## Patent List, Electronic Harassment Related

The following list of patents relate to inventions and concepts which can be applied to electronic harassment weapons. The existence of a patent plainly indicates that someone is serious about the technology, and points to some likelihood that the real device exists also. (Keep in mind that these patents below are UNclassified, and that classified science is typically at least a decade ahead. Also keep in mind that these are only United States patents.)

---

PATENTSWITH E-HARASSMENT POTENTIAL, BY NUMBER (not exhaustive):

[3773049.htm](#), LIDA  
[3951134.htm](#), Malech  
[4858612.htm](#), Stocklin  
[4877027.htm](#), Brunkan  
[5123899.htm](#), Gall  
[5159703.htm](#), Lowery  
[5356368.htm](#), Monroe  
[6011991.htm](#), Mardirossian  
[6017302.htm](#), Loos

\*\* NOTE: The following two patent lists are much longer than mine above. The reason is that those lists below include patents which have only some tenuous relationship to the through-wall, silent electronic harassment targets experience. For example, a patent dealing with brain waves that requires contact electrodes or coils in close proximity doesn't show intent or ability to affect or read the brain from significant real-world distances, which is what happens to electronic harassment targets.

Targets considering use of patents for activism purposes need to keep in mind that just blasting a reader with every brain research patent on record does not educate the reader about electronic harassment, and is likely to make the reader not want to take on the huge, complex job of reading hundreds of scientific patents.

## Case Summary: Pat Jackson

January 18, 2008

---

My name is Pat Jackson. I used to be in law enforcement in the Vilas County Sheriff's Office in WI. A copy of my ID is shown above so that you know I'm legit.

I was harassed then railroaded from the department in 2000 when I was pegged as a potential whistleblower and the BOYZ (as I call them) discovered I worked as a professional psychic and was very good at it.

When filing a formal complaint of harassment with the head of the County Personnel Committee, I was told nothing would be done to stop the railroading and was threatened that I best leave the county. I refused to do this, saying I'd take my case all the way to the Supreme Court if need be.

Immediately after that meeting, I was slipped what I believe was meant to be a lethal dose of GHB in what I believe was an attempt to kill me. I claim that I was also covertly injected with a biowarfare agent while still with the department.

Others sympathetic to me also ended up being diagnosed with infectious diseases, all around the same time.

I left the Sheriff's Dept. in 2002. My terminally ill husband and I were already being group stalked and apparently tortured with bio-electromagnetic weaponry by then.

The harassment escalated upon my leaving the department. I was deliberately left ill from the "biowarfare agent" for nearly 7 years and when I became suspicious the physicians "treating" me were acting in collusion with the Sheriff's Dept. in what I believe were attempts on my life.

I also believe a second attempt was made on my life. I believe a third was made when I told these doctors I was fully aware they were acting in collusion with the Sheriff's Dept.

These same doctors also denied my diabetic husband insulin for years, telling him his diabetes was "cured". His cancer has gone totally untreated as has his congestive heart failure for the most part. He's dying.

The last time he was in the emergency room, I attempted to report to one of the ER physicians we were being tortured with this electronic weaponry. The doctor's response was to laugh, and say "Well I guess someone is getting rich!" and walked away.

A doctor whom I believe had been involved in a conspiracy against me showed up in the ER, apparently to make sure I didn't talk to anyone else about being tortured.

I'm now disabled as a result, my heart being so damaged that according to the last doctor I could afford to see, it's like an 80 year old's heart. I lost my gallbladder, probably due to this torture, after being, deliberately I believe, left with an infected gallbladder for 6 years. My doctor reported the toxicity level in my body was "off the charts". I was repeatedly denied referral to a thoracic surgeon for excruciating rib cage pain around my heart. I believe the doctors knew the burning and nerve damage from this torture would be discovered.

My appeal for Social Security disability was denied and my hearing now appears to have been "swept under the carpet".

I have been subjected to every tactic used in organized stalking, including my dogs being killed. I held one of them in my arms all night, helplessly watching him suffocate to death. We've been financially destroyed and are now facing losing our home.

In addition to the torture with electromagnetic weaponry I learned via someone claiming to be an ex-CIA agent that synthetic telepathy had also been attempted on me using a very high level "CIA trigger."

Like all victims, I have been portrayed to everyone as being "insane" in order to discredit me when I speak out.

Myself and another informant the Sheriff's Dept. had recruited as one of their "drug mules" went to the media to try to expose what was going on. Naturally, they refused to expose it or even investigate our claims - despite knowing attempts were being made on our lives! As did every govt. agency I reported it to, right up to the U.S. Atty. General's Office.

An FBI agent told me when I reported it (and I quote) "Well stuff like this happens all the time. I suggest you just get on with your life and forget about it."

A federal undercover investigation was begun into the Sheriff's Dept. where I worked in October, 2003. It was quietly dropped. When another kid died in the custody of that Sheriff's Dept.- again, the investigation was quietly dropped and hushed up - despite my writing to the investigating agency that I suspected the kid had been murdered. So people just continue to die up

here.

I'm told the latest plot the Sheriff's Dept. is hatching is to frame me for crimes they themselves committed in order to illegally imprison me.

Is law enforcement aware of this and even actively participating? YOU'RE DAMN RIGHT THEY ARE! Are all law enforcement officers corrupt and participating? No. But the good officers like myself are railroaded out of our jobs for refusing to "play the game", leaving corrupt officers in the ranks.

The organized stalking is the least of it. These corrupt cops are also engaged in drug trafficking, child pornography, child prostitution and yes, even murder of those who "know too much".

You have my permission to print this on your website, including my name and photo. Only if I'm "public" and high profile enough will I have any chance of not being falsely imprisoned or murdered like so many others have been.

Pat Jackson  
Vilas County, WI

<http://alternativenewscenter-com/swradio.htm>

---

## Please Read Before Looking up Broadcasters

IMPORTANT: You do NOT need a short wave set to listen to short wave broadcasters. Web sites with live and archived broadcasts are listed below.

IMPORTANT: Within the United States, some of these shows, like the popular morning show "The Power Hour" with Joyce Riley and Dave von Kleist, and the popular afternoon Alex Jones show, are carried on some AM and FM stations, and satellite radio as well.

The AM-FM stations often play only some of the hours of the longer shows. Assistance from listeners to get some of these Patriot shows on to commercial AM-FM stations is much appreciated. Contact not only the AM-FM stations but their sponsors as well.

The best way to find the times for these shows is to check the NETWORK web sites, e.g., [gcnlive.com](http://gcnlive.com) and [republicbroadcasting.org](http://republicbroadcasting.org). For microbroadcasters (low power FM) slowly tune around your local FM frequencies, listening for these shows. That applies to shortwave as well, with 3.215 MHz, and frequencies between 5 and 12.180 MHz being the most likely ranges for locating Patriot shows. Lower frequencies tend to carry the shows at night.

\* These shows have commercials, so take time tuning in case you land on one of their commercials and not recognize the show itself.

Shortwave shows also have bumper music, so again, take some time with a show playing music to see if it's one of the Patriot shows.

\*\* CANADIAN callers frequently call in, and much of the content describes problems which apply to Canada but which receive no publicity in Canada.

I, Eleanor White, the maintainer of this page, do not agree with some of the personal precepts and philosophies of some Patriot broadcasters. But I urge every citizen concerned with the future of truth, freedom and justice to listen to these shows for their factual information, and the testimony by whistleblowers, and information provided by "boots on the ground", i.e. the callers who report blow by blow from trouble spots in North America and around the world.

The Patriot broadcasters use mainstream sources such as the wire services (like Associated Press, United Press International, Reuters) which are in effect "news wholesalers". The Patriots present analyses of these "wholesale" news stories, which they call "connecting the dots". Some of these "wholesale" news stories never make it to the "retail media outlets" like the 6 o'clock news or mainstream papers. Other sources are Freedom of Information (FOIA) requests, mainstream government and scientific papers, and first person testimony from whistleblowers. Some of these whistleblowers were forced out of their fields because they would not go along with corrupt systems. Some from government, some from the corporate scene, and some from the medical arena. They are heroes and have suffered dearly for standing up for what is right. Patriot broadcasters are not hoaxers; they place a high value on truth.

#### NOTE ABOUT AIR TIMES:

The place to look for times is the schedule page of the NETWORKS, or, the schedule posted on the web sites of the shows themselves.

=====

LIBERTY NET, <http://www.3950.net>

Ham radio operators net in the Patriot Movement spirit, reputed to be excellent listening. Can extend well into the "wee hours". Probably a good place to look for uncensored news in the event of a disaster.

3.950 MHz, 0300-.... UTC (GMT) winter \*\* SATURDAY ONLY \*\*

Times:

10p-.. Estrn, 9p-.. Cntrl, 8p-.. Mntn, 7p-.. Pacfc

\*\* You need to set your radio to SSB (single sideband) ON, and if you have a switch labelled USB and LSB, it needs to be set on LSB. The knob which allows you to hear SSB as normal speech may be labelled as "Fine Tuning" or "BFO" or "Clarifier". Refer to your manual for the way to receive SSB on your radio. (Not all radios have SSB reception capability.)

\*\* When intentional interference is present, sometimes the participants shift to 3953, 3947, 3947.5, 3950 USB, or other nearby frequencies.

[Quick Access Show Listening Details Menu](#)

[Back to Subject Menu](#)

=====

ON SELECTING A SHORTWAVE SET

\*\* Most critical feature for ensuring you can pick up the Patriot broadcasts is CONTINUOUS or almost

continuous coverage of the HF (high frequency) shortwave bands, 2 to 30 MHz. If a set has continuous coverage from 3 to 17 MHz, that's good enough. Many low cost sets do NOT have continuous coverage - my (Eleanor White's) advice is save your money - don't get one of those.

<http://www.republicbroadcasting.org>

<http://www.sangean.com/worldband.html>

IMPORTANT FEATURES FOR EMERGENCY USE ARE KEYPAD TUNING AND SINGLE SIDEBAND CAPABILITY (SSB). SSB GETS YOU HAM RADIO STATIONS IN EMERGENCIES. KEYPAD TUNING HOLDS THE RADIO ON STATION VERY WELL AND MAKES GETTING THERE EASY.

A cheap radio like the Grundig FR-200 will work but will lack the convenience of a keypad to punch in frequencies. You learn to listen at the time your favourite show is on, and slowly tune around that area on the small slide rule dial. A good idea is to mark the approximate places where the Patriot broadcasts are found using a tiny dot of nail polish or whiteout. It's not a great way to tune, but it is good enough.

If you do acquire a shortwave radio, there should be either a telescoping whip antenna, or, a place to connect a wire antenna. I've had good luck using about 25 feet of lightweight flexible wire with a large alligator clip on one end to clip over the telescoping antenna. (I do not use the telescoping antenna extended as it is awkward.) I find the best performance of this trailing wire antenna can be had by simply letting it drape across the floor with the far end up and over the fridge, with a heavy object to hold it so it doesn't slip off the fridge.

Outdoors, a length of wire simply lying on the grass or pavement works fine - attaching the far end above the ground helps but usually is not essential.

[Quick Access Show Listening Details Menu](#)

[Back to Subject Menu](#)

=====

Information about PROTECTING your shortwave radio set:

1. Obtain one of the hardware store version of the aluminum D-ring style snap rings. These come in different colors and sizes, a 2" size and a 3" size being popular. One side has a spring loaded snap and these are handy for securing things together while hiking.

Secure your radio's (or even camera's) WRIST STRAP so it cannot come out of the snap ring. Then wherever you put your radio, and this includes putting the radio into a shoulder bag for listening while walking, be sure your radio is clipped to something so it cannot fall on the floor or pop out of your shoulder bag. This includes tables within your house, and night tables.

2. The telescoping antennas, needed for WALKING and listening, are kind of weak at the point where they are attached inside the sets. I had my own telescoping antenna "work around" so much as I walked that the inside screw came out.

The way around this is to keep the telescoping antenna in its "down" position, usually along the top of the radio, using a large rubber band or two. Then when you extend the telescoping antenna, the strain is taken by the securing rubber band and not the inside antenna mount. In this way, your radio will probably be sitting on one END inside your shoulder bag as you walk.

[Back to Subject Menu](#)

=====

Information about listening to HAM RADIO OPERATORS on your shortwave set:

Bottom line, your set MUST have "SSB", or "single sideband" capability to hear all but a tiny minority of ham radio operators. Ham radio may be the only way to monitor what is happening during severe, wide area emergencies.

Most shortwave sets cover from a little below the AM broadcast band, up through 30 MHz, the upper limit of the so-called "HF" or "high frequency" band. It is in this HF band where most of the long distance radio communications is carried on, because HF is reflected from the ionosphere.

Here is a quick summary of where you can find SSB VOICE ham radio stations in the HF band:

1800 - 2000 kHz (1.8 - 2.0 MHz) ... the 160 meter ham band  
3750 - 4000 kHz (3.75 - 4.0 MHz) ... the 75 meter phone band  
7150 - 7300 kHz (7.15 - 7.3 MHz) ... the 40 meter phone band  
14150-14350 kHz (14.15 - 14.35 MHz) ... the 20 meter phone band

18110-18168 kHz (18.11 - 18.168 MHz) ... the 17 meter phone band  
21200-21450 kHz (21.2 - 21.45 MHz) ... the 15 meter phone band  
24930-24990 kHz (24.93 - 24.99 MHz) ... the 12 meter phone band  
28300-29700 kHz (28.3 - 29.7 MHz) ... the 10 meter phone band

And though NOT ham radio operators, Citizens Band can be a potential source of emergency information:

26,965 - 27,405 kHz (26.965 - 27.405 MHz) ... "CB" radio

NOTE: The newer "FRS" (Family Radio Service) radios are well above the HF band covered by what are sold under the name "short wave sets".

In some sets, you can select "USB" (upper sideband) or "LSB" (lower sideband), and on these sets, once you find out which setting works best for the ham station you want to receive, tuning is fairly straightforward.

In other sets, you simply have an "SSB" switch, the Grundig YB 400 PE set being one example. For these sets, you tune up and down within the bands listed above, using either a tuning knob, or tuning UP/DOWN buttons.

For fine tuning a ham SSB station, make sure your Frequency STEP is set to 1 kHz, no more, so you can make small moves.

You are looking for a loud station. It's different from a broadcast station in that ham stations sometimes exchange information with short transmissions so you don't have a steady signal to attempt to tune.

Once you get your loud station, your SSB switch being ON, you will hear what sounds like voice but is garbled. In this case, you try the FINE TUNING knob up and down slowly, until you hear a normal voice.

If you cannot normalize the voice, move your LCD window frequency setting one or two kHz up, and re-try the FINE TUNING knob. If that doesn't work, move the LCD window frequency down, and re-try the FINE TUNING knob.

You have to adjust both the LCD window frequency and the fine tuning back and forth to get a normal voice from an SSB station.

If you hear a STEADY TONE with some voice mixed in, that is NOT an SSB station, it's an AM station. To hear that one, you switch off the SSB switch.

\*\* TO HEAR OTHER RADIO SERVICES IN THE HF BAND:

Here is an on-line frequency assignment listing:

<http://www.ku4ay.net/radiospectrum.html>

If that listing link is broken, [click here](#).

Here is ANOTHER on-line frequency assignment listing:

## **Mainstream Examples of the Current World Wide Pedophilia Epidemic**

**May 3, 2004**

<http://www.drcarley.com>, web site by former Dr. Rebecca Carley, who lost her licence because of her local TV show on which she tried to expose pedophilia, including among medical professionals. An activist against all forms of abuse including bad vaccines.

**The importance of news about the world's pedophilia epidemic is that this epidemic demonstrates that brutal and severe human rights atrocities can and do happen without much or any exposure in the media.**

---

Submitted by Abuse Activist Lynne Moss-Sharman:

Los Angeles Times, Gayle Pollard Terry  
April 18, 2004

Secrets in Bakersfield - Rumors of a powerful cabal were whispered for years. Then the local newspaper investigated. By Gayle Pollard-Terry, Times Staff Writer 1/27/03

"For more than a generation," the story said, "Bakersfield was run by a cadre of men who led double lives. To the public, these men were members of the community's most visible institutions, its justice system and the media. "But in truth ... these men -- a sprinkling of county executives, judges, prosecutors, defense attorneys, even the newspaper's publisher -- were part of a loose-knit, secretive network. "Some were homosexuals who preyed upon young men and boys, then used their positions of power and influence to protect one another from possible ramifications.

Occasionally, however, the preyed-upon lashed out, leading to a string of murders involving young gay men and their prominent older male suitors." In the late 1970s and '80s, the victims included two millionaires, one of whom was on a county crime commission; the Kern County personnel director; the owner of a fashionable hair salon; and a 14-year-old girl who attended parties thrown by Bakersfield's one-time police commissioner, who committed suicide after being charged with providing marijuana to minors. With the exception of the girl, whose case was never solved, the murders were committed by teenage or young adult men who said they had had sexual relationships with the victims."

