects.

The Globe focused on drug abuses. None in Mass nor any involving the use

of less-than-lethal technology or electronic medical devices which have been used by researchers for at least 30 years.

One humorous observation is the comment that "social withdrawal is a symptom of schizophrenia." A more accurate explanation is people shun such persons. Her sources on mental illness are normal persons who create diseases by consensus. They pre-tend to be scientists. Two books give insight into the research industry; John Marks, Search for the Manchurian Candidate; Margaret Hagen's Whores of the Court.

Laws in America are about one generation behind technology being used in this country. The mainstream media is about one generation plus ten years behind technology. Few journalists report on human experimentation. They accept information unquestioningly from persons who conduct and benefit from experimentation, the medical professionals, the academic community and the pharmaceutical industry. Journalists seldom report personal accounts from persons harmed by human experimentation. Is that objective reporting? Is that fairness in reporting?

Anyone who justifies using persons with disabilities for human experimentation without informed consent belongs in jail not in universities or hospitals. That they excuse it in the name of science shows that they are no different than the Nazi doctors who conducted medical experiments on concentration camp prisoners in the 1930's and the 1940's.

If they dehumanize persons with disabilities and prey on them due to their indigence they are depraved. Institutionalized abuse must end. But it will not end until the laws passed to end discrimination against persons with disabilities are enforced as strongly as discrimination due to race, religion and sexual preference. Why are persons with disabilities denied access to the courts and to police protections?+++

On Dec 2 '98 I filed a bill in the Mass House of Representatives, after six months of being ignored by the leadership of the Mass legislature and my representatives.

One of US Senator John Kerry's aides tried to have me committed to a hospital. At US Senator Edward Kennedy's office they looked at me as if I had three heads. Supporters of US Rep. Joseph Kennedy not only ignored my complaints but joined in the harassment and the campaign to discredit me.

Congressional protocol requires seeking relief from one's representative. The US House subcommittee which studies human experimentation laws refused to respond to my complaints without being asked to do so by Rep. Kennedy. They demand "credible evidence."

I spoke with aides of Congressman-elect Capuana outlining the years of abuse asking that they contact US Rep. Christopher Shays. Shays can order an investigation by the General Accounting Office for abuse, fraud, and waste of taxpayer funds used for illegal experimentation. I also asked the Cambridge City Council to have the Human Rights Commission refer my concerns to Rep. Shays, as allowed by the Municipal Code. I still wait for a response.

After I wrote to Richard Cole, the assistant Mass attorney general for civil rights, a man chased me from the state McCormack office building. He said he was a state police officer but was unable to produce identification. What is ironic is that Mr. Cole is one of a group of attorneys who argued a Mass case before the US Supreme Court making treatment without consent illegal, even for patients in a hospital.

I called to and wrote to the US Attorney in Boston, Mr. Donald K. Stern. A paralegal, Ms. Mary Ann Casoli called me admitting that she knew nothing about human experimentation. I told her there are books about it. She said to me, "I don't have time to read books."

After being rebuffed by local police, state and federal officials to gain relief from non consenting human experimentation, I sought relief from the Cambridge Human Rights Commission. The Municipal Code empowers the Commission to investigate and to litigate an end to unlawful practices. One unlawful practice is denying persons access to city services due to a perceived disability.

In 1993 and again in 1998 the Director and the Acting Director refused to take and to investigate my inability to get relief from human experimentation without any consent or volunteering on my part. I addressed the City Council in Dec '98 and Jan '99 asking the City Council to conduct public hearings on this issue.

The Commission can file any complaints "that relate to acts of discrimination [received], with other government agencies [which are] under the jurisdiction of such agencies." + + +

From a story in the Boston Herald Associated Press Dec 11 '98, page 42. Eric Brown was accused of murdering two men. A psychiatrist diagnosed him as "a paranoid schizophrenic." "He was sent to Bridgewater (Mass) State Hospital where medication and group therapy rendered him competent to stand trial."

Brown's attorney asked to allow the defendant to be taken off his medications, "so a jury can observe him in a psychotic state on videotape." Even among professional participants in the legal process there is little understanding of the issues of insanity, competency and law. Perhaps it is money. That makes sense. Billable hours is the key.

Brown's psychiatrist, Ingunn Hodgkins, testified that "it would be wrong to withhold treatment from a patient who might ... require chemical restraints." Exacerbation studies and withholding medication studies are common.

Even with no benefit to the subject. Even when consent was at best deceptive. Here is a man at risk of substantial loss of freedom or worse. Seeing him in his state of mental illness would eliminate liability for his acts.

Isn't it curious that the issue of ethics is raised when a potential benefit to the individual is present? The author of this report confusedly writes, "If he recovers from his illness, then he stands trial. But if he stands trial, then the odds are strong a jury will convict him of murder because they don't believe he had been ill."

This is flawed reasoning. What happened to the presumption of innocence? Does this show the pervasive prejudice toward persons with disabilities?

This kind of biased reporting is not unique. One requirement for a person to be acquitted due to a mental disability at the time of the offense is that his state of mind be proved to the trier of fact. His lawyer wants to show that if his medication is removed now, he may be mentally ill. But what does that have to do with his state of mind at the time of the offense? Nothing.

There are two distinct determinations to be made by the trier of fact. Psychiatrists are expert witnesses, not the triers of fact. It is the judge or jury that makes the decisions. But for some reason, judges, juries and the Nevada Boxing Commission give up their duty to professional pretenders who claim more common sense than you or I.

They give their personal opinions as if they were science. When will this madness end allowing the mental health cartel to earn lucrative fees while making a mockery of the justice system?

What does the proposed test of withholding medication imply? That the medication simply covers up the illness? That it is a restraint itself, no different than chains or a billy club. Could it be that the administration of drugs is also a business with no benefit to the taker of drugs? + + +

[Following reports are from the NYPost Jan '99] NY State Senator Efraim Gonzales (D-Bronx) introduced a bill to restrict experiments using human subjects. Columbia University Medical School Dean Herbert Pardes, chaired a NY State Health Department Task Force on experimentation. It recommended allowing researchers to use mental patients for risky and harmful experiments without having to obtain their consent.

If the task force recommended using blacks or women for experiments what would be the reaction? Would the NYTimes limit reporting to two inches as they did with this report?

At St. Patrick's Cathedral John Cardinal O'Connor said, "every one of us perhaps could profit by a periodic reminder that much of what was done under the Nazi regime under Hitler began long before with the experiments of psychiatrists and other medical professionals on people who are psychologically incapacitated or otherwise vulnerable."

NY State Assembly Speaker Sheldon Silver (D-Manhattan) said, "It seems to me that this is a total violation of people's rights and an invasion of their life."

A Post editorial said, "In this republic, each citizen is guaranteed his sovereign right to life, liberty and the pursuit of happiness. And though the mentally ill cannot always exercise those rights, they still have them."

NY Governor George Pataki said, "What the ultimate decisions will be, I can't tell you." If he doubts that experimentation on persons who cannot give consent is an abomination, he is either asleep, sedated, or getting money to allow these vile activities. + + +

The London Times reports (Jan 21 '99) Queen Noor of Jordan backs a campaign to end the "honour killings" "of women in the Arab world for alleged

sexual impropriety." "Male relations encouraged by lax laws ... take the lives of these women" due to suspected involvement in affairs. The Queen joined the campaign of Rana Husseini, an Arab woman crime reporter for the Jordan Times. + + +

Joanna Bale (London Times Jan 21 '99) reports "There is no immunity for those who use torture as an instrument of state policy, which is banned under international law." +++ NYTimes Jan 21 '99 reports "An outsider breached the Internet security of the" USIA knocking its website out of action "diverted users to other locations and then dismantled the site."

Experts "thought they had repaired the damage, but the saboteur had planted a 'Trojan Horse' that repeated the destruction" later.+++

Lawyer's Weekly Jan 11 '99 reports new Rule 6.1 of the Supreme Judicial Court of Mass. "A lawyer should provide annually at least 25 hours of pro bono publico legal services for the benefit of persons of limited means." Camille Sarrouf, current Mass Bar President and "82 percent of the members" oppose the rule which takes effect Feb. 1, 1999. No surprise there. + + +

Joseph White, exposed by the NYPost scamming kind hearted folks by using crutches he doesn't need was nabbed by cops. They gave him a summons for pan-handling. + + +

Clinton is a wuss compared to Lord Bristol who died at age 44. His debauchery includes arrests for drug possession, stealing traffic bollards, and blasting a door with a shotgun to get to a bottle of champagne. (London Times) + + +

Liz Smith NYPost: "Kissinger stared into his cocktail and said slowly, 'Mr. Clinton does not have the strength of character to be a war criminal.'" + + +

David Gelenter NYPost: "Where art is concerned, bizarre behavior is (unfortunately) a [NY] tradition. Much of the century's greatest art was produced in [that] city ..."+++

NYPost: "Bill Gates' \$100 million donation to charity pales in comparison with Andrew Carnegie's \$350 million (\$6.5 billion today) gift to Carnegie Institute."

## European Parliament Resolutions as Passed

RESOLUTIONS PASSED JANUARY 28, 1999:

Below are the resolutions passed by the European Parliament.  
In my personal opinion, these are VERY watered down with respect to the current state of neuro-influence devices, however, they give a slim hope that someday, esteemed politicians and media may give lip service to this highly invasive technology. Eleanor White

-----  
Resolution adopted by the European Parliament, 28.1.99  
Environment, security and foreign affairs  
A4-0005/99

23. Calls on the European Union to seek to have the new 'non-lethal' weapons technology and the development of new arms strategies also covered and regulated by international conventions;

24. Considers HAARP (High Frequency Active Auroral Research Project) by virtue of its far-reaching impact on the environment to be a global concern and calls for its legal, ecological and ethical implications to be examined by an international independent body before any further research and testing; regrets the repeated refusal of the United States Administration to send anyone in person to give evidence to the public hearing or any subsequent meeting held by its competent committee into the environmental and public risks connected with the HAARP programme currently being funded in Alaska;

25. Requests the Scientific and Technological Options Assessment (STOA) Panel to agree to examine the scientific and technical evidence provided in all existing research findings on HAARP to assess the exact nature and degree of risk that HAARP poses both to the local and global environment and to public health generally;

26. Calls on the Commission to examine if there are environmental and PUBLIC HEALTH implications of the HAARP programme for Arctic Europe and to report back to Parliament with its findings;

27. CALLS FOR AN INTERNATIONAL CONVENTION INTRODUCING A GLOBAL BAN ON ALL DEVELOPMENTS AND DEPLOYMENTS OF WEAPONS WHICH MIGHT ENABLE ANY FORM OF MANIPULATION OF HUMAN BEINGS;

## DIARY: Volume 1

The collected memoirs of the organized stalking/electronic harassment victims of the late 20th century, presented in diary format.

This volume is about 90K in length.

Diary #1 (Eleanor White)  
January 1, 1998 (date written)

A New Year's Day diary entry.

Last evening, December 30th, 1997, I went home to discover water from the apartment above (an often used harassment base for the spooks) dribbling out of the electrical wall outlet next to my stove. By the grace of God I was able to get the outlet pulled out of the wall and the water channelled into a cat litter pan before great damage took place.

Went to sleep, the water stopped overnight. (Water coming out of outlets is a favourite pastime of certain e-weapons spook crews.)

Today, Dec. 31, our work let out early and I got home at 2 p.m. As I entered the apt. I noticed a terrible smell, a mix of the brown stuff and perhaps ethyl mercaptan, the smelly stuff in the Guinness book of records.

When I entered the kitchen, my kitchen sink was half full of a jet black fluid every bit as opaque as India ink. Before I could do anything else, this fluid magically drained out, and left a thick black sludge. Before it was finally cleaned up, I nipped a few samples into empty pill vials for the ol' evidence locker.

Apparently the spooks were not happy I was able to divert the water. The place still reeks.

And as a capper, I came to work to email this out, and they zorched my CD music player - which is literally the source of my strength - just as I started up a rousing chorus from the Red Army choir.

Any media people who read this - this is very, very typical - not an abberation at all - and when we e-weapons victims tell you about "non-electronic harassment", this is an excellent example.

Eleanor White

-----  
Diary Entry #2 (Eleanor White)

January 2, 1998

At 11:45 a.m., our company UNIX mainframe locked all sessions and displayed this error message:

"Panic! Attempting to dump 49055 memory pages to dev hd (1/40)....."

[49,000 memory pages would fill the hard drive referred to many times over.]

11:45 a.m. is a VERY busy time of day for our company, and this time, along with roughly 4:45 p.m. is lunch and go-home time for me.

These times, literally several hundred times over the past 6 years here, are consistently the times, (either by remote electronic means or in-house provocateur means,) at which faked computer problems occur.

The times when I plan to leave for lunch hour are all the more likely to have an artificially induced crash of some sort happen.

Today just "happened" to be the day I had hoped to get my spook-zorched CD player to the repair shop, and at the time of the crash above, I had just called Radio Shack to be sure they could take it and had just finished boxing the unit up.

At first sight, a non-victim's reaction to this kind of thing is usually "just coincidence".

Our response is: If you intend to claim co-incidence, then you must also include the several hundred OTHER "coincidences" over the past 6 years. To be fair, you must either explain them ALL TOGETHER, or you simply don't have a valid explanation.

Eleanor White

-----  
Diary #3 (Eleanor White)

January 3, 1997

One of the e-weapon harassers' favourite pastimes is to use their advanced remote manipulation ability to generate weird noises from common objects.

An example is that off and on during my now 8-year stint as a guinea pig is: they make one shoe or the other whistle every time I step down on it.

This is NOT coming from the shoe - I normally wear suede Wallabees which are both very comfortable and very quiet. It happens on carpet as well as on hard floors or even dirt surfaces. It happens where others can hear it. My co-workers have asked me why my shoe whistles when I walk by. (It's not the nylon - this happens with bare feet in shoes as well.)

I asked one co-worker to listen for it and for several days, the noise would SELECTIVELY STOP, a few feet before I reached her desk and started again a few feet after I passed.

Other favourites are squeaks from furniture that come close to mimicing a taunting human voice, like, "nyaaaaah". Ditto for any kind of door hinge. They also use this technology to make one's own nostrils "wolf whistle" at the victim when trying to sleep. Very sophisticated and it works quite well on small non-conductive items.

ANYWAY - I spend lots of time alone in our offices, both due to taking care of the computers and because my Internet access is there.

For the past 3 years or so, the spooks have delighted in loudly shaking, via their remote manipulation equipment (used on my bed too) the air conditioning ductwork. I finally succeeded in quieting the ductwork which makes the computer room noisy with lots of heavy telephone books, placed on or suspended from the ductwork. Good damping.

About a week before Christmas, the spooks went into high gear with extreme disruption and damage to computer equipment (all by remote control). They also remotely caused intense friction between two air conditioning rotary humidification drums that squeaked like an old leather chair with a microphone and amplifier attached. Co-workers even complained about that trick.

They did this whenever I was present, but they did not hide the noise from others (they can do that too - have done major noises that nobody standing close by can hear.)

The noise is intentional - I have arrived at times I'm not normally there, and the drums are turning, but no noise. The spooks must have specialist equipment operators scheduled.

Just yesterday, Jan. 2, 1997, we had our HVAC contractor fix the drums - wasn't able to see him to find out how he did it - possibly replaced some parts.

Well when I came in this morning, Saturday, Jan. 3, 1997, the spooks had IMMEDIATELY found yet some more air duct structure to rattle, so I'll again have to climb up into that filthy false ceiling and hang some more phone books, which usually takes repeated climbs.

To outsiders - this is the way it goes: ...and goes, and goes, and goes, and goes and goes! Never a moment's let up. Like the Gorgon's head, cutting it off does no good at all.

This is our future, not a bright one if these sickos are allowed to keep their toys.

Eleanor White

-----  
Diary #4 (Eleanor White)  
January 3, 1997

Both by dwelling break-ins (which normally leave no trace and don't set off monitored alarms) and now apparently remotely, the e-weapons harassers perform destruction of clothing.

For the past 8 years, I've been an e-weapons guinea pig, and have always been puzzled at the arrival of cold weather (yes we have warm weather in Canada) in that my winter coats always have substantial damage to seams, even though when I hung them up in the spring, they were completely intact.

This year, roughly December 1st I began wearing a durable down-filled nylon coat which had a seam which was opened up for about two inches, and which had not been this way this past spring.

This 2" section is down near the lower hem, in an area where I never apply any stress whatsoever. Since e-weapons victims are prevented from having cars (due to constant vandalism) I haven't even worn it in a car where the most occasional stress might occur more than once or twice this fall-winter.

Today I suddenly noticed both a pocket and this seam had opened up

(the seam to almost 4".) I haven't needed to use the pocket yet - El Nino has kept the weather quite warm so far.

This suggests that the spooks may be using their incredible remote manipulation capability to do damage to clothing on the fly. On the fly guaranteed, because that coat always travels with me - it is never left in my apartment over the length of the winter.

Sounds incredible? Clothing damage directly as by ripping, or indirectly as by application of caustic chemicals is done routinely.

April past (1997) I owned 8 pairs of underwear - just enough for a week. At that stage none was older than 8 months, and they were good quality from Eaton's, a quality department store chain in Canada.

In a single week, and after washing them in lukewarm water only, and they were intact then, every darn one of them were ripped open in the crotch, in a rather unusual way: There were two holes, front right and front left, not a single random opening.

These unusual pairs of holes were not exactly the same size, but the pattern was consistent over all of them. A few had holes so large that the divider left between the holes consisted of precisely two rows of stitching, and this tenuous two-row strand was a good two inches long. Obviously not natural.

No regular wearer of female underwear would say this was remotely like normal wear and tear. The quality nylon was dense and should have lasted at least a couple of years. No batch of matching pattern holes like this appears as if by magic in a single week, either.

Finally, for comfort's sake on the job (I do some crawling under desks and some ladder work as well) I always purchase oversize underwear.

This invasion of privacy is a good indicator of the attitude of the harassers. Anyone who researches this phenomenon will know that voyeurists and perverts are the ones most attracted to this line of "work".

Eleanor White

---

Diary #5

January 3, 1998

All electronic weapons victims try to shield themselves from the array of symptoms of invasive microwave harassment: voice-to-skull transmissions, burns, itches, spasms, runaway fast heartbeat, wild muscle jerking, prevention of sleep, muscle flutter, manipulation of limbs and extremities, holographic images, dream manipulation, and more.

My own experiments have largely failed, but I still sleep in a piecemeal sheet-steel "cylinder" in which my bed and the multi-piece shielding are suspended 4 feet above the floor. (The 4-foot suspension frame has significantly reduced what used to be constant bouncing of my body at the rate normally used in the sex act, throughout most of every night.)

Most of the electronic weapons effects are not stopped by any shielding, however. I keep the shielding in place because I'm guessing that it forces the spooks to use higher power than they would have to without the shielding, and maybe, just maybe, another tenant will get caught in the signal too, once in a while.

A consistent trick of my spooks is to enter my apartment while I'm at work (they can get around my monitored alarm and obviously they have a pass key) and crawl into my bed shielding enclosure and bend sheet metal edges and corners, and some of the 1/4" wire mesh cut edges, inwards so I will cut myself when I sleep (or more likely, try to sleep.)

The carefully choose places I can't easily see. Most edges have been padded with multiple layers of duct tape and some of the worst corners with foam under the tape.

A constant technique for padded edges is for the spooks to take what is probably a roller and roll the padding against the edge so it still looks padded, but if any contact is made, the chance of a wound is there.

Christmas Eve, for no apparent reason, I searched the interior of my bed shielding with a flashlight. I found one edge of the interior 1/4" mesh at the foot end had been bent so the cut ends pointed directly into the enclosure - a vicious wound was a definite possibility.

That particular edge had been inspected and secured carefully with nylon cable straps a couple of days before.

I crawled in and with pliers restored the edge to a safe condition, then I went into the kitchen. As I stood in the kitchen, a tremendous clatter of metal striking metal was heard from the bed.

I walked out, and a 6-inch long link with hardware store "S" hooks had been wrenched loose (remotely), banged against the sheet steel and flung on to the floor. This is a physical impossibility - those "S" hooks are so deep even an earthquake couldn't have budged this link loose.

I then went to bed. An hour later as I was getting groggy, the same thing was repeated - wild rapping of this link on the sheet metal and flinging to the floor.

Many e-weapons victims either don't experience remote manipulation, or don't report it for fear of being called crazy. It's not crazy, readers, it is for real.

Eleanor White

-----  
Diary #6 (Eleanor White)  
January 4, 1998

Dicing up recent memory:

For a day, or for months on end, one of the "tests" the e-weapons harassers perform on some victims is dicing up (i.e. deleting from) recent memory.

This leaves the victim in a state where he/she scarcely knows the names of familiar faces, and causes embarrassing pauses when trying to communicate, especially at work.

Another common "test" is to delete memory of what task to do next - causing the victim perhaps to spend several minutes staring blankly at a computer screen wondering why he/she is there in the first place.

Considerable stress is generated when the deletions are applied just as the party on the other end of a business call answers your call. Or, you'll start out on a chore at some remote part of the plant, and by the time you get there, you haven't the slightest idea why you are there in the first place.

One of my own most serious problems is

that the spooks are extremely efficient in preventing me from taking daily medications. An important stomach pill, Losec 20 mg., must be taken daily. Even if I attach an empty 14-day pill dispenser on top of my apartment monitored alarm panel so I must move it, there can be 2 or 3 days in a row where I move it out of the way without the slightest thought about what that container is there for.

Memory deletion during shopping is another frequent "test". The spooks routinely cause the victim to forget to look at a list, if the victim is lucky enough to remember to bring it.

Since the spooks don't seem intent on doing this to the extent I became unemployable, I can only guess that they do this for these possible reasons:

1. They want me to become depressed.
2. They want to see how much stress I can "take".
3. They want me to experience the debilitating effects from not taking the medicine.
4. They want to show me they are in charge.
5. They get sexual/sadistic stimulation from inflicting pain

These instances resemble but are NOT the ordinary every day forgetfulness that all busy people experience. I have always been extremely careful about procedure and getting necessary chores done on time. This is not natural - and I can back that up with 48 years of life before I got enrolled in this mess.

Again - to readers eager to jump in and say "but that could be natural or coincidence", it is definitely not.

I would say I've averaged 2 or 3 memory deletions per day for 8 years. That's between 7,000 and 10,000 unnatural incidents of memory deletion, and these occurrences, remember, are set in a massive programme of non-electronic harassment, that some co-victims call "street theatre".

Skeptics must explain ALL events taken as a complete set or they have not explained ANY of it.

I ask the reader to ponder what happens  
when this technology is massively applied  
to large segments of population.

Eleanor White

Diary #7 (Eleanor White)  
January 4, 1998

Immediate e-weapon response to office  
conversation:

I am the lead computer operator at my company  
and today, Sunday, I am on duty with an assistant  
operator who doubles as a Sunday order taker.  
This lady is in the process of learning the ropes,  
and because she was in ahead of her normal  
shift time, I showed her what happens during  
the weekly routine takedown-bring up of our  
multi-host UNIX system.

I spent a little time telling her that the mainframe  
clock can lose one or two minutes over a busy  
week, so it should be set 2 minutes fast when it  
is taken down then up on Sunday.

I also shared with her that our boss had apparently  
been at another business where every time their  
computer had a slow clock, a disaster was about  
to happen. I've been here 6 years, and that has  
never been true here. (There have been many  
disasters, but not has been prefaced by a slow  
clock.)

About an hour after telling her about the clock,  
the boss himself, who monitors sales screens  
from home via modem, called me and said the  
clock was a little slow, and was anything wrong.

The clock was NOT "a little" slow - it had lost  
HALF AN HOUR in about two hours running  
time with very light sales activity!

This incident demonstrates what has happened to  
me and to others repeatedly (in my case, I'd guess  
more than 200 times in the 8 years I've been a  
victim). You will say something (or in some cases  
even THINK it to yourself by way of "sub-vocal-  
ization") and BINGO - the spooks will cause  
something to happen which unmistakably tells  
you they heard what you said or subvocalized.

To the skeptics: Explain ALL events taken as a  
complete set or you have not explained ANY of  
them.

Eleanor White

---

Diary #8 (Eleanor White)  
January 4, 1998

Ahh, the birds, the birds...:

All e-weapons victims can relate that their harassers all have "specialities", that is, techniques they use ad infinitum, which is one of their "signatures" on their "work".

My spooks make extensive use of BIRDS, and some use of local dogs as well.

I walk to work each morning. It NEVER fails that walking along my fairly high density detached housing neighbourhood I get blasted by scores of very unfriendly bird calls.

At times, these artificially controlled bird calls will perfectly mimic wolf whistling. On one 100 foot landing approach over our company's back parking lot, the seagull making the approach literally laughed a perfect human laugh at me. I was not quick enough on that occasion to tape it, as I had my arms full.

This has been going on for the past 6 years here in Hamilton, Ontario, and this has given me a great deal of opportunity to watch the birds themselves as they carry on like this. Here are some observations:

- The bird calls so far have been tape-recordable.
- The raucous, unnatural bird calls stop IMMEDIATELY if I push the record button on my microcassette recorder which I always carry. The unnatural calls will start again a short time after I stop the recorder. As a result I have, at best a few fragments, perhaps a second in length of the unnatural part.
- Co-workers have heard the calls that have accompanied my stepping outside for a moment when the co-workers are outside smoking, but this has only happened twice in 6 years. Nonetheless, the co-workers do back me up that these calls were highly unnatural.
- In all cases where the birds have been in clear visual range, they actually ARE mouthing the strange calls.
- We have a very large flock of crows (?) who live in a large strip of woods behind my apt. bldg. and place of work. Starting in 1997, the spooks have apparently succeeded in "stationing" one large crow either on the ground, fence, or building part every single time that I walk from home to work. This "sentinel crow" breaks into the most unnatural series of angry caws and remains quite close during my entire walk.

I've lived in both rural and fairly rural

cities all of my 56 years, and I have plenty of experience to draw on that assures me this is highly unusual.

- During some portion of the walk, there are often gatherings of birds I believe are starlings, and who break into painfully loud screeching calls which are so high they are almost beyond my hearing's upper frequency limit.

In my 56 years I have never heard anything remotely like the volume and frequency from any bird or flock. My hearing has been tested and has always been above average. I have never been a loud music aficionado.

- Angry bird calls follow me everywhere I drive or walk - even miles from where I live. This following of the victim is a routine feature of audible harassment for most e-weapons victims.
- The VOLUME LEVEL of the artificial calls is often far beyond the capability of the bird mouthing the calls. I saw a 3-1/2" house finch, a tiny little bird, scream at me at a much higher power level than a large seagull or macaw.

Here again, I know that this bird could not possibly make such noise in it's natural state.

The sum total of, by now, several thousand occurrences of angry unnatural controlled bird calls makes it obvious to me that the spooks are able to duplicate the hypnotic coercion that works so well in human victims. They can literally control the animals and can probably actually supply additional audio power, above and beyond the bird's own lung power, as well.

Local dogs routinely bark and snarl loudly every single time I pass one where the dog is free in a neighbourhood back yard. I have carefully noticed that other pedestrians never get this treatment from the same dogs.

I have never, until moving into this neighbourhood 6 years ago, had dogs single me out for angry or threatening gestures.

Other victims have reported bird and animal effects as well.

Skeptics - you must explain ALL occurrences in this series taken as a single set, and this includes other co-victims too - or you have not explained

ANY.

[Ed's Response to #8 - The Birds]

Subject:                Birds & dogs

Yep, when I was living with my mother I bought a bird trap thinking to take this shitty sparrow to another locale. My mother found it and lost faith with me. Hmm.

I've seen the birds mouth it too. They can do the sound without any bird as well. They do ghost people. They also do talking dogs. And - talking infants !!!!!

Ed Light, Editor, Mind Control Forum

Diary #9 (Eleanor White)  
January 6, 1998

Endless renovation.

This diary entry is important because it shows the incredibly accurate SURVEILLANCE capabilities of the harassers' equipment.

I've been an e-weapons victim for 8 years. In that time I've lived in three different apartment bldgs.

In all 3 buildings, the apartment just below me (and in one, beside me too) was the site of non-stop "renovation". Endless hammering, loud drilling into masonry, and sometimes fumes from some sort of liquid that was so potent it burned my eyes (and was sensed by a roommate at one of the apartments.)

First, all three buildings were in fine shape to begin with, and there was no pressing reason for so much renovation. My present building opened in 1994, and I was in the batch of first tenants.

To my mind, first class apartments do not need 2, 3, or 4 years of constant renovation.

The more significant aspect of the "renovation" noise was and is: It is performed ONLY at key times and no other times:

- Just as I try to fall asleep on a weekend nap
- Just as I try to enjoy a meal, and the better the meal, the more likely that will be the time "renovations" start up
- Just as I try to fall asleep nights

More than that, in the last couple of years, they have become so precise with their

"renovation" scheduling that now they start up at PRECISELY (and I mean to the second) the time I think to myself, "Well, the chores are done now I'll lie down and relax."

There are alternatives - one is to "vacuum" the hallway right outside my apartment, and again, always after normal working hours, and they are especially careful to hit weekend suppers, which are a little less rushed and are better prepared than weeknight suppers.

I have the cleanest patch of hallway in the building right outside my door!

This "work" is noisy, and presumably because of other neighbours, it is not done as often as, say, jolting you awake with a giant muscle spasm or generating a sensation on the side against the mattress of a bare wire carrying perhaps 50 volts lightly being touched to your bare skin.

I would estimate that these fake "renovation" and "maintenance" sessions occur at least once a week on average, maybe a bit more. Others in the same building have not had the same experience, ever.

Along with "renovation" on an apt. on the same floor (or other "maintenance" work) is the scattering of debris from the work just outside my apt. door.

"Renovation" is only one of several ways in use to keep me from getting rest or sleep - they use others IN ROTATION, the purpose being to dilute my complaint among many "natural" apartment house occurrences so that to a casual observer, my complaints will appear groundless. But let me assure the reader that ONE of these diversionary tactics is used every single day of the year. These include:

- fake phone calls (sarcastic "sorry, wrong #")
- fake lobby buzzer calls
- fake knock on door (including "solicitors" who don't solicit from any other apartment)
- kids making wild unnatural noise outside my door, even knocking on it at times (kids are routinely used, and if I have a tape recorder ready with a mike placed by the crack under the door, kids NEVER do their "noise thing")
- repeated door slamming by other nearby apartments (to the extent that the shock wave can be felt, not just heard, and this may be repeated 20 times in half an hour)
- repeated extremely heavy thumping in the apartment above mine

- repeated rapping on radiator pipes from an adjacent apartment

Remember, reader: I'm describing things that do NOT occur at random times - they are consistently at meal time or at the exact point I start to fall asleep.

8 years times 52 weeks/yr = 416+ times "timed renovation" happened. (For the other diversionary items listed above, one of those will occur perhaps 6 times a week, or an additional 2,500 events over 8 years.

These things I'm describing here do not happen any time other than an attempt to eat or sleep. When put together with all the other electronic and non-electronic effects, there is no other conclusion possible than that my entire life within my apartment is under the most intense scrutiny that now-declassified thru-the-wall radar and still secret equipment can provide.

Skeptics: You must explain ALL occurrences on the part of all 50 known e-weapon victims as an unbroken SET, otherwise, you have failed to explain any occurrence.

Eleanor White

-----  
Diary #11 (Eleanor White)  
January 9, 1997

Current situation snapshot.

My diary entries 1-10 have been focussed on a single type of occurrence, to show the reader some detail on, for example, the use of birds as harassment pawns. This entry is to snapshot the entire spectrum of harassment being experienced by Eleanor White during roughly December 1997 and January 1998.

A quick outline of the events experienced:

- Fake-voice bird calls on way to and from work and often when doing company errands in town
- Voice-to-skull transmissions during hours when sleep is attempted
- Artificially induced muscle spasms while trying to sleep
- "Hot-needle-in-flesh" effects
- 50-volt-wire effects on side against mattress
- "Electronic caffeine" signals for half of the 10-hour night (or more)
- Loud static to obscure AM radio, which is not present elsewhere in the building or neighbourhood
- Violent itching spells of from 1 to several hours, always when trying to sleep
- Extreme itching focussed on one foot or the

other, both while trying to eat a meal and at work - cortisone cream is the only medicine that can even begin to cope with this

- Daily crashing of our 24-hour dial-in order line testing PC: Every night and almost every lunch, just as I'm about to take the first bite
- Daily tampering with computer files, especially those relating to exposing this activity
- Daily locking of my computer shortly after starting an email session, sometimes resulting in loss of email - this applies to ALL 4 currently Internet capable machines, on different phone lines
- Destruction, or apparent destruction, of computer components and software installations, especially when I touch a machine for routine work like adding a network card. I'm talking total destruction of the video section of the motherboard as one example, even though I'm extremely careful about static.
- Direct manipulation of company mainframe so that the date jumps by as much as half an hour, and taking a simple directory on a tape drive causes a full crash (battery backed up clock)
- Almost daily crashing of a daily financial data download and in a couple of cases, blocking the modem at the BANK'S end, not my end, from answering calls (Operators there tell me when that happens they can hear the rings but their modem refuses to pick up, even though it picks up all other calls) This financial download system has been very reliable up to roughly the end of November 97.
- Dialing in on certain modems and not logging in but keeping the modem off hook, with the telephone bill piling up, all night or even all weekend
- "Following" me around my workplace, beeping battery backup units as I pass
- Disruption of data transfer between computers where no explanation can be found by even our best consultants
- Black smelly liquid planted in my kitchen sink
- Water running from an electrical outlet
- Extremely frequent, after working hours vacuuming of hallway outside apartment, always co-inciding with meals or attempted sleep. My end of the apt. hallway is vacuumed so often there is scarcely any pile left on the carpet.
- Loud hammering and very heavy drilling into masonry sounds from apartment below, while attempting to eat/sleep
- Heavy thumping from apartment above, while attempting to eat/sleep
- Fake phone ringing while attempting to eat/sleep
- Generation of loud whistling from normal breathing when NOT obstructed by colds or allergies, and even when a rubber nostril expander is used.
- Plucking of rubber nostril expander completely out and causing it to quickly disappear into hard to retrieve places, using remote manipulation equip.
- EVEN WHILE LYING PERFECTLY STILL, the use of the remote manipulation equipment to roll scouring pads into pencil-size cylinders, to cause discomfort, even when my full weight is on a flattened pad

- Rapping of loose items into the sides of my steel sleeping enclosure, ending with the flinging of the item on to the floor, "poltergeist" style (Definitely artificial - this is not genuine poltergeist activity)
- Shaking my bed frame while trying to sleep
- Very forceful shaking of air conditioning ductwork in the vicinity of my desk, when viewed in the false ceiling, as much as 1/4" displacement from the rest position of the ductwork has been observed
- The now 8 year-old trick of making one of my shoes whistle as I walk by - some days, not all, only one shoe, not both, different pairs of shoes, with or without nylons, and plainly heard and remarked on by co-workers
- Bending metallic edges and damaging the padding on interior parts of my sheet steel and mesh sleeping enclosure, in hard to see places, in a manner likely to cause a laceration
- Destruction of one microcassette tape recorder
- Destruction of one CD player

The above list will give the reader an idea of what my days and nights are like during Dec 97 - Jan 98. If yours are not like that, be thankful!

Skeptics: You must explain ALL occurrences, taken as an unbroken SET, or you have not explained ANY.

Eleanor White  
Hamilton, Ontario Canada

-----  
Diary #12 (Eleanor White)  
January 10, 1998

Instant recognition proves itching is under remote control.

I've been an e-weapons guinea pig for about 8 years now, and one of the longest-running harassment methods is the prevention of sleep or disruption of work using remotely inflicted insatiable itching, with emphasis on the most difficult to scratch body parts. For example:

- Itching on the INSIDE of the victim's eyelids
- Itching in the toe area during a busy work day
- Itching ONLY on the contact area between the victim's body and mattress while trying to sleep

(The mattress contact itching starts out as the sensation of being lightly stroked by a bare wire carrying about 50 volts, typical of a telephone circuit, for example. The electric-current-tickle then gives way to a spreading itch that can only be relieved with sandpaper or a stiff bristle hair brush.)

This past week, I glued together an array of kitchen scouring pads on to the rubberized side of a carpet remnant, using silicone rubber for best adhesion under deformation and pressure. This was to eliminate the harassers' practice of literally rolling up one or more scouring pads into a pencil shaped

tight roll, even as the victim lies motionless.

The TELLING EVENT is that last night, my first trial with this glued scouring pad array under me as I slept, the harassers DID NOT CAUSE THE USUAL ITCHING WHERE MY SKIN CONTACTS THE MATTRESS.

Instead they INSTANTLY switched to induced itching on all parts of my body NOT in contact with the mattress. This proves two things:

- The itching is artificial. (This is pretty well established anyway by a total lack of rash at any point in the 8 years.)
- The harassers' equipment is capable of seeing in perfect detail things like the location of scouring pads under the victim's body. This also says that this particular viewing capacity is NOT "sound" technology. Sound can't possibly penetrate reinforced concrete floors and walls, and into a steel cocoon, to both detect scouring pads under the victim and roll the small ones into pencil-size cylinders.

Skeptics: You must explain ALL of the effects reported by e-weapons victims taken as a complete SET, or you have explained none of them.

Eleanor White

-----  
Diary #12B (Ed Light)

I have the "itch" too. And sores on my legs to show for it where I vehemently scratched (I could do nothing else).

Ed Light, Editor, Mind Control Forum

-----  
Diary #13 (Eleanor White)  
January 10, 1997

Example of intense mental impairment by remote control.

Spring past (1997) I took a trip to the next town north and east, Burlington, to the regional office of Industry Canada, Radio Spectrum Management Branch, which is the Canadian counterpart of the FCC. The purpose was to renew my ham radio station licence so I could legally begin building a demo voice-to-skull transmitter, using the Allan Frey method, developed in 1961, and posted on my raven1 web site.

(I put this project on hold in early summer 1997 after Wright-Patterson Air Force Base announced they were developing unclassified voice to skull technology to scare birds away from runways.)

I reached the Industry Canada office fine, and renewed my ham ticket with no problem at all.

However, as soon as I left the office, I began to feel the kind of out-of-sorts feeling described by pilots who have encountered strange things in the Bermuda Triangle. The surroundings just didn't seem right. It was chilly but sunny, and I could see no taxis in sight.

I went a short distance to Burlington City Hall, where there is a phone booth on the main street. The Taxi section was torn from the phone book. I left the phone booth and entered the lobby of City Hall. I found I suddenly had no idea what the local Burlington taxi service was named. (Surprise: The name is "Burlington Taxi")

I asked at the information desk for a phone book. The taxi page was torn from that book too. I asked the information clerk if he knew the name and/or telephone number of the local taxi company. He "had no idea".

I tried to call information, but a young lady ran over to the lobby phone and stayed on it for 10 minutes, talking excessively quietly.

I went out to call information at the booth outside. Another long wait. Not a single taxi in sight, and I had been in the main square now for almost half an hour. It was now uncomfortably chilly as the sun had gone behind clouds.

All the while, unseen bird calls of a particularly loud and mocking type were heard from all directions, though no birds at all could be seen.

By the time the outside booth became free, I still didn't know the name or number of "Burlington Taxi" and in fact, had forgotten my intent to phone information.

So - I phoned a Hamilton taxi service to come get me for the trip back to Hamilton.

BANG! The "Bermuda Triangle" feeling vanished, and right away, the City Hall square was RINGED with a literal parade of bright yellow BURLINGTON TAXIS, with the phone number boldly painted on the side!

After more chilly waiting (City Hall has too much setback and foliage to chance waiting inside for a Hamilton taxi, I finally got back OK, with no further incidents, except way more time than I like being away from my desk on a workday.

Skeptics: If you intend to call this event a

chain of coincidences, you must then explain ALL effects I've experienced in my 8 years as an involuntary mind-affecting e-weapons guinea pig. Anything short of explaining ALL effects does not explain ANY.

Eleanor White

-----  
Diary #14 (Eleanor White)  
January 11, 1998

Household appliances.

The disruption and destruction of household appliances is one area in which the e-weapons harassers use a lot of energy.

Before describing appliance disruptions, let me say that I have had, in the 8 years of being an e-weapons guinea pig, perhaps a dozen apt. building nighttime full power failures, lasting long enough that the presence or absence of e-weapons harassment can be determined.

Every single nighttime power failure has resulted in the IMMEDIATE stoppage of whatever harassment method was in use, and the majority of power recoveries meant the harassment started up again within a minute or two.

I have not had as full a range of appliance disruption as others, but here's what I've experienced to date:

- "Talking" electric fans, especially the 20-inch box type. The e-weapons harassers routinely use these things as loudspeakers. In my case, one apt. bldg. broadcast loud hammering from these fans, in crystal clear fidelity, and with a random, semi-musical beat that could not possibly be simple vibration of the fan structure.

At my current apartment building, the preferred sound is random bongo drumming. I've never been treated to actual voice, though other victims have.

I placed several turns of wire around the magnetic core of the motor and have put oscilloscopes on to this coil. There is nothing but pure sine-wave AC - no other audio frequencies present.

This sound is tape recordable, however, like the birds, attempts to tape record are nearly instantaneously accompanied by a reduction in volume level, too weak to record over the fan's noise, or, either

a loud steady whistle or raspy static fed to the tape recorder to prevent any kind of recording. All I've ever been able to get is maybe one or two seconds' worth, not enough for evidence.

By the way, I prepare all my fans to suppress vibration noise, which is also commonly enhanced by the harassers, by careful disassembly and packing grey strips of window caulking in all joints where vibration is possible.

The ceiling fan in my bathroom has also been used as a loudspeaker.

Finally, a variation on this is that the harassers sometimes move the fans so they bang into nearby objects.

- Simple destruction by discharge and leakage, of batteries, very prematurely. Sometimes the leakage is so bad that the appliance (in my case a brand new expensive flashlight) was trashed.

I lost one purse-size voltmeter to "battery leakage" - it stopped working even after replacing the batteries and polishing the contacts. None of the leakage got inside the "works" and I'm certain the meter was destroyed separately.

- Destruction of polaroid film giving about half of the image smeared, copper coloured dribble, with film being fresh.
- Remote control or tampering (don't know which) with all four stove top burner switches so that the full-high click-detent position is reduced to below medium heat. To boil water I have to click the full-high detent then click down into the high end of the continuous adjustment range.
- Total stoppage of toaster. Switch contacts still making electrical contact. To those who know toasters, they draw a huge amount of current, and as long as the contact points are in firm physical contact, current must flow.

If the points actually touch with pressure from the pushdown handle, then the small amount of dirt which can accumulate cannot insulate against the full 120 volt line voltage, and the

current will force it's way through.

The only exception is if the points are so badly burned they don't make pressured contact, or, some foreign substance of some thickness has been put between the points. In my case, neither condition has occurred during my spontaneous failures.

- Loud, raspy static applied to AM or FM radio on a favourite station.

Also - I have tried to use an FM radio "off frequency" so that the "hiss" will act as white noise for covering up the harassers banging and thumping. Most times, within minutes the harassers will find the frequency I'm tuned to and put a loud, steady tone, like a TV test pattern on that frequency. If I re-tune, they do too, almost immediately.

- Broadcasting of bongo drums or other annoying noises through commercially-made white noise machines. I own 3 white noise machines, all of which are rendered useless by this practice. The harassers let me have a short period of success in using commercial white noise so I would purchase more than one, then "closed me down" by using them as loudspeakers for bongo drumming.
- Fake sparking of 120 volt line cord to small fan mounted inside my sleeping enclosure. The fan was getting on in years, but was still quite adequate. One night I bumped into the all-plastic case (Braun) fan and a shower of sparks appeared to fall from the point at which the line cord enters the case.

I discarded the fan, but kept the line cord, and spent a lot of time checking the point at which the "sparks" occurred under a powerful light and magnifying glass. I also carefully sectioned the cord with an Xacto knife. There was NO indication of sparking or indeed any break in the heavy duty neoprene cord.

- (This is kind of a nickel-and-dime one, but definitely done by daytime intruders) The shortening of the core of one end of the TV cable just enough that contact was occasionally disrupted. I know that copper center conductor was originally more than long enough.
- The spontaneous switching of channels

which occurs just at the moment I'm really paying close attention and eagerly awaiting the next sentence. I'd guess this has occurred monthly or more often over my 8-year stint as a guinea pig. It does not happen at all during scenes I am not interested in.

- Destruction of my microcassette tape recorder I carry in my purse. Just the record function. I purchased another recorder to replace it, and carefully disassembled the disabled unit. My ohmmeter could not find any contacts that didn't work.

When I try to play the short 1-2 sec. snippets of weird noise for co-workers, the harassers put a shrill whistle thru the speaker. This is NOT on the tape - when I listen in private, it's not there.

The whistling is NOT caused by the particular recorder, either - the unit I purchased as a replacement whistles in this manner too.

- Finally, this isn't strictly "household" appliances, but I've bought and/or taken for repair two vacuum cleaners at my place of work. ANY vacuum cleaner I purchase or have repaired gets immediately "broken" by having it's wiring re-arranged so the motor runs backwards. There is usually some other physical damage accompanying this also.

Skeptics: If you intend to explain a few of these incidents as "co-incidence", you must explain all these and all other harassment incidents taken as a complete SET, or you have not explained ANY of them.

Diary Entry #15 (Kay)  
January 10, 1997

Two years ago, my husband went to another town  
for a business meeting. My children and I went  
along to make a weekend mini-vacation out of it.

I drove from the motel to the place of the business  
meeting and dropped my husband off. The children  
and I went to a restaurant nearby to pass the time.

At the appointed time I left the restaurant to pick up  
my husband.

I drove, and I drove. Around in circles. I was unable to  
think which street led where. Something was wrong with  
my brain. Like a hole had developed.

I want to make clear that before my children  
were born I worked as a Real Estate agent and  
NEVER experienced problems of this magnitude  
finding my way around.

I pulled over on a road leading OUT of town.  
Totally confused and lost. I was extremely  
concerned.

I got my map out, which I had just read not more  
than 2 hours ago to find the meeting place.

I COULD NOT MAKE SENSE OUT OF IT.

The part of my brain that allows one  
to organize information was GONE.

It was a map I was looking at,  
I could read the street names,  
I could read the name of the street I was on,  
I could even find it on the map.  
I couldn't figure out how to get from  
point A to point B.

Now another disturbing thing happened.  
The older child

( who claims he is dissociative from E-MK-ultra  
tortures at a preschool he attended)

took the map and read it and was able  
to guide me effortlessly to the destination.  
Normally, this child has extreme difficulty  
reading and had NEVER read a map before.

I have had no more map reading problems and  
my child has not been able to read another map.

Kay

-----  
Diary #16 (Eleanor White)  
January 12, 1998

Precise-timing computer shutdowns.

Starting around the beginning of December 1997,  
and shortly after I began attempts to persuade  
my co-electronic-weapons victims that we should

claim what is actually true (we too are just latter-day MKULTRA victims), my local harassers started shutting my PC down by way of remotely causing it to lock, at PRECISELY 8:10 a.m., every single morning and now including weekends.

I normally arrive at work around 7:15-7:30 a.m. and am ready to start the day's email campaigning by 7:45-8:00 a.m.

This move on the part of the local harassers seems to be to cause me stress by having the best time of day lost.

\* Significant is the fact that this blockade applies to ANY Internet capable PC at my office, at this point there are four. These PC's are on different telephone lines, all direct outside lines, having nothing to do with the switchboard.

It's not always easy to read the meaning of a given harassment type, but when this is combined with a stepup in other types of harassment also, it is pretty clear that the harassers are not keen on having the public learn there really was such a thing as MKULTRA (they don't know this at present, in general.)

Skeptics: You must explain ALL incidents taken as a complete SET, or you have explained none.

Eleanor White

-----  
Diary #17 (Eleanor White)  
January 12, 1998

Tics and fumbles.

Electronic weapons harassers are capable of incredibly precise and overriding control of their victims' muscles. My local harassers here in Hamilton, Ontario demonstrated this graphically one evening by, while I was fully awake in bed, bending each toe of my right foot so far backwards it almost touched the upper side of my foot.

There is no possible way I could ever duplicate that feat.

At this point I'm into my 9th year as an e-weapons guinea pig. I have noticed over those 9 years that I have become very clumsy at ordinary chores, like food preparation, eating/drinking, and handling tapes and diskette.

When I moved into my brand new apartment (where I live now) I was tenant number 1.

The brand new kitchen and bathroom cabinets

all had extremely sharp corners where the formica surfaces came together in a point.

For more than 2 years I kept raking my forearms on those corners drawing blood. I looked like a cat clinic nurse all the time, scratches and scabs everywhere.

One of the harassers' techniques is to remote-hypnotically (electronically) induce a sense of complacency, so the victim will never get enough will to fix such a condition.

When I finally did so, by sandpapering all sharp corners round, not only did the lacerations stop, but AT NO TIME AFTER THAT DID MY SKIN EVER AGAIN CONTACT A CABINET DOOR CORNER.

This was not a case of heightened awareness, and it took me several months to realize that the harassers had been nudging my arms into contact with those corners, and this was definitely not natural.

I began to take note of other clumsiness incidents: Every one of them involves either a muscular nudge or a sudden sharp sting somewhere on my body that momentarily distracts me at just the right time.

Because this is not done at close intervals, and there is time for the last such incident to pass from conscious thought, it still works most of the time even though I am now aware what is going on.

I would estimate that by now this kind of clumsiness has occurred at least a couple of thousand times over the past eight years.

Heaven help us if the harassers should do this to surgeons.

Skeptics: You must explain ALL incidents taken as a complete SET, otherwise, you have not explained ANY.

Eleanor White

-----  
Diary #18 (Eleanor White)

Non-electronic harassment at work.

For e-weapons victims lucky enough to have jobs, they are guaranteed that the harassment they experience at home and on the street will continue at work.

At my previous job, I was in charge of a

software test lab containing about 40 PCs. I would experience missing parts there, and there were many office cubicles nearby where bird calls and wolf whistles would originate throughout the day, in practice, they were untraceable.

Co-workers were obviously on the payroll of the harassers, and I would find wiring regularly disrupted, and in some cases the gold-plated connector pins coated with an invisible layer of some chemical which made them non-conductive.

Co-workers would go out of their way to pass by whenever I was on an intense testing assignment, and literally whack nearby structure to make me jump.

The lab was in a dark, windowless area, and after a complete re-lamping by building management, within a couple of months, by steady small incidents, I would find lamps rotated in their sockets so they would not light, and several fluorescent fixture safety covers had mysteriously "fallen out". I counted 40 lamps not working after two months.

When I changed jobs and moved from Toronto to Hamilton, the on-the-job non-electronic harassment kept up. Similar wolf whistling started immediately.

I posted information labels on most equipment, both for my own information and the benefit of others. Every single label I posted would, on the evening shift when I was not present, have corners gradually lifted and torn off. Sturdy cardboard tags with pasted on diagrams and other information (like internal pinouts) would somehow get "crumpled" by someone crushing it in their hand.

One terminal had the roof spring a leak above it - I responded immediately by installing a sheet metal slanted roof. Shortly after that, an evening shift employee (unknown, of course) pulled the terminal far enough out on it's table that the monitor high voltage got a bath and the terminal was toast.

I ordered a small shipment of custom cut structural aluminum tubing for expansion of the computer room shelving. This batch was seen by two co-workers who are not on the harassers' payroll. It stood in the Receiving Dept. area for the day, and at 5 p.m., a receiving clerk, wearing gloves,

brought what had been spotlessly clean aluminum tubing all day, only when he flung it into my office, all 3 bars had been smeared from one end to the other with dirty automotive grease. I was talking to the boss and was not watching at the time.

In the 6 years I've been here, there have been at least a couple of hundred incidents of computer plugs being pulled out just far enough so the unit doesn't work - and, surprise, those incidents occur either precisely as I'm about to take the first bite of lunch, or leave for the day.

Even though physically impossible, the explanation I get is that "somebody must have hit it with a box". (I have purposely installed the equipment using guards and nylon cable ties so that is absolutely not possible.)

Another 'trick' is to allow a remote part on our large complex system to malfunction and not report it, but rather, the worker goes to some other workstation to work around the problem.

Eleanor White's wastebaskets are consistently "not seen" by the evening cleaners, and often are emptied but cracked or otherwise damaged. One "not seen" waste basket was left in full view of the cleaners for 5 days. (I deliberately waited.) When asked on day 6 why it wasn't emptied, it was explained that they didn't think I wanted it emptied because the two other wastebaskets in the (locked) computer room were not next to it.

And of course, any time I am asked to either purchase or have repaired a company appliance, like a vacuum cleaner or hot water kettle, the item gets "broken" right away, often withing 24 hours of it's arrival at the place it will be used.

Skeptics: You must explain ALL incidents, taken as a complete SET, or you have not explained ANY.

Diary #19 (Eleanor White)  
January 12, 1998

The company back gate lock.

Our company has a parking lot in the back of

the plant, which is for employee parking and deliveries. This gate is locked with a rain-proof high-quality (\$35 CDN) padlock and chain.

This padlock has often been the target of the e-weapon harassers because for several years, I've been the official gate-opener, because I arrive earliest each day. (The daily ritual of unlocking the gate with no witnesses gives the harassers their best daily chance to wow me with their faked "bird calls".)

One memorable day, the harassers had packed snow on top of the lock and poured water on the snow, to give an impression it was heavily iced. (Nothing else was, and on that morning, the temperature had risen enough above freezing so that anything with ice from the evening before would have melted off.) I tried both lock de-icer and WD-40, but could not get it to open. We had to cut it off.

Turns out they had packed some steel wool way up into the upper end of the key slot, permanently disabling the lock. We replaced the lock with another, heavier-duty, high quality rainproof lock.

This replacement lock worked fine for about one year. Two weeks ago, it suddenly began to get gritty and hard to unlock. I thought maybe some blown dust from nearby road construction had mixed inside with some wind-blown rain. I took the lock this morning into the computer room and moved a 60-watt lamp so the light bulb touched the lock, to bake it out.

After about half an hour, one of our staff pharmacists came in and asked me "What's that smell? It smells like acid."

Once he said that, a light bulb came on in my head and I immediately recognized the unmistakable smell of SULFURIC ACID.

There is no doubt about it - the harassers have been putting acid into our lock over the past couple of weeks.

(What next!?)

Skeptics: You must explain ALL of these incidents taken as a complete SET, or you have explained NONE of them.

-----  
Diary #20 (William MacIntosh)

January 13, 1998

Only you can prevent Garage Fires!

Due to the strange El Ninio weather patterns of late I have been using the Garage to store the weekly accumulation of garbage sealed in plastic bags. The heavy rains tend to fill the tied garbage bags and make them unnecessarily difficult to move. This incident occurred the day before waste pickup by the local disposal agency.

As is my routine I packaged up and sealed the kitchen's accumulation of waste and moved it out into the garage beside the outside door in preparation for the morning pickup. I placed this bag next to it's companion, for the week was a typical two bagger. These two bags stood alone up against the wall, between the car and the door. Nothing else was anywhere near them.

About two hours later my roommate begins a load of his laundry, the washer and dryer are located in the garage too. He retires to his room while I try to watch some TV in the living room. Not more than 10 minutes had gone by when I noticed the smell of something burning. At first it didn't bother me, many chimney's in the area, but the smell of something burning became too intense. So like a dog, I commence the hunt and sniff bit and discover a raging garbage fire in the garage. Luckily the fire was extinguished fairly easily with several buckets of water, left unattended any longer and the whole house would have gone up.

When I talked to my roommate about this incident he stated rather glibly "WERE YOU AFRAID?". No worry or concern of any kind with the exception of my mental state. What kind of response was that? As though the intent was only to cause distress and he was part of it. His only thought was to verify his success at causing me distress and maybe earn any offered reward, SPOOK ALERT! My spook roommate is moving out at the end of this month, thank God!

Diary #21 (Eleanor White)  
January 14, 1998

Days off.

An involuntary e-weapons victim is normally targeted continuously, 24 hours, 7 days, with at least ONE effect.

However, there are breaks which seldom last more than 24 hours. Yesterday was one of those days for me. Every day since late November 1997, my PC is remotely locked up at precisely 8:10 a.m. every day, including weekends, and this extends to any

other Internet-capable PC at my office.

That did not happen at all, yesterday.

Every day since I started MKULTRA publicity back in early autumn of 1997, a great many media web sites either wouldn't load, "didn't have a DNS address", or if they did load were extremely slow. (We are talking major media sites here, which damn well DO have DNS addresses!)

Media in major cities, especially those where there is lots of defense agency activity, were usually not accessible when I had my emailer loaded with messages about MKULTRA.

That did not happen at all yesterday. Suddenly every single web site I tried to access came up, and came up swiftly.

(There has never been same sluggish or blocked performance for web sites having nothing to do with media or government, however.)

For the entire period 8 a.m. to 4 p.m. there was no harassment. I had to go home sick in the afternoon. No "renovation". No induced itch. no artificial racket of any kind. After 4 p.m., however, I started getting "paid back" for my brief relief from harassment, and last night was one of the worst ever for itches, twitches, stings, burns, and "electronic caffeine" signals which just keep you wide awake.

It is a guess, but after 8 years of this, you get much better at guessing: The 8-to-4 equipment operator was off sick.

Other brief off times:

- Electronic effects stop immediately when the power goes off
- There is some relief, some summers. Presumably, this is the harassment operators' vacation. The harassment doesn't stop, but it does sometimes get lighter during warm weather.

Now to a non-guinea pig, this doesn't sound all that unusual. But reader, you have to view this from the standpoint of the usual situation where there is never a minute's relief from all the effects taken as a complete set.

Normally, itching may stop and no birds screech at you, but then your constant artificially-induced tone in your ears gets turned way up. Or, everything including the artificial tinnitus may go low or absent, but then you get fake wrong number calls or fake raps on your door by "solicitors" who only knock on your door.

Under "normal" circumstances, a victim is never left alone in all ways, but these brief breaks as yesterday do show what life is like for non-guinea pigs. Quite a change.

Skeptics: You must explain ALL incidents taken as on complete SET, otherwise, you have not explained ANY.

Diary #22 (Eleanor White)  
January 14, 1998

Diary entry #23 below was supposed to be #22. (Whether it is an external harassment effect is unknown, however, causing things like this is an almost daily routine for e-weapons guinea pigs.)

-----  
Diary #23 (Eleanor White)  
January 14, 1998

Computer invasion by harassers.

Next door to my office is an office occupied by our field technician, who installs credit card machines, debit card machines, and giveaway PCs at our customer sites. The giveaway PCs are used for direct dialing into a UNIX host to place orders, bypassing the need to phone or fax them. They are given only to our better customers as incentives.

This morning she began getting "program too big to fit in memory" error messages from of all programs, simple, basic, time-tested DOS EDIT. She uses this program to customize the DOS startup files on the customer PCs, which are TINY.

Anyone who has used the 69K DOS edit program knows this is a compact, well-behaved Microsoft DOS accessory that literally "never fails" in any PC. The PC in question was a fairly new COMPAQ Pro Linea, with 8 megs total RAM. The mem /c command said that just over 600K was free and available to load programs. There is no need to access any high or extended memory to run EDIT.

The memory tests fine with the CHECKIT utility.

She was in a rush to get on the road, so I copied the even smaller and equally famous for simplicity and reliability NE.COM, which is an early version of "Norton Editor". As a programmer I have used this program for the past 10 years and it has run on every PC, no matter how ancient or how small. It's

program file is 32K in size.

To make things simpler for her, I deleted the original DOS EDIT.COM and renamed NE.COM to EDIT.COM. Surprise! Even the Norton Editor bombed out with "program too big to fit in memory". So far, looks like a problem with the PC, probably memory, right?

WRONG! I re-named the Norton Editor back from it's temporary name EDIT.COM to NE.COM, and IT RAN FINE! The early Norton Editor program is a simple, single file and it does not care what you name it. In fact, it is originally designed specifically to BE RE-NAMED, for users who like to have their own customized versions handy, say, on a network. This was definitely not a failure originating in the Norton Editor.

What has happened here is that, this PC being a clear line of site shot from the suspected operating room of the harassers, less than 100 feet across the street, they have patched in to that machine and are causing it to fail to load any time the command is "EDIT".

This is not difficult - the harassers have done far, far more sophisticated disruption on my own PC with all my Internet software.

This incident may not mean much to those who are not experienced in computers, but any experienced PC programmer at the DOS level will tell you the above circumstances point to remote tampering.

The "read" half of the TEMPEST technology, where someone can read your screen from a few hundred feet away using an antenna similar to a fringe-reception TV antenna, has been publicized on both TV and print media.

What is still not yet admitted is that there exists a much more sophisticated version which can also "write", i.e. manipulate remotely.

Skeptics: You must explain ALL such incidents taken together as a complete SET, or you have not explained ANY of them.

Eleanor White

-----  
Diary #23B (Eleanor White)  
January 15, 1998

Yesterday, Diary entry #23 described weird behaviour of a new PC in good condition while running a new bootable floppy disk. After sending

the original diary bulletin, I ran more extensive tests all afternoon using Checkit version 4, which is a fairly recent version and matches the Pro Linea vintage well.

All tests on system board, memory, and hard drive worked perfectly - no failures whatsoever.

This morning? The machine will not boot to either floppy drive or hard drive - just hunts and buzzes but nothing shows on the screen.

The system board SETUP program does work, and all values are normal.

Harasser damage? Probably - this is often the way they show disapproval of victims speaking out.

I'd bet this messed up PC was done intentionally, but as usual, I can't prove it.

Eleanor White

-----  
Diary #24 (Kay)  
January 14, 1998

Along with the brain and nervous system attacks has come various forms of physical, verbal and mental harassment. These are observable and recordable where the MK-ultra e-weapons "beams" are very difficult or impossible to prove.

When touching my kitchen refrigerator, I was shocked with a huge volt of electricity, which stunned me for a few seconds. My family was there with me and can attest to my reflex action. I called an electrician to correct the problem and the following day he examined the refrigerator and the house circuitry and found absolutely nothing to fix.

Upon arriving at our new home our healthy dog jumped out of the car and ran around gleefully. She appeared at the door several minutes later with what appeared to be human feces smeared in a very undog-like way across the front of her face. That evening she had a very high temperature. We called the vet. He came over and said he didn't know what it was. He reassured us that the feces could not have this effect on her. Her "illness" progressed and changed form with no clue from the vet what was wrong. She panted like she was out of breath, she had unexplained seizures, she had bladder problems, she couldn't sleep, she whimpered in pain. This went on for 3-1/2 months. We finally put her to sleep when it became clear she was not going to improve. At times in the last 3 years I have had symptoms just like that dog.

Returning home one evening I prepared to take a shower. I opened the shower door and saw on the

floor a dusting of black grainy powder. At the time I was new to some of the harassment techniques and simply washed the stuff down the drain and proceeded. For the next week I had an exceedingly painful and itchy red rash, worse at my ankles and tapering off above my knees.

A description of the neighborhood where the following events took place is: A tree lined subdivision, with well kept houses, 3-5 bedrooms, attached garages, home to ex-military, district attorneys, business owners and white collar professionals. No one surrounding us seemed to think the activities described below were abnormal. And went out of their way to make faces, yell and give obscene gestures to my children. We fled after 8 months, losing a considerable amount of money.

Returning home soon after moving in, we found a group of children near our front door. Our cat ran frantically from the group as we approached. One girl said "you better keep your cat inside, it might get hurt." Several days later we returned to find that our cat had been shot off the backyard wall with an air rifle shattering her leg bones. My young children wondered if they would be shot too.

One of my children's rabbit's had just given birth to an anxiously awaited litter of nine baby bunnies. They were in a latched wire cage in our back yard. Two mornings later my children awoke to find all nine bunnies dead in their nesting box, every scrap of nesting material (this consists of wood shavings, grasses, and rabbit hair.) GONE. The cage was neatly latched.

Upon telling our ex-military neighbor of the bunnies death, he asked my child, "And how did you feel about it?" He apparently was unconcerned that someone was roaming the neighborhood at night killing animals. The district attorney's contribution to the event was to suggest that an iguana may have been the culprit! Presumably we were to believe that an iguana which is not a species found in our state, let alone our country, came and ate wood shavings and bunny fur in the middle of the night, and latched the door neatly behind himself. Well, okay, weird things happen but iguana's are reptiles and it would not have been able to move about at night because it was too cold at that time of year. Our taxes go to pay this man's salary. One neighbor walked across the street, rang my bell and said to me "keeping your adrenaline levels up will eventually kill you". Strange, because I had never talked to this neighbor about adrenaline or anything else. At the time I was having major e-weapon attacks which had the effect of massive amounts of caffeine. Dismissing the adrenaline comment, I went on to tell him about the recent demise of the bunnies.

His answer to the event was to say "maybe they are really after you". Was this a threat? The best and perhaps most telling response was from a neighbor who smiled and simply said, "welcome to the neighborhood".

Many times when verbal harassment is about to commence you can see the people involved start "taking their positions" and activity "unusual for the neighborhood" occurring.

On one occasion (and there were many events of unprovoked verbal harassment), I noticed strangers pulling up to our neighbors house, they were all standing around. Not alarming, but a sign of something to come, at least from my experience. I had earlier promised to help one of my children skate in front of our house after dinner. I had planned to video the child like some parents do. I had also hoped to catch abusive behavior if there was any. We proceeded. Not more than a few minutes had passed when the neighbor with the strangers appeared with an entourage behind her. From her yard she started yelling and screaming at me for following her in my car and harassing her and pulling her over on the street. She said she was going to call the police, she called me very unpleasant names and kept the tirade up with the people behind her looking on. She kept motioning me over and saying "come on, come on" as if to begin a fist fight.

If one were to know me at all you would know that her accusations could not possibly be based on any truth and were spewed forth for some other purpose.

Then one young boy that we had never seen before, came in front of our house and started yelling obscenities and saying things like " you fat cow, get back in your tent where you belong" "you pig" " get back in your shack, you don't belong out here." While I was gathering up my children, I'll never forget the look in that kids eyes. They were big and huge and vacant. A future e-weapons operator perhaps?

When trying to keep calm under the attack I had tried to turn on the video, I found that my finger kept bouncing on the switch uncontrollably so that I could not keep the machine on and filming. I abandoned the filming effort to help my children back in the house. No film. What a picture it would have been.

All that night I had excruciating pain, like a washboard with sandpaper was being rubbed on my heart. The vibrations were agonizing. It promptly stopped at 6am.

We discovered during efforts to sell this house that our security efforts were not effective

against the harassers. Despite high security Medico locks on all doors and a security system tyed in with the local Police Dept. our front door was standing ajar on more than one occasion upon returning to the house. We know we had locked up securely before leaving. Under our circumstances it is not something you forget to do.

Kay

Diary #25 (Eleanor White)  
January 15, 1998

Ionizing radiation.

In mid-autumn 1997, I caught a glimpse of an article about a US Army test program where xrays were used to induce mind control effects. The benefit, of course, is the xrays ability to penetrate shielding. Since we, collectively, have had little success with shielding, I thought this may be the harassers' secret.

I purchased a Victoreen pen-style ionizing radiation dosimeter, 200 mR (milliroentgens), which is an electroscope (charged fiber, which, as ionizing radiation hits it, loses its charge and swings across a printed scale.)

This dosimeter arrived on Christmas eve 1997, and in the ensuing 3 weeks plus, I've had plenty of harassment effects but no abnormal readings.

One dosage chart (found via searching Yahoo for "ionizing radiation dose") says normal is 360 mR per year, and in the past 3 weeks, I've had only 5 mR, and my dosimeter travels with me. I'm therefore average.

(The same chart says a survey of international ionizing radiation limits shows 5,000 mR per year is the highest allowed in any country, and that is for those who work with radioactive materials.)

Now - although this suggests xrays are not in use HERE, that doesn't mean they are not in use on other victims. Furthermore, there is more than one way a victim could receive xray doses and still not have it show on an electroscope-style dosimeter:

- The xrays could be tightly focussed and intentionally aimed so the dosimeter isn't hit
- The dosage needed to cause MC effects may be (as scientist Eldon Byrd, former US Navy e-weapons researcher claims) so LOW as to be undetectable by a dosimeter
- The effective dose received may be tiny

even though a PULSED signal with very high peaks but very short duration is used

- The harassers may be re-charging my dosimeter (they can target a 1 mm dia. spot of pain, and I don't doubt they can remotely read and reset (charge) a dosimeter if they set their minds to it)

So - the jury is still out. I'm broke right now, but I may try a film badge type dosimeter when I get rich again. Others may also want to try the film badge route.

Skeptics: You must explain ALL incidents taken together as an unbroken SET or you have expained NONE of them.

Diary #26 (Kay)  
January 15, 1998

[Editor's Note: This is a response to some reader comments on the AZ Central Message Boards, in the "Sound Off" category. In particular, Kay's response is addressed to the skeptics. To visit that paper and it's message boards:

<http://www.azcentral.com>]

My three young children and I are victims of e-weapons technology, MK-ultra style. Like most of you I do not want my vision of the world to change. I have been forced through experience to accept a horrible truth.

The efforts and techniques to torture and destroy my family are extremely advanced. My children are kept up in excruciating pain, night after sleepless night, "Why me, mommy?" "Will this happen to me when I am big?" "Are there any good people left?" The best I can tell them is that they are soldiers in a secret war that good people don't know about, have a very hard time finding out about and a hard time believing it when they do. Robert Becker said in the forward of his book "The Body Electric" ..... "May your children shine in the darkness to come". For us the darkness is here.

For those of you who want more information, please contact me at MYKwest@aol.com Come see the dark circles under my childrens eyes. Hear what they have to say. Judge for yourself, how "crazy" we are.

We should have been the normal, happy family with bright children going to school, having friends, enjoying life. We are still all together, we all still love each other. But something is going very wrong in our lives and it is out of our control. We

live in an electronic concentration camp. This is surely a Holocaust, high technology style. We have found out first hand what all those Nazi experiments were leading to.

For the love of life itself, take a closer look at what we victims have to say. Look at the carefully documented evidence of brain and nervous system weapons development. Consider what it means. Your children's future will be bleak if this horror is not stopped. Once you understand the situation you will know why it is not reported in the general media.

Thought reading, thought implanting, emotion controlling, remote hypnotizing is all a reality. Today. Now

Kay

Diary #27 (Deleted on author's request)  
-----

Diary #28 (Patricia Mougey)  
January 15, 1998

I walked down the basement stairs. As I stepped on the cement floor I looked back at the far end of the basement a huge sudden fear come over me. The instant I felt afraid I heard a female say, "Now, watch. She's going to be afraid to go back there." Instantly I knew why my step-father had become afraid to go into the basement, and at times flatly refused to go down there. He was never afraid of anything or anyone. In fact, in the past he'd followed some of these perverted harassers in his car. It also explained other incidents that affected my thinking and behavior in a very negative and frightened manner, and I vowed then and there that they were not going to get away with it.

Over a period of time other events happened that proved I'd been programmed. One afternoon I felt suddenly afraid that a certain radio of mine had been stolen while I was out. It held sentimental value and I verbally yelled out, "Boy, if you've taken that.!" plus a few other statements. And, then I remembered that only the day before I'd seen it on a table in the basement. I hadn't been out of the house, and knew it couldn't be gone. I also knew that I'd been programmed into being afraid that it was gone, and then filled with concern and anger. And, for a second I WAS angry. In the meantime I continued walking around the house, acting like I was still looking and grumbling aloud. And, then, after a few minutes, I made a verbal statement that I knew where it was all the time and went thru this 'act' to build up their ego... pointed out where it was setting..and then proceeded to tell them what I thought of them. A few seconds of angry remarks could be heard from

their side.

About two hours later they (local harassers) returned home(they live in houses near me) from their almost-daily meeting elsewhere. It was in the summertime and I could hear them yelling to each other about it with such phrases as, 'Oh..yeah, sure. She knew where it was all the time. The H\*""she did." " She was worried..she didn't know where it. was" "She didn't know it was us.", etc., etc. (The age group ranged from teenagers to grandparents..on that date there approximately 8 people, perhaps more.)

They still continue on with various attempts to program me which I still fight. I feel sudden and strong urges to do a certain thing, and the more I fight back the urge, the stronger it becomes. At the same time the angrier I feel. Most of their attempts back then revolved around getting me to go out on my front porch so I would have to witness them at the curb, or in the street, where large gatherings of younger people would be. They would be playing loud music from their cars, some from their homes, and others would be carrying on loud conversations with each other as though they were the only two people in the block, ignoring every one else. At other times it would be basketball games in front of my house, coupled with loud music, etc. More than once I'd hear someone saying, "It's not working. It's not working." Fighting those urges took every ounce of strength and willpower I had. Lately, they've lessened to a large degree, but have not completely disappeared. They don't give up easily, nor do I.

Pat Mougey (Glass City Warrior)

Diary #29 (Eleanor White)  
January 16, 1998

Dream control.

Starting in early 1997, my local harassers began what is one of their longest running harassment methods.

Forcing the victim to dream about certain things has long been a characteristic of their torture. The dreams they force are either neutral or pleasant, with rare exceptions. They seem much more interested in getting you to cooperate than simply terrorizing you.

I've had a few where someone in the dream either repeatedly injected me with an unknown substance or attempted to attach an electrode to my head.

Their dreams are far more vivid, and in my experience are far more colorful and clear, and in my case are far more likely to contain other

people than the natural dreams prior to my becoming a guinea pig.

This diary entry is to describe one very specific repeated dream that occurs nightly. This dream is about all kinds of objects that I manipulate.

A lot of my time during the workday is spent moving equipment, opening computers to install or remove accessory printed circuit boards, or running and terminating data or power cables.

The harassers, almost always midnight or later, allow me to drift back to sleep after they jolt me awake, but AT A PRICE. The price they charge for me to get some sleep is that I must dream that I am manipulating objects, most always objects I use at work.

This manipulating begins when I am relaxed but awake still. When they do this, they ALSO force my hands to go through the identical motions as if I were actually on the job.

This is most annoying, and they know it. I sleep with my fingers poked into holes in large chunks of foam rubber to limit this activity. They often slyly move my hands out of the foam so slowly that I'm not aware until they suddenly cause me to "cut that wire" with my physical hands.

If I fight them, and I can by, say, forcing myself to imagine calm, pastoral outdoor scenery, they will come back with stronger imagery until they succeed or I force myself to stay awake. They DO KNOW when I'm dreaming their stuff vs. my stuff.

The attitude I sense when they succeed is no more sophisticated than a simple "Gotcha", but I have no doubt at all that they use or will use such technology to remotely manipulate saboteurs.

One such occurrence may be co-incidence, but this has happened every single night for the best part of a year.

Skeptics: You must explain all such incidents taken together as a SET, or you have explained none of them.

Eleanor White

-----  
Diary #30 (Kathy Heckman)  
January 16, 1998

I'm subjected to my thoughts being read, auditory feedback, dream manipulation and street theatre.

Here's a daily example:

I was recently on another list and for a while one of their threads was political systems, including communism, facism, and democracy. Because of the volume of entries I did not follow the thread and used my delete key when I came upon these issues. Following my unsubscription, I was auditorily told that "communists have infiltrated our society" and that "You're a communist infiltrator". This was interwoven with other auditory statements that I usually get.

Yesterday a friend called me and we arranged to meet after work for a cocktail. We met at a bar in my town and were discussing our day at work when my friend suddenly, loudly and with a smile announced that he thought he was a commie. This is a man who works very hard to make money for his own pocket. We live in a very small western town that's about as political as a cow paddie.

This is the kind of interweaving of my auditory feedback and street theatre that leaves one wondering if the people they use for street theatre are paid to be stupid or are doing it for free.

>From now on, I'm going to ask people that follow the perpetrators thread why they think they just said what they said. If they're being manipulated, it might help explain how, and if they're being paid, it will make the perpetrators have to do alittle more explaining to the street theatre people what they're doing.

Bye for now,

Kathy Heckman

Diary #31 (Eleanor White)  
January 16, 1998

Another one of those darned unprovable things.

In the summer of 1996 I'd been on the Internet for about 6 months and had been doing some media awareness emailings. Toward the end of a 2,000 email campaign, I came across the official U.S. Navy web site.

For those not familiar with the history of electronic weapons, the U.S. Navy has apparently been at the forefront of the development efforts. This probably explains why the unclassified lead in non-lethal weapons belongs to the U.S. Marine Corps, a branch of the U.S. Navy.

One of the early lead scientists for the Navy is Dr. Eldon Byrd, and he is an interviewee in the July 7, 1997 issue of U.S. News and World Report, in an article titled "Wonder Weapons". He went on record as saying that his work showed signal levels "too small to be detected" can produce disruption of the brain and nervous system. (This may also explain why shielding doesn't ever seem to work.)

OK - so I'm at the U.S. Navy's web page, and I've been a full time guinea pig/victim for about 6 years. I see they have an email address. I write a brief email to them that says:

"Hey guys, stop harassing innocent civilians with your classified electronic weapons."

20 minutes later, the machine crashes. Later I find that both the system board and hard disk are toast. The power supply is OK. Every PC in our company has a battery backup unit containing line filtering. Every electrical panel and telephone line has a set of lightning arresters in addition to the surge protection provided by the electric utility and telephone company. Mid summer, no static.

Quickly I set up another machine to run my Internet account. About 40 minutes after starting that one up, same thing: system board and hard drive are both toast.

This might be coincidence if I were not already a victim of non-stop electronic and non-electronic harassment, the level of which could not possibly be maintained without at least government COVER, if not actual government operation.

Skeptics: You must explain ALL occurrences taken as an unbroken SET, or you have not explained ANY.

-----  
Diary #32 (Kay)  
January 16, 1998

From Kay To Exalted 1, AZ Central Message Boards,  
"Sound Off" discussion

[Editor's note: Kay is currently carrying on an extended chat with the AZ Central Message Board "Sound Off", on an original posting titled: "MKULTRA - North America's Holocaust". Exalted1 is one of the skeptical participants.]

We as victims cannot tell you exactly what is causing our physical pain. We don't understand the science either. From my experiences, individuals can be targeted without affecting a person standing next to you. This makes it even harder to believe. I know.

[Editor's note: One victim reports she has been 5 feet from another person, and the two of them were both receiving simultaneous BUT DIFFERENT voice-to-skull transmissions.]

In an effort to block these signals, I can tell you what has failed.

I have tried traveling out of state, going to mountains, taking a boat, visiting underground caves and I had a Faraday box built. This is specially constructed to keep out microwaves and radio waves. This did not stop the pain signals. I am not a scientist. I am (or should be) a regular

"just a face in the crowd" kind of person.

The only thing I can do is tell you how my body feels and the reactions I have and hope that I am able to convey to you that these are not naturally occurring body sensations.

If you have a stomach ache, one that sends out alarms that 'this isn't right' , how do you prove to me that you really have a stomach ache? Can you describe the difference in quality of say an ache caused by overeating and one caused by the flu? I suspect you can. It's hard to relate in words, but you know the difference. I know and my body knows the difference between something that is normal and natural and something that is foreign and perpetrated.

Some symptoms: stomach ache that feels like a ball of electricity, headaches that feel like a torch burning a hole through your brain, choking sensations like a laser crossing your vocal chords ( a raw throat is the after effect of this), heart palpitations and irregular heart beats, feelings like your chest is going to explode, body vibrations that feel like you are shuddering, painful tones in the ears to the point of causing temporary deafness, sensations of a hot iron on your skin when touched by another person, pain that seems to extract water from your very cells so that you swell in targeted areas, excruciating tingling body pain with just the simple act of closing your eyes, body convulsions when entering selected EEG states. There are many, many more. These sensations change, piggyback, appear and disappear like someone is turning a radio dial. And I can't prove a whit of it.

I understand your frustrated point of view. What we are saying sounds like something to be checked out if it were true, but where is the proof? How can this be what we say it is?

As victims, we have the "benefit" of feeling the pain so that when we research what could possibly be happening to us, the documents and government articles describing plans for remote control of the brain make a little more sense to us. Not much, but a little.

Why would I make this up? To be held up to public ridicule? What can I possibly gain?

Ask my children what they really, really want and they will say "FREEDOM".

Kay

-----  
Diary #33 (Eleanor White)  
January 16, 1998

Definitely not accidental.

I am the lead computer operator and light maintenance person at my company. I've been here six years now and most equipment installed has been installed by me or at least while I was present.

Over my tenure here, one of my jobs is to print sales reports for internal use and our suppliers who pay their sales reps based on sales by region. Some suppliers get their reports as files on diskette. A few still get 5-1/4" floppies.

Late last summer (1997) I noticed that the usual ejection of the sales data diskettes was not occurring from the 5-1/4" diskette drive on the AST Bravo 486/33 machine, about 3 years old and in excellent shape. That's fairly rare but not unheard of either. I forgot about it and the next month it happened again.

When I got a spare moment which coincided with a little physical energy (rare for an e-weapons victim - we appear lazy and absent minded due to never getting enough sleep) I opened the machine up and lo! and behold!, the entire mechanism which pushes the diskette out was ABSENT. Not broken, not stuck, ABSENT! NO loose parts anywhere.

This is not surprising - at my workplace there are signs of tampering weekly, at a minimum.

But what is a little unusual was that this removal operation took time and care to do. The drive was below the 3-1/2" drive, which had to be taken out to provide removal access to the 5-1/4" drive.

The self-tapping screws which normally hold the ejection mechanism bracket to the cast aluminum frame are TIGHT - they do not vibrate out, period.

What is even more unusual: I went to another machine in our front office (many of our PCs do not have 5-1/4" drives any more) which had the 5-1/4" drive, and IT TOO had the ejection mechanism carefully removed!

In this case, due to the amount of work required, there is not a "snowball's chance" that this is anything but sabotage.

Not long before, one of the two machines showed no video. When I opened it up, an expansion slot cover, a strip of metal, was loose in the chassis and removing that fixed the problem. I know for certain, having done maintenance on that machine which did NOT require removal of slot covers, that that occurrence was no acci-

dent either.

In my six year tenure there have been a few  
hundred tampering incidents - no coincidence.

Skeptics: You must explain ALL incidents  
taken as a SET or you have explained NONE.

Diary #34 (Patricia Mougey)  
January 18, 1998

Broadcasting of thoughts.

One summer as I was struggling with acceptance of  
the fact that people could 'hear' me read I spent  
many afternoons at a local Metro park, with a book.  
I've always been an avid reader and always having a  
book with me is habit.

I'd had other confirmations but one afternoon I  
was uncomfortably aware of comments from people as  
they walked by, and a lot of stares. All I was  
doing was sitting in one place and trying to read a  
book. Finally, I noticed a young boy and older  
woman several yards away. As they came closer he  
looked up at her and said, 'Mommy, how can she do  
that without moving her lips?' Her answer was, "I  
don't know". They had been able to hear the  
material I'd been reading from a great distance,  
possibly a half block away. I'll never forget the  
look on her face, and my first thought was, "And,  
from this moment on, you will NEVER be certain that  
your son will not be FORCED to hear a book you  
don't want him to know about." I said nothing, but  
my heart sank, and I finally accepted what I'd  
already known for several months. And, at the same  
time I felt very sad for that little boy.

After that time I would notice people in the park  
saying, "It's coming from her."...."There"  
or....."She's the one, over there." etc..etc. I  
had no idea at that time that these were some of  
the harassers who were there to instigate and point  
fingers...while also making sure their equipment  
was working.

See my story on Mind Control Forum for more  
examples of this....also see the file on John  
St.Clair Akwei & his court case against the NSA.  
...in the "Mind Control Archives".....

Diary #35 (Eleanor White)

The Emeryville Ontario incident.

In spring of 1997, the Tamia family of Emeryville, Ontario (not far from Detroit MI) reported strange telephone/electrical/electronic harassment, which had been in progress for ten months.

I publicized it to the media, offering this public event as an electronic weapons harassment case. The case ended in a bizarre twist, which I believe had two purposes:

- Avoid publicizing electronic weapons' existence
- Discredit me and any others who might have used this case to get the public's attention

This is my personal opinion of what happened the weekend the Emeryville Tamia family's electronic harassment case was exposed as a so-called "hoax":

1. Friday afternoon I sent a fax, which I had offered to do for one of our co-victims, to the Ontario Provincial Police (OPP) containing very specific particulars on a southern Ontario resident whom the co-victim was certain is involved in electronic harassment as a "contract harasser" and who allegedly has possession of advanced e-weapons.

That fax contained the "contract harasser's" name and date of birth, and an offer of a photo.

2. I believe that information allowed the OPP to instantaneously finger someone responsible for the Emeryville electronic harassment, using classified weapons which have leaked from government to criminal and finally to hacker.
3. The OPP found out that the individual was in some way involved with government black operations, and the weapons were indeed classified. They could not possibly release this.
4. Saturday morning, they concocted the 'confession' story, which sounds like the very best explanation they could muster OTHER THAN the truth.

Here are reasons I think this was a cover up:

1. As any 15-year-old boy will tell you, any time spooky things like lights, TV, clock radios etc. start malfunctioning suspiciously, he is automatically the CHIEF suspect!

This went on for 10 months, 4 of which were watched closely by investigators. No son could get away with snapping (usually fairly loud) breakers and making calls on a phone extension that long, especially with all the attention focussed on the site.

True?

2. The "600 volts" did NOT come IN from the telephone line. It was a burst of 600 volts SENT OUT by the investigators to fry the harassment equipment, and it originated at the Tamia residence.

It was reported that 'Sommy' replied immediately 'Are you trying to zap me?', which means a conversation was in progress.

If a conversation was in progress, it is certain the investigators would have visually checked all extensions in the house to be sure no family members were on any other extension, for safety's sake.

If the son was using an extension telephone, as 'confessed', then how could he make a call under these conditions?

3. An earlier AP article stated that both Billy (the son) and his best neighbourhood buddy were CLEARED of suspicion by a police voice analyzer.
4. The AP article makes it plain that one of the harassment methods was to SWITCH CHANNELS on the TV, and, cause a clock radio to go off at random times, not set.

The kid said he "did it with circuit breakers."

How can you change channels with a circuit breaker? How can you cause a clock radio to go off with a circuit breaker.

5. The AP article also said this:

" 'It's been very hard on Billy,' Debbie Tamai said. 'He knew he was being fingered - even though investigators have sat in the kitchen with him WHILE SOMMY WAS TALKING ON THE PHONE.' "

If Billy WAS the culprit, how could he do that?

Lots of fertile ground there for an ambitious investigative journalist.

Eleanor White

-----  
Diary #36 (Eleanor White)  
January 18, 1998

Garbled audio.

I've been a victim of intense electronic weapons activity at home, work, and in community for 8

years now.

A sometimes-favourite harassment tactic of my Hamilton, Ontario harassers is to garble the audio of devices like telephones and the outdoor intercom speakers at drive-thru fast food outlets.

Variations include:

- I can place a food order, but I cannot make out anything the waitress says from the outdoor speaker. I consider this as NOT defective equipment when both the cars ahead and behind me have no difficulty, and, I can hear the speaker when the waitress addresses them.
- On a public pay phone, there is static and earpiece volume jumps from barely audible to blasting at a rate reminiscent of someone pushing a button or toggle switch.
- On a public pay phone, the volume is normal but the earpiece is garbled.

Again, I make a point of hanging around after this happens and I see that others have no trouble.

This does not happen continuously, perhaps so far, a grouping of incidents like these (and they are normally grouped over a short period of time) once every quarter (3 months).

Skeptics: You must explain all incidents taken as a complete set, or you have explained none.

Eleanor White

-----  
Diary #37 (Eleanor White)  
January 18, 1998

Sick days at home-sweet-home.

A pattern observed over my 8 years as an e-weapons victim is that whenever I go home or stay home sick, I can count on at least double the noise-type of harassment.

"Noise-type" means rapping on adjacent walls, thumping very hard on the floor of the apartment above mine, or heavy non-stop drilling into masonry in the apartment below mine. I suspect that the drilling into masonry is not the bldg. structure, but rather, a stone block held against a wall or their ceiling.

In spring of 1996 I had the worst case of flu I've ever experienced - the pain was so severe that it was like having "lockjaw" - I could barely move without hurting all over.

At 11 p.m. on the worst of that flare-up, the apt. below mine suddenly needed lots of "drain maintenance" in the form of a roto-rooter pushed up into my apartment bathroom drain pipe from the apt. below. A 1-1/2 year old building needs lots of that, right? More like: "Hit 'em when they're down."

Skeptics: You must explain ALL incidents taken together as a complete SET, or you have explained none of them.

Eleanor White

-----  
Diary #38 (Eleanor White)  
January 19, 1998

Remote manipulation of body.

During early spring a couple of years back, I was home sick for more than a week. All the usual fake noise, door knocks etc. were in full swing, naturally.

During this period, before I moved my bed from floor level to a steel sleeping cocoon 4 feet above the floor, I found it most comfortable to lie on a foam rubber mattress on the floor day and night. (This allowed the use of a heat lamp to help with the illness also.)

I found that by moving the mattress around my one bedroom apartment every hour or so, I could escape the e-weapon effects like electronic caffeine (keep-awake) signal, vibrating or jerking muscle signals, and even fake phone rings and fake door knocks which were sent via voice-to-skull technology.

Each mattress move brought about loud sounds of moving heavy equipment in the apartment below mine, which was also a base for noise harassment. Moving heavy equipment sounds have been reported by other victims who live in apartment houses too.

But there was one way the harassers kept me awake that was unique and almost incredible, except for the fact that it was repeated several dozen times during that week+ of being home sick.

This way was to use invisible remote manipulation to push up against my relaxed stomach as I lay on one side, hard enough to flip me over like a hamburger. Sometimes this would occur as I tried to fall asleep, other times as I was wide awake.

The sensation was as if an invisible soft rubber ball, perhaps 6 inches in diameter and

mounted on a broom handle were being thrust up through the floor and against my generous middle-aged abdomen.

This was not an occasional hallucination - it was literally strong enough to quickly turn me over even though all my muscles were completely relaxed throughout the movement.

This effect was completely different from the violent spasmodic jerking of limbs, which also took place during this period.

Since that time I have repeatedly but not frequently seen other examples of remote manipulation of objects, not part of my body. This technology exists, surprising as it might seem.

Skeptics: You must explain ALL incidents taken as a complete SET, or you have explained NONE.

Eleanor White

-----  
Diary #39 (Eleanor White)  
January 19, 1998

A suspicious mechanical death.

In my 8-year experience as an e-weapons victim, I have had many appliances destroyed without any apparent causative condition like extreme age, mishandling, overloading etc.

My local harassers have usually prepared a special more intense than usual 'suite' of harassment and often destruction over the Christmas - New Years' holidays. The 1997-8 holiday period was one of these. On the destruction list were a mini cassette recorder and a CD/tape/radio player.

I just picked up my CD unit at Radio Shack, and their technicians were rather amazed.

Apparently, the CD shaft bearings went bad.

I don't know how often that happens in units not mishandled and just a little more than a year old, but the mechanical loads imposed by a lightweight CD disk, and the low rotation speed would seem to add up to bearing failure being quite rare. This is a table top model, not a jogger's portable.

A couple of days prior to the total failure, I did hear a little scraping from the unit.

Surgically precise remote mechanical and electrical manipulation are hallmarks of the harassers I deal with, and this seems well within their capability.

Can't prove it, unless the finder of fact is willing to take ALL incidents like this and weigh them as a complete SET. If that is done, the cause of this unusual failure becomes obvious.

Eleanor White

---

Diary #39B (Eleanor White)  
January 20, 1998

"Bad Job Syndrome".

Familiar to all e-weapons victims is "Bad Job Syndrome".

What this means is: Whenever you require the services of the trades, you can count on the job being royally screwed up. In my case, this has happened consistently, even for jobs I've contracted for my company.

Skeptics: I'm 56 years old, old enough to distinguish a normal screw-up rate from one where literally every single job gets screwed up, so please, don't tell me this "happens to everyone", because it doesn't.

Diary #39 described how my CD player amazingly, in spite of low rotation speed, very light balanced load, and conservative use on a steady table top, had it's spindle and bearings fail mechanically after a little over one years' service.

I got it back yesterday, along with a bill for \$90.

Guess what? No surprise to e-weapons victims - it still scrapes and won't quite turn.

Why would the weapon holders pay what are probably substantial bribes for this "service"? Trying to make us look insane. Impossible? Every one of us victims would have said that too before it started happening to us.

Eleanor White

---

Diary #40 (Eleanor White)  
January 20, 1998

Computer virus.

An earlier diary entry spoke about our field technician's machine acting strangely, overnight from when thorough checks said it was AOK.

At noon the following day, it again had trouble, going blank. OK, another virus check and CHECKIT run. This time the current version of

Norton Anti-Virus turned up a boot sector (a special track on the hard drive that allows the newly switched-on machine to "get its bearings") virus.

The virus, should anyone else wish to check for it, was called the "NYB" virus.

I checked around other PCs too - including those in the computer room. My two Internet machines also had the same virus.

A third machine parked outside the computer room had it too.

I NEVER download software from the Internet - we always buy it from the factory in shrink wrap. (Text documents don't carry viruses - just programs that run.)

I also did virus checks on those machines over the Christmas holidays.

I checked back diskettes also, and found it, of all places, on the Internet software suite furnished by my Internet Service Provider two years ago.

My boss's machine was clean, indicating that the Internet diskettes picked it up well after the initial install in 1996.

The diskettes remain locked up at night.

I don't know how this happened, and the only explanation I have is that somebody broke in and did this overnight. We have a monitored alarm system here. I have one at my apartment as well.

I know from a couple of hundred incidents of damage, theft, or intentionally misplaced items that my harassers routinely bypass that alarm, which is hard-wired into the phone system, not plugged.

This diary entry is an alert to co-victims about this NYB virus. The past couple of days, I noticed all WINDOWS software was running very slow, and even keystrokes, which usually appear instantly as you strike the keys, were delaying up to a full second before they appeared on screen.

My suspicion is that the harassers knew about the other machine with a problem from my emails, and decided to "help" by planting additional problems.

Their motto seems to be: "Hit 'em while they're down".

Skeptics: You must explain ALL incidents taken as a complete SET, or you have explained NONE.

Eleanor White

---

Diary #41 (Eleanor White)  
January 20, 1998

The old "found nothing" trick.

From time to time, but not often, e-weapons victims will have their premises checked by "experts" for radio signals which might cause biological effects.

The result is as predictable as sunrise: "We found no signals out of the ordinary" or some similar phrase.

Why? Because the same technology which can generate painful, annoying or mind-controlling signals can EASILY scan the premises and know precisely when monitoring equipment is in use.

Even low tech monitoring equipment operated by the victims causes instant cessation until the equipment is shut off or removed. If the victim leaves the equipment switched on, the e-weapons harassers have a huge smorgasbord of transmission modes and effects which can readily substitute, and do so without detection.

I've had a camcorder aimed at myself while lying quietly during time periods when the harassers are most likely to cause their violent muscle jerks. Almost immediately, when the hour long tape expires, the jerking starts.

If I keep rewinding and re-starting it, they go to less visible methods. It is impossible to win the detection game against people who have, essentially, Superman's xray vision.

This diary entry is to inform outside observers that when you see, as with both Cheryl Welsh's and the Emeryville Tamia family's detection attempts, that "nothing was found", that does not in any way show that signals were not and will not be present when the detection equipment is off or not in use.

Eleanor White

---

Diary #42 (Eleanor White)  
January 20, 1998

Boom-boom from below.

A couple of years back, during a period when I found it more comfortable while home sick to lie on a foam rubber mattress on the floor of my

apartment, my e-weapons harassers were headquartered in the apartment below mine. (They are now in that one, the one above, and one beside me on the same floor.)

During this period, one of their tricks was to detect my heartbeat, presumably by it's electrical signals, and play it back through their stereo system, at high volume. A very eerie sensation.

A recent (January 19) article in the Washington Post shows that this is clearly within present technology:

"The field is faint, but it can pass through almost any physical barrier. The LifeGuard can pick up on the strongest part of the field, the heart, through barriers including concrete walls, heavy foliage and rocks. Company officials say the LifeGuard can detect a person in less than five seconds and can pinpoint his or her location with a high degree of accuracy."

This article goes a long way towards validating our claims.

Diary #43 (Deleted on author's request)  
-----

Diary #44 (Ronald)  
January 22, 1998

I have a 1977 Ford Van and they have been stalling that for years but not so much lately. They usually do it at specific locations which is how I know they are responsible. I have a late model car also, they can't stall that but can make it start running badly, at the same spots as the van. I can usually start the van up after a few minutes.

Ronald

-----  
Diary #45 (Eleanor White)  
January 22, 1998

Too many mistakes.

One of my jobs at work is to set up new UNIX user IDs for our customers who use direct dial-in ordering. When a new user is set up, you have to assign them a password.

The UNIX add-user program requires you to enter the password twice and then compares the two entries before accepting it. Since it is a courtesy to the customer, we place emphasis on being accurate.

There is often half a day or a full day's delay between when I enter the new password

and our roving technician visits the customer to set up the software at their end.

This work has been in progress for almost 3 years at this point, and has progressed smoothly until roughly December 1997. At that time, at least half of the setups I've done have resulted in a phone call from the field technician asking me to check the password.

I'm by no means perfect, but with the double entry required, errors in setting up passwords have been quite rare. This direct dial-in sales project is a very high profile project, watched closely by management.

There is no doubt that the passwords are being hacked. The do-not-require-change feature is the UNIX default, so the passwords do not change themselves.

A similar situation has occurred with the reports I send to customers and suppliers on diskettes. At least once each month, important customers or suppliers get a diskette which they can't read. We use nothing but brand new 3M diskettes, a premium brand, to distribute data on.

Skeptics: You must explain ALL occurrences taken together as a complete SET, or you have explained none of them.

Eleanor White

-----  
Diary #46 (Patricia Mougey)  
January 22, 1998

In the early 1980's in my mother's home.. she and I sat there being bombarded with verbal statements of other people. At one point she told me what she was hearing, it was that of a man's voice, while at the same time I was hearing only a woman's voice.

This happened more than once, but also proved they could make two people in the same room hear whatever they wanted them to hear and it would NOT be heard by the other person. I continued keeping notes, while I kept my own counsel. I had nothing to base my experiences on and could hardly go to the authorities claiming we were hearing 'voices' without being branded in need of psychiatric help. Because this was the time period when talk shows were filled with psychiatrists and others on the air saying if you hear voices, you need help. Bag ladies on the street were being portrayed as hearing voices, even a few TV movies were produced with this theme in mind. I knew we weren't crazy, and intended to prove it.

At another time, several years later a conversation between two people in the group: The female asks: "Why can't Harry hear our voices and Pat and her mother can? Is it because he's hard of hearing?" (Harry is/was my stepfather) Reply: "No...and he's NOT hard of hearing. It's because we use different frequencies." See my story on Mind Control Forum.

Without keeping notes over the years I would have none of the information to refer to, nor would I have other information where a room full of 'electricity' was in use which caused a person visiting it to 'lose his memory'. He was unable to recall anything with all that electricity around him. I didn't know what these things meant, but I recorded them in my journal. (See my story on Mind Control Forum)

Above are three examples of electronic equipment affecting the hearing and memory of human beings, without their permission....The first two before 1984, the third approximately late 1985, early 1986. This is January, 1998.

So, how long has this covert testing been in existence? It's clear they didn't start yesterday. (Where did one or more of the harassers get the idea that Harry was hard of hearing?) If you'll open your mind, do your homework and put everything together, the answer will pop up.... quicker than a 'pop tart. It's silent, successful and backed by people with deep pockets and endless funds. The pain continues as they add more and more human beings to their silent 'victim' list ....

Diary #47 (Eleanor White)  
January 23, 1998

Computer equipment failure epidemics.

I've worked at my present job for six of the 8 years I've been an e-weapons victim. I look after day-to-day operation and light maintenance of the computer system.

Starting in late autumn, 1997 and continuing up to the present, there has been an epidemic of computer equipment failures on relatively new (say, 2 years) PCs and components whenever I touch a machine.

The list over the past two months includes:

- Corruption of software on a standby UNIX host that never gets touched except for simple nightly updates of its databases i.e. UNIX refuses to boot, and it is not on the same partition as the updating.

For a couple of months we had no standby UNIX host.

- Corruption of software on a UNIX host that went from main to standby, same thing - UNIX refuses to boot. Both this machine and the one above have been examined by large service organizations and no cause is apparent.

So we still don't have a standby host - waiting on service for this one.

- Failure of tape drive which mysteriously "fixed itself" when a spare was added to the SCSI chain (i.e. we were no longer solely dependent on that drive)
- Failure of AST Bravo 486/33 which had been running perfectly when I attempted to take it off the shelf to put it into use - wouldn't boot. Motherboard replaced.
- Video failure on AST Manhattan Pentium server - had to install new video card in order to get WINDOWS to run
- Video failure on AST Bravo 486/33 when I installed a network card using static precautions. No interrupt or I/O conflicts, motherboard video just plain stopped working.
- Second video failure on different AST Bravo 486/33 when I took it off the shelf to put it into active service

That's a lot of failures for a two month period and including machines which worked fine when put "on the shelf" as spares and were not very old when that was done.

The spares are outside the locked computer room (no storage available inside) and are in the same office area in which frequent harassment occurs - any labels I post are torn off overnight, power and data cables are loosened, a few critical files on PC boot disks are deleted, CMOS setups are changed, all this more or less a steady diet.

In summary, if I try to establish backup and spare machines, it is almost guaranteed they will be hacked and useless when needed.

Skeptics: You must explain ALL occurrences taken as a complete SET or you have explained NONE of them.

Diary #48 (Eleanor White)

January 23, 1998

Theft of consumable supplies.

I have experienced two types of consumable supplies theft:

- Outright theft, during one of the harassers' frequent daytime break-ins
- Artificially high consumption by way of hypnosis using e-weapons

The high consumption type of theft can be foiled, but at the price of eternal vigilance, which over time can sap the victim of energy.

I've frequently caught myself taking a large mouthful of Plax, when not more than a couple of teaspoons is actually needed. Ditto for laundry soap, toothpaste, skin cream and prescription medication needed to overcome the daily dosage of "microwave itch".

Excessive consumption of food, and things like margarine are also targets. Artificial hunger is one of their very effective tactics.

The coercive power of the hypnotic e-weapons is very powerful, and hard to defend against even when you know full well it is being applied.

To people of medium to high income, this type of attack is not especially bothersome, but when you are among the working poor, it causes quite a bit of stress.

Skeptics: You must explain ALL occurrences taken together as a SET or you have explained NONE.

Diary #49 (Eleanor White)  
January 23, 1998

Remote nose pinch.

Shortly after coming home from work yesterday evening, and as I was getting supper ready, the harassers used their remote muscle manipulation capability to suddenly pinch my nostrils shut and keep them that way for several minutes.

The same rubber expansion rings I use to eliminate this pinching when I'm trying to sleep did not help - this time the force was too strong.

Fortunately, after several minutes the harassers relaxed their signal and supper was normal.

Skeptics: You must explain ALL occurrences

taken as a complete SET or you have explained  
NONE of them.

Eleanor White

-----  
Diary #50 (Eleanor White)  
January 23, 1998

Fake tinnitus.

Increasingly, e-weapons victims are reporting  
intrusive and artificially induced ringing in the  
ears. I know it is artificial because it varies  
whenever I switch various equipment on or off.

This "signal" is at the highest end of the audio  
spectrum and varies in volume.

I have no idea what it's purpose is, but believe  
it may represent some sort of "marker" to make  
my brain electrical activity easier to read, track,  
and possibly disrupt or change.

To any readers who are not sure if they are  
e-weapons victims, this fake tinnitus is a strong  
clue that you are.

Skeptics: You must explain ALL occurrences taken  
as a complete SET or you have explained NONE of  
them.

-----  
Diary #51 (Patricia Mougey)  
January 25, 1998

A series of events where my breathing was  
affected...this lasted for a two year period.

First time, just BEFORE my throat began to close up  
and I found it difficult to take a breath I heard a  
female say "Ohh....look, she can't breathe.  
Ohhh..what a shame." I had barely enough breath to  
call a rescue squad. I was in the ER room twice  
that year for the same reason. However, at various  
other times, in very humid weather, my throat would  
close up on me and I could barely breathe. This  
happened both in summer and winter time. Poking my  
head outdoors in the winter time gave some relief.  
Comments are always heard just one second before  
the breathing difficulty.

This is a group with egos that need extreme  
power-trips. Letting the subject know they're not  
only watching , but causing the discomfort has  
always been a must. (This happened several years  
ago. My lungs were not that bad at that time.  
However, that is no longer the 'research'/testing  
they're involved in. I still have emphysema. Do  
they use real doctors/interns? From what my  
observations and notes tell me, yes.

Diary #52 (Eleanor White)  
January 25, 1998

"Microwave itch" update.

In my 8 years as an e-weapons victim, the harassers' nighttime favourite harassment method has been to induce "microwave" itch on whatever body parts were in contact with the mattress.

Recently, scouring pads glued to the floor-side of carpet fragments have proven a good antidote. If scouring pads are used individually they are rolled into tight pencil-sized cylinders by the harassers' remote manipulation equipment - you can even feel this happening as you lie still. But the carpet fragments hold an array of scouring pads flat enough that it's hard for the remote manipulation device to roll the entire carpet up.

As predictable "revenge", the harassers have now been zapping me daytime, especially in the upper back region, where it's difficult to scratch, both at work and driving the company truck.

Here's a thought that seems to be working OK today - for women, wear an extra large scouring pad, say, 8" x 10", which can be had in some hardware stores, tucked under your bra. This is reasonably comfortable if you use a rolling pin or some substitute to crush and flatten the pad before using it this way. ("Raw" pads can be too scratchy.) You might also place the pad under a cushion on a hard chair you frequently sit on, to "break it in" over a few days.

Men could use an ace bandage to achieve the same result.

Skeptics: You must explain ALL occurrences taken as a complete SET, or you have explained NONE.

Diary #53 (Eleanor White)  
January 26, 1998

Same equipment, different performance.

At my work we have been using direct dial-in UNIX computer to take orders from our customers who have modems. We have a modem bank, and what is called a "hunt group" of data-grade telephone lines. If one line is busy, the next free line answers the call.

Right from day 1, we have had endless trouble.

If a low-numbered line doesn't answer (which is a modem malfunction) the Bell System will not try any of the higher numbered lines. Higher numbered lines only get calls if the low numbered lines are BUSY.

The only remedy for that is to switch the modem off then on, which gets to be a very busy task when traffic is heavy.

Another phenomenon we experience is mysterious modem users who dial in but do NOT log in - and just keep the line open for hours.

We have tried both U.S. Robotics and Hayes modems, the roughly \$500 class, not the 'cheapies', and make of modem makes no difference.

As a desperate remedy, I designed and built external circuit boards which sit on a small wooden platform atop each modem, and watch for several conditions, among them:

- A line that rings but the modem does not answer
- A line that answers but the remote end sends no data (i.e. does not log in)

After a few minutes, the device, called a "modem minder", will switch the modem off for 5 seconds then back on.

This has not just 'improved' performance, but has actually made normal usage possible. Without the modem minders, we'd have to have somebody on duty watching for hung modems 24 hours, 7 days.

Other local businesses with very similar setups report none of these troubles.

We have had several top-rated consultants from computer service firms, and the Bell Canada staff, and none of them have found any problems with the setup.

But the TELLING event was late last autumn (1997) when we opened up an identical UNIX machine at a branch office. We have been cutting customers over to that machine since then, and: You guessed it - NO PROBLEMS EVEN THOUGH THE MODEM MINDERS HAVE BEEN SWITCHED OFF.

Since the telephone system is a prime 'playground' for electronic weapons harassers, and in light of the extremely high failure rate of all equipment I personally touch, I see this different performance of two identical systems as showing the clear effects of targetted harassment here, but not at the branch.

Skeptics: You must explain ALL occurrences taken together as a complete SET, or you have explained

NONE.

Eleanor White

Diary #54 (Eleanor White)  
January 27, 1998

Remotely triggered splashes.

This morning as I was making breakfast, my harassers decided to give me a couple of wakee-upees.

I had modified a plastic cap on a Realemon squeeze bottle so that a small nozzle from a Radio Shack precision oiler could be attached, making the bottle much handier to use at the table.

The bottle it came from was full, but capped with another unmodified (no nozzle) cap. As I removed the unmodified cap, it whizzed out of my grip and I was startled to the point where I spilled some lemon juice. Hey, no problem, it cleans up fairly well.

Then, I tried putting the un-nozzled cap on the bottle which was still sealed by it's plastic membrane. I had unusual difficulty, which I've learned over my 8 years as an e-weapons victim can indicate the spooks were interfering with normal muscular coordination.

I made a second try, and just as the cap began to engage the bottle neck's threads normally, the bottle literally exploded in my face, this time giving me a real bath in lemon juice.

I have never had a seal membrane act that way, and I was not squeezing the bottle nor turning anything with any degree of force. Purely spontaneous. Very typical of spook influence in the kitchen where all sorts of spills and winging cookware around unexpectedly takes place.

This may not seem like the end of the world, but when you have a steady diet of it for 8 years, it gets frustrating. Imagine people getting what are probably above average salaries for causing some poor slob to spill lemon juice at 6:45 a.m. in his/her kitchen.

Skeptics: You must explain ALL occurrences taken together as a complete SET, or you have explained NONE.

Diary #55 (Eleanor White)  
January 28, 1998

E-weapons harassers' celebration of Wednesday.

Kind of a miscellaneous anecdote - the e-weapons harassers usually have one or more surprises planned on me when I arrive at work.

Today they celebrated by setting up these items:

1. Yesterday, for no apparent reason, and carefully double checked by our programmer-consultant, a file on our UNIX host refused to transfer to DOS for emailing. (We email from WINDOWS.)

This morning it did, and no expert has any idea why. UNIX permissions were set, and the user was root.

2. Two of the most damning files for my MKULTRA site (<http://www.nas.net/~cirrus>) were deleted from my hard drive and one other backup place. I know they were originally there because the files were still on the web site itself.
3. Our APC Back-UPS 450 VA workstation battery backup units are a favourite of the harassers, because they have internal beepers. The harassers routinely "follow" me around the building, beeping some of the units at the exact moment I pass by. This has been witnessed by co-workers.

The beeper can be defeated with a couple of "DIP" (tiny toggle) switch settings at the back of the unit. Those switches are recessed inside the unit case, and a mechanical pencil or pen is needed to move them.

For the past couple of days, a new unit not in use has been beeping at me when I pass. I set all new unit DIP switches for silence right as they are removed from the box. I did that on this unit.

This morning I checked the unit, and someone had moved the switches back to the 'beep' position. That is not possible by accident due to the recessed location for the switches.

I don't know if it was done overnight by harassers let in by the cleaners, or remotely, either one is possible.

So that's a typical morning for an e-weapons victim.

Skeptics: You must explain ALL occurrences taken together as a complete SET, otherwise you have explained NONE of them.

-----  
Diary #56 (Deleted on author's request)  
-----

diary #57 (Eleanor White)  
Februray 1, 1998

An optimistic entry.

Last night, as with most Saturday nights, the harassers applied extra harassment in the form of sleep prevention (electronic harassment) signal, keeping my skin electronically "on fire" in that unique type of itching only other victims know, plus the usual assortment of induced bumps on the ceiling (probably direct to skull, not actual bumps), stabs with electronic "hot needles" and artificially induced spasms. I'm exhausted this Sunday morning as I start the Sunday shift.

Nevertheless, something is different.

Now when I walk out the apartment door into a flock of screaming ravens, or get hit with a particularly powerful surge of tinnitus, or get hit with a blast of memory erasure, instead of hopeless harassment forever, I now hear the agonizing cries of Satan, who is now losing this one and is no longer on top of the mind control phenomenon.

The watershed was actually last spring when three harassment technologies were re-invented as commercial applications:

- voice to skull (USAF bird calls carried on radar signal project)
- thru the wall radar (articles plus the admitted use at the Shirley Allen/Roby IL standoff)
- long distance electronic ventriloquism, i.e. the "acoustic heterodyne" speaker systems due on the market in 1998

Since then, we have had the Japanese MCTOS mind control equipment, and the people tracking via heart signal equipment.

We now have enough naughty e-toys that we can back our stories up with actual, available-now devices.

One of our co-victims was told by operator 1019 at America's Most Wanted TV staff that they are now studying electromagnetic harassment.

Of course, the Japanese "Pokemon" TV experience in which simple flashing light put 600+ kids into hospital, some for more than 5 days, also bolsters our claims.

Dan Rather's (CBS evening news) December 97 announcement that police helicopters are slated to be fitted with electromagnetic pulse guns is a dramatic assist to our cause.

The Christian freedom group "Proclaim Liberty Ministry" has been sending newsletters for some time to me, devoid of any MC information. Now, their periodical newsletter "Liberty Letter" received Friday past includes an ad for a 4-hour video "EXOTIC WEAPONS OF MASS CONTROL", an ad for a Mel Gibson movie titled "Conspiracy TheorIES" (not the Gene Hackman film) in which he "exposes MKULTRA, CIA mind control, etc." and a video titled "Satanism & the CIA International Trafficking in Children", by Ted Gunderson, formerly of the FBI. This is a major leap forward.

(Anyone wanting to order these:

EXOTIC (4 hours)...\$ 39.95 1-800-729-4131  
Mel Gibson video ..\$ 15.00 1-888-820-2126  
CIA-children .....\$ 20.00 1-888-820-2126)

And at my local level, the harassers have been so persistent that several of my co-workers have witnessed their handiwork, and now believe it is not fiction. To the best of my comprehension, my doctor and the local police detective who is handling my case now believe what I'm saying is at the least probably true.

The tide of exposure is coming in slowly, but not all the covert organizations in the world, not even Satan himself, can stop the re-invention of the harassment technology and it's exposure now.

1998 is looking very hopeful - hopeful enough that victims can now approach government and the media with confidence that the technology to do what we claim is clearly available, given that classified technology is often 20+ years ahead of commercial technology.

I hope my co-victims can now hear Satan's last gasps in our daily torment. We're finally headed home, gang!

Diary #58 (Roy Bercaw)  
February 2, 1998

A media letter from e-weapons victim Roy Bercaw.

[NOTE: "TAB" is the publisher of a group of Boston, MA community newspapers.]

Letters January 6, 1998  
TAB  
254 Second Avenue  
Needham MA 02194

Editor,

MIT's President says disingenuously "MIT believes

that its researchers acted properly under then-existing standards and denies any wrongdoing." (Linda Rosencrance, "MIT, Quaker Oats settle with Fernald School," Cambridge TAB, Jan. 6-12, 1998, page 9) The Nazi doctors who performed human experiments without consent also believed that they did no wrong.

The Nuremberg Code, designed to protect human rights in experimentation, was the response of the American Military Tribunal for the Doctors' Trial (Dec 9, 1946 to Aug. 19, 1947). It cannot be true that the MIT researchers did not know about the Nazi experiments. The Declaration on German Atrocities (Moscow Declaration), was released on Nov. 1, 1943, signed by Roosevelt, Churchill and Stalin. The cereal experiments, which violate all ten statements of the Nuremberg Code were conducted between 1945 and 1956.

50 years later the US government is still conducting human experiments on their own civilians, using them as "guinea pigs," without consent. The present experimenters also think they "act properly and deny any wrongdoing."

Contrary to assurances given by the CIA to the Church Senate committee, MKULTRA experiments did not end in 1978. The product tested was changed from drugs to nonlethal electronic weapons, which are studied at MIT today. The objective of controlling human minds was extended to controlling human behavior, using results gleaned from earlier CIA drugging experiments at McGill University.

Will it take forty more years to expose the nonlethal weapons testing going on today? Why aren't any of the sadistic MIT researchers being exposed for their crimes against humanity? Seven of the Nazi doctors were hanged.

Diary #59 (Mikey235@aol.com)  
February 3, 1998

The following is a summary for the month of January, 1998. Please share with serious researchers and victims only.

I have been subjected to increased sleep deprivation the last month after a reprieve over the holiday season. The microwave induced voices have also increased using what appears to be the cloned voice of an employee of the agency I worked for when this all began. I am experiencing increased dreaming and mental activity with occasional night sweats. Eye pain is sometimes

associated with the dreaming and mental activity. Black circles have reappeared around my eyes. I experience intermittent lower back pain along with bouts of fatigue and short bursts of energy. Periods of rage have been tempered by increased suggestions of affection for a former lover. For the past three weeks I have had a hard time getting to work on time. Through it all, I have continued to write select senators to support Senate Bill 193. I have also uplifted this cause locally. I recently shared my story with a psychiatrist, but found myself having to defend my beliefs.

Mikey235@aol.com

Diary #60 (Eleanor White)  
February 3, 1998

Sneaky little trick.

My local harassers are aware I've been sending an article titled "Naughty e-toys require new toys" to both media and government addresses. I plan to send this to all state and provincial government members as well as federal and media, and this is a huge job which will probably take all spring.

I prefer to jump from one destination type to another to keep coverage moving in all arenas, i.e. the Ohio state legislature today, Nova Scotia tomorrow, campus papers the next day and so on.

To do this I must use the browser's already-sent feature, which on my browsers turns a clickable email address from blue to purple.

This feature involves the keeping of a file of already-sent email addresses, named NETSCAPE.HST (HST=history).

Last night, a clever harasser somehow got this file erased, making it necessary now to guess, and in the future make written records of where on each list I was. Makes the job more difficult, but still not impossible. A duplicated message isn't the end of the world.

Skeptics: You must explain ALL occurrences taken together as a complete SET, or you have explained NONE.

Diary #61 (Anonymous e-weapons victim)  
February 3, 1998

E-weapon effects on bodily functions.

I would like to tell you a few things about things we dare not talk about but which are a favorite to the imbeciles as I call them because only imbeciles could continue doing this with every intention premeditated. They are like gunmen expressing their domination on hostages with guns and cannons bought with the money they stole from them.

Sciatic nerve simulation and constipation vs diarrhea approach

I always had very strong back muscles especially those that protect the vertebrae.

This last summer in three months with terrible and repeated electromagnetic shocks to the lower back at any time of day or night and whether I was moving or not they have succeeded in destroying the mass and firmness and protection that I had always had. The purpose of this I found out was not only to stop me from working or relaxing but was to reach the sciatic nerve that now they can hurt terribly with now but a very weak signal transmission which naturally can be even harder to detect.

Constipation

In 1989 as I had been made conscious of what was behind everything that had been happening to me for

the last 15 years I was shock to the point of going wild to find them electrocuting me as I was going about daily evacuation. And not anywhere but right there. The purpose was to destroy the capacity to execute normal physical needs and then with constipation installed and belly ache provoked either normally or by them create a hard cell plug which they could use to rip as evacuation was forced by contraction.

But there is something else to this technique. They contract the anus muscle partly which force the evacuation sideways. To this add irradiation day and night on the same but larger region of the body and you end up with all is required of loosenees provoked not by age or physical condition but by repeated electrocution and irradiation. Finally they reach their goal.

I hope you understand what these three points mean.

#### Diarhea

A few years ago we heard that an equipment had been invented to control a mob. Well the technique being too obvious, especially if it occurred at the same time on a large group of people they choose to create the contrary, constipation (instead of relaxing muscles and provoking bellyache they contract the muscles stopping normal body evacuation) . Nobody wants to talk about it and then they can do it to anyone...

Note. Eleanor one argument that could be very influential on the media and people who still hesitate to help us would be to let them know that we may be fifty or somewhat more that are informed but many more are still being aggresssed without them knowing about it; an old man to a new born child can be the target of those imbeciles destroying an old man's relation with with his children or the fortune he was aiming to give to them or destroying what could have become a beautiful and maybe a powerful personality God had reserved for the newborn.

We the 60 victims have been made conscious of what is happening to us after many years in some cases because probably in a weaker position to defend ourselves than others who the imbeciles prefer not being made conscious. Get it...

So in fact and we know, they are as much victims as we are but could do something about it knowing what is done to them, from losing a girlfriend to losing physical attractions done by modifying complexion or reducing skin firmness or other means ...

Anonymous e-weapons victim

-----  
Diary #62 (Patricia Mougey)  
February 5, 1998

[E.W. Note: When Mrs. Mougey refers to "hear" and "see", she is talking about a common experience among e-weapons victims: The ability of the harassers' equipment to transmit their remarks directly into the victim's skull, and to see thru the victim's eyes.]

In my story on Mind Control Forum I go into detail about interference with electrical/electronic equipment...including my new computer and printer.

Last week, (last week of January, 1998) while printing out pages to mail to Senator Mike DeWine, one female harasser said, "Is that 100 pages? OK." I looked down, and immediately the print began to fade on one line, and then the balance of the page went blank.

Much earlier ( in 1997), I heard a male voice say, "Hey...isn't the print on her page a little light?" Within 2 seconds the copy being printed turned darker.

I'd wondered why the print never faded over several pages, as it does when the cartridge was truly getting empty, and they've answered the question... they control it so it "runs out of ink" whenever THEY decide it should.

Pat Mougey

\_PS: I seem to have a group of people who like to announce their superiority by forcing me to hear their remarks. Their ego has always been supremely high.

-----  
Diary #63 (Eleanor White)  
February 6, 1998

The POWER of memory erasure technology.

What I call "memory erasure" is probably a case of electronic hypnosis - that is, the victim is caused to forget things because they are induced to focus on something else. At least that is the impression I get during the now frequent memory erasure episodes.

I have to take an important stomach medication exactly once a day - otherwise I get very sick. This medication is dispensed from 14-day cards with each day of the week printed on each tablet's recess.

The e-weapon harassers have lately (Jan-Feb 98) been VERY successful in erasing important things,

like the medication, and like important tasks at work. My co-workers will vouch for this.

An example of just how powerful this technology can be is demonstrated by the fact that at my small dining table, I keep the dispenser card of stomach pills clamped directly at the center of my eating place, on TOP of the table, using a large foldback paper clamp.

The dispenser is actually curled up so that it projects 2 inches above the table top, and it definitely contacts my hands and utensils when I eat. It is frankly a nuisance.

I also keep an empty pill dispenser on top of my monitored burglar alarm panel, which I have to move in order to set and unset the alarm.

In spite of these precautions, the harassers succeed in getting me to forget my pills on an average of twice a week.

The reader is urged to ponder the implications of this - there is no discernable effect to clue in the victim, and there is no reason this can't be happening to many more people than we approx. 50 known e-weapons guinea pigs.

There is no reason it can't be happening right now to government leaders in sensitive positions.

Skeptics: You must explain ALL occurrences taken together as a complete SET or you have explained NONE.

Eleanor White

-----  
Diary #64 (Eleanor White)  
February 12, 1998

Attitude indicator.

This incident is so small that it's hardly worth writing execept for one thing: It shows the harassers' mindset and extremism very clearly.

I've had a couple of courses in the UNIX operating system and several years' experience. Nevertheless, I've found that books for beginners in any field often have very handy information which even an expert may have missed.

I purchased the "for Dummies" book on UNIX. After finishing the book, I put it on our company bookshelf, a large unit in the main office. The books there are kept in cardboard magazine holders because many of them are thin and paperback.

On the morning after I placed the book on the shelf unit, I came in to find it had been lifted

and tilted back so the "for Dummies" portion of the title was showing. This is classic harasser activity. Their orders are to do every possible thing each and every day to make the victim look inept.

A much earlier incident at another company - there was a technician there who was on the night shift and who regularly sabotaged my machine and files, and lab test setups. He was a true mental case - perfect harasser material.

I set up a cordless phone base station so it connected with a modem and made it possible for the receptionist to transfer a call to my cordless unit rather than a normal desk unit. The modem provided a CSA approved interface to the phone line but it's data section was not used.

While I was showing the hybrid cordless unit to one of the managers, this clown walked up and pointed out that the mouthpiece holes were blocked off - that is, they were fakes. The actual mike was vented by a tiny pinhole at the lowest end of the unit - a feature now common on cell phones.

He did this just as he did with other supposed "problems" with my setup - in an attempt to show the world that I was incompetent. He also sabotaged original programs and hand built test equipment.

So the exposure to the world of the "for Dummies" portion of the book title was perfectly in line with past experience - virtually a signature of these cowardly misfits. These small incidents are useful, though, in pointing out the type of person who gladly goes into a career in electronic harassment.

Skeptics: You must explain ALL occurrences taken together as a complete SET or you have explained NONE of them.

Diary #65 (Eleanor White)  
February 15, 1998

A note to diary readers.

After 64 diary entries, mostly mine, readers may have noticed that these articles have slowed to a trickle. The reason is that in order to present a clear and complete picture of the daily life of an e-weapons victim, it was necessary to "play catchup" and touch on at least some of the little nasties experienced over the past 8 years.

A true diary will include repeats, but one hope for

this experience list is that some forward- looking media people will pick up on it and maybe give us a little ink. For that reason I don't write up every day's repeated events.

Make no mistake about it - my harassers and those of most victims provide a HUGE SMORGASBORD of harassment 24 hours of each and every day. I don't want casual readers or media people thinking that no entries mean everything is fine in between. Not so at all.

For example in the last 24 hours, I've experienced this incomplete list:

- Electronically triggered itching night and day
- Huge thumping sounds from the floor above my apartment almost every single time I tried to fall asleep (These are 99% certainly sound-to-skull transmissions, the preferred method in apartment buildings. My boss and a former roommate confirmed that really heavy booms can be transmitted to me but not heard by someone a few feet away.)
- Hot needles pushed into fleshy body parts
- Physical bumping of my bed when I tried to sleep
- Electronically induced body jerks
- General electronic caffeine signal - you can't even start to sleep no matter how exhausted
- Electronic hypnosis commands to turn in bed at precise on the hour/half-hour times selected by the harassers
- Turning of alarm clock 15 minutes fast either through apartment entry or by remote physical manipulation
- A couple of instances of remotely induced fumbling of objects (utensils, book)
- Loud, raucous unnatural "bird" calls at frequencies right at the very top of the hearing range, and at least ten times as loud as any natural bird could be - almost painful
- Faked "buzz-in" lock trouble at the work bldg.; provocateur employee pretended he couldn't open the door so I had to go to the front door and open a perfectly functioning door - same guy regularly hassles me during the week, and no doubt enjoys some "walking money" in return)
- Fake "renovation" every time I tried to take a daytime nap and at meal time (my apt. bldg. saves up all work for Sat. & Sun. afternoons apparently.) What I'm talking about is hammering, drilling etc. that is timed almost to the second when I try to slide off into sleep or have a meal - additionally, I never hear this at any other time, and it's been 8 years of this by now. Way beyond coincidence.

The point is: Readers please remember that 64

diary entries are continuously performed and re-performed, always in rotation to avoid others' noticing, day and night. 64 harassment methods is quite a catalog and it's by no means complete.

The point is also: OTHER VICTIMS, please add your experiences even if they are carbon copies of what I've already written. Adding your names will make this little project much more attractive to media readers.

Other victims have over the years written me some great emails describing their experiences - so why not let me post them? You can do so anonymously.

Skeptics: You must explain ALL occurrences taken together as a complete SET, or you have explained none of them.

Diary #66 (Eleanor White)  
February 16, 1998

Another computer virus.

The 7 weeks since New Years' 1998 have seen extensive computer virus activity at my place of work.

Right after New Years' week, our field technician had a series of customer boot diskettes turn up with viruses. That MAY be just hacking at the customer's site.

A week after that, I discovered that a virus called "NYB", which resides in the "boot sector" of a bootable diskette or disk, suddenly popped up on every machine on to which I had installed the Internet software.

Now we NEVER download executable programs or software from the Internet, and executable programs are needed to make a virus "grow". The central processor must RUN a virus program for it to do any harm.

Also, computer viruses aren't caught by proximity, as biological viruses are.

So when I found that the Internet software diskettes ALSO had the virus, this is solid proof of deliberate planting, not only deliberate, but also by covert entry into the locked-at-night computer room.

Those install diskettes did NOT come with viruses - I checked them, and one machine not normally used with the Inter- net was clean, after 1996 installation from those diskettes.

About 3 weeks ago, our accounts receivable manager had her machine virused. A/R has long been a favourite target for all sorts of computer harassment - it's way off by itself with easy evening warehouse shift access. At times, one or more of their machines have been disrupted DAILY.

Just this morning, my own PC turned up to have been virused AGAIN. It is clear that these are attacks and not accidents.

Skeptics: You must explain ALL events taken together as a complete SET, or you have explained NONE of them.

Diary #67 (Eleanor White)  
February 20, 1998

Classic incident.

As you read this, remember that the e-weapons harassers constantly stage non-electronic harassment incidents to keep the victim off balance, but most of all, to ensure the victim will be seen as insane and not believed by the community at large.

Small children are constantly used to mis-behave in ways an e-weapons victim can never "prove", but at the same time, behave in obviously "set up" manner.

Early this morning, my next door neighbour began to knock on my door. I was undressed, so ignored the knocking for about 20 minutes. When I left for work, I found out what he was so anxious to tell me:

"I'm leaving, and the super is moving a young fellow, a friend of his into my apartment". I have no social connections whatever with this retired gentleman, the same one that delivered a dirty picture to our receptionist one day, within minutes of when I went home sick in mid-day. He insisted she copy the picture and gave it to me.

Now this guy, though he obviously lets the harassers use his next door apartment regularly (door opening and closing all night, etc.) has no family and has been relatively quiet. I'm fairly certain this new person has a young family.

I can count on the kids using the area outside our doors (which are separated by about 12 inches) as their noisy playground. Young kids repeatedly knock on my door persistently and loudly, every time I try to nap or eat.

Young kids have stood in building entrances daring me to touch them to get past. Two young girls (about 6 and 8) at another apartment building used

to wait for me to get home, then rush up and stand almost in physical contact while I waited for the elevator, and passionately hugging, kissing, and "feeling one another up" as their saucy little faces stared straight at me. This is not typical behaviour for 6 and 8 year olds, and it repeated for about two years until I moved.

As to the super, who is this person's chum, he is the one who continues to pretend the stack of three apartments directly above mine, and also in the line of "microwave fire" from the apt. below, are occupied.

I have observed these three units for the past 3-1/2 years and they remain empty, probably because they might receive some of the harassment equipment's effects from below.

This super also breaks into a raucous, unnaturally loud whistle every single time he spots me in a hallway when there are no other witnesses. He never does that when there are other witnesses.

The super is also the one responsible for scheduling all "maintenance" work in the vicinity of my apartment on Saturday and Sunday afternoons/evenings, precisely at the time I try to lie down and nap, or settle down to a leisurely meal. The carpet in the hallway near my apartment gets so much weekend vacuuming that it looks like a bleached desert.

So - in addition to harassment by the super's chum's kids, I can count on:

- loud blasting music
- "accidental" bumping the thin wall between my apartment and his
- loud "street theatre" conversations outside my apartment during attempted naps and meals
- possibly sex-related innuendo from both resident and visiting children
- very likely some loud parties

I can also count on all harassment being denied by the super, who is supposed to maintain order.

If a skeptic is tempted to tell me this is an ordinary part of living in an apartment building, let me say that prior to my 8-years as an e-weapons harassment victim, I was 48 at the time, and I did get an accurate idea of what normal apartment living is like. THIS is NOTHING like that.

I may be a victim, but I'm wise enough to know when apartment "problems" are staged.

When this artificial nasty behaviour follows you through 4 different apartment buildings, it is obvious it is orchestrated, and not "the luck of the draw".

Skeptics: You must explain ALL incidents taken together as a complete SET or you have explained NONE of them.

Eleanor White

-----  
Diary #68 (Mikey)  
March 6, 1998

Day before yesterday, I confirmed an appointment to visit a psychiatrist. Yesterday's visit went reasonably well. I was not put on the defensive this time. The microwave induced voice activity increased when I confirmed the appointment and continues as I write this diary entry. The voices today have been exclusively female. Female voices are usually generated whenever I get more than 5 hours continuously sleep, which is extremely rare.

The last few weeks I have experienced several days of increased anxiety associated with nervousness, trembling hands and increased appetite. For a couple of days, there were periods when I could not get enough to eat. The anxiety appears to be correlated with increased mental activity during sleep the night preceding the anxiety. This is not always the case.

Induced sleep deprivation and anxiety is usually associated with my wanting to engage in activities outside of the norm, i.e church participation other than Sunday service or taking any prescription drug to relieve anxiety and stress. The stressors increase in relation to the amount of medication taken to offset its therapeutic value.

I also visited my primary care physician today to get medication for a cold. This is the second time within 90 days I've contracted a cold. The constant stress and the electromagnetic monitoring may be affecting my immune system, however, I have no medical evidence to support this.

Mikey

-----  
Diary #69 (Nancy B)  
Life, Liberty and the Pursuit of Shielding Devices

[EW Note: "Cardinal" is the code name of an e-weapons victim of Nancy B's acquaintance. Nancy B is close to Cardinal, and she thus signs as a "co-victim".]

Dear Diary Reader:

I think it is great that you are taking the time to try to understand and perhaps even empathize with what it is like to be a victim of electronic abuse. In short and to quote "Cardinal", "It's like having a disease with a volition."

Well, can you imagine having a personalized verbal abuse

radio station in your head that you can't shut off?  
What about having a physical ailment which does not  
originate in your own body and, therefore, cannot be  
treated systemically? And then, when you attempt to  
explain what is REALLY going on, should you possess the  
knowledge, you are revictimized by rampant disbelief.  
It can be stifling to say the least.

There is nowhere to run and hide - just some ways to cope  
as best you can.

As you may surmise, many victims are institutionalized,  
suffering quietly in ignorance, screaming bloody murder  
to people who won't help, other victims are dead by  
suicide. We may never know the full extent. And what  
did they do to deserve this? Nothing. There is no  
justification for it. And this includes National  
Security.

Try as you might to "ostrich-ize" this problem away, the  
truth is that NO ONE is immune or safe from the aberrant  
usage of this technology.

Right now, you are probably physically in a room  
somewhere with walls all around, sitting, and mentally,  
of course, you are in your own mind with skull all  
around, reading. But are you aware that this technology  
has the ability to bypass those physical structures as  
if they were nonexistent and to interface with your mind  
and body? So, what can you do about it anyway?

You started by empowering yourself with knowledge. Next  
educate others. This technology invades the inner  
sanctum of the mind where it does not belong. That  
private place is yours. Anything else is a horrendous  
violation of your human rights not to mention of your  
God given birthday present of free will.

Don't just sit there, do something. Scream bloody  
murder. For what is life without freedom of thought?  
It's not you; you are not you anymore without your own  
thoughts. Might as well dead in Hell.

Sincerely,

Nancy B, a covictim

-----  
Diary #70 (Eleanor White)  
March 18, 1998

Sometimes I think my harassers just want me to  
publish diary entries about them.

Between 10 and 11 am, I normally go to the lunch  
room to make a cup of instant coffee. The coffee  
pot is fairly new (a few months) and in excellent  
condition. The lunch room's kitchen area has six  
independent circuits feeding six outlets, for  
kettles and microwave ovens.

This morning, I found a half-full kettle with the

water still quite hot - someone had just boiled the water.

I unplugged microwave ovens and tried other outlets. Still dead as a doornail.

So I accepted the warm but not boiling water. Immediately one of our staff pharmacists walked in, plugged in the pot, and it boiled IMMEDIATELY.

This man knows about the spook activity, and is now a confirmed in-person witness to another one of their "acts".

But there's more: A short time after this, I approached two co-workers making photocopies on a large Xerox copier in good condition, on it's own 240-volt outlet. The power was shut down at the moment I arrived for about ten seconds.

There have been no electricians working in the building today, and neither of these outlets have had this type of problem over my 6-year career here.

One of the co-workers at the copier is now also a confirmed in-person witness - she knows the background behind the local harassment problem.

What some people will do to get a little attention!

Skeptics: You must explain ALL occurrences taken together as a complete SET, otherwise you have explained NONE of them.

Eleanor White

-----  
Diary #71 (Cardinal)  
March 27, 1998

Dear Diary reader:

Despite the fact that I have been an EMR victim for several decades, still, I'll wake up some mornings thinking "This CAN'T be happening." Then one of them (my personal torture technicians) is right on me with the reply "Don't you just wish it were so? Ha, Ha." The voice, albeit gruff, is so clear, having bypassed the physical mechanisms of normal hearing.

"What's it gonna be?" We both wonder the same thing. I awaken EACH AND EVERY DAY knowing that approximately eighty percent of my time, much more than that of a full time job, will be spent just dealing with their incessant mental inanities and inflicted physical pain.

Metaphorically speaking, this means actively maintaining a position beside the rushing waterfall

trying to keep myself from being washed away or drowned, or standing outside the raging furnace without allowing myself to be sucked in and burned. (This is how I expend my depleting energies.) And, sometimes it's a matter of simply walking through it. Other victims will know exactly what I mean here.

I endure by focussing on hope.

They are NOT going to win.

Yours truly,

Cardinal

E-weapons diary #72 (Marion)  
April 3, 1998

Tinnitus-like sounds.

Hi everyone:

I've been an e-weapons victim for almost 4 years.

I have been followed to several states, severely irradiated and have experienced the muscle spasms and electrical "zits" that are common. The invasion imagery (forced dreaming) used on me has been abusive; the sick people, as I call the perpetrators, have shown me swastikas and murder.

I am a fine, fine sculptor and have been in contact with Eleanor for about 5 months. I want to tell you what the sick people are doing now. [I've seen a photo of her work - it really is fine! EW]

Beginning in early January, I started hearing the tinnitus-like sounds in my ears, that others have experienced as Eleanor reported some weeks later. Once, in January, I woke up to very loud drumming. Then 2-3 weeks ago, the drumming came back as a continuous background sound. And then, a week or so ago, the sounds became very loud, all night and every night. They used static sounds that swept up and down the vocal range, which went on simultaneously with a whirring/drilling sound and sometimes alternated. They changed the different sounds from one ear to the other.

This invasion is bloody horrible, but the problem is that as the sick people are well aware, I already have a hearing loss. I have babied my hearing for years - it would have lasted my whole life. I know about the mechanics of hearing. These sounds are deliberately intended to damage my hearing further, if not to make me deaf and therefor incapacitated. I am seeing doctors and documenting this. I am telling everyone. I'd like to know what anyone else on this list has experienced.

I was hit badly last year when I was not in contact with other victims and knew little about what was going on. I was certainly not doing anything about it. Now they are hitting me in this physically damaging way when I am in contact with other victims and am writing letters. Even if their pattern seemed to conform to anything I am doing - which it does not - I would and will continue to write letters.

These people are such pitiful cowards. Do they go home at night and tell the wife what brave things they did today against defenseless people? That they live at such a level, that this is all they understand to do, God, what limited lives.

I could use your prayers, as you always have mine. Your writing on this site is so important.

With love,

Marion

---

E-weapons Diary #73 (Eleanor White)  
April 5, 1998

Another tape recorder dies.

Diary #8, of January 4, 1998, described the death of a good quality microcassette battery operated recorder, which I use to try to trap some of the more extreme goofy noises made by the spooks.

Many of the indoor noises are transmitted via voice-to-skull (voice modulated radar type signal) and are not tape recordable by me - they are usually sprung on me at odd times by surprise and don't last long enough to get a good attempt at recording.

Therefore, I usually only use a microcassette recorder to record the outdoor noises, which are tape recordable, (but usually shut down the instant I press the Record button.)

Well, this morning on the way to work, while the spooks were making noises straight out of an old WW II movie, where Japanese soldiers harass U.S. troops in the jungle at night with weird noises, my replacement recorder, purchased December 30, 1997, has also died.

It had been cared for well, and it's original alkaline batteries were still at nominal voltage level with the Record button pushed.

Coincidence - two recorders in a little over 3 months, right?

Skeptics: You must explain all of the incidents taken together as a complete set, or you have not explained any of them.

Eleanor White

---

Diary #74 (Mikey)  
April 10, 1998

Castration is one aspect of this experience which is most difficult to discuss. Deliberate and systematic manipulation of my libido is an integral part of this mind control experience. I often experience stressors which decrease my desire for sexual intimacy. This usually begins with intense imagery, dreaming or mental activity the night preceding a date. Also, the stressors are often initiated on Thursday night as a prelude to the weekend. The imagery or mental activity during sleep creates fatigue, anxiety and mental disjointedness. If I am really physically attracted to an individual, I may experience microwave induced dissonant voices or some other combination of negative/positive punishments. Frustration, impotence and negative outcomes have been associated with sex so that it is no longer enjoyable. A recent urological examination did not detect anything physically wrong. The loneliness and the lack of intimacy are only overshadowed by the incessant fatigue and emotional pain. It's Friday morning and I experienced the mental activity during sleep last night. I need God's strength to make it through another day.

Mikey

-----  
Diary #75 (Kathy Heckman)  
April 13, 1998

Artificially induced heart problems.

[NOTE: A number of e-weapons victims, myself included, have experienced electronically induced heart pain and palpitation. This experience is not unique to Kathy Heckman. I have not personally heard of anyone having an actual heart attack from this, however, there is always a first time.]

For months now the perpetrators have been telling me "You're a heart attack victim". And I am afraid that they are killing me. I am subjected to heart pain and it sometimes feels like my heart has expanded in my chest. I've also felt pressure on the left side of my neck, and it feels like they're constricting the artery.

In case of my death, I want it known that I've been murdered. They woke me up at 2:35 AM this morning and I couldn't get back to sleep with their chatter; and so I got up at 5:30 am to go to work. Last night was one of the nights my heart felt in pain, and I still feel pressure on it at work.