Judge won't let convicted Bakersfield child molester post bail  
by Brian Skoloff, AP Writer 3/15/04

"In Bakersfield alone, 46 people were arrested in eight alleged child molestation rings. Thirty were convicted, eight had their charges dropped and eight struck plea deals that kept them from prison. Twenty two of the 30 convictions were later reversed for reasons including legal technicalities, prosecutorial misconduct or faulty jury instructions."

AND MORE:

two fwds from L Moss Sharman - Child Porn Hearing Opens - South County husband and wife are accused of 90 felony counts each, including videotaping and molesting a 5-year-old girl. By Mai Tran 4/9/04 "The videotape gave authorities a roadmap that led to a locked chest stored in a bedroom closet of the couple's home containing 216 videotapes and CDs, many of them depicting the couple having sex with children, investigators said. Investigators said they did not know who sent them the tape or who had the access or time to record snippets from so many movies. Thursday's testimony offered a first glimpse into the case against David Hwang, 31, and his wife, Sheila Sikat, 23. The hearing, which was continued until April 20, will determine whether the couple should stand trial. Orange County sheriff's investigators contend the tapes and CDs reveal six children being molested."

>From American Journal of Public Health - The Economic Burden of Hospitalization Associated With Child Abuse and Neglect Posted 04/02/2004 Sue Rovi, PhD; Ping-Hsin Chen, PhD; Mark S. Johnson, MD, MPH Abstract and Introduction Abstract Objectives: This study assessed the economic burden of child abuse-related hospitalizations. Methods: We compared inpatient stays coded with a diagnosis of child abuse or neglect with stays of other hospitalized children using the 1999 National Inpatient Sample of the Healthcare Costs and Utilization Project. Results: Children whose hospital stays were coded with a diagnosis of abuse or neglect were significantly more likely to have died during hospitalization (4.0% vs 0.5%), have longer stays (8.2 vs 4.0 days), twice the number of diagnoses (6.3 vs 2.8), and double the total charges (\$19266 vs \$9513) than were other hospitalized children. Furthermore, the primary payer was typically Medicaid (66.5% vs 37.0%)."

## **PENNY AND MITZI**

**A fantasy by Eleanor White  
January 16, 2002**

---

### **FOREWORD**

I'm a current-day, around the clock, terminal, psychotronic mind control victim. This short essay grew from my hobby of feeding squirrels. Feeding squirrels, and writing fantasy essays like this one, are one more type of attempt to lessen the impact of the heavy, advanced technology bodily attacks, the street theater skits, and the break-ins and sabotage at home and at work. I think it helps a little.

---

Penny began to take interest in squirrels at age 9. She had always admired the way they could race among the trees around her home, almost as if they could fly. But it was the end of August, a week before she was to start grade 4, that in a quiet moment, a young squirrel walked up to her, as she sat under a large maple tree, and just looked at her with obvious interest.

"I wonder what he is thinking", she thought. In the beautiful warm, sunny afternoon, this curious little fellow just stared and stared. Penny thought later that he must have sat there for at least two minutes.

She slowly reached out to pet him, but, like all squirrels, he darted away quickly, and up a nearby tree.

Penny enjoyed the rest of the beautiful afternoon outdoors, walking around the pond, and up the hill on her family's property. She didn't think much about the squirrel for the rest of the day. The little hill was a great place for watching clouds, and dreaming about the future.

Penny enjoyed school, playing with her friends, did her share of the family chores, did her homework, liked to pick her clothes, and all of the other things any nine-year-old girl likes. But she was a little different in that she especially treasured quiet time in the natural beauty surrounding her southern New England home.

The maples in autumn, the cherry trees in spring. Watching the new day gradually light the sky behind a beautiful row of scotch pine trees just east of her family's property.

She loved the small pond too. The sound of peepers almost as soon as winter's ice had retreated to the center of the pond, then was gone. Standing near the pond on rainy nights, listening to the soft tinkle of the rain on the pond, pondering the silhouettes of the trees on the far side against the overcast clouds, lit by the large coastal city to the south.

Or in winter, walking along the path into the woods behind her house, around the pond, then up and down the small sledding hill, and finally being guided back to her warm cozy house by

the friendly beacon of the driveway floodlight, when the sky had only a red glow on the southwestern horizon.

Yes, Penny enjoyed life but had a private, contemplative side to her personality not entirely shared by her friends.

That autumn of grade four, Penny noticed that her little squirrel friend, she wasn't really sure, was almost always there perched on the large stone wall as she walked in from the school bus stop. He was only there for a moment, and like all squirrels spent most of his afternoon scurrying around gathering and burying food, especially acorns.

One day, Penny had some peanuts left over from a bag she had bought at the school cafeteria. She tossed one to her furry friend. He jumped at it, scurried up the nearest tree, and gratefully munched his treat as Penny studied him from below. Seeing how thankful the squirrel was, she began to ask her mom for enough so she could feed him every day.

The next afternoon, there were three squirrels, then six, then enough that she couldn't really tell how many.

She found that she could tell them apart after a while. They had slightly different markings, sizes, and each one had either a way it walked or a way it handled the peanuts that was different from the others.

As the New England weather grew colder, she found that her squirrel friends were not always there when she came home, especially if it were especially cold or rainy.

One squirrel came every day. She (at least Penny thought it was a she) seemed to be a little older and not quite as sprightly as her friends. When they hopped, jumped, and ran at top speed, this squirrel would simply walk to get her peanuts. When this squirrel had her peanut in her mouth, she would look at Penny for what seemed like a long time, before walking off to eat or bury her treat. Penny named this squirrel Mitzi.

Mitzi would be there to greet Penny every day, even in rain, snow, cold or high wind.

Then Penny found on the Internet that some people have squirrels as pets.

She asked her mom if she could take Mitzi in as a pet, but her mom said no. Her mom explained that once an animal has grown up from a baby as a wild animal, she would not be content to live in a house. Mom also explained that squirrels spend a lot of their time building nests, and that Mitzi would chew and tear at all the family's clothing and furniture, doing what God had made her to do.

Penny was sad, but understood.

Well, in the spring of her grade four year, Penny learned that Mitzi was indeed a lady squirrel. She was bulging with babies; there was no doubt about it. Before the end of the school year, Mitzi had her babies, and wasn't seen every day until early summer. Penny was sad that she had to say good bye to Mitzi, as she had to go to summer camp in upper New York State.

While at camp, Penny had a magical experience. One Sunday evening, she felt especially calm and relaxed, and was asleep before the light in the cabin was turned out.

She had the most vivid, colorful, realistic dream she had ever had in her whole life. She was back at home, outdoors, and only 10 inches tall!

And, somehow (the dream wasn't clear on how this worked) she was able to actually greet and chat with her squirrel friends. This was a magic moment, and was just as real as anything that had ever happened in Penny's life. They ran and played and chased each other. The trees looked so big that it was as if they reached way up to the clouds.

Her dream seemed to last a very long time. In the dream she finally got very tired, and found herself standing in front of her friend Mitzi, both of them a little out of breath from all the playing. She was suddenly sad, as she somehow knew that soon she would be back in her world, and Mitzi in hers, unable to chat and have fun in this enchanted way ever again.

Then God gave her a gift to last a lifetime: Mitzi stood up on her hind legs, her soft white front fur making her look ravishingly beautiful, and ever so gently placed her soft grey arms around Penny's neck, and placed her warm cheek gently against Penny's, and just said ever so softly, "I love you Penny, and I will love you for the rest of my life. Thank you so much for being my friend!"

Penny cried, and said "I love you too, Mitzi, I hope we can play together again!"

Mitzi said nothing, but gave Penny a long, gentle squeeze. In the background, Penny heard a squirrel somewhere nearby start to cry a little, as Eastern Grey squirrels do, kind of a meow-like sound. Gradually, Penny realized that she was back in her cabin at summer camp, and there was indeed a squirrel quietly crying in the nearby woods.

As Penny grew, dated, went to college, and matured, she never forgot that beautiful moment in her dream. She continued feeding and spending time with Mitzi until she was a junior in high school. One October day, Mitzi wasn't there. She was never seen again. Penny felt as if she had lost a family member.

But as Penny's mourning for the loss of her friend lessened, an immense sense of gratitude to God took its place. God had not only given her seven years of Mitzi's loyal friendship, but an irreplaceable experience that human beings don't ever have, the thrill of actually being part of the family of squirrels for a day, and being able to communicate directly with them. Though it was a dream, it was so vivid and realistic that for Penny, there was nothing imaginary about it.

After college, Penny found a very unusual way to thank God for arranging this private miracle, she became a sister of the Episcopal Order of St. Helena, on the beautiful banks of the Hudson River at Vail's Gate, New York. And you can be sure she kept in touch with the squirrels on the beautiful grounds there!

## **Totally Anonymous, Untraceable Questionnaire for Organized Stalking/Electronic Harassment PERPETRATORS**

---

### **Your Chance to Anonymously Share Your Story**

**December 26, 2004**

Dear Organized Stalker/Electronic Harassment PERPETRATOR:

This is a serious questionnaire, and is 100% safe for you to respond to.

Your answers are generated by a third party web service host, and are emailed to me, Eleanor White, webmaster of raven1.net, by that host. No trace of your email address or ISP is sent to me.

You are part of the New World Order, which is many things but in any case is one of the most amazing undertakings this planet has ever seen. This is especially true now that a half century of incredibly advanced, but kept tightly secret, technology is in your hands, or the hands of those you work for, which can produce effects most people consider only science fiction.

By submitting answers to a few questions below, you will get a chance to tell your story in complete anonymity. While we all want the torture you are heaping on us to stop, at the same time, we would like to know something about you as well.

I will post responses which we judge to be probably serious and genuine.

Please consider taking advantage of this opportunity to tell the world about your part in this historical undertaking.

Eleanor White

---

Can you tell us how you found work as a harassment agent?

Can you tell us why you find this type of work satisfying?

Can you give us some idea as to how and how much you are paid?

Can you tell us what you know about future plans for us?

- Are you told information about the backgrounds of those of us you target?
- What kinds of reasons have you been given which make you feel we deserve to be targetted?
- Have you ever wondered if these reasons might not be true?

Do you really expect to escape death? Do you really expect that choosing a career of torturing innocent people will have no consequences for you in the NEXT life? Do you really think, after hearing reports from MILLIONS of people who have "died" and come back, that there is no "next life"? Do you really believe that those people who reported ending up in Hell during their near death experiences were all lunatics?

Your organization, like any other intelligence agency or similar group is highly compartmentalized. Are there any questions you have for us, because we see/experience the activities of ALL compartmentalized elements of your org.?

---

## Local Perpetrator Groups

January 22, 2005

"Local perpetrator groups" are those groups which carry out the day to day targetting of mind control victims. This page is to present information which we have been able to learn during this several decades long program of covert harassment of innocent people. It is hoped these insights may help mind control victims in their local fight against around the clock, covert harassment.

Important: See also this book review of [Terrorist Stalking in America](#), which solidly backs up the insights reported on this page.

### One reason given...

**...by a church group known to the remote viewer whose testimony is the first section below. That church group feels perfectly justified in keeping a neighbour under surveillance and performing repeated harassment because "...we believe we are angels kept behind to straighten people out so they can come to the Lord."**

**This can start out innocently, but some people embellish their role in volunteer groups beyond the mandate, spurred on by malicious lies about the person being targetted.**

## I. Local Perp Groups Exposed by Victim, by way of Remote Viewing

Here below are comments from an anonymous victim who is an accomplished remote viewer and hypnotherapist, outlining the SUCCESSFUL battle to expose and largely stop the 'mind control' torment. The information is from that victim, and I have edited it only to make for smoother reading:

My remote viewing abilities definitely did make a difference. Bottom line, these groups usually thought they were 'rehabilitating' me, believing I was some sort of criminal, welfare cheater, drug addict, or of a similar past.

My own 'mind control' harassment was done by:

- College Teachers

Teachers at the college, they were harassing me, using strange equipment, discriminating against my disabilities, etc. This was during the same time period, and began with the physics teacher, then extended to the chemistry teacher, then the organic chem teacher issued the death threat, then all the teachers joined in every day. There were also shills in class, who showed up after the class had begun (semester beginning) and were very avid harassers, assaulters, and did street theater.

- Religious groups

The groups that I found by way of remote viewing were church organizations. The specific ones I am alleging I found were [deleted on request] and possibly [deleted on request], and several other smaller denominations of [deleted on request], including the [deleted on request], locally.

- Anti Drug Groups

Anti drug groups such as McGruff, DARE, etc.

- Political Groups

Political groups like Crime Fighters

- Fire Fighters

Firemen, The [deleted on request] State Firemen's Association icon of a firehat, was on every car that did stalking and endangerment on local roads, and in parking lots, in the beginning months. It was the icon without a particular city, which I was told by their association means they were part time or volunteer. The Association told me there is no way for other people to get those icon stickers, whether I believe that or not is a question. Someone could have stolen (or borrowed) their icons (for the purpose of misidentification) or could have used their cars.

- Martial Arts Groups

Martial arts groups, I am alleging that I noticed the hearing devices in the studio, or on certain people there, and plenty of examples of harassment, and following that lead right to the martial arts studio, and of course street theater).

- Law Enforcement

I had a HELPER, a NON LOCAL Sheriff, whom I contacted officially because he was a close personal friend, and his PhD in Criminal Justice is on "Cults, Gangs, and Crime Networks".

I asked, since what was happening to me so closely resembled what I had read in his dissertation (about 1,000 pages) of how these people operate to scare, silence, discredit, etc. people whom they target. I asked if since he held this very unusual understanding that he be a liaison to the local sheriff. I contacted him again asking for an agency to contact. I learned that an exposure from a former rental home's

contamination had caused my husbands terminal cancer, my own cancer and many chronic and acute diseases to my children and myself. He was surprised at this information and at that point admitted he had NOT CONTACTED the local Sheriff, nor the FBI when the harassment had caused me to fear for not only my children's and my lives, but also my parents'. He apologized for not contacting my local sheriff, and within a week or two the intense nighttime torture stopped, and remained stopped for the past year. (Written summer 2003).

I saw by way of RV where each of the people fit into the puzzle, and how they were separated, but none of that did that much good. I wrote to each of the different groups, at the headquarters, and told them that someone who had their icons (or other revealing identifiable things) was going around doing what ever that group was doing and that if it were thieves who were giving their group a bad name I thought they needed to be aware of them.

If the harassment was part of their group, they needed to be more aware lest the entire group get the wrong kind of name, sued or prosecuted. These things caused each of the different groups to cut short their activity. I really don't know anyone else who is being targeted the way I was. These people (who were victimizing me) were identifiable to me, because of either knowing them before, and recognizing them at the time, or because I got to know them, and who they were associated with. That is just the way I do things, uncover any linking evidence, then go for the upper echelon of that club, church, whatever, and inform them of what is going on. Each of these people whom I contacted did not help me, nor admit it could possibly be any member of their groups. However, one by one THE HARASSMENT SLOWED DOWN.

Then the final big deal was with the sheriff, when harassment from that source stopped. Now it is just some people who are jerks, with individual tricks, nothing like it was before.

There are certain ways I said things that instead of sounding like it was a complaint against them, was rather a word of help. I made it sound as though I thought highly of the group in general, and thought there may have been someone (or group) who was trying to make it look as though they were from that group, or it is a deviant group within, that they may not have been aware of. It let them off the hook, making them less defensive toward me.

I never gave out the names, license numbers, or anything to anyone except the sheriff, and I still kept some of the information to myself.

I never mentioned suing, except saying so out loud in my car where I know they were listening, (although they may not be now) because I had proof positive and I knew it could not be construed as a threat because it was said out loud only, even if they were making recordings. I carefully explained I was a public speaker and was practicing my skills there in my car with the windows up. My attorney daughter has mentioned that to say you will sue someone is a personal threat, and is construed against you, if you say it, you either go to an attorney or you don't, you never threaten with it.

However, I did mention that I did have the licenses, makes, models, street names, dates and times of occurrences to each of the people I contacted. I also mentioned that I had contacted authorities already with the all information, so that it could be correlated later if need be. [Meaning the local sheriff.]

When I was certain of the identity of some people from church, due to knowing them within the church I had formerly belonged, then I went quite specific (but still not the licenses or that info), because I knew the Church would only deal with them internally (The [deleted on request] keeps it's business to itself), and because of their high percentages of Intell workers, within the church. I also included people that I had found by way of remote viewing (but did not say how I had made the correlations) who had set up meetings where there were perps, and who were in on it, but playing out their friendships for it. The fact that they had played the part of a harasser, I had not understood until remote viewing revealed their involvement, then I was able to trace back their involvements and things they had said that I had missed when the harassment was happening.

I also sent the names of the perpetrators to [deleted on request], (both because of his name popping up at the scenes of crimes, and because of the personal involvements) each person with their official position, and what they had done, including that it had been done in public and was provable. I did as I had to the Church because [deleted on request] also [deleted on request], and I figured he would either not tell outside officials, would tell the church officials, or quite possibly do some remote viewing of his own, but with a very different vantage point. I figured if he told the church officials it would get the same information working up and down, simultaneously. To him I included the anomalies of his system of remote viewing and the corruptability I had found in their system, that photos could be used that set numbered sites set up to see something that was not what they were really looking for. I did this because I had a laundry basket of photos missing, after a break in. I assured each that "Even the elect can be deceived, and that evil can come cloaked in light".

I also included with the church and [deleted on request] that this had happened right after being the most seriously ill with cancer (which I had had for years), and that it had degraded my health further. I mentioned this because I thought it might explain to them some things they might be perceiving as wrong behavior, when in fact it was not.

Several groups asked for further information, (licenses, etc.) but I said I could not give it to them until the official authorities had finished their investigations.

I did not include what exotic items that had been used on me, except that I had experienced pain in the night starting on a particular date, only in my own home, and the degree (on scale of 1 to 10 that it had been at 100, and that my own former 10 had been either root canals done on infected teeth without any novacaine, analgesic, or laughing gas, or my cancer in its later stages).

I never got a single word back from the church or from [deleted on request]. But debate was not what I was after. I figured it this way. If their people were not involved, the people I contacted would either ignore my information, or they would investigate on their own, and that would take the pressure off me if they did.

The firemen's association, whom I contacted in [deleted on request], did return my letter with a follow up phone interview. There had been 'fireman association sticker hats' on each of the cars in front and back of me, during several months of stalking and reckless endangerments. That changed to cars with no license plates (new cars) and no identifiable stickers, after I spoke of the stalking at the stores where other forms of both stalking and harassment had been happened. In the phone interview with the firemen's association locally, I could tell others were listening in the office, (there was noise of muffled speaking in the background)

dispite his saying he was alone in his office for confidentiality, which he offered, i had not asked.

You have to be very careful what you imply when informing a group about illegal activities involving their logo or stickers. My statements to the firemen's association were that some group, using their stickers, were doing it, I was merely warning them that either the firemen's kids, someone who had stolen stickers, or their vehicles, was perptrating the crimes against me, and that they sould be aware of it.

It all was really much more complex than outlined here, but I figured no one was going to do anything, so I would, a great defense is a good offense. I kept track of everything, and so it panned out. I only used the remote viewing to see though my own lack of certainty, and to link people together, and to see inside homes where during meditations, I followed (something) backwards to those homes, from things that seemed to be hitting my home.

I also mentioned to [deleted on request] and the Church, as well as, the sheriff I knew, about the sabatages that had accumulated, and the disabilities and discriminations done to me in school, in public, during class, and the life threat by the teacher,"... if I told (those things)...", and that all this harassment had started a couple of weeks after that threat by the teacher.

END OF CASE I.

## Message to Mind Control Perpetrators

---

This message is directed to all perpetrators who tune in to this web site.

### [Anonymous questionnaire for you...](#)

It is our belief, as your victims, that like all operations which use the methods of the intelligence services, your organization is extremely "compartmentalized". That means that every member of your group is given only enough information to get his or her job done and nothing more. "Need to know" is the term for this principle.

Furthermore, our limited candid face to face or voice contacts with your members suggest that you are probably given enticements to enter this organization, and are told lies about us to make it easier for you to participate in harassing us. I personally know of at least one lie circulated in an apartment building I have lived in about me.

You may also be told you are aiding a "police investigation" or some similar tale to make you feel your surveillance and harassment work is for the common good.

I'd like to tell you all that we targets see the picture from a vantage point you cannot: We see you come and go, year in and year out. Some of us have seen you come and go for thirty or forty years.

The picture is not always pretty. We have seen perpetrators who today may believe they are "on top of the heap" and do their harassment and surveillance with great gusto. However, in some cases, we see those same perpetrators in terrible shape, destitute, and obviously no longer being taken care of by the organization bosses. You are not allowed to see this, but we are and have.

Another situation we have observed are perpetrators, apparently no longer of use, or who have misbehaved in some way, who are now being targetted with the same mind/pain weapons we are. After all, a perpetrator knows too much, and to avoid explaining a lot of bodies, it's much easier to make them into victims so they will be thoroughly discredited too. That way, once a perp has outlived his/her usefulness as a torturer, that former perp now provides additional experimental data to the big bosses as a guinea pig.

Consider other organized crime members. Are they allowed to retire peacefully? Or do they "know too much"? What happens when a change in management decides they are "no longer of use to the organization"? Will they be given a generous severance package and wished well?

From the very practical standpoint of self interest, we urge you to ask yourselves these questions.

We know that once a guy has, say, "made his bones" in a crime syndicate, he is subject to much more severe penalties for screwing up or becoming "no longer of use". We recommend

that if you are not very far into this covert "mind control" organization, you consider getting out while you can without severe consequences.

Finally, although Christianity is probably foreign to you, as a Christian I *willingly* and *regularly* pray for all of you. I pray that God will allow a pinhole into your dark shells so that you can see His unspeakable glory, and eventually be inspired to face skyward, open your arms, and simply say "Father, I have sinned. I beg you to forgive me."

The miracle of Christianity is that you *will be forgiven*.

And if you do this early in your careers, you may even be allowed to live a life among the rest of the community with little or no consequence.

As you go about your daily routine, or relax at home, please think about YOURSELF, and YOUR FUTURE, especially in the NEXT LIFE, and what sort of NEAR DEATH EXPERIENCES nasty people have, and what is said here, once in a while.

Eleanor White

## PERPETRATOR Questionnaire

January 22, 2005

---

[Click Here](#) for the actual form

Below are selected responses to this form. Since the form is emailed to me, Eleanor White, from a third party anonymous email server, there is no way to know the source email address, and no way to know whether any given response is from a genuine mind control perpetrator or not.

The sheer importance of the New World Order mind control issue makes it worth at least asking for anonymous postings from the perpetrators. The visitor to this page will have to judge the postings below as to their possible authenticity. I will post below those submissions which seem to have at least a 50% chance of being genuine.

I would suggest that if an anonymous perpetrator really wants to convince us that he/she is authentic, while remaining anonymous, that perpetrator could tell me something that no one other than myself could know about.

Finally, to the perpetrators, I include you in my prayers.

=====

### SELECTED RESPONSES TO THE QUESTIONNAIRE

=====

SUBMISSION - January 8, 2003

Q. Can you tell us how you found work as a harassment agent?

"I was serving in my nations air-force, when I was invited to a recruitment drive for our 'secret service', mainly because of my doctorate in neurophysiology. I spent 6 years with the service before being granted leave to work at a large multi-national investment bank.

"My work here relates to the manipulation of the stock market in such a way that when trade information is displayed on most of the common trading systems, various 'subliminal' messages are relayed to brokers in order to maximise our profits. My tenure here is coming to an end, and I plan on retiring in the next few months.

"I guess I was motivated primarily by curiosity and intrigue at the advances in neuropsychology being employed by these agencies, and it was only recently that I began to realise the nefarious side of my employment. To be honest, I am only human, and as such a pawn in the greater scheme of things, and the financial remuneration has been significant. In essence, I have 'sold out'. Those in my field are on salaries equivalent to US\$1 million+ per annum. My base salary is only US\$200,000 (which is typical for a long standing employee of an investment bank), with the remainder being paid through various off-shore accounts. When I retire I hope to publicise my information."

=====

SUBMISSION - January 8, 2003

Can you tell us how you found work as a harassment agent?

"Ad in the paper. Sounded like interesting work, so I said 'Why not?' "

Can you tell us why you find this type of work satisfying?

"Pays really good, and since there are so many of us we get a lot of vacation time. Unlimited Power."

Can you give us some idea as to how and how much you are paid?

"Cold hard cash, and lots of it. It's easy to say we need expense money."

Can you tell us what you know about future plans for us?

"Wait until you see what we got planned for next March."

[EW: I suspect he/she may mean THIS March, 2003.]

=====

SUBMISSION - February 11, 2003

I wanted to be in a position of control. The feeling of having so many lives at my fingertips is just a rush. I used to run a small arms deals business outside of San Francisco, until the feds finally had the evidence they needed to storm my building. Specifically, my prints on stolen goods.

But I was able to elude them for so long, and they were impressed with the organization I was able to build, so they made me a deal. Federal prison, or work for them. It doesn't take a rocket scientist to figure that one out.

At first, the control that I was able to extend to those assigned to me was a rush. Every time I made a decision that could make or ruin a life, I just got a run of adrenaline. The feeling was astounding. That feeling only lasted for the first few months. My superiors have since then tightened our restraints to ensure that we can't contact the outside world. They insist that no one know we exist and anyone who knew me before had thought I had died when I was recruited. This conspiracy goes much deeper than you think it does.

The government is little more than a front for an even large organization, and those people are ruthless.

[Eleanor White talking: Most of us have figured out that whay you say about the visible government being just "window dressing" to cover for a larger, invisible organization must be true.]

More ruthless than I or anyone I work with. They could just as easily sentence a room of 5 year olds to death as they could shower in the morning. Hypnosis isn't even the begining of it, although we have used hypnotic techniques to make some forget of our existance, we mostly operate through covert operations. Terrorism, seemingly illegal acts.

Consider this: when you see a news story about a man who killed his neighbor and was arrested, that neighbor is most likely one of the people my superiors doesn't want to exist, and the person who did it is one of our operatives, and I can guarentee that that person never went to jail for a second, rather, he was brought back to the nearest mobile command center.

We are paid well, there is no question about that, but with all the security measures we must go through, there's no where we can spend it.

I can't even go to Wendy's without risking being recognized, just like many other of my co operatives. So our money mostly goes to purchasing supplies and ordering food and things from places that will deliver food or that we have an agreement with.

I only have about 5 minutes left to type before the counter-IC programs go down, so I'm going to have to make this quick. You must know about the new static field generator that my agency is developing. It distorts all light and sound waves that pass through it creating an illusion much like invisibility coupled with a dead spot of noise. In other words, you won't be able to hear or see whatever is in the radius of the static field.

[Eleanor White talking: This sounds like the "circle of silence" which witnesses in areas where 'bigfoot' is seen or similar 'spiritually intense' sites are. Temperature changes, either up or down when one enters these circular zones, and once inside the zone, no sound, even if the wind is strong outside the zone, can enter.]

The thing returns false radio, UV, IR, and thermal signals, as well.

We've field tested small models that can cover a single individual, and have had no real problems with those, but soon we will be developing larger ones to hide aircraft and large artillery. I think my superiors are going to stop the war with Iraq before bush even knows what happened.

I have to go now, the counter-IC is nearly exhausted. Viva freedom.

=====

SUBMISSION - February 12, 2003

About 12 years

[Eleanor White talking: I don't have a question asking "how many years" so I'm not sure what the responder means by "About 12 years". Probably the time he's been in the biz.]

I get to mind f--k simpleton's such as yourself. This helps forward our plan for world domination by the secret group known only as the JAV. In the blood of freshly killed goats. Involves Potatoes and a small Yak.

=====

SUBMISSION - February 17, 2003

I was approached while in college. I never completed school and instead went into training with the monitoring and enforcement group. I worked with agents at a now-closed facility in middle Georgia (east of Macon) where I went through five years of extremely intensive training, sometimes going two or three days at a time with little or no sleep.

Many people would say that power is the main reason they do this. While this is certainly a part of it, I do this because it gives me a chance to help make this a better world. How many other people can honestly say that they go to work every morning and make actual changes in how the world at large works? If all goes according to plans, the world will be a very different place after the next ten years, and I will be extremely proud to be able say that I played a part in it.

[Eleanor White talking: So you think that lifetime torture, destruction of relationships, quality of life, and careers makes the world a better place? Don't the persistent reports from those who have had near death experiences suggest to you that just maybe you should consider what a career in torture might imply for your experiences in the next life?]

I also enjoy the travel- I've been to all fifty states and thirty other countries, including every continent except Antarctica. I spent quite a bit of time working at a behavioral research and modification facility in Nigeria where I was able to work on some cutting edge technology and see

firsthand how well it worked. I expect some amazing things to begin happening here in the US very soon as this technology begins to be used here!

I am not paid extravagantly, but I am comfortable. I receive a salary from a federal agency and pay taxes as everyone else in the country does. My salary is based on the standard government pay scale and as a front I have a cover job with a public government agency. My first year of training I received a flat stipend of \$3000- the idea is that people recruited for this service realize that they're here to serve their fellow man and not to become wealthy.

If I told you, you wouldn't believe me. It's hard to comprehend some of the changes that have been planned and I'm sure there will be some resistance at first as change is always difficult. I think that everyone will agree afterwards that all the changes have been very beneficial and that our new transhuman future is so much better than our current lives.

Eleanor, I have done some investigation of some of the allegations on your site. I believe that your 'sabotage' problems are not the result of our organization. We do not break chairs or wear holes in underwear, nor do we loosen door hinges. I can assure you that the work we do is much more subtle and extremely difficult to detect. My colleagues and I believe that you may be suffering mental issues which may or may not be the result of earlier projects. I cannot give more information than this, but I would strongly recommend that you see a psychiatrist.

[Eleanor White talking: I have, in fact, twice, and the report was no signs of mental illness. And since mental illness doesn't sabotage things, and since psychiatrists know nothing about even MKULTRA, never mind the current day stuff, they are not qualified to even begin to do anything but mis-diagnose, and heap more torture upon us.

If your organization isn't doing this, rest assured someone with equally powerful backers IS.]

=====

SUBMISSION - March 7, 2003

I was contacted through a pay phone by a man calling himself "John Smith". He told me to come to an address which I can not disclose with you.

I do not find it satisfying.

\$100,000 per year

The money is wired to a private bank account with no name.

[Future plans are] Confidential

How do you know all this?

[Eleanor White answering:]

1. I've been a target for this activity for 23 years.
2. Almost 2,000 other targets, world wide, have collectively assembled the information on my web site and others.

My prayers are with you.

=====

SUBMISSION - March 27, 2003

I was first approached during my employment at NASA. Specifically while I was in Florida at the Kennedy Space Center working on low level sound wave communications. First designed for submarine communications over great distances, the technology now has grown towards potential

use as an instant communication conduit and as a non-lethal weapon on crowds or populations.

My superior, a man that rarely talked to the employees and was overall very shy, called me into my office to "discuss my future." After 10 minutes in his office, it was clear to me that I had no choice but to work with his "organization." That was 15 years ago, and I have hated myself ever since for not telling him no.

I don't find this work satisfying in the least, but what can I do?

The pay is the only good thing about this place. About all of it. I think the typical pay for someone in my position is \$150k to \$200k a year, but that is just speculation since topics of pay and job specialty are prohibited. Accounts are setup for us.

I don't know much outside of my own specialty, but I do get a kick out of it whenever I see something on TV about the "Taos Hum" I know. It was sound people, low level and sub-sonic.

Features? I don't understand this question. Being able to target a crowd of people and cause discomfort or even a euphoric rage, I would not call that a feature.

One day I would like to see a list of the companies and people that have my superiors scared like rabbits. I would like all the people to see it. See it and put a stop to this insanity. This domination of decent people. This inhumanity.

=====

SUBMISSION TO THE MIND CONTROL PERP SURVEY FORM:  
May 13, 2003

What: I'm not sure. It is very compartmentalized. Individual operators are only given enough information to get the job done.

Why: I am being blackmailed.

Future plans: As I said earlier, I only know what I need to do my job. Questions are not permitted.

Controlled: If you consider blackmail a form of control, then yes.

Fear: My life and the life of my children.

Trapped: Yes. I killed a young woman in a drunk driving incident and the operators helped the problem "go away" In return, I am tied to them for life.

Enjoy: No, I never knew the pain I was causing until I stumbled here. There is a great divide between what I was told and what is actually going on. I was told the project involved criminal rehabilitation. Now I know it is much more than that.

Questions: No, just my apologies. Please realize that most operators are very low level and have no idea that they are helping to torture people. Most of the other operators are much like myself. They are everyday people that have made a pact with the wrong side and when they realize it, it's too late.

=====

SUBMISSION TO THE MIND CONTROL PERP SURVEY FORM:  
May 26, 2003

What: I don't really know. Let's get this straight right off. I don't create "alters" or "manchurians" if such things even exist. I simply train "persons" in the ability to retain information, tremendous amounts of information. I suppose what I am building is

a spy who does not need a camera, but I don't think so. Possibly a depository of information, Someone who can keep an entire bank ledger in his head, no paper trail, no evidence.

I don't know, I complete the training and I never see my subjects again and I'm never told where they go or even who they are for that matter.

Why: I was taught the system I teach others in university by another student. He was older than your average college punk. He approached me at a time we were lab partners in an entry level course, somehow he could tell I would be susceptible to it and would pick it up easily. He made me an offer I couldn't refuse, straight A's. Later he recruited me to teach the technique to a few "refferals". I was paid quite well for my services, and still am for that matter.