I'm afraid of going directly to the Sheriff because I don't want to be arrested or put in mental health hold. So

what do I do? I'm going to send a letter to the Sheriff in Calaveras County where I live. I've given him an earlier version of my story, but I want to tell him that my life is threatened and if I die, it is murder. I'm going to write the police in Ventura County the same. That is where this started and I hope to move there in late July. I'm also going to write the coroners in both counties to please remember that I am told I am being murdered.

I figure they either want me dead or insane, and the constant attack on my heart could be so that an autopsy would reveal an enlarged heart, which indicates damage caused by drug use. I do not use drugs and don't want to be smeared in my death as well as in my life.

I am also going to carry a short note to the same effect in my purse with the request that if I die someone notifies Eleanor and the Mind Control e-mail group.

Meanwhile, I go to work and save money so I can move closer to the daughter whose custody I lost in 1994 when these thieves entered my life.

Sincerely,

Kathleen Heckman

---

Diary #76 (Eleanor White)  
April 21, 1998

Email read by spooks?

I'm privileged to have had an engineering school classmate who has made it to the "chief scientist" level at one of NASA's major facilities.

When I wrote him a couple of years ago, telling him the story of neuro-influence weapons and their illegal use, he discussed it with his colleagues and told me the consensus was that I was crazy.

Fine - no problem there - at that point that was always the response.

A few days ago, I emailed him the Nature magazine article (January 22, 1998, page 316) in which the French Government, via their Bioethics Committee, has publicly declared that neuro-influence technology is NOT fiction, and that even UNclassified medical scanner technology is approaching weapons capability.

At this time my former classmate has not become "on fire" with interest, however, he has begun to ask me a few questions. One of those questions was: "What about the effects on the heart?".

I wrote him back (no response received yet) that taking the targeted test subject part way into a heart attack state has been a common experience.

I also told him that a few years ago, roughly 1992-1995, giving me heart distress symptoms was common, and that they seemed to have given up on it. (Reason probably being, as a Christian, I have no particular fear of death, and simply said to God silently "If you really want me now, Father, I'm ready", rolled over, and tried to sleep.)

I suspect that artificial heart trouble is used to stress out the victim for whatever sick experimental purposes. In my case, that doesn't particularly stress me out.

So, after almost 3 years of zero heart symptoms, the very night after sending that email, I got hit with perhaps 20 "heart hurts".

Coincidence? Or, is it "not nice" in the spooks' view for a neuro-influence guinea pig to be talking to NASA?

Skeptics: You must explain ALL occurrences, taken together as a complete SET, or you have explained NONE of them.

Eleanor White

-----  
Diary #77 (Eleanor White)  
April 23, 1998

Theft of consumable supplies.

Theft of consumable supplies has long been a staple activity to accompany neuro-influence weapons harassment. The idea is to stress the test subject, for who knows what purpose - direct testing or to keep the guinea pig off balance and appear insane to the community at large.

Within the last week here is a typical example:

- 5 bottles Buckley's Mixture, which I keep both at work and at home in convenient locations to help with my perpetual cough/sore throat, went from half full (on average) to zero in a 24 hr. period. By nipping from 5 locations, my consumption per bottle is very low, and everyone knows that you can't gulp Buckley's!
- 1 bottle of Wake Ups caffeine tablets went from 1/3 full to zero overnight. This was in my desk drawer in my locked-at-night computer room. This too is an item nobody "wolfs" down at one sitting!
- 1 large (770 ml) bottle of Maalox went from almost half full to zero overnight, this too in my desk drawer at work.

In the same period, a complete set of Norton

Anti-Virus diskettes disappeared from the computer room, locked at night.

"Go figure!"

Skeptics: You must explain ALL occurrences taken together as a complete SET, or you have explained NONE of them.

Eleanor White

-----  
Diary #78 (Eleanor White)

May 5, 1998

Some more recent nasties.

Just after sending out that ALLVIC note listing tangible, inexpensive, do-able suggestions for legislatures and police agencies a couple of days ago, my spooks decided that I wasn't receiving enough daily punishment.

Here's an update:

- The spooks have stolen my most recent Norton Anti-Virus rescue diskette.
- The spooks had somehow got hold of the earlier (Dec. 1997) version, had erased the files, and got it into the hands of our graphic artist, who absent-mindedly copied a slew of graphics files on to it.

It had to be erased first, otherwise the files would not have fit.

This rescue diskette had a very unique black, yellow and white commercial label, and under normal circumstances, our graphic artist, being very computer savvy, would never have used such a disk for transferring files.

At the time the diskette was stolen a few weeks ago, it had been locked in the computer room.

- This morning, all the Norton Utilities series including Anti-virus failed to run according to their menus and the manual, no matter how closely the menus and manual instructions are followed.

I can't create a new rescue disk, because the creation program simply exits where it should be doing the create. This pgm has run successfully a number of times.

Ditto on different machines.

- Oddest of all, because WIPEDISK doesn't

work (just hangs, doing nothing) I used SPEEDISK to write nulls into all unused disk space, after finally getting the "NYB" virus removed from the boot sector.

(This NYB virus seems to be the spooks choice because it locks my machine for an hour starting at precisely 8:00 am each day - my prime time for doing electronic publicity work.)

There are now 35 - count 'em - 35 NEW "unmovable clusters" on my hard drive.

There used to be only 4. Why do those unmovable clusters suddenly show up? They were not there last time, about 4 months ago. I've used SPEEDISK for the last 10 years, and have never seen any proliferation of these unmovable clusters.

And there's more:

- I use a lot of DB connector crimp pins (male) and crimp sockets (female) on both DB connectors and other customized wiring. I had in stock a few days ago, roughly 400 of each type.

I discovered that ALL male pins had completely disappeared. Lots of female pins still present. So I faxed an order to the big Canadian supplier Electrosonic.

After a few days of waiting, I phoned them today and asked them about the order. They "never received the fax", even though our machine said it was transmitted OK.

- A "small" loss, but significant because it happened in my locked-at-night office - I keep a roll of toilet paper on hand for wiping up minor spills of various kinds. It was about half full yesterday. This morning - totally used up, only the cardboard tube left.

(Not long ago, seven bottles of patent medicine both at home and at work were emptied by these interlopers over a period of a few days.)

The spooks often do not hit valuable things, but they constantly mess with moderately costly and foremost, convenient things. Stealing and returning later is very common, and I do fully expect the male crimp pins to show up after the order for replacements is here.

For readers new to this, keep in mind that each of these diary entries is only a single, very limited snapshot of a 24-hr/day, 365 days/yr programme of total immersion harassment. Any one item could be

an "accident", but not taken together, and not when the stories of more than 50 people coincide.

Skeptics: You must explain ALL occurrences taken together as a complete SET, or you have failed to explain any of them.

Eleanor White

-----  
Diary #79 (Eleanor White)  
May 15, 1998

How do you tell when a spook takes a vacation day?

In my 8 year experience as a victim of involuntary "testing" of electronic neuro-influence weapons, I've noticed that in the warmer weather season, the most aggressive of the harassment crew members do seem to take the odd day off.

This weekend coming up is a long one, Victoria Day in Canada. The weather has suddenly turned very warm and sunny.

I believe the events of the last 24 hours indicate that the worst member (most aggressive) of the local harassment crew here in Hamilton, Ontario has taken a day off. Here's why:

For the first time in almost a year, I was allowed to sleep most of the night. Usually I'm peppered with violent limb movements, smaller scale finger movements, different loud thumps and bangs, dream interference, aggressive electronic itching which is not even fully relieved by a cheese grater I must sleep with, and of course, several applications of the harassers' electronic caffeine signal.

The only caffeine signal was applied 30 minutes before I normally get up. That was about all there was. I am wholeheartedly grateful for even one night's break.

There's more at work:

- An important program which my boss has been anxiously awaiting but which has been inexplicably failing almost all day and night long has suddenly started to work. I did nothing - left it completely alone.
- A remote label printing system which I programmed and which has been acting up inexplicably for the past 3 or 4 weeks is suddenly working. I did not touch it.
- A new alarm I assembled for a key printer in our invoicing room stopped mysteriously malfunctioning. I did not change anything.

The harassers usually choose something important that I have recently touched to cause it to fail.

It almost never happens that three such systems suddenly "repair themselves" on their own.

Skeptics: You must explain ALL occurrences taken together as a complete SET or you have explained NONE of them.

Eleanor White

-----  
Diary #80 (Eleanor White)  
May 16, 1998

Daily re-runs, anyone?

All electronic neuro-influence weapon victims have had countless instances where the harassers act on or even narrate, what the victim sees. (The narration is by way of voice-to-skull transmissions, or, a member of the harassment crew will approach the victim on the street and describe the viewed situation in high detail.)

My own harassers here in Hamilton, Ontario have begun to use this capability in a very unpleasant way.

A staple in the "diet" of neuro-influence victims is to be allowed only enough sleep to not die, and little more. What this means is that when the harassers back off their "electronic caffeine" signal, you are READY to go to sleep!

Over the past couple of months, my torturers have let me start to fall into natural sleep, and just when I'm almost there, the force a waking colour, 3-D image of exactly what I was doing during the just ended day's work. Their favourites are when I spend the day making up custom cabling and adapters, and I'm focussed all day long on tiny, brightly-coloured wires.

This is repugnant to have happen over and over, and it of course forces you back to a higher level of consciousness.

The projected mental images are so sharp that I clearly see and almost "feel" the shiny individual strands after a wire is stripped. I would have to say these images are almost better than the original.

While this isn't terrifying, it goes on for several hours and is clearly within the realm of "torture" in anyone's book.

Skeptics: You must explain ALL occurrences taken together as a complete SET or you have explained NONE of them.

Eleanor White

---

Diary #81 (Eleanor White)  
May 16, 1998

Want PROOF that spooks can read your thoughts?  
Here it is.

All neuro-influence weapons victims know that the harassers will take every possible opportunity to "mess up" the purchases made by victims.

I ordered a series of 16 maps of New England states. Naturally, the order got screwed up, and I got three wrong maps substituted for the ones listed on the invoice. That's always expected - no big deal by now.

However, THE THREE WRONG MAPS WERE ALL MAPS I HAD THOUGHT ABOUT PURCHASING BUT DECIDED NOT TO ORDER. I mentioned this order to NO ONE, either before or after placing the order. I live alone.

I did not even mention their titles or numbers aloud - all I did was to visually scan the index and THINK about those not-ordered maps.

When asked for "proof", as far as I'm concerned, that leaves no doubt at all as to whether the harassers can read your thoughts and see through your eyes. All fair minded people cannot possibly disagree - the INVOICE was correct, and a picking error could have hit on hundreds of other maps.

Skeptics: You must explain ALL occurrences taken together as a complete SET or you have explained NONE of them.

Eleanor White

---

Diary #82 (Mikey)  
May 21, 1998

My primary care physician was killed in an automobile accident April 9, 1998. The initial police report indicated the accident was precipitated by an unknown driver. I was alarmed because my therapist died of heart failure in August of 1996 at age 43. Both persons were familiar with my ordeal and were sincerely interested in helping me.

In addition to this loss, the periods of sleep deprivation intensified. For the past three weeks, I've tried to drink my way through the pain. I know this is not a solution, but its easy. It's difficult living in two worlds. Trying to maintain a normal existence in the alternate reality of mind control. There are times, I believe I'm acting out a script. I have become a master at concealing my feelings and functioning during periods of extreme stress.

However, the sleeplessness combined with the targeted synthetic voices for an extended period is maddening. This technique works like an emotional trigger. At these times, I mentally curse and yell at the manipulators. The need for closure becomes paramount.

I was awoken this morning by the synthetic voices. As usual, it was the voice of a person employed with the California Franchise Tax Board (FTB), the agency I was employed with when this experience began. This is one of the techniques used whenever I make an attempt to contact the FTB or other persons knowledgeable of my FTB connection, i.e. the Los Angeles attorney I sought regarding employment harassment. The voices become more oppressive. Today, I was awakened with "We'll kill you". At this point in my life, threats of death have no power over me.

Diary #83 (Marion L. Young)  
May 23, 1998

Following is an update on the projection of sounds into my ears. I had a hearing test after the loud sounds began and after the first severe attack. My best ear is now my worst. There have been other major attacks: one night I woke up with both ears totally numb and the surrounding area numb. My ears usually feel moderately numb now. The sounds and tones are mechanical in quality. The vowel sounds used as descriptions following are not accurate, words are just inadequate. All of these sounds occur SIMULTANEOUSLY.

- What I've called a whirring sound. Remindful of the music, "Flight of the Bumblebee", though these tones change faster and are extremely irritating in quality. They start at approximately F#/G, a vibrating e-e-e-, then slide up to A# or thereabouts and vibrate, e-e-e-, then slide back down, repeating up and down. Sometimes the movement is so fast, it sounds like a counter-clockwise circle.

- A single tone about D or E below the whirring sounds. Goes on for ver long periods.

- Low sounds, what used to be clearly drumming of many drums. Now is a dull thudding, I'm sure from damage, not from the program being changed. Sound is like continuous traffic or a very full humming, low, with thuds of what was drumming.

- Constant static surrounding these sounds. Many frequencies. A hiss, iii, as in hit. This white noise sometimes gets so loud that it overwhelms every other sound and then blanks out completely. There is just a terrific pressure. I know the sound is still there, but I can hear nothing.

- Other tones and sounds that come and go.

The notes on the scale of each of the sounds above are different in each ear. They do not harmonize, but are discordant. The white noise is often louder in one ear than the other, with the tone louder in the opposite ear. I made a drawing of this and after I started showing it to people, the composition of the above changed somewhat, though the elements are more or less the same. The sounds never stop. The damage to my hearing at every level of my life is noticeable, dramatic and continuing.

Diary #84 (Marion L. Young)  
May 23, 1998

Following is a busy week of street theatre in Ashland that ends on an ominous note:

Day One: I'm a member of the Unitarian Church here. Churches attract wierd people. But in the last few months, the crowd has been enormous. They all look the same, trashy, broken faces. I was doing some work at the church and forgot to lock the door after everyone else left. "Chris", who convinced the secretary for awhile that he likes to come in and play the piano and "talk to God", showed up at the piano with a young woman in tow this time. I could see them and be seen through a doorway. After a few minutes, I'd had enough - I was finished anyway - and started to pack up, intending to tell them I had to lock up. As soon as they saw what I was doing, they left. This 5 minute "talk" was a first. They doubtless thought, mission accomplished, but as I said, I was finished anyway.

Day two: Parking lot at So. Oregon University. I am first in line, 4 cars behind me. A space comes up behind where I am and car-3 darts into it, ramming the car behind him in the process! For once I have something to yell about, so I charge back and tell him to move. After some excuses he does. I park, and as I am walking away, he is standing there, angry and confused, as the other woman takes his driver's license info. Poetic justice for once. Understand, I am followed a lot.

Day three: Staying at a friend's house in a small town north of Ashland. This is the country. I hike out into a meadow area behind the house to get away from the irradiation briefly. There is an aquaduct at the base of a hill; I find a nice spot to lie down next to it and get the first sun in weeks. In 10 minutes two late teenage boys are suddenly walking by on the other side, the second one toting a gun pointing at the sky. They shout hellos in cocky and disparaging tones. Normal kids would have said nothing. I say hello back. The one with the

gun, his back to me now as they are walking on, says a sentence I don't quite get, except for the word "turkey". There are no turkeys to hunt in this area. In a few minutes the frequencies start out there.

Day four: At the library using the computer. Almost finished, I turn around and there is a guy doing the crazy routine (a favorite). He sits in an off balance position, head at an extreme angle, gazing into space. Then changes it - and in one of his first changes he looks at me with hate. After that, he keeps the blank stare going, changing positions, as other people in the library begin to politely try not to notice him. I leave.

Day five: Still at my friend's house. I go back to the aquaduct at dusk for some relief from frequencies. There is a large hill on the other side that is in shadow as the sun is setting behind it and to the left. I stand on the mound on the side for about 5 minutes. Suddenly, there is a gun shot from up the hill and slightly to the right. A bullet lands in the water, five feet in front of me. It was a light calibre rifle sound (the same as the look of the rifle that the kid had carried two days before). The water is moving fast, but the ring from the bullet stays for moments. I can see no one, and of course I came out alone. I stood there for about 15 minutes until it got dark. I had no doubt that if the rifleman intended to hit me, that he could have. Nevertheless, I was certainly shot AT. Then I went inside and called the local police who came out and took a report.

Diary #85 (Eleanor White)  
May 26, 1998

Maybe a spook trick, maybe not.

Over the past few days, I've had the very good fortune to be interviewed and photographed by a local magazine for an article on the mind control problem.

The editor phoned me this morning with some more questions, and told me he doesn't have an Internet connection at home, so he used his sister's last night to view and print both the MD Speech and diaries sections of my raven1 web site.

He said he was somewhat startled to find that when he tried to call up my site, his sister's PC crashed. Her husband is a computer guru, and could not find any usual causes like loose cables or bad software configuration.

I will now attempt to print those pages and hand deliver them. The printing attempt is not going

well either - the LaserJet IV which has worked very well in the past is now also malfunctioning.

Is this a spook trick? If it is, it is a very, very dumb one - actually working against their slimy agenda.

Eleanor White

-----  
Diary #86 (Marion L. Young)  
May 27, 1998

My father was an amateur naturalist and a hunter. He had me when he was in his 50s, and had he been born some years earlier, he would have been a pioneer, living on the edge of the wilderness in a log cabin with his family, doing everything necessary for survival and a very happy man. So hunting for him was putting food on the table.

We were taught how to hold and handle guns safely, and we did this without deviation in the company of others and when we were alone. Guns were to be respected. They were not a joke; they were never funny.^

Guns were okay with me while I was home, but after I left home and as the years passed and I watched the tremendous egotism and power trips of people with guns, I developed, without trying or thinking about it, a tremendous and deep antipathy for them. They are okay for law enforcement and limited other situations, but in general I view them as very sick.

During my ordeal as an eweapons victim, I have, like most of us, kept a journal. I made an abbreviated Record, which I have sent out to many places, so I am sure the sick people have their own many copies filed away. I experience forced dreaming virtually every night - I have called it Invasion Imagery.

On May 20th, last year, I had three separate invasions of forced dreaming. The second one was the repetition of a simple word over and over - I couldn't remember it specifically when I "woke up", but wrote that it was something like "garden". There was also a plot which I couldn't remember exactly.

In the third invasion imagery, I was filled with the feeling of rifles, many of them, and many people near me with many of them. The feeling was of people who LOVE them in a wierd way that I find hard to put into words. It was a dark and ugly feeling, but also obsessive, of people who couldn't think of anything but guns, they meant everything to these people, like some great god. They were filled with this feeling totally, as I was. When I "woke up", I went into total disgust. All my natural feelings about guns came up in force. Nevertheless, I felt awful all day, afraid and flat. But the feelings

slowly faded and as far as I consciously know, these images were not repeated.

So I am a "mature" woman, with lots of years. Suppose I was a kid who needed an identity and didn't have the defenses of an "attitude" that had been around for a long time or the strict training of a father who had a realistic perspective about guns. That innocuous word that was repeated over and over could have been some kind of cue. And if you fill a child with that sick "love" of guns, he doesn't have enough experience in his own skin to compare that with what is real. He could very well think it was real and live it out compulsively and as a program, because he doesn't yet have a psychological awareness level that can stand aside and look at what he is thinking/feeling and recognize that those thoughts/feelings are "not him" and are not wanted.

So as I watch these young boys shoot their classmates in this last year, I can vouch for the fact that imagery of a sick love of guns can be projected into the unconscious during sleep and the feeling of a sick love of guns can be somehow stimulated in the unconscious during sleep, because I have personally experienced it.

Diary #87 (Eleanor White)  
May 29, 1998

A lazy Friday afternoon phone call.

Having received zero responses to about half a dozen emails, faxes, and letters to my federal Member of Canadian Parliament Sheila Copps, I decided to phone her local constituency office. I want to be sure I have made every effort to contact her before picketing later this summer.

An idea came out of this call which can be used by any of us - not just our technical types, since at the early correspondence stage, the parties contacted will not know the state of your technical qualifications.

The secretary was nice, and said she sits right next to their fax machine, and she was sure there were no faxes or other messages received from me.

OK - so next I said: "By the way, I'm going to bring an electronic weapon over to show you."

In this age of bombings, that really got her attention. "No no no no no no no no no no, do NOT bring any kind of weapon here!!!!"

I then assured her that I was a responsible person and would not activate the acoustic weapon

on anyone. If anyone wanted to sample the effects, THEY would have to push the button, and I would require a written waiver of responsibility.

I told her the weapon was being built to show how easy it is to build electronic weapons in this day and age. I then told her a short spiel about how I was being targetted by such devices and that my purpose was to urge Ms. Copps to press for laws against using them.

The conversation ended on a friendly note, with the secretary promising to make sure my correspondence was either found or I would be contacted.

Now here's a subsequent idea, for when I get the bum's rush from Ms. Copps. I will say that the electronic weapons so far have not been admitted to by any government, so I am free to build what doesn't exist.

Furthermore, I am prepared to circulate very precise plans for the acoustic weapon, with detailed sources of parts, so any local hacker can get in on the "fun" of using what doesn't exist.

I will do that if I get stonewalled - you can promise the same to your reluctant politicians.

Hope this helps with your own local war efforts.

Diary #88 (Eleanor White)  
June 3, 1998

Spook trick?

Yesterday afternoon, I received a copy of a near-miraculous letter received by Pat Mougey (Toledo) from someone hired to clean up after the recent National Bioethics Advisory Commission hearings at Chase Western Reserve University.

He expressed shock at Mrs. Mougey's letter, and said it really stood out among the other letters he was cleaning up.

He ended saying "Consider me an ally."

Now THAT IS DIFFERENT from the reception we usually get, isn't it?

This morning I wanted to forward that letter (his name and address blanked out) to Marjorie Lundquist, a Milwaukee WI bioelectromagnetic hygienist who has helped us in the past.

Guess what - it has VANISHED from my PC!

I use a "find-string-within-all-files" search program and his name does not appear in ANY files.

Had I accidentally deleted it, the name would still appear, because my emailer maintains a "holding tank" of deleted messages for one week after I press the delete button.

The disappearance of this significant letter was definitely NOT an accidental deletion!

Eleanor White

---

Diary #88B (Eleanor White)  
June 6, 1998

Spook trick - or coincidence?

On June 3, 1988, I sent Diary #88, which related the overnight disappearance, a near physical impossibility with my emailer's deleted messages holding tank, of the letter to Patricia Mougey of Toledo, from a man who read her letter as he was cleaning up after a US Bioethics Advisory Commission hearing at Chase Western Reserve University.

This man ended with "Consider me an ally."

Both an uninvolved person believing us and the impossible deletion were miracles, albeit of different kinds.

The following day, I got an email from victim Joan Siegemund, in Los Angeles CA, who told me that her copy of the file vanished from HER PC AS WELL!

Coincidence?

Eleanor White

Diary #89 (Eleanor White)  
June 6, 1998

The incredibly precise surveillance used in the airway manipulation torture.

Remote manipulation of my airways has long been included in the suite of torture effects. Starting in 1998, though, my local spooks seem to have had an "airway manipulation specialist" come aboard.

Airway manipulation at all is miraculous - the spooks can locate and squeeze or pop the tiniest air bubbles in the victim's skull (or other parts of the airway and alimentary systems as well.)

They do this in my case to force me to wake up or keep me awake when their "body quaking" or "electronic caffeine" signal methods get too boring for their pleasure, I guess.

The precision would, for any victim who is not yet wise to their methods, produce fear and hopelessness in a big way. The spooks will often "play a tune", or the rhythm of a familiar tune, by remote control during the silent hours of late night. This is clearly not natural, and would frighten many.

This diary entry is to share what for me is the absolute "topper" so far.

For the past few weeks, I have been wearing an ace bandage in a loop, under my chin and over the top of my head. This solves the problem of the spooks holding my jaw open all night, producing extreme discomfort in a completely dry mouth.

Shortly after starting that fix, the "airway manipulation specialist" has been using a manipulation scheme where he pries open either the left or right half of my lips and at the same time sets up an unnaturally loud rush of breath. This has consistently been the way they wake me up several times each night.

The pushing apart of my lips is definitely NOT a manipulation of my own facial muscles, which stay completely relaxed throughout this procedure. Instead, the external manipulation is by way of their often used external force, the same one used in manipulating other objects.

So last night, I thought I would try a one inch wide band of elastic, tied in a loop so that if positioned around my head as a gag, would prevent the lips from taking part in this noisy breathing effect.

At this time, after one night of having this applied a number of times, I don't know if it works because without my even placing the elastic over my lips, the spooks detected it's presence and used anOTHER airway manipulation scheme not requiring my lips to be opened.

In this case, they manipulated the tissue at the back of my mouth, in the region of my epiglottis, to produce generous amounts of noisy breathing more than enough to keep me awake.

It is the spooks' knowing that I had the band ready which shows powerfully just how invasive their equipment is, and how determined they are to maintain whatever stress level they have chosen for each individual victim.

This extremely determined invasion of one's body and mind are gruesome reminders to the public at large of what awaits them if they don't muster their collective will to fight this menace before it is solidly in place and escapable by no one.

Skeptics: You must explain ALL of the torture effects as a complete SET, otherwise, you have explained NONE of them.

Eleanor White

---

Diary #90 (Eleanor White)  
June 10, 1998

The headline should read:

ELECTRONIC WEAPONS ACTIVIST MUZZLED  
BY HAMILTON POLICE PSYCHIATRIC SQUAD

If you were to ask the squad's leader, Constable Margaret Couch, badge #173, why she paid an unannounced visit at 7 p.m. on Monday, June 8, 1998 to e-weapons activist Eleanor White, she would tell you that she was "sent by her chief to make sure Eleanor was safe and in no danger to herself or to others." Very noble of you, PC Couch.

As I was in bed, necessary so early because of constant sleep disruption from electronic neuro-influence weapons operated by persons unknown, I had to jump up in response to knocking loud enough to be heard throughout the entire 8-storey apartment building.

PC Couch and two husky young attendants stood by and to all appearances in their initial demeanor, were more than ready to hustle "this nut" off to mental hospital.

Now, to any citizen, a "raid" by a psychiatric squad is more than a routine visit. It is a statement in itself, which is:

"BEHAVE YOURSELF OR YOU MAY BE LOCKED UP."

They made no such statement, of course, but no reasonable person can deny this truth in their actions.

All three stood in a semicircle and peppered me for an hour with standard psychiatric questions in such rapid fire that I could scarcely complete any answers.

"What year is this?". "What month is this?". "What is the address of this apartment?". "Gee, if you are constantly harassed, don't you want to really get those harassers?".

In response to a closure of the neighbour's door, "OOOOH! Is THAT one of the spooks?"

"Does your TV take part in this?". Yes ... I tried to explain that the signal was frequently cut off, but PC Couch interrupted with "You mean it TALKS to you?"

I mentioned that my muscles and limbs were manip-

ulated by the harassing equipment, and PC Couch asked me "You mean you can SEE something grab your chin and move it around?"

Mental health workers, to those who have never dealt with them NEVER discuss patient statements. They restrict their "discussions" to responses like: "How does that make you FEEL?" Consequently, attempts to discuss anything substantial fail.

By clipping off your answers, they establish that you are incoherent, justifying their own behaviour.

They repeatedly hammered me by questions about my stomach acid suppression drug, LOSEC. They wanted to know why I would take such a thing. Can't imagine why - it certainly has no narcotic effect whatsoever.

"Do you want to do away with yourself?". "Do you have weapons?". On and on it went, with very little time for any factual responses, and those that were made seemed to be ignored.

Add to that the fact that the constable and her two male escorts stood in a semicircle and asked me questions in rapid succession.

I had intended anyway to discuss my plans to take an acoustic weapon to the provincial legislature at "Queen's Park" in Toronto with local police, so I did mention this plan to them. I would much rather that get out into the open here in Hamilton, than wait and have a nasty surprise in Toronto.

This acoustic weapon is to be used only to demonstrate how easy it is to build.

Now, reader, you must be wondering what I did to precipitate all this. Well, over the past 6 months I have sent the Hamilton Police, Staff Sergeant John Daniels, and the Hamilton Police Service Review Board, Robert C. Prowse, Secretary, some very seditious faxes like:

- A list of readily available e-weapon capable devices, pointing to a need to control them
- A list of steps, like "add e-weapons victims to the list of people to be prima facie believed, alongside stalking victims and domestic abuse victims" which police agencies can take withOUT legislation
- Finally, (horrors!) an article from the Radar Systems Division of Georgia Institution of Technology, titled: "Radar Flashlight for Through-the-Wall Detection of Humans", with a handwritten sentence saying (horrors again) "This underscores the need for e-weapons enforcement". How could I DO such a thing!

The Georgia Tech fax was sent the day of the visit, and in my view, is what precipitated it.

Then came the MUZZLE ORDER: Constable Couch told me quite plainly that I was not to send any more faxes to the Hamilton Police or Police Service Review Board. Any correspondence:

- MUST BE SENT BY MAIL
- MUST ONLY BE SENT TO HER AND NO ONE ELSE.
- MUST BE SENT ONLY TO HER "CRISIS OUTREACH" ADDRESS OR PHONE NUMBER, NOT VIA THE POLICE MAIN ADDRESS OR SWITCHBOARD.

So much for freedom of speech and access to public officials, eh?

Diary #91 (Eleanor White)  
June 12, 1998

Just another little co-incidence.

My PC crashed this morning, but I was able to get it to boot up. When it did boot, I discovered that Netscape had lost the feature which causes addresses to turn colour when you have accessed or sent to them. No amount of re-configuring has restored this feature.

This feature is critically important in large scale publicity work, to avoid dinging people with duplicate messages. Without it, you must keep careful and time consuming records on paper.

The fact that this happened right after sending a complaint to the Ontario Minister of Health which told her this complaint was being publicized could not possibly have anything to do with this, right?

Eleanor White

---

Diary #92 (Eleanor White)  
June 15, 1998

An answer of doubtful truthfulness

This refers back to Diary #90, the unannounced raid on my apartment by the Hamilton Police psychiatric squad, code name "COAST".

In preparation for a possible return visit by this squad, I just phoned up the Ontario Law Society's

Lawyer Referral office in Toronto, 1-800-268-8326

The referral clerk asked for particulars. I told her I was an electronic neuro-influence weapons activist who had been raided by the Hamilton Police psychiatric unit a week ago, and was in serious danger of being placed involuntarily in a mental hospital. The clerk took the time to carefully read back the phrase "electronic neuro-influence weapons", so there was no error in the nature of the problem.

She put me on hold to speak with her supervisor.

She came back on line and told me they have no such category as "mental health". I suggested there is such a category, to which the referral clerk responded "Well, then, I guess there are no Hamilton lawyers registered as such."

Hamilton is a big industrial city (for Canada) of about 300,000 people. Hamilton has it's own psychiatric hospital. I find it difficult believing there were no listings.

Eleanor White

---

Diary #93 (Kathy Kasten reporting)

DATE: June 13, 1998 starting at 10:30 AM  
PLACE: West Side Division - LAPD  
Butler & Santa Monica Blvd., West LA  
RE: Open House for the West Side Division  
along with a Neighborhood Bazaar

BACKGROUND: Joan Siegmund is an electronically harassed individual (a targeted individual). She has exhibited a dermatological condition whose possible cause is electromagnetic/microwave radiation. She presented to the National Bioethics Advisory Commission this past January, 1998 when the Commission had their meeting in Los Angeles.

The location of the equipment, causing Joan's skin condition, is in the house directly next door to hers. The owner of the house is a known drug dealer. Joan lives on a street which turns into a dead end in the Pacific Palisades. She noticed many cars pulling into dead end street, knocking on her neighbor's door and leaving quickly. She decided to jot down license plate numbers to make a report to the police. Joan was trying to be a good citizen.

As a consequent of her actions, her reports were basically ignored and the electronic harassment started. It appears that the electronic harassment was perpetrated by the very drug lord she was trying to report to the police. The police basically refused to respond to her attempts to report drug dealing in her neighborhood. Please

draw your own conclusions as to what this means.

On June 13th, Joan decided to take the latest photos of her skin condition and try to approach the police in what she felt would be a happy, friendly environment. A time and place where she felt her story might be better received. Joan walked around showing her photos to various police officers. After listening to her story, a friendly officer took her to meet someone he claimed looked to have the same type of burns/skin condition as Joan.

It was at this point that Joan was introduced to Officer Digby Sharpe. Joan noticed that he was wearing shorts, and his skin condition was readily apparent. Officer Sharpe and Joan compared their lesions, and it was evident to both of them that she had the same condition as he did. Officer Sharpe declared that his lesions were caused by EM radiation and he was seeing a doctor in Beverly Hills. He gave the name and address to Joan so that she could go to the doctor and get confirmation as to her condition.

In addition to her fruitful discussion with Officer Sharpe, Joan talked with Lt. Lauer and Officer Karen Ellis who encouraged her to make a report about the drug problem. Also, surprisingly, Officer Ellis suggested that Joan make an EM damage report at the West Side station.

I am providing this information to show that local police departments are aware of heavy duty EM radiation. They have never admitted this before. I can only guess the reason why one of their own is suffering from EM radiation. But, the point is, that they know about this condition. The point is that doctors know about this condition.

Earlier this morning Joan made a suggestion to me. She thought it would be a good idea to present a united front. That is, target individuals as a group go to police stations together and fill out the so-called EM report. Joan was also afraid that I would report the facts of the matter to the public. She was afraid this might "offend somebody" and "get some people in trouble." This is what happens to a targeted individuals; they begin to believe they are alone; that no one will believe them; that the local police are not on their side (and in some cases, that is the correct assumption).

The bottomline is: that the targeted individuals come to know that they are no longer in isolation, living in fear, without the general public understanding or knowing that direct EM radiation as a form of retaliation is taking place. Now, the targeted individuals are just a small group of people. This small group of people is just the

test. If the test is successful . . . . How many more will become targeted by electronic harassment?

Diary #94 (Mikey)  
June 15, 1998

What appear to be random acts of emotional violence are certainly deliberate and purposeful. Perhaps my attempts to expand my social network (new female acquaintance or involvement in church activity) or my discussion of the Franchise Tax Board necessitated a behavioral adjustment. I will never know the protocol.

A couple of times, I noticed increased sleep disturbance during the shuttle's launch and flight activities. However, I have never been able to monitor these activities to determine a correlation. The microwave induced voices with occasional electric shocks were emotional triggers this week. The number of minutes of induced anxiety appears to have increased since May 26, 1998.

This week I felt an urge to pick up the telephone and call the Franchise Tax Board to unleash a verbal attack comparable to what I've been experiencing. It was a struggle to stay in control because I felt like I was immersed in a pressure cooker. I often find myself alternating between opposing trains of thought.

My brain is seldom at rest. However, I mask my feelings and conceal my thoughts from persons around me. I awoke today with painful and swollen eyes from 4 1/2 hours of sleep with dreams and mental activity. Today, I am physically and mentally exhausted. The past 2 weeks I've tried to maintain a daily 30 minute exercise regimen. I didn't exercise today.

Diary #95 (Eleanor White)  
June 19, 1998

A funny one. (There are such things.)

I've been at my present job for a little over six years, working as the computer system manager.

For the first five years, whenever a computer-related parcel would arrive at our receiving dock, the parcel would more or less be delivered to the computer room any time of day, usually with minimal delay.

For the past 3 years or so, I've had the pleasure of working with an excellent receiving staff. One

gentleman on the receiving staff has acted more or less harmlessly, doing a few harassment stunts for a little walking money in his kick. One of his most pronounced stunts was Diary #18, in Volume 1 of the diary series on my raven1 web site.

For the past year or so, this man's main trick and source of walking money has been to deliver one or more parcels precisely as I start eating my lunch at about 12:10 p.m. An alternative form of this is to phone me to come out and inspect some boxes of computer related stuff, or even have me come out only to find the item isn't addressed to me.

Another variant is to bring huge heavy boxes into the computer room and drop them, even though I have patiently explained countless times that boxes are never to be delivered inside the computer room.

Anyone tempted to call this "coincidence" will have to explain why there have been no exceptions over the past several months. I do not label events like this as genuine harassment until they have happened consistently enough.

The reason I know this is genuine harassment and not coincidence is that for the past year or so, there are never deliveries at any other time.

I have let it go until the past couple of months when I began making notes of this phenomenon.

So today, I looked him squarely in the eye when he tried to bring today's lunchtime box, and asked him "Joe, please deliver no more boxes between noon and 1 p.m., OK?"

"Joe's" response to my request was the funny part:

He explained that all boxes must be delivered the second they enter the building because computer parts are EXTREMELY expensive!

And... he went on "... besides, somebody might put another box on top of this one!" ("Joe" is, of course, the only one who would be moving boxes around in his area anyway.)

I and several co-workers who are aware of the harassment and Joe's antics had a very, very good laugh over the excuses, much as we all laugh at some of the excuses made to police when caught carrying drugs.

I feel this little opportunity to laugh has been earned, by me and by Joe, in opposite senses!

Diary #96 (j.SC)

June 20, 1998

VICTIM OFFERS REWARD

I've written Senator Boxer (Sen. Feinstein doesn't answer mail often) for help in getting Lawrence Livermore Natl Lab to show me their UNCLASSIFIED, commercial product, the MicroPower Impulse Radar set, which would explain many of the strange characteristics of the radar being used against me. The lab so far has refused to answer two Emails and a hardcopy letter. Zircon Co., who have licensed the MIR technology, wanted me to pay them to talk with one of their engineers! Must be from Russia.

The second paragraph below is running in Yahoo & was run two weeks in the SJ Mercury-News. It announces the reward and also describes my possibly unique problem--unique in that the guilty parties are known in the area--not fly-by-nights; therefore, they will not escape the law.

-----  
Hello.

Thank you for expressing an interest in the harassment problem. I am a resident of the complex in question and am the person offering the reward.

-----

Reward -- \$10,000. For information or technical evidence leading to the arrest and conviction of persons harassing residents of a Santa Clara apartment complex. A radar set or other microwave device, probably emitting random pulses, must be identified. Email jwill@pacbell.net.

-----

The information in this message is not confidential or personal, but it is protected by copyright and should not be copied, posted, or published without permission.

To be eligible for the reward, you must not have any employment, blood, or marriage connection with the Santa Clara Police Department or the Santa Clara City government. You also must not be forbidden by law, for example by police or civil service regulation, to accept such a reward.

Only ONE reward will be made; if the efforts of several eligible persons lead to an arrest and conviction, the reward will be divided equally among them.

To earn the reward, a plan, information, technical innovation, or other approach must be accepted by the Santa Clara Police as a basis for an arrest on the charge of battery. If your approach is rejected by the police, it means that the arrest will not be made; so, the reward will not be made, either.

The charge for the arrest and conviction must be battery. Preferably, convictions also would be obtained for one or

more of: invasion of privacy, conspiracy, reckless endangerment, and espionage. But, battery will be enough for the reward.

If you wish to pursue the reward after reading this message, I will meet with you in person before you contact the police. The police will require informational testimony or incontrovertible physical evidence before they will act. Technical evidence must be reduced to meaningful accusations. My difficulty to date has been that the Federal agencies with the necessary technical expertise insist that the unexpert Santa Clara police do all the work.

My interest is in gaining relief from the persecution I and others have been enduring; if your information or approach seems good to me, I most certainly will help you provide the basis for an arrest.

If I think your approach will not work, you still may contact the police as a witness of a crime.

-----

To avoid misunderstandings or attempts to try approaches that already have failed, I now will provide you with some information.

I will provide you additional assistance and information if I think the Santa Clara police would make an arrest based on your information or approach.

For example, if you knew the manufacturer or supplier of apparatus being used in the harassment and could show that one of the perpetrators had bought or been given such equipment, that would help qualify you for the reward.

#### General Description of the Problem:

The harassment is microwave radiation apparently originating from three specific apartments in the complex. Because the radiation is being emitted through solid wooden walls, the operators of the microwave apparatus cannot be seen during the harassment. So, the major difficulty is in not having eye witnesses of the act of harassment.

However, good electronic measurements of the radiation probably would be adequate to support a search warrant and lead to an arrest (or, preferably, three or more arrests) and conviction.

Briefly, the radiation causes vague "hackle-raising" feelings, pins-and-needles, blood pressure anomalies, or acute pain, depending on intensity and body part illuminated. Except the acute pain, the symptoms always take some time, often seconds, to develop after one has changed location within ones home. The radiation makes sleeping or remaining still painful or uncomfortable. Based on NIH postings, the radiation seems to cause biological effects by heat, by direct neural interaction, or by paralyzing blood capillaries.

The harassment generally becomes most intense around midnight and again around 3:00 AM.

The apparatus may be modified medical equipment; but, more likely, they are homemade--or, are modified military radar sets, possibly misappropriated from the armed forces.

All indications are that the devices, evidently three or more of them, fulfill the following:

1. They are small and portable.
2. They allow for a beam diameter adjustable from something like 1 cm to 20 cm. The beam is well collimated and has a range of 10 meters.
3. The devices probably have adaptive intensity controls for constant RF flux into human tissue. The beam seems switchable (perhaps to a different device) between a low duty-cycle random pulse and a continuous, microwave-oven-like, operation.
4. They are operable on a power or amplitude modulation based around 1 or 2 Hz. They probably are programmable with a variety of random pulse frequency distributions.
5. They probably are operable on a tunable or programmable microwave carrier frequency.

A legitimate use of such a device might be to treat impotence in the home by dilation of blood vessels; some recent Russian "research" in the online PubMed (NIH) abstracts suggest this application.

One person being harassed has said he believes that deer hunters may be using radar sets to deliver pain to deer in hiding, forcing them into the open to be shot. In this case, he believes an Air Force employee has been providing the radar.

The current, illegal use in this apartment complex may be revenge for failure of an industrial espionage setup (for theft of software products) that apparently was aborted by my actions early last year.

-----  
Approaches already tried and failed:

"Failed" means that the Santa Clara Police would not request a search warrant or attempt an arrest. It also may mean that evidence could not be obtained.

1. The microwaves interfere with TV audio and video reception, UHF or VHF (or, sometimes, both), causing a hiss or sputter when the antenna is inserted in the beam. Tapes of this interference have not been acceptable for an arrest.
2. In at least one mode of operation, the harassing device is audible through the wall as a 1 - 2 Hz transformer-like hum; the frequency increases to perhaps 5 Hz when a sheet

of aluminum is used to block the beam. Tapes of this sound have not been acceptable for an arrest.

3. Several models of RF spectrum analyzer have been tried and have failed to reveal any particular operating frequency in the range 5 MHz to 20 GHz. This supports the idea that random pulses (or, pulses at spread-spectrum frequency) are emitted. Narrow enough pulses would extend into the TV broadcast range, whatever their center frequency.

4. The beam can not be detected by:

- A. An off-the-shelf microwave oven safety checker;
- B. A pinwheel radiometer; or,
- C. A sensitive ammeter, with or without a wire for antenna.
- D. Based on a report from another harassed person: There is no response from a commercially available, beeper-sized portable mw detector sensitive to under 1 microWatt per cm<sup>2</sup> over about 100 MHz to 5 GHz.

5. Assistance has been requested of several Federal agencies, including FCC, FDA, EPA, DOE, CIA, and FBI. All seem to have concluded that action must be initiated by the Santa Clara Police, because of the criminal nature of the offense.

-----  
If you still think you have information, or means of obtaining information, leading to an arrest and conviction, please send me another Email at this address (jwill@pacbell.net), including your name and telephone number.

If you already have factual information in hand, please describe it; if you have a plan of some kind depending on future actions, I suggest not including it in the message. I will contact you from a secure telephone within a few days.

Diary #97 (Anonymous)  
June 21, 1998

In 1983, I became aware that I was being harassed in a way that was unique. Experiences progressively got worse, no matter what I tried to do to stop these experiences.

Written in a very shortened form, the following were experienced:

Male voices inside my head talking to me,  
disembodied male voices in the room, disembodied  
male voices in the yard of my home, disembodied  
voices coming from my bedroom closet.

Sounds such as a motor vehicle (a van) with accompanied thumping noises. Male voices accompanying, explaining the action.

Inability to sleep. Miniature "elf-like" men inside my ear, talking. The feeling of bugs on my body.

A clock radio which I had turned off was turned back on again. My husband said, "Turn that off." I told him, "I already did."

Television interruptions. One morning while I was watching the Donahue show, the screen changed and I saw an older man wearing a pinocchio nose. A wall was behind him. "Liar", the voices said.

The sound of voices coming from electrical outlets. I thought my house was bugged. I arranged for a detective to come to the home to electronically search for bugs. He found none.

Uncontrollable emotions. Once, I couldn't stop laughing for hours.

Hearing parts of conversations attributed to others whom I may or may not know. It gave the impression of all of a sudden becoming "psychic".

There was a game. If I lost the game, certain threats would be carried out. One of the threats involved my father. If I didn't play the game, my father would die, among other consequences. The game went like this. There were 10 steps. You were allowed 10 steps and then you could repeat 10 more steps. These steps represented actions (going to the bathroom, going to the mailbox, doing this, doing that, etc.

Once you lost the game (and the game was almost always lost), then you had 3 days to stop them from carrying out their threats. With all these threats, with the house sounding like it is haunted, with little "elf-like" fellows in your ear, etc., it was very scary. I would shake with fear. I have never known such fear as this.

An example of my father dying --

On and on they talked, and then I picked up the sound of a gun going off. They explain my father just committed suicide. I hear the voice of my mother reacting. For several days, I thought my father had killed himself with a gun and my mother hated me for letting it happen. It wasn't until a few weeks later that I knew this scenario was a hoax.

I also heard "radio" transmissions coming from the electrical equipment. Every once in a while, I could make out some of the talk. There were also

squeaking shoes.

They also made me believe that a local person wanted to make me a sex slave by keeping me in the basement of his office.

In 1984 in South Carolina, I was absolutely terrified.

I moved to Florida and things improved. However, I still head voices in my head, I still played the game for many months, I "heard" my parents talk in nonexistent conversations, my husband was threatened, my parents and I were always threatened.

I also saw many, many, many cars with bikes being carried atop them, secured by bicycle racks. The inference was that bicycles meant something bad was going to happen. The voices would say "bicycles" when they implied something was bad. I developed a fear of seeing bicycles. unless I knew their presence was innocuous.

Finally, the game stopped after the death of my husband in 1986 from a heart attack.

Follow-up to victim who posted the reward in  
Diary #96

The Santa Clara police closed their open case on my battery complaint, after I went to the expense of renting a spectrum analyzer (having no knowledge or experience with the radio spectrum) and got only \*equivocal\* results in the range 5 MHz - 20 GHz. One next-door neighbor, one of the conspirators, is described as a strip-tease artist, and the policeman I was dealing with had described himself as knowing all about the dirty, crooked things going on (but not, apparently, being paid enough to do anything about them). I suspect, but have no direct evidence of, possible police corruption, maybe in exchange for sexual favors.

Diary #99 (Joan Siegemund)  
June 21, 1998

A FUNNY THING HAPPENED  
at THE POLICE STATION.

The announcement "Open House" loomed large in the throw-away paper and the thought crossed my mind: "This would be a good opportunity to show the pictures of my EM-embattled arm. My idea was this: If the reaction was: "Get thee to a nut house!" I would have pocketed my artwork, said hello and

goodby in rapid succession, forgone the free hotdog, and taken my leave without further ado.

As it turned out, though, the reception was warm and welcoming, and above all, my pictures were a big hit. Each police officer I spoke with became absorbed in the pictures volunteering his impression of what they might represent. After all, huge blisters and red inflamed arm and other areas are not your everyday spectacle, at least outside a war zone.

Tables set up for the occasion displayed with piles of PR pamphlets for would-be police aspirants or volunteer helpers, and the hosting officers seated at the various tables were most friendly and forthcoming, eagerly awaiting questions from visitors.

The first officer I approached was heading a long table. : "May I show you some rather unusual pictures," was my opener, and I waited for a affirmative sign before displaying my small portfolio. The reaction was subdued but intense. He gazed deeply at the 1.5 in. inch bright yellow blisters (height of about a half inch) and the 5x6 red inflamed areas displayed on the film.

"What are these?" he asked. "Ebola virus? That's the only thing I can imagine." No, he said, he had not seen cases of Ebola, except on a television documentary. But he came close. EM and Ebola are both man-made, and both lethal. When I told him they were caused by EM frequencies targetted at my arm and other body parts, he did not seem in the least surprised and made no attempt to refute it. The Red Cross badge he wore seemed to give him an added modicum of authority of one who had seen much that was unspeakable.

I then proceeded to the next table, and this is where IT happened. Two outgoing and charming officers, fascinated by the ARM artwork, readily ventured that the pictures might represent white sulphur bombs or napalm! It was apparent that one of these officers was familiar with those terrible compounds and the wounds they produced.

Then it happened: "One of our fellow officers has the same thing," said the redhead officer. His companion concurred with: "Let me introduce you. He's right here," getting up to lead me a few steps way to the officer in question.

Community Relations Officer Digby Sharp stood tall and smiling as we approached. He was the only one wearing shorts, and when he pointed down to his calf, I knew why. A long 9x4 inch inflammation shone red on the outer part of his leg from a few inches below the knee to just above the ankle. It looked as if it must be painful, but knowing from my arm

experience that you don't feel it unless something (trousers or the like) chafed or rubbed against it, I did not remark "how painful it must be". But "Oh, my God!" escaped before I could stop it.

I was full of wonderment, not because I had seen my first confirming EM wounds, but because heretofore, I had believed that if anyone was immune to this sort of overt EM harassment, it would be the police.

Clearly, I was wrong.

A badge of honor? or of horror? Officer Sharp smiled as if walking around with an expanse of burned leg was the most natural thing in the world. Was it honor or horror to be attacked by unknowns and even though you represent Law Enforcement, to be powerless to enforce the law that forbids assault and battery? How was it he was powerless to enforce the particularly strict censures against assault on peace officers?

In any case, he stated that his wounds were electromagnetically related, that they were diagnosed as such by a dermatologist, and quickly volunteered the latter's name.

After he vanished into the small gathering, I wandered over to the Police Historical Society wagon. There I spoke with a retired gentleman who informed me that back in the '60's the police had an outfit they used to call in response to citizens' electromagnetic harassment complaints. He said that outfit would go to the source of the problem and reduce the power.

He conceded they could then start up the machine again, though. Alas, he stated the '60's was the last he heard of such a service.

I returned to the second table where now the Watch Commander, a comely blond lady, Lt. Nancy Lauer and officer Karen Ellis were speaking. When I displayed my pictures to them, the reaction was instantaneous. And when I said I believed a drug dealer living near me was the perpetrator, Lt. Lauer instructed officer Ellis to take down the information.

After showing my artwork to the bomb squad officer wearing a microwave shielding uniform who was operating a microwave-controlled robot, and who volunteered the name of a San Diego based uniform shop that made microwave-shielding clothing, I showed my pictures to a few more officers and volunteers who were silent yet clearly dismayed.

How many similar pictures, I wondered, had they seen and how many were chafing under similar EM burns as Officer Sharp and unnamed others?

How many of them were EM victims?

Diary #100 (j.SC)  
June 22, 1998

Victim able to detect signals on hand held TV.

TVI = TV interference which coincides with  
harassment effect.

N = No corresponding TV interference

In the last 24 hours, I've experienced  
this incomplete list:

- Electronically triggered itching night and day == TVI

- Huge thumping sounds from the floor above                      N  
my apartment almost every single time I tried  
to fall asleep (These are 99% certainly sound-  
to-skull transmissions, the preferred method  
in apartment buildings. My boss and a former  
roommate confirmed that really heavy booms  
can be transmitted to me but not heard by  
someone a few feet away.)

[ME TOO. EW]

- Hot needles pushed into fleshy body parts == TVI

- Physical bumping of my bed when I tried        == TVI  
to sleep

- Electronically induced body jerks                      N

- General electronic caffeine signal - you can't  
even start to sleep no matter how exhausted

For me (j.SC), caused by beam to abdomen, causing  
"stirring" feeling.

- Electronic hypnosis commands to turn in bed  
at precise on the hour/half-hour times selected    N  
by the harassers

- Turning of alarm clock 15 minutes fast either        N  
through apartment entry or by remote physical  
manipulation

- A couple of instances of remotely induced            N  
fumbling of objects (utensils, book)

- Loud, raucous unnatural "bird" calls at freq-  
encies right at the very top of the hearing  
range, and at least ten times as loud as any  
natural bird could be - almost painful

"Tinnitus"? [No. Tape recordable. EW]    Caused  
by TV-detectable beam to head, for me.

- Faked "buzz-in" lock trouble at the work bldg.; N provocateur employee pretended he couldn't open the door so I had to go to the front door and open a perfectly functioning door - same guy regularly hassles me during the week, and no doubt enjoys some "walking money" in return)
- Fake "renovation" every time I tried to take a daytime nap and at meal time (my apt. bldg. saves up all work for Sat. & Sun. afternoons apparently.) What I'm talking about is hammering, drilling etc. that is timed almost to the second when I try to slide off into sleep or have a meal - additionally, I never hear this at any other time, and it's been 8 years of this by now. Way beyond coincidence.

N

The TV is a Radio Shack PocketVision 22; 4 AA batteries (operation from a wall adapter has been proven not to corrupt the effect). Similar models now run about \$100; however, unlike the specialized instruments available for snooping on people or detecting "bugs", the TV is just fine as a little TV set!

I should point out that I use the TV with telescoping antenna extended to locate the beam.

Then, to determine the exact path of the beam, I fold the antenna down to minimum length. I then move the TV in a circle, parallel to the floor & maybe at other angles: The TV program playing emits a brief "snif" sound when the TV passes through the beam. Two intersections of the beam determine a line along which it passes.

I think I explained this in a past message, too. Simply interposing the TV between the body and the neighbor's wall (or, ceiling, for the upstairs), and then blocking the beam with a piece of metal, proves the source of the noxious stimulation.

After bringing this to Feds & police, the harassers began quickly moving the beam around, to make use of the TV harder; but, it still works. A weak, diffuse, big cone of emission (say, a meter across), may be hard to hear on TV; however, it also has only a weak effect on the body, too.

Diary #101 (Mikey)  
June 26, 1998

Between acutely stressful episodes, I often reflect on the surrealism of the mind control experience.

It's a contrast between the illusion of freedom and

the reality of psychological detention. The parameters or limits of my behavior or actions are the invisible walls of confinement. Only the victim and the oppressor know the extent of the invisible chains that bind.

This experience could be a model for incarceration in the twenty-first century. As a victim and/or prisoner, I simply try to adjust to the pressures of being under constant observation and survive the cruelty of sleep deprivation, painful physical/psychological abuse and castration.

The victim's volition is circumvented by the manipulation of these tools of bondage. The apparent ability of the oppressor to intrude into the territoriality of the victim/prisoner's mind perpetuates a "Twilight Zone" existence. The covert nature of the incarceration veils the insanity.

Mikey  
Houston, Texas

-----  
Diary #102 (Eleanor White)  
June 26, 1998

Once again, God reaches down and helps the hapless!

Referring back to Diary #90, since an un-scheduled police psychiatric unit raid on my apartment on June 8, 1998, I have been effectively muzzled in e-weapons activism.

So, in the past two weeks I've been trying to prudently prepare for a second knock, as I wrote a stiff letter of complaint to the Ontario Minister of Health, and attached diary entry 90. That letter wasn't exactly full of praise for the Hamilton police.

There are two things I've started rolling today, as part of the preparation:

- To get a mental health experienced lawyer to agree to take my case if I get locked up, and,
- To try to arrange a psychiatric evaluation on a voluntary basis, so that when I take my demo acoustic weapon to Queen's Park, I'll in effect have a clean bill of mental health in hand.

The lawyer I visited this morning was the same lawyer I had seen about 3-1/2 years ago, when I thought the harassment was a landlord-tenant matter. She is a really impressive person, an eloquent speaker, and someone you would really like to have on your side in a jam. She is:

Joan M. MacDonald, Barrister and Solicitor  
1 King Street West - Suite 1100

Hamilton, Ontario L8P 1A4  
Voice: 905-526-9552  
Fax: 905-526-1037

Her secretary, who was brought in to hear my story, is Patty. (Patty has a PC and will probably be reviewing my sites soon.)

The meeting started out simply, and I said I had just one question: "Will you represent me if the police psychiatric squad returns and places me in hospital confinement?".

She said yes, and we went through the usual opening of a file, personal and contact information, and so forth.

I then told her that after visiting her earlier on, I had joined the Internet and searched on "harassment", and was stunned to find Julianne McKinney's article, which I showed her.

I showed her the burn photos on my site, one anonymous, the other Joan Siegemund's.

After a few more highlights, it was her turn to speak. What she told me almost caused me to fall out of the chair! She said: "I KNOW about this. Between 1989 and 1993, I represented a man who was incarcerated in the Penetanguishene (Ontario) hospital for the criminally insane. He too complained about the same electronic weapons effects that you [Eleanor] are experiencing now. He was actually a [SPOOK] who was involved in USING the e-weapons and had tried to blow the whistle."

She went on to say that he was a fountain of inside information from the perpetrator side, information she, Joan MacDonald felt he could not possibly have unless he was the person he claimed to be.

She has since lost touch, but said she would try to track him down and see if he is willing to contact us.

Can you believe it? You go to a lawyer who has actually dealt with one of the SPOOKS?

She would need a retainer to cover the probable \$2,000 CDN cost of fighting an involuntary psychiatric hospitalization. I don't have that, but just before I take my weapon to the provincial legislature later this summer, I'm going to transfer that money from my credit card into my chequing account and give them a cheque to hold.

It may be possible, too, to recover some of that from legal aid, but this is too important a matter to quibble over legal aid eligibility which can be done after the fact.

But Ms. MacDonald had more to say: She gave me the names of two local psychiatrists who have done some activism themselves on nuclear proliferation. I'll hold the names back here, until I've had a chance to meet with one of them. Ms. MacDonald felt that they would treat an activist better than many psychiatrists.

Right after meeting with the lawyer, I visited my GP doctor, who is:

Dr. Laura Blew  
ROSEDALE MEDICAL CLINIC  
1955 King Street East  
Hamilton, Ontario L8K 1W2  
Voice: 905-547-0504

I asked Dr. Blew about arranging for a rigorous, voluntary in-patient psychiatric assessment. She now realizes the seriousness of this matter, after the police raid (and she is also the reason I'm free to write this today!)

She plans to contact the two recommended psychiatrists who have experience as activists to arrange that. The plan is to successfully complete a voluntary assessment BEFORE taking the weapon to Queen's Park. I have more than enough saved-up vacation to do this.

Dr. Blew showed me, though I didn't read much due to her busy schedule, the police psychiatric squad's report of their raid on June 8th. A full page of fine print stating what I had told them about e-weapons, and those golden words, right at the end:

"Eleanor White is clearly no danger to herself or others." H-O-O-O-O-O-O-O-R-A-Y!!!!

If I needed confirmation of God's hand in this mess, today was the brightest shaft of light I've seen thus far!

Eleanor White

-----  
Diary #103 (Eleanor White)  
July 4, 1998

\*\* First an appeal for help. I thought that the diary entries had gone above #102. If anyone has received a 103 or higher, then this is consistent with recent intense spook damage to my files - first disabling Netscape's "visited" hypertext colour change, and more recently, disabling my ability to log on automatically every time I leave work. Please let me know if you have seen other #103 entries or higher. Thanks.

Spook tactics following Diary #102  
of June 8, 1998

This is to report, as a precaution, that ever since the police psychiatric unit's raid on June 8th, the spooks have been gradually but irreversibly doing two things not experienced to the current degree:

- Blanking of current memory - i.e., you start off to do something at work or home and it is blanked for at least several hours before you have taken your second step.

- "Nudging", probably via hypnosis, your hands to do completely erroneous things, not only erasing when you meant to open an email, for example, but more serious things at work and home.

The obvious suspicion is that they want me disabled as an activist, but they can't do anything sudden without local people seeing that as an act of spookery. Rather, by doing it very slowly, someone age 57 can "be expected" to suffer some loss of cognitive function over time.

This is a much more efficient tactic on their part than a "Mafia hit".

Let me say that my deceased family members always had crystal clear perception and cognitive skills right up to the moment cancer or heart disease put them in the ground.

If I wind up a veggie, know well it is not a natural occurrence.

Eleanor White

-----  
Diary #104 (Mikey)  
July 7, 1998

I awoke fatigued this morning after a night of dreams and imagery. I experienced some disjointedness of thought and found it difficult to get going at work. The microwave induced voices were an irritant this morning. I am usually allowed to work without the distractions of the voices. I've had a break from this madness since my last entry. The voices have slowly intensified since July 5, 1998. I am continually reminded one way or the other of the boundaries of the mind control penitentiary. Sometimes I ask myself "Is this twenty-first century incarceration or slavery?"

Mikey  
Houston, Texas

-----  
Diary #105 (Maria)  
July 9, 1998

I have, for over 20 years, been the target of nonconsensual Mind Control Technology and since early this decade Electromagnetic radiation has been directed in/on my body.

I observe it as muscle spasms externally and internally, radiation burns on my face, neck and upper chest and internally in my lungs, damaging the delicate tissue. The EMR is used to interrupt my sleep and resulted in symptoms of prolonged sleep deprivation so that my health deteriorated greatly by 1997. I had no understanding what was happening, although I worked out the EMR for myself because of its effects.

I sought help from professionals, but no one believed me. Some knew of the illegal technology, but refrained from enlightening me. The mind control is more insidious, very confusing and hard to cope with.

I found out about the use of these nonconsensual technologies in April, '98 in a film, Hyperscience. I am a practising Christian and find help in God who promised never to leave or forsake me. " The Lord is my strength" Ps 27:1.

Maria

-----  
Diary #106 (Eleanor White)  
July 17, 1998

For anyone who doubts the potency of the spooks' memory blanking abilities.

Since successfully avoiding being taken in to psychiatric custody on June 8, 1998 (Diary #102) my local spooks have stepped up the memory blanking and erroneous action effects significantly.

The most recent and serious example:

For the past eight work days, I have been assigned to run an important accounts receivable computer report prior to the normal work day, because to run this report during the work day causes serious delays in processing orders.

Out of those eight work days, I have been able to remember to do it on only two days.

I'm no star performer at any job, but dependability in simple tasks has always been a strong point with me. There is just no way that I would ever forget to run an important task six out of eight days.

Such performance would have guaranteed that I be unemployed long ago.

On top of that, I have had posted around the computer room three large-print notes reminding me to do this task, one of which is 8.5 x 11" and literally screams the message.

Even some victims have told me that memory sup-

pression by spooks is impossible, and I'd like to say to those doubters here: "Oh yeah?"

Eleanor White

-----  
Diary #107 (Kathleen Heckman)  
July 23, 1998

Out Of The Mouth Of Babes . . .

This morning I watched Headline News' report that Janet Reno visited yesterday school children to ask them why children are violent. A teenage girl said that the violence stems from insecurity and frustration against unknown forces that they cannot react against, and so they take their anger out on those around them.

Why doesn't Janet ask herself where violence comes from? Or ask the designers of the program that we are attacked by? They already seem to have agreed with what this young girl said.

I am told that I have a prostitute mentality. That my e-mail campaign doesn't go through, that I am a heart attack victim, and that they are in love with me. That I am Janet Reno's favorite victim.

I sit at my desk and have felt heart pain and a tightening on the left side of my neck why they tell me what is my "final destination". I try not to squirm and do my job, and sometimes wonder how strange am I that I am not screaming my bloody head off telling my co-workers that I am being murdered.

I am told constantly that "Timothy McVeigh blew up the Oklahoma Federal Building". I have to live with their messages and ugly comments and continue to try to work and find happiness and not become a robot or bitter person who blames every circumstance in my life on their manipulations.

Yes, Janet, that girl was correct according to the governments agenda against us victims. However, why are some NOT violent, such as us victims who continue to try to help one another, carry on our lives, and end this abuse?

Sincerely,

Kathleen T. Heckman  
echoes444@hotmail.com

-----  
Diary #108 (Eleanor White)  
July 25, 1998

The little things that add up, over time.

This is a diary entry about a very little spook act of sabotage. Nothing, right? Not when these "little" acts continue year after year after year.

I have a large complex composite metallic shell surrounding my bed, which is a past attempt to "attenuate" (diminish) the radio signal harassment effects. It has partly succeeded, but if they want to, the spooks can still generate every one of their torture effects.

The bed-shield assembly is suspended on four chains and four nylon straps about 4 feet above the floor.

For the past year or so, the most aggressive form of torture has been application of radio controlled itch, which leaves me looking like the paint job on a car which has upended and scraped along a gravel surface for several hundred feet. Self-scratched, using the coarsest possible paint-removal scouring pads throughout the night just to get a little rest, never mind sleep.

(It's radio controlled nature is obvious: It gets switched on and off suddenly - just like a lamp - and is accompanied by many other electronic effects.)

So - OK - I used nylon cable ties to wrap a scouring pad around the nylon strap support beside my left foot. This is an assist in scratching the feet.

A couple of days after making that scratching aid, I came home and discovered that the spooks had tightly tied the chain and strap supports against one another, preventing full use of the scratch pad. Untied that and got full use back.

(I remind the reader that I live entirely alone, with no social visitors ever. 1/8" cotton cord does NOT leap out of the kitchen drawer, march to the bed, hop up and tie itself into a tight knot. Daytime entry into my apartment for pranks like this has been happening for years.)

Yesterday, Friday, I got into bed and discovered that the 1/4" screen mesh layer, the edge of which is very close to the scratch pad had it's protective layer of 2" tape tidily removed where my toes would contact it, and get little holes punched when I used the scratch pad. There is no regular contact with the mesh's protective edge tape in that area.

Again, tape doesn't arbitrarily disappear into thin air, at least not in the world I live in.

The removal of protective tape and padding of sharp edges, or hammering the padding against a sharp edge so the edge can push through, has been a staple activity of my local harassers for years.

Wish I could watch their faces when they line up for Final Judgement.

Electrical misdeed.

I've often been the "utility person" at my place of work, running errands which don't fit with mainstream activities. I have purchased and taken the company vacuum cleaners for repairs several times.

Over the past 6 years, every single time I purchased or had a vacuum cleaner repaired, within 24 to 48 hours, every one of these vacuum cleaners had been rewired to run backwards. As a result, I no longer do anything with vacuum cleaners, and the spooks have "won" one.

I've also been virtually the only person who turns on the lights in our main office, as I have a key and arrive early.

The main office lights operate from two rows of four wall switches.

A few days ago, I was startled to see that the order of the switches vs. the order in which blocks of lights come on had been re-wired, so that the lower left pair of switches now energize the lights formerly connected to the lower right hand switch pair.

This isn't an amazing misdeed, but it is a classic illustration of how the spooks keep an e-weapons victim constantly "on edge".

Diary #110 (Eleanor White)  
July 30, 1998

Some skilled work with a small steak knife.

For more than a year now, my local tormentors have manipulated my limbs and especially my hands and fingers while projecting waking images (eyes closed but fully awake) of using tools, often cutting cables as I try to rest in bed at night.

As a very small countermeasure, I sleep with a 3" foam rubber pad under my pillow, with the egg carton pattern side down.

I keep one of my hands facing upward, and the fingers engage the egg carton pattern so that their movement during this torment is restricted.

A couple of weeks ago I noticed that while the egg carton pattern was there intact, there was almost nothing restricting the movement of my fingers. I inspected the foam pad and found that someone had

drawn what appeared to be a steak knife diagonally across every possible hand position on the end of the pillow-sized pad where I keep my hands.

(I use only one end for this - I have other arrangements at the opposite end.)

These cuts appeared instantaneously and were absolutely not wear and tear.

So - I turned the pad 180 degrees so that the uncut end was positioned where I keep my hand.

Exactly two days later, last evening, exactly the same cut pattern appeared on the other, uncut end, and had to be done during the day while I was at work.

Entry to my apartment and the living quarters of all other e-weapons victims is routine, and this is not an "end-of-the-world" event, but it is highly typical.

Diary #111 (Eleanor White)  
August 3, 1998

A second crystal clear electronic hypnosis incident.

Yesterday I spent some time trying to troubleshoot a balky acoustic demo weapon.

At one point, I had the workbench almost clear of parts and tools, and was re-mounting one of the impedance matching transformers, each of which mounts with two 8-32 machine screws and nuts.

The nuts are bright metal plated, and "large" pattern in hardware jargon.

The bench is dark, woodgrain finish, with two 75 watt floodlights providing plenty of light.

I was alone in the building, and there were no distracting activities in progress.

The first of the two screw-nut pairs installed just fine.

After inserting the second screw, I turned toward the workbench for the second nut. I COULD NOT SEE IT, even though I knew it was there.

I searched the floor carefully, and any places it might have been accidentally knocked into, but there was just nothing to be seen.

I stepped away for a minute to change music tapes, and - VOILA! - the nut was dead center, bright and clear, in the spot I knew I had left it.

This is the second clear cut incident - there have been many, but few are so undeniably obvious.

Unwanted editing of web site files.

Once in a great while, the spooks will directly edit what a targetted individual posts on a web site.

It happened perhaps a year ago to Patricia Mougey's Toledo OH based web site - her copy of the victims' list was quietly deleted.

I just discovered that one of the most supportive magazine articles we have, "Wonder Weapons" by Douglas Pasternak, US News and World Report, July 7, 1997, has also vanished from my web site.

It will take me some time to re-post it, but it will be back there soon.

So - both our victims' "memorial" list, and the Wonder Weapons article are not liked by the spooks.

That gives us a clue as to what to use in future publicity efforts!

"Psychiatric assesment", (so to speak.)

Today I went to what will be outpatient appointment #1 with the psychiatrist who is a close working colleague with my GP doctor. His name is John Davine (pronounced like "Divine"), he works out of St. Joseph's hospital here in Hamilton, and sees outpatients at my clinic, the Rosedale Medical Clinic, 1955 King Street East, Hamilton, L8K 1W2, main phone number 905-547-0508.

I spent an hour in his outpatient office, along with his psychiatric intern, a young Chinese girl, a Dr. Tang. Dr. Tang took the history and gave me the usual psychiatric questions, while Dr. Davine divided his time between scanning my handout pack and listening in.

In a nutshell (no pun intended), he told me that "I had a psychiatric problem, a curable one."

Further: "I am misinterpreting facts" etc. - same old BS we have all heard a thousand times.

In response to the expected question as to why anyone would do this to me, I repeatedly answered "I can't explain the motives of the people who were the MKULTRA perpetrators, but I can say that the motives are undoubtedly the very same. You are talking to the wrong person if you want an explanation of perpetrator motives."

After delivering his "assessment" (he doesn't feel I need a hospital one) I got my turn to ask some of my own questions:

1. EW: "Do you believe MKULTRA really happened?"

DD: "Well, I don't know".

2. EW: "Have you ever heard of Dr. Jose Delgado? Are you aware of his radio-controlled bull experiment? Will you watch a video of it?"

DD: "Well, I don't know."

3. EW: "Here is a letter from Dr. Colin Ross at the University of Toronto. Are you willing to call Dr. Ross?"

DD: "Well, I don't know."

4. EW: "Are you aware that the USAF and Raven Inc. have been experimenting with microwave voice to skull transmission?"

DD: "No."

5. EW: "Do you think my test equipment is also mis-interpreting facts?"

DD: "Well, I wasn't there."

And more, but you get the drift.

He gave me his well-used line "We'll agree to disagree", and said: "Take the meds and we will see if the harassment stops."

I agreed, and he has prescribed Olanzapine 2.5mg to be taken once a day at bedtime, which he says is a light dose. He also claims Olanzapine has less side effects than any other drug he uses.

So - OK - this sounds like a negative visit, but so was the first time I raised the subject with my GP, who, unless she is pretending, does believe something electronic is going on in the world, though she doesn't feel she understands it all.

I'm going along with this for now - I want to have given the meds a chance before gently and gradually trying to persuade this psychiatrist that he should learn something about world events before passing

judgement. Before this doctor will be open to persuasion, there is no way around a dose of meds.

He claims, that the fairly recent psychiatric "wonder drug" Risperidone, and Olanzapine have minimal side effects. Unfortunately, sometimes we just have to take a hit in order to reach our goals, which in my case is to bring this psychiatrist to the level of belief my GP has.

At this moment, given the experiences with co-workers and my GP, I am cautiously optimistic.

August 5, 1998

MORE "Psychiatric assesment", (so to speak.)

Yesterday I went to the office of Dr. John Davine (pronounced "Divine"), a psychiatrist colleague of my GP doctor. The purpose of the visit was to attempt to get at least one local psychiatrist to take our evidence seriously.

The visit is written up in Diary #113, but one point was left out, because I wanted some quiet time to think over the verbal and non-verbal exclamations of Dr. Davine and his intern (Dr. Tang) before writing the conclusions.

Having done this, I now know that what happened on that visit was spook intervention - absolutely no question whatsoever.

While in the waiting room, I heard a nurse named Crystal paged. Once I entered the doctor's office, the paging system, unnaturally loud, kept repeating over and over the same page, so frequently at one point that it was almost continuous.

I broke what I was saying and said, intending to be humorous, "Crystal needs her own pager".

Well, both doctors stared at me in dead silence with EXTREMELY serious faces. Also - there was NO more paging for the rest of the hour.

Obviously the spooks tricked me into acknowledging the voice to skull transmission. I'll know better next time - and I hope any readers who are targetted individuals will keep this in mind when they face psychiatric personnel.

Do NOT trust that they hear what you hear.

Lesson learned.

Eleanor White

Diary #114 (Pat Mougey)  
August 5, 1998

Can't breathe!

They kept me awake all night, when I dozed my nose closed up and I'd gasp for breath. Female supervisor was on duty (new crew being trained next door at 1931 again)...and she announced plainly 'this will keep oxygen from getting to the brain'. (Remember I have emphysema)

I had to cancel 2:30PM appt with Dr. (which is probably what they wanted), but just talked with his nurse, explaining that I've taken my nose inhaler twice already & other regular inhalers twice, which I shouldn't have because it isn't 2PM, and will it hurt to over-use them. She told me to get to emergency room, so I guess I will when Robin gets home from work.

When you take a breath thru your nostrils, you can feel the air go up, back and down into the back of the throat, it's the back of the nose and throat where the clog is, it can't get into the throat or lungs, and, at same time, you can barely get a breath into your lungs by breathing thru your mouth. Deep breaths are almost a rarity. There's no doubt it keeps the oxygen away from the brain because I almost passed out at least 7 times. I finally used a vicks inhaler, and it opened a pinpoint that air could get thru..even used Vicks Vaporub to start with. They did this to me a few years ago, but it was my throat they clogged up...allowing me to have only a 'pinpoint' passage where the air could go thru. This went on for a full winter season, I was in ER once. A few seasons after that they clogged the nose for an entire winter, (i was able to use the damp outside air to open up the passages then) but not as they did it this time.

I sit in chair & my nose closes up, use vicks inhaler and it works for a second, then few minutes later can't get breath, get real dizzy, plus fluttery in chest, etc. However, now that I've called the Dr. they've eased up just a bit, but I know it won't last long. They're really ticked at me because they heard the Block Watch police officer telling me she'd be calling on one of them tonight after a block watch meeting. That was in mid-week and on Friday night I placed another call to her voice mail during a LOUD musical attack from next door. Their music could be heard on it as I left my message. (I did that one other time...good way to prove what they're doing.)

They started it yesterday. Humidity just isn't that bad for it to affect me like this, should have realized they were doing it then, but I do know now! & this weekend was really a lollapalooza with the noise department on both sides of me, in addition to

usual verbal harassment, etc. & buzzing (grabing skull) attacks. God, that is painful!

Diary #115 (Eleanor White)  
August 5, 1998

Local "e-weapons-aware" shop gets first hand taste of e-weapons harassment.

I'm fortunate to have three e-weapons believers in the local printer repair shop, Milena Balta, and her two gals on the counter.

The shop is:

BBM OFFICE INNOVATIONS INC.  
755 King Street East  
Hamilton ON L8M 1A4  
Voice: 905-523-8686  
Fax: 905-528-4366

Yesterday morning, before the visit to the psychiatrist, I dropped two well worn printers for repair, cleaning and testing.

Milena was not in, but her two counter gals were. There were no other people in the building, a two storey store front belonging entirely to Milena.

I handed over the research finds from Cheryl Welsh:

<http://www.nas.net/~raven1/nsa1.gif>  
(NSA admits mind control exists by affirming classified status of requested document)  
<http://www.nas.net/~raven1/nlpal.gif>  
(Law firm clearly states existence of MC)  
<http://www.nas.net/~raven1/schefln1.gif>  
<http://www.nas.net/~raven1/schefln4.gif>  
(Law professor clearly states existence of MC)  
<http://www.nas.net/~raven1/colnros1.gif>  
<http://www.nas.net/~raven1/colnros4.gif>  
(U. of Toronto psychiatrist clearly affirms existence of MC)

The counter gals were very impressed, and almost as soon as I handed them the papers, a door in the basement slammed shut. This particular door is heavy and drags, and there is no way any kind of draft could have caused the slam. There was virtually no wind outside.

They were very unsettled by this, and I told them that because the spooks can't brag about their exploits in a local bar, they sometimes show off for others, which is true - other co-workers have seen or heard directly a small subset of effects.

This morning I had to go back with another jammed printer (as best I can tell, these particular

printers are not spook-damaged) and Milena told me they were still rattled by what happened, and was about to tell me that a couple of other "spooky" events had taken place since yesterday.

A crush of customers entered, and I didn't bother to hear the details - after 8 years of this - I'm not really all that interested in hearing what I know only too well.

Milena is a very solid, trustworthy person, about my age, and is originally from Bosnia-Herzegovina, where she was a Bosnian Serb. Milena knows all too well how nasty and deceitful governments in general can be, and that I'm sure is why she is so willing to believe our stories.

If the spooks continue to "haunt" her shop, I can tell them right here, bluntly, that they will not achieve their purpose of scaring her into avoiding me. She's lived through it all, and the first time I spoke with her about the spooks, saw thru to the truth instantly.

We could use more like Milena Balta.

Diary #116 (Eleanor White)  
August 11, 1998

Incessant spook trick - and an apology.

My work involves some computer programming and other tasks involving the creation and management of computer files.

For the past 8+ years, the time when I became a full time e-weapons victim, one of the oldest and most consistently used spook tricks has been to copy aside a current version of a program or other file, particularly one needing some work to make it run smoothly.

The spooks then wait a day or two, or as long as several weeks or months, then copy the older version of a program or other file on top of an updated file.

This has come home to roost when a few days ago, I discovered that my site index page, <http://www.nas.net/~raven1/ravindex.htm> ...had lost the reference to that very significant and helpful article "Wonder Weapons", which appeared in U.S. News and World Report in 1997. I strongly suspect either an older version was copied or the Wonder Weapons entry simply deleted.

Just now, I noticed some out of date addresses showing up on some email failure messages. I reviewed my mailing lists, and found at least

two addresses where I am certain they asked me to remove them.

Having experienced this for 8+ years, I have no doubt this was done deliberately, and I recommend you check your files and mailing lists too, for the same reason.

If this bulletin reaches anyone who has asked to be taken off a mailing list, please accept my sincerest apologies!

Diary #117 (Anonymous)  
August 11, 1998

Spooks and children. NOT a good mix.

I wish there were some way to get the people that hurt my little children. Make them suffer the way they made my babies suffer. My four year old has flash backs at least 10 times a day and asks me at least two or three times a day why. "Why did those people want to hurt me mommy , why were they so mean to me?"

I don't know what to tell him that will satisfy his little mind because he keeps asking daily, why Mommy? I say they were very bad evil people that there was no good reason why. They were just very bad. But he still doesn't understand. Neither do I.

When he cried for me the cop would throw him up against the wall and beat him. On other occasions the social worker would throw him out in the dark and lock him out. The day after the court allowed me to visit him for the first time, they took him back to the house and all sat around touching him and raping him and telling him his mommy didn't love him and chanted "humpty dumpty fell off the wall, humpty dumpty had a great fall ect while he cried for his mommy.

When they were done, they all sat back real still and told him they were "waiting for him to come apart like humpty dumpty." To torture these people for 10 years would not be enough. And if if WAS our government behind all this, to make my child into an assassin, then I hate our government and wish I knew how to flee to another country where children are safe. Are there any such countries?

Anonymous

August 12, 1998

Phone company "lock" (?!?)

It was the spring of 1992, two years after I had been kidnapped by Cornell Medical Center. I was living in a NYC highrise building. I was still being harrassed and stalked, photographed and videoed by strangers at least once a week. I was working with a detective and I wanted him to find out who was making the harassing phone calls.

Much to his suprise and mine he discovered I had a high security lock on my phone information. No one, not even employees of the telephone company could get access to review my records. He told me that SUCH A SECURITY LOCK COULD BE PLACED ONLY BY HIGH LEVEL GOVERNMENT OFFICIALS.

Blanche

-----  
Diary #119 (Kathy Heckman)  
August 12, 1998

A Psychological Analysis of My Voice to Skull Harrassment:

I've noticed an increase in oral sybolism in the repeated messages my harrassers have subjected me. This has happened gradually over time as they have weeded out some of the verbal rotations and increased the frequency of those dealing with a psychologically "oral" infantile fixtation. Some examples:

- "Stop smoking and drinking and we'll leave you alone" - (oral activities)
- "Money runs thru your fingers like water" - (water: something one drinks and might subconsciously associate with the wetness of a throat (oral))
- "There's nose candy" . . . (candy, something we eat (oral)).
- "You're a finger nail biter" (bite (oral activity))
- "You make me sick to my stomach" (stomach, associated with eatting (oral activity)).
- "You're a mouth control subject" (mouth, food (oral)).

Continuation of diary:

Anyone care to refresh my memory on who  
pschoanalyzed the anal vs. oral personality and what  
oral represented (you don't have to go into great  
detail)?

Plus, there's also repeated messages against mental  
reasoning such as:

- "You're a prostitute mentality" (negative sexual  
connotation to mental (ie. the mind) thinking.

I'm also getting directly manipulated by street  
theater from someone who makes a big deal over my  
smoking and drinking. I am also encouraged to  
distrust others by this person making up what other  
people I know say about me (say, another oral  
activity) and who uses abandonment and withdrawing  
to punish me when I verbally or by my actions  
challenge their attempts at manipulating my  
behavior.

I believe that oral fixtation in psychology is  
associated with infantile dependency on another (the  
child needs mothers milk or dies). Coupled with fear  
of abandonment, and the attempt to remove some of my  
normal social contact with people in my community  
(and yes Martha, I have friends at bars) this is an  
attempt to weaken my ego, transfer my dependency for  
social contact from many sources to one, and make me  
vulnerable eventually to self destructive action  
(including suicide).

For those who disbelieve, remember I have been  
subjected to 4 years of their pre scripted audio  
messages, mind reading, dream manipulation and  
street theater. They aren't just whispering Dixie. I  
advise other auditorily harrassed victims to pay  
attention to psychological attempts at manipulation.

Sincerely,

Kathy Heckman  
echoes444@hotmail.com

Diary #120 (Eleanor White)  
August 13, 1998

The spooks don't miss a beat.

Just a random collection of nasties sent my way by  
the spooks in the last 24 hours.

Just after my company's prime programmer-consultant  
left for vacation in Europe 3 weeks ago, the  
"remove" (delete) command on our UNIX mainframe  
acted up in a strange way. Whenever you need to  
delete a collection of files, you use a "wild card"  
character. For example, you want to delete all  
files beginning with "xa", so you do it like this:

```
$ rm xa*
```

The day he left on vacation, the rm command started requiring me to verify with a "y" for "yes" every single file, one at a time.

Today I needed to delete a string of files just like the example, and NO verification was required.

I was assembling some cables requiring a soldered connection this afternoon. The spooks kept jerking my hand so that either the connection was spoiled or the soldering iron swung over and hit the other hand.

This is a "probable" spook incident: The equipment used by the spooks can generate artificial smells, i.e. there is no actual smelly substance in your air. Today many people at work complain about a smell vaguely like paint. While at work it's not possible to do the tests for microwave-induced smells, I suspect this was part of today's harassment package.

The test for microwave smells can be done in two parts:

1. Just move, but not so far away that a true substance odour couldn't reach the new spot. If it disappears, it may be a microwave induced smell.
2. If you have a fairly powerful fan, and can have it blow directly on you at high speed from a region where no smells exist (say, from part 1 above), and the smell persists, it could be a "microwave smell".

Over time, if your spooks use microwave induced smell creation, you will be able to see the subtle clues.

Ho hum - another day. (What will night bring?  
A third evening in a row in which I forget to take my meds even though they are prominently placed and living alone have few distractions?)

Diary #121 (Eleanor White)  
August 14, 1998

Another day in the life of...

I often am the one to switch on the lights in the morning, as I am usually the first to arrive at work. A short time ago, I found that the switches on two banks of front office fluorescents had been reversed, as have the motor wires in several vacuum cleaners.

This morning, one of the light switches in one of our two ladies' washrooms had the switch turned upside down so when the handle is down, it is now "on". (Our ladies' washrooms have seen considerable hi-jinks: One time the top clips were carefully removed from a full-length mirror, causing it to crash to the floor later in the day. Nobody was hurt. The spooks are constantly tampering with hardware of all sorts, not the least of which are screws and bolts holding chairs together - guess whose?)

This followed a night where I got two frantic phone calls from Melody, my assistant computer operator who handles the evening shift. These calls came smack dab in the middle of supper (I've learned my

lesson on calls from Melody; I now have a headset type phone so I can eat and talk).

Now Melody is sharp as a tack. For some years she ran her own business.

The spooks had caused the alarm on our remote order entry UNIX host computer to go crazy, along with some of the programs locking up.

When Melody called, I discovered that totally unlike most times, Melody could just not comprehend the simplest commands, which she has used many times before.

Almost twenty times I tried, while drooling over a beautiful, steaming hot fishcake, S-L-O-W-L-Y, phonetically, spelling out the commands to her. She still just couldn't get it right. Not remotely like Melody - ever.

Melody was also not terribly happy last evening - she had had words with another co-worker. However, I've known Melody a long time and being upset has NEVER caused her to forget computer commands.

I theorize that the spooks were actively causing Melody's mental dysfunction, as they often do to me and have done over the past 8 years, trying to force me to be nasty to her on the phone. While it was not pleasant to have your hot supper wafting up your nostrils as your co-worker struggles to spell the simplest commands, I am fortunate that I was able to not openly get angry. It was difficult, though, no doubt about that.

-----  
Diary #123 (James Henry Graf)  
August 16, 1998

Re: THE SPOOKS BAG ANOTHER ONE! ...and Jim Graf tells how it's probably done.

They call it "complimenting." Here's how it has worked out in my experience. There's a curious "sacrificial lamb" mentality that seems to prevail. In "complimenting" people, an unholy amalgam of corrupt cops and prosecutors, sick and twisted intelligence operatives, and sinister Mafiosi make people an offer they can't refuse. Though I've never actually witnessed it, I imagine it goes something like this:

1. "We represent this or that government agency

(private foundation, victim's rights organization, etc.). We are here to ask for your cooperation in our investigation (experimental behavior modification program, etc.)"

2. "Here's a person that will come to you for help. There's something you should know about him. He is suspected of this, diagnosed as that, has a history of such and such, has been positively identified as this one or that one. Look what his neighbor (friend, former spouse, etc.) has to say about his lifestyle and his character. His doctor has this to say about him. Note how silly he looks in this photograph. What would be your first impression if you saw him doing this? The fact is, he's really not who he claims to be. He did bad things and got away with them. You shouldn't believe what he says. He's mentally incompetent. If you give him any attention, you'll only be feeding his delusions, standing in the way of his rehabilitation. It's best to discourage him. I'm sure you understand that he will only make progress when he is forced to face the truth about himself. That's our goal."

3. By this time, of course, the person being addressed has caught the implied threat: "We can do this to anybody. Here's what we know about you and your organization. Here's how vulnerable you are. Now, you do a lot of good for a lot of people. It would be a shame to see your career -- your organization -- go down the drain just because of this one troublemaker. We don't have a problem with most of what you do. Just go along with us on this one and everything will be all right."

And so they do, and so it is -- for them, for the time being, but the whole world is turning corrupt, and the end of the day will see the enslavement of all people of good will.

Hyperbolic psychological warfare and propaganda techniques render absurdity palatable. To gullible eyes, the slanderers can make anyone look crazy, criminal, degenerate. New Age torturers not only tell their victims: "No one will believe you." They also taunt: "Nobody respects you. Everybody laughs at you. You have no allies. You are alone. There is no way out."

For further insights, consult "Here's How It All Came About" on my web site at <http://home.sprynet.com/gowebway/jhgraf/hereshow.html>

Diary #124 (Eleanor White)  
August 17, 1998

One of my Hamilton spooks' favourite tricks is to remotely pinch my nostrils just closed enough so that they whistle, keeping me awake. They do this

to other air passages as well.

When they choose the nostril trick, I can get some partial relief by inserting a small, say 1/4" wide section of a large medicine dropper bulb into one or both nostrils.

It's not pleasant, but some relief can be had that way.

I keep a pair of these on the top rung of the stepladder that I need to climb into my sheet steel clamshell which, to date, does seem to lessen the harassment effects but does not eliminate them.

(My object in building the clamshell was not to stop the signals, because for any hope of doing that, you'd have to seal it air tight. Instead, I hoped to force the spooks to use a more powerful signal, possibly affecting the neighbours.)

The stepladder rung is necessary for storing these expander rings because inside the cocoon such a small item would get lost.

One recent night I reached for, and dropped one of the expander rings. I was able to get some relief using the other.

In the morning I could find it nowhere - that is not surprising, since the spooks routinely move objects within my apartment remotely.

What was unusual is that upon returning home from work, the spooks had carefully placed the missing expander ring daintily right on the edge of my mattress, a place it would have been knocked from when I got out of bed.

The mattress could not have "caught" the dropped ring, as it is about 8 inches above, and about 8 inches horizontally from the point at the rung where I dropped it. The expander ring very clearly fell to the floor, almost 5 feet below the top rung of the stepladder.

Gives one an insight into just how mentally ill are the spooks.

Spooks attack acoustic demo weapon.

Which means they care about demo weapons, which means, to me at least, they are something worth pursuing.

Ever since I worked for a high tech firm in

Toronto in the late eighties-early 90's, the spooks have used one trick over and over. That trick is:

Ruining the electrical conductivity of things like contact pins, using some substance such as dilute clear nail polish (probably some much more sophisticated substance, since the spooks are such wizards and macho cool guys, who wouldn't be caught using mere nail polish.)

At that company, Computer Logics Ltd. in Etobicoke, the spooks regularly sabotaged almost every job I ever set up, and spoilage of contacts was a real favourite.

Yesterday I had left the main control/oscillator unit for the demo weapon, where the signal originates, disassembled on my workbench, but in a protected alcove since there is always a chance of somebody bumping or spilling something on it.

When I came in to work this morning, the computer room had not been locked - the official reason is that the vacation replacement night operator "had trouble" (Even though she had done the night computer routine 5 times in the past week. This same vacation relief operator locks the company parking lot gate, and fixed it so I was forced to stand in a puddle this morning, but that's another story, too common to tell here.)

And, I just discovered, the momentary push button, which would be the main item used during the demo at Queen's Park (Ontario legislature), suddenly did not conduct electricity. I replaced it, and the other pushbutton eventually conducted more or less, but it took a lot of combined twisting and pushing of the stem to clear away whatever had been deftly dribbled into the contacts.

Skeptics: You must explain ALL the occurrences as a single group, and not explain one without reference to the others, or you have explained NONE.

Eleanor

Diary #126 (Anonymous phone call to Eleanor)  
August 24, 1998

Yesterday evening I received a phone call from an e-weapons victim living in a Western US state.

She related to me that she had borrowed a "magnetic therapy" mattress, brand name "NIKKEN". From what she told me, I would guess that this mattress has magnetic coils embedded within it, however, she did not know any details about frequency or modulation.

\*\* SHE DID SAY THIS MATTRESS GAVE HER A  
SINGLE NIGHT'S RESPITE FROM HER HARR-  
ASSMENT EFFECTS.

Even one night's respite is tangible proof of electromagnetic harassment, however, it's not enough to stand on it's own, but I urge other victims to keep this incident in mind when challenged by nay-sayers.

Who knows what sort of harassment signal jamming might be possible with, say 2, 3 or 4 of these mattresses arranged in "sandwich", triangular tunnel, or square tunnel configuration. (The square tunnel, requiring four mattresses supported by some sort of external structure would be the most comfortable, naturally.)

Something else:

The magnetic field DRIVER UNIT for these mattresses might be ready-made for driving the coils in our proposed ELF-sleeping-cap that so far none of us have had the time/inclination/money to build. It might even be available as a spare part from the mattress manufacturer, making testing this idea much cheaper.

Before using such unit an experimenter must find out what the electrical ratings are to avoid damage.

Very, very interesting occurrence!

Eleanor, per phone call from Anonymous by request

Diary #127 (Eleanor White)  
September 5, 1998

Here's one for you computer buffs:

At my work, I am the operator of a fairly complex UNIX-plus-Novell computer system, connected to three branch offices via T1 service.

I've been here 6 years. In that time perhaps a dozen computer "gurus" (i.e. specialized consultants who are needed to handle the toughest problems) have visited and been amazed that our system has problems they have never seen.

These guys aren't kids - average age mid-40s, with plenty of experience.

I'd like to share with you the latest consultant response to a problem where one of the mainframe dial-in modems just refuses to work without any apparent cause, or at least apparent to non-e-weapons victims.

This most recent consultant-visitor spent an entire afternoon trying to resuscitate one of the mainframe modems, and at the end of the day (Thursday past) he left this statement on a note:

"I DID get ttylA8 to work, WHEN I PHYSICALLY  
UNPLUGGED THAT MODEM'S PHONE CABLE. VERY STRANGE!"

For you non-computer types, whether the phone cable  
is connected or not should have no effect on whether  
or not the computer can exchange commands and  
responses with a modem.

No cable will only affect whether you can make or  
receive calls.

This consultant was trying to display and modify the  
modem's settings - and a phone connection is totally  
irrelevant to doing that.

All this takes place in the same computer room where  
the most basic, bread-and-butter UNIX commands are  
behaving totally WACKO, and again, our consultants  
have no explanation.

All in a day's work as an electronic pincushion.

Diary #127B (Sarah Schaeffer)  
September 11, 1998

CONFIRMATION of the odd experience in #127.

Well I'm not a computer guru, but on using my little  
webtv and using stuff. I learned about emaila and  
computer bombs. Quite frequently the MIBs will  
knock me off by sending a bomb over the phone line.  
THEy were also able to mess up my tv screen via  
sending stuff over my cable.. And theres been times  
when my computer's freezed. And I dis connected the  
phone line and it righted it's self.

I guess I would surmise that it was a sophisticated  
kind of virus or bomb that goofed it up while  
connected or even they have ray (or what it's called)  
guns that have disrupted my radio. Maybe one spook  
in the area had a portable one and fired it at it  
till you disconnected the phone line to make it look  
like it had something to do with it. Mess with ya.  
The bomb might just bee while connected. I dont know  
if it left any residue program in it.

That would be something to look for.

I'm thinking your gonna need a heavy duty anti-virus  
to repell any grabbing by the sppoks through the  
phone line.

-----  
Diary #128 (Mikey)  
September 5, 1998

I was daydreaming the other day as I drove home from

work. I attempted to change lanes without looking and almost caused a collision. If a collision were the result of my inattentiveness, I would have shrugged it off to the martyr mentality. I often think of the times I was told " You'll be a martyr". Mental and physical fatigue are conditions that nurture a dual thought process. My thoughts are often not consistent with my behavior. I am experiencing cognitive dissonance, i.e. joining the church choir yet questioning the existence of god.

In the past my thoughts and behavior have usually been on one accord. During the past 4 through weeks, the increased mental activity during sleep and fewer hours of continuous sleep have produced a range of emotional responses. It reinforces feelings of powerlessness and delineates the behavioral barriers of this experience. These stressors change the perception of my environment and often cause a divergence from a course of action I may be considering.

The stressors are the salient tools of this behavioral modification experience. At least, I am consciously aware of these tactics. Sometimes I wonder about the tactics that may be directed to my subconscious, i.e. sleep mental activity. I once heard a beeping sound in the supermarket and immediately made a sharp right turn as if I was directed to do so. Isolation is another tool of my manipulators. My apartment sometime reminds me of a prison cell.

Going to work is analogous to a work release program because work and a physical exercise program have been the only consistent regimen. Sexual relationships continue to be discouraged by the manipulation of positive and negative punishments. I can empathize with those experiencing incarceration within physical boundaries. This penitentiary is invisible and the shackles are fur lined; however, it is not more humane.

What a difference a different doctor makes!

For background, see Diary #90, Volume 3, and Diary #113, Volume 4. These entries are about a June 8, 1998 raid on my apartment by the local police psychiatric squad, code name "COAST".

Diary #113 describes the total "bust" when I tried to get some positive real-terms support from the shrink who partners with my GP doctor. Two years ago, and again this summer past, zip from this clown.

Just today I had an appointment with a psychiatrist who was recommended by my lawyer as possibly more open minded. She is the office-mate of another psychiatrist who treats only kids but who has been a long time anti-nuclear war activist.

I spent just one hour with her today, and here is approximately what she said in response to my story:

1. "I have never heard about this electronic harassment, but in glancing at your binder (I left her a big one) it would seem there may be something to this."
2. "You don't seem delusional or detached from reality to me."
3. "If accosted by police in your activism, I will speak with them by phone and give them the above opinion."
4. "I see no need for you to enter hospital for further diagnosis or treatment."
5. She made no mention of future appointments.
6. She knows I'm taking Olanzapine 5mg per day to demonstrate that taking neuroleptics does not stop the harassment, but she had no intention of prescribing me anything on her initiative.

This is wonderful and I thank God for this event.

I can't say she is ready to massively help us in the way Raoul Wallenberg helped the Jews in Nazified Poland, but this is really good and encouraging news.

She accepted the binder as a gift, so if she is called by police she will have our basic evidence.

For emergency purposes, her name and particulars are:

Dr. Joan Nagy (pronounced as it is spelled)  
925 King Street West  
Hamilton, Ontario L8S 1K7  
905-521-1952

I just can't stop saying 'thank you, thank you, thank you'!

Diary #130 (Kathy Heckman)  
September 11, 1998

Title: Paranoia and Contingency Plans

Anyone who has read my letters and emails knows that

I believe (at least in the US) that this E Weapons program is ran by the Infrastructure Task Force, composed of various government entities including the President at the Executive level and the FBI, Justice Department, DOD and CIA at the administrative level.

Well, upon reading of Brians organization of an email list that we could or could not subscribe to, but that would not show the individual email addresses of those upon it, my paranoia took over and I can up with this subplot.

What if the powers that be are unhappy with Clinton's administration of this mind reading, electronic weapons technology. What if the gun man at the Capitol WAS a victim and it pissed off some of the powers that be to be shot at? What if Kenneth Starr was an insurance policy all along, and when Clinton went too far, they decided to pull the plug on Clinton and use a sex scandal?

OK, so what if the perpetrators are as unsure as the rest of the American people who will be in charge of their program if Clinton is removed? Wouldn't it be likely they would develop several contingency plans so that they could present these options to the next Chief Executive Office of the US?

So, how about the ability to isolate our communications with each other? Then, they could group certain victims of like circumstances together, so that we could not forewarn others of effects and mind games that were not personally experienced? Only those experiencing similar effects would be in communication.

What if they wanted to present a scenario for downsizing? Some who were on isolated communication cliques could be let out of this nightmare without others still in aware of it? What about the killing of some without us missing them? What if they decide to compensate a test group without the main stream being aware of it?

In fact, if they want to try different things on us "Research Subjects" to take a sample survey of how the whole group would react wouldn't isolation of communication be one of the first necessities to ensure a controlled environment?

If I only depend on a list to communicate in which I don't know who is in and who is out, in the long run I could be sending emails only to myself.

Don't forget, this plan is not viable that their still perpetrating. They'll be using us as test subjects on various scenarios of "How do we get out of this one in one piece?"

Please understand that I am not accusing Brian of

any involvement. I have subscribed to his list. But, whether we are being lead by the perpetrators, or they are just using what we do naturally and planning scenarios around our own actions, a little scepticism is healthy.

I've entered this as a diary entry because it is an expression of some of the thoughts running through my (our) head today. I did ask Brian if he is advertising his list on Eleanor's, Cheryl's, Ed Lights and James Graf's web sites to guarantee that it won't turn into a small pond too easily isolated.

Love and take care,  
Kathy Heckman

Diary #131 (Kathy Heckman)  
September 16, 1998

Senator Barbara Boxer  
112 Hart Building  
Washington, DC 20510

Dear Senator Boxer:

I received a questionnaire regarding HMO reform from you today. In your letter you state that I have written to ask your views in the recent past. That is not true. I wrote to you and others in positions of power to ask for help in ending my abuse as an electronic weapons victim under a top secret classified program ran by our government.

I am audio harrassed (voice to skull), my thoughts are read, and I have scenarios inserted into my mind while I dream. My REM activity also is being extended during sleep. This has continued since 1994.

I believe that this harrassment is partially done to increase the number of incidents of domestic terrorism in the United States, as victims lash out on society, quite like Russell Weston Jr. who was the gunman at the Capital and who reported that he was hearing voices coming from a satillite dish. These operatives of the US government want the public perception of domestic terrorism to increase so that legislation will be passed favoring more power in the hands of the federal and local law organizations. This is to counter act a liberal backlash that they expect will happen if and when mind reading technology in the hands of the government becomes known to the American populace.

Meanwhile, innocent people and loyal American citizens are dying and lives are being permanently destroyed while you and others charged with our protection ignore this situation.

What do I think of HMO reform? Gee, I guess any

insurance is good since I have gone without it for over three years when I lost custody of my daughter, lost my job and lost my home when I started to report that I was hearing voices. Only now have I been lucky enough to have a permanent job that offers insurance. It will be a long time before I'll vote to put any more power into the hands of the government that so blithely abuses it.

Sincerely,

Kathleen T. Heckman  
Mind Read/Electronic Weapons Victim  
P.O. Box 1744  
San Andreas, CA 95249

Diary #132 (Mary Ritz)  
September 17, 1998

Went to the FBI here yesterday, you can pass this on to everybody if you'd like by the way.

The person who talked to me this time told me that she and they have never heard of what I was talking about, I had some material about it with me, she read for about 30 seconds, and told me, smiling, that there wasn't anything that they could do, because it wasn't against the law!!!

In other words, she replied, it is not on the statutes, as we know and she suggested that I contact my congressman and the Attorney General wench, well she didn't throw in the adjective.

Cheryl and I have both contacted Senator Hayden and as everyone knows a lot of us have written to various congresspeople etc. So, I think we need some more assertive action, rallying perhaps - at this capitol or other government buildings or places.

Told her about my pets and things being taken, but can't do anything about it until we have shielding.

[EW comment: Odds are one of these statements is true: (a) We can't afford enough shielding to work, or, (b) The signals are so sophisticated that shielding is irrelevant. I'm betting on (b).]

These people will not negotiate.

Well, happy mental health to everyone...oh, the Pentagon never e'd back, would like to visit them in person.

Mary (Sacramento CA)

Diary #133 (Eleanor White)  
September 17, 1998

Shades of Ed Light's Intro to Victim-dom.

Way back in the '70s, Ed Light was introduced to his victim-dom by driving in his van, receiving a skullgram saying "It's going to break", followed immediately by a click and the breakage of his turn signal indicator.

I am the computer system operator for a company in Hamilton, Ontario. From time to time, I have to round up all the stale diskettes for label removal and re-formatting.

In the label removal process, it is necessary to use lighter fluid (or paint thinner) to soften the adhesive before removing the label. It is essential to NOT let any fluid, which is all too eager to penetrate the diskette case seam, actually get inside.

The way you do this is saturate a Q-Tip, and apply the lighter fluid from the swab rather than directly on to the old label.

I'm currently using the plastic stem version of Q-Tips.

When you do a batch of stale diskettes you sit in one spot at the workbench, and this makes it much easier for the spooks to harass you many ways, (including itch application, nudging your hands, and other effects.)

So this morning, I found these normally tough Q-Tip stems were fracturing with no more pressure than simply picking them up. Remembering Ed's experience I took some Q-Tips to co-workers and asked them to bend the stem and see how hard it was to break.

These stems held up well, and resisted breakage almost until the co-workers got them into a "U" shape.

\*\* But here's the kicker: As soon as I demo'd the native stem toughness to my co-workers, the spontaneous breakage stopped completely, and that is proof that this was externally and artificially caused, not co-incidence. The broken sections showed similar toughness in the hands of other co-workers.

Diary #134 (Eleanor White)  
September 21, 1998

ELF Cap: Consider it proven.

Although I don't have enough parts to finish the demo acoustic "pain field generator", I was able to use the excess purchased parts to assemble an "ELF sleeping cap", the circuit for which is very

similar to the oscillator for the acoustic weapon.

(See <http://www.nas.net/~raven1/elfcapx.gif>)

I've made two live test runs.

The good news is that, even when the coils are operated with air cores, the 4 amps supplied are enough to generate a very relaxed sensation, even when the coils are mounted on a 1-inch thick foam rubber cap, as with test run #1.

Adding ferrous (steel bolts with nuts) cores into the coils did not really make much difference, and the second live run, with a nylon water polo cap and the coils quite close to the skull worked well also - FOR FIVE MINUTES.

The bad news is, that on the second run with the water polo cap, after 5 minutes, the spooks zorched the oscillator-driver unit.

How do I know it was the spooks? Because they performed an electrically impossible maneuver: The light that blinks in sync with the applied ELF signal (about 5 Hz in my test runs) suddenly started blinking at much less: About 0.5 Hz.

What was significant was that not only was the pulse indicator blinking, the POWER ON LED WAS BLINKING TOO, even though the output of the 6-amp regulated DC supply was on steady (it has an LED that tells you the voltage is on and steady.)

The failed oscillator-driver unit has an Exar XR8038ACP oscillator chip driving a two-transistor amplifier. Both transistors are mounted securely, heat sunked, and on top of that, the box they are mounted in has a forced air cooling fan. This was no accident, and throughout construction of both the acoustic weapon and this ELF sleeping cap machine, the spooks showed heightened interest by knocking my hands about while soldering and generally causing hypnotic "disappearances" of parts and tools.

The outlook is bleak: Obviously the spooks do not intend to let me build a successful device, but step in after expenditure of energy and money.

For other experimenters, here are some details of the cap and coils:

- Nylon water polo cap, ear protectors removed
- Coils are enamelled copper (factory tinned ends) audio crossover coils from Parts Express:
  - 4 P/N 266-806 1.5" dia, 0.18 ohms, 0.20 mh, 18ga
  - 2 P/N 266-320 2.5" dia, 0.12 ohms, 0.40 mh, 14ga

(1-800-338-0531)

- Lighter coils joined in two PARALLELED pairs, one for forehead, one for back of skull, mounted aside one another, both operating in same magnetic polar direction as a "ganged, 2-coil unit"
- Heavier coils in series, one on each TEMPLE, connected "Helmholtz" fashion, i.e., the fields of the two temple coils aided each other, through the skull

This series-parallel hookup eliminated the earlier overheating problem at 4 amps, though the two larger coils did get just slightly warm, no more than if you lay your head on a heating pad.

There is no doubt in my mind, now, that this device would work if the spooks didn't trigger failure.

Eleanor White  
Hamilton, Ontario

Diary #134B (Eleanor White)  
September 22, 1998

ELF Cap sequel: Consider it prohibited by the spooks.

(See <http://www.nas.net/~raven1/elfcapx.gif>)

I've made two live test runs, plus an hour or so on the bench.

During the runs, the power transistor (2N3055) at 4 amps, with heat sinking and forced air cooling, stayed touchable by a bare finger - not overheated.

Yesterday I reported that the unit stopped working after 5 successful minutes. The 6-amp 12-VDC Radio Shack power supply continued indicating a steady 12 volts, but the oscillator-driver device's POWER light blinked on and off.

That is electrically impossible.

Just now I replaced the burnt out 2N3055, which made a blackened image of it's outline on the circuit board when it was burnt out by the spooks, and re-connected the ELF cap for test.

At first, I got 13.8 volts DC indicated at the power supply, but zero at the oscillator/driver unit terminals. Electrically impossible.

the 3-foot 12 VDC power cord is #16 stranded copper, terminated with SOLDERED spade terminals, not a cord that would fail like that. After checking all connections and switching the new 12 VDC Radio Shack supply on and off, it finally ran - for less than a second, when the new 2N3055 died!

A 2N3055 transistor is one of those heavy duty

devices that looks like a stack of 4 quarters with a flange. The emitter and base pins are offset from center making installation the wrong way impossible.

The spooks are not even letting me repair it, never mind use it.

This device DID work though - and that alone is encouraging. In a way, this experience serves as proof of the deliberate intent of the spooks, and can be easily understood by experienced technicians who know that none of these symptoms is possible in normal electronic work.

Diary #135 (Kathy Heckman)  
September 21, 1998

Unlimited permission to publish.

For some time now the auditory harrassment has repeated the words "you have a prostitute mentality" and "prostitution is your only way out" They also say "marry somebody that can take you away from all of this". Anyway, I was thinking on my way to work that they sound like they're hoping that in the future, if and when this crime could become known, I'll be an older woman who might not want the attention or the notoriety that could come if my thoughts and actions for the last four years were made public.

Because they use mind reading technology on me, everything legal or illegal that I've ever done in my life is known to them. I'm single and they mind read me when I have sexual relations, if I fantasize and when I'm mad at people. In other words, I don't always think nice thoughts and I have thoughts that would be embarrassing if made public.

But I don't care if I look like chopped liver in the "public" as long as it brings about an end to this crime. Anything and anyone who enters my life after I became a target of this technology is going to have to accept the fact that I've changed because of the experiences I've been put through and that I owe it to who I used to be and who I am now to be honest and fearless in trying to expose this abuse.

Sincerely,

Kathleen Heckman

More computer attacks.

Our large UNIX + Novell/DOS network has a couple of copies of dBASE software for general use.

dBASE software can be used as multi-user software.

To control how many licensed users can be accommodated simultaneously, a file called DBASE415.ACC (depending on version) is needed. The software won't run without it.

A couple of days ago, someone had "accidentally" deleted this file from a directory where the owner never accesses.

Our complex system has an extremely important emergency document called "DOWNUP.NOT", which is a script for operators to follow if they need to take the system down then up. It is critical in an emergency - not even our programmer/consultant knows all the details contained there.

This file was stored in two places: My personal directory and the directory of an assistant operator. This morning I discovered that both copies had been "accidentally" deleted. Fortunately, we have a hard copy and have reconstructed it.

More extensive backing up will be done in the future. It may be on old backup tapes, but there isn't time to search in an emergency.

And, a reference to a voice to skull principle diagram, <http://www.nas.net/~raven1/v2skull.gif> was removed from my main index, [ravindex.htm](#). Another "accident". I know I did not remove it.

Lesson learned. I leave it up to the reader to decide if these were "accidents".

Eleanor White

-----  
Diary #137 (Mikey)  
October 14, 1998

I was recently informed of low white and red blood cell counts during a visit to a my primary care physician. It appears that the white has been below the normal range since 1996. I compared the recent white blood cell count to lab work done in 1993 and there was a significant decrease, 7.2 to 3.9. My physician ordered a CT scan of the abdomen, pelvic and chest areas. There appeared to be no abnormalities. I was referred to a Hematologist for further tests. I am nervously waiting for the results of the examination.

I am fearful that my immune system may be compromised as a result of the long term exposure to electronic mind control/microwave radiation or whatever. I have been subjected to this technology for 14 years. I suspect it began sometime in 1984.

However, the intensity was elevated in 1989 and in 1993. It has been consistent since 1993. The synthetic voices have often repeated "You'll die sick, We'll murder you, or You'll die a martyr".

The net effect of this experience on my immune system may prove them correct. The conspiracy of silence surrounding mind control technology renders persons like myself powerless as guinea pigs.

Mikey  
Houston, Texas

Diary #138 (Eleanor White)  
October 15, 1998

Sick-ology experimental intent revealed.

Until this summer past, 1998, the electronic effects had been of the "attack" type - i.e.:

- limb flailing or rigidity or vibration
- extremely painful aches in large muscle groups
- itch attacks
- hot needles in the flesh attacks
- false non-vocal sounds like fake alarm clocks, fake pagers, fake door knocking
- sudden electronic caffeine attacks

These were almost always timed to prevent sleep.

Since this summer past, I have had a number of instances where I have been awakened by what feels like the classic electronic caffeine attack signal, but as I came to over say 15 seconds, I am aware of a chain of the same word or phrase being repeated over and over, though I have not so far been able to remember what the words/phrases are.

This is clearly sick-ological "mind control research" and not simple harassment.

(For the record, this same time frame has seen an increase in levitation/manipulation of objects, both conductive and non-conductive, within my bed partly shielded enclosure. They now frequently "bop" me awake with objects secure to where they cannot possibly move without levitational help.)

Eleanor White

-----  
Diary #139 (Eleanor White)  
October 15, 1998

A genuine and frightening riddle.

Two nights ago, a very strange thing happened: I was allowed to "sleep" for perhaps 4 hours. (This is never restful sleep - bits of experience coming out of this so-called sleep make it plain that the spooks keep my muscles tense to the point of waking

up exhausted anyway.)

This was in sharp contrast to their recent policy which started around late August 1998 to keep my "sleep" rations very short.

The evening before had not produced as much attack itching as usual either, and the need to scratch with the scouring pads was not at all bad.

But the riddle is: I awoke with a very sore back of my upper left thigh, about an inch below the brief underwear leg band. Since I used some scouring pads for itch attack relief, this did not seem all that unusual in the morning.

As the day wore on, however, the pain increased quite a bit, and when I got home, expecting to see a patch of reddened rough skin by using a mirror, I was astounded to see a 6-inch long dark red stripe, about 1/8" wide directly across the back of my thigh from one side to the other.

Furthermore, at what appeared to be the "start" end of this lesion was (and is) a spot where it looked as if a semi-sharp pointed instrument had been pushed very hard into the thigh muscle. No actual blood was there, but this scrape had to be done with enough force to come very close to ripping the skin wide open.

There are no implements in my bed's shielding cocoon which could inflict such a wound, and the most likely item is a pair of semi-pointed hair trimming scissors in my bathroom. For me to do this in my sleep I would have to carefully exit my cocoon, which takes effort, then climb down a stepladder, and enter the bathroom where the fluorescent lights stay on all night.

The most likely way this could have happened is for 100% hypnotic control and zero memory, because my door lock has several devices on it which could possibly be opened using the spooks' remote manipulation equipment, but would be very difficult for them to restore the devices to their locked positions from outside the room (or so I would imagine.)

I don't have a good feel for how much force the spooks' remote manipulation equipment can generate, but I'd be surprised if it was enough to "float" the scissors through the air and remotely do the scrape and near puncture with the necessary force, though I don't rule this out entirely.

The least likely but remotely possible way for the spooks to enter my apartment would be for them to dangle a rope ladder from the apartment above and enter via the enclosed but accessible balcony. My apartment is not far from the street

and I kind of doubt if they did that they would risk being seen by passing traffic.

But how this wound came to be inflicted is still not completely clear to me. Nevertheless, it really does underscore the word "CONTROL" in the phrase "mind control". There is nothing imaginary about this wound.

"Dr. Zhivago" again.

I've been under intense neuro-influence weapon harassment for more than 8 years now, with possible incidents by the same group some time before that.

One strange effect which has been with me for many years since the 1980s is that for 2 or 3 days prior to watching a TV movie, I will get repeated images from and thoughts about that movie, in spite of there being zero clues (like a TV announcement of the showing.)

This has happened well over a hundred times.

I NEVER look at TV schedules. I am VERY consistent in my daily schedules.

I'm sure the harassers could look at a TV schedule and given my consistency of viewing times, know which show I'm likely to watch.

I'm guessing that these artificial premonitions are imposed to give me the feeling of total helplessness, that is, "We know you so well we even can tell you what show you will be watching 3 days from now."

Some times this happens weekly.

I'd advise the thought reading equipment operators to enjoy it while they can, because there will be a most unpleasant payback awaiting them upon their deaths.

Diary #142 (Eleanor White)  
October 23, 1998

Proof enough for an open-minded reader.

At my work, the computer room has about ten operating positions, i.e. a screen and keyboard.

One position I use for a "utility" PC which can do both DOS and UNIX jobs which need to be run over lengths of time without interruption. This utility PC has been a favourite target for the spooks - they often hang the processor, necessitating a re-boot, or actually cause the power switch to switch to off.

The problem is not the PC itself - several changes of PC have not eliminated the problem, and the PC is powered via a battery backup unit in good condition, which also provides line filtering.

Most recently, I've been assigned to check the flow of customer direct dial-in orders, which the spooks have recently specialized in disrupting in ways that even the programmer-consultants can't understand. I.e., plain vanilla BASIC and UNIX commands spontaneously refuse to do what they are supposed to, even though the "permissions masks" of the command programs are all normal.

I have assigned checks at 11:30 am, 12:30 pm, and 1:30 pm.

The spooks have used their heaviest electronic memory blanking available and had succeeded in preventing me from remembering to do this in spite of leaving large notes about.

So I started an "alarm clock" program on this utility PC which accepts multiple alarm times and allows separate alarm routines for each day of the week.

On the first day I used ALARMCLK.EXE, the program hung 4 minutes short of 11:30 am, and even though I had reminded myself only ten minutes earlier, I completely "forgot" (not really "forgot", more like "hypnotized to not remember") and missed the check.

A co-worker who observed this brought me a separate alarm clock to operate in PARALLEL with the PC alarm program.

As long as both devices are set, there has not been a single missed alarm for almost 3 weeks now!

It's pretty obvious that the spooks will not risk giving themselves away by locking TWO independent devices, especially with witnesses, and the long history of their remotely tampering with this PC, but not when backed up by a clock, should be proof of malicious remote control hacking to any truly open minded reader.

The recent visit to the hematologist did not resolve anything for me. My white blood cell count was 3.5. He stated the peripheral smear looked ok. I am scheduled for a bone marrow biopsy in December. In addition to the normal pressures, this issue has given me something else to worry about. I have too many things on my mind. I still experience periodic night sweats and intense dreaming. I sent the Franchise Tax Board a copy of the last 2 diary entries. I guess it was a feeble attempt to express my indignation and frustration. The result was a few days of sleep deprivation.

Diary #144 (Eleanor White)  
November 1, 1998

Oh, so C-A-R-E-F-U-L-L-Y!

I live in an 8-storey apartment building on the third floor. Each floor consists of about 60 feet of hallway leading either side of the elevator, then a right angle "L" hallway of about 50 feet.

My apartment is at the elbow of the "L".

On my floor, the apartment about 30 feet from the elevator in the direction of my apartment has a couple of kids who are very disrespectful of the building rules - and there is frequently a brownish colour to the grey carpet from that apartment to the elevator, often containing bicycle tire skid marks (bicycles are forbidden in the apartments).

The 30 feet from that apartment to mine, plus the 50 foot leg of the L shape remains spotlessly clean as there is little traffic by kids from the outside.

Recently the assistant super couple, who have become the most active of the paid harassers, have taken to doing all their vacuuming either Saturday, Sunday, or holidays for this section of the hall.

(Pure coincidence, say the skeptics.)

They normally time it so that, say, between 1 and 2 pm, the most likely time I would try to nap, they fire up the vacuum cleaner at the precise time I nod off. (Pure coincidence again, right?)

Well, yesterday, Saturday, I tried to grab a nap at around 1 p.m. (The spooks have always arranged something such that I haven't been able to actually get even 5 minutes' sleep since Spring of this year, and that was only once.)

At the precise moment, a carpet wet scrubbing machine fired up in the zone which is normally dirty from the kids' foot traffic. That area is acoustically close enough to easily destroy hope of napping.

The assistant super couple finished up in about 15 minutes, then moved on to my area.

Well, readers, you would not believe how CAREFULLY these fine people did the area outside my apartment.

They made THREE full passes, with lots of pausing (and walking out of view of my peephole) between machine operations.

On my section of the hallway, they actually brought up a second, different machine and went over and over and over this carpet, which was very clean to begin with.

They were so "CAREFUL" they managed to stretch a 15 minute job into THREE HOURS! And to beat all, the kids' area STILL has some tire marks and outdoor dirt showing.

These people are faithful churchgoers - I'd just love to hear how they reconcile Christianity with their antics.

Diary #145 (Janine)  
November 6, 1998

I am now moving my bed around each night to escape both microwaves and laser attacks to my body. We are running out of space left in our home. Although I keep shifting my bed, it is purposeless because powerful co-ordinations locate my body with precision. Then my nose begins to make 'clicking' noises and I know the terrible electronic jolts will soon follow, to rip high voltage shocks through my body. I cannot escape this torture that occurs every night.

I must sleep but bed has become a deadly place of 'no-return' for me. The radiation flashes through our windows and walls and I lie waiting for it to strike my body through the indepth electrodes planted inside my head. Last night this is what they did. Within half an hour after lying down to try to sleep, my nose started clicking. I saw a flash of brilliant blue light come through the laundry door (it is glass).

Then my body parts were whipped into painful jerks and spasms as the beams shot into my hands, feet, shoulders and through my brain. These were repeated

over and over for about an hour. Eleanor please tell others fighting this technological mania being inflicted on ue, what is happening to me. I actually despair when I see your extensive efforts on our behalf to important organizations and media etc, come to no avail. They excuse they give are incredibly sickening.

I liken my state to the hideous world Kafka's character dwelt in. A never-ending trial! Also my mind goes back to the classic fim The Body Snatchers where, with dreadful speed, all the world were brainwashed and 'el-doped' against those few and ever decreasing heroes, who fought so gallantly against the evil, for the right to live as human beings! We live in a 'body-snatched' world I am afraid

Diary #146 (Mikey)  
November 3, 1998

The night sweats continued this week along with the synthetic voices. I experienced periods of anxiety and extreme fatigue. Every time the telephone rang yesterday, the synthetic voice attack began. The voices were mostly female. However, the voice of Sam Williams, an employee I knew from the FTB, has been a constant throughout this entire experience.

Francisco Franco's, another FTB employee, voice was used to set this experience in motion some time ago. I suspect the voices are somehow cloned.

Nevertheless, the effect elicits emotional responses. Just like the memory set involving Roslyn Jackson.

The sleep deprivation and fatigue kept me confined to my apartment this weekend except for a brief period Saturday and church attendance Sunday. I also experienced brief periods of isolated physical pain. I don't know if something was actually wrong or the pain was simply an harassment technique.

The overall castration effect and warnings of being broken continues to be oppressive. However, these things do not over ride the physical evidence of a potential blood disorder from long term exposure to EMF's. Castration and "slave breaking" have always been favorite tools of slave masters.

Entries in response to Diary #146

First entry:

The voice thing they also did to me. I think they have equipment that appears to be synthesizers that can capture peoples voices from your memory and then can adapt their equipment to voices of people you have known. They can then talk and their equipment will make them sound just like other people. They will often even try to adapt similar personalities to make it more convincing. The anxiety and extreme fatigue was done to me many times along with pain. Last night they kept me up for most of the night.

Second entry:

Last night they kept me up again until around 1:00am and woke me up at 5:00am. They are working on trying to get me to commit suicide. They have pretty much taken my life away from me over the past five years and they are keeping me from getting a job so I won't have anything to hold on to except God. They continue to try anything to get any control they can and they haven't been too successful. I have been working hard against them by telling them that they are working for Satan and are whores for the devil because they are selling their souls to Satan and the money they are being paid is blood money they receive for torturing and murdering people. I don't know how much longer I will be able to take this.

Diary #147 (Eleanor White)  
November 6, 1998

New operator, old stuff.

My company has hired a second computer operator, who, together with me will cover a complex system here in the Hamilton branch and a new head office in Oakville, Ontario.

She has a PC of her own set up just outside the Hamilton computer room, and my days include training her.

Some time in the last two days, as regular as clockwork for the trusty spooks, a virus was planted on her PC, which I had to wrestle to get removed today.

I also discovered that in the last couple of nights, the spooks also deleted the anti-virus startup program from our Novell network.

Routine stuff.

Interesting, though, this new operator is quite perceptive and she has a good idea of what is and what isn't "normal operation". She is able to recognize that a fair number of things are not at all "routine failures", and one could say she is "on to them".

Interesting too in that not long ago, I wheeled a large twin Pentium server which had been sitting idle for the best part of a year out to fire it up as a potential machine for the new head office.

The new gal was sitting close by.

Now this twin Pentium server had been a favourite target of the spooks - requiring TWO motherboard replacements in 3 years' service - a fact which has amazed our visiting hardware repair people.

Well - the spooks evidently decided that this machine was not going to work any more. The machine, having been fitted with a new motherboard and taken out of service THEN LEFT SWITCHED OFF AGAIN HAD A FAILED MOTHERBOARD.

I was amazed (and so was the new operator) that when I pressed the power on button of this server, she got a substantial case of "the shakes". This had never happened to her.

She happened to be sitting in the direct line of sight from the suspected house across the street from the company, where over time it is obvious to co-workers this house is anything but a normal dwelling.

My suspicion is that the motherboard-fail signal nicked the new operator's nervous system and gave the momentary "shakes".

This would be amazing except to fellow victims, for whom this is strictly ho-hum stuff.

Diary #148 (Janine)  
November 12, 1998

I am sending a brief note to say last night was the worst night I have endured in the nearly 6 years of being 'put through the mill' by perpetrators of covert directed energy weapons targeting. Today I feel 'like death' warmed over.

My head is raging with microwave, I am shakey and am having difficulty breathing. I wish for others who think New Zealand practices good human rights and quality treatment of citizens, to see the truth as it is exemplified in my case. I want to reveal what this state does to those it choses to despise.

The beasts started to throw strong voltages through my body at about midnight last night and this torture continued until about 4 AM No part of my body was spared! I am thoroughly beaten today and feel so enraged, frustrated and miserable!

Diary #150 (Eleanor White)  
November 15, 1998

Pattern emerges.

I've been conducting email campaigns for almost 3 years now, trying to get the public aware that there are such things as neuro-influence devices.

In the beginning, I used sensational wording, and though I'm sure it opened a few eyes, such wording was not well received, even though we targets know all too well it is not exaggeration.

Now I'm finding that I get very positive responses by simply and consistently using the word "device" instead of "weapon".

I'm also finding that phrasing a question is more likely to get a response than making a statement.

But there is one troubling aspect of this new found success:

With each new class of email addresses, I get a few positive responses followed by TOTAL SILENCE as I move through the various email lists for the class. (A "class" is a unique search target for web sites, for example "human rights", "animal rights", "government power abuse" etc.)

This points strongly to spooks watching for success and immediately intercepting and trashing emails which seem to be having success. Over the past couple of months, the pattern is too consistent for this to be accidental.

There is no way organizations further down a search result are less likely than the first couple to respond positively.

Diary #151 (Mikey)  
November 18, 1998

There are things in life that you never get used too. This experience is an example. Last night and today, I listened to the emotional assault of being told "I'd be broken or die sick". I also endured another night of forced dreaming. It's likens sleep to a kaleidoscope of images draining my mental strength and spirit.

The controllers are adamant in their efforts to remind me of their control. The castration and the continual emotional assault and battery illustrate the oppressiveness. There are deliberate techniques used to dampen periods of spiritual peace or contentment.

The technological trickery can create and individualize a state of hell for whatever period of time chosen. It's concealed like the underside of a patchwork quilt. My life may appear orderly to the casual observer; however, the reality is a living hell.

When hope disappears, I sometimes vacillate between the delusions of using alcohol (temporary solution) or a using a gun (permanent solution) to anesthetize

the pain. This week I chose alcohol again. Perhaps it's really what the controllers wanted.

Mikey

-----  
Diary #152 (Eleanor White)  
November 18, 1998

A work of jerks.

My company's head office will soon be moving to a city about 25 miles from it's present location in Hamilton, Ontario.

One of the many changes is that there will now be two system operators on staff, myself and a new gal, Liz. Liz had been hired temporary part time to catch us up on some projects which required uninterrupted concentrated attention for about a month, mostly in October. In November, Liz came on permanent half days, to be increased to full days when the new head office opens.

Liz is a fine person, and we get along very well, a situation we all know the spooks don't like.

Right after she became permanent staff, I was sitting next to her trying to fire up a server that had been idle for quite a few months. This server and it's twin had been singled out for extra trouble by the spooks. UNIX never ran well, and MY user ID often was not allowed to log in, even though it was properly set up.

I was the one who chose this make and model, and experience both at my present company and the past employer was that anything chosen by Eleanor White gets "special" or "extra" attention from the spooks.

When I tried to fire it up, there was a brief message from the "BIOS" (the first program to load on startup) then the screen went blank. After many tries and a service call to our hardware maintenance provider, the motherboard had failed - for the THIRD time! This is not cheap or bargain basement equipment.

Back to Liz: At the time the screen first went blank, Liz suddenly exclaimed that she felt something give her "the shakes" as she described it. Perfect timing.

Now to the subject of this entry:

Liz reported to me that she had a REALLY vivid realistic dream last night that she was at work, and I had called her a "dirty rotten liar", after which she packed up and left.

REALLY, spooks, can't you think up something more

original than that??

Eleanor White

-----  
Diary #153 (Janine Jones)  
November 26, 1998

The goon squad who harass me, for the back-room boys:

... by surrounding a victim's home, mum and I have now located 6 houses around us (line of sight) who are blasting our home with bright, crystal blue and white light (optical scanning devices I think)

The ring here moves around sharing their dirty monkey business.

Without exception, they all fit my Perp Profile to a 'T'. Low-life layabouts with layabout women by their sides. Most drive with different number plates and have false names meant to obscure detection. I know them all, where they live and what they do!

Somehow the optical scanner equipment they are paid to operate is being linked directly to electricity which then sends jolts through my body each and every night. The one thing these ugly perps dont realise is my ability to gain information on them as a trained social researcher. The dossiers on each perp are becoming heavy with good, accurate data!!

Janine.

-----  
Diary #154 (Eleanor White)  
November 26, 1998

Remote physical manipulation equipment capabilities:

For years, I and others have been experiencing the more routine remote physical manipulation capabilities of the spooks' equipment:

- nudging shopping carts
- nudging a heavy shoulder bag off the shoulder
- rattling or banging on various items
- moving body parts without any participation from the target's muscles

Recently, and over a distance of 200 feet plus from the daytime hangout across the street to my office, the spooks have demonstrated just how capable both the precision 3D viewing (this is not thru-the-eye viewing) and manipulation equipment really is.

A month or so ago I got part way home and realized the cell phone was missing from my shoulder bag.

When I returned to the office, the phone was on the floor at the spot under my desk where the bag spends it's day. There is no chance I knocked the phone

out by accident - it is wedged well down in a fairly stiff sided compartment which would not spontaneously empty itself unless literally turned upside down.

More recently, I discovered the nylon shoulder strap dog-leash style lanyard had been disconnected from the phone. This could never be done by accident, as any dog leash user can tell you. Nothing had been pushed down by the phone to cause a lanyard disconnect.

Just yesterday I discovered that a microcassette tape recorder, also wedged deep in it's own slot, had not only been unclipped (same dog leash style catch) but the lanyard itself is missing.

This bag never leaves my sight.

The implications of such precise technology are truly terrifying. These spooks could clearly set off an ICBM without ever entering the bunker.

Eleanor

-----  
Diary #155 (Eleanor White)  
November 26, 1998

Update on the familiar spook practice of damaging target's clothing.

Many e-weapons victims know very well the standard spook practice of entering the target's apartment while the target is out, and doing subtle damage to all sorts of possessions.

In my case, I've noticed for the entire time I've been a target that my winter coat gets hung up in the spring in good repair, but has all sorts of ripped out seams in the fall.

This has been a heavy year - some seams with FOUR rows of stitching have been ripped out, one to almost a foot in length. Other more subtle damage, not present last spring, has been found in seams normally hard to view.

The almost-a-foot long seam was down near the hem, definitely NOT a point of stress, and with a high quality nylon/down filled coat, not at all a normal occurrence. All original stitches and thread are in excellent shape when not deliberately ripped.

My own yearly repair stitching is often targetted for summertime destruction. When these repaired seams go, it is truly proof of intentional damage.

When I repair a ripped-out seam, I use hand sewing with needle and good quality polyester thread. That right away gives double the strength of a single machine stitched seam.

I also TIE A KNOT AT EVERY SINGLE STITCH.

There is no way my repair stitches can unzip like a zipper, as some machine stitches can.

Finally, the incredibly sick personalities of the people hired to work as spooks show very clearly in that, right from the start of my targetting, both crotches and underarm areas of my clothing, especially underclothing, have been targetted for destruction by circular tears which grow daily until the targetted clothing is replaced.

Eleanor

-----  
Diary #156 (Mikey)  
November 27, 1998

Today, I'd like to discuss my introduction to the mind control experience. I think it is important for other victims to know.

While employed at the FTB, Long Beach, Ca. office, synthetic voices were targeted into my work space. The voices were that of fellow workers Adelia Lopez, Betty Rodriguez, Nora Beathards, Lynn Pierson, and Francisco Franco.

Some or all of the voices were probably microwave induced to create an uncomfortable and hostile environment. The same tactics were used to precipitate a separation from my spouse, Yvonne Smith, by cloning the voice of a neighbor who lived below us in the apartment complex. We were trying to reconcile a separation at the time. The voices suggested she was having an affair.

Even my three year old son's voice was cloned to express disparaging statements. These tactics precipitated the final separation and effectively isolated me prior to turning up the technological trickery at work and my new residence. At that time, I had no knowledge of mind control/ voice cloning etc.

The communications suggested this punishment was initiated by the FTB or my mother-in-law, Ruth Smith. It wasn't until I returned to Houston that my controllers revealed the extent of the mental intrusiveness.

The revelation involved targeting voices to directly interact with my thought processes with the use of racial slurs and other humiliating comments, and sleep deprivation. Initially I believed I would go insane when it appeared the territoriality of my mind/thoughts had been violated.

Mikey

-----  
Diary #157 (Eleanor White)

November 28, 1998

More proof, two witnesses at work.

Yesterday, I was in a fog of euphoria at work.

We had just received Cheryl Welsh's notification of Harlan Girard's paper being published in the newsletter of the World Organization Against Torture, OMCT, second only to Amnesty International in matters like ours.

I immediately sent an email to the OMCT site in Brussels Belgium offering my hard copy info pack of unclassified neuro-influence device articles, which, thanks to our power researchers, is now enough to base a demand for investigation and exposure on.

The "Charg, de Mission" immediately wrote back and asked for the info pack. What a difference from even 6 months ago!

Apparently, the spooks here were not amused.

Just after lunch one of our VP's, Bill, brought me his "campus pager" stating that even with new batteries, it had just stopped working.

A "campus pager" is a small CB transmitter next to the reception desk which transmits a digital signal up to two miles (in the clear) and can cause one of several local area pagers to beep. It has no connection with any phone system. This is a high quality unit, from Black Box Corp., a maker of prestige quality digital equipment.

We have just two pagers, but more can be used.

One pager has sat unused in my desk drawer for the roughly 4 years the system has been in use, only for Bill.

Bill asked me to program the unused pager for his code.

I tried many times, referring to the manual. The unused pager had the same symptoms - won't beep - as the one that had just gone down. You have to both press the on-off switch in at the same time as you slide it to "on" and then transmit the code you want it to respond to. An "L" for learn symbol shows in the LED window when the unit is ready to "learn" a new code.

No "L" ever showed - I must have made 20 to 30 attempts.

I then told Bill this might be the time to change to a new technology, like the digital phones which also have a pager feature. As one last attempt

before dropping the attempt to program the new pager, Bill tried it.

IT WORKED, TWO OR THREE TIMES - the "L" showed immediately, FOR BILL.

I took it BACK from Bill - and the new computer operator Liz was watching closely - and could NOT get the "L" to show.

Bill took it back from me a second time, and the "L" immediately showed.

I then told Bill how to transmit his code to the pager, and he did so, without my touching either the transmitter or the pager. Worked perfectly.

I offered this as proof to Bill, who has stated he more or less believes the spooks exist and cause trouble. If anyone needs proof, this is about as good and specific as it gets.

Eleanor

-----  
Diary #158 (Eleanor White)  
December 2, 1998

This shows the petty level of detail the sick "e-psych experimenters" will go to to accomplish their "great and wonderful work" for humanity.

Late yesterday afternoon, close to the end of the work day (and computer day for me), target Ronald Cohen from Toronto, who is on the ACHES-MC video and also the Canadian Space Channel's "Stranger Than Fiction" video phoned me to request a copy of the video.

I wrote his address on a yellow sticky note, and left it prominently placed on my desk which was in one of its rare fairly-clear states. I also wrote another note reminding me to add his name and address to the list for the video.

So now it's 7:30 a.m. today, I have just arrived at work, and plan to enter his address a couple of places in the computer.

Guess what? SURPRISE! The reminder sticky is there, but the address has disappeared.

Maybe not as big a surprise as it might otherwise be, given that the spooks lately have been planting viruses on average every couple of weeks.

Does anyone have Ron's address? The one he gave me was on Vaughan Road in Toronto.

-----  
Diary #159 (Eleanor White)

December 4, 1998

Two more "impossible" witnessed harassment events.

Yesterday, one of our field managers from Montreal called in to say a remote order customer which had been set up a week ago could not log in to the UNIX host computer at Montreal.

Melody, a seniour customer service representative with computer operating experience took the trouble call, and together with Liz, the new operator, examined the setup at Montreal using our high speed TCP/IP link.

Melody found, and Liz saw, that the application software setup was missing (we call our application "JACKPAC" in honour of it's programmer, Jack.)

However the UNIX USER IDs WERE PRESENT.

UNIX is a very tenacious program, and once you generate a new user, that user stays locked into the system until it is scrapped. There is no way you can remove a user, once entered.

About an hour later, I got a SECOND call from the Montreal field manager that his sales rep was in the store, 150 miles from home, and STILL could not log in.

At this point, I personally checked the Montreal remote order host computer and - LO! - those two user ID's had DISAPPEARED - an impossibility under UNIX. They had in fact also disappeared from the Hamilton remote order host as well.

That's TWO QUALIFIED PEOPLE seeing it an hour before I did, yet these ID's were missing from two UNIX computers. This is clearly impossible without sabotage.

The second incident occurred virtually as the second hand hit 5:00:00 p.m. My desk phone rang and the shipping pit clerk, which in years past had been the site of the most intense sabotage in the company, reported BOTH bar code scanners for manifesting parcels were DOWN - no power.

Now, due to the earlier 1995-97 extreme rash of sabotaged failures (intentional locking of the JACKPAC software, pulling plugs just a little way out, messing up the setup menus, etc.) we installed TWO OF EVERYTHING.

Two independent data circuits, four available login IDs, two independent terminals, and two independent hand held scanners.

The odds of both systems crashing at one point are as remote as getting two flat tires at the

same instant. Yet it happened last night.

Today's project is to find out just what sort of sabotage did this, and it may turn out that this was remote electronic sabotage which the spooks turn on and off at will.

(See Diary #157 for a recent example of "it works for others, but not for Eleanor".)

I'm not sure why the spooks seem to be performing for a wider audience than just myself - but it is obvious they no longer care if their existence is known by others.

Eleanor

-----  
Diary #160 (Anonymous)  
December 6, 1998

Responding to Eleanor's diary #159, which describes two on-the-job witnessed harassment incidents.

On the job harassment and sabotage has been part of my experience too. My perps got their emf weapons into where I worked in St. Louis and had them in a locked room within a maintenance room below my office. They would turn them on when they went to lunch and when they left everyday at 3:00 PM. I was never able to gain access to the room. Both the maintenance room and the storage room therein were both kept locked when they weren't there. I tried picking the locks but that is not my expertise and I was never able to get in.

Anyway, what started as a harassment and sabotage campaign against me, spread to include other employees. I know for a fact that at least 5 other people were targeted with emf weapons at this company. There may have been more.

That's what happens once people get their hands on these weapons, they don't just use them against their primary target but they start to target others too. Moreover, general sabotage becomes another aspect of their campaigns of harassment. It can really destroy a company.

After I left that company in St. Louis, they had to let a number of key people go and the division I worked at has suffered serious financial set backs. The parent company is now considering dissolving that division. I think the financial set backs were primarily due to the sabotage and the targeting of individuals within the company. Even the CEO and some VPs in the company were targeted. The individuals that got their hands on these weapons didn't like some of the management's decisions and targeted them. As I said, this division is now in serious financial trouble. These idiots that had these weapons at work really destroyed the company.

Once people get their hands on these weapons and find that they can get away with using them and destroying people's lives, they go crazy and start targeting anyone they don't like. It is insane.

Diary #161 (Eleanor White)  
December 8, 1998

Forced robotic speech.

In the past few weeks, the spooks have been doing forced robotic speech on me.

To set this up, they give you a minimal ration of what they consider "sleep" (loss of consciousness but with muscles slightly tensed) then they REALLY start in torturing you.

VERY aggressive all-body itching, sharp needle in flesh sensations, and limb/body jerking on command. Underneath all that they keep their electronic caffeine signal on so you can't rest or sleep.

After several hours of that, you are glad to be allowed to drop into a sort of hypnotic "middle ground" between sleep and waking. That's when they do their most forceful image projections. This is a state of full awareness of being awake, however.

When they do robotic speech, they normally accompany the forced speech with images and this morning I "saw" a horizontal representation of the word they were forcing my vocal cords to sound, over and over and over.

Most of the time, just as with their repetitive hypnotic phrase torture, I am unable to remember the word.

A couple of times I could, and they are simple words at this point like "Oh, my" or the favourite Teletubbies' word "Oh-oh".

Forced robotic speech clearly takes this matter out of the ridiculous "explanation" given by some "experts" that this is "sensitivity to power lines".

Diary #162 (Eleanor White)  
December 8, 1998

Suspicious near accidents on the road.

At noon on our Sunday shift, I borrow the warehouse foreman's car, and in exchange I pick up his hot lunch at a local mall as well as mine.

This past Sunday's drive involved two near misses which gave me the impression the other vehicles were actually being controlled by nearby spooks.

As I left a divided driveway exiting from the mall, turning left on to Ottawa St., a van which had been stopped at a side street, across the street, started out almost ramming me. The point at which I braked to avoid collision was about 3/4 of the way through my left turn.

The traffic was light, my signal was on, and this van I am sure had been watching me.

At another left turn at a stoplight (Cannon St. on to Gage Avenue) I was about 2/3 of the way through the intersection when I noticed a blur of blue and white clothing on a bicycle approach the crosswalk from behind and left of where I was.

The bicycle was being ridden by a teen ager, and there is no possible way he could not have seen me. By the time he got to the Gage Avenue crosswalk, I was WELL into my turn and he could not have help notice that either.

At about that 2/3 way through my left turn, the rider suddenly accelerated at very high speed across the crosswalk, and I came within inches of hitting him.

At age 57 I am a conservative driver and never exceed speed limits. In the city, we are allowed 30 mph, and in average traffic I maintain 30 mph except where hidden hazards are possible, then I drop to 25 mph, if there are, say, children around or a line of parked cars.

Since most traffic maintains 30 mph or just above, this rarely causes me to be seen by other drivers as a "slowpoke".

Eleanor

-----  
Diary #163 (Anonymous)  
December 9, 1998

Eleanor,

From your diary editions #161-2, I see we have had some similar experiences in the way of emf effects and automobile harassment.

My perps have often used what I refer to as the dozen cups of coffee effect. The emf doesn't cause any real pain but I can feel it in an overall tension. When I try to sleep I feel as if I had just drank a dozen cups of coffee and at best I get a fitful nights rest. I never really get a good sleep. I've even heard my perps via audio mixed

with emf say "we can turn it on and we can turn it off." When they turn it off I can feel my whole body go limp. It feels so good and I could just feel myself drifting off to a deep sleep and then they would turn it right back on. The perps use this emf as a background emf onto which I get other emfs.

One of the other emfs has been short, rapid blasts which feel like an electrical shock and which works on specific nerves and muscles to cause my arm to involuntarily jerk. I always sleep on my side and when I get one of these shocks it causes the arm which is free to repeatedly and very rapidly jerk up and down. Again, there is no intense pain associated with this emf but it does cause intense discomfort and I've been awoken many nights with this occurring.

I too have had my experiences with the perps using automobiles to harass me. Aside from the vandalism (I've had 3 cars and 1 motorcycle vandalized) they attempted to run me over when I was on my motorcycle.

I get stalking all the time and when I rode my motorcycle, the sound of the engine would pick up the perps talking to me via what I believe is the audio mixed with emf or the acoustical heterodyne device many victims have talked about. The audio works by seeming to modulate or ride on other sounds.

In this case I could hear the perps talking to me by the apparent modulation of the sound of my motorcycle engine as I drove around town. This one day I was driving and was headed towards a circle around which there are 4 turnoffs. Just as I was about to enter this circle, I heard a perp say "Now we're going to get you."

I entered the circle and as I came to the turn off I wanted, I signaled well before and I began my turn to the right to get off. Just then, a car sped past me on the right just brushing my motorcycle and nearly causing me to fall off.

I was able to regain control and followed the car. Just a short ways down the exit there was some road construction so the car which had nearly caused me to have an accident had to stop. I pulled up beside the car to give this person a piece of my mind. Boy did I start yelling at this woman. Just then a car behind me began honking his horn and I turned to see that it was a neighbor of mine that lived just 3 houses away from me.

This person I knew to be involved in my harassment but that's another story. The point is that the first car was trying to cause me to lose control and

perhaps he was bringing up the rear to run over me or at least to act as a witness in favor of the first car if she had been successful in causing me to have an accident.

I had yet another incident with my motorcycle where the perps had sawed two of the engine retaining bolts nearly all the way through and which could've caused me to have a serious accident. I started driving my motorcycle and just before I got onto the nearby highway I heard a perp say "Normally I wouldn't do something violent, but I'll make an exception for you." I got onto the highway and was going 60 mph.

All of a sudden I felt one and then a second jolt to the bike and then the bike started to lose control. I immediately shut down the engine and fortunately there was a wide shoulder to stop on. I got off the bike and saw that 2 of the engine retaining bolts had been severed clean through. This was no accident. Two bolts breaking at once is not a coincidence.

Moreover, a more thorough examination revealed that the breaks on the bolts were not clean. They appeared to have been sawed almost all the way through but with just a little metal left to hold the engine in place until I got to riding it, then under the stress of riding, they broke unevenly the rest of the way through. Needless to say, at 60 mph I could've been killed. As a result of these two incidents, I no longer ride a motorcycle. It is just too easy for the perps to get at me on a motorcycle.

December 11, 1998

Revelations!!!!!!!

Today here in San Francisco, we had a major power blackout. It started at 8:15am and lasted until about 2:30 in the afternoon. During this time, when there was absolutely no power at all for the entire city of SF i was totally free of any harassment. No ringing in my ears, no voices, nothing !!!!!!!

I have finally established that these assholes must use the usual power source to power there equipment. Not long after the power was restored, the usual shit started up again. This confirms to me that they are within a measureable range. Well, as I write this, ( 12:58am) they are doing there damn best. Hell with them.

Diary #165 (Mikey)  
December 14, 1998

I had a birthday last week. Periodic episodes of anxiety dampened my spirit. There were moments when I considered calling my physician to ask to be hospitalized for periodic sleep deprivation. Those were times when I was allowed only 4 hours or less of continuous sleep for multiple days.

Birthdays don't mean a lot to me. Birthdays and holidays invoke the question, "How many more years of emotional masturbation and psychological intercourse can I endure?" This week I reviewed the diary I've maintained for 7 years. I noted how seemingly different events and activities had a common theme. One day I'd like to put my experiences in a book. Is there anyone who can offer assistance?

Diary #166 (Eleanor White)  
December 14, 1998

Early 'Christmas present' from the spooks.

Saturday morning, two days ago at the breakfast table, I noticed a little "gift" the spooks had apparently left me overnight.

On the inside of my right elbow, right where a lab technician would draw a blood sample, were three crisp, perfectly formed red spots, about 2 mm in diameter. They were arranged in a perfect equilateral triangle about 9 mm on a side.

The colour is from blood pooling underneath the skin, but it doesn't appear there was any penetration of a needle.

Knowing the amazing remote physical manipulation capabilities of the spooks' equipment, I suspect this was done remotely, somehow, rather than by surreptitious entry to my apartment while I was "asleep" - the quotes being necessary because e-weapons targets rarely get genuine sleep.

Eleanor White  
-----

Diary #167 (Eleanor White)  
December 18, 1998

Spooks go to extreme level of detail in performing their harassment.

I hail from the big-band era, and love the sentimental popular music style where words are clearly audible and the damn drum section is in the background. (I also love "high church" classical/vocal music sung in praise of God.)

But for me, it is the big band ballroom and sentimental music which went along with the 50's rock and roll (but remained separate) which gives me MOMENTARY RELAXATION while doing work.

Recently, I have discovered that first my favourite Glenn Miller tape, and now a slough of others are missing. I didn't misplace them - the box of tapes is the only place they stay.

Guess the spooks want to be sure they erase every possible means of relief from their torment. Too bad, really - they will find THEY need relief once they are marched into Hell for this kind of thing.

I don't think my tapes will help them much at that point.

Eleanor White

Diary #168 (James Henry Graf)  
December 18, 1998

In response to diary #166, about three red dots in a triangle appearing overnight on Eleanor White's arm:

Yes. They do it. Around 1990, while I was still living with my former wife, who got up early in the morning for her teaching job, I awoke several times to find puncture marks (usually two, about three quarters of an inch apart) on the back of my right hand, between thumb and forefinger. God and the perps know what they were doing. I don't.

James Henry Graf

Diary #169 (Eleanor White)  
December 24, 1998

New at-work spook trick.

In the good old days of 3 to 5 years ago, the spooks would "follow" me around the computer room and building by powerfully vibrating each keyboard I would sit down at. The mechanism seemed to be to use the hard disk motor to generate vibration at the resonant frequency of the desk top.

The machine could be felt to vibrate a little, but the center-desktop location of the keyboard was by far the most energetic - it was extremely uncomfortable.

By firmly bracing the desk tops I spend the most time at, and adding foam padding under the PC and/or keyboard, the situation was made workable and when that happens with any of their tricks, they usually pass on to another one.

Their latest is to cause my hard drive to whir and click, that is, to go through the motions of accessing files, every few seconds. This occurs in both WINDOWS and DOS.

There is a long history of sabotaging Internet software and repeated planting of viruses.

Viruses can cause this, but my recent anti-virus software detects nothing - so it's probably a spook-customized piece of ostensibly normal software, OR, they are doing it directly from wherever their "hideout" is, very likely a house just across the street.

The spooks are solidly patched into our UNIX system too - they make both UNIX and applications malfunction differently on different days, and in ways no programmer could possibly do, unless they had spook budget, equipment, and training behind them.

Eleanor White

-----  
Diary #170 (Woody)  
December 24, 1998

Talking about spook tricks I want you to roll this one around for a while [pun intended].

I play a professional game of pool (9 ball and most other games) I may have told you this in the past. I can tell you with out any doubt whatsoever that each and everytime I play that our friends (?) the spooks control everything that happens on the table, I mean everything!!!!

I'm sure theres someone out there that could run it down (how it's done) and if so when I complain to the BCA again I could back it up with something they could chew on.

[My view is that no unclassified scientist can explain remote physical manipulation - Woody is the seventh person to report remote physical manipulation. E.W.]

The spooks here show me that they can push on things with quite a bit of pressure. I mean quite a bit of pressure and seem to have endless gradifecation demonstrating to me there abilities. I must be quite a audience for them as you are.

To wrap up the lastest and greatest of the bag of tricks they now demonstrate that at anytime I can be render absolutely paralyzed, I mean I can't move a muscle including moving my eyelids. They must be getting ready to visit me in person.

Maybe they will come dressed as Santa Claus. I have been undergoing the burns and the tricks and

manipulation for about 13 years now so we know of course that we're never alone in this.

Woody

Diary #171 (Anonymous)  
December 25, 1998

From a reader of the Diary:

I was reading through your diary--rips in an unusual place in your underwear, god I only thought that happened to me. Things being rearranged, I had my Tai Chi patch right in the middle of my living room floor, now I know I didn't leave it there.

Honestly, such bizarre happenings, as if what we go through otherwise isn't enough.

Everytime, I go into my bedroom, it sounds like someone knocks on the wall or drops something at that precise moment. I still can't tell if it is the neighbors or just beamed into my head. I don't have anybody over who goes in there so can't rely on second hand testimony.

My mom stayed in there a few nights, didn't mention any unusual noises, and if she noticed any she would not say, due to my so-called frail mental health because I used to talk about this stuff to her. Of course, she thinks I had a mental illness, I am cured now because I just don't talk about it anymore.

WITHDRAWN BY REQUEST OF POSTER

[NOTE: This phenomenon of others hearing "voices" coming from someone who is not saying anything is exactly what neuro-influence target Patricia Mougey of Toledo OH has experienced for years. In Pat's case, she has been the "sender".

Remember too that Ed Light experienced remote physical manipulation effects, in his broken turn signal indicator after being remotely told by "voices" it will break, as far back as the 1970s.

E.W.]

-----  
Diary #173 (Mikey)  
January 10, 1999

I awoke at 3:30 am this morning after 4 hours of sleep. I realize my holiday vacation is over. This

week began with vivid imagery during sleep. I was late for work everyday this week. So its business as usual. The week before and after Christmas was somewhat peaceful with the exception of periodic mental suggestions and dreams about Roslyn.

My controllers are intent upon maintaining a soul tie relationship. Manipulating my emotional reactions to hearing her voice, hearing her name mentioned or seeing her or individuals associated with her.

Frankly, my soul tie has been effectively used to help minimize my church participation. I didn't want to attend church or work out at the gym because she was always at both places with another man. She made a point of lifting up her new relationship. Our chance meetings appeared more than coincidental. For a period of time, my heart exploded and my emotions vacillated uncontrollably every time I saw her.

The results of a recent blood work up indicated that my white blood cell count had risen to 4.8 after a sustained period of decline. The oncologist did not perform the bone marrow biopsy that was originally scheduled for December. However, he could not explain why the count increased.

Mikey

-----  
Diary #174 (Eleanor White)  
January 10, 1999

Spooks assist me in convincing co-workers of their existence.

I'm right in the middle of moving the computer system at work to the new head office in Oakville, Ontario.

This requires the purchase of some new battery backup units, commonly referred to as "UPS's", or uninterruptable power supplies. In the event of a short power failure, the computers plugged into them never stop working, and in event of a longer power failure, operators have time to log off without losing their work in progress.

These UPS units are treated with extra special care by their manufacturers. This is because the failure of such a unit could cause serious financial loss if the computer using it lost power at a sensitive point in processing.

Their design is extremely rugged, and as an example of the care that goes into making them, screws inside are tightened with a TORQUE WRENCH. Those readers who have done mechanical work know that torque wrenches are used in places where incorrect tightening can have severe consequences.

Use of torque wrenches on simple machine screws is EXTREMELY rare - confined to jobs like assembly of space station parts, for example.

To gain customer confidence, UPS manufacturers offer LIABILITY INSURANCE with their products, to cover legal actions where their product failure has cost their customer significant financial loss.

Keep this background info in mind when I tell you that one UPS for Oakville was delivered to Hamilton a couple of weeks ago. It spent most of that time sitting in the front office, out of the weather, waiting for transport to Oakville.

When I got it to Oakville, I opened the case to connect the battery leads, which is standard procedure.

I plugged the unit into a special filtered outlet used exclusively for the computer room, and connected some low-power-drain data "hubs" (cable jack boxes) to the UPS. These hubs draw perhaps 5 percent of the rating of the UPS.

The hubs ran OK.

Later, I wanted to de-energize the hubs to do some further work on them. UPS units have a main power switch which can be used to shut off the load and the UPS unit itself. THE POWER CONTINUED TO FLOW despite the switch being OFF.

Further testing showed that, in spite of the battery being connected for sixteen hours, the unit provided ZERO backup power with the switch on and the wall plug disconnected.

A DUD, right out of the box.

My colleagues, especially those with technical backgrounds appeared to be convinced that this unit had been sabotaged, very likely by some sort of destructive signal, as the box did not appear to have been opened since shipping from the factory.

Thank you, spooks; your help in convincing observers of your presence is very much appreciated.

Eleanor

-----  
Diary #175 (Eleanor White)  
January 16, 1999

More clear cut evidence of sabotage.

Today is the day when most of the equipment is moving from the old head office in Hamilton, Ontario

to the new head office in Oakville, Ontario.

At three KEY moments during preparation, the spooks have stolen three ESSENTIAL items. This chain of thefts of KEY items removes any doubt that this set of events is coincidence:

1. Last week, when some advance PCs were to be set up to communicate with the new UNIX host computer, the morning I left to do the work, the most important manual and diskette, stored in the locked computer room, and never touched for the past 3 years, went missing.

(This was the UNIX communications/terminal emulator program, James River Group's "ICETCP". This item has ZERO theft value, as it has nothing to do with end-user application software.)

I had Liz, the assistant operator scour the computer room top to bottom. No find. The following morning, I did a second scour. No find.

Luckily, the spooks have got me into the habit of making many copies in many different places, so we were able to re-create the program set.

2. We had several days of extremely bright sun, and the trip from Oakville back to Hamilton faces you directly into the winter setting sun. This is made worse by the fact that the highways tend to be perpetually wet throughout the winter.

I had my pair of polaroid sunglasses, now a rarity (the world has moved away from polaroid, now preferring "UV protective" glasses) stolen from my desk. They had been there throughout my 7 year tenure here.

Polaroid sunglasses, in southern Ontario, are still available, but often only in sunglass specialty boutiques, and starting at over \$100. I was lucky after scouring a number of places to find a pair at \$42. Had to buy them - impossible to safely drive without them with all the wet roads and white snow.

3. Today is the physical move. I had a bunch of mission-critical papers, cabling diagrams etc. on a bright blue clipboard, centered on my desk last evening, to be taken to Oakville this morning.

GONE. Not in car - nowhere. Just GONE.

Very, very clearly, these three thefts over a few days are not co-incidence.

To top off their efforts yesterday afternoon, the spooks put me into a momentary trance and caused me to take a very hard fall on a set of outdoor concrete

steps. They have watched me be extremely careful for the past 7 years, looking down at every step and holding the railing tightly.

Yesterday, I walked off the edge, staring into space, without a thought about what I was doing, in one of the now familiar memory blanking incidents. This set of steps faces the house I am sure they use, and I'm sure they got a hearty laugh out of it.

Eleanor

-----  
Diary #176 (Eleanor White)  
January 17, 1999

Spook activity at the height of the head office move.

Yesterday was the "longest day", in terms of moving my company's head office from Hamilton to Oakville, Ontario.

Not a fun day, but the spooks still managed to get in a couple of nasties.

A couple of days previous, I had measured and cut six 20-foot pieces of data cable for use with the six mainframe modems, but due to the snowstorms, didn't get time to terminate them with RJ-45 connectors.

My first task yesterday was to finish those cables.

When you don't make up RJ-45 (8-pin version of the clear plastic telephone plugs) connectors frequently, you get slow, and slower still is making them up from 4-pair ROUND, TWISTED PAIR wire. Each RJ-45 takes me from 15 to 20 minutes, and there were 12 to do.

I got the first three cables made up, then went to run those in place. SURPRISE! Over the couple of days they remained unattended, the spooks had CUT FOUR FEET off each one. They had also removed most of the remaining cable from the pull-box of bulk cable on hand for that and various other jobs.

We got around it by placing the modems closer to the jack panels, but this was not as planned at all. Lesson learned.

Not much spook activity was noticeable until close to day's end. I connected up the order desk fax machines which comprise a three-line "hunt group".

That is, the customers dial the first number only, and if the first is busy, the call is transferred to the second line, and if that is busy, to the third line.

I noticed from the successive ringing on the three

still not powered up fax machines that not only are calls transferred when the machine is busy, but also if the call is NOT ANSWERED.

Why is that significant? Because this is precisely the type of operation Bell Canada told us we could NOT get on our customer computer ordering system.

The phone system, as anyone who has dealt with the spooks knows, is perhaps the "main playground" for the spooks. The Bell technicians have repeatedly played nasties whenever I needed to call them in for company work. Wrapping their cord in a tight spiral around a bundle of computer cables is just one of many examples (including a major battle to get the technician back to undo his act.)

So, since we could not get what is an obvious, logical, and necessary type of hunt group operation for our customer lines, the spooks forced us to build dozens of custom-designed circuit boards mounted on top of our modems to accomplish what Bell Canada refused to give us.

That is why the sudden, now-correct operation of the FAX hunt group at Oakville was a shocker.

Now yesterday's topper:

I'm driving a low mileage rental car in excellent condition. Yesterday night, when I arrived home exhausted, I shut the engine off, closed and locked the door in preparation for walking home.

SURPRISE! The DOME LIGHT STAYED ON!

This had never happened in the two weeks I have been driving the car. I repeatedly snapped the door dome light switches in and out. There was no jamming, and being inside the seal, no corrosion. Apparently the spooks had remote-welded the contacts shut.

Now, when a dome light stays on, you can't just go home, or the battery will be low or dead the next morning. So I had to screw around for 20 minutes or so, finally figuring out how to get the dome light lens off to disconnect the lamp.

Nice little "nightie nite" touch, don't you think?

Eleanor

Diary #177 (Eleanor White)  
January 17, 1999

A WONDERFUL surprise!

Yesterday, after securing the Hamilton computer room, I drove to the new head office location at Oakville, Ontario to meet our programmer/consultant

to get the new computer system installed and running.

At Oakville, there is a long hallway from the main office to the computer room.

As I approached the computer room, the consultant was talking to the PBX telephone technician.

He was saying: "They are REAL, all right, I can PERSONALLY VOUCH FOR THAT."

To my amazement and delight, I found that the phone tech and consultant were discussing the SPOOKS, and they had no idea at that point that I was in the area. I had quite a bit of Hamilton system securing work to do, so they could not have known I was coming at that moment.

The consultant has been generally "poker faced" on the topic of the spooks, and this was an AMAZING statement, unprovoked, from him.

There is hope yet!

Eleanor

-----  
Diary #178 (Eleanor White)  
January 19, 1999

Day 3 of the head office move to Oakville.

Day 3 was Monday after the Saturday-Sunday insanity euphemistically referred to as our head office "move".

All furniture and equipment had been dumped into broken piles (i.e. furniture partly disassembled and computers strewn all over the floor, tangled in their previous cabling.)

Employees asking me "please set me up - where is my PC? what is my telephone extension" etc.

I tried to keep up, but the spooks had a little thing going with the snow removal contractor.

My big boss (the owner) kept asking me to move my car for snow removal, about every 20 minutes. I had parked at the furthest end of the lot and my bumper was right at the property line, so I could not imagine what was going on, until I saw the faked "efforts" of the snow plow driver.

He was slowly circling the building, just daintily nipping at a drift here and there - absolutely zero work of any worth getting done.

Each time my boss asked me to move his car, I tried to approach the plow truck to find out why an already cleared parking space was so critical.

The plow driver would circle away from me, meaning I had to "chase" him around the office/storefront block about 200 feet long and 75 feet deep. This got me all out of breath.

When I caught up to the driver, he said, with a smirk, "Why ... no ... I never asked for your car to be moved."

So back upstairs, and just as I made a little progress in getting somebody's workstation up, another request to move would be delivered in person by my boss.

Not only did this go on, but I noticed not a single other car was being asked to move.

A computer emergency at Hamilton cut this game short, but when I left, roughly noon, this plow driver hadn't cleared ANY snow of any consequence at all.

After this, I worked on Hamilton's problems until almost 8 p.m., and when you have been running on pure adrenaline for 3 days, you are ready for a shower and rest (no sleep of course.)

I started gingerly picking my way along narrow sidewalk "slots" (our company refuses to do it's share of sidewalk shovelling). As I approached the back door of our apartment building, the perfectly level blacktop was icy so I adapted the standard cautious walk, 6 inches per step, and kept full concentration on what I was doing.

All of a sudden, the spooks used their remote limb jerking or external manipulation (I believe it was the external manipulation in this incident) to yank my feet forward, "out from under me".

I went down hard, luckily with enough muscular preparedness to avoid cracking my skull, though my teeth came together when the back of my head hit the blacktop.

After such an aggressive "accident", the spooks need a "topper", of course, and this morning a significant reminder note was missing from my desk.

Eleanor

-----  
Diary #179 (Eleanor White)  
January 19, 1999

More day 3 of the head office move to Oakville.

Today we had a very troublesome shipping manifest printer in our Narcotics Department refuse to print anything. It is a new printer in excellent

condition. The data cable checked out AOK many times, but still no action.

After a frustrating two days on this problem (mixed in with many others), as a last resort, I opened the little plastic case which connects the 8-wire data cable to the printer's serial port. This gadget is called an "adapter" and we hand assemble them, to accommodate different connection requirements among many different printers.

The problem was a repeat of a similar one in our shipping pit (a hotbed of spook activity at times).

Someone had broken in a couple of nights ago, and REVERSED THE SEND AND RECEIVE LEADS.

The little DB-25 pins are firmly latched into their cylindrical sockets and there is absolutely no way the pins could change themselves. This was irrefutable sabotage, plain and simple.

A significant thing is that the break in occurred in the NARCOTICS CAGE. There are roughly \$30 million dollars at street value in that cage, and the cage is like Fort Knox, and has many extremely sensitive alarms.

Whoever got in there had to have a password.

As a topper, the spooks also, I discovered, had screwed up a data cable to another printer. It just does not ever stop.

Diary #180 (Eleanor White)  
January 22, 1999

Day 6 of the head office move to Oakville.

Yesterday, day 6, we began to try to get some DOS programs up and running on four user workstations. Because the new head office has no DOS/WINDOWS network, before moving, I had installed Word Perfect and Lotus 123 for DOS on several machines.

Yesterday, I discovered that ALL FOUR machines had these DOS programs entirely deleted, plus all directories removed, and even the C:\BAT> startup batch files removed.

The employees concerned saw me do the installations, so there is no doubt whatsoever that this is sabotage.

The operating system and communications files are intact - this is NOT a mass failure of hard drives, all of which are less than 2 years old. We don't use "Stacker" or any other disk compression programs which add some chance of file loss/corruption.

No doubt of sabotage at all, witnessed by four very disappointed employees who know the software was there originally prior to the move. Several hours of loading and setup time was lost.

The "topper" is entirely speculative, but the PBX telephone installer (their lead technician) reports multiple extremely unlikely aberrations in how the new PBX system works. He repeatedly asks me if the spooks are messing with his system.

(I reply with the truth: "I don't know, but I do know that telephone systems are a favourite 'playground' for spooks.")

In spite of being one of the top rated companies in Ontario, and having worked daily on the new phone system for a large portion of each day for the past two weeks, and having transferred the physical PBX equipment with original programming from the Hamilton office to Oakville, they still do not have the system entirely up.

E-Weapons Diary #181 (Mikey)  
January 20, 1999

I was reminded by another victim about the contradictory aspects of this experience. One apparent objective is the maintain contradictions between perceived reality (what I see with my own eyes) and my thought process.

It may be subverting a goal I am trying to achieve resulting in an opposite outcome. Last week I attempted to pray for clarity and peace of mind. I am participating in a church fast.

In the past attempts to pray have usually elicited punishment. Last week was no exception. Moreover, feelings of resignation entered my mind. I've asked myself, "Is this a life worth living".

My faith is and has been severely challenged. The manipulation of sleep and the obvious control of certain aspects of my behavior perpetuate the prisoner mind set. There is never a feeling of true fulfillment and contentment. Moments of joy are always overshadowed by periods of open ended grief. This is a merry go round existence with no closure.

I am reluctant to share these issues now that both

medical professionals I initially shared my story with are deceased, Monica Barrett, M.D. and Curtis Tutson, M.A. Attempts to develop new relationships have not been fruitful.

Mikey

-----  
E-Weapons Diary #181 (Eleanor White)  
January 22, 1999

Day 7 of the head office move to Oakville.

This morning, as to be expected, I guess, the install diskettes for Word Perfect 5.1 turned up stolen from Hamilton. I was to take them to Oakville to re-install on four employee machines where the spooks had deleted my installations of WP 5.1 and Lotus 123 prior to the move.

This will be an hours-long exercise to re-create these diskettes, and more hours to finally re-install at Oakville.

Today's topper: A long-time spook collaborator who works in the warehouse, and who "jumped" me one morning with a bear hug at the back gate, is playing dumb.

He was given a key and alarm password, and pretended to "not know the difference between turning the alarm on and off", and all his boss told him was to turn the alarm ON when he enters the building.

I finally shouted at him several times as he would not stop watching over my shoulder as I tried to go thru the many, many steps needed to silence a triggered alarm. All he would do is smile at me and say "Yes yes yes".

The boss forgives him saying "Oh yes - he smiles a lot."

Even when I reminded him of the assault which was sexual in nature, the boss still said he is essentially faultless.

There is no doubt, as he has participated in other spook harassment, that he was carefully coached to do this.

Eleanor

-----  
E-Weapons Diary #183 (Eleanor White)  
January 23, 1999

More day 7 of the head office move to Oakville.

A new spook tactic has started up at Hamilton, Ontario, until a week ago the head office of my company.

One of the very first co-workers to willingly read all about MKULTRA and electronic mind control is the gal who is now the only inventory control clerk at Hamilton.

She works closely with the receiving clerk, who has a long track record of doing little nasties for the spooks. He was the one who spread black grease all over a shipment of structural aluminum for me, and who has literally held shipments so he can dump them in my lap as I eat lunch.

As soon as the head office moved, and I was on the road, he has now made a point of harassing her by playing dumb and causing her endless repeated tasks and always with a grin on his face saying "Sorry ... so sorry ... so sorry".

The spooks also started to disrupt her PC while I did not have time to stay and fix it, being needed to handle the endless man-made emergencies at the new head office.

My best guess is that the spooks are aiming to do two things:

1. Make it look as if the receiving clerk is just an ordinary bozo, and not a spook perp
2. Make the inventory control gal wish she had never met me.

With the departure of the head office, the number of witnesses has been sharply reduced, leaving a warehouse work force containing many english-not-first-language workers who will always be at minimum wage and ripe pickings for the spooks to recruit perps.

I look forward to the most intense at-work harassment possible in the future, as the 50% cost of living (Oakville vs. Hamilton) makes it impossible for me to move.

I lost my cool (see E-Weapons Diary #182) but I now have a tactic to cope with play-dumb perps which will make shouting not necessary. Other victims may also want to try this:

EACH TIME THE VICTIM IS ACCOSTED BY WEIRD BEHAVIOUR ON THE PART OF SPOOK PATSIES, START A TAPE RECORDER. If you don't have a recorder handy, say nothing, go get it, then come back and calmly get the perp's words on tape.

I firmly believe this will stop the play-dumb variety of harassment.

-----  
E-Weapons Diary #184 (Eleanor White)  
January 26, 1999

Interesting little incident - take it with a grain of salt.

Part of the spook sabotage where I work was the rapid destruction (internal, electronic only) of three warehouse bar code scanner guns, valued at about \$1,800 each. This destruction occurred over a period of two weeks, and two of the three failed at exactly 5:00:00 p.m. as I was heading home.

The local bar code scanner sales and service depot was extremely surprised - "We've never seen two fail at the same time."

They were even more amazed when one of the gold-plated connector pins was mashed over - something that usage can't possibly do.

I explained to the technician that this was part of a government-backed sick psychology experiment that has followed me for nine years, through two companies and three apartment houses.

His predictable reaction: "Yeah, right."

Today, when I went to pick up the repaired units (repairs on three added up to \$1,400), it was a little different.

The young technician jabbed at me with the expected comment: "So the government is going to break them again, eh?".

I said yes. I also noticed the senior exec take an interest in our conversation, smiling and shaking his head. I asked him why this was funny.

He said: "It's NOT funny - it's just that over my experience (he's mid 50's) I have seen 3 or 4 OTHER COMPANIES experience government sabotage too."

I pressed him, and he assured me he was not joking.

He said some years ago, the company had a guard wait over four nights, and on the fourth night, the guard shot dead a government saboteur.

He would not supply further details, but he said he had no trouble believing government agencies will do nasty things to people and companies they don't like.

I think there is a fair chance he is telling the truth, even though we can't use it as evidence.

Both guys took down my web site address with

seeming interest.

-----  
E-Weapons Diary #185 (Eleanor White)  
January 28, 1999

Automobile electronics and more.

On January 17, the dome light came on in a car rented for the head office move. It would not shut off under any conditions. I had to remove the cover and pry one end of the fuse-shaped lamp free to avoid running down the battery.

When I returned the rented car on January 25, I told the rental agency about the light, which, incidentally, still malfunctioned the morning I returned the car. Their attendant clipped the lamp back in and it worked perfectly, having acted abnormally for 8 days.

Anyone who has done electrical work knows the odds are virtually zero for this to happen.

I then, on January 25, began driving a company car.

Yesterday evening, when I drove home from the new Oakville office to Hamilton, all inside instrument lighting went off before I even moved out of the parking lot. It was heavily overcast and head-lights were needed for the entire 45 minute trip.

My co-worker Liz, who acts as backup computer operator, rode with me.

As soon as we parked at Hamilton, ONE BY ONE, with several seconds between each, the panel lights came on. Temp, speed, fuel, radio, heating/ventilation. ONE BY ONE.

In my 57 years of living and driving (and flying) I have never seen instrument lights behave like that, and if lights did behave like that, it would be classified as a supernatural event.

Neither occurrence could be anything but spooks.

As a topper, I have driven three cars over the past month: Two new rentals and the company car, a Ford Escort wagon with about 50,000 miles.

All three exhibit severe engine missing while trying to cruise, i.e., jerking back and forth along the horizontal fore-aft axis of the car - definitely NOT bumps in the road. Liz also confirms this is engine misses and not bumps.

Finally, there have been 3 or 4 instances where I was positioned to make a left turn and when the oncoming lane was empty, I just sat there

until cars behind honked. I have up until now been an exemplary driver.

I am certain this is the same kind of hypnosis that caused me to step off into "space" and come crashing down on icy concrete steps, in full view of the spooks' apparent house, a month ago.

At the new head office, ONLY I hear constant grinding and drilling, and ONLY when I am ALONE in an office, room, or stairwell. There is NO construction work in the spaces under our new head office - only established offices.

Co-workers in adjacent offices/rooms hear nothing either.

It is clear the spooks will not let up.

Eleanor

-----  
E-Weapons Diary #185B (Eleanor White)  
January 28, 1999

MORE Automobile electronics.

Just picked up the company Ford Escort wagon which, in entry 185, had it's panel lights go out last night and come back on in steps. I took it to the dealership for a check this morning.

Mechanic: "We found no problem whatsoever with your panel lights."

Also: RE the skipping of the engine - "We found an engine warning light on but it was very unusual - we found NO ERROR CODE to go with the light when we plugged in our diagnostic computer."

Not a surprise.

Eleanor

-----  
E-Weapons Diary #186 (Eleanor White)  
January 28, 1999

Spare or less-often-used computers.

In my nine years as an e-weapons target and computer worker, there is one rule I can count on:

If a computer is networked but used only rarely but is kept as a standby, OR, if a computer is placed, in WORKING CONDITION, on the shelf for emergency use,

I CAN COUNT ON THAT UNIT BEING  
DESTROYED.

The rule has been, in not one but TWO companies, Eleanor White is not allowed any spare backup

equipment, making all minor incidents into major (and expensive) ones, as there are delays in getting new equipment then wrestling to get it set up in a network-compatible state.

I was forcefully reminded of this rule two days ago when a large, server-grade machine with five years' worth of work on the part of our graphics department had it's motherboard die some time during the recent move of our head office.

There were no signs whatsoever of rough handling.

It is not the hard drive, which is the most sensitive to rough handling, but the electronics on the motherboard.

This machine cost close to \$10,000 and was "really loaded" with memory capacity.

This event follows another loss of the motherboard (the "guts" of the electronics) in a very similar machine just before the move a week ago.

In the 7 years I've been here, we have lost perhaps 24 battery backup ("UPS") units, when over that same time span one might expect to lose say four to six.

This big graphics department machine is perhaps the 15th PC to be unexpectedly ruined in that same period - always the motherboard and maybe other items too - sometimes the hard drive.

(Like, two motherboards and two hard drives in a single incident when I emailed the U.S. Navy web site asking them to stop harassing innocent civilians with their classified equipment. Both destructions happened within an hour.)

The total bill from the spooks' damage is very high - and only because people don't want to believe that remote-capable and alarm-defeating saboteurs exist in pristine old Canada (same with the US, of course.)

Eleanor

E-Weapons Diary #187 (Jim)  
January 31, 1999

A comment on E-Weapons Diary #184, about spook industrial sabotage:

I just wanted to make a comment on this entry. I met a former corporate attorney to whom I explained what had happened to me. He believed every word of my story and informed me that he too was harassed whenever he brought charges against the U.S. Government.

Strange and nasty things began to happen. Such as office break-ins, tax audits of his office every year, missing files, etc.

He also informed me that we are doing all the right moves and that we would probably win down the long road if we did not ever give up -he said this was the key and that the government knows this as well..

Back to the Battle,

Jim

-----  
E-Weapons Diary #188 (Eleanor White)  
January 31, 1999

Little vignette.

Last autumn, my shoulder bag under my desk and never moved or hit by anything, my cell phone flipped out and fell on the floor. I didn't notice it missing until I had reached home and had to go back for it.

Usually, they confine remote physical manipulation to my apartment.

A week ago, lucky I was looking in the right direction, they flipped my eyeglasses out of my bag at the steps from the parking lot to the office front door.

I mentioned to a co-worker that the spooks had flipped my glasses out of my bag.

What is curious is that over about the 3 days following this incident, not once but TWICE, not one but TWO DIFFERENT empty glasses cases showed up on that same spot where mine would have landed. Neither was mine.

In my 7 years with this company, I have never seen a glasses case there, and the weather has been very foul, cold, and the area icy - very little "casual traffic", in other words. It's not an area frequented by the public, especially having had the entire admin staff move to another city.

I can only guess at the spooks' motive, but it seems to be a recurring pattern that they want very badly for the target to KNOW their incidents are DELIBERATE, but still not provable.

Eleanor

E-Weapons Diary #189 (anonymous)  
February 3, 1999

MORE spook-induced falls.

This same unexplained falling has happened to me 4

times in the last three months. This has NEVER happened to me before.

The first time this happened to me 3 or 4 city maintenance trucks were parked along the road in a quiet area adjacent to a large university. I was carrying some groceries and walking along the road. Just after I went onto the sidewalk, my left leg collapsed. I then was able to begin to lift myself up with my right leg preventing myself from falling. As I was lifting myself up with my right leg, my right leg suddenly collapsed, and I fell because all my weight was on one leg.

A guy walked by me just as I and my groceries fell. I had never before this, seen such a robotic response from a person when someone fell. He showed absolutely no response, he just staired straight ahead and continued to walk by me, about 1 foot away from me, not even turning his head toward me.

The second time this happened, these harassors must have realized that I needed a heavier dose because the first time I almost prevented myself from falling. As I was walking down the sidewalk with my groceries, I suddenly flew forward and hit the sidewalk. Because I had already experienced this, I knew I was forced to fall, and I very quickly stood up. As I was standing up, a woman ran toward me and made a huge scene that I must have injured myself and she was going to help me. However, I was already in the process of standing up when she insisted I was hurt. She appeared dissappointed by the expression on her face when I got up and just kept on walking.

About three weeks ago, we had a snow/sleet storm. As I was walking in the heavy sleet, I saw a guy who was inappropriately dressed for this storm, he was just standing and doing nothing as he was stood on the sidewalk. I was wearing a ski mask which was necessary because the sleet caused pain and damage to exposed skin. I also had sunglasses on to protect my eyes. It was impossible to be out very long with out glasses because the sleet would have done damage to the eyes.

After I crossed the street and starting walking on the sidewalk, I suddenly flew, fell, and slid. I believe this was the same "robotic" guy who walked by me before. He finally decided to move after I crossed the street and he showed absolutely no expression and said nothing.

The other times this has happened to me I also flew.

I wondered if this was a type of "shock wave". This has only happened to me when I was away from other people. I believe this "shock wave" has a diameter of about 10 to 20 feet, which is why this only has happened when I was not close to a croud of people.

Also, I know of someone who I think this has happened to. A women in my rape support group wears large baggy clothing causing her to appear heavier than she is. As she was jogging, she said she flew several feet causing her to break a few bones in her foot. A full leg cast was used. When I was attending this support group, I was harassed more than usual with microwaves. I believe, this women was also harassed because she was speaking up about when she was raped.

(anonymous)

-----  
E-Weapons Diary #190 (Mikey)

February 4, 1999

I was awakened this morning about 4:00am. This has been the norm for the past 4 weeks. I averaged about 4 hours of sleep. As usual my activities are restricted to work and exercise. Like a prisoner, I return to my apartment which is comparable to a penitentiary cell. Work and exercise prevents me from going insane. My psychological perspective contradicts my outward behavior.

The intermittent irritability and fatigue have been burdensome. I don't know how I continue to function. The sleep deprivation wears me down. I wonder how many years of this hell I was sentenced to. How much more money will be made from my suffering. I sometimes feel I am acting out a script and being driven by an unknown force. I don't know if persons close to me can see through the mask I wear. The controllers work hard to restrict and limit my contacts with others.

Mikey

February 5, 1999

It's 5:00am and my cage is being rattled by the targeted synthetic voices. The voices automatically kick in with 5 or more hours of sleep. I fell asleep at 11:00 pm and was awakened at 4:00am.

Mikey

-----  
E-Weapons Diary #191 (Girl in Ft. Worth, Texas)

February 7, 1999

Tinnitus-like sounds commonly experienced by people targetted by electronic neuro-influence devices:

I do not have tinnitus, it's important not to have tinnitus if you are a musician. I am currently in a band. I have been to loud concerts and had that ringing in the ears but this sound is different. Its even there when I sleep.

Seems like there was a break in it sometime this morning. Maybe the operator took a break as you were claiming sometimes occurs in your diaries. Also EVERY day I have to reinstall my modem. I am an expert at this-because I work at an internet provider as tech support.

I have been reading your diaries.....this is strange about the birds. I always seem to have birds around me when I go out and they seem to be drawn to me and come closer to me than normal. A friend pointed this out to me.

I have yet though to hear them emit strange sounds. But it never fails that I am surrounded with bird "parties".

There was also a strange bird incident yesterday. For several hours a dove sat on the fence and it looked like a rock. It sat so still and looked so odd that my boyfriend ran up to it and touched it and then it flew away. Maybe it was taking a nap but I have never seen a dove look this way. It looked very unusual.

Girl in Ft. Worth, Texas

-----  
E-Weapons Diary #192 (Girl in Ft. Worth, Texas)

February 7, 1999

Electronically induced itching - synchronized.

I notice the itching episodes too. These come on strong about twice a day. It is strange too that my boyfriend and I do things simultaneously. WE WILL SCRATCH AN ITCH AT EXACTLY THE SAME TIME.

We will also clear our throats at precisely the same time.

This is really weird to me. This happens periodically during the evening. And I always have a little electric shock to give to someone if I even briefly just barely happen to touch them or if they touch me, whether its touch by finger or shoulder, even at the legs.

Girl in Ft. Worth, Texas

-----  
E-Weapons Diary #193 (Girl in Ft. Worth, Texas)

February 7, 1999

Automobile problems.

It never fails that if I get in your car it will have some sort of problem or something will break on your car. This includes my own car that has been in the shop so many times I know they are sick of

seeing me and my car there. And one time I was driving on the freeway and had a friend in the car.

I was pointing out the cameras they've put up and all of a sudden the transmission just went haywire. Lucky the transmission shop was just around the corner and we barely made it there as well.

Its always the same problem when I take it in. It is still under warranty. Since when does it take two weeks to order a part? I think I am putting them out of business because the twelve times I have taken it in since last August I have never had to pay another labor charge.

When I dicuss this problem with people that have a similar vehicle I find they haven't had these same type problems. I never thought anything strange was being done to my car (e-weaponry Possibly?) until what occured on the freeway.

My boyfriend's car stalls only when I am in the car with him. We broke up for 2 weeks and when we got back together I asked him how his car was doing. He told me that the problem had gone away on its own (he just realized it too.)

Well what do you know the same problem came right back while I as in the car with him again. He is a good mechanic and usually can fix anything. He looked his engine and car over and says he can't figure out what the problem is.

We broke up again a couple weeks later....problem gone again.When we got back together..... problem back.....ARGGGGHHHHHHHHHHHH.....I feel like it has something to do with me. Maybe I am not supposed to have a car or be in one.

I am sick of friends telling me their cars run so great and then when I get in their car something breaks-door handles, brakes locking up, radios go out.....you name it-it's probably happened.

Girl in Ft. Worth, Texas

E-Weapons Diary #194 (Annalondra)  
February 3, 1999

[NOTE: This text is a strong statement about the desperation produced by constant electronic harassment. Any reader who can imagine constant torture in home where the police refuse to believe the victim can understand the desperate tone. These strong words are NOT the product of mental illness. E.W.]

I am still been tortured by my next door neighbor (a mad criminal woman).

Police did nothing for me, and London's doctors are

completely ignorant about tortures of electronic devices. They all refer me to psychiatrists. They all do not want to believe me. I cannot prove any thing as it is impossible to arrange witnesses.

My mad criminal neighbor has even a sophisticated camera and she can see me in my room... A police inspector told me that she can even see me from behind the parting wall. That it is to why she can point at me and not to other present with me.

The so-called medical "professionals" do not want to believe me. (AMEN. Eleanor)

Annalondra

E-Weapons Diary #195 (Barbara Guillette)  
February 11, 1999

My harassment started in December of 1997. I am an environmental activist.

It started two weeks after a meeting on some land in my town..a leading company in town is also part of it. The trucks belonging to Eastman Geletine have shot 'energy bursts' at me as I walk their land with my dog.. that sizzles inside my throat and has blistered it.

I had it documented by my doctor.....they want to take this beautiful and last open space in town and turn it into a golf course.

The Mayor's name is Torigian, the town is Peabody MA. Company is Eastman Geletine...part of Kodak....

You see I am rare .... I know who these men are and they feel very powerful and don't care if I know. They are above the law and they know it....

Barbara Guillette

-----  
E-Weapons Diary #196 (Eleanor White)  
February 14, 1999

Harassment down to the tiniest detail.

While the spooks do thousands of dollars of damage in my work environment each year, they don't overlook details either.

Friday night when I tried to take a shower, my shower curtain had a pair of rings tangled.

I'm fairly certain the spooks tangle my shower curtain rings often, as the pair closest to the shower head are tangled almost daily, and I live alone, and do not press the curtain against the end after a shower. Instead, I spread it out so it can dry, with all rings clear of one another.

This time instead of one ring pushed thru the other, one ring had been PHYSICALLY OPENED, inserted through it's neighbour, and snapped shut again. This required a person to do - there is no way the rings can ever do that on their own.

This is an obvious move to keep me painfully aware that they violate my apartment when I'm away, whenever they choose.

Eleanor White

E-Weapons Diary #197 (R.)  
February 28, 1999

I am 44 now, so the period I refer to below begins in late 1969.

At age 14 I was sent to a residential center ( a nice way to say "institution" in California) just to the north of San Francisco, called Sunny Hills.

I am gay and I am sure now that it is one of the main reasons for me ending up there, though it was my choice not to return home. At the time it seemed like a "normal" place, but I am now almost certain that it was at Sunny Hills where I first started being monitored.

I'm sure that the monitoring continues to this day. If "aversion therapy" experiments are done, as described in the attached article, why not other types of experimentation? These are just some thoughts for today. Hope you are doing well.

Here is the url:

E-Weapons Diary #198 (Mikey)  
February 28, 1999

Attempts to contact local defense contractors in the NASA area has been futile. NASA officials have not responded to my request for Human Subjects Research Oversight information. Moreover, the level of stress increases with attempts to uplift my experience in the Houston area. My physician has recommended a sleep study to evaluate the sleep disturbances.

I awoke this morning with a headache. This night sweats and dreaming have been intense this week. I have no remedy for the black circles around my eyes. Nor do I have a remedy for the despair I feel living in an EMC penitentiary. I am not optimistic about the outcome of this experience. Certainly, the persons controlling my environment have outcome

objectives. When and how will this end?

To restate that I am physically and mentally exhausted is an understatement. We all have our limits. Unfortunately, the cries of guinea pigs are not taken into consideration. Everyday, I press through the fatigue and endure the emotional assault and battery of the synthetic voices and sleep deprivation. It's a struggle to maintain an outward appearance of contentment. Yesterday, I was told "we'll kill you".

Perhaps, that will happen after they have perfected their (Tricknology) technological trickery and/or successfully marketed this twenty-first century mind control penitentiary. Today, I don't give a damn.

Mikey

E-Weapons Diary #199 (Anonymous)  
February 28, 1999

A "voice" (NOTE: Microwave voice-to-skull has been publicly admitted to as a workable technology by the US Government) in my head on occasion tells me things that are about to happen. And it DOES happen. So the voices aren't some psycho illusion.

For instance, a week before they got hold of my child I heard a voice say "sodomize him" I realized right away my child was in danger. It was clearly the voice of someone evil that wanted to hurt my child. So I watched him more closely thinking some stranger might get hold of him. I had no idea people from inside the system intended get hold of him and hurt him.

Today, I heard a voice say, "Jim is dead." Jim is someone I haven't talked to in a year. We'd become estranged, but I'd been missing him lately. I decided to check out the message and sure enough Jim is dead.

Being that the messages I get come true, I don't think I'm schizophrenic.

Note to reader: This anonymous person's child was abducted by people in the system for mind control through ritual abuse, to train children for espionage and assassinations.

Being stalked by spook-supervised local kids.

For any reader who may not be familiar with our situation, "we" are involuntary in-community psychology experimentees. This experimentation is

apparently government-sponsored or at least gov't looks the other way.

One part of this experimentation is for neighbours and people-in-the-street to perform "harassment skits", which we involuntary subjects call "street theater". For readers still not familiar with what we are talking about, go to a library or the Internet and search for material on "MKULTRA", a covert psychological test program initiated in the 1950s by the U.S. CIA, with other agencies and countries playing a part. This program was exposed, but like the Mafia, exposure has done nothing at all to stop the activity.

Children are sometimes used by the experimenters in two ways:

- As targets of abuse, often sexual abuse, to form multiple personalities which lend themselves to the spy trade
- As street theater harassment operatives, which is what this diary entry talks about

Starting in January 1999, my company's head office moved from Hamilton, where I still live, to Oakville, Ontario, roughly 45 minutes away in the best road conditions.

Each evening, I return either just before dark or just afterwards, and I park the company car in the company parking lot, which is adjacent to my Hamilton apartment building.

In January, I had two occurrences where the spooks used their technology to cause falls on hard pavement.

On the second occurrence, as I walked from the car to the apartment building, I noticed two young boys doing something highly out of place for a bitterly cold January night (about 8 p.m.) with high winds. They were pelting a metal sign near the building with ice blocks, but all the while staring at me with unusual interest.

Shortly after I passed them, the spooks used their remote physical manipulation equipment, which was close by as I was opposite my apartment/their apartment. This night, the "trick" was to bodily yank my two legs out from under me, causing a fall and quite a crack to the back of my head.

The two kids had continued staring, and seemed frozen in their stares.

After that, I have noticed them, after dark sometimes, clinging half way up a chain link fence as I get out of my car, again, just staring.

A couple of weeks ago, I was the only car on Cumberland Avenue, and was almost to the company parking lot, when these same two kids whizzed out of a nook on the adjacent building on roller blades and right across the path of my approach.

By the time I got to their crossing point, they had reached the oncoming lane, and staring at me, turned once again towards my car, as if to deliberately hit me.

The other morning, around 8:30 a.m., they appeared as I was approaching my car to start it.

When kids target someone for harassment, they often will "edge" toward their target, pushing each other and giggling, kind of daring one another to get closer. They did this at that morning incident.

Last evening, as I walked from my car to the apt. building, they came out of nowhere, and raced at top speed past me, nearly clipping me in the process. They then entered the classic "shoving match" of kids intent on some sort of harassment skit.

I was able to snap the apartment back door shut to prevent them from squeezing into the narrow back door passage with me - not a comfortable situation when you know the kids are out to "have fun" at your expense.

These two boys are perhaps 10 to 12 years in age, and both wear blue winter jackets, one with a red area. Both are Caucasian with dark hair and very plain in appearance - difficult to ID.

From this point on I will have to watch them most carefully, and carry at least a tape recorder at the ready - and perhaps my camcorder as well.

Eleanor

Diary #201 (Anonymous)  
March 6, 1999

Re: Diary #200 (Eleanor White) which outlined the problem of being stalked by spook-supervised kids.

Sounds familiar. Just after moving to a little town, I noticed groups of small kids 8 to 12 years hanging around the house watching every move we made. Not there to play mind you, but just watching and being generally obnoxious.

When we decided to move from there down the street a few blocks the U-haul stayed outside our house over night. I woke up with them sitting all around the U-haul. As we packed up the rest of the stuff they hung around just watching everything we did. When it came time to leave they all jumped on their

bicycles and raced to try and keep up with the vehicle.

I looked in the rear view mirror and decided to try and loose them by zig zagging down one block then up the next kind of thing so they couldn't figure which direction I'd go. These kids had been trained. They immediately split up in all directions so that at least one of them would see which way the truck went. One of them stayed on our trail, I saw another coming around a side street, but I had the advantage. They had short legs and I had a fast truck. I lost them with the one on our tail huffing and puffing.

Eventually, word got around where we moved to. I woke up one morning with the door chain partially broken away. Someone had tried to break in and I figured they were after my kid then because I had nothing of value. We moved again thinking we were safe. A few weeks later when I had my "baby police" jumped me and took the kids. No good reason. I'd done absolutely nothing.

["Baby police" are child welfare authorities. EW]

I'm a great mom. Now that we have gotten out of that mess and we are safe, my child has told me of secret meetings held where large groups of kids came to the foster care house in the middle of the night to hold satanic ritual with foster care parents, social workers, police officers, doctor who delivered baby etc.

So those kids were put out by our house to spy on us. They were trained to do that. These kids are being trained to kill other children. My child told me they wanted him to kill other kids. They told him he was the only one in the whole world that was smart enough to do it.

\*\* READER: Before you write this woman off as a nut case, first read up on MKULTRA. It is real and alive today just as the Mafia is.

They used paired association to have my child associate pleaseure with fear and a weapon, for future assasins, as the police officer put a gun in my child's mouth clicking it over and over while rubbing his private parts, then told my child to pull the trigger too.

\*\* READER: Police (or people in police uniforms) are used by MKULTRA for many sordid purposes.

My child said, he wouldn't do it. (thank God.) Because people within the system are training these kids, like police, social workers, ect, then when a child murders another child, it is easy for them to pin it on someone else so the secrecy of their covert operations continues, and when the children

being trained see another child being murderd and they are told they will be murdered too if they tell, this assures secrecy.

But my child had been trained to tell on bad people since he was 2. He had the courage to tell me every single slimy thing they did to him and someday they will pay. If not in this world, then in hell.

\*\* Keep in mind the now annual ritual of school shootings when you read this piece. EW

Diary #202 (Eleanor White)  
March 7, 1999

How incredibly precise is the spook thru-the-wall and thru-steel-shielding scanning equipment!

For the past few months, my spooks have, for long periods during the night, used their remote physical manipulation and scanning equipment to move slugs of air under my right-side upper lip, to puff out at the center of my closed lips. This creates a very invasive, unpleasant feeling as well as noise.

The sensation is as if a frictionless thing about the size and shape of a shelled almond were being pulled along under your lip by, say, an external magnet. The force can be overcome but only by very tight pursing of your lips, which means you must come fully awake to do so.

This is used, it seems, as one of many methods of keeping me awake and aware of their presence.

I have developed a way to stop this, by wearing two separate lightly tensioned ace bandages around my head. One is a flat band which is more or less vertical, from the bottom of my chin to the top of my head. This also helps keep the involuntary machinations of my jaw more or less in check.

I then take a 3-inch wide bandage which is coiled shorter and folded so that one edge is rounded, and put that diagonally, crossing my ears, and with it's rounded edge ending up under my nose. The flat vertical loop holds this one in place, while the folded loop puts enough pressure on my lips to prevent the spooks from even trying.

A week ago I had a tumor (courtesy of the spooks, I suspect) removed from the left end of my mouth, about the size of a robin's egg. To keep the stitched wound clean, I would soak a 1" x 2" gauze pad in rubbing alcohol, and place it over the lip-closing loop as you would a towel on a towel rack.

The THICKNESS of this gauze might be about the thickness of a piece of cardboard on the back of

a writing tablet - perhaps 25/1000ths for you technical types. When compressed under about 8 layers of this folded ace bandage, that thickness is miniscule.

Now here is the amazing part:

But guess what, folks - the spooks IMMEDIATELY detected that tiny area where the folded pressure band was under less tension, and used that maybe 1/4-inch wide low tension area to push air out!

The only thing I can think of is that a tiny change in pressure must be very visible on their scanner screens. This is phenomenally invasive and accurate, considering the scanner must operate thru at least 8 inches of reinforced concrete, and a couple of thicknesses of sheet steel (auto body thickness), aluminum foil, and finally Faraday cage galvanized steel mesh.

THIS is why I harp on the folly of trying to fight a technological war where it is obvious to me they will win every single battle. This is why I put all my effort into publicity and persuasion. (We have the tools, but very few of us are picking them up and using them.)

Now here is a topper:

Last night, my diagonal, folded lip pressure band either slipped or was tugged down by the spooks just enough so that the tension was not gone, but lessened by maybe 25%. You guessed it - the spooks immediately detected that light pressure drop and started blowing air out my lips!

If it turns out that this technology originated on another world, I, for one, will not at all be surprised.

Diary #203 (Sherry in Arizona)  
March 12, 1999

Hello everyone---

I have literally had my heart beat altered by whatever these radio frequencies are. At one point, I lost 40 pounds without changing my eating patterns or exercise habits. I would wake up each morning smelling sweat--it was as if I had been climbing Mount Everest all night. (There was no one else in the room--the sweat could only be mine!).

[Don't be so sure nobody else was in your room, unless you have rigged the door carefully with a collapsing door-open indicator that cannot be re-set-up using remote physical manipulation.

A needle taped to one door jamb and a thread taped to the other might do it (when threaded at bedtime) or a noisy pile of empty tins. Eleanor]

There is \*no\* doubt in my mind that these weapons can and do and probably have caused "heart attacks".

I stay up most nights listening to Art Bell's radio program, because, as we all know, sleep deprivation is one of the main factors in these terrorist campaigns. There have been numerous Art Bell guests who have suffered either heart attacks or sudden-onset, severe, deadly cancer. The latest victim is Richard Hoaglund, who has been a frequent Art Bell guest and is also one of his personal friends. Whether or not one agrees with Hoaglund's views, the point is that he is not overweight and he does not smoke. Saturday morning he had a massive heart attack. He is 53 years old. (That's pretty young.) I believe even Art Bell himself is beginning to wonder what is going on.

Art had a guest on his show by the name of Speaking Wind who spoke out against the H.A.A.R.P. project. Three days later, Speaking Wind was dead from a "heart attack". (Read Alan Yu in the alt\* files for more information about "fake" cancer and heart attacks which are, never the less, fatal.)

I continue to lobby Mr. Bell about MKULTRA, microwave harrassment, etc. I ask him to read Julianne McKinney's report and Raven's Diary, just in case he has missed any of it. Art Bell's audience includes some 20 million people around the world every night. If you are interested in media coverage, \*now\* is the time to write him again and remind him that MKULTRA is not dead, it just went underground. Timing is everything, so I have heard. Art Bell is at artbell@aol.com or at P.O. Box 4755, Pahrump, Nevada 89041-4755. He has given his e-mail address and mailing address out over the air many times.

[Boy, do I ever wish Art Bell would talk about us. I've tried literally dozens of times to "move" him to do so, but have heard no reports of his taking up our cause. The spooks may have "advised" him of the "potentially unhealthy results" of his talking about them...a current-day Victor Riesel he sure aint!! Eleanor]

Send your prayers to Richard Hoagland. Thanks.

Diary #204 (Eleanor White)  
March 13, 1999

Busted-up chairs, act II

In my 9 years in intense victimhood (of a total of

about 19 years of partial then full-fledged) I've had a lot of things broken up prematurely.

A couple of years back, I had a rugged steel folding chair for my dining table broken up in stages. The area on each front leg where the folding bottom rests on a steel rod. This rod pierces each leg and has it's ends mashed over like a rivet during manufacture.

Because the rod pierces the legs, the legs are made of more than adequate steel. Furthermore, the bending stresses in the legs, like all beams, are NOT carried by the center of the beam, but the outside fibers.

The failure of the chair a couple of years ago was made by, very obviously, bending over a spook's foot, leaving a radiused section perhaps 4 inches long.

I have enough training and experience in structural analysis (being an engineer) that I can say with certainty that radiused-bend failure is absolutely not due to weight on the chair, but to sabotage.

Before discarding that chair, others saw the bend and agreed.

So a couple of days ago, I noticed my current dining chair was acquiring an uncomfortable forward tilt, and sure enough, both front legs are starting on that same radiused bend type of damage, and both to the same degree, which is highly unlikely in a real-life chair.

Careful use by an adult who doesn't use the chair as a prop for gymnastics training simply doesn't cause gradual, radiused bend failure. If that point ever did fail, you would see just ONE leg fail and it would be a sharp SNAP failure of the back of the leg tubing, the part in tension.

Certainly not in two years.

Their topper on this chair actually happened within a couple of weeks of bringing it home. The mid-back support is vinyl-covered sheet metal, tack-welded to the main structural tubing. The spooks entered my apartment and worked one side back and forth and broke all the welds on that side.

I continued to use the chair because I don't lounge in it.

The criminal psychologist/psychiatrist experimenters who engineer these stunts like to have the victim go thru life with as many possessions as possible in a shabby state, probably to keep the stress level high, and shabby possessions are seen

by the public as a sign of mental illness. This perpetuates their cover.

Too bad the easily-deceived public won't be the ones deciding their lot in the Next Life.

Diary #204-B (Eleanor White)  
March 13, 1999

Busted-up chairs, act II ... FOOTNOTE

A couple of years back, I had a rugged steel folding chair for my dining table broken up in stages. Yesterday I discovered the spooks had started the process again.

Today, Saturday, I went to the local Zellers, which is about the only retailer who carries folding steel chairs as a stock item.

Clerk: "Gosh, gee, so sorry, we just sold the last one."

The mental health "professionals" are great at setting up torment - but they are useless at anything for the greater good.

Eleanor

-----  
Diary #204-C (Eleanor White)  
March 21, 1999

Busted-up chairs, act THREE

A couple of years back, I had a rugged steel folding chair for my dining table broken up in stages.

A week ago, I came home from work to discover the spooks had entered my apartment and again bent the two front legs of the replacement chair in a way that could only have been over their shoe, i.e., not in a way that a bend from weight could have done.

I replaced the chair about a week ago.

Yesterday morning, the THIRD chair, not yet a week old, had started to bend. The steel tubing, make, and model of the chair were identical to the one which "suddenly" got bent after two years.

Several years ago, after moving to Hamilton, I put on a considerable amount of weight as the harassment got really intense. Because all natural sleep had been lost due to the electronic torture, I have to OVEReat just to maintain enough energy to make it through the work day.

I am now almost 200 lbs, and have been for more

than the past two years. My 200 lbs is not responsible for the chair legs bending.

First, 200 lbs. is not that unusual, since half of the folding steel chair users are men. Secondly, I "bounce tested" both chairs withOUT any visible bending, at my 200 lb. weight.

This goes along with a general increase in spook harassment, which seems to coincide with the recent news releases, and my email campaign, to alert the public about thru wall radar.

There's a topper: A couple of years back the spooks switched away from a standard tactic: vibrating whichever keyboard I sat at to make use very uncomfortable. What identified this as a spook phenomenon is that the keyboard vibrates but the table underneath does not. Today they did this as I was bringing Hamilton's computer network back up after an intentional shutdown.

All I can think of is, that to engage in this work, over and over, for YEARS, the perps must be real brain-dead zombies. No human being could stand the boredom so long.

Diary #205 (Sherry in Arizona)  
April 5, 1999

Hello--

I lived in Albuquerque, N.M. when this all first started happening to me. At the time I was 44 years old (I am now 51). I held various responsible positions for the same large corporation for 30 years. I was, at the time, buying a house in Albuquerque. My one constant companion was a little 15 pound miniature schnauzer puppy.

My job used to keep me away from my house many hours a day. It was not unusual to have to work 80-100 hours per week. This left my house open to continuous trashing by my stalkers. It left my dog open to abuse by my stalkers, and lastly, of course, while I was working, it left my car free to be broken into so many times I have lost count. My mail in Albuquerque began constantly to be misdirected to the Albuquerque public school system (I had the same house and the same mailing address for 8 years previous to this sudden onset of misdirected mail).

One day, in Albuquerque, I was sitting on my bed and my dog was sitting next me. I started feeling a tingling, needle-like sensation around my mouth, which was by this time starting to become familiar. Shortly after, the needle-like sensation stopped and was aimed directly at my dog. Since she only weighed 15 pounds, this would always immediately send her

into a grand mal seizure. If anyone doubts that this is a \*directed\* energy weapon, I could only wish that you could see and experience what I have seen and experienced so many times.

I have been told that I am not \*that\* important (the implication being that I have delusions of grandeur). It is true. I am \*not\* that important. I am not Madonna. That is precisely why it is so easy to stalk and unmercilessly harass someone like me. For those of you reading this and sitting in judgement, I would urge you to keep in mind that if this can happen to me, it can happen to you or your children or your grandchildren or your dogs or cats.

My stalkers have always numbered somewhere between 10 to 13 people. They are almost always relatively young (late twenties to middle thirties), mostly white and mostly male, although there are some women involved. There is one white male who has been in this from the beginning and has followed me through three different states. I surmise he is my main handler. I have seen him in New Mexico, Nebraska and now Arizona. I am originally from Arizona, but because of my job, I had to move first 400 miles to Albuquerque, New Mexico and later on again to Omaha, Nebraska.

I was finally downsized out of my job, after 30 years, in Omaha. Trying to deal with a 24 hour-a-day type of job and with this constant harassment and pain certainly contributed to the demise of my employment. I now no longer have my job, my house or my dog (I gave the dog away before she was killed, which is, no doubt, what would have eventually happened).

I still have the car but it is constantly being broken into, tampered with, mis-wired, etc., ad nauseum. When it finally goes, I can no longer afford to buy another one.

I love my country, but who is going to stand up for my rights? Apparently, I no longer have any. So, tell me, dear reader, who do I call about all of this?

---Sherry in Arizona

-----  
Diary #206 (Eleanor White)  
April 7, 1999

They always seek out the priority jobs and equipment.

When the spooks decide to disrupt my company's computer equipment, they know all about whose task is the most critical, and focus on that one. No "penny ante stuff" here.

Today, our Merchandising Department is eager to

get the new price book delivered to the customers. To do that, a run of address labels are required.

This company uses an expensive (\$13,000) heavy duty (Mannesman-Tally) dot matrix printer and fanfold labels.

Yesterday, when the consultant was here setting up his program to print these labels, everything worked fine. Early this morning, a short test run worked fine too, on this printer.

Almost as soon as I arrived from the Hamilton branch, the Merchandising Supervisor "ran up" to me saying she was getting an error message trying to print the full run of labels. She had already tried to get phone help from our consultant, but he could do nothing from off site.

First thing I checked was the new (January 1999) cabling which had been in first class condition since day one. The cable tester showed that ALL 8 conductors were OPEN. That is, all 8 wires suddenly had no contact from the mainframe to the printer. This is about as likely as getting hit by lightning.

Some running back and forth, making sure the cable had not been re-plugged into a non-working jack showed no physical disturbance. A SECOND check showed continuity. CLASSIC spook trick: failures that "fix themselves".

(They have done this "temporary open circuit" trick on me several times, once so persistently that we had to run a new piece of cable. The "bad" cable was put back in service several months later, and continues in uninterrupted service to this day. Nothing needed fixing.)

Still didn't work. Checked the printer configuration menu. TWO critical items had been changed, very likely by remote control: Emulation (i.e. the command language understood by the printer) and Protocol (i.e. how the printer tells the mainframe how fast to send data). The bogus settings caused the printer to sit there, an expensive lump of metal and plastic, doing absolutely nothing.

Still didn't work. Found that the detailed settings for the printer's communication channel on the mainframe (tty1a1) had been set to INSane values. For UNIX buffs, I had to reset the port to SANE.

So THREE distinct elements were altered, and they had to have been altered remotely, given that this printer worked earlier today.

Two "toppers", no doubt providing my local spooks

with much laughter:

1. I own ONE chair, a folding steel chair. I replaced it about 3 weeks ago. Day before yesterday, while I was at work, this "new" chair got bent a second time. But this time, the clever spooks also snapped a main structural weld, leaving me with a heap of bent steel to sit on. Har har har!

Got some steel channel and clamps, and now my one chair looks like a junkyard metal sculpture, at only 3 weeks old. No point in buying a new one - they'd just do it all again.

2. While asking about vacation, our personnel guy flopped open my personnel folder this morning. He suddenly turned it so I could no longer see it.

Why? Because the very top item was the Hamilton Magazine article on my apartment and steel shielding, with my forlorn face peering out at the photographer.

That means, whether officially or not, that I am on some sort of "probation".

Just routine stuff for an electronic MKULTRA target!

Eleanor

-----  
Diary #207 (Eleanor White)  
April 17, 1999

A Saturday morning "thinking of you" act by the spooks.

It takes me about 2 hours to do grocery and drug store shopping, usually carried out Saturday morning.

This Saturday morning, after returning home, I found one of the six 48" x 48" sheet steel panels which cover my living room/dining room floor, originally intended for under the bed use, had been wrenched about two inches out of position.

This required considerable force, and, the 2" packaging tape (two layers) which had maintained the positions of these panels for the past 3 years had been lifted off, and the panel shifted, while I was away for the 2-hour errands.

When I first lay down the 6 panels three years ago, I had some hope they might shield my bed from the apartment below, but following that, harassment effects began originating from all four adjacent directions, and there was no shielding effect.

The first day the panels were laid down, taped,

with furniture on top, when I came to work the entire set of 6 panels was slide a foot out of position. It was an extremely difficult task to move them back, and I installed shelf brackets at the end of the room, and small steel "C" clamps to prevent sliding. These locking devices were/are attached to four 4" x 4" vertical timbers I installed to suspend my bed from, with a large section wooden beam across each of two pairs.

The vertical timbers are rigidly locked in place by a vertical screw jack atop each, pressing very hard against the ceiling, which is an 8" thick reinforced concrete floor.

These panels and a host of other objects are on my list of daily position/condition checks, and this forceful dislodgement was not there when I left the apartment at about 8 a.m.

Because of the force necessary to move the panel and the careful sticking/unsticking of the seam tape, I believe this was done by actual entry into the apartment, not remote physical manipulation.

Eleanor

-----  
Diary #208 (Eleanor White)  
April 22, 1999

A little out of the ordinary.

I currently use a company car, parked at our Hamilton branch, to commute to Oakville each day.

Two days ago I noticed that the gas gauge showed less than a quarter, and made a mental note to fill up the following day.

When I started the car the following morning, I discovered the quantity had increased to a little over HALF FULL.

This isn't as strange as it sounds, when one considers that keeping an experimentee "off balance" is one of the main goals of MKULTRA testing/training or whatever happens to be the goal of the local harassers.

I suspect but can't prove, that because I have been meaning to do a thorough check of tire pressures on the next nice day, which the day would have been if the tank had not been refilled, the spooks decided to derail my plans. They delight in doing little things like that to keep the target aware she/he is having thoughts read.

As a topper, at work in Oakville the day after, one of our receivables clerks told me she suddenly lost power on her PC. Her battery backup unit has a clear plastic cover over the switch, and the switch

had been moved to "off" - which was yet another remote physical manipulation incident.

Eleanor

-----  
Diary #209 (Eleanor White)  
April 23, 1999

Guess it had to happen sooner or later.

I've been kind of ignoring this -- it started early this year and has been increasing. I am allowed to "sleep" a few hours each night. This is NOT anything like "real" sleep, because it does not in any way refresh, and, at about 2 minutes prior to alarm clock time, I hear some clicking from the apartment next door and I drop like a rag doll into true semi-sleep.

Spook "sleep" includes keeping all muscles slightly tensed up, which is probably why I "awaken" exhausted.

So, now, when I "awaken", I discover that during the night I have been sleep walking - moving small things out of place, and turning lights on or off, so that they are not in the condition I left them when I got to "sleep" (after several hours of itching and hot needles and often electronic caffeine.)

The apartment door has a complex linkage to secure the lock and make it difficult for spooks to remotely unlock then RESTORE the setup. I don't doubt they could unlock the linkage remotely, but I have some doubts that they could restore it using remote physical manipulation.

Therefore, I believe I did these things while under hypnosis.

I have, in effect, become a nocturnal spook-controlled "robot".

Not much else I can say, is there?

Eleanor

-----  
Diary #210 (Sherry in Arizona)  
May 10, 1999

[See also Diary #205 - Sherry describes other attacks by directed energy weapons there.]

This is extremely scary. Since I became a victim of the criminals who have aimed this directed energy weapon at me, starting in 1992, my health has begun to consistently fail and worsen.

When I still lived in Omaha, Nebraska, I recall one evening when this weapon was aimed specifically at my abdomen area for a prolonged period of time. It was, of course, at night, when I was exhausted and

trying to get some sleep. About a month after that, I learned that I had a tumor in my uterus and needed a complete hysterectomy. This was performed, naturally, under a general anesthesia. I was "downsized" out of my job at about this same time and waited until after I moved back to Arizona before having the operation (this was in 1995).

Last Wednesday, May 5, 1999, I was watching the news on television at shortly after 10:00 pm local time. Suddenly I was in some of the worst pain I have ever felt in my life. I was horribly sick. I could not stand up and I could not sit down. I began profusely sweating and vomiting. Then I began to get very dizzy. I thought I had food poisoning, but whatever it was, I decided to drive myself to the Emergency Room of the local hospital while I still was able to do so.

After I got to the ER, I was immediately admitted to the hospital and scheduled for yet another major operation under general anesthesia. I was diagnosed with having a bad gallbladder and stones in the gall- bladder. After the operation, I found out that I not only had stones in the gallbladder, but the gallbladder itself was completely dead and decaying. It was gangrenous. Before the operation, the surgeon had told me there were certain procedures that could be tried to save the gallbladder, but after the operation he told me there would have been no way to save that organ. It was already dead. He said it was a very good thing I had opted for the surgery.

The only fortunate aspect of this surgery is that instead of the major abdominal cut, the surgeon was able to pull the gangrenous gallbladder out through my belly button, which is a less intrusive method of performing this surgery.

I was a very healthy 45 year old woman when these criminals began aiming this directed energy weapon at me. My conclusion is that rather than murdering me in one swoop, I am being killed organ by organ. This is now the third surgery I have had to endure since 1995 which has required going under general anesthesia. I wonder how many other organs I will lose before the criminals succeed in finally killing me.

As I was being wheeled into the operating room in a wheel chair, there was a white, dark haired male about age 35 who stood waiting for the elevator at the same I was. The only other person present was the hospital transport person who was pushing the wheel chair. The white, dark haired male stared at me the entire time we were waiting for the elevator and the entire time we were in the elevator until I was wheeled off the elevator and into the preoperative holding area. The criminals wanted to be sure I knew they were watching me even as I was about to have major surgery. A regular doctor or

hospital worker would not have made it a point to stare at someone in a wheel chair the way this guy was doing.

Sherry in Arizona

[NOTE: Staring is just one of many forms of harassment by others, commonly known among MKULTRA victims as "street theater". The perpetrators set up "skits" where the victim knows they are being harassed, but where a casual observer would think this is coincidence. Clearly, this is psychological experimentation at it's unethical worst.]

Diary #211 (M. P. Cherney)  
June 12, 1999

My name is M. P. Cherney, from Ada, Oklahoma.

I have been a victim since February 1992. Suddenly one day, I heard whispery voices which seemed to emanate from the wall near the ceiling. I thought my house was being bugged. It wasn't long before I found I could be away from home and still hear the voices.

This went on for four years, until July 1996. During this time I met and married a man, and had a baby girl by him. During my pregnancy with my second child, I started being deprived of my sleep. Immediately after my son was born I started feeling physical sensations on certain parts of my body, a sort of poking and/or itching sensation.

Because of these frightening, unexplainable things happening to me, I began to isolate myself. In July 1997 a DHS lady came to my door, saying my then 3-year old little girl had repeatedly been brutally sexually molested by my husband.

I lost custody of my children ("failure to protect"). I divorced my husband and appealed to the Supreme Court to regain my parental rights. (My ex-husband was convicted and sentenced to 220 years in prison.)

In January 1998 the people harassing me really started in on me. I started experiencing:

- 1) Vivid dreams - they seem to have stopped now. They were so unreal, so vivid, so unlike any of my other dreams.
- 2) Sensations of heat and cold on various parts of my body or on my entire body.
- 3) Muscle control - they can make my limbs and fingers twitch and jerk. One time I was preparing to put my contact lens in my eye and had the lenses on the cabinet in front of me. I had the wetting solution in my hand and they made my arm jerk down violently, crushing my contact. Just one example...
- 4) Senses of taste and smell manipulated - they can give my food and drink an entirely different taste, or make them totally tasteless.
- 5) Tactile senses manipulated - they're able to cause any body part to tingle, vibrate or become entirely numb.
- 6) Pain - abdominal pain, headaches, earaches, toothaches. Stinging pain in my eyes. No medication can ease the pain.
- 7) Sleep deprivation - forcing me to stay awake all night. However a doctor prescribed Temazepam for me, which enables me to sleep now.
- 8) Memory and concentration severely affected - I'm forced to write anything of importance down immediately because I won't remember.
- 9) Control of urination and bowel movements!
- 10) Visual disturbances - they can make my eyesight blurry, or make it appear as if I were seeing through a fog. When I go to church, for instance, they'll blur my vision so I can't read the words on the screen - just to be malicious.
- 11) Control of my car and electrical appliances - they can make my car shudder and/or stall.
- 12) Control of my emotions - yes, they can even control my feelings. They can make me feel angry, anxious, lethargic, peaceful, numb, etc.

This list is incomplete. Sometimes I hesitate to tell even other victims of what they can do because

it sounds so incredible.

In June 1998 I did regain my parental rights. As time went on, DHS let me see my children more and more frequently, eventually allowing me to see them overnight, and then over the weekend. During all this time the harassment has gotten progressively worse. There is nothing in my life they haven't touched and destroyed. They are simply vicious, malicious, self-gratifying perverts.

The people controlling me don't seem to have a purpose in their harassment. They seem to live for the thrill of the moment. All they do is hurt me all day long, one way or another. Once when I told them the pain my little girl must have gone through while they were playing their sick, deadly game, they said, "How do you know she didn't like it?" and "How do you know it hurt?" I've tried to tell people about them and they say, "Who's going to believe you?"

I'm going to have to sign away my parental rights around June 1. There's a couple willing to adopt both of my children. They can alter my mind and emotions to the extent that I'm unable to adequately care for them. All because they want to continue their illegal, lethal game.

Can you please tell me what you've had to go through? I'd really like to get in touch with other victims. It was only in February 1999 that I first got on the Internet and discovered I wasn't alone in this. Also I've found that believing and trusting in God will help you through your trials. If it weren't for God, I don't think I'd have made it this long. Thank you for reading this. Take care.

Sincerely,

M. P. Cherney

Diary #212 (Eleanor White)  
June 16, 1999

Heavy duty harassment - I must be doing something right.

Last week, I used my bottle of rubber cement.

Today I needed it again to glue on some photocopied diskette labels.

Everyone at my office agreed: The glue has been SPIKED WITH SKUNK SCENT.

The topper was this morning: A liter container of milk which was perfect yesterday was curdled this morning. It is not yet over age (dated June 19) and I keep my fridge colder than average.

When the pinhead perpetrators drop to this level  
it must mean I'm doing something they don't like,  
which is to say, "something right!"

Cheers,

Eleanor

-----  
Diary #214 (Yve)  
July 7, 1999

In September, 96 someone came through my drop  
ceiling from another room, I was raped and became  
pregnant. The police were furious , extremely  
defensive, and said they wondered if I was crazy whe  
I told them something kept me "asleep" while some  
guy came through my drop ceiling from another room.

After doing research, I found out about cover-ups  
concerning "sleep inducing methods" including  
nitrous oxide, and equipment that can induce sleep  
by changing the electromagnetic brain waves.

I believe a forced abortion occurred when I was  
about 3 months pregnant by using the same technology  
that was used to keep me "asleep" when I was raped.

I believe the use of "sleep inducing methods" is  
used by government PI's to keep someone asleep when  
they go through important documents and other  
possessions of interest. I believe our government  
justifies these actions by claiming necessity due to  
drug dealing.

Legal documents are stolen from me constantly,  
especially when I was involved in a child custody  
battle with very influential ex. I believe the  
"official" reason for this guy to drop in my room as  
to go through my papers and possessions.

My ex's uncle was a county judge, and his father had  
been a judge and commissioner before he died. I  
believe I currently have joint custody of my son,  
however, I am too weak to fight for my pare tal  
rights. When I ask for the documents of the last  
court hearing, which I was told was cancelled, I am  
told I have to copy the whole folder. Whenever I  
try to get legal aid, I am constantly given a  
run-a-round and I have not been able to get legal  
help.

One reason electron technology is being used on me,  
is to keep me too weak to get my son back. Keeping  
me weak, has been a very effective way for my ex to  
win this child custody battle. My son reported  
horrifying child abuse, but my government only  
protected those who abused my son.

Currently, I am enduring misuse of technology in  
ways some people would have difficulty  
understanding. The following is only some of what is

happening to me: polysound ultrasound and infrasound, se of low voltage "stun gun" type devices, injections in my spinal column made possible by "sleep inducing methods", microwave harassment, tampering with food, vitamins and other items, and exposure to toxic by-proucts of illegal drug manufacturing, such as methanol, etc.

I am currently being most victimized by people coming into my apartment via sleep inducing methods. This again happened to me on 6-15-99, and I believe I was given another spinal injection, which acts as a CNS depressant and a muscle relaxant. I had an excessive discharge and severe irritation and burning which indicates some type of sexual assault again happened to me. The examination revealed unusual, excessive mucous formation and what appeared to be blood on my spinal column which was noteworthy enough to be swabbed by the examiner.

Diary #215 (Eleanor White)  
July 27, 1999

"When push comes to shove..."

I normally drive from Hamilton to Oakville, Ontario, along highway 5, a fairly straight and level stretch through developments to the south, and farm country to the north. The speed limit is mostly 50 mph.

I try to conform to the speed limits, and for the several little "intersection-size villages" the limit usually drops to 35 mph for the roughly half-mile through the built-up zone.

This means that when I drop from 50 mph to 35 mph, most traffic passes me - it is a rare individual who, on this open, medium to lightly travelled highway, worries too much about the 35 mph zones.

This morning when I slowed for one of the intersection villages all but one dark green van zoomed past me, as usual. This van followed me closely thru the intersection and right thru to the 50 mph zone beyond. That is REALLY unusual because once cars clear the stoplight, they go to 50 mph without waiting for the posted start of 50 sign.

At a steady 50 mph, not a breath of wind, and on a smooth pavement, with a company car in excellent condition, I started to notice my speedo bouncing from 50 to 70 or thereabouts. As a former pilot, I put more effort into holding speed steady than many drivers and this was definitely not my doing.

The tachometer was rock steady too, indicating there was no reason for the speed to vary at

all.

I have noticed this unusual swinging from true speed to 10 or 15 mph above on a number of different occasions, all within the month of July.

Then my car was shoved to the right, and almost left the pavement with a very strong push which I would estimate at least 500 to 1,000 lbs. This was not a light shove, and it kept up for about 10 seconds.

As I got the car back into the right lane, the shoving stopped instantly and the green van suddenly shot past me at a very high speed.

This is consistent with reports from other victims.

It almost seems like the spooks have all this fantastic equipment and are frustrated as Hell that they can show it off publicly.

Diary #216 (Eleanor White)  
July 29, 1999

Perps get more aggressive.

For the most of my (so far) 19-year sentence of being a victim, my local perps here in Canada have been quite careful (though far from perfect) at making their harassment look "natural" - i.e. as if it's "just part of life."

In June, they did something that amazed me because it was so bold: One morning, at the Hamilton warehouse, several shipments of prescription pharmaceuticals were stolen from the shipping area. I had been asked to open the door for the early courier, which I did about 15 minutes before he arrived.

I did not open the door - merely unlatched it from the inside.

The perps apparently knew, even though I was alone in the building when I opened up. This is not at all unusual for neuro-electromagnetic involuntary test subjects - our minds are read and our movements are tracked with precision down to a millimeter.

Some of the "loot" has been recovered by an anonymous samaritan returning it to a local doctor, whom I do not know.

Again - this is amazingly bold for the perps.

Then again, a week ago a computer consultant and I both took one Ethernet communications card from a

box of 20 at our Oakville head office, where I work.  
This left ten new boards in their original wrappers.

A couple of days ago, the consultant phoned me and asked me to prepare six boards for him to pick up as he was going to our Montreal office. Nobody else but me would even know what to do with those boards, and nobody took any.

But when I went to get his six, the "ten" boards were now only FOUR.

No amount of investigation has turned up the slightest hint of who took them, but remember, this is the same computer room in which two baby pigeons were placed on the ceiling grate above the computer room LaserJet, and liberally messed it up big time. There is no way those birds could have found their way in there.

This is obviously perp work, and they are definitely getting bolder all the time. It is getting harder for them to top their stunts.

Eleanor White

-----  
Diary #217 (Eleanor White)  
August 11, 1999

Perps want me to know it's them, not coincidence.

Yesterday, a couple of incidents which were like literally hundreds of others in the 19 years I've been an involuntary neuro-electromagnetic experimentee.

1. Around 8 a.m., I downloaded the article on the successful law suit by 8 Canadian MKULTRA victims against the CIA, and had just clicked "upload" on my file transfer program to put that solid evidence on my three web sites.

All of a sudden, all action ceased. I tried manually calling the Internet Service Provider, no answer. Their entire server, and not just my connection, crashed.

Just before noon I managed to get on again and got the postings done.

It is very rare for an ISP to totally crash, and whenever I do something truly beneficial to our cause, like posting first rate evidence, something like this happens.

2. Around 2:30 p.m., I received an email from an engineering classmate who has made it to chief scientist at a NASA research facility. He is a "hard sell" on electronic harassment, but he asked for a table of unimpeachable evidence that RADIO (not magnetic, not electrical via

electrodes, not the Flanagan neurophone) signals actually have non-thermal effects.

As I started to email around looking for such a table, one of the three 13.2 KV phase cutout tubes dropped open on the pole in front of our office, instantly causing chaos on the computer system and requiring a speedy takedown.

For those who haven't handled these heavy duty outdoor knife switches (fuse enclosed), you need a very, very forceful pull on an insulated switch stick to pry them open. They DO NOT fall out by themselves, otherwise, windy days would result in massive power failures.

The fuse did NOT blow - the blade just dropped open as I pressed "Send" on the first email.

(The several of us who experience regular remote physical manipulation know very well that such a thing can easily be caused by remote control.)

\*\* BUT THERE IS MORE: This took place at the Oakville head office. At that same moment, one of the key battery backup units at the Hamilton computer room suddenly started beeping, EVEN THOUGH PLUGGED IN PROPERLY WITH OTHER UNITS ON THE SAME OUTLET STILL WORKING.

The history of my past 7 years at this company is that these battery backup units, on all PCs, have been a favourite target of the spooks.

My first year, 13 units in fairly new condition (less than 5 years old) dropped dead. Each time I changed a battery, a routine procedure, the circuit board wouldn't work.

Furthermore, literally thousands of times over the past 7 years, the perps have delighted in pulling the voltage down right inside the units (not at the outlet, but inside the unit itself) causing the units to go on battery and start beeping. More than that, they often play at "following" me, making each battery backup unit I pass beep as I walk by. Witnessed many times.

After 20 minutes or so, the beeping unit in Hamilton, 30 miles from Oakville and where there was NO power failure, came back up on it's own. Self-fixing problems are a classic perp trick.

This confluence of rare events, especially the simultaneous "power failures" at two facilities 30 miles apart, no bad weather, is just one of hundreds of such co-incidences. It is the way the perps let the victim know he/she is being targetted but cannot prove it.

Eleanor White

-----  
Diary #218 (Eleanor White)  
August 15, 1999

Perps: "No no no! We can't have that!"

I don't drink, smoke, go to movies - almost nothing in the way of entertainment. My one weakness is every couple of weeks I've bought a small filet mignon for all my adult life. This item in Canada is about equal to a lunch tray at Arby's in price.

As in other diaries, the perps' policy seems to have changed to a heavy crackdown on many fronts starting New Year's day, 1999. One aspect of the crackdown is to remove all filet mignon steaks from my local "Super Fresh" supermarket, a subsidiary of A & P.

In June, one of the tougher substitute steaks caused three fillings to pop out. After that incident, since the more tender filet mignon was unavailable, I gave up stakes in favour of an entirely fish diet.

I did ask the store staff why filet mignon was suddenly removed from the shelf. They gave me a kind of weird story: "People steal filet mignon a lot." First time in my adult life (58 now) I haven't found at least one piece on the meat shelf. I said no more until yesterday I just happened to glance at the meat shelf and there was a BANQUET of all sorts of filet mignon.

I couldn't find the same store staff member who had given me that story, but I bought one of the tenderest, most flavourful filets I've ever enjoyed.

This happens with many of us victims - favourite items are suddenly "not available" at your regular store, even though they may be at all the distant branches. Dollars to doughnuts there will be no more filet mignon at the Super Fresh as long as I look for it.

Well - the perps simply "can't have" an instance where a victim gets a goodie in a location they have chosen for non-availability! They just HAD to come up with a topper.

Discovered the topper as I approached the company parking lot for the Sunday shift today - my (actually the company car) right front tire had been knifed thru the sidewall.

What'sa matter perps? You poor babies running out of imaginative things to do to me?

Eleanor White

-----  
Diary #219 (Eleanor White)

August 27, 1999

Remote physical manipulation incident.

In our Hamilton, Ontario branch, we have a set of customer order receivers connected to a file transfer host computer. For the past several years, we have had an optical alarm on this machine which will sound if screen activity freezes.

This device has an optical sensitivity knob, like a volume control on a radio. Reliable performance is achieved at roughly the mid point of this knob's travel.

This device has worked flawlessly for the past several years.

Yesterday, while doing some dirty, physically difficult and frustrating work on old cabling thru the ceiling plenum area, the alarm suddenly "went crazy", shrieking and clicking.

When I came down the ladder to see what was happening, the sensitivity knob had been moved to the EXTREME HIGH position. Since I was working just outside the computer room, I know that no person had entered.

This is just one of hundreds of similar occurrences which demonstrate beyond doubt that the perps have science-fiction-like remote manipulation ability.

As per their usual practice, the "topper" consisted of:

- turning my Hamilton address lists files to garbage
- modifying DOS copy command on my Oakville computer so it won't properly back up files; fixing that would require a complete new install of Win 95

Eleanor White

-----  
Diary #220 (Eleanor White)

August 20, 1999

The most incredible REAL TIME computer sabotage incident I've seen yet.

Today I was correcting a problem with my two mirror site cover pages (the ones that pop up first, automatically.)

I made the correction in the home.nas.net cover page, saved it on a nearby UNIX machine, and uploaded it. The problem did show as fixed.

I then returned to the DOS screen, and tried to

copy the correction I had made less than a minute ago into the mirror site (www.bestnet.org) page, and - WHAT!? - the file just corrected and displayed as corrected had reverted to a state of several days ago - "BY ITSELF" !!! That alone is not possible, so I checked the just backed up copy on the UNIX machine - in a few SECONDS that copy had reverted to several days ago too!

There's MORE: I reloaded from the site into my browser the corrected page, and IT TOO had reverted to several days ago - "BY ITSELF"!

Even the recent corrections in the not yet touched file (www.bestnet.org) had vanished so it too was in a state of several days ago - "BY ITSELF".

To overwrite three files on three completely independent computers, in two locations would require someone who could type a thousand words a minute!

Lately, I've had several incidents where other files, such as mailing lists, were "there" until I tried to access them, then they disappeared "BY THEMSELVES".

This is a new ball game for me - instantaneous remote sabotage of files I'm just about to try to access. Mind reading is essential for the perps to perform this trick, and proves that mind reading is for real.

In the past, files would disappear overnight, but now it's in the snap of a finger.

!!! LESSON: Any good stuff you find on my sites or any other sites, download it to your PC when you can - it may be gone tomorrow !!!

And consider keeping some of it on floppy disks!

Eleanor White

-----  
Diary #221 (Eleanor White)  
August 30, 1999

The incredible power of the perps' remote manipulation equipment.

I have known for some time that the perps' remote manipulation equipment is capable of very high mechanical force, even on non-magnetic objects.

This little episode proves it beyond all doubt.

Saturday, after groceries, I had a little strength left so I went to my office to check the email and to do a little preparation for my contributions to the protest against the U.S. Senate handing over letters from the public to the police.

I didn't stay long, and went home ready to collapse.

When I did collapse, the two-month-old Coleman camp cot was listing like a leaky ship.

This cot has what appears to me as an engineer as a reasonably good quality one-inch aluminum tubing frame.

At either end and at the middle fold point, the aluminum legs are 1" diameter aluminum tubing, 0.063" (1/16) wall, bent into a low, wide "U" shape. The width is about 28 inches and the height of the two upright ends is 9 inches.

The bends in the "U" shape are generous, well made, about 3 inches in radius.

At the center "U" leg, on one of the uprights, about 4 inches above the floor, the tubing had been PULLED APART!

That section of the U-leg is under almost pure COMPRESSION, not tension. There is some bending, but the bending is resisted by the stout horizontal section which contacts the floor, as well as the shortness of the uprights. (Short sections are highly resistant to bending failure.)

As a former stress analysis engineer, I can tell you all that the ragged edges of the break were characteristic of a TENSILE break.

IF BENDING was the mode, it would have severely distorted the 28-inch horizontal section also. No other section of the U-leg or brackets was evident.

There were NO MARKS of any kind either.

The force necessary to pull apart a piece of 1" x .063" wall aluminum tubing of moderate temper would be a MINIMUM of 3,000 lbs.

So these guys exerted 3,000 lbs. tension on a small section of the U-leg, left no marks, and no other portion of the bed's structure was in the slightest bent.

This is clearly a demonstration of the ability of the remote physical manipulation equipment.

It is not the first: Shifting of heavily secured 12 foot x 12 foot steel sheet shielding on my floor has occurred repeatedly. This sheeting is PAINTED, and about as thick as older cars' body metal.

Restraints have been stretched and broken over work days a number of times. There have never

been ANY marks, dents, or paint scraped or chipped. That too indicates the amazing amount of physical force the perps' equipment can generate.

The sheeting would have to have been severely buckled if the movement and restraint breakage were done by hand or tools.

When this equipment is revealed, it will astound the entire world.

Eleanor White

-----  
Diary #222 (Eleanor White)  
September 2, 1999

"Domestic atrocities".

Not every one of the perps' domestic atrocities is as showy as when they snapped the aluminum frame of my cot.

Over the past 3 months, they've taken to polluting foodstuffs. For example, I'll buy, say, four fresh ears of corn in their husks. The first two (eaten at one meal) are beautiful, tender, and sweet.

A day later, after I've been to work (i.e. out of the apartment), I'll husk the second pair from the same batch, and they will be full of smut.

Smut takes time to grow into veggie crevices - it doesn't happen overnight with ears of corn in the veggie section of a refrigerator. The chances of two ears in a batch being perfect, and the next two being covered with smut are near zero.

The same kind of thing is done with milk. I buy milk by the liter, rather than a larger bag so the containers stay sealed until close to usage time. Living alone, a Saturday purchase of 3 or 4 liter containers lasts a full week.

What has been happening this summer is that milk only a few days old, and still before the stamped date, is found on opening to be severely curdled.

Since the perps routinely enter my apartment, my 58 year lifetime worth of experience tells me that it's unlikely one liter is perfect and the next, from the same batch, is curdled. This has happened over and over this past summer.

There always has to be a co-incident "topper", and in the same time frame, a recurring incident at my office is the topper. Every new month, on the 2nd working day, I begin a long series of sales reports and data exports. The first day is avoided to allow others to verify the sales data is OK, and run their departmental reports.

On the first day of each new month, I bring an "armload" (3 or 4) of packages of 500 sheets of LaserJet paper into the computer room to prepare for the large print jobs the following day.

Today, and the previous two months, those paper packs have vanished overnight, with nobody saying they have taken the paper. Everyone knows where the supply room is, next door to the computer room and almost the same distance from the main office. Nobody would ever think to come to the computer room for paper when there is a huge bulk supply in the next room, as high as an adult's head - about a ton of paper is there at any one moment.

Perhaps topper #2 has been that a critical backup tape for the mainframe, the midnight of the last day of each month, has consistently FAILED. These are new 4mm tape cassettes, stamped with the (high quality) Hewlett Packard logo, used in a Hewlett-Packard computer, used only once a month, costing \$50 each, are unlikely to fail. This machine itself is nearly new, having been put into service February 1999.

This is just one of the many, many "little" ways in which the electronic MKULTRA experimenters harass us.

Eleanor White

-----  
Diary #223 (Eleanor White)  
September 4, 1999

Possible spook "slap on the wrist".

I'm a very slow driver. I stick right at the limit, or between 1 and 5 kilometers per hour (1-3 mph) over. I'm more observant than average because I know the spooks engage in a range of automotive sabotage and accident causation. And there is always the fear of unusual punishment by any police officers who may have been spook-co-opted.

People who ride with me actually chide me about being slow, however, by going right at the limit I am not so slow as to cause others to take chances. Most people who pass do not do so in anger, and I always slow just a little to let them in front again without panic. (Truckers excepted - they seem to feel that speed limits are only suggestions.)

I've been nearly nudged off the highway at about 60 kmh (~35 mph). I recently had a tire slashed.

A few months back, while waiting at a McDonald's drive thru window, and obvious spook raced around the corner and knocked my back bumper, which is

painted, without leaving a scratch. I could see in the mirror that he made an exaggerated turn and was pretending to look 'out of control'.

I could see by his mannerisms that he was sober and in full control and the incident was entirely artificial.

Today, the spooks jacked up the ante, although I can't be sure whether the other party was a spook or had been momentarily entranced by them.

I had been to a local Wal-Mart for a couple of items and was travelling slowly along the "express" (i.e. divided with stop signs like a road) lane at about 20-25 kmh (12-15 mph), my normal speed in a busy parking lot.

On the right was a generously wide lane, easy for cars to pass, and this also extended to the left.

A young man in a Dodge Shadow (compact) suddenly emerged, not turning, as if he intended to cross the divided (by a single line) express lane to go to the lot on the left. He was travelling about the same speed I was, but seemed in a trance - not the slightest application of brakes.

We collided, the left side of his front bumper pushing my right front wheel back a couple of inches, fender flattened inwards, with anti-freeze spraying everywhere. He pushed my front end one full lane to my left, and pushing rubber on dry pavement takes quite a bit of force.

The force of the impact on my body was more than I expected, though there does not seem to be any pain. No glass was broken except my headlight.

His car had very little damage.

Being on private property, I need only report the accident within 7 days in person. Being a long weekend, I had the car towed to the company parking lot and will attend to the follow up on Tuesday.

The guy did not behave sarcastically, and if the spooks set this up, I suspect they put him in a momentary trance, and he may have been completely unknowing, rather than a paid collaborator.

I don't know, and will never know, so I'm not worrying about it, but it follows one of the worst days (Friday) and nights I've had to contend with in terms of harassment level.

My co-workers were amazed at how many mysterious self-fixing "problems" we had on our computers and those our customers use to transmit orders

electronically. It was a day to remember!

So was today.

Eleanor White

Diary #224 (Eleanor White)  
September 17, 1999

A "dangerous weapon" ???

Not long ago, after a delay and a re-mailing, the CAHRA award certificate for Dr. Rauni Leena Kilde, the former Chief Medical Officer for Finland, reached her. She was quite pleased.

(Dr. Kilde was the doctor who had the courage to put her face and name on the Transmedia video, the one that was briefly seen (by surprise) in Canada then squelched for showing in the U.S. She came right out and said electronic mind control is real and needs to be exposed.)

Trouble is, scarcely had she received it when her spooks decided that a simple piece of paper glued to a piece of wood was FAR too "dangerous a weapon" for anyone to possess. It disappeared.

Now, this is deadly serious, but it is at the same time uproariously funny: The big bad spooks, with decades of black budgets and black project research and weapons giving them god-like powers ...  
ARE AFRAID OF A CAHRA PLAQUE!?

My goodness - what would they do if we put up a CAHRA BILLBOARD?

Eleanor White

-----  
Diary #225 (Eleanor White)  
September 17, 1999

A spook becomes "hero of the day" to his buddies in Oakville, Ontario.

I often am chosen as my company's "official hardware buyer" as a result of my engineering experience.

Today, the boss wanted a thousand flat washers, for 1/4 inch hardware. Local Hamilton stores out of them (very likely not by accident.)

So I placed an order to a hardware wholesaler when I reached Oakville this morning.

To tide the shelving assembly crew over, I stopped into Oakville's Canadian Tire store, which in addition to carrying tires and auto parts is one of Canada's largest hardware chain stores.

It was a weekday morning and the store was deserted

except for staff. I found a shelf with about ten boxes of 1/4" flat galvanized washers, 100 per box.

I intended to load up on them because the boss wanted to lay in such a large supply that this item won't run out for a very long time.

I made a small error, which the spooks turned into a large one: I had forgotten to bring the little arm-style basket with me. I clutched two packages and walked about 30 feet to get a basket and walked quickly back. Still no customers in sight.

But guess what? The remaining 8 package had DISAPPEARED! No customers. The only clerk was not near that aisle.

So a spook is either on staff or followed me in to that store, and snatched the washers. I carefully examined the checkout line - the woman at the register had been delayed because of a lady with an armload of coupons. Nobody had any washers.

Furthermore, 1/4" flat washers are NOT normally a huge seller. They are used for projects, but the most common hardware items for fastening are nails and screws. Bolted assemblies are not as frequent.

This incident is so clear cut that it is worth keeping in mind.

How awsomey heroic was the act of that courageous perp!

Diary #226 (Yve)  
September 19, 1999

Hey, gang, Eleanor isn't the only "whistling shoe" victim!

This magnification of walking noise was happening to me 2 weeks ago, interesting that it stopped about 9-10-99 when your email message was sent to me.

With me, it was a "squeaking" noise only coming from my right foot. This squeaking noise would be slightly different depending on the shoes I was wearing.

Also, when I was walking around town this noise would only happen sometimes. I noticed the usual stalkers about 1 to 2 blocks away from me when this "squeaking noise" would start. When I walked on sidewalks that belonged to a private university, the noise stopped.

I had no idea how my harassers were doing this, and I ignored it. Then about 9-10-99 it stopped. ALSO,

my email had been tampered with, even though this email was dated 9-10-99, it did not come into my email account until after 9-18-99 afternoon.

Funny little spook trick.

Now that Ed Light can do very high quality scans of colour snapshots, I've been thinking about getting an improved quality scan from Ed of myself.

This morning, before I left the Hamilton office for Oakville, I asked a co-worker Diane to try a couple of Polaroid snapshots of me on the front porch of the company, with the spook hideout house across the street as background.

(Too much contrast - will have to try another time.)

What was funny, though, is that the spooks messed up her attempts by creating, probably in her mind's eye, a little black "curtain" that came down across her viewfinder image when she started to press the shutter release.

She would quickly hand the camera to me and I'd press down the shutter release part way, but see nothing out of the ordinary. This did not interfere with the snapshots, and the quality was normal (the strong low-angle sun was the reason for excess contrast.)

What I find funny is that the spooks would even bother trying to mess up a co-worker with fairly sophisticated trickery. Normally, they don't do that to potential witnesses.

Diane has read a number of MC articles and is a believer, so perhaps they decided it would do no harm to tweak her a bit.

Diary #228 (Auckland NZ)  
October 6, 1999

Here is an "unexpected holiday from harassment" story

[You mean GOVERNMENT might be harassing us? Tsk tsk.]

During the APEC leaders meeting (Asia Pacific gathering held last month in my local city, with Pres Clinton and China's leader Xiang Zemin both present, so high profile and high security) I had several weeks of glorious ordinary life. It ended the day Clinton left the country. He was only here 3-4 days, but from about 2-3 weeks before he came, I was more or

less ignored - Clinton's visit (or was it Xiang's?)  
took precedence.

Diary #229 (Eleanor White)  
October 24, 1999

"Lightweight" little spook stunts.

Lately, the kiddie spooks in my apartment building  
in my neighbourhood have been trying to get more  
active, presumably because everyone is back from  
summer vacation.

For example, one of the more common kiddie spook  
stunts is for a teen couple to neck somewhere near  
where I must pass or stand, and as they "suck face",  
they also stare at me and giggle or wolf whistle.

Another variation is for kids to go out of their  
way to bump into me and let out a burst of curse  
words, wolf whistling, or any of several other  
sarcastic variations.

Just the other night, at about 6 p.m., I arrived  
home from Oakville and as I pulled into the Hamilton  
company parking lot, I noticed two such neckers. It  
was not a pleasant night, windy and cold, and it was  
clear these were kiddie spooks, not random lovers.

As soon as I started to exit the car (to the very  
second) these young perps started towards me,  
staring all the while. Their plan was to bump or  
rub against me as I got my heavy shoulder bag out  
of the passenger side which bordered the sidewalk.

Knowing this, based on years of experience, I just  
stood at the driver's side door and stared right  
back at them. They tried to go slow so as to give  
the appearance of genuinely moving off, but as I  
stood there, they were forced to eventually go  
past the car.

I then came around and removed my bag from the  
passenger side. As I did so, these youthful  
clowns had to turn around and head back.

What they didn't realize is that I had started my  
8 mm camcorder rolling, and caught the last part  
of this act on video tape. Recently, I've been  
practicing getting the camcorder quickly into  
action and have recorded glimpses - nothing serious,  
but perhaps enough to ID them if their stunts take  
a serious turn.

I've graduated from tape recording, which keeps  
kiddie spook apartment lobby theater acts silent,  
to the camcorder to ID these perps.

Since starting regularly unholstering my camcorder

before entering the lobby, I've kept the lobby clear of loitering kids. Miraculous.

So I have a group of frustrated street theater actors in and around my apartment building who are searching for newer ways to earn their walking money.

Last evening one such way showed itself. I spent a couple of hours, thanks to God for the energy, at my PC (at the Hamilton office) doing some long overdue typing for items on my web site.

I listen to a lot of military and religious hymns and marches to keep me pumped up with adrenaline during web site maintenance/email sessions. The VERY LAST march I listened to before going home was the "Marines Hymn".

I was completely alone in the office, on a Saturday evening when no activity ever takes place, and my music cannot be heard from outdoors. I went home uneventfully.

Just as I was about to pass the door to apartment 317, an adult, probably male, started whistling the Marines' Hymn so loud it almost hurt! This is Canada, and whistling the USMC Hymn ANYWHERE is extremely rare in fact I've never heard it once in my 26 years here.

For those who are not victims, mind reading, remote hearing what you hear, and remote viewing what you see are common - this is just one small example.

So this is one little way the folks in 317 "got at" me. 317, by the way, has been a chronic door slam source, slamming so hard that around a corner, in my 312 apartment, the slamming can be felt as an airborne shock wave that rattles everything. The most frequent slamming times are supper and nap time. (I try to nap, but for the past couple of years have never had even a single second's worth of sleep during the day.)

The two young girls in 317 have also been participants, regularly, in apartment lobby theater, and in one aggressive incident in Diary Volume 3, entry #67.

I apologize to the 317 crowd for encroaching on their income, but gee, folks, sometimes times are just plain hard!

Diary #229B (Eleanor White)  
October 25, 1999

SEQUEL TO:

"Lightweight" little spook stunts, entry #229.

Lately, the kiddie spooks in my apartment building in my neighbourhood have been trying to get more active, presumably because everyone is back from summer vacation.

See Diary 229 for examples. One example was that I stated that carrying a live camcorder has cleared the apartment lobby of loitering kiddie spooks.

Sunday evening I walked from my apartment next door to the office to check emails. What happened in the lobby on the way out confirmed that the local spooks had read my entry 229 email:

The kiddie perps were back in the lobby, giggling, saying "Hi hi" etc, and this time HIDING BEHIND LOBBY SHRUBBERY, so that the camera could not get an ID-able shot of them.

This is not much of a disadvantage as I already have enough footage of the lobby perps to ID them quite well.

Eleanor

-----  
Diary #230 (Eleanor White)  
October 25, 1999

Another telephone system perp trick.

Lately, my local (southern Ontario) perps have used a new trick to keep me off the Internet - causing a clear line to dial "busy". I have verified this by calling that number on a voice phone, and it is indeed busy.

At about 11 a.m. today (Monday) I phoned my Internet Service Provider (ISP) and asked them to check the modem lines for Oakville. "Nobody is on."

Nobody on? But I get a busy signal!

They gave me an alternate number, and, I got the chance to tell the ISP staff a few more spook stories, something I do routinely now because each inexplicable event is an opportunity to do so.

Being technically oriented, the ISP staff is normally receptive to and interested in stories like ours.

(VERY handy for our publicity efforts - thank you again, spooks, for helping us expose you!)

Eleanor White

Diary #231 (Eleanor White)  
October 27, 1999

PURE COINCIDENCE, right?

Ever since the new Mind Control Forum moved to the More Than Conquerors site at this address:

<http://www.morethanconquerors.simplenet.com/MCF/>

..I have never been able to access it on either of my two PCs, one at Hamilton and one at Oakville.

Yesterday I got around to calling my ISP about this problem (i.e. the bestnet.org company in Hamilton.)

Their tech guy spent most of his day trying to find out why HE could get it easily from his office, but I cannot, using two PCs, to different versions of software, two different telephone lines, and independent configurations. (I.e., all the settings were typed at two different sittings - nothing was simply copied.) Virus checks, cache erasure, changing between primary and alternate numeric IP addresses - all the usual things failed, failed, failed.

Finally this morning I went to another Internet PC in the Oakville head office and got the new MCF to pop up immediately.

Somebody tell me this is "co-incidence" and has no connection with my activism!

Eleanor White

-----  
Diary #232 (M. Cherney)  
November 5, 1999

It appears they're attempting to try to speak through my mouth. I can feel the words being formed in my mouth, that is, the muscles and tongue move as it would if I say a word. Quite often when I say something, they'll say something at the same time and try to make me say it their way. In addition, I'll SAY the words I want to say in the correct way, but they'll make me hear it another way.

[Ditto, ditto, ditto ... Eleanor]

When they want to put me in some particular mood (and nothing they do is pleasant) I can actually feel my emotional state change as they turn the dial, or whatever it is they do.

They repeat, "It's not a game," but why do they laugh when they do something horrible to me? On November 1, 1999, I went to the courthouse for the last time and finally lost all parental rights to my children, Leah and Paul. For them, it was just another day. Why do I hear laughter from them when I mention this? And why do they actually appear to look for and dream up ways to hurt me in every possible way?

On another note: I was almost ran into twice within this last week because my mind was on them and not on my driving.

M. Cherney

-----  
Diary #233 (Barbara Guillette)  
November 7, 1999

I have woken up and felt my head being pushed over,,,,I let it continue,to see what they would do and they pushed my head so that the back of my neck was exposed so they could use the pulse weapon on the back of my head....I have also found them opening my legs,,for access to the uretha,,,,,,now they are using this pulse dart ,energy thing to irritate the rectum.....the thing i speak of above,,,,,does not apply preasure,,now can you feel anything....nothing,,you are just moving and you are not doing it,,,,

[EW comment: That's it - no perception of force]

they use the pulse device to move me also,,,but that you can feel...as of course, fine or intense pulses.....incredible,,,things these jerks have,,,may they all rot in hell.....and the money they earn brings nothing but evil...

Barbara Guillette

-----  
#234 redundant - #234-B below tells the story.  
-----

Diary #234-B (Eleanor White)  
November 9, 1999

This refers to diary #234, which was about the spooks' destruction of several copies of the "house" handout, which appears at these direct dial addresses:

<http://home.nas.net/~raven1/hand1003.gif> (solid black, laserjet)  
<http://home.nas.net/~raven1/hand1004.gif> (grey, for inkjet)  
<http://home.nas.net/~raven1/hand1005.gif> (black but w/cartoon)  
(that's one thousand and 2, one thousand and 3, etc.)  
..or  
<http://bestnet-org/~raven1/hand1003.gif> (solid black, laserjet)  
<http://bestnet-org/~raven1/hand1004.gif> (grey, for inkjet)  
<http://bestnet-org/~raven1/hand1005.gif> (black but w/cartoon)

The destruction was the night after I sent an email to everyone suggesting this might be a good item to print locally and hand out at showings of the new mind control "comedy" (sick comedy) movie "Being John Malkovich". This is the first instance I've encountered where a specific item in an email has been attacked by the spooks immediately and devastatingly. Usually, perp punishment does come, but in a vague, roundabout way you can't fully tie to their worries.

This was DIFFERENT, and unlike diary #234, it turned

out to be NOT tentative at all.

Also note that this damage was SURGERY, not just deletion or corruption. That in itself is amazing.

Follow up investigation showed this is how the damage was done in one overnight attack:

- hand1003.gif on my Hamilton PC, surgical removal of only the two faces, perp with dish, and victim; rest of image stayed perfectly intact

\*\* THIS IS THE AMAZING ONE:

- handout3.cdr on my Hamilton PC, same surgical removal; note that both the FILE NAME and FILE TYPE are completely different! That is courtroom quality, irrefutable evidence of the perps seeking out that image and messing with it
- hand1003.gif on the Hamilton Novell network server surgically altered
- hand1003.gif on my home.nas.net web site
- hand1003.gif on my www.bestnet.org web site
- hand1003.gif on Patricia Mougey's [www.glasscity.net/users/1927](http://www.glasscity.net/users/1927) web site

SURGICAL removal of the people images is evidence of deliberate attack against the drawings, and if that isn't enough, they went to every directory on my PC, and even attacked an image from a different piece of software (.CDR not .GIF) and under a different filename.

THANK YOU SPOOKS FOR DOING DUMB THINGS WHICH ARE REALLY HELPING US CONVINCING OTHERS YOU ARE ATTACKING PEOPLE. WE SINCERELY APPRECIATE YOUR HELP.

Eleanor

Diary #235 (Eleanor White)  
November 10, 1999

CIA's "flaps and seals" course?

A few weeks ago, Blanche sent me a photocopied book on electromagnetic interactions with the nervous system.

But one article had been neatly removed, even though the flap on the cardboard mailing envelope appeared completely intact; it was a self sealing type which under normal conditions will tear apart if you try to open it.

Blanche checked back and discovered in her exact duplicate set of copies that this article, by a key experimenter (Dr. Ross Adey, the LIDA machine

holder and colleague of Dr. Eldon Byrd) HAD BEEN  
IN THE ORIGINAL MAILING.

I have read about a "flaps and seals" course  
given to CIA agents - I guess that must be a good  
course!

Thanks again spooks for making it easy to prove  
sabotage as opposed to "bad luck". We really  
appreciate it, guys!

Eleanor

-----  
Diary #236 (Lifetime human rights activist)  
November 10, 1999

Lady on a parallel track to ours backs us up!

Dear Eleanor,

When you talk about "perps" sitting at your computer  
(or hacking), it sounds unbelievable that they would  
go to such lengths.

It is believable to me because in my early life as  
an activist, my husband and I were closely monitored  
by the FBI. Our house was broken into many times  
and drawers rifled. No money was taken, so I knew  
who it was.

Incriminating stuff was also planted in our house,  
so we had to get a lawyer (midnight on a Saturday)  
to return what was clearly labeled "government  
property" and left in the vestibule. Journalists  
working for the FBI were planted on us and my  
husband was framed up by the local police in 1964.  
His picture was doctored to make him look sinister.

He was accused of being a dangerous radical because  
he is Black and was a youth leader. The judge  
blamed him for riots in the Black community that  
year even though he was in Chicago at the time they  
occurred. The FBI also sent us scurrilous (racist)  
mail.

In the 1970s when the COINTELPRO was exposed, it  
came out what the FBI did in our town. But we knew  
who our "perps" were all along.

That is why I believe you.

/S/ Lifetime human rights activist.

-----  
Diary #237 (Eleanor White)  
November 13, 1999

Kiddie perps again.

Refer back to diary entries 229 and 229-B for some  
background on my Hamilton, Ontario apartment bldg.  
kiddie perps. Carrying a camcorder from my car in

to the building has instantly and totally cured the building lobby loitering harassment problem.

This apparently does not please the spooks and the kids' parents, who no doubt receive their "walking around money" for their stunts.

Today, Saturday, I had returned from grocery shopping, and had put away the groceries and finished lunch. Normally at this time, I'm exhausted from the harassment and previous week's work, and lie down trying to nap. (The perps never let me actually fall asleep - but at least, between squirming and jumping due to electronic shocks, stabs, and itching, I can get some small amount of horizontal rest.

This Saturday, I had to go out again, very much NOT part of my normal habits, to get a couple of clothing items for the oncoming winter.

As I left the door, I immediately ran face to face into the group of "apartment 317" kids, who seem to be the most persistent kiddie perps. (In addition to being the noisiest, and causing the most soiling and damage to the hallway carpetting.)

"Hi" is their persistent greeting, accompanied with stares and giggles, and is repeated over and over, to let me know they are watching me.

This time, by the time they got their carefully choreographed collective "Hi" said at me, I had the camcorder unholstered. I missed the "hi" itself, but did follow them down the hallway to apt. 317 to tape them hurriedly entering.

Got the door number 317 in the same shot.

Sorry about that kids - maybe you should think in terms of actually working for your walking money.

Eleanor

-----  
Diary #238 (Mag)

November 13, 1999 - Saturday

Hurricane Irene passed thru here a few weeks ago. It knocked down a huge gumbo-limbo tree in the swale across the street from my house. Since this swale is on city zoned land, it's not on a swale that joins up to anyone's property. It's a circle where six streets converge and all homes on this circle (including mine) face it with the road between us and this circle.

This tree has been down for a few weeks, and I thought it very strange that the city has not been out to remove it as they have done with all the

other stuff that blew down (they are usually very good about that) as it is leaning on a huge pine at roughly a 45 degree angle.

My curiosity got the best of me, because the leaves on this tree have not turned brown. They are still green and look fresh, despite the fact that the root ball was completely pulled out of the ground when the hurricane knocked it over. On closer inspection, these roots don't seem to be as long as they should be.

I know a gumbo-limbo is a tropical plant, and I know it does not have an extensive root system, but this tree has barely any root system at all. and the leaves should have died and turned brown by now. When I pat the trunk with an open palm, it sounds hollow.

I cannot reach any of the leaves to get a closer look as the top of the tree is approximately 20 feet up, against a pine and out of reach. It's not stable enough to climb up the trunk either so I don't want to chance a fall. Gumbo-limbo trees have a straight smooth trunk and are very tall, so they're quite impossible to climb without equipment to do so.

Since this tree went down, I've noticed a certain white pickup truck with heavily tinted windows (I cannot see the person driving it) hanging around the circle on the opposite side from my house.

A couple of times I've actually walked out of my house and around the circle towards it to get a better look and a plate number, and by the time I would get half way around, it would take off.

This morning, I was getting into my car to go to the little store up the street, and he/she/the driver in the truck came off one of the streets around the circle, running the stop sign AND HEADED STRAIGHT FOR ME AND MY VEHICLE AT A HIGH RATE OF SPEED.

Instead of going on around the circle, he/she/ whoever stopped behind me and sat there. I just stood there and stared at the tinted passenger window, no fear, no running, just staring him/her/whoever down. Here we were, at standoff position.

So I walked around behind the truck and I looked at the plate. The driver (aparently realizing what I was doing), sped off up the nearest street. It's a normal number and plate like we all have here in this state, and this truck has no markings or anything unusual to identify it aside from the two foglights on the top of the cab, which for fog lights, are sort of strange (smaller than the norm and black coated).

I mentioned this to my husband and wrote the plate number down in my little black book along with the time, date and the description of the pickup truck. It is Florida reg # 37N LE4, and the truck is a white Ford.

Mag

-----  
Diary #239 (Larkspur)

Submitted November 14, 1999

Approximately 2 months ago someone (my guess is that it was one of my controllers) drove past my home in Colorado and fired off several shots from a hand gun very proximal to the back door of my apartment. I called the local police and got the usual ...if it happens again give us a call routine.

About three months prior to this incident I was on my way home from my friends place and was tailgated for several miles by a pickup, similar to the monster trucks like big foot. (by tailgating I mean they were within 12 or 18 inches of my rear bumper). It wasn't until I reached under my seat to go for my pistol that they abruptly stopped and pulled a 180. What is most interesting to me, about this incident is that ALTHOUGH i HAD INTENDED TO RETRIEVE THE PISTOL, THE GUN HAD SLID SO FAR UNDER MY CAR SEAT THAT i WAS UNABLE TO REACH IT and hence never pulled it out, yet they REACTED (pulled the U-turn and stopped persuing me) the instant I THOUGHT I should get the gun out.

[Eleanor White's comment: Boy oh boy - I can't count the number of times my items have been moved by the perps' remote physical manipulation equipment. Their most common trick is to slide the pause/go switch on my mini-cassette recorder to "pause".]

Larkspur

-----  
Diary #240 (Eleanor White)

November 26, 1999

Last night was American Thanksgiving. For the first time in more than a year, the perpetrators' usual practice of holding me awake for a few to many hours, in a state of physical (shocks, stabs, itching, limb flailing) and mental (unwanted vivid images forced into the mind's eye while awake) torture was SUSPENDED!

Candian Thanksgiving is in mid-OCTOBER.

This clinches what I have more or less known for years: My becoming an involuntary experimentee grew out of service in the AMERICAN Navy.

Obviously my supervising local torturer is an American, who went home to Thanksgiving, most likely

to a family who doesn't know how he really makes his living.

What is impossible to understand is, with a holiday having strong roots in RELIGION, how can this creep even THINK about sitting down to give thanks, much less look his family members in the eye?

Doesn't he realize that his "work" guarantees that his future and probably present loving family will be put through the same torture at some point?

To torture is bad enough; but to pretend to thank God in a family setting places this person at about the same level as the AIDS virus!

Skeptics: Only "alternate explanations" which explain ALL, not some, of the observed effects are valid. Divide-and-conquer logic, i.e. separating one effect at a time and "explaining" it is not valid.

Diary #241 (Ronald)  
December 6, 1999

In the past I wrote about how they were able to stop  
my van, stall the engine.

I have some ideas on this that you may be interested  
in. In the summer of 1998 it got to the point I  
couldn't start it at all. I also have an old  
motorcycle I was able to run but they seemed to be  
zeroing in on that also. That day they succeeded in  
stopping it.

The small carburetor is gravity fed with a CLEAR  
PLASTIC fuel line. That day after they stalled it I  
noticed something I never seen before, AIR BUBBLES  
IN THE FUEL LINE.

I've been riding that same model since 1969 but  
never seen that before. At that point I was sure it  
was the fuel system they were hitting, causing some  
type of vapor lock. The other late model car I  
drive is fuel injected and never seems to be  
affected.

So I got home and rolled up a bunch of aluminum screening and packed it around the van's carburetor, it started up after about a minute and ran great for about a week then started to go downhill slowly.

[Eleanor White's comment: The perps go into a frenzy if anyone succeeds in dampening out their intended harassment effects. The "downhill slowly" period is when they re-tune their equipment to overcome the victim's defences.]

At idle speed seems to be when it was most vulnerable so I would keep the engine speed up when I stopped at a light and that seemed to work as a good countermeasure. At some locations I drive by there was always a problem, one day I drove by one such spot keeping the engine speed high, it didn't stall but AS I WENT BY IT FELT LIKE SOMEONE WAS POKING NEEDLES IN MY LEG which is at the SAME ELEVATION AS THE CARBURETOR.

When I seen those air bubbles in the carburetor it got me to thinking how sometime I get tight chest pains and then hear all this bubbling sound in my chest or throat or wherever I am being targeted at the time. I wonder if they can induce electric currents strong enough to cause some type of electrolysis of the body fluids and break them down to a gas.

## **Covert Electronic Weapons Spiel**

**Eleanor White, January 2, 2008**

This script is intended to provide a short talk to introduce COVERT electronic anti-personnel weapons to the unaware public, public officials, doctors, and family members of electronic weapons targets.

---

### **The Spiel**

Hello. In this talk, I'm going to describe COVERT electronic anti-personnel weapons which have been available for one to five decades, and which can silently attack a target through the target's walls, leaving no trace evidence. This class of COVERT electronic weapon is used in conjunction with the modern-day crime called organized stalking and electronic harassment.

In this talk, I'm going to focus on the electronic weapons. For information on organized stalking, google the phrase "organized stalking" and abundant information will be found on the Internet. The best web site for introducing organized stalking and electronic harassment to people not familiar with this crime is probably [catchcanada.org](http://catchcanada.org)

In discussions about these weapons, you will often hear the phrase "directed energy weapons", but not all directed energy weapons are suitable for COVERT use.

Let me first mention some well publicized military and police electronic weapons which are NOT suited for COVERT use against targets living and working in ordinary communities. Such NON-covert weapons include the microwave "area denial" weapon which heats the skin, and the "LRAD" acoustic weapon which projects ear-splitting sound in a narrow beam.

Also in the NON-covert category are tasers and high power lasers. High power lasers are not covert, because at high power levels, before a target could be reached inside their home, a hole would have to be burned through the wall.

It is common to hear claims that the HAARP project can function as an anti-personnel weapon. HAARP stands for High Altitude Auroral Research Project, and there are now multiple HAARP-type transmitter sites around the globe. HAARP stations operate at relatively low frequency, and lower frequencies can be reflected off the ionosphere. Common HAARP transmissions are in the range of 3 to 4 megahertz, which is the lower end of the "short wave" band. HAARP isn't known to transmit microwave, and microwaves would generally penetrate the ionosphere and not be reflected.

When a shortwave signal is aimed at the ionosphere, it is not reflected like a shiny mirror. It is actually "refracted", meaning a more gradual curved bending. In addition, shortwave signals themselves are fairly long wavelengths, and these signals cannot be focussed sharply at all. Focussability of shortwave signals is on the opposite end of the scale from laser light, which can be focussed sharply.

These characteristics of the HAARP signal mean that yes, some disabling effects could theoretically be applied to relatively large areas (a large city, at a minimum), but could not target single individuals without affecting everyone else in the area.

The electronic weapons used in the organized stalking and electronic harassment crimes, by contrast, are highly surgical in their accuracy, and targets of covert electronic weapons have reported that they can be feeling strong effects while others quite close by report nothing. For these specific crimes, HAARP can't be blamed.

So when discussing organized stalking and electronic harassment, publicly known military and police weapons like area denial, LRAD acoustic, taser, high power laser, and HAARP technologies are NOT what are in use.

COVERT electronic harassment weapons, then, meet these very specialized criteria:

- They reproduce EXACTLY at least one of the attack effects targets of organized stalking commonly experience
- They do so SILENTLY
- They do so THROUGH WALLS without disturbing the walls in any way
- They do so withOUT alerting or affecting neighbours
- Their technology has been DEMONSTRATED, NOT just forecast, and the details of the demo are documented in a mainstream ORGANIZATION's publication, under their name or logo

So which electronic weapons have been available outside the laboratory long enough to have been taken up by the criminals who commit organized stalking crimes, and, meet the criteria for COVERT weapons?

The first of these is the common microwave oven, available for something like a quarter century, and not particularly expensive. If a criminal wants to cause some serious disabling effects to either someone in an adjacent apartment, or someone in a nearby home, this is a dandy electronic weapon. The case of the oven is removed and replaced with a directional sheet metal "horn", mounted at the port where the microwave signal enters the cooking chamber.

A criminal using a weaponized microwave oven could cause damaging effects such as: asthma, cataracts, headaches, memory loss, early Alzheimer's, bad dreams, depression, fatigue, concentration loss, heart and blood pressure problems, and cancer. Not bad for a couple of hundred dollars and a little sheet metal.

If enough room is left between the weaponized oven and the target, it's possible that heating effects and other clues would not be sufficiently noticeable for the target to realize they are being silently microwaved.

There is an excellent German web site, posted by Dr. Reinhard Munzert, which shows a weaponized microwave oven and provides information in English regarding the use of microwave signals for covert weapon purposes. Google his last name, spelled M-u-n-z-e-r-t and the word "microwave."

The next covert electronic weapon has been available for half a century, but never widely publicized. It is NOT classified secret. It is, in fact, an old MEDICAL device, originally designed as a drugless sedation system. It originated in Russia and is called the Lida, spelled L-i-d-a, machine.

The Lida was tested for weapons potential some years ago by doctors Ross Adey and Eldon Byrd at the Loma Linda, California, veterans hospital research unit. It has been patented and the patent number is 3,773,049.

A drugless sedation machine, covertly aimed at an organized stalking target at work can literally destroy the target's career, by making the target too tired to carry out his or her duties effectively. This on the job fatigue is a very common type of attack reported by organized stalking targets.

The Lida works by a simple process of "entraining" the average rhythm of brain activity, by sending pulses of radio signal at a rate matching the sleeping brain activity rate. Brain activity is measured by electro-encephalographic technology, commonly called EEG. The developers of the Lida machine discovered that by pulsing 40 megahertz, 40 watt radio signals at the sleeping activity rate, they could induce sleep in patients. This is in the "diathermy" medical device band.

More recent documentation has shown that pulsed microwave signals, which can be more precisely aimed over greater distances, can also produce this brain entrainment effect.

We do not have extensive information on the Lida machine's performance because it has not found its way into common use here in North America. Presumably this was because of concerns about exposure to fairly strong radio signals and cancer. Of course, organized stalkers aren't concerned about the health of their targets, and ham radio transmitters with built in morse code keying capability can be used to generate this type of attack.

The Lida machine technology can do something at night which is just as devastating as producing fatigue on the job. By adjusting the pulse rate higher, up into the wide awake brain activity region, this device can be used through walls to deny the target sleep. And by choosing a microwave frequency high enough to not interfere with most of the target's electronic appliances, theoretically it could be almost impossible for a target to discover he or she is being pulsed wide awake at night.

40 watts is plenty, and a 40 watt signal isn't going to disturb electronic appliances when the signal is well up in the microwave range.

By choosing more sophisticated pulsing signals, scientists like bio-electromagnetic researchers Dr. Elizabeth Rauscher and Bill van Bise have stated that other disabling effects can be generated from this simple radio frequency pulse technology. One such covert electronic weapon is currently under development for police and military use and is designed to disrupt coordination and balance, through walls.

Organized stalking targets commonly report coordination and balance attacks, especially when attempting delicate or messy work.

The coordination and balance weapon is code named EPIC, spelled E-P-I-C, and once this weapon has been publicly demonstrated, we anti-organized stalking/electronic harassment activists will be posting details on our web sites. It is basically an advanced Lida technology. It is under development by a company named Invocon, based in Houston, Texas.

Remember - the covert weapons we are describing have been around for DECADES, and are affordable by anyone with upper middle class income. They are NOT secret, and are NOT "laboratory curiosities."

Organized stalking criminals find the next covert weapon especially sexy. It's called "microwave voice to skull", and has a U.S. Army acronym "V-2-K."

This weapon is not new, having been made public at a 1974 seminar at the University of Utah, and a 1975 article in the official journal of the American Psychological Association, "The American Psychologist", in the March article titled "Microwaves and Behavior." The weapon is not classified, and using that article as a guide, an experienced radar technician could convert a radar set into a through-wall voice projector.

Microwave voice to skull does NOT produce sound, so it can be aimed at a target, through the wall, and ONLY the target will hear the sounds projected in this way. If the microwave beam is narrow, even the target's wife in the other bed will not hear the signal.

Since the media haven't uttered a peep about microwave voice to skull since 1975, it is a great covert weapon. And since "hearing voices" is assumed to be an indicator of mental illness, the target of voice to skull transmissions can't even complain about it.

There is an article from the 1990s stating that the U.S. Air Force has done some work towards improving the fidelity of the sound, so even though the public doesn't know about voice to skull, it's effectiveness as a weapon isn't being overlooked. But this invasive weapon has been available for over three DECADES now to criminals.

Why isn't voice to skull used publicly? Almost certainly because of concerns about exposure to radio frequency radiation.

For listeners interested in the technology, google "Joseph Sharp" and "voice to skull". Briefly, each radar pulse from a moderately powerful radar set produces a click in the hearer's hearing sense. When you use a voice wave form to control the speed at which those clicks are sent, you can reproduce voice or any other sound, like music, which the hearer hears as originating inside his skull. This is really a primitive form of digital sound.

It's important, listener, to understand that there are a couple of OTHER technologies which have some things in common with voice to skull but do NOT qualify as covert electronic weapons because they don't work through walls or at a distance.

The first is slowly becoming public knowledge as an advertising gimmick, in which a sales display or vending machine, or even a billboard advertising a movie, "speaks" but only to a person standing in a position to be attracted to the item for sale. Nearby people hear little or nothing, and the person being "spoken to" hears the voice more or less as originating at or within their skull.

This technology has a couple of commercial names, the "Acoustic Spotlight," or, "HyperSonic Sound." This technology uses a pair of ultrasonic beams that travel together silently, but produce audible sound at the point of impact with a solid object, which may be a listener's head. This is true ventriloquism, and this beam-like system can work out to a hundred feet or more.

The "Acoustic Spotlight" is NOT a true COVERT weapon, however, because it will not project through a wall. When the beam encounters a wall, the audible sound content radiates from the impact point, as if a loud speaker were mounted on the outside of the wall. Not only would a target indoors NOT hear the sound as from within his or her skull, the neighbours would also be aware of it.

The second technology which sounds like a covert weapon but is NOT, is the Patrick Flanagan "neurophone." Patrick Flanagan applied a high voltage audio signal to his body through INSULATED electrodes, and was able to faintly hear the music without any actual sound being produced. Later versions of his "neurophone" use a different principle, the sound was fed to a vibrating crystal. The crystal didn't emit the sound into the air, however, when pressed against the body, the sound could be heard.

Both versions of the "neurophone" require CONTACT with the body, hence are not covert, through wall, at-a-distance weapons.

The next COVERT electronic weapon is actually an ENHANCEMENT which can be used with any technology capable of projecting sound, including ordinary radio and TV transmissions. It is called "Silent Sound", and one of the early patents held by Oliver Lowery is U.S. patent number 5,159,703.

"Silent Sound" has replaced "time slice subliminal sound", and is used for self help coaching and theft reduction in department stores. It is sound that the brain can descramble, but is not audible as words to the normal hearing sense.

"Silent Sound" works, basically, by taking the normal human voice and processing it through something like a telephone voice changer up near the top end of the normal hearing range. From about 12,000 Hertz, or cycles per second, to the upper limit of our hearing range, there isn't a whole lot of sound making use of that range. So by moving voice up to around 14,000 to 16,000 Hertz, a Silent Sound device pretty well has a clear channel. It can effectively travel along with normal voice or music.

Silent Sound speech converters do one other thing, and listeners with technical backgrounds will understand this - the speech is converted to frequency modulated format. What comes out of the speaker is a steady tone, with the frequency varying a couple of hundred Hertz up and down, controlled by the original voice waveform. Commercial Silent Sound speech processors use FM "center" frequencies in the range of 14,500 to 16,000 Hertz. Although the target only hears a high pitched tone, the subconscious can understand the tone as speech.

More sophisticated versions of Silent Sound monitor the normal sound level of a radio or Muzak signal, and adjust the volume of the Silent Sound so it's just loud enough to be heard by listeners, but not so loud it's easily noticed.

Most people have some ability to be hypnotized. With Silent Sound, the subject can't hear the hypnotist's words, and has less resistance to hypnosis. When you project Silent Sound through a target's wall, over months and years, and the target can be hypnotized, some serious disruption of the target's perception and personality can be installed, and the target will have no idea how or why their world has changed. For organized stalking targets, the changes are intentionally bad ones.

Everyone knows about the last of today's proven COVERT electronic weapons - through wall radar scanners. Airport security scanners use different technologies, and some use "millimeter wave" microwaves, which can not only see through luggage, but also through walls which are mainly non-conducting. Wood, dry brick, dry concrete without too much reinforcing rod. Most concrete residences do not have large amounts of steel reinforcing rod in the walls.

With through wall radar, first you can AIM the other electronic weapons with pinpoint accuracy. And you can also determine, roughly, what the target is doing, and set up all sorts of harassment skits that let the target know they are being watched, even under intimate circumstances.

One target reported being watched while urinating, and having the water in the apartment below turned on precisely when the target's urine stream started, and shut off precisely when the urine stream stopped. This happened repeatedly over a period of months. There is simply no way a target could complain to police about that, or even convince friends and family.

That target also called a manufacturer of through wall radar, and was told that for the cash price, the equipment could be had, no questions asked. The target made it plain she was not with law enforcement, and that was not a problem.

At this point, listener, we have described enough COVERT electronic weapons to essentially destroy the quality of life of an organized stalking target. These weapons are not military secrets. These weapons can all be had by someone with an upper middle class income. And these weapons have been available for one to five DECADES!

We hope this talk will make it plain that it is time to stop making "tin foil hat" jokes about electronic weapons, and take the problem of organized stalking and electronic harassment seriously. Only with YOUR help talking up this issue can these covert crimes be stopped.

Thank you for listening.

## **Organized Stalking Story Suggesting City Government Complicity**

**February 5, 2009**

This organized stalking story by itself does not prove that city government was complicit in organized stalking. However, I feel it certainly suggests that. The story is certainly an example of the organized stalking experience.

I am Eleanor White, now fully retired, having had a career in engineering first, then computer programming. In the spring of 2000, the sabotage level at my employer had reached the point where I was forced to resign, three years from qualifying for retirement.

The sabotage level had become so severe that almost every machine I would repair, upgrade, or in some cases just install would be found inoperable the next morning. In some of these cases, the equipment was destroyed, and in other cases, sabotage was found and fixed.

Programs I would write would malfunction either the next day, or sometimes the programs would refuse to work in spite of having other well qualified programmers check for errors and finding none. Clearly the operating system had been modified to recognize programs written by me and cause them to malfunction or refuse to run at all.

In spite of clear cut evidence, the managers above me refused to even discuss the obvious sabotage. I had no choice but to resign because I was no longer contributing useful work in return for my salary.

I found a couple of technical openings in my city of Hamilton, Ontario, and in those cases, the person hiring was very interested in my skill set and experience. However, inevitably, when I would check back a few days later, all of a sudden there was no opening. One of the more persistent tactics used by organized stalkers is to spread lies about the target. My impression was that the stalkers had ensured I would not be able to find another technical job.

Needing to support myself, I took a job as a part-time security guard. I would have been glad to work full time as a guard but full time openings went to guards with seniority. So this was fine, a chance to learn how to live on very little.

One thing the part time schedule did was give me lots of time off.

At that time, I was living next to a huge, beautifully landscaped park, about a quarter mile wide and a half mile long. Many beautiful mature trees of many different species. Naturally, I took the opportunity to spend time there.

While doing that I fell in love. With the approximately 200 squirrels who called this beautiful park home. I spent many hours hanging out with them, tossing them treats, and learning about their lifestyle.

This continued for eight years, three working as a part time guard, and five fully retired.

The first year was an animal lover's dream. These little folks were already partly tame, generations of them having been accustomed to human company. There were several other people who liked to hang out with the squirrels as well.

I just couldn't get enough of the company of the squirrels.

This turned to Hell in the second year. Organized stalking perpetrators carefully observe what the target enjoys, and will do all they can short of being highly visible, to destroy whatever that activity is.

In this case, and this did NOT happen in the first year, almost every time I would sit down to enjoy the company of one of the squirrel colonies, someone would come along and do something to break it up.

The park seemed to always have "joggers" who just had to alter course way off the paths and run right through a brushy area where I was communing with the squirrels. Or groups of kids would suddenly find an obscure area I was at the most attractive place to be. Some would throw stones, acorns, berries at the squirrels and/or at me. Some would just start a screamfest.

Or a family would decide that some of the least attractive corners of the park were just where they needed to have a picnic lunch. Really rather dirty areas with branches and leaf debris, and weeds.

But the most invasive thing that began happening in my second year of squirrelling were the dog owners who just had to walk their dogs through the middle of a gathering of squirrels I was with. Even way off the paths, which is where dog owners used to walk their dogs during my first year of squirrelling.

I made a point of watching the other squirrellers carefully, and in my eight years there, I never saw a single instance of any park user or dog bothering them.

In the third year, these dog owners got more aggressive. They would walk up to where I was, take their dog off the leash, (a bylaw violation,) and say "Go get 'em boy!" And those dogs did go after the innocent squirrels with great gusto. This would happen at least once, and sometimes 2 or even 3 times each day I visited the park.

All the while, no other squirrellers were observed having this problem. I would occasionally ask them if they were having this problem, and they did not have the problem.

Organized stalking perpetrators always try to make their attacks look like "life's normal breaks," and they succeeded well at maintaining their cover until my last year at the park. At that point, they got so aggressive that other squirrellers noticed.

In my last year at the park, having had my patience severely tested, I began turning in written reports, sent by mail, to the city's animal control officer in charge. These folks wore uniforms and badges, and had some degree of police authority where animal matters were concerned. They would not arrest, but they could issue summonses, and the police backed them up in extreme cases.

The officer in charge was polite but oh-so-sorry he just couldn't do anything about this. He claimed there was no way he could help unless one of his officers saw an act of animal cruelty in progress. I had to remain polite, but I knew this fellow was pretending helplessness. So I kept sending detailed reports for a year.

The dog owners' facial expressions and body language showed obvious pleasure in this activity. They didn't appear to have the slightest worry that they could be prosecuted for anything.

I actually observed one owner being coached as to how to guide her dog over to the squirrel colony I was at.

When this seemed blackest, I learned that one of the city councillors had been an activist against animal cruelty for years. His particular organization was called "Zoochek", and was concerned about cruelty to zoo animals.