I don't consider myself an agent of any kind. I don't even know who it is I really work for. A fact that troubles me. I never thought much of it in the beginning, the money was good, as far as I knew I was just helping my fellow man better himself.

I'm beginning to wonder now. I'm older now, maybe a little smarter, and able to detect lies with a greater degree of proficiency. I hear alot of lies now and even more silence and words unspoken. The secrecy is indicative of something, I'm not sure what.

Future plans: I can only tell you about my students. They are young and naive but incredibly focused, almost cold, by the time they get to me. I suspect they have recieved some sort of training to focus their minds before they are given to me. They see to be for the most part amoral, calculating, not necessarily overly intelligent but not stupid either. They are dedicated, in any event, and rarely reveal anything about themselves.

At lighter moments I sometimes try to make small talk to get a feel for who I am dealing with. I'll ask them about the weather, a ballgame, they never have any opinion on even trivial matters. Every word that seems to come out of thier mouths is crafted to be a guarded non answer or a lie. A question like "where ya' from" always elicits a New York, Toronto, Beijing response. Try to find out anything about a John Doe from New York. Good Luck. All I can say is that these men and women are probably up to no good.

Controlled: Not in that sense. I am controlled by the "don't ask don't tell and you won't have to consider the consequences of such, if they even exist" type of atmosphere. You just know by the way people act, that you don't want to know. I know the consequences are not good, but I have no idea how bad they might be. Fear of the unknown if you will.

I suppose there is a possibility I am being controlled in a more direct manner, but reason dictates that if that were true, I wouldn't be typing this right now.

Fear: Yes, though I have no concrete reason to give you. As I said, fear of the unknown.

Trapped: I was drawn in slowly, to something that seemed to be not only innocent at first, but quite constructive. Something like Adam and Eve eating from the fruit of the tree of knowledge of good an evil, I have slowly been awakened. My relationship with my "masters" over that time has devolved from a "father/son" type realtionship to a much more uneasy worker foreman type arrangement. I fear the relationship has not yet hit bottom. Again more fear of the unknown to ensure it never get's that far.

It is almost as if they can read my mind, or at least my state of mind. They know I am something of a threat to them now. But in a

sense, what threat? I don't know anything.

Enjoy: I loathe it. I don't know what kind of killers, or thieves I'm dealing with and am helping to perfect on a daily basis. I thought I recognized of my trainees from about 6 years back a few weeks ago. Her picture was on the net standing in a crowd of anti-war protestors. I am certain it was her she was a little older and a little heavier, however I am certain it was her. I never forget a face, or a name, or a phone number, It's my job after all.

I can't for the life of me figure out why she would have been there. Like I suggested earlier, none of them could care less about such things. She must be there for a reason, who knows what? All I know is that I am not creating upstanding members of society. I manufacture ghouls and goblins and it makes me sick to think of it.

Questions: You'll never win. It's too late.

=====

SUBMISSION TO THE MIND CONTROL PERP SURVEY FORM:  
June 3, 2003

what: Despite what you may believe about grandiose, mysterious internationalist cabals and shadow governments, I worked with the governments of Argentina, Paraguay, Uruguay, and on four occasions with the Consiglieri Nazionale of Italy in various (mostly clandestine) capacities for twenty-eight years without ever having occasion to discover evidence of any agencies of the sort which are now popularly termed the "New World Order". My client states, sponsors, co-workers, and I were engaged in earnest efforts to thwart the propagation of communism by whatever means we, at the time, deemed the most expedient. What we hoped to accomplish, in simple language, was to rid our world of the plague of leftist thought and action, to identify those who direct or commit acts of sabotage, to disrupt their organizations and infrastructure, and to rehabilitate impressionable victims of pernicious leftist dogma.

why: While it is undeniable that I have lived a life of relative material comfort and priveledge in a part of the world where many are quite poor, I have always been an ideologue and I have chosen to walk the path I have walked because I believe in the good work we have committed our lives to complete. I wield little real power, and I am not even known publicly as a member of the Security Forces of my client states. I cannot even fix my own traffic citations. All of this is satisfactory to me, and my conscience is untroubled by the things I have seen, learned of, or done in the nearly three decades of my professional life.

futureplans: I would, of course, never divulge operational details, or such things as new technologies which periodically become available. Having said so, I am happy to state that our work continues to evolve and to progress, and in ways which are less traumatic to our subjects than previous, less evolved methods and practices. At the same time, increasingly satisfactory results are being achieved in terms of intelligence gathered, as well as long-term control of our "volitionals" and "sub-volitionals".

controlled: Having knowledge of the processes by which control of our subjects is achieved, I am able to say that I am, with every certainty, neither what we term a "volitional", or a "sub-volitional". It would be fair to say that I am controlled to a degree by my desire to have a role in the efforts to bring about the eventual demise of communism, as well as my desire to have a role in furthering the cause of National Socialism.

fear: If you are asking whether I fear reprisal for any failure on my part to continue with our work, then the question is both naive and irrelevant. I am very gratified in my professional life. However, I live with the knowledge that certain governments would kill in order to ferret

our secrets, or to prevent my client states from possessing these rarefied abilities to win friends and influence people. I take such precautions as I reasonably am able to take, but otherwise I live a normal, comfortable existence when I'm not working.

trapped: Absolutely not. My father was an officer in the S.S. during the Second World War, and a number of my mother's family were members of the Hungarian Arrow Cross Movement during the same time. They met in Spain after the war while living in one of the communities of expatriates which evolved in response to the nuisance of Soviet occupation, Nuremberg-type inquiries, etc., and subsequently married and then settled in Uruguay under new names.

I was born there in 1953, but was sent to be raised with the family of my "Onkel", who was not actually a relative, in British Colombia. My parents maintained regular contact with me, and I spent my summers with them and three younger sisters on our farm in Uruguay. My parents, as well as my "Onkel" remained believers in the National Socialist Cause, and thier hatred of communism was galvanized by the events following the war. One may say that the torch was passed to me, and I have nurtured that flame in my heart throughout my life!

Following my university education, I served with the United States Navy, and Naval Intelligence. It was during this time, and in the capacity of my duties that I first had occasion to work with my current client states and in a similar kind of role. I believed (and still do) in the beneficial effects of our work, and was able to prove my aptitude for the sort of projects with which I was involved. I knew then that I had found a way to serve the world doing something I found challenging and interesting. (I deliberately do not wish to employ the word "enjoyable" out of respect for the suffering and upheaval occassionally caused by my work upon the lives and psyches of our direct subjects and those others indirectly affected.) After a period of honourable service, I resigned my Naval Commission, and have since that time worked semi-autonomously in the trade with the Security Forces of my client states. I accept responsibility for my work without mitigation or hand-wringing.

Likewise, I accept credit for my share in what we have been able to accomplish in a spirit of gratitude that I've had the priveledge of having opportunities to make a bit of a difference in an increasingly chaotic world.

enjoy: As I have already made clear, I feel that the word "enjoy" would be less appropriate, less accurate than an alternative word or phrase. None of my colleagues are sadists, and neither am I. We are proud of what we are working toward, and we are proud of the underlying moral and political motivations that guide us in our efforts. Kindly pardon what you may consider fussy semantic distinctions, but take into account how closely a question of semantics bears upon the methodology of Persuasion/Compulsion/Conditioning.

questions: I doubt very much that your belief in the rights-of-the-individual would be altered at all by whatever I might offer here for your consideration. Let me simply leave you with this: We do not undertake the initiation of any new subject-file lightly, or arbitrarily. If you found yourself the object of the attentions of my Works Program, it would be because of your own demonstrated opposition to the interests of my client states. Believe or disbelieve any part of this submission as your own faculties and proclivities dictate. I'll be sleeping contented and vindicated regardless. Auf Wiedersehen.

=====

SUBMISSION - June 9, 2003 (raven1.net form)

[Can you tell us how you found work as a harassment agent?]

I didn't find it as much as it found me. I think I was supposed to be a victim, but my advanced intellect made that difficult. I was able to

counter every attempt initially made against me.

I was asked by a high ranking member of the air force if I would be interested in taking part in a program for national security. I wouldn't have imagined what it actually meant. I figured that I would, at best, review low level reports from covert military personnel.

[Can you tell us why you find this type of work satisfying?]

I don't. If we were using it on subjects who knowingly accepted to be tested, or if we were using this technology on enemy combatants (which is possible -- I don't know everything that goes on), I wouldn't mind.

This is not the case. I, and I presume everyone else in the program, are paid the same as any other federal employee. We get checks which we deposit into our bank accounts. Those who can leave the site are free to spend as they see fit. Of course, we are watched.

[Can you give us some idea as to how and how much you are paid?]

We are paid VERY well, as you might imagine. I've only been with the program for a little over five years and am making slightly more than \$50,000.00 a year. I also get full (military) benefits at no additional cost. I can, if I wish, live "on base" for free. I've elected not to do this, but many others have.

[Can you tell us what you know about future plans for us?]

I don't have access to that information. I have heard rumors, but I have no way to confirm them.

The most recent rumor I've heard deals with March of next year. I have no real details, but I understand it's not going to be pleasant.

[Which features of the electronic equipment do you especially enjoy using?]

I like "The Walkman" as we've come to call it. An operative will carry what looks like a standard Walkman radio. It is in fact a transmitter that is tuned to a specific subject. We can send thoughts, sounds and images to the subject "on the fly" as it were and no one would suspect a thing.

If you see, hear, smell something odd and there is someone with a walkman type player, they may be sending you the information. Asking them about it is pointless since with the flip of a hidden switch, it will work like a standard Walkman. Is there any way to get out of this? I'll sign a secrecy document and pretend I was never a part of the program.

[Eleanor White's comment: I suspect that the "walkman" is in fact a remote terminal, linked to regional harassment bases. This is the only way the perps could exercise enough control to prevent personal "hacking" use by perps on people who are not enrolled as victims.]

I would write more, but the counter measures I've put in place won't go undetected for much longer, and it's not pretty if anyone is found to have spilled the beans.

=====

SUBMISSION TO THE MIND CONTROL PERP SURVEY FORM:  
July 11, 2003 at 11:55 EDT

=====

SUBMISSION TO THE MIND CONTROL PERP SURVEY FORM:  
July 11, 2003 at 12:29 EDT

what: Information. The implants are really not so much for mind-control, as you may have been led to believe. Some unscrupulous agents among us have

been known to use the devices in this manner, however. The transceivers actually harvest certain types of sensory input, which can be relayed back as data. Data, which when coupled with such mundane collection methods such as wiretaps, tracking devices, and checking listings in the TV Guide, can be quantified into useful information. Surely you've realized there was more to the VCR+ numbers than met the eye, yes? It's easiest to think of it as a high-tech census.

why: Certainly. We do not believe this to be a conspiracy, at least not by the same definition. It is merely an exercise in covert data collecting. I am merely a collection agent, for lack of a better, or less classified word. The pay is good, we get vision, dental, and prescription coverage, and two weekends out of three off.

futureplans: To the best of my knowledge, there are no future plans beyond the continued collection of data. Due to the nature of the devices, we could not suddenly cause any percentage of the populace to stand up in unison and become an army of robots. That's just not how they work.

controlled: Technically, there is no 'control' per se. When the devices are improperly used, they can generate feedback, which can be altered to cause a form of suggestion, but no more. Generally, the feedback only results in a headache. Sorry about that. The truth is, the suggestions generated cannot seriously alter a person's behavior - it is much like with hypnosis - the subject will not do anything they are not predisposed to doing. The devices cannot induce a person to kill, unless that person had homicidal tendencies to begin with.

fear: No more than most any other people who carry classified information. In this case, the story is so fantastic that it would be pointless to go public, as we would be dismissed or ridiculed by the public at large. Which is just the way we like it. There's no point in spilling the beans on a story nobody wants to hear, eh?

trapped: No. It came as a sort of natural progression from my previous, somewhat related field. Obviously I cannot disclose that field, but suffice it to say there are enough people in it to keep us happily staffed for quite some time.

enjoy: Eh. It has its days. Most of the time it involves reading graphs similar to EEG charts, checking GPS data, and cross-referencing other sources. Most of it is quite dull, really. But as I said, it pays well.

questions: None to speak of. I wish you luck in your endeavors.

=====

SUBMISSION TO THE MIND CONTROL PERP SURVEY FORM:  
July 11, 2003 at 14:22 EDT

what: Our activities are not about what we want from you. They are about what you want from yourselves. The people of the earth desire peace of mind and security, conditions that could not possibly exist without the actions of our organization. We do not seek power. We seek to serve the human race which demands our existence.

why: I resent the term "harassment agent" and refuse to answer a question worded in such a way.

futureplans: There are no "future plans." Our mission is not to drive the human race toward some secret goal. Our mission is to maintain the security enjoyed by the human race today. Just as in wartime, there are truths which must be kept secret in order to save lives. For obvious reasons, I cannot tell you what they are.

controlled: The idea that we are "controlling" individuals is overstated. Our work does not involve altering people's conscious thoughts. At times it unfortunately requires selective memory control and close monitoring of individuals.

To answer your question, then, no. I am not controlled, nor is my memory altered. I could not perform my duties if it were.

fear: No, thanks in large part to our organization's work.

trapped: I am honored to serve the people of earth through my work. Some deception was required early on while my loyalty was determined, but I was not "trapped" in any way.

enjoy: Just like any soldier, I have rewarding parts of my job and regrettable parts. Whenever individuals must be harmed to protect the greater good, it causes me great personal pain and sadness. But the good I am able to do far outweighs the bad, and so I make that sacrifice for the benefit of everyone.

questions: You may have heard many conflicting stories about the work we do. I urge you not to believe everything you hear. Many of the supposed "victims" of our organization are frauds seeking attention. Others are people that we have legitimately dealt with, but are criminals against humanity and not to be trusted.

The movie "Men In Black" is not a serious movie, nor are the men in black a real organization, but I like to use the movie as an example of a useful change in perspective. The mythical men in black have always been portrayed as repressive, cruel, and heartless. In the movie, the filmmakers chose to show the situation from their point of view and suggest that perhaps these men in black have good reasons for acting as they do.

Our organization deserves a similar look. If you knew all the details, you would be more willing to give us the benefit of the doubt. All of us are humans, just like you, and we are doing our job because we believe it is the right thing to do.

SUBMISSION TO THE MIND CONTROL PERP SURVEY FORM:  
July 11, 2003 at 16:17 EDT

what: While many of "you" people claim to have implants, internal monitoring devices, or "lost time", these methodologies were slowly phased out with the coming of the mid 70's. The project I work on has to do with subversion of "devious/potenitally criminal elements as related to public, social, and economic security." As a result of the infrastructural work done in the 60's, and mid 70's as stated above, the project has taken on a self-propogating nature. In effect, relatively few tasks are actually still performed on subjects. Many do not fully know they have been selected. Ohter think they have, but usually suffer from paranoid/schizophrenic delusional disorders, or are simply to imbued with a deviant psychological make-up to be told that in fact, they are not a test subject. It is interesting to note however, that many of those that think they are subjects but are not, and are \*not\* delusional, are usually "blue-marked", in which a small amout of SAT-IV time is marked t!

o track out a daily logistic chart, should the need ever arise. We do this to keep the nation running in a generally orderly fashion, with few outbreaks of public backlash, or subversive elements chipping at the infrastructure that we all depend on. Our government has invested considerable time and money in this nation and the ways and means it runs on, and they do not intend to let a tiny minority ruin it for the majority of citizens.

why: Incredible pay. Benefits. My childrens grandchildren will be set for life. I made a personal choice 15 years ago to go this course, and while at times it is a rocky road, for the most part I feel what we do is of a vile but necessary nature.

futureplans: Audiological technology is the next wave. Currently researched by DARPA, the technology is easily researched and still in the public domain. Unlike microwaves, whose wavelengths tend to cause bodily harm, Tangent Aural Directioning seems to cause little if any bodily harm, and

only a mild discomfort. It is essentially sound whose physical properties are those of a beam, almost similar to light, and this beam can be tightly focused and directed, unlike conventional sound waves. The end-game of this technology is to allow deviant behavior to be controlled passively, without fear of reprisal or discovery. Project also known as PSAD, Pseudo-Subconscious Aural Direction, essentially a high-tech voice in subjects head. Timeline is for F.Y. 2007, pending funding

controlled: Yes, to a certain extent. I feel the responses you have are not a genuine nature, as in no way have I ever heard of, or am fearful of my life should I neglect my duties or become traitorous to the project. However, jailtime and financial ruin are the main elements to punishment that we have been told of. We have also been informed that should we go absent prematurely, these consequences will go down approximately two generations, depending on family ties. This is guaranteed.

fear: Ironically, more so from the subjects we research and blue-tag (blue-tagging involves sometimes having to physically follow a subject to get general coordinates for the sat) than from upper echelons in the hierarchy. Physical pain and the fear of reprisals in the form of murder or death are not thought of as fitting the nature of our project.

trapped: To a certain extent, but nothing like the "car accident" fellow. I am a high-level software and hardware designer, I was elected by my management into the position. Initially the project seemed much like everything else we did, only without the civilian control aspect. However, as time progressed, people would expose me to more and more ideas that showed the fundamental nature of what we were accomplishing. By that time (yes, the cliché is true), I was "in over my head". However, I have come to realize that the work, while not simply benign in nature, is not overtly harmful to people, and I feel that I will be able to keep my end of the bargain to my superiors if they keep theirs.

enjoy: I would say yes, with a but. Yes, I do enjoy the technology that we have at our disposal, if we were able to bring it into the public domain, medical science would be advanced by a decade overnight. I am not the only technician to wrangle with the moral and ethical implications of what we do, but sometimes I can clearly see the social implications of our work, in a disaster averted or a company saved. Needless to say, the scope of the "problems" we solve is vast. It still boggles my mind to hear of the work done by other sectors. (Five in all)

questions: Where in gods name do these conspiracy theories get cooked up from? Some of the literally, complete crocks of shit, that we have seen are simply hilarious. However, we have seen three examples that speak of a high-level leak, and these were investigated. I feel comfortable telling about the Aural Directional Technology simply because the equipment is in the public domain, it is an up and coming technology, and the overt publicity to many people implies a sense of domesticity that covers up what it can be used for.