So I researched a bit of federal and provincial law relating to animals and animal cruelty, and found out that cities in Ontario are allowed to enact and enforce their own animal cruelty bylaws. I carried a letter asking this city councillor to submit an animal cruelty law for the city making harassing animals a prosecutable offence.

The first thing the councillor did was to call the officer in charge of animal control to find out what laws existed.

WELL! All of a sudden, a bylaw explicitly prohibiting harming or disturbing park animals materialized! It had been there all the time, and the animal control officer in charge, who is responsible for enforcing animal related bylaws, "didn't know" it was there!

That in itself is suspicious. But there's more: NOT ONE SINGLE INCIDENT OF DOGS HARASSING SQUIRRELS OCCURRED AFTER THAT BYLAW TURNED UP!

Think about that - SEVEN YEARS of daily dog attacks vanished on the spot! Permanently. No dog attacks after that. And by that time, a couple of hundred dog owners had participated, some from out of town. I tracked dog owners back to their vehicles and many bore dealer logos from places far from the city.

Ask yourself how the dog owners all suddenly knew that they no longer had cover to engage in their "sport." Nothing was posted publicly.

That wasn't the end of the harassment, of course.

The year 2007 was my last full year in that city (Hamilton, Ontario.) That summer, we had a six month drought during which at most a few drops of rain fell, not enough to wet the pavement, just a few spots here and there. No actual water that a small animal could drink.

It was so dry that the soil blew out from under some of the mature oak trees, leaving the roots exposed like "legs."

Even before 2007, there had been several dry years, little to no snow, and critically important for small animals, no DEW. Hamilton is on the face of the Niagara Escarpment, which is a very long cliff over which Niagara Falls flows.

There are several small creeks running through Hamilton which flow over the escarpment. There are also many springs which flow out of the escarpment face. By the drought of the summer of 2007, all these were bone dry. Hamiltonians who had lived there for decades commented that they had never seen this happen.

The squirrels were in a desperate situation. Dew has always been their main source of water when rainfall ceases. And there wasn't a drop to be had.

So I set about placing an average of 25 dishes and cups of water at many different places in the park, and filled them every day when there was no snow or rain, and that was most days. I had to do this at the crack of dawn to avoid attracting the attention of the public, as vandalism would follow automatically. Summer 2007 was so dry and the squirrels so thirsty I had to fill them again daytime.

I could not fill all the dishes daytime due to the people attending the park, but was able to refill some of them.

At one point, I stood by a freshly filled dish and counted squirrels using it for ten minutes. FORTY squirrels drank from that dish in ten minutes, showing how thirsty they were.

For the information of readers who may be interested in helping their local small animals survive in future drought conditions, don't worry about letting water freeze. The squirrels will drink by using their sharp front teeth to scrape deep grooves in the ice.

Squirrels also enjoy eating ice cubes on cold, snowless winter days. They will pick them up in their mouth and take them up to a branch and nibble on them just as they do with other treats. Smaller ice cubes are best, as squirrels' mouths aren't huge.

**IMPORTANT: NEVER WATER WILDLIFE WITH METAL DISHES OR CUPS.** They could be severely injured by having their lips or tongues frozen to cold metal.

Because the vegetation was regularly trimmed by park staff and park gardening volunteers, and because not every staffer is a small animal enthusiast, it was always a problem to find ways to hide the dishes and cups. Some dishes could be placed in bushes among the weeds growing within the bush. Some dishes had to be moved according to various park activities, which happen regularly in the summer.

I spray painted my clear plastic cups with olive drab (military camouflage) paint on the outside to make them less visible.

I was able to attach some cups to larger bush stems, using stainless steel screws and large flat washers. Screws into living stems must not be completely tight and must be loosened to offset stem growth each Spring. Cushion the washers and cup with non-hardening weatherstripping compound. This holds the cup vertical without causing so much strain that the cup cracks.

I used the same technique to attach drinking cups into recesses on mature tree trunks, where the general public would not normally be able to see the cup.

I would "announce" initially, and intermittently, the presence of a water dish or cup by leaving a few peanuts tucked right at the side of the cup or dish. That ensured the squirrels would find them.

Interestingly, the organized stalkers left most of these dishes and cups alone, most of the time. There would be periods when they would attack by dumping the water and punching holes in the bottom, or cracking the cups, or stuffing them full of dirt and old leaves, but this would only happen maybe 10% of the time on average. A pleasant surprise, but based on a couple of decades of being an organized stalking target, my guess is that they didn't want to give me too much evidence of their attacks.

But this changed once I, and the perps, discovered there was a specific law against what the dog owner perps were doing.

I began to see the same crew of city "forestry" workers, young tough guys, kind of shadowing me in their truck every time I visited the park. When I would go in early to try to fill the water dishes and cups, these dudes were often there, sometimes much earlier than their normal start time, watching me very intensely.

Sometimes, they would arrive at an area with a couple of dishes and cups ahead of me, just parked there, grinning at me, knowing I could not water that area that day.

They had an official city truck and were there throughout the days, doing their "work."

What they did as work was, in the area of every one of my water dishes and cups, they would clip a little foliage away. They would saunter around the park, taking very small amounts of foliage in any one day. Continually watching me closely.

For weeks, then months. Non stop. Regardless of weather. Park staff would plow access paths in snow for their truck so that these "workers" had access to every place where I had a cup. By early 2008, they had totally removed all the cover I depended on to keep my watering cups and dishes out of sight of the park using public.

One of the most bizarre removals was that of a perfectly healthy beautiful 50-foot spruce tree, with a trunk diameter of 16 inches. This tree had an unusually deep recess on one side, providing perfect cover for a squirrel water cup. One bright day, a tree removal crew arrived and by noon, all that was left was a stump cut right to ground level. That was in an area where it was very difficult to hide watering cups too. That tree was in no way a safety threat and did not interfere with any park function.

Fortunately, winter snow had broken the 2007 drought, and if I had stayed at that location, watering would have been made extremely difficult. Praise be to God, some of my fellow wildlife lovers report to me that 2008 had reasonable rainfall so watering was not critical.

People expressed amazement at why this beautiful park needed to have so much shrubbery cut down to nothing. Again, these guys did it in small steps over months. If they had been

assigned to simply clear brush, they would have done one area completely, and moved to another area. Not in tiny increments.

Instead, they chose to work around the park, taking just a little at a time. Anyone observing this operation would have wondered what was going on.

My personal belief is that it was a "payback" for bringing the bylaw to light which stopped, instantly, the dog attack problem.

[This story is about my personal take on this experience, and I cannot "prove" what I believe is the truth. It is posted for what it may be worth to readers.]

**Book Review, November 12, 2000**

## **Excalibur Briefing**

**Lt. Col. Thomas E. Bearden**

**Copyright 1978, Updated 1988**

---

**This review, like all articles on this site or emails written by "Eleanor White" is my opinion. As such it is not inherently factual, rather, these opinions are based on a 59-year-old engineer who has worked in electric power distribution, mechanical stress analysis, computer science, and has been a ham radio operator since age 12. I am not an expert in anything, but I understand enough technology to claim "informed guess" status.**

---

**[beardzoh.htm](#) is text from the "Zoh Show" in which some of Lt. Col. Bearden's theories are explained with much less jargon than the Excalibur Briefing book.**

### INTRODUCTION

Lt. Col. Thomas E. Bearden is a prolific writer and former electronic weapons researcher for the United States Air Force. In 1985, he appeared in a CNN "Special Assignment" segment discussing the then state of the art. That video segment is available from CNN, below:

For a \$55 US copy of this tape call CNN at 404-827-1089 and ask for R2501 #13, R2747 #33, R2501 #15, R2501-#17. It runs about 20 min.

Some of Lt. Col. Bearden's other books are:

Bearden, Thomas E. (Lt. Col.): An Approach to Understanding Psychotronics, (AD-A027866) Defense Documentation Center, Washington, DC, 1976.

Bearden, Thomas E. (Lt. Col.): Excalibur Briefing, Strawberry Hill Press/Walnut Hill Books, San Francisco, 1980.

Bearden, Thomas E. (Lt. Col.): Gravitobiology, 1991.

Bearden, Thomas E. (Lt. Col.): The New Tesla Electromagnetics and the Secrets of Electrical Free Energy, Tesla Book Co., Millbrae, CA, 1983.

Bearden, Thomas E. (Lt. Col.): Solutions to Tesla's Secrets and the Soviet Tesla Weapons, Tesla Book Co., Millbrae, CA, 1983.

## THE BOOK

My copy of Excalibur Briefing, second edition, revised and expanded, 1988, carries ISBN # 0-914119-36-2, is published by:

TESLA BOOK COMPANY  
P.O. Box 121873  
Chula Vista CA  
USA 91912  
1-800-398-2056  
teslabook.com

This review is based on reading during a 12-hour guard shift of about half the book's contents, with sections picked according to the table of contents. The criterion to select was those sections which seemed to deal with the situation of involuntary "mind control" experimentees.

First, as one might expect, I found this book to have three different aspects:

- Negative points (my opinion)
- Value neutral and sometimes questionable points (my opinion)
- Positive, promising points (my opinion)

This review then will present those three main areas here for the reader. I have tried to describe the book using as little technical jargon as possible.

At the very end, I try to summarize some of Bearden's main points as may apply to his theory and US, and remotely possibly, some of our own experiments.

## NEGATIVE POINTS

1. This book is HEAVY, slow reading at best. If you are looking for something like, say, the Time-Life book series, this is not it. It CANNOT stand alone as proof of anything, as assertions like Lt. Col. Bearden's are quite rare. However, it can be used, to whatever extent Lt. Col. Bearden's qualifications will buy you, as a degree of backup for your experiences.

Unfortunately, my copy does not have an "About the Author" section.

I found most of the immediately useful stuff in the first 60 or so pages, and the last 60 or so pages. The middle didn't seem too promising, but will be read as time allows. (Additions will be made to this page and sent out by email.)

2. The book is rife with jargon that anyone without some heavy duty credentials in modern physics can fully understand. However, there is enough lay-person understandable text that someone without a physics degree can still gain something from reading the book.
3. The subtitle is "Explaining Paranormal Phenomena". From the text inside the actual book, it is clear that he feels SOME paranormal phenomena can be explained by natural but advanced physics. In my opinion, he has NOT explained all paranormal phenomena, or UFO incidents, which are too varied and numerous to be explained by Lt. Col. Bearden's theories.

As involuntary experimentees, it is urgent that we be on guard against sophisticated disinformation campaigns, as explained in an autumn 2000 email titled "Disinfo tactics predictions". That email outlined some really serious disinfo moves which our tormentors will probably use, as their exposure draws near:

- "You are all suffering from geological piezo-electric or electromagnetic sensitivity and effects"
- "You are all suffering from sensitivity to electric power lines and power wiring in your homes"
- Rigged demonstrations, classified equipment covertly used to make the demos work to our discredit, such as:
  - a. Exposure to 60 Hz throws us, at a demontstration, into convulsions and other visible effects, while non-victims are left untouched during the allegedly same conditions
  - b. Fake demo equipment to mislead the public into thinking, for example, that conventional ultrasound can "see through walls" and that nothing more sophisticated is in use, while in fact, the classified viewing systems are driving the demo images.

So I am not thrilled with the subtitle, "Explaining Parnormal Phenomena" since discreditation of our torment, and bona fide paranormal phenomena, could be attempted with books like this.

#### VALUE NEUTRAL AND/OR QUESTIONABLE POINTS

1. Lt. Col. Bearden makes some extensive claims which may be true, but in my opinion, can overshadow the good points. Examples:
  - That the Russians (Soviets when this book was written) have fully developed complex sophisticated weaponry, in the form of their "Woodpecker Signal" transmitters as of 1988, which can instantaneously
    - a. Cause widespread disease in their "enemies" world wide including viral diseases like AIDS using electromagnetic signals alone
    - b. Cause immunity to their own (Russian) citizens
    - c. Other equally powerful anti-missile capabilities

He may be right, but all I'm saying is that such claims may turn off readers to his more positive aspects. I have trouble believing that viruses can be generated using electromagnetic signals for instance.

#### POSITIVE, PROMISING POINTS

For me, the most promising points of this book are the names of alleged devices which apparently tap into "hyperspace", which is a word for all the stuff we can't see or detect around us with our senses and unclassified equipment as of the year 2000. For whatever respect Lt. Col. Bearden is

due, this book powerfully backs up the existence of classified weapons which use a brand new type of physics.

I'd like to comment though, that when I was an engineering undergrad in the early 60s, "hyperspace" was routinely discussed by physics majors who shared some of our courses, especially math courses. It is not a new term. This new "Superstring Theory" of the universe has made "hyperspace" a much more frequently quoted term.

Additionally, we have one quiet, saintly gal in our group, Blanche Chavoustie, formerly of Aches-MC, who is both an MKULTRA institutional kidnap and implant victim, and continues to be dosed with advanced electronic harassment. Blanche has more VISIBLE phenomena that anyone else I've heard from. Without going into details here, this book backs up her reports AND PHOTOS of 'strange lights', sometimes visible to her, sometimes only on camera.

Bearden's book begins with his explanation of mysterious lights in Washington Township, Morris County, New Jersey, which seem to behave in the same elusive manner as "Blanche's beams". In the late 1970s, these lights were investigated by a group set up for the purpose called "Vestigia", P.O. Box 1183, Perth Amboy NJ 08861. Some associated names are Robert E. Jones, James McGrath, and Bill Wagner.

What is positive about Lt. Col. Bearden's detailed explanation at the beginning of this book is that IT LAYS THE FOUNDATION FOR THE EXISTENCE OF *EQUIPMENT* WHICH CAN PRODUCE EXOTIC EFFECTS. As we all can appreciate, proving existence of EQUIPMENT is exactly the backup we need. All we have to do is guard against disinformation which simplifies the equipment down to "geo-electromagnetic waves" or "piezo-electric waves" or "power line sensitivity." Double-edged sword, all the way.

For me particularly, I'm very glad that this "foundation" finally brings "hyperspace" or, as Lt. Col. Bearden says more often, "hyperspatial" principles to light. This should help the folks who are convinced the entire mind control issue comprises just microwave, acoustics, and electromagnetic implants. The spending of life savings on shielding which cannot deal with the more powerful "hyperspatial" equipment is a tragic waste.

Let me give you a couple of quotes to illustrate this:

- a. I've had the "squeaky hinge" trick, in which a normally functioning hinge suddenly binds so tightly it can barely be moved, and does so with loud snaps as if the two halves are being pressed together with a huge force. (Especially leaving or entering my apt.)

Foreword: "...we could instantly amplify the gravitational force between two electrons by a factor of 1,042 [!] With such a gravitational force amplification factor, our altered "electrical" circuits could actually become powerful *electrogravitational* circuits."

Shades of remote object manipulation, anyone?

- b. Foreword: "Thus I make no bones about it; we have a new physics in the offing."
- c. Page 165: "With psychotronics, it is quite possible to extinguish electrical currents flowing in a circuit, or in the nervous system of a biological organism."

\*\* DEVICES. The book mentions some devices which, if an actual device, high quality documentation, or witnesses/inventors/family members could be found, would DRAMATICALLY move our cause ahead. But let me explain that these devices are NOT described as using advanced psychotronics.

Lt. Col. Bearden's point in including them in his book is that they represent "miraculous" devices that appear miraculous because they tap into the "hyperspace" and "scalar" realm. Lt. Col. Bearden uses them to back up his own theories on how "this" worldly fields relate to "other" dimensional fields. Remember his entire point is to describe the "new physics" which his theories describe and in my opinion, are what is causing US so much grief:

1. The Moray Radiant Energy Device (start page 54):

"In the early 1900s, Dr. T. Henry Moray of Salt Lake City produced his first device to tap energy from the metafrequency oscillations of empty space itself. Eventually, Moray was able to produce a free energy device weighing sixty pounds and producing 50,000 watts of electricity for several hours. Ironically, although he demonstrated his device repeatedly to scientists and engineers, Moray was unable to obtain funding to develop the device further into a usable power station that would produce electrical power on a mass scale."

[snip]

"Once he even took the device several miles out in the country, away from all power lines, to prove that he was not simply tuning in to energy being clandestinely radiated from some other part of his laboratory. Several times he allowed independent investigators to completely disassemble his device and reassemble it, then re-activate it themselves. In all tests, he was successful in demonstrating that the device could produce energy output without any appreciable energy input. According to exhaustive documentation, no one was ever able to prove that the device was fraudulent or that Moray had not accomplished exactly what he claimed."

[snip]

But in the face of all this, the U.S. Patent Office refused to grant Moray a patent, first, because his device used a cold cathode in the tubes (the patent examiner asserted it was common knowledge that a heated cathode was necessary to obtain electrons) and, second, because he failed to identify the source of the energy."

[snip]

"...nonetheless, the patent has still not been issued to this day, although the Morays still keep the patent application current."

>> TIP FOR OUR INVESTIGATORS/RESEARCHERS!

2. The Priore Machine (start page 273):

"The cure for cancer mentioned above is the Priore device in France, which has been curing cancer and other diseases for over a decade, much to the frustration of many members of the French Academy of Sciences.

"Antoine Priore is an Italian-born inventor who escaped from the

Germans in World War II and escaped to France."

[snip]

"...Priore explained consisted of an electromagnetic wave in a magnetic field. Eventually the French Government spent almost three million dollars for the construction of a new, improved Priore machine, because Priore had shown he could cure cancers in laboratory animals with the device.

"In 1964 Professor Robert Courrier, renowned biologist and secretaire-perpetuel of the French Academy of Science, presented some of Priore's results to the Academy. Forty eight cancerous rats had been divided into two groups of twenty four each. One group was set aside without treatment as a control, and the other was divided into two groups of twelve each. One of these subgroups was treated by the Priore machine promptly after cancer grafts, and the other was treated after a lapse of several days.

"Both subgroups were completely cured - the first quickly and the second after more prolonged treatment. All the control rats died in twenty-two to thirty days after grafting.

"The results created a furor and a controversy that have continued to the present day [1988]. Since the first presentation by Courrier, the machine has repeatedly cured leukemia and other forms of cancers in laboratory animals. The controversy seems to have arisen because the French Academicians could not comprehend the working of the new machine, and because the inventor would not reveal how it worked but only how it was built."

>> ANOTHER INVESTIGATIVE LEAD.

3. "Neutrinic wave devices" (start page 263):

Dr. T. Henry Moray again.

"At any rate, neutrinic *longitudinally polarized waves* often arrive at a distant point many times stronger than they were when they left [the transmitter]. T. Henry Moray, for example, built a radio and a sound detector that apparently worked by a version of neutrinic waves, condensed into electromagnetic waves, in his radio-detector apparatus. Dr. Moray tested the radio scores of times between 1930 - 1933, and on several occasions received broadcasts from Admiral Byrd's party in the Antarctic. Even when powerful, ordinary radios could receive nothing from Antarctica because of the severe weather conditions, Moray's little *batteryless* radio brought the broadcasts in, loud and clear, with no static.

"Further, Moray demonstrated a sound pickup device of similar construction that could pick up or zoom in on SOUNDS five miles away. Again the sounds were loud and clear, with none of the distortions of weather conditions and background noise.

"(See T. Henry Moray, The Sea of Energy in Which the Earth Floats, 4th edition, 1960, pp 129, 133 and 143.)"

[snip]

"Tesla in fact patented a capacitive (E-field only) transmission system."

>> ANYONE HAVE ACCESS TO THAT BOOK?

4. Bearden's basic points as to how this all works:

I'm finishing up here by listing quick highlights of Bearden's main points:

- The main idea is that conventional electric, magnetic, and electromagnetic fields CAN EASILY BE TRANSFORMED INTO FAR MORE EXOTIC STUFF IF YOU KNOW HOW.
- In fact, Bearden asserts, the simple day to day process of modulation, like AM and FM, actually results in things happening in hyperspace - and that this is necessary for modulation to work at all.
- You can transform conventional electromagnetic waves into more exotic stuff by "locking together perfectly two OPPOSING EM waves".

What he is talking about is like the difference between a chemical COMPOUND and a MIXTURE. In the mixture, the two or more components still retain their original properties. In a compound, the original individual properties are given up to yield something with entirely new properties.

His "locking together of two opposed waves" turns electromagnetic signals into "electrogravitational" signals.

One place you see this take physical shape is web articles talking about "generating scalars" by simply driving a pair of concentrically wound coils with the same alternating current. The idea is that this locks them together, generating a scalar.

Remains to be shown, in my opinion. I tried it once, and had the coils touching my head. Nothing.

But just as some chemical compounds have to be forced to combine using a suitable catalyst, I strongly suspect there is a way and we just need to find it.

- Modulation is equivalent to taking the [calculus] derivative of the modulating waveform.

To illustrate this, he gives a block diagram (not a schematic) of an improved "Flanagan Neurophone", in which the device is supposed to develop signals that use "hyperspace" to reach into the mind, even though the signals themselves, if simply played to a speaker, would sound like static. (Shades of the Smirnov method of silent hypnosis?)

Bearden claims that this is done like this:

- a. Amplify the music or voice to a high level, then clip all the peaks so you have a low amplitude square wave with all the zero-crossings of the original intact. (Very much like the Joseph Sharp voice to skull device.)

- b. Pass this square wave through a stage which outputs the [calculus] derivative with respect to time.

This gives zero output for the duration of the clipped peaks, with rapidly reversing spikes, once up, once down then back to zero, at each zero crossing.

- c. (This is where, according to Bearden, you get into the realm of hyperspace) Then, pass this train of spikes through a SECOND [calculus] derivative stage.

It is the output of this second derivative stage which forces signal components that make use of hyperspace to penetrate the mind directly.

- d. An electrode on the skull (INSULATED since this is a Neurophone which uses insulated, capacitively coupled pads) and a second at any other point on the body complete the device.

I could go on, but my purpose is only to HIGHLIGHT the book, not reproduce it. I've tried staying away from jargon as much as possible.

The book contains excellent bibliographic references, and to the extent you understand physics, a good glossary at the back.

# Excuses and Manipulations in Mind Control

## Rationalizing Away Torture

- a. **Post-hoc rationalizations.** Most of the rationalizations are of this sort, but it is included as a separate item. Basically a person is selected for torture and surveillance for whatever real reason is involved -- classified work, they are presumed subversive, they are a random experimental subject, etc. -- and then one objective of the surveillance is to come up with plausible lies about why the surveillance was begun in the first place.
- b. **Pretend it is a battle between equals.** Act like this is some struggle between equals, a sporting event, or even a war between two armies. Never express the reality that this is a military and intelligence attack against civilians in their homes using advanced weaponry.
- c. **Demonize the victims.** Pretend the victims were terrible people, who deserve what they got, and from whom the public needs to be protected. Portray domestic repression as a "good" sort of government vigilante action. Choose one or two victims in particular to smear. An individual cannot begin to counter a huge, behind-the-scenes smear campaign -- especially when coupled with torture -- and all the other victims will be smeared by association.
- d. **Compare adult citizens to children.** The paternalistic approach to justifying torture. Claim that these people do not know what is best for them and cannot make their own decisions. If we have to abuse and violate these people it is only tough love. If they demand their basic human rights it only shows how childlike and naive they are.
- e. **This information is too valuable to give up.** The Nazi medical data excuse. This research is necessary for national security, for the medical and psychological data we obtain, and any other information we steal. To protect freedom and uphold the Constitution, some citizens must be summarily enslaved and tortured.
- f. **"She wanted it."** Like the excuse of the rapist, pretend the victims really wanted the "attention" of the mind controllers. This is especially good if Stockholm syndrome can be induced in the victim.
- g. **Medieval doctor syndrome.** Torture and traumatize the victim into a terrible state. Back off the overt harassment a bit. If the victim gets better, claim you cured them. You were only "helping" them all along. ("The lobotomy cured the patient's hyperactivity.")

- h. **Spread the blood around.** The more people who can be made to take part in the crimes, the more support there is for covering them up and continuing them. Spread around the ``spoils" of the torture. Give foreign governments and intelligence agencies some of the data and technology. Encourage the general public to participate in the harassment and torture of the victims.
- i. **Appeal to the status quo.** Point to how things are now. Claim that surely things would be worse if the secret atrocities had not been committed. Present some ludicrous and dubious scenarios that ``might have happened" if the Bill of Rights had stood in the way. (The same sort of approach can be taken to show why the secret crimes cannot possibly be exposed...)
- j. **The victims are only in it for the money.** This absurd claim can aid in turning the public against the victims, and can even sow dissension among the victims. People are always suspicious of their purse-strings, and many are just greedy. This claim ignores the fact the most victims first want the torture to stop, and then want to see some sort of justice done. With the facts out, any claims for compensation can be rationally considered in the open. (Calling compensation for years of torture and abuse ``welfare" is another way to belittle the victims.)
- k. **It's not really that bad.** The current American-style system of political imprisonment and harassment has evolved precisely to evoke that sort of reaction from Americans. As such, it is in many ways a reflection of our society. The system, at the same time, has also evolved to maximize the trauma and terror experienced by the victims. It really is that bad. Victims have to live under constant surveillance for 24 hours a day. They never know when they might be killed or have their brains fried into retardation. They cannot trust their own thoughts because their minds have been repeatedly violated. It is like being a chimpanzee in an aversive conditioning lab with an electrode in the brain. This is carried out in the context of purposely induced trauma and human social ridicule.

## Denying the Problem

- l. **The victims are crazy, the weapons do not exist.** The standard lines. Repeat every step of the way. Put the burden of proof on the victim to explain all the technology developed in secret, black projects, and to explain exactly how the effects they experience each day are being caused. Use techniques that mimic mental illness and counter every claim of harassment with a dismissive ``paranoid schizophrenia." If some weapons are shown to exist, claim that the government never built any such weapons. If the government is shown to possess such weapons, claim that they would never, ever use them in the way that has been alleged.
- m. **Silence the whistleblowers.** Harass them. Destroy their careers. Threaten their families. Make them the next victims.
- n. **``Chomskyize" the whistleblowers.** If someone cannot be intimidated, if they are too well-known, and if their careers cannot be completely ruined, ignore them. That is, *actively* ignore them. If too many of their facts and analyses cannot be refuted, then they are left out of the debate. Everything proceeds as if the person had never said anything.

- o. **Claim, ``the system works."** Repeat this again and again to make it more true. Sure there are some problems, but the system is working. You just need to follow channels, hire lawyers, and lobby for your cause (even if that cause is stopping the torture of American citizens by their government). Some of these things are worth doing, but not because the system works. The system only works to maintain the status quo. In intelligence matters, even more than others, the system is corrupt to the point where it is simply evil. Intelligence agencies routinely lie, even to Congress, which may or may not be aware of it.

## Manipulating and Turning Away From Individual Victims

- p. **Straightforward harassment.** Death threats, threats against family and friends, surveillance, ridicule, attempts to demean, rumormongering. Attacks with secret weapons inside the home, harassment on the street. Psychological warfare attacks, especially with feedback from surveillance. This is a chapter in itself.
- q. **Aww, poor baby.** You went and got yourself tortured. You must have done something to deserve it. This really fits in with the demeaning aspects above, but I've put it here because it illustrates an attitude that extends beyond just the harassers.
- r. **Call the victim naive.** Imply that the harassment is normal, and that the victim should have known that all along. ``The natural order of things" and other such supremacist crap. Everybody knows -- but at the same time it is not happening at all and the victim is crazy.
- s. **If only you hadn't done that!** Imply that help is on the way, and that you have the power to aid the victim. Build up the sense that help is just around the corner. Watch the victim, and when they do something you want to train them out of, cry, ``If only you hadn't done that!" That is, no help will be forthcoming, and now it is the victim's fault. This works well with good cop/bad cop routines. It also works well in conjunction with other harassment. If the victim is really desperate, traumatized, and in fear for their life it can work over and over again.
- t. **If only you would do this...** If only the victim would modify his or her life in the prescribed way, then the harassment would stop or the rescuers could help. This is direct behavior modification: Only by conforming and following orders can you be free. Once you change one thing, there is always another. Later on, the ``rescuers" may say, ``We cannot help you, but aren't you so much better off for following our directions?" The fact that you cooperated with harassers posing as rescuers may be used to imply that you consented to the harassment.
- u. **The harassers need to save face.** This is used to get victims to back off from their complaints, and to get activists to tone down their activities. The claim is that somehow things will be magically worked out behind the scenes if only the torturers could do it in a face-saving way. The fact that this has not happened in fifty years is not mentioned. It is basically a lie to stall for time, and stonewalling and delay is *the* preferred technique of escaping accountability. I call a Nazi a Nazi.
- v. **You have to wait in line.** The implication is that there is some secret process of justice working behind the scenes, and your turn is coming. You are selfish for

wanting to jump ahead in line! This system is overloaded (which is no excuse, even if such a system did exist) but if you put up with torture for a few more years you may come to the top of the list. See **u** above.

...well worth a visit.

# **The Power of the Presidency**

## **Executive Orders**

**All presidents have the power to establish themselves as dictator!**

**Listed below are some of the executive orders that would accomplish absolute dictatorship:**

EXECUTIVE ORDER 10990 allows the government to take over all modes of transportation and control of highways and seaports.

EXECUTIVE ORDER 10995 allows the government to seize and control the communication media.

EXECUTIVE ORDER 10997 allows the government to take over all electrical power, gas, petroleum, fuels and minerals.

EXECUTIVE ORDER 10998 allows the government to take over all food resources and farms.

EXECUTIVE ORDER 11000 allows the government to mobilize civilians into work brigades under government supervision.

EXECUTIVE ORDER 11001 allows the government to take over all health, education and welfare functions.

EXECUTIVE ORDER 11002 designates the Postmaster General to operate a

national registration of all persons.

EXECUTIVE ORDER 11003 allows the government to take over all airports and aircraft, including commercial aircraft.

EXECUTIVE ORDER 11004 allows the Housing and Finance Authority to relocate communities, build new housing with public funds, designate areas to be abandoned, and establish new locations for populations.

EXECUTIVE ORDER 11005 allows the government to take over railroads, inland waterways and public storage facilities.

EXECUTIVE ORDER 11051 specifies the responsibility of the Office of Emergency Planning and gives authorization to put all Executive Orders into effect in times of increased international tensions and economic or financial crisis.

EXECUTIVE ORDER 11310 grants authority to the Department of Justice to enforce the plans set out in Executive Orders, to institute industrial support, to establish judicial and legislative liaison, to control all aliens, to operate penal and correctional institutions, and to advise and assist the President.

\*\*\*

A Presidential Executive Order, whether Constitutional or not, becomes law simply by its publication in the Federal Registry. **Congress is by-passed.**

**This means that the government may, upon declaration of a state of local or national emergency, seize any of the above, private or otherwise, including manpower.**

# Fact Sheet

## Nonconsensual Experimentation

Cheryl Welsh complained that the U.S. government was conducting an experiment on her without her consent. They were using a highly classified electromagnetic weapon technology. She has been unable to stop this illegal activity.

---

### Background information

- This problem is similar to the radiation experiments. The major difference is that electromagnetic technology is still classified. The National Security Act was used to cover up radiation experiments and now electromagnetic technology experimentation.
- There are many victims alleging that the U.S. government has been conducting experiments on them, some as far back as 1960.
- There are several independent literary sources to explain and confirm these claims. Refer to the sample of attached articles.
- Briefly, electromagnetic technology works on the theory that the mind and body are an electromagnetically mediated biophysics system and electromagnetic signals from outside sources can mimic the mind and body's electromagnetic signals. The super powers and several industrialized countries are developing this technology as anti-personnel weapons.
- Victims are organizing into groups such as the nonprofit "Citizens Against Human Rights Abuse" to stop nonconsensual experimentation. This is a public policy issue that is and will affect the lives of all U.S. citizens.
- The U.S. government cannot inform the public about this classified technology. Therefore a review of available sources of information will help people decide for themselves about the truth of the allegations.

**More information is available upon request.**

U.S. Explores Russian Mind-control Technology  
U.S., Russia Hope to Safeguard Mind-Control Techniques  
by Barbara Opall, Staff writer

## **U.S. Explores Russian Mind-Control Technology**

Washington-The Russian government is perfecting mind-control technology developed in the 1970s that could be used to hone fighting capabilities of friendly forces while demoralizing and disabling opposing troops.

**Known as acoustic psycho-correction, the capability to control minds and alter behavior of civilians and soldiers** may soon be shared with U.S. military, medical and political officials, according to U.S. and Russian sources.

The sources say the Russian government, in the spirit of improved U.S.-Russian relations, is beginning to lift the veil of secrecy surrounding the technology.

The Russian capability, demonstrated in a series of laboratory experiments dating back to the mid-1970s, could be used to suppress riots, control dissidents, demoralize or disable opposing forces and enhance the performance of friendly special operations teams, sources say.

Pioneered by the government-funded Department of Psycho-Correction at the Moscow Medical Academy, acoustic psycho-correction involves the transmission of specific commands via static or white noise bands into the human subconscious without upsetting other intellectual functions. Experts said laboratory demonstrations have shown encouraging results after exposure of less than one minute.

Moreover, decades of research and investment of untold millions of rubles in the process of psycho-correction has produced the ability to alter behavior on willing and unwilling subjects, the experts add.

In an effort to restrict potential misuse of this capability, Russian senior research scientist, diplomats, military officers and officials of the Russian Ministry of Higher Education, Science & Technology Policy are beginning to provide limited demonstrations for their U.S. counterparts.

Further evaluations of key technologies in the United States are being planned, as are discussions aimed at creating a frame-work for bringing the issue under bilateral or multilateral controls, U.S. and Russian sources say.

An undated paper by the Psychor Center, a Moscow-based group affiliated with the Department of Psycho-Correction a Moscow Medical Academy acknowledges the potential (?) of this capability.

## **U.S., Russia Hope to Safeguard Mind-Control Techniques**

Control, From Page 4

The Russian experts, including George Kotov, a former KGB general now serving in a senior government ministry post, present in their report a list of software and hardware associated with their psycho-correction program that could be procured for as little as \$80,000.

“As far as it has become possible to probe and correct psychic contents of human beings despite their will and consciousness by instrumental means; results having been achieved can get out of { our } control and be used with inhumane purposes of manipulating psyche,” the paper states.

The Russian authors note that **“World opinion is not ready for dealing appropriately with the problems coming from the possibility of direct access to the human mind.”** Therefore, the Russian authors have proposed a bilateral Center for Psycho-technologies where U.S. and Russian {?} restrict the emerging capabilities.

Janet Morris of the Global Strategy Council, a Washington-based think tank established by Ray Cline, former Central Intelligence Agency deputy director, is a key U.S. liaison between Russian and U.S. officials.

In a Dec. 15 interview, Morris said she and the Richmond, Va-based International Healthline Corp. have briefed senior U.S. intelligence and Army officials about the Russian Capabilities, which Morris said could include hand-held devices for purposes of special operations, crowd control and antipersonnel actions. Healthline Corp. is evaluating Russian health care technologies and will underwrite Russian demonstrations in the United States.

“We talked about using this to screen and prepare special operations personnel for extremely difficult missions and ways in which this could be integrated {?} for psychological operations,” Morris said.

She said Army officials were concerned about the capability being directed against armored systems and personnel through electronic communications links. Ground troops, she said, risk exposure to bone-conducting sound waves that cannot be offset by earplugs or other current protective gear. Morris added that U.S. countermeasures could include sound cancellation, a complex process that involves broadcasting oppositely phased wave forms in precisely matched frequencies.

Major Pete Keating, a U.S. Army spokesman, said senior Army officials had expressed interest in reviewing Russian capabilities but that repeated plans to schedule visits to the former Soviet Union were rejected by Donald Atwood, deputy secretary of defense. Keating said he was unfamiliar with the mind-control technology {?} specific details.

U.S. sources said government officials and leaders from the business and medical communities will consider Russian offers to place the mind-control capability under bilateral controls.

At least one senior U.S. senator, government intelligence officials and the U.S. Army's Office for Operations, Plans and Force Development are interested in reviewing the Russian capabilities, U.S. sources said.

In addition, International Healthline Corp. is planning to bring a team of Russian specialists here within the next couple of months to demonstrate the capability, company President Jim Hovis said in a Dec. 2 interview.

Meanwhile, the U.S. Army's Armament Research, Development & Engineering Center is conducting a one-year study of acoustic beam technology that may mirror some of the effects reported by the Russians.

Army spokesman Bill Har? said Dec 3 the command awaited the one-year study contracted Scientific Applications & Research Associates of Huntington Beach, Calif. Related research being conducted at the Moscow-based Andreev Institute, U.S. and Russian sources said.

Despite the growing interests a capability traditionally reserved for science fiction novels and ?, industry and academic experts, are cautious and skeptical about its potential battlefield use.

"This is not something that strikes me as requiring high-? attention," Raymond Gartho? defense and intelligence analyst at the Washington-based Brookings Institution, said in a De? interview.

Morris contends that the capability has been demonstrated in the laboratory in Russia and should be placed under international restrictions at the earliest possible ?

The Development of New Antipersonnel Weapons  
by Louise Doswald-Beck and Gerald C. Cauderay

NOTE: THIS ARTICLE SHOWS THAT ELECTROMAGNETIC TECHNOLOGY IS AN INTERNATIONAL ISSUE.

I of 27

Introduction

Article 36 of Additional Protocol I of 1977 states that

"In the study, development, acquisition or adoption of a new weapon, means or method of warfare, a High Contracting Party is under an obligation to

17 of 27

resulting injuries is at present, and will be for the foreseeable future, virtually non-existent. The second working group, which will principally comprise psychiatrists and doctors, will study in greater detail the short and long-term effects, both for the individual and for society, of blindness & compared with other injuries typically sustained on the battlefield. The information collected can then be used for a more thorough discussion of the legal and policy implications of the development of these weapons.

#### 5. Directed energy weapons (DEW)

Apart from the anti-personnel laser weapon, which in some respects could also be considered as a directed energy weapon, there are also very special weapons, such as those using electromagnetic waves of different wavelengths and generators of particle beams, which are considered by some experts as extremely efficient potential anti-materiel weapons. Although this particular type of weapon, which requires a considerable energy supply, is unlikely to become operational on the battlefield in the near future, the same cannot be said for weapon systems using beams of electromagnetic waves

18 of 27

or pulses. The effects induced in human beings by electromagnetic waves have been known, albeit imperfectly, for a long time and have been the subject of continuous research. Depending on the frequency used, the emission mode, the energy radiated, and the shape and duration of the pulses used, electromagnetic radiations directed against the human body may produce heat and cause serious burns or even changes in the molecular structure of the tissues they reach.

**Research work in this field has been carried out in almost all industrialized countries, and especially by the great powers, with a view to using these phenomena for anti-materiel or antipersonnel purposes.** Tests have demonstrated that powerful microwave pulses could be used as a weapon in order to put the adversary hors de combat or even kill him. It is possible today to generate a very powerful microwave pulse (e.g., between 150 and 3,000 megahertz), with an energy level of several hundreds of megawatts. Using specially

adapted antenna systems, these generators could in principle transmit over hundreds of metres sufficient energy to cook a meal.

19-20 of 27

However, it is important to mention that the lethal or incapacitating effects which can be expected from weapon systems using this technology can be produced with much lower energy levels. Using the principle of magnetic field concentration, which permits the control of the geometry on the target, by means of antenna systems especially designed for the purpose,

the radiated energy can be concentrated on very small surfaces of the human body, for example the base of the brain where relatively low energy can produce lethal effects. It seems that with currently available technology, serious consideration could be given to the production of such weapon systems, which could have a range of approximately 15 km and could sweep a zone with a series of fast pulses. Unprotected soldiers within this zone could be put hors de combat or killed within a few seconds. Such a weapon could be installed on a truck and would therefore be easily transportable.

**In spite of the rarity of publications on this subject, and the fact tht it is usually strictly classified information, research undertaken in this field seems to have demonstrated that very small amounts of electromagnetic radiation could appreciably alter the functions of living cells.** Research work has also revealed that pathological effects close to those induced by highly toxic substances could be produced by electromagnetic radiation even at very low power, especially those using a pulse shape containing a large number of different frequencies. As mentioned earlier, the energy necessary to achieve these results is often much lower than the energy required to induce a significant effect of heat in body tissues.

**Some research seems to have confirmed that low-level electromagnetic fields, modulated to be similar to normal brainwaves could seriously affect brain function.** Experiments with pulsed magnetic f ields carried out in animals have reportedly produced specific effects such such as inducing sleep and triggering anxiety or aggressiveness, depending on the modulation of the frequency used. It is, on the other hand, well known that lethal effects can also be produced by using higher power levels than those used for the experiments on behaviour modification. An anti-personnel weapon based on such biophysical principles could produce similar effects to those of a nerve gas, but would have no secondary effects and leave no lasting trace.

NOTE: MANY DOCUMENTS SUCH AS THIS, SHOW U.S .INVOLVMENT IN ELECTROMAGNETIC TECHNOLOGY

# Biological Process Control

Looking 50 years into the future is extremely easy and, at the same time, exceedingly difficult. Easy, since I will not be around to catch the flak for being very wrong. Difficult, since it is really presumptuous to pretend that you have the vision to see the future. Nonetheless, you asked for it and here goes.

As we look forward to the future, it seems likely that this nation will be involved in multiple conflicts where our military forces increasingly will be placed in situations where the application of the full force capabilities of our military might cannot be applied. We will be involved intimately with hostile populations in situations where the application of non-lethal force will be the tactical or political preference. It appears likely that there are a number of physical agents that might actively, but largely benignly interact or interfere with biological processes in an adversary in a manner that will provide our armed forces the tools to control these adversaries without extensive loss of life or property. These physical agents could include acoustic fields, optical fields, electromagnetic fields, and combinations thereof. This paper will address only the prospect of physical regulation of biological processes using electromagnetic fields.

The literature regarding the interaction of biological processes with electromagnetic fields is growing at a rapid rate. Sources are becoming more available, biomedical instrumentation is improving so that the interactions between biological processes and physical fields can be examined with fewer artifacts, and the principles underlying these interactions are becoming clearer and more amenable to theoretical prediction.

Prior to the mid-21st century, there will be a virtual explosion of knowledge in the field of neuroscience. We will have achieved a clear understanding of how the human brain works, how it really controls the various functions of the body, and how it can be manipulated (both positively and negatively). **One can envision the development of electromagnetic energy sources, the output of which can be pulsed, shaped, and focused, that can couple with the human body in a fashion that will allow one to prevent voluntary muscular movements, control emotions (and thus actions), produce sleep, transmit suggestions, interfere with both short-term and long-term memory, produce an experience set, and delete an experience set. This will open the door for the development of some novel capabilities that can be used in armed conflict, in terrorist/hostage situation, and in training.** New weapons that offer opportunity of control of an adversary without resorting to a lethal solution or to collateral casualties can be developed around this concept. This would offer significant improvements in the capabilities of our special operation forces. Initial experimentation should be focused on the interaction of electromagnetic energy and the neuromuscular junctions involved in voluntary muscle control. Theories need to be developed, modeled, and tested in experimental preparations. Early testing using in vitro cell cultures of neural networks could provide a focus for more definitive intact animal testing. If successful, one could envision a weapon that would render an opponent incapable of taking any meaningful action involving any higher motor skills, (e.g. using weapons, operating tracking systems). The prospect of a weapon to accomplish this when targeted against an individual target is reasonable; the prospect of a weapon effective against a massed force would seem to be more remote. Use of such a device in an enclosed area against multiple targets (hostage situation) may be more difficult than an individual target system, but probably feasible.

**It would also appear possible to create high fidelity speech in the human body, raising the possibility of covert suggestion and psychological direction. When a high power microwave pulse in the gigahertz range strikes the human body, a very small temperature perturbation occurs. This is associated with a sudden expansion of the slightly heated tissue. This expansion is fast enough to produce an acoustic wave. If a pulse stream is used, it should be possible to create an internal acoustic field in the 5-15 kilohertz range, which is audible. Thus, it may be possible to "talk" to selected adversaries in a fashion that would be most disturbing to them.**

In comparison to the discussion in the paragraphs above, the concept of imprinting an experience set is highly speculative, but nonetheless, highly exciting. **Modern electromagnetic scattering theory raised the prospect that ultrashort pulse scattering through the human brain can result in reflected signals that can be used to construct a reliable estimate of the degree of central nervous system arousal. The concept behind this "remote EEG" is to scatter off of action potentials or ensembles of action potentials in major central nervous system tracts.** Assuming we will understand how our skills are imprinted and recalled, it might be possible to take this concept one step further and duplicate the experience set in another individual. The prospect of providing a "been there-done that " knowledge base could provide a revolutionary change in our approach to specialized training. How this can be done or even if it can be done are significant unknowns. The impact of success would boggle the mind!

NOTE: VICTIM'S ALLEGATIONS OF EXPERIMENTATION MATCHES U.S. GOVERNMENT TECHNOLOGY.

Mind Reading Machine Tells Secrets of the Brain  
Sci-Fi Comes True  
March 29th 1976  
by Norman Kempster

NOTE: ELECTROMAGNETIC TECHNOLOGY IS WELL-FUNDED, HIGHLY CLASSIFIED AND GOES BACK TO AT LEAST 1960.

Washington-In a program out of science fiction, the government is developing mind-reading machines that can show, among other things, whether a person is fatigued, puzzled or daydreaming.

If the project lives up to its promise, the machines could be in use in airplane cockpits before the end of this decade to warn a pilot that his mind is wandering and he is failing to perform essential duties.

**Since 1973, a little-known Pentagon agency has been studying ways to plug a computer into an individual's brain waves or electroencephalograph (EEG) signals in the scientist's lexicon.**

**The Advanced Research Projects Agency says the \$1 million-a-year program has passed its initial laboratory tests and is ready for determination of its military uses.**

**Scientist working under agency contracts at the University of Illinois, UCLA, Stanford, Massachusetts Institute of Technology and the University of Rochester and in laboratories other facilities have been able to determine an individual's alertness from his brain waves.** They can tell also how he perceives colors and shapes.

But there may come a day when the EEG will be used to perform more bizarre tasks.

At UCLA, scientists are working on the use of the EEG to control machines. To give it a trivial application, a spiritualist could use the waves to make a table levitate and to give it the serious application envisioned by the Pentagon, a gun could fire by pure cerebral reflex, bypassing the body's motor system.

So far, this work has been conducted solely in the laboratory, with a subject who has electrodes attached to his scalp thinking an object through a maze. Scientists say the maze experiment works, heightening hopes for the project.

Other applications of the EEG may come much sooner. It may be only a matter of time before the machines will be able to read a person's brain waves to determine just what he is thinking.

Within two to five years, the Advanced Research Projects Agency hope to test the EEG-computer hookups in a wide range of military uses ranging from pilot training to interpretation of satellite photos of earth.

In the airplane cockpit it could work like this:

The pilot's brain waves are read by electrodes placed in his radio earphones. A small special-purpose computer scans the peaks and valleys of the EEG to determine what the pilot is concentrating on and what he is ignoring.

If the pilot should intentionally put his plane into a dive, the computer would let it pass. But if he took a potentially hazardous action through inattention, the computer would alert him.

Scientists at the University of Illinois-the lead institution on the project-expect to test the system in Link Trainers within two years and in airplanes within five years. It then might take several years more before the system could be produced in quantity.

George H. Heilmeier, director of the research agency, dropped tantalizing hints about the EEG program in his annual report to Congress. Although he has provided few details, enough has been said about the program to raise some questions.

For example, could these systems be used to read the minds of prisoners of war or to pick the brains of unsuspecting American citizens. Highly unlikely, agency scientists say.

For one thing, the EEG must be individually calibrated. Brain-wave graphs mean different things for different persons. So it is necessary to obtain a baseline graph by having each individual think a specific series of thoughts.

“It is quick and easy to make the calibration but it must be done for each individual.” one scientist explained.

Besides, under present programs, it is necessary to place electrodes on the individual’s head. It does not hurt but it could scarcely be done secretly.

At MIT, however, scientists are studying magnetic brain waves that can produce graphs much like the electrical brain waves now being measured.

Scientists for the research agency say it may be possible to pick up magnetic waves a foot or two from the subject’s head, perhaps by placing a receiver in the back of a chair.

Could these waves be projected over distances greater than a few feet?

“We are now talking about a foot or several feet,” one scientist said. “But the research agency has a pretty good idea of what it could be doing in the 1980s.

At the University of Illinois, the research is concentrating on two possible applications--as an aid to pilots and as help for teachers.

The scientists assume that the aircraft of tomorrow will be even more automated than those of today. This means the pilot will have to make numerous decisions about the use of equipment under his command.

The research agency said the objective of the brain-wave research was to provide a system to help the pilot when he needed it and leave him alone when he did not.

Another possible application of the new technology is to give a pilot a preflight checkout. The researchers think that relatively soon they will be able to determine if anxiety or fatigue is likely to impair a flyer’s effectiveness.

In the classroom, the EEG can discover how a student learns and when he is most likely to learn. It can also advise teachers about the best way to teach more to the student.

For instance, a student taking a multiple-choice test now can be graded only right or wrong. If he misses a question, the teacher can increase the emphasis on the subject so he will get it right the next time.

But scientists for the research agency believe that within two years or so a student can be given a multiple-choice test while hooked into an EEG machine. The machine can tell the difference between a ‘right’ answer based on knowledge and one that was merely a lucky guess. It can tell also if a student was dead certain about an answer that proved to be wrong-a result that calls for the greatest attention from the teacher to end the misunderstanding.

The research agency is interested in the way the EEG can be used to improve computer-based teaching programs. at present, the agency’s researchers say, computer lesson plans can be set up only on a trial and error basis.

The agency expects an EEG hookup to show which lessons are effective and which are not.

At Stanford, scientists are studying EEG charts to determine the part of the brain that is in use when persons are most successful in remembering pictures or graphs.

In theory, everyone has “photographic memory” some of the time. If it can be determined when a person is most likely to remember the details of a picture, it should help in interpretation of photo reconnaissance.

Interpretation of satellite photos involves the quick recognition of changes in a pattern from one day to the next. Scientists for the research agency say that, if the Stanford project is successful, technicians can be shown the photos only when their brains are most receptive.

At the nearby Stanford Research Institute, a private firm previously associated with the university, scientists are testing a theory that the brain’s two hemispheres perform separate functions

The work of an air traffic controller, for instance, may be governed entirely by one of the brain’s hemispheres. By attaching several controllers to EEG machines, it is possible to direct the work to the controller whose brain is most ready to handle it at any particular time.

Mind-Altering Microwaves  
Soviets Studying Invisible Ray  
November 22, 1976

NOTE: SEVERAL INDUSTRIALIZED COUNTRIES ARE DEVELOPING  
ELECTROMAGNETIC TECHNOLOGY FOR ANT-PERSONNEL USE.

Mind-Altering Microwaves  
Soviets Studying Invisible Ray

**A newly declassified U.S. Defense Intelligence Agency report say-extensive Soviet research into microwaves might lead to methods of causing disoriented human behavior, nerve disorders or even heart attacks.** “Soviet scientists are fully aware of the biological effects of the low-level microwave radiation which might have offensive weapons application,” say the report, based on an analysis of experiments conducted in the Soviet Union and Eastern Europe.

According to the study, this research work suggests the potential for the development of a number of antipersonnel applications.”

Microwave beams are the electronic basis of radar and are widely used for relaying long distance telephone calls. Other common sources of microwaves include television transmitters.

A copy of the study was provided by the agency to the Associated Press in response to a request under the Freedom of Information Act. The Pentagon agency refused to release some portions of the study, saying they remain classified on national security grounds.

The report made no direct mention of the Soviet microwave bombardment of the U.S. Embassy in Moscow where despite strong American protests the radiation continues, though at reduced levels.

Up to now, the view most widely accepted among State Department officials in Washington has been that the Soviets appear to be using the microwave beams to foil sophisticated U.S. electronic intelligence gathering equipment at the embassy.

The State Department issued an administrative source on Nov. 12 declaring Moscow “an unhealthy post,” but no link was officially drawn between this move and the radiation situation. Department spokesmen insist that medical tests have found no adverse health effects attributable to the microwaves.

The Soviets have denied beaming any radiation at the embassy, contending that the microwaves are simply part of the normal background radiation found in any major city.

The Pentagon agency’s report, distributed within the government last March said that biological effects which could alter anti-personnel uses is the phenomenon known as **microwave hearing**.

**“Sounds and possibly even words which appear to be originating intracranially (within the head) can be induced by signal modulation at very low average power densities,”** the study said. It added that “combinations of frequencies and other signal characteristics to produce other neurological effects may be feasible in several years.”

The report concluded that Soviet research in this area has great potential for development into a system for disorienting or disrupting the behavior patterns of military or diplomatic personnel. It could be used equally as well as an interrogation tool.

...Soviets have also studied various changes in body chemistry and functioning of the brain resulting from exposure to microwaves and other frequencies of electromagnetic radiation.

One physiological effect which has been demonstrated is heart seizure. It said that this has been accomplished experimentally in frogs by synchronizing the pulses of a microwave signal with the animals heart beat and beaming the radiation at the chest area.

The document added that a frequency probably could be found which would provide sufficient penetration of the chest wall of humans to accomplish the same effect-heart attacks.

The report said that another potential antipersonnel use. ...microwaves could be used to effect the blood-brain barrier, which regulates the exchange of vital substances between brain cells and the circulatory system.

More Evidence of human radiation...

by Les Blumenthal

NOTE: THE U.S. GOVERNMENT CANNOT REVEAL CLASSIFIED INFORMATION BECAUSE OF THE NATIONAL SECURITY ACT. THERE IS NO EFFECTIVE GOVERNMENT MONITORING SYSTEM TO PREVENT RADIATION AND NOW ELECTROMAGNETIC EXPERIMENTS.

A presidential commission says it has, at least, circumstantial evidence the CIA engaged in Cold War human radiation experiments, but the agency steadfastly denies it had any involvement.

The experiments represent one of the darkest sides of the Cold War, and the secrets have been, and continue to be, closely held behind the veil of national security.

The committee, appointed by President Clinton earlier this year to report on the experiments and make possible recommendations on the thorny issue of compensation, asked half a dozen or so government agencies to review millions of documents dating back to the 1940s.

In addition to the CIA, the Department of Defense, the Department of Energy, as keeper of Atomic Energy Commission documents, the Department of Health and Human Services, the Department of Veterans Affairs and the National Aeronautics and Space Administration all searched their files. A sketchy picture of their involvement in the experiments has begun to emerge.

The committee, in a report marking the halfway point of its year-long effort, said it has discovered human radiation experiments may have been far more widespread than originally thought.

A 1986 congressional study, considered the most exhaustive review to date, found evidence of dozens of experiments, and according to estimates earlier this year, about 1,000 people or so were involved.

The committee, however, has found firm evidence of about 400 experiments and fragmentary evidence of an additional 100. Up to 23,000 people may have been involved.

In addition, the committee has evidence intentional radiation releases may have numbered in the hundreds rather than the 13 previously thought. Whether there were more releases at the Hanford Nuclear Reservation in Washington state than just the infamous Green Run of 1949 remains unclear. The committee has asked the departments for more information on Hanford as it prepares for a Nov. 21 meeting in Spokane.

Classified information

Much of the information on the intentional releases remains classified, and the committee remains uncertain whether there will be public access to it. Even though the releases are

thought to date back 30,40 or 50 years, the departments cite national security in denying information to the committee.

**The CIA, with its black budget and cloak-and-dagger image, was assumed to have been deeply involved in the radiation experiments.**

**The agency, however, said no.**

**“To date, CIA has found no records or other information indicating that it conducted or sponsored human radiation experiments,” the committee said in its interim report.**

**...The committee, however, said it has evidence CIA officers took part in Pentagon groups in which human radiation experiments were discussed and planned.**

During the 1950s, the CIA conducted an “extensive” human experimentation program to find ways to control behavior using drugs, psychological methods and other means.

...But some of the documents unearthed by the advisory committee hint at more sinister projects.

A 1963 CIA Inspector General report said MKULTRA was “concerned with research and development of chemical, biological and radiological materials capable of employment in clandestine operations...

## **A Note To Family and Friends of Victims**

Current links:

<http://www.stopcovertwar.com/family.html>

<http://www.stopcovertwar.com/couples.html>

Note: The "Covert War" spoken about on the above link is the selective but growing targetted harassment of citizens by advanced technology and corrupt justice systems around the world, including the U.S. and Canada. Although we do not have "courtroom quality" proof, it appears that this current-day [MKULTRA](#)-like programme is being carried on by what we call the "New World Order". The ["New World Order"](#) was spoken about when George Bush (Seniour) was asked about it by a reporter. His reply was: "Oh ... that's nothing to worry about. Next question." Our feeling is that the NWO is behind this covert war, and the motive is most likely world domination.

If above links are broken

# A Word About Friends and Family

They won't listen, read, or question authority.

Incredibly, many victims report even their friends and family members have turned perp. Since no one has been able to get the perps to talk about their activities, it is not known how those we once thought we could trust with our very lives could be "turned" to do such evil. However, this sad fact has caused many targeted individuals to re-define the word "family".

The perps have an infinite number of ways to "turn" a person. Those of us who have had close family ties in the past will always choose to believe threats and coercion were used on our family members to get them to co-operate.

Some survivors believe their family members would rather sacrifice them to the evil entity rather than spend the time it takes to listen to the crimes being perpetrated on them. It just takes too much time and effort to read and listen to find out the truth, thus the victim simply becomes expendable. So friend and family just hand the victim over to the evil Devil worshipping crooks who murder them quietly day by day.

That's how it happens. They won't listen, they won't read, and the perps have programmed them to believe the victim is a mental case. Family members probably think that by turning the victim over to the ghouls they will avoid the same fate. And they will...for a while. But victims can take some comfort in knowing the turncoats will ultimately become targets of the same tactics and directed energy weapons (DEW). There have been many reports from bewildered victims, wondering why people who co-operate with the perps become targets themselves. Why did the perps turn DEW on the very people who were helping them? It has been reported to us that these once loyal family (and friends) who co-operated so well soon find their lives full of perp instigated problems. Multiple Sclerosis, Fibromyalgia, Lupus, insomnia, weight problems, digestive problems, troubles in personal relationships, failures in business and investments, etc. We have witnessed this also. It doesn't seem to matter how well the new turned perps co-operate, they also become victims, and they stay in denial longer, perhaps indefinitely.

The male head of household is usually the family member to be targeted and "turned" into a perp, although every family member will be targeted eventually. The perps will first try to smear the victim's reputation. If this is not successful, they will send an agent provocateur to influence the would be perp. This may be somewhat effective, although just a precursor to what is to follow. Eventually, what is known as a "handler" will be provided, with extensive training in mind control. We have seen one case where two handlers were required. The targeted family member was a responsible male head of household who always put his family first. He spent time with his children at every opportunity, his siblings were a joy to him, he loved talking on the phone with his cousin. Then two "handlers" were assigned to control him.

Within a year, they had him totally controlled. He no longer seemed to care about his family at all. Just didn't have the time anymore. His handlers made sure he had more things to do than he had time for, and changed his attitude toward family. Handlers call this nonconsensual behavior modification and it is accomplished through deceit, silent hypnosis, and drugs designed to make him suggestible. His daily ration of beer greased the wheels, making him easier to control.

Family members stood by helpless as they watched him change from a family oriented man to someone they hardly recognized. Whatever drugs his handlers had given him made his skin red and his hands shake. No amount of talking could get through to him. He flew into a rage over such insignificant things that no one even wanted to try to talk to him about anything that might be controversial. On several occasions, conversations about the weather made him angry. Even his telephone conversations changed. Family members couldn't figure out what had happened to him. Why, they wondered had he changed? What happened to him? His personality had turned 180 degrees. How could this happen?

Some professionals have suggested the beer finally got to him. Truth is, the perps are experts on turning people so they will not care about anything. They can selectively erase memories or even change them. We have reports that a friend of one victim even forgot a near drowning and rescue incident that the victim had performed 25 years before. This friend remembered the incident for 20 years and repeatedly credited the victim with life-saving rescue until the handlers came on the scene, then suddenly, the incident was forgotten and could not be recalled.

Understand that the perps have unlimited resources in the mind control area. MKULTRA never stopped, even though the Congress investigated the program in the seventies. Since that time, the perps have had 25 years of secret experiments to find methods specifically designed to control the public. Splitting up families is the acid test. If family oriented people can be made to participate in hurtful activities toward other family members, then these same methods and devices

will be successful in the perps' overall plan for global slavery. Some victims have even reported the perps caused husbands and wives to lose sexual desire for each other, eventually breaking up marriages.

So the perps are holding all the cards. Basically the public is powerless to stop this evil unless they are willing to sacrifice some of their time to get involved. They will be swept along, never finding out the truth, doomed to whatever fate the perps decide for them. The best anyone can do is to educate themselves and deal with it. Friends and family turn their backs on victims in time of greatest need. Accept this and you will be ahead of the game. The sooner you come out of denial and become involved with other survivors, the less isolated you will be. This means you need to look for support among your fellow victims, and there are plenty of them. All you have to do is find them.

## If you are friend or family

**THINK!**

If this were being done to you, how would you react? Would you attempt to get support from friends and family? Would you complain to the police, the justice department, the FCC? In other words, would you act paranoid?

If this were happening to you, it wouldn't it be justifiable paranoia?

If you are a friend or family member of a victim of Covert War and are genuinely interested in seeking out the truth, if you believe in justice, if you think feuds were started over less than this, do not blindly accept the lies you are being told about your loved one. Do not let the perp "investigators" influence your thinking about your loved one. No matter what kind of badges the perps flash in your face, do not be drawn into their evil scheme. Recognize that these low-life bastards have a hidden agenda and that is to isolate the targeted individual from friends and family, destroy their credibility, break them financially, and drive them to suicide.

If the perps allege your loved one is being investigated, understand that the "investigation" will never end because it was never real in the first place. Recognize that it is a harassment tool and that not everyone accused of a crime is guilty. Accept the fact that neither you nor the victim will ever understand why

this is being done. Nor will you ever know the identity of all the perps involved.

---

---

## When a friend or family member is targeted:

Listen to what they have to say.

Take time to read and educate yourself on the situation.

Refer the "investigators" to your attorney.

### Memo to Field Offices

=====

Page 62:

GOVERNMENT ASSAULTS, BEATINGS, AND KILLINGS: Under the guise of enforcing the law, FBI agents and police officers routinely roughed up 1960s activists and often threatened or injured them. The coordinator of PEN American Center's Freedom to Write Committee recorded the experience of one alternative newspaper:

*Kudzu*, produced in Jackson, Mississippi, served as a major organizational center for the New Left and counterculture in the area. The tenacity of the paper and its allies can be gauged by the fact that by 1968 the newspaper had survived a conviction on obscenity charges, the arrest of salespeople, the confiscation of cameras, and even eviction from its offices. On October 8, 1968, eighteen staff members and supporters of *Kudzu* were attacked and beaten by Jackson deputy sheriffs ... In 1970, *Kudzu* was put under direct surveillance by the FBI. For more than two months FBI agents made daily searches without warrants ... On October 24 and 25, *Kudzu* sponsored a Southern regional conference of the Underground Press Syndicate. The night before the conference the FBI and Jackson detectives searched the *Kudzu* offices twice. During the search, an FBI agent threatened to kill *Kudzu* staffers. On the morning of October 26, FBI agents again searched the offices. That evening local police entered the building, held its eight occupants at gunpoint, produced a bag of marijuana, then arrested them ... A *Kudzu* staff member commented, "The FBI used to be fairly sophisticated, but lately they have broken one of our doors, pointed guns in our faces, told us that 'Punks like you don't have

any rights', and threatened to shoot us on the street if they see us with our hands in our pockets." [166]

Similar violence was used to disperse 1960s demonstrations, with proactive acts by undercover agents often providing a convenient pretext. Southern police attacks on civil rights workers in the early 1960s have been widely publicized, most recently in the film "Eyes on the Prize". Contrary to the impression promoted by the media, however, 1960s brutality against political

protesters was not limited to any one period or region. As progressive momentum surged in the final years of the decade, "Southern justice" spread throughout the country. Unarmed demonstrators were attacked by police and national guardsmen in Ohio (Kent State), Kansas, Wisconsin, Illinois, New York, California and Puerto Rico as well as Mississippi (Jackson State) and North Carolina (Orangeburg). Thousands were beaten and injured. Hundreds were wounded and hospitalized. At least 17 were killed. [167]

Page 82:

MEMO TO FIELD OFFICES

This is not an excerpt from Brian Glick's writing itself. It is, however, an excerpted FBI directive to its field offices, both in Brian Glick's files

and in the FBI Reading Room in Washington DC. Another source of FBI COINTELPRO papers is *COINTELPRO PAPERS: Documents from the FBI's Secret War on Domestic Dissent* (South End Press, 1989). REMEMBER THE FOLLOWING FBI DOCUMENT IS EXCERPTED:

COUNTERINTELLIGENCE PROGRAM  
INTERNAL SECURITY  
DISRUPTION OF THE NEW LEFT  
(COINTELPRO - NEW LEFT)

7/5/68

Bulletin 5/10/68 requested suggestions for Counterintelligence action against the New Left. The replies to the Bureau's request have been analyzed and it is felt that the following suggestions for counterintelligence action can be utilized by all offices:

1. Preparation of a leaflet desgined to counteract the impression that Students for a Democratic Society (SDS) and other minority groups speak for the majority of students at universities. The leaflet should contain photographs of New Left leadership at the respective university. Naturally the most obnoxious pictures should be used.
2. The instigating of or the taking advantage of personal conflicts or animosities existing between New Left leaders.
3. The creating of impressions that certain New Left leaders are informants for the Bureau or other law enforcement agencies.
4. The use of articles from student newspapers and/or the "underground press" to show the depravity of New Left leaders and members. In this connection, articles showing the use of narcotics and free sex are ideal to send to university officials, wealthy donors, members of the legislature and parents of students who are active New Left members.
5. Since the use of marijuana and other narcotics is widespread among members of the New Left, you should be alert to opportunities to have them arrested by local authorities on drug charges ...
6. The drawing up of anonymous letters regarding individuals active in the New Left. These letters should set out their activities and should be sent to their parents, neighbors, and the parents' employers. This could have the effect of forcing the parents to take action.
7. Anonymous letters describing faculty members and graduate assistants in the various institutions of higher learning who are active in New Left matters. The activities and associations of the individual should be set out. Anonymous mailings should be made to university officials, members of the state legislature, Board of Regents, and to the press. Such letters could be signed "A Concerned Alumni" or "A Concerned Taxpayer".
8. Whenever New Left gropus engage in disruptive activities on college campuses, cooperative press contacts should be encouraged to emphasize that the disruptive elements constitute a minority of the students and do not represent the conviction of the majority ...
9. There is a definite hostility among SDS and other New Left groups toward Socialist Workers Party (SWP), the Young Socialist Alliance (YSA), and the Progressive Labor Party (PLP). This hostility should be exploited wherever possible.
10. The field was previously advised that the New Left gropus are attempting to open coffeehouses near military bases in order to influence members of the Armed Forces. Wherever these coffeehouses are, friendly news media should be alerted to them and their purpose. In addition, various drugs such as marijuana, will probably be utilized by individuals running the coffeehouses or frequenting them. Local law enforcement authorities should be promptly advised whenever you receive an indication that this is being done.
11. Consider the use of cartoons, photographs, and anonymous letters which will have the effect of ridiculing the New Left. Ridicule is one of the most potent weapons we can use against it.
12. Be alert for opportunities to confuse and disrupt New Left activities

by misinformation. For example, when events are planned, notification that the event has been cancelled or postponed could be sent to various individuals ...

Mystery Clouds

Minneapolis Star Tribune, February 15, 2003

Recently our new radar technology at WCCO-TV and government NEXRAD radar have detected a baffling phenomenon: Skies were crystal clear, yet the radar screen was scribbled with 200-mile-long contrails. The most likely explanation may be "chaff," a release of tiny particles, often used in Air Force military exercises. We have not been able to confirm this, though. In the last 10 days we've tracked these mystery clouds on three or four days, not just here, but also in Boston and south Florida. As soon as we learn more, we'll pass it on to you.

Mobile My-Cast founder Paul Douglas is the WCCO-TV 4WarnSTorm Team's chief meteorologist.

Feds investigate child porn on P2P networks - 65 arrests, 1,000 cases announced 5/14/04 AP Washington "A nationwide probe into child pornography trafficking using Internet file-sharing networks has resulted in 1,000 investigations and at least 65 arrests, federal officials announced Friday. The broader investigation centers on the growing use of "peer-to-peer," or P2P, networks that allow users to connect computers directly with one another to exchange files rather than using traditional Internet servers that are easier to track."

<http://www.msnbc.msn.com/id/4980441/>

this one paragraph fwd from L Moss Sharman More details in pornography case -

Responding to a motion by Stephen W. Thompson's lawyers, a U.S. prosecutor defended the seizure of a "monstrous" cache from the EX-JUDGE'S Shore home. By John Shiffman Inquirer Staff Writer 5/13/04 Camden

"A federal prosecutor said yesterday that a "monstrous collection" of child pornography kept by a former state Superior Court judge had been lawfully seized from his Shore home. In a legal filing, the prosecutor said Stephen W. Thompson's cache of child pornography included "thousands of images of naked or partially naked children engaged in sexually explicit conduct." At one point, the judge kept 20 such images on the laptop computer he used on the bench in Camden County, according to Assistant U.S. Attorney Diana Carrig. From the desktop in his chambers, Carrig said, Thompson e-mailed a Web site that sold child pornography and downloaded information from a "travel sex guide" site.

Thompson is charged with possession of child pornography and traveling to Russia to videotape himself having sex with a teenage boy."

## The Mind Has no Firewall

by Timothy L. Thomas

**"It is completely clear that the state which is first to create such weapons will achieve incomparable superiority."**

-- Major I. Chernishev, Russian Army (1)

The human body, much like a computer, contains myriad data processors.

They include, but are not limited to, the chemical-electrical activity of the brain, heart, and peripheral nervous system, the signals sent from the cortex region of the brain to other parts of our body, the tiny hair cells in the inner ear that process auditory signals, and the light-sensitive retina and cornea of the eye that process visual activity. (2) **We are on the threshold of an era in which these data processors of the human body may be manipulated or debilitated.**

Examples of unplanned attacks on the body's data-processing capability are well-documented. Strobe lights have been known to cause epileptic seizures. Not long ago in Japan, children watching television cartoons were subjected to pulsating lights that caused seizures in some and made others very sick.

Defending friendly and targetting adversary data-processing capabilities of the body appears to be an area of weakness in the US approach to information warfare theory, a theory oriented heavily toward systems data-processing and designed to attain information dominance on the battlefield. Or so it would appear from information in the open, unclassified press. This US

shortcoming may be a serious one, **since the capabilities to alter the data processing systems of the body already exist.**

A recent edition of US News and World Report (July 7, 1997) highlighted several of these "wonder weapons" (acoustics, microwave, lasers) and noted that **scientists are "searching the electromagnetic and sonic spectrums for wavelengths that can affect human behaviour".(3)**

A recent Russian military article offered a slightly different slant to the problem, declaring that **"humanity stands on the brink of a psychotronic war", with the mind and body as the focus.** That article discussed Russian and international attempts to **control the psycho-physical condition of man** and his decision making processes by the use of VHF-generators, "noiseless cassettes" and other technologies.

An entirely new arsenal of weapons, based on devices designed to introduce subliminal messages or to alter the body's psychological and data processing capabilities, might be used to incapacitate individuals. These weapons aim to control or alter the psyche, or to attack the various sensory and data processing systems of the human organism. In both cases, the goal is to confuse or destroy the signals that normally keep the body in equilibrium.

**This article examines energy-based weapons, psychotronic weapons, and other developments designed to alter the ability of the human body to process stimuli.** One consequence of this assessment is that the way we commonly use the term "information warfare" falls short when the individual soldier, not his equipment, becomes the target of attack.

[... text snipped ...]

**With modification these technological applications [as outlined in the US News and World Report "Wonder Weapons" article, July 7, 1997] can have many uses. Acoustic weapons for example could be adapted for use as acoustic rifles or as acoustic fields that, once established, might protect facilities, assist in hostage rescues, control riots, or clear paths for convoys. These waves, which can penetrate buildings, offer a host of opportunities for military and law enforcement officials. Microwave weapons, by stimulating the peripheral nervous system, can heat up the body, induce epileptic-like seizures, or cause cardiac arrest. Low frequency radiation affects the electrical activity of the brain and can cause flu-like symptoms and nausea. Other projects sought to induce or prevent sleep, or to affect the signal from the motor cortex portion of the brain overriding voluntary muscle movements. The latter are referred to as pulse wave weapons, and the Russian government has reportedly bought 100,000 copies of the "Black Widow" version of them.**

# Floating Frogs

## Magnets help living organisms defy gravity

By CORINNA WU

### Floating Frogs

by Corinna Wu

**(This was demonstrated on both Dan Rather's CBS News and CNN in April of 1997)**

Asked to think of an animal that can fly, most people don't picture a frog. Nonetheless, in April 1997, a team of British and Dutch researchers announced success in levitating a live frog by using a powerful magnet. According to one of the human observers, the frog emerged from the flight unharmed and "happily joined" his fellow frogs in a biology department.

The amusing video image of the frog hovering in midair circulated widely and captured many people's fancy.... [snip]

The seeming ability to defy gravity is what delights most people, but the demonstration highlights a more subtle idea that is often overlooked in everyday life - that many objects considered nonmagnetic do, in fact, possess magnetic properties. The water, proteins, and organic molecules that make up frogs and other living things are *diamagnetic*, which means that in the presence of a magnetic field, they become weakly magnetized in such a way as to oppose the applied field.

*Diamagnetism* is what allowed the researchers to float the frog. Scientists are now looking into this phenomenon to simulate zero gravity and thus provide a low-cost substitute for experiments now possible only in outer space. They plan to tease out how the absence of gravity affects biological systems, especially developing embryos.

[snip]

With the advent of high-temperature superconductors, the magnetic levitation of nonmagnetic material became an easy tabletop demonstration too. A chunk of superconductor can hover above an ordinary refrigerator magnet when cooled to liquid nitrogen temperatures or lower. A superconductor acts as a perfect diamagnet and excludes an applied magnetic field, says Simon Foner, former associate director of the Massachusetts Institute of Technology's Francis Bitter Magnet Laboratory. In effect, electrons within the superconductor move in a way that

generates a field equal and opposite to the applied field. Because superconductors are such good diamagnets, a relatively weak magnetic field is enough to make them float.

Frogs are much poorer diamagnets. In the presence of a magnetic field, the electrons orbiting a frog's atoms generate an opposing field that has only a tiny fraction of the applied field's strength. It therefore takes a stronger applied field combined with a change in magnetic field or gradient, to create enough repulsion to support a frog's weight.

To perform their trick, the researchers - from the University of Nijmegen in the Netherlands, the University of Sao Carlos in Brazil, and the University of Nottingham in England - used a powerful water-cooled solenoid magnet, a cylindrical coil wound from a few hundred turns of wire. Current passing through the wire creates a field whose north-south axis lies along the center of the coil and whose strength varies along the axis.

Placed in the hollow core of the coil, a vertical tube a few inches in diameter, the frog generates a diamagnetic field that could theoretically be detected by a compass, says Nijmegen's Andre Geim.

When the frog is in an area of the magnet where it experiences a large combined effect between the gradient in the applied magnetic field and the field strength, a repulsive force pushes the frog up. At the point where magnetic repulsion and gravity exactly counterbalance each other, the frog floats.

**Even though the magnetic field needed to levitate the frog is much larger than that of a household magnet, it's still low enough to be reproduced easily in a laboratory.** "It takes only 100 times higher fields" than for the superconductor demonstration, says Geim. **The relative ease of levitating a frog** "appeared to be counterintuitive for many, including myself and my colleagues.

[snip]

Geim doesn't consider the floating frogs a "scientific discovery", since **the physics that explains it has been known for years.** The demonstration does show, however, that scientists may not need to leave the ground to see their ideas fly.

# TRUE JUSTICE FIELD OPERATIONS MANUAL

**IMPORTANT: This "spoof manual" describes targets of "true justice" activities having "criminal records." The actual current day target community members do NOT have criminal records. The references to targets having criminal records are SARCASM.**

Rev: June 19, 2008

# OVERVIEW

In earlier times, justice was accomplished in two ways: By way of the courts, and by way of community members for cases in which the courts were not available, or failed to deliver true justice.

During the 20th century, as law enforcement agencies grew and technology made their officers more efficient, community members who attempted to deal out "old fashioned" justice were prevented from doing so.

Unfortunately, there are many offenders who are not dealt true justice by the court system. These offenders are allowed full freedom, and can commit serious offences which the court system is either unable or unwilling to stop. Our communities deserve to have these offenders monitored and neutralized, to prevent them from endangering innocent citizens.

In the latter half of the 20th century, with the quiet cooperation of law enforcement officials who have a keen sense of responsibility to the community, the True Justice system has been forming and is now nation wide. Offenders can no longer move to escape True Justice.

True Justice must remain fully covert, as there are irresponsible members of every community who do not care about the well being of their community and would loudly object to True Justice operations. This need not concern True Justice agents - there are always people who like to spoil the best of any type of crime control activity.

If you are reading this manual, it means you have been observed by your local True Justice organization, and are deemed to have the proper character and strong motivation for serving your community required for this very important work. This is one of the highest compliments anyone can receive, and your community owes you immense gratitude for protecting the citizens.

## I. GENERAL

True Justice operations in general are of the "active surveillance" type. Passive surveillance is watching a target covertly, to obtain information about the target. Active surveillance can include information gathering, but it includes the agent making the target aware they are under surveillance.

Active surveillance is appropriate for True Justice operations, because with the target being aware they are under surveillance, they will realize their former criminal behavior can't be repeated without immediate consequences.

Beyond active surveillance, True Justice agents perform acts to keep the target uncomfortable, around the clock. A target turned over to True Justice has amply demonstrated that they are habitual criminals, but they have been able to avoid

punishment by the court system. True Justice does deal out the punishment appropriate for the type of crime committed by the target.

Although True Justice operations are silently approved of, and covered for by the official justice system, punishment outside the official justice system is seen by citizens who do not have a strong sense of right and wrong as criminal in nature.

True Justice agents must take great care that each and every act of punishment is DENIABLE. This means that if the target should complain to police, any other officials, or friends, neighbours, family members, or doctors, the nature of the punishment must be seen as the target's "overactive imagination" or better yet, an indication the target is mentally ill. True Justice has worked for years to recruit the medical establishment in helping maintain deniability, and today, most targets are immediately labelled as mentally ill and often forced on to antipsychotic medication when they complain.

But True Justice agents must still do their part to skilfully perform acts of punishment so almost anyone the target complains to will deny a crime against the target has taken place. As a True Justice agent, you will be trained in how to do this.

True Justice has been blessed with advanced technology which enables heavy punishment at times the target is in their home, silently, through walls, and this is very deniable. True Justice agents must pass their initial training and demonstrate a high level of commitment to maintaining community safety, and the ability to operate deniably, before they will be considered for advanced electronic punishment training. Electronic punishment training is beyond the scope of this manual.

The True Justice organization is very fortunate in that we have been able to recruit top specialists to back up field operations people. Psychologists are key to finding ways to maximize feelings of stress and hopelessness in the target, and degrading the target's health, from many individually "minor" invasive punishment acts. Technicians in all fields - telecommunications, electric power, building electrical and alarm systems, and utility employees in all fields use their positions to inflict many absolutely "normal-looking" problems to targets on an ongoing basis. And of course, the services of many skilled locksmiths are invaluable in this effort to restore true justice to this contemporary world.

As a True Justice community-based agent (CBA) you will have the privilege of working with a team capable of delivering better justice than the official system.

## II. SURVEILLANCE

Surveillance is the foundation of all True Justice operations. Both community based agent (CBA) visual surveillance and advanced electronic surveillance are used. This chapter will cover only local agent visual surveillance.

Your local lead agent will schedule surveillance watches for each target in that community. Every target will have at least one CBA watching them at all times, even while home and asleep. Each CBA surveillance team will be given a cell phone

number for reporting target actions and movement to the local True Justice Control Center (TJCC.)

Actions to be reported include but are not limited to:

Target turns lights on to start the day

Target uses toilet or shower

Target exits residence

Target drives away

Target arrives at work, or

Target shops or visits any other establishment or location

Target arrives home

Target eats meal, home or restaurant

Target engages in sexual activity

Target turns lights off at end of day

Target turns lights on in middle of night

Target travels out of town

Some of these observations will be performed by the True Justice Electronic Corps (TJEC), but CBAs should attempt to make and report as many detailed observations of target activity as possible. The reason such detail is necessary is that the punishment phase of active surveillance requires that TJCC supervisors customize each punishment action to match the personality of the target, and the need to make each punishment action appear to be "life's normal breaks."

One important punishment function of surveillance is to sensitize the target. Targets are never told they are under surveillance or being punished. Instead, close, active surveillance and other activities, happening far too frequently to be written off as "life's normal breaks," will eventually cause the target to realize they are under surveillance and punishment.

As a community-based agent, you will be given specific instructions on exactly when, where and how to carry out punishment actions. As long as you carry out punishment instructions exactly as given, there is no way the target will be believed if they complain, and you will not be exposed to risk of action by law enforcement.

How well the punishment actions work depends on how accurate and complete your reports are to TJCC.

In many situations, True Justice acquires access to properties or apartments immediately next to the targets' homes or apartments. Because TJEC has through wall surveillance and punishment equipment, they will be reporting target activity to TJCC along with community based agents. In a typical setup, CBAs may be posted in a parked car where the target's home or apartment can be observed overnight, for example.

In this setup, the CBA in the car may be instructed to call, using a walkie-talkie style cell phone, another CBA (or team) waiting or patrolling by car nearby to follow the target, or, you may be assigned to follow the target yourself. You will receive instructions from your local TJCC as to following a target.

Targets in transit may be either covertly or visibly followed. When in doubt, hang back a bit, and contact the TJCC for instructions, as targets in transit can present many unanticipated situations. The TJEC will always have the target's position monitored, so if a target gives the CBA the slip, the TJCC will assign other appropriate community based agents to pick up the target at the earliest opportunity. Be sure to notify TJCC immediately if you lose the target.

When applying the visible following of a target, making the target uncomfortable because of your presence, you will be given instructions as to when to break off the following. Another CBA or CBA team may pick up the visible following, but once you have broken away, advise TJCC that you are clear and ready for the next assignment.

### III. INTERCEPTS

Intercepts are where community-based agents (CBAs) will appear to "just coincidentally" cross paths, on foot, with a target. Once the target has been sensitized to the point of realizing they are under surveillance and punishment, they will recognize, and be made appropriately uncomfortable by, the simple act of multiple CBAs "just happening to" cross paths with them.

Your local True Justice Control Center (TJCC) will instruct you as to how you will be cued to perform an intercept. Often, you will have an on-site supervisor (OSS) position you, and give you hand signals as to when to start your movement to intercept the target. Because targets moving about aren't always totally predictable, the success of CBA intercepts depends heavily on the True Justice Electronics Corps (TJEC) who have means of monitoring the exact whereabouts of every target, and through computer programs, predict exactly when and where a target will be as they move about the community.

Your local OSS has a special means of receiving instant, silent instructions from the TJEC.

Intercepting CBAs may be asked to perform one of the following forms of intercept:

Simple path crossing, requiring the target to take evasive action to avoid collision; multiple CBAs sometimes perform this several times during a single outing by the target

On foot, walking for an extended period on the opposite side of a street from a walking target

Arrival at a place known to be a favourite of the target, and simply occupying that place just as the target is about to arrive (restaurants, parks, public facility seating, even bus seats are examples); sometimes just "hanging out" in such a location at times and places where people don't ordinarily do that

Smoking, coin-jingling, pen clicking, whistling, or toe tapping near the target at a location where the target is known to need to stand, as to wait for a bus, or standing right behind a target at a water fountain

A group, as many as a dozen CBAs, may be assigned to arrive at a store just ahead of a target, and form a queue ahead of the target, spending time buying lottery tickets, to delay the target. This is especially effective when it happens often, and when the target is very tired and eager to get home after work, for example.

Community-based agents may be assigned to leave a next door home or apartment at exactly the same time as the target, repeatedly. Alternatively, a CBA may intercept the target a short way before home and arrive at exactly the same time as the target.

While these may seem like trivial acts, keep in mind that the target will have these "trivial" things happen every single day, and repeated intercepts like these will force the target to always watch for such acts, essentially ensuring the target never "has a nice day." This is the goal of True Justice, to ensure targets deserving of punishment get what they deserve.

Similar intercept operations are performed with vehicles. The TJCC can schedule these every day the target commutes, and both to and from work. Vehicle intercepts are particularly effective when the target sees the same vehicle in an intercept convoy both in the morning and in the evening commute.

(Because vehicle intercepts can be dangerous, CBAs assigned to vehicle intercept duty must successfully complete a special training course prior to actual assignment.)

Here are some examples of vehicle intercepts a community-based agent (CBA) can expect to be assigned:

Parking so as to block a target's access to their vehicle, e.g. so close the door(s) can't be opened, and then "disappearing"

Parking so as to prevent a target's leaving a parking area, and then "disappearing"

Parking commercial vehicles often, near a target's home, with something unusual about these vehicles, such as there is no need for that trade, or, just unmarked white vans to make the target think the van is there to conduct surveillance

Simple following, or leading, a short distance, but every day. Doing this both during target commutes and then at other times makes the target very uncomfortable.

Passing a side street stop sign, then stopping an uncomfortable distance into oncoming traffic just as a target is about to arrive at the side street, causing the target to have to slam on the brakes (this requires True Justice Control Center (TJCC) assistance and prompting by walkie talkie style cell phone)

For a CBA vehicle convoy, boxing in the target during a commute, forcing the target to travel at a slower speed than the target wants to travel. In some locations, the TJCC will supply special licence plates to CBA vehicles with short words which have special meaning to the target

For a CBA vehicle convoy, and where the target is at a location (and time) where traffic is normally very sparse, cause heavy traffic, forcing the target to notice

The ultimate vehicle intercept is the staged accident. This can be dangerous and is only assigned to very senior agents. However, it is possible to stage an accident so only the target knows it was staged. This is an excellent means of punishment where a target has committed a serious offence specifically against True Justice. Some targets have been financially ruined this way.

Generally, staged accidents are done in jurisdictions where police strongly support True Justice operations, so that the CBA driver is protected.

## IV. PHYSICAL SABOTAGE

Physical sabotage is an especially effective form of punishment when it is carefully limited to low value items, below the value where police will take the report seriously. For example, burning a target's house down, or even stealing an expensive appliance, would bring official investigators into the picture, so that is not done.

Sabotage producing extreme safety hazards is generally not suitable for True Justice operations, because of the potential for bringing official investigators to an accident scene. So while damaging the brake system of a target's vehicle is not allowed for community-based agents (CBAs), draining some of the oil, transmission fluid or radiator antifreeze are allowed. But not all of it. The goal is to make it look as if the target is negligent in maintaining fluid levels, and generally not causing a catastrophic failure that non-targets might see as sabotage.

It is very important to apply punishment by way of a large number of small value sabotage acts, because that makes it look like the target is forgetful, exaggerating, or in some cases even delusional, if they complain about many cases of small value damage. The target's associates will simply refuse to believe that anyone but the target is responsible.

Sabotage is very important in that it lets the target know they are totally helpless to stop it, and can't even complain about it effectively without appearing mentally ill. True Justice is very fortunate in that some people, hearing about sabotage from a target, will actually believe the target did the sabotage themselves, "to get attention."

Sabotage is applied at the target's home, workplace, and on their vehicle. This requires the assistance of locksmiths and alarm technicians. Your local True Justice Control Center (TJCC) will supply this help, and will bring specialists in from a distance in the case of rural areas.

Here are some examples of sabotage a community-based agent (CBA) may be assigned to carry out:

- Entering a vehicle and changing control and radio settings

- Replacing window washer fluid with water, possibly destroying the system if in winter

- Scratching the paint on a target's vehicle

- Tire sabotage, from removing some air right, up to slashing a sidewall if authorized by TJCC

- Simulating a break in electric window heater strips

- Cutting off the 4-way flasher button

- Removing substantial amounts of oil, transmission fluid or antifreeze but not enough to cause catastrophic failure

- Moving things around inside the vehicle to show the target someone got in

- Unlocking the vehicle and leaving it unlocked, possibly even with door open

- Small cuts to car's upholstery

- Unlocking the target's front or back door and leaving it ajar while the target is away

- Moving furniture or carpets fairly frequently to show the target someone was there

Stealing low value items, especially items like scissors which can be easily misplaced, keeping them until the target replaces the item, then returning the missing item, often in a place the target checked

Stealing important personal papers, especially those which will cost money to replace

Stealing irreplaceable photographs

While the target is at work, remove mail from their box and toss it around

Repeatedly making wall pictures crooked

Setting clocks to the wrong time

Repeatedly dumping consumable supplies (e.g., coffee) to make the target think they are no longer capable of managing their supplies well

Starting small rips in new clothing, which are widened on repeated visits

Rarely, ripping all the crotches out of the target's underwear

Replacing clothing with similar items which are too small for the target

Ironing inside button flaps over, making buttoning the shirt or top difficult

Carefully working the tip of a knife through seams in any air mattress or cushion the target may own, including replacements, on a daily basis

Breaking zippers, perhaps by pulling out a tooth or two

Shoving a knife through the soles of waterproof boots

At work, removing screws from the target's office chair

At work, damaging or destroying (if not extremely obvious) a target's work from a previous day; for example, if a target fixes a computer, the next day, the computer is broken again possibly worse

At work, replacing current copies of computer files with an older copy - particularly serious if a target is a computer programmer

At work, where some employees are or can be recruited to be community-based agents, set up "mistaken deliveries" of heavy goods which block the target's office

At work, if the target is responsible for parts of the operation which can be sabotaged, do so repeatedly just as the target starts eating lunch, or is about to leave for home

At work where the target is responsible for materials but the materials can't be locked up, sabotage or with special permission from the True Justice Control Center (TJCC) steal the material

Thefts have to be carefully considered and authorized by your local TJCC, and unless you have authorization, do not steal. One particularly effective type of theft is to remove small value but often used items from the target's premises. Once the target has been observed purchasing a replacement, the item is returned.

This not only causes the target to question their own sanity, it also forces the target to spend money uselessly, and imposes a feeling of total helplessness on the target.

## V. SABOTAGING THE TARGET'S REPUTATION

Sabotaging the target's reputation - and all that goes with it, such as ability to earn a living, business and personal relationships - is a very special operations category. Newer community-based agents will not be assigned to "engineer" the method, but will assist in passing on "rumors," which are the main means of destroying a target's public image.

"Rumors" consist mainly of the criminal record of the target. However, in order to secure cooperation of specific members of the community to participate in the punishment phase, additional information keyed to appeal to the patriotic or community service sense of such community members may be used as well.

As mentioned earlier, the True Justice organization has many top psychologists and psychiatrists on permanent staff at headquarters, and some in larger population centers. It is their responsibility to design the campaign to destroy the target's reputation.

These people listed below can be approached and given information which will cause them to make the target's association with them uncomfortable, or break off all contact with the target:

Business contacts

Supervisors

Co-workers

Casual social contacts, such as clubs a target may be a member of, or a group who frequent a bar where the target is a patron

Friends

Local fraternal organizations - they are motivated by public service, and are an excellent source of assistance in keeping the target under surveillance, and participating in the punishment phase as well

Store staffs at places the target shops

Target's landlord

Target's neighbors

Tradesmen who are likely to service the target's home, car, or business

Bus drivers on the target's route

Local children

City employees, including emergency medical technicians

Homless shelter staff and residents where applicable

Family members (surprisingly, many are ready to believe negative information)

Especially, personnel at places the target applies for work

How intensely this is done is governed mainly by the need to prevent the target from learning that negative rumours are being spread. The goal is to keep negative information covertly flowing into the community, in such a way that those receiving the information aren't likely to tell the target. One might think that friends and family members would instantly notify the target and side with the target. Fortunately, experience shows that co-opting friends and family is surprisingly easy, once they are informed about the target's criminal record.

The True Justice Headquarters staff have developed techniques which by and large prevent that, but those techniques are beyond the scope of this manual. Suffice to say that it is possible to apply "incentives" which cause even people closest to the target to cooperate. These incentives are applied by specialists from our organization at higher than local level.

For the community level CBA, the work of sabotaging the reputation of the target takes the form of simply carrying out instructions from your True Justice Control Center (TJCC) as to what you say to whom, how, and when.

## VI. DISCREDITING      TRUE      JUSTICE TARGETS

While the powerful silent support of True Justice operations by the justice and psychiatric systems has been sufficient to prevent True Justice targets from informing the public, the area of discrediting targets is an ongoing activity. Like sabotaging the target's reputation, discrediting their public statements, web sites, media appearances, letters to the editor and the like are done under the supervision of psychologists and psychiatrists on True Justice staff.

If a community-based agent (CBA) has a good track record of intelligently carrying out assignments, and has access to a computer, the CBA may apply to the local True Justice Control Center (TJCC) for assignment to discreditation work. Excellent communications skills are required.

Some of the activities CBAs carry out under supervision are:

Monitoring message boards, blogs, and open media like Indymedia for target posts. This is normally done in special shifts and under scheduling and control at a higher level than your local TJCC. This monitoring is assisted by blog scanning software which will detect and instantly flag posts relating to True Justice activities. The CBA doing this work will immediately reply with comments like "Someone isn't taking their medication" or "<target name> has provided absolutely no evidence." The CBA will then report the post to higher level True Justice supervisors for possibly more detailed responses.

Monitoring newspapers in your area for letters to the editor regarding True Justice activities. Most editors and many reporters have been recruited and are willing to assist in keeping the important work of monitoring and neutralizing local criminals quiet, but once in a while, a letter to the editor will slip through. In this case, comments like "Someone isn't taking their medication" are not an appropriate response. Transcribe and forward such a letter to the editor to your supervisor, along with your proposed response. The supervisor may edit your response, and will assist in ensuring your response is printed.

Your supervisor will have staff monitoring upcoming talk show appearances by targets. While most talk show hosts, even those somewhat sympathetic to targets, have received discrediting information and often will not host targets, some targets do manage to get on the air. In this case, your supervisor will assign you to call into the show, and will instruct you as to appropriate things to say, such as rebutting the target's claims, pretending to be a target calling in and making "wacko" statements such as "UFOs are harassing me", or pulling the discussion away from True Justice activities and on to something like "media mind control."

True Justice agents who have excellent persuasive communications skills can be assigned, with careful coaching and preparation from supervisors, to pretend to be a target and get on talk shows known to air targets as the guest. These opportunities are great ways to discredit targets by talking about UFOs, things like black helicopters following you, foil beanies, satellites "parked" just above your home, and perhaps events normally considered "paranormal" like

seeing people appear and disappear. These discrediting topics must be a total surprise to the host, only mentioned after the show is in progress.

CBAs can "casually" describe the "odd behavior" exhibited by the target as a result of around the clock True Justice activities to the target's neighbors. The idea is to focus the neighbors' attention to the target's behavior, hinting that maybe the target is mentally ill. This is easy once the target has developed suspicion that "everyone is out to get" him or her.

It is a special honor for CBAs to be chosen for target discreditation work.

## VII. TRADE-RELATED PUNISHMENT

This section will give some examples of ways community-based agents (CBAs) with specific trades or situations in the community can apply deniable punishment to targets:

Underground utility crews, where the management has been recruited, schedule messy, noisy maintenance at the target's home (or business if the target runs a business.) This can include having the street torn up for extended periods, or repeatedly. Funding for unneeded work is available from True Justice headquarters.

Taxi drivers can delay arriving when called by the target

Bus drivers have leeway, in nasty weather for example, to stop one stop away from a waiting target and wait there for perhaps 5 minutes, ostensibly to "get back on schedule." This can also cause a target to miss connections with the next bus or train. This is especially effective when the target, exposed to bad weather, can see the bus waiting up the street for no apparent reason.

Repair tradespeople can keep "getting it wrong" necessitating many recalls, be late, be messy, over-bill the target, and even damage things which were OK. This is especially effective in the automobile repair trade.

Medical lab technicians can substitute blood samples, or otherwise falsify results making the target appear to have absolutely no reason for their complaints

Police can frequently pull the target over for frivolous reasons

Telephone and cable TV technicians can cause the target to have constant service failures, and when other technicians check out the complaints, no cause will be found.

Telephone technicians can re-route legitimate calls to the target's number in large numbers, and this will cause the target to get very angry with these totally innocent callers

Store staff where the target shops frequently can be instructed to remove items the target is known to need when a target is known to be coming. Store management can stop ordering a target's favorite items.

Restaurants and food delivery services can tell the target they are out of an item known to be a favourite of a target

The key to successful punishment by tradespeople is that while the target is very likely to know they are being punished, these punishment acts must appear to the general public as "life's normal breaks."

## VIII. TARGET'S HOME

Punishing the target at the target's home is essential for effectiveness of True Justice operations. If the target were punished in the community but was allowed sanctuary in their home, the creation of a "prison without walls" would not be complete.

One of the very first things the True Justice Control Center (TJCC) will arrange is for homes or apartments adjacent to the target's home to be occupied by both community-based agents (CBAs) and members of the True Justice Electronic Corps (TJEC.) Operations of the TJEC members are covered in the True Justice Electronic Operations manual.

Because True Justice operations are carried out 24/7 in shifts, homes and apartments which are leased or owned by True Justice staff are not used as dwellings. The lease or deed will bear either an entirely false name, or the name of a senior True Justice staff member whose actual home will be at a different location.

Some adjacent homes or apartments are occupied by neighbors of the target who have offered to cooperate in punishment of the target. The initial contact of neighbors to determine their willingness to cooperate is done by senior staff, and incentives to cooperate are often tendered.

Here are some commonly used punishment activities which are carried out both by CBAs and cooperating neighbors of the target. Activities are rotated among the choices, but at least one of them is applied daily:

Noise. Noise must be of a type which the general public deems "normal." Remember that the goal is to have the target aware they are being punished, but not be able to convince anyone else that is the case. Observe local noise curfews, but plenty of punishment can occur outside noise curfew times. The target must not have easy cause to involve law enforcement. Examples:

Starting a leaf blower, timed precisely when the target attempts to enjoy their yard, or, when TJEC operators cue the CBA that the target is trying to nap.

Loud music from a neighboring home. This is an excellent action, as it is common. Time it so every time the target opens a window the music starts. The timing makes the point it is intentional punishment. TJEC operators can apply music in adjacent apartments with exceptionally powerful bass, directed at the target's unit.

Frequent squealing of tires near the target's home.

In apartments, frequent drilling into a scrap of wood or masonry held against the target's wall, floors or ceiling as if "working." Alternatively, hammering. Especially effective when cued by TJEC operators that the target is attempting to nap.

Tossing golf or tennis balls against the target's home when the target is known to be trying to fall asleep. Ideal for cooperating neighbor children.

Frequent use of sirens near target's home. Many emergency services employees have a strong sense of community service and willingly cooperate in this.

Knocking on the door for frivolous/nonsensical/wrong address reasons. Especially effective when the target is in bed or having a meal.

Trash. Leave trash in the target's yard. Frequently, but TJCC staff will assist in scheduling this so that the target can't quite have a case on which law enforcement will act.

Terrifying the target's pet. This requires entry while the target is away from home for an extended period and must be scheduled by TJCC. True Justice Electronic Corps (TJEC) operators can render a dog passive for safe entry of the community-based agents.

Wounding or killing the target's pet. Rarely used, scheduled when the target has acted in a way so as to deserve special punishment.

Killing domestic animals or wildlife and leaving them on the target's doorstep. Scheduled when the target has acted in a way so as to deserve special punishment.

Where the target owns substantial land, noxious activities can be arranged and built for next to the property. In one case, a dump, an auto race track, and a prison were built adjacent to a target who owned a large farm in an area of natural beauty. While this is rare, it does illustrate True Justice's commitment to delivering punishment to those deserving of it.

Cooperating police departments can visibly watch the target's home. Possibly being parked in front of the home when the target returns, repeatedly.

## IX. OTHER TACTICS

There are other tactics which are not strictly part of the categories discussed so far:

IMPORTANT: Community-based agents (CBAs) are strictly forbidden from adding anyone to the list of targets. Target selection is done by senior True Justice Control Center (TJCC) staff or higher levels.

Punishment of people who side with and help the target. Friends, family members, and citizens who do not place a high value on community safety sometimes help targets. In these very specific cases, TJCC-authorized punishment in the form of individual acts against them is appropriate. The official justice system can arrange for these target sympathizers to be found guilty of crimes, or liable for civil actions, for example. This is important for maintenance of the True Justice system.

Targets' bank accounts can be disrupted in ways which don't give the target a direct cause to involve law enforcement. Examples: A target's account can be changed to a "youth account", or, an overdraft protection feature can be disabled, without notifying the target, by cooperating bank employees.

## CKLN-FM Mind Control Series -- Part 16

---

### Interview with

# Lynne Moss-Sharman

## [ACHES-MC](#) Canada Contact

---

[Back to CKLN Series Table of Contents](#)

---

Producer/Interviewer Wayne Morris:

Good morning. You have tuned into another International Connection for another Sunday, and we are in the midst of a radio series on mind control in Canada and the USA. Last week, we heard an interview with Dr. Stephen Kent talking about ritual abuse allegations against Freemasons. Also as part of CBC's coverage for the ***Making up for Lost Time*** conference/workshop series, put on from November 1994 to June 1995 in Thunder Bay by a group called The Stone Angels. We heard [Peter Tooey](#), a Mason in Thunder Bay respond to allegations of Masonic ritual abuse. Also we heard an interview with [Judy Steed](#) about the subject. Today we are going to hear an interview with Lynne Moss-Sharman. Lynne is the Canada contact for [ACHES-MC](#) (Advocacy Committee for Human Experimentation Survivors - Mind Control) and she was the coordinator for the Making Up For Lost Time conference. We will go to that interview now.

I am on the line now with Lynne Moss-Sharman a survivor of mind control experimentation, and an advocate for other survivors. Welcome to the International Connection Lynne.

Lynne Moss-Sharman:

Thanks Wayne, I am really glad to be speaking here this morning.

Wayne Morris:

I wonder if you could briefly describe for our listeners what had happened to you. I will get into more detail, but just kind of summarize what happened to you.

Lynne Moss-Sharman:

I am a survivor of child mind control experimentation which was funded by the CIA, primarily in the 1950's in Southern Ontario and in Upper State New York. I grew up in Toronto until age 3 on Elm Street and Maria Street near the railway tracks, and then spent the rest of my childhood and adolescence in Hamilton.

Wayne Morris:

Just before we go into more detail about what you went through, I would like to talk about what you are doing now. You are the founder of The Stone Angels support group. I wonder if you could talk about that.

Lynne Moss-Sharman:

The Stone Angels was formed in Thunder Bay in 1993. I had been in therapy myself for quite a long time, and began to come in contact with other survivors of cult ritual abuse at that point, and was able to speak with over sixty adult survivors of ritual cult abuse. Many of them are from Thunder Bay and Northwestern Ontario, but a great number of them had moved here from other cities in the country. There was a great need to begin asking for services to be provided for survivors, and we began producing The Stone Angels Journal in 1993 with Volume 1 of survivors' writings and drawings, and I have just been working on completing Volume 6b on Mind Control In The Modern Age. We essentially began bringing cult ritual abuse to light and that progressed, as we began to hear more from survivors, into the dialogue about the mind control experimentation that had in fact been going on all over the country.

Wayne Morris:

You focused on specific issues with your release of The Stone Angels information package. Maybe we could talk about the different issues that you have released, and what they have focused on.

Lynne Moss-Sharman:

Again, initially it was an overview and personal descriptions of having gone through cult ritual abuse, and then we began to realize that a great percentage of the survivors had also been involved in Masonic cult ritual abuse. Their fathers or their grandfathers were Masons or Shriners, again in different parts of the country, and we started looking much more closely at that because it seemed to be a common thread. Once the Presidential Hearing had been conducted in Washington in 1995 and the survivors of childhood mind control experimentation came forward with their testimony and that became part of the public record -- we were then able to publicly come forward with the information about the mind control experimentation that had been described by certain survivors, and the military connection began to come in there, and again the Masonic was also a common thread. Volume 6a was the first issue that we devoted entirely to mind control in Canada and it gives a bit of an historical perspective from World War II onwards, and Volume 6b brings in more experiences, drawings and documentation by American survivors. It's really curious to see the similarities between the experiences of women and men who were raised in Canada, as Canadian citizens, and those experiences described by USA citizens. It seems that wherever there was an American military base in Canada ... we started looking at NORAD and the DEW Line ... wherever there was an American military base we would then see a clustering of survivors

who had grown up there, if not on the base itself, then as part of the community that was adjacent to a military base.

Wayne Morris:

Can you tell us typically how children are introduced to this sort of thing?

Lynne Moss-Sharman:

There is a certain element of intergenerational cult abuse, but the common denominator again is that usually the father was in one of the armed forces - either Canadian or American - and whether there was a predilection for pedophilia and cult involvement prior to that particular father joining the military is a question that really needs to be answered. Almost all of the survivors - certainly over 90% - describe having been either consciously or wittingly offered up to the cult abuse and then to the mind control experimentation that followed. This wasn't a situation where children were secretly taken away from their parents during the day or on overnight visits or weekend visits elsewhere. There was conscious knowledge by either one or both parents and they were actively involved in making sure the children arrived where they were supposed to arrive. This is especially devastating. There is a really big statement that needs to be made at this point in history as well. When we think of the Third Reich and when we think of Hitler and the Nazis targeting for extermination 'the Other' - what happened following World War II is that the survivors who are coming forward are the generation of children who were offered up by their own families.

Wayne Morris:

This is something that is just so hard to believe - how a parent could offer up their own children to this kind of thing - but I think we have to put things into context here and what, primarily the fathers, have been involved in. You mentioned that very often the father is in one of the various armed forces, and also involved somehow in cults. What kind of cults are participating in this, and you mentioned the Masonic as well? Is the cult part of that structure or does it operate as a separate thing?

Lynne Moss-Sharman:

If we start looking at the people, the men, who are put in positions of power in the military, in the government, in any given municipality - and again say across Canada, and again certainly across the United States - the white male secret society, the Masons, seems to be a prerequisite for having any sort of authority and they have traditionally certainly been involved in the military itself. I believe all but two Presidents of the United States were Masons - Ronald Reagan was inducted into the Scottish Rite in the Oval Office of the White House - and certainly the cults are very secret and they practice behind the scenes, so to speak, in Anglican Churches, Episcopalian Churches, the Mormon Church ... a number of churches have come forward. Research has been conducted by Dr. Stephen Kent, a sociologist at University of Alberta who researches cult practices, deviant religions and it is a focus of his work that the Masons seem to be the secret society who come up over and over again whenever cult practices are disclosed by survivors or investigated by researchers.

Wayne Morris:

I understand you had organized the Making Up For Lost Time conference in Thunder Bay back in 1994, which was really the first conference of its kind - a very important one because of that. What were your experiences organizing that conference, and what did you hope to accomplish?

Lynne Moss-Sharman:

At the time of applying for grant applications to hold Making Up For Lost Time - it was actually a series of three conferences that began in November 1994 and ended in June 1995 - at that point I had come in contact with over sixty survivors of ritual abuse in childhood, just here in Thunder Bay alone. Many of the agencies here in the city had become fairly open about the number of clients they were seeing, and everyone was looking for information. The goal of Making Up For Lost Time was to bring the information and the experiences of survivors and of therapists as well into a community context so that people would be able to receive some education and instruction on how to deal with clients, including children, who were coming in with these problems. Also to put it into the abuse continuum in a sense as well, that this was severe childhood sexual, ritual trauma and that it had to be included in the abuse continuum. In a sense it was a way of making the information available, and to make it safe for people to begin talking about it. It was also really, really essential to bring the survivors together and this was a survivor-driven conference - it wasn't organized by an agency- it wasn't organized by professionals.

Wayne Morris:

What level of community involvement did take place at the conference?

Lynne Moss-Sharman:

We designed the conference so it was appropriate for both Native and non-Native agency workers. We had representation and participation from Beendigen, the Native women's shelter and now women's and men's counselling unit, and they work with children too; the Canadian Mental Health Association; the Children's Aid Society; Ontario College of Physicians and Surgeons; the battered women's shelters here in Thunder Bay - and we actually received our direct sponsorship from Faye Peterson Transition House; representation from Confederation College; the Refugee and Immigrant Women's Office; Family Services Thunder Bay; Ojibway Family Services; Geraldton Mental Health Services; Hoshizaki House - a northwestern Ontario based shelter for battered women; the Indian Friendship Centre; Kenora Sexual Assault Centre; Lakehead Psychiatric Hospital; Lakehead Regional Family Centre; Lakehead University; the London Sexual Assault Centre; the Ojibway Tribal Family Services; Meno Bimahdzewin Child and Family Services; the Ottawa Sexual Assault Support Centre; Oakland Place - Women in Crisis, Algoma; People Allied for Change Through Empowerment, the psychiatric survivors advocacy group in Thunder Bay; the Plummer Hospital Sexual Assault Care Centre in Sault Ste. Marie; Thunder Bay Police; representation from Toronto Rape Crisis Centre; representation from the Wunnemin Health Council which is a band council service group from a reserve that is primarily Ojibway speaking. We had students who volunteered and participated from the Department of Social Work and Psychology, including post graduate, from Lakehead University. Students who volunteered from the Departments of Aboriginal Studies and Social Services at Confederation College. There was also registration from post-graduate studies in psychology from Carleton University and the University of Manitoba in Winnipeg.

Wayne Morris:

So a lot of these groups were looking for information and to sensitize themselves to these issues. Did you get feedback from them afterwards as to what they got out of the conference?

Lynne Moss-Sharman:

I think the people who attended obviously were people who had come across it in practice, and were unable to locate any information or to concretely receive any validation that what they were experiencing wasn't an anomaly, peculiar to their own lack of experience. I think a lot of people who have worked in direct service with children and adolescents and adults, whether it is in addictions or in corrections or in direct crisis counselling - a lot of people have been really quite frightened when clients start to describe what has actually happened to them. And the information is so horrifying, I can't imagine how overwhelming it would be to a worker in a small agency, or a worker in an isolated area to hear their client describe what had been done to them and not really be able to put their hands on any information or have any peer consultation about this. It is certainly a taboo in our society to begin with ... There was a great relief and empowerment and strengthening that came about in the service providers themselves, and a lot of networking began.

Wayne Morris:

And the survivors themselves who attended the conference - how did they feel empowered by the conference?

Lynne Moss-Sharman:

For many of the survivors - and they came from Alberta, Saskatchewan, Manitoba, all over Ontario and one survivor from New Brunswick - for some it was the first time they had ever attended any sort of gathering where they were able to meet other survivors. I think one of the most empowering aspects was that a lot of the material was being presented in an academic, objective way -- survivors came to realize that they weren't alone with their perceptions or their experiences -- but that this issue was being taken seriously by a broader research and service delivery community. Just to be there as a survivor, and to see 40 other women and some of the men who were coming forward at that time was tremendously empowering for survivors. I saw many of them begin to speak for the first time. You take away the element of being "crazy", being isolated ... I saw some of the survivors begin to give material to students who were seeking information. One survivor actually made a videotape of one of her flashbacks which was to be used by three mental health workers out in the region. People began information sharing and they became less fearful for their own safety as well when they realized how many other survivors were out there. There was a great deal of laughter. I have to say that as well. Many survivors are really creative, and very bright people who are excluded in many ways from participating in society at large because they have such a hard time functioning. On that level alone, being able to laugh, and to share, and to speak the same language with other survivors - it's hard to put into words what being able to be understood by other people, other women who have gone through the same thing - how much that means.

Wayne Morris:

I can imagine that survivors who are trying to articulate what happened to them in the general public would be met with incredulousness and would find it very hard to come out and speak about it. Approximately how many survivors did attend the conferences?

Lynne Moss-Sharman:

There were approximately 40 survivors who attended each of the three sessions. I was actually quite amazed at the number of survivors who did attend, but I had seen so much fear, and a lot of it was validated fear. Survivors have ended up in hospital from being stabbed or beaten up, they are threatened and harassed by cult members - it was a very dangerous thing to do - a very courageous act for a survivor to come to a gathering.

Wayne Morris:

Who else did you invite to the conference to speak from the academic world or from the therapist community?

Lynne Moss-Sharman:

The first workshop that was held in November 1994 - the primary presenter at that one was Shirley Turcotte who is a registered clinical consultant and therapist based in Vancouver, B.C. A lot of people know Shirley from the NFB film that she made called "To A Safer Place". Shirley is a survivor herself and a therapist. She was born to a Native father and a non-Native mother in Winnipeg where she was raised, and it was a cult setting. She was used for child pornography as well. Shirley was an extraordinarily dynamic speaker. We also invited at that time, an Elder, Louise Shebagegit from Sabiskong Reserve near Nestor Falls, and Louise was there 24 hours a day throughout the duration of the conference there in the hotel. She was able to act as an Elder, and provide protection and healing for anyone who was having a difficult time or who wanted to seek the guidance of an Elder about it.

When I first called through to Nestor Falls to try and find Louise and ask her if she would come and do this for us, one of her relatives answered the telephone. The message was delivered to Louise, secondhand in a sense, and we asked if she would come and help The Stone Angels at this conference. When I went to pick Louise up at the bus terminal, there she was, having arrived on the Greygoose Bus with her medicine bag and her gym bag with her clothes - and she was really surprised when she met me, because she thought Hell's Angels had invited her to come to Thunder Bay to do a healing! And she gathered up all her courage, and there she was at the bus terminal, ready to act as an Elder and as a spiritual advisor to Hell's Angels, and we had a really good laugh about that one.

I just thought any Elder who was prepared at the drop of a hat to come and work with Hell's Angels had a lot going for her spiritually ...

Then that was followed by the January 1995 portion of Making Up For Lost Time. That was a more involved list of presenters. Judy Steed spoke - she had at that point just released "Our Little Secret: Confronting Child Sexual Abuse in Canada".

Pam Gummer and Ruth Chamberlain-Belagus were the two social workers involved in the Prescott Community Advisory Committee on multi-victim, multi-perpetrator crimes against children, spoke as well. Pam and Ruth had been involved in the case in Prescott where 50

adults were formally charged, and I think about 234 children were rescued from situations where ritual abuse was involved. All of the adults who were charged were found to be guilty. Pam and Ruth, because of their direct family-child agency service orientation, were very, very important to have speak to our community itself. They spoke about the procedures that they had to go through in order to ensure that the children's interests were served - the documentation that they obtained, the testing they had to go through. One thing that really stayed in my mind was that they had to set up a quonset hut for art therapy - they needed a really large facility because there were over 230 children who had been impacted in a multi-generational setting in a very small community.

Another presenter at that conference was Dr. Louise Million. She is a psychologist, and co-author of "Breaking the Silence" - the report on the abuse and torture experiences of First Nations people in residential schools - that report had been commissioned by the Assembly of First Nations.

Another speaker was Dr. Connie Kristiansen, who is a psychology professor at Carleton University in Ottawa, and Connie is a very well known researcher on the source and impact of the supposed false memory syndrome, and the recovered memory movement. Another speaker was Dr. Stephen Kent, a sociologist at the University of Alberta. His presentation was "Deviant Scripturalism and Allegations of Masonic Ritual Abuse". Dr. Kent specializes in primarily research and published writings about ritual practices within the Masonic men's society, and also within the Mormon church because there are many links between those two institutions.

There was a community panel on the Saturday afternoon, "The Ethics of Confidentiality - Who Is The Silence Protecting?" The moderator for the panel was Brenda Small, who is a Cree lawyer from James Bay who teaches in the Aboriginal Law division at Confederation College. Her specialty is the concept of Native or Aboriginal Law as opposed to the laws, the judicial process that is part of our dominant culture. The panel participants were Kerry Bourret, who is a counsellor/ therapist at Family Services Thunder Bay and who has almost ten years experience in working very successfully with cult survivors, trauma survivors, mind control survivors. Also Constable Ken Davies, who is one of the two-person Criminal Investigation Dept. at Thunder Bay Police. He and another officer specialize in the area of cult activity, cult abuse as well.

So that January session was very comprehensive, and what I wanted to do there was to cover every possible aspect - the child aspect ... how agencies could deal with it. The parallels within the First Nations communities - the parallels in the kinds of organized torture and abuse that had taken place in residential schools. The impact and the acceleration of False Memory Syndrome Foundation. The evidence and research documentation about Masonic ritual abuse which is a big problem in this community as in many others in North America, Britain, Australia. And then to have the community panel - we are really fortunate to have some extraordinarily committed and very perceptive and bright professionals working here in the community in Thunder Bay. There are people working here who - I guess people are surprised when they realize the level of research and service that is actually occurring in this very isolated region.

The third and final section of Making Up For Lost Time was a workshop by Alexandra Rogers, who is also a survivor and therapist, based in the United States. Alexandra was raised in a masonic, military cult in the state of Maine and she was a programmer, trained to be a

programmer throughout her childhood. I think that particular conference workshop setting - to have a survivor who has managed to break the programming and escape from the cult, and who is now able to work professionally with survivors and therapists - to break the code for them on how to deal with certain programs that have been indoctrinated in clients - also for survivors to be able to listen to this extraordinary woman who had been through all of the same practices, tortures and abuses, and had actually been a torturer herself - for her to stand up there and talk about the kinds of interventions that had brought her over on the side of being a survivor and not a practitioner or participant any more - it was one of the most powerful things that happened throughout the duration of the three part conference series. Alexandra is 33 years old. Her husband was also there. He is an artist and also a cult survivor who was raised in Toronto, and had formerly been involved in animation production.

This was a really interesting time in Ontario's history. Unbeknownst to us, there were five other communities in the province who were also hosting conferences, workshops or gatherings specifically about ritual abuse. One took place in Kitchener in February, 1995. One in Ottawa in February. One in Belleville in February. Another in Ottawa in March, and another in Kingston in June. So from our first gathering in November, our second in January and the third in June -- in that six to eight month period -- there were 8 or 9 gatherings happening around the province. So what we were doing wasn't happening in isolation - we are not a curiosity of a community. What we were doing was part of a much larger breaking the silence throughout the province of Ontario.

Wayne Morris:

Do you know if any of the other conferences made the links between ritual abuse and mind control experimentation?

Lynne Moss-Sharman:

No, nor did they talk about masonic ritual abuse. I sensed at the time that if we were going to present this information, and if people were going to go to all the trouble of getting to Thunder Bay from other parts of the province, or from other provinces, that it was essential that we encapsulate the information and that we put the whole notion of ritual abuse into a much broader historical context. I know some of the other groups were very fearful of bringing that kind of information forward. We certainly brought the masonic information forward and we paid for that in lots of ways. The mind control experimentation wasn't addressed directly at that time. There were private conversations about it that went on at the gatherings, and actually I think the extent of the mind control experimentation -- coming to know about it -- was a byproduct of advertising - particularly about the masonic connection. I put a few small advertisements in the Globe & Mail, notifications about the upcoming conferences - and just the three or four words describing the masonic connection generated phone calls and letters from survivors across Canada who described themselves as being masonic survivors, living in terror. They were invariably the daughters of Masons, or Scottish Rite or Shriners. They began describing, again from all across Canada, memories of what could only be described as mind control experimentation. Those fragments began to come forward back then in November 1994.

Wayne Morris:

There were some public statements about masonic involvement in ritual abuse in the media, at the time of the conference and shortly afterwards in which they had a chance to respond, and they denied all the allegations that were brought forth. Has there been further responses from the masonic lodge since the conference, or any further communication?

Lynne Moss-Sharman:

There was a really well organized - I can only call it an attack - by the masons when the January portion of the conference was coming to the media's attention and I am going to speak about Thunder Bay, because there was a great deal of media coverage here in the city about it. There was a fax campaign where then Premier Bob Rae received faxes from masons all over the province denouncing what The Stone Angels were doing in Thunder Bay. I had messages left on my answering machine at that point, day after day, from masons and wives of masons in Northwestern Ontario, including a call from the wife of a mason up in Moose Factory and also the publisher of a newspaper in Dryden who refused to print the notice about the conference itself because her husband was a mason. So she chose as publisher and editor of a regional newspaper to not let people know there was such a gathering. There was a public outcry by the masons that they were not allowed to come and attend our conference, and we were very explicit and very clear about masons not being allowed to attend. Registration was closed to survivors, therapists and service providers only -- that's who it was designed for. I received a series of calls from two particular masons over a period of time here in Thunder Bay. One of them was a retired policeman, Peter Tooey, who also went on television denouncing what we were doing. At that point I was fairly naive. I didn't have access at that time to all of the information that was available - primarily USA publications who had also been asking questions about the Masons. So I was operating in a bit of an information vacuum at the time.

I had come across some information (in a library encyclopedia of organizations) stating that the Scottish Rite in the USA funded, out of their charitable donations, research on schizophrenia. I can remember reading that and thinking how curious, how chilling, that the upper echelon within the Masonic secret society would choose to use their charitable monies to fund research on schizophrenia which is very similar in some ways, to the diagnosis of Multiple Personality Disorder or Dissociative Identity Disorder which is displayed by 99% of the survivors of ritual abuse, and certainly by survivors of mind control experimentation. And I very naively asked Mr. Tooey if he was aware that monies were being used for these purposes, and he very proudly told me that " ... well yes ... and here in Thunder Bay all the money that the Scottish Rite raised went to fund a research project on the study of schizophrenia at the University of British Columbia." I found that very frightening, and again, very chilling -- that the money from this community in Northwestern Ontario, raised by this male secret society, would be directly funnelled to a university on the West Coast of Canada. And then I came across another piece of information on a bulletin board out at the University shortly after that - there are research grants available at York University - something called the Rohr Institute which is funded by the Masonic Foundation of Canada which is headquartered in Hamilton, Ontario. It offers \$8,000 and \$35,000 research grants -- the \$35,000 research grant is directly funded by the Scottish Rite Charitable Foundation of Canada through the Rohr Institute for the purpose of offering research grants for studies in the area of "intellectual disability". I don't think this is something that is broadly known either - and I am wondering what kinds of studies are actually being carried out at York University with these monies.

I think I have mentioned to you before, in terms of intellectual disability, all of the survivors with whom I have come in contact, are extremely bright, very very creative women and men. Some of them have two degrees. Some of them have post graduate accreditation as well, and yet the survivors who are able to function on any professional or academic level, or indeed, are even able to support themselves, are in the minority. What was done to us has been disabling to use intellectually, in the extreme.

Wayne Morris:

I would like to talk about [ACHES-MC](#) which you are the Canada contact for. How did this organization come about and what are your goals and demands and activities?

Lynne Moss-Sharman:

ACHES-MC is the Advocacy Committee for Human Experimentation Survivors of Mind Control. In March 1995 the testimony was accepted at the President's Advisory Committee on Human Radiation Experiments in Washington -- the testimony of approximately fifty survivors of child mind control experimentation funded by the CIA was presented to that Committee by Valerie Wolf, a therapist in New Orleans. Valerie incidentally grew up on the military base in North Bay, Ontario and she and her husband both completed undergraduate degrees at McMaster University in Hamilton. Valerie has been a therapist for a number of years in New Orleans where her husband is a psychiatrist on faculty at Tulane University Medical School. Valerie collected the written testimony of survivors of childhood mind control experimentation to bring to the Committee's attention, and two of her clients, Claudia Mullen and Chris Denicola came in person to give oral testimony about their experiences as children who had been subjected to torture, mind control experimentation procedures, and also the organized pedophilia, again with the CIA context.

I was able to attend a conference in Texas in 1996. Valerie, Claudia and Chris were presenters at the conference, and when they described the next thing that had to happen for survivors was the formation of a survivor based advocacy committee who would collect information from as many survivors as possible and bring it to the attention of this Advisory Committee -- so that another Presidential Advisory Committee and a formal commission could be formed to accept the testimony of the mind control survivors in the United States and in Canada. I met other survivors there, and we began sharing experiences and began informally talking about forming such a group. On the last day of that conference I by chance started to talking to Blanche Chavoustie who is also a survivor, she is an adult survivor of mind control experimentation who is originally from upper state New York. She and I just happened to sit down and started talking to each other, and decided that we were going to do whatever was necessary to form a survivors advocacy committee. When each of us returned home, Blanche to Long Island and me to Thunder Bay, we began contacting all the survivors we had been in contact with over the internet or by mail or telephone. We were able to start ACHES-MC. One of the first actions that we did was when five survivors attended a conference at the Holocaust Memorial Museum in Washington, D.C. in May 1996 and they handed out the first information about ACHES-MC at that time. We started a data base. We formally started that a year ago in October of 1996, and we have a website and questionnaires have been sent out to well over a hundred survivors of child mind control experimentation. We have begun collecting this information, creating this data base and we hope to be able to produce a report. That data shows the geographical clusters where experimentation has taken place in the US

and in Canada, and it also shows the clusters of alleged perpetrators, torturers - the doctors who carried out these experiments.

Wayne Morris:

I understand you have also been very active in working with the Native American Indian communities in the Thunder Bay area. What has your involvement been and how have traditional Native healing practices played a part in your recovery, and other survivors' recoveries?

Lynne Moss-Sharman:

When I spoke earlier about coming in contact with over sixty adult survivors of ritual abuse in Thunder Bay, some of those adult survivors are Ojibway people who were raised in Thunder Bay or on the reserves in Northwestern Ontario. We began to see similarities in what survivors of residential schools were describing in terms of the practices that were carried out on them. For instance the electric chair that was constructed at the residential school in Fort Albany, near Moose Factory. There were also statements about the skeletons of children found in an abandoned barn there at Fort Albany. Some of the ex-residential school students described being raped in the middle of the night by men in white robes, and then forced abortions taking place. These are the same ritual cult practices described by survivors of cult abuse, cult experience.

---

Wayne Morris:

You are listening to The International Connection on CKLN 88.1 and that was an interview with Lynne Moss-Sharman, a US mind control experiment survivor and Canada contact for ACHES-MC. We are going to hear a music piece right now, called "Play Me Backwards" by Joan Baez, and if you listen closely to the lyrics, this song is about child ritual abuse.

You don't have to play me backwards to get the meaning of my verse  
You don't have to try and go to hell to feel the devil's curse  
Well I thought my life was a photograph on the family christmas card  
Kids all dressed in buttons and bows and lined up in the yard  
Were the golden days of childhood so lyrical and warm?  
Or did the picture start to fade on the day that I was born?

I've seen them light the candles, I've heard them bang the drum  
And I've cried Mama I'm as cold as ice and I got no place to run.

Let the night begin, there's a pop of skin and a sudden rush of scarlet  
There's a little boy riding on a goat's head, and a little girl playing the harlot  
There's a sacrifice in an empty church of sweet little Baby Rose  
And a man in a mask from Mexico is peeling off my clothes.

So I'm paying for protection, smoking out the truth  
Chasing recollections, nailing down the proof  
You don't have to play me backwards to get the meaning of my verse  
You don't have to try and go to hell to feel the devil's curse

I'll stand before your alter and tell everything I know  
I've come to claim my childhood at the Chapel of Baby Rose.

Joan Baez, 1992 (CD: Ring Them Bells)

---

That was Part 1 of an interview with Lynne Moss-Sharman the Canada contact for ACHES-MC and also of The Stone Angels group in Thunder Bay. Next week we will continue this interview and talk more about ACHES-MC's current campaign to call for government investigation into mind control experiments on children. You can learn more about ACHES-MC through their website which is <http://www.aches-mc.org/>

I would like to make a couple of announcements regarding these issues we are dealing with on this show. From October 1 to 3 in Atlanta, Georgia there will be a conference called "Ritual Trauma, Child Abuse and Mind Control: a growing threat to national security." This is organized by ECLIPSE. ECLIPSE is Emancipating Children from Legal Injustice, Pornography and Sexual Exploitation and it is going to feature quite an impressive list of speakers including Walter Bowart, author of "Operation Mind Control", Dr. Charles Whitfield, author of "Trauma and Abuse", Ted Gunderson, a former FBI agent who investigated the McMartin case, Nick Begich, author of "Angels don't play this HAARP", Brice Taylor, a former presidential mind control slave and author of "Starshine, One woman's valiant escape from mind control", among many other speakers in Atlanta, Georgia. Also another gathering, more survivor oriented healing gathering in Elliot Lake, Ontario from October 3-5. This is organized by SOS&SA, survivors of sexual and spiritual abuse and there will be survivor panels covering topics on institutionalized child abuse, incest, ritual abuse and cults, sexual abuse by the clergy. There will be an opportunity to participate in holistic healing and ceremonies by Anishnabe Elders. For more information, you can contact SOS&SA at PO Box 147 Serpent River First Nation in Cutler, Ontario POP 1PO. You can get transcripts of previous shows on this mind control radio series here on The International Connection at the Mind Control Forum website <http://www.mindcontrolforums.com> and look under the CKLN Radio Series title.

---

Wayne Morris:

Good morning and welcome to another edition of The International Connection here on CKLN 88.1. Today we are broadcasting show #26 in a series on mind control. We are going hear part 2 of an interview with Lynne Moss-Sharman, the Canadian contact for [ACHES-MC](#), the Advocacy Committee for Human Experimentation Survivors - Mind Control and of The Stone Angels in Thunder Bay. Through her work with these organizations, she devotes her energies to act as an advocate for other survivors of ritual abuse and mind control. The Stone Angels publishes journals with information for survivors, and ACHES-MC is currently engaged in a campaign to call for an investigation into government mind control experimentation in the United States and Canada. Lynne alleges that she had been used in government mind control experiments involving tortures, electricity, sensory deprivation and sexual abuse. She has remembered names of doctors who are known to have been involved in the CIA's MKULTRA mind control project, such as Jose Delgado and Ewen Cameron. And now, the second part of that interview.

Lynne Moss-Sharman:

More people contacted The Stone Angels as more Native agencies and Native service providers started to get in touch with us. A lot of this happened on an individual basis as well. We began to see that there were certain reserves, certain areas where there were intergenerational satanic cults operating - and these are comprised of Ojibway or Ojibway-Cree people. I can only assume that the creation and the maintenance of these cults over the decades, or over generations, was a direct result of the missionary activities, the religion that was imported by the British and the French through the fur trade centuries ago, and certainly is a direct product of the residential school experience. There is known cult activity on Manitoulin Island and some survivors described wealthy, white people who were flown in from New York and California to take part in highly organized, highly sophisticated cult activity right on the Island. This is something that has been addressed within the Native community and across Canada there is research being carried out by Native people themselves. They know where the activity is taking place, and they are dealing with it in their way.

A group has formed in the Sault Ste. Marie/Cutler/Thessalon area, Survivors of Spiritual and Sexual Abuse. They are affiliated with Elders, and have recently received funding to sponsor intensive healing gatherings directed and run by Elders. They are quite prepared to provide any help or assistance at all to ritual abuse survivors, or survivors of mind control experimentation, Native or non-Native. There is a high level of awareness within the Native community itself about the extent of ritual, cult abuse practices and certainly people who work in the Native Child and Family agencies have come to find a lot of evidence of this kind of practice, a lot of children who have been damaged by it.

Wayne Morris:

What kinds of healing practices have been going on in the Native community? Has that been helpful in the recovery of Native survivors?

Lynne Moss-Sharman:

I have been at healing gatherings, at sweat lodges, where Elders have gathered together and they usually know that there has to be a group of them who are going to work with ritual abuse survivors. They have had the most profound healing impact on survivors that I have seen. I often think that, personally, I wouldn't be alive if it hadn't been for the assistance of some Native Elders here in the Thunder Bay area. I am very grateful to them for what they have been able to do. They don't shy away from it, or deny it, or run away from it which is not something I can say about the non-Native healing community itself. There is a great deal of fear in the non-Native community. The fear isn't there in the majority of Elders. They see the direct equation to what has happened to so many of their people in the residential schools and within the prison system as well, and again because so many of the residential schools were also found in areas that were near military bases, either U.S. or Canada military bases (NORAD and the DEW Line certainly had an impact). We are starting to see a lot more evidence of mind control experimentation. I am assuming it is going to be the same CIA funded practices that were carried out on non-Native children, again in that non-military context.

Wayne Morris:

Lynne, I would like to talk to you about your own experiences with government mind control experimentation. How do you remember that you first got introduced to this?

Lynne Moss-Sharman:

My father had been in the Canadian military, the Cape Breton Highlanders, from 1939-45. My mother was a war bride from Glasgow. They moved from Halifax to Toronto following my birth in 1947, and like many other men after the war, my father had the usual difficulty in finding work. My memories first began with memories of sexual abuse by my father, my uncle and a group of his army buddies who were also involved in the sexual exploitation of children. The memories always began with these men who were somehow associated with the military, and I am not sure how it escalated with my father. I am absolutely uncertain about how he came to play a role in this, and he will never talk to me. I do know he worked for General Electric in Toronto and that he belonged to something called The Pyramid Club. I met an adopted survivor, who is half Native, and she had been used in pedophilia in southern Ontario by her adoptive father who belonged to a group who went by this name as well.

Wayne Morris:

Do you know if your father was involved with any potential cults or ....

Lynne Moss-Sharman:

I have very distinct memories of cult rituals starting at a very early age. One of them was when living on Maria Street in Toronto. I have memories of a ritual ('forgiven by the blood') taking place near the slaughterhouse; churches outside of Hamilton and Toronto - different locations there; also being flown to different places as well, including an underground cult site called Stone Mountain, that was affiliated with the military. I remember being taken to Uplands Air Base in Ottawa as a child.

Wayne Morris:

Do you have any idea of how old you would have been when this took place?

Lynne Moss-Sharman:

I have really distinct memories from age three onwards, and I have begun to piece together the memories about the experiments themselves bit by bit over the years.

Wayne Morris:

You have done a series of drawings that express your memories of government mind control experimentation which you have included in one of The Stone Angels journals and which I found to be very disturbing. Can you tell us how these drawings came about, and what they mean to you?

Lynne Moss-Sharman:

The drawings were very puzzling to me for a long time. I found myself doing drawings of children who seemed to be wearing helmets, and there was always an electrical outlet nearby.

There was always some kind of indication of electricity being used. Over time, I began to realize what I was trying to say with these drawings, because I was unable to say any of these things in words. It has only been in the past six or eight months that I am somewhat able to articulate what is contained in the drawings. There is one drawing that describes a series of memories I had about having my limbs dislocated at the shoulders and at the hips, and then being wrapped up with rolls of bandage to create a portable sensory deprivation unit, if you like. What was said about what was being done to me there was "First we break you, then we make you ..." I can remember looking at the drawing when I finally did it, and realizing that this was a very, very simple technique for anyone in the military ... not even necessarily in the military ... if someone wanted to begin the process of torture on an individual, they would be able to carry rolls of bandage as part of a first aid kit, or it could be as simple as carrying rolls of bandage in a brown paper bag ... and no one would know that you were about to begin breaking a person.

Wayne Morris:

And this is really exactly what the intention was of Dr. Cameron's projects at McGill were designed to do. He publicly stated that was what he wanted to do ... remove a person's personality. Totally break them down, rebuild them, put in a new personality according to their design.

Lynne Moss-Sharman:

Actually, not a new person per se, but a series of interlocked and interconnected personalities or components that could only be brought forward by key words or key phrases. Telephone programming - you were made to respond and made to be cued internally by the application of electricity and by different torture procedures, again as a child so that the telephone could be used very effectively. Again, it could be as simple as someone 1000 miles away wanting to make contact with that part of you, and all they have to do once the training had been completed, was to pick up the phone, give you a cue word, and then that component within yourself would be activated to follow through on any instructions or suppression of material they might want to implement at that time.

I have very distinct memories about different sensory deprivation techniques as well. There was a series of constructed rooms, some of which became smaller while you were in them. Other containers such as barrel shaped containers in which you were placed - your arms, legs, everything would be bound and you would be wrapped up that way and put inside a container. These are just the systematic techniques to begin isolating you. Then things accelerated to the use of Ewen Cameron's procedures. The song Home Home on the Range seems to be something that was used in my programming, and there was another experiment, again with the use of a helmet and tubes were placed over my arms so that I was unable to move my arms or my hands to defend myself, or have any tactile sense at all.

And there are also drawings of ... I remember being put in ... I had no idea what I was describing at the time, but I certainly knew what the effect and the impact was. There were chambers, and all I can remember is what I would call a huge coil at the end of the chamber and ... they ... I was put in there ... and then something happened, and it had to do with that coil, and I can remember wanting to rip the top of my skull off when I started to remember about being put in those chambers ... there were two of them, one was larger than the other ...

I wanted to kill myself and rip the top of my skull off. I can't even put into words what the effect of those coils were.

I was part of some of the projects that were funded by the University of Rochester in the last part of the forties and early fifties. The three key research points in the funding triangle were Los Alamos, University of Rochester and Stanford University in California. Dr. Cameron certainly had an affiliation with those research groups which were conducted in secrecy in upper State New York. Another Canadian is Dr. George Estabrooks. There is a very worth-noting silence about Dr. Estabrooks. He was located at Colgate College in Hamilton, New York and he had a teaching affiliation with Oswego State Teacher's College. It is worth noting here that Oswego, N.Y., on Lake Ontario, was a major receiving site for Holocaust survivors and refugees. Those people deemed not well, psychologically or physically, were held at Fort Drum, about 35 miles from Oswego. George Estabrooks was born in Newfoundland, and Canadians can know that he was instrumental in creating the U.S. versions of the Manchurian Candidates. He had been in direct contact since 1937 with J. Edgar Hoover, and was affiliated with Jose Delgado, Martin Orne, Ewen Cameron and others -- with the practitioners of mind control and brainwashing experiments. There is a long-neglected history here that needs to be brought forward.

Wayne Morris:

Right, and he has published many writings of his own, detailing or giving some details of his work in trying to create Manchurian Candidates. Just for the benefit of listeners who may not be familiar with that term, it is using a person under the influence of mind control to commit assassination and many other military and espionage acts as we will get into later. Also to familiarize listeners with the work of Jose Delgado ... he was involved also in the same kind of work using radio control brain implants ...

Lynne Moss-Sharman:

... I don't even want to use the word "doctor" ... I will say torturer, Delgado, was one of the men who performed experimental procedures on me as well as Dr. Ewen Cameron. He had experimental sites constructed within a building -- one was called The Funhouse, the other was The Playhouse. I had been wired up to perform like a robot, like a puppet, and electricity was used to control my movements and actions. I was taken to a place that I can only recall as the "Land Vehicle Division" and the work that Jose Delgado was doing was somehow related to this military installation. Because I would have been taken there in a drugged state as a child, I am not sure of the location of that particular place, but I know it is Jose Delgado who has come up over and over again.

Wayne Morris:

Do you know what kinds of things the government has used you in, using mind control? What kind of operations were you involved in?

Lynne Moss-Sharman:

In many cases it literally is to carry information and to be used for blackmail purposes and to be used in pedophilia among high-ranking people who either have to be brought into the fold or reminded of their place in the hierarchy. There are certainly the assassin programs, that is a

very hard one to come to grips with inside yourself when you start to remember exactly what your hands have been taught to do. For example, I know how to scalp someone three different ways. Not a Betty Crocker Little Homemakers Oven trick is it?

There are many instances ... and Jonestown always comes up ... and the experimentation at Walla Walla Prison ... there seem to have been some assassin programs produced at Oakridge Penitentiary here in Ontario in the late 1960's and early 1970's under a programming and LSD experiment conducted by Dr. Elliott Barker in that institution. He is still practicing in the Midland area today.

I was used to blackmail a British scientist. It started in a faculty building dining room setting and then I found myself, as a child, in bed with this older man who was crying, and there was a camera trained on the bed, and he been drugged, I had been drugged as well ... and here I was a child, with of course no clothes on ... he had no clothes on ... and he was crying and crying about what was he going to tell his wife, what was he going to tell his wife ... (that was actually the least of his worries really) ... there were three people standing at the end of the bed, men dressed in women's clothes, and it had to do with one of the projects they were working on at that time, and this particular British researcher - it was essential that he become complicit in what they were going to carry out.

Wayne Morris:

Have you heard other accounts of children being used operationally for these sexual blackmail episodes?

Lynne Moss-Sharman:

There are hundreds of stories like that. I think what I find - not just the sadism of these military researchers, these scientists - not just the sadism and their absolute total disregard for anything we would put under the definition of "human or humanity" - there seems to be a predilection among almost all of them for pedophilia with either male or female children, and that seems to be a common bond with them. There was also a lot of "gender blending", cross dressing at times in rituals or situations like the one above.

Wayne Morris:

What are some of the similarities between the survivors accounts that you have come across with ACHES-MC and The Stone Angels?

Lynne Moss-Sharman:

Some of the things that children who have been involved in ritual abuse describe is the use of cages, electricity, the use of drugs ... these are also things that come up in the production of pornography, in any investigation of the production of pornography itself. In the mind control experiments, again, the electricity is essential ... it has been refined over time. The use of drugging to obtain compliance or to literally experiment with children to see what the effect of certain drugs will be. The use of torture. The use of sensory deprivation. Psychic driving. The use of the children who were used in the mind control experimentation to carry secrets, to be used for pedophilia to blackmail certain individuals in the research and military community so that their compliance is gained. Proximity to military bases or nuclear reactors ... in the

U.S. and in Canada. When I look at a map of Ontario for example, I can pinpoint clusters of survivors who grew up in communities where there were military bases or nuclear power plants ...

Wayne Morris:

You were aware of other people, other survivors, being around other people who were being experimented upon. Were these for the most part children, or a mixture of men and women.

Lynne Moss-Sharman:

There were babies, female and male children, female and male adults. The survivors that I am personally am most in contact with because they are the ones I share the most with are the child survivors of experimentation, and there are certainly many survivors who were introduced to these experimental technologies and this torture as adults at different colleges or universities, or in prisons, or the military itself. I guess I am thinking it is easier to believe that a prisoner or an adult was subjected to mind control experimentation because we have seen a published and a broadcast history of what was done to adults. It is really essential that the child survivors' stories are brought forward, and that as a society we understand the depth and the length that the research institutions in Canada and the USA ... the length and the depth they will sink, and go to, to devise more and more refined techniques so they can brainwash the populace.

Wayne Morris:

Through your memories of the time when you had undergone these experiments, what is your sense of how many other people were involved in being experimented on at that time?

Lynne Moss-Sharman:

I was taken to laboratory settings where people had been held for a long time. I saw evidence of children having been born in these laboratory settings ...

Wayne Morris:

And they were being used as well?

Lynne Moss-Sharman:

Yes, and the genetic experimentation that was going on ... I remember being in one place in the fifties and there were what I call "Torso Babies" ... they had little babies, they had beards, and they didn't have any arms and legs ... and when I did the drawings, all I could call them was the "Torso Babies". A friend, who is a nurse, looked at them and said "omigod, that must have been something like thalidomide being used that way" in these hidden laboratories. I know that some of the survivors who have come forward talked about having been given different drug regimes when they were eight or nine years old to bring puberty on ... so that they were able to become reproductive much earlier than they normally would have. They have been very damaged by what was done to them at age eight or nine in terms of their genetic makeup and some are unable or unwilling to have children themselves.

Wayne Morris:

What is the role of the various kinds of druggings they had used within the experimentation?

Lynne Moss-Sharman:

That is a huge question. To make someone unconscious and therefore malleable is one. I think they were also experimenting to see which of the drugs would make someone more susceptible to brainwashing. Probably efficiency is a word I could use. Time management, cost efficient. Which drug is going to make it easier and quicker to begin the brainwashing process, to begin the patterning that needs to take place. And genetic alteration was a big factor ... along with radiation experiments. I believe cross breeding was taking place, animal and human matings. And if you look at the list of research projects documented at University of Rochester during that time period ... when you see an experiment described as being done with rats, or cats, or monkeys ... try inserting the word infant, child, adult human in some cases ... the CIA scientists would never have listed human beings as research subjects for the procedures they were carrying out on primates etc.

There is some parallel research going on in Canada in the Native community itself as well ... when I look at the electric chair that was constructed at the Fort Albany residential school up by Moosonee, where the children were put in that electric chair and made to jump and squirm with electricity for the "entertainment of the visiting dignarities" ... that was back in the 1950's. I am really wondering what role the military mind control experimentation has played in what has happened to the Native community across Canada. I have memories of being in one place where, there was an Inuit woman who had a very small infant with her and her head had been shaved. I am wondering what happened to some of the patients who were sent down to Southern Ontario or across the border into the States for tuberculosis treatment in the fifties and sixties ...

Wayne Morris:

How has the process of healing been for you?

Lynne Moss-Sharman:

It's been a really long one, and I guess ... at some point there is a fragmentation that occurs is irreversible and absolutely devastating. As you enter into each of the levels of programming, your body remembers everything that was ever done to you. So physical, you are almost in whiplash sometimes when your body begins to remember the insertion of certain things whether it was the doctor's penis, or whether it was a fine metal wire ... you begin to remember what it felt like when they began to turn the coil on when you were in the chamber. You begin to remember what you felt like when they put you in the chair and strapped down your hands and your ankles and put the electrodes on you. You begin to remember what it is like to be made to walk and function like a robot in a room where there were scientists looking down over the top of the small constructed room that they called The Playhouse, and they told you to go into The Playhouse and as a child you thought it was going to be a playhouse ... and instead it was just an experimental laboratory ... sort of like a doll's house with no roof on the house ... and they watched you and used their remote control devices and their electricity to make you do what they wanted.

Wayne Morris:

How did you begin remembering the memories of experimentation and torture? What was going on in your life at the time?

Lynne Moss-Sharman:

I think things really began to break through at a time of personal crisis in my life. I know that many survivors have had the process of memory recovery begin ... sometimes a car accident, or a physical trauma like a rape, or another kind of traumatic event started their process. Mine was being in an extremely abusive personal relationship with someone and it ended up being the last of a series of degrading, for myself, interpersonal relationships. And I really just bottomed out and could not function, and some friends took me to get some help.

Wayne Morris:

And was that when you were first introduced to the therapist you have been working with.

Lynne Moss-Sharman:

Yes. And neither she nor I were cognizant at the time of what was to come in the therapeutic process over the ensuing years. Things started off fairly simply -- generically in a sense. I began dealing with different incidents with my father and uncle, some of my father's military friends. Over time I began having fragments of other more puzzling memories of being in hospital settings, memories of being in cages, electricity. I guess it is important to emphasize that my process, which is similar to many other survivors, was a very fragmentary one. I would get initially a glimpse of a setting, a glimpse of someone's face, but as I got the visual memory, or the fragment of the memory, I would have intense body pain and I would be unable to speak. I couldn't tell my therapist what I was remembering, or what was happening. So there was a very very long and intense series of acting things out for her ... I was absolutely non-verbal, incapable of telling her what I was remembering. There was a lot of abreacting, and sometimes writing or drawing, sometimes hiding myself under her coffee table, wrapping myself up in her throw rug on the floor of her office, sometimes pinning myself against the wall, or hiding in the corner. Using the electrical outlet on the wall, pretending to put my fingers into it, to somehow transmit to her that there were electrical currents coming into my body.

Wayne Morris:

And when you say abreacting, that means to be re-living that experience once again ...

Lynne Moss-Sharman:

Yes. In that process, your body literally takes on the position that you found yourself in, or you will intensely feel the pain in certain parts of your body, as if it were taking place right at that minute again.

Wayne Morris:

This seems to be the nature of remembering traumatic experience ... in that it does come back more like a body memory and a lot of survivors have said that they have felt the actual pain or the physical effects of what had been done to them ... the actual marks on the body will reappear during remembering.

Lynne Moss-Sharman:

I didn't have any of that happening (marks), but I did find myself in physical positions that I would be absolutely incapable of putting myself into in my everyday existence. It's really hard to describe. The contortions that my body went into, and the spasms -- I literally would have spasms as my body remembered the electricity. I can remember another time sitting there and pounding and pounding my legs, as if I was going to break the bones in my legs, with strength I would never experience, again, in my day-to-day existence. So the therapeutic process is a long one for those very reasons. It is extremely wearing physically to be able to allow yourself in the safety of your therapist's office to try and somehow convey to her what was done to you.

Wayne Morris:

How did your therapist go about conducting the sessions with you?

Lynne Moss-Sharman:

She was very, very good right from the start. I honestly didn't know what was going on. I was finding myself collapsing out in the street, finding myself phoning hospitals because I was reliving memories of being in hospitals, and I had programming that was telling me to go back to the hospital. At certain points I used to beg her to send me to a hypnotist in Toronto or in Ottawa, or wherever a competent hypnotist would be. She really gently sort of didn't dissuade me from it, because all the decisions that were made were my own, and continue to be my own, but she was also very firm and said that she didn't think hypnosis would be a good idea based on the intensity of the physical reactions that I was having as I brought the memories forward -- that hypnosis might be literally more than my body could handle. If I was going to be overwhelmed and flooded by hypnosis with a huge quantity of memories -- it would literally be very hard on my body. What she recommended was that we just go really slowly so that I was able to deal with things just a bit at a time, one step at a time, so that my body, my spirit, my psyche, my "self" was able to process and begin to understand how the different memories were actually linked together.

She has also been very kind and very careful to never give me any information in writing, or any spoken information. The relationship I have had with her has been one of her acting as my witness ... and as a person in whom I have been able to ... for the first time in my life ... establish a relationship of trust. It has never been my experience where she was giving me articles or books. She has never once said "this sounds like" or "this may be" -- it has been, and it still is, the relationship outlined by Judith Lewis Herman, the trauma specialist at Harvard University -- where the most important thing that a survivor of any childhood trauma needs is someone to be a confidential and respectful witness to the story that needs to be told by that person.

Wayne Morris:

So she never used hypnosis or drugs on you ...

Lynne Moss-Sharman:

Nothing. Nothing. And because she was able to go slowly, and carefully, and respectfully with me, I was able to avoid any psychiatric intervention. There were many, many times when I did want to, literally, erase myself from life and go into a psychiatric ward, go into a psychiatric hospital. I did want drugs to make what I was remembering and feeling easier to bear. But I never did do that. There were lots of times when I wanted to drink or do drugs as well as a means of escaping the pain of remembering what had happened, and I never did do that either. I give a lot of credit to her competency and her skills as a therapist that I was able to continue in therapy, and I am still in therapy today, without having to escape into any artificial intervention, or any destructive intervention. Because I could have ended up being one of those recipients of electroshock, I could have ended up being one of those persons who were chemically lobotomized. There has certainly been an escalation in both of those things in the past few years in Ontario.

Wayne Morris:

Absolutely. Now when you started remembering the names of the doctors and the places of the experimentation, were you familiar with the history of CIA mind control experiments through what had been published.

Lynne Moss-Sharman:

No. I had absolutely no knowledge of any of these experiments or any of the information involved. And I think it's really important to say something about how I remembered the names, or how I remembered places. It's not like a cartoon flash coming up in your mind, "Oh, that's Dr. so-and-so" or "Oh, that's the place I was taken to..." I have binders and binders of my journals. When I started remembering things, and I am going back to remembering my father, my uncle, my father's military friends ... when I started remembering the incest when I lived in Toronto on Maria Street as a small child and then in Hamilton, up on the mountain ... I wrote and I wrote and I wrote ... night after night. I had something I called my "secret code writing" as well that came at a certain time. After a certain point, I found myself writing things that were not familiar to me at all, and there were names in there ... a Dr. Hamilton, a Dr. Green, a Dr. Hendricks as well, I don't know who that is ... I found myself writing down names and words and phrases that had absolutely no meaning to me at all. And it was quite a few years before some of the things I had written began to have some meaning. The fragmentary fashion in which I wrote these things down too ... they were not really intelligible. My handwriting would change as different parts of myself came forward to write things down and that's how my drawings came as well. I ended up doing a series of drawings for ten months ... although I had never been able to draw more than a stick figure in my life ... and once the drawings "came through" for that ten month period I was unable to draw again after that series of drawings came out.

I don't know how to put into words ... I am not sure how to put into words ... about how fragmented the therapeutic or the memory process is. It's as fragmented as the fragmentation that was deliberately induced by these scientists, by these doctors, by these CIA funded "workers" when they put electricity on me, or when they put the electrodes on, or when they put the helmet on me, or when they put me in the different sensory deprivation containers.

They were ensuring that what was being done to me at that time was being fragmented into a certain neuropathway, and so as the memories came, they came in a fragmented fashion as well. This isn't like a lightbulb going off in your head ... "Oh yes, now I remember!" You go through years of getting little bits of information about the same event and finally, you do get to the point where you can "re-enter" the hospital setting. You can "re-enter" the military setting. You can "re-enter" the pedophile setting, after having spent years and years of an indescribable amount of physical and emotional pain as the fragments leaked through.

Wayne Morris:

And did you visit these places in an attempt to verify your memories in terms of validating the existence of the places themselves and the people that ...

Lynne Moss-Sharman:

No. And I live in Thunder Bay and I have been on welfare on and off for 17 years. I am on disability now. I do my laundry in a bucket. I go to food banks sometimes. I don't travel anywhere. My biggest wish would be that I could go to upper state New York, that I could go to Oswego, Rochester, Hamilton, N.Y. to Colgate College. I want to go to Annapolis, Maryland. I want to go with someone that I trust and I want to take a videocamera and I want to go back to these places, because I know that I have a voice, or voices, inside me that are going to be able to describe very accurately what was done, when I visit the places. I have been able now, in the past year, to find some photographs of sites. I was given the yearbook from the Oswego State Teachers College from the 1950's, and I was able to identify, without the names, the two psychologists in the Psychology Department there, who were involved. There is one location in one of the buildings ... I know that was one of the places where I was taken.

I have gathered lots of information in the past year, and I can certainly verify some things, but I would give anything to be able to go back physically to these places and take this process to the next level.

Wayne Morris:

When did you start finding out that what happened to you may have been part of the CIA and US government's military experimental programs? How did that realization take place?

Lynne Moss-Sharman:

It was actually on New Year's Day 1996. A friend had given me a computer the summer before, and another friend gave me a modem so I could get on internet, and another friend gave me a year's hookup on internet so that I could begin contacting other people and finding information. On 11pm at night, on New Year's Day, I, by accident found a speech that Walter Bowart had given in 1994 or 1995 in Texas. His speech mentioned something about funding at University of Rochester, Navy funding, something called Project Chatter in 1952. I literally went into shock at the computer. My daughter and her boyfriend were both there, and apparently I went into spasms and my daughter's boyfriend was going to call an ambulance. My reaction to reading those words apparently really, really strong. What had happened was, I had a drawing. It was a child with a helmet on, and I had written "Chatter" underneath it. There were actually a series of drawings about these helmets, and the sound programming that

we were made to endure. I felt very alone with all this. I thought I was crazy, to be honest, for a long time. And here I am sitting there reading, "Project Chatter, Navy funding, 1952". Following that someone gave me some information that Valerie Wolf and Claudia Mullen and Chris Denicola had testified in Washington, and when I read that, that was a huge turning point, especially Claudia Mullen's, because I had remembered Ewen Cameron. The cages, the electricity. Chris talked about the same table I had already remembered, and gone through that. There were so many similarities, particularly in Claudia's testimony. That was a huge turning point. I did phone Valerie Wolf, and I got her address, and when I realized that she was Canadian and had gone to McMaster University in Hamilton where I grew up, that was another sort of curious synchronicity.

I did send my drawings to Valerie in New Orleans, and I asked her if she would just take a look at them, and see if anything I had drawn was similar to anything she had been told by her clients. She phoned back to say that Claudia Mullen had looked at my drawings, and Claudia was able to identify the doctors' portraits that I had drawn. I can't put names to these "portraits". Claudia and Valerie won't tell me the names because they don't want to contaminate my memory process.

I actually didn't even show them to my therapist for about ten months after I had finished most of them. I felt I had no conscious connection to these drawings at all, and I finally just went into her office one day and really dismissively just sort of tossed this stack of drawings to her ... and said, "you might find some of these interesting." It was the only time I had ever seen, a sort of "emotional" reaction on her face (laughs) -- I think she was really really shocked at what she saw -- but again, she was really respectful. That part of me was ready to sort of hand over the drawings to her. There was a lot of pain, and a lot of work ahead of me in terms of having to go through more abreactive processing about these drawings that I consciously "had nothing to do with". It's a very complicated process, this memory retrieval.

I don't think I will ever live to see the kind of verification or validation of everything that is in my journals, or everything that is in my drawings. And I would imagine that most of the files that my drawings are referring to around 1952 to 1955-56 -- I would imagine most of those CIA files are among those that were destroyed because those drawings are very damning, very damning indeed.

Wayne Morris:

They are extremely moving to look at, and depict such horrific experimentation. Can you tell us what some of the recent activities ACHES-MC have been?

Lynne Moss-Sharman:

A group of survivors, and advocates, and professionals were able to meet at the Believe the Children Conference in Chicago in April of 1997. At that time, we began documenting statements from survivors and the professionals involved on videotape and we have now sent a videoletter to President Clinton with a copy to Prime Minister Chretien, asking for a Presidential Hearing and the declassification of government records relating to mind control experiments conducted on unwitting children and adults funded by the United States government through the CIA from the 1940's onward.

That videodocument is now in their hands, and we haven't heard anything back at this point in time. Basically we are now lobbying and pressuring for a formal hearing to begin on the mind control experimentation.

Wayne Morris:

What sort of form of hearings do you envision or you would like to see? Or what are the possibilities of different types of hearings?

Lynne Moss-Sharman:

I am not entirely familiar with how the process for the Human Radiation Experiments was conducted in the United States. I understand there were travelling hearings though that would be similar to other commissions that have been conducted in Canada and the United States. I am assuming that the travelling hearing process would be the most successful, and the most productive. If a Committee can be constructed, and if they can go to different centres in the United States, and again, in Canada, that it would then become possible for survivors and for their therapists and other persons involved, to be able to attend the hearings and present their information.

And I would certainly assume that there would be some travel monies made available to survivors so that they would be able to attend and present. But I am certainly hoping that there is going to be a North American hearing ultimately ... and that the Canadian survivors who have been affected by the CIA experiments are going to have an opportunity to present their histories as fully as possible.

Wayne Morris:

I want to thank you very much, Lynne, for speaking here with us at CKLN. I know it takes incredible courage in speaking out, more than any of our listeners can imagine.

Lynne Moss-Sharman:

It's a struggle. I want to thank you too on behalf of survivors and people working in the field, for what you have taken on with this radio series. No one else has done it, and I want to thank you.

---

We have been listening to an interview with Lynne Moss-Sharman, the Canadian contact for [ACHES-MC](#), the Advocacy Committee for Human Experimentation Survivors of Mind Control. To support the ACHES-MC current campaign for a government investigation into mind control experimentation on children and adults, you can send your letters of support to Prime Minister Chretien and President Clinton. I would quickly like to make an announcement about an upcoming conference regarding these issues. >From October 1 to 3, 1997 in Atlanta, Georgia there will be a [conference](#) about ritual trauma, child abuse and mind control. Call ECLIPSE for more information.

# Human auditory system response to Modulated electromagnetic energy.

ALLAN H Frey

General Electric Advanced Electronics Center

Cornell University, Ithaca, New York

Frey, Allan H. *Human auditory systems response to modulated electromagnetic energy.*

J. Appl. Physiol. 17(4):689-692. 1962-

The intent of this paper is to bring a new phenomenon to the attention of physiologists. Using extremely low average power densities of electromagnetic energy, the perception of sounds was induced in normal and deaf humans. The effect was induced several hundred feet from the antenna the instant the transmitter was turned on, and is a function of carrier frequency and modulation. Attempts were made to match the sounds induced by electromagnetic energy and acoustic energy. The closest match occurred when the acoustic amplifier was driven by the rf transmitter's modulator. Peak power density is a critical factor and, with acoustic noise of approximately 80 db, a peak power density of approximately 275 mw/cm<sup>2</sup> is needed to induce the perception at carrier frequencies of 425 mc and 1,310 mc. The average power density can be at least as low as 400 uw/cm<sup>2</sup>. The evidence for the various possible sites of electromagnetic energy sensor are discussed and locations peripheral to the cochlea are ruled out.

A significant amount of research has been concerned with the effects of radio-frequency (rf) energy on organisms (electromagnetic energy between 1Kc and 100 Gc). Typically, this work has been concerned with determining damage resulting from body temperature increase. The average power densities used have been on the order of 0.1-1 w/cm<sup>2</sup> used over many minutes to several hours. In contrast, using average power densities measured in microwatts per square centimeter, we have found that other effects, which are transient, can be induced with this energy. Further, these effects occur the instant the transmitter is turned on. With appropriate modulation, the perception of various sounds can be induced in clinically deaf, as well as normal, human subjects at a distance of inches up to thousands of feet from the transmitter. With somewhat different transmitter parameters, we can induce the perception of severe buffeting of the head, without such apparent vestibular symptoms as dizziness or nausea. Changing transmitter parameters again, one can induce a "pins-and -needles" sensation.

Experimental work with these phenomena may yield information on auditory system functioning and, more generally, information on nervous system function. For example, this energy could possibly be used as a tool to explore nervous system coding, possibly using Neider and Neff's procedures (1), and for stimulating the nervous system without the damage caused by electrodes. Since most of our data have been obtained on the "rf sound" and only the visual system has previously been shown to respond to electromagnetic energy, this paper

will be concerned only with the auditory effects data. As a further restriction, only data from human subjects will be reported, since only these data can be discussed meaningfully at the present time. The long series of studies we performed to ascertain that we were dealing with a biologically significant phenomenon (rather than broadcasts from sources such as loose fillings in teeth) are summarized in another paper (2), which also reports on the measuring instruments used in this work. The intent of this paper is to bring this new phenomenon to the attention of physiologists. The data reported are intended to suggest numerous lines of experimentation and indicate necessary experimental controls. Since we were dealing with a significant phenomenon, we decided to explore the effects of a wide range of transmitter parameters to build up a body of knowledge which would allow us to generate hypotheses and determine what experimental controls would be necessary. Thus, the numbers given are conservative; they should not be considered precise, since the transmitters were never located in ideal laboratory environments. Within the limits of our measurements, the orientation of the subject in the rf field was of little consequence. Most of the transmitters used to date in the experimentation have been pulse modulated with no information placed on the signal. The rf sound has been described as being a buzz, clicking, hiss, or knocking, depending on several transmitter parameters, i.e., pulse width and pulse-repetition rate (PRF). The apparent source of these sounds is localized by the subjects as being within, or immediately behind, the head. The sound always seem to come from within or immediately behind the head, no matter how the subject twists or rotates in the rf field.

Our early experimentation, performed using transmitters with very short square pulses and high pulse repetition rates, seemed to indicate that we were dealing with harmonics of the PRF. However, our later work has indicated that this is not the case; rather, the rf sound appears to be the incidental modulation envelope on each pulse, as shown in Fig. 1

**Fig 1 Oscilloscope representation of transmitter output over time (pulse-modulated)**

Some difficulty was experienced when the subjects tried to match the rf sound to ordinary audio. They reported that it was not possible to satisfactorily match the rf sound to a sine wave or white noise. An audio amplifier was connected to a variable bandpass filter and pulsed by the transmitter pulsing mechanism. The subjects, when allowed to control the filter, reported a fairly satisfactory match. The subjects were fairly well satisfied when all frequencies below 5Kc audio were eliminated and the high-frequency audio was extended as much as possible. There was, however, always a demand for more high-frequency components. Since our tweeter has a rather good high frequency response, it is possible that we have shown an analogue of the visual phenomenon in which people see farther into the ultraviolet range when the lens is eliminated from the eye. In other words, this may be a demonstration that the mechanical transmission system of the ossicles cannot respond to as high a frequency as the rest of the auditory system. Since the rf bypasses the ossicle system and the audio given the subject for matching does not, this may explain the dissatisfaction of

our subjects in their matching. At one time in our experimentation with deaf subjects, there seemed to be a clear relationship between the ability to hear audio above 5Kc and the ability to hear rf sounds. If a subject could hear above 5Kc, either by bone or air conduction, then he could hear the rf sounds. For example, the threshold of a subject whose audio-gram appears in Fig. 2 was the same average power density as our normal subjects. Recently, however, we have found people with a notch around 5Kc who do not perceive the rf sound generated by at least one of our transmitters.

Audiogram of deaf subject (otosclerosis) who had a "normal" rf sound threshold

## THRESHOLDS

TABLE 1 Transmitter parameters

| Trans-<br>mitter | Frequency<br>mc | Wave-<br>length cm | Pulse Width<br>usec | Pulses/Sec | Duty Cycle |
|------------------|-----------------|--------------------|---------------------|------------|------------|
| A                | 1,310           | 22.9               | 6                   | 224        | .0015      |
| B                | 2,982           | 10.4               | 1                   | 400        | .0004      |
| C                | 425             | 70.6               | 125                 | 27         | .0038      |
| D                | 425             | 70.6               | 250                 | 27         | .007       |
| E                | 425             | 70.6               | 500                 | 27         | .014       |
| F                | 425             | 70.6               | 1000                | 27         | .028       |
| G                | 425             | 70.6               | 2000                | 27         | .056       |
| H                | 8,900           | 3.4                | 2.5                 | 400        | .001       |

As shown in Table 1, we have used a fairly wide range of transmitter parameters. We are currently experimenting with transmitters that radiate energy at frequencies below 425 mc, and are using different types of modulation, e.g., pulse-repetition rates as low as 3 and 4/sec. In the experimentation reported in this section, the ordinary noise level was 70-90 db (measured with a General Radio Co. Model 1551-B sound-level meter). In order to minimize the rf energy used in the experimentation, subjects wore Flent antinoise ear stoppers whenever measurements were made. The Ordinary noise attenuation of the Flents is indicated in Fig. 3. Although the rf sounds can be heard without the use of Flents, even above an ambient noise level of 90 db, it appears that the ambient noise to some extent "masked" the rf sound.

FIG 3 Attenuation of ambient sound with Flent antinoise ear stopples (collated from Zwislocki (3) and Von Gierke (4))

TABLE 2 Threshold for perception of rf sound (ambient noise level 70 - 90 db)

|          |           |       | Peak    |         |          |       |
|----------|-----------|-------|---------|---------|----------|-------|
| Magnetic |           |       | Avg     | Peak    | Peak     |       |
|          |           |       | Power   | Power   | Electric | Field |
| Trans-   | Frequency | Duty  | Density | Density | Field    | amp   |
| mitter   | mc        | Cycle | mw/cm2  | mw/cm2  | v/cm     |       |
| turns/m  |           |       |         |         |          |       |

Table 2 gives the threshold for perception of the rf sounds. It shows fairly clearly that the critical factor in perception of rf sound is the peak power density, rather than the average power density. The relatively high value for transmitter B was expected and will be discussed below. Transmitter G has been omitted from this table since the 20 mw/cm<sup>2</sup> reading for it can be considered only approximate. The field-strength-measuring instruments used in that experiment did not read high enough to give an accurate reading. The energy from transmitter H was not perceived, even when the peak power density was as high as 25 w/cm<sup>2</sup>. When the threshold energy is plotted as a function of the rf energy (Fig 4), a curve is obtained which is suggestive of the curve of penetration of rf energy into the head. Figure 5 shows the calculated penetration, by frequency of rf energy, into the head. Our data indicate that the calculated penetration curve may well be accurate at the higher frequencies but the penetration at the lower frequencies may be greater than that calculated on this model.

Fig 4 Threshold energy as a function of frequency of electromagnetic energy (ambient noise level 70 - 90 db)

FIG 5 Microwave power distribution in the forehead model neglecting resonance effects and considering only first reflections (from Nieset et al [5], modified)

As previously noted, the thresholds were obtained in a high ambient noise environment. This is an unusual situation as compared to obtaining thresholds of regular audio sound. Our recent experimentation leads us to believe that, if the ambient noise level were not so high, these threshold field strengths would be much lower. Since one purpose of this paper is to suggest experiments, it might be appropriate to theorize as to what the rf sound threshold might be if we assume that the subject is in an anechoic chamber. It is also assumed that there is no transducer noise.

Given: As a threshold for the rf sound, a peak power density of 275 mw/cm<sup>2</sup> determined in an ambient noise environment of 80 db. Earplugs attenuate the ambient noise to 30 db.

If: 1 mw/cm<sup>2</sup> is set equal to 0 db, then 275 mw/cm<sup>2</sup> is equal to 24 db.

Then: We can reduce the rf energy 50 db to -26 db as we reduce the noise level energy from 50 db to 0 db. We find that -26 db rf energy is approximately 3 uw/cm<sup>2</sup>.

Thus: In an anechoic room, rf sound could theoretically be induced by a peak power density of 3 uw/cm<sup>2</sup> measured in free space. Since only 10% of this energy is likely to penetrate the skull, the human auditory system and a table radio may be one order of magnitude apart in sensitivity to rf energy.

## RF DETECTOR IN AUDITORY SYSTEM

One possibility that seems to have been ruled out in our experimentation is that of a capacitor type effect with the tympanic membrane and oval window acting as plates of a capacitor. It would seem possible that these membranes, acting as plates of a capacitor, could be set in motion by rf energy. There are, however, three points of evidence against this possibility. First, when one rotates a capacitor in an rf field, a rather marked change occurs in the capacitor as a function of its orientation in the field. When our subjects rotate or change positions of their heads in the field, the loudness of the rf sound does not change appreciably. Second, the distance between these membranes is rather small, compared with the wavelengths used. As a third point, we found that one of our subjects who has otosclerosis heard the rf sound.

Another possible location for the detecting mechanism is in the cochlea. We have explored this possibility with nerve-deaf people, but the results are inconclusive due to factors such as tinnitus. We are currently exploring this possibility with animal preparations. The third likely place for the detection mechanism is the brain. Burr and Mauro (6) presented evidence that indicates that there is an electrostatic field about neurons. Morrow and Sepiel (7) presented evidence that indicates the existence of a magnetic field about neurons. Becker (personal communication) has done some work indicating that there is longitudinal flow of charge carriers in neurons. Thus, it is reasonable to suspect that possibly the electromagnetic field could interact with neuron fields. As yet, evidence of this possibility is inconclusive. The strongest point against is that we have not found visual effects although we have searched for them. On the other hand, we have obtained other nonauditory effects and found that the sensitive area for detecting rf sounds is a region over the temporal lobe of the brain. One can shield, with a 2-in.sq. piece of fly screen, a portion of the strippled area shown in Fig. 6 and completely cut off the rf sound.

**FIG 5 Area most sensitive to electromagnetic energy  
(shaded portion)**

Another possibility should also be considered. There is no good reason to assume that there is only one detector site. On the contrary, the work of Jones et al (8), in which they placed electrodes in the ear and electrically stimulated the subject, is sufficiently relevant to suggest the possibility of more than one detector site. Also, several sensations have been elicited with properly modulated electromagnetic energy. It is doubtful that all of these can be attributed to one detector. As mentioned earlier, the purpose of this paper is to focus the attention of physiologists on an unusual area and stimulate additional work on which interpretations can be based. Interpretations have been deliberately omitted from this paper since additional data are needed before a clear picture can emerge. It is hoped that the additional exploration will also result in an increase in our knowledge of nervous system functions.

### ELF Goggles (upgraded)

Tune your mind beyond time and space into altered states of awareness! The ELF(Extremely Low Frequency) Goggles are a combination of our Meditation goggles and our popular Elf oscillator into one highly effective unit. The unit electronically entrains your brain waves to match the frequency pattern generated within the stereo headphones while photonic stimulation is utilized with flashing lights inside the goggles to effect your optic nerve by pulsing at the same frequency pattern. This powerful combination of flashing lights and phase shifted sound causes your brainwaves to forcibly adjust to the new frequencies inducing altered states of awareness.

Just as one tuning fork will cause another identical tuning fork to vibrate, the user can let his EEG patterns be entrained to coincide with a specific altered state. This unit allows you to reach deep meditative states in minutes that take Yoga masters a lifetime to achieve.

Experiences include improved memory and comprehension, out-of-body feelings, spontaneous regressions, enhanced ESP and other paranormal sensations! After using the device for a few weeks, it is possible to self-induce these altered states on your own without the machine.

The frequency of the unit is completely adjustable from 13 to 4 cycles per second. A digital display shows the selected frequency. The unit also has a volume control for the sound emitted to the headphones and a light intensity control which can adjust the light goggles to a comfortable level. Two jacks are mounted on the side of the unit for headphones and light goggles to plug into. A

|                       | <table border="1"> <tr> <th colspan="2" data-bbox="561 1317 1406 1384">Neurophone (upgraded)</th></tr> <tr> <td data-bbox="561 1384 805 2020"></td><td data-bbox="805 1384 1406 2020"> <p>Invented in 1968 by Patrick Flanagan. The Neurophone is a device that allows the user to hear through the skin. It bypasses the normal audio channels and allows hearing of information using a direct connection to the brain! There have been many reports of deaf people who are able to hear using the device. When he applied for a patent, the Defense Intelligence Agency took possession of the technology under the excuse that it was a matter of national security. A national security order forbade Patrick from working on the device or discussing it with anyone. After challenging the order for more than 4 years, the patent was finally released and approved in 1972.</p> <p>The device is about the size of a cassette tape and runs on a 9 volt battery. It has an input jack where you can feed any standard audio from a cd player, or tape player into the Neurophone. There are 2 electrodes that transmit the audio information directly to the brain. When the electrodes are placed anywhere on your head or face, the sound actually appears to be coming from inside your head! It takes most people about a week of using the machine to hear clearly with it. This is apparently because many people do not have the right neural connections formed yet in their brains. After using the device for a few days, the sound becomes much clearer. If you plugged your ears with your fingers or used earplugs while using the device, the</p> </td></tr> </table> | Neurophone (upgraded) |  |  | <p>Invented in 1968 by Patrick Flanagan. | Neurophone (upgraded) |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                       |  |  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|                       | <p>Invented in 1968 by Patrick Flanagan. The Neurophone is a device that allows the user to hear through the skin. It bypasses the normal audio channels and allows hearing of information using a direct connection to the brain! There have been many reports of deaf people who are able to hear using the device. When he applied for a patent, the Defense Intelligence Agency took possession of the technology under the excuse that it was a matter of national security. A national security order forbade Patrick from working on the device or discussing it with anyone. After challenging the order for more than 4 years, the patent was finally released and approved in 1972.</p> <p>The device is about the size of a cassette tape and runs on a 9 volt battery. It has an input jack where you can feed any standard audio from a cd player, or tape player into the Neurophone. There are 2 electrodes that transmit the audio information directly to the brain. When the electrodes are placed anywhere on your head or face, the sound actually appears to be coming from inside your head! It takes most people about a week of using the machine to hear clearly with it. This is apparently because many people do not have the right neural connections formed yet in their brains. After using the device for a few days, the sound becomes much clearer. If you plugged your ears with your fingers or used earplugs while using the device, the</p>                                                                                                                                                                                                            |                       |  |  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

|  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |  |

|  | <p>Neurophone sound actually becomes louder as a booming voice from inside your head!</p> <p>Here are some of the reported effects of using the device:<br/>         Accelerated learning, Reportedly allows some nerve deaf people to hear, Electronic telepathy, Information is transmitted directly to brain, Has been used to communicate with dolphins, Increases concentration, Stress reduction, Synchronizes left and right side of brain, Information is fed directly to subconscious mind, Enhanced psychic, abilities, Reprogram your brain.</p> <p>Many aspects of the Neurophone technology are not completely understood but it appears to have incredible potential for learning. We have tested the device here at Future Horizons and found it amazing. The unit comes with an attractive carrying case, instruction booklet, hookup probes, demonstration CD, and is easy to use.</p> <p>We also have a complete technical booklet about the Neurophone technology and details about how it works. It also contains lots more info about its history and potential uses. Patent information about the device is also included. The Neurophone booklet is included with all Neurophone purchases and is also available seperately.</p> |  |

|  | <p>Much research is currently being done on human brain waves called alpha waves. Now you can build your own IC controlled Brainwave Reciever and experiment with this interesting physiological instrument. These plans also contain information on transcendental meditation, "Alpha State" and other information about this exciting new field!</p> |  |

|  | <p>Lucid dreaming is the awareness during a dream when you realize your dreaming. Once achieved, you can control all aspects of the dream, do anything, go anywhere, see anybody. Device induces the effect electronically while you sleep.</p> <p><b>How it works</b></p> <p>Small optical sensors are embedded within the special goggles. The sensors can detect REM (Rapid Eye Movement) which starts when the body is dreaming. Several minutes after REM sleep is detected a visual flash is emitted into the eyes to help you wake up inside your dream. After a few days or weeks of practice most people can have lucid dreams every night. This technology is based on proven scientific concepts recently discovered from dream research. It has been documented in several scientific magazines and also shown on the Discovery Channel.</p> |
|  | <p><b>Ready to Use</b></p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

| <p>Control people's minds with this amazingly simple technology. The Mind Control Machine converts your voice into something called Silent Sound. It is basically a special format the brain can understand without your conscience awareness of any message. In technical terms, it frequency modulates your voice data at 16 kHz in a special format that affects our unconscious mind. It sounds a bit like some kind of secret military communications. The human brain however is able to interpret these messages perfectly. This mind control technology has been around for many years and in fact there are many U.S. patents on it. It definitely works and it has been used for many years by our government and by large corporations. The government used this technology during Desert Storm to influence the Iraqi's to surrender. They set up huge radio transmitting towers near the battle zone and transmitted powerful Silent Sound messages to the Iraqi's to surrender. Others will do anything you program them to. Get that raise you always wanted. Solid-State circuit works great on women too.</p> |  |

|                                                                                                                                    | <p>Tune in your mind beyond time and space into altered states! The ELF Oscillator electronically entrains your brain waves to match the frequency pattern generated within the stereo headphones and the unit itself. Better than bio-feedback, this Extremely Low Frequency oscillator helps you tune in to a variety of altered states of awareness. Just as one tuning fork will cause another identical tuning fork to vibrate, the user can let his EEG patterns be entrained to coincide with a specific altered state. Experiences include improved memory and comprehension, out-of-body feelings, spontaneous regressions, enhanced ESP and other paranormal sensations! After using the device for a few weeks, you should be capable of self-inducing these altered states on your own. Stereo headphones included. Operates on 9 volt battery.</p> |  |

| <b>Professional Polygraph</b>                                                                                                                                                                                                                                                                                                                                                                                                                                           |  |
| This is a professional type lie detector that monitors several vital signs of the subject simultaneously: respiration, skin resistance, and pulse rate. This instrument is unique in that it utilizes a stereo tape to record all the test results on one track of the tape while all the questions and answers are recorded on the second track. It can be attached to a chart recorder for permanant, graphic recording or may be replayed with full metered display. |  |

This is an "Eleanor White Book Review". Such reviews are not like what you see in the print media. My emphasis is to provide enough information that a multi-stalking victim or supporter can make an intelligent decision as to whether to buy the book. This means most of the reviews are excerpted text, with comments inserted. This type of review is biased in favor of information relevant to the fight to expose, educate the public about, and stop, multiple stalking.

Note: In the excerpted text from the book, emphasis by way of ALL UPPER CASE LETTERS is mine. The reason for such emphasis is to point up information particularly relevant.

The MAIN purpose of this book review is to describe for the visiting public just how subtle and devious the "science" of harassment had become by the end of the 20th century. Multiple stalker victims will immediately recognize the modus operandi in this book.

The book Gaslighting is intended to show effective ways of driving someone who has done the reader a REALLY bad turn, or made life Hell for the reader, REALLY crazy. The author takes the position that a few people really do deserve extraordinary harassment. The problem with multiple stalking victims, however, is that they have done NOTHING to deserve the types of treatment described in this book.

REASON TO PURCHASE THIS BOOK: I, Eleanor White, have found that this little book in hard copy form can do a terrific job of making it plain to those not informed about multiple stalking that some people really do at the very least THINK, and SERIOUSLY, about such crimes. Especially good for doubting family members and co-workers, who often would really rather none of what the multi

stalking victim says be true, and would love to rid themselves of worry by writing us off as mental cases.

## Introduction

[p 1]

"Gaslighting" is a systematic array of techniques that destroys your target's mental equilibrium, self-confidence, and self-esteem, and is designed to drive your target nuts. Gaslighting is NOT conventional harassment or physical destruction, but highly refined and subtle psychological warfare.

[Eleanor White: Sound familiar?]

Relatively crude harassing tactics, such as sending him magazine subscriptions and having his utilities turned off make it unequivocally clear to the target that HE'S UNDER ATTACK BY SOMEONE ELSE.

[Eleanor White: And I might add, this book proposes tactics designed so that the target canNOT convince others that he IS under attack. The big difference is FREQUENCY of occurrence. While the normal breaks of life happen occasionally, "Gaslighting" and multi stalking victims may have these subtle attacks happen DAILY.]

Gaslighting is far more subtle, because most of the techniques NEVER CLEARLY POINT to a malevolent or vengeful other party. The hapless target never suspects that things are being done to him ... [EW: at first, anyway] ...he comes to believe he's DOING THEM TO HIMSELF!

Other tactics are designed to ALIENATE HIM FROM HIS FAMILY MEMBERS, NEIGHBORS, ASSOCIATES, FELLOW EMPLOYEES, AND EVEN HIS EMPLOYER!

[p 2]

The term "Gaslighting" comes from the 1944 Hollywood movie *Gaslight*... ... In the movie Charles Boyer tries to convince his wife that she's going insane by contriving incidents designed to make it appear as if she's forgetful, disoriented, and confused. ... Boyer ... was able to use the force of his personality to convince Bergman that she had inherited bad genes from her mother, who had died insane.

[Back to Top of Table of Contents](#)

---

## Chapter 1: Gaslighting Philosophy

[p 8]

A fundamental aspect of gaslighting doctrine is that it's a progressive attack on your target's personality first, followed by his social and occupational relationships. Unlike harassment, where you work from the outside in, gaslighting begins at the center and works out. The sequence of attacks is important, because if you were to mount a direct attack at first, you'd run into a strong and fully functioning personality, able to resist the assaults.

[Eleanor White: Thankfully, in many cases of attacks as described in this book, these sly moves actually STIFFEN and STRENGTHEN the target's resolve, not destroy it.]

[p 9]

There are several steps in preparing a gaslighting campaign against a target. The first is to find out all you can about your target. The first step is to find out all you can about your target, to uncover entry points into his life. The following list provides a minimal outline of what you need to know:

- Full name
- Home address
- Marital status
- Spouse's name
- Number of children if any
- Children's sex and age
- Other relatives
- Occupation
- Work address
- Work telephone
- Name of supervisor
- Names of fellow employees
- Spouse's workplace
- Hobbies and interests
- Motor vehicles owned
- License plate numbers

- Credit card accounts
- Bank account numbers

[Eleanor White: My multiple stalkers have demonstrated knowledge of all the applicable points listed above, and it is a real puzzle how this has been done.]

[p 12]

Your target should not discover that he's under attack until your plan is well underway and it's too late for him to counter it.

[p 13]

In many cases, you'll improve your chances of success if you have a confederate or two to support you. This is especially true if you're conducting a whispering campaign against your target. A target may accuse one person of "having it in for him," but if he begins voicing suspicions of SEVERAL people conspiring against him, he'll present an image of paranoia.

[p 14]

Official stationery from government agencies and letterheads from several companies can serve various purposes, so whenever you have the opportunity, take a few letterheads and envelopes from the office of every company for which you work. ... As we'll see, commonplace forms such as hunting licenses and vehicle registration forms enable you to use devastating tactics against your target.

[p 15]

Collect bars of soap and hotel stationery from several hotels and motels around the country if you travel.

[Back to Top of Table of Contents](#)

---

## Chapter 2: Causing Disorientation

[p 19]

If your target wears a hat, and you can find one just like it but a quarter size larger or smaller in a thrift shop, you can make him wonder if his head is swelling, or if his skull is shrinking. It becomes very easy if your target's headgear is a baseball cap with an adjustable plastic backstrap, and he leaves it on a shelf, hat rack or in a locker. Simply change the strap by a hole or two when he's not looking.

[Eleanor White: Substituting wrong-size clothing is reported by multiple stalker victims.]

[p 20]

Move furniture and other objects to disorient your target. The more subtle you can be, the better this technique will work.

[p 21]

Change one item at a time. Move a chair or lamp, or switch his paper baskets to the other side of the desk. If he has an adjustable chair, raise or lower it an inch. Next morning ... a sense of unease and mild disorientation will creep over him as he tries to readjust to the changed surroundings. When he finally notices that something's different, it will appear inexplicable. After all, who would sneak into his office or home to move a lamp a few inches?

[Eleanor White: Moving my furniture when I'm out is a daily occurrence.]

This works in other settings as well. If your target's a machinist, purloin his micrometer, caliper, or calculator, and wait until he's given up searching for it. Then put it back in a SLIGHTLY DIFFERENT place. During the interval, your target may have even accused another employee of stealing it, provoking a confrontation that will alienate him from fellow workers. When the tool reappears, he'll be doubly confused.

[Eleanor White: Theft-and-replacements are common among multiple stalking victims.]

[p 23]

Never siphon fuel from his tank, as your target would merely conclude that someone was stealing his gas. Instead, each night ADD a couple of gallons to his tank. Your target will begin to wonder when he's due for another fill-up. It will never occur to him that anyone would add gasoline to his tank, and pretty soon he'll doubt his memory.

[Eleanor White: This has happened to me too.]

If he drives to work, get into his car and move the seat an inch or two. If he has an adjustable steering wheel, readjust it slightly for him. If he normally leaves the window open a crack to let hot air out during the summer, crank his window up to the top.

[p 24]

Another piece of subtle sabotage has a long delayed action. Open his trunk and let the air out of his SPARE tire. This is another example of untraceable sabotage that can have serious effects.

[Back to Top of Table of Contents](#)

---

## Chapter 4: Destroying Your Target's Reputation

[p 45]

Certain companies have their security guards examine any packages or briefcases employees carry out the door. ... smuggle a homosexually oriented or bondage magazine into his briefcase. The guard's eyebrows will surely go up, and the find may become the subject of gossip.

[Eleanor White: A cranky neighbour of mine was told I am a pedophile. He took some porn material to my workplace one day when I was home sick. He told the receptionist in very loud tones to "GIVE THIS TO ELEANOR".]

[p 46]

The essence of defaming your target with a rumor is that it NOT get back to him.

[p 48]

Any close police investigation [after framing the target] causes ripples. Police officers who interview friends and neighbors may request that they keep the interview confidential, but some people can't resist the temptation to gossip about anything involving scandal. More importantly, your target's employer, if interviewed by police, may hold it against him. It doesn't matter at all if the police investigation "clears" your target. Both police and employer will probably assume that, although no hard evidence surfaced this time, the target's probably got something to hide.

... he may be on the execution list for the next downsizing. Whatever else may happen, promotion will henceforth be out of the question.

[Back to Top of Table of Contents](#)

---

## Chapter 5: Provoking Confrontations

[p 83]

Sabotaging your target's work is an excellent way of provoking a confrontation with his supervisor, but it's effective only if it appears to be the result of [the target's] carelessness. This is why ... deleting massive amounts of data from his computer ... is counter productive. There are other and more subtle ways of sabotaging your

- In a machine shop ... Turning a knob or changing the computer control setting can change a critical dimension by a couple of thousandths of an inch, enough to turn an entire lot of parts into scrap metal. Another way is to remove one part from the lot, making it appear [the target] spoiled it and discarded it to hide his mistake.
- Remove your target's micrometer or caliper and put it at the other's workstation.
- Re-calibrate your target's micrometer or caliper setting it to read one or two thousandths high or low.
- In a retail outlet, make an extra entry on his cash register. He'll come up inexplicably short in his tally at the end of the shift.
- If you and your target work for the postal service, swipe letters from your target's bundle and drop them into an alley somewhere along his route.
- If your target is a photographer, open the back of his camera momentarily while he's not looking. You'll fog his film and he'll have several totally spoiled exposures to explain away.
- In a photo processing plant, surreptitiously add acid, such as sodium sulfite, to your target's developer. This is particularly effective ... because it will degrade the quality without making it too obvious that something's gone wrong.

- If you both work in a high security plant, steal his badge just before quitting time, putting it in a place where he logically could have dropped it. If you do this on a day you know he has to be home early, he'll be frantic while trying to find it.

[p 98]

Once your target has begun to lose credibility with his neighbors, a few more efforts will build a reputation as the neighborhood crank. The basic tactic is a series of unfounded complaints.

[Eleanor White: Provoking the multiple stalking target to complain loud and often is a prime tactic used by multiple stalking perpetrators.]

[p 99]

If your target has his newspaper delivered, call the newspaper's circulation office a couple of times per week, giving his name, and complaining that his newspaper never arrived that morning. It helps to be abusive. If the route manager arrives with another copy to replace the missing one, and sees [the copy which was delivered OK] at his door, it won't take long for your target to become known as a nut case at the newspaper office.

[Back to Top of Table of Contents](#)

---

## Final Comments

Eleanor White talking: The examples above are only a small sampling of the many stalking and harassing techniques listed in this book. I've chosen a few which have been reported, (or very similar incidents reported,) by people who are victims of multiple stalking. One question for which we have no satisfying answer is HOW the stalkers get away with such invasive crimes, and HOW the stalkers can influence many people to assist.

One would suspect telling lies about the target would be one way. Beyond that, it almost appears as if the justice system deliberately turns their collective heads away and ALLOWS these crimes to happen and go uninvestigated and unpunished.

As a target since 1980, I sincerely hope we will eventually find out exactly how this modern-day horror happens, and how to stop it.

From military officers to prison inmates, the ranks of ordinary Americans who claim to have been the unwilling subjects of mind control research continue to grow.

I was a victim of psychological behavior modification experimentation because of my political beliefs. I want people to know about my experience so that they may realize that the U.S. government is developing mind control technology on U.S. citizens without their consent. The National Security Act is being used to cover up abuses of U.S. citizen's rights under the law.

This experimentation took place at San Quentin in 1967, after I had been in the prison system for ten years. It lasted for seventeen months, twenty-four hours a day nonstop and used a sound projection that simulated environments. I was tested psychologically and the experiment was designed to study my fears, weaknesses and my reactions in order to develop a means to control people.

This is hard to believe but a good comparison is the Tuskegee Syphilis Experiments on black men that the National Institute of Health funded up to the 1970s, (Jones, Bad Blood, 1981). The blacks were not given a cure even though it was available. In my case, they unethically experimented on my mind rather than my body.

## **How the M.I.N.D. Device or Magnetic Integrated Neuron Duplicator Works**

John Akwei, a victim but not a prisoner, has filed a [court case](#) that described alleged "remote neural monitoring and electronic brain link technology" (Washington, DC. Civil Action No 92-0449). The theory behind mind control technology is that the brain emits electromagnetic energy like an eeg that can be detected and analyzed. Computers can correlate behavior and speech to the brainwave signals and the mind can be remotely deciphered. This theory also works in reverse. In stimulating or controlling behavior, the brain communicates via electromagnetic signals and certain frequencies create and correspond with specific mood states and behavior. The brain cannot differentiate a foreign signal from it's own. By targeting the subconscious mind with messages as hypnotists do, the technology can remotely target the subconscious and it becomes a very potent mind control weapon.

This is a simple explanation of complex technology but with President Bush proclaiming the 1990s the Decade of the Brain, it is well within the realm of reality. One of the best books on this topic is Dr. Becker's *The Body Electric: Electromagnetism and The Foundation of Life*, 1985.

Using mind control technology, the experimenters knew what I was thinking and feeling. I filed a court case in 1968 and it stated, "...a brain device at San Quentin is being used upon him to alter or destroy his brain." and "The machine emitted electromagnetic waves which stimulated petitioners brain." They could communicate directly with my mind. At one point, they kept me awake for twenty-seven days and nights.

Dr. Schmidt, the chief psychiatrist of San Quentin later told me that they had used a M.I.N.D. device or magnetic integrated neuron duplicator on me as well as General Erwin Walker. Walker was the target of a missed gunshot by Oswald at the time of the JFK murder. General Walker, like myself was known for his strong political opinions.

I think that the goal of the behavior experiments performed on myself and General Walker were to develop the computer-brain technology for political purposes and as an intelligence tool. They used pavlovian conditioning with negative psychological stimulus, and in this way, they can change your behavior. For example, my political views would be degraded all day long for days on end.

The court case, *Orlikow v U.S.* 682 F.Supp77 (D.C.C.1988) describes the Canadian court case of brainwashing and details a history of mind control experimentation by the CIA. In these experiments, which have relevant similarities to my experience, a Grid Room was used. "The subject's brainwaves were beamed to a nearby reception room, voice analyzers..." (Thomas, *Journey Into Madness The True Story of Secret CIA Mind Control and Medical Abuse*, 1989).

At about the time that I was experimented on, my mother, who never lost faith in me, saw a CBS television show, *The 21st Century* and an episode called "Miracle of the Mind". The show described experiments around the country and the direction of research was control of the mind, such as implanting animals with electrodes and manipulating their behaviors. David Krech, a scientist warned about ominous abuses of the technology that could occur.

## [Contents](#)

### **A National Security Issue**

Mind control technology is still classified and I have absolutely no remedy under the law. Evidence of the highly classified status of electromagnetic technology can be found in publications such as *The International Review of the Red Cross*. An article by Louise Doswald-Beck and Gerald C. Cauderay on Nov.1, 1990 called "The Development of New Antipersonnel Weapons", page 19-20 under Directed Energy Weapons states: "In spite of the rarity of publications on this subject, and the fact that it is usually strictly classified information, research undertaken in this field seems to have demonstrated that very small amounts of electromagnetic radiation could appreciably alter the functions of living cells." And also, "Some research seems to have confirmed that low-level electromagnetic fields, modulated to be similar to normal brainwaves, could seriously affect brain function."

Mind control research may have begun in the 1950s and evolved into a full fledged competition between the world powers as in the nuclear arms race. Several independent sources support this claim. Just two examples include the CIA's STARGATE Report describing Russia's interest in psychic research for military purposes and the U.S.'s subsequent programs of psychic research. Another article in *Chemical and Engineering News*, 2-5-96 describes a Hong Kong professor who is suing the U.S. government. The court case "names the University of Science and Technology on grounds that it was involved in continuing mind control work."

## [Contents](#)

## **A Credibility Issue — How Do You Describe Mind Control Experimentation Before it Is Public Knowledge?**

When I tried to commit suicide the experiment changed as suddenly as it had begun, as if their goal had been met. Apparently, looking for my breaking point, the mind-benders found it. Their fear tactics temporarily changed my anti-Zionist views to Marxism, and I wrote to the East German government for asylum. I still have the reply I received. Since then, I have told everyone I meet about the M.I.N.D. device. I even filed a complaint with the FBI and was interviewed for about an hour. That yielded me no benefit, however, nor did the Freedom of Information Act request I filed.

The overt, aggressive forms stopped, but the experimenters continued to monitor my actions to see what other changes might result.

Now other prisoners are describing an experience similar to mine. There are also many articles to support the reality of a M.I.N.D. device. The Los Angeles Times, March 20, 1976 article entitled "Mind-Reading Machine Tells Secrets of the Brain" by Norman Kempster states "Since 1973 a little-known Pentagon agency has been studying ways to plug a computer into an individual's brain waves... The Advanced Research Projects Agency say the \$1 million a year program has passed its initial laboratory tests and is ready for determination of its military uses. Contracts with UCLA, Stanford and MIT, among others were listed.

Several independent sources describe Russian mind control technology in defense publications such as Defense News, Jan 11-17, 1993. It states: "Known as acoustic psycho-correction, the capability to control minds and alter behavior of civilians and soldiers may soon be shared with U.S. military, medical and political officials, according to U.S. and Russian sources."

The Russian authors of a paper quoted in the story wrote:

As far as it has become possible to probe and correct psychic contents of human beings despite their will and consciousness by instrumental means...results having been achieved can get out of {our} control and can be used with inhumane purposes of manipulating psyches...World opinion is not ready for dealing appropriately with the problems coming from the possibility of direct access to the human mind.

Although U.S. sources said government officials and leaders from the business and medical communities will consider Russian offers to place the mind control capability under bilateral controls, it is not hard to imagine intelligence agencies racing to find computer-brain weapons before the other side gains the advantage.

But it has been incredibly difficult for me to convince people that scientists would attempt to conquer the mind even after the development of the nuclear arms race, genetic engineering, nanosecond computers, satellites and other advanced technology. The U.S. government and other governments are motivated to develop the deadliest toxins and germ warfare and why not exploit the mind?

After thirty years of classified research, the U.S. government is starting to openly use electromagnetic warfare technology in police forces, prisons and the military. Articles in the

last five years include Stolitsa, Nov. 2, 1992 "MC-Ultra Program, Use of mind-control equipment by armed forces....," Herald Glasgow May 26, 1995, "Brainwash killers still in use", (more citations upon request). Many articles are describing nonlethal electromagnetic behavior control weapons and related topics such as USA Today, Feb. 1996 discussing a South Carolina lawmaker proposing to use the Global Positioning Satellite system to track parolees.

[Contents](#)

## **San Quentin, a Plausible Site for Mind Control Experimentation**

Prison in California during the 60s and 70s was vastly different from today. It reflected the hippie movement and President Kennedy's vision of Camelot and the radical Berkeley protester's disillusionment. Berkeley was a hotbed of intellectual thought on third world politics and the prison system was undergoing a social reform movement. Rehabilitating prisoners was in vogue. A book called *The Rise and Fall of California's Radical Prison Movement* by Eric Cummins described it best as my experience fit his factual account. I was sentenced before Angela Davis and her successful overturning of the indeterminate sentencing law. If not for her efforts, I could still be in prison today. There were many reasons for the anger and violence displayed by prisoners at the time. "On Jan 12-16, 1967, a massive prison disturbance brought the simmering situation in the institution to a boil." Black prisoners wanted better jobs and training and representation. I was in a cell next to George Jackson, a radical who would later be killed by the guards at San Quentin. And Caryl Chessman, whose world wide appeals were a lesson to the prison administration on how much trouble an educated prisoner could be, was nevertheless executed in 1960. I knew Carl and he got me interested in law.

Sirhan, in San Quentin for killing Robert Kennedy had the same chief of the prisons's psychological testing program that I did, Dr. Eduard Simpson-Kallas. Dr. Simpson-Kallas and Dr. Schmidt disagreed with Dr. Parks about Sirhan's sanity. Dr. Simpson-Kallas felt that Sirhan was hypnotized and did not plan the assassination. Dr. Parks stopped Dr. Simpson-Kallas from examining Sirhan and after a clean six year record with San Quentin, Dr. Simpson-Kallas handed in his resignation over this disagreement (Turner and Christian, *The Assassination of Robert F. Kennedy*, 1978).

[Contents](#)

## **Another Government Cover-up - Who Will Inform the U.S. Public?**

I was transferred to Vacaville Medical Prison, where they tried to give me shock therapy but my mother would not sign the papers needed. I believe that they wanted to discredit me so that I could never testify or stop their behavior control experiments. I have been out since 1977 working to reveal the existence of the M.I.N.D. device.

I hope to prove in court that Associate Warden Parks knew about this experimentation, but signed a national security oath. There has been a growing bureaucracy to enforce national secrecy among the many government and private research institutions and even when laws are violated, it is the overruling factor in court cases.

Mr. Parks worked at Vacaville Medical Prison when Dr. William C. Keating, Jr. and Dr. Ralph Urbino, a retired Air Force man formed the nonprofit, tax exempt and shadowy Solano Institute for Medical and Psychiatric Research. SIMPR may have been a front organization for funding my experiment by the CIA. Books have described illegal and inhumane experiments at Vacaville (Mitford, *Kind and Usual Punishment*, 1975 and Marks, *Search For the Manchurian Candidate*, 1979).

While a prisoner in 1965, I played bridge with Dr. Keating and high ranking officers from Travis AFB and professors and their wives from the universities. I made some enemies with my political views. Two years later, the mind control began.

I also hope to prove in court that Raymond Proconier, Director of the California Department of Corrections, an ex-Navy man and Reagan appointee had knowledge of the experiments with the M.I.N.D. device. He also would have had a security clearance.

In 1973, Ronald Reagan, governor of California announced a proposal by Dr. Louis Jolyon West, a well-known CIA consultant and chief of the UCLA Neuropsychiatric Institute to establish a new "Center for the Study of Violent Behavior." It was to include the prison system. I believe that the public outcry against the proposal caused this related behavior research to go underground.

### [Contents](#)

## **Top Mkultra CIA Scientist Denies Validity of Government Documents on Vacaville Prison CIA Sleeper Lab to the Advisory Committee on Human Radiation**

The Final Report Advisory Committee on Human Radiation Experiments, states that at Vacaville prison:

...CIA provided Dr. Hamilton funds to set up and operate a so-called "sleeper laboratory," whereby he could do his own research but would be available to do research for CIA at the agency's request. ...In contrast to the description in the 1965 document, Hamilton stated further that CIA never in fact utilized the laboratory before it was shut down.

But in light of my experience and the fact that Dr. Hamilton worked for the MKULTRA mind control CIA research and was a West Coast supervisor (Marks, p200), Dr. Hamilton could misrepresent facts in the name of national security.

### [Contents](#)

## **An International Human Rights Issue**

Today, victims are organizing. David Fratus has fought to publicize his case in Utah. Perry Dardar of Louisiana describes the same type of experiment that I endured. And Gregory [Lambros](#), another prisoner even has a law firm that is organizing a mind control database for victims. Betsy Russell-Manning has written a [book](#) called Mind Control in U.S. Prison System, 1996, [Flatland Publishing](#).

Looking back to 1967 and I see great progress against tremendous odds. In prison, time takes on a new meaning; I learned that I had no choice but to be patient — but persistent. I hope that victims will contact me so that we can make consistent progress as a group.

# ORGANIZED STALKING AND ELECTRONIC HARASSMENT GLOSSARY

June 7, 2009

---

## ADVANCED TECHNOLOGY

Technology which does things like vibrate objects or even body parts of electronic harassment targets. Target groups are not able to explain how these attacks can be done at this time. (Vibration of objects and body parts also occurs in sufferers of the as-yet unexplained "Hum", which started out years ago as the "Taos (NM) Hum.")

Contrast with [conventional technology](#) below.

## BELIEFS

A common label used by [disinformation agents](#) to refer to statements and proffered materials from organized stalking and electronic harassment targets.

Descriptions of experiences by targets are first person testimony, acceptable in court, not "beliefs." References to technologies which have been [demonstrated](#) are fact, not "beliefs." References to stalking by multiple stalkers are backed by [statistics](#), and are not "beliefs."

## C.A.H.R.A.

[Citizens Against Human Rights Abuse](#), the FORMER name of a non-profit U.S. registered organization, founded and directed by Cheryl Welsh. The mission of CAHRA is stated in full on the web site, but is basically to provide information to the public to increase awareness about the current-day gang stalking and electronic harassment crimes being ignored or covered up by the world's major governments.

CAHRA has changed its name to "Mind Justice", and the web site is at:

<http://mindjustice-org>

## CAUSE STALKING

"Cause stalking" is an alternate term for what some multi stalking targets call ["organized stalking" or "gang stalking."](#) It is specialized groups of people who think they are supporting some cause, but are more interested in harassing targets designated by their leaders. Lies told by the leaders add fuel to the fire. An extensive explanation of cause stalking can be found in the book:

[Quotes from both Lawson books](#), Eleanor White's recommendation for those who want to refer others to Lawson's investigation. My reviews of Lawson's books have material that would distract a non-target and possibly confuse them.

["Cause Stalking"](#) by David Lawson.

Purchase source for CAUSE STALKING:

<http://www.amazon.com>

## **COINTELPRO**

... a series of covert crimes against dissenters of all stripes within the United States during the Cold War and extending to Viet Nam protesters and anti-racism elements. These crimes included infiltration of activist groups, and total destruction of lives and reputations, as well as property by frequent break-ins. The FBI was the main perpetrator organization. COINTELPRO type activity is half of the non-electronic activity experienced by today's electronic harassment targets, [organized stalking](#) being the other half. An excellent site for COINTELPRO research may be found at:

<http://www.derechos.net/paulwolf/cointelpro/cointel.htm>

## **CONVENTIONAL TECHNOLOGY**

"Conventional technology" is that which can be purchased on today's commercial market. Examples of conventional technology signals are:

- Radio waves (non-ionizing)
- Microwave (non-ionizing)
- Infrared (non-ionizing)
- Ultraviolet (non-ionizing)
- Visible light, including laser light (non-ionizing)
- X-rays and Gamma rays (ionizing)
- ELF electromagnetic (non-ionizing, extremely low frequency)
- ELF acoustic (mechanical vibration, not electromagnetic)
- Ultrasound acoustic (mechanical vibration, not electromagnetic)
- Infrasound acoustic (mechanical vibration, not electromagnetic)

## **DECOY(ING)**

Decoy(ing) is the perpetrators' practice of deceiving gang stalking and electronic harassment targets.

When I (Eleanor White) use this term in relation to technology, I am referring to deception tactics like these:

- The deliberate stoppage of an attack signal in response to a target's attempt to shield or jam the attack signal, always for a limited time, just enough to sucker the target into spending more money, time, and fighting spirit before re-starting the attacks.

- The seemingly "accidental" showing the target some kind of device which the target then assumes is a genuine electronic harassment weapon. (Historically, intelligence perpetrators have used the appearance of being totally inept to cover their culpability - this is not new to the trade.)
- The detection of conventional signals in the homes of some targets, interpreted as "proving" that conventional technology is "all there is to it".

Such deceptive tactics serve to keep the target's attention focussed on ineffective shielding and detection efforts, causing in some cases very large waste of resources. Decoying also keeps targets and outside members of the public debating endlessly about irrelevant technology.

## **DISINFORMATION (AGENT)**

Disinformation is deliberately false information, as opposed to misinformation, which can be accidental. Examples of disinformation:

- Weapons capable of through wall harassment and destruction of quality of life all in the future, as the 2050 estimate in one widely distributed USAF article.
- Voice to skull technology is all in the future.
- Electronic harassment requires body implants.
- Organized stalking never happens.
- Organized stalking and electronic harassment are being carried out under the MONARCH program

Disinformation agents are persons working for the organized stalking and electronic harassment perpetrators and who are very slick in their ability to present information, and very prolific in lading out information which is false to targets eager for easy solutions. Some pose as targets. Others claim military or government or scientific working histories to enhance their credibility.

One good example is Colonel John Alexander, who calls himself "the father of non-lethal weapons". He consistently goes on talk shows or gets public attention in other ways and declares that he doesn't know of any mind control programs or weapons in use today, the implication being that if he doesn't know of any, then almost certainly there is no such thing at present.

There are web sites claiming to be posted by targets which portray trivial events or events not involving criminal activity as organized stalking and electronic harassment.

A pilot credibility review project was started in 2008 to place ratings on material which has been promoted for activism use:

<http://www.creviews.net>

## **ELECTRONIC HARASSMENT**

(Targets of electronic harassment sometimes refer to it as "mind control", because mind-controlling technology is part of electronic harassment.)

Electronic harassment as referenced on this web site refers to harassment by advanced electronics which can directly act on, monitor, and disrupt and cause pain in the mind and body of a target. Some of these devices are UNclassified:

[Full listing of proven EH technologies](#)  
[voice to skull](#)  
[silent sound](#)  
[EEG entrainment by radio](#)  
[through-the-wall radar](#)

None of those devices require implants to work.

## **ELECTROSENSITIVITY**

A medical condition, in no way related to covert government backed harassment and torture of selected citizens, i.e. the crime of electronic harassment. "Electrosensitivity" is repeatedly used by both professional [disinformation agents](#), and electronic harassment targets who have not carefully thought about the effects of confusing a medical condition with a crime, ...to derail conversations about electronic harassment and to leave the uninformed listener with the "feel good" idea that mind control may be nothing but an allergy to electromagnetic fields.

## **FACTS**

To decide what info is usable as "facts", for a gang stalking and electronic harassment target, is not fully straightforward. I, Eleanor White, have tried to describe things for a target to consider in different situations when deciding whether to use a piece of information as "fact" or not on [this separate page \(click here\)](#).

## **GANG STALKING**

Gang stalking is a POOR TERM, as it confuses listeners and readers with various types of gangs such as youth, biker, race, Mafia. ORGANIZED stalking is the preferred term. Organized/gang stalking refers to the organized harassment of selected targets by groups. In almost all cases of electronic harassment, the target gets both electronic attacks on mind and body functions, along with harassment by groups of people. A book describing these organized stalking gangs is:

[12-year investigation](#) by David Lawson.

David Lawson calls gang stalking "cause stalking" in his second book.

These groups are entirely different from youth gangs or organized crime gangs, and their members are indistinguishable from the average citizen. When organized stalking occurs in the workplace (which it virtually always does) it is called [mobbing](#). Statistics for mobbing are in line with those for organized stalking with electronic harassment, that is, about one person in a hundred report they are being targeted. To date, government and medical officials refuse

to acknowledge this, although a small number of doctors and police officers have privately acknowledged this is happening.

## **HAARP**

High Altitude Active Auroral Research Project of the U.S. Government. This project has been written about as a conventional but very high power network of radio transmitters, at time of writing in Alaska, Greenland, Norway and Australia.

The abilities to change weather patterns, perform undersea communications, and could theoretically use atmospheric reflection/refraction to transmit ELF pulsed mood-altering signals which might affect large numbers of people have been attributed to the HAARP transmitter network. This large-scale conventional network can NOT focus its signals on individual human beings, which is one of the abilities of current-day electronic harassment signals which are actually in use. HAARP should not be considered one of the electronic weapons causing disabling effects in targets of OS/EH.

Visit <http://www.earthpulse.com>, a web site maintained by Dr. Nick Begich, for books about the HAARP project.

## **HANDLER**

A handler in the intelligence services (and MKULTRA survivor group) is the direct supervisor of an intelligence "asset".

Someone who has been programmed to do the will of a controlling agency, such as a mind control target, is a "asset" to the controlling agency. Current day gang stalking and electronic harassment targets are not usually acquainted with their handlers, however, we can be certain at any given time that each of us has one.

The term handler is heard and read much more frequently among MKULTRA survivors. The handlers know the appropriate hypnotic words, tones, or other signals to invoke the "asset's" hypnotic programming.

## **HAND TO HAND MIND CONTROL**

A term coined by anti-New World Order activist Linda Kennedy to describe the type of up close and personal destruction of every facet of life experienced by current-day targets of organized stalking and electronic harassment, and who also experience many forms of electronic mind/body attack, sabotage, street and neighbourhood harassment skits by [gang stalkers](#), fuelled by lies about the target.

## **HUMAN RADIATION EXPERIMENTS**

... From World War II up through the 1960s, a comprehensive set of government experiments in which involuntary human test subjects were fed or injected with plutonium and other radioactive materials in the name of nuclear warfare research. These test subjects were finally apologized to (after decades of being labelled "the crazies") by President Clinton. Demonstrates the tradition of denial and ridicule by government officials when it suits their agenda.

## "INFO WARFARE" GLOSSARY

.... "Information Warfare" is a popular buzzword these days, and unfortunately and wrongly, organized stalking and electronic harassment activity is sometimes lumped into the same category as computer crimes. So here is a glossary of the "Information Warfare" buzzwords, some of which may be used in dealing with our issue:

<http://www.informatik.umu.se/~rwhit/IWGlossary.html>

The Patriot broadcasters use information warfare to mean the campaign to educate the public about the many government crimes, past and present, and their usage is not specifically related to organized stalking and electronic harassment. At least 20 of the Patriot Radio hosts have had some of the electronic harassment effects. Several of their shows have featured organized stalking and electronic harassment targets as guests.

## MANCHURIAN CANDIDATE

... From the non-fiction book by John Marks, based on 16,000 pages of Freedom of Information Act materials. This is a person who has been hypnotized to the extent that he/she is willing to perform atrocious crimes, such as assassinations, without fail, and against the "candidate's" own will. Manchurian Candidates are set into motion by "trigger" phrases, hand signals, tone combinations or sequences. The programming is thus "passworded". The programming also self destructs upon completion of the triggered task.

## MIND CONTROL

**Scope of this term:** In the early 1990s, what is today often referred to as "electronic harassment", or "organized stalking and electronic harassment" was called "mind control" because of the similarity between the attacks on current-day gang stalking and electronic harassment targets and survivors of MKULTRA, the well-known U.S. government mind control program.

However, since newer statistics show that organized stalking and electronic harassment are occurring quite often, around one person out of a thousand being targeted, we in the anti organized stalking/electronic harassment activism community urge that using the term "mind control" as our primary term for these crimes be stopped, in favour of "organized stalking and electronic harassment" which doesn't paint an inaccurate picture in the mind of our listeners/readers.

Make no mistake about it, though, some of the electronic harassment is clearly of types which control both mental and physical functions of the target. "Mind control" is definitely a subset of "electronic harassment."

**1. Original Sense:** The ability and use of any method for forcing an individual to think, perceive, or behave according to the wishes of another. Hypnosis and torture are prime examples. MKULTRA is a recent example.

**2. Current-day Sense:** A world wide programme in which citizens are chosen for covert thought, perception, and behaviour control by advanced technology, accompanied by remotely induced pain and artificial disease symptoms, and incremental but *never-ending*

ruination of all aspects of the chosen target's life. For example, physical and mental health, possessions, finances, career, and relationships. Each individual attack is kept small so that to the outside observer, the target is "imagining things". This incremental method takes advantage of the fact that outside observers cannot see the full history of this constant harassment and torture, and cannot believe that other citizens are capable of knowingly torturing someone. (The [Milgram](#) experiments showed that willingness to torture others is far more common than the average person realizes. The book [Terrorist Stalking in America](#) by David Lawson exposes the non-electronic side of what is often called "mind control".)

## **MKULTRA**

... The 1950s group of "behaviour modification" programmes started covertly by the CIA. This programme group was exposed by the U.S. Senate's Church-Inouye committee in the late 1970s, but no criminal proceedings followed, and the neuro-electromagnetic programmes simply kept on rolling, totally out of control but very well hidden. See [OTHER SITES](#) to read more about MKULTRA.

## **NEURO-ELECTROMAGNETIC**

... The use of radio signals specifically fashioned (modulated) to directly affect the brain and nervous system. This is different from the use of electrodes in contact with the body, and enables generation of effects **from a distance**.

## **NEW WORLD ORDER**

A not specifically admitted to organization, the purpose of which is world domination, and to which most world leaders and senior officials have allegedly and covertly pledged their allegiance. One person asked a United Nations representative about the New World Order, and the rep stated that the New World Order is the sum total of all United Nations programs. A massive UN document titled "Agenda 21" (referring to the 21st century) is regarded by some researchers as the working blueprint for the New World Order. National sovereignty is to be replaced by "regional governance" say the researchers.

Some targets consider it likely that the ultimate driving force behind the organized stalking and electronic harassment atrocities reported in this web site is the planned New World Order. Very likely made up of secret societies, and political organizations of the rich and influential such as the Council on Foreign Relations, the Tri-Lateral Commission, the Bilderbergers, and like others. Spoken about by U.S. former President George Bush SENIOUR, but never explained in detail to the public. Do a web search on the name for more detailed information.

For Congressman Ron Paul's public statement about the New World Order at an appearance in Austin, Texas USA, [click here](#).

For a book, copyright 2000, explaining the roots of the New World Order, check out [Rule by Secrecy](#), by Jim Marrs.

## **ORGANIZED STALKING (OS)**

"Organized stalking" is the PREFERRED term for that portion of the full crime of organized stalking and electronic harassment where people who live in the community will mercilessly

harass a designated target, based on LIES, such as the target is a drug dealer, the target has a long criminal record, or the favourite lie, the target is a pedophile.

"Group stalking" is a good alternate term, as it does not mislead a non-target into believing that common types of "gang" are the organized stalking perpetrators.

This organized stalking is carefully scripted so that every attack appears to be a "break" experienced by everyone in the course of normal living. However, a "break" that might happen once or twice a year will happen daily to targets. Since there are many "breaks" to choose from, the perpetrators rotate "breaks" from the large menu, making it very difficult for the target to convince others that they are being harassed.

The justice system provides cover by pretending organized stalking and electronic harassment don't happen, and a few police officers have actually confided that they are under specific orders to not help, or even make a report for their records, when someone complains about organized stalking.

Lawson's books on the subject, two editions now, are quoted here:

[Notes on David Lawson's 12-year investigation](#)

## **OS/EH**

"OS/EH" is an abbreviation for the full crime of organized stalking and electronic harassment. A large majority of targets experience both, particularly those who are several years into what is usually a life sentence.

There are two e-booklets available designed to educate non-targets about the crime of OS/EH:

[Organized Stalking: A Target's View](#), with information about BOTH OS and EH.

[Organized Stalking: A Target's View](#), with information only about organized stalking - there are activism situations where this "muted" approach may work better.

## **PERP(S)**

"Perps" are perpetrators of the organized stalking and electronic harassment crimes.

## **POISON PILL DISINFORMATION TACTIC**

"Poison pills" are seriously (and usually considered deliberately) false statements embedded in documents which otherwise contain valid information. A poison pill disinformation purveyor hopes that people desperate for information to help them prove a crime will promote such documents because of their good information content. Promoting such documents leads to eventual discreditation of those promoting the documents. One example are the many web sites, videos and books filled with organized stalking and electronic harassment information but titled "MONARCH." MONARCH is an alleged program of torturing physically captive children which has nothing to do with organized stalking and electronic harassment.

## **PSYCHO-ELECTRONIC**

Refers to any electronic technology, either conventional or advanced, which is capable of mind-weapon effects. Using this term does not tie one down to any specific type of mind weapon technology. Electronic mind weapons were looked into as part of the MKULTRA programs.

Because of the "psycho" term, this is NOT a recommended term for activism. Activists are better served by the term "electronic harassment" or "electronic assault."

## **PSYCHOTRONIC**

A word used in many different senses, but when used by an electronic harassment target, usually refers to advanced technology capable of mind weapon effects. Normally psychotronic refers to electronic harassment effects which cannot be generated by, detected by, or shielded against, using conventional technology. (Psychotronics began as a healing methodology about a century ago.)

(Originally, "psychotronic" referred to use of electronic components together with "special abilities" of an operator to produce healing. The "special abilities" appeared similar to psychic abilities.)

"Psychotronic" is NOT recommended as an activism term, first because of that "psycho" portion, and secondly because of the confusion with the original meaning of "psychotronic" as a healing practice.

## **SILENT SOUND**

... Ultrasound or voice-FM transmission of hypnosis and other manipulative signals which is understood by the brain but not the human ear (an alternative or adjunct to microwave). See U.S. patent [5,159,703](#) for further details of one prominent method for creation of a silent sound signal.

Some commercially available silent sound speech converters raise the voice into the upper reaches of the audible hearing range, and also convert the waveform from amplitude to frequency modulated. The brain can decode the speech but the conscious hearing sense cannot.

Later versions uses in anti-shoplifting programs regulate the volume level of the "silent sound" component of department store music systems so that the "silent sound" subliminals aren't easily heard.

## **STREET THEATER**

Important: See also the book [PI David Lawson's 12-year investigation](#) of organized stalking, of which "street theater" is a part.

"Street theater" when spoken of in an organized stalking context refers to carefully scripted harassment by neighbours and strangers especially, but can include harassment by family, friends and co-workers. These acts are designed to keep a target at a high stress level, and are crafted so that outside observers are likely to wave the skits off as "life's normal breaks".

The cumulative effect of such acts can be crushing to sensitive targets. Noise, crowding in person or on the highway, stealing items from shopping cart when in the checkout line, and kids sent to hang out in front of, stare, make noise, and even throw tennis balls against the target's house are simple examples.

What differentiates street theater from "the breaks" is that street theater goes on every day, often by different mind control operatives, far too often to be random or "natural". Cover is provided by the tendency of people to refuse to acknowledge the frequency of these acts and consider the complainer just being "a crank."

\* Read [this essay](#) to see how incredibly EASY it is to design street theater acts which are absolutely deniable and carry no risk of being caught.

## **SUBINFO**

"Subinformation" is used by disinformation agents who want the public to believe that something may happen but only "in the future". An example is when a so-called "expert" in non lethal weapons declares that implantLESS transmitting voice into the skull of a target MAY happen in the future, though in fact [it did happen](#) in the early 70s.

## **SUB-VOCALIZED THOUGHTS**

"Sub-vocalized thoughts" are thoughts in which the thinker expresses the thought in words, said **silently**, to self. When a thought is sub-vocalized, electric currents normally associated with speech are sent to the vocal cords, just as if the thinker were speaking. However, there is no forcing of air past the cords and so the thought is "silent".

Electronic harassment targets seem to find that if a thought never reaches the sub-vocal stage, it may be more difficult for the electronic harassment perpetrators to monitor.

## **SYNTHETIC TELEPATHY**

See [V2S aka V2K](#). Sometimes used as an alternate name for voice to skull transmission. Sometimes used to describe actual telepathy involving artificial means.

"V2K" was posted as an acronym representing voice to skull on the U.S. Army's thesaurus web site for several years. Attempts to find out why the definition was removed have not been successful.

## **TI**

"Targetted Individual", a target of organized stalking and electronic harassment. Targets are urged to NOT use the abbreviation "TI" because it is not known at all to the public. Generally, the fewer abbreviations we use, the easier we will be understood by members of the public.

## **V2S aka V2K**

"Voice to Skull", microwave transmission of sound to skull by way of pulse modulated microwave, basically a modified radar signal; successfully demonstrated by U.S. Army researcher Dr. Joseph Sharp in the early 1970s; also known as "synthetic telepathy".

For more details, see [voice to skull success notes](#)

## ***Psychotronic Golgotha***

**with comparisons to [U.S. protestors](#)**

Newworld Dictionary: Golgotha, the place where Jesus was crucified.  
1. a burial place. 2. a place of agony or sacrifice.

Also see [Psychotronic Golgatha](#) by N.I. Anisimov, 1999

---

Издательство "Сам себе адвокат"  
Москва, 1999 год

Three protest signs, left to right:

1. Psychotronic Genocide is the work of the Central Committee Communist Party! Nuremberg-2 Inevitable!
2. SOS! Russia is in Danger of Going Psychotronic
3. No psychotronic weapons! no psychofascism!

If the government is going from communism to fascism, then where are we going?

The FSB is using psychotronic weapons. They can control, paralyse, and send to prison or a psychiatric ward anyone they want to.

People! Your private and intimate lives are under the control of the "special Service" and the military.

Central Committee Russian Communist Party and KGB-  
Officially stop the government from using psychotronic weapons against the people.

International Day to fight for the prohibition of psychotronic weapons.  
(September 10th)

No psychotronic weapons. No psychofascism.  
Take the Central Committee Communist Party and KGB to an international tribunal!

# **Psychotronic Golgotha**

**by N.I. Anisimov, 1999**

[Also see pictures from the book](#)

---

Twenty-five pages of the seventy-two page book, generously translated by Ramon Ruelas, copyright.

The Russian author, N.I. Anisimov has been interviewed in several mainstream Russian press articles in the 1990s as the spokesman for a Russian group of 'mind control' or psychotronic victims. He has appeared in the 1998 ZDF German TV documentary, "Zombies of Russia". Anisimov has been quoted by Foreign Military Studies Office, military analyst, Timothy L. Thomas in the Parameters, US Army War College Quarterly Vol. XXVIII, No.1, Spring 1998 article, "The Mind Has No Firewall".

Anisimov describes the history of psychotronic weapons, the weapon effects, who is targeted in illegal experiments in Russia, who is developing the weapons and the extent of the problem.

## Table of Contents

- Psychotronic Weapons
- Humanitarian Weapons - A Plague of the 20th Century
- Scientific Cannibalism, Psychotronic Weapons and Diabolical Technologies
- Totalitarian Sects - A Range for Testing Psychotronic Weapons
- Rights-defenders Anticipate - Watching Television is Dangerous!
- Wizards, Witches and other Evils Under the Roof of the Government Administration
- Aliens, [\*\*\*], [Baba-Yaga and Other Devilries]
- Contemporary Exotic Types of Weapons
- The Computer is Destroying Mankind
- Certainty in Complete Non-punishment or a Bandit's Farce?
- Vampires in White Dressing Gowns
- Yellow Gulag and Psychotronic War
- Towards a Backward Thinking In the Name of Stopping the Bio-robotizational Madness
- KPSS Central Committee and KGB Plan: "Psychotronic Golgotha"
- Your Brain, Your Private and Intimate Life are Under the Control of the Secret Service
- The White House in a Psychotronic Dimension
- "Ch" Hour \*
- Dispassionate Codes Strike out in Alarm
- Customers and Manufacturers
- The Conducting of Political and Governmental Secret Terrorism
- Crazy "Little Vodka"

- An Electronic God Blindly Punishes and Pardons
- Free Will for Citizens, Democratic Elections are Impossible Under Conditions of Psychotronic Applications on the Population
- On the Quiet to the Authorities: On the Scenario of the Model of the Puppet Theater
- Murder will Out
- The Threat to National Security Demands the Urgent Adoption of Laws
- Notes on the Sources of Information Used in this Book

## **Psychotronic Weapons**

At the dawn of the scientific-technical progress, dictators and rulers of totalitarian governments dreamt about how to embody the most ancient occult sciences and hidden potentials of mankind's psyche in technical weapons in order to, with their help, make their own populations obediently conformist, blindly fulfilling the wishes of the dictator and his associates. They even cherished monstrous ideas, after the creation of super-weapons, of using these for the enslavement of other governments and of becoming rulers of the world. With the creation of such types of weapons the military has been receiving the ideal weapon of mass enslavement and destruction, and the Secret Services an ideal zombie agent capable, without portable radio sets and guns, of obtaining and conveying secret information. But if at the end of the past century, the embodiment into life of these dreams -given the weak development of technology -was not possible, then already by the start of the 20th century, when scientific-technological progress was becoming intensively developed, these dreams came to be realized into practice.

One of the founding fathers of these national psychotronic weapons became the academician V. Bekhterev. In 1925 B. Bekhterev's group conducted the first experiments on the collective suggestion of emotions over a distance. Mass suggestion was achieved with the radio-set. A considerable contribution in the creation of these diabolical weapons was introduced by the daughter of F. Dzerzhinskovo M. Tal'tze and the docent D. Luntz. They were engaged in the development of combined psychotronic technologies that were based on imported special narcotic preparations and technical apparatuses. In the capacity of guinea pigs they employed prisoners of Lubjanka and patients of the psychiatric institutions. With the invention of the television, there appeared the possibility of the mass psychotronic treatment of the population by mean of television sets. After the fall of fascist Germany, the scientific research in the area of the creation of psycho-technological weapons fell into the hands of the Soviet military and the Chekists, and they gave a significant push to the creation of national psychotronic weapons.

At the end of 50 years, contemporary national psychotronic weapons emerged from the laboratories of the secret NII and began to appear in the arsenals of the secret service and the military. At the same time, in the "List of Knowledge Prohibited from Publication," the point was introduced regarding the prohibition of the open publication of material about technical devices intended for influencing of the behavioral functions of a person and about the possibility of controlling the behavior of a person. At the end of 70 years, psychotronic weapons started to come off the conveyors of assembly lines of secret factories to be used against the population on a mass scale. At the end of 80 years, the first rights-defense movement in the country came to be created, leading to the uneven struggle against the monstrous criminals of the century.

## **Humanitarian weapons - A plague from the 20th century**

Psychotronic weapons are related to one of the types of the so-called "nonlethal" weapons. Their invisible components can kill at a distance, imitating or causing any chronic illness, they can make a person a criminal or irresponsible, create aviation, railroad or automobile accidents in a matter of seconds, destroy fundamental structures, destroy, create or provoke any climatic cataclysm, control the most complex instrument or mechanism, control the behavior of people and any biological object and change the world-view of the population.

Inquiry. Non-lethal weapons are composed of the fourth type. The first type are taken from a series of military technologies and structures along the path to changing the molecular structure of material, the reduction of its stability, the altering of physical-chemical properties, but also to put out of service any apparatus or any mechanism by destroying the functioning of radio-electronic devices. The second type put out of a order only living powers, permitting the destruction of the psyches of the enemy, the coordination of body movement, muscular tone, the change in the functioning of various systems of the body, among them the cardiovascular system and visual apparatus. Radio-sound is employed that is capable of lulling to sleep large contingents of enemy troops and of optical-generating capabilities for the projecting into the atmosphere holographic monstrous images to demoralize enemy soldiers. Holographic images of "the grim reaper" and armadas of "UFOs", an artificially created crimson-red setting sun and the appearance of images of the moon during the daytime, or artificially created unpleasant climatic conditions in specific places where military activities are underway, undo the psychological processing of the enemy and create panic. With overdoses of the given effects are caused trauma to organs that are not treatable, mental damage that is non-treatable, and an increase in the number of invalids. To the third type are related psychotronic weapons. The fourth types are based on anti-gravitational technology. The principle of gravitational types of non-lethal weapons consists in that any object can be artificially deprived of the earth's natural attraction and become an obedient toy in the hands of an operator sitting at the control panel of the gravitational weapons. Military technologies created on anti-gravitational technology possess the highest maneuverability of any of the most modern and exotic weapons. The first and second types of non-lethal weapons -at the end -are not classified, but the third and fourth -from previously -are officially considered Secret.

More than 20 years ago, starting with the first secret research in the area of the creation of non-lethal weapons, the government and the Secret Services foresaw with concern that in the case of even the minimal declassification, information about similar types of research carried distortions or a veiled nature that did not cause the international society to prick up its ears in concern. At the present time, such a time has arrived. And military scientists connected to its development, complying with secret directives, attempt to present its type almost as a blessing for mankind, fondly call their eccentric weapons nonlethal, bloodless weapons -or a humanitarian bomb. With this they are attempting to pass themselves off as upright, infallible citizens, pretending to be generally respectable and accountable. This untruthful information -and cynicism to the highest degree - is easily fed through several of means of mass information, in many cases achieving the aim of taking hold in the minds of uninformed citizens, and serves as a preventive defense for the criminals who are employing these types of weapons against the population on a mass scale. In connection with these and a host of other circumstances, today nonlethal weapons do not come under even one of the international conventions which would prohibit the development, accumulation and applications of such types of weapons.

## **Scientific Cannibalism, Psychotronic Weapons and Diabolical Technologies**

Inquiry. The direction of secret scientific-research of institutes that are working on the creation and perfection of psychotronic weapons:

1. Physics
2. bio-physics
3. bio-chemistry
4. psycho bio-physics
5. bio-cybernetics
6. radio-electronics
7. psychotronics
8. biology
9. medicine
10. Outer-Space

Secret NII is taking on the following [general] tasks: geo-political, ideological, military, police [law enforcement], medical-biological, scientific research, production-farming, the expert appraisal of conducting a psychotronic war. Narrow [high] specialization:

- a. development of technological means of distant control and management of the thought processes of humans
- b. the perfection of technologically distant control of the behavior and organisms of man with the help of apparatuses used in the capacity of directing sources of electromagnetic, magnetic fields and acoustic waves
- c. the use of telekinesis of a techtronic character for the influencing of a technological system
- d. the development of devices with the aim of the distant control of behavior of humans, with the use of the implanting into the brain and body of electronic data
- e. distant control of the behavior of people with the use of pharmacological means along this schemes: introduction in the human body of pharmacological means (behavior modification), and afterwards the distance-influencing by psychotronic apparatuses for the modification of the body of humans
- f. the perfection of technological, distant transporting into the body of a bio-object chemical and other object matter
- g. the distant control of people with the use of radio and television
- h. the creation of a bio-robot
- i. the perfection of technology for erasing information from the brain
- j. the distant physical and biological influencing of a living organism by electromagnetic, magnetic fields and acoustical waves
- k. the distant influencing of particular factors of the surrounding environment and on the growth of animals and humans:
  1. Geo-political tasks: development of systems of distant control of third countries, expert appraisals of the creation of geo-political hotbeds of tension and their location
  2. Ideological tasks: the distant influencing of populations with the aim of the creation of a law-abiding society loyal to the existing governmental order and political system
  3. Military tasks: expert appraisals of the conducting of psychotronic war against enemy governments, technological defense of troops and populations from the destructive factors of psychotronic weapons, coordination of the applications of psychotronic weapons with other types of non-lethal weapons, the

coordination of psychotronic weapons with other types of contemporary weapons, the coordination of army units.

4. Police (law enforcement) tasks: control and management of criminal group and of individual criminals, investigations and operational activities, suppression of protests and demonstrations, coordination of the Secret Services.
5. medical-biological tasks: new technological treatment of illnesses with the use of psychotronic apparatuses and pharmacological means, the distant control of the health of the population, the distant control and management of people with mental deviations, the distant alteration of individuals at the genetic and psycho-physical level.
6. Space tasks: the taking out into outer space of psychotronic weapons (apparatuses) with the aim of controlling and managing the behavior of the population; the distant control and management of cosmonauts.
7. scientific research tasks: the development of new technologies of psychotronic weapons and psychotronic apparatuses, their interaction with the surrounding environment and pharmacological means.
8. manufacturing-farming tasks: the distant automatization of manufacturing-farming activities, the distant control of city communications and transportation.
9. Agricultural tasks: increase crop yields, control and management livestock.
10. Geological tasks: the distant search for useful minerals.
11. Climatic tasks: the distant control of annual conditions and cataclysms.

According to information received from the military-history academy, the period preceding the Second World War was a big period of time when the Soviet and German military scientists jointly developed chemical weapons, and in secret laboratories of the town of Vol'sk (Shikhany-1) they closely collaborated in the creation of weapons of psycho-technology. Those who know are few that in the years '20-'27 in the territory of the Soviet Union there were numerous joint Soviet-German aviation and armoury schools in which future fascists of the Axis were trained in military skills. The military-history academy names several such sites. For example, in the town of Lipkakh there was located the joint Soviet-German aviation school, and in Saratov region, the joint Soviet-German armoury school.

After the start of the Second World War, interest in the creation of weapons of psycho-technology enveloped practically all the military circles of the leading countries of the world. At the end of 40 years, applying the received developments, the military scientists of many countries of the world conducted innumerable tests on the creation of universal narcotics with the aid of which it would be possible to control the behavior of man. In the end, such a preparation was created. It was called LSD. In the year 1951 the Swiss company "Condor", having received the monopoly rights to its production, illegally sold the Soviet Union 50 million doses of the narcotic which were put into use immediately.

There is information that already the end of 50 years, for these very same goals, the Soviet scientists created an entire series of national, unique pharmacological preparations --behavior modifiers of special gases and chemical means. It is probably not difficult to figure out who were their customers and where they found their application. In the following years, special pharmacological centers continued to create still newer and newer behavior modifiers. Towards the end of 70 years, their production was received to a sufficiently wide extent and led to a full Secret classification of military installations that were engaged in its production.

There is information that medical workers employed at the Secret Service and *VPK*, with the conducting of surgical operations and vaccinations of the population, introduced into the bodies of patients, micro-schematic records that can be readily inserted into epidemic needles. After the introduction of such micro-schemes, the person becomes a radio-controlled bio-robot. According to confidential information, nearly 30 % of the population of the former Soviet Union carry in their bodies these micro-schemes.

Psychotronic weapons are a complex of unique electronic-irradiating apparatuses capable, over a large distance, of controlling the psycho-physical activities of a person, purposefully destroying his health. Psychotronic weapons are lofty, rational weapons which are applied in combination with other types of nonlethal weapons and psycho-technological weapons.

Inquiry: In the year 1995, at Prospect Mir, No. 36, in the Moscow Chapter of the Information Center for the Rights of Man, direction: Defending the Citizen from psychotronic terrorism, there took place a colloquium of scientists at which was adopted the decision: " In connection with the classification of weapons of psycho-technology and the confusion about the terminology, all types and sorts of weapons capable of distantly controlling the psycho-physical activities of a person, which can change his surrounding environment when applied jointly, are called psychotronic weapons."

Destructive factors of psychotronic weapons are: torsion generators, SVCh-generators, lasers, acoustic and microwave apparatuses used as powerful energy sources for stationary and portable psychotronic stations located on Earth and taken into outer space, as well as in the surrounding environment, and also chemical and gaseous means. Focusing types of irradiations without hindrance, without losing the given strength, freely penetrate through any barrier and with a high degree of [accuracy in] striking the chosen victim at any distance. The effects are realized at the cellular-molecular level by methods of the psycho-physical treatment of the brain and organs of persons along the principle of associative and neuro-linguistic psycho-programming with the application of radio-acoustic effects and distance tomography. With psychotronic complexes are controlled super-IBM and staff-operators. Computer psycho-programming is conducted along the following schemes: operator-computer-victim and in the reverse sequence: victim-computer-operator. The exchange of information along these schemes carries the name bio-feedback ties (BOS). The effects exerted on a person can be realized in a positive, negative or a neutral regime. The irradiative components of the weapons can change the indicated instruments and chemical reactions that allow the terrorists a sufficient length of time to escape detection and punishment.

There exist three types of psychotronic influencing on a person: secret, open and combined. With the secret influencing the victim does not know and does not even suspect that his brain and organs are being subjected to distant influencing. All external thought-transmissions he takes as being his own, all conditions of illness are related to as natural illnesses and to the poor state of his health. Such a person-victim, being under influencing through his psyche, can commit any crime that comes to his mind; under the manipulation of the brain, he adheres to one and then to another political grouping. It is easy to lead such a person-victim type to any psychological state, a state of irresponsibility, and to imitate in the victim any mental illness. With this the person will think that he himself achieved the criminal thoughts that came to his mind, that he himself has such and such a political viewpoint and persuasion, that he himself became ill from an illness. Such a person is a bio-robot since he (no one knows why) fulfills the wishes of the criminal. Such a person-bio-robot is the greatest danger for any society. Secret methods of influencing are the basis for controlling a large mass of the

population. With the open method of influencing, the person-victim knows and understands that his brain and organisms are being subjected to psychotronic influencing. To such a person is artificially attached and grafted special systems of arrangement, being capable of extracting from his brain and introducing into him information at the speed of his psycho-programming, and in several cases also capable of reprogramming in full or partially rebuilding his personality and his bio-robotization. The person-victim intended for this type of goal very often cannot distinguish his own thoughts from those artificially introduced. But usually the bio-robots are created with the application on the victim of secret influencing. Besides secret and open methods, there exists also the combined method, when the brain of the victim is under secret influencing while the body is under open influencing. Open and combined influencing are realized by methods of manipulation of the judgment on the principle of Yes-No, manipulation of the psyche in conjunction with manipulation of functions of internal organs and of the whole body. Usually for the victims of open and combined influencing are brought in operators creating the newest type of psychotronic weapons and who are conducting medical-biological and pharmacological experiments.

For the guaranteeing of safety of psychotronic technology they have two basic types of defenses -the so-called alibis. The first type of defense consists in the fact that open and combined influencing are realized along the principle of studied clinical illnesses. Usually this type of defense is used by the involved terrorist in the cases that the victim turns to law-enforcement organizations and to doctors. As a rule, after the becoming familiar with them, the victim ends up in a psychiatric hospital, and upon leaving the victim forever has acquired the status of an insane person with the surety that the condition will be explained on a psychiatric basis. The second type of defense consists in that the capabilities of the weapons momentarily are attached to any person appearing with the victim in connection with the resulting changes in his thinking and his behavior. As a result of employing this type of defense, officials, even if they are not connected to the criminals, are not going to correctly and logically perceive information received by them from the person undergoing the experimentation. For a more hopeful guarantee of an "alibi", and for the realization of a specific determined program, the victim is previously worked on by secret methods. Unnoticed, they attached to his bio-fields and they study his intellect, his psychological type and, depending on the program to follow, artificially induce in him various illnesses of his internal organs -they create conflicting situations in daily life and at work which, during the time of open and combined influencing, will also serve to veil it.

With the realization of influencing and terror, the criminals practically in all cases follow a basic rule: all artificially created situations should have a reason and consequences, even if the artificially created reasons appear absurd and the consequences unnatural.

There exist three stages of psycho-programming. The first stage -control of the brain. The second stage - control of the psycho-physical activities of the person. And the third stage -the elimination of the person under experimentation. To the third stage terrorists come running in the following cases: the danger of being exposed, worked out material, fear, and the artificial stabilization of the size of the population. The elimination could be realized by traditional, as well as by non-traditional methods.

All national psychotronic programs carry a coded name:"zombie". But if earlier the term "zombie" meant a person bio-robot whose brain had been rigidly coded with the help of narcotics and special psychological influencing, then in contemporary interpretation "zombie" implies an abbreviation which is deciphered as: secret object of medical-biological research.

Why secret? This is because of the costs of the person under testing speaking to those around him about what is going on with him, as in matters that appear in all the above described types of defenses. The person under testing, being under the control and command via the psyche, is outwardly little different from ordinary people. Psychotronic terrorists vigilantly track him in order to ensure that he remains secret up to his very death.

Psychotronic weapons by their own specifications are at the root different from other types of weapons. If an automatic Kalashnikova could have been invented, approved and perfected at the shooting range, then for the development of psychotronic weapons people-donors are constantly required. Any person could become a donor if his intellect and physical characteristics are required by the terrorists. The selection of donors is achieved according to the following principle: it is known that human society is composed of specific groups with their own intellects and psychological types. Every person is a representative of such a group. The selection of donors for open psycho-programming and the treatment of him with psycho-technology could secretly control the behavior of the entire group and consequently all the society in its entirety.

But psychotronic weapons have long ago emerged from the testing stages. They were transformed into monstrous weapons of mass repression, destruction, and elimination. Psychotronic military weapons are called super-weapons, ultra-weapons --weapons of the fifth generation.

Inquiry. In the former USSR over the course of more than 30 years there has been conducted a secret undeclared psychotronic war by the communist regime and its followers against its people. At the present time in records of governmental departments, rights-defense organizations and in means of mass communication, there exist more than one million victims of open psychotronic terror and psychotronic influencing.

Usually people who become victims are gifted people not loyal to the regime, servicemen from military subdivisions, athletes, those held in prisons and concentration camps, people who make up the ranks of dispensaries, without exception prisoners of psychiatric hospitals, and also the population in free behavior. For the covering up of the crimes and for the shifting of the responsibility to the USA and Mafia organizations, to open psychotronic terror are also subjected portions of the communists and employees of the Secret Service.

Psychotronic terror, realized openly in relation to the selected victims is conducted every second, around the clock and over the course of many years along the principle of the activities of an executioner in the middle ages -- torture chambers and "works" of researchers of the VChK- KGB in communist torture chambers in the same terrible years of the history of our much suffering country. Contemporary executioners embody in the technology of psychotronic weapons the entire enormous arsenal of torture handicraft. For terrorists the person under testing represents an ideal target upon which the invisible rays-impulses fall, inflicting traumatic blows. Sometimes in sadistic ecstasy, the terrorists with particular cruelty torture their victims for a sufficiently long enough time. The *brain jailers* climb [*samo* *syjatoe\*\*\**] intimately and secretly, with electronic-ray whips, punishing him for disobedience. With the shouts of the defenseless person for help, he is appraised by the law-enforcement agencies and those around him as a raving lunatic. There is created a distinctive psychotronic hood, electronic-ray tentacles which entirely keep their own victims in firm isolation from the rest of the world around him. Distant control and the constant stimulation of important life-sustaining areas of the brain and organs allows for a quick get-away for the

killers of the person under testing. {**that line is not clear**}; As a rule the terrorists treat the entire genetic tree of the selected victim. But if the very victim is terrorized by the open method, then his immediate family and his relatives are treated secretly along a more merciful program in which there prevail [directions for misunderstood problems]. {**Not positive re: what is in brackets**}

With the realization of the psycho-programming and terror, the criminals strictly adhere to the basic principle of psycho-com-fascism which consists of the gradual suppression and destruction of the person in a psycho-physical plan, as with the personality and the destruction of his I. If the person possesses any positive qualities, then he is converted into the total opposite. For example, if the person possesses a good intellect then he is transformed into a totally "degraded" person, athletes are transformed into invalids, "beauties" into "uglies", sociable people into reserved persons, and neat persons are changed to untidy people, etc.

Inquiry. Results of scientific research in the area of the study of influences of electromagnetic fields and acoustic waves on the psycho-somatics of a person completely coincide with the sensations of victims of psychotronic weapons. In both cases there is present: tightness and sharp head pains, dizziness, pressure on the eardrums, oscillations (vibrations) of the walls of the peritoneum and rib-cage and of individual groups of muscles; dryness of the mouth, pain in teeth and gums, difficulty swallowing; dampness in the hands, muscle pains and aching bones; tremors of the extremities, painful sensations in the sex organs and anus, arousal of sex organs, depression of sex organs; arrhythmia, an increase or decrease in arterial blood pressure; a decrease in visual acuity; coughing; an increase or decrease of the body temperature; coma; itching; bursting of tissue; modulation of speech; occurrences of fears, anxiety, etc. With the purposeful irradiation, the above-described sensations can easily be significantly controlled in their expansion, purposefully influencing any portion of the brain and organs [in order] to use the person in the capacity of a radio-controlled model. The list of artificially created illnesses and damage to the health of the person undergoing testing completely coincide with the list of illnesses and damages to the health of the person subjected to electro-magnetic and acoustic irradiation. According to this list, the most widespread are: malignant new growths, damage to the cardio-vascular system, coagulation or disintegration of the blood, illnesses of the brain, a functional change or a destruction -up to the point of being lethal -in the peripheral and central nervous systems, eye illnesses, illnesses involving the sex organs, a deterioration of movement-support apparatus, a breakdown of the rib-cage, damage or rupture of organs, muscle atrophy, a destruction of the endocrine system, damage to the skin, [\*\*\**troficheskie*] damage -- hair loss, brittleness of the nails, etc.

### **Information for consideration**

Practically all technologies for psycho-programming of people foresee compulsory harsh treatment of the psycho-energetic centers man, included among these: the heart, organs of [inclination\*] in the peritoneal area, sex organs, prostate gland, the womb and its appendages, the spine, the cerebellum, the left and right hemispheres of the brain, the frontal lobe, visual and other sense organs and the vocal cords.

Inquiry. According to official statistics in the countries of the former USSR, there is practically not even one person who did not suffer from some kind of chronic illness. The most common are composed of: illnesses of organs of [inclination\*] in the pelvic area, mental and nervous disorders, oncological and cardio-vascular illnesses and illnesses of the eyes and of the movement-support apparatus.

## **Totalitarian Sects: Laboratories for Testing Psychotronic Weapons**

The most significant example of the applications of psychotronic weapons on a mass scale would be served by the recent exposure of the totalitarian sect "The White Brotherhood," financed by the Minister of Defense and the KGB-FSB. The Minister of Justice of the country of the former USSR, Russian Federation, liberally registers hundreds of totalitarian sects supplying them with psychotronic weapons, among which are the international terrorist sects of "*Aum Sinrike*", having the most technical ties with the Russian Secret Service and military. This sect conducted mass zombification of populations, employing the Russian radio station "Majak". The leaders of the sect, complying with the directives from the military and Secret Service and from the powers that be, crippled hundreds of thousands of children, transforming them into bio-robots. In the terrorist country of the former USSR, there functioned hundreds of Secret Service schools, the students of which were subjected to neuro-linguistic programming.

## **Rights-defenders Warn that Watching Television is Dangerous!**

Over the course of several decades, for the creation of a conformist-obedient population are used the means of mass communication: radio, television, and cinematography. Bio-signals built into the frames of motion picture and texts unnoticeably influence the subconscious of a person and form in the population a definite stereotypical world-view, depending on the political goals of those who are in power. Such type of treatment of the population has for a long time and successfully been employed for control by the KGB-FSB.

In the USA and Japan, the employment of the means of mass information for the modification of the behavior of the population is prohibited, since the effects of bio-electronic signals on the brain and organs of the body of a person inflict irreparable damage to his health, permitting the transformation of people into bio-robots and represent an infringement of the rights of people. In recent times, "subliminal cassettes" have appeared in commercial sets on which special methods of recording texts influence the subconscious of a person and help to formulate his world-view.

## **Wizards, Witches and other Evils Under the Roof of the Government Administration**

In the former USSR, Russian Federation, in only one year -1988- there appeared thousands of "treatment" centers for non-traditional medicine, equipped with ultra-modern medical and psychotronic apparatuses issued out of secret factories. These centers widely used occult sciences which represent the basis of psychotronic technology. As a rule, the heads of these centers were secret, but the service personnel each had two kinds of higher education -- medical and technological. Surely it would not be hard to surmise where, when and by whom were created these unique apparatuses. For example, medical scientist -and at the same time a physicist- I. Smirnov conducted experiments on prisoners from one of the psychiatric treatment centers in Moscow with the use of a psychotronic generator, the director of *IKEMa SO AMN* USSR, the academician V. Kaznacheev and his colleagues conducted medical biological-technological experiments on patients of their clinic and population of the town of Novosibirsk, while the academician N. Bekhtereva and her colleagues on patients of a clinic having her at its leadership at her "*Mozg*" center, etc. Centers, with the blessings of the Minister of Health, would daily turn out thousands of zombie retransmitters with "sorcerer" diplomas in their pockets. **{I think this is what is meant re: Mozg center..}**

The tele-seances of Kashpirovskii, Chumaka and other miracle-workers enter into a single global system of developers of psychotronic weapons and are nothing other than obedient toys in the hands of criminals, maniacs sitting at the controls of technological psychotronic weapons. If anyone has any doubts as to the accuracy of the above written lines, then the person reading them should consider Kashpirovskii and others, or wizards and witches, or sorcerers and magicians, and hang their images either next to Baba-Yagi or with Nikolai Ugodnik.

Giving out licenses to characters supposedly possessing magical charms, the leadership of the Ministry of Health simultaneously negates any possibility of manipulating people. Few of those from all who make declarations about any external influencing having effects on them, the doctors again, with the blessings of the Ministry of Health, subject them to forced "treatment" in psychiatric stations where they conduct the most dreadful psychiatric diagnosis. The inadequateness and illogicalness of such operations of these "highest" doctors not only do not fall under any kind of logic but also usually not even by most primitive of concepts. In connection with this, the conclusion suggest itself : that governmental departments, called upon to stand as the guardian of the health of the people, appear to be direct participants in these abominable crimes.

\* [inclination] best I could come up with. Same with "Frontal lobe" in the same section.

\*\*\* troficheskie -no luck finding this.

## **Ruth Ann Goodman**

### **\*\* TO WHOM IT MAY CONCERN ... \*\***

**My purpose in posting this is only to share Ruth Ann's story, and since she furnished her story to us for posting, I feel a responsibility to a fellow target of harassment crimes to publish the statement which she wanted me to communicate to others. This posting has been cleared on legal grounds. I have confirmed that I have both the legal right and the constitutional right to publish statements furnished to us by Ruth Ann for posting. However, I do not wish to cause discomfort to anyone by exercising my rights. For that reason only, I have removed references to specific names and dates. If anything in the present form causes discomfort to anyone, please let me know which specific sentences you find objectionable.**

**Eleanor White**

From the Las Vegas Review Journal May 11 - 2003

Ruth Ann Goodman, 34, died Friday.

She was born 1968. An administrative assistant, she was a member of the American Modelers Association and a longtime resident of Las Vegas.

Ruth Ann's postings prior to her death included:

I am a philosopher/writer who was posting my writings on the Internet for a period of about 5 years, ignoring the online harassment I often received. In the past year the harassment became worse after I decided to ignore previous smearing of my reputation and consistent online abuse by the people mentioned below. When I made it clear that what they were doing was considered a hate crime, and that I know who they are (especially Brian, his attitude, although he used aliases online, gave him away) things began to escalate.

The story began when I was contacted at home, in my personal life by a couple of men who work for the government... Brian Xxxxx, with the D.O.D. (I know this is his real name, I have been to his and his parents home in Fairfax Virginia. His father, Larry Xxxxx, works for the Pentagon) pretended at first to be in love with me. This was over 5 years ago when I was more naive. He flew

out to California several times pretending he was going to relocate to move in with me. It turned out that he was lying, and was actually stalking me for counter intelligence. After I broke up with him, confused, his intimidation and online smear campaign kept me from writing on the Internet for about a year. But as I became wiser and realized what it was he was doing, and for whom, I went back to writing online, refusing to give in to terrorists. I was followed online and again harassed. Brian used many aliases and many methods to attempt to force me to stop going online to share the truth.

About a year and a half ago, I was contacted by another man, Jason Xxxxx (not sure if this is his real name) who made contact with me pretending to be a friend interested in discussing spiritual principles. It was clear to me after meeting him, based on his attitude and our conversations that he was involved with the same people who were following my movements online trying to discredit my truths. When I asked him about this, he became very upset, as opposed to behaving like an innocent friend, his behavior gave me more reasons to suspect what he was up to. I was curious as opposed to afraid. When he tried to convince me that the evil government controls everything and that I should be afraid, I repeatedly told him that their struggle for control would only be their downfall. He would become upset during these conversations. I explained to him that ignorance and evil are the same thing, and that such people cannot hold onto their power for long without causing themselves to be overthrown by the people. Especially in a free country.

While he was at my apartment I noticed him staking out the neighborhood from my balcony seeming very interested in the properties in direct proximity. A few months later, my neighbors in the house directly behind my balcony moved out, and some of these people moved in. They built a very HIGH wall (I'm sure it's higher than city codes regularly allow), and began to gather there harassing me from behind this wall, shouting racial epithets, claiming they were starting a race war, and saying they have friends who are "very powerful people". I was not intimidated by this either. On the contrary, I would sometimes ask them "why are you hiding if you're so powerful?" and state that MOST people are above ignorance such as racial discrimination so their attempt at starting a race war will fail. They were often very disturbed, and would sometimes throw objects at my balcony from over their wall. They are still living there and continue to harass me verbally now.

After one of Jason's visits with me I became extremely ill (I thought I had food poisoning), and was taken to the emergency room closest to my home, very late at night, and was put out with a general anesthetic for 4 hours. After that I never saw or heard from Jason again.

About a day or two later I began to experience people, including Jason and Brian, harassing me in my head. The noises come from outside of my "mind" but they are audible. When I cover my ears they do not cease, but when I squeeze hard enough they do. I can TELL they are using electronic devices to do so. I have found fake hairs protruding out of the back of my neck and behind my ears. My hairline is not the same as it was before. There are also tiny "hairs" that come from my temples and go under the skin behind my ears.

These feel more like tiny wires than my own hair, and the sound they make in my head when I pull at them is "twangy".

These people continue to harass me in my head, screaming "Stay off the Internet" and "we control everything" etc. They talk about a "secret society", mention the president and say they are "kidnapping people and mind controlling them". They can hear my thoughts through this device, so I respond saying they would have to kidnap a million people a day for a couple of years to control everyone, and keeping control would be a serious problem. They do not scare me with their lies.

3 months ago they had me picked up in front of my house by a Long Beach policeman, alone with no name badge (though I later found out his last name is Xxxxx), who drugged me before handcuffing me by sticking a small needle in my wrist. He met an LA County sheriff behind a dark building, who was also alone, and transferred me to another patrol car. As I was losing consciousness I noticed him getting on the freeway. When I asked, "where are you taking me?" his response was "someplace fun".

When I awoke he had taken me to a secluded section of LA County Jail where I was brutally beaten, stripped naked, fondled and tortured by male sheriffs, and told over again that "we're gonna smoke you, nigger" while guns were brandished in front of me. I was also repeatedly drugged with something that made me unable to control myself. It was some form of major stimulant, which caused me to be "hyped up" and hysterical. I was held for 5 days with no phone call. My sister reported me missing after a few days. She was at first given the runaround by the police department, told I was arrested but not told why. They then told her to meet me in court in Long Beach. I was put on a bus, taken back to Long Beach looking terrible, dehydrated, with chains wrapped around my waste and my hands cuffed to them. I was then charged with being under the influence of drugs, and the judge released me on my own recognizance.

Instead of letting me go home with my sister, they held me in a tiny closet for the next 5 or 6 hours while still in chains, then put me back on a bus to LA County where I was taken to a mental facility and again mistreated for the next 3 days while they tried to convince my sister and mother I needed to be institutionalized.

Please help me if you can. I am not sure where to turn. It seems they follow me and make sure that people I talk to are also harassed. Any information at all would be appreciated.

Thank you. Ruth Goodman

---

Eleanor White talking: Ruth Ann Goodman also discovered, in her efforts to fight her electronically assisted stalkers, that as she communicated with her stalkers, they revealed sensitivities to certain topics. Ruth was able to deter some of the harassment by reminding the perpetrators of the sensitive issues.

Unfortunately, I do not have specifics on her work, and her work has been removed from the Mind Control Forum so this information is apparently lost to us.

## **Outrageous Gutting of Law Referencing Mind Control**

Menu:

[Contact information, U.S. Rep. Dennis J. Kucinich](#)

[Original bill with MC ref, H.R. 2977](#)

[Gutted replacement bill, no MC refs, H.R. 3616](#)

[Comments from chemtrails activist](#)

---

The bill which was originally H.R. 2977, of the United States House of Representatives was to be extremely important to the fight to expose and stop psycho-electronic or "psychotronic" mind control experimentation on involuntary citizens. The importance is that in this draft bill, the terms "PSYCHOTRONIC" and "MIND CONTROL" were clearly referenced. The ORIGINAL bill is presented first below.

Follwing the original bill, is the "gutted" bill which Rep. Kucinich will be presenting for passage.

Special thanks to Mr. Kyungguk Ha of Korea for locating the original document for us.

## **Original Bill**

### **Space Preservation Act of 2001 (Introduced in the House)**

**HR 2977 IH**

107th CONGRESS  
1st Session  
**H. R. 2977**

To preserve the cooperative, peaceful uses of space for the benefit of all humankind by permanently prohibiting the basing of weapons in space by the United States, and to require the President to take action to adopt and implement a world treaty banning space-based weapons.

**IN THE HOUSE OF REPRESENTATIVES**

**October 2, 2001**

Mr. KUCINICH introduced the following bill; which was referred to the Committee on Science, and in addition to the Committees on Armed Services, and International Relations, for a period to be subsequently determined by the Speaker, in each case for consideration of such provisions as fall within the jurisdiction of the committee concerned

---

**A BILL**

To preserve the cooperative, peaceful uses of space for the benefit of all humankind by permanently prohibiting the basing of weapons in space by the United States, and to require the President to take action to adopt and implement a world treaty banning space-based weapons.

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,*

**SECTION 1. SHORT TITLE.**

This Act may be cited as the 'Space Preservation Act of 2001'.

**SEC. 2. REAFFIRMATION OF POLICY ON THE PRESERVATION OF PEACE IN SPACE.**

Congress reaffirms the policy expressed in section 102(a) of the National Aeronautics and Space Act of 1958 (42 U.S.C. 2451(a)), stating that it 'is the policy of the United States that activities in space should be devoted to peaceful purposes for the benefit of all mankind.'

**SEC. 3. PERMANENT BAN ON BASING OF WEAPONS IN SPACE.**

The President shall--

- (1) implement a permanent ban on space-based weapons of the United States and remove from space any existing space-based weapons of the United States; and
- (2) immediately order the permanent termination of research and development, testing, manufacturing, production, and deployment of all space-based weapons of the United States and their components.

**SEC. 4. WORLD AGREEMENT BANNING SPACE-BASED WEAPONS.**

The President shall direct the United States representatives to the United Nations and other international organizations to immediately work toward negotiating, adopting, and implementing a world agreement banning space-based weapons.

**SEC. 5. REPORT.**

The President shall submit to Congress not later than 90 days after the date of the enactment of this Act, and every 90 days thereafter, a report on--

- (1) the implementation of the permanent ban on space-based weapons required by section 3; and
- (2) progress toward negotiating, adopting, and implementing the agreement described in section 4.

## **SEC. 6. NON SPACE-BASED WEAPONS ACTIVITIES.**

Nothing in this Act may be construed as prohibiting the use of funds for--

- (1) space exploration;
- (2) space research and development;
- (3) testing, manufacturing, or production that is not related to space-based weapons or systems; or
- (4) civil, commercial, or defense activities (including communications, navigation, surveillance, reconnaissance, early warning, or remote sensing) that are not related to space-based weapons or systems.

## **SEC. 7. DEFINITIONS.**

In this Act:

(1) The term 'space' means all space extending upward from an altitude greater than 60 kilometers above the surface of the earth and any celestial body in such space.

(2)(A) The terms 'weapon' and 'weapons system' mean a device capable of any of the following:

(i) Damaging or destroying an object (whether in outer space, in the atmosphere, or on earth) by--

- (I) firing one or more projectiles to collide with that object;
- (II) detonating one or more explosive devices in close proximity to that object;
- (III) directing a source of energy (including molecular or atomic energy, subatomic particle beams, electromagnetic radiation, plasma, or extremely low frequency (ELF) or ultra low frequency (ULF) energy radiation) against that object; or
- (IV) any other unacknowledged or as yet undeveloped means.

(ii) Inflicting death or injury on, or damaging or destroying, a person (or the biological life, bodily health, mental health, or physical and economic well-being of a person)--

- (I) through the use of any of the means described in clause (i) or subparagraph (B);
- (II) through the use of land-based, sea-based, or space-based systems using radiation, electromagnetic, psychotronic, sonic, laser, or other energies directed at individual persons or targeted populations for the purpose of information war, mood management, or **mind control** of such persons or populations; or
- (III) by expelling chemical or biological agents in the vicinity of a person.

(B) Such terms include exotic weapons systems such as--

- (i) electronic, psychotronic, or information weapons;
- (ii) chemtrails;
- (iii) high altitude ultra low frequency weapons systems;

- (iv) plasma, electromagnetic, sonic, or ultrasonic weapons;
  - (v) laser weapons systems;
  - (vi) strategic, theater, tactical, or extraterrestrial weapons; and
  - (vii) chemical, biological, environmental, climate, or tectonic weapons.
- (C) The term 'exotic weapons systems' includes weapons designed to damage space or natural ecosystems (such as the ionosphere and upper atmosphere) or climate, weather, and tectonic systems with the purpose of inducing damage or destruction upon a target population or region on earth or in space.
-

# **GUTTED Replacement Bill**

## **Space Preservation Act of 2002**

### **(Introduced in the House)**

**HR 3616 IH**

**107th CONGRESS - 2nd Session**

To preserve the cooperative, peaceful uses of space for the benefit of all humankind by prohibiting the basing of weapons in space and the use of weapons to destroy or damage objects in space that are in orbit, and for other purposes.

IN THE HOUSE OF REPRESENTATIVES January 23, 2002

Mr. KUCINICH introduced the following bill; which was referred to the Committee on Science, and in addition to the Committees on Armed Services, and International Relations, for a period to be subsequently determined by the Speaker, in each case for consideration of such provisions as fall within the jurisdiction of the committee concerned

#### **A BILL**

To preserve the cooperative, peaceful uses of space for the benefit of all humankind by prohibiting the basing of weapons in space and the use of weapons to destroy or damage objects in space that are in orbit, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

#### **SECTION 1. SHORT TITLE.**

This Act may be cited as the 'Space Preservation Act of 2002'.

#### **SEC. 2. REAFFIRMATION OF POLICY ON THE PRESERVATION OF PEACE IN SPACE.**

Congress reaffirms the policy expressed in section 102(a) of the National Aeronautics and Space Act of 1958 (42 U.S.C. 2451(a)), stating that it 'is the policy of the United States that activities in space should be devoted to peaceful purposes for the benefit of all mankind.'

### SEC. 3. BAN ON BASING OF WEAPONS IN SPACE AND THE USE OF WEAPONS AGAINST OBJECTS IN SPACE IN ORBIT.

The President shall-- (1) implement a ban on space-based weapons of the United States and the use of weapons of the United States to destroy or damage objects in space that are in orbit; and (2) immediately order the termination of research and development, testing, manufacturing, production, and deployment of all space-based weapons of the United States.

### SEC. 4. INTERNATIONAL TREATY BANNING SPACE-BASED WEAPONS AND THE USE OF WEAPONS AGAINST OBJECTS IN SPACE IN ORBIT.

The President shall direct the United States representatives to the United Nations and other international organizations to immediately work toward negotiating, adopting, and implementing an international treaty banning space-based weapons and the use of weapons to destroy or damage objects in space that are in orbit.

### SEC. 5. REPORT.

The President shall submit to Congress not later than 90 days after the date of the enactment of this Act, and every 6 months thereafter, a report on-- (1) the implementation of the ban on space-based weapons and the use of weapons to destroy or damage objects in space that are in orbit required by section 3; and (2) progress toward negotiating, adopting, and implementing the treaty described in section 4.

### SEC. 6. SPACE-BASED NONWEAPONS ACTIVITIES.

Nothing in this Act may be construed as prohibiting the use of funds for-- (1) space exploration; (2) space research and development; (3) testing, manufacturing, or production that is not related to space-based weapons or systems; or (4) civil, commercial, or defense activities (including communications, navigation, surveillance, reconnaissance, early warning, or remote sensing) that are not related to space-based weapons or systems.

### SEC. 7. DEFINITIONS.

In this Act: (1) The term 'space' means all space extending upward from an altitude greater than 60 kilometers above the surface of the earth and any celestial body in such space. (2) The terms 'space-based weapon' and 'space-based system' mean a device capable of damaging or destroying an object or person (whether in outer space, in the atmosphere, or on earth) by--

(A) firing one or more projectiles to collide with that object or person; (B) detonating one or more explosive devices in close proximity to that object or person; (C) directing a source of energy against that object or person; or (D) any other undeveloped means.

# Commentary by Chemtrails Activist

Rep Kucinich Rewrites HR 2977 - 'Chemtrails' Disappear

By Lorie Kramer  
seektress@ev1.net  
January 27, 2002

The "Space Preservation Act of 2001" originally introduced in the House by Rep. Dennis Kucinich as HR 2977 has been re-written.

The new, revised bill, HR 3616, "Space Preservation Act of 2002" was introduced January 23, 2002.

Re-writing bills is a common enough practice as a bill goes through the legislative process. However, the differences between HR 2977 and HR 3616 are more than just a few tweaks here or there.

By its conspicuous appearance in 2977, the term 'chemtrails' received a form of credibiity within the official government process never seen before...producing the hope that one courageous Representative had finally had the fortitude to take the issue of chemtrails to a level of Congressional scrutiny long overdue.

Even though chemtrails are sprayed/deployed in the 2-6 mile high range, and not the 60 mile altitude stated in 2977, the simple fact of their inclusion in Kucinich's 2977 list of weapons systems was deemed a major breakthrough by tens of thousands of citizens and researchers across the country who have been monitoring and investigating the spraying going on in the skies of America for the past three years.

In Rep. Kucinich's revised new (some woud say 'emasculated') Bill, HR 3616, there is no longer any mention whatever of:

- \* chemtrails,
- \* particle beams
- \* electromagnetic radiation
- \* plasmas
- \* extremely low frequency (ELF) or ultra low frequency (ULF) energy radiation
- \* or mind-control technologies

as weapons systems covered in the measure.

In fact, 'Exotic Weapons' - as boldly-stated in HR 2977 - are not even mentioned in HR 3616. So, what happened here? Did someone have a 'friendly chat' with Rep. Kucinich? Did the Congressman inhale a bit too much aluminum during his morning job? Did he look up one day and find himself standing under a big 'X' and feel his knees get a little wobbly?

As stated in Kucinich's first version of his "Space Preservation Act of 2001" -

"The term 'exotic weapons systems' includes weapons designed to damage space or natural ecosystems (such as the ionosphere and upper atmosphere) or climate, weather, and tectonic systems with the purpose of inducing damage or destruction upon a target population or region on earth or in space."

Apparently Rep. Kucinich is no longer concerned about the effects of the testing and use of exotic weapons systems on natural ecosystems and living organisms on the planet.

Although chemtrails are no longer stated as a weapons system, or even mentioned in HR3616, the question of the components of the RFMP / VTRPE warfare system is raised.

HR 3616 states -

"To preserve the cooperative, peaceful uses of space for the benefit of all humankind by prohibiting the basing of weapons in space and the use of weapons to destroy or damage objects in space that are in orbit, and for other purposes."

The intent of this passage remains fuzzy. Example: Are Imaging satellites used with the RFMP / VTRPE system broadly defined as part of a weapons system ?

HR 3616 further states -

"The terms 'space-based weapon' and 'space-based system' mean a device capable of damaging or destroying an object or person by directing a source of energy against that object or person."

The word "directing" is clearly the key. Strictly speaking, the RFMP system does, by imaging, provide information to direct a source of energy against that particular object or person

HR3616 also says -

"4) civil, commercial, or defense activities (including communications, navigation, surveillance, reconnaissance, early warning, or remote sensing) that are not related to space-based weapons or systems."

They could say the RFMP is not a weapon - it does not "fire a bullet," but it is part of a weapons system. There are clearly serious issues of definition in Kucinich's new Bill. It is conceivable that the RFMP / VTRPE weapons system may fall in the area covered by HR3616.

It remains a mystery as to how the word 'chemtrails' appeared in HR 2977 to begin with. Investigation into that point is ongoing. Who actually is authoring the text of these bills? Why such an emphasis on "exotic weapons" in HR 2977 but then nothing mentioned about them in HR 3616?

My call to Rep. Kucinich's Washington office last week was brief. I was told there had been "quite a few" calls regarding HR 2977. I was then told my questions should be directed to the person on the congressman's staff who handled that bill. I was then transferred to that person and received...big surprise...their voice mail service. I left a message with my contact information. No reply has been received to date. I will place a follow-up call again this week. We suggest others do the same.

Even though the term 'chemtrails' has been removed from the revised bill, efforts to continue to educate and alert others about the chemtrail issue go on. Many thanks to those who have taken the time to contact their Congressional Representatives, keep it up.

We still know what we see. We still didn't consent. We still want it

stopped.

PHYSIOLOGICAL RESPONSES APPLICABLE TO DEVELOPMENT OF  
LESS-THAN-LETHAL WEAPONS

Oak Ridge National Laboratory

Physiological Responses Applicable to Development of  
Less-Than-Lethal Weapons

Sponsored by National Institute of Justice

Oak Ridge National Laboratory

Less-than-lethal weapons have a variety of applications in law enforcement, including rescuing hostages, stopping fleeing felons, and quelling prison disturbances. The National Institute of Justice is sponsoring a broad program to develop new techniques for "friendly force" as an alternative to the use of deadly force. As part of this program, Oak Ridge National Laboratory (ORNL) is examining approaches based on known physiological responses to certain types of stimuli. These "weapons" would temporarily incapacitate an individual or a group with no lasting physiological damage. These concepts are based on ORNL's experience and expertise in biological-based systems and biophysical responses, particularly in evaluating the physical responses of humans to a variety of chemical, physical and radiological agents. ORNL also has extensive experience and expertise in risk analysis and in risk assessment and modeling.

The ORNL less than-lethal weapons project sponsored by the National Institute of Justice began in September 1993. The following tasks are being performed:

- \* Locate and compile data from tests, accidents, medical literature, etc. on biological and biophysical responses to energetic stimuli (such as electromagnetic fields).
- \* Analyze the information and identify promising candidate mechanisms for further development for a friendly force
- \* Evaluate the applicability of the proposed approaches to several realistic scenarios (such as hostage rescue or riot control).

ORNL has already examined several possible concepts for less-than-lethal weapons based on known physiological responses to energetic stimuli, including a thermal gun, a seizure gun, and a magnetophosphene gun. A thermal gun would have the operational effect of heating the body to 105 to 107F, thereby incapacitating any threat, based on the fact that even a slight fever can affect the ability of a person to perform even simple tasks. This approach is built on four decades of research relating radio frequency exposure to body heating. A seizure gun would use electromagnetic energy to induce epileptic-like seizures in persons within the range of a particular electromagnetic field. The magnetophosphene gun is designed around a biophysical mechanism which evokes a visual response and is thought to be centered in the retina, known as magnetophosphenes. This effect is experienced when a person receives a blow to the head and sees "stars". This same effect can be produced with electromagnetic energy. While there are a number of technical challenges to be overcome in building devices of these types, less-than-lethal weapons based on physiological responses to energetic stimuli would provide a safe and effective means of dealing with a number of law enforcement situations where use of deadly force is not desirable.

Mind-Altering Microwaves: Soviets Studying Invisible Ray

A newly declassified U.S. Defense Intelligence Agency report says extensive Soviet research into microwaves might lead to methods of causing disoriented human behavior, nerve disorders, and even heart attacks.

...

A copy of the study was provided by the agency to the Associated Press in response to a request under the Freedom of Information Act.

...

Sounds and possibly even words which appear to be originating intercranially (within the head) can be induced by signal modulation at very low average power densities, the study said.

...

One physiological effect which has been demonstrated is heart seizure, the report said.

It said this has been accomplished experimentally in frogs by synchronizing the pulses of a microwave signal with the animal's heartbeat and beaming the radiation at the chest area.

-----

Microwave News, January-February 1987

ZAP!

Six hundred scientists and engineers with security clearances spend the first week of December at Kirtland Air Force Base in New Mexico examining the potential of high-power microwaves to zap enemy electronics...

... Many branches of the Department of Defense were represented, including the Air Force, the Army and the Navy, together with DARPA, DIA, and DNA. The Lawrence Livermore Labs were also well represented, as were most of the big defense contractors - General Dynamics, Physics International and TRW each have a high-power microwave testing facility.

In addition to these sources, susceptibility and hardening, there was one on biological effects: Dr. David Erwin and Major Robert Downs represented the Air Force and Howard Bassen and Dr. John D'Andrea described the Army and Navy programs, respectively. Dr. Frank Barnes of the University of Colorado in Boulder presented a poster paper on his and Dr. Howard Wachtel's research on the effects of pulsed microwaves.

Chuck de Caro, a former correspondent for the Cable News Network, considers the possibility that the U.S. is falling behind the U.S.S.R. in microwave weapons in "The Zap Gap", to be published in the March issue of "The Atlantic" (see also MWN November-December 1986).

-----  
Microwave News, January-February 1996

#### RF WEAPONS - Disabling People and Electronics

The military continues to explore development of RF weapons for the conflicts of the future. For instance, the "First Directed Energy Warfare (DEW) Conference", held last year at the Mitre Corp. in McLean VA, featured Dr. David Erwin of the Armstrong Lab at Brooks AFB, San Antonio, TX, on "Directed Energy Warfare RF Effects", and D.r Jose Pina of the CIA on "Ground Combat Applications of RF". Other topics included "Personnel Vulnerability" and Directed Energy Warfare Biological Effects".

The June meeting was organized by the Association of Old Crows, whose members are specialists in electronic warfare. Conference participants had to have security clearances of "Secret" or higher, as has been the case at similar meetings in the past (See MWN, J-F 87 and N-D 93).

Public discussions of RF/MW weapons have focussed on disrupting technology. But a recent Article in the Airpower Journal revealed "for the first time that the military is developing high-powered microwave weapons for use against human beings", reports Peter Cassidy in the January 1996 "Progressive" (see p. 14).

RF/MW and EMF-based weapons are also being studied for civilian law enforcement. Oak Ridge National Laboratory (ORNL) in Oak Ridge TN will soon complete a literature

review for the National Insitute of Justice on the feasibility of "thermal guns" which could heat the body to 105 to 107 degrees F and incapacitate the target; "seizure guns" which would use EM energy to induce epileptic-like seizures; and "magnetophosphene guns" which would cause the target to "see stars".

The institute's Ray Downs in Washington cautioned that the report may not be made public. ORNL's Dr. Clay Easterly has said that some effects not associated with heating could be useful in developing nonlethal weapons.  
(See MWN, N-D 93.)

---

Microwave News, September-October 1996, page 19

#### Stop That Car or We'll Zap You

They're the sexiest gadgets in this year's action movies: EMP weapons, which use electromagnetic pulses to zap electronics. They have starring roles in Goldeneye, the latest James Bond movie, as well as in Broken Arrow, Escape From LA, and Eraser. And soon they may be coming to a police car near you.

Law Enforcement News (September 30) reports that the U.S. Army and the National Institute of Justice are running a \$500,000 field test to see if EMP guns can force a car to stop by disabling its electrical systems. The plan is to use EMP to do away with high speed chases (another Hollywood staple). This is another example of the growing interest in using nonlethal weapons developed by the military.

## **Activist Arrested for 'Irrational Statements'**

This incident shows CLEARLY that freedom of speech is dead in the United States. The importance of this one incident cannot be overemphasized in the fight to show how urgent is the need to investigate and prevent more such atrocious crimes. If this can happen in the United States, the entire world is in grave danger.

Oct. 17, 2003

Activist Boyd Graves illegally evicted from home

SAN DIEGO - Human rights activist Dr. Boyd Ed Graves was forcibly evicted from his San Diego residence Oct. 12, 2003 when police entered his home to escort him to the street.

Although the court ruled Graves owed no money to his landlord, Bob Meekins, Graves was forcibly evicted. Graves was removed and detained from his residence by police earlier for making 'irrational statements' that the government created HIV/AIDS.

Graves said he will appeal the illegal eviction. He said the process will take several weeks and cost more money than he has. "I don't even have a pair of socks with me," Graves said. "I will still stand up."

Graves said he has been living in a motel since Monday.

Graves' years of judicial activism has helped expose the formerly secret virus development program, The U.S. Special Virus.

# UFO RESEARCH REVEALS PERPETRATOR GROUP SIMILAR TO THAT BEHIND INVOLUNTARY EXPERIMENTATION IN ELECTRONIC MIND CONTROL

October 23, 1999

---

With permission of CSETI: <http://www.cseti.org>

**...and with our special thanks.**

Eleanor White's comments: I've had complaints that by posting this article, I am somehow "aligning myself" with UFO enthusiasts. UFO investigation is a legitimate and very important arena, in my opinion, but my sites and activities relate to involuntary human experimentation, not any other field.

The purpose of posting this article is to show that investigators in an entirely different field from ours, UFO investigation, have claimed discovery of a group of perpetrators who have those characteristics that our 300 known victims also describe.

THAT IS IT. Do NOT infer that I am hinting that "aliens" are harassing us, or anything along those lines. We are clearly being harassed by very ordinary and very unethical HUMAN BEINGS.

From: Tony Craddock  
Subject: WHEN DISCLOSURE SERVES SECRECY

WHEN DISCLOSURE SERVES SECRECY

Copyright 1999  
Steven M. Greer M.D.

Ending the secrecy surrounding the UFO/ET subject is a laudable

goal. It is long overdue. It would transform the world in ways both simple and profound.

And yet it is fraught with danger.

The covert projects which have been running UFO related programs for nearly 60 years are not interested in a disclosure which upsets their apple cart. They want such a disclosure to transform their apple cart into a freight train. And they potentially have the power and connections to do it.

There are multiple scenarios attending the disclosure of the UFO subject-and not all of them have the best interests of humanity at heart. Elsewhere, in the new book 'Extraterrestrial Contact: The Evidence and Implications' ([www.DrGreer.com](http://www.DrGreer.com)) I write about the kind of disclosure the world needs. An honest one. An open one. One which replaces secrecy with democracy. A disclosure which is peaceful, scientific and hopeful.

But then there is the disclosure the powers that be would like to see: Manipulated. Calculated to consolidate power and engender fear. Configured in such a way that chaos and a deepening need for Big Brother is carefully inculcated into the masses.

We have seen the plans and it is not a pretty picture.

I write this as a warning. A warning that the wolves in sheep clothes are very cunning indeed. And have almost limitless resources. Most who work with them do not even know they are wolves. Indeed, it is likely that many of the wolves have been convinced that they are sheep.

The UFO matter is not so much a mystery as a matter deliberately obfuscated and mystified. Confusion and a lack of clarity serves the larger covert goal of keeping it off the long- range radar of society while power and plans are consolidated quietly. And the one thing more dangerous to society than all this secrecy is a planned, contrived disclosure run by the keepers of the secrets.

For years such plans have been made - to be unfurled at just the right time. During a time of great expectation. Of social confusion. Perhaps of millennial madness?

I have personally met with a number of people who are very involved with such plans. I do not speculate here. Be aware: The disclosure of UFO reality is being planned very carefully. It will assiduously follow a scheme to spin the subject in just the right way - the only way which will further redound to the glory and power of the secret-keepers. It will be a false disclosure - one born out of the age-old bane of human existence: selfishness and greed. Greed for power. Greed for control. Greed for domination.

We must be mature and informed on such matters. Only a vigilant and informed public can see through such deceit - and correct it should such a plan be unfurled. Every citizen needs to know that great good can come from the truth being known. But the mature citizen must also recognize that the 'truth' can be spun and spun again -until the goals of those who crave secret and overt power are met.

Consider: One scenario for disclosure is that the UFO and Extraterrestrial subject is acknowledged in a way which is

scientific and hopeful. Excessive secrecy which lacks executive branch and congressional oversight is ended. Humanity begins to entertain open contact with other civilizations, with peaceful engagement as the goal. Technologies which are currently suppressed are allowed to be disseminated: Pollution ends. An economy of abundance and social justice is firmly established. Global environmental destruction and mind-numbing world poverty become a faint memory. Zero-point based energy devices transform the world. Electro-gravitic devices permit above ground travel without paving over the world's precious fertile farm land. As an ET once told Colonel Philip Corso, " Its a new world, if you can take it...". This is the disclosure which we are working for.

But the disclosure envisioned above could have happened in 1950. It did not - Why? For such a disclosure would lead to the total transformation of the status quo. Centralized energy systems would be obsolete. Oil would be useful only for lubricants and synthetics. The geo-political order of today would be a thing forgotten: Every country and people on earth would have such a high degree of progress and advancement that all nations would have a seat at the global table. Power would need to be shared. Peaceful acknowledgment of life from elsewhere would make the earth seem like the very small, organic homeland which it is. The vast trillion dollar global military - industrial sector would be reigned in. And a universal spirituality might dawn...

But remember, there are hugely powerful interests who dread this scenario. For them, it is the end of the world as they know it. The end of centralized, elite power. The end of a controlled geo-political order which today leaves nearly 90% of the people of earth barely one step out of the stone age. And they do not wish to share the power they wield.

Now, let me describe the 'disclosure' which would make these covert control programs happy. This is the false or contrived 'disclosure' which has only one clear goal: The further consolidation of their power and their paradigm. It has to do with fear, not love. With war, not peace. With division and conflict, not unity. It is the dominant paradigm - but it is slipping away slowly. And a carefully orchestrated disclosure of the 'facts' of the UFO and ET subject could secure their power. This is the disclosure which is to be dreaded. This is the disclosure to watch out for. This is the disclosure which is already occurring.

My meetings over the past 9 years with covert operatives who have worked on UFO related programs have introduced me to some characters right out of a spy novel - and then some. Whether in private high tech industry, at the Pentagon or at a midnight meeting in a private mansion, a theme has emerged. It is one of immense, though currently hidden, power. It transcends government as we know it (at this point the government of 'We the people...' has been made irrelevant on this issue). And the theme has two main strands - the eventual covert militarization of the ET subject and a weird covert religious strain which can only be viewed as bizarre.