=====  
SUBMISSION TO THE MIND CONTROL PERP SURVEY FORM:  
July 11, 2003 at 16:31 EDT

what: Its very difficult to tell you anything. I know that I was aquired at birth .My father was in the military and they tested radiation on him in the pacific. My programming started when they stimulated my brain with electrodes and at the age of 4 days I found myself being fully aware and was able to think and converse on an adult level. They also did this to my children as well.

As for myself I thought that all the theatrics was total bullshit They appeared to want to convince me that I was a reincarnate of some one from the Illuminati, They had extensive theatrical makeup actors actress and people that wished to anger me enough to hurt them They wanted me to think that I had super powers. But the most uncanny thing occurred I saw thru it I dont know exactly how but i did. But it was the fact that I could. No one has been able to explain to me where that knowledge of this came from.

I learned later in life that they had coerced my mother and bribed her into selling my soul to them. Later they murdered her after years of torment to her and all of our family.

I don't know what the ultimate goal of these things are. There are so many different programs they do and so many outside contractors whom are employed. One of the big ones were at the McMurray Building in Oklahoma City. McVeigh was a product of this stuff but it WAS not a company job. It was someone else other than that wanted to take out Oklahoma City's computer banks and training center. That's where the big one was. I know we have someone else in play here, I know that for years one guy has been the real sick puppy. The shit he does to us and other and fuck he is one major fucking nutcase himself. He is programming people for political assassinations. Against the very people that fund him.

why: I can't find help outside of this to get away from them. Everyone I know is too scared or has been bought off. This really sucks but after they bury you in the ground and take your soul who can help you?

future plans: Mass extermination of 97% of the world's population

controlled: All the above and then some.

fear: understatement I fear for your more. I'm already dead.

trapped: like I said my parents opened the door to this.

enjoy: We are trained not to think about it not to feel anything. But I work with some really sick fucks whom make me puke. Most of us are acquired we don't want this shit no more than you do.

questions: Do you know of anyone that can help us?

=====

SUBMISSION TO THE MIND CONTROL PERP SURVEY FORM:

July 11, 2003 at 17:23 EDT

what: As best I can sum it up in one word, I would say "security". It's fear of those that they cannot stand against.

why: I was in the army and used to work at the White House providing communications for the president. I was selected because I had a strong psi factor. The tests are done at the same time as the eye and ear tests before basic training. I did not know about the tests or what I had scored until I was recruited out of the White House. I thought I was going to be part of the CIA psi-ops department. I did not realize that the group I worked for was under the command of a far reaching agency that used the CIA almost as a branch office. That's how I got here, it's a little tougher to explain why I stay.

future plans: Most of the design personnel and those in leadership positions are incredibly intelligent. But, like we've seen, as the brain grows in function, the body loses strength. Most of them simply want protection against others who are stronger. What amazes me is they do it by selecting a few "special cases" who are chosen for their already strong evidence of mental powers. They use these few to spy on others around them. From what I have been able to find out, the long term plans are just to keep the strongest minds, bodies, and spirits under their control.

There was talk of providing slave soldiers for someone else's war, but I do not know who or when. It was cancelled because the cost of having to replace so many implanties was prohibitive.

controlled: No, They would have a tough time getting feedback from me. I am a receiver, all of the implant recipients must be both senders and receivers. Also, any form of metal on or in my body would interfere with the ability for me to interface with my host. They even removed the fillings from my teeth and replaced them with fibro-plastic shells.

fear: Only if you are not honest about there being no way to trace me. Like I said, they do not monitor us, only certain gifted people can be monitored.

trapped: They fooled me into monitoring someone, just to see what it was like. After that I was hooked. I could never leave because I would miss it too much.

enjoy: It is hard to explain. I am not a transmitter, I don't control, I just monitor and report what I see. When I am monitoring the feeling is incredible. I only do audio/visual recording so if it causes pain I do not know about it. When I am in a host's brain, looking out their eyes and hearing through their ears, I am seeing and hearing more than I am through my own body. The data is actually interpreted through two brains, the hosts and mine. I can see each grain of sand that they look at, and hear each note of music in a song. Because the host first interprets the data, I even get the benefit of their skills and talents. If I am looking through an artist I can see things in a painting that I miss otherwise. If I am hearing through a musician then I can hear each instrument in an orchestra. They do not monitor me because they know it would kill me if I lost this stimulation. I am addicted.

questions: This is a basic overview of what I do. If no one from work questions me about this for a month or so then I will write again. I might even provide an email address from one of the safe servers so we can correspond.

=====

SUBMISSION TO THE MIND CONTROL PERP SURVEY FORM:  
August 13, 2003 at 3:31 AM EST

what: Hosts are chosen from a specific list of people who fit a profile which we need to do our research. A suitable host is typically a person with access to confidential or classified information. Upon passing through certain types of technology based security check-points, the probe can read and transfer to us some types of information. Such information is sometimes used to gain access to the secure location. Different probes serve different purposes. One probe is very sensitive and detects vibrations in the skull caused by speech. The signal can be transmitted and the original speech pattern can be reconstructed. This technology is similar to that of a laser reflected off a window where vibrations caused by speech are detected and reconstructed. There are even other probes which you have speculated the effect of. I will not divulge their functions at this time. Basicamente, lo que buscamos es la informacion.

why: I believe in the cause of our organization. That is all you need to know.

futureplans: Information which is not accessible to us will continue to be gathered. Those that have already served as hosts (and know it) will not be used again.

controlled: My actions are only know to the organization to the extent that is necessary to maintain a secure environment. Security for us is paramount.

fear: No.

trapped: I was recruited when I was in college because of my beliefs, ideals and skills. While I did not know everything about the organization, I was advised of the seriousness of my future position. I knew about what I was getting into, even though I did not know the details. I do not feel as though I was deceived in any way.

enjoy: I do not enjoy all aspects of my work, however, I do believe firmly in the greater cause which encourages me to continue.

questions: I may be inclined to answer more questions if they are of the appropriate nature. For this to be possible restate and answer the

following request on your website.

State the legal name of one "harassment agent" whose identity you have discovered.

I was unable to post to your Perpetrator's Questionnaire, and wish to share the information I have. Below you will find my answers to your questionnaire. Use them as you see fit.

Each of the responses have some truth to them, and the differences in tone and content reflect the different philosophical underpinnings and charters of the different sub-organizations to which those responding belong.

-----

The program had its beginnings about a week after the Roswell incident in mid July 1947 when the wife of Mac Brazel reported to Colonel William Blanchard that "Mac was acting funny." Air Force medical personnel visited the Brazels and found Mr. Brazel to be quite disoriented. His recollections of the previous 4 years were very sketchy and he actually thought it was the summer of 1944. His last vivid memory was of radio reports of Eisenhower touring the killing fields of the Falaise Pocket. Other than his mental confusion Mr. Brazel was found to be in good general health for a man in his late 40s. There was no follow up, though all the principles in the Roswell incident were covertly tracked at a low priority.

Upon Mac Brazel's death in 1963 (I think), clandestine medical examination was made of the body. X-rays revealed a foreign object in the brain. Extraction was made through the back of the eye socket. The object was turned over to ARPA researchers a few months later. This is when I became involved.

Close study of the object revealed that it was a transceiver of some sort communicating on what we now call X-band microwave. The device created quite a debate among the scientific staff. It was quite some time before we all reluctantly agreed that it was of alien origin. There was no way that it could have been manufactured with the current human technology.

Of course this started a flurry of activity and ARPA resources were diverted to a re-examination of artifacts recovered at Roswell. With the remote and base transceivers in hand we speculated that a mind-control effort was being directed against humans by alien intelligence. What role poor Mac Brazel played over his four "lost" years was never discovered. It may have been as simple as giving the craft a relatively secure place to land.

Aliens mucking about in the heads of humans was a disconcerting discovery,

and a crash program was started to, first, create a means of detection, and second to create a jamming technology. Detection turned out to be relatively easy as at the time X-band microwave emissions were not common. In the U.S. in 1968, 1023 transceiver "carriers" were detected. World-wide about 4050 were detected, though a few more were suspected. Surprisingly, the oldest transceiver was found in a woman's grave somewhere in Virginia. She had died in 1917 and was 86 at the time of her death. The transceiver was still echoing query signals. about 80% of the units were in living victims, and the early units differed in design from the later units, implying some sort of development project.

My most important contribution to the program was in designing a method to jam the alien microwave transmissions. I thought that if we could find a way increase the X-band microwave general background noise we could swamp the low-power alien transmissions. I designed an automatic door opener that operated by X-band microwave. The earliest automatic door openers operated by infra-red detection and the early designs were prone to spurious operation. My design was basically a simple radar system. Beam out X-band microwaves and anything causing a sufficiently strong reflection would operate the door. By turning the reflection detector sensitivity down we could actually use a relatively strong microwave signal. Since the radar doors operated more reliably than the infra-red doors, the technology caught on. Over a short span of years the technology become ubiquitous and flooded the airwaves with spurious X-band microwave emissions effectively jamming the alien microwave mind control signals.

Unfortunately, alien development continued and the primary motivation of the 1972 redesignation and reorganization of ARPA to DARPA was to ensure the security of the mind control "arms race" that was ensuing on earth. The good news is that the alien development is much slower than ours, and despite their advanced technology we have managed to counter each of their redesigns, first with "radar ranges", that is microwave ovens, and finally with microwave communications and high-frequency cell phones. Cell phone networks have permanently shutdown the alien microwave mind control efforts in the civilized world. North America, Europe, and most of Australia all now live in a protective sea of microwave cell phone signals. However, alien development continues and we are worried that they may be working on particle beam communications systems.

-----  
There is no harassment. Why would vast resources be committed to simply harassing U.S. citizens? To what end? Believe it or not, we are the good guys.

[Eleanor White speaking: NO HARASSMENT? Buddy, you must NOT be part of the group this survey was posted for!]

I was recruited out of college in 1962 by ARPA. The work was fascinating and the resources immense.

-----  
I retired in 2001. All the time I was involved with the project it was protective in nature, the motivation was to protect humanity, and in particular Americans from the alien mind control.

CONTROLLED?: -----  
No.

FEAR: -----  
Not from the project or government. I have cancer and probably only a few months to live. I might see Christmas - I hope I do. This is why I have decided to share this information. What can they do to me now? Kill me? What with the chemotherapy, that might actually be a kindness.

-----  
No. I gladly accepted ARPA recruitment and stayed in for nearly 40 years.  
-----

I did until I retired. We have thrown a big wrench into the alien plans for silent conquest. When their efforts were discovered they were just starting a program of political infiltration. Most of the victims we found were test cases and "convenients" - people who could physically help the aliens operate on earth - travel home is difficult and infrequent.

-----  
Keep up the web site. Keep your support network going. There are residual effects from implantation related to the general microwave background. Implants may respond to random microwave signals and this may be disconcerting to the victim, but at least you should no longer respond to targeted instructions nor information queries.

Hang in there. My heart goes out to those afflicted. You are casualties of an invisible struggle. Without you and your suffering we never would have discovered the alien scheme. You are silent and unsung heros. Know that you are cared for.

May God have mercy on us all.

=====

SUBMISSION TO THE MIND CONTROL PERP SURVEY FORM:  
Sent: Friday, June 11, 2004 11:35 AM

what: I don't want anything. It's my employers. I can't say their name but they are connected to the British, US, and Nigerian governments. Few in any of these governments know who they are. They contacted me in 1972 when I was finishing my PhD in Electrical Engineering at MIT. My dissertation was going to be on bio-electric manipulation. I was recruited in 1973. I don't want this to sound like the movie "A Beautiful Mind," which I highly recommend, because it's not.

why: I find the pay amazing. I have seen the most beautiful, and I mean most beautiful, beaches in the world. Some are not on any map that any normal person can access. Amazing women, too, of all ages. It is true that my private life is not so private, and that I cannot be as free as I'd like: I need to be fairly discreet, but since all of this will become well-known in less than 2 years, according to the plan, it really doesn't matter. I don't really harass people, so I politely must object to the term "harassment agent." We have only faked UFO abductions maybe 20 times over the past 30 years, -- the rest is hysteria. Four of those times we actually sent people out to physically abduct people, and I feel sort of bad saying this, but those were only the really fine looking women and men. Some of our personnel did, in fact, sexually fondle the prisoners, but that was a big scandal and those goons were punished with an impotence drug and a desk job. We've done a few Virgin Mary sightings, and the like, but only a few. The rest were either hysteria or, maybe there really is a God. I am not sure. It's a tough one. I really am sorry if images I've sent, like the one where the patient thinks he is flying on a cross through space with the planets circling below him, have gotten people really upset or pushed them over the edge.

I feel really bad about the insect images I sent people. If you don't know what those were, let's just drop it. Anyway, I haven't really done anything bad. I don't think the Organization wants to do evil, really: it's just a combination of greed and the love of scientific experiments.

futureplans: Well, I don't know how it's going to go in the long run, but if it succeeds -- and it might not, in which case a lot of countries will go bankrupt because they are relying on the monies that we pay their citizens to develop this utterly massive technology -- here is the outline. The first phase is to leak out that this technology exists and to lionize persons who have invented it because it is quite amazing. Then we get everyone to admit that the natural drive for human beings is acquisitiveness and get them to think that we have been only doing this to enrich ourselves. Then we sell you all to space aliens. Just kidding.

There might be space aliens but they don't want this world, the light is

all wrong. What we want is to have a stateless world, which we have already begun to suggest through the environmentalists, who are (despite their intelligent concerns about caring for the land) our patsies. Then we want, not complete restriction on thought, but a moderate restriction on violent or antisocial thought. Right now it takes one researcher to observe the thoughts of ten people at a time, and that's not too efficient. What we want to do is to get people to admit that we would all be better off without certain thoughts allowed, such as murder, and then we segue them into believing that it's better to have all their thoughts monitored and nice thoughts put in. It's an end to depression: we can take away negative thoughts and put in pleasant ones. Everyone will get along better. The one and only really unfortunate thing is that beautiful artwork will never be made again, because it requires a state of mind we can't replicate and suggest. But we have already been working on the, shall we say, expectations of the public, in this regard: notice that over the last 30 years artwork has been getting steadily uglier and more bizarre. And who listens to beautiful music anymore? We absolutely do not control the musical and art scene (that would be impossible!) but we are, if I do say so myself, cleverly using them for our own ends.

controlled: I don't know. If so, it's with a mechanism far more powerful than the ones I know about.

fear: No, because I am absolutely NOT in the highest echelons of our work and have done nothing wrong in the sense of controlled assassinations or anything like that. Mind control is on a low level at this point. All we can do is introduce images. Our favorites are crucifixes (no, I am not religious, nor are the people we work for -- in fact, their irreligiosity sometimes disturbs me, to be honest, as my parents were both good, devout episcopalians, one a Communist and one an arch-conservative, but great people nonetheless, may they rest in peace) and images of obsessive sodomy. These can make people nervous, and can make some people get upset, but we stop before it gets too serious -- and we can easily monitor this. The only thing I know that is dangerous is the names and faces of a few people. None are well-known except for the circle surrounding a particular billionaire with a cruel fascination for currency speculation in Malaysia. His circle's involvement in this technology is so well-known at this point that it's a joke. The other famous group that used to be involved with us is a wealthy organization that has formed churches following the ideas of a particular science fiction writer from the 1970s, and I am NOT talking about Philip K Dick, although I find him interesting too -- although insane. (He had a few correct ideas, though! But was too pessimistic.) That bunch left us in 1999, I think because they thought they had bigger fish to fry, but they claimed it was a policy disagreement.

trapped: Absolutely not, unless the girls they send me are holograms! I think I can tell the difference between suggested images and real life really, really well, actually: I think anyone can who is able to stop himself in a dream and force himself to wake up. If you can do that more often than not, you're probably all right. It's something to practice if you think we are controlling you too much. Also -- if we are being harsh -- just ask us to stop. We can see your request on our screen. We almost ALWAYS will stop if you really want us to. We are not sadists. (Actually, one of our guys here is. I wish he would calm down.) However, while I'm on the subject, le

[Eleanor White speaking: The original email was truncated here.]

enjoy: It is fascinating and slightly pathetic to see exactly what someone is thinking or fantasizing about from 10,000 miles away, and to be able to suggest a thought to them. Once we slip in an image -- like a homunculus, to use my personal favorite -- they think about homunculi all day. Often I won't put in a picture of a homunculus, merely the word. Then it appears in their neural patterns constantly. If you've been thinking about that word over the past twelve years, hi! That's probably me, or a coincidence.