Here, we find some very strange bed-fellows indeed. War mongers and militarists in cahoots with industrialists who share a certain bizarre eschatological bent: A dark view of the future, featuring an extraterrestrial Armageddon - or at least the threat of it. Such a theme supports retrograde and fanatical religious causes as well

as deeply covert military-industrial plans to expand the arms race into space.

In fact, the big players in the so-called 'civilian UFO community' are tied into such beliefs and agendas. It strains credulity, I admit, but here is what we have found by penetrating these operations.

From a military-industrial perspective, the disclosure of choice is one which frames the UFO/ET issue in a threatening manner. If a threat from space can be established ( as President Reagan liked to say) then the entire world can be united around the need to fight such a threat. This would ensure trillion dollar plus military - industrial spending well into the next century, and beyond. If you think the cold war was costly, wait until you see the price tag for this ' protection' from the 'threats' in space: The trillions spent on the cold war will look like a blue light special.

Retrograde and fanatical religious groups, similarly, have great vested interests in fulfilling the promise of Armageddon. An eschatological paradigm, well enshrined in the belief systems of those running covert UFO projects, is supported by the portrayal of a cosmic conflict in the heavens. Voila! We have the necessity of spinning the UFO/ET issue in the evil invading aliens (translates in religious terms as demons) direction. Indeed, this has already been accomplished , courtesy of the 'civilian UFO community' and the tabloid media (which at this point is virtually all media...).

Additionally, there is a subtext which can only be viewed as thinly veiled racism. You will note that part of the 'new myth' regarding UFOs involves the 'good ET s' , which invariably are described as 'Pleadians' who are 'handsome' white, blue-eyed Aryan appearing types. Naturally, those 'evil, bad ET s' are darker, shorter, look funny and smell funny. Please. Such clap-trap would have us trade age-old human racism for an extraterrestrial variety. This nonsense and propaganda could only make Hitler proud.

In one lengthy meeting with a multi-billionaire, I was told that he gave great support to UFO activities which propel the so-called 'alien abduction' subject into public awareness because he wanted humanity to unite around fighting this 'alien threat'. Later, this very influential figure informed me that he believed these demonic ET s were the cause of every set back in human history since Adam and Eve. Sound familiar?

Military interests, which are heavily involved in covert projects which hoax ET events, such as human military- related abductions, have a shared goal of demonizing the UFO/ET phenomenon. Doing so lays the foundations for the fear and dread necessary for an organized opposition to all things ET. And this subserves the long - term need to provide a rationale for an expanding global military even should world peace emerge. In fact, under this scenario, 'world peace', or strictly speaking peace on earth, could be secured by the world uniting, eventually, against the 'threat from space' referred to by President Reagan. (By the way, personally I believe Reagan was the victim of disinformation specialists who surrounded him and who manipulated him into the statements he made on this subject.)

Under this scenario, currently being gamed and 'disclosed' courtesy of the trial - balloon UFO 'community', we would get peace on earth

- in exchange for inter-planetary conflict. One step forward, ten steps back. Wonderful.

Such a false and contrived 'disclosure of the truth' regarding UFOs and ET s would, then, subserve agendas held by powerful covert interests in both the military - industrial sector and those of a strange collection of religious fanatics, who pine for Armageddon - and the sooner the better.

Lest the reader think such a strange amalgam of militarists and cult-like religious interests are unlikely, remember the weird views of the Third Reich. Or more recently, the views of one US Department of the Interior cabinet secretary during the Reagan years named James Watts. It was he who, not knowing a microphone was still on and recording his comments, stated in the 1980s that we did not need to worry about all these environmental problems since Armageddon was coming soon and the world would be destroyed anyway...This bizarre view, held by a man who shaped and applied policy for the Interior Department of the US Government, was later reported in the general media. At the time a comical footnote perhaps. But what does it say about the degree to which such beliefs may be shaping covert UFO policy - and specifically disclosure plans? We have found that such views - bizarre as they may seem to most - are heavily represented in covert policy development on the UFO subject.

And most disconcerting of all: This strange mixture of military cosmic saber - rattling and bizarre religious beliefs are the dominant forces shaping both the 'civilian UFO community' and the planned eventual 'spin' on UFO disclosure. Let the buyer beware.

To the rational and intellectual, such views seem ridiculous. Why, you might ask, would anyone want a cosmic war in space, an Armageddon and the destruction of the earth? To comprehend this, you have to get inside the head of people who hold such beliefs - people like James Watts. In his case, why worry about a little bit of deforestation, air pollution and areas of dead oceans if the entire world is going to be destroyed in a couple of years anyway?

But the thinking goes further than this. Because such fanatical thinking has within it the concept that as a result of the Armageddon we will see the return of Christ- and with it the good people's salvation. Now, people are free to believe what they want. But what we have found is a deliberate influencing of covert policy on UFOs by such beliefs. Some of these people want Armageddon - and they want it ASAP.

Strictly speaking, the militarists and war-mongers, itching to 'kick some alien butt' as it was said in the movie Independence Day, may actually only want a pretext to justify their existence and get the world to eventually spend huge sums of money on a perceived (if contrived) threat from space.

But in some cases - high up on the food chain of the covert entity running UFO secrecy - the two views meet. A place where militarism and eschatology merge. Where Star Wars and Armageddon join.

In tracing the history of both the UFO civilian community and the covert policy-making group concerned with UFOs, we have found a growing penetration of the latter into the former. So much so that at this point there are projects which ostensibly are innocent

civilian initiatives but which in reality are totally controlled and financed by 'cut-outs' from ultra-secret projects.

Moreover, our careful penetration of such projects yielded the disturbing finding that deep-cover black project operatives are working closely with alleged civilian researchers, journalists and UFO glitterati. CIA and military intelligence operatives are working with civilian 'think tank' heads, alongside very wealthy business people who are eschatologists, and being advised by 'civilian' technologists and scientists - who are themselves proponents of bizarre religious belief systems involving the end of the world and ET s....

Thus, the new 'chosen ones' have been assembled. They are planning your disclosure on the UFO/ET subject. They are owned by the money whores and power brokers doing the bidding of the secret entity which runs UFO projects to begin with. And it all looks like a civilian initiative. So innocent. So well-intended. So 'scientific'. And by the way, the sky is falling courtesy of ET and we need your money and your souls to defend against it.

Do not be deceived. You need to be awake to the darker scenarios which some would like to thrust upon the world. And you need to know that there are alternatives. If a 'disclosure' is unleashed on the world which is xenophobic, militaristic and terrifying, know that it comes from the spinmeisters of secrecy - regardless of how respectable the person or group may appear to be.

And remember: Part of this disclosure plan involves the use of UFO look-alike devices made by humans in an attack on earth or military assets of earth. This would be a well-orchestrated use of advanced human technologies to hoax an ET attack - all for the purpose of disclosing the truth with the desired military-oriented spin. In such a scenario, most of humanity will be deceived into believing the threat from space has arrived - and that we must fight it at all costs. This is nothing more than long-term social security for the military-industrial complex. There must be people who can expose this fraud.

But why should we wait for these darker scenarios to be unleashed on an unsuspecting world?

Here is another idea: Why don't 'we the people' unite and launch a disclosure which resembles the first one described above. An honest one. One which leads to peace, not war. To a sustainable and beautiful world, free of pollution and brimming with abundance, of all types. One which reaches out into the unknown, instead of firing particle beam weapons into the darkness of space.

Additionally, we welcome those who can come forward with first hand knowledge of the machinations referred to in this paper and who wish to expose such madness to contact us at <http://www.cseti.org>. The one thing the darkness of secrecy cannot tolerate is a spotlight shining right on it. And the more of us holding the light, the better.

Evil steps in when good people do nothing. This is a lesson taught through thousands of years of human history. We stand at the beginning of a new time, and a new world awaits us. But we must embrace it, and help create it. For if we are passive, others will have their way - at least in the short run.

## Greenbaum Speech

---

This speech is controversial in that it exposes the "nuts and bolts" of the psychological aspects of MKULTRA (50s thru 70s) and the psycho-electronic successor programmes (80s onward). There are two versions, "Full" and "Safe", as one psychology professional has warned that the "Full" version may in some way interfere with recovery of the MKULTRA survivors.

---

[FULL version](#)

[SAFE version](#), recommended for MKULTRA survivors who still carry some of the original hypnotic programming.

## **THE GREENBAUM SPEECH**

Herein is the lecture by D.C.Hammond, originally entitled "Hypnosis in MPD: Ritual Abuse," but now usually known as the "Greenbaum Speech," delivered at the Fourth Annual Eastern Regional Conference on Abuse and Multiple Personality, Thursday June 25, 1992, at the Radisson Plaza Hotel, Mark Center, Alexandria, Virginia. Sponsored by the Center for Abuse Recovery & Empowerment, The Psychiatric Institute of Washington, D.C. Both a tape and a transcript were at one time available from Audio Transcripts of Alexandria, Virginia (800-338-2111). Tapes and transcripts of other sessions from the conference are still being sold but -- understandably -- not this one. The transcript below was made from a privately made tape of the original lecture.

The single most remarkable thing about this speech is how little one has heard of it in the years since its original delivery. It is recommended that one reads far enough at least until one finds why it's called "the Greenbaum speech."

In the introduction the following background information is given for D. Corydon Hammond:

B.S. M.S. Ph.D (Counseling Psychology) from the University of Utah

Diplomate in Clinical Hypnosis, the American Board of Psychological Hypnosis

Diplomate in Sex Therapy, the American Board of Sexology

Clinical Supervisor and Board Examiner, American Board of Sexology

Diplomate in Marital and Sex Therapy, American Board of Family Psychology

Licensed Psychologist, Licensed Marital Therapist, Licensed Family Therapist, State of Utah

Research Associate Professor of Physical Medicine and Rehabilitation, Utah School of Medicine

Director and Founder of the Sex and Marital Therapy Clinic, University of Utah.

Adjunct Associate Professor of Educational Psychology, University of Utah

Abstract Editor, The American Journal of Clinical Hypnosis

Advising Editor and Founding Member, Editorial Board, The Ericsonian Monograph

Referee, The Journal of Abnormal Psychology

1989 Presidential Award of Merit, American Society of Clinical Hypnosis

1990 Urban Sector Award, American Society of Clinical Hypnosis

Current [now Past] President, American Society of Clinical Hypnosis

### **THE GREENBAUM SPEECH of D.C.HAMMOND**

We've got a lot to cover today and let me give you a rough approximate outline of the the things that I'd like us to get into. First, let me ask how many of you have had at least one course or workshop on hypnosis? Can I see the hands? Wonderful. That makes our job easier. Okay. I want to start off by talking a little about trance-training and the use of hypnotic phenomena with an MPD dissociative-disorder population, to talk some about unconscious exploration, methods of doing that, the use of imagery and symbolic imagery techniques for managing physical symptoms, input overload, things like that. Before the day's out, I want to spend some time talking about something I think has been completely neglected in the field of dissociative disorder, and that's talking about methods of profound calming for automatic hyper-arousal that's been conditioned in these patients. We're going to spend a considerable length of time talking about age-regression and abreaction in working through a trauma. I'll show you with a non-MPD patient -- some of that kind of work -- and then extrapolate from what I find so similar and different with MPD cases. Part of that, I would add, by the way, is that I've been very sensitive through the years about taping MPD cases or ritual-abuse cases, part of it being that some of that feels a little like using patients and I think that this population has been used enough. That's part of the reason, by choice, that I don't generally videotape my work. I also want to talk a bunch about hypnotic relapse- prevention strategies and post-integration therapy today. Finally, I hope to find somewhere in our time-frame to spend on hour or so talking specifically about ritual abuse and about mind-control programming and brainwashing -- how it's done, how to get on the inside with that -- which is a topic that in the past I haven't been willing to speak about publicly, have done that in small groups and in consultations, but recently decided that it was high time that somebody started doing it. So we're going to talk about specifics today. [Applause] In Chicago at the first international congress where ritual abuse was talked about I can remember thinking, "How strange and interesting." I can recall many people listening to an example given that somebody thought was so idiosyncratic and rare, and all the people coming up after saying, "Gee, you're treating one, too? You're in Seattle"...Well, I'm in Toronto...Well, I'm in Florida...Well, I'm in Cincinnati." I didn't know what to think at that point. It wasn't too long after that I found my first ritual-abuse patient in somebody I was already treating and we hadn't gotten that deep yet. Things in that case made me very curious about the use of mind-control techniques and hypnosis and other brainwashing techniques. So I started studying brainwashing and some of the literature in that area and became acquainted with, in fact, one of the people who'd written one of the better books in that area. Then I decided to do a survey, and from the ISSMP&D [International Society for the Study of Multiple Personality and Dissociation] folks I picked out about a dozen and a half therapists that I thought were seeing more of that than probably anyone else around and I started surveying them. The interview protocol, that I had, got the same reaction almost without exception. Those therapists said, "You're asking questions I don't know the answers to. You're asking more specific questions than I've ever asked my patients." Many of those same therapists said, "Let me ask those questions and I'll get back to you with the answer." Many of them not only got back with answers, but said, "You've got to talk to this patient or these two patients." I ended up doing hundred of dollars worth of telephone interviewing. What I came out of that was a grasp of a variety of brainwashing methods being used all over the country. I started to hear some similarities. Whereas I hadn't known, to begin with, how widespread things were, I was now getting a feeling that there were a lot of people reporting some similar things and that there must be some degree of communication here. Then approximately two and a half years ago I

had some material drop in my lap. My source was saying a lot of things that I knew were accurate about some of the brainwashing, but it was telling me new material I had no idea about. At this point I took and decided to check it out in three ritual-abuse patients I was seeing at the time. Two of the three had what they were describing, in careful inquiry without leading or contaminating. The fascinating thing was that as I did a telephone-consult with a therapist that I'd been consulting for quite a number of months on an MPD case in another state, I told her to inquire about certain things. She said, "Well, what are those things?" I said, "I'm not going to tell you, because I don't want there to be any possibility of contamination. Just come back to me and tell me what the patient says." She called me back two hours later, said, "I just had a double session with this patient and there was a part of him that said, 'Oh, we're so excited. If you know about this stuff, you know how the Cult Programmers get on the inside and our therapy is going to go so much faster.'" Many other patients since have had a reaction of wanting to pee their pants out of anxiety and fear rather than thinking it was wonderful thing. But the interesting thing was that she then asked, "What are these things?" They were word perfect -- same answers my source had given me. I've since repeated that in many parts of the country. I've consulted in eleven states and one foreign country, in some cases over the telephone, in some cases in person, in some cases giving the therapist information ahead of time and saying, "Be very careful how you phrase this. Phrase it in these ways so you don't contaminate." In other cases not even giving the therapist information ahead of time so they couldn't. When you start to find the same highly esoteric information in different states and different countries, from Florida to California, you start to get an idea that there's something going on that is very large, very well coordinated, with a great deal of communication and systematicness to what's happening. So I have gone from someone kind of neutral and not knowing what to think about it all to someone who clearly believes ritual abuse is real and that the people who say it isn't are either naive like people who didn't want to believe the Holocaust or -- they're dirty. [Applause]

Now for a long time I would tell a select group of therapists that I knew and trusted, information and say, "Spread it out. Don't spread my name. Don't say where it came from. But here's some information. Share it with other therapists if you find it's on target, and I'd appreciate your feedback." People would question -- in talks -- and say, you know, they were hungry for information. Myself, as well as a few others that I've shared it with, were hedging out of concern and out of personal threats and out of death threats. I finally decided to hell with them. If they're going to kill me, they're going to kill me. It's time to share more information with therapists. Part of that comes because we proceeded so cautiously and slowly, checking things in many different locations and find the same thing. So I'm going to give you the way in with ritual-abuse programming. I certainly can't tell you everything that you want to know in forty-five or fifty minutes, but I'm going to give you the essentials to get inside and start working at a new level. I don't know what proportion, honestly, of patients have this. I would guess that maybe somewhere around at least fifty percent, maybe as high as three-quarters, I would guess maybe two-thirds of your ritual-abuse patients may have this. What do I think the distinguishing characteristic is? If they were raised from birth in a mainstream cult or if they were an non-bloodline person, meaning neither parent was in the Cult, but Cult people had a lot of access to them in early childhood, they may also have it. I have seen more than one ritual-abuse patient who clearly had all the kind of ritual things you hear about. They seemed very genuine. They talked about all the typical things that you hear in this population, but had none of this programming with prolonged extensive checking. So I believe in one case I was personally treating that she was a kind of schismatic break-off that had kind of gone off and done their own thing and were no longer hooked into a mainstream group. [Pause]

Here's where it appears to have come from. At the end of World War II, before it even ended, Allen Dulles and people from our Intelligence Community were already in Switzerland making contact to get out Nazi scientists. As World War II ends, they not only get out rocket scientists, but they also get out some Nazi doctors who have been doing mind-control research in the camps.

They brought them to the United States. Along with them was a young boy, a teenager, who had been raised in a Hasidic Jewish tradition and a background of Cabalistic mysticism that probably appealed to people in the Cult because at least by the turn of the century Aleister Crowley had been introducing Cabalism into Satanic stuff, if not earlier. I suspect it may have formed some bond between them. But he saved his skin by collaborating and being an assistant to them in the death-camp experiments. They brought him with them. They started doing mind-control research for Military Intelligence in military hospitals in the United States. The people that came, the Nazi doctors, were Satanists. Subsequently, the boy changed his name, Americanized it some, obtained an M.D. degree, became a physician and continued this work that appears to be at the center of Cult Programming today. His name is known to patients throughout the country. [Pause]

What they basically do is they will get a child and they will start this, in basic forms, it appears, by about two and a half after the child's already been made dissociative. They'll make him dissociative not only through abuse, like sexual abuse, but also things like putting a mousetrap on their fingers and teaching the parents, "You do not go in until the child stops crying. Only then do you go in and remove it." They start in rudimentary forms at about two and a half and kick into high gear, it appears, around six or six and a half, continue through adolescence with periodic reinforcements in adulthood. Basically in the programming the child will be put typically on a gurney. They will have an IV in one hand or arm. They'll be strapped down, typically naked. There'll be wires attached to their head to monitor electroencephalograph patterns. They will see a pulsing light, most often described as red, occasionally white or blue. They'll be given, most commonly I believe, Demerol. Sometimes it'll be other drugs as well depending on the kind of programming. They have it, I think, down to a science where they've learned you give so much every twenty-five minutes until the programming is done. They then will describe a pain on one ear, their right ear generally, where it appears a needle has been placed, and they will hear weird, disorienting sounds in that ear while they see photic stimulation to drive the brain into a brainwave pattern with a pulsing light at a certain frequency not unlike the goggles that are now available through Sharper Image and some of those kinds of stores. Then, after a suitable period when they're in a certain brainwave state, they will begin programming, programming oriented to self-destruction and debasement of the person. In a patient at this point in time about eight years old who has gone through a great deal early programming took place on a military installation. That's not uncommon. I've treated and been involved with cases who are part of this original mind-control project as well as having their programming on military reservations in many cases. We find a lot of connections with the CIA. This patient now was in a Cult school, a private Cult school where several of these sessions occurred a week. She would go into a room, get all hooked up. They would do all of these sorts of things. When she was in the proper altered state, now they were no longer having to monitor it with electroencephalographs, she also had already had placed on her electrodes, one in the vagina, for example, four on the head. Sometimes they'll be on other parts of the body. They will then begin and they would say to her, "You are angry with someone in the group." She'd say, "No, I'm not" and they'd violently shock her. They would say the same thing until she complied and didn't make any negative response. Then they would continue. "And because you are angry

with someone in the group," or "When you are angry with someone in the group, you will hurt yourself. Do you understand?" She said, "No" and they shocked her. They repeated again, "Do you understand?" "Well, yes, but I don't want to." Shock her again until they get compliance. Then they keep adding to it. "And you will hurt yourself by cutting yourself. Do you understand?" Maybe she'd say yes, but they might say, "We don't believe you" and shock her anyway. "Go back and go over it again." They would continue in this sort of fashion. She said typically it seemed as though they'd go about thirty minutes, take a break for a smoke or something, come back. They may review what they'd done and stopped or they might review what they'd done and go on to new material. She said the sessions might go half an hour, they might go three hours. She estimated three times a week. Programming under the influence of drugs in a certain brainwave state and with these noises in one ear and them speaking in the other ear, usually the left ear, associated with right hemisphere non-dominant brain functioning, and with them talking, therefore, and requiring intense concentration, intense focusing. Because often they'll have to memorize and say certain things back, word-perfect, to avoid punishment, shock, and other kinds of things that are occurring. This is basically how a lot of programming goes on. Some of it'll also use other typical brainwashing kinds of techniques. There will be very standardized types of hypnotic things done at times. There'll be sensory deprivation which we know increases suggestibility in anyone. Total sensory deprivation, suggestibility has significantly increased, from the research. It's not uncommon for them to use a great deal of that, including formal sensory-deprivation chambers before they do certain of these things. [Pause] Now let me give you, because we don't have a lot of time, as much practical information as I can. The way that I would inquire as to whether or not some of this might be there would be with ideomotor finger-signals. After you've set them up I would say, "I want the central inner core of you to take control of the finger-signals." Don't ask the unconscious mind. The case where you're inquiring about ritual abuse, that's for the central inner core. The core is a Cult-created part. "And I want that central inner core of you to take control of this hand of these finger-signals and what it has for the yes-finger to float up. I want to ask the inner core of you is there any part of you, any part of Mary," that's the host's name, "who knows anything about Alpha, Beta, Delta, or Theta." If you get a Yes, it should raise a red flag that you might have someone with formal intensive brainwashing and programming in place. I would then ask and say, "I want a part inside who knows something about Alpha, Beta, Delta, and Theta to come up to a level where you can speak to me and when you're here say, 'I'm here.'" I would not ask if a part was willing to. No one's going to particularly want to talk about this. I would just say, "I want some part who can tell me about this to come out." Without leading them ask them what these things are. I've had consults where I've come in. Sometimes I've gotten a Yes to that, but as I've done exploration it appeared to be some kind of compliance response or somebody wanting, in two or three cases, to appear maybe that they were ritual abuse and maybe they were in some way, but with careful inquiry and looking it was obvious that they did not have what we were looking for. Let me tell you what these are. Let's suppose that this whole front row here are multiples and that she has an alter named Helen and she has one named Mary, she has one named Gertrude, she has one named Elizabeth, and she has one named Monica. Every one of those alters may have put on it a program, perhaps designated alpha-zero-zero-nine a Cult person could say, "Alpha-zero-zero-nine" or make some kind of hand gesture to indicate this and get the same part out in any one of them even though they had different names that they may be known by to you. Alphas appear to represent general programming, the first kind of things put in. Betas appear to be sexual programs. For example, how to perform oral sex in a certain way, how to perform sex in rituals, having to do with producing child pornography, directing child pornography, prostitution. Deltas are killers trained in how to kill in ceremonies. There'll also be some self-harm stuff mixed in with that, assassination and killing. Thetas are called

psychic killers. You know, I had never in my life heard those two terms paired together. I'd never heard the words "psychic killers" put together, but when you have people in different states, including therapists inquiring and asking, "What is Theta," and patients say to them, "Psychic killers," it tends to make one a believer that certain things are very systematic and very widespread. This comes from their belief in psychic sorts of abilities and powers, including their ability to psychically communicate with "mother" including their ability to psychically cause somebody to develop a brain aneurysm and die. It also is a more future-oriented kind of programming. Then there's Omega. I usually don't include that word when I say my first question about this or any part inside that knows about Alpha, Beta, Delta, Theta because Omega will shake them even more. Omega has to do with self-destruct programming. Alpha and Omega, the beginning and the end. This can include self-mutilation as well as killing-themselves programming. Gamma appears to be system-protection and deception programming which will provide misinformation to you, try to misdirect you, tell you half-truths, protect different things inside. There can also be other Greek letters. I'd recommend that you go and get your entire Greek alphabet and if you have verified that some of this stuff is present and they have given you some of the right answers about what some of this material is, and I can't underline enough: DO NOT LEAD THEM. Do not say, "Is this killers?" Get the answer from them, please. When you've done this and it appears to be present, I would take your entire Greek alphabet and, with ideomotor signals, go through the alphabet and say, "Is there any programming inside associated with epsilon, omicron," and go on through. There may be some systematicness to some of the other letter, but I'm not aware of it. I've found, for example, in one case that Zeta had to do with the production of snuff films that this person was involved with. With another person, Omicron had to do with their linkage and associations with drug smuggling and with the Mafia and with big business and government leaders. So there's going to be some individualism, I think, in some of those. Some of those are come-home programs, "come back to the Cult", "return to the Cult" program. Here's the flaw in the system. They have built in shut-down and erasure codes so if they got into trouble they could shut something down and they could also erase something. These codes will sometimes be idiosyncratic phrases, or ditties. Sometimes they will be numbers maybe followed by a word. There's some real individuality to that. At first I had hoped if we can get some of these maybe they'll work with different people. No such luck. It's very unlikely unless they were programmed at about the same point in time as part of the same little group. Stuff that I've seen suggests that they carry laptop computers, the programmers, which still include everything that they did twenty, thirty years ago in them in terms of the names of alters, the programs, the codes, and so on. Now what you can do is get erasure codes, and I always ask, "If I say this code, what will happen?" Doublecheck. "Is there any part inside who has different information?" Watch your ideomotor signals and what I've found is you can erase programs by giving the appropriate codes, but then you must abreact the feelings. So if you erase Omega, which is often where I've started because it's the most high risk. Afterwards I will get all the Omega, what were formerly Omega alters, together so that we will abreact and give back to the host the memories associated with all the programming that was done with Omega and anything any Omega part ever had to do in a fractionated abreaction. They use the metaphor -- and it is their metaphor -- of robots. and it is like a robot shell comes down over the child alter to make them act in robotic fashion. Once in a while internally you'll confront robots. What I found from earlier work, and so I speed the process up now because I confirmed it enough times, is that you can say to the core, "Core, I want you to look -- there's this robot blocking the way in some way, blocking the progress. Go around and look at the back of the head and tell me what you notice on the back of the head or the neck." I just ask it very non-leading like that and what's commonly said to me is that there were wires or a switch. So I'll tell them, "Hold the wires or flip the switch and it will immobilize the robot and

give me a yes-signal when you've done it." Pretty soon you get a yes-signal. "Great. Now that the robot is immobilized, I want you to look inside the robot and tell me what you see." It's generally one or several children. I have them remove the children. I do a little hypnotic magic and ask the core to use a laser and vaporize the robot so nothing is left. They're usually quite amazed that this works, as have been a number of therapists. [Pause] Now there are many different layers of this stuff is the problem. Let me come over to the overhead and give some ideas about them. What we have up here are innumerable alters. I'll tell you one of the fascinating things I've seen. I remember a little over a year ago coming in to see some cases, some of the tough cases at a dissociative-disorders unit of a couple of the finest of the MPD therapists in this country, who are always part of all the international meetings, have lectured internationally. We worked and I look at some of their patients. They were amazed at certain things because they had not been aware of this before. As we worked with some of the patients and confirmed it, I remember one woman who'd been inpatient for three years, still was inpatient. Another who had one intensive year of inpatient work with all the finest MPD therapy you can imagine -- abreactions, integrations, facilitating cooperation, art therapy, on and on and on, journaling, intensively for one inpatient year followed by an intensive year of outpatient therapy two, three hours a week. In both patients we found out that all of this great work had done nothing but deal with the alters up here and had not touched the mind-control programming. In fact it was not only intact, but we found that the one who was outpatient was having her therapy monitored every session by her mother, out-of-state, over the telephone, and that she still had intact suggestions that had been give to her at a certain future time to kill her therapist. Now one of the things that I would very carefully check is, I would suggest that you ask the core, not just the unconscious mind, ask the core, "Is there any part inside that continues to have contact with people associated with the Cult? Is there any part inside who goes to Cult rituals or meetings? Is there a recording device inside of Mary," if that's the host's name, "a recording device inside so that someone can find out the things that are said in sessions?" This doesn't mean they're monitored. Many of them just simply have it. "Is there someone who debriefs some part inside for what happens in our therapy sessions?" I have the very uncomfortable feeling from some past experience that when you look at this you will find the large proportion of ritual-abuse victims in this country are having their ongoing therapy monitored. I remember a woman who came in about twenty-four years old, claimed her father was a Satanist. Her parents divorced when she was six. After that it would only when her father had visitation and he would take her to rituals sometimes up until age fifteen. She said, "I haven't gone to anything since I was fifteen." Her therapist believed this at face value. We sat in my office. We did a two-hour inquiry using hypnosis. We found the programming present. In addition to that we found that every therapy session was debriefed and in fact they had told her to get sick and not come to the appointment with me. Another one had been told that I was Cult and that if she came I would know that she'd been told not to come and I would punish her. If anything meaningful comes out in a patient who's being monitored like that -- from what I've learned thus far, they're tortured with electric shocks -- my belief is if they're in that situation you can't do meaningful therapy other than being supportive and caring and letting them know you care a lot and you'll be there to support them. But I wouldn't try to work with any kind of deep material or deprogramming with them because I think it can do nothing but get them tortured and hurt unless they can get into a safe, secure inpatient unit for an extended period of time to do some of the work required. I have a feeling that when you make inquiries you're going to find that probably greater than fifty percent of these patients, if they're bloodline, meaning mother or dad or both involved, will be monitored on some ongoing basis. [Pause] Now when you come below the alters, you then have Alpha, Beta, Delta, Theta, so and so forth, the Greek-letter programming and they will then have backup programs. There will typically be an erasure code for the backups. There

may be one code that combines all the backups into one and then an erasure code for them, simply one code that erases all the backups. So I will get the code for, let's say, Omega and for all the Omega backups at the same time. After I've asked "What will happen if I give this," I will give the code and then I will say, "What are you experiencing?" They often describe computer whirring, things erasing, explosions inside, all sorts of interesting things. I've had some therapists come back and say, "My Lord, I had never said anything about robots she said something about robots vaporizing." I remember one therapist who'd been with me in several hypnosis workshops and consulted with me about a crisis MPD situation. I told her to inquire about Alpha, Beta, Delta, Theta. She did. She got back to me saying, "Yeah, I got an indication it's there. What is it?" I said, "I'm not going to tell you. Go back and inquire about some of this." We set an appointment for a week or so hence. She got back with me and said, "I asked what Theta was and she said, 'psychic killers.' I asked her what Delta was and she said 'killers.'" Okay. So I told her about some of this stuff for a two-hour consult. She called back and she said, "This seemed too fantastic. I heard this and I thought, 'Has Cory been working too hard?'" she said, I'm embarrassed to admit it, but she said, "I held you in high professional regard, but this just sounded so off in the twilight zone that I really thought, 'Is he having a nervous breakdown or something?'" She said, "But I respected you enough to ask about this." She said, "I asked another MPD patient and she didn't have any of this." So in this patient she started describing things and how she worked, for example, with an erasure and she was describing things like robots vaporizing and kinds of things. She said, "I hadn't told her about any of these things." Well, here's the problem. There are different layers and I think some of them are designed to keep us going in circles forever. They figured we probably, in most cases, wouldn't get below the alters which they purposefully created.

The way you create Manchurian Candidates is you divide the mind. It's part of what the Intelligence Community wanted to look at. If you're going to get an assassin, you're going to get somebody to go do something, you divide the mind. It fascinates me about cases like the assassination of Robert Kennedy, where Bernard Diamond, on examining Sirhan Sirhan found that he had total amnesia of the killing of Robert Kennedy, but under hypnosis could remember it. But despite suggestions he would be able to consciously remember, could not remember a thing after was out of hypnosis. I'd love to examine Sirhan Sirhan.

It appears that below this we've got some other layers. One is called "Green Programming" it appears. Isn't it interesting that the doctor's name is Dr. Green? One of the questions in a way that does not contaminate is after I've identified some of this stuff is there and they've given me a few right answers about what some of it is, "If there were a doctor associated with this programming and his name were a color, you know, like Dr. Chartreuse or something, if his name were a color, what color would the color be?" Now once in a while I've had some other colors mentioned in about three or four patients that I felt were trying to dissimulate in some way and I don't really believe had this. In one case I got another color and I found out later it was a doctor whose name was a color who was being trained by Dr. Green almost thirty years ago and he supervised part of the programming of this woman under this doctor. I remember one woman couldn't come up with anything. No alter would speak up with anything. I said, "Okay," and we went on to some other material. About two minutes later she said, "Green. Do you mean Dr. Green?" We found this all over. There appears to be some Green Programming below that and I suspect that you get down to fewer and more central programs the deeper you go. Well, all Green Programming is Ultra-Green and the Green Tree. Cabalistic mysticism is mixed all into this. If you're going to work with this you need to pick up a couple of books on the Cabala. One is by a man named Dion Fortune called "Qabala" with a "q," Dion Fortune. Another is by Ann Williams-Heller and it's called "The Kabbalah." I knew nothing about the

Cabala. It was interesting. A patient had sat in my waiting area, got there considerably early and drew a detailed multicolored Cabalistic Tree over two years ago. It took me two months to figure out what it was. Finally, showing it to somebody else who said, "You know? That looks an awful lot like the Cabala Tree" and that rang a bell with some esoteric in an old book and I dug it out. That was the background of Dr. Green.

Now the interesting thing about the Green Tree is his original name was Greenbaum. What does "greenbaum" mean in German? Green Tree, Ultra-Tree and the Green Tree. I've also had patients who didn't appear to know that his original name was Greenbaum, volunteered that there were parts inside named Mr. Greenbaum. Now let me give you some information about parts inside that may be helpful to you if you're going to inquire about these things, because my experience is one part will give you some information and either run dry or get defensive or scared and stop. and so you punt and you make an end run and you come around the other direction, you find another part. I'll tell you several parts to ask for and ask if there's a part by this name. And, by the way, when I'm screening patients and fiddling around with this, I throw in a bunch of spurious ones and ask, "Is there a part inside by this name and by that name" as a check on whether or not it appears genuine. For example. "In addition to the core," I ask, "is there a part inside named Wisdom?" Wisdom is a part of the Cabalistic Tree. Wisdom, I've often found, will be helpful and give you a lot of information. "Is there a part inside named Diana?" I mean I may throw in all sorts of things. "Is there a part inside named Zelda?" I've never encountered one yet! Just to see what kind of answers we get. I try to do this carefully. Diana is a part that, in the Cabalistic system, is associated with a part called the Foundation. You will be fascinated to know that. Remember the Process Church? Roman Polanski's wife, Sharon Tate, was killed by the Manson Family who were associated with the Process Church? A lot of prominent people in Hollywood were associated and then they went underground, the books say, in about seventy-eight and vanished? Well, they're alive and well in southern Utah. We have a thick file in the Utah Department of Public Safety documenting that they moved to southern Utah, north of Monument Valley, bought a movie ranch in the desert, renovated it, expanded it, built a bunch of buildings there, carefully monitored so that very few people go out of there and no one can get in and changed their name. A key word in their name is "Foundation." The Foundation. There are some other words. The Foundation is part of the Tree. So you can ask, "Is there something inside known as The Foundation?" I might ask other things to throw people off. "Is there something known as the Sub-Basement?" Well, maybe they'll conceive of something. Or "Is there something known as the Walls?" There are a variety of questions you can come up with, to sort of screen some things. I've also found that there will often be a part called "Black Master," a part called "Master Programmer," and that there will be computer operators inside. How many of you have come into computer things in patients? There will typically be computer operators: Computer Operator Black, Computer Operator Green, Computer Operator Purple. Sometimes they'll have numbers instead, sometimes they'll be called Systems Information Directors. You can find out the head one of those. There'll be a source of some information for you. I will ask inside, "Is there a part inside named Dr. Green?" You'll find that there are, if they have this kind of programming, in my experience. Usually with a little work and reframing, you can turn them and help them to realize that they were really a child-part who's playing a role and they had no choice then, but they do now. You know, they played their role very, very well, but they don't have to continue to play it with you because they're safe here and in fact, "If the Cult simply found out that you talked to me, that they you had shared information with me, you tell me what would they do to you?" Emphasize that the only way out is through me and that they need to cooperate and share information and help me and that I'll help them. So all these parts can give you various information. Now they have tried to protect this very

carefully. Let me give you an example with Ultra-Green. I discovered this -- by the way I used to think this programming was only in bloodline people. I've discovered it in non-bloodline people, but it's a bit different. They don't want it to be just the same. I don't think you'll find deep things like Ultra-Green and probably not even Green Programming with non-bloodline people. But let me tell you something that I discovered first in a non-bloodline and then in a bloodline. We were going along and a patient was close to getting well, approaching final integration in a non-bloodline and she suddenly started hallucinating and her fingers were becoming hammers and other things like that. So I used an affect-bridge and we went back and we found that what happened was that they gave suggestions, that if she ever got well to a certain point she would go crazy. The way they did this was they strapped her down and they gave her LSD when she was eight years old. When she began hallucinating they inquired about the nature of the hallucinations so they could utilize them in good Ericsonian fashion and build on them and then combine the drug-effect with powerful suggestions. "If you ever get to this point you will go crazy. If you ever get fully integrated and get well you will go crazy like this and will be locked up in an institution for the rest of your life. They gave those suggestions vigorously and repetitively. Finally they introduced other suggestions that, "Rather than have this happen, it would be easier to just kill yourself." In a bloodline patient then, as I began inquiring about deep material, the patient started to experience similar symptoms. We went back and we found the identical things were done to her.

This was called the "Green Bomb." B-O-M-B. Lots of interesting internal consistencies like that play on words with Dr. Greenbaum, his original name. Now in this case it was done to her at age nine for the first time and then only hers was different. Hers was a suggestion for amnesia. "If you ever remember anything about Ultra-Green and the Green Tree you will go crazy. You will become a vegetable and be locked up forever." Then finally the suggestions added, "And it'll be easier to just kill yourself than have that happen to you, if you ever remember it." At age twelve then, three years later, they used what sounds like an Amytol interview to try to breach the amnesia and find out if they could. They couldn't. So then they strapped her down again, took and gave her something to kind of paralyze her body, gave her LSD, an even bigger dose and reinforced all the suggestions. Did a similar thing at the age of sixteen. So these are some of the kind of booby traps you run into. There are a number of cases where they combined powerful drug effects like this with suggestions to keep us from discovering some of this deeper level stuff. What's the bottom? Your guess is as good as mine but I can tell you that I've had a lot of therapists who were stymied with these cases who were going nowhere. In fact someone here that I told some basic information about this to in Ohio a couple of months ago said it opened all sorts of things up in a patient who'd been going nowhere. That's an often common thing. I think that we can move down to deeper levels and if we deal with some of the deeper level stuff it may destroy all the stuff above it. But we don't even know that yet. In some of the patients I'm working with we have pretty much dealt with a lot of the top-level stuff. I'll tell you how we've done some of that. We'll take and erase one system like Omega. Then we will have a huge abreaction of all the memories and feelings in a fractionated abreaction associated with those parts. I typically find I'll say to them, "Now that we've done this are there any other memories and feelings that any parts that were Omega still have?" The answer's usually "No." At that point I will say, "I usually find at this point in time the majority, if not all, of those parts that used to be Omega no longer feel a desire or need to be different, realizing that you split off originally by them and want to go home to Mary and become one with her again." I use the concept often now -- which came from a patient -- of going home and becoming one with her. "Going back from whence you came" is another phrase I'll use with them. "Are there any Omega parts inside who do not feel comfortable with that or have reservations or concerns about that?" If there are we talk to

them. We deal with them. A few may not integrate. My experience is most of the time they'll integrate and we may integrate twenty-five parts at once in a polyfragmented complex MPD. I think it is vitally important to abreact the feelings before you go on. Also for many patients it hasn't seemed to matter the order we go in but I've found a couple where it has. If it doesn't seem to matter I'll typically go Omega, then Delta because they have more violence potential, then Gamma to get rid of the self-deception stuff. What I will do before I just assume anything and do that, is once we've done Omega and showed them that success can occur and something can happen and they feel relief after, I will say to them, "I want to ask the core -- through the fingers -- is there a specific order in which programs must be erased?" You know maybe it doesn't matter but most of the time I found "No." There are cases where we found "Yes." I recommend doing one or two or three of those because they'll produce relief and a sense of optimism in the patient. But then I would recommend starting to probe for the deeper level things and getting their input and recommendations about the order in which we go. Question?

Q: What has been the typical age and typical gender of this type of person?

Dr.H: I know of this being found in men and women. Most of the patients I know with MPD ritual abuse that are being treated are women, however. I know of some men being treated where we've found this. A while back I was talking to a small group of therapists somewhere. I told them about some of this. In the middle of talking about some of this all the color drained out of one social worker's face and she obviously had a reaction and I asked her about and she said, "I'm working with a five-year-old boy," and she said, "Just in the last few weeks he was saying something about a Dr. Green." I went on a little further and I mentioned some of these things and she just shook her head again. I said, "What's going on?" She said, "He's been spontaneously telling me about robots and about Omega." I think you will find variations of this and that they've changed it, probably every few years and maybe somewhat regionally to throw us off in various ways but that certain basics and fundamentals will probably be there. I have seen this in people up into their forties including people whose parents were very, very high in the CIA, other sorts of things like that. I've had some that were originally part of the Monarch Project which is the name of the government Intelligence project.

Question in the back?

Q: I'm still not grasping how one starts, how you find out how to erase. How do you get that information?

Dr.H: I would say, "I want the core, if necessary, using the telepathic communication ability you have to read minds," because they believe in that kind of stuff, "so I'll use it..." I was trained in Ericsonian stuff, "...to obtain for me the erasure code of all Omega programs. When you've done so, I want the yes-finger to float up." Then I ask them to tell it to me. "Are there backups for Omega programs?" "Yes." "Okay? How many backups are there?" "Six," they say, let's say. It's different numbers. "Is there an erasure code for all the backup programs?" "No." "Is there an erasure code that combines all the backups into one?" "Yes." "Obtain that code for me and when you've got it give me the yes-signal again." It can move almost that fast in some cases where there's not massive resistance.

Question?

Q: Yes, can you tell me what you know about the risks to the therapist? [Laughter]

Dr.H: You would have to ask.

Q: Yeah, I'd like to know that. What kind of data do you have given that you've had contact with large numbers of people. Not just threats but also any injury, any family problems that have arisen. That's one question. A second one is are you aware of anybody that you've treated -- or others -- with this level of dissociation and trauma that have recovered? Integrated? Whole and happy?

Dr.H: Okay, I have one non-bloodline multiple, complex multiple who had this kind of programming where they have a lot of access to the patient as neighbors and where the doctor, by the way, you'll find physicians heavily involved. They've encouraged their own to go to medical school, to prescribe drugs to take care of their own, to get access to medical technology and be above suspicion. There have been a couple, in fact, in Utah who've been nailed now. We now in Utah have two full time ritual-abuse investigators with statewide jurisdiction under the Attorney General's Office to do nothing but investigate this. [Applause] Okay? In a poll done in the State of Utah in January by the major newspaper and television station, they found that ninety percent of Utahans believe that ritual abuse is genuine and real. Not all of them believe it's a frequent occurrence but some of that was imparted from two years of work by the Governor Commission on Ritual Abuse, interviewing, talking, meeting people, gathering data. Now when people say, by the way, "There's no evidence. They've never found a body," that's baloney. They found a body in Idaho of a child. They've had a case last summer that was convicted on first-degree murder charges, two people that the summer before that were arrested where the teenaged girl's finger and head were in the refrigerator and they were convicted of first-degree murder in Detroit. There have been cases and bodies. Back to risk. I know of no therapist who's been harmed. But patients inform us that there will come a future time where we could be at risk of being assassinated by patients who've been programmed to kill at a certain time anyone that they've told and any member of their own family who's not active. If that would come about is speculative. Who knows for sure? Maybe, but I don't think it's entirely without risk.

A question in the back?

Q: It seems to me that there seems to be some similarity between these kinds of programming and those people who claim that they've been abducted by spaceships and have had themselves physically probed and reprogrammed and all of that sort of thing. Since Cape Canaveral is across the Florida peninsula from me and I don't think that they've reported any spaceships lately, I was just wondering is there any sort of relationship between this and that?

Dr.H: I'll share my speculation, that comes from others really. I've not dealt with any of those people. However, I know a therapist that I know and trust and respect who I've informed about all this a couple of years ago and has found it in a lot of patients and so on, who is firmly of the belief that those people are in fact ritual-abuse victims who have been programmed with that sort of thing to destroy all their credibility. If somebody's coming in and reporting abduction by a flying saucer who's going to believe them on anything else in the future? Also as a kind of thing that can be pointed to and said, "This is as ridiculous as that." All I know is that I recently had a consult, a telephone consult, with a therapist where I had been instructing her about some of this kind of stuff. When we were consulting at one point in the fifth or sixth interview she said, "By the way, do you know anything about this topic?" I

said, "Well, not really" and shared with her what I shared with you. I said, "If it were me being with this guy..." that she'd been seeing for a couple of months, I said, "I would ask inside for the core to take control of finger-signals and inquire about Alpha, Beta, Delta, Theta." She proceeded to do all that, got back to me a week later and said, "Boy, were you on target. There is a part inside named Dr. Green. There's this kind of programming."

Yes?

Q: What's the difference between this kind of program and cult-type abuse and Satanic abuse in the kind of cults with the candles and the...

Dr.H: This type of programming will be done in the cults with the candles and all the rest. My impression is this is simply done in people where they have great access to them or they're bloodline and their parents are in it and they can be raised in it from an early age. If they are bloodline they are the chosen generation. If not, they're expendable and they are expected to die and not get well. There will be booby traps in your way if they aren't non-bloodline people that when they get well they will kill themselves. I'll tell you just a little about that. My belief is that some people that have ritual abuse and don't have this have been ritually abused but they may be may be part of a non-mainstream group. The Satanism comes in the overall philosophy overriding all of this. People say, "What's the purpose of it?" My best guess is that the purpose of it is that they want an army of Manchurian Candidates, ten of thousands of mental robots who will do prostitution, do child pornography, smuggle drugs, engage in international arms smuggling, do snuff films, all sorts of very lucrative things and do their bidding and eventually the megalomaniacs at the top believe they'll create a Satanic Order that will rule the world. One last question. Then I'll give you couple of details and we need to shift gears.

Q: You have suggested and implied that at some point at a high level of the U.S. Government there was support of this kind of thing. I know we're short of time, but could you just say a few words about the documentation that may exist for that suggestion?

Dr.H: There isn't great documentation of it. It comes from victims who are imperiled witnesses. The interesting thing is how many people have described the same scenario and how many people that we have worked with who have had relatives in NASA, in the CIA and in the Military, including very high-ups in the Military. I can tell you that a friend and colleague of mine who has probably the equivalent of half the table space on that far side of the room filled with boxes with declassified documents from mind-control research done in the past which has been able to be declassified over a considerable -- couple of decades -- period and has read more government documents about mind control than anyone else, has a brief that has literally been sent in the past week and a half asking for all information to be declassified about the Monarch Project for us to try to find out more. Now let me just mention something about some of the stuff that my experience is in several patients now that you may run into late in the process. I know I'm throwing a lot at you in a hurry. Some of it is completely foreign and some of you may think, "Gosh, could any of this be true?" Just, you know, ask. Find out in your patients and you may be lucky and there isn't any of this. Somewhere at a deep level you may run into some things like this. Let me describe to you, if I can find my pen, the system in one patient. One patient I had treated for quite a while, a non-bloodline person. We had done what appeared to be successful work and reached final integration. She came back to me early last year and said she was symptomatic with some things. I started inquiring. I found a part there we'd integrated. The part basically said, "There

was other stuff that I couldn't tell you about and you integrated me and so I had to split off." I had done some inquiring about things like Alpha, Beta as a routine part of it and found they were there and I said to this part, "Why didn't you tell me about this stuff?" She said, "Well, we gave you some hints but they went right over your head." Says, "I'm sorry, but we know that you didn't know enough to help us but now we know you can." So the stuff started coming out. It was interesting. She described the overall system -- if I can remember it now -- as being like this. The circle represented harm to the body, a system of alters whose primary purpose was to hurt her including symptoms like Munchhausen's, self-mutilation, other kinds of things. Each of the triangles represented still another different system. She said, "With the exception of me," this one part, "you dealt with the whole circle with the work that we did before but you didn't touch the rest of the stuff." Okay. In the middle of all this was still another system consisting of the Cabalistic Tree, which some of you are aware, looks approximately like this with lines in between and so on and so forth. There's a rough approximation. That represented another system. Then once we got past that she implied that this entire thing was somehow encompassed by, what do you call it, an hourglass. I kept thinking we were at final integration then I'd find some other parts. This person had an eagle-eye husband that was watching for certain things that we found to be reliable indicators. So often I would get evidence of dissociation within a few days. It would suddenly be picked up. You know, what we found was I continued to find evidence of dissociation and I'd find parts. Finally this part, as I got angry with him and said, "Why when I give these ideomotor inquiries am I getting lied to?" This part said, "Because you don't understand. You're going to get us all killed." We started talking and then she basically said, "It's been programmed so that if you succeed and think you've succeeded, you will fail. They build it in as a way to laugh at you, that if you ever get us integrated, we will die." Here's what she said, this part said, "I'm one of twelve disciples," and I've seen this in others, twelve disciples within this hourglass each of whom had to memorize a disciple-lesson which were basic Satanic kind of premises, philosophies of life like "be good to those who hurt you, hate those who are nice to you," on and on and on. There may be two or three sentences like that associated with each that they had to memorize them. They said, "We are like grains of sand falling and when the last grain of sand falls, there's Death." I said, "Is Death a part?" "Yes. When the last grain of sand falls the Sleeping Giant awakens." The Sleeping Giant was Death, who was then to kill them on Day-One or Day-Six after awakening unless certain things were followed and we did some of those. Well we also found Death had a sister as a backup, used with mirrors to create the sister part. We had to get past and deal with that too. Death had certain things that they said had to be done to integrate. I started to say, "Oh, come on, they lied to you before." She said, "Wait a minute. This what they said you'd say. They said that no doctor would ever believe that they had to go these extremes to get us well and that's part of the reason they'd fail." I said, "Well, tell me, tell me again." She said, "I have to be dressed all in red. I have to have Demerol onboard, have taken Demerol. A code has to be given and it has to be in a room that's totally dark. It has to happen on Day-One or Day-Six after this part's been awakened." I said what I'd have to lose? I had a psychiatrist give her a little Demerol. We used the code. My office didn't have any windows anyway. It was pretty easy. Oh, and there had to be four, I think, candles lit. Well, fine. So we did it and everything went well. Maybe it would have gone well if we hadn't done it, but I decided not to take the chance and to trust the patient maybe. Well, so we go on and then we find another part. There's Death And Destruction, another backup also with a sister that we had to get through. In fact, I think there were two backups there. Interestingly, the very last part was an extremely nice part, made especially that way so that they wouldn't want to lose them because they would be so adorable and so loving and so sweet that they wouldn't want to maybe get rid of them. Then we found that she continued to have these feelings with this last part left now of darkness and blackness inside. What did we find? A

curtain. She said, "They assumed that if you ever got to this point, you would," and along the way, by the way, we had encountered this stuff about the LSD stuff, the Green Bomb programming. The message was that she said, "There is a curtain behind which are the remaining feelings and memories, but it can't be opened from the middle. It's like a stage curtain. It has to be opened this way," that it can't be opened. They assumed that you would try to deal with all the feelings. That can't be opened until you've dealt with that last part and they've integrated. So far it looks like we've got integration that's holding. So I found Death And Destruction and the Hourglass in non-bloodline. "The Tree and the Hourglass," this patient informed me, "were made of sand because we were meant to die. We're expendable. We're the unchosen generation." I've heard variously that it's crystals or blood that fills the Hourglass in bloodline people. By the way, you can do real simple things like turn the Hourglass on its side so nothing can fall out, so time stands still to be able to do certain kinds of work. Spread the grains of sand on the seashore so that they can't be numbered and the time will not be counted. Got that idea from a ritual-abuse victim who had seen some of this kind of programming done that another therapist was seeing. So those would be just a few other hints about things that may be helpful or meaningful. We're talking about very intensive things and at deep levels to me this gives us two things. One thing it gives to me is hope because it gets to material and it makes progress like nothing else we've ever seen with these people who have it. The second thing it does for me is it demoralizes me, too, because although three years ago I had a pretty good idea about the extent and breadth of what they'd done to these victims, I had no real appreciation for the depth and breadth and intensity of what they'd done.

I want to come back to the other question over here now. The other question is how many of them can get well? We don't know. In most things in the mental health profession we accept two-thirds of the patients are going to improve, maybe seventy percent. There's very little we can get everybody well. I think one of the sad things we have to face is that many of these patients will probably never be well. My personal belief is that if they are being messed with their only hope of getting well is if they can somehow get out of contact. Now I know patients who've gone to other states and simply had deep-level alters pick up the phone and call and said, "This is our new address and phone number" so that they could be picked up locally. I mean in an inpatient unit for an extended period of time. If they are in a Cult from their area and they are still being monitored and messed with, my own personal opinion is we can't get them well and can't offer more than humanitarian caring and supportiveness. Lots of therapists do not like to hear that. That's my opinion. I believe that if somehow they're lucky enough to be wealthy enough to have protection, to have somehow gotten away in some way and we can work with them without being messed with, that they have a chance to reach some semblance of normality and livability with enough intensive work. My own personal belief is I don't think anybody with this kind of programming is well in this country yet. There are some who are well along the way. I've got a couple who are well along in their work and have done a tremendous amount, but they're clearly not well yet.

Q: Could you speculate on the relationship between this stuff and the fantasy games that have been proliferating, Dungeons and Dragons and that sort of thing?

Dr.H: Well, there are a lot of things out there to cue people. You want to see a great movie, interesting movie, to cue people? Go see "Trancers II." You can rent it in your video shop. Came out last fall. One night in sheer desperation for something at the video store, you know? Nine o'clock on Friday night. Everything's gone. I rented a couple of movies and one of them is that. Fascinating. They're talking about Green World Order. Yes, "Trancers II." And who is the production company? Full Moon Productions. I couldn't see much cuing in "Trancers I,"

but who's the production company in "Trancers I"? Alter Productions. There are lots of things around that are cuing. There's an interesting person in the late sixties who talked about the Illuminati. Have any of you ever heard of the Illuminati with regard to the Cult? Had a patient bring that up to me just about exactly two years ago. We've now had other stuff come out from other patients. Appears to be the name of the international world leadership. There appear to be Illuminatic Counsels in several parts of the world and one internationally. The name of the international leadership of the Cult supposedly. Is this true? well, I don't know. It's interesting we're getting some people who are trying to work without cuing who are saying some very similar things. There was an old guy in Hollywood in the late sixties who talked about the infiltration of Hollywood by the Illuminati. Certainly what some patients have said is all of this spook stuff, horror stuff, possession and everything else that's been popularized in the last twenty years in Hollywood is in order to soften up the public so that when a Satanic world order takes over, everyone will have been desensitized to so many of these things, plus to continually cue lots of people out there. is that true? Well, I can't definitely tell you that it is. What I can say is I now believe that ritual-abuse programming is widespread, is systematic, is very organized from highly esoteric information which is published nowhere, has not been on any book or talk show, that we have found all around this country and at least one foreign country.

Let's take a couple of quick questions and we need to get on to other material. Yes?

Q: Do you have any techniques for decreasing your level of uncertainty that a patient is or is not being still tampered with, "messed with," as you said?

Dr.H: Just that I would ask several of the parts I've inquired about, Core, Diana, Wisdom, Master Programmer, several parts inside I would ask about these sorts of things and I will keep asking it. As you do additional work and get a bit further, I would ask again to find out. In the back?

Q: I wonder if you've heard or you know of the Martin Luther Bloodline?

Dr.H: The what?

Q: Martin Luther Bloodline?

Dr.H: I know nothing about Martin Luther Bloodline. I'll give you one other quick tip. Ask him about an identification code. There's an identification code that people have. It will involve their birth date. It may involve places where they were programmed and it will usually involve a number in there that will be their birth order, like zero-two if they were second-born. It will usually involve a number that represents the number of generations in the Cult, if they are bloodlines. I've seen up to twelve now, twelve generations.

Q: I have seen a lot of the things you've been describing today in several patients. I wanted to ask you a question about the Seven Systems. You mentioned something about systems here. Are there Seven Systems?

Dr.H: There has been that described in some patients, yes, the Seven Systems.

Q: Could you say what that is or a little diagram?

Dr.H: I don't think we know enough to know what it is, honestly. I think it may have to do with Seven Cabalistic Trees.

Q: Have you ever had any evidence where any of these people have been tagged and there have been anything of their body-parts that might be related to this, private parts in particular?

Dr.H: Well, there are certainly people that have had tattoos, that have had a variety of other kinds of things, some of which have been, you know, documented in cases, but I mean to say, well, maybe they did that to themselves or had it done consciously to really prove something, not that occurs to right off the bat. Let me just take this one last question back and we need to go on to other material because we're never going to get through it all. I'll just ask you to hold your question.

Q: It's not a question but I wanted to say for myself, personally, and perhaps for others here as well, I wanted to thank you very sincerely for taking this time to come forward. [Applause]

Dr.H: Well, [Applause]

Q: Does anyone want to join us for a standing ovation for this material? It's wonderful. [Sustained applause]

Dr.H: A dear friend who's one of the top people in the field, who I know has had death threats, but I know struggled for professional credibility in believing in MPD and was harshly criticized for even believing in that ten and fifteen years ago, and struggled to a point of professional credibility. I think in his heart of hearts he knows it's true, but he will say things like, "I wouldn't be surprised to find tomorrow it was an international conspiracy and I wouldn't be surprised to find tomorrow that it is an urban myth and rumor." He tries to stay right on the fence and the reason is because it's controversial, because there is a campaign underway saying these all false memories induced by, along with incest and everything else, by "Oprah" and by books like "The Courage to Heal" and by naive therapists using hypnosis. It's controversial. My personal opinion has come to be if they're going to kill me, they're going to kill me. There's going to be an awful lot of information that's been put away that'll go to investigative reporters and multiple investigative agencies, if it happens, and an awful lot of people like you, I hope, that if I ever have an accident will be pushing for a very large-scale investigation. I think we have to stand up as some kind of moral conscience at some point and I tried to wait until we had gotten enough verification from independent places to have some real confidence that this was widespread. I know we've gone like a house afire to try to pack as much as I could in for you. I hope it's given you some things to think about and some new ideas and I appreciate being with you. [Long sustained applause]

## THE GREENBAUM SPEECH

### \*\* Safe for MPD Victims \*\*

By Doctor D. Corydon Hammond

"Safe Version" Redacted to Protect Ritual Abuse MPD Victims  
With Introductions and Redactions by H. Michael Sweeney, Author, The  
Professional Paranoid: How to Fight Back When Investigated, Stalked,  
Harassed, or Targeted by Any Agency, Organization, or Individual

It is extremely important to realize how key this speech is, since it represents one of the first and very few times a group of psychiatric professionals have openly acknowledged and discussed the existence, detection, proper diagnosis, and successful treatment of ritual abuse MPD programming - and further, openly and directly linked such programming to Satanic influences and the CIA through scientific discovery. However, I would urge extreme caution to anyone closely associated with or who may actually be a victim of ritual abuse MPD programming - they should NOT READ THE ENTIRE DOCUMENT IN AN UNEDITED FORM. One of the principle material contributions within the document itself is the explicit warning that such persons should NOT be exposed (contaminated) IN ANY WAY to select information contained herein because it would SEVERELY HAMPER OR DETER ANY OPPORTUNITY FOR PROPER PSYCHIATRIC EVALUATION AND TREATMENT as prescribed/described herein.

Specifically, to become aware of this information contaminates the victim in a way which makes it difficult if not impossible for the Doctor to find the clues which confirm the programming and subsequently lead to treatments appropriate to the programming. Thus I have taken the liberty of preparing this version of the document which is 'censored' to safe levels by using CIA's own time honored methodology of [REDACTED] annotation. Some redactions include terms or phrases found elsewhere, but in such cases, it is the context and use of the terms and phrases which warrants the redaction. Other redactions involve descriptions of programming techniques which are typically described by the patients in treatment. These are the things which must come from the patient from true memories (especially when 'hidden' within an alter personality) and without outside contamination or influence in order to have any value in the treatment process. A small number of redactions are specifically to avoid establishing an undue fear of the process in an MPD. Professionals and researchers, of course, will want the full document, which can be

obtained by email request from .

Herein is the lecture by D.C.Hammond, originally entitled "Hypnosis in MPD: Ritual Abuse," more commonly known as the "Greenbaum Speech," delivered at the Fourth Annual Eastern Regional Conference on Abuse and Multiple Personality, Thursday June 25, 1992, at the Radisson Plaza Hotel, Mark Center, Alexandria, Virginia. Sponsored by the Center for Abuse Recovery & Empowerment, The Psychiatric Institute of Washington, D.C. Both a tape and a transcript were at one time available from Audio Transcripts of Alexandria, Virginia (800-338-2111). Tapes and transcripts of other sessions from the conference are still being sold but -- understandably -- not this one. The transcript below was made from a privately made tape of the original lecture.

In the introduction the following background information is given for D. Corydon Hammond:

B.S. M.S. Ph.D (Counseling Psychology) from the University of Utah  
Diplomat in Clinical Hypnosis, the American Board of Psychological Hypnosis  
Diplomat in Sex Therapy, the American Board of Sexology  
Clinical Supervisor and Board Examiner, American Board of Sexology  
Diplomat in Marital and Sex Therapy, American Board of Family Psychology

Licensed Psychologist, Licensed Marital Therapist, Licensed Family Therapist, State of Utah  
Research Associate Professor of Physical Medicine and Rehabilitation, Utah School of Medicine  
Director and Founder of the Sex and Marital Therapy Clinic, University of Utah.  
Adjunct Associate Professor of Educational Psychology, University of Utah  
Abstract Editor, The American Journal of Clinical Hypnosis  
Advising Editor and Founding Member, Editorial Board, The Ericsonian Monograph  
Referee, The Journal of Abnormal Psychology  
1989 Presidential Award of Merit, American Society of Clinical Hypnosis  
1990 Urban Sector Award, American Society of Clinical Hypnosis  
Current [now Past] President, American Society of Clinical Hypnosis

#### THE GREENBAUM SPEECH of D.C.HAMMOND

We've got a lot to cover today and let me give you a rough approximate outline of the the things that I'd like us to get into. First, let me ask how many of you have had at least one course or workshop on hypnosis? Can I see the hands? Wonderful. That makes our job easier.

Okay. I want to start off by talking a little about trance-training and the use of hypnotic phenomena with an MPD dissociative-disorder population, to talk some about unconscious exploration, methods of doing that, the use of imagery and symbolic imagery techniques for managing physical symptoms, input overload, things like that.

Before the day's out, I want to spend some time talking about something I think has been completely neglected in the field of dissociative disorder, and that's talking about methods of profound calming for automatic hyper-arousal that's been conditioned in these patients. We're going to spend a considerable length of time talking about age-regression and abreaction in working through a trauma.

I'll show you with a non-MPD patient -- some of that kind of work -- and

then extrapolate from what I find so similar and different with MPD cases. Part of that, I would add, by the way, is that I've been very sensitive through the years about taping MPD cases or ritual-abuse cases, part of it being that some of that feels a little like using patients and I think that this population has been used enough. That's part of the reason, by choice, that I don't generally videotape my work.

I also want to talk a bunch about hypnotic relapse-prevention strategies and post-integration therapy today. Finally, I hope to find somewhere in our time-frame to spend an hour or so talking specifically about ritual abuse and about mind-control programming and brainwashing -- how it's done, how to get on the inside with that -- which is a topic that in the past I haven't been willing to speak about publicly, have done that in small groups and in consultations, but recently decided that it was high time that somebody started doing it. So we're going to talk about specifics today. [Applause]

In Chicago at the first international congress where ritual abuse was talked about I can remember thinking, "How strange and interesting." I can recall many people listening to an example given that somebody thought was so idiosyncratic and rare, and all the people coming up after saying, "Gee, you're treating one, too? You're in Seattle"...Well, I'm in Toronto...Well, I'm in Florida...Well, I'm in Cincinnati." I didn't know what to think at that point.

It wasn't too long after that I found my first ritual-abuse patient in somebody I was already treating and we hadn't gotten that deep yet. Things in that case made me very curious about the use of mind-control techniques and hypnosis and other brainwashing techniques. So I started studying brainwashing and some of the literature in that area and became acquainted with, in fact, one of the people who'd written one of the better books in that area.

Then I decided to do a survey, and from the ISSMP&D [International Society for the Study of Multiple Personality and Dissociation] folks I picked out about a dozen and a half therapists that I thought were seeing more of that than probably anyone else around and I started surveying them. The interview protocol, that I had got the same reaction almost without exception. Those therapists said, "You're asking questions I don't know the answers to. You're asking more specific questions than I've ever asked my patients." Many of those same therapists said, "Let me ask [my patients] those questions and I'll get back to you with the answer."

Many of them not only got back with answers, but said, "You've got to talk to this patient or these two patients." I ended up doing hundred of dollars worth of telephone interviewing. What I came out of that was a grasp of a variety of brainwashing methods being used all over the country. I started to hear some similarities. Whereas I hadn't known, to begin with, how widespread things were, I was now getting a feeling that there were a lot of people reporting some similar things and that there must be some degree of communication here.

Then approximately two and a half years ago I had some material drop in my lap. My source was saying a lot of things that I knew were accurate about some of the brainwashing, but it was telling me new material I had no idea about. At this point I took and decided to check it out in three ritual-abuse patients I was seeing at the time. Two of the three had what they were describing, in careful inquiry without leading or contaminating.

The fascinating thing was that as I did a telephone-consult with a therapist that I'd been consulting for quite a number of months on an MPD case in another state, I told her to inquire about certain things. She said, "Well, what are those things?" I said, "I'm not going to tell you, because I don't want there to be any possibility of contamination. Just come back to me and tell me what the patient says."

She called me back two hours later, said, "I just had a double session with this patient and there was a part of him that said, 'Oh, we're so excited. If you know about this stuff, you know how the Cult Programmers get on the inside and our therapy is going to go so much faster.'" Many other patients since have had a reaction of wanting to pee their pants out of anxiety and fear rather than thinking it was wonderful thing. But the interesting thing was that she then asked, "What are these things?" They were word perfect -- same answers my source had given me. I've since repeated that in many parts of the country.

I've consulted in eleven states and one foreign country, in some cases over the telephone, in some cases in person, in some cases giving the therapist information ahead of time and saying, "Be very careful how you phrase this. Phrase it in these ways so you don't contaminate." In other cases not even giving the therapist information ahead of time so they couldn't. When you start to find the same highly esoteric information in different states and different countries, from Florida to California, you start to get an idea that there's something going on that is very large, very well coordinated, with a great deal of communication and systematicness to what's happening. So I have gone from someone kind of neutral and not knowing what to think about it all to someone who clearly believes ritual abuse is real and that the people who say it isn't are either naive like people who didn't want to believe the Holocaust or -- they're dirty. [Applause]

Now for a long time I would tell a select group of therapists that I knew and trusted, information and say, "Spread it out. Don't spread my name. Don't say where it came from. But here's some information. Share it with other therapists if you find it's on target, and I'd appreciate your feedback." People would question -- in talks -- and say, you know, they were hungry for information. Myself, as well as a few others that I've shared it with, were hedging out of concern and out of personal threats and out of death threats. I finally decided to hell with them. If they're going to kill me, they're going to kill me. It's time to share more information with therapists.

Part of that comes because we proceeded so cautiously and slowly, checking things in many different locations and find the same thing. So I'm going to give you the way in with ritual-abuse programming. I certainly can't tell you everything that you want to know in forty-five or fifty minutes, but I'm going to give you the essentials to get inside and start working at a new level. I don't know what proportion, honestly, of patients have this. I would guess that maybe somewhere around at least fifty percent, maybe as high as three-quarters, I would guess maybe two-thirds of your ritual-abuse patients may have this.

What do I think the distinguishing characteristic is? If they were raised from birth in a mainstream cult or if they were an non-bloodline person, meaning neither parent was in the Cult, but Cult people had a lot of access to them in early childhood, they may also have it. I have seen more than one ritual-abuse patient who clearly had all the kind of ritual things you hear about. They seemed very genuine. They talked about all the typical things that you hear in this population, but had none of this programming with prolonged extensive checking. So I believe

in one case I was personally treating that she was a kind of schismatic break-off that had kind of gone off and done their own thing and were no longer hooked into a mainstream group. [Pause]

Here's where it appears to have come from. At the end of World War II, before it even ended, Allen Dulles and people from our Intelligence Community were already in Switzerland making contact to get out Nazi scientists. As World War II ends, they not only get out rocket scientists, but they also get out some Nazi doctors who have been doing mind-control research in the camps.

They brought them to the United States. Along with them was a young boy, a teenager, who had been raised in a Hasidic Jewish tradition and a background of [REDACTED] that probably appealed to people in the Cult because at least by the turn of the century Aleister Crowley had been introducing [REDACTED] into Satanic stuff, if not earlier. I suspect it may have formed some bond between them.

But he saved his skin by collaborating and being an assistant to them in the death-camp experiments. They brought him with them. They started doing mind-control research for Military Intelligence in military hospitals in the United States. The people that came, the Nazi doctors, were Satanists. Subsequently, the boy changed his name, Americanized it some, obtained an M.D. degree, became a physician and continued this work that appears to be at the center of Cult Programming today. His name is known to patients throughout the country. [Pause]

What they basically do is they will get a child and they will start this, in basic forms, it appears, by about two and a half after the child's already been made dissociative. They'll make him dissociative not only through abuse, like sexual abuse, but also things like [REDACTED] and teaching the parents, "You do not go in until the child stops crying. Only then do you [REDACTED]." They start in rudimentary forms at about two and a half and kick into high gear, it appears, around six or six and a half, continue through adolescence with periodic reinforcements in adulthood.

Basically in the programming the child will be put typically [REDACTED]. They will have an [REDACTED]. They'll be strapped down, [REDACTED]. There'll be [REDACTED]. They will see [REDACTED]. They'll be given, most commonly I believe, [REDACTED] as well depending on the kind of programming. They have it, I think, down to a science where they've learned you [REDACTED] until the programming is done.

They then will describe a [REDACTED] stimulation to drive the brain [REDACTED]. Then, after a suitable period when they're in a certain brainwave state, they will begin programming, programming oriented to self-destruction and debasement of the person.

In a patient at this point in time about eight years old who has gone through a great deal early programming took place on a military installation. That's not uncommon. I've treated and been involved with cases who are part of this original mind-control project as well as having their programming on military reservations in many cases. We find a lot of connections with the CIA. This patient now was in a Cult school, a private Cult school where several of these sessions occurred a week.

She would go into a room, [REDACTED]. They would do all of these sorts of things. When she was in the proper altered state, now they were no longer having to [REDACTED]. Sometimes they'll be on other parts of the

body. They will then begin and they would say to her, [REDACTED]. They would say the same thing until she complied and didn't make any negative response.

Then they would continue. [REDACTED]. They repeated again, "Do you understand?" [REDACTED] again until they get compliance. Then they keep adding to it. "[REDACTED]" Maybe she'd say yes, but they might say, "We don't believe you" and [REDACTED] They would continue in this sort of fashion.

She said typically it seemed as though they'd go about thirty minutes, take a break for a smoke or something, come back. They may review what they'd done and stopped or they might review what they'd done and go on to new material. She said the sessions might go half an hour, they might go three hours. She estimated three times a week. Programming [REDACTED] associated with right hemisphere non-dominant brain functioning, and with them talking, therefore, and requiring intense concentration, intense focusing. Because often they'll have to [REDACTED], and other kinds of things that are occurring. This is basically how a lot of programming goes on.

Some of it'll also use other typical brainwashing kinds of techniques. There will be very standardized types of hypnotic things done at times. There'll be [REDACTED] which we know increases suggestibility in anyone. [REDACTED] suggestibility has significantly increased, from the research. It's not uncommon for them to use a great deal of that, including [REDACTED] before they do certain of these things. [Pause]

Now let me give you, because we don't have a lot of time, as much practical information as I can. The way that I would inquire as to whether or not some of this might be there would be with ideomotor finger-signals. After you've set them up I would say, "I want the central inner core of you to take control of the finger-signals." Don't ask the unconscious mind. The case where you're inquiring about ritual abuse, that's for the central inner core. The core is a Cult-created part.

"And I want that central inner core of you to take control of this hand of these finger-signals and what it has for the yes-finger to float up. I want to ask the inner core of you is there any part of you, any part of Mary," that's the host's name, "who knows anything about [REDACTED]" If you get a Yes, it should raise a red flag that you might have someone with formal intensive brainwashing and programming in place. I would then ask and say, "I want a part inside who knows something about [REDACTED] to come up to a level where you can speak to me and when you're here say, 'I'm here.'"

I would not ask if a part was willing to. No one's going to particularly want to talk about this. I would just say, "I want some part who can tell me about this to come out." Without leading them ask them what these things are. I've had consults where I've come in. Sometimes I've gotten a Yes to that, but as I've done exploration it appeared to be some kind of compliance response or somebody wanting, in two or three cases, to appear maybe that they were ritual abuse and maybe they were in some way, but with careful inquiry and looking it was obvious that they did not have what we were looking for. Let me tell you what these are.

Let's suppose that this whole front row here are multiples and that she has an alter named Helen and she has one named Mary, she has one named Gertrude, she has one named Elizabeth, and she has one named Monica.

Every one of those alters may have put on it a program, perhaps designated [REDACTED] a Cult person could say, "[REDACTED]" or make some kind of hand gesture to indicate this and get the same part out in any one of them even though they had different names that they may be known by to you.

[REDACTED] appear to represent general programming, the first kind of things put in. [REDACTED] appear to be sexual programs. For example, how to perform oral sex in a certain way, how to perform sex in rituals, having to do with producing child pornography, directing child pornography, prostitution. [REDACTED] are killers trained in how to kill in ceremonies. There'll also be some self-harm stuff mixed in with that, assassination and killing. [REDACTED] are called [REDACTED]. You know, I had never in my life heard those two terms paired together.

I'd never heard the words "[REDACTED]" put together, but when you have people in different states, including therapists inquiring and asking, "What is [REDACTED]," and patients say to them, "[REDACTED]," it tends to make one a believer that certain things are very systematic and very widespread. This comes from their belief in [REDACTED]. It also is a more future-oriented kind of programming.

Then there's [REDACTED]. I usually don't include that word when I say my first question about this or any part inside that knows about [REDACTED] will shake them even more. [REDACTED] has to do with self-destruct programming. [REDACTED]. This can include [REDACTED] programming. [REDACTED] appears to be system-protection and deception programming which will provide misinformation to you, try to misdirect you, tell you half-truths, protect different things inside. There can also be other [REDACTED].

I'd recommend that you go and get your entire [REDACTED] and if you have verified that some of this stuff is present and they have given you some of the right answers about what some of this material is, and I can't underline enough: DO NOT LEAD THEM. Do not say, "[REDACTED]?" Get the answer from them, please. When you've done this and it appears to be present, I would take your entire [REDACTED] and, with ideomotor signals, go through the [REDACTED] and say, "Is there any programming inside associated with [REDACTED]," and go on through. There may be some systematicness to some of the other [REDACTED], but I'm not aware of it.

I've found, for example, in one case that [REDACTED] had to do with the production of snuff films that this person was involved with. With another person, [REDACTED] had to do with their linkage and associations with drug smuggling and with the Mafia and with big business and government leaders. So there's going to be some individualism, I think, in some of those. Some of those are come-home programs, "come back to the Cult", "return to the Cult" program.

Here's the flaw in the system. They have built in shut-down and erasure codes so if they got into trouble they could shut something down and they could also erase something. These codes will sometimes be idiosyncratic phrases, or ditties. Sometimes they will be numbers maybe followed by a word. There's some real individuality to that. At first I had hoped if we can get some of these maybe they'll work with different people. No such luck. It's very unlikely unless they were programmed at about the same point in time as part of the same little group.

Stuff that I've seen suggests that they carry laptop computers, the programmers, which still include everything that they did twenty, thirty years ago in them in terms of the names of alters, the programs, the

codes, and so on. Now what you can do is get erasure codes, and I always ask, "If I say this code, what will happen?" Doublecheck. "Is there any part inside who has different information?" Watch your ideomotor signals and what I've found is you can erase programs by giving the appropriate codes, but then you must abreact the feelings.

So if you erase [REDACTED], which is often where I've started because it's the most high risk. Afterwards I will get all the [REDACTED], what were formerly [REDACTED] alters, together so that we will abreact and give back to the host the memories associated with all the programming that was done with [REDACTED] and anything any [REDACTED] part ever had to do in a fractionated abreaction. They use the metaphor -- and it is their metaphor -- [REDACTED]. and it is like a [REDACTED] comes down over the child alter to make them [REDACTED].

Once in a while internally you'll confront [REDACTED]. What I found from earlier work, and so I speed the process up now because I confirmed it enough times, is that you can say to the core, "Core, I want you to look -- there's [REDACTED]." I just ask it very non-leading like that and what's commonly said to me is that there were [REDACTED].

So I'll tell them, "[REDACTED] and give me a yes-signal when you've done it." Pretty soon you get a yes-signal. "Great. Now that [REDACTED] and tell me what you see." It's generally [REDACTED]. I have them [REDACTED]. I do a little hypnotic magic and ask the core to use [REDACTED]. They're usually quite amazed that this works, as have been a number of therapists. [Pause]

Now there are many different layers of this stuff is the problem. Let me come over to the overhead and give some ideas about them. What we have up here are innumerable alters. I'll tell you one of the fascinating things I've seen. I remember a little over a year ago coming in to see some cases, some of the tough cases at a dissociative-disorders unit of a couple of the finest of the MPD therapists in this country, who are always part of all the international meetings, have lectured internationally. We worked and I look at some of their patients. They were amazed at certain things because they had not been aware of this before.

As we worked with some of the patients and confirmed it, I remember one woman who'd been inpatient for three years, still was inpatient. Another who had one intensive year of inpatient work with all the finest MPD therapy you can imagine -- abreactions, integrations, facilitating cooperation, art therapy, on and on and on, journaling, intensively for one inpatient year followed by an intensive year of outpatient therapy two, three hours a week. In both patients we found out that all of this great work had done nothing but deal with the alters up here and had not touched the mind-control programming.

In fact it was not only intact, but we found that the one who was outpatient was [REDACTED], and that she still had intact suggestions that had been give to her [REDACTED]. Now one of the things that I would very carefully check is, I would suggest that you ask the core, not just the unconscious mind, ask the core, "[REDACTED]? Is there [REDACTED]," if that's the host's name, "[REDACTED]?"

This doesn't mean they're monitored. Many of them just simply have it. "Is there [REDACTED]?" I have the very uncomfortable feeling from some past experience that when you look at this you will find the large proportion of ritual-abuse victims in this country are having [REDACTED].

I remember a woman who came in about twenty-four years old, claimed her father was a Satanist. Her parents divorced when she was six. After that it would only when her father had visitation and he would take her to rituals sometimes up until age fifteen. She said, "I haven't gone to anything since I was fifteen." Her therapist believed this at face value. We sat in my office. We did a two-hour inquiry using hypnosis. We found the programming present. In addition to that we found that every therapy session was debriefed and in fact they had told her to get sick and not come to the appointment with me. Another one had been told that I was Cult and that if she came I would know that she'd been told not to come and I would punish her. If anything meaningful comes out in a patient who's being monitored like that -- from what I've learned thus far, [REDACTED] -- my belief is if they're in that situation you can't do meaningful therapy other than being supportive and caring and letting them know you care a lot and you'll be there to support them.

But I wouldn't try to work with any kind of deep material or deprogramming with them because I think it can do nothing but get them tortured and hurt unless they can get into a safe, secure inpatient unit for an extended period of time to do some of the work required. I have a feeling that when you make inquiries you're going to find that probably greater than fifty percent of these patients, if they're bloodline, meaning mother or dad or both involved, will be monitored on some ongoing basis. [Pause]

Now when you come below the alters, you then have [REDACTED], so and so forth, the [REDACTED] programming and they will then have backup programs. There will typically be an erasure code for the backups. There may be one code that combines all the backups into one and then an erasure code for them, simply one code that erases all the backups. So I will get the code for, let's say, [REDACTED] and for all the [REDACTED] backups at the same time. After I've asked "What will happen if I give this," I will give the code and then I will say, "What are you experiencing?" They often describe [REDACTED], all sorts of interesting things. I've had some therapists come back and say, "My Lord, I had never said anything about [REDACTED]."

I remember one therapist who'd been with me in several hypnosis workshops and consulted with me about a crisis MPD situation. I told her to inquire about [REDACTED]. She did. She got back to me saying, "Yeah, I got an indication it's there. What is it?" I said, "I'm not going to tell you. Go back and inquire about some of this." We set an appointment for a week or so hence. She got back with me and said, "I asked what [REDACTED] was and she said, '[REDACTED]'. I asked her what [REDACTED] was and she said '[REDACTED]'. Okay.

So I told her about some of this stuff for a two-hour consult. She called back and she said, "This seemed too fantastic. I heard this and I thought, 'Has Cory been working too hard?'" she said, I'm embarrassed to admit it, but she said, "I held you in high professional regard, but this just sounded so off in the twilight zone that I really thought, 'Is he having a nervous breakdown or something?'" She said, "But I respected you enough to ask [my patient] about this." She said, "I asked another MPD patient and she didn't have any of this." So in this patient she started describing things and how she worked, for example, with an erasure and she was describing things like [REDACTED] and kinds of things. She said, "I hadn't told her about any of these things." Well, here's the problem. There are different layers and I think some of them are designed to keep us going in circles forever. They figured we probably, in most cases, wouldn't get below the alters which they

purposefully created.

The way you create Manchurian Candidates is you divide the mind. It's part of what the Intelligence Community wanted to look at. If you're going to get an assassin, you're going to get somebody to go do something, you divide the mind. It fascinates me about cases like the assassination of Robert Kennedy, where Bernard Diamond, on examining Sirhan Sirhan found that he had total amnesia of the killing of Robert Kennedy, but under hypnosis could remember it. But despite suggestions he would be able to consciously remember, could not remember a thing after was out of hypnosis. I'd love to examine Sirhan Sirhan.

It appears that below this we've got some other layers. One is called "[REDACTED]" it appears. Isn't it interesting that [REDACTED]? One of the questions in a way that does not contaminate is after I've identified some of this stuff is there and they've given me a few right answers about what some of it is, "If there were a doctor associated with this programming and [REDACTED]?" Now once in a while I've had some [REDACTED] in about three or four patients that I felt were trying to dissimulate in some way and I don't really believe had this. In one case I got [REDACTED] and I found out later it was a doctor [REDACTED] who was being trained [REDACTED] almost thirty years ago and he supervised part of the programming of this woman under this doctor.

I remember one woman couldn't come up with anything. No alter would speak up with anything. I said, "Okay," and we went on to some other material. About two minutes later she said, "[REDACTED]?" We found this all over. There appears to be some [REDACTED] below that and I suspect that you get down to fewer and more central programs the deeper you go. Well, all [REDACTED] is mixed all into this. If you're going to work with this you need to pick up a couple of books on [REDACTED]. One is by a man named [REDACTED]. Another is by [REDACTED].

I knew nothing about [REDACTED]. It was interesting. A patient had sat in my waiting area, got there considerably early and drew a detailed [REDACTED] over two years ago. It took me two months to figure out what it was. Finally, showing it to somebody else who said, "You know? That looks an awful lot like [REDACTED]" and that rang a bell with some esoteric in an old book and I dug it out. That was the background [REDACTED].

Now the interesting thing about the [REDACTED]. I've also had patients who didn't appear to know that [REDACTED], volunteered that there were parts inside named [REDACTED]. Now let me give you some information about parts inside that may be helpful to you if you're going to inquire about these things, because my experience is one part will give you some information and either run dry or get defensive or scared and stop. and so you punt and you make an end run and you come around the other direction, you find another part.

I'll tell you several parts to ask for and ask if there's a part by this name. And, by the way, when I'm screening patients and fiddling around with this, I throw in a bunch of spurious ones and ask, "Is there a part inside by this name and by that name" as a check on whether or not it appears genuine. For example. "In addition to the core," I ask, "is there a part inside named [REDACTED], I've often found, will be helpful and give you a lot of information. "Is there a part inside named [REDACTED]?" I mean I may throw in all sorts of things. "Is there a part inside named [REDACTED]?" I've never encountered one yet! Just to see what kind of answers we get. I try to do this carefully. [REDACTED] is a part that, [REDACTED], is associated with a part called [REDACTED].

You will be fascinated to know that. Remember [REDACTED]? A lot of prominent people in Hollywood were associated and then they went underground, the books say, in about seventy-eight and vanished? Well, they're alive and well in southern Utah. We have a thick file in the Utah Department of Public Safety documenting that they moved to southern Utah, north of Monument Valley, bought a movie ranch in the desert, renovated it, expanded it, built a bunch of buildings there, carefully monitored so that very few people go out of there and no one can get in and changed their name.

A key word in their name is [REDACTED]. There are some other words. [REDACTED]. So you can ask, "Is there something inside known as [REDACTED]?" I might ask other things to throw people off. "Is there something known as the [REDACTED]?" Well, maybe they'll conceive of something. Or "Is there something known as [REDACTED]?" There are a variety of questions you can come up with, to sort of screen some things. I've also found that there will often be a part called "[REDACTED]" and that there will be [REDACTED]. How many of you have come into [REDACTED]?

There will typically be [REDACTED]. Sometimes they'll have numbers instead, sometimes they'll be called [REDACTED]. You can find out the head one of those. There'll be a source of some information for you. I will ask inside, "Is there a part inside named [REDACTED]?" You'll find that there are, if they have this kind of programming, in my experience. Usually with a little work and reframing, you can turn them and help them to realize that they were really a child-part who's playing a role and they had no choice then, but they do now.

You know, they played their role very, very well, but they don't have to continue to play it with you because they're safe here and in fact, "If the Cult simply found out that you talked to me, that they [find out] you had shared information with me, you tell me what would they do to you?" Emphasize that the only way out is through me and that they need to cooperate and share information and help me and that I'll help them. So all these parts can give you various information. Now they have tried to protect this very carefully. Let me give you an example with [REDACTED]. I discovered this -- by the way I used to think this programming was only in bloodline people. I've discovered it in non-bloodline people, but it's a bit different.

They don't want it to be just the same. I don't think you'll find deep things like [REDACTED] with non-bloodline people. But let me tell you something that I discovered first in a non-bloodline and then in a bloodline. We were going along and a patient was close to getting well, approaching final integration in a non-bloodline and she suddenly started hallucinating and [REDACTED] and other things like that.

So I used an affect-bridge and we went back and we found that what happened was that they gave suggestions, that if she ever got [REDACTED]. The way they did this was they strapped her down and they [REDACTED] so they could utilize them in good Ericsonian fashion and build on them and then combine [REDACTED]. "If you ever get to this point [REDACTED]. If you ever get fully integrated and get well [REDACTED]. They gave those suggestions vigorously and repetitively. Finally they introduced other suggestions that, "[REDACTED]." In a bloodline patient then, as I began inquiring about deep material, the patient started to experience similar symptoms. We went back and we found the identical things were done to her.

This was called the "[REDACTED]. Lots of interesting internal consistencies like that play on words with [REDACTED]. Now in this case it was done to her at age nine for the first time and then only hers was different. Hers was a suggestion for amnesia. "If you ever remember anything about [REDACTED]." Then finally the suggestions added, "[REDACTED], if you ever remember it." At age twelve then, three years later, they used what sounds like an Amytol interview to try to breach the amnesia and find out if they could. They couldn't.

So then they strapped her down again, took and gave her something to kind of paralyze her body, [REDACTED] and reinforced all the suggestions. Did a similar thing at the age of sixteen. So these are some of the kind of booby traps you run into. There are a number of cases where they [REDACTED] suggestions to keep us from discovering some of this deeper level stuff. What's the bottom? Your guess is as good as mine but I can tell you that I've had a lot of therapists who were stymied with these cases who were going nowhere. In fact someone here that I told some basic information about this to in Ohio a couple of months ago said it opened all sorts of things up in a patient who'd been going nowhere. That's an often common thing.

I think that we can move down to deeper levels and if we deal with some of the deeper level stuff it may destroy all the stuff above it. But we don't even know that yet. In some of the patients I'm working with we have pretty much dealt with a lot of the top-level stuff. I'll tell you how we've done some of that. We'll take and erase one system like [REDACTED]. Then we will have a huge abreaction of all the memories and feelings in a fractionated abreaction associated with those parts. I typically find I'll say to them, "Now that we've done this are there any other memories and feelings that any parts that were [REDACTED]?" The answer's usually "No." At that point I will say, "I usually find at this point in time the majority, if not all, of those parts that [REDACTED] no longer feel a desire or need to be different, realizing that you split off originally by them and want to go home to Mary and become one with her again."

I use the concept often now -- which came from a patient -- of going home and becoming one with her. "Going back from whence you came" is another phrase I'll use with them. "Are there any [REDACTED] inside who do not feel comfortable with that or have reservations or concerns about that?" If there are we talk to them. We deal with them. A few may not integrate. My experience is most of the time they'll integrate and we may integrate twenty-five parts at once in a polyfragmented complex MPD. I think it is vitally important to abreact the feelings before you go on.

Also for many patients it hasn't seemed to matter the order we go in but I've found a couple where it has. If it doesn't seem to matter I'll typically go [REDACTED], then [REDACTED] because they have more violence potential, then [REDACTED] to get rid of the self-deception stuff. What I will do before I just assume anything and do that, is once we've done [REDACTED] and showed them that success can occur and something can happen and they feel relief after, I will say to them, "I want to ask the core -- through the fingers -- is there a specific order in which programs must be erased?" You know maybe it doesn't matter but most of the time I found "No." There are cases where we found "Yes." I recommend doing one or two or three of those because they'll produce relief and a sense of optimism in the patient. But then I would recommend starting to probe for the deeper level things and getting their input and recommendations about the order in which we go. Question?

Q: What has been the typical age and typical gender of this type of person?

Dr.H: I know of this being found in men and women. Most of the patients I know with MPD ritual abuse that are being treated are women, however. I know of some men being treated where we've found this. A while back I was talking to a small group of therapists somewhere. I told them about some of this. In the middle of talking about some of this all the color drained out of one social worker's face and she obviously had a reaction and I asked her about and she said, "I'm working with a five-year-old boy," and she said, "Just in the last few weeks he was saying something about [REDACTED]." I went on a little further and I mentioned some of these things and she just shook her head again. I said, "What's going on?" She said, "He's been spontaneously telling me about [REDACTED]." I think you will find variations of this and that they've changed it, probably every few years and maybe somewhat regionally to throw us off in various ways but that certain basics and fundamentals will probably be there. I have seen this in people up into their forties including people whose parents were very, very high in the CIA, other sorts of things like that. I've had some that were originally part of the Monarch Project which is the name of the government Intelligence project.

Question in the back?

Q: I'm still not grasping how one starts, how you find out how to erase. How do you get that information?

Dr.H: I would say, "I want the core, if necessary, using the telepathic communication ability you have to read minds," because they believe in that kind of stuff, "so I'll use it..." I was trained in Ericsonian stuff, "...to obtain for me the erasure code of [REDACTED]. When you've done so, I want the yes-finger to float up." Then I ask them to tell it to me. "Are there backups for [REDACTED] programs?" "Yes." "Okay? How many backups are there?" "Six," they say, let's say. It's different numbers. "Is there an erasure code for all the backup programs?" "No." "Is there an erasure code that combines all the backups into one?" "Yes." "Obtain that code for me and when you've got it give me the yes-signal again." It can move almost that fast in some cases where there's not massive resistance.

Question?

Q: Yes, can you tell me what you know about the risks to the therapist?  
[Laughter]

Dr.H: You would have to ask.

Q: Yeah, I'd like to know that. What kind of data do you have given that you've had contact with large numbers of people. Not just threats but also any injury, any family problems that have arisen. That's one question. A second one is are you aware of anybody that you've treated -- or others -- with this level of dissociation and trauma that have recovered? Integrated? Whole and happy?

Dr.H: Okay, I have one non-bloodline multiple, complex multiple who had this kind of programming where they have a lot of access to the patient as neighbors and where the doctor, by the way, you'll find physicians heavily involved. They've encouraged their own to go to medical school, to prescribe drugs to take care of their own, to get access to medical technology and be above suspicion. There have been a couple, in fact, in Utah who've been nailed now. We now in Utah have two full time

ritual-abuse investigators with statewide jurisdiction under the Attorney General's Office to do nothing but investigate this. [Applause]

Okay? In a poll done in the State of Utah in January by the major newspaper and television station, they found that ninety percent of Utahans believe that ritual abuse is genuine and real. Not all of them believe it's a frequent occurrence but some of that was imparted from two years of work by the Governor Commission on Ritual Abuse, interviewing, talking, meeting people, gathering data. Now when people say, by the way, "There's no evidence. They've never found a body," that's baloney. They found a body in Idaho of a child. They've had a case last summer that was convicted on first-degree murder charges, two people that the summer before that were arrested where the teenaged girl's finger and head were in the refrigerator and they were convicted of first-degree murder in Detroit. There have been cases and bodies.

Back to risk. I know of no therapist who's been harmed. But patients inform us that [REDACTED] who's not active. If that would come about is speculative. Who knows for sure? Maybe, but I don't think it's entirely without risk.

A question in the back?

Q: It seems to me that there seems to be some similarity between these kinds of programming and those people who claim that they've been abducted by spaceships and have had themselves physically probed and reprogrammed and all of that sort of thing. Since Cape Canaveral is across the Florida peninsula from me and I don't think that they've reported any spaceships lately, I was just wondering is there any sort of relationship between this and that?

Dr.H: I'll share my speculation, that comes from others really. I've not dealt with any of those people. However, I know a therapist that I know and trust and respect who I've informed about all this a couple of years ago and has found it in a lot of patients and so on, who is firmly of the belief that those people are in fact ritual-abuse victims who have been programmed with that sort of thing to destroy all their credibility. If somebody's coming in and reporting abduction by a flying saucer who's going to believe them on anything else in the future? Also as a kind of thing that can be pointed to and said, "This is as ridiculous as that."

All I know is that I recently had a consult, a telephone consult, with a therapist where I had been instructing her about some of this kind of stuff. When we were consulting at one point in the fifth or sixth interview she said, "By the way, do you know anything about this topic?" I said, "Well, not really" and shared with her what I shared with you. I said, "If it were me being with this guy..." that she'd been seeing for a couple of months, I said, "I would ask inside for the core to take control of finger-signals and inquire about [REDACTED]." She proceeded to do all that, got back to me a week later and said, "Boy, were you on target. There is a part inside [REDACTED]. There's this kind of programming."

Yes?

Q: What's the difference between this kind of program and cult-type abuse and Satanic abuse in the kind of cults with the candles and the...

Dr.H: This type of programming will be done in the cults with the candles and all the rest. My impression is this is simply done in people

where they have great access to them or they're bloodline and their parents are in it and they can be raised in it from an early age. If they are bloodline they are the chosen generation. If not, they're expendable and they are expected to die and not get well. There will be booby traps in your way if they aren't non-bloodline people that when they get well they will kill themselves. I'll tell you just a little about that. My belief is that some people that have ritual abuse and don't have this have been ritually abused but they may be may be part of a non-mainstream group.

The Satanism comes in the overall philosophy overriding all of this. People say, "What's the purpose of it?" My best guess is that the purpose of it is that they want an army of Manchurian Candidates, ten of thousands of mental robots who will do prostitution, do child pornography, smuggle drugs, engage in international arms smuggling, do snuff films, all sorts of very lucrative things and do their bidding and eventually the megalomaniacs at the top believe they'll create a Satanic Order that will rule the world. One last question. Then I'll give you couple of details and we need to shift gears.

Q: You have suggested and implied that at some point at a high level of the U.S. Government there was support of this kind of thing. I know we're short of time, but could you just say a few words about the documentation that may exist for that suggestion?

Dr.H: There isn't great documentation of it. It comes from victims who are imperiled witnesses. The interesting thing is how many people have described the same scenario and how many people that we have worked with who have had relatives in NASA, in the CIA and in the Military, including very high-ups in the Military. I can tell you that a friend and colleague of mine who has probably the equivalent of half the table space on that far side of the room filled with boxes with declassified documents from mind-control research done in the past which has been able to be declassified over a considerable -- couple of decades -- period and has read more government documents about mind control than anyone else, has a brief that has literally been sent in the past week and a half asking for all information to be declassified about the Monarch Project for us to try to find out more.

Now let me just mention something about some of the stuff that my experience is in several patients now that you may run into late in the process. I know I'm throwing a lot at you in a hurry. Some of it is completely foreign and some of you may think, "Gosh, could any of this be true?" Just, you know, ask. Find out in your patients and you may be lucky and there isn't any of this. Somewhere at a deep level you may run into some things like this. Let me describe to you, if I can find my pen, the system in one patient. One patient I had treated for quite a while, a non-bloodline person. We had done what appeared to be successful work and reached final integration. She came back to me early last year and said she was symptomatic with some things.

I started inquiring. I found a part there we'd integrated. The part basically said, "There was other stuff that I couldn't tell you about and you integrated me and so I had to split off." I had done some inquiring about things like [REDACTED] as a routine part of it and found they were there and I said to this part, "Why didn't you tell me about this stuff?" She said, "Well, we gave you some hints but they went right over your head." Says, "I'm sorry, but we know that you didn't know enough to help us but now we know you can." So the stuff started coming out. It was interesting. She described the overall system -- if I can remember it now -- as being like this. The [REDACTED], other kinds of

things.

Each of the [REDACTED] represented still another different system. She said, "With the exception of me," this one part, "you dealt with the whole circle with the work that we did before but you didn't touch the rest of the stuff." Okay. In the middle of all this was still another system consisting of [REDACTED], which some of you are aware, looks approximately like this with lines in between and so on and so forth. There's a rough approximation. That represented another system. Then once we got past that she implied that this entire thing was somehow encompassed by, what do you call it, [REDACTED].

I kept thinking we were at final integration then I'd find some other parts. This person had an eagle-eye husband that was watching for certain things that we found to be reliable indicators. So often I would get evidence of dissociation within a few days. It would suddenly be picked up. You know, what we found was I continued to find evidence of dissociation and I'd find parts. Finally this part, as I got angry with him and said, "Why when I give these ideomotor inquiries am I getting lied to?" This part said, "Because you don't understand. You're going to get us all killed."

We started talking and then she basically said, "It's been programmed so that if you succeed and think you've succeeded, you will fail. They build it in as a way to laugh at you, that if you ever get us integrated, we will die." Here's what she said, this part said, "I'm [REDACTED]," and I've seen this in others, [REDACTED] each of whom had to memorize [REDACTED] kind of premises, philosophies of life like "[REDACTED]," on and on and on. There may be two or three sentences like that associated with each that they had to memorize them.

They said, "[REDACTED]" after awakening unless certain things were followed and we did some of those. Well we also found [REDACTED] as a backup, used with mirrors to create the sister part. We had to get past and deal with that too. [REDACTED] had certain things that they said had to be done to integrate.

I started to say, "Oh, come on, they lied to you before." She said, "Wait a minute. This what they said you'd say. They said that no doctor would ever believe that they had to go these extremes to get us well and that's part of the reason they'd fail." I said, "Well, tell me, tell me again." She said, "I have to [REDACTED]. I have to have [REDACTED]. It has to [REDACTED] after this part's been awakened." I said what I'd have to lose? I had a psychiatrist give her a little Demerol. We used the code. My office didn't have any windows anyway. It was pretty easy.

Oh, and there had to be [REDACTED]. Well, fine. So we did it and everything went well. Maybe it would have gone well if we hadn't done it, but I decided not to take the chance and to trust the patient maybe. Well, so we go on and then we find another part. There's [REDACTED] that we had to get through. In fact, I think there were two backups there. Interestingly, the very last part was an extremely nice part, made especially that way so that they wouldn't want to lose them because they would be so adorable and so loving and so sweet that they wouldn't want to maybe get rid of them.

Then we found that she continued to have these feelings with this last part left now of darkness and blackness inside. What did we find? [REDACTED]. She said, "They assumed that if you ever got to this point, you would," and along the way, by the way, we had encountered this stuff about the LSD stuff, the [REDACTED]. The message was that she said,

"[REDACTED]. It has to opened this way," that it can't be opened. They assumed that you would try to deal with all the feelings. That can't be opened until you've dealt with that last part and they've integrated.

So far it looks like we've got integration that's holding. So I found [REDACTED] this patient informed me, "[REDACTED]." I've heard variously that it's [REDACTED] in bloodline people. By the way, you can do real simple things like turn the [REDACTED], so time stands still to be able to do certain kinds of work. [REDACTED]. Got that idea from a ritual-abuse victim who had seen some of this kind of programming done that another therapist was seeing.

So those would be just a few other hints about things that may be helpful or meaningful. We're talking about very intensive things and at deep levels to to me this give us two things. One thing it gives to me is hope because it gets to material and it makes progress like nothing else we've ever seen with these people who have it. The second thing it does for me is it demoralizes me, too, because although three years ago I had a pretty good idea about the extent and breadth of what they'd one to these victims, I had no real appreciation for the depth and breadth and intensity of what they'd done.

I want to come back to the other question over here now. The other question is how many of them can get well? We don't know. In most things in the mental health profession we accept two-thirds of the patients are going to improve, maybe seventy percent. There's very little we can get everybody well. I think one of the sad things we have to face is that many of these patients will probably never be well. My personal belief is that if they are being messed with their only hope of getting well is if they can somehow get out of contact. Now I know patients who've gone to other states and simply had deep- level alters pick up the phone and call and said, "This is our new address and phone number" so that they could be picked up locally.

I mean in an inpatient unit for an extended period of time. If they are in a Cult from their area and they are still being monitored and messed with, my own personal opinion is we can't get them well and can't offer more than humanitarian caring and supportiveness. Lots of therapists do not like to hear that. That's my opinion. I believe that if somehow they're lucky enough to be wealthy enough to have protection, to have somehow gotten away in some way and we can work with them without being messed with, that they have a chance to reach some semblance of normality and livability with enough intensive work. My own personal belief is I don't think anybody with this kind of programming is well in this country yet. There are some who are well along the way. I've got a couple who are well along in their work and have done a tremendous amount, but they're clearly not well yet.

Q: Could you speculate on the relationship between this stuff and the fantasy games that have been proliferating, Dungeons and Dragons and that sort of thing?

Dr.H: Well, there are a lot of things out there to cue people. You want to see a great movie, interesting movie, to cue people? Go see "[REDACTED]." You can rent it in your video shop. Came out last fall. One night in sheer desperation for something at the video store, you know? Nine o'clock on Friday night. Everything's gone. I rented a couple of movies and one of them is that. Fascinating. They're talking about [REDACTED]. Yes, "[REDACTED]." And who is the production company? [REDACTED]. I couldn't see much cuing in "[REDACTED]," but who's the production company in "[REDACTED]"? [REDACTED]. There are lots of things

around that are cuing.

There's an interesting person in the late sixties who talked about the Illuminati. Have any of you ever heard of the Illuminati with regard to the Cult? Had a patient bring that up to me just about exactly two years ago. We've now had other stuff come out from other patients. Appears to be the name of the international world leadership. There appear to be Illuminatic Counsels in several parts of the world and one internationally. The name of the international leadership of the Cult supposedly. Is this true? well, I don't know. It's interesting we're getting some people who are trying to work without cuing who are saying some very similar things.

There was an old guy in Hollywood in the late sixties who talked about the infiltration of Hollywood by the Illuminati. Certainly what some patients have said is all of this spook stuff, horror stuff, possession and everything else that's been popularized in the last twenty years in Hollywood is in order to soften up the public so that when a Satanic world order takes over, everyone will have been desensitized to so many of these things, plus to continually cue lots of people out there. is that true? Well, I can't definitely tell you that it is. What I can say is I now believe that ritual-abuse programming is widespread, is systematic, is very organized from highly esoteric information which is published nowhere, has not been on any book or talk show, that we have found all around this country and at least one foreign country.

Let's take a couple of quick questions and we need to get on to other material. Yes?

Q: Do you have any techniques for decreasing your level of uncertainty that a patient is or is not being still tampered with, "messed with," as you said?

Dr.H: Just that I would ask several of the parts I've inquired about, Core, [REDACTED], several parts inside I would ask about these sorts of things and I will keep asking it. As you do additional work and get a bit further, I would ask again to find out. In the back?

Q: I wonder if you've heard or you know of the Martin Luther Bloodline?

Dr.H: The what?

Q: Martin Luther Bloodline?

Dr.H: I know nothing about Martin Luther Bloodline. I'll give you one other quick tip. Ask him about an identification code. There's an identification code that people have. It will involve [REDACTED]. It may involve [REDACTED] and it will usually involve [REDACTED]. It will usually involve [REDACTED].

Q: I have seen a lot of the things you've been describing today in several patients. I wanted to ask you a question about [REDACTED]. You mentioned something about systems here. Are there [REDACTED]?

Dr.H: There has been that described in some patients, yes, [REDACTED].

Q: Could you say what that is or a little diagram?

Dr.H: I don't think we know enough to know what it is, honestly. I think it may have to do with [REDACTED].

Q: Have you ever had any evidence where any of these people have been tagged and there have been anything of their body-parts that might be related to this, private parts in particular?

Dr.H: Well, there are certainly people that have had tattoos, that have had a variety of other kinds of things, some of which have been, you know, documented in cases, but I mean to say, well, maybe they did that to themselves or had it done consciously to really prove something, not that occurs to right off the bat. Let me just take this one last question back and we need to go on to other material because we're never going to get through it all. I'll just ask you to hold your question.

Q: It's not a question but I wanted to say for myself, personally, and perhaps for others here as well, I wanted to thank you very sincerely for taking this time to come forward. [Applause]

Dr.H: Well, [Applause]

Q: Does anyone want to join us for a standing ovation for this material? It's wonderful. [Sustained applause]

Dr.H: A dear friend who's one of the top people in the field, who I know has had death threats, but I know struggled for professional credibility in believing in MPD and was harshly criticized for even believing in that ten and fifteen years ago, and struggled to a point of professional credibility. I think in his heart of hearts he knows it's true, but he will say things like, "I wouldn't be surprised to find tomorrow it was an international conspiracy and I wouldn't be surprised to find tomorrow that it is an urban myth and rumor." He tries to stay right on the fence and the reason is because it's controversial, because there is a campaign underway saying these all false memories induced by, along with incest and everything else, by "Oprah" and by books like "The Courage to Heal" and by naive therapists using hypnosis. It's controversial.

My personal opinion has come to be if they're going to kill me, they're going to kill me. There's going to be an awful lot of information that's been put away that'll go to investigative reporters and multiple investigative agencies, if it happens, and an awful lot of people like you, I hope, that if I ever have an accident will be pushing for a very large-scale investigation. I think we have to stand up as some kind of moral conscience at some point and I tried to wait until we had gotten enough verification from independent places to have some real confidence that this was widespread. I know we've gone like a house afire to try to pack as much as I could in for you. I hope it's given you some things to think about and some new ideas and I appreciate being with you. [Long sustained applause]

End Document

Added commentary: Researching Dr. Corydon reveals the existence of an False Memory Syndrome Foundation 'friendly' Web site (FMSF was founded/headed/staffed by former MK-ULTRA project heavyweights, chiefly to 'teach' professionals in the medical, media, and legal arenas that ritual abuse MC does not exist)

**Nonlethal Weapons?  
by Dave vonKleist**

The recent stories from [CNN](#) and the [Air Force Times](#) reveal a "new" weapon to be used by our military for "crowd control". The fact is that the military never tells about new weaponry until it has been field tested and found to be affective.

Micro-wave technology has been around for years and it is well known that it can be deadly if focused into a beam. Has it already been used? Please look carefully at the photos of these unfortunate Iraqis who were killed during the Gulf War. They were provided to the American Gulf War Veterans Association by a vet who had to smuggle them out of Iraq.

Warning! Do not view these pictures if you are easily offended by images of violence and/or death. This is the real thing!

[Victim 1](#)  
[Victim 2](#)

Ask yourself:

How does one burn a body beyond recognition and leave the clothing intact and not even singed?

If this is the result of some new microwave technology, is it really non-lethal, or can it be used in some other non-disclosed application? Were there other new weapon technologies that were "field tested" during the Gulf War that have been yet to be disclosed to the American public?

Look....Think....Decide!

Dave vonKleist

## **Excerpts from Angels Don't Play This HAARP**

**courtesy Patricia Mougey**

From the book, "Angels Don't Play This HAARP" by Dr. Nick Begich and Jeane Manning

Voice Mail System at U.S.A.: 1-907-249-9111 FAX: 1-907-696-1277

Mail: Dr. Nick Begich P.O. Box 201393, Anchorage, Alaska 99520

Page 184. Note that HAARP is the most versatile and the largest radio-frequency-radiation transmitter in the world. Captain Paul Tyler wrote a chapter in "Low-Intensity Conflict and Modern Technology and points to applications which may already be somewhat developed. He points out that the uses of radio-frequency radiation may include enhancement of 'anomalous phenomena' in individuals. these could be A SENSORY OR SUPER-NORMAL PHENOMENA.

Techniques are needed to deposit RFR (radio frequency radiation) effects at selected organ sites.....These studies will require prudent extrapolation of physical and physiological data obtained from laboratory animals to humans in operational environments. The 1982 Air Force report called for the research to be done so that the Air Force could develop hardware so that the radiation could be delivered through new weapons.

A research publication commissioned by the Air Force - "Radio Frequency Dosimetry Handbook' described these models in time to meet the schedules they had put forward in 1982. The book gives mathematics for calculating the dosages (Dosimetry) of radio frequency radiation necessary to cause changes in animals and humans. ...This book compiled research spanning five decades and contains a bibliography which is 29 pages long. ....(page 185)....More importantly the research behind it is being used to develop better methods of killing.

Purpose; To change the central nervous system, cardiovascular system and the respiratory system.... (Page 185). The 1982 Air Force report covering the use of radio frequency radiation in the new weapon systems contemplated by the Air Force was intended to change the central nervous system, cardiovascular system and the respiratory system. We were distressed to read about the idea of using this technology to alter the way people think in order to make the "enemy" of the government incapable of waging war. ..

Page 186: The fact that these technologies are classified and hidden from the medical community denies humanity the opportunity to explore these areas for healing people

rather than for destructive purposes.

The report speaks about using this technology in a way which could interact with biological or chemical agents....it states: "It may be possible to sensitize large military groups to extremely dispersed amounts of biological and chemical agents....It should be noted that this may require relatively low level RFR. The idea expressed here is that depositing small amounts of chemicals in a person's physiological system, in amounts below normal levels where negative physical effects are known to occur, will ensure they have no perceivable effect until radio frequency radiation (RFR) is introduced. Once introduced, the RFR creates physiological reactions which are detrimental to the host. This would allow individuals who are not exposed to the chemicals to then enter the area of the RFR without harm to their own bodies. When an operator tunes the RFR in just the right way, changes are caused in the energy state of atoms, which cause chemical reactions in the body, which in turn manifest as physiological or psychological changes.

The introduction of small amounts of chemicals is a very important concept when cyclotron resonance is considered. The HAARP transmitter uses cyclotron resonance in radiating its energy transmissions into the atmosphere. The introduction of RFR causes a change in energy states, which cause chemical reactions....the use of HAARP could be intentional or accidental, depending on the level of knowledge held by the equipment operators.....page 187.

Page 187 - from "Angels Don't Play This HAARP"

The 1982 report (Air Force), "'Final Report on Biotechnology Research Requirements For Aeronautical Systems Through the Year 2000" went on to describe graphically the research efforts, breaking them into three primary areas.

1. "Pulsed RFR Effects" which covered a research period from 1980 through 1995, emphasized "considerably increased efforts" in this area.
2. "Mechanisms of RFR with Living Systems" was referred to as the 'continuation of ongoing research' beginning in 1980 and forecast to conclude around 1997.
3. The last area of emphasis was "RFR Forced Disruptive Phenomena", which they considered a "major new initiative". It was to begin around 1986 and continue until 2010. This last area could be characterized as applied technology, scheduled to begin at the same time as the Radio frequency Radiation Dosimetry Handbook's completion. the handbook gave the basic information needed to develop new and powerful weapon systems which would have a negative effect on humans and electronics, but would leave other property unscathed. By the mid-1990's, the timeline for development was on or ahead of schedule.

Page 188: In the second volume..."As the technological race continues, knowledge of mechanisms of action of RFR

with living systems and the assessment of pulsed RFR effects will demonstrate the vulnerability of humans to complex pulsed electromagnetic radiation fields in combination with other stresses."

"Electroshock therapy indicates the ability of induced electric current to completely interrupt mental functioning for short periods of time, to obtain cognition for longer periods and to restructure emotional responses over prolonged intervals.....Experience with electroshock therapy, RFR experiments and the increasing understanding of the brain as an electrically mediated organ suggest the serious probability that impressed electromagnetic fields can be disruptive of purposeful behavior and may be capable of directing and/or interrogating such behavior. Further, the passage of approximately 100 milliamperes through the myocardium can lead to cardiac standstill and death, again pointing to a speed-of-light weapons effect.

Page 189 Objective: Degradation of human performance

"While initial attention should be toward degradation of human performance through thermal loading and electromagnetic field effects, subsequent work should address the possibilities of directing and interrogating mental functioning, using externally applied fields within the possibility of a revolutionary capability to defend against hostile actions, and to collect Intelligence data prior to conflict onset."

What this seemed to say was that the objective of the research would be toward mind manipulation at a distance, where the military could alter what people thought and, at the same time, know what they thought. It seemed too much like a science fiction novel. How in the world could this effect be possible? How long had research of this kind been underway, so that the military would be so bold as to publish this kind of material in an unclassified document? Could it be that they had quietly advanced their research into these technologies under a veil of secrecy?

Non-lethal conference.....Attorney General/Justice Dept.

Page 171 - In 1986 the U.S. attorney general held a conference on the development of these new high-tech weapons. It was summarized the following year in a report discussing problems and solutions for what was believed to be an area with significant future possibilities. Several areas were reported to offer new possibilities for the Department of Justice. ..and a quote' participants also discussed the use of various wave lengths and forms of administration of electromagnetic energy as a non-lethal weapon. One conference participant noted that scientific knowledge of human physiology is progressing to the point where it may soon be possible to target specific physiologic systems with specific frequencies of electromagnetic radiation to produce much more subtle and fine-tuned effects than those produced by photic driving.

Page 173: in November, 1993 about 400 scientists gathered at John Hopkins University Applied Physics Lab to

discuss their work in developing non-lethal weapons technologies, including radiofrequency radiation (RF), electromagnetic pulse (EMP), extremely low frequency (ELF) fields, lasers and chemicals. the meeting was classified, and no detailed reports were ever publicly released. Dr. Clay Easterly of Oak Ridge National Laboratories led a session on ELF/EMF's...his presentation dealt with uses which would affect people....it was classified by the military.

On July 21, 1994, Dr. Christopher Lamb, Director of Policy Planning, issued a draft Department of Defense directive which would establish a policy for non-lethal weapons. the policy was intended to take effect January 1, 1995 and formally connected the military's non-lethal research to civilian law enforcement agencies. (Page 175)

Page 176: In interviews with the Defense Department the development of this policy was confirmed. In its current draft form, the policy gives highest priority to development of those technologies which are most likely to get dual use, i.e. law enforcement and military applications. According to this document, non-lethal weapons are to be used on the government's domestic "adversaries". The definition of 'adversary' has been significantly enlarged in the policy. "The term 'adversary' is used above in its broadest sense, including those who are not declared enemies but who are engaged in activities we wish to stop. This policy does not preclude legally authorized domestic use of the nonlethal weapons by United States military forces in support of law enforcement.

Page 177 - the Pentagon actually received \$50 million to be used jointly with the Department of Justice in developing these 'non-lethal' weapons.

Development of these technologies is being jointly managed by the Non-Lethal Weapons Steering Committee, which is co-chaired by the undersecretary of Defense for Acquisition and Technology and the Office of the Assistant Secretary of Defense for Special Operations and Low-Intensity Conflict. This crystallizes the new Justice Department and Department of Defense alliance for future law enforcement and military initiatives, in the United States.

Page 177 - the weaving together of Department of Defense missions with civilian Department of Justice missions is unprecedented. Not since the civil war has the military machinery - except in very limited riot control actions - been turned against United States citizens since the Civil War. The idea of using these dangerous and intrusive systems is counter to good public policy. This raises serious questions regarding use of our Department of Defense for domestic police actions, which may be a violation of constitutional law by being in conflict with the narrowly defined federal use of the military "for the national defense".

Page 178 - "International Red Cross" raised a number of questions in their report in mid-1994....and the conclusion

was that 'we can use on our own citizens what we cannot use in warfare with real enemies who are threats to national security. This explains why the development of nonlethals has moved out of the

"HAARP: - continued page 178 - Justice Department

Department of Defense into the Department of Justice. For the Department of Defense to continue to work on these weapons, as instruments of war, is now illegal under international law.

Page 178 - What does this mean for Americans? This places Americans, and citizens of other countries, in a lesser-protected class than individuals seeking to destroy our countries - our real adversaries. This language really represents a way for countries to continue to develop these weapons. This is a loop-hole in agreement.

Page 179:

One of the uses described is an Electromagnetic Pulse (EMP) weapon which gives an operator the same ability to wipe out electronic circuits as a nuclear blast would provide. The main difference is that this new technology is controllable, and can be used without violating nuclear weapons treaties.

Page 180: Council on Foreign Relations report points out that "The Nairobi Convention, to which the United States is a signatory, prohibits the broadcast of electronic signals into a sovereign state without its consent in peacetime.

This report opens discussion of the use of these weapons against terrorists and drug traffickers. The CFR report recommends that this be done secretly so that the victims do not know where the attacks is from, or if there even is an attack. There is a problem with this approach. the use of these weapons, even against these kinds of individuals, may be in violation of United States law in that it presumes guilt rather than innocence. In other words, the police, CIA, DEA or other enforcement organization becomes the judge, jury and executioner.

The forward to "Low-intensity Conflict and Modern Technology" was written by Congressman Newt Gingrich in 1986. He wrote: "The organization of power in the States and Defense Departments and the relationships between Congress, the news media, and the executive branch are all unsuited to fighting low-intensity conflict effectively." He goes on to say much more. Page 181

Page 183: Captain Paul Tyler discusses in this book the application of non-ionizing radiation using external fields, including radiofrequency radiation and other electromagnetic radiation's. and says, "Some of these potential uses include dealing with terrorist groups, crowd control, controlling breaches of security at military installations, and antipersonnel techniques in tactical warfare. In all of these cases the EM systems would be used to produce mild to severe physiological disruption or

perceptual distortion or disorientation. In addition, the ability of individuals to function could be degraded to such a point that they could be combat ineffective...can provide coverage over large areas & they are silent.

Dr Tyler wrote his papers back in 1984 and stated then (page 192) research has shown that very specific frequencies cause very specific reactions, and once a critical threshold is passed, negative reactions occur.

## Air Force Plan: Hack Your Nervous System

This is the first of a two-part series on plasma and electromagnetic weapons by David Hambling, author of Weapons Grade: How Modern Warfare Gave Birth to Our High-Tech World.

The brain has always been a battlefield. New weapons might be able to hack directly into your nervous system.

"Controlled Effects" (see image, right) is one of the Air Force's ambitious long-term challenges. It starts with better and more accurate bombs, but moves on to discuss devices that "make selected adversaries think or act according to our needs... By studying and modeling the human brain and nervous system, the ability to mentally influence or confuse personnel is also possible."

The first stage is technology to "remotely create physical sensations." They give the example of the Active Denial System "people zapper" which uses a high-frequency radiation similar to microwaves as a non-lethal means of crowd control.

Other weapons can affect the nervous system directly. The Pulsed Energy Projectile fires a short intense pulse of laser energy. This vaporizes the outer layer of the target, creating a rapidly-expanding expanding ball of plasma. At different power levels, those expanding plasmas could deliver a harmless warning, stun the target, or disable them - all with pinpoint laser precision from a mile away.

Early reports on the effects of PEPs mentioned temporary paralysis, then thought to be related to ultrasonic shockwaves. It later became apparent that the electromagnetic pulse caused by the expanding plasma was triggering nerve cells.

Details of this emerged in a heavily-censored document released to Ed Hammond of the Sunshine Project under the Freedom of Information Act. Called "Sensory consequence of electromagnetic pulsed emitted by laser induced plasmas," it described research on activating the nerve cells responsible for sensing unpleasant stimuli: heat, damage, pressure, cold. By selectively stimulating a particular nociceptor, a finely tuned PEP might sensations of say, being burned, frozen or dipped in acid -- all without doing the slightest actual harm.

The skin is the easiest target for such stimulation. But, in principle, any sensory nerves could be triggered. The Controlled Effects document suggests "it may be possible to create synthetic images to confuse an individual's visual sense or, in a similar manner, confuse his senses of sound, taste, touch, or smell."

In other words, it may be possible to use electromagnetic means to create overwhelming 'sound' or 'light', or indeed 'intolerable smell' which would exist only in the brain of the person perceiving them.

There is another side as well. The "sensory consequences" document also notes that the nervous system which controls muscles could be influenced to cause what they call "Taser-like motor effects." The stun gun's ability to shock the muscles into malfunction is relatively crude; we might now be looking at are much more targeted effects.

Tomorrow: Moscow moves in. Remote-controlled heart attacks, anyone?

-- David Hambling

## Electromagnetics and the Mind

Greg Harrison  
October 26, 1997

The ultimate goal of all psychological operations, has always been to capture the 'hearts and minds' of those of the enemy. Forms of PSYOP have existed for nearly as long as war itself, but with the advent of information warfare, PSYOP is seen as a manipulation of the processor of information — the mind itself. Though these operations have traditionally been relegated to *presenting* information that produces a desired impact on the mind, only with recent advances in neuroscience have we begun to understand *altering* how that information processed. This alteration has come initially in hypnosis and psychoactive drugs, but more importantly, in certain forms of radiation and their interactions with the electrochemical brain. Where drugs and hypnosis can be considered 'invasive' techniques, requiring physical proximity, radiated energy can be applied over great distances, with less probability of detection.

What must first be understood from a military perspective, is the utility of this technology. Next, a foundation in the hard science and documented military research is necessary to understand the potentials and limitations. Finally, due to the potential national security, public health, and ethical ramifications associated with this research, much has been classified. This classification has lead to certain amount of conspiratorial speculation, which is worth some mention.

Non-lethal weapons are currently en vogue with the DoD, especially to those who have come to face the specter of MOOTW and anti-terrorist action. These situations, as well as those in law enforcement, are not suitable to the application of traditional combat arms. The chief intent of these non-lethal weapons being to compel its target to retreat or surrender, or to prohibit the target from offensive action. The goals of extra-low frequency (ELF) electromagnetic (EM) radiation is to mentally achieve these ends from a distance and without any physical contact.

These goals can be divided into three specific applications: deterrence, influence, and control. Each goal becomes progressively more scientifically challenging. Deterrence is to simply cause such neurological discomfort or mental psychosis to make the aggressor simply fall back rather than suffer. This area dovetails with electromagnetic pulse (EMP) weapons, but here the effect is not from a pulse as much as sustained radiation. Deterrence usually intends the recipient to be aware of the source of the ill effects and seek to avoid it. Influence and suggestion are achieved when the target is not aware that the EMR is present or what it is doing. Simple effects such as the inability to concentrate, inexplicable paranoia, and headaches, all negatively influence the behavior without being able, or aware, of the need to escape a weapon. Finally the illusive goal of 'mind control,' in both allies and in the enemy, by co-opts them to work unconsciously based on

direction of a controlling agent.

With these goals identified, the question now becomes: how much of this can be achieved, and how much has already been accomplished? In answering this question, it is important to discern between pseudo-science and hard science, between conspiracy theories and documented facts. Unfortunately, the line between these areas is often blurred, and with most information protected for national security and ethical means, separating the wheat from the chaff is quite challenging. Presented here are footnoted sources of legitimate research in both science and history.

Research in this field is not new. Hypnosis and mind-altering drugs have been known to man for years, and the use of subliminal suggestion has been well documented and even publicly accepted in such roles as shoplifting deterrence [\[CONGRESS84\]](#). Since the latter half of this century, the use of EM radiation to impact the brain has been researched. Though not the chief focus of this paper, research into these psychoactive drugs is of note since the attempts met with some results (some tragic), and the intent of such research is identical to that in ELF radiation. In the 1950s, at the beginning of the Cold War, the newly created CIA recognized the need for drugs and techniques that would both elicit information from captured spies, and prevent our operatives from divulging information under medication, if captured. This research came under the title Project ARTICHOKE and soon became Project MK-ULTRA. Dr. Sidney Gottlieb, a program administrator, stated the objective of the program was to, "investigate whether and how it was possible to modify and individual's behavior by covert means" [\[CONGRESS77\]](#). MK-ULTRA would almost certainly have remained classified, had it not been for the death and permanent psychosis of participants in the studies. The death of Dr. Frank Olson 1953, of the Army Chemical Corps, is but one example where LSD was given to a participant in MK- ULTRA, leading to his death. This case brought to a head to the public outcry which declassified MK-ULTRA, and resulting in the government's payment of damages to the Olson family and many others.

Two congressional subcommittees resulted from MK-ULTRA and from the parallel research being performed in the interest of law enforcement. Senator Ted Kennedy's congressional subcommittee that investigated MK-ULTRA in 1977, found it guilty of both ethical violations and of violating its charter to only involve non-domestic activities. No one in the CIA was ever criminally charged; the CIA simply vowed that the research would stop. A second committee of Senator Sam Ervin in 1974 entitled, "Individual Rights and the Federal Role in Behavior Modification" also found law enforcement agencies and the VA guilty of violating patients' rights thorough various means including lobotomies. Again, a stated promise to stop the research was the only punitive result. In 1977, one of the CIA whistleblowers, Michael Copeland, stated that despite claims to the contrary, the research continued and that, "the congressional subcommittee which went into this sort of thing only got the barest glimpse" [\[ERINGER85\]](#). Though MK-ULTRA is officially stated to have met with

little success, its intent, clandestine manner, and ethical lapses are of note. MK-ULTRA's greatest contribution may have come in pushing research toward EM and away from narcotics.

Other researchers met with certain successes in the 1950s and '60s. Dr. Jose Delgado, professor of psychology at Yale, who was able to elicit a range of emotions from his subjects by using small implants located in parts of the brain which then received their energy from 'remote control' radio waves. Through this research, Dr. Delgado was able to stop a charging bull. [\[TIMES65\]](#) A contemporary of Delgado, Dr. Ivor Browning was able, through stimulation of the hypothalamus, induce a mule to ascend a 5000' mountain path [\[MARTIN\]](#). Delgado's human subjects could be consistently brought to states varying from euphoria, rage, and fatigue. Delgado states: "Stimulation of different points in the amygdala and hippocampus in the four patients produced a variety of effects, including pleasant sensations, elation, deep concentration, odd feelings, super relaxation, colored visions, and other responses" [\[DELGADO73\]](#). This research was limited in its applications because of its dependence on its physical implants into the brain. However, a 1970 RAND Corporation study found that using ELF microwave radiation alone, "could promote insomnia, fatigue, irritability, memory loss and hallucinations" [\[MACGREGOR70\]](#). Additionally, a DIA report found that ELF microwaves can, "induce metabolic change, alter brain function, and behavior patterns" [\[ADAMS76\]](#).

Dr. Delgado saw no limits for the technology he had researched and as a part of the 1974 congressional hearings, testified, perhaps prophetically, that, "Man does not have the right to develop his own mind. This kind of liberal orientation has great appeal. We must electronically control the brain. Some day armies and generals will be controlled by electric stimulation of the brain" [\[CONGRESS74\]](#). It may be worth noting that the Office of Naval Intelligence funded much of Dr. Delgado's research, but in his radical statements, Dr. Delgado is not alone. Three other Harvard doctors concluded in their 1967 report, "The Role of Brain Disease in Riots and Urban Violence" to JAMA, that screening tests of the limbic brain function was necessary as an "early warning test" for a predisposition toward violence [\[MARK67\]](#).

Dr. Ross Adey, now of Loma Linda University Research Hospital, has investigated the effects of ELF radiation on the brain, and his work continues. Dr. Adey has researched the impact of ELF radiation on the inherent 'waves' of the brain. After studying the different rhythms of EEGs during various mental states, Dr. Adey was able to bombard the brain with specific frequencies to which the brain's EEG would involuntarily synchronize. Synchronizing the brain in various states would induce stress, anger, malaise, and fatigue. Dr. Adey was able to identify specific frequencies and their specific response. Some of Dr. Adey's current research, available in abstract from the NIH database is in calcium ion efflux [\[ADEY75\]](#).

Though someone viewing the research description might not be alarmed at the study of how ELF radiation can affect calcium ion efflux in brain cells, an understanding of this research's impact on the entire brain may cause alarm. Calcium ions are involved in transmitting neural and nerve impulses. Dr. Adey has shown that certain ELF frequencies can hinder or increase calcium ion efflux. Such ion efflux reduction delays or prevents neural impulses. The opposite case of efflux, "with repeated or continued exposure, the increased excitability leads to a state of exhaustion of the cells of the cerebral cortex." [\[ZARAT78\]](#) Dr. Adey was able to document a marked delay in rat's reaction times and memory. The more ominous prospect is that ion efflux in the hippocampus is also tied to the storage of human memory and recall [\[ADEY67\]](#). When Senator Richard Schweiker questioned Dr. Gottlieb of MK-ULTRA about this study and its potential to destroy memory in animals, Dr. Gottlieb replied, "I can believe that, Senator." [\[CONGRESS77\]](#) Further study has been done by other researchers using ELF radiation, with responses varying from and desire to 'bite' the researcher [\[LAWRENCE73\]](#), to the ability to hear spoken words delivered via pulsed ELF microwave analog of the speaker's sound vibrations [\[BECKER85\]](#).

Given the small sampling of past and current research, it is worth noting that these seemingly disparate advances, along with the known areas of hypnosis and classical conditioning training — lest B.F. Skinner and Pavlov be left from the discussion — could lead to rather impressive and dangerous potentialities. The Internet is replete with those who have tied these technologies with history and personal psychosis to assert such many interesting conspiracies. Prospects such as the CIA assassination programming of Lee Harvey Oswald (a documented CIA employee) and Sirhan Sirhan, have been offered, as well as the notion of widespread mental implantation and control of the American populous. The former of these statements is the belief that through hypnosis, drugs, and possibly ELF radiation, these assassins were programmed to carry out their duties without remorse, without memory, and without memory of their training. The latter of these assertions, the notion of mental implants and control, has led to a large group of individuals, most likely with other more severe mental problems, to be convinced they are victims of a governmental mind control conspiracy. It may be of note that before the discovery of MK-ULTRA such claims by individuals in that program, though seemingly ludicrous, were indeed accurate.

Further conspiracies revolve around the DoD which operates the joint Navy- Air Force High Altitude Auroral Research Project (HAARP). The program's stated objective is to study the affects of radiation in the upper atmosphere, but it's critics charge either for large-scale mind control (using the ionosphere as a reflector) or weather control. Another buzzword that is not strictly limited to conspiracy theorists is 'psycho-acoustic correction.' This word involves using an acoustic signal to mask an underlying ELF wave designed to produce 'voices in the head' and to produce overall states of anxiety and discomfort. Research in this area has already been

mentioned. Such technology is alleged to have been used in both the eventual surrender of Manuel Noriega from the Vatican Embassy in Panama, and the siege of the Branch Davidian compound in Waco. In both cases, helicopters playing 'loud music' were certainly documented to fly over. Each of such conspiracy theories certainly contains a measure of truth and a bit of speculation. The military's intense secrecy in this area of research does little to abet their beliefs. When David Boyd of the National Institute of Justice was asked if such technology was used in Waco his reply was, "I have to answer that very carefully. The fairest answer is none were suitable." [\[VALENTINE\]](#)

The extent to which the conspiracies, which revolve around this area of research, are accurate may be best determined through history. If the military and intelligence communities since the start of the Cold War have known about such powerful technology, why so would the military actions in Korea and Vietnam resulted in such unsuccessful results? Though such technology may be able to create the perfect assassin, why involve such complicated technology, when Navy SEALs or Hamas terrorists would willingly achieve the same ends without any fancy mind control. Also in a military role the potential use of such technology still requires the presence (most likely from the air) of an emitter, which, if capable of overflying a battlefield, must fly in an environment in which air supremacy has already been established.

The military certainly needs technology that allows it to deter or influence aggressors from action against our forces and those of our allies. In an age when there is less threat of a single large-scale engagement, but a greater threat of small rebellions and terrorist action, such technology can be of even greater value. Such weapons and technology can obviate the need for inflicting mass casualties, incurring collateral damage, and launching street to street 'room clearing' offensives. Public source research in this arena is sufficient to glean that there is a body of research with definite PSYOP uses.

Such technology is not without its legal and ethical ramifications, especially in a peacetime environment. If its application can pacify a people before war starts, is it acceptable? If it can extract near-perfect information without any physical torture or permanent effects from captured soldiers, is it a violation of the Geneva Accords? What could this mean for criminal justice in the U.S., where lie detectors are suspect enough? If such ELF waves are used in aversion therapy to 'rehabilitate' criminals from their violent impulses, is that okay? Can we be sure it worked? These ethical questions and the seemingly permanent veil of national security compartmentalization in this area will likely prevent any but the least powerful implementations of this technology in the near future.

## **Book Review:** **Harvest of Rage**

**by Joel Dyer,**  
**reviewer Eleanor White**  
**This page updated April 14, 2004**

**Copyright 1998**  
**Published by Westview Press**  
**ISBN 0-8133-3293-1**  
**326 pages, indexed**

### **\*\* THUMBS DOWN \*\***

This book presents 285 pages of extensive research on the "growing and deadly anti government movement" which has "surprisingly deep rural roots". The author claims the grass roots militia and Patriot movements were responsible for the Oklahoma City bombing and other crimes. He is totally ignoring the fact that what took down the Murrah federal building were INTERNAL charges placed against structural columns, verified ON CAMERA by local officials and the governor of Oklahoma, confirmed by explosives experts, and later covered up by the controlled media. This reviewer has some such statements on video tape from local TV coverage.

Ignoring the facts clearly shows this author is not interested in the truth, and this reviewer regards the book as a work of propaganda.

Let me start by transcribing the blurb about this book from its back cover:

**Timothy McVeigh is not alone.** The 1995 bombing of the federal building in Oklahoma City killed nearly two hundred innocent people and shattered the complacency of a nation. But this event, horrible as it was, may well be only the beginning of an unprecedented wave of terror in America. This is the chilling conclusion reached by Joel Dyer in Harvest of Rage the first book to explore the deep rural roots of today's growing and increasingly deadly anti government movement. Completely updated with new material on the McVeigh Trial, the defense of Terry Nichols, and the lingering doubt that both were not alone, but assisted by a host of "unknown others" in the militia movements of rural America.

JOEL DYER is an investigative reporter and writer. He has written numerous magazine and news articles on the farm crisis and the rise of the radical right. He has appeared on CBS and National Public Radio, and his work has been featured in the New York Times, the Utne Reader, and numerous other national magazines.

Eleanor White talking: I have not and will not read this book. The author ignores the testimony of bomb experts that Timothy McVeigh's truck bomb could not and did not bring down the Murrah federal building. He ignores the repeated on camera statements by officials about the internally planted explosives, two UNexploded "extremely sophisticated" bombs having been found in and recovered from the federal building.

More than that, I know what I have heard from two years of daily listening to the U.S. Patriot Movement shortwave, web, and AM-FM broadcasts. The evidence presented and issues discussed are totally at odds with a grass roots "antigovernment movement" being responsible for crimes being attributed by this author to Patriots.

What I hear on the Patriot broadcasts are a very large number of citizens with a strong sense of right and wrong. They are professionals who have discovered major crimes within government and corporate arenas, and have devoted their strength and resources to try to get what they know about these crimes to the people. In addition to presenting whistleblower testimony, the Patriot broadcasters use information from the international media (less censored than North American) and government and scientific publications, some obtained by Freedom of Information Act requests. The wire services often carry stories which are either under reported or totally blocked by retail major media outlets.

I promise you, visitor, that if you were in trouble with the corrupt justice system, you would be truly blessed if you had the U.S. Patriot Movement broadcasters on your side! I would gladly put my life in their hands if a life and death situation were to arise.

The U.S. Patriot Movement broadcasters are ANTI-VIOLENCE. They seek return to Constitutional and sovereign government by way of PUBLIC EDUCATION. These broadcasters shun people who call in and advocate violent rebellion. I, Eleanor White, do not know about the operations, motives, and goals of every person who uses the label "patriot". It is certain, as with any group of human beings, that there are some who would use violence, but the Patriot Movement, represented in their radio programs, is very much anti crime.

The section of the book [Terrorist Stalking in America](#), by David Lawson, references this book "Harvest of Rage". Having seen "Harvest of Rage", I can understand where David Lawson's misapprehension probably comes from.

I advise all my colleagues who are trying to expose the type of group stalking described in "Terrorist Stalking in America" to be aware of the type of disinformation presented in "Harvest of Rage", and if challenged, explain that "Harvest of Rage" does NOT present an accurate picture of the Oklahoma City bombing, and slanders the courageous broadcasters of the U.S. Patriot Movement.

Advise your challenger to LISTEN to the shortwave, web, or AM-FM Patriot broadcasts and see for themselves what their evidence, goals, and methods actually are. The brave U.S. Patriots deserve that much.

For a Patriot broadcast listening guide, please visit this page:

## **ADVANCED ELECTROMAGNETIC WEAPONS TECHNOLOGY-YET ANOTHER CLASSIFIED EXPERIMENT PROGRAM IN ADDITION TO RADIATION EXPERIMENTS.**

---

On Friday, June 28th, 1991, *The Plain Dealer* reported the plight of Delores Hejazi. The article reported that "A Parma woman was charged in the fatal stabbing of one daughter....She discussed the concerns she has had over the past two years of being repeatedly attacked and tortured by government agencies, beam weaponry and laser technology." Delores said that they were targeting her three children and that she wanted to spare them the pain and torture.

Delores made a statement to Harlan Girard of the International Committee for the Convention Against Offensive Microwave Weapons. This organization documents nonconsensual weapon testing research on human subjects with microwave technology, such as microwave hearing. (Microwave hearing is the hearing of voices, as in mental illness except that it is caused by a microwave signal). Hejazi described much more than reported in the newspaper account. She reported laser holes in her curtains and furniture and even on her skin. Her statement says that she complained to the Internal Revenue Service by letter and her problems abruptly started. She had nightmares of people dressed in black. Also, she stated that she experienced numerous coincidences and believed that a thought or mental suggestion had been implanted in her subconscious so that it coincided with a preselected incident the following day. For example, Delores would bake brownies and the following day would read in the newspaper horoscope that "you make brownie points with your supervisors..." Many of these numerous coincidences were threatening and out of the ordinary and added up to a pattern of harassment.

One explanation of how this could be done from a remote location is discussed in *Defense News*, January 11-17, 1993 in an article entitled "U.S. Explores Russian Mind-Control Technology".

It describes sophisticated military weaponry.

...the capability to control minds and alter behavior of civilians and soldiers may soon be shared with U.S. military, medical and political officials, according to U.S. and Russian sources....acoustic psychocorrection involves the transmission of specific commands via static or white noise bands into the human subconscious without upsetting other intellectual functions.

These are military weapons, designed to defeat the enemy and if Russia has this technology, the U.S. government would have to develop these weapons also. As disturbing as this technology would be during wartime, the related alleged experimentation on victims such as Hezazi is just as brutal.

It is plausible that electromagnetic technology is a current and very classified U.S. government capability, and that this computer-to-brain remote neural monitoring and direct brain communication is being tested on human guinea pigs such as Hejazi. Certainly many victims do believe that the capability to create computerized artificial intelligence thought patterns exists and that the U.S. government would not reveal a classified weapon testing program even if they had it. The National Security Act enables the U.S. government to prosecute any person who releases classified information. Additionally, there is evidence that the U.S. government has the electromagnetic technology to *create* mental illness in order to discredit any victim as in an intelligence operation. This would be a potent government tool.

Readers of this article may find it hard to believe that the U.S. government would do this. Governmental experimentation programs such as the radiation experiments exposed in late 1993, the Gulf War Syndrome in the early 1990s and now electromagnetic technology are coming to light after years of cover up. Victims face massive credibility problems such as the use of psychiatric records to discredit victims such as Hejazi. However, there is mounting evidence to the contrary. As seen, for example in the government denials around Gulf War Syndrome, history has shown that victims deserve the benefit of the doubt. Victims today are alleging illegal electromagnetic weapon experimentation and a thorough investigation would be prudent.

## **PROBABLE CLASSIFIED ELECTROMAGNETIC TOOLS FOR DOMESTIC INTELLIGENCE OPERATIONS AND THE TESTING OF THIS CAPABILITY ON U.S. CITIZENS**

Martin Luther King, the famous civil rights leader in the 1960s, was a target of an illegal FBI and CIA domestic intelligence program. The FBI's Cointelpro, counterintelligence program was designed to disrupt groups and neutralize individuals deemed to be threats to domestic security. From late 1963 until his death in 1968, Martin Luther King, Jr., was the target of an intensive campaign by the FBI to neutralize him as an effective civil rights leader. No holds were barred. The FBI gathered information about Dr. King's plans and activities through an extensive surveillance program, employing nearly every intelligence-gathering technique at the Bureau's disposal in order to obtain information about the private activities of Dr. King and his advisors [to] completely discredit them with executive branch officials, congressional leaders, foreign heads of state, American ambassadors, churches, universities and the press.<sup>1</sup> Victims today are claiming government harassment in the same way as Dr. King but with the new electromagnetic technologies.

Tragically, Hejazi reported numerous physical symptoms which she attributed to "government agencies" such as the CIA. Hejazi stated that "[my] own nervous system was used and I felt what it is like to be electrocuted. If I had had a revolver, I would've taken my life for fear of being made to feel it again." Hejazi described the pains as being unbearable, causing her to feel "like bacon frying in a pan," or as though rats were chewing at her feet" (*The Plain Dealer*, December 21, 1991). This remote torturing would eliminate the need for threats of loss of a job, ruining a political career, or threats of physical harm. This technology leaves no easily documentable proof, unlike physical scars, poison or a paper trail. According to declassified government documents, one goal is to reliably get a victim to commit suicide with

no tie to the U.S. government. It is clear that the motives of the U.S. government and potential capabilities of this technology need to be further examined.

It is also a matter of record that Hezazi documented car and telephone irregularities and I have also experienced similar inexplicable problems with any electrical system, television or radio at any location. Like Hezazi, I experienced a statistically higher than normal amount of coincidences; for example I would eat sardines in the privacy of my home the day before and an empty can of sardines would be in my path at school the next day. These experiences have been documented with 24 hour video tapes. This is repeated several times a day and is not a figment of the imagination. A University of California at Davis statistics professor compiled a report of this effect. Many victims have verified this odd cluster of similar symptoms.

## **GOVERNMENT RECORDS REVEAL THE MEANS AND MOTIVE FOR DEVELOPMENT OF ELECTROMAGNETIC INTELLIGENCE TOOLS AND WEAPONS**

Evidence of electromagnetic technology as an explanation for Hezazi's complaint are found in numerous government publications. The 1996 U.S. Air Force Scientific Advisory Board report is almost an exact match of electromagnetic technology to Hezazi's testimony.

The literature regarding the interaction of biological processes with electromagnetic fields is growing at a rapid rate. ...[T]he development of electromagnetic energy sources, the output of which can be pulsed, shaped, and focused, that can couple with the human body in a fashion that will allow one to prevent voluntary muscular movements, control emotions (and thus actions), produce sleep, transmit suggestions, interfere with both short-term and long-term memory, produce an experience set, and delete an experience set. This will open the door for the development of some novel capabilities that can be used in armed conflict, in terrorist/hostage situations, and in training.

This report further demonstrates that Hezazi's electrocution experience could be engineered with the capabilities of military technology on the drawing board today. This is the official record and it is not known what is classified..

...[T]he concept of imprinting an experience set is [speculative, but nonetheless], highly exciting. Modern electromagnetic scattering theory raises the prospect that ultrashort pulse scattering through the human brain can result in reflected signals that can be used to construct a reliable estimate of the degree of central nervous system arousal. The concept behind this "remote EEG" is to scatter off of action potentials or ensembles of action potentials in major central nervous system tracts...[in order to] duplicate the experience set in another individual"

This U.S. Air Force document also offers an alternate explanation to the diagnosis of schizophrenia by Hezazi's psychiatrist.

It would also appear possible to create high fidelity speech in the human body, raising the possibility of covert suggestion and psychological direction. When a high power microwave pulse in the gigahertz range strikes the human body, a very small temperature perturbation occurs. This is associated with a sudden expansion of a slightly heated tissue. This expansion is fast enough to produce an acoustic wave. If a pulse stream is used, it should be possible to create an internal acoustic field in the 5-15 kilohertz range, which is audible. Thus, it may be possible to 'talk' to selected adversaries in a fashion that would be most disturbing to them.

## **GOVERNMENT EXPERIMENTATION USING ELECTROMAGNETIC WEAPONRY CLAIMED BY GROWING NUMBERS OF U.S. CITIZENS**

Victims report being remotely monitored 24 hours a day no matter where they go, by government electromagnetic and satellite technology. In this way, many baseline studies could be done in a manner similar to radiation experiments. Both mind control researchers and victims have evidence that this is U.S. government weapon testing experimentation which began in the 1960s for political and military purposes. The government bureaucracy for radiation experiments would most likely be the same as for alleged electromagnetic experiments. Mr. Harlan Girard is a well-established researcher. In 1989, the FBI refused Mr. Girard access to his own files on the grounds that the files are "exempt from mandatory release on the basis of 5 U.S.C. 522 (b)".<sup>2</sup> This section of the U.S. Code is applicable to documents "to be kept secret in the interest of national defense or foreign policy." The National Security Act is impossible to overcome even when trying to document illegal government experimentation.

Electromagnetic technology was used to discredit Hejazi and to enable indiscriminate experimentation on myself and other victims. No one who could help Hejazi believed her "crazy" complaint that the government was "bombarding her with laser beams". Now it seems that the U.S. government does not have to limit their experiments to powerless or poor victims as *anyone* is a potential guinea pig or target. Martin Luther King was tape recorded in sexually compromising positions and received threatening notes and now the U.S. government may be discrediting people with new technologies. Examine the similarities of the cases, laser burns in the Hejazi case, the numerous video recordings of inexplicable electrical, phone and car problems in my case and descriptions of psychological harassment and torture in scientific papers and declassified government documents. Tie this to a possible classified U.S. technology capability to harass and mimic mental illness. Evidence is available to prove that this is an illegal testing program of a variety of U.S. intelligence high tech tools.

There is a strong link between the allegations of victims and the current development of electromagnetic technology, (see footnote <sup>3</sup>). Delores Hejazi died of throat cancer and never found justice for the heinous crimes she endured. Her story needs to be told. Victims are organizing and maybe they can prevent this human rights abuse from happening in the future so that the lessons from radiation experimentation will be assured. More documentation is available upon request and for networking on this issue, please see footnote 3.

## Eleanor White's Hall of Heroes

Freedom's Angel: Dr. Rauni Kilde, formerly the Chief Medical Officer for Lapland (Northern Finland), is one of our bravest professional supporters. She was given an award from CAHRA for her appearance on a now-unavailable TV show by Transmedia Productions in London, England. Dr. Kilde has been harassed constantly since speaking out, and travels the world lecturing on covert government crimes including electronic harassment, organized stalking, and mind control which is part of electronic harassment.

In 1971, stolen FBI files exposed the government's domestic spying and harassment of citizens program. The break-in by still anonymous anti-citizen harassment and brutalization activists took place on March 8, 1971. After more than a decade of people innocent of any crime having their lives ruined by criminals working for the FBI, and at extreme personal risk, these activists broke into the Media, Pennsylvania FBI office and stole documents proving the FBI was responsible for numerous criminal acts. The candle above represents the heroic shining of light into the darkest recesses of government crime, this one called COINTELPRO.

The Washington Post broke the first story on March 24, 1971.

This is a stepping stone of profound significance in the fight to expose current day version of COINTELPRO, the continuing ruination of lives of innocent citizens by way of organized

stalking and electronic harassment.

God bless and keep those brave anonymous activists!

Canadian Member of Parliament David van Orlikow essentially blew the lid off a horrifying involuntary experimentation atrocity initiated by the U.S. government, with participation by the Government of Canada, resulting in the Church Committee hearings in the early 1970s. This program was MKULTRA, and involved 149 sub-projects covering far more than the popularized "LSD trips". David's wife Velma fell into the clutches of arch-criminal psychiatrist "Dr." Ewen Cameron, who severely damaged Velma's life at McGill University.

The Orlikow's revelations resulted in a successful law suit against the CIA on behalf of many victims of these Nazi-like atrocities. Gradually, a few of the victims are being compensated, an another major step towards exposing current-day organized stalking and electronic harassment, essentially "MKULTRA in the home," was accomplished largely thanks to the van Orlikow's efforts.

Perpetrator Children Who Refuse a Life of Crime

On some occasions, organized stalking and electronic harassment targets will be able to observe their harassers as the harassers go about their lives, outside of their harassment operations. OS/EH has been growing since the COINTELPRO and MKULTRA days, and the

perpetrators are observed to be multi- generational.

In some of these family harassment operations, OS/EH targets have observed that some of the harasser family children have opted out of the "family business." These opted-out children have in fact chosen the life of targets.

I honour these children who chose doing what's right over a comfortable career in harassing others. Their heroism is on a par with eastern bloc citizens who resisted their communist oppressors. May God bless, uplift, and reward these perpetrator children who have chosen a very difficult life, over one of crime.

[Greg Szymanski](#), heroic journalist at the level of reporter Victor Riesel (blinded by acid as a result of his exposing organized crime activity.) Greg is the first journalist to consistently and diligently conduct a GENUINE investigation of organized stalking, electronic harassment, and the crimes which made today's OS/EH possible, government mind control and dissent suppression programs like MKULTRA and COINTELPRO. God bless and stay close beside you, Greg!

Like Rachel Corrie, Malachi Ritscher was an activist who gave his all for his cause - in this case, protesting the slaughter of over a million innocent Iraqis based on outright lies which started the U.S. invasion of Iraq. As a result, a literal horror story awaits the living Iraqi people as the result of tons of "depleted" uranium dust spread so thickly in their landscape from U.S. ammunition that it will kill them and their children slowly, painfully, by cancer and birth defects, for the next 4 million years.

On November 3, 2006, in Chicago, Illinois, USA, Malachi Ritscher immolated himself, dying a horrifyingly painful death for atrocities ignored by the media and most people. His story did not get media attention.

From his suicide note: "... if I am required to pay for your barbaric war, I choose not to live in your world. I refuse to finance the mass murder of innocent civilians, who did nothing to threaten our country ..."

U.S. Army First Lieutenant Ehren Watada, in June 2006, refused orders to deploy to Iraq. He said: "My participation will make me party to war crimes."

"I feel that we have been lied to and betrayed by this administration. It is the duty, the obligation of every soldier, and specifically the officers, to evaluate the legality, the truth behind every order including the order to go to war."

This brave young officer faces court martial for telling the truth. May he serve as an example for all who respect truth, freedom and justice.

U.S. Army Sergeant Kevin Benderman wrote: "Having watched and observed life from the standpoint of a soldier for 10 years of my life, I always felt there was no higher honor than to serve my country and defend the values that established this country. My family has a history of serving this country dating back to the American Revolution, and I felt that to continue on

in that tradition was the honorable thing to do."

With this background, and having served in Iraq, Sgt. Benderman refused a second deployment, as he felt the Iraq invasion, based on knowingly false "intelligence" about an alleged Iraq "weapons of mass destruction" program, was immoral.

U.S. Army Specialist Michael New's web site, speaking about his decade-long legal battle, reports: "10 October 1995, the day his unit was supposed to be in formation in the U.N. uniforms, Michael showed up in his regulation U.S. Army uniform." However, some 549 U.S. Army soldiers did show up in formation, wearing a United Nations emblem on their baby-blue caps and U.N. patches on their right shoulders! Michael was immediately removed from the parade ground, where he was informed that he would be facing a court-martial. He was read his rights. And this began the chain of events that continues sending shock waves around the country and the world."

At issue is whether U.S. servicemen, who have sworn to uphold and defend the U.S. Constitution against all enemies foreign and domestic, compels them to serve under a flag other than that of the United States. Michael New has lost a number of legal challenges, however, this may reflect more on a justice system increasingly ignoring the U.S. Constitution, than the law as set down in the Constitution.

[BRAVE POLICE OFFICERS](#), who have stated to targets of organized stalking and electronic harassment that their departments are aware of organized stalking, and are actually under official orders to IGNORE complaints of multiple perpetrator stalking and electronic harassment. I pray their colleagues will increasingly step forward and break the decades-long silence.

Dr. Doug Rokke, formerly in charge of the U.S. Army's (NOT) "depleted" uranium weapons cleanup in Iraq, has become a very public activist who has the credentials to tell the "depleted" uranium story LIKE IT IS. Dr. Rokke's on-site work in Iraq has resulted in his getting cancer from exposure to DU several times. Some of his co-workers have died from exposure to DU residue (dust form). DU has a half life of 4 BILLION years, and the suffering of Iraqi civilians has ONLY BEGUN. Ditto for the Balkan countries. Thousands of TONS of DU ammunition have been expended to date, and there is no way to get the dust cleaned up, and no way to extract it from the lungs, once inhaled.

Ohio high school coach Dave Daubenmire, former green beret Lt Col James "Bo" Gritz and 45 others including children were ARRESTED at the Woodside Hospice in Pinellas Park, Florida, between March 18 - 31, 2005, for the CRIME of trying to get WATER to government mandated torture victim [Terri Schindler](#). Dying patients who are denied water to

hasten death are allowed ice chips in their mouths to ease the pain caused by denial of water. Terri's "guardian", adulterous "husband" michael schiavo denied even the comfort of ice chips as Terri took two weeks to die of thirst. This, after denying even brushing her teeth or letting her window shade being lifted for a DECADE before her death.

Terri was NOT terminally ill - she suffered from brain damage, the cause of which may have been foul play on the part of michael.

The day before Terri died, she LIFTED HER ARM in RECOGNITION of two old friends who visited her during her judicially mandated execution. Stories that Terri was vegetative are outright LIES, and the LYING MEDIA are every bit as responsible for this government torture as are michael and criminal judge george greer, whose torture order was illegal by Florida and federal law.

The first two who attempted to get water to Terri reported she was wide awake and, even as the police rushed to wrench them out of Terri's room, Terri clearly recognized they were there to give her water. This is one of the most horrible cases of government torture of an innocent citizen in human history! Those 47 people who tried to relieve Terri's suffering are GENUINE HEROES!

Rachel Corrie was the 24-year old woman who stood up against the oppressive government bulldozing of Palestinian homes in Israel. She gave her life voluntarily, standing fast as a government bulldozer ran over her, for the cause of human rights. I only hope on my best day I can be one one-millionth the activist she was! (Note: I consider her a hero as an \*activist\*. This posting is in NO WAY a comment on the Israeli-Palestinian issue.)

Gary Webb was a California-based journalist who exposed major government crimes, for example, U.S. intelligence services being involved with importing and sales of illegal drugs, apparently to finance "black operations." In 2004, Mr. Webb was found to have "committed

suicide" by TWO gunshots to the BACK of his head. You figure that out. As a target of government- ignored and possibly government backed harassment, I consider journalists of Gary Webb's caliber heroes of the highest order.

Russian scientist, Dr. Igor Smirnov, is widely known for his work in subliminal influencing and character assessment using subliminal stimuli, in short, in "mind control." After losing his funding from the post-Soviet Russian government, Dr. Smirnov received visits from Russian organized crime asking for technology to help their unethical/illegal business ventures. Dr. Smirnov REFUSED!

Von Stauffenberg, Claus Philip Schenk (1907-1944) was the youngest of three sons of one of the oldest and most distinguished South German families. As a German Colonel, he placed the bomb at Hitler's "Lair" at Rastenburg, Poland which nearly killed the consummately evil dictator. Would definitely be fighting with us if alive today.

Pastor Dietrich Bonhoeffer was a Lutheran minister before and throughout World War II in Hitler's Germany. He absolutely refused to allow any trappings of the Nazi state in or on his

church, and refused to preach Nazi praises or doctrine from his pulpit. He managed to survive through most of the war, being hanged just one month before the end of the war. This man was a genuine CHRISTIAN, and would, if alive today, not be telling organized stalking and electronic harassment sufferers to stop bothering him, as has happened with all "Christian" organizations to which we have appealed for help.

Raoul Wallenberg, (1912-1947), Swedish diplomat who walked right past Nazi troops loading death camp trains, passed Swedish identity papers to more than 20,000 Jews and successfully rescued them, at extreme risk to his life. Wallenberg was captured and imprisoned by Soviet troops at the end of the war on false spy charges, and died in captivity. No doubt, this hero would be helping us if he were alive.

John Brown was an American Civil War hero, who made the cause of freeing the slaves a personal crusade, for which he ultimately paid with his life at Harper's Ferry, Virginia. Although his business and family ventures were a shambles, he never wavered in his fight for true freedom. He was an activist ahead of his time who would, if alive today, be one of the most outspoken against organized stalking and electronic harassment atrocities.

Conductor Levi Coffin, and the others, of the American Underground Railroad.

Conductor (participating home owner) Levi Coffin, of Fountain City, Indiana, provided food, shelter, and a safe house (his own), just as thousands of other Underground Railroad heroes did prior to the Civil War. These conductors risked their lives helping black slaves succeed in reaching free states and Canada. Armed fugitive slave hunters scoured the northern territories, and there was always the risk of legal action against them.

These conductors sacrificed immense amounts of money funding their safe houses, and two-horse wagons to move the fugitive slaves at night through the very rough conditions of the pre-Civil War United States, in all seasons.

Any time I think I have it rough as a target of organized stalking and electronic harassment, I only have to think of the heroes of the underground railroad, along with the heroes of anti-Nazi and anti- Soviet resistance.

For anyone who knows American history, Captain Nathan Hale, the school teacher in civilian life, needs no introduction. This brave young man, with promise of a life and a career, and before he was hanged, said "I regret that I have but one life to give for my country."

Would only God let his spirit walk among us who struggle now to take back the freedom that government secrecy, and covered up government crime have stolen from current and all future generations, until this rot at the very core of formerly democratic nations is exposed and purged.

## **(German) HF Detector**

**Recommended as "best" by [The Power Hour](#) guest  
Mr. Jesus Mendoza, March 3, 2004, who is an in-home  
government (admitted) microwave "surveillance" victim**

---

NOTE: You can contact Jesus (pronounced HAY-soos)  
at this email address:

[jesusmm7@hotmail.com](mailto:jesusmm7@hotmail.com)

Or here:

Mr. Jesus Mendoza  
2202 East 28th St.  
Mission, Texas 78574  
956-519-7140 (often around 10 pm only)

One U.S. based vendor (who IS FRIENDLY to our cause):

<http://www.lessemf.com>

HF DETECTOR

#### Full Featured High Frequency Meter & Low Price

HF Detector is very sensitive and can measure high-frequency analog and digital radiation, from 3 MHz to 3 GHz and is ideal for measuring mobile telephones, radio phones, transmitters, microwave ovens, etc.

The HF-Detector can cope with all customary radio telephones as well as all models of mobile phones available worldwide. Also sensitive enough (range of 1.2 picoW/sqcm to 12 microW/sqcm) to measure radio or transmitter masts (GSM transmitters, radio, television, rail, air and mobile radio up to a few hundred meters away). Due to its far-reaching frequency range, it can even be used as a Bluetooth-tester!

The field strength is indicated by both a proportional sound signal as well as 10 LED display. Has 4 sensitivity ranges and boasts a 1dB accuracy, (but don't count on it). Switch enables either peak or average mode so digital signals can be properly processed. Earphones included and, get this:

The unit can be connected to your PC (with optional free software, get cable listed below) to provide spectrum analysis!

Good information on current safety standards included in the detailed manual

(44 pages). Use one 9V battery (included). Made in Germany. 10 year warranty. Note: this is the professional version and can be slightly complicated for the beginner to use. Fairly heavy battery consumption. Consider getting the AC/DC 9V adapter.

HF Detector (Cat. #A134-HF) ..... \$149.95 US dollars

Connector Cable for downloading data from the HF Detector to your PC or Laptop: 6 foot long, 3.5 mm mono male to 2.5 mm mono male.

Connector Cable (Cat. #A134-cable) ..... \$7.95 US dollars

ELEANOR WHITE'S STANDARD WARNING: WHEN THINKING ABOUT THE PURCHASE OF **\*\*ANY\*\*** DETECTION OR COUNTERMEASURE DEVICE OR SERVICE, **\*\*ONLY\*\*** SPEND MONEY YOU CAN REALLY AFFORD TO LOSE! The perps have a wide range of advanced equipment and this detector or any other device has so far proven defeatable when the perps really want to do so.

## **Hiding Multiple Stalker Harassment**

**by Deborah S.  
April 27, 2004**

---

One of the most perplexing aspects of multiple stalker harassment is the ease with which it can be disguised so as to appear no crime has been committed. It is extremely difficult to EXPLAIN this to people who have never been targetted by a stalking group. Here below are two very convincing examples provided by multi stalking target Deborah S. which we can all use when we are forced to justify our claims. THANK YOU, Deborah! Keep on passing us such excellent verbal ammunition!

---

In multiple-party harassment, the offending actions of any one individual can become more and more subtle and difficult to name as specific incidents. Every one specific action is part of a coordinated whole.

The African-American high school student who goes to a racist all-white school might experience it this way: four students position themselves at points in the student's classroom route, each one uttering a syllable. One says, FUH, second says KING, next one says NI, next one says GRRR. Put together, these syllables say something very hurtful and destructive to that student.

In multiple-party harassment, the four may switch syllables, or they may have 40 white students taking turns each day saying these syllables over a two-week period. There is little that a principal or other investigator can do to discipline these students unless he is able to break the conspiracy, which may not happen. What is more likely is that it is the targeted student who will experience being disciplined - it is the targeted student who will lose control at some point, and unfortunately, that is the point that disciplinary action can be taken.

Let's say after three months of FU-KING-NI-GRRR he can't take it any longer and shoves the second guy. The principal asks him, "What is it that he said that upset you so?" The student tells him. The principal says, "Wait - You're telling me you shoved him because he called you King???" The student tells him "No, no, there is more to it than that." The principal tells the student he has anger issues, is imagining things, and the student, who has endured three months of multiple-party racial slurs with no recourse, is then given detention or other disciplinary action on top of it for not being able to handle his anger.

So the injustice here is that a victim of racial hatred then becomes a victim of the inability to understand why this multi-party harassment was able to make him lose control.

Here is another example. Imagine a female college student who has been raped by a really popular male student. The male student wore a purple shirt on the night of their "date." When the victim files charges, a lot of students express their support for the popular male by wearing purple shirts. They position themselves wherever she goes, by wearing the purple shirt. As a victim of a psychological trauma, the symbolism is not lost on her, and each time a purple-shirted student blocks her way or sits in front of her or follow her into the restroom she

is reminded of her humiliation and violation. If it continues, she will either drop out or psychologically collapse. This is the power that the symbol has over her.

# Targeting the Human with Directed Energy Weapons

**Dr. Reinhard Munzert**

6. Sept. 2002

**Original link:** <http://www.mikrowellenterror.de/english/mw-weapon.htm>

New arms threaten and destroy lives in strange ways. Directed energy weapons are among the high-tech arms of the century. They hurt and kill with electromagnetic power. Microwave weapons can be aimed at computers, electronical devices and persons. They have strong physical and psychological effects and can be used for military and terrorist activities. These weapons are also part of crimes (in Europe) that almost nobody knows except the victims and the offenders. Until now they make the perfect crime possible. No doubt, these weapons have a terrible future.

## Key Points

- Directed Energy Weapons (DEW)
- DEW and Crime
- Perfect Crime?
- DEW and Terrorism

## Topic 1

- Manipulated Microwave Oven
- Magnetrons and Generators
- Intelligent Antenna Systems

## Topic 2

- Anti-Electronics Weapon
- Anti-Personnel Weapon
- Psychological Effects

## Topic 3

- DEW and Crime
- License to Kill
- Perfect Crime
- Mental Strength & Fighting Back

## Topic 4

- DEW as Terrorist Weapon
- Unseen Terror Attack

- Prevention and Protection

## **Summary**

- New Threats and Dangers
- Crime and Terrorism
- Recognizing and Knowing
- Prevention and Elimination
- Future Weapon! -Terrible Future?

## **MICROWAVE WEAPONS**

### **New Technology in Crime**

#### **Activities and Sources**

There is a new, effective weapon for criminals and terrorists. Law-breakers often misuse modern technology. Through the illegal usage of innovative high-tech weapons, people are not "shot", rather their living quarters are bathed in (high frequency) electromagnetic waves for a length of time. Directed Energy Weapons (DEW) are mostly intended for military purposes (U.S. Air Force, Russian and Chinese armies). High-tech company Raytheon states about DEW: "We believe they are a critical element of how ultimately wars will be fought. HPM (High power microwaves) is the most mature right now" (in Fulghum & Wall 2002).

The renowned German newspaper "DIE WELT" acknowledges microwave weapons as arms of the 21st century. In another German newspaper, Süddeutsche Zeitung, a weapons expert has recommended the police to procure microwave (MW) weapons for police use. Considering what certain criminals know about MW weapons, they have a significant advantage over the police until now. This puts the victims in extreme danger.

A primitive variation of a MW weapon would look like this: A microwave oven from the kitchen with the protective shielding removed from the door and replaced by a metal funnel. And then the waves can get through walls (Pictures 1, 2, 3).

The effects of the MW beam on the victims include extreme weariness, headache, irregular heartbeat, diarrhea, painful testis, damaged nervous system and internal organs, burned skin and eye damage. Later effects include blindness, heart attack, stroke and cancer. In the last months by some victims, cancerous tumors have been diagnosed.

In addition to that, victims (through intrigue and defamation) are seen as psychotic and dangerous; thus, they are completely helpless. At the same time, the new weapons (for certain contractors) are tested under ordinary circumstances and constantly improved.

HPM crimes are a new kind of crime with some very new characteristics. The

International Union of Radio Science emphasizes in a resolution of 1999 on Criminal Activities using Electromagnetic Tools: "The fact that criminal activities using electromagnetic tools can be undertaken covertly and anonymously and that physical boundaries such as fences and walls can be penetrated by electromagnetic fields."

Expert Pevler stresses: "The development of high-power microwave (HPM) weaponry, and its proliferation into subversive organizations, offers the means to commit the 'perfect crime'. HPM attacks typically leave no residual evidence and their effects can range from nuisance to catastrophic" (1997).

The HPM-weapons that the high-tech gang uses supply continuous or pulsed waves over long periods of time - especially in the night - from cars or vans or buildings around the target/person(s). They use magnetrons, microwave-generators, amplifiers, integrated systems. In addition they apply through wall imaging methods. There are already over 40 known victims in Germany, some of them even have been attacked while in hospital. But the police doesn't understand these new weapons.

Besides this the criminals use tactics of information warfare: Know all about the victims, let them know nothing about you, information dominance, disrupt the communication systems of the victims.

The criminal network has at its disposal plentiful first class technical know-how and high quality equipment. That assures high efficiency and precision strikes and enables to operate from cars or vans. The MW generators/transmitters can be camouflaged in an attaché case or hidden in a small suitcase.

Only through cooperative work between electronic specialists and physicists have we been able to shine a revealing light on this special high-tech criminal activity. For experts: The (pulsed) waves of two or more transmitters [MW generators] interfere in the target zone, and through that, strengthen their effects. There are also parabolic antennas modified to transmitters. Besides this, intelligent (adaptive) antenna systems (numerous small transmitters connected, instead of few large ones; for example hidden in parked cars) will be used. Sometimes frequency hopping is employed. These methods work over several hundred feet, if everything is well adjusted.

We could find out where (electronic) components for highly potent MW weapons or whole systems (pictures 4, 5, 6) can be bought legally.

The criminals follow a double strategy: One way the victims are weakened, injured, tortured and intimidated. On the other side, the victims experience extreme, unbelievable things; almost no one can believe their reports. Most interpret the information from the victims as chimerical thinking. Some experts who work for the German Army or Nato know very well about MW weapons, but secrecy keeps them from talking too much about in public.

In several German cities there are complaints of serious physical injury. One attorney represents the interests of many victims. About 40 victims have built a

community of interests. We are aware of many cases with amazing similarities that have been reported in the last few months. We have names and addresses of many victims and the circumstances of the cases. We also have the names and addresses of some perpetrators.

In some cases, the lifestyles of the criminals are well known to us. Similar to terrorists, many pretend good citizenship or student lifestyles to cover their crimes. Conventional criminal activities, (i.e. burglary) are undertaken by normal gangsters or former members of the Stasi (which was the secret service of former GDR). In this network, they have division of labor and a support structure that includes foreigners as well.

Terrorists could use MW as anti-electronics weapons too. With HP microwaves, they can attack the electronics of computers, cars, airplanes and so on successfully [see the other papers of the Workshop W8]. They can use microwave weapons (radio frequency weapons) to damage electronic systems in an unseen attack with all those bad consequences.

Additional points to be covered in the workshop: Detection of microwaves and protection against attacks.

All that has nothing to do with MW beam fright, but is criminal high-tech forced on the people. It is frightening that these weapons are being increasingly used by criminals and terrorists.

## **Advisory Committee on Human Radiation Experiments**

### **1995 Hearings**

#### **Secret Experiments by the United States Government on Involuntary, Unwitting Citizens by Injection and Feeding of Radioactive Materials**

The purposes of this 1995 testimony transcript posting are:

- To show the public that brutal, painful, life-destroying and sometimes fatal experiments were carried out, involuntarily, on innocent U.S. citizens without their knowledge. This supports the assertions by mind control victims of both the [MKULTRA era](#) and the current in-home/in-community psycho-electronic era that this is not only possible but has been proven and admitted to by government.
- To present some of the testimony at the hearings from mind control victims of the MKULTRA era who were allowed to testify at the 1995 radiation hearings, in particular, the torture of CHILDREN which was omitted by the U.S. Senate hearings on MKULTRA.
- To show that there is an urgent need for LAWS and political will to set up public controls over all classified human experimentation to prevent such atrocities in the future.

There are no such controls in place, and the United States has in fact EXITED the World War II [Nuremburg Protocols](#) which were supposed to prevent secret human experimentation in the future.

Senator John Glenn tried to replace the Nuremburg Protocols with his own Senate bill S.193, which died due to inaction after his being given a space shuttle ride and retiring. There are at present NO public oversight agencies monitoring CLASSIFIED (secret) human experimentation and this posting is to trumpet the need for this type of protection most urgently.

# P R O C E E D I N G S

1:00 p.m.

## Opening Remarks

DR. FADEN: Good morning. Excuse me. I'm used to the meeting starting in the morning. Good afternoon. We have Phil Caplan from the White House to open the meeting, please, officially.

MR. CAPLAN: Good afternoon. As the designated federal official for the Advisory Committee, I declare this meeting open.

DR. FADEN: Thank you. Thank you, Phil. I can't decide if we're happier to see him in the beginning, when the meeting starts, or at the end when he closes it. When is he more welcomed. Well, welcome to everyone here. This is the 12th meeting. Is it the 12th meeting? Yes, the 12th meeting. Okay. Scary thought. This is the 12th meeting of the Advisory Committee on Human Radiation Experiments. Welcome, everyone here. We've had a change of venue. So, I trust everybody could find The Madison. We were almost getting to feel at home in the last hotel we were in, and we're now here.

We have a very packed agenda. The meeting begins this afternoon and goes through all day Thursday and all day Friday. It's been typical for me to start the meetings with a kind of quick overview of what we were hoping to accomplish in this particular meeting, and let me just do that, run down and go straight to our important subject for today, which is Public Comment.

One objective of today's meeting, as is true for all our meetings and for our small panel meetings throughout the country, is to hear from members of the public, anyone who wishes to tell us things that they think we need to hear. This is very important to us, always has been very important to us. We will hear later this afternoon a report from Nancy Oleinick, and Henry represented the committee at a small panel meeting at Knoxville, and we'll hear the results of that later this afternoon, and, in addition, we have given over the bulk of this afternoon to a public comment period, and we have a

substantial list of people who have taken time out of their lives to come and talk to us, and we are grateful that they have done that, and we are looking forward to hearing from all of you.

So, this afternoon is pretty much given over to our hearing what members of the public want us to hear. We will have a public comment period, and Nancy and Henry will give us a report of what was heard at the Knoxville meeting, and then we will begin a discussion of how we're going to tackle the actual processing and thinking, committee writing or responding to drafts of the final report as they're emerging.

So, we're going to do some housekeeping basically this afternoon, if we have time, and clearly there's a possibility that we may run short.

We will also hear tomorrow afternoon -- tomorrow morning, excuse me, from Senator Wellstone, who will be making some comments to us based on some events that have occurred in his state that he thinks bear on the work of the committee.

After that, the rest of the meeting, Thursday and Friday, is given over to this committee's deliberations. We have a real shortage of time left, and we have some very tough things that as a committee we need to deliberate together.

We will have two reports from the Contemporary Projects that are on-going, and they will occur Friday morning. So, we will be updated on the progress of the subject interview study and the research proposal review project, but -- and we will also hear on Thursday afternoon from the chair of a committee being sponsored by the National Academy of Sciences, looking at radiation-related research in the state of Alaska in the '50s.

We heard a little bit about it from some public representatives of the North Slope Borough in Alaska, and we will be hearing more about that Thursday afternoon, but with the exception of the items that I just mentioned, we're going to spend the bulk of tomorrow and Friday deliberating about possible recommendations that this committee may wish to make, and I want to signal to our members of the public that are here and to ourselves that we should realize that these are discussions.

We are not going to reach any conclusions about recommendations yet. That would be premature. It would clearly be inappropriate or imprudent, I'm not sure what the right term is, for us to be finalizing recommendations when we haven't yet completed our analyses.

So, the idea here is that these are recommendations, drafts of recommendations, both forward-looking and backward-looking recommendations, for the committee to begin to -- we have been -- for the committee to continue to debate and discuss and examine, so we can see what recommendations look promising, what recommendations should be further developed, what additional information we might want to review before we can conclude as to whether we want to have this be a recommendation of the committee or not.

So, we will not be calling for closure, that is, will the committee recommend this, yes or no, but for debate and discussion and deliberation by committee members about the recommendations, and we will obviously hold off and finalize our recommendations only after we've deliberated as much as we can our analyses of the task before us.

So, that said, we have one piece of business before we move immediately into the Public Comment period, and that is approval of the minutes of the February 15th to 17th meeting. Approval of Minutes of February 15-17, 1995, Meeting

DR. FADEN: Are there any comments or questions or corrections for the record of the minutes of the February meeting?

(No response)

DR. FADEN: Thank you. Is there a second to the approval?

COMMITTEE MEMBER: Second.

DR. FADEN: All in favor.

(Chorus of ayes)

DR. FADEN: Any opposed?

(No response)

DR. FADEN: Thank you. The minutes of the February 15th to 17th, 1995, meeting then have been approved. I just do that a little bit out of order to get it out of the way. I know that's one thing that was done.

Public Comment

DR. FADEN: With that, we're going to move to Public Comment period. It looks as if we have nine people who are here. We have asked that our public presenters try to keep their comments, if they possibly can, to 10 minutes. That leaves the committee opportunity to ask the presenter questions, and this has always turned out to be very important to the committee. It allows us to learn more from the person than we might otherwise. We appreciate that sometimes it's extremely difficult to keep important comments to 10 minutes, but we would express our appreciation for those of you who are able to do so and also as a courtesy to the public commenters who come after you. So, as much as possible, if you can keep it to 10 minutes, that would be terrific.

I guess I should just start. Our first public presenter is Dr. Ernest Sternglass. Is Dr. Sternglass here? Thank you for coming. Would you please come to the table? And we would ask you to speak into the microphone so that your comments can be recorded for the record.

DR. STERNGLASS: Might I be permitted to stand over there, because I have a few overheads to show?

DR. FADEN: Can we -- we need you to speak into the mike. So, if you can lift the mike up, that would be fine.

(Pause)

Statement of Dr. Ernest J. Sternglass

University of Pittsburgh

DR. STERNGLASS: Dr. Faden and distinguished members of the committee, I appreciate the opportunity to appear before you today. My remarks will address primarily the question of radiation doses and health effects of the radiation exposures documented in your work so far, which is the area in which I've earned -- carried out extensive research during the past three decades as indicated in my vitae.

In fact, I spent essentially the last 30 years of my life trying to reduce doses in medical procedures, including radioisotope and x-ray procedures, at the University of Pittsburgh, School of Medicine.

This subject is relevant to the question of

compensation for both individuals who were exposed in individual experiments as well as for large groups of people living near the facilities from which experimental releases took place. My testimony also bears on the policy recommendations your committee has been asked to make with regard to future actions by our government involving both individual human experiments and releases of radioactivity into the environment, since there's evidence, as I will present, that government agencies have continued to cover up the three -- the actual true doses from environmental releases, and the serious effects of such low-dose exposures. I will not try to read the entire testimony.

DR. FADEN: We have it as part of the record.

DR. STERNGLASS: Right. And I will just simply summarize the essential points for you, using a few overhead projections to do this in a few minutes. Basically, the argument that I'll be presenting is that we have grossly under-estimated without realizing it how chronic exposure over long periods of time due to internal doses from long-lived Radium class, not the ones we use in medicine, which are extremely short-lived and mainly give off penetrating radiation, but beta emitters that stay in the bone like Strontium 90 for a long, long time, have an enormously greater effect than we were led to believe on the basis of our experience with Radium, which was the only material for which we had any human data from the Dial workers that you know about back in the early '20s and '30s.

The trouble is that Alpha particles have a very short range of bone, and therefore stick in the bone and do not reach the bone marrow to the same degree as has been experimentally observed as a beta rate from fusion products, and these did not exist on earth before the bomb, and this is really the basic reason why we under-estimated the effect.

We thought we knew what Radium was doing. We thought we knew what Cosmic rays were doing. We thought we knew what x-rays were doing, and we even thought we knew what the short flash of the bomb at Hiroshima had done.

All those studies, including hundreds of studies on animals, all those studies have to be done at high enough doses to be able to see an effect. You cannot have a million mice and give them a hundredth of a rad and expect to see anything. So, of necessity, all work had to be done at high doses and high dose rates, and not until 1972 was it discovered quite by accident, by a Canadian physician and researcher by the name of Dr. Abraham Petgow, working in Penowa, Manitoba, for the Atomic Energy establishment of Canada, working on radio-protection, and he discovered that cell membranes, fatty cell membranes of all types, break at much lower doses when the dose is prolonged over a long period of time given in a short x-ray, and that is only in 1972, 30 years after the first fusion process and long after the bomb testing had begun, in fact ended, atmospheric tests and long after all the nuclear facilities in the world had constructed, and then only did we learn that the chronic exposures to membranes dominate at low doses whereas the DNA damage to the cell nuclei and to the genetic information dominates at high doses, and therefore the repair mechanism of DNA, which are very efficient, led us to believe mistakenly that doses, if you extrapolate them down linearly, you would expect to have practically no detectable effects from environmental

releases or tiny doses given in the course of diagnostic procedures and so on, and that has in fact, if it hadn't been for the fact that x-rays and gamma rays given in short intense bursts have little effect, we could never have used radiology as a diagnostic tool in medicine or could we have used radiation as a way of treating tumors, because we would have killed everybody whom we gave x-rays at these high doses.

It is fortunate, however, that cell membranes are very strongly protected by enzymes in the body and the fact that the free radicals, which are created, bump into each other and deactivate each other at high doses, and therefore we can use medical x-rays. We can use and we're tricked into believing that the same thing is true for environmental and tiny doses given over very long periods of time.

I want to emphasize this because I myself have worked in the field of diagnostic medicine for 40 years and helped to develop instruments that expose people deliberately to radiation, but, of course, there was a very clear benefit to the individual involved, and this, I think, is the important point; that when you do individual, you know, treatment or diagnosis of an ill person, then this individual receives both the risk and the benefit.

But when you carry out an experiment in which you release radioactivity into the environment for some experimental purposes just to satisfy some instrumentalist desire to find out how well he can read the meter at 50 miles away, then you see you're exposing people who are not ill. You are exposing women during pregnancy, and since Dr. Alice Stewart had already shown in 1958 that the fetus is extremely sensitive, then we were exposing the most sensitive members of the population for no benefit to them whatsoever, without their consent and without their ability to even know what was happening to them or to take precautions or protect themselves or their children, and that, I think, is the difference between the medical use on an individual who is ill and the deliberate or often accidental distribution of radio-activity in the environment for some purpose other than to benefit the individual who receives the radiation.

Now, the tragedy is that during the Cold War, and especially as you have already found with all your investigations, there was great concern that the fact of fall-out should not become too well known for all the military security reasons that you know about. I don't have to go into that, but it's evident that what happened is that the scientific community as a whole, people like me, my friends, people who worked on equipment and designed reactors, worked on the design of nuclear reactors for space propulsion. I participated in many, you know, developments of nuclear instrumentation.

We had no idea that early, already in 1945-46-47, at the Argonne National Lab in Chicago, metallurgical lab, animals were exposed to small doses of Strontium 90 during pregnancy, and they knew that the dogs that were being examined were not able to walk, and they died of pneumonia and cancers and all this in a very short time. Sometimes it was five or 10 years before it showed, but because all this was kept secret, we could not benefit from it, and therefore what I have done here is to provide you with the documentation that show the history of what happened now, and now I can just explain to you what the latest development is, because Dr. Petgow's findings mean that the dose response curve -- in other words, the shape of the dose response curve is not a straight line all the way down, and these graphs

are taken mainly from the material I'm showing you, and this is extremely important because all the data at high doses you see was on the flat part of the curve. That means a small increase in dose produced very little extra effect, and as long as you're way up on this curve, way, way up, then you will never find the tiny part of the dose where you have very small amounts, and this is taken from our paper, published in the International Journal of Health Services, which, by the way, is published in your department at Johns Hopkins University, and in this paper, you see that if you go across the nation and take the nine census regions and use the announced radioactive releases from nuclear reactors and plot them up, it's not a straight line, and that, in other words, shows that we grossly under-estimated it by using that slope rather than this slope.

And the nature of this curve is such that if you decrease it by 10, the risk per millirad goes up tenfold. If you go down another 10, the risk keeps going up, and therefore we have a strange situation that the weaker the radiation intensity is, the more deadly it is, and nobody anticipated this and present radiation standards do not believe in this and have not accepted this because it goes against the existing regulations, which govern all uses of radiation everywhere, and nobody wants to touch this, although the BEIR Committee of the National Academy called attention to it years ago in the earlier report, BEIR III, and, so, we now find that we have a situation where we have far greater health effects than we ever thought.

Moreover, we can tie this directly to Strontium 90 specifically because here we have the relationship which shows the link between low birth weight and Strontium 90, and this is human data, not extrapolated from high doses. This was gathered by the AEC during their early years, where they gathered skeletons from all over the world that you publicized, and then you see that the number of babies born under-weight in New York State is perfectly correlated with an extremely incredibly high correlation coefficient of .96, which is totally unbelievable. I mean it's just unbelievable that any experiment in the environment can give such a correlation, and that is the nature of this enormous tragedy that we're faced because of the nature of secrecy.

So, the following point I need to make is that we are in a situation where, unfortunately, our government had to -- had to deceive the public in order to be able to continue the bomb testing, and as a result, they did not realize, for instance, that in Nevada, when the bomb tests went off in 1951, and the story in today's Times indicates, they did want to find out what would happen from bomb testing.

Well, they never looked at the low birth weight data for Nevada. When you see this giant peak here which only comes back down to the rest of the United States, after the end of atmospheric surface testing, then you see that we have a far greater problem from chronic radiation than anyone had expected, especially since all standards have until now been said essentially only on cancer and not on other conditions that involve the immune system because the Strontium 90 goes to the immune system where the beta rays reach and destroy the progenitors of all the blood cells, and therefore lead to children that are born immature, whose future is impaired because low birth weight is associated with learning difficulties, with neurological damage, with immune system damage, and we have

created a generation of children that are now born under weight. We see the first peak that I just showed you in the previous slide here, and now we see the tragic rise, which in New York in recent years has exceeded the high point of fall-out from bomb testing, and that is frightening. It followed some accidents at the Indian Point plant, which released low levels perfectly within present guidelines that caused apparently Strontium 90 damage to the mother's immune system, which causes her to reject the fetus as a foreign object.

We've only learned about the role of the immune system in the critical aspect of pregnancy within the last decade or so, and, so, you can see it was the inadequacy of our knowledge that was so tragic because so much of it was concealed.

Unfortunately, the concealment still seems to be going on, and this is one thing that I'm recommending your committee to investigate; namely, the National Cancer Institute did a study in 1990, which was so arranged and the methodology used in such a way that it was practically guaranteed to find no effects around 62 nuclear facilities, and this was in 1988 and '90, not in 1945 and 1950.

We are talking about today's deception that is still going on, and in the material that I supplied you, you will see what the nature of the deception is, but it's very simple. They said, well, we'll look at the small population that's irradiated in this county, and then we'll look to see -- anyway, we'll look at this -- the facility which had a high dose here, and then we'll pick some control counties, and it turns out that three-quarters of the control counties were right adjacent, as if the radioactivity stopped, but the latest DOE report submitted to you in February shows that they were able to trace the radioactivity 50 to 200 miles away from a source.

So, the methodology used was guaranteed not to show anything, and furthermore, and this is frightening, as one of the criteria they used in order to select control counties, they -- aside from the normal demographic variables, like sex, race, occupation, poverty status and so on, they used and picked control counties that had the same infant mortality or low birth weight, which was essentially guaranteed to show that there would be no difference in cancer rates later, and, so, this is what I'm planning to do, namely offering some recommendations to you of things to do, and they are written down, and they relate to the need to re-examine and to urge or to request or recommend to the other departments that the newest data should be re-examined, the NCI study should be examined by independent people who are not involved in this cover-up, like this committee is an independent committee, you can do it, or some subcommittee.

Secondly, I'd urge that a new way be taken to set radiation standards, not by the users exclusively and the self-appointed committee, but in a public manner where the public and lay person can participate, who are the ones who have to run it, take the brunt of the risk, and therefore the biggest thing that you can do, I believe, is to recommend that we need to re-examine the risks that were involved, and above all not to deny compensation to the victims on the basis of the high dose risk estimates which clearly, unfortunately, were so low.

The last slide that I wanted to show you is very important, and I'll just take another minute. This one. It's rather frightening because what the National Cancer Institute did, which minimized or practically eliminated the effect of radiation, is really very, very serious for the nation as a whole, because of the rising cancer rate, and the continued rise

in low birth weight that nobody knows what's causing it. But I'll now show you a graph that is really astounding. This shows how mortality in the United States unadjusted for age declined steadily from 1900 to 1945-50, okay, and suddenly, beginning with the -- roughly the time of the Bravo tests, the first hydrogen bomb test that released thousands of times as much Strontium as the Hiroshima bombs, suddenly, there was a rise, an abnormal rise, which stayed high, and a gap developed between the projection and the actual number of deaths. Then, after a short time, 10 years or so, it began to try to come down again, but then there was another rise, and I have to say the rises have continued in the last two years, completely counter to what's going on in most other advanced civilized countries. Mortality is rising rather than declining, despite all our medical efforts and all our expenses, and what this means is that this gap here, which has developed, by 1993, this gap represents 15.6 million people who died prematurely. Thank you very much.

DR. FADEN: Thank you, Dr. Sternglass.  
We have --  
(Applause)

DR. FADEN: -- a limited amount of time. Are there questions from the committee to Dr. Sternglass? Nancy?

DR. OLEINICK: Well, I think your presentation raises many questions, and we will undoubtedly not be able to handle them right now, and perhaps some of us could speak with you afterwards.

DR. STERNGLASS: Be happy to do that. I'll stay beyond.

DR. OLEINICK: I guess just one question that immediately comes to mind is, in general, correlation does not mean cause and effect.

DR. STERNGLASS: Right.

DR. OLEINICK: Right. And I just wonder, I'm sure this is not something you can address in a minute, but I'd like to hear what other cause and effect factors were considered and ruled out in order to place the blame on Strontium 90.

DR. STERNGLASS: Right. First of all, the cause and relation of -- cause and effect relationship between Strontium 90 has been established since as early as the early '40s and '50s on animal studies. There's no question that Strontium 90 produces leukemia and other types of cancers. So, there is no question about that.

Secondly, we -- I pointed to the extremely close correlation between Strontium 90 measured actually in bone and the low birth weight in New York City.

Furthermore, there are many other studies which are referenced in there, all of which point to the high toxicity and the ability of Strontium 90 to affect the immune system, and once you affect the immune system, you increase the chance of every type of malignancy being accelerated, if it already exists, or going out of control, due to the failure of the immune system,

and, so, there are also studies that I referred to which show that the Strontium 90 in the milk by state-by-state with the three to four-year lag, which is necessary for the build-up of Strontium 90 in bone, and that is actually correlated from state-to-state.

So that states with very low Strontium 90 and otherwise similar diets and everything else had very low increases, whereas other states that had high data, and, so, there's an enormous amount of both human and animal studies that relate Strontium 90 to leukemia and all types of cancers, including also infectious diseases.

DR. FADEN: Thank you very much, Dr. Sternglass. I'm sure that we all --

DR. STERNGLASS: I'll be glad to stay after the meeting.

DR. FADEN: Thank you. Be sure to take your materials with you. We have -- all the committee members have copies of your documents. Thank you very much. Our next presenter from the public is Mrs. Elmerine Whitfield Bell. Is Mrs. Bell here? Good afternoon, Mrs. Bell. Thank you for taking the time to speak with us.  
Statement of Elmerine Whitfield Bell

Dallas, Texas

MS. BELL: Thank you.

I saw him as a depressing sight. Joyless, unanimated, with a damaged head and a broken spirit. During his lifetime, I saw him as a burden rather than as an asset to my grandmother, as she waited on him, pampered him.

My mother, I recall, resented this treatment while she contended that he didn't do his share for the family. She recalled a life of living with a father who, when not on an alcoholic binge, suffered from frequent seizures which had to be endured by the rest of the family.

My uncle, on the other hand, did not seem resentful, but I often felt he must have been disappointed in a father incapable of playing a simple bat and ball game or merely offering a positive life outlook.

My grandmother said it wasn't always like this. She said my grandfather was once a vibrant and handsome Pullman porter, a hard worker who wanted only the best for his family. When I was younger, I liked to do puzzles from the newspaper, where you find words hidden among randomly-arranged letters. Since my grandfather spent most of his time sitting alone, he would sometimes complete these puzzles -- we would sometimes complete these puzzles together, and eventually he began saving them in a neat stack and worked on completing them himself.

In the springtime, I saw him take brown paper bags and make kites for the kids down the street. He once made a pen for my pet rabbit. He often talked of feelings in his missing leg and would shudder and make comments like "they must be working on my leg today".

Years later, when I was home on breaks from college, the sight of my grandfather was horrible. He seemed useless and frail. He had lost more of life's joy. He seemed angry and sad. The pain was obvious, and he was sometimes furious and irate, mean and spiteful.

I often have dreams about my grandfather. Before his

death, I had a dream that he was in his old house in a coffin, open with the body in full view, dead, but alive somehow. After his death, another dream revealed him through a doorway, sitting in his wheelchair, looking feeble, yet in good spirits. He seemed to have a newfound joy, laughing and joking with male friends.

When Eileen Welsome presented my family with the fact that this man was indeed CAL-3, a human nuclear guinea pig, I wondered, could this be the reason, the origin, the root cause of this depressed character that I considered all along to be my grand-father. He lived over 40 years without a zest for life and with a pain I imagine was without equal.

For I understand that the reality of life for the African American man of the 1940s was already a pre-determined bleak one, dictated by the white man's tyrannical power of economics, politics, and, to a certain degree, basic freedom. Being born a black male was already a handicap, having a limited education was a further handicap. Then to add a physical handicap, due to being basically tricked into donating a body limb for science.

With all of this in mind, I now understand how alcohol could relieve his reality, how depression and schizophrenia could take control of his life, how his feelings of hopelessness shattered such a promising future.

In my most recent dream, I saw my grandfather with both legs, standing with confidence and strength of character I never saw in real life. He had a young appearance. He had a look of joy on his face, and he seemed content.

This statement is signed April D. Whitfield, granddaughter of Elmer Allen, March 15th, 1995.

Good afternoon. My daughter, April Whitfield, and the other survivors of Elmer Allen are determined that the truth about his plutonium injection and subsequent leg amputation be made a part of the public record.

We continue to be appalled by the apparent attempts at cover-ups, the inferences that the nature of the times, the 1940s, allowed scientists to conduct experiments without getting a patient's consent or without mentioning risks. We contend that my father was not an informed participant in the plutonium experiment.

He was asked to sign his name several times while a patient at the University of California hospital in San Francisco. Why was he not asked to sign his name permitting scientists to inject him with plutonium? Why was his wife, who was college trained, not consulted in this matter?

It is my hope that history will not be rewritten in committees who claim that they do not understand the actions of the scientists of the 1940s, those who claim that poor and disenfranchised African American men could not be hoodwinked by his doctors.

I hope you will understand that just as Jewish fathers were placed in the ovens at Auschwitz, my father, Elmer Allen, was placed in his own private oven here in the United States of America. He was left there for 44 years, and the scientists occasionally took a peek inside to see if he was still alive.

His survivors are pledged to tell the truth about this experiment for the next 50 or even 100 years, if necessary, so

that future generations will have more than lies, half truths, and inconclusive reports, when attempting to recount this real-life horror story.

Thank you. I didn't know I had 10 minutes because I would have a lot more to say, but I thank you.

DR. FADEN: Thank you very much, Mrs. Bell. Please don't leave us. I'm sure there are questions of committee members, or if you have a few more comments that you would like to make, please feel free to make them.

MS. BELL: I just wanted to address the report of the UCSF ad hoc fact-finding committee. There are so many inconsistencies in here, I hope you all will look at them and look at them again and again, and pay attention to the biographies of the scientists involved and how they seemed to all have some type of connection.

I believe I know what happened, and I hope, hopefully, all of you will come to some conclusion that these folk were wrong.

DR. FADEN: Lois?

MS. NORRIS: Thank you for your testimony. Did your father ever express knowledge of the fact that he was an experimental subject, and, more importantly, did he tell you then what he was told before this was done or after it was done?

MS. BELL: It is my feeling that my father had no idea that he was being used as an experimental subject in something this important.

It's really hard to explain because of the things that my father said, nobody paid attention to. It was known, and my mother explained to us, about his initial accident, when he was thrown from the train, and it was always our contention that the leg had to be amputated because surgery would not permit it to be healed properly.

So, we grew up, my brother and I grew up thinking that the leg was amputated because it could not be repaired.

My father often said things that didn't make sense and usually was when he was inebriated. He would say things like that he knew that the doctors that were working on him didn't know what they were doing. It was his contention that they were young people, and knowing that UCSF was a teaching hospital, we always thought he was talking about the interns that didn't know what they were doing. But he said, you know, when you find somebody that starts right in, and he would recall that they were running in and out of his room on certain times, that perhaps they didn't know what they were doing and made some type of mistake.

But to go on with it, after reading my father's medical records, the graphic charts that were written down during the time that he was in the hospital, first of all, I took offense at the fact that the doctors made most of his comments as to my father's joviality, happy man, amiable, and that's spelled

incorrectly in his statement, and I can show it, also.

But he was like he was setting him up, but after the biopsy on my father's leg, they put the leg in a full cast and suspended it, and to me, living even in the '90s, if something -- if I had an injury to my leg and someone put it in a full cast and suspended it, I would think that it was in the process of healing, and I can just imagine if they came in three days later and told he they need to split the cast, and they did something to the leg, and then a couple of days later cut it off, I would feel that someone made a mistake.

So, this is what I attribute his statements to mean.

DR. FADEN: Ruth?

DR. MACKLIN: Yes. Ms. Bell, you said that

-- you just told us now that you saw some of these hospital records?

MS. BELL: Yes.

DR. MACKLIN: Your father's records, and in your written testimony, you say he was asked to sign his name several times while a patient at UCSF.

Do you know what -- did you see documents that he signed, and were those consent to treatment, consent to surgery, consent to research? What were they? What did he sign?

MS. BELL: I've seen two documents. One was the first day he was admitted to the hospital, which was five days before the injection. They wanted to do a biopsy on the leg, and he had to be put to sleep by the anesthetic. There was a consent form, and he did sign that.

After the injection, before they amputated the leg, he had to sign a consent form for the leg to be amputated, and he signed that. So, since there was no -- nothing wrong with his hands between that time, this is why the family is concerned that he was not asked to sign for something this important.

DR. MACKLIN: Hm-hmm.

DR. FADEN: Mrs. Bell, you were speaking about your brother and you believing that your father had had the amputation because the leg couldn't heal properly, and that -- was your -- what was your mother's understanding of why the leg had been amputated? Was that the same --

MS. BELL: We got our information from our mother.

DR. FADEN: You thought that was what she thought?

MS. BELL: Yes, that's what she thought.

DR. FADEN: Okay.

MS. BELL: And another thing I wanted to mention, also, and I'm not trying to be a doctor or a scientist or anything like

this, but one of the concerns that my mother had was the -- and I do understand this is the '40s. I just said that. I know folk didn't talk to folk, especially an African American, but at the time, my father had had a viable job, but he had run out of money. This is why his doctor, his private doctor, referred him to UCSF, and you know and I know that the times did not offer African Americans a chance to ask a lot of questions, especially if you needed someone's assistance.

But my mother claims to this day that she does not recall anyone even showing her a document or saying that my father had cancer, and in all the documents here say that -- and we've subsequently read that he's supposed to have had cancer, but -- and I've also talked to experts who said that if he had this type of cancer that they said he had, that he should have been dead within 10 years, which was following the guidelines, but he lived for 44 years.

So, actually, it had to be a mis-diagnosis. My mother recalls hearing the word "cancer" for the first time when she was -- when they were contacted by the scientists from Argonne in 1972 about coming in for the follow-up studies, and she offered surprise at that diagnosis because that was the first time she had heard, from 1947 to 1972.

DR. FADEN: So, the statements that are in the chart in UCSF, your father's medical record, the two physician signatures, your mother has no recollection of anyone ever talking to her about any experiment or anything?

MS. BELL: She did not. She never heard of it, and I know I'm not here to speak to my mother's health, but just -- you'd have to know my mother to know what I'm saying. This has like really devastated her. She went from a person with -- that was very viable, somebody who could come here and express herself much better than I can today, to a person who's virtually an invalid, who's a recluse now. She's really ashamed that something like this could have happened, and she was not sharp enough to catch it. She really thought she was a pretty bright lady.

DR. FADEN: It's a terrible burden for her. Are there other questions for Mrs. Bell? Yes, Lois?

MS. NORRIS: Just a very quick one. Did the medical records show cancer that you received recently?

MS. BELL: There was -- I'm not a medical expert. So, I'm not saying it said cancer. It said the sarcoma. So, that's the cancer.

MS. NORRIS: Okay. Thank you.

DR. FADEN: Well, we thank you very much for your taking the time to come and talk to us, and for your daughter's testimony as well. Thank you.

MS. BELL: Thank you.

(Applause)

DR. FADEN: Our next presenter is Mr. Steve Schwartz.  
Mr. Schwartz here?

(No response)

DR. FADEN: We'll reserve his place in case he stepped out of the room.

Mr. Brown, Mr. Cooper Brown? Next on the list then.  
Good afternoon.

Statement of Cooper Brown

National Association of Radiation Victims

MR. BROWN: Good afternoon.

Madam Chair and members of the committee, thank you once again for inviting me to testify or allowing me to testify.

What I have done, and I hope everybody's now seen this, is I've provided recommendations that come not from myself but from the task force in the leadership at the Radiation Victims Survivors community, primarily focused on the issue of remedies, and I think rather than read that, I'm going to leave that for your digestion at a later point.

I'd just summarize briefly what -- where the task force is coming from, and that is, when we look at the issue of rights and remedies, we realized that at this stage in the game, perhaps the best thing -- certainly it proves the best thing for us, and perhaps it will prove the best thing for the advisory committee, is rather than trying to deal with a lot of the detail that comes up when you start talking about remedies, you focus on the issue at the level of principles, and that's what we've attempted to do in the presentation that has now been submitted to the advisory committee.

I just want to stress, too, and I will come back to them in a minute, but one fundamental principle revolves around the issue of outreach, and I've stated our concerns before, and I'll probably state them again.

The second fundamental principle revolves around the issue of protecting the individuals' rights to remedy within the justice system, and with that, what I want to try and do is wrestle with four questions that I understand from Dan the committee is particularly concerned about.

I hope that I -- that I articulate the questions properly, and then I'm going to try to give you very quick answer to each one of these. The questions as I understand them that are of particular concern to the committee.

Are there special considerations when you address the issue of remedies because of, for lack of a better word, the cover-up that took place here? That's Question Number 1.

Secondly, where in -- here, I may be inarticulately recharacterizing this question, but where -- I think what the second concern is that if you have reason to believe that -- or,

you know, that there's some evidence to suggest an increased risk of bodily injury, personal injury, because of the radiation exposure, how do you define that? Who does it? You know, what - how do you assess damages in a situation like that?

The third, issues arising around the question of notification, not the least of which is who do you notify, and how, and fourth, what -- what do you do with people yet to be discovered? You know, experiments have taken place, but nobody's stepped forward.

The short answers to those questions are yes, it depends, make a good faith effort, and government gets proactive.

More -- more to -- more to the point, special considerations because of the cover-up, yes. I think that -- and we make the point in our prepared testimony, this is the importance of restoring the rights of individuals, and that necessarily would require an act of Congress in a situation like that, but I mean what -- what was going on here, we see from some of the early documents, that there was a conscious -- there was a concern and a conscious effort as a result to suppress information about what was really going on in order to avoid not only the adverse publicity but liability, and because of that, the issue of restoration of rights becomes, we think, very important.

The second issue about risk and how you define injury and how do you define damages, it's very problematic, as you know, but perhaps -- well, not perhaps. The -- we feel that the question, and I think that Elmerine Whitfield's testimony perhaps underscores this point better than anything I can ever say, but looking at radiation health risks is simply -- is but only one element of the question of what was the harm, what are the damages?

What Elmerine Whitfield, Mrs. Whitfield was speaking to was a fundamental notion under common law, and that's the dignitary interests. Deprivation of rights. That has to be taken seriously. It can't be dismissed because the dose due to the radiation was "inconsequential" or the risk from such a dose was minimal.

There's something far more egregious going on here, and I think Mrs. Whitfield most eloquently spoke to that point, and, finally, you cannot ignore the issue of exemplary damages, and when we were wrestling with this among ourselves down in Knoxville, and trying to figure out, well, what happens when you've got the situation, you know, how do you -- how do you deal with this issue of the -- there's no injury, but yet there's been an unethical, unlawful experiment, an experiment without the individual's consent.

Somebody pointed out that it's much like the situation of you're gone for the week, somebody comes into your house, uses the house, doesn't destroy anything, doesn't use any of the food in the refrigerator, if they do, they put the same food back. The house is clean, everything. You come back. Nothing's amiss. Nothing's -- all right.

But this individual while he was there took a lot of pictures, turned around, went out and sold the pictures and made a lot of money and became famous. Now, what does he -- you know, are there damages here? You know, what are you entitled to? Are you entitled to the profit that this fellow made off of your -- the pictures he took of your -- he stole from your house?

I mean that's -- when this person crystallized it in that fashion, then we felt that that made sense, and if you can put that perspective into this issue, perhaps it will help in wrestling that particular matter to the ground.

Then the question, who decides? What are the standards? Who's the judge? Who's the jury? Well, we would submit that absent clear evidence that the court system won't accommodate the victims' claims, leave it to the existing civil justice system, but now if there are persuasive arguments that exist for establishing an administrative claims process, then there are some fundamental principles that cannot be ignored.

One is it should be limited to the issue of damages, bodily injury, damages related to the radiation health risk. It should be based on presumptions. It should be a non-exclusive remedy, and when we say that, we mean a number of things.

One is it would be limited to the radiation-related claims only, but the victim or the family member would not be required to give up his or her or their rights to pursue that same cause of action in the courts initially.

They would also not be required to give up the right to sue in court on the dignitary claims, constitutional rights deprivation claims, privacy claims, and, finally, they should not be forced to relinquish, as has happened to some of the radiation victims, their claims against the private parties.

To the extent that private parties were merely acting as agents of the Federal Government, there are court-created defenses that they already have available to them. They do not need a legislatively-imposed Warner amendment.

Now, so, that's a brief summary to the concerns as I understand them to be for the committee.

I want to back up and just visit a couple of things. One is the importance of one's day in court. I have been trying for several years, and it's only become really apparent to me over this last six or eight months, to figure out why it is that the radiation victims survivors community, in particular groups like the Atomic Veterans, are still angry.

There's been an administrative remedy. There have been congressional hearings. There's been a lot done. Health care provided. Yes, the system doesn't work well. Yes, there are problems. But I think that what goes to the core of it for the veterans as well as for others is the feeling that they were robbed of their day in court.

I know that is particularly so for many of the atomic veterans that I worked with, and the other concern, and this is from the perspective of society, is that when you impose an

administrative remedy, what I've observed is what dies on the vine almost immediately is the truth, because you don't have access to it anymore, and that's the other concern.

Now, finally, what is -- when we talk about restoring rights, restoring people's rights to their day in court, we're talking essentially about removing procedural and hyper-technical impediments to that day in court.

What's -- what are the merits of that? Because what we're asking -- we're asking a lot when we ask that. Well, I'd submit that the merits are similar to the -- how you are assessing the issue with ethics and what standards apply.

I think the committee has agreed that the ethics standards to be applied are the ethics standards that were in existence at the time the experiments took place.

If you look, you will find that many of the procedural and what I would call hyper-technical sovereign immunity defenses that bar access for many to the courts, particularly against the government, did not arise until the late -- until the mid to late 1970s. That had these people had knowledge of what happened, had they not been deprived of the day in court back when the experiments took place, many of those lawsuits would have been able to go to trial because these defenses did not exist, and it's those -- we submit that when you're evaluating this from a legal perspective, the same standards should be applied as are being applied when you're judging this from an ethical perspective.

And, finally, and I mention this as an attorney, I know that there are members of the committee that are concerned that these issues and the victims not become another public trial for avaricious plaintiffs' attorneys.

I have to tell you that since my first day in law school, I've never been particularly enamored of the legal profession. I actually may end up being a plaintiffs' attorney in some of these cases as it now stands, but the point is that if you get into that debate, you're essentially -- you're taking sides then. You're taking sides against the plaintiffs' attorneys and for the defendants' attorneys.

We discovered in doing some research there's a case called Barrett v. United States in which the government's -- the government attorneys were implicated in a cover-up of an experiment that took place using not radiation but some form of drug, and, anyway, the attorneys advised -- the Justice Department attorneys advised on the cover-up.

They were held accountable under Bivens for a violation of the constitutional rights. The claims against the attorneys were allowed to go forward. I would submit that what we're going to find as we dig into this further is that there were attorneys at the Department of Energy and other agencies as well as in the Justice Department that were advising with regard to the cover-up.

So, if this -- and they should be held accountable, if that is the case. So, you see, if you start taking sides against

raising concerns about plaintiffs' attorneys, you're ignoring something here.

My personal feeling is that if you want to, you know, keep the plaintiffs' attorneys at bay, limit the amount that they can collect on any judgment or award. That would be how I'd do it.

Anyway, thank you very much for your leniency. I know I'm way over my time. I appreciate it very much, and if you have any questions, you know where to reach me.

DR. FADEN: Thank you, Mr. Brown, and thank you for the written document. Written documents are very helpful for us to work with.

Mr. Brown has already left the podium, but are there any questions for Mr. Brown before we go on?

(No response)

DR. FADEN: All right. Our next presenter is Dr. Oscar Rosen. Dr. Rosen? Good to see you. Thank you for coming.

Statement of Dr. Oscar Rosen

National Association of Atomic Veterans

DR. ROSEN: Thank you. Thank you very much for inviting me to speak.

I've been attending as many of these conferences as I can, and I've learned an awful lot, and as you can see from the cover of the newsletter, the Atomic Veterans newsletter that was distributed to all of you, my thinking as the editor of this newsletter has been enormously influenced by what I've learned from attending these conferences and from the documents that you have -- you have distributed to the public.

That's the greatest thing you could possibly have done for us because with your resources, you have accomplished more in a year and a half than we could have accomplished in a million years, and you still have more time to do this.

The -- the Buchenwald touch article, I learned from a document that I received from this committee, and I think it's very appropriate, and I -- when I heard Mrs. Bell mention that her father was, you know, figuratively put in an oven, just like the, you know, millions of Jews at Auschwitz and Buchenwald and other places, I felt a great, great compassion and empathy, and then the article on the sterilization experiments on prisoners, and the fact that they had to consent to have vasectomies after the experiments because of the damage to their chromosomes, that was -- that really hit home.

And then the -- the Atomic Veterans and Widows testimony to this President's Advisory Committee on Human Radiation Experiments, the thousands of test participants may have been used as guinea pigs after all.

I know that when the committee first began its work, it

wasn't -- didn't seem to be particularly interested in the atomic veterans and so on, just in the -- just in the human radiation experiments, like the one that Mrs. Bell's father was subjected to.

But because of the testimony, especially of Pat Broudy and Cooper Brown and, you know, others, Charlie McKay, and the Atomic Veterans and Widows, who have testified at Santa Fe, San Francisco and elsewhere, I think this committee has finally started moving in our direction.

Last -- at the last conference, I learned that only -- only Part 1 of the Pacific -- part of one of the test series was deemed experimental by this committee, and that was Operation Red Wing, but -- and I wrote a little bit about that in this -- in my testimony, but then, when I came here, the first thing I did was to get a set of the latest documents, and in it, I was amazed to see all the material you have on Operation Buster Jangle, and that you have -- that there is evidence now that Buster Jangle was also experimental.

So, that's another big step in the direction that we were hoping you would take.

I'll read through my written testimony as quickly as I can, although I can talk forever on this subject.

The charge of this committee is analogous to that given to the Manhattan Engineer Project. It took about five years to develop the bomb under a crash program to which unlimited resources were allocated. The best minds in nuclear science and ancillary fields were brought together to accomplish the project.

This advisory committee was allowed little more than a year or a year and a half in which to accomplish the daunting and laborious task of illuminating all the shameful experiments conceived to provide the planners of nuclear war and its consequences with defenses against lawsuits and the other negative results of their policies.

How can this committee be expected to clean up the mega-tons of experimental garbage that took the years of the Manhattan project, the human radiation experiments, the years of atomic bomb testing, and deliberate exposure to ionizing radiation of several hundred thousand servicemen to create?

And I might add because of Dr. Sternglass' talk, and also the leakage from nuclear power plants, it might interest you to know that when I told Dr. Sternglass, who by the way is the scientific advisor to the National Association of Atomic Veterans, that my mother died of bladder cancer in 1962 at age 62, you know, when I thought she was an old woman, and because her hair was white and so forth, he told me that it had to have been from the fall-out from the, you know, from the nuclear bomb testing from 1945 to 1962, and he knows, and others know and have written that fall-out from the tests came down in many parts of the U.S., including Massachusetts, and she may also have been affected by the Pilgrim Nuclear Power Plant, for all we know.

We know that there have been lots of health problems surrounding the Pilgrim Nuclear Power Plant. Like the civilian

guinea pigs, we, including military personnel and civilian test site workers and down-winders, were the subjects of bio-medical experiments, should call them homicidal experiments, to see how we would be affected by ionizing radiation under every conceivable aspect of military service in war and peace.

We were a captive population like a group of prisoners who were deliberately exposed to gamma radiation to determine how much it would take to make them sterile. In the consent form, they had to agree to have vasectomies because of possible damage to their chromosomes.

Then there were the Fernald children who were fed Quaker Oats laced or flavored with radiation, take your pick. What about the radiation experiments on the pregnant women at Vanderbilt University Hospital or the 18 innocents, including Mrs. Bell's father, who were injected with plutonium without their knowledge or consent or the children who were experimented upon by NASA at Oak Ridge or the children of the down-winders who were badged to see how much radiation they were exposed to or the children of the Los Alamos scientists we learned about at the last conference and the thousands of military personnel, male and female, who were stationed at Camp Hanford to guard the plutonium production facilities?

As for military personnel at the Pacific and Nevada Proving Grounds, some were badged but most were not. Even Stafford Warren's so-called radiation safety monitors were experimental subjects. Some of the men claimed that -- some of the test participants, not particularly the safety monitors, claim that when they went to sick bay after the test to complain about illnesses, their illnesses were deliberately mis-diagnosed as conventional ones, just as the DOD is doing about the Persian Gulf illnesses, and some of them were given quickie medical discharges.

How many men may have been court-martialed or otherwise punished for refusing to be exposed to radiation during the atomic bomb testing? Probably not many because not many knew what the real dangers were.

Why were so many medical records lost, quote unquote? Why were so many young men sent on temporary duty assignments, TDY, to be guinea pigs in atomic bomb tests, and why were their -- their assignments deliberately left out of their service records, so that when they filed claims, they would be denied for lack of proof of participation?

Why did the military and nuclear power industries adopt the threshold of harmless exposure below a certain specified amount of radiation? Again, when Dr. Sternglass was talking about the, you know, the linear principle and so on.

Why did they also accept the linear hypothesis whereby the more radiation one was exposed to, the more harm would result as a strategy to deny the insidious long-range effect of low-level ionizing radiation?

Why was Stafford Warren concerned about the large number of lawsuits that might occur? Why was the Defense Nuclear Agency created? Was it to help the veterans obtain justice or to

prevent them from obtaining justice? Why were less than adequate radiation compensation laws passed?

Why were so many competent scientists like Dr. Sternglass drummed out of government or denied funding for their legitimate research or prevented from publishing their findings when they sought to tell the truth?

Why is a veteran's only recourse for justice the VA? Why can't he sue his government for damages? Why is he denied his constitutional rights of due process? It's because of a Supreme Court decision reached just after World War II called the Ferris doctrine. When a serviceman tried to sue the government for injuries he suffered while in the service, and he was turned down because of the principle of sovereign immunity for the government, which immunized it against suits, a suit by a serviceman.

Why was the Price-Anderson Act passed in 1957, to protect the utility companies from full financial liability for nuclear disasters? Why was the Warner Amendment enacted to immunize government contractors involved in the nuclear bomb testing from being sued by injured servicemen?

My over-riding concern already mentioned before this committee by Cooper Brown, Cliff Honicker, Pat Broudy, and others, is that this committee's findings may fall short of producing the evidence that will support the claims of the thousands of atomic veterans who believe that they were experimental subjects in the same context as all the other subjects, who were injected with radioactive substances in order to prepare this country for nuclear warfare.

It is clear that every test was designed to test the succession of nuclear devices on the military personnel involved. I'll give you an example. After Operation Crossroads, it was determined that on the ships, the target ships, that objects that were painted lighter in color showed less radioactivity than objects that were painted darker in color.

I happened to meet a Navy veteran of Operation Hard Tack One, when I lived back in Pennsylvania, and he had served on the USS Boxer as an enlisted man in Operation Hard Tack One, and he told me that in preparation for one of the bomb tests, the enlisted men of the Boxer were told to line up on the flight deck and cover themselves with their mattress covers, which were white, and turn their backs in the direction of the detonation, and while the officers were in the enclosed bridge.

This is what he told me, and he said that when the bomb went off, they could feel the heat, the blast, see the bones in their arms, and he said that not long after that, his hair began to fall out. He was only 18. When he went aboard the Boxer, he had a full head of bright, you know, flaming red hair. His hair fell out, then his teeth began to fall out, and now he frequently has cysts on his body that have to be removed, and we hear this constantly from veterans, the same story about the teeth, the hair and the cysts.

So, how will they be affected during the short run because a nuclear war was not expected to last very long?

National survival was the compelling reason for these tests, according to the test planners.

J. Robert Oppenheimer, when he was -- when he -- when he learned that post-war nuclear bomb tests were being planned, he insisted that the testing could be done with models and could be done theoretically, but he was overridden.

Long wars were a thing of the past. The Gulf War is a case in point. If even one of the cruise missiles used was nuclear tipped, how long would that war have lasted? And what would the human damage have been? Why isn't the veteran given the benefit of the doubt when his claim is being adjudicated as the law stipulates?

It says this in the laws, but he's not given the benefit of the doubt. Speaking of the Gulf War, did any of you watch 60 Minutes last Sunday, when Ed Bradley presented all kinds of evidence, including witnesses, that poisonous chemicals were used by Iraq during the war, and that many of our personnel became very ill, that they became very ill as a result of their exposure?

And John Deutsch, who's the assistant secretary of Defense now, and who is the appointee designate to head the CIA, persistently denied that any of the illnesses were caused by chemical agents to which the servicemen and women might have been exposed during the Gulf War, and I've heard too much testimony to the contrary, and I was also both disappointed and shocked that the use of depleted uranium during the Gulf War was not mentioned even once, and I have heard testimony at a conference that I went to in Jonesboro, Tennessee, a few months ago by participants, who claimed that they were -- that their health was seriously impaired by depleted uranium, and, so, that I was very disappointed in that 60 Minutes presentation, but I was not surprised to hear the testimony of John Deutsch.

And he was obviously lying, and when he was the provost of MIT, one of his jobs was to get as much money from the Pentagon as possible to finance MIT defense research. He also happened to be on the executive board of SAIC, the Science -- the -- let's see. SAIC, Science Applications International Corporation, Incorporated, which is a contractor for the Defense Nuclear Agency, to provide dosage reconstructions, which are invariably low and used by the VA to shoot down veterans' claims.

This committee has determined that all the nuclear bomb test series in the Pacific and Nevada -- that of all the nuclear bomb test series in the Pacific and Nevada only operation was Red Wing -- only Operation Red Wing was experimental because the military aircraft that were flown through the mushroom clouds were not equipped with the filters used to collect air samples. If they were equipped with filters, I suppose their missions would not have been regarded as experimental.

As of this moment, this is when I wrote this, to the best of my knowledge, none of the other tests have been deemed experimental by this committee. I hope this will change.

Well, as I pointed out at the beginning of my talk, it does seem to be changing because of what you came up with on

Buster Jangle. Further, the committee relied exclusively on governmental sources instead of their own faculties to reach this conclusion considering all the information available about these tests, which is now apparently being rectified.

Can you imagine the uproar that would ensue when participants in the other test series learn that the tests that they were in were not considered experimental?

Well, now you've opened a Pandora's box by coming up with the evidence about Red Wing. So, documentary material -- that is in our favor. Documentary material has been presented to this committee stating that urine samples were to be obtained from all the test participants, which, of course, were not obtained from the vast majority of the test participants.

Why are urine samples taken? They are taken to see how much radiation -- how much radiation remains in the body or they are taken to determine how the ingested radiation affects the subject's health.

We think the urine samples, if they are taken or have been taken, were to determine that -- how little was left in the body, despite the damage, what was excreted previously caused.

I was a test participant in Operation Crossroads at Bikini in July 1946. One of my crew mates recently informed me, I hadn't seen him for years, recently informed me that he was told not to look at the atomic detonation because he might suffer serious radiation injury. I'm talking about Test Able, the bomb that shows on the cover of this newsletter.

I, on the contrary, recall being out on the deck of the same vessel, the floating drydock, which had been towed to a presumably safe distance when it was announced over the PA system that if we wanted to see the detonation of Test Able, we should look at a certain direction and listen to the count down over the PA system.

We were not issued protective goggles, even though I later learned that a special directive to that effect had been issued to all the ships assigned to the test. When the count down reached zero, I saw the flash on the horizon, and we immediately reversed course and headed back to Bikini. We entered the lagoon the next morning, anchored and proceed to work on damaged target ships.

As before the test, when work was over, we stripped down and dove into the contaminated lagoon for our usual refreshing swim. Nobody told us that the lagoon water might be contaminated with alpha particles. Nobody told the young men who were sent aboard the target ships to retrieve dead and dying experimental animals, cameras, and test equipment about the dangers of radiation.

Why were some of the target ships "decontaminated" and declared geiger sweet as opposed to geiger sour when they were really not -- when they were really not, so that the crews could go back aboard to resume their normal duties? We believe that this was experimental.

Why did the surviving crew members of some of the support ships still refer to them as death ships? The bottom line is that they wanted to see how our ability to engage in combat operations during a nuclear war would be affected. They wanted to see how living aboard supposedly decontaminated target ships would affect our ability to perform our military duties, and we were also the victims of the insatiable curiosity of Dr. Strangeloves, like Dr. Edward Teller, who wanted to see what could be learned from the testing of bombs of many different designs and yields.

Just as John Deutsch lied on 60 Minutes the other night, Pentagon spokesmen have been lying for decades about the real effects of radiation on the hundreds of thousands of servicemen who were exposed.

I rest my case.

DR. FADEN: Thank you, Mr. Rosen.

DR. ROSEN: Thank you.

DR. FADEN: We're running --

(Applause)

DR. FADEN: -- short on time. Is there anyone who has a question for Dr. Rosen?

(No response)

DR. FADEN: If not, we have your written testimony, and we appreciate your taking the time.

DR. ROSEN: Thank you.

DR. FADEN: Our next presenter is Mr. Glenn

-- I'm sorry if I pronounce your last name -- Alcalay, is that correct?

MR. ALCALAY: Correct.

DR. FADEN: Thank you for coming, Mr. Alcalay.

#### Statement of Glenn Alcalay

New York, New York

MR. ALCALAY: Thank you, Dr. Faden and members of the committee, for this opportunity.

I'm going to address my remarks this afternoon to the women of the Marshall Islands. My name is Glenn Alcalay, and I have had a 20-year involvement with the people of the Marshall Islands, beginning 20 years ago as a young Peace Corps volunteer on Utirik, one of the downwind atolls from Bikini, which was hit with a very substantial amount of radioactive fall-out from the U.S.'s largest hydrogen bomb thermo-nuclear weapon at Bikini in 1954.

I learned very early on that all was not well with the people of Utirik, and it was my experience, after having been on Utirik for one month as a Peace Corps volunteer, that I encountered my first foray with East meets West in the form of a Brookhaven National Laboratory survey done under the auspices of the Atomic Energy Commission, headed up by Dr. Robert Conard, the then director of the Brookhaven team assessing the follow-up program in the aftermath of Bravo from 1954.

In 1975, as a young Peace Corps volunteer, I inquired to Dr. Conard about the potential harm to women and reproduction as a consequence of latent effect of radiation, and before the community-wide village meeting between Brookhaven and the people of Utirik, I was told in no uncertain terms that that was not my bailiwick, that I really had no business making such an inquiry, and that I should stick to my formal Peace Corps duties of teaching English and setting up an agricultural cooperative.

That is, it was 20 years ago for me that I began to sense that something was rotten in the state of Denmark.

At the present time, I am a doctoral candidate in medical anthropology at the New School for Social Research in New York. I'm also assistant professor of Anthropology at the City College of the City University of New York, and for the past 20 years, I have made seven return trips to the Marshall Islands. I've spent a total of four and a half years in the past 20 years, including the two years as a Peace Corps volunteer, in the Marshals. I'm a fluent speaker of the language, and it was always very interesting to me to go back and investigate this question of women vis-a-vis the latent effects of radiation in the Marshals.

Now, following 41 years of the follow-up studies of Brookhaven following Bravo in 1954, it is well documented and acknowledged that thyroid abnormalities are one of the larger problems facing the Marshalese.

In addition to a few assorted carcinomas, the Brookhaven scientists have very narrowly focused on thyroid abnormality and a few assorted carcinomas. The question of women and reproduction has always been conspicuously omitted.

It was for that reason when I chose my topic for doing doctoral research that I decided to focus on women. I'd like to read a quote from one of my 1200 interviews I've collected over the past 20 years of Marshalese women, one of the inducements about how I got involved.

This is a quote from a Mili Latobo on Utirik, and I quote, she says, "Some women gave birth to creatures like cats, rats and the insides of turtles, like intestines. Most of the women had miscarriage, including myself, who gave birth to something unlike a human being. Some women gave birth to things resembling grapes and other fruits, and some women even stopped having children, including myself. Things are not the same now, and the people are not as active and healthy as before the bomb."

I heard this repeatedly throughout the Marshall Islands from many women, and it seemed really curious about this chasm that existed between Brookhaven studies and the perceptions,

indigenous perceptions and observations of the Marshalese women.

For that reason, I spent 13 months in the Marshall Islands, between 1990 and 1991, conducting a health survey on women and reproduction, and I would direct your attention in my statement, I'm sorry I didn't bring overheads, I should have had foresight to bring overheads, I'm going to share with the committee some preliminary findings of my 13-month health survey that I conducted in the Marshall Islands, wherein I interviewed 830 women on 10 different atolls.

In a nutshell, I clustered the Marshall Islands. Here's a map, by the way, attached to my statement of the . I clustered the islands under purview in terms of their proximity to Bikini, the site of the largest thermo-nuclear weapons in the 1950s, and I divided them into Northern and Southern . That seemed reasonable. And I anticipated there might be confounding variables with my study.

I anticipated I could hear Dr. Conard saying to me, well, what about the problem of selective memory, for example. Moreover, since a nuclear claims tribunal has been established under the Compact of Free Association Regiment, whereby a \$150 million trust fund has been established in the Marshals, the Marshalese are at present filing claims for health injury and property damage stemming from the tests, what about the so-called greed factor or let's call it more diplomatically the embellishment factor of the selective memory problem?

My sense and my 20-year knowledge of the , if we can call this the greed factor, that the greed factor amongst all 50,000 Marshall Islanders will be randomly distributed throughout the . I do not think there is one island with a monopoly on the greed factor.

Another factor-encountering variable might have to do with differentials in health care provision; that is, prenatal care, neonatal care. I can attest to this committee and anybody who has spent any time in the outer islands of the that health care, and in particular prenatal and neonatal care, is abysmally poor universally. That is, there is no one particular island that stands out in the outer islands as having excellent health care. So, I don't see that as a compounding variable either.

I direct the committee's attention to Pages 6, 7 and 8 of my statement. On Page 6 is the data, the data tables. Page 7 shows what I call adverse births or congenital anomalies; that is, I combined miscarriages and still births, and I made a division between pre-1952 and post-1952 in the Marshals. The reason being that the thermo-nuclear weapons experiments started at Eniwetok in 1952. Prior to that, they were atomic weapons in the kiloton range. Beginning in 1952, the weapons, thermo-nuclear weapons, the hydrogen bombs, were in the megaton range, and the fall-out from the megaton range weapons we now know was distributed pretty uniformly throughout the Marshals more -- obviously higher doses to the northern islands, closer to Bikini, and less fall-out further away.

So, that's the reason I chose '52 as the cut-off point. On Page 7, the graph indicates that prior to 1952, before the onset of the thermo-nuclear weapons, adverse births were randomly

distributed throughout the Marshals. A pattern doesn't really emerge until you turn the page to Page 8, post-'52. After the large hydrogen bomb weapons, we see a distinct correlation between distance from Bikini and that being the independent variable and the incidence rate of congenital anomalies.

As you move further away from Bikini, that is the three atolls furthest away, the southern islands, Rongelap, Anorik and Mili, we see that they have the lowest incidence rate of congenital anomalies.

Now, this is a preliminary survey. This is a pioneering effort in the , and I am here to request one item from this committee. I did not bring a long laundry list. I brought one particular item. I tried to crystalize my statement into one request.

It seems pretty clear to me that 41 years after Bravo and the very large thermo-nuclear weapons in the , we still have an uncertain prognosis vis-a-vis women, and I would urge this committee to recommend initiation of a larger follow-up study to my study, a larger systematic epidemiological study of the women and reproduction in the .

DR. FADEN: Thank you, Mr. Alcalay. Thank you for your material.

Are there questions? Ruth?

DR. MACKLIN: I'd just like to have one clarification about --

MR. ALCALAY: Yes.

DR. MACKLIN: -- the words you used and the items that you're measuring. You have miscarriages. You have still births, and then you have what you call adverse births, which you define as still births and miscarriages combined, and yet in your -- when you -- in your oral statement, you referred to congenital anomalies.

Did you look at something other than deaths? I mean miscarriages and still births are adverse outcomes that did not result in a live birth. Did you look at anything that would be called congenital anomalies in births, in live births?

MR. ALCALAY: Yes. Thank you for the question.

In my data collection, and I'm still assessing the data, I have a ton of data, it's going to take me several more months to sift through it, I also collected data from all these women in my survey about children born with serious maladies. I would include those in congenital anomalies as well.

Also, another facet of this research which will come out in a few months has to do with resident histories. The Marshall Islanders, unlike our popular romantic images of island people, do not stay put. There's a high degree of mobility. It's important to know where a particular women resided, say, in 1954, did she live in Rongelap, a 120 miles from Bikini, or was she at Alamonwah Shopping Center in Hawaii several thousand miles

away.

So, I'm also assessing those data, but I hope that clarifies.

DR. MACKLIN: Yes.

DR. FADEN: Thank you. Are there other questions for Mr. Alcalay?

(No response)

DR. FADEN: Thank you very much for the material.

MR. ALCALAY: Thank you very much.

DR. FADEN: Good luck with your dissertation.

MR. ALCALAY: Thank you.

(Applause)

DR. FADEN: Our next speaker is Ms. Denise Nelson. Is Ms. Nelson with us this morning -- this afternoon? Excuse me. I keep getting my time of day confused. Thank you for taking the time to come here, Ms. Nelson.

#### Statement of Denise Nelson

Bethesda, Maryland

MS. NELSON: There was no blame to be assessed, no responsibility to be assumed. What had happened was somehow inevitable. Not the doing of man but of circumstances. These are the words of Adolf

Eichmann. Never, not once did the man convey anything but the feeling that everything he had done was totally appropriate. If the conscience stops functioning, even occasionally, one is in mortal danger of losing one's self.

He was a soldier. In this, he took enormous pride, and a soldier is never entirely his own man. When decisions were made by those above and orders issued, they had to be obeyed. This was duty, and his moral responsibility.

For it is not just about the unspeakable evil perpetrated by the agents of Nazism, but about the astonishing capacity of those not wholly unlike ourselves for self-justification. The ease with which in the interest of an ideology or simple ambition seemingly normal souls escaped their better selves.

Evil is most disturbing when it is common place. Eichmann was the perfect example of the obedient, dedicated government loyalist who had put the whole before the individual. Over 400,000 Hungarian Jews found their way to human experimentation and death solely because of the actions of this man.

Today, we think only of the Nuremberg Code, but prior

to the Nuremberg Code came the Nuremberg Decrees of 1935, which stripped Jews of their basic rights, took away their financial and social livelihood, and marked the beginning of a massive classification of sensitive national security documents.

Almost the same thing happened in this country at the beginning of the Cold War. Residents of Southern Utah and Nevada were identified in AEC documents as a low-use segment of the population. In other words, disposable.

The rights, health and livelihood of these fall-out victims were torn from them and documents about their health, exposure levels, medical examinations, and experimentation were classified.

50 years later, the bodies of these people have been carefully buried one-by-one in nice little graves with lots of flowers, but I for one cannot ever look at the graves in St. George, Utah, without thinking of a mass grave and unjustified premature deaths. The parallels are undeniable.

When I hear that some children in Southern Utah -- when I heard that some children in Southern Utah received film badges and others did not, I could not help but think of the Star of David, which was so clearly the sign of another low-use segment of the population.

Was it justified to expose the thousands of children who lived in a virtually uninhabited area as it was described by the AEC to radioactive food, air and water? If so, then who are we to say that to kill by gassing is wrong?

The children of Southern Utah are dead and dying. If there was no harm in the clouds, why did they always wait until the clouds blew away from Las Vegas? If there was not enough radiation to cause harm, why did the government apologize for the sacrifice the people of Utah have made in the interest of national security? If there was no harm done, why did the Congress pass a compensation act which places a \$50,000 value on the life of each man, woman and child who dies of certain cancers?

The enormous medical costs were not addressed. The families slid into poverty. Children lost out on education, and once well-to-do hard-working families were driven apart and bitter. The compensation act has failed miserably.

Some families have lost several members and because of the restrictive nature of the bill, no compensation is paid. The loss of a child is small indeed to this government, but it is colossal to a mother and father.

Past and present politicians use the words "small sacrifice" to address the loss of a child, and this attitude should make us fear for our lives because once it no longer bothers us to see mangled bodies, it will no longer bother us to mangle them ourselves.

Evil can simply be defined as the use of political power to destroy others for the purpose of defending our sick selves. Just as the Jews had no protection in Nazi Germany, the

Constitution of the United States of America does not protect its children.

When the AEC was asked, who has the responsibility for the safety and welfare of persons and property near areas of possible fall-out, the answer was, it is the responsibility of the heads of families and the owners of property to protect the members of their families and their property from possible radioactive fall-out.

Any group will remain potentially evil and without conscience until such time when every single individual becomes directly responsible for their own behavior and deeds.

Eichmann was the only man ever executed in the state of Israel. Justice prevailed, and it did not heal the wound, but it satisfied the soul. Heroic action brought him to trial, as it will take heroic action to reveal the truth about Fall-Out City.

If the fall-out was -- if the fall-out which was purposefully directed toward a healthy population was not an experiment, or even one of planned opportunity, then it was just simply a criminal act of mass genocide.

There was no blame to be assessed. No responsibility to be assumed. This was Eichmann's view. I hope that this committee is composed of individuals who respect the right of each human being to live in safety, in dignity, and with the understanding that if their life is taken from them prematurely, for whatever reason, justice under the law must punish the guilty, so that all souls may rest in peace.

Thank you.

DR. FADEN: Thank you very much, Ms. Nelson. Very eloquent statement.

Are there --

(Applause)

DR. FADEN: -- Ms. Nelson, Ms. Nelson, excuse me, I think we have some questions, if you would -- Lois?

MS. NORRIS: Thank you, Ms. Nelson. Could you direct me to the source of the quote in your written statement? It's the third paragraph. The AEC's response to the question, saying that it is the responsibility of the heads of families.

MS. NELSON: That came out of the book "Under the Cloud" by Richard Miller, and I think I referenced it on the bottom of the second page.

DR. FADEN: Thank you. Duncan?

DR. THOMAS: Again, thank you for an eloquent statement.

MS. NELSON: Thank you.

DR. THOMAS: The same question regarding the AEC

document that you quote on the first page about the low-use segment.

MS. NELSON: Yes.

DR. THOMAS: Where does that come from?

MS. NELSON: That came actually out of the book by Carole Gallagher. I'm not sure of -- "American Ground Zero".

DR. THOMAS: "American Ground Zero"?

MS. NELSON: Yes.

DR. THOMAS: Have you seen that document itself?

MS. NELSON: It was an internal memo. I have not seen that myself, but I believe that somebody else that has worked with some of the radiation victims does have a copy of that memo.

DR. THOMAS: I've heard reference to this document before, and I haven't seen it either. I don't know whether the staff has.

I have the vague recollection that --

MS. NELSON: I would like to find it out myself. I'd like to see the original.

DR. THOMAS: Yes. Me, too, because I --

MS. NELSON: Yes.

DR. THOMAS: -- have heard reference to an earlier discussion, where someone, and I don't recall whom, was saying that that statement was referring to the land and not to the people, and I think it's really important to get to the bottom of that.

MS. NELSON: Well, there are actually two statements. One was a low-use segment of the population, and another one was virtually uninhabited.

DR. THOMAS: Well, if anyone, yourself or any of the other members of the audience, can point us in the direction of the original documents, it would --

MS. NELSON: Okay. I will make a note of it.

DR. THOMAS: -- be very important for us.

MS. NELSON: I will make a note of that, to look those up for you.

DR. FADEN: Thank you very much, Ms. Nelson.

MS. NELSON: Thank you.

DR. FADEN: We appreciate it.

We next have a panel of people who have asked to

present, and again please forgive me if I'm not pronouncing people's names correctly, but we have Ms. Chris DeNicola, Ms. Valerie Wolf, and Ms. Claudia Mullen. Are you all of New Orleans, is that correct?

MS. WOLF: Yes, that is correct.

DR. FADEN: Thank you for making the effort to come up to speak to us today.

Statement of Chris DeNicola, Valerie Wolf and  
Claudia Mullen, New Orleans, Louisiana

[Main Menu](#)

[Top](#)

MS. WOLF: Okay. I'm going to start. My name is Valerie Wolf.

In listening to the testimony today, it all sounds really familiar. I am here to talk about a possible link between radiation and mind-control experimentation that began in the late 1940s.

The main reason that mind-control research is being mentioned is because people are alleging that they were exposed as children to mind-control radiation drugs and chemical experimentation, which were administered by the same doctors who are known to have been involved in conducting both radiation and mind-control research.

Written documentation has been provided revealing the names of people and the names of research projects in statements from people across the country.

It is also important to understand that mind-control techniques and follow-ups into adulthood may have been used to intimidate these particular research subjects into not talking about their victimization in government research.

As a therapist for the past 22 years, I have specialized in treating victims and perpetrators of trauma and their families. When word got out that I was appearing at this hearing, nearly 40 therapists across the country, and I had about a week and a half to prepare, contacted me to talk about clients who had reported being subjects in radiation and mind-control experiments.

[Main Menu](#)

[Top](#)

The consistency of people's stories about the purpose of the mind-control and pain-induction techniques, such as electric shock, use of hallucinogens, sensory deprivation, hypnosis, dislocation of limbs and sexual abuse, is remarkable.

There is almost nothing published on this aspect of mind-control used with children, and these clients come from all over the country, having had no contact with each other.

What was startlingly was that therapists reported many of these clients were also physically ill with auto-immune problems, thyroid problems, multiple sclerosis, and other muscle and connective tissue diseases as well as mysterious ailments for which a diagnosis cannot be found.

While somatization disorder is commonly found in these clients, many of the clients who have been involved in the human experimentation with the government have multiple medically-documented physical ailments, and I was really shocked today to hear one of the speakers talk about the cysts and the teeth breaking off, because I have a client that that's happening to.

Many people are afraid to tell their doctors their histories as mind-control subjects for fear of being considered to be crazy. These clients have named some of the same people, particularly a Dr. Green, who was associated with clients' reports of childhood induction of pain, mind-control techniques, and childhood sexual abuse.

[Main Menu](#)

[Top](#)

One of my clients, who had seen him with a name tag, identified him as Dr. L. Wilson Green. A person with this same name was the scientific director of the Chemical and Radiological Laboratories at the Army Chemical Center, and that he was engaged in doing research for the Army and other intelligence agencies.

Other names that have come to light are Dr. Sidney Gottlieb and Dr. Martin Orne, who, it is reported, were also involved in radiation research.

[REPEAT: "...WERE ALSO INVOLVED IN RADIATION RESEARCH"]

It needs to be made clear that people have remembered these names and events spontaneously with free recall and without the use of any memory-retrievable techniques, such as hypnosis. As much as possible, we have tried to verify the memories with family members, records and experts in the field.

Many attempts have been made through Freedom of Information Act filings to gain access to the mind-control research documentation. These requests have generally been slowed down or denied, although some information has been obtained, which suggests that at least some of the information supplied by these clients is true.

It is important that we obtain all of the information contained in the CIA and military files to verify or deny our clients' memories. Although many of the files for MK Ultra may have been destroyed, whatever is left, along with the files for other projects, such as Bluebird and Artichoke, to name only two, contain valuable information.

Furthermore, if, as the evidence suggests, some of these people were used in radiation experiments, there might be information in the mind-control experiment file on radiation experiments.

We need this information to help in the rehabilitation and treatment of many people who have severe psychological and medical problems which interfere with their social, emotional and financial well-being.

[Main Menu](#)

[Top](#)

Finally, I urge you to recommend an investigation into these matters. Although there was a commission on mind-control, it did not include experiments on children because most of them were too young or still involved in the research in the late 1970s to come forward.

The only way to end the harassment and suffering of these people is to make public what has happened to them in the mind-control experiments. Please recommend that there be an investigation and that the files be opened on the mind-control experiments as they related to children.

Thank you.

DR. FADEN: Thank you.

[Main Menu](#)

[Top](#)

MS. DeNICOLA: Good afternoon. I'm Christine DeNicola, born July 1962, rendering me 32 years of age.

I was a subject in radiation as well as mind-control and drug experiments performed by a man I knew as Dr. Green.

My parents were divorced around 1966, and Donald Richard Ebner, my natural father, was involved with Dr. Green in the experiments. I was a subject from 1966 to 1976. Dr. Green performed radiation experiments on me in 1970, focusing on my neck, throat and chest in 1972, focusing on my chest and my uterus in 1975.

Each time I became dizzy, nauseous and threw up. All these experiments were performed on me in conjunction with mind-control techniques and drugs in Tucson, Arizona.

[Main Menu](#)

[Top](#)

Dr. Green was using me mostly as a mind-control subject from 1966 to 1973. His objective was to gain control of my mind and train me to be a spy assassin. The first significant memory took place at Kansas City University in 1966. Don Ebner took me there by plane when my mom was out of town. I was in what looked like a laboratory, and there seemed to be other children. I was strapped down, naked, spread-eagle on a table, on my back.

Dr. Green had electrodes on my body, including my head. He used what looked like an overhead projector and repeatedly

said he was burning different images into my brain while a red light flashed aimed at my forehead.

In between each sequence, he used electric shock on my body and told me to go deeper and deeper, while repeating each image would go deeper into my brain, and I would do whatever he told me to do.

I felt drugged because he had given me a shot before he started the procedure. When it was over, he gave me another shot. The next thing I remember, I was with my grandparents again in Tucson, Arizona. I was four years old.

You can see from this experiment that Dr. Green used trauma, drugs, post-hypnotic suggestion and more trauma in an effort to gain total control of my mind. He used me in radiation experiments, both for the purposes of determining the effects of radiation on various parts of my body and to terrorize me as an additional trauma in the mind-control experiments.

The rest of the experiments took place in Tucson, Arizona, out in the desert. I was taught how to pick locks, be secretive, use my photographic memory, and a technique to withhold information by repeating numbers to myself.

[Main Menu](#)

[Top](#)

Dr. Green moved on to wanting me to kill dolls that looked like real children. I stabbed a doll with a spear once after being severely traumatized, but the next time, I refused. He used many pain-induction techniques, but as I got older, I resisted more and more.

He often tied me down in a cage, which was near his office. Between 1972 and 1976, he and his assistants were sometimes careless and left the cage unlocked. Whenever physically possible, I snuck into his office and found files with reports and memos addressed to CIA and military personnel.

Included in these files were project, sub-project, subject and experiment names with some code numbers for radiation and mind-control experiments, which I have submitted in your written documentation.

I was caught twice, and Dr. Green ruthlessly used electric shock, drugs, spun me on a table, put shots in my stomach and my back, dislocated my joints, and hypnotic techniques to make me feel crazy and suicidal.

Because of my rebellion and growing lack of cooperation, they gave up on me as a spy assassin. Consequently, the last two years, 1974 to 1976, Dr. Green used various mind-control techniques to reverse the spy assassin messages, to self-destruct and death messages.

His purpose. He wanted me dead, and I have struggled to stay alive all of my adult life, all of my adult life. I believe it is by the grace of God that I am still alive.

These horrible experiments have profoundly affected my life. I developed multiple personality disorder because Dr. Green's goal was to split my mind into as many parts as possible so he could control me totally. He failed. But I've had to endure years of constant physical, mental and emotional pain even to this day.

I've been in therapy consistently for 12 years, and it wasn't until I found my current therapist two and a half years ago, who had knowledge of the mind-control experiments, that I finally have been able to make real progress and begin to heal.

In closing, I ask that you keep in mind that the memories I have described are but a glimpse of the countless others that took place over the 10 years between 1966 and 1976, that they weren't just radiation but mind-control and drug experiments as well.

I have included more detailed information of what I remember in your written documentation. Please help us by recommending an investigation and making the information available so that therapists and other mental health professionals can help more people like myself.

I know I can get better. I am getting better, and I know others can, too, with the proper help. Please help us in an effort to prevent these heinous acts from continuing in the future.

Thank you very much.

DR. FADEN: Thank you.

(Applause)

[Main Menu](#)

[Top](#)

MS. MULLEN: Good afternoon.

Between the years of 1957 and 1974, I became a pawn in the government's game, whose ultimate goal was mind-control and to create the perfect spy, all through the use of chemicals, radiation, drugs, hypnosis, electric shock, isolation in tubs of water, sleep deprivation, brain-washing, verbal, physical, emotional and sexual abuse.

I was exploited unwittingly for nearly three decades of my life, and the only explanations given to me were that "the end justifies the means", and "I was serving my country in their bold effort to fight communism".

I can only summarize my circumstances by saying they took an already-abused seven-year old child and compounded my suffering beyond belief. The saddest part is I know for a fact that I was not alone. There were countless other children in my same situation, and there was no one to help us until now.

I've already submitted as much information as possible, including conversations overheard of the agencies responsible.

I'm able to report all this to you in such detail because of my photographic memory and the arrogance of the doctors -- the arrogance of the people involved. They were certain they would always control my mind.

Although the process of recalling these atrocities is not an easy one, nor is it without some danger to myself and my family, I feel the risk is worth taking.

[Main Menu](#)

[Top](#)

Dr. L. Wilson Green, who claimed to have received \$50 million from the Edgewood Chemical and Radiology Laboratory as part of a TSD or technical science division of the CIA, once described to Dr. Charles Brown that "children were used as subjects because they were more fun to work and cheaper, too." They needed lower profile subjects than soldiers or government people.

So, only young willing females would do. Besides, he said, "I like scaring them. They and the agency think I'm a god, creating subjects experiments for whatever deviant purposes Sid and James could think up." Sid being Dr. Sidney Gottlieb, James, Dr. James Hamilton.

In 1958, I was to be tested, they told me, by some important doctors from the society or the Human Ecology Society, and I was instructed to cooperate. I was told not to look at anyone's faces, and not -- try hard not to ignore -- to try hard not to ignore any names as this was a very secret project, but I was told that all these things would help me forget.

[Main Menu](#)

[Top](#)

Naturally, as most children do, I did the opposite, and I remembered as much as I could, but Dr. John Gittinger tested me, Dr. Cameron gave me the shots, and Dr. Green the x-rays.

Then I was told by Sid Gottlieb that "I was ripe for the big A" meaning Artichoke. By the time I left to go home, just like every time from then on, I would remember only whatever explanations Dr. Robert G. Heath of Tulane Medical University gave me for the odd bruises, needle marks, burns on my head, fingers, and even the genital soreness. I had no reason to believe otherwise. They had already begun to control my mind.

[Main Menu](#)

[Top](#)

The next year, I was sent to a lodge in Maryland called Deep Creek Cabins to learn how to sexually please men. I was taught how to coerce them into talking about themselves, and it was Richard Helms, who was deputy director of the CIA, Dr. Gottlieb, George White, Morris Allen, were all planning on filming as many high government agency officials and heads of academic institutions and foundations as possible, so that later,

when the funding for mind-control and radiation started to dwindle, projects would continue.

[Main Menu](#)

[Top](#)

I was used to entrap many unwitting men, including themselves, all with the use of a hidden camera. I was only nine years old when this sexual humiliation began. I overheard conversations about a part of the agency called Ord, which I found out was Office of Research and Development. It was run by Dr. Green, Dr. Steven Aldridge, Martin Orne, and Morris Allen.

Once a crude remark was made by Dr. Gottlieb about a certain possible leak over New Orleans involving a large group of retarded children who were being given massive doses of radiation. He asked why was Wilson so worried about a few retarded kids, after all, they would be the least likely to spill the beans.

Another time, I heard Dr. Martin Orne, who was the director then of the scientific office, and later head of the Institute for Experimental Research state that, "In order to keep more funding coming from different sources for radiation and mind-control projects, he suggested stepping up the amounts of stressors used and also the blackmail portion of the experiments". He said it needed to be done faster and to get rid of the subjects or they were asking for us to come back later and haunt them with our remembrances.

There's much more I could tell you about government-sponsored research, including project names, cell project numbers, people involved, facilities used, tests and other forms of pain induction, but I think I've given more than enough information to recommend further investigation of all the mind-control projects, especially as they involve so much abuse of the radiation.

I would love nothing more than to say that I had dreamed the whole thing up and need just to forget it, but that would be a tragic mistake. It would also be a lie.

All these atrocities did occur to me and to countless other children, and all under the guise of defending our country. It is because of the cumulative effects of exposure to radiation, chemicals, drugs, pain and subsequent mental and physical distress that I've been robbed of the ability to work and even to bear any children of my own.

It is blatantly obvious that none of this was needed nor should it ever have been allowed to take place at all, and the only means we have to seek out the awful truth and bring it to light is by opening whatever files remain on all the projects and through another presidential commission on mind-control.

I believe that every citizen of this nation has the right to know just what is fact and what is fiction. It is our greatest protection against the possibility of this ever happening again.

In conclusion, I can offer you no more than what I've given you today, the truth, and I thank you for your time.

(Applause)

DR. FADEN: Thank you for your presentations. We appreciate that this is not an easy thing to do.

Are there comments or questions from the committee?  
Duncan?

DR. THOMAS: Could I ask either of you, where were your parents through all this? Do you have any idea how you were recruited in the first place? Did they -- do you have parents, and did your parents know anything about what was going on?

MS. DeNICOLA: I can make a brief statement on that. It was my father who was involved with Dr. Green. My mother was not aware because they were divorced when I was four years old. Well, maybe before that, separated, and what would happen, how he gained access to me is these experiments took place actually in the middle of the night, and he would sneak in while my mom was asleep and take me out, and she had absolutely no knowledge of what happened.

However, when these memories did surface, and I began to tell her about them, she -- there was no question in her mind that he was capable. He had been in the military, in the Air Force. He had access to meet Dr. Green.

So, in answer to your question, it was my father. He groomed me from the very beginning, started sexually abusing me from the very beginning, and it was just something that he wanted to do, and he was closely involved with Dr. Green, but my mom had no knowledge.

The only thing she knew was that she wanted to get away from him. She didn't know why. She just knew she had to get away from him because of my reaction to him. I'm sorry. I didn't mean to go on. Thank you.

MS. MULLEN: Do you want an answer from me, also?

DR. THOMAS: It's up to you.

MS. MULLEN: If you want. The way I got involved was I was adopted when I was two and a half by a woman who sexually abused me, and then she was a friend of the chairman of the board of Tulane University at the time, and as a favor to him, she -- I began to show symptoms of, you know, typical of childhood abuse, when I was very, very young, and she asked him to recommend a psychiatrist, and he recommended Dr. Heath, who was involved with the project already, and, so, when he discovered that I already had been abused from the time I was practically born, and that I was -- had the ability to associate and that I had almost perfect recall, and I passed all the personality tests that they gave me, he suggested me for the project, and, so, that's how I got involved into it.

My father had no idea, and he died when I was very young, but I don't know if my mother knew or not. I don't think

she really cared, to tell you the truth, and then she died when I was teenager. So, after that, they had access to me.

DR. FADEN: Lois?

MS. NORRIS: You mentioned that there are others across the country who are coming -- who are recalling similar things. Do they all cover the same time span, generally, or do you have a feel for that?

MS. WOLF: Yeah. Generally, they cover the same time span from about the late 1940s until -- see, one of the things that we're hearing about is people that were assigned to monitor them in case they should start to remember because it's so horrible what was done, so we're not exactly sure when the actual experimentation took place and when it got into just the monitoring to make sure that they were still under control, and not everybody is being monitored.

So, but, yeah, pretty much, I think, from the late '40s through the 1970s, and maybe even into 1984.

MS. MULLEN: Later than that, I found out, because after my parents died, then there was no one to protect me, to monitor that she spoke of. My particular monitor was a physician at Tulane University, and, so, he was a family friend, also, of my mother's, and he just kept on making sure that I kept going back and forgetting.

MS. WOLF: So, it's kind of unclear as to when -- whether it stopped or whether it -- you know, where the --

MS. MULLEN: They still monitor you, though. That's why I am taking some danger in coming here today, because I'm still being watched.

MS. WOLF: I know this sounds unbelievable, but I mean there's actual -- she gets stuff in the mail. She gets phone calls. People have been writing things on her house, using the pseudonym that they used when she was at Tulane, and only they have knowledge of that name.

MS. MULLEN: My real name was never used, ever, in anything. So.

MS. NORRIS: Were they all children at the time?

MS. WOLF: Yeah. All children. And the thing is, is as therapists, we are trying really hard to figure this out, and to get as much information as we can.

Claudia's memories have been verified, a lot of them, because the way I have approached this is as I don't read in the field. I don't -- and, so, as people give me information, I send them to experts, like Alan Schefflin, who has a lot of information, and then he'll get back to me to confirm or deny. He has never denied any information that I've sent him.

Some of it can't be because we don't have all the information, but a lot of Claudia's memories have been validated, and they're not in any published source. The only way she would

know the things she knows is if she filed Freedom of Information Act information, and this is what Alan Schefflin is telling me.

So, I have every -- and then I have been very careful not to know a whole lot, so if someone tells me something, I don't even cue them that -- because I don't know either.

DR. THOMAS: It seems to me that documentary evidence is going to be key to establishing the truth of these cases.

MS. WOLF: Yes, absolutely.

DR. THOMAS: It's hard for me to imagine that a program as large and as complex as you people have described could have gone on for so long without a great deal of documentation.

The question is where is this documentation now? It becomes a Catch-22 if it is said that all of the documentation resides within the CIA files, and all of it's secret, and they won't give it to us. But what you've described is a pattern of very complex organization which involves plenty of people outside of the CIA as well.

Therefore, there must be a substantial amount of documentation which could be discovered. You just mentioned about the letters that some of you are still receiving. There is a lead to documentation.

Can you describe for me what efforts have been made, either by yourselves or by other people who are working on this story, to try to track down some of this documentation, and what you meant a moment ago when you said that some of these memories have been verified or validated?

MS. WOLF: Okay. Dr. Alan Schefflin, and you have his resume in the documentation and a statement from him about Claudia in your documentation, he has been for the past 20 years filing Freedom of Information Act filings to get this information, has been piecing it all together.

Other people across the country have been doing the same, going back to the government files, getting what they can, and what they've also been doing is writing books, sharing information. So, he has actual Freedom of Information Act information.

The problem is that it's -- when the requests are going in now, they're being slowed down or denied or just kind of lost in the shuffle, and the information is very difficult to get.

DR. THOMAS: I'm sorry. I don't see the documentation in the package that was provided to me. Is there something missing?

MS. MULLEN: I have -- I supplied --

MS. WOLF: I sent a --

MS. MULLEN: -- project numbers, names.

MS. WOLF: -- packet of documentation overnight mail,

should have been here Monday, and some more yesterday. So, maybe it isn't --

DR. FADEN: If we haven't received it, we'll let you know.

MS. WOLF: Okay. I sent the first one to Steve Klaidman, and the second one to Kristen Crotty. You have it?

COMMITTEE MEMBER: Yes, we have some of this material.

MS. WOLF: Okay. And, again, it was, you know, what I could pull together in about a week and a half from across the country, but the consistency of the stories, and the thing is, we want to verify it.

So, Alan has amassed over 20 years from Freedom of Information Act, from memos other people give him or sharing information, a lot of information, but we don't have the complete story. There's still a lot of stuff that we don't know, and that's what we're trying to find out because --

DR. THOMAS: Does any of this documentation specifically refer to radiation experiments? Because we are told by CIA that they never did any radiation experiments. So, what we need is documentation in order to pursue that.

MS. MULLEN: All you have to do is look up anything on Ord, the one that I mentioned that I overheard them speaking about. That was almost strictly radiation, and that was run by Dr. Steven Aldridge, Martin Orne.

DR. THOMAS: And that's appeared in the package which you sent Steve Klaidman?

MS. MULLEN: Yes, and I gave you project numbers, project names, sub-project numbers, even the subjects. We were given numbers ourselves for each specific experiment, and I overheard my number because they would -- they would assume that -- they would use techniques so that you would forget. You know, when you go home, you wouldn't remember what happened. So, they just talked freely in front of me. That's why no one ever hid their face or wore a mask or anything, because they knew that I would not remember, and I didn't. I didn't remember until two years ago.

MS. WOLF: And, also, I think you can follow up on Dr. L. Wilson Green. I don't know if you've come across him, but he seems to have been involved in both, and I think realistically, in terms of the mind-controls, some of the subjects were used in mind-control radiation. Some, as you've been hearing, have been strictly radiation, and some were strictly mind-control.

I think the reason it's coming up now is because in some of the stuff people are remembering, they knew that it would break down. They really worked hard to induce amnesia, and they knew it would break down, and I think in the last couple of years, that that's what's been happening, because we're hearing more and more, and, you know, -- so, we're just trying to find out what's happening here. That's -- so, we'd appreciate any help you could give us on that.

DR. FADEN: Thank you. Did you want to make --

MS. DeNICOLA: Yes, I did. I just wanted to address you for a moment. The question you asked about the documentation on radiation specifically. Included in my packet, and I don't know if you have that or not, there is - it's entitled, "Radiation File Information". There are names of subjects names, experiment names, and some code numbers that I remembered, and the problem is we have no way of verifying this without opening the files.

I mean I --

MS. WOLF: You have them.

MS. DeNICOLA: Yeah.

MS. WOLF: You have what she remembers, and you have what Claudia remembers.

MS. DeNICOLA: Do you have the documentation?

DR. THOMAS: All I have from you is your three-page -- four-page -- three-page document.

MS. WOLF: There is a whole packet of information.

DR. FADEN: We can clarify that.

DR. THOMAS: I gather the staff has it. So, we can get that.

DR. FADEN: We can clarify what we don't have, what we do have, and whatever it is we can put together, and we thank you very much --

MS. WOLF: Okay. Thank you.

DR. FADEN: -- for your traveling from New Orleans to present to us.

We have two more presenters. I'm sorry. We have two more presenters who are waiting, and we owe them the courtesy of hearing from them.

I understand that Mr. Schwartz is now with us. If you would wait, and we'll just make sure that you get on, but we have Ms. Starr. Ms. Suzanne Starr is here. Thank you, Ms. Starr. And you're traveling from New Mexico?

MS. STARR: Yes, thank you.

DR. FADEN: Thank you for coming.

Statement of Suzanne Starr

Chimayo, New Mexico

MS. STARR: This is my husband, and he's sitting here in case I pass out.

DR. FADEN: Well, we hope that doesn't happen.

MS. STARR: I'm not going to. You know, I just want to say thank you. Thank you very much for listening to me, for being here, for sitting in your seats this past hour. Thank you.

A whole part of my life just came together. This is phenomenal. Here I am, living in a remote area of New Mexico, and I start remembering this really bizarre stuff. Then I go back and I find the place where it happened, a place I never thought I had been in my life, and by gosh, it looks just like my recall of it, and now I sit here today, and I hear from people I have never met, never seen. They have been through the same thing I'm experiencing.

I don't have the names, but you know one thing that just shocks me is through all of my work, I keep coming up with this darned Delta code, Delta 5133867. Until today, I didn't know what that was. It's an experimentation code. I kept wondering, why do I write Delta 5133867. What's an alpha code? What's a beta code? Those are things that this nation needs to find out for the sake of our future, and really and truly, without mistake, for the sake of the salvation of our planet.

I'm just shocked. I'm surprised. I am a survivor of secret experimentation conducted by our government on healthy children. I recalled and began to recall these incidences two years ago. I have been working for weeks to overcome the terror program so that I could be here and speak to you with dignity today.

I know I survived my childhood for this moment. These horrid secrets undermine the core of our society. They exist only out of the power of evil. As long as atrocity to human beings, particularly children, go unbelieved, they can continue.

I have come to realize from my awakening that reality is a dimension beyond human beings' ability to conceive the truth. When the truth comes to the light and is believed, there is an incredible healing for ourselves and our nation. That is my hope.

I was born in 1949. We were very poor. I lived in the mountains of Colorado. Both of my parents have died of cancer. All but two of my aunts and uncles have either died of cancer or have cancer.

As a child, my parents were victims of a mind-control organization that permitted me to be inducted into experimentation. I have early recollections of people coming to my house. My father was picked up on a false arrest for a ticket, parking ticket, and put in jail. They came to my house, and they tortured me, and they held my mother until she signed a paper.

I believe and I know that if she had not signed that paper, I would not be here today. I believe that her signing this paper is related to me being brought into these experiments. Either she signed or I died.

I believe our family physician, who was retired from the military, got children from the mountains of Colorado for the experiments. He was the only doctor I have ever saw until I was 20 years old. The first memory I have of environmental deprivation was in the basement of this doctor's office.

His office adjoined a meeting hall that was used for satanic rites. I was astounded when I returned to this city not that long ago, two years ago, and discovered that his office and the adjoining chambers and the sub-chambers in that city were exactly as I had remembered it.

Of course, I would remember my doctor's office, but I had no knowledge prior to my return and my investigation of the sub-chambers and of the secret things about his office.

The incidences I have recalled happened to me between ages of three and 12 years old. I was taken to a college campus in the summer. We were kept in a locked dorm and taken to the experiment by way of underground tunnels. I provided the name of that institution in my narrative. I believe you have my narrative.

I don't want to say that here in public. One day, there was a lot of confusion, and a door was left open, and I slipped out. I went across the campus and entered into another dorm. I heard some people yelling. I wondered down the hall. I was a very type of inquisitive kind of a slip-out child, and when I went into the room and looked around the corner where the people were yelling, there was a high official from the United States military. There was the man that the people in the program called the Nazi doctor. They called him a Nazi. I don't know who this man is. I believe I could recognize a picture if I was given the opportunity, and there was one of the technicians at the head of the program.

I was caught and taken into electro-shock sessions, something was put up my nose, and I passed out. In recovering this incident, I had convulsions, which I have. I'm not a seizure person, but when I am recalling these incidences, frequently I go into a convulsive type of episode. It's not grand mal. It's just extreme shaking.

A year and a half ago, on an investigative trip, my husband and I returned to that campus. I was amazed to find it exactly as I had recalled it. The two buildings where we were used for the experiments had been torn down in 1968, but the dorm that I wondered into was exactly as I remembered it.

I recall being in a classroom with other children. We were all in institution pajamas. We were told that we were chosen to help serve our country. A careful record of the procedures were kept. The technicians were highly-trained professionals. They were just doing their job.

We were not to be angry at them. An American flag hung in the room. The experiments are discussed in more detail in my narrative. One of the doctors, who supervised the experiments, was called the Nazi when he was out of the room. The experiments involved environmental deprivation, to the point of forced psychotic states, and you know why I remember about the forced

psychotic states that had a great impact on me because I realized something. After they put me in that little cell and treated me like a dog and kept me there until I went into psychotic states, they gave me electro-shock and told me we returned you to sanity, so we can take your sanity away, if you ever speak, and I'm speaking today, and I'm not going to lose my sanity. I'm going to stay nice and sound.

The experiments also included extreme sensation on the brain, spin programming, breeding of children and injections. I was given frequent electro-shock and mind-control sessions with the threat of death or insanity if I ever spoke, and through my recollection and these years that I have struggled for my freedom and the phrase that says thank God I'm free at least means a lot to me, through these times, I have fought self-destructive programmed messages to kill myself, and I know what a program message is, and I don't act on them. I know the difference.

Obviously they mis-judged my spirit and my desire to be free. The experiment I wish to speak about involved radiation. I was strapped face down, straddled on a device like a chair that curved my spine in a haunch. Needles were put in three places in my spine, my coccyx, my mid-spine and the base of my skull.

To the right, there was a device with five orifices, five IV tubes came out and joined into one, with controls for the amount of fluid and frequency. This tube was connected to the needles at the base of my skull.

I was given a timed injection at my coccyx. The technician had a monitor, I believe it was a Geiger counter. They checked my head with it. There would be timed releases -- released injections through the IV into the needle at the base of my skull -- could you get me some water -- repeatedly, which was monitored.

When the injections went into my brain, it felt like ice spreading throughout my skull. It was agonizing. I had cuffs on my upper arms and things on my fingers. I believe for vital signs. Wires were connected to my head simulator to an EEG. Often, they would say get some fluid. They did something to the needles in my middle spine. I believe they were testing my spinal fluid.

Sometimes something happened to the cuffs on my arms that caused horrible pain. Readings were taken again. The procedure was being taught to someone. I believe -- I believe that's what was happening. They talked as if I was unconscious and not even human. I recall it was explained that the injections were referred to as "trace" but enough to make this kid's head light up like a Christmas tree.

They thought this was funny. They kept making jokes about my head glowing. They sat me up and put a tube in my nose. I could feel something horrible in the front of my brain, and I blacked out.

In another experiment, when I -- they thought I was dead, they took me out of the chair, and the technician looked at me, and he said, "It looks like we lost this one. Well, there's plenty more where she came from. If she's brain dead, we can

institutionalize her and use her for further experiments. If she's dead, we will arrange an accident as is procedure with her family."

Another experiment involved inserting air into my uterus and expanding the abdominal cavity with air. This experiment was torturous. Measurements were taken periodically. X-rays of my uterus and fallopian tubes were taken by injecting radioactive dye. I know that this is a salpinghystiogram. I had to have this done during fertility testing when my husband and I were trying to conceive a child.

Fertility testing was so traumatic that I had to stop trying. I have never had a normal pregnancy or been able to conceive a child. Howsomever, I do remember at the age of 12 having an induced pregnancy. My baby boy was taken for the experiments. That is the only child I have ever had, unless there are other abortions that I'm not aware of.

I am willing to experience my -- to discuss my experiences in more detail, if any of you wish to. I have suffered all my life because of this. My life has completely changed now because of my recovery.

Five years ago, I began my quest for truth. I didn't perceive how much I was suffering until finally my symptoms diminished. I have recovered these incidences with the help of a caring professional. He has been careful to maintain a neutral position and does not hypnotise or lead me or influence me in any way, and he said he will attest to that.

Once early in my healing, I spoke to a man who helps people deprogram from mind-control groups. He told me freedom is in the struggle. The good Lord knows, I have struggled to be free. I am thankful that I started working on my healing of my body in my thirties. The past five years, I have healed my mind and spirit. Now, I am strong enough to speak the truth, the truth will set us free.

There's one more thing I didn't mention. During the many times, there were forced rapes. I wanted to say one thing. When I was early -- a memory I've had all my life. I always knew about, I always wondered what it was.

When I was four or five years old, I used to lie in the bedroom when my sisters went to school in the morning, and I played Nazi concentration camp, and I would be the Jewish princess, and they would be experimenting on me and military people would come and rape me, and I held up to it all because I was such a brave girl. I think I was a very brave girl. I really do.

I always wondered why did a four-year old fantasize that she was being experimented on. Why did she think that people were raping her? Now I know why. Because it was truth.

I wish to thank the people at the task force for helping me trust enough to testify. I would never have trusted a government project without their support. I also wish to thank President Clinton for appointing this commission, and each of you especially for having the courage and the integrity to listen to

us, the survivors of America's most horrid secret.

I am deeply committed to exposing this most horrid secret. Of course, I am terrified of repercussions, but if one of you hears us today, if one of you takes action, if someone in this room takes action, even if it's 10 years from now, this can change.

I am terrified of repercussions, but I will not purchase peace at the price of my silence. If life's so dear or peace so sweet as to be purchased at the price of chains of slavery, forbid it, almighty God. I know not what course others may take, but as for me, give me liberty or give me death, and I imagine you all know who said that. My hero when I was a little girl, Patrick Henry.

I do not choose death, I choose freedom, freedom to speak the truth. Thank you.

DR. FADEN: Thank you, Ms. Starr.

(Applause)

DR. FADEN: We appreciate your comments. Thank you for leaving us information.

If we have questions, could we keep them brief?  
There's one more person we need to get in.

(No response)

DR. FADEN: Thank you for your material. We appreciate your coming.

MS. STARR: Thank you.

DR. FADEN: Our last presenter is Mr. Steven Schwartz, who we missed earlier on, but he's here now.

Statement of Steven Schwartz

Washington, D.C.

MR. SCHWARTZ: I'll be brief.

DR. FADEN: Thank you, Mr. Schwartz.

MR. SCHWARTZ: Thank you.

Madam Chair, members of the committee, my name is Steven Schwartz. I'm a guest scholar at the Brookings Institution just up the street here in Washington, D.C., where I'm directing a project, attempting to assess the comprehensive, historical and potential future year costs of the U.S. nuclear weapons program from its inception in 1940 through the present.

I'm here today to explain a little bit of what we're doing, but also to share with you some of the experiences we have had in trying to track down some documentation which in talking with Mr. Guttman and other members of your staff, I understand it's a little bit similar in terms of the problems that we're

running into.

Actually, you have more money. You've got a bigger staff. You've got a bigger presence in Washington, and you've got a presidential directive. Other than that, we're pretty much the same.

I would -- so you understand some of the road blocks that we're up against here, the project got underway last May, and it's going pretty well. One of the -- basically, we're looking for cost data. So, in a way, we're sort of looking for discrete sets of data, and you would think that given what we're looking for, what you're looking for, that we would have the easier time of it.

In fact, and it could be due to the fact that you have a presidential directive, we're not succeeding as well as I would have liked. A part of that is because a lot of the documentation, unfortunately, doesn't exist. Either it was destroyed a long time ago, because it was felt to be irrelevant, or it was never collected in the first place, and here I'm speaking principally of the Department of Energy and its predecessor, the Atomic Energy Commission.

Of course, the edict in the early years was produce, produce, produce and let's not worry about anything else, and it turns out that worrying about what we were spending really wasn't a factor as long as the money was being spent.

We've uncovered some wonderful memos from the Atomic Energy Commission staff in the early 1950s saying things like gosh, we're spending a \$100 million a month, and we don't know what we're spending it on. We ought to find this out, which is pretty amazing.

So, we're running into a little difficulty there. The department has fairly recently, I guess, opened up the Open Net which you can access on the Internet, which is a fairly useful way of tracking down information. There are some limitations. The software only allows you to look at the first 40 items in your search. They will mail you the rest at cost, which is obviously expensive and burdensome and sort of limits the capability of the system, but it's better than nothing.

One experience that I had there recently, which does tie in with the work that you're doing, is I requested some information on troop use tests at the Nevada test site, and a whole slew of documents came up on the screen, wrote down the numbers, E-mailed it in to them, didn't have to pick up the phone once. It was wonderful.

I got back a pile of stuff in a box about a month later, which, given my other experience with retrieving information via FOIA, was incredible. I just actually got a call the other day from a FOIA officer at DOD who tried to reach me at my previous job, and when I told him that I was no longer there, he said, oh, thank you.

So, I have no idea what that request was. I told my successor at my previous job to follow up with this gentleman, that clearly this is not strictly a legal operation, and they

probably have some interest in what I'd requested for them in the past.

But getting back to DOE and the Open Net, in the package of materials that we requested, three documents were missing. They all had sheets. One of them said that it was simply not there. They couldn't say anything more about it. The other two said that they had been remanded back to DOE headquarters for review 10 years ago, and when I wrote back to them, and I said could you tell me a little bit more, like maybe where these documents are, I -- at first, I didn't get a response. Apparently the request got lost in the mail. Then I got a call back, and they said, well, we don't know where they are. We get stuff. It's supposed to be classified. If it isn't, it goes back. I said, well, tell me who I need to talk to. They did.

I called the gentleman. It turns out that he's in the History Division, and, ironically enough, he's been detailed to your counterpart at DOE. He has yet to get back to me, but I imagine he'll want to know where these documents are, too, because they relate to your mission and his. So, hopefully that will come up relatively soon.

We've had more success, frankly, getting information from published sources, old Atomic Energy Commission histories, which I'm sure your staff has looked at, and the Department of Defense histories, but, of course, as you know, anything that is really interesting isn't in there, and that's unfortunate, given the fact that cost data on all government programs is, according to the Constitution, supposed to be published now and then for people to know what's going on, it's unfortunate that most of this information is still not available.

We've made requests to the department, discrete requests for specific blocks of information that we need. Things that have been classified and are still classified today, but in our view should not be. For example, the cost of nuclear warheads. There's no reason for the American public not to know what we spent on these things.

We don't want to know how they worked. Frankly, we already know that. We don't want to know how they're put together. We just want to know what they cost, and, unfortunately, we're running into a bit of a bureaucratic road block there.

We've done the same thing at the Department of Defense, got a bit more success there, but they're still dragging their feet a little bit on that request, and we've gone, frankly, we've gone to the National Archives, which is where we went first, for this information, and surprisingly there isn't a whole lot of it there, as I'm sure -- well, actually, your committee's found a fair amount of information in the Archives.

But I think you've got somewhat better access to it than we do. So, you know, I've been following your work. I've been to the committee offices and looked at the documentation. The stuff from the Defense Nuclear Agency is terrific, and I commend you all for putting it together and look forward to using it in the future when the committee finishes its work.

I just wanted to relate those experiences, to say that the kind of problems you're running into, independent scholars and historians are running into the same problems. We dare not use the Freedom of Information Act. When we went to the Defense Department, for example, to request access to some information, we told them that one part of the request involved a pending Freedom of Information Act request, they said, well, how long has it been pending, we said two years, can you do anything about that, and they said, not really, it will just have to stay in the queue, and we said, well, it's been two years, our mandate is to get this report out in two years. So, hopefully in four years, you'll get our document to us, but in the meantime, isn't there anything you can do, and they said absolutely not, and we understand the reason, legally, why they need to do that.

But it is a serious, serious problem. So, with that, I'll just end, and if you all have any questions for me, I'd be happy to answer them.

DR. FADEN: Thank you, Mr. Schwartz. Thank you for your compliments. The staff really has done an amazing job gathering all the material.

Do we have questions? Susan?

DR. LEDERER: Are you suggesting the inability of the, say, DOE to locate a particular document is evidence of stonewalling or --

MR. SCHWARTZ: No.

DR. LEDERER: -- obstruction or a conspiracy or the inefficiency of a large bureaucracy?

MR. SCHWARTZ: I don't think -- on our stuff, I can't speak to your documentation, but on the stuff that we are seeking, I don't think there's any element of conspiracy there.

A lot of it, frankly, is bureaucratic inertia. We met with some very senior-level people in October, and they said to us, quite frankly, and we understand it, although given the Secretary's edict that, you know, they're going to try to be more helpful to the customer, i.e. the public, I was sort of hoping for a little bit more, but they said, look, you know, we've got a lot of work to do here, and this is just more work on top of that, and they couldn't quite see what they would be getting out of this project, and to be fair, our original request was rather burdensome, but even after we peeled it down, we're still meeting with resistance, and it's really from a fairly small group of people that control this information that just don't feel that it's worth their time to go and find it for us.

I'm not trying to accuse anyone. I just think that's the way the system is working. It's similar at the Defense Department, you know. We've been very clear with them about not requesting information that is classified. We originally asked to get access to their FYDP data base, their future years defense plan data base, which, since 1962, has collected information by program element, which is exactly what we need to track costs by year by program, and they said no, because, of course, things

like the CIA and the National Reconnaissance Office listed in there said, well, but you could request it by program element.

Well, there's thousands of program elements in this thing. I said that's going to take you a lot of time, wouldn't this be easier, if you just got rid of those few things that are a problem, they said no. So, we ended up submitting a request for 623 program elements, which is now pending over there. It may come out, it may not.

Mostly, I think, you know, as I mentioned, the -- some of this information just simply does not exist. When you go back before 1960, cost data at the Defense Department gets very spotty, and for the Atomic Energy Commission, even up to the present and the DOE, there's serious problems in finding it.

The attitude really seems to be once we've allocated the money, we don't really care about finding out what happened to it. In fact, I've talked to officials over there that are conducting the first-ever baseline inventory that's ever been done of all their facilities, and it's amazing what they're discovering. The amount of slipshod accounting over there.

So, it's frustrating, but as we're going to tell in our report, part of the story is that the documentation just may not exist. So, what does exist, we want, though. So.

DR. FADEN: I'm sure you do. Good luck with your project. We'll look forward to seeing it.

MR. SCHWARTZ: Thank you.

DR. FADEN: Thank you very much.

I think we need to take a break. So, it's 10 of 4. If we come back at 4:00, we have an hour for the other items on our agenda.

(Whereupon, a recess was taken.)

DR. FADEN: Committee members, please come to the table.

(Pause)

DR. FADEN: Committee members, if we could start, we have a few agenda items that I still would like to get in, and then we start -- so people can recall, we start at 8:30 tomorrow morning. I just put that in because we seem to start at a different time every day. We start at 8:30 tomorrow morning, and then we start at 8:00 on Friday morning. Okay.

If we could pick up with the -- kind of where we left off on the agenda. Nancy, is Henry joining you in this? Do we need to wait for Henry to come or can you start?

DR. OLEINICK: No. And then if he wants to add to it, he can.

DR. FADEN: Okay. Could somebody close the door? Thank you, David. If there are any committee members -- oh,

here, good, here comes Henry. Duncan, any other committee members, if we could round them up.

(Pause)

DR. FADEN: Nancy and Henry were kind enough to represent us in our last field panel hearing, and Nancy, I gather, is going to give us a report of how that experience went, and Henry will chime in or --

DR. OLEINICK: As he sees fit.

DR. FADEN: Okay. Thank you both, by the way, on behalf of all of us for finding the time to go. We appreciate it.

#### Update on Knoxville Small Panel Meeting

DR. OLEINICK: All right. I'm going to report on the Knoxville meeting that was held two weeks ago.

This, as we had heard from other small panel meetings, was very interesting and informative to those of us on the committee. That particular panel was small. We -- the committee was represented by Henry and myself. Steve Klaidman joined us on the panel, just so that we would be three. We missed Reed and Susan, who were initially supposed to go but couldn't attend, but we hope we represented the committee well.

The significant details of the meeting can be found in the report that was prepared by staff, and I certainly don't want to repeat that. I'd like to just give you a few of my impressions, and Henry can add to this as he sees fit.

I would like to say before going further that we were very fortunate to have a core staff who performed in their usual highly-efficient manner, and all the arrangements went according to clockwork almost. If there was chaos, it was all behind the scenes, and we weren't aware of it, and even last-minute program changes were accommodated without interrupting the flow of the meeting, and I think staff really deserves a round of applause from us for this effort.

(Applause)

DR. OLEINICK: Literally. We were able to hear from a diverse array of citizens, as in most of these panels, and that included current and former scientists and medical professionals who were associated with the Oak Ridge facilities to persons certainly or probably involved in the radiation experiments of concern to the committee.

These included Emma Craft and others who were subjects of the Vanderbilt experiments and patients treated for acute leukemia with experimental total body radiation at Oak Ridge.

Also, among the patients, it was interesting, were those who expressed how grateful they were that the Oak Ridge facilities were available to them for treatment of themselves or family members.

The audience was somewhat polarized, and we heard applause for both the scientists on the one hand and the patients on the other hand, and -- but I think there were expressions of sincerity and courage on both sides for telling us each of their parts of the stories.

Also presenting were a number of individuals who felt they had been over-exposed to radiation or chemicals or both as a result of working in DOE facilities and others who were concerned about environmental contamination by these facilities, and while occupational exposures per se, experiments with non-radioactive chemicals and pollution in general are certainly outside the committee's charter, the panel recognized a genuine concern by workers and citizens in the Oak Ridge area, and I think we need to at least report and acknowledge these fears and perhaps consider a recommendation for the government to look further into these issues, even though they go beyond our charter.

In order to accommodate the large number of presenters, we had originally imposed a seven-minute rule and were going to be ruthless about it, but, you know, as we know in these things, we can't always be so ruthless, and the first time that we had to let that rule go was for Karl Morgan, and who, as you remember, is one of the early health physicists in Oak Ridge, and he prepared a review of his efforts to define radiation exposure limits and discussed some of the human radiation experiments conducted at the Oak Ridge facilities, and, so, we were very interested to hear his report, and let him go well beyond the seven-minute rule, and additional others as well.

We also heard from two gentlemen, Dr. Bill Bibb and Dr. Bill Burr. Both retired from Oak Ridge Defense Programs, and they spoke about the role of the medical branch in reviewing research proposals, and the medical research that Dr. Bibb was aware of, he says, was certainly not classified, and there was an appropriate level of accountability, and I think what was most interesting here is that these two gentlemen certainly have very firsthand view of how research, human research was conducted at this institution, and we certainly suggested they may have an important view, and if time permits, that they should be interviewed to add to the data base for the committee.

We two others who might also be contacted were Dr. Frank Comas and Ann Sipe, who were also involved in those experiments. They spoke about the caring attitude of the hospital staff and the community, and that theme was echoed by Dick Smyser, who was the founding editor of the newspaper, the Oak Ridger.

Several individuals repeated a theme we heard in prior public testimony, and that is the difficulty of finding records of whether or not they or family members were participants in research.

One example was Richard Vaughn, who was born at Vanderbilt in 1946, and he has a letter to his mother from Dr. Heckstrom asking his mother to participate in the follow-up study, and yet he doesn't know if his mother was exposed to radioactive ion or not, and that, I think, statements like that reinforce the need for the recommendation concerning, where possible, the increased accessibility of records, where they

still exist, to the public.

Finally, a Ph.D. student in sociology at Vanderbilt asked us how we were going to weight all of the anecdotal reports, such as those obtained in public testimony, some of which we've heard today, with all the technical information, and although we couldn't give her a complete answer on that subject, off the top of our heads, we all agreed that this represents one of the major challenges to the committee's work.

These were a few of my impressions of the meeting. It's clear that these panels have been very important to us in hearing from the public and helping us in our data gathering, and I thought perhaps Henry or Steve may wish to add to my report.

DR. FADEN: Thank you very much, Nancy. I'm just thumbing through something to see if we got it in here. And, again, thank you for going, and the session went all day?

DR. OLEINICK: The session went all day, yes.

DR. FADEN: Henry, do you want to add something?

DR. ROYAL: I'll just make three brief comments. The first is there are a -- there is a list of people that Shirley Fry from Oak Ridge sent me, who she believed might have information that would be of interest to the committee, and I recently got that list, and we'll be forwarding it to the committee for follow-up as appropriate.

The second thing is that Nancy really did a wonderful job chairing the meeting. I had been to the Spokane meeting and had seen Reed in the job that Reed did, and Nancy is every bit of his equal.

And the third thing is I wish that Steve Klaidman would figure out how to get to the airport.