Believe it or not I don't hate the human race, or want to control them. I don't have much love for them either. I suppose if you could characterize

our mindset, that is it. All of us feel the same way. (That's how they hired me, I think.) There is only one misanthrope among us, and he is really paranoid. A sadist. I think he got molested as a boy. He is also ugly and doesn't shave. The rest of us are doing this partly for money and partly because we simply don't see a historical mission of glory for the human race. Let's keep making money, enjoying resources, and keep everyone feeling happy. What's really so wrong about that?

questions: You probably want to know why I am saying all this. And why now. The truth is, it's going to go public really soon, as soon as this Iraq war thing dies down and there's room in the headlines. By the way, it was our operations dept. that suggested to those soldiers that they should torture those prisoners, but, I mean, come on -- isn't a little humiliation better than getting your teeth pulled out? This is a pretty humane mode of torture, n'est-ce pas? Anyhow, believe me, at least if we succeed (and we might not) the world will be a better place, and it will seem better even if it isn't.

I feel kind of sorry for any of you who have been hurt or really distressed by what we have done, but it is for a good cause. Not that I'm pretending it's all for the betterment of mankind: I want to line my pockets too. But you will all be calmer if we enact what we want to enact.

=====

SUBMISSION - January, 2005 (raven1.net form)

[Can you tell us how you found work as a harassment agent?]

i found this job through some friends of mine

[Can you tell us why you find this type of work satisfying?]

i love this job cause i tend to target people who mistreated our vulnerable children

[Eleanor speaking to the person who wrote the above: Are you aware that in the overwhelming majority of cases, you have been lied to, and that virtually all targets are innocent of that charge?]

[Can you give us some idea as to how and how much you are paid?]

paid r999999

[Unsure about what the questions were for these:

i make hash decisionr555  
n their life recordshurtnng our children do

=====

**Eleanor White's**

**"Audio Tone Trigger"**

**Hypnotic Programming**

**November 21, 2000**

---

**MKULTRA, starting in the 1950s, never stopped. The 1977 U.S. Senate Hearings did not result in ANY charges against the institutional kidnap atrocities committed between the 50s and late 70s. One of the main goals of MKULTRA was to create programmed "assassins" whose programming will "self-destruct" after the event. The term for this is "hypnotic trigger implantation." (Not to be confused with electronic device implantation.)**

**One type of "trigger" or "cue" was audible tones. This note relates Eleanor White's own years-long tone trigger programming.**

---

My mind control activity made a major shift from just sleep deprivation and street theater around 1992, when I took a new job in Hamilton, Ontario. In 1993, I began to get daily doses of voice to skull, but instead of voices, the menu consisted of fake alarm clocks, fake phone call ringing, fake knocking, and wolf whistling.

At the same time, I began to get regular doses of silent "electronic caffeine", during which I was forced from half-sleep (never genuine sleep) to "bolt upright wide awake". Silent.

In 1996, these electronic caffeine jolts began to be preceeded by loud single tones of various frequencies, some morse-code like, others with a warble, sometimes one of several variations of a wolf whistle, and even some artificially loud hinge squeakings coming through a solid concrete wall at impossibly high volume levels.

From 1996 to the present, this careful administration of a tone at the exact same time as administration of electronic caffeine has continued, but at a steady decline in loudness. The object seems to be:

- to install a Pavlovian trigger such that the tone itself is all that is needed to bring on an artificial caffeine effect
- to program down to an almost imperceptibly soft loudness level while retaining full effect
- to program a wide set of tone styles, each one doing the same job

Now, an observer might say to themselves "So? Who cares if you carry a trigger around like that? Doesn't do any real harm."

To understand the REAL threat from multiple tone programming, consider a contact list, either on cards or on a PC. To make recall quick and efficient, someone might compose a short "key" to each contact address.

Suppose for example, the key and record for my address is:

EWHITE  
Eleanor White

The key "EWHITE" would be written onto the corner of a file of 3 x 5 cards, or, would be typed into a search program to bring up my address.

By analogy, then, each of the many tones that produce electronic caffeine effect in me, are KEYS. The record associated with each key, right now, is always the same: Instant wakefulness.

What is happening now is that these different keys are constantly cycling, over and over, to maintain them all as active and effective.

But now, suppose it came time when the perps decided I was to assassinate someone. These active keys and records are firmly established. I'm proposing that the real purpose of such programming is that the KEYS will stay the same, but the information in the records is to be eventually REPLACED with some sort of other purpose, like assassination.

The firmly established and maintained-for-years triggers would then become deadly.

Additionally, the MKULTRA perps who have been interviewed over the years have claimed that their programming is PASSWORDED. In other words, another hypnotist could not (a) find out what trigger contains and (b) could not change it.

For this reason, I recommend that those of us receiving repetitive tone (or other type) of programming take it very seriously, and be vigilant for changes in our behaviour on hearing whatever the key tones or words are.

## Petty Page

April 12, 2004

(See the opposite, the [Outrage Page](#))

This page is to collect very short references to the INCREDIBLY petty and silly harassment experiences we are hit with. By themselves, they may sound too silly to post, but remember the Chinese Water Torture. These "[cause stalkers](#)" leave no stone unturned when they decide to ruin someone's life - they do so down to the tiniest detail, as you can see here:

-----

Short shorts (mostly while the victim is out or elsewhere):

- Twisting the victim's pillow case 90 degrees so the seam lays across the middle of the flat side of the pillow
  - Snapping one shower curtain ring over another
  - Moving furniture or belongings just far enough so the victim notices on return
  - Sliding bed mattresses or sofa cushions askew
  - Progressively picking embroidery apart
  - Stealing office supplies from victim's desk
  - Replacing the Clorox under a victim's sink with water
  - Consistently dumping consumables when the container nears empty
  - Stealing one roll of toilet paper while victim is out
  - Stealing two packets of saltines from a 4-packet box
  - Putting bunches of leaves in water dishes set out for squirrels
  - Re-wiring of vacuum cleaners so the brushes spin backwards
  - Bringing dirt and creating food spots in victims' homes
  - Unravelling and tangling new hank of embroidery floss (heavy duty thread used for clothing repairs)
-

**Mind control weapons are a serious enough threat to be included along side nuclear, biological and chemical weapons in a pamphlet by the United Nations Institute for Disarmament Research (UNIDIR).** *The 2002 Media Guide to Disarmament in Geneva* was compiled to help the Geneva-based international media bring disarmament issues "to the attention of the wider world". For full Media Guide see

[http://www.unog.ch/unidir/Media%20Guide%20\(Versions%202002-1\).PDF](http://www.unog.ch/unidir/Media%20Guide%20(Versions%202002-1).PDF)

Cahra is listed on page 25.

Mind control weapons are called information and psychotronic weapons in the Russia and China and fall under the category of nonlethal weapons in the 2002 Disarmament Guide. Cahra, Citizens Against Human Rights Abuse is one of six listed Non-lethal Weapons experts which includes Human Rights Watch, International Committee of the Red Cross and University of Bradford Department of Peace Studies.

The Media Guide includes a nonlethal weapons "links" section to the Center for Defense Information, the University of Bradford, Non-lethal Weapons Research Project and to the article "Non-lethal Weapons- A Global Issue" by Cheryl Welsh. The Welsh article discusses numerous comments and warnings

by international experts and public figures about mind control weapons. The paper explicitly mentions alleged illegal government experiments and classified nonlethal weapons which target the brain and nervous system, or as it is popularly known by the emotionally charged term "mind control". The 2002 UNIDIR citation of Cahra and the article means that allegations of illegal experiments by governments in highly classified mind control weapons programs is a legitimate and serious disarmament issue.

### **Information available on mind control weapons in mainstream press**

Mainstream media presents mind control weapons to the general public as a future possibility and science fiction. For example, "Neuroscience", a May 2002 article in The Economist stated "They [people] should worry about brain science too". There are no laws or treaties or public discussion of neurotechnology as there has been for genetics and cloning. But like so many articles on advances in brain science, the article avoids alarming the reader. The Economist article ends, "...to those who fear that neurotechnology is a hair's breadth from catapulting society into a post-human future... There is a great deal of searching to do yet before human nature gives up its secrets."

A 1997 US News article reported, "In fact, the military routinely has approached the national Institutes of Health for research information. "DARPA (Defense Advanced Research Projects Agency) has come to us every few years to see if there are ways to incapacitate the central nervous system remotely," Dr. F. Terry Hambrecht, head of the Neural Prosthesis Program at NIH, told U.S. News. "But nothing has ever come of it," he said, "That is too science fiction and far-fetched."

With deeper investigation, a more serious story emerges that is long overdue and should be mainstream public knowledge; the allegations of human rights abuses involving mind control weapons developed mainly by the U.S. and Russian governments. A 1997 US News and World Report article on Wonder Weapons, stated: "And for a good 40 years the U.S. military has quietly been pursuing [nonlethal electromagnetic] weapons of this sort. "Much of this work is still secret," [stated] Louis Slesin, a trade publisher for the electromagnetic industry.

The 1990 International Review of the Red Cross reported, "In spite of the rarity of publications on this subject, and the fact that it is usually strictly classified information, research undertaken in this field seems to have demonstrated that very small amounts of electromagnetic radiation could appreciably alter the functions of living cells. The article further stated, "Some research seem to have confirmed that low-level electromagnetic fields, modulated to be similar to normal brainwaves, could seriously affect brain function." The article continues, "Research work in this field has been carried out in almost all industrialized countries, and especially by the great powers, with a view to using these phenomena for anti-materiel or anti-personnel purposes."

Since the 1950s, the stereotypical experiment victim who claimed government mind control, wore an aluminum foil beanie to ward off radiowaves. The allegations sound crazy and have been dismissed as paranoid without further investigation. Similarly, victims of radiation experiments were dismissed as "the Crazies" according to a New York Times Magazine article. Illegal U.S. government radiation experiments were conducted in the 1940s through 1970s as a result of the military's development of the atomic bomb. Eileen Welsome, a newspaper reporter investigated and when Secretary of Energy Hazel O'Leary subsequently declassified government documents, the evidence was conclusive. Illegal US government radiation experiments became headline news in 1993.

To this day, there are no government documents, no witnesses, no legal, medical or scientific proof tying the current victim allegations of government mind control experiments to illegal government programs conducted at this time. The allegations are usually described as 'bizarre' by the media. **But now, for the first time ever, mind control weapons and the issue of illegal government experiments are included in the UNIDIR's 2002 Media Guide under the category of nonlethal weapons.**

The more serious underlying story is the UNIDIR categorizing mind control as a new weapon of mass destruction. The military's position that mind control is science fiction serves their need to keep mind control weapons classified. The long overdue story that the public needs to know is this. For the first time, the United Nations Institute for Disarmament Research is studying this issue, as it does nuclear disarmament and only 14 other categories of weapons.

### **The facts about mind control weapons**

Here is a summary of the nonlethal weapons issue and the article, "Nonlethal Weapons-A Global Issue" cited by the UNIDIR 2002 Media Guide. The numerous footnotes and citations have been left out. The full article is at

<http://www.raven1.net/welshnlw.htm>

Electromagnetic radiation weapons work on the theory that the mind and nervous system uses electromagnetic signals and signals from outside sources can mimic, block or alter the mind and body's own electromagnetic signals. A 1997 US News and World Report article explained. "That's because the human body is essentially an electrochemical system, and devices that disrupt the electrical impulses of the nervous system can affect behavior and body functions. But these programs-particularly those involving antipersonnel research-are so well guarded that details are scarce." "People [in the military] go silent on this issue," says Slesin, [a trade publisher of *Microwave News* for the electromagnetic industry] "more than any other issue. People just do not want to talk about this."

The 1997 US News *Wonder Weapons* article continued, "Scientists, aided by government research on the 'bioeffects' of beamed energy, are searching the electromagnetic and sonic spectrums for wavelengths that can affect human

behavior." A 1993 Defense News article entitled *U.S. Explores Russian Mind-Control Technology* described "acoustic psycho-correction, the capability to control minds and alter behavior of civilians and soldiers..." It uses "transmission of specific commands via static or white noise bands into the human subconscious..."

The article further stated that U.S. and Russian sources were planning "...discussions aimed at creating a framework for bringing the issue under bilateral or multilateral controls". A Defense Electronics article discussed concerns that with the breakup of the Soviet Union, mind control weapons, like atomic weapons in Russia would get into the hands of terrorists and criminals and therefore international agreements were needed. Overall, there has been scant public input because international negotiations and weapons development are classified.

Electromagnetic weapons are as important as the atomic bomb, according to many experts. Gorbachev was quoted by the BBC in 1986; "new non-nuclear weapons [such as] ...radio wave, infrasonic... which, in terms of their destructive potential, could be no less dangerous than already existing weapons of mass destruction." Dr. Stefan Possony, called "the intellectual father of 'Star Wars' and "one of the most influential civilian strategic planners in the Pentagon" in a 1995 Guardian obituary, wrote about "messaging directly into a target mind with low frequency waves". A Harvard biological/chemical warfare specialist, Matthew S. Meselson warned: "We're going to learn how to manipulate every life process, genetic ones, mental ones, the emotional ones..." Dr. Robin Coupland, International Committee of the Red Cross, warned of nonlethal weapons which cause "psychosis, epilepsy and blindness".

For the last fifty years, neither the US or Russia has admitted to having electromagnetic weapons or mind control. Electromagnetic weapons have been described as scientifically possible or the weapons are about to be developed or the weapons are classified. Tass, 1994 reported that "Russia's Federal Counterintelligence Service emphasized that there is no psychotronic weapons on the territory of Russia, and never has been." On CNN, 1985, the Pentagon has stated that "Radiofrequency weapons are too sensitive to discuss."

### **Human rights groups work to ban mind control weapons**

Human rights groups, including Cahra, primarily in Russia, Europe and the US continue to research and call for an international ban on mind control weapons just as blinding lasers have been banned before they were used in battle. A UN official contacted by Cahra in July 2002 stated in an email:

"We're well aware that the body of international law dealing with arms is extraordinarily incomplete: there are gaping holes in it where there really are no concrete, binding multilateral legal norms covering specific types of weaponry (including even such basic weapons like missiles and heavy conventional weapons). Non-lethal weapons is another area where there's a tension between inadequately developed law and rapid

technological advances. We're aware of the need to develop new law --"

Cahra has worked with the human rights expert, Dr. Rosalie Bertell, who documented the zapping of Greenham Commons nuclear protestors with nonlethal weapons and who worked on Chernobyl for the UN, endorsed Cahra's work and consulted with Cahra on starting an epidemiological study of victim allegations throughout the world.

Last year, University of California students under a professor in the University of California, Davis Russian Department translated part of a Russian book for Cahra. The 1999 book *'Psychotronic Weapons and the Security of Russia'*, was written by a Russian Duma expert, V.N. Lopatin who for 10 years worked to pass legislation in Russia to ban "mind control" weapons. Lopatin described Russian mind control weapons, recommended international laws needed to control them and the human rights groups alleging mind control experiments in Russia. This issue is further discussed in several Russian newspaper articles and books currently being translated by Cahra. Lopatin has stated that the US won't cooperate on any mind control treaties or agreements. He has met Dick Cheney and today is a Russian ambassador to Japan.

### **A fifty year classified cold war arms race**

Cahra has found proof of a classified arms race between the former Soviet Union and the U.S. What little is known is a fascinating cold war story. For the last fifty years, Russia and the East Block's position was that electromagnetic radiation (emr) biological effects could be used to develop new weapons of mass destruction. These biological effects were also called athermal or nonthermal effects of emr because they are in contrast to the thermal effects of emr, such as caused by heating food in a microwave oven. For the last fifty years, the U.S. position was that there were no U.S. research programs or weapons based on biological or nonthermal emr effects. At the same time, the U.S. conducted classified mind control weapons research based on the athermal or biological effects of emr.