DR. FADEN: It's a shame he missed it, but we'll relay it. I gather it has special significance for Steve. Okay. We have material in the briefing book obviously that is a more detailed report, and the testimony and transcript of the field hearing will be available. I don't know when. Shortly. Usually -- so, we should have it or we do have it, and I have them, if anybody wants to look at them, in addition to looking at what's in the briefing book. You should just ask staff.

Okay. That's -- thank you very much, and that is our final field hearing, and it is clear that if we had resources, it would be useful to do more, but we are pleased that we could do the four. Did we do four? Five? Well, four. San Francisco wasn't a field hearing. San Francisco was a formal meeting. So, we had five meetings outside of the Washington area. It would have been good to have had more, but five is better than none. A lot. A lot in 13 months. That's true. We should give ourselves, and especially the committee members and staff that did the traveling, the acknowledgement that they deserve.

What we're going to do now for the rest of the afternoon, which is basically until 5:00, and we will end at 5:00, so that our plans are not totally messed up, and we can

function tomorrow morning, is focus a little bit on where we are with respect to the pulling together of the report and try to get some suggestions and responses to a strategy for how we might proceed to get systematic involvement of the committee members in the process of getting these chapters out, you know, drafted, improved, revised, and yet again.

Let me just, before we go into that discussion again, Dan is going to lead us in that, if he will, let me just point out that there have been pieces of paper left at your table, at your seat. There always are. It's like Eli or somebody else said, it's dangerous to leave your seat because when you come back, there's stuff on it, that you're supposed to read that night. Well, this is another one. There is a document marked "Final Chapter". Please ignore -- there's -- only on mine? Okay.

This happens frequently. No, no. I got it, but I got one that was inappropriately copied. It seems that happens. It's a document that's final chapter, and it's -- this -- we will be discussing material that's covered in the document tomorrow and Friday.

The first -- it's almost split. The first 20 pages or so relates to the discussion for tomorrow, and from 21 forward, the discussion for Friday. This is homework, unfortunately, to read tonight, and I know this is very bad, and you should have had it two weeks ago, but it was being pulled together yesterday. I don't know what you received yesterday. I'd have to check. I don't know. I don't know what you received.

Anyway, this is -- okay. And when I say that it -- I sort of chopped it in half, we're going to do half tomorrow and half on Friday. Obviously, if one discussion goes more quickly, we'll move into the Friday discussion tomorrow. Conversely, if the Thursday discussion takes more time, it will go into Friday.

So, I guess the request is please read the whole thing tonight, but focus disproportionately on the material in the front half tonight, because you will have an opportunity to revisit the material in the second half on -- what is today? Wednesday. Thursday night.

So, in addition, -- so, that's this one, and this is critical because this is almost all we're going to be doing for the next two days. It comes out of what's written here.

In addition, however, you have a report from the research proposal review project. There's the beginning of an appendix for that chapter, and also a report on where things are going, and we're going to have a report on that tomorrow morning. Friday morning. So, that can go in your pile to look at. It looks like this. This should have been -- I know. One says "update" on the research proposal review project, and the other one says "Part 2, Chapter 10, Appendix".

We should, as a point of whatever from now on, I don't think we should leave things on people's chairs. I think it's better to wait until we reassemble, and then I will describe what it is, and we will circulate it, rather than going through this exercise of saying it looks like this or it looks like that or

you find it here, you find it there.

For the last two -- one and a half more meetings that we're going to have or however many we are, but let's not leave things on people's -- all right. So, if we're clear for the homework assignment, if you could focus on the final chapter tonight, that would be very useful.

Okay. Dan and Anna, you want to talk us through, where we are and what you need us to do?

#### Approach to the Final Report

MR. GUTTMAN: Let me just give a perspective. I gather that there are some of you that are eager to jump in and start working on this, and we're really more than thrilled. We're in a situation like one of these computers where there's an infinite amount of data to calculate. If we had enough time, and Jay may have made this point some time ago, there wouldn't be a difficulty, but we don't have that much time.

What we tried to do, and this is why there was the sort of bottleneck in the last month, is get what we had in the first go-around to these chapters was kind of descriptive. Anybody who wanted to know about every, you know, document and piece of paper, but that's not something that anybody would want to read for comprehension.

So, what we've been trying to do is get the chapters, and I'll use the word "grokking", getting through the conceptual problems. They're not alliterative. The color is missing. You know, the sentences are fractured, but at least it kind of reads through, and you can say I disagree with this or don't disagree with this.

The staff is acutely aware that the conclusions are the committee's. So, a lot of the cases, if we can figure out where, you know, you had clearly gone and put them in, but otherwise not.

In any event, having said that, we're now at the point where in the next five days, we will have fairly blocked through drafts of two-thirds of the chapters, roughly, which will give you -- and then the question is how to go get that, and we have about three or four chapters which were practically prepared at the same -- the chapters that we have to work on are the radio-isotope chapter, which Gil is working --

DR. FADEN: Yeah. Maybe it would be helpful for people to look at this first.

MR. GUTTMAN: Right. We just go through -- we can just go --

DR. FADEN: There's a draft, another piece of paper that looks like this.

MR. GUTTMAN: Yeah.

DR. FADEN: I feel like I'm running a kindergarten. If you go to your pink folder.

MR. GUTTMAN: Yeah. Right.

DR. FADEN: Your pink folder, in the red folder, in the yellow folder, you'll find.

MR. GUTTMAN: Yeah. We're going to -- we've dubbed whatever the conclusions are Chairman Ruth's take-home lessons.

DR. FADEN: Thank you. So, maybe if you work with this, then --

MR. GUTTMAN: Right. Okay.

DR. FADEN: -- this is the operative structure at the moment.

MR. GUTTMAN: Yeah.

DR. FADEN: It has a 100,000 chapters in it.

MR. GUTTMAN: Yeah. The introduction, you have a draft of the introduction, and the atomic century, you have a draft of that.

The accomplishments, that's a chapter, we don't know where to put it, which will recite some of the testimony we've heard, and there's been some discussion, which is obviously your choice, as to whether it should be -- clearly, we want to integrate the testimony, the chapters, but do you also want a stand-alone chapter? I don't know, but this is what it might look like.

DR. FADEN: Chapter 2-A is in your --

MR. GUTTMAN: Right.

DR. FADEN: -- blue folder.

MR. GUTTMAN: Okay. Right.

DR. FADEN: By the way, if you look right here, it says -- there's this other table.

MR. GUTTMAN: Right. Yeah.

DR. FADEN: If you look at this, too, it says when we're supposed to get them, if we haven't already got them. So, go ahead, Dan.

MR. GUTTMAN: Okay. Let me work you through the next four chapters, 3 through 6, are actually all ethics chapters, and this is sort of an evolving set. Chapter 3 is the one that we've had for some time, which is the veil of secrecy lifted. We found all these documents about the Cold War.

After you go through Chapter 3, the citizen might ask, well, gee, what about the Nuremberg Code, what about professional practices, and that's the chapter that John Harkness has been working on, where we told about the history, we talk about the trial at Nuremberg, we talk about what people knew.

Then, as Ruth and I were talking about it again at Starbucks, someone said, probably Ruth, gee, what happened after 1955, and that's sort of what all the scholars, Dr. Katz and others, have written about in many of their textbooks, the period from 1960 to the '74 period, where you have, you know, Henry Beecher and Willowbrook and discovery a little later of M.K. Alter, and, so, it's a bridge chapter between the part of the world we were really uncovering here for the first time, and what, you know, is called the post-Cold War world, 1974 and thereafter. So, that's that bridge chapter.

4 and 5 are being -- they're roughed out. They'll be available within a week or so, we hope. Jeff can tell us more shortly, but that's under control. 4 is going to require a lot of work because that's where the scholars, by which I mean Dr. Katz, are going to have to really think about what is being said about the Nuremberg trial, the Nuremberg Code and how it fits in. So, that's going to be a chapter that is going to be exciting. It's going to be interesting, but it's going -- nuanced, nuanced. Nuanced, and there's only a footnote allowed for dissenting opinions.

So, Chapter 6 is what we've discussed before. That's the summary. It's the committee finds in light of all this that the standards should be such and such for judging experiments.

So, by and large, you have Part 1, except for the 4 and 5. 4, you have, you know, gotten, you know, something to sink your teeth in, and 5 will be here shortly.

Part 2, of course, is the case studies. The problem here, as Pat King mentioned last time, is what's the point of each of these cases, and that's sort of -- before we send it out, we want to get some sense.

Overview of case studies will be about, you know, two or three pages, where we will say this is why we have these all here. You may wonder how come we didn't just do like plutonium experiments, uranium experiments, and so forth. Well, because we thought about the billions of ways to organize it, and this is the way we're doing it, and that will be two or three pages.

The bio-distribution, that's the plutonium experiment at the core, and is it -- we've given it --

DR. FADEN: No. They will get it.

MR. GUTTMAN: Okay. That's the -- ready, and that's here.

DR. FADEN: Friday.

MR. GUTTMAN: It's in a draft form. So, you'll have that.

Total body irradiation. We've been revising for literary quality, hope to give you by next Monday or Tuesday, but it's along the lines that we discussed, except it turned into something, you know, instead of, you know, -- review committee 1 said, review committee 2 said, you know, something that somebody

could read.

Children and pregnant women. What we are trying to do there is trying to take the children and the pregnant women chapters, which are now two separate descriptive set pieces, and put them together in one story. So, otherwise, you're not going to have anything you can work with, and the working notion there, and this is something we're going to do very quickly, is that what it's about is low-level -- the ethics issue percolated very quickly in the '40s was work. It wasn't so much consent, as, this is very risky because these are kids, and, so, that's part of the story of how you put it out in a way where you're not just Case 1, Case 2, Case 3. That is about a week or two away.

Prisoner research, you've seen. That's in pretty good shape. That will be circulating in a day -- when is that?

MS. MASTROIANNI: Friday. The dates are in there as to when we either have it or we lost it we got it in.

MR. GUTTMAN: Yeah. The human -- the experimentation in connection with bomb tests. We will have it to you either by Friday or Monday. The difficulty there, as we all know, having discussed it, is how you talk about a situation where in some sense, everything was an experiment, in some sense, there were these technical experiments and people were similarly exposed in both cases, and, so, there really -- the presentational difficulties are met. Then you get to the end of it, you say what was the risk, and then at the end of this discussion that we have been, you know, about what one says about low levels relatively speaking of radiation.

So, there are many levels of difficulty, and what we have that will give to you, hopefully just sort of lays it out and that you can, you know, reorganize it or do whatever you want with it, but it's sort in a form where you can work with it.

Isotopes. Gil is going to give us something when he gets in from Cambridge, and it will be eloquent. It will be scholarly, and I'll say it's not spicy enough, and he'll say that's just my view.

Research experiments of opportunity, which has been renamed, although we don't have an attractive new name, we have, and I guess we will work with -- immediately with those we're going to work with. Duncan, I know, wants to work with it and possibly Nancy. We'll just start working with it, and short-term releases is ready, will be ready by Monday. Mark has re-worked it, you know, and it's not -- it's much more than, you know, a series. It's now actually, I think, a pretty good readable. The stories are quite elegant, and the conclusions are useful, and that will be out by Monday, I hope. Mark, Monday? Yeah. Okay. There he is.

Contemporary projects, we'll talk about in a second. Secrecy is this chapter that's been there for about two months, and we haven't had any comment, and it's there, and let's leave that where it is, and see if we can work with it, and, so, that's it.

You've also just gotten this last piece.

DR. FADEN: Yeah. Which we're going to talk about tomorrow --

MR. GUTTMAN: Yeah.

DR. FADEN: -- and Friday.

MR. GUTTMAN: Yeah. Anna?

DR. FADEN: Do you want to explain this form?

MS. MASTROIANNI: Yeah. Why don't I explain this form and what we're doing? I think it's self-explanatory, but I'll just run through it. You have a three-page form, and we're asking each committee member to review at least one chapter every week, and we have a nice little checklist. We want to make sure that every chapter is reviewed, and we know when to expect your comments. So, there are specific staggered deadlines.

DR. FADEN: Let me just introduce. We would like everybody to read every chapter.

MS. MASTROIANNI: Absolutely.

DR. FADEN: But at minimum, we want people to come up to the plate and say I will take responsibility for the following chapters after careful consideration. So, we expect everybody to read every line of everything.

Having said that, we want people to really take responsibility for sharp readings of identified chapters.

MS. MASTROIANNI: Okay. If you go to Page 2, for example, we will have most of these documents to you by Friday, so that you can take them home and read them over the week. The comments are due by Monday, March 27th.

What we are recommending that you do is either E-mail or telephone or fax in your comments to the person who's designated in that column as the staff coordinator, and we will take your comments, we'll pull in whatever staff members get. We need to pull in to go over the comments with you and incorporate them and follow up with you as well.

So, I think that the actual chart is self-explanatory. You have to check at least one. That's your permit to read at least one, and as you'll see on the first page, that all committees members are expected to read one and two, and on Page 3, all committee members are expected to comment on the final chapter as well.

So, if we could get these forms back from you tomorrow, we'll collate them and make sure that every chapter is covered, and I'll be talking to you, if I find nobody's interested in reading particular chapters.

What we'd also like to encourage is that you read a chapter that you may have technical expertise in, but then also select one that you know that you may not have the specific expertise to read. So, we want to make sure that these documents

are understandable to people who are not working within that area.

DR. ROYAL: I'd like to make the job a little bit more complicated.

DR. FADEN: Great, Henry.

MS. MASTROIANNI: Thank you, Henry.

DR. ROYAL: When the committee members give their comments to the committee staff, the other committee members don't necessarily see the comments. I would suggest that the comments get collated by line number, and -- what was that, Dan? And that they get sent out to the, I would say, all of the committee members.

I think that does two things. Actually, the comments should -- should not only be collated but what happened to that comment should be indicated. The possibilities. It was implemented, it was partially implemented or it was not implemented. Just so that we can see what comments were made, and we can see what resulted as a basis for that comment.

The reason that I think it's a good idea is because it becomes immediately apparent what parts of the chapter are controversial and which parts of the chapter everyone pretty much agrees with, and it documents the process, and I know I personally would find it very helpful, and I could immediately find the contentious parts of various chapters just by looking at the comment and seeing that there was a big diversity of opinion about that particular section.

MS. MASTROIANNI: Okay. What I would -- what I'm going to anticipate doing is doing a red-lining of the comments, and then indicating -- what we will do is we will incorporate the comments. We'll send out a red-line of the document itself, and then on the document that we receive from the committee that identifies by line number, we will indicate where that change is.

I think you're going to have to look at two documents.  
Do you want to -- you want an explicit --

DR. ROYAL: What I was thinking of -- I hate looking at a document that has all kinds of marks on it, underlines.

MS. MASTROIANNI: Yeah. I don't want to red-line.

DR. ROYAL: I don't particularly want a red-line.

MS. MASTROIANNI: No.

DR. ROYAL: What I would like is I would like to see what -- the comments that people made linked to particular line numbers in the document that they read, and just whether or not that suggested change or that comment was implemented or ignored or partially implemented, so I can get some feel.

I mean if I want to go back and specifically find out what you meant when you said it was partially implemented, I can ask you that, if I can't figure it out myself, but I'd like to

know what happens to the comments.

DR. FADEN: If I understand this right, we're all going to get -- we have some of these. We're all going to have the chapters with the dates on them that are indicated here, the March 17th version. So, let's say Henry and Lois got Chapter 3, okay, but -- and I agree, they're the primary reviewers this round for Chapter 3.

So, you send back your comments, maybe your overall comments that are for the whole tone, and then your specific comments indicating Page 8, Line 22 to 26, kind of thing. Then hopefully there is a revision of the chapter that incorporates a response to Lois and Henry's criticisms or comments and suggestions, plus other reasons that the chapter is revised, style, new information, tone, whatever, and then we all as a committee member, committee members now get the April 2nd version or whatever it turns out to be, and we would have the original document, which we can throw out every time we want to throw it out. If we feel we want to have it, we can use it as a reference to just say for Lois and Henry's comments. Is that what you're envisioning, Henry? And then at some point, -- no?

DR. ROYAL: I'm envisioning that when you send me the new version, --

DR. FADEN: Right.

DR. ROYAL: -- that you will also send me the comments that were made on the old version.

DR. FADEN: Right.

DR. ROYAL: So, that's a separate document.

DR. FADEN: Okay.

DR. ROYAL: And that I will be able to see from looking at that list of comments, first of all, I'll be able to see what the comments were. Secondly, I'll be able to see whether or not the committee staff made a change to the document based on that comment, just by simply saying that this comment was accepted and incorporated as is or this was partially implemented or this was ignored or not implemented.

DR. FADEN: All right.

DR. KATZ: Henry, might you accept an amendment to what you said?

DR. ROYAL: I would accept an amendment.

DR. FADEN: We have two questions.

DR. KATZ: By the way, we really should all get two copies of these chapters because we might want to send the other one back to you.

DR. FADEN: Oh, marked up?

DR. KATZ: Marked up. So that we have --

DR. FADEN: Don't you want to keep a copy of your marked-up one? Some people want to.

DR. KATZ: Yeah. Keeping it. Okay. Well, anyway, you know, what concerns me about your suggestion is that we will be inundated with lots and lots of additional paper there from all 14 of us.

Would it be sufficient if the staff circulates to us, in the light of our comments, those pages or those comments where we challenge the way it's written where we need criticisms, and that they use their judgment to -- and lean on the side of over-inclusion rather than under-inclusion, because many of the comments we might make are just sort of editorial, etc., etc., and that might very well be omitted?

DR. ROYAL: Yeah. I would be happy if they omitted editorial comments.

DR. KATZ: And letters like that.

DR. ROYAL: And really just focused on the subject of the comments.

DR. KATZ: Something that's controversial.

DR. FADEN: So, you are saying it's okay if it's like, you know, a comma or the sentence style. We don't want to see that. So, it's just substance. If it goes to substance, fine, but if it's stylistic, you don't care to see it. That's fine.

DR. KATZ: I only have one suggestion to make, and you probably have thought about it. The chapter outline. I do not know why secrecy has a part of the quality, but that's not important at the moment.

I wonder whether beginning with the Chapter 9-A, 9-B, and 9-C should be a separate part.

DR. FADEN: Yeah, I think so, too.

DR. KATZ: That deals with the present, and I'm also wondering, and again I don't have a judgment about what you might want to do, that maybe Chapter 9-A, B and C should be introduced by Chapter 5, Part 1. That's a possibility. It may not work, but it is --

DR. FADEN: It's worth thinking about.

DR. KATZ: But it's something you might want to think about, yeah.

DR. FADEN: Yeah. It's worth thinking about for sure because it's an interesting suggestion.

DR. KATZ: Of course, -- yeah.

DR. FADEN: Chapter -- the Chapter 5 emerged when there was a realization that somehow we needed to explain something to the reader about why it was that the Administration highlighted

1974. What was it about 1974 that caused them to think that there was a demarcated period? Certainly it wasn't the end of the Cold War. That continued past 1974.

So, there was -- and, so, that -- also, we realized there was no explanation of why it was that somebody thought that 1974 was of significance, and it turns out that that's leading up to the federal regulatory structure as we know it today.

So, I think your point is well taken that it cramps -- but it also has very important implications for the Defense Department because the IG's report in relation to MK Ultra that resulted in changes in the way research was reviewed by the CIA and the Defense Department also occurs in that same period.

So, for the two parts of our story about traditional bio-medical experiment part and also as well the national security related human experimentation, there are watershed events in the late '60s and '70s, Tuskegee on the one hand and MK ULTRA on the other, and we can sort of balance that out, that lead to changes in the regulatory structure about the time, and that's a bridge that might fit nicely to move it down.

Duncan? I'm sorry.

DR. THOMAS: Did the institutional case studies get dropped?

DR. FADEN: They're not here.

MR. GUTTMAN: Yeah. We had -- we actually were thinking about putting them in the companion volumes, some of our companion volumes, and the reasoning was focus and time and effort, and we have, as you know, the California case studies, --

MS. MASTROIANNI: Yeah, right, and the Oak Ridge.

MR. GUTTMAN: -- and we've taken what we're doing, as you'll see in the bio-distribution, an essential part of the California case study goes into that chapter.

It's up to you. If you want to put it -- you know, you know, whatever you people want to do, it's just that we got 18 chapters, and, you know, --

MS. MASTROIANNI: Well, there was a reason for deciding to do the two additional case studies.

MR. GUTTMAN: Right.

MS. MASTROIANNI: It seems that that reason, I guess, is still valid.

MR. GUTTMAN: The reason it's valid --

DR. THOMAS: The reason was valid, but its implementation in the draft chapter that we saw didn't cut it.

DR. FADEN: Right.

MR. GUTTMAN: It's just a difficulty of how much you

want to work with. As I said, we have time, we can do it.

DR. FADEN: It may be something that can be relegated to staff. Okay. Ruth?

DR. MACKLIN: One trivial point and one ignorant question. The trivial point is the due dates for the comments are Mondays, and if -- since most of us probably have a bigger block of time to work on it on the weekend, it -- and then FedEx it on Monday, if you want it on Monday, it means --

MR. GUTTMAN: Tuesday, Tuesday.

DR. MACKLIN: Tuesday. All right.

MR. GUTTMAN: Tuesday.

DR. MACKLIN: That's what --

MS. MASTROIANNI: Faxing Monday, FedExing Tuesday. How about that?

DR. MACKLIN: Pardon? What?

MS. MASTROIANNI: If you're faxing Monday, if you're FedExing Tuesday.

DR. FADEN: If you're faxing or E-mailing Monday, if you're FedExing, it will come on Tuesday.

DR. MACKLIN: So, actually, we can E-Mail, right? We can --

MS. MASTROIANNI: Sure. That would be better.

DR. MACKLIN: Is that what you would prefer?

MS. MASTROIANNI: I would prefer -- I would prefer E-mail, unless you're writing directly -- unless you're faxing it or sending in comments.

DR. MACKLIN: That's if you want an E-mail version. Now, clearly, the most efficient way, if we get an E-mail version, those of us who do it on the E-mail, is to inter-lineate and comment --

MS. MASTROIANNI: On the text itself.

DR. MACKLIN: -- on the text itself. Less work. If that's all right.

DR. FADEN: It's a little more work to respond to Henry, but it -- I don't know. I think we should -- frankly, we should just -- whatever makes it easier for you, that you'll do the most work and be happiest, you should do it.

DR. MACKLIN: Well, I mean anybody who does it on E-mail can then E-mail what they do to Henry.

DR. FADEN: What you should do is -- if you're doing it on the electronic file, maybe you should have your comments

bolded or whatever, so that it's then possible to pull them out, as a simple matter, pull them out and make them a separate document, your comments.

DR. MACKLIN: Bold. All right.

DR. ROYAL: The one thing about E-mail that I would suggest is if it's -- you have to get the text so that it has -- the E-mail text, so that it has the line numbers and it has carriage returns at the end of the lines, because otherwise the line numbers get all --

DR. FADEN: You're right. It's not going to work. Okay.

DR. ROYAL: I think you come up with a file to a plain old text file that then you can E-mail that has the line numbers in it, but --

MR. FEINBERG: Unless you're sending it to Henry, then you should mix something up.

MR. GUTTMAN: Well, send out lots of orders of pizza to Henry, right.

DR. FADEN: Let me -- let me point out on this, there's a little bit of a confusion. There are three charts. Okay. The intent is not that you're supposed to pick one in each chart because if you'll notice, the middle chart has a short number of chapters. The idea is that we would like everybody to take primary responsibility for really three chapters between now and the next meeting.

You can pick them all from one week. We'd like you to spread it out. But you can pick them all from one week or one from each of the three weeks or one from one week and two from the other week. We would encourage you to please pick chapters that you, you know, have a kinship to, and chapters that you find alien to your interests, so that to underscore what Anna was saying, so that we're not only reading stuff that we have a particular affinity for, expertise for, because our readership will not be made up solely of people who have expertise in the areas. So, it's very helpful if, you know, you know a lot about how IRBs run as in Lois's case, I can see why you'd want to take one chapter, but take a plunge and do another kind of chapter.

That kind of thing would be helpful, so that we can balance that out, but once they're blocked out, they're blocked out in part because they're the subjects of this meeting. We're going to be talking about one and two. We were going to do it today, but we'll talk about it tomorrow because we're running out of time, and, of course, the other one is the discussion for the rest of the meeting.

So, if the expectation is we've all read those chapters, and we'll have comments and reactions to them, we'll get some of that out in the meeting, and then additional written comments, of course, would be very useful, but they'll be stuff for staff to do in terms of revisions, based solely on the discussion of the group communally.

So, there's a sense that staff can make progress on those three chapters based on the discussions that we're going to have collectively over the next two days. The other chapters, the staff needs input from us in between meetings, and then we'll put things on the agenda again for the April meetings. So, that's the notion behind this being set up this way.

DR. MACKLIN: I had my question of ignorance.

DR. FADEN: I'm sorry.

DR. MACKLIN: I just need a reminder. The -- which of the technical material falls under the bio-distribution chapter, and which under the isotope chapter? I know the plutonium is under the --

MR. GUTTMAN: Yeah. The bio-distribution chapter, as the concept evolved, but as it's evolved now, we start off talking about transuranic experiments, then we said workers, and what it really turns out in part because you look at the UCSF report, is the plutonium, which we know about, then at the UCSF, that merges. The people doing the plutonium, then after the War ends, get into doing zirconium and columbium, and, so, that's not, you know, not necessary transuranic, and then it turns out in Boston in '53-54, there is what we had thought was the last of the uranium experiments, except that Miriam found yesterday that there were uranium experiments as late as 1969.

So, basically, it's the transuranics, but part of the story is that in California, there was maybe a multiple purpose involved. They were doing, you know, different, you know, different purposes, and then the last gasp, sort of what happens when they do these uranium experiments after 10 or 15 years after the AEC says you got to be ethical about these things.

So, that's it. The radio-isotopes by contrast is more an institutional, it's what we've been referring to as the great unwashed, that there are thousands of other experiments going on at institutions throughout the country, which have all these human use committees, and how do those kind of work out, and it's an institutional series, and the story there is generally that risk was taken into consideration, but that there doesn't look like there was an implementation of the consent part of the, you know, AEC standards.

So, the bio-distributions specific to particular experiments and the isotopes is sort of an institutional story about the way in which that process worked throughout the country.

Is that an answer? Is that the question?

DR. MACKLIN: It is an answer, and I'm just -- what only puzzles me a little bit is the logic of it. I mean it answers my question. I'm just -- I'm not challenging it.

MR. GUTTMAN: Right. Okay.

DR. MACKLIN: I'm trying to think -- if I looked puzzled, I'm just trying to think it through.

DR. FADEN: What you are pointing out, though, is the problem of this method. Soon, at some point, we got to be reading this from beginning to end, I mean because one of the biggest sets of issues has to do with whether it makes sense the way it's set up, and when we're dividing it up and somebody's getting three chapters and somebody else is doing another three chapters, we do have a problem with Gestalt and whether it's hanging together and how it works as a piece.

MR. GUTTMAN: That's right.

DR. FADEN: So, while we want people to, you know, as I said, sort of step up to the plate and take first reviewer responsibility as a primary reviewer responsibility for identified chapters, we do need people to start thinking about this as a whole, and I don't exactly know what that -- I mean it means we have to read thousands of pages, and whether that should be done on this iteration or the next iteration is a very problematic question.

DR. MACKLIN: Well, I mean I guess conceptually, I mean my comment is really about it conceptually, certainly the way it's set up -- I mean we have the concept of case studies, and these are all case studies, but they're different kinds of case studies. They're case studies of different sorts of things, and one of the difficulties is that they require saying the same kinds of things about these different case studies.

MR. GUTTMAN: Let me step back and respond. It occurred to me this is what, Nancy, you asked.

The isotope chapter in essence becomes the institutional chapter. In other words, that's the chapter about there were thousands of these experiments at institutions throughout the country, how did this institutional process work, and we're going to draw on all that we know about the various institutions, California, Oak Ridge, Los Alamos, School of Aviation Medicine, you name it.

So, that's the institutional chapter. In other words, sort of you don't see your particular experiment, you want to know generally what happened, how did this process work throughout the country. Well, the AEC had this set of rules, and then they had these local things at the institutions, and how did the two connect, you know, and there will be some examples.

But it's that sort of institutional. Everything we have about, you know, --

DR. OLEINICK: I thought that the -- just that the distinction between what we were calling bio-distribution and isotopes was basically that isotopes was the use of isotopes to study normal metabolism, whereas bio-distribution was looking at the distribution of radioactive materials that we wouldn't have been thinking about if there weren't --

MR. GUTTMAN: Correct. But let me -- the problem is, as you get into this material, --

DR. OLEINICK: Is that the distinction?

MR. GUTTMAN: No, no. That was --

DR. OLEINICK: Different ethical questions that arise with each of these, but I thought that was the --

MR. GUTTMAN: Nancy, that's right.

DR. OLEINICK: -- reason that we started that way.

MR. GUTTMAN: That's right. But then you follow -- you follow the uranium, you follow your transuranic experiments until 1954, and then Dr. Sweet says he's doing something that -- as you follow the trail of the story, --

DR. OLEINICK: All right.

MR. GUTTMAN: -- the distinction changes. We've discussed this practically -- it's like this game of everybody comes in here saying, well, what's this distinction, and the more we talk about it, there is no -- it's not like -- there's no -- no linear set of categories.

DR. OLEINICK: Okay.

MR. GUTTMAN: There is no linear set of categories by which this whole thing can be divided. It's more different cuts on different groups of things, but you're obviously right in the way we thought about it originally, you know.

DR. OLEINICK: It's fuzzy. Yeah. Okay.

MR. GUTTMAN: And the problem with the chapter is to unfuzz it, to have a clear enough focus.

DR. OLEINICK: I'm going to have to look at them and then see how it divides up.

MR. GUTTMAN: Right. That's right.

DR. FADEN: That's where the problem comes.

MR. GUTTMAN: Right, right.

DR. FADEN: Because you may like the chapter that you're looking at, and you may not, but then you may not think it belongs --

MR. GUTTMAN: Right.

DR. FADEN: -- set up this way relative to the other chapters or whatever. So, at some point, depending on how, you know, how much time you have, you've got to take a plunge at some point and try to work your way through. Eli looks thrilled.

DR. GLATSTEIN: Whatever it takes.

DR. FADEN: Whatever it takes. Duncan?

DR. THOMAS: I asked this the last time, and I can't remember the answer. Where does the common garden variety clinical trial of radio-therapy fit? Is that part of what we're

calling total body irradiation but probably should be --

MR. GUTTMAN: That's -- that's -- you've asked it the last time. We -- it's a troublesome question because there's no one place that that goes. That's right. Total body irradiation would be the natural location, but we know that's taken up with total body -- that's one -- there -- we have a list of things. Maybe we should circulate it. Things that are going to stick out. Half a dozen things about where does this go.

DR. THOMAS: Well, let me suggest. The isotopes chapter, seems to me, to be a dual-purpose chapter as well. In part, it's tracers for studying normal physiology, and it's part it's nuclear medicine.

I wonder maybe trying to roll those two together into one chapter is maybe a mistake. Maybe we should have a tracers chapter, and we should have a medical therapy and diagnostic chapter, and that latter could include then both diagnostic and therapeutic irradiation, whether it's done by isotopes or whether it's done by external radiation.

MR. GUTTMAN: Anything's possible. When you say the logic of the isotopes, is that the way the material flowed, you had all the isotope committees, and that's an institutionally-organized chapter.

DR. THOMAS: Right.

MR. GUTTMAN: Then a diagnosis versus -- the purpose of the use and organized along the regulation. Yeah?

DR. MACKLIN: But the logic of Duncan's suggestion is that you then have in one place experiments or research that stands to benefit the individual patient, --

DR. FADEN: Which we don't have.

DR. MACKLIN: -- and that's something that's just -- threads throughout, and we had a lot of difficulty in talking about it.

DR. FADEN: That's right.

DR. MACKLIN: If that -- if it turns out that we can pull out those, both diagnostic, which would be presumably -- I mean it's research, but it also stands to benefit that individual, and then the radio-therapy, then I think it forms a neater conceptual package.

I mean understanding the problem of the -- well, it depends on which concepts one prefers here. I mean when you're talking about risks and benefits, which makes more sense? Obviously to you the institutional thing makes more sense because we're talking about --

MR. GUTTMAN: I'm a lawyer.

DR. MACKLIN: Well, because I'm an ethicist, the risk benefit discussion is a very different discussion, with or without consent, it's a very different or with all the variations

in consent, it's a very different discussion. If we're talking about things that promise no direct benefit to the experimental subject, and on the other hand, the benefit.

MR. GUTTMAN: Let me just say that that's right, and one of the things that -- as you go through these chapters again and again and get rid of all the crud, then you see what's really at issue here. So that one way of looking at the bio-distribution chapter is that it's not -- it's of no benefit -- no direct benefit to the subject chapter, right? Even if it's science research in the latter days of the uranium, it's not that they're going to help that particular patient, and, so, the question is --

DR. MACKLIN: Well, I thought the plutonium was alleged.

DR. FADEN: No, no. I mean the UCSF report there acknowledges that there was never -- I mean that was the working assumption, that there was never even at the time an expectation that at least the three --

DR. MACKLIN: That was true of the Rochester, all the ones done under Rochester, too?

DR. FADEN: Well, we haven't seen that, but certainly that seems to be the case.

DR. MACKLIN: Yeah, but Rochester? Is also true with Rochester?

DR. FADEN: That seems to be the case, that -- we have to work on this some more, but it does -- it does look like there was not even -- certainly in the three cases, including Mrs. Bell's father, there's the acknowledgement in the UCSF report that there was not an expectation, even at the time, that they -- that the -- that the persons themselves could have benefitted, and that seems to work.

MR. GUTTMAN: That's what I mean. The point Ruth made is that one of the things that's critical is taking an obvious theme that has to be addressed and seeing that -- when you shake out each chapter, that that emerges as a salient theme, and I think it may be in the first chapter, the bio-distribution to the risk benefit for the non-therapeutic.

DR. FADEN: I think that's a very important

-- I mean it's been a problem, and I think that's really a good one. I don't think it takes away from the -- I mean you don't have to change the way the isotope story goes. It's a different kind of story. To -- it's a different issue, set of issues. It's basically how well did the AEC radiation risk committees work. How did they function? What did they do? That's a different story.

If I'm telling something about how therapeutic research in nuclear medicine and diagnostic and radiation oncology areas, --

MR. GUTTMAN: Here's the problem with this, what we've

been trying to do is you find out that it's hard enough to get a chapter to say anything, you know, it's like the dog that talks, right. I mean in the abstract, you'd like to have a chapter on this and a chapter on this, and when you look at the material, you say there's no way you can -- so, you try to figure out what the hell can I say, and what is the point of all this 60 pages, and once you get to that, then you can get fancy about, you know, can we -- you know, I mean the --

DR. MACKLIN: So, what's the answer to Duncan's question about the other radio-therapy experiments?

DR. FADEN: We have very little information. This is something we were talking about. We have very little information on research that falls into this category, where it clearly would be what we'd call therapeutic research, research where the subject stands to benefit.

Now, I keep saying, you know, where are the studies looking at the development of radiation therapy for Hodgkins' Disease? We haven't looked at any of them. I mean presumably there's a whole body of work that was done that could be called research, but we have never discussed, talked, whatever.

DR. GLATSTEIN: We have focused on certain issues and certain projects that had already been granted attention, even before this committee ever met.

DR. FADEN: That's right.

DR. GLATSTEIN: There was controversy, and those are things that captured our attention. We have not looked at those. These are things that we chose consciously or subconsciously, however you want to view it, but we did not try to cover the whole breadth, and I don't think we have time.

DR. OLEINICK: But somewhere, we need to, even in a very short way, get to the issue of the accomplishments of the use of radio-isotopes and irradiation.

We have a chapter, Chapter 2-A, which is called Accomplishments and Distrust. Now, we haven't had the opportunity --

DR. GLATSTEIN: Yes, we have to look at that.

MR. GUTTMAN: That's not what --

DR. OLEINICK: That seems to be just testimony.

MR. GUTTMAN: Right.

DR. OLEINICK: Okay. But somewhere under that kind of a title, under the Accomplishments, --

MR. GUTTMAN: Let me just say there are a number of ways you can do it. I mean you can have boxes set aside. You can do it in all kinds of ways rather than having --

DR. FADEN: Boxes won't do it.

MR. GUTTMAN: Well, okay.

DR. FADEN: I mean the title of 2-A, Accomplishments and Distrust, was -- that's not the chapter to look at, and one of the things -- I think we'll talk about it tomorrow when we talk about 1 and 2, is that right now, that -- it's not -- that's not there. I mean it's not, it's not in what we have, and I don't know, but that's sort of a separate -- one issue is where do we want to tell, and where do we want to emphasize the medical advances and the accomplishments in that sense that came from this work.

That's in some ways a different issue than the issue of do we want to deal with case studies looking at examples of therapeutic research involving cancer patients or other kinds of patients, and that's where Eli's responding, and I was pointing out, we haven't looked, we haven't investigated or looked at --

DR. GLATSTEIN: We were highly selective because the controversy already existed.

DR. FADEN: We can do the other one. We've got to figure out where. I mean we can do a story, tell the story of the advances for the medical care of people, and the benefits that now exist because radiation research with human subjects was allowed to go forward. That's a different task from sitting there and saying let's look at eight experiments that involved cancer patients or other kinds of patients in which the -- from the beginning, these people stood to benefit, of how they were conducted and whether consent was obtained and how people viewed it and all that kind of stuff, and we don't have documents on that. We haven't looked at studies like that.

MR. GUTTMAN: Well, actually, it's not -- we discussed this yesterday.

DR. FADEN: We do have some?

MR. GUTTMAN: No. We actually have to make something clear for the record. In our data base, it's true we have a relatively small number of radiation, especially external radiation, therapy, and we discussed that --

DR. FADEN: We have almost no information on that.

MR. GUTTMAN: Well, --

DR. FADEN: A journal article, maybe.

MR. GUTTMAN: -- Pat Perentesis has been down looking at the National Library and trying to pull all of that series, but for whatever reason, it doesn't -- there's not the vast preponderance of, you know, there are not thousands of these things that might --

DR. FADEN: Well, that's not -- those -- Ron looks desperate. He looks desperate.

DR. NEUMANN: There are journals on that subject.

DR. FADEN: Yeah, I know.

MR. GUTTMAN: I defer to Ron.

DR. NEUMANN: There are two problems that I think put us in that position. One is, as Eli said, because of all the attention on a few negative cases that were brought very early to our attention, the bulk of the research efforts has been focused on that, and the only one of those that's not isotopic happens to be TBI, a major project.

The other is for some peculiar reason, and I discussed this in E-mail, I think that institutions assumed we were only interested in radio-nuclide or isotope work, partly because of our funding and link and sponsorship by the DOE perhaps, but also because the regulatory efforts that were put in place after the War focused on isotopes. There was not equivalent of this type of distribution review, for example, for x-ray machines or other types of external therapy machines.

So, we've tended to focus on --

DR. GLATSTEIN: Partly true and partly not true in the sense that the --

DR. NEUMANN: Well, at the federal --

DR. GLATSTEIN: -- NRC certainly has supervision over external beams with isotopes, that is to say, Cobalt units.

DR. NEUMANN: Right.

DR. GLATSTEIN: The accelerators do not come under that heading.

DR. NEUMANN: Right.

DR. GLATSTEIN: We've basically been immune to that.

DR. NEUMANN: Right. I -- the point wasn't made to say that as much, Eli. I don't think when people responded in these various agency groups who were collecting experiments for our attention, that they tended to focus on things that were perhaps funded with that form of external -- I think they tended to focus because of the preponderance of material we received as clearly radionuclide based, and, of course, the AEC was fundamentally in that business to a much greater extent than they were in distributing a few sealed sources that they were involved with.

So, my guess is, as Dan stated, we have very little information about all the work that went on in diagnostic radiology, some of which clearly could have led to exposures and a potentially dangerous range in angiography and other techniques where there's long exposure, and also that would be the case for much of conventional radiation therapy that's not internally administered radio-nuclide based.

DR. FADEN: Eli? I'm sorry. Duncan?

DR. THOMAS: I'm just afraid that the reader is going to read all of Part 2 and come to the conclusion that radiation research is all of it bad.

There's one side of the coin that needs -- there's one aspect that needs to come across, and that is, of course, all that we've learned that benefits mankind through medical treatment and diagnosis.

Now, that -- there is a story here, though, because this does not come without cost, and there are well-known hazards associated with medical use of radiation, both for therapy and for diagnosis. Most of us believe that those -- that the risk benefit ratio is still clearly in the favor of appropriate use.

Now, over the course of history, use has not always been appropriate. Perhaps they didn't know it at the time, but there's -- on the one hand, there's this message of the risks and the toll which people pay in order to advance our knowledge, and then there's a question of how the research was conducted. Those are exactly the same questions that we're asking in all of the others. Those are fundamental ethics questions.

I agree. We may not have a lot of documentation about the way these studies were carried out at the time, although I suspect by and large, we don't have very much documentation about the ethical conditions for most of these other ones as well. I think we're wracking our brains over, you know, what were patients told in the TBI or bio-distribution studies.

So, we're no less ignorant in this case, and indeed we have a lot of information at least about the way things are done today. So, perhaps we could rely on some of that to help us write this chapter.

DR. FADEN: What I'm hearing are two things. One, that there's a proposal or a consideration that we have a chapter that focuses on research and diagnostic and therapeutic uses of radiation that would -- with a particular slant towards research where the subjects were patients who could potentially benefit from their participation, and the other is that the report overall has to have a clear place, maybe several clear places, where the accomplishments of human radiation research for medical care are -- where those accomplishments are articulated, and we may want to do both or one, depending on how it goes.

As a point of order, it is 5:00. We should probably stop because it is 5. I have a sense that we've just started -- just kind of gotten started because we haven't had much time to talk as a committee, but I think in fairness to people who've made commitments or plans or whatever, and the fact that you've got to read tonight, you have homework, and that tomorrow and Friday won't be nearly as good if you don't read, I think we should stop at 5.

We will start at 8:30 tomorrow morning, and we have our work cut out for us. Okay.

(Whereupon, at 5:10 p.m., the meeting was adjourned, to reconvene tomorrow morning, Thursday, March 16th, 1995, at 8:30 a.m.)

## **Human Radiation Experiment Page**

**Updated June 2, 2001**

This page is to collect references to the 1944-1994 covert use of involuntary U.S. citizens as radioactive substance experimentees.

These secret experiments were finally admitted to by U.S. President Bill Clinton, and offer hope to current-day victims of covert psycho-electronic experimentation that some day, their suffering will be recognized, and the in-home/in-community psycho-electronic torture which has continued for decades may be disclosed and stopped.

The radioactive substance experimentees were kept quiet by using the psychiatric profession to muzzle them. The radiation experimentees were referred to by government officials as "the crazies", exactly as was done with dissidents in the Soviet Union and is being done now with psycho electronic experimentees.

The visitor is asked to keep this history of government lies and brutality on citizens in mind when evaluating the claims of the psycho-electronic experimentees.

## ATC HyperSonic Sound as a Weapon

=====

By Marshall SELLA New York Times March 23, 2003  
5036 words, Late Edition - Final , Section 6 , Page 34 , Column 3

Original link:

<http://www.nytimes.com/2003/03/23/magazine/23SOUND.html>

For the moment, though, HSS is unfinished business. As night must follow day, there are Defense Department applications. Norris and A.T.C. have been busy honing something called High Intensity Directed Acoustics (HIDA, in house jargon). It is directional sound -- an offshoot of HSS -- but one that never, ever transmits Handel or waterfall sounds. Although the technology thus far has been routinely referred to as a "nonlethal weapon," the Pentagon now prefers to stress the friendlier-sounding "hailing intruders" function.

In reality, HIDA is both warning and weapon. If used from a battleship, it can ward off stray crafts at 500 yards with a pinpointed verbal warning. Should the offending vessel continue to within 200 yards, the stern warnings are replaced by 120-decibel sounds that are as physically disabling as shrapnel. Certain noises, projected at the right pitch, can incapacitate even a stone-deaf terrorist; the bones in your head are brutalized by a tone's full effect whether you're clutching the sides of your skull in agony or not.

"Besides," Norris says, laughing darkly, "grabbing your ears is as good as a pair of handcuffs."

Nimble holding a big black plate, Norris stands with me in an A.T.C. sound chamber. Since he's poised behind the weapon, he will hear no sound once it's powered up: not a peep. "HIDA can instantaneously cause loss of equilibrium, vomiting, migraines -- really, we can pretty much pick our ailment," he says brightly. "We've delivered a couple dozen units so far, but will have a lot more out by June. They're talking millions!"

(Last month, A.T.C. cut a five-year, multimillion-dollar licensing agreement with General Dynamics, one of the giants of the military-industrial complex.)

Norris prods his assistant to locate the baby noise on a laptop, then aims the device at me. At first, the noise is dreadful -- just primally wrong -- but not unbearable. I repeatedly tell Norris to crank it up (trying to approximate battle-strength volume, without the nausea), until the noise isn't so much a noise as an assault on my nervous system. I nearly fall down and, for some reason, my eyes hurt. When I bravely ask how high they'd turned the dial, Norris laughs uproariously. "That was nothing!" he bellows.

"That was about 1 percent of what an enemy would get. One percent!" Two hours later, I can still feel the ache in the back of my head.

=====

<http://www.raven1.net/humanexp.htm> revived by [www.hearingvoices-is-voicetoskull.com](http://www.hearingvoices-is-voicetoskull.com)

**1931** Dr. Cornelius Rhoads, under the auspices of the Rockefeller Institute for Medical Investigations, infects human subjects with cancer cells. He later goes on to establish the U.S. Army Biological Warfare facilities in Maryland, Utah, and Panama, and is named to the U.S. Atomic Energy Commission. While there, he begins a series of radiation exposure experiments on American soldiers and civilian hospital patients.

**1932** The Tuskegee Syphilis Study begins. 200 black men diagnosed with syphilis are never told of their illness, are denied treatment, and instead are used as human guinea pigs in order to follow the progression and symptoms of the disease. They all subsequently die from syphilis, their families never told that they could have been treated.

**1935** The Pellagra Incident. After millions of individuals die from Pellagra over a span of two decades, the U.S. Public Health Service finally acts to stem the disease. The director of the agency admits it had known for at least 20 years that Pellagra is caused by a niacin deficiency but failed to act since most of the deaths occurred within poverty-stricken black populations.

**1940** Four hundred prisoners in Chicago are infected with Malaria in order to study the effects of new and experimental drugs to combat the disease. Nazi doctors later on trial at Nuremberg cite this American study to defend their own actions during the Holocaust.

**1942** Chemical Warfare Services begins mustard gas experiments on approximately 4,000 servicemen. The experiments continue until 1945 and made use of Seventh Day Adventists who chose to become human guinea pigs rather than serve on active duty.

**1943** In response to Japan's full-scale germ warfare program, the U.S. begins research on biological weapons at Fort Detrick, MD.

**1944** U.S. Navy uses human subjects to test gas masks and clothing. Individuals were locked in a gas chamber and exposed to mustard gas and lewisite.

**1945** Project Paperclip is initiated. The U.S. State Department, Army intelligence, and the CIA recruit Nazi scientists and offer them immunity and secret identities in exchange for work on top secret government projects in the United States.

**1945** "Program F" is implemented by the U.S. Atomic Energy Commission (AEC). This is the most extensive U.S. study of the health effects of fluoride, which was the key chemical component in atomic bomb production. One of the most toxic chemicals known to man, fluoride, it is found, causes marked adverse effects to the central nervous system but much of the information is squelched in the name of national security because of fear that lawsuits would undermine full-scale production of atomic bombs.

**1946** Patients in VA hospitals are used as guinea pigs for medical experiments. In order to allay suspicions, the order is given to change the word "experiments" to "investigations" or "observations" whenever reporting a medical study performed in one of the nation's veteran's hospitals.

**1947** Colonel E.E. Kirkpatrick of the U.S. Atomic Energy Commission issues a secret document (Document 07075001, January 8, 1947) stating that the agency will begin administering intravenous doses of radioactive substances to human subjects.

**1947** The CIA begins its study of LSD as a potential weapon for use by American intelligence. Human subjects (both civilian and military) are used with and without their knowledge.

**1950** Department of Defense begins plans to detonate nuclear weapons in desert areas and monitor downwind residents for medical problems and mortality rates.

**1950** In an experiment to determine how susceptible an American city would be to biological attack, the U.S. Navy sprays a cloud of bacteria from ships over San Francisco. Monitoring devices are situated throughout the city in order to test the extent of infection. Many residents become ill with pneumonia-like symptoms.

**1951** Department of Defense begins open air tests using disease-producing bacteria and viruses. Tests last through 1969 and there is concern that people in the surrounding areas have been exposed.

**1953** U.S. military releases clouds of zinc cadmium sulfide gas over Winnipeg, St. Louis, Minneapolis, Fort Wayne, the Monocacy River Valley in Maryland, and Leesburg, Virginia. Their intent is to determine how efficiently they could disperse chemical agents.

**1953** Joint Army-Navy-CIA experiments are conducted in which tens of thousands of people in New York and San Francisco are exposed to the airborne germs *Serratia marcescens* and *Bacillus globigii*.

**1953** CIA initiates Project MKULTRA. This is an eleven year research program designed to produce and test drugs and biological agents that would be used for mind control and behavior modification. Six of the subprojects involved testing the agents on unwitting human beings.

**1955** The CIA, in an experiment to test its ability to infect human populations with biological agents, releases a bacteria withdrawn from the Army's biological warfare arsenal over Tampa Bay, FL.

**1955** Army Chemical Corps continues LSD research, studying its potential use as a chemical incapacitating agent. More than 1,000 Americans participate in the tests, which continue until 1958.

**1956** U.S. military releases mosquitoes infected with Yellow Fever over Savannah, Ga and Avon Park, FL. Following each test, Army agents posing as public health officials test victims for effects.

**1958** LSD is tested on 95 volunteers at the Army's Chemical Warfare Laboratories for its effect on intelligence.

**1960** The Army Assistant Chief-of-Staff for Intelligence (ACSI) authorizes field testing of LSD in Europe and the Far East. Testing of the European population is code named Project THIRD CHANCE; testing of the Asian population is code named Project DERBY HAT.

**1965** Project CIA and Department of Defense begin Project MKSEARCH, a program to develop a capability to manipulate human behavior through the use of mind-altering drugs.

**1965** Prisoners at the Holmesburg State Prison in Philadelphia are subjected to dioxin, the highly toxic chemical component of Agent Orange used in Viet Nam. The men are later studied for development of cancer, which indicates that Agent Orange had been a suspected carcinogen all along.

**1966** CIA initiates Project MKOFTEN, a program to test the toxicological effects of certain drugs on humans and animals.

**1966** U.S. Army dispenses *Bacillus subtilis* variant niger throughout the New York City subway system. More than a million civilians are exposed when army scientists drop lightbulbs filled with the bacteria onto ventilation grates.

**1967** CIA and Department of Defense implement Project MKNAOMI, successor to MKULTRA and designed to maintain, stockpile and test biological and chemical weapons.

**1968** CIA experiments with the possibility of poisoning drinking water by injecting chemicals into the water supply of the FDA in Washington, D.C.

**1969** Dr. Robert MacMahan of the Department of Defense requests from congress \$10 million to develop, within 5 to 10 years, a synthetic biological agent to which no natural immunity exists.

**1970** Funding for the synthetic biological agent is obtained under H.R. 15090. The project, under the supervision of the CIA, is carried out by the Special Operations Division at Fort Detrick, the army's top secret biological weapons facility. Speculation is raised that molecular biology techniques are used to produce AIDS-like retroviruses.

**1970** United States intensifies its development of "ethnic weapons" (Military Review, Nov., 1970), designed to selectively target and eliminate specific ethnic groups who are susceptible due to genetic differences and variations in DNA.

**1975** The virus section of Fort Detrick's Center for Biological Warfare Research is renamed the Fredrick Cancer Research Facilities and placed under the supervision of the National Cancer Institute (NCI) . It is here that a special virus cancer program is initiated by the U.S. Navy, purportedly to develop cancer-causing viruses. It is also here that retrovirologists isolate a virus to which no immunity exists. It is later named HTLV (Human T-cell Leukemia Virus).

**1977** Senate hearings on Health and Scientific Research confirm that 239 populated areas had been contaminated with biological agents between 1949 and 1969. Some of the areas included San Francisco, Washington, D.C., Key West, Panama City, Minneapolis, and St. Louis.

**1978** Experimental Hepatitis B vaccine trials, conducted by the CDC, begin in New York, Los Angeles and San Francisco. Ads for research subjects specifically ask for promiscuous homosexual men.

**1981** First cases of AIDS are confirmed in homosexual men in New York, Los Angeles and San Francisco, triggering speculation that AIDS may have been introduced via the Hepatitis B vaccine

**1985** According to the journal Science (227:173-177), HTLV and VISNA, a fatal sheep virus, are very similar, indicating a close taxonomic and evolutionary relationship.

**1986** According to the Proceedings of the National Academy of Sciences (83:4007-4011), HIV and VISNA are highly similar and share all structural elements, except for a small segment which is nearly identical to HTLV. This leads to speculation that HTLV and VISNA may have been linked to produce a new retrovirus to which no natural immunity exists.

**1986** A report to Congress reveals that the U.S. Government's current generation of biological agents includes: modified viruses, naturally occurring toxins, and agents that are altered through genetic engineering to change immunological character and prevent treatment by all existing vaccines.

**1987** Department of Defense admits that, despite a treaty banning research and development of biological agents, it continues to operate research facilities at 127 facilities and universities around the nation.

**1990** More than 1500 six-month old black and hispanic babies in Los Angeles are given an "experimental" measles vaccine that had never been licensed for use in the United States. CDC later admits that parents were never informed that the vaccine being injected to their children was experimental.

**1994** With a technique called "gene tracking," Dr. Garth Nicolson at the MD Anderson Cancer Center in Houston, TX discovers that many returning Desert Storm veterans are infected with an altered strain of Mycoplasma incognitus, a microbe commonly used in the production of biological weapons. Incorporated into its molecular structure is 40 percent of the HIV protein coat, indicating that it had been man-made.

**1994** Senator John D. Rockefeller issues a report revealing that for at least 50 years the Department of Defense has used hundreds of thousands of military personnel in human experiments and for intentional exposure to dangerous substances. Materials included mustard and nerve gas, ionizing radiation, psychochemicals, hallucinogens, and drugs used during the Gulf War .

**1995** U.S. Government admits that it had offered Japanese war criminals and scientists who had performed human medical experiments salaries and immunity from prosecution in exchange for data on biological warfare research.

**1995** Dr. Garth Nicolson, uncovers evidence that the biological agents used during the Gulf War had been manufactured in Houston, TX and Boca Raton, FL and tested on prisoners in the Texas Department of Corrections.

**1996** Department of Defense admits that Desert Storm soldiers were exposed to chemical agents.

**1997** Eighty-eight members of Congress sign a letter demanding an investigation into bioweapons use & Gulf War Syndrome.

## **A History of Human Experimentation on U.S. Citizens?**

**November 5, 2002**

This collection of research leads has NOT been verified by me, Eleanor White. It came from a site which is not a factual source, in my opinion. However, these entries may be important to those researchers among us as starting points for further investigation:

---

(1931) Mr. Cornelius Rhoads, under the auspices of the Rockefeller Institute for Medical Investigations, infects human subjects with cancer cells. He later goes on to establish the U.S. Army Biological Warfare facilities in Maryland, Utah, and Panama, and is named to the U.S. Atomic Energy Commission. While there, he begins a series of radiation exposure experiments on American soldiers and civilian hospital patients.

PUBLICLY CONFESSED by President Bill Clinton. (1932)The Tuskegee Syphilis Study begins. 200 black men diagnosed with syphilis are never told of their illness, are denied treatment, and instead are used as human guinea pigs in order to follow the progression and symptoms of the disease. They all subsequently die from syphilis, their families never told that they could have been treated.

(1935) The Pellagra Incident. After millions of individuals die from Pellagra over a span of two decades, the U.S. Public Health Service finally acts to stem the disease. The director of the agency admits it had known for at least 20 years that Pellagra is caused by a niacin deficiency but failed to act since most of the deaths occurred within poverty-stricken black populations.

(1940) Four hundred prisoners in Chicago are infected with Malaria in order to study the effects of new and experimental drugs to combat the disease. Nazi doctors later on trial at Nuremberg cite this American study to defend their own actions during the Holocaust.

(1942) Chemical Warfare Services begins mustard gas experiments on approximately 4,000 servicemen. The experiments continue until 1945 and made use of Seventh Day Adventists who chose to become human guinea pigs rather than serve on active duty.

(1943) In response to Japan's full-scale germ warfare program, the U.S. begins research on biological weapons at Fort Detrick, MD. (1944) U.S. Navy uses human subjects to test gas masks and clothing. Individuals were locked in a gas chamber and exposed to mustard gas and lewisite.

(1945) Project Paperclip is initiated. The U.S. State Department, Army intelligence, and the CIA recruit Nazi scientists and offer them immunity and secret identities in exchange for work on top secret government projects in the United States.

(1945) Program F" is implemented by the U.S. Atomic Energy Commission (AEC)This is the most extensive U.S. study of the health effects of fluoride, which was the key chemical component in atomic bomb production. One of the most toxic chemicals known to man,

fluoride, it is found, causes marked adverse effects to the central nervous system but much of the information is squelched in the name of national security because of fear that lawsuits would undermine full-scale production of atomic bombs.

(1946) Patients in VA hospitals are used as guinea pigs for medical experiments. In order to allay suspicions, the order is given to change the word "experiments" to "investigations" or "observations" whenever reporting a medical study performed in one of the nation's veteran's hospitals.

PUBLICLY CONFESSED by President Bill Clinton. (1947) Colonel E.E. Kirkpatrick of the U.S. Atomic Energy Commission issues a secret document (Document 07075001, January 8, 1947) stating that the agency will begin administering intravenous doses of radioactive substances to human subjects.

PUBLICLY REVEALED by U.S. Senate hearings (Church/Inouye). (1947) The CIA begins its study of LSD as a potential weapon for use by American intelligence. Human subjects (both civilian and military) are used with and without their knowledge.

(1950) Department of Defense begins plans to detonate nuclear weapons in desert areas and monitor downwind residents for medical problems and mortality rates.

(1950) In an experiment to determine how susceptible an American city could be to biological attack, the U.S. Navy sprays a cloud of bacteria from ships over San Francisco. Monitoring devices are situated throughout the city in order to test the extent of infection. Many residents become ill with pneumonia-like symptoms.

(1951) Department of Defense begins open air tests using disease-producing bacteria and viruses. Tests last through 1969 and there is concern that people in the surrounding areas have been exposed.

(1953) U.S. military releases clouds of zinc cadmium sulfide gas over Winnipeg, St. Louis, Minneapolis, Fort Wayne, the Monocacy River Valley in Maryland, and Leesburg, Virginia. Their intent is to determine how efficiently they could disperse chemical agents.

(1953) Joint Army-Navy-CIA experiments are conducted in which tens of thousands of people in New York and San Francisco are exposed to the airborne germs *Serratia marcescens* and *Bacillus globigii*.

PUBLICLY REVEALED by U.S. Senate hearings (Church/Inouye). (1953) CIA initiates Project MKULTRA. This is an eleven year research program designed to produce and test drugs and biological agents that would be used for mind control and behavior modification. Six of the subprojects involved testing the agents on unwitting human beings.

(1955) The CIA, in an experiment to test its ability to infect human populations with biological agents, releases a bacteria withdrawn from the Army's biological warfare arsenal over Tampa Bay, Fl.

(1955) Army Chemical Corps continues LSD research, studying its potential use as a chemical incapacitating agent. More than 1,000 Americans participate in the tests, which continue until 1958.

(1956) U.S. military releases mosquitoes infected with Yellow Fever over Savannah, Ga and Avon Park, Fl. Following each test, Army agents posing as public health officials test victims for effects.

(1958) LSD is tested on 95 volunteers at the Army's Chemical Warfare Laboratories for its effect on intelligence.

(1960) The Army Assistant Chief-of-Staff for Intelligence (ACSI) authorizes field testing of LSD in Europe and the Far East. Testing of the European population is code named Project THIRD CHANCE; testing of the Asian population is code named Project DERBY HAT.

(1965) CIA and Department of Defense begin Project MKSEARCH, a program to develop a capability to manipulate human behavior through the use of mind-altering drugs.

(1965) Prisoners at the Holmesburg State Prison in Philadelphia are subjected to dioxin, the highly toxic chemical component of Agent Orange used in Vietnam. The men are later studied for development of cancer, which indicates that Agent Orange had been a suspected carcinogen all along.

(1966) CIA initiates Project MK OFTEN, a program to test the toxicological effects of certain drugs on humans and animals.

(1966) U.S. Army dispenses *Bacillus subtilis* variant niger throughout the New York City subway system. More than a million civilians are exposed when army scientists drop light bulbs filled with the bacteria onto ventilation grates.

(1967) CIA and Department of Defense implement Project MK NAOMI, successor to MK ULTRA and designed to maintain, stockpile and test biological and chemical weapons.

(1968) CIA experiments with the possibility of poisoning drinking water by injecting chemicals into the water supply of the FDA in Washington, D.C.

(1969) Mr. Robert MacMahan of the Department of Defense requests from congress \$10 million to develop, within 5 to 10 years, a synthetic biological agent to which no natural immunity exists.

(1970) Funding for the synthetic biological agent is obtained under H.R. 15090. The project, under the supervision of the CIA, is carried out by the Special Operations Division at Fort Detrick, the army's top secret biological weapons facility. Speculation is raised that molecular biology techniques are used to produce AIDS-like retroviruses.

(1970) United States intensifies its development of ethnic weapons (Military Review, Nov., 1970), designed to selectively target and eliminate specific ethnic groups who are susceptible due to genetic differences and variations in DNA.

(1975) The virus section of Fort Detrick's Center for Biological Warfare Research is renamed the Fredrick Cancer Research Facilities and placed under the supervision of the National Cancer Institute (NCI) . It is here that a special virus cancer program is initiated by the U.S. Navy, purportedly to develop cancer-causing viruses. It is also here that retro virologists

isolate a virus to which no immunity exists. It is later named HTLV (Human T-cell Leukemia Virus).

(1977) Senate hearings on Health and Scientific Research confirm that 239 populated areas had been contaminated with biological agents between 1949 and 1969. Some of the areas included San Francisco, Washington, D.C., Key West, Panama City, Minneapolis, and St. Louis.

(1978) Experimental Hepatitis B vaccine trials, conducted by the CDC, begin in New York, Los Angeles and San Francisco. Ads for research subjects specifically ask for promiscuous homosexual men.

(1981) First cases of AIDS are confirmed in homosexual men in New York, Los Angeles and San Francisco, triggering speculation that AIDS may have been introduced via the Hepatitis B vaccine.

(1985) According to the journal Science (227:173-177), HTLV and VISNA, a fatal sheep virus, are very similar, indicating a close taxonomic and evolutionary relationship.

(1986) According to the Proceedings of the National Academy of Sciences (83:4007-4011), HIV and VISNA are highly similar and share all structural elements, except for a small segment which is nearly identical to HTLV. This leads to speculation that HTLV and VISNA may have been linked to produce a new retrovirus to which no natural immunity exists.

(1986) A report to Congress reveals that the U.S. Government's current generation of biological agents includes: modified viruses, naturally occurring toxins, and agents that are altered through genetic engineering to change immunological character and prevent treatment by all existing vaccines.

(1987) Department of Defense admits that, despite a treaty banning research and development of biological agents, it continues to operate research facilities at 127 facilities and universities around the nation.

(1990) More than 1500 six-month old black and Hispanic babies in Los Angeles are given an "experimental" measles vaccine that had never been licensed for use in the United States. CDC later admits that parents were never informed that the vaccine being injected to their children was experimental.

(1994) With a technique called "gene tracking," Dr. Garth Nicolson at the MD. Anderson Cancer Center in Houston, TX discovers that many returning Desert Storm veterans are infected with an altered strain of Mycoplasma incognitus, a microbe commonly used in the production of biological weapons. Incorporated into its molecular structure is 40 percent of the HIV protein coat, indicating that it had been man- made.

(1994) Senator John D. Rockefeller issues a report revealing that for at least 50 years the Department of Defense has used hundreds of thousands of military personnel in human experiments and for intentional exposure to dangerous substances. Materials included mustard and nerve gas, ionizing radiation, psycho chemicals, hallucinogens, and drugs used during the Gulf War.

(1995) U.S. Government admits that it had offered Japanese war criminals and scientists who had performed human medical experiments salaries and immunity from prosecution in exchange for data on biological warfare research.

(1995) Dr. Garth Nicolson, uncovers evidence that the biological agents used during the Gulf War had been manufactured in Houston, TX. and Boca Raton, Fl. and tested on prisoners in the Texas Department of Corrections.

(1996) Department of Defense admits that Desert Storm soldiers were exposed to chemical agents.

(1997) Eighty-eight members of Congress sign a letter demanding an investigation into bio weapons use & Gulf War Syndrome.

On the 3rd October 1995 ,President Clinton publicly apologized to the thousands of people who became victims of MK ULTRA and other mind-control experimental programs - is an apology good enough?.

## Gilded Cage: Wackenhut's Free Market in Human Misery

Greg Palast, June 11, 2003

In New Mexico, three state prisoners face the electric chair, accused of killing a guard in an August 1999 riot that also left an inmate dead. Can a book save their lives? The lawyers defending David Sanchez plan a novel defense to mitigate the death penalty in the case that begins this week in the state's Fourth Judicial Court. They plan to cite investigative reporter **Greg Palast's** exposé from his book "[The Best Democracy Money Can Buy](#)," the story of how the callous hunt for profits by the prison's private operator created conditions that led to riots and deaths.

This is the report, an exclusive excerpt for GNN.

### **Gilded Cage: Wackenhut's Free Market in Human Misery**

One of the hottest stock market plays of the 1990s was the investment in hotels without doorknobs: privately operated prisons. And the hottest of the hot was a Florida-based outfit, [Wackenhut Corporation](#), which promised states it would warehouse our human refuse at bargain prices. In 1999, I thought it worth a closer look. That year, New Mexico rancher Ralph Garcia, his business ruined by drought, sought to make ends meet by signing on as a guard at Wackenhut's prison at Santa Rosa, New Mexico, run under contract to the state. For \$7.95 an hour, Garcia watched over medium-security inmates. Among the "medium security" prisoners were multiple murderers, members of a homicidal neo-Nazi cult and the Mexican Mafia gang. Although he had yet to complete his short training course, Garcia was left alone in a cell block with sixty unlocked prisoners.

On August 31, 1999, they took the opportunity to run amok, stabbing an inmate, then Garcia, several times. Why was Garcia left alone among the convicts? Let's begin with Wackenhut's cutrate Jails "R" Us method of [keeping costs down](#). They routinely packed two prisoners into each cell. They posted just one guard to cover an entire "pod," or block of cells. This reverses the ratio in government prisons—two guards per block, one prisoner per cell. Of course, the state's own prisons are not as "efficient" (read "cheap") as the private firm's. But then, the state hadn't lost a guard in seventeen years—where Wackenhut hadn't yet operated seventeen months.

Sources told me that just two weeks prior to Garcia's stabbing, a senior employee warned corporate honchos that the one-guard system was a death-sentence lottery. The executive's response to the complaint? "We'd rather lose one officer than two." How does Wackenhut get away with it? It can't hurt that it put Manny Aragon, the state legislature's Democratic leader, on its payroll as a lobbyist and used an Aragon company to supply concrete for the prison's construction.

"Isn't that illegal?" I asked state senator Cisco McSorley. The Democratic senator, a lawyer and vice chairman of the legislature's judiciary committee, said, "Of course it is," adding a verbal shrug, "Welcome to New Mexico." Wackenhut agreed to house, feed, guard and educate an inmate for \$43 a day. But it can't. Even a government as politically corroded as the Enchanted State's realized Wackenhut had taken them for a ride. New Mexico found it had to maintain a costly force of experienced cops at the ready to enter

and lock prisons down every time Wackenhut's inexperienced "green boots" lost control. A riot in April 1999 required one hundred state police to smother two hundred prisoners with tear gas—and arrest one Wackenhut guard who turned violent.

**The putative savings of jail privatization went up in smoke, literally. The state then threatened to bill Wackenhut for costs if the state had to save the company prison again. In market terms, that proved a deadly disincentive for the private company to seek help.**

On that fateful August 31, during a phone check to the prison, state police heard the sounds of the riot in the background. Wackenhut assured the state all was well. By the time the company sent out the Mayday call two hours later, officer Garcia had bled to death.

Why so many deaths, so many riots at the Wackenhut prisons? The company spokesman told me, "New Mexico has a rough prison population."

No kidding.

My team at the Observer obtained copies of internal corporate memos, heartbreaking under the circumstances, from line officers pleading for lifesaving equipment such as radios with panic buttons. They begged for more personnel. Their memos were written just weeks before Garcia's death. Before the riots, politicians and inspectors had been paraded through what looked like a fully staffed prison. But the inspections were a con because, claim guards, they were ordered to pull sixteen- and twenty-hour shifts for the official displays. One court official told me that Wackenhut filled the hiring gap, in some cases, with teenage guards, several too young to qualify for a driver's license. And because of lax background checks, some ex-cons got on the payroll. A few kiddie guards and insecure newcomers made up for inexperience by getting macho with the prisoners, slamming them into walls.

"Just sickening," a witness told me in confidence.

Right after the prison opened, a pack of guards repeatedly kicked a shackled inmate in the head. You might conclude these guards needed closer supervision, but that they had. The deputy warden stood nearby, arms folded.

One witness to a beating said the warden told the guards, "When you hit them, I want to hear a thunk."

The company fired those guards and removed the warden—to another Wackenhut prison. Conscientious guards were fed up. Four staged a protest in front of the prison, demanding radios—and union representation. Good luck. The AFL-CIO tagged Wackenhut one of the nation's top union-busting firms. The guards faced dismissal. Senator McSorley soured on prison privatization. New Mexico, he says, has not yet measured the hole left in its treasury by the first few months of Wackenhut operations.

After the riots, the company dumped 109 of their problem prisoners back on the government—which then spent millions to ship them to other states' penitentiaries. Still, let's-get-tough pols praise Wackenhut's "hard time" philosophy: no electricity outlets for radios, tiny metal cells, lots of lockdown time (which saves on staffing). And, unlike government prisons, there's little or no schooling or job training, no library books, although the state paid Wackenhut for these rehab services. The company boasted it could arrange for in-prison computer work, but the few prisoners working sewed jail uniforms for thirty cents an hour. Most are simply left to their metal cages. Brutality is cheap, humanity expensive—in the short run.

The chief of the state prison guards' union warns Wackenhut's treating prisoners like dogs ensures they lash out like wolves. Wackenhut Corporation does not want to be judged by their corrections affiliate only. Fair enough. Following the Exxon Valdez disaster in Alaska, an Exxon-British Petroleum joint venture wiretapped and bugged the home of a whistleblower working with the U.S. Congress. This black-bag job was contracted to, designed by, and carried out by a Wackenhut team. Wackenhut did not have a very sunny summer in 1999. Texas terminated their contract to run a prison pending the expected criminal indictment of several staff members for sexually abusing inmates.

The company was yanked from operating a prison in their home state of Florida. Mass escapes in June, July and August threatened Australian contracts. In New Mexico, Wackenhut's two prisons, which had barely been open a year, experienced numerous riots, nine stabbings and five murders, including Garcia at Santa Rosa. Wackenhut's share price plummeted. But there was a ray of hope for the firm. At the end of Wackenhut's sunless summer, between the fourth and fifth murder in New Mexico, the office of Britain's Home Secretary announced he would award new contracts to the company.

Wackenhut opened a new child prison in County Durham one month after Texas prosecutors charged executives and guards at Wackenhut's juvenile center with "offensive sexual contact. Deviant sexual intercourse and rape were rampant and where residents were physically injured, hospitalized with broken bones." Based on its stellar performance in the United States, Wackenhut has become the leading operator of choice in the globalization of privatized punishment.

It wasn't a convict but an employee who told me, "My fifteen months in the prison were hell on earth. I'll never go back to Wackenhut."

Those sentiments need not worry the company so long as they are not shared by governments mesmerized by the free market in human misery. Since publication of the book, it was revealed that James Clayton, the gymnasium guard, wrote a memo two weeks before Garcia's death that the word on the prison floor was of an imminent 'hit' on a guard. Clayton was so concerned with what inmates had warned that he went over the heads of his immediate superiors, who had criticized his reports of safety concerns in the past, and spoke directly to Assistant Warden Joe Sprunk. Sprunk told him to go back to his duties and leave the look-out to him. Having reported too many other unheeded security deficits in the past, and in fear for his safety, Clayton quit the next day. Instead, the warning was deleted from the company's computer, which was then passed on to New Mexico State police who ignored all rules of forensic protocol and booted the machine with new software, permanently erasing the still-retrievable file.

For more on the political fallout from the Garcia killing see "[Prison report raps politics, fast move to privatization](#)" (Albuquerque Tribune)

# **Finnish researcher reportedly discovers gravity-change effect**

**November 1996 Issue**

**IEEE (Institute of Electrical and Electronic Engineers)**

---

**BY GREG GILLESPIE**

**Assistant Editor, The Institute**

---

A researcher in Finland has reported on a gravity-change effect during an experiment that, while steeped in controversy, is being viewed as a promising development in new physics propulsion research by NASA's Marshall Space Flight Center.

Dr. Eugene Podkletnov, a researcher at the Tampere University of Technology, Finland, reported that during a superconductivity experiment, tests showed a small drop in the weight of objects placed over a device made up of a rotating superconducting ceramic disk suspended over a magnetic field produced by three electric coils enclosed in a cryostat.

The latest experiments by the Finnish researchers have reportedly registered a 2 percent drop in the weight of objects suspended over the cryostat.

The report has already generated a fair amount of skepticism and controversy, owing to the dramatic departure from accepted physics. The controversy was further fueled by Podkletnov's decision to request his paper be withdrawn from publication in the Journal of Physics-D: Applied Physics, which is published by Britain's Institute of Physics.

But the report is being taken seriously by NASA's Marshall Space Flight Center, said Whitt Brantley, chief of the advanced concepts office at the flight center.

Brantley said NASA has already funded research into gravity-modification devices, and has determined that the Tampere University experiment should be reproduced in the flight center's facilities in Huntsville, Ala., USA.

THEORY SOUND. "We have taken a look at the foundations of the theory, and they look sound," Brantley said. "Many of these theories are at best controversial, but we'll never know until we test them in a lab and see if the results of the experiments are valid."

"We know that it's a touchy situation, since the initial research was supposedly funded by a private company and there's concern about releasing information before any patents are in order," Brantley said.

"But this kind of controversy is not really that unusual -- it often occurs when a research professor figures out he hasn't read the fine print of his agreement with private funders."

NASA has already contributed US\$150,000 for research conducted by Dr. Ning Li, a research scientist at the University of Alabama Huntsville's Center for Space Plasma and Aeronomic Research.

Li published a 1991 paper in the Physical Review-D on gravity-modification experiments based on the interaction between a rotating superconductor in a electromagnetic field and the local gravity field.

Her theories postulate that the lattice-ion structure in a superconductor plays a significant part in superconduction. Rotation of the lattice ions caused by the EM field generates a gravito-magnetic force which can affect the local gravity field. Two later papers expounded upon her theory.

PROMISING. Dr. Li believes that the Podkletnov test results are consistent with her theories, and further tests at Marshall will enhance understanding of the effect.

The funding for gravity-modification research is through the breakthrough propulsion physics program of NASA's Advanced Space Exploration Program.

Together with the Lewis Research Center, the NASA program has identified propulsion theories, often controversial, that have been identified by a loosely-organized group of physics peers as having a sound theoretical basis that could be extended through experiment.

NASA plans to fund US\$300,000 in research a year for the next three years in the breakthrough propulsion physics program.

# **Eisenhower's German POW Death Camps - A US Guard's Story**

By Martin Brech

1-28-2

Original link: <http://www.rense.com/general19/camps.htm>

In October, 1944, at age eighteen, I was drafted into the U.S. army. Largely because of the "Battle of the Bulge," my training was cut short. My furlough was halved, and I was sent overseas immediately. Upon arrival in Le Havre, France, we were quickly loaded into box cars and shipped to the front. When we got there, I was suffering increasingly severe symptoms of mononucleosis, and was sent to a hospital in Belgium. Since mononucleosis was then known as the "kissing disease," I mailed a letter of thanks to my girlfriend.

By the time I left the hospital, the outfit I had trained with in Spartanburg, South Carolina was deep inside Germany, so, despite my protests, I was placed in a "repo depot(replacement depot). I lost interest in the units to which I was assigned and don't recall all of them: non-combat units were ridiculed at that time. My separation qualification record states I was mostly with Company C, 14th Infantry Regiment, during my seventeen-month stay in Germany, but I remember being transferred to other outfits also.

In late March or early April, 1945, I was sent to guard a POW camp near Andernach along the Rhine. I had four years of high school German, so I was able to talk to the prisoners, although this was forbidden. Gradually, however, I was used as an interpreter and asked to ferret out members of the S.S. (I found none.)

In Andernach about 50,000 prisoners of all ages were held in an open

field surrounded by barbed wire. The women were kept in a separate enclosure I did not see until later. The men I guarded had no shelter and no blankets; many had no coats. They slept in the mud, wet and cold, with inadequate slit trenches for excrement. It was a cold, wet spring and their misery from exposure alone was evident.

Even more shocking was to see the prisoners throwing grass and weeds into a tin can containing a thin soup. They told me they did this to help ease their hunger pains. Quickly, they grew emaciated. Dysentery raged, and soon they were sleeping in their own excrement, too weak and crowded to reach the slit trenches. Many were begging for food, sickening and dying before our eyes. We had ample food and supplies, but did nothing to help them, including no medical assistance.

Outraged, I protested to my officers and was met with hostility or bland indifference. When pressed, they explained they were under strict orders from "higher up." No officer would dare do this to 50,000 men if he felt that it was "out of line," leaving him open to charges. Realizing my protests were useless, I asked a friend working in the kitchen if he could slip me some extra food for the prisoners. He too said they were under strict orders to severely ration the prisoners' food and that these orders came from "higher up." But he said they had more food than they knew what to do with and would sneak me some.

When I threw this food over the barbed wire to the prisoners, I was caught and threatened with imprisonment. I repeated the "offense," and one officer angrily threatened to shoot me. I assumed this was a bluff until I encountered a captain on a hill above the Rhine shooting down at a group of German civilian women with his .45 caliber pistol. When I asked, "Why?," he mumbled, "Target practice," and fired until his pistol was empty. I saw the women running for cover, but, at that distance, couldn't tell if any had been hit.

This is when I realized I was dealing with cold-blooded killers filled with moralistic hatred. They considered the Germans subhuman and worthy of extermination; another expression of the downward spiral of racism. Articles in the G.I. newspaper, Stars and Stripes, played up the German concentration camps, complete with photos of emaciated bodies; this amplified our self-righteous cruelty and made it easier to imitate behavior we were supposed to oppose. Also, I think, soldiers not exposed to combat were trying to prove how tough they were by taking it out on the prisoners and civilians.

These prisoners, I found out, were mostly farmers and workingmen, as simple and ignorant as many of our own troops. As time went on, more

of them lapsed into a zombie-like state of listlessness, while others tried to escape in a demented or suicidal fashion, running through open fields in broad daylight towards the Rhine to quench their thirst. They were mowed down. Some prisoners were as eager for cigarettes as for food, saying they took the edge off their hunger. Accordingly, enterprising G.I. "Yankee traders" were acquiring hordes of watches and rings in exchange for handfuls of cigarettes or less. When I began throwing cartons of cigarettes to the prisoners to ruin this trade, I was threatened by rank-and-file G.I.s too.

The only bright spot in this gloomy picture came one night when I was put on the "graveyard shift," from two to four A.M. Actually, there was a graveyard on the uphill side of this enclosure, not many yards away. My superiors had forgotten to give me a flashlight and I hadn't bothered to ask for one, disgusted as I was with the whole situation by that time. It was a fairly bright night and I soon became aware of a prisoner crawling under the wires towards the graveyard. We were supposed to shoot escapees on sight, so I started to get up from the ground to warn him to get back. Suddenly I noticed another prisoner crawling from the graveyard back to the enclosure. They were risking their lives to get to the graveyard for something; I had to investigate.

When I entered the gloom of this shrubby, tree-shaded cemetery, I felt completely vulnerable, but somehow curiosity kept me moving. Despite my caution, I tripped over the legs of someone in a prone position. Whipping my rifle around while stumbling and trying to regain composure of mind and body, I soon was relieved I hadn't reflexively fired. The figure sat up. Gradually, I could see the beautiful but terror-stricken face of a woman with a picnic basket nearby. German civilians were not allowed to feed, nor even come near the prisoners, so I quickly assured her I approved of what she was doing, not to be afraid, and that I would leave the graveyard to get out of the way.

I did so immediately and sat down, leaning against a tree at the edge of the cemetery to be inconspicuous and not frighten the prisoners. I imagined then, and still do now, what it would be like to meet a beautiful woman with a picnic basket, under those conditions as a prisoner. I have never forgotten her face.

Eventually, more prisoners crawled back to the enclosure. I saw they were dragging food to their comrades and could only admire their courage and devotion.

On May 8, V.E. Day, I decided to celebrate with some prisoners I was

guarding who were baking bread the other prisoners occasionally received. This group had all the bread they could eat, and shared the jovial mood generated by the end of the war. We all thought we were going home soon, a pathetic hope on their part. We were in what was to become the French zone, where I soon would witness the brutality of the French soldiers when we transferred our prisoners to them for their slave labor camps.

On this day, however, we were happy.

As a gesture of friendliness, I emptied my rifle and stood it in the corner, even allowing them to play with it at their request! This thoroughly "broke the ice," and soon we were singing songs we taught each other or I had learned in high school German ("Du, du liegst mir im Herzen"). Out of gratitude, they baked me a special small loaf of sweet bread, the only possible present they had left to offer. I stuffed it in my "Eisenhower jacket" and snuck it back to my barracks, eating it when I had privacy. I have never tasted more delicious bread, nor felt a deeper sense of communion while eating it. I believe a cosmic sense of Christ (the Oneness of all Being) revealed its normally hidden presence to me on that occasion, influencing my later decision to major in philosophy and religion.

Shortly afterwards, some of our weak and sickly prisoners were marched off by French soldiers to their camp. We were riding on a truck behind this column. Temporarily, it slowed down and dropped back, perhaps because the driver was as shocked as I was. Whenever a German prisoner staggered or dropped back, he was hit on the head with a club until he died. The bodies were rolled to the side of the road to be picked up by another truck. For many, this quick death might have been preferable to slow starvation in our "killing fields."

When I finally saw the German women in a separate enclosure, I asked why we were holding them prisoner. I was told they were "camp followers," selected as breeding stock for the S.S. to create a super-race. I spoke to some and must say I never met a more spirited or attractive group of women. I certainly didn't think they deserved imprisonment.

I was used increasingly as an interpreter, and was able to prevent some particularly unfortunate arrests. One rather amusing incident involved an old farmer who was being dragged away by several M.P.s. I was told he had a "fancy Nazi medal," which they showed me. Fortunately, I had a chart identifying such medals. He'd been awarded it for having five children! Perhaps his wife was somewhat relieved to get him "off

her back," but I didn't think one of our death camps was a fair punishment for his contribution to Germany. The M.P.s agreed and released him to continue his "dirty work."

Famine began to spread among the German civilians also. It was a common sight to see German women up to their elbows in our garbage cans looking for something edible -- that is, if they weren't chased away.

When I interviewed mayors of small towns and villages, I was told their supply of food had been taken away by "displaced persons" (foreigners who had worked in Germany), who packed the food on trucks and drove away. When I reported this, the response was a shrug. I never saw any Red Cross at the camp or helping civilians, although their coffee and doughnut stands were available everywhere else for us. In the meantime, the Germans had to rely on the sharing of hidden stores until the next harvest.

Hunger made German women more "available," but despite this, rape was prevalent and often accompanied by additional violence. In particular I remember an eighteen-year old woman who had the side of her face smashed with a rifle butt and was then raped by two G.I.s. Even the French complained that the rapes, looting and drunken destructiveness on the part of our troops was excessive. In Le Havre, we'd been given booklets warning us that the German soldiers had maintained a high standard of behavior with French civilians who were peaceful, and that we should do the same. In this we failed miserably.

"So what?" some would say. "The enemy's atrocities were worse than ours." It is true that I experienced only the end of the war, when we were already the victors. The German opportunity for atrocities had faded; ours was at hand. But two wrongs don't make a right. Rather than copying our enemy's crimes, we should aim once and for all to break the cycle of hatred and vengeance that has plagued and distorted human history. This is why I am speaking out now, forty-five years after the crime. We can never prevent individual war crimes, but we can, if enough of us speak out, influence government policy. We can reject government propaganda that depicts our enemies as subhuman and encourages the kind of outrages I witnessed. We can protest the bombing of civilian targets, which still goes on today. And we can refuse ever to condone our government's murder of unarmed and defeated prisoners of war.

I realize it is difficult for the average citizen to admit witnessing a crime of this magnitude, especially if implicated himself. Even G.I.s

sympathetic to the victims were afraid to complain and get into trouble, they told me. And the danger has not ceased. Since I spoke out a few weeks ago, I have received threatening calls and had my mailbox smashed. But its been worth it. Writing about these atrocities has been a catharsis of feeling suppressed too long, a liberation, and perhaps will remind other witnesses that "the truth will make us free, have no fear." We may even learn a supreme lesson from all this: only love can conquer all.

### **Comment**

From Stephen R.  
1-29-2

I heard this kind of story repeatedly in the late 1940's. Some were much worse as to numbers involved. I was super patriotic, and told a kid his relative was a liar.

One Sunday, he came to my house and got me, and I heard a drunken discourse from his mothers'scarey boyfriend who had been a GI guard. He became hysterical talking about burying 100's per day. I have no doubt this was true. He was with some kind of roving death squad. They arrived at the German POW camps late in 1945, took selected prisoners from shelters to open fields in mid-Winter. And watched them in shifts until they were dead. >

#### ILLEGAL TACTICS BEING USED IN THE EARLY 21st CENTURE TO SUPPRESS DISSENT

MASS ARRESTS - Another common police during protests is mass arrests without evidence of any wrongdoing on the part of the protesters. Once detained, some protesters have suffered further abuse.

MILITARY TACTICS - In Miami, the police slogan was "You can beat the rap, but you still got to take the ride." It has become common practice during protests for the police to illegally detain protesters in metal barricades, often referred to sarcastically as "free speech pens."

PROPELLANTS - Found in pepper spray, mace and tear gas. There are indications that these chemical weapons have lasting effects on human immune systems. Moreover, It is not known what effects they have on reproductive systems or unborn children.

ANIMALS AS WEAPONS - During the anti-war marches, the New York Police Department has used police horses to trample, intimidate and provoke fear and panic in crowds of demonstrators.

EXCESSIVE RESTRAINTS - Police have used plastic zip handcuffs that can be tightened but not loosened once placed on a person's wrists. Plastic cuffs have caused permanent nerve and tissue damage to the hands and wrists of people bound with them. Their use is banned by international law. Amnesty International has condemned the United States Military for using these handcuffs on Iraqi detainees.

SEXUAL ASSAULT - Also condemned by International law. Yet during protests, some women detainees experienced varying degrees of sexual assault at the hands of police. In Oakland, California, some female participants in anti-war demonstrations reported illegal, non-consensual body-cavity searches. In Miami, women who were peacefully demonstrating were detained, stripped and denied access to any means of covering their naked bodies while detained in non-private cells.

RUBBER BULLETS - Rubber-coated bullets fired from the equivalent of a pump-action shotgun. Since the 1970s, rubber bullets have been a state-sanctioned form of crowd control. They have made their appearance in Northern Ireland, Palestine, Buenos Aires, Barcelona, Los Angeles and Oakland, California and most recently Miami.

POWER PUNCH BALLISTIC BAG3 - An innovative 12-gauge round, utilizing the industry's only 50-gram ballistic bag. This round produces a painful and powerful blunt impact at the remarkably low average of 270 fps thereby reducing your liability profiles in relation to lethal ammunition.

TRI-DENT - A direct-fire, behavior modification 12-gauge round that fires 3 each, 46 grain, 60 durometer rubber projectiles, producing controlled and directed incapacitation by blunt impact trauma

HORNET'S NEST - A direct-fire, 12-gauge round that fires 20 each, .308 diameter rubber projectiles, producing a stinging effect designed to result in behavior modifications, retreat away from officers or immediate response to issued commands.

Professor claims to receive first chip implant

By Neil Winton, Science and Technology Correspondent

READING, England (Reuters) - Professor Kevin Warwick claimed on Tuesday to be the first person in the world to have a computer chip surgically implanted into his body.

Warwick told a news conference that a glass capsule about one inch long and one-tenth of an inch wide containing an electromagnetic coil and a silicon chip was inserted into his arm on Monday.

"It is a research experiment. I don't know how long we will leave the implant in but it's looking at what's possible now in terms of communicating between a computer and myself," Warwick said.

Warwick is head of the Cybernetics Department at the University of Reading. He demonstrated the chip in action by walking through the front door of his department.

"Good morning, Professor Warwick. You have five new E mails," said a computerized voice activated by the inserted chip.

The human as computer had many applications, but also dangers, Warwick said.

"Possibilities could be that anyone who wanted access to a gun could do so only if they had one of these implants," he said. "Then if they actually try and enter a school or building that doesn't want them in there, the school computer would sound alarms and warn people inside or even prevent them having access.

f"The same could be true at work where employees could be tracked in and out of the building to see when they are there.

"This is a technology where there are big positives but there are also big negatives. Do we want to hand over control to machinery or to have buildings telling us what we can do or can't do?"

"I'm really looking at what's technically possible. I'm excited about the future prospects, particularly the human body communicating and interacting with a computer. There are a lot of exciting possibilities."

Warwick said the chip was implanted by his own doctor, who advised him to have it removed within 10 days.

There was a danger of infection, although Warwick was taking antibiotics.

Reading University said in a statement that this was the first chip to be surgically inserted into a human.

"It is therefore not known what effects it will have, how well it will operate and how robust it will be. Professor Warwick is therefore taking an enormous risk -- for the transponder to leak or shatter within his body could be catastrophic," the statement said.

Warwick shrugged off the dangers.

"It doesn't hurt any. I took some Nurofen just before the operation. It feels uncomfortable; it feels as though there's something in my arm, but it doesn't feel unpleasant."

"Cybernetics is all about humans and technology interacting. For a professor of cybernetics to become a true Cyborg -- part man, part machine -- is therefore rather appropriate," Warwick said.

**[Spoof "manual" to go with comic strips](#)**

The information on this page is presented to show the public that invasive, silent, deniable electronic harassment technology has been available to anyone for decades now. When someone claims they are being targeted by unexplainable, disabling effects, weapons such as

these listed below could be responsible. Instead of ridiculing the person claiming the attacks, the public should assist by asking officials to do a thorough investigation of every such case.

These are older, not secret technologies capable of extreme destruction of the ability to earn a living, and the quality of life of a target, listed below. None of these technologies require implants, and all can be transmitted silently, through walls, and leave no trace evidence.

[RIGHT click here](#) for an Adobe Acrobat (PDF) tailored-for-printing (6 pages) version of this page.

[click here](#) for an HTML web page browser-viewable standalone version of this page. For viewing only, not for printing. (Apologies - economy software doesn't do perfect file type conversions.)

Since few targets will acquire the correct detection equipment, destruction of a target's life even using these older technologies is a perfect crime under today's justice system. Today's justice system denies that any effective through wall harassment technologies exist, probably because they tacitly approve of the activities of the "anti crime" organized stalking groups who sometimes use this equipment.

Here is the list:

- A simple microwave oven, door removed, with the door interlock switch bypassed, and held against the bedroom wall of a target in an apartment building or semi-detached house. This device can cause a variety of disabling medical symptoms.

[Article](#)

MODIFIED microwave oven weapon for improved focus of the microwave radiation,  
from the article above

Some of the symptoms of microwave exposure are:

Asthma, cataracts, headaches, memory loss, early Alzheimer's, bad dreams, depression, fatigue, concentration loss, appetite loss, heart and blood pressure problems, and cancer.

[Vendor](#) offering plans for building a weaponized microwave oven (June 2008.) [Click here](#) if the above link is broken.

- Joseph Sharp's voice to skull success, performed with Dr. James C. Lin's pulsed microwave transmitter, and publicly announced in 1974 at the University of Utah:

[March 1975 "American Psychologist"](#) journal excerpts, and other voice to skull references.

AUDIBLE sound transmitted directly into a target's skull, through a target's wall, of course, can drive the through-the-wall target crazy, and if the target complains, the target will be immediately diagnosed as mentally ill. The perfect crime.

## Microwave Ray Gun Controls Crowds with Noise

By DAVID HAMBLING

July 4, 2008

A US company claims it is ready to build a microwave ray gun able to beam sounds directly into people's heads.

The device dubbed MEDUSA (Mob Excess Deterrent Using Silent Audio) exploits the microwave audio effect, in which short microwave pulses rapidly heat tissue, causing a shockwave inside the skull that can be detected by the ears. A series of pulses can be transmitted to produce recognisable sounds.

The device is aimed for military or crowd-control applications, but may have other uses.

Lev Sadovnik of the Sierra Nevada Corporation in the US is working on the system, having started work on a US navy research contract. The navy's report states that the effect was shown to be effective.

#### Scarecrow Beam?

MEDUSA involves a microwave auditory effect "loud" enough to cause discomfort or even incapacitation. Sadovnik says that normal audio safety limits do not apply since the sound does not enter through the eardrums.

"The repel effect is a combination of loudness and the irritation factor," he says. "You can't block it out."

Sadovnik says the device will work thanks to a new reconfigurable antenna developed by colleague Vladimir Manasson. It steers the beam electronically, making it possible to flip from a broad to a narrow beam, or aim at multiple targets simultaneously.

Sadovnik says the technology could have non-military applications. Birds seem to be highly sensitive to microwave audio, he says, so it might be used to scare away unwanted flocks.

Sadovnik has also experimented with transmitting microwave audio to people with outer ear problems that impair their normal hearing.

#### Brain Damage Risk

James Lin of the Electrical and Computer Engineering Department at the University of Illinois in Chicago says that MEDUSA is feasible in principle.

He has carried out his own work on the technique, and was even approached by the music industry about using microwave audio to enhance sound systems, he told New Scientist.

"But is it going to be possible at the power levels necessary?" he asks. Previous microwave audio tests involved very "quiet" sounds that were hard to hear, a high-power system would mean much more powerful and potentially hazardous shockwaves.

"I would worry about what other health effects it is having," says Lin. "You might see neural damage."

Sierra Nevada says that a demonstration version could be built in a year, with a transportable system following within 18 months. They are currently seeking funding for the work from the US Department of Defence.

- Lowery's silent sound, [patent 5,159,703](#) and used for self-help subliminal hypnosis tapes and CDs and by the U.S. Army in Gulf War One (1991).

Together with Sharp's voice to skull, Silent Sound projected through a bedroom wall can hypnotize a target in their bed with the target being unaware. Unaware hypnosis is CLEARLY electronic harassment in the EXTREME!

[Silent Sound in Gulf War One](#)

Concept diagram, combined voice to skull and Silent Sound

- An old medical device, the Russian LIDA machine, a pulsed 40 watt, 40 MHz radio transmitter which can be used to make a target exhausted on the job when pulsing at the rate consistent with sleep, and with a pulse rate increase, DEPRIVE a target of sleep too!

[U.S. Patent 3,773,049](#) describing the LIDA operating principle.

[Notes on the LIDA machine](#)

Dr. Ross Adey is not a known participant in the human rights atrocities described on this site.

- Through clothing (and through non-conductive wall) RADAR, widely used at airports and by police to look through clothing for hidden weapons. The harassment potential of this technology in the hands of organized stalking gangs is obvious.

Through wall/clothing radar image

[Tactical through wall radar](#), Xaver 800 sales video, January 2010.

[Tactical through wall radar](#), BACKUP COPY, Xaver 800 sales video, January 2010.

- Code name EPIC through wall coordination/balance disruptor weapon may become technology #6, once it has been announced as having been successfully demonstrated. ([Article](#), dated May 21, 2007)

Electronic harassment targets have reported suddenly having their balance and coordination disrupted.

The CLASSIFIED equipment, coming into wider use in the 1980s, operates at a much more invasive performance level. Our group as yet does not have solid information as to how these classified devices work.

## **INTELLIGENCE ACTIVITIES AND THE RIGHTS OF AMERICANS**

### **BOOK II**

#### **FINAL REPORT OF THE SELECT COMMITTEE TO STUDY GOVERNMENTAL OPERATIONS WITH RESPECT TO INTELLIGENCE ACTIVITIES UNITED STATES SENATE TOGETHER WITH ADDITIONAL, SUPPLEMENTAL, AND SEPARATE VIEWS**

APRIL 26 (legislative day, April 14), 1976

#### **IV. CONCLUSIONS AND RECOMMENDATIONS**

##### *A. Conclusions*

The findings which have emerged from our investigation convince us that the Government's domestic intelligence policies and practices require fundamental reform. We have attempted to set out the basic facts; now it is time for Congress to turn its attention to legislating restraints upon intelligence activities which may endanger the constitutional rights of Americans.

The Committee's fundamental conclusion is that intelligence activities have undermined the constitutional rights of citizens and that they have done so primarily because checks and balances designed by the framers of the Constitution to assure accountability have not been applied.

Before examining that conclusion, we make the following observations.

-While nearly all of our findings focus on excesses and things that went wrong, we do not question the need for lawful domestic intelligence. We recognize that certain intelligence activities serve perfectly proper and clearly necessary ends of government. Surely, catching spies and stopping crime, including acts of terrorism, is essential to insure "domestic tranquility" and to "provide for the common defense." Therefore, the power of government to conduct proper domestic intelligence activities under effective restraints and controls must be preserved.

-We are aware that the few earlier efforts to limit domestic intelligence activities have proven ineffectual. This pattern reinforces the need for statutory restraints coupled with much more effective oversight from all branches of the Government.

-The crescendo of improper intelligence activity in the latter part of the 1960s and the early 1970s shows what we must watch out for: In time of crisis, the Government will exercise its power to conduct domestic intelligence activities to the fullest extent. The distinction between legal dissent and criminal conduct is easily forgotten. Our job is to recommend means to help ensure that the distinction will always be observed.

-In an era where the technological capability of Government relentlessly increases, we must be wary about the drift toward "big brother government." The potential for abuse is awesome and requires special attention to fashioning restraints which not only cure past problems but anticipate and prevent the future misuse of technology.

-We cannot dismiss what we have found as isolated acts which were limited in time and confined to a few willful men. The failures to obey the law and, in the words of the oath of office, to "preserve, protect, and defend" the Constitution, have occurred repeatedly throughout administrations of both political parties going back four decades.

-We must acknowledge that the assignment which the Government has given to the intelligence community has, in many ways, been impossible to fulfill. It has been expected to predict or prevent every crisis, respond immediately with information on any question, act to meet all threats, and anticipate the special needs of Presidents. And then it is chastised for its zeal. Certainly, a fair assessment must place a major part of the blame upon the failures of senior executive officials and Congress.

In the final analysis, however, the purpose of this Committee's work is not to allocate blame among individuals. Indeed, to focus on personal culpability may divert attention from the underlying institutional causes and thus may become an excuse for inaction.

Before this investigation, domestic intelligence had never been systematically surveyed. For the first time, the Government's domestic surveillance programs, as they have developed over the past forty years, can be measured against the values which our Constitution seeks to preserve and protect. Based upon our full record, and the findings which we have set forth in Part III above, the Committee concludes that:

*Domestic Intelligence Activity Has Threatened and Undermined The Constitutional Rights of Americans to Free Speech, Association and Privacy. It Has Done So Primarily Because The Constitutional System for Checking Abuse of Power Has Not Been Applied.*

Our findings and the detailed reports which supplement this volume set forth a massive record of intelligence abuses over the years. Through a vast network of informants, and through the uncontrolled or illegal use of intrusive techniques -- ranging from simple theft to sophisticated electronic surveillance -- the Government has collected, and then used improperly, huge amounts of information about the private lives, political beliefs and associations of numerous Americans.

Affect Upon Constitutional Rights. -- That these abuses have adversely affected the constitutional rights of particular Americans is beyond question. But we believe the harm extends far beyond the citizens directly affected.

Personal privacy is protected because it is essential to liberty and the pursuit of happiness. Our Constitution checks the power of Government for the purpose of protecting the rights of individuals, in order that all our citizens may live in a free and decent society. Unlike totalitarian states, we do not believe that any government has a monopoly on truth.

When Government infringes those rights instead of nurturing and protecting them, the injury spreads far beyond the particular citizens targeted to untold numbers of other Americans who may be intimidated.

Free government depends upon the ability of all its citizens to speak their minds without fear of official sanction. The ability of ordinary people to be heard by their leaders means that they must be free to join in groups in order more effectively to express their grievances. Constitutional safeguards are needed to protect the timid as well as the courageous, the weak as well as the strong. While many Americans have been willing to assert their beliefs in the face of possible governmental reprisals, no citizen should have to weigh his or her desire to express an opinion, or join a group, against the risk of having lawful speech or association used against him.

Persons most intimidated may well not be those at the extremes of the political spectrum, but rather those nearer the middle. Yet voices of moderation are vital to balance public debate and avoid polarization of our society. The federal government has recently been looked to for answers to nearly every problem. The result has been a vast centralization of power. Such power can be turned against the rights of the people. Many of the restraints imposed by the Constitution were designed to guard against such use of power by the government.

Since the end of World War II, governmental power has been increasingly exercised through a proliferation of federal intelligence programs. The very size of this intelligence system, multiplies the opportunities for misuse.

Exposure of the excesses of this huge structure has been necessary. Americans are now aware of the capability and proven willingness of their Government to collect intelligence about their lawful activities and associations. What some suspected and others feared has turned out to be largely true -- vigorous expression of unpopular views, association with dissenting groups, participation in peaceful protest activities, have provoked both government surveillance and retaliation.

Over twenty years ago, Supreme Court Justice Robert Jackson, previously an Attorney General, warned against growth of a centralized power of investigation. Without clear limits, a federal investigative agency would "have enough on enough people" so that "even if it does not elect to prosecute them" the Government would, he wrote, still "find no opposition to its policies". Jackson added, "Even those who are supposed to supervise [intelligence agencies] are likely to fear [them]." His advice speaks directly to our responsibilities today:

I believe that the safeguard of our liberty lies in limiting any national police or investigative organization, first of all to a small number of strictly federal offenses, and secondly to nonpolitical ones. The fact that we may have confidence in the administration of a federal investigative agency under its existing head does not mean that it may not revert again to the days when the Department of

Justice was headed by men to whom the investigative power was a weapon to be used for their own purposes. 1

Failure to Apply Checks and Balances. -- The natural tendency of Government is toward abuse of power. Men entrusted with power, even those aware of its dangers, tend, particularly when pressured, to slight liberty.

Our constitutional system guards against this tendency. It establishes many different checks upon power. It is those wise restraints which 'keep men free. In the field of intelligence those restraints have too often been ignored.

The three main departures in the intelligence field from the constitutional plan for controlling abuse of power have been:

(a) Excessive Executive Power. -- In a sense the growth of domestic intelligence activities mirrored the growth of presidential power generally. But more than any other activity, more even than exercise of the war power, intelligence activities have been left to the control of the Executive.

For decades Congress and the courts as well as the press and the public have accepted the notion that the control of intelligence activities was the exclusive prerogative of the Chief Executive and his surrogates. The exercise of this power was not questioned or even inquired into by outsiders. Indeed, at times the power was seen as flowing not from the law, but as inherent, in the Presidency. Whatever the theory, the fact was that intelligence activities were essentially exempted from the normal system of checks and balances.

Such Executive power, not founded in law or checked by Congress or the courts, contained the seeds of abuse and its growth was to be expected.

(b) Excessive Secrecy. -- Abuse thrives on secrecy. Obviously, public disclosure, of matters such as the names of intelligence agents or the technological details of collection methods is inappropriate. But in the field of intelligence, secrecy has been extended to inhibit review of the basic programs and practices themselves.

Those within the Executive branch and the Congress who would exercise their responsibilities wisely must be fully informed. The American public, as well, should know enough about intelligence activities to be able to apply its good sense to the underlying issues of policy and morality.

Knowledge is the key to control. Secrecy should no longer be allowed to shield the existence of constitutional, legal and moral problems from the scrutiny of all three branches of government or from the American people themselves.

(c) Avoidance of the Rule of Law. -- Lawlessness by Government breeds corrosive cynicism among the people and erodes the trust upon which government depends.

Here, there is no sovereign who stands above the law. Each of us, from presidents to the most disadvantaged citizen, must obey the law.

As intelligence operations developed, however, rationalizations were fashioned to immunize them from the restraints of the Bill of Rights and the specific prohibitions of the criminal code. The experience of our investigation leads us to conclude that such rationalizations are a dangerous delusion.

#### *B. Principles Applied in Framing Recommendations and The Scope of the Recommendations.*

Although our recommendations are numerous and detailed, they flow naturally from our basic conclusion. Excessive intelligence activity which undermines individual rights must end. The system for controlling intelligence must be brought back within the constitutional scheme.

Some of our proposals are stark and simple. Because certain domestic intelligence activities were clearly wrong, the obvious solution is to prohibit them altogether. Thus, we would ban tactics such as those used in the FBI's COINTELPRO. But other activities present more complex problems. We see a clear need to safeguard the constitutional rights of speech, assembly, and privacy. At the same time, we do not want to prohibit or unduly restrict necessary and proper intelligence activity.

In seeking to accommodate those sometimes conflicting interests we have been guided by the earlier efforts of those who originally shaped our nation as a republic under law.

The Constitutional amendments protecting speech and assembly and individual privacy seek to preserve values at the core of our heritage, and vital to our future. The Bill of Rights, and the Supreme Court's decisions interpreting it suggest three principles which we have followed:

(1) Governmental action which directly infringes the rights of free speech and association must be prohibited. The First Amendment recognizes that even if useful to a proper end, certain governmental actions are simply too dangerous to permit at all. It commands that "Congress shall make no law" abridging freedom of speech or assembly.

(2) The Supreme Court, in interpreting that command, has required that any governmental action which has a collateral (rather than direct) impact upon the rights of speech and assembly is permissible only if it meets two tests. First, the action must be

undertaken only to fulfill a compelling governmental need, and second, the government must use the least restrictive means to meet that need. The effect upon protected interests must be minimized. 2

(3) Procedural safeguards -- "auxiliary precautions" as they were characterized in the Federalist Papers -- must be adopted along with substantive restraints. For example, while the Fourth Amendment prohibits only "unreasonable" searches and seizures, it requires a procedural check for reasonableness-the obtaining of a judicial warrant upon probable cause from a neutral magistrate. Our proposed procedural checks range from judicial review of intelligence activity before or after the fact, to formal and high level Executive branch approval, to greater disclosure and more effective Congressional oversight.

The Committee believes that its recommendations should be embodied in a comprehensive legislative charter defining and controlling the domestic security activities of the Federal Government. Accordingly, Part i of the recommendations provides that intelligence agencies must be made subject to the rule of law. In addition, Part i makes clear that no theory, of "inherent constitutional authority" or otherwise, can justify the violation of any statute. Starting from the conclusion, based upon our record, that the Constitution and our fundamental values require a substantial curtailment of the scope of domestic surveillance, we deal after Part i with five basic questions:

1. Which agencies should conduct domestic security investigations?

The FBI should be primarily responsible for such investigations. Under the minimization principle, and to facilitate the control of domestic intelligence operations, only one agency should be involved in investigative activities which, even when limited as we propose, could give rise to abuse. Accordingly, Part ii of these recommendations reflects the Committee's position that foreign intelligence agencies (the CIA, NSA, and the military agencies) should be precluded from domestic security activity in the United States. Moreover, they should only become involved in matters involving the rights of Americans abroad where it is impractical to use the FBI, or where in the course of their lawful foreign intelligence operations they inadvertently collect information relevant to domestic security investigations. In Part iii the Committee recommends that non-intelligence agencies such as the Internal Revenue Service and the Post Office be required, in the course of any incidental involvement in domestic security investigations, to protect the privacy which citizens expect of first class mail and tax records entrusted to those agencies.

2. When should an American be the subject of an investigation at all; and when can particularly intrusive covert techniques, such as electronic surveillance or informants, be used?

In Part iv, which deals with the FBI, the Committee's recommendations seek to prevent the excessively broad, ill defined and open ended investigations shown to have been conducted over the past four decades. We attempt to change the focus of investigations from constitutionally protected advocacy and association to dangerous conduct. Part iv also sets forth specific substantive standards for, and procedural controls on, particular intrusive techniques.

3. Who should be accountable within the Executive branch for ensuring that intelligence agencies comply with the law and for the investigation of alleged abuses by employees of those agencies?

In Parts v and vi, the Committee recommends that these responsibilities fall initially upon the agency heads, their general counsel and inspectors general, but ultimately upon the Attorney General. The information necessary for control must be made available to those responsible for control, oversight and review; and their responsibilities must be made clear, formal, and fixed.

4. What is the appropriate role of the courts?

In Part vii, the Committee recommends the enactment of a comprehensive, civil remedy providing the courts with jurisdiction to entertain legitimate complaints by citizens injured by unconstitutional or illegal activities of intelligence agencies. Part viii suggests that criminal penalties should attach in cases of gross abuse. In addition, Part iv provides for judicial warrants before certain intrusive techniques can be used.

5. What is the appropriate role of Congress:

In Part xii the Committee reiterates its position that the Senate create a permanent intelligence oversight committee. The recommendations deal with numerous other issues such as the proposed repeal or amendment of the Smith Act, the proposed modernization of the Espionage Act to cover modern forms of espionage seriously detrimental to the national interest, the use of the GAO to assist Congressional oversight of the intelligence community, and remedial measures for past victims of improper intelligence activity.

Scope of Recommendations. -- The scope of our recommendations coincides with the scope of our investigation. We examined the FBI, which has been responsible for most domestic security investigations, as well as foreign and military intelligence agencies, the IRS, and the Post Office, to the extent they became involved incidentally in domestic intelligence functions. While there are undoubtedly activities of other agencies which might legitimately be addressed in these recommendations, the Committee simply did not have the time or resources to conduct a broader investigation. Furthermore, the mandate of Senate Resolution 21 required that the Committee exclude from the coverage of its recommendations those activities of the federal government which are directed at organized crime and narcotics.

The Committee believes that American citizens should not lose their constitutional rights to be free from improper intrusion by their Government when they travel overseas. Accordingly, the Committee proposes recommendations which apply to protect the rights of Americans abroad as well as at home.

## 1. Activities Covered

The Domestic Intelligence Recommendations pertain to: the domestic security activities of the federal government; 5 and any activities of military or foreign intelligence agencies which affect the rights of Americans 6 and any intelligence activities of any non-intelligence agency working in concert with intelligence agencies, which affect those rights.

## 2. Activities Not Covered

The recommendations are not designed to control federal investigative activities directed at organized crime, narcotics, or other law enforcement investigations unrelated to domestic security activities.

## 3. Agencies Covered

The agencies whose activities are specifically covered by the recommendations are:

(i) the Federal Bureau of Investigation; (ii) the Central Intelligence Agency; (iii) the, National Security Agency and other intelligence agencies of the Department of Defense; (iv) the Internal Revenue Service; and (v) the United States Postal Service.

While it might be appropriate to provide similar detailed treatment to the activities of other agencies, such as the Secret Service, Customs Service, and Alcohol, Tobacco and Firearms Division (Treasury Department), the Committee did not study these agencies intensively. A permanent oversight committee should investigate and study the intelligence functions of those agencies and the effect of their activities on the rights of Americans.

## 4. Indirect Prohibitions

Except as specifically provided herein, these Recommendations are intended to prohibit any agency from doing indirectly that which it would be prohibited from doing directly. Specifically, no agency covered by these Recommendations should request or induce any other agency, or any person, whether the agency or person is American or foreign, to engage in any activity which the requesting or inducing agency is prohibited from doing itself.

## 5. Individuals and Groups Not Covered

Except as specifically provided herein, these Recommendations do not apply to investigation of foreigners 7 who are officers or employees of a foreign power, or foreigners who, pursuant to the direction of a foreign power, are engaged in or about to engage in "hostile foreign intelligence activity" or "terrorist activity". 8

## 6. Geographic Scope

These Recommendations apply to intelligence activities which affect the rights of Americans whether at home or abroad, including all domestic security activities within the United States.

## 7. Legislative Enactment of Recommendations

Most of these Recommendations are designed to be implemented in the form of legislation and others in the form of regulations pursuant to statute. (Recommendations 85 and 90 are not proposed to be implemented by statute.

### *C. Recommendations*

Pursuant to the requirement of Senate Resolution 21, these recommendations set forth the new congressional legislation [the Committee] deems necessary to "safeguard the rights of American citizens." 9 We believe these recommendations are the appropriate conclusion to a traumatic year of disclosures of abuses. We hope they will prevent such abuses in the future.

#### *i. Intelligence Agencies Are Subject to the Rule of Law*

Establishing a legal framework for agencies engaged in domestic security investigation is the most fundamental reform needed to end the long history of violating and ignoring the law set forth in Finding A. The legal framework can be created by a two-stage process of enabling legislation and administrative regulations promulgated to implement the legislation.

However, the Committee proposes that the Congress, in developing this mix of legislative and administrative charters, make clear to the Executive branch that it will not condone, and does not accept, any theory of inherent or implied authority to violate the Constitution, the proposed new charters, or any other statutes. We do not believe the Executive has, or should have, the inherent constitutional authority to violate the law or infringe the legal rights of Americans, whether it be a warrantless break-in into the home or office of an American, warrantless electronic surveillance, or a President's authorization to the FBI to create a massive domestic security program based upon secret oral directives. Certainly, there would be no such authority after Congress has, as we propose it should, covered the field by enactment of a comprehensive legislative charter. 10 Therefore statutes enacted pursuant to these recommendations should provide the exclusive legal authority for domestic security activities.

Recommendation 1. -- There is no inherent constitutional authority for the President or any intelligence agency to violate the law.

Recommendation 2. -- It is the intent of the Committee that statutes implementing these recommendations provide the exclusive legal authority for federal domestic security activities.

(a) No intelligence agency may engage in such activities unless authorized by statute, nor may it permit its employees, informants, or other covert human sources to engage in such activities on its behalf.

(b) No executive directive or order may be issued which would conflict with such statutes.

Recommendation 3. -- In authorizing intelligence agencies to engage in certain activities, it is not intended that such authority empower agencies, their informants, or covert human sources to violate any prohibition enacted pursuant to these Recommendations or contained in the Constitution or in any other law.

#### *ii. United States Foreign and Military Agencies Should Be Precluded from Domestic Security Activities*

Part iv of these Recommendations centralizes domestic security investigations within the FBI. Past abuses also make it necessary that the Central Intelligence Agency, the National Security Agency, the Defense Intelligence Agency, and the military departments be precluded expressly, except as specifically provided herein, from investigative activity which is conducted within the United States. Their activities abroad should also be controlled as provided herein to minimize their impact on the rights of Americans.

*a. Central Intelligence Agency* The CIA is responsible, for foreign intelligence and counterintelligence. These recommendations minimize the impact of CIA operations on Americans. They do not affect CIA investigations of foreigners outside of the United States. The main thrust is to prohibit past actions revealed as excessive, and to transfer to the FBI other activities which might involve the CIA in internal security or law enforcement matters. Those limited activities which the CIA retains are placed under tighter controls.

The Committee's recommendations on CIA domestic activities are similar to Executive Order 11905. They go beyond the Executive Order, however, in that they recommend that the main safeguards be made law. And, in addition, the Committee proposes tighter standards to preclude repetition of some past abuses.

#### *General Provisions*

The first two Recommendations pertaining to the CIA provide the context for more specific proposals. In Recommendation 4, the Committee endorses the prohibitions of the 1947 Act upon exercise by the CIA of subpoena, police or law enforcement powers or internal security functions. The Committee intends that Congress supplement, rather than supplant or derogate from the more general restrictions of the 1947 Act.

Recommendation 5 clarifies the role of the Director of Central Intelligence, in the protection of intelligence sources and methods. He should be charged with "coordinating" the protection of sources and methods -- that is, the development of procedures for the protection of sources and methods. 12 (Primary responsibility for investigations of security leaks should reside in the FBI.) Recommendation 5 also makes clear that the Director's responsibility for protecting sources and methods does not permit violations of law. The effect of the new Executive Order is substantially the same as Recommendation 5.

Recommendation 4 -- To supplement the prohibitions in the 1947 National Security Act against the CIA exercising "police, subpoena, law enforcement powers or internal security functions," the CIA should be prohibited from conducting domestic security activities within the United States, except as specifically permitted by these recommendations.

Recommendation 5 -- The Director of Central Intelligence should be made responsible for "coordinating" the protection of sources and methods of the intelligence community. As head of the CIA, the Director should also be responsible in the first instance for the security of CIA facilities, personnel, operations, and information. Neither function, however, authorizes the Director of Central Intelligence to violate any federal or state law, or to take any action which is otherwise inconsistent with statutes implementing these recommendations.

#### *CIA Activities Within the United States*

1. Wiretapping, Mail Opening and Unauthorized Entry. -- The Committee's recommendations on CIA domestic activities apply primarily to actions directed at Americans. However, in Recommendation 6 the Committee recommends that the most intrusive and dangerous investigative techniques (electronic surveillance; 13 mail opening; or unauthorized entry 14) should be used in the United States only by the FBI and only pursuant to the judicial warrant procedures described in Recommendations 53, 54 and 55.

This approach is similar to the Executive order except that the Order permits the CIA to open mail in the United States pursuant to applicable statutes and regulations (i.e., with a warrant). The Committee's recommendations (see Parts iii and iv), places all three techniques -- mail opening, electronic surveillance and unauthorized entry -- under judicial warrant procedures and centralizes their use within the FBI under Attorney General supervision. The Committee sees no justification for distinguishing among these techniques, all of which represent an exercise of domestic police powers 15 which is inappropriate for a U.S. foreign intelligence agency within the United States and which inherently involve special dangers to civil liberties and personal privacy.

2. Other Covert Techniques. -- The use of other covert techniques by the CIA within the United States is sharply restricted by Recommendation 7 to specific situations.

The Committee would permit the CIA to conduct physical surveillance of persons on the premises of its own installations and facilities. Outside of its premises, the Committee would permit the CIA to conduct limited physical surveillance and confidential inquiries of its own employees 17 as part of a preliminary security investigation.

Although the Committee generally centralizes such investigations within the FBI, it would be too burdensome to require the Bureau to investigate every allegation that an employee has personal difficulties, which could make him a security risk, or allegations of suspicious behavior suggesting the disclosure of information. Before involving the FBI, the CIA could conduct a preliminary inquiry, which usually consists of nothing more than interviews with the subject's office colleagues, or his family, neighbors or associates, and perhaps confrontation of the subject himself. In some situations, however, limited physical surveillance might enable the CIA to resolve the allegation or to determine that there was a serious security breach involved.

Unlike the Executive Order, however, the Committee recommendations limit this authority to present CIA employees who are subject to summary dismissal. The only remedy available to the Government for security problems with past employees is criminal prosecution or other legal action. All security leak investigations for proposed criminal prosecution should be centralized in the FBI. Authorizing the use of any covert technique against contractors and their employees, let alone former employees of CIA contractors, as the Executive Order does, would authorize CIA surveillance of too large a number of Americans. The CIA can withdraw security clearances until satisfied by the contractor that a security risk has been remedied and, in serious cases, any investigations could be handled by the FBI.

The recommendation on the use of covert techniques within the United States also precludes the use of covert human sources such as undercover agents and informants," with one exception expressly stated to be limited to "exceptional" cases. The Committee would authorize the CIA to place an agent in a domestic group, but only for the purpose of establishing credible cover to be used in a foreign intelligence mission abroad and only when the Director of Central Intelligence finds it to be "essential" to collection of information "vital" to the United States and the Attorney General finds that the operation will be conducted under procedures designed to prevent misuse. 19

Apart from this limited exception, the CIA could not infiltrate groups within the United States for any purpose, including, as was done in the past, the purported protection of intelligence sources and methods or the general security of the CIA's facilities and personnel. (The Executive Order prohibits infiltration of groups within the United States "for purposes of reporting on or influencing its activities or members," but does not explicitly prohibit infiltration to protect intelligence sources and methods or the physical security of the agency.)

3. Collection of Information. -- In addition to limiting the use of particular covert techniques, the Committee limits, in Recommendation 8, the situations in which the CIA may intentionally collect, by any means, information within the United States concerning Americans. The recommendation permits the CIA to collect information within the United States about Americans only with respect to persons working for the CIA or having some other significant affiliation or contact, with CIA. The CIA should not be in the business of investigating Americans as intelligence or counterintelligence targets within the United States -- a responsibility which should be centralized in the FBI and performed only under the circumstances proposed as lawful in Part iv.

The Executive Order only restricts CIA collection of information about Americans if the information concerns "the domestic activities of United States citizens." Unlike the Committee, the Order does not restrict CIA collection of information about foreign travel or wholly lawful international contacts and communication of Americans. As the Committee has learned from its study of the CIA's CHAOS operation, in the process of gathering information about the international travel and contacts of Americans, the CIA acquired within the United States a great deal of additional information about the domestic activities of Americans.

The Executive Order also permits collection within the United States of information about the domestic activities of Americans in several other instances not permitted under the Committee recommendations:

(a) Collection of "foreign intelligence or counterintelligence" about the domestic activity of commercial organizations. (The Committee's restrictions on the collection of information apply to investigations of organizations as well as individuals.) ;

(b) Collection of information concerning the identity of persons in contact with CIA employees or with foreigners who are subjects of a counterintelligence inquiry. (Within the United States, the Committee would require any investigations to collect such information to be conducted by the FBI, and only if authorized under Part iv, and subject to its procedural controls.) ;

(c) Collection of "foreign intelligence" from a cooperating source within the United States about the domestic activities of Americans. "Foreign intelligence," is an exceedingly broad and vague standard. The use of such a standard raises the prospect of another Project CHAOS. (The Committee would prohibit such collection by the CIA within the United States, except with respect to persons presently or prospectively affiliated with CIA.) ;

(d) Collection of information about Americans "reasonably believed" to be acting on behalf of a foreign power or engaging in international terrorist or narcotic activities. (The Committee would require investigations to collect such information within the United States, to be conducted by the FBI, and only if authorized under Part iv.) ;

(e) Collection of information concerning persons considered by the CIA to pose a clear threat to intelligence agency facilities or personnel, provided such information is retained only by the "threatened" agency and that proper coordination is established with the FBI. (This was the basis for the Office of Security's RESISTANCE program investigating dissent throughout the

country.) (The Committee would require any such "threat" collection outside the CIA be conducted by the FBI, and only if authorized by Part iv, or by local law enforcement.)

Recommendation 6. -- The CIA should not conduct electronic surveillance, unauthorized entry, or mail opening within the United States for any purpose.

Recommendation 7. -- The CIA should not employ physical surveillance, infiltration of groups or any other covert techniques against Americans within the United States except:

(a) Physical surveillance of persons on the grounds of CIA installations;

(b) Physical surveillance during a preliminary investigation of allegations an employee is a security risk for a limited period outside of CIA installations. Such surveillance should be conducted only upon written authorization of the Director of Central Intelligence and should be limited to the subject of the investigation and, only to the extent necessary to identify them, to persons with whom the subject has contact;

(c) Confidential inquiries, during a preliminary investigation of allegations an employee is a security risk, of outside sources concerning medical or financial information about the subject which is relevant to those allegations; 19a

(d) The use of identification which does not reveal CIA or government affiliation, in background and other security investigations permitted the CIA by these recommendations, and the conduct of checks, which do not reveal CIA or government affiliation for the purpose of judging the effectiveness of cover operations, upon the written authorization of the Director of Central Intelligence;

(e) In exceptional cases, the placement or recruitment of agents within an unwitting domestic group solely for the purpose of preparing them for assignments abroad and only for as long as is necessary to accomplish that purpose. This should take place only if the Director of Central Intelligence makes a written finding that it is essential for foreign intelligence collection of vital importance to the United States, and the Attorney General makes a written finding that the operation will be conducted under procedures designed to prevent misuse of the undisclosed participation or of any information obtained therefrom. 20 In the case of any such action, no information received by CIA from the agent as a result of his position in the group should be disseminated outside the CIA unless it indicates felonious criminal conduct or threat of death or serious bodily harm, in which case dissemination should be permitted to an appropriate official agency if approved by the Attorney General.

Recommendation 8. -- The CIA should not collect 21 information within the United States concerning Americans except:

(a) Information concerning CIA employees, 22 CIA contractors and their employees, or applicants for such employment or contracting;

(b) Information concerning individuals or organizations providing, or offering to provide, 23 assistance to the CIA;

(c) Information concerning individuals or organizations being considered by the CIA as potential sources of information or assistance; 24

(d) Visitors to CIA facilities; 25

(e) Persons otherwise in the immediate vicinity of sensitive CIA sites; 26 or

(f) Persons who give their informed written consent to such collection.

In (a), (b) and (c) above, information should be collected only if necessary for the purpose of determining the person's fitness for employment, contracting or assistance. If, in the course of such collection, information is obtained which indicates criminal activity, it should be transmitted to the FBI or other appropriate agency. When an American's relationship with the CIA is prospective, information should only be collected if there is a bona fide expectation the person might be used by the CIA.

#### *CIA Activities Outside of the United States*

The Committee would permit a wider range of CIA activities against Americans abroad than it would permit the CIA to undertake within the United States, but it would not permit the CIA to investigate abroad the lawful activities of Americans to any greater degree than the FBI could investigate such activities at home.

Abroad, the FBI is not in-a position to protect the CIA from serious threats to its facilities or personnel, or to investigate all serious security violations. To the extent it is impractical to rely on local law enforcement authorities, the CIA should be free to preserve its security by specified appropriate investigations which may involve Americans, including surveillance, of persons other than its own employees.

The Committee gives to the FBI the sole responsibility within the United States for authorized domestic security investigations of Americans. However, when such an investigation has overseas aspects, the FBI looks to the CIA as the overseas operational arm of the intelligence community. The recommendations would authorize the CIA to target Americans abroad as part of an authorized investigation initiated by the FBI.

The Committee does not recommend permitting the CIA itself to initiate such investigations of Americans overseas. 27 Present communications permit rapid consultation with the Department of Justice. Moreover, the lesson of CHAOS is that an American's activities abroad may be ambiguous, such as contact with persons who may be acting on behalf of hostile foreign powers at an international conference on disarmament. The question is who shall determine there is sufficient information to justify making an American citizen a target of his government's intelligence apparatus?

The limitations contained in Recommendation 9 only pertain to the CIA initiating investigations or otherwise intentionally collecting information on Americans abroad. The CIA would not be prohibited from accepting and passing on information on the illegal activities of Americans which the CIA acquires incidentally in the course of its other activities abroad.

The Committee believes that judgments should be centralized within the Justice Department to promote consistent, carefully controlled application of the appropriate standards and protection of Constitutional rights. This is the same position taken by Director Colby in setting current CIA policy for mounting operations against Americans abroad. In March 1974, Director Colby formally terminated the CHAOS program and promulgated new guidelines for future activity abroad involving Americans, which, in effect, transferred such responsibilities to the Department of Justice. 28

The Committee is somewhat more restrictive than the Executive Order with respect to collection of information on Americans. As mentioned earlier, the Order only restricts CIA collection of information about the "domestic activities" of Americans and does not prohibit the collection of information regarding the lawful travel or international contacts of American citizens. This creates a particularly significant problem with respect to CIA activities directed against Americans abroad.

The Order permits the CIA wider latitude abroad than do the Committee's Recommendations in two other important respects. The Order permits collection of information if the American is reasonably believed to be acting on behalf of a foreign power. That exemption on its face would include Americans working for a foreign country on business or legal matters or otherwise engaged in wholly lawful activities in compliance with applicable registration or other regulatory statutes. More importantly, the Order permits the CIA to collect "foreign intelligence" or "counterintelligence" information abroad about the *domestic activities* of Americans. The Order then broadly defines "foreign intelligence" as information about the intentions or activities of a foreign country or person, or information about areas outside the United States. This would authorize the CIA to collect, abroad, for example, information about the domestic activities of American businessmen which provided intelligence about business transactions of foreign persons.

The CIA does not at present specifically collect intelligence on the economic activities of Americans overseas. The Committee suggests that appropriate oversight committees examine the question of the overseas collection of economic intelligence.

#### *Use of Covert Techniques Against Americans Abroad*

Recommendation 11 requires the use of all covert techniques be governed by the same standards, procedures, and approvals required for their use by the Justice Department against Americans within the United States. Thus, in the case of electronic surveillance, unauthorized entry, or mail opening, a judicial warrant would be required. As a matter of sound Constitutional principle, the Fourth Amendment protections enjoyed by Americans at home should also apply to protect them against their Government abroad. It would be just as offensive to have a CIA agent burglarize an American's apartment in Rome as it would be for the FBI to do so in New York.

Requirements that a warrant be obtained in the United States would not present an excessive burden. Electronic surveillance and unauthorized entries are not presently conducted against Americans abroad without prior consultation and approval from CIA Headquarters in Langley, Virginia. Moreover, the present Deputy Director of CIA for Operations has testified that bona fide counterintelligence investigations are lengthy and time consuming and prior review within the United States, including consultation with the Justice Department, would not be a serious problem. 29 Indeed electronic surveillance of Americans abroad under present administration policy also requires approval by the Attorney General.

The Committee reinforces the general restrictions upon overseas targeting of Americans by recommending that the CIA be prohibited from requesting a friendly foreign intelligence service or other person from undertaking activities against Americans which the CIA itself may not do. This would not require that a foreign government's use of covert techniques be conducted under the same procedures, e.g., warrants, required by those Recommendations for the CIA and the FBI. It would mean that the CIA cannot ask a foreign intelligence service to bug the apartment of an American unless the circumstances would permit the United States Government to obtain a judicial warrant from a Federal Court in this country to conduct such surveillance of the American abroad.

The Committee places greater restrictions upon the CIA's use of covert techniques against Americans abroad than does the Executive Order. For example, the Order permits the CIA to conduct electronic surveillance and unauthorized entries under "procedures approved by the Attorney General consistent with the law." No judicial warrant procedure is required. In addition, the Order's restriction on CIA's opening mail of Americans is limited to mail "in the United States postal channels." In other words, under the Order the CIA is not prevented from intercepting abroad and opening a letter mailed by an American to his family, or sent to him from the United States.

The Order also contains no restrictions on the CIA infiltrating a group abroad, even if it were one composed entirely of Americans engaged in wholly lawful activities such as a political club of American students in Paris. Furthermore, the Order permits the CIA to conduct physical surveillance abroad of any American "reasonably believed to be" engaged in "activities threatening to the national security." On its face this language appears overly permissive and might be read to authorize a repetition of the CHAOS program in which Americans were targeted for surveillance because of their participation in international conferences critical of the U.S. role in Vietnam.

Recommendation 9. -- The CIA should not collect information abroad concerning Americans except:

(a) Information concerning Americans which it is permitted to collect within the United States; 30

(b) At the request of the Justice Department as part of criminal investigations or an investigation of an American for suspected terrorist, 30a or hostile foreign intelligence 30b activities or security leak or security risk investigations which the FBI has opened pursuant to Part iv of those recommendations and which is conducted consistently with recommendations contained in Part iv. 31

Recommendation 10. -- The CIA should be able to transmit to the FBI or other appropriate agencies information concerning Americans acquired as the incidental byproduct of otherwise permissible foreign intelligence and counterintelligence operations, 32 whenever such information indicates any activity in violation of American law.

Recommendation 11. -- The CIA may employ covert techniques abroad against Americans:

(a) Under circumstances in which the CIA could use such covert techniques against Americans within the United States; 33 or

(b) When collecting information as part of Justice Department investigation, in which case the CIA may use a particular covert techniques under the standards and procedures and approvals applicable to its use against Americans within the United States by the FBI (See Part iv); or

(c) To the extent necessary to identify persons known or suspected to be Americans who come in contact with foreigners the CIA is investigating.

#### *CIA Human Experiments and Drug Use*

Recommendation 12 tracks similar restrictions in the Executive Order but proposes an additional safeguard -- giving the National Commission on Biomedical Ethics and Human Standards jurisdiction to review any testing on Americans.

Recommendation 12 -- The CIA should not use in experimentation on human subjects, any drug, device or procedure which is designed or intended to harm, or is reasonably likely to harm, the physical or mental health of the human subject, except with the informed written consent, witnessed by a disinterested third party, of each human subject, and in accordance with the guidelines issued by the National Commission for the Protection of Human Subjects for Biomedical and Behavioral Research. The jurisdiction of the Commission should be amended to include the Central Intelligence Agency and other intelligence agencies of the United States Government.

#### *Review and Certification*

Recommendation 13 ensures careful monitoring of those CIA activities authorized in the recommendations which are directed at Americans.

Recommendation 13 -- Any CIA activity engaged in pursuant to Recommendations 7, 8, 9, 10, or 11 should be subject to periodic review and certification of compliance with the Constitution, applicable statutes, agency regulations and executive orders by:

(a) The Inspector General of the CIA;

(b) The General Counsel of the CIA in coordination with the Director of Central Intelligence;

(c) The Attorney General; and

(d) The oversight committee recommended in Part xii.

All such certifications should be available for review by congressional oversight committees.

#### *b. National Security Agency*

The recommendations contained in this section suggest controls on the electronic surveillance activities of the National Security Agency insofar as they involve, or could involve, Americans. There is no statute which either authorizes or specifically restricts such activities. NSA was created by executive order in 1952, and its functions are described in directives of the National Security Council.

While, in practice, NSA's collection activities are complex and sophisticated, the process by which it produces foreign intelligence can be reduced to a few easily understood principles. NSA intercepts messages passing over international lines of communication, some of which have one terminal within the United States. Traveling over these lines of communication, especially those with one terminal in the United States, are the messages of Americans, most of which are irrelevant to NSA's foreign intelligence mission. NSA often has no means of excluding such messages, however, from others it intercepts which might be of foreign intelligence value. It does have, however, the capability to select particular messages from those it intercepts which are of foreign intelligence value. Most international communications of Americans are not selected, since

they do not meet foreign intelligence criteria. Having selected messages of possible intelligence value, NSA monitors (reads) them, and uses the information it obtains as the basis for reports which it furnishes the intelligence agencies.

Having this process in mind, one will more readily understand the recommendations of the Committee insofar as NSA's handling of the messages of Americans is concerned. The Committee recommends first that NSA monitor only foreign communications. It should not monitor domestic communications, even for foreign intelligence purposes. Second, the Committee recommends that NSA should not select messages for monitoring, from those foreign communications it has intercepted, because the message is to or from or refers to a particular American, unless the Department of Justice has first obtained a search warrant, or the particular American has consented. Third, the Committee recommends that NSA be required to make every practicable effort to eliminate or minimize the extent to which the communications of Americans are intercepted, selected, or monitored. Fourth, for those communications of Americans which are nevertheless incidentally selected and monitored, the Committee recommends that NSA be prohibited from disseminating such communication, or information derived therefrom, which identifies an American, unless the communication indicates evidence of hostile foreign intelligence or terrorist activity, or felonious criminal conduct, or contains a threat of death or serious bodily harm. In these cases, the Committee recommends that the Attorney General approve any such dissemination as being consistent with these policies.

In summary, the Committee's recommendations reflect its belief that NSA should have no greater latitude to monitor the communications of Americans than any other intelligence agency. To the extent that other agencies are required to obtain a warrant before monitoring the communications of Americans, NSA should be required to obtain a warrant. 34

Recommendation 14. -- NSA should not engage in domestic security activities. Its functions should be limited in a precisely drawn legislative charter to the collection of foreign intelligence from foreign communications. 35

Recommendation 15. -- NSA should take all practicable measures consistent with its foreign intelligence mission to eliminate or minimize the interception, selection, and monitoring of communications of Americans from the foreign communications. 36

Recommendation 16. -- NSA should not be permitted to select for monitoring any communication to, from, or about an American without his consent, except for the purpose of obtaining information about hostile foreign intelligence or terrorist activities, and then only if a warrant approving such monitoring is obtained in accordance with procedures similar 37 to those contained in Title III of the Omnibus Crime Control and Safe Streets Act of 1968.

(This recommendation would eliminate the possibility that NSA would re-establish its "watch lists" of the late 1960s and early 1970s. In that case, the names of Americans were submitted to NSA by other federal agencies and were used as a basis for selecting and monitoring, without a warrant, the international communications of those Americans.)

Recommendation 17. -- Any personally identifiable information about an American which NSA incidentally acquires, other than pursuant to a warrant, should not be disseminated without the consent of the American, but should be destroyed as promptly as possible, unless it indicates:

(a) Hostile foreign intelligence or terrorist activities; or

(b) Felonious criminal conduct for which a warrant might be obtained pursuant to Title III of the Omnibus Crime Control and Safe Streets Act of 1968; or

(c) A threat of death or serious bodily harm.

If dissemination is permitted, by (a), (b) and (c) above, it must only be made to an appropriate official and after approval by the Attorney General.

(This recommendation is consistent with NSA's policy prior to the Executive Order. 38 NSA's practice prior to the Executive Order was not to disseminate material containing personally identifiable information about Americans.)

Recommendation 18. -- NSA should not request from any commercial carrier any communication which it could not otherwise obtain pursuant to these recommendations.

(This recommendation is to ensure that NSA will not resume an operation such as SHAMROCK, disclosed during the Committee's hearings, whereby NSA received for almost 30 years copies of most international telegrams transmitted by certain international telegraph companies in the United States.)

Recommendation 19. -- The Office of Security at NSA should be permitted to collect background information on present or prospective employees or contractors of NSA, solely for the purpose of determining their fitness for employment. With respect to security risks or the security of its installations, NSA should be permitted to conduct physical surveillances, consistent with such surveillances as the CIA is permitted to conduct, in similar circumstances, by these recommendations.

#### *c. Military Service and Defense Department Investigative Agencies*

This section of the Committee's recommendations pertains to the controls upon the intelligence activities of the military services and Department of Defense insofar as they involve Americans who are not members of or affiliated with the armed forces.

In general, the restrictions seek to limit military investigations to activities in the civilian community which are necessary and pertinent to the military mission, and which cannot feasibly be accomplished by civilian agencies. In overseas locations where civilian agencies do not perform investigative activities to assist the military mission, military intelligence is given more latitude. Specifically, the Committee recommends that military intelligence be limited within the United States to conducting investigations of violations of the Uniform Code of Military Justice; investigations for security clearances of Department of Defense employees and contractors; and investigations immediately before and during the deployment of armed forces in connection with civil disturbances. None of these investigations should involve the use of any covert technique employed against American civilians. In overseas locations, the Committee recommends that military intelligence have additional authority to conduct investigations of terrorist activity and hostile foreign intelligence activity. In these cases, covert techniques directed at Americans may be employed if consistent with the Committee's restrictions upon the use of such techniques in the United States in Part iv.

Recommendation 20. -- Except as specifically provided herein, the Department of Defense should not engage in domestic security activities. Its functions, as they relate to the activities of the foreign intelligence community, should be limited in a precisely drawn legislative charter to the conduct of foreign intelligence and foreign counterintelligence activities and tactical military intelligence activities abroad, and production, analysis, and dissemination of departmental intelligence.

Recommendation 21. -- In addition to its foreign intelligence responsibility, the Department of Defense has a responsibility to investigate its personnel in order to protect the security of its installations and property, to ensure order and discipline within its ranks, and to conduct other limited investigations once dispatched by the President to suppress a civil disorder. A legislative charter should define precisely -- in a manner which is not inconsistent with these recommendations -- the authorized scope and purpose of any investigations undertaken by the Department of Defense to satisfy these responsibilities.

Recommendation 22. -- No agency of the Department of Defense should conduct investigations of violations of criminal law or otherwise perform any law enforcement or domestic security functions within the United States, except on military bases or concerning military personnel, to enforce the Uniform Code of Military Justice.

#### *Control of Civil Disturbance Intelligence*

The Department of the Army has executive responsibility for rendering assistance in connection with civil disturbances. In the late 1960s, it instituted a nationwide collection program in which Army investigators were dispatched to collect information on the political activities of Americans. This was done on the theory that such information was necessary to prepare the Army in the event that its troops were sent to the scene of civil disturbances. The Committee believes that the Army's potential role in civil disturbances does not justify such an intelligence effort directed against American civilians.

Recommendation 23. -- The Department of Defense should not be permitted to conduct investigations of Americans on the theory that the information derived therefrom might be useful in potential civil disorders. The Army should be permitted to gather information about geography, logistical matters, or the identity of local officials which is necessary to the positioning, support, and use of troops in an area where troops are likely to be deployed by the President in connection with a civil disturbance. The Army should be permitted to investigate Americans involved in such disturbances after troops have been deployed to the site of a civil disorder, (i) to the extent necessary to fulfill the military mission, and (ii) to the extent the information cannot be obtained from the FBI. (The FBI's responsibility in connection with civil disorders and its assistance to the Army is described in Part IV.)