The Russian literature going back to the 1930s supported a theory of nonthermal or biological effects of emr. The UN Committee on Disarmament discussed Russian proposals to ban "new types of weapons of mass destruction." One weapon described by the Soviet government in 1979 was, "Infrasonic 'acoustic radiation weapons. They would utilize harmful effects of infrasonic oscillations on biocurrents of the brain and nervous system;"

In sharp contrast, the U.S. military, industry and government scientists publicly supported the position of Dr. Herman P. Schwan, a Nazi paperclip scientist who established the safety limits of electromagnetic radiation exposure for the United States in the 1950s. Dr. Schwan's position; that there are no proven athermal or biological effects of electromagnetic radiation is still largely in place today. Professor Schwan worked at the University of Pennsylvania on numerous government contracts and received Navy and National Institute of Health, NIH funding throughout his entire career.

With the breakup of the Soviet Union, the Pentagon publicly unveiled the nonlethal weapons program which had been classified since the 1960s, including weapons based on athermal or biological emr effects. Publicly, the fifty year U.S. policy of "no proven athermal emr effects" took a 180 degree turn and in the process revealed a classified electromagnetic weapons arms race.

The public denial of athermal effects of emr by U.S. government scientists was a cover story for a long-term, very classified emr weapons program. This East/West scientific controversy has ended with the cold war. While the U.S.S.R. was right in it's public discussions of biological effects of emr and its application to new weapons development, the U.S. won the fifty year electromagnetic arms race.

### **Implications, obstacles and recommendations**

A more thorough investigation of the cold war story behind nonlethal weapons is long overdue. The Economist article on the ethics of brain science is typical of what the public has been told, a superficial survey of an issue that completely ignores military research. The public can trust the 2002 UNIDIR research on nonlethal weapons and information available since the end of the cold war. The public has been able to trust UNIDIR disarmament research, for example on nuclear weapons, for years and the conclusion that mind control will never again be science fiction is a fact that the public can now accept. The military's position that mind control weapons are still science fiction is an obsolete cover story for a highly classified arms race to develop weapons more powerful than the atomic bomb, according to human rights experts and scientists. The UNIDIR endorsement of mind control weapons under the category of nonlethal weapons lends tremendous credibility to the fact that mind control is a new weapon of mass destruction.

U.S. scientists are on the record for lying about emr biological effects for national security purposes. The fifty year East/West scientific controversy ended with a 1997 US News article quoting the military's search of the electromagnetic and sonic spectrum for weapons which affect human behavior. In contrast, while some victims in aluminum foil beanies may be mentally ill, it is quite plausible that many have been telling the truth. Given this cold war history, the victim claims of government mind control should be seriously investigated.

Given the history of radiation experiments and classified emr research, the lack of solid proof of illegal mind control experiments is not surprising. If true, Russia and the U.S. are guilty of torture worse than the atrocities exposed in the Nuremberg trials, worse because most victims claim continuous experimentation, 24 hours a day, 7 days a week for years on end. It become clear why obtaining an investigation has been a fifty year uphill battle. The UNIDIR endorsement is a major breakthrough.

Cahra recommends that the evidence required for reporting illegal government experimentation and human rights complaints needs revising, given the

advanced science involved in new hi tech weapons. Evidence to prove victimization is beyond the reach of ordinary citizens. Changing the current ineffective human experimentation laws and regulations with special emphasis on the problem of national security is essential. **A serious investigation of the thousands of international human rights complaints of mind control experiments is long overdue.**

### **You be the judge: mental illness or mind control?**

Here is just one example of the human side of this issue. A 1988 Los Angeles Times article described Rex Niles, an FBI informant who reported kickbacks by defense contractors. "His aluminum foil hat has tiny holes in it," says Niles, proof that the government is bombarding him with microwaves in an attempt to kill him." "They were aggravating my conscious as well as my subconscious mind," he stated. He reported noise campaigns to cause stress and circling helicopters. Witnesses documented the harassment and the high microwave levels. Niles, a formerly successful defense contractor, after FBI informant role ended, faced retaliation and was labeled mentally ill in the newspaper.

### **About the author.**

Cheryl Welsh is attending Lincoln Law School in Sacramento, CA. and is taking a year off to work on other nonlegal areas of this issue.

### **A note to victims.**

Here are a few short opinions on my approach to stop illegal experiments. It is not going to stop unless we make them stop. Eileen Welsome, author of *Plutonium Files* stated that, given human nature, there will be another classified illegal experiment program that will be exposed in another fifty years. ( From July 18, 2002 "History Undercover" "Declassified: Human Experimentation".) There are no laws or mechanisms in place to prevent classified experiments like the radiation tests from happening again. The program also discussed a court case against the government and the government's use of the discretionary immunity doctrine as a defense to the claims of illegal experiments. An old rule, the discretionary immunity doctrine grants immunity for a public official's acts which require the exercise of judgment in carrying out official duties such as planning and policy making. It is based on public policy considerations which are judged to be more important than the rights of the injured litigant. The History Undercover program called the government's discretionary immunity doctrine outdated.

My own pro se court case was dismissed as frivolous because I could not show the existence of mind control weapons to the level that the court requires by law. Government or corporate statements that mind control weapons are classified is not enough. Therefore I had no possible legal way to prove my case in court and it was dismissed on that basis. Since then I have been looking for a different approach.

Working within the democratic system is the only viable option that I have found. When writing to congressman, reporters or officials, make specific statements and requests. Bring the Welsome book to appointments and quote her well-documented information. Ask for an official statement of support of laws against mind control weapons or a GAO investigation or a congressional report on this issue. Ask about the Rep. Degette bill, the Human Research Subject Protections Act of 2002 which does not address penalties for illegal experiments. Request government documents that are your right to have access to. Write freedom of information act requests. There is no doubt a paper trail of mind control experiments to be found. Check out investigative journalism tactics on websites such as [www.ire.org](http://www.ire.org). These are just a few suggestions that Cahra plans to continue working on. Victims have enough information for an investigation even without solid evidence.

With the UNIDIR endorsement, mind control victims can never again be dismissed as mentally ill for claiming illegal government experiments. John Ginter, today in his 60s, claimed 1967 prison mind control experiments and with only a high school education, wrote in his 1960s court case that San Quentin's chief psychiatrist, Dr. Schmitt's described the device as a M.I.N.D. or magnetic integrated neuron duplicator. Ginter wasn't sure he would ever see this breakthrough after living 35 years with a mentally ill label.

The biggest lesson is having to do it yourself; attempt to stop illegal experiments because democracy does not work in this situation, a direct result of national security law. Being targeted and not able to hire a private investigator, an attorney, go to a doctor and have this solved and over with is not fair. I hope for a better future than radiation victims have found. A future with new laws, an exposure of human rights abuses by the U.S. and Russian governments and corporations, legal remedies and redress comparable to the atrocities committed, jail terms for the guilty, is possible given a long fight with much planning, alot of caring and hardworking people and much luck. That is the best case scenario and also applies to an international approach. I have much more to figure out. But for now I am enjoying the UNIDIR endorsement and breakthrough, when I expected only that mind control weapons would thwart any substantial progress.

Finally, I am including Cahra's position below because there are extensive discussions on mind control technology, for example, whether psychic phenomena has been decoded and used by the government, similarities of mind control cases to ufo cases and how to delineate whether a person is mentally ill or targeted with mind control. In addition, a fairly good number of victims experience phenomena, like:

- can move objects, from tiny gas bubbles in the victim's respiratory tract, through yanking legs out from under the victim, all the way up to shoving a moving car sideways
- can strike heavy blows to any object, or set any object including the body into strong vibration, while nearby objects are not vibrating at all

- can wrench house/building structure causing loud snapping or crackling noises, often done at precisely the point where a victim is starting to doze off to sleep
- levitation of about a dozen of us

Therefore, Cahra endorses the following position.

### **Cahra's position on the technology causing victim's symptoms.**

Very sophisticated, classified electronic warfare and psychological operations intelligence weapons technology can target every nerve of the body with scientific precision. New scientific advances unknown to the public most surely are involved. Any countermeasures or attempts to document the effects by targeted victims would have the best chance of success by world class professionals, especially with military electronic signals intelligence. Given national security, this is extremely difficult to do. Please note that ufos, psychic phenomena and mental illness are the major cover stories used in the illegal testing and use of these weapons. Therefore Cahra has no position on psychic phenomena, ufo theories or mental illness because it is impossible to prove scientifically and detracts from the goals of Cahra.

Cahra welcomes your ideas and opinions.

## A REPORT ON THE ABUSE OF POWER

Editor: Antony C. Sutton

August 1995

Vol. 14, No. 8

---

### CONGRESS ASLEEP AT THE SWITCH AGAIN

**Secretly** the reality of a totally controlled society has been emplaced. While we were looking at **political** control, the technological mechanisms for a Big Brother state are being installed, **secretly in the hope no one will notice.**

Congress once again is at fault, it allowed vast billion dollar "black budgets" to escape oversight control. For decades, research and development on **population control systems** has been funded by a complacent Congress, and the Intelligence Committees in the House and Senate have allowed these systems to go operational. We are going to give you hard information and hard proof. This is not guesswork, it is **reality. And Congress is to blame for lack of oversight.**

Fortunately (for the United States), Sweden has applied these control systems overtly to entire segments of the population (in the U.S. apparently only **selected individuals are under control.**)

Our information comes from a Swedish researcher who has followed the Swedish system of **people control** i.e., **the replacement of individual values, standards and beliefs by state authority.**

Our Swedish source says, "We have (been led) out of the industrial society to enslavement in the Information Society" and "there are frightening developments concerning the use of data surveillance, known as biomedical telemetry, mind control, optical electronic surveillance and brain-computer interaction."

Then comes the clincher:

"The properties of this technology enable the monitoring of mental functions, thought, deed and associated cerebral neurophysiological changes as well as the manipulation of behavior, values and personality from limitless geographical distance."

These systems form the basis of the Information Society (so beloved by Newt Gingrich) and **eliminate the power of the individual to make personal decisions.** Maybe Newt Gingrich is not aware of this, but his emphasis on individuality is a fraud so long as control mechanisms exist to over ride individual values and decision making. (We are not accusing Gingrich, he may not know. We've spent a lifetime following these developments and only now can

visualize the technology emerging.) **These are black budget systems hidden from the public and ignored by the leadership in Congress.**

Let's summarize the information we received from our Swedish source, then we can sketch development in the U.S.

**Cyber is the science of control.** It consists of transmission of electromagnetic wavelengths for cerebral radio communication. The subordinate technologies include brain-computer interfacing, data surveillance, mind control, biomedical telemetry, man-machine interaction, all designed to transmit the basic ideology of the Information Society. (That's why Gingrich's mentor **Alvin Toffler says the Constitution is "out of date."**)

Telemetry requires transmission of data not normally available i.e., your thoughts and plans. **It is a two way communication system enabling remote control of individuals.** (Official U.S. terminology-RNM or "remote neural monitoring.")

This (our source continues) is a **global system.** (Is that why we have hundreds of satellites up there?) It operates at the speed of light and over any distance.

The surveillance system is operated by implanted transmitters in the head or electrodes in the brain but also injectable microchips, substances or **micro transmitters implanted in any part of the body.**

These implantations take place "in unwitting patients" during hospital operations, in patients at psychiatric clinics. In Sweden **all** elderly persons are implanted when "taken into long term care" (ah ha, Clinton's universal health care!) and in all persons taken into police custody or in prison. Implants are also in the form of dental material and false teeth, and **can be mixed into pharmacological products (i.e., medicine.)**

Therefore, the Toffler school futurist's emphasis on nanotechnology-- the devices are hardly seen in x-rays.

These implants are, up to now, inserted into persons under state control (i.e., mental patients, prisoners, elderly sick.) This program has been funded, developed and implemented **in complete secrecy.** Experience has been that when governments hide something, it's probably not to our benefit. P>So how do the systems work?

The implant receives radio signals via satellites. These have known and specific effect on the brain. Many years of research on effects of radio signals on monkey and human behavior is in the open nonclassified literature. The black budgets have generated more advanced systems given the sophistication of the implants we know about.

The returned signals, from the individual brain through the satellite are **processed by a central computer and the information presented on a screen to the controller.** The technology has advanced to the stage where individual **dreams or vision** (i.e., mental picture) can be monitored on a three dimensional screen. So that as you read this and have a mental image of Big Brother at a screen this image in your mind can be (or **is being**) relayed back to a central processing facility.

## **U.S. Citizens Under Cyber Control**

We have specific verifiable information that U.S. citizens are under electronic control. Whoever did this has violated the law, should be investigated and brought before a court of justice.

Research on these systems goes back to the early Cold War period and indeed the rationale may have been to use the technology for Cold War purposes. However, open (scientific) literature reporting goes back **decades**. A 1935 article in *Yale Journal of Biological Medicine* was, "Remote control of electrical stimulation of the nervous system" and by 1941 *Science* journal reported, "The first electrode implant."

In the next two decades research was focused on controlling action in animals, especially by JMR Delgado (**working under CIA contract**.) Delgado was a prolific worker in the field of human remote control. Sample articles have such titles as 1973 "Two way radio communication with the brain in psychosurgical patients."

1967 "Social rank and radio stimulated aggressiveness in monkeys." In 1969 Delgado published a book *Physical Control of the Mind* (Harper and Row.) **Remember this is the OPEN literature.**

Quietly **in secret with black budget financing** Delgado and other medical researchers were working on control systems for humans. From time to time information leaked out but was so mind boggling that only the supermarket tabloids would print i.e., *National Enquirer* (June 1976) "A mind reading machine by DARPA." (DARPA is the Pentagon advanced projects agency.)

Then the open literature discontinued reporting research. Today we can see what the black budget contracts have generated. **An ability to track and control actions and thoughts for any individual world wide.** ALL DONE IN SECRET WITH NO OVERSIGHT USING TAXPAYERS FUNDS and IGNORED BY CONGRESS.

What immediately comes to mind is whether the explosive rise in **"random" killings** over the past few years can be linked to these control programs? When killers complain they "hear voices" have the examining psychiatrists checked for implants? Or are the victims forced to be examined by government doctors? Surprisingly even today, as you read this, some (if not many) neurologists and doctors are convinced that this technology doesn't exist.

For example, on May 30, 1991, Commander Edward Higgins of the U.S. Navy was shot while waiting for a shuttle bus in the Pentagon parking lot. The accused killer was found not guilty by reason of insanity and sent to the Federal Psychiatric Hospital at **Springfield MO**. Even the prosecutors agreed that accused Campbell claimed the U.S. Government had implanted a **computer chip in his brain**. (This Springfield facility turns up in numerous unsolved or covered up events i.e., the Omaha child abuse case, the Oklahoma City bombing. No one in Congress has bothered to ask what are they doing at the Springfield facility?)

Let's be specific. Here are two cases of **provable forced implants inserted by U.S. Government agents**, illegally and **denied** by U.S. Government agencies. Both cases refer to prisoners in federal jails (one now released.) Prisoners are notorious for scams designed to get early release. Therefore, we have confined our report to extracts from independent doctor's reports. We have not included the prisoners from the argument **and so remove any possibility of self-serving information.**

**CASE NO. 1 BRAIN WRANGE** (Reported in *The City Sun*, Brooklyn, December 21, 1993.)

Photo in the article suggests foreign object in Wrange's head. Examined by Dr. Albert O. Duncan a physician who sent Wrange to Diagnostic Imaging Associates in Brooklyn.

"MRI of the chest was performed. These images reveal the presence of a paramagnetic foreign body artifact noted in the region of the left anterior chest wall at the level of the axilla."

Wrange then consulted neurologist Dr. Jayesh Kamdar in Manhattan and was referred to MRI-CT Scanning Inc. for another examination. Report reads

"The bilateral external auditory canals demonstrate dense rectangular shaped metal foreign objects. The etiology of this finding is uncertain. Clinical correlation is suggested."

Wrange then went to Rev. Phil Valentine who arranged further examination by an anatomist (who wishes to remain anonymous.) Report reads:

"a flat metallic object like a computer chip covering a portion of his eardrum." When asked the purpose the doctor replied, "to pick up and transmit sound. With a device in that location one could hear what is said to a person and have them hear what you might say to them." "There are certain sinuses in the bone, grooves where something is implanted in the maxillary area."

In the Wrange case we have **three independent specialists** arrive at the same conclusion. **Someone with medical expertise implanted Wrange with electronic devices for communication and control.**

TT>Whoever did this is guilty of moral and legal offenses. Mr. Wrange has been severely wronged by agents of the U.S. Government.

**CASE NO. 2 JOHN G. LAMBROS**

Serving life sentence in Leavenworth for drug smuggling. We reproduce below extract from a radiological report on Lambros. It states clearly

"clusters of punctate radiopaque foreign bodies" (Each object is about 1 millimeter in diameter.) (See Figure 1)

Then the radiologist Dr. William C. Wells makes an extraordinary and unethical recommendation, "...to repeat a lateral view to further exclude a foreign body."

However, in the request to Dr. Wells, the original purpose of the x-ray is to **locate** "foreign bodies."

This doctor finds evidence of "foreign bodies" and then suggests another x-ray to eliminate the evidence. (This is easily done by reducing the intensity.)

Dr. Wells requests suppression of evidence!

(We have copy of the second x-ray. To be published in a coming issued. Notably it is UNSIGNED by the second radiologist!)

**FIGURE ONE: Radiological report on JOHN LAMBROS  
(Reports clusters of "punctate radiopaque foreign bodies.")**

**FIGURE TWO: ANALYSIS OF LAMBROS BRAIN IMPLANTS**

This report was examined and confirmed by Glen E. Nichols, a psychological researcher in California. (See Figure 2)

The report and x-rays were sent to Swedish researchers who concluded

"Examination of radiograph 7/17 give us good reason to believe that a transmitter has been inserted in John Lambros and is attached to the frontal lobes." (See Figure 3)

Once again **three independent sources** verify the existence of an implant, inserted by force, illegally.

In the Lambros case, the illegal assault is magnified. A U.S. District Judge in Minneapolis refused to consider the evidence above but **accepted nonsense evidence from the government to retain Lambros in jail**. The judge was later promoted to the Appeals Court!

These are extremely serious cases implicating the U.S. Bureau of Prisons in the Wrange case and the CIA and DEA in the Lambros case. The federal court system is implicated in both cases for refusal to review the cases impartially.

Especially troubling is a decision by U.S. District Judge Diane Murphy in Minneapolis District Court earlier in 1995 which entirely disregarded the evidence, refused to allow an independent medical examination and overlooked errors by Lambros' attorney.

We have a letter from an independent outside attorney not representing Lambros who states that, "my conclusion was that the appointed attorney was in fact working hand in hand with the prosecution."

Here is the basis of our concern. A 'foreign body' is in Lambros head. In medical terminology this is an "artifact." Lambros says it was implanted by force. Any citizen, be they government official, attorney, doctor or layman should be horrified by forcible implants and demand it be removed and the operators brought to trial. **Instead we have cover-up.**

---

**RADIOGRAPHICAL REPORT**

In comparison to the previous report published on the radiographic cranial examination of Mr. John Lambros, the present report including radiographs numbered 7/17 and 7/27, will discuss additional opinions on what can be identified and what would most likely appear in the pictures if they were of normal quality. We can find no other explanation for the very poor exposure other than it was a deliberate act to hide the facts. The pictures are wrongly exposed and would normally never be accepted as the basis of a radiological examination. However, despite this, there is a great deal that we can establish.

Examination of radiograph 7/17 give us good reason to believe that a transmitter has been inserted in John Lambros sinus and is attached to the frontal lobes. This area is marked with three arrows in the radiograph. In this area can be seen certain faint shadowy formations which correspond to the shape of the transmitter as we know it from previous studies of implanted transmitters. This area is also in a direct line from the opening of the nasal passages. Moreover, in the frontal lobes, just above the previously mentioned area there are large dark spots which have been caused by oxygen deficiency. This area has also been marked with an arrow in the radiograph. Reduced oxygen balance is a normal consequence of radiowaves penetration of biological tissue through the heat-energy and dehydrating effect of the electromagnetic energies. Oxygen deficiency can also cause a change in physiological conditions and has a detrimental effect of health.

Finally we can also verify the appearance of what the U.S. doctors refer to as: "... Clusters of punctate radiopaque foreign bodies." These objects have absolutely no natural origin and are most probably some kind of transmitters. These foreign bodies are also visible in radiograph 7/17 and have been marked with an arrow. It also seems natural to suppose that these objects are the cause of the problem Mr Lambros has at the right side of his face, which we can see from the enclosed photograph as swollen and which also causes him pain judging by what has been referred to us. We would like to recommend that Mr. Lambros undergo a new radiological examination of his skull.

Stockholm, February 21, 1995

---

### **FIGURE THREE: SWEDISH DOCTORS REPORT ON LAMBROS RADIOGRAPH**

Judge Murphy, along with the prosecutor and the defense attorney, accepted the testimony of an "expert witness" that the implants were an "artifact" and "artifact means dust." This conclusion is so patently false that we suggest a conspiracy to keep Lambros in jail and denied medical attention. This case alone demands investigation by independent medical examiners and attorneys.

Recently Mr. Clinton, in a campaign speech, made a comment, "How dare you suggest that we, the freest nation on earth live in tyranny."

We suggest Mr. President that these cases are not government workers who "make mistakes," **they are tyrannical actions**, which should be brought to justice. **Forcible implant of persons under state custody is not done in a free society.**

The above report is the first in the United States newsletter industry, which usually runs 2-5 years ahead of the kept establishment media. Please reproduce and pass along to independent newspapers, *60 Minutes*, ACLU, the TV news magazines, Christian Broadcast Network (Pat Robertson) and the Bar Association.

## **Response of Public Servants to the Above:**

As usual, "public servants" (feeding at the public trough) DO NOTHING until forced by public pressure:

U.S. Senator Paul Wellstone (Minnesota) and his aide William Buckingham have files. NO RESPONSE.

Foreman of the Federal Grand Jury in Kansas City, Kansas has a file. NO RESPONSE.

American Medical Association, Chicago, Illinois has a file. NO RESPONSE.

## **"Plutonium Files"**

### **Book Review**

---

**This is an informal review with excerpts, by email, from Lynn Weed. To read the testimony from the official U.S. Government hearings, the section where three MKULTRA child victims were able to testify, [click here](#).**

---

From: Lynn Weed  
To: Eleanor White  
Subject: Plutonium Files  
Date sent: Tue, 26 Jun 2001 15:24:03 -0000

Dear Eleanor,

The name of the book is "The Plutonium Files" by Eileen Welsome, Published by the Dial Press, Random House, Inc. NY 1999 ISBN 0-385-31402-7. Subtitle: "America's Secret Medical Experiments in the Cold War". The book was a gift to me from Tom McClellan, a Manhattan resident, musician, fellow of victim of mc testing/abuses.

Some of these tests might have been precursors to what we are experiencing now:

Pg. 253 "Thus the comments made at Fort Monroe show that even before the first large-scale troop maneuvers were held, the armed forces planned to ignore inhalation hazards and considered collecting the data with instruments that would result in lower reported exposures for troops. These remarks, when combined with the cavalier attitude exhibited by Cooney and other high-ranking officers toward radiation hazards, strongly suggest that some troops rreceived greater doses than what has officially been reported.

Before the maneuvers began, the Pentagon's Joint Panel on the Medical Aspects of Atomic Warfare met to thrash out a shopping list of questions that needed to be answered at the upcoming bomb tests. "It is of course, obvious," the panel acknowledge, "that a test of a new and untried atomic bomb is not a place to have an unlimited number of people milling about." The top-secret panel was formed in 1949, the year the Soviets exploded their first bomb, but it's not clear when it was dissolved. Little was known about the Joint Panle until 1994, when a stack of its records was obtained by the Clinton Committee. Those records show that James Cooney, Louis Hempelmann, Robley Evens and Hymer Friedell served as members of consultants.

Among other things, the "shopping list" prepared by the Joint Panel called for an investigation into the Psychological effects of nuclear explosions on troops, research into the efficiency of protective clothing and devices, the measurement of radioisotopes in the body fluids of weapons test personnel, orientation flights in the vicinity of nuclear explosions, and studies on the effects of the atomic flash on the human eye. It so happened tht the psychological tests, the orientation flights, and the flashblindness studies would all begin in the fall of 1951 and continue for the next decade."

continuing on pg 263

"Afterward, the troops went to a decontamination station where they were swept off with brooms and monitored for radiation. "If the radiation intensity could not be lowered to 0.01 r/hr the individual was to shower and change his clothing, and vehicles were to be washed," an official summary of the test noted. Some of the soldiers underwent psychological testing to determine the effectiveness of indoctrination programs. Researchers from

HumRRO, the Human Resources Research Organization, an Army contractor based at George Washington University, found the troops' confidence in the use of atomic weapons had "increased materially". But psychologists from the John Hopkins University Operations REsearch Office, known as ORO, claimed their studies showed deep worry and anxiety among the troops despite the indoctrination lectures."

There is also a reference to the "Cardoza" ruling in NY which is very significant for a lawsuit based on unauthorized testing.

p. 213

"In 1908 a woman named Mary E. Schloendorff sued the Society New York Hospital, [(unrelated to radiation experiments )comment added to text] claiming that she had not given her consent for an operation in which a fibroid tumor was removed from her stomach. Following the procedure, she developed gangrene in her left arm and several fingers were amputated. Upon appeal Benjamin Cardoza, who later went on to become a Supreme Court Judge, issued his now-famous ruling, "In the case at hand, the wrong complained of is not merely negligence. It is trespass. Every human being of adult years and sound mind has a right to determine what shall be done with his own body; and a surgeon who performs an operation without his patient's consent commits an assault for which he is liable in damages."

Concerning funding:

p. 208, 209

"Researchers throughout the United States used the radioisotopes in thousands of human experiments. As these experiments involved minute amounts of radioactive materials, they are often called "tracer studies".

Congress allocated \$175 million to the AEC in 1947 with up to \$5 million to be reserved for cancer research that did not duplicate the work of other public or private agencies. At that time the \$5 million was a huge sum, and more money than some AEC officials believed could bespent on legimate projects. Under Shields Warren's direction, three AEC cancer hospitals were eventually set up: the Argonne Cancer REsearch Hospital, located in Chicago next to Billings Hospital, the Oak Ridge Institute of Nuclear Studies in Tennessee and a 48 bed facility at Brookhaven National Laboratory near Upton, New York. During the next 3 to 4 decades, scores of human experiments using radioisotopes and external radioactive sources were conducted at these facilities."

Concerning the "wall of silence ... cracking"

Although information on the human radiation experiments occassionally made its way into obscure journals, the scientists managed to pursue their studies without drawing much public attention to their projects. This was due in large part, of course, to the deliberate effort on the part of the researchers and their government funders to keep the experimentation quiet. But the silence was also the result of the media's complacency and lack of sophistication. Activities related to nuclear weapons involved a labyrinthine bureaucracy and complicated scientific and technical issues, and spokesmen for the nuclear weapons industry were adept at manipulating the press. Controversial information was difficult to obtain and oftentimes documents were deliberately classified to keep them away from reporters. With tight deadlines and long obstacles, many journalists wound up reporting what they were told. Slowly though, the wall of silence began to crack."

p. 423

" The test ban victory notwithstanding. O"leary recognized that if she was going to succeed in making any permanent, long-term reforms, she would have to begin by reversing the "culture of secrecy" that had been created by the Manhattan Project. that meant, among other things, declassifying documents and revising the long-standing practiceof compartmentalization -- the old idea promulgated by General Leslie Groves that workers should know only what

they need to know to do their jobs and nothing more. Gover's policy was beginning to backfire. "

....

" O'Leary also changed the name of the Office of Classification to the Office of Declassification and instructed A. Bryan Siebert, the director to develop a plan for making more documents available to the public. Siebert readily embraced O'Leary's orders: "I have been in the program for 20 to 30 years and it has been clear to me that classification has been used against the public time and time again. I thought it was wrong" he said. "

This is out in print and paperback. The issues it raises are the same issues we are raising.

Lynn

From: Lynn Weed  
To: Eleanor White  
Subject: re: "The Plutonium Files" related issues  
Date sent: Tue, 26 Jun 2001 22:53:48 -0000

Dear Eleanor,

It seems that the radiation studies may have been early versions of what they are doing to us now -- or that our "testing" is somehow being rationalized as being necessary for military "readiness". I'm sending these excerpts from the book:

Lynn

p. 346, 347 ("The Plutonium Files" by Eileen Wilsome)

"Often the patients were moved to a private room after irradiation so that their mental state could be better evaluated. What's more, the doctors told their military funders, "there are no other patients receiving radiation therapy with whom the patient can exchange experiences." These psychological studies were another important component of the experiment and became more elaborate as the years went on. Tests were administered to measure the patients' depression, hope, denial, and pessimism. Brief interviews were conducted before and after irradiation and then "scored" for cognitive dysfunction. Many of the patients were so sick after they were irradiated that they could not complete all the testing. Herb Varin remembers his mother Nina Cline, complaining about the constant barrage of questioning. "I tell them I'm feeling terrible but they just want to talk to me," Varin recalled his mother saying. The psychological research was pertinent to the military, the Cincinnati doctors wrote, because of the way TBI affected thought processes:

Following exposure to acute whole or partial body radiation it is possible that there will be significant impairment of the decision making capability of key personnel who have major command responsibilities. This concern has become more important in recent years since the findings that complex electronic systems can be rendered inoperative by very high doses of radiation. Thus it is necessary to maintain dependence on the human being. It is quite possible that even moderately high doses or dose rates could produce impairment of cognitive processes either of an obvious or of a subtle nature which in moments of stress would impair or defeat a military operation. In order to gain understanding of such possible changes it is necessary to seek changes in cognitive processes and decrease in the capability to perform highly technical processes."

Some of these tests were done anticipating space travel:

p. 358, 359 (IBID)

"The radiation sources were located in a larger, outer, heavily shielded room. the patients were able to move about freely while they were continuously exposed to a low-level sea of radiation. Attached to the patient's body were electrodes and an umbilical cord that measured cardiac and respiratory signals. The data were fed into a computer and stored for later analysis by NASA. Occasionally rats were hung in between the walls of the two rooms and irradiated simultaneously with the human patients.

LETBI cost \$26 million. The AEC picked up the tab for the design and construction of the chamber and NASA contributed \$2.2 million which was used mostly to pay the salaries of Lushbaugh and a technician, and to buy some monitoring equipment.

A third high-dose irradiation facility was constructed at the animal research laboratory run by the U of Tennessee's School of Agriculture. Referred to in some documents as HETBI, an acronym which apparently stood for the High Exposure Total Body Irradiator, the chamber delivered massive doses of radiation within minutes to plants, seeds, and large animals such as cows and horses. It became operational in 1970 and was used by ORINS researchers to irradiate four patients undergoing bone marrow transplants. One worker who was irradiating seeds accidentally received a large dose of radiation in the high-exposure facility and developed acute leukemia ten years later.

The exposures in LETBI mimicked the low, chronic radiation doses that astronauts were likely to encounter when they traveled through space. The information, wrote the Oak Ridge scientists, was "increasingly more relevant to the occupational medical needs of deep space exploration where exposures are expected to be small, multiple and randomly timed." The HETBI data would be useful in the event of a serious accident "like that which could occur during extra-vehicular activities in space from the unexpected occurrence of a large solar flare or in an accident resulting from the use of nuclear energy propulsion systems."

Records also reveal that the Army was funding a study on the irradiated patients to find out how single, repeated, or protracted doses affected the intestinal bacteria of exposed patients. NASA was also provided this data "without additional costs." Thus the data from patients irradiated in METBI and LETBI were used in multiple investigations: Oak Ridge scientists used the information in their search for a biological dosimeter and to better learn how to treat accident victims; NASA used the data in its space missions; and the Army used the findings to better predict soldiers' reactions on the nuclear battlefield."

The secrecy of unauthorized testing and the ethical and legal implications of secrecy --

p. 481-486 (IBID)

" When Energy Secretary Hazel O'Leary acknowledged that the federal government had conducted radiation experiments on its own people, thousands of callers had flooded a hot line set up by the DOE: What was going on? Had we become a nation of paranoiacs? A country of guinea pigs? Or had O'Leary touched on something that resonated deeply with the American public?

Certainly the radiation experiments raised complex questions that go to the core of our society: the trust between a government and its people, the subjugation of individuals to the interest of the state, and the ethical dilemma associated with the development of weapons of mass destruction.

But what O'leary did in a dramatic and unexpected way was confirm the hunch

that all was not well beneath the soothing no harm, do danger statements that accompanied the reports of nuclear blasts, spills, and accidents of the Cold War. Her admission produced an electrifying response, something akin to the emotions a person might feel after being subjected to a lifetime of vague allusions and abrupt silences and suddenly learning a dark family secret he or she had always suspected.

When the Nevada Test Site opened in 1951, the Atomic Energy Commission warned its public relations men to approach the tests "matter-of-factly" and not go overboard in emphasizing how safe the explosions were going to be. Such a campaign might be interpreted as one of the "lady doth protest too much", an AEC official cautioned.

The bomb project's public relations machine succeeded in keeping a lid on the experiments for fifty years. Its spokesmen were able to blame the fallout controversy, the illnesses of the atomic veterans, and the diseases of the downwinders on sudden wind shifts, misinformed scientists, the overactive imagination of agine soldiers, and even Communists propagandists. But the radiation experiments revealed a deliberate intent, a willingness to inflict harm or the risk of harm, which could not be explained away so easily. Somebody inserted the needle into the human vein, mixed the radioisotopes in the paper cup, or flipped the switch that delivered a potentially lethal dose of whole-body radiation. There is no denying that:

. Thousands of Americans were used as laboratory animals in radiation experiments funded by the federal government. Many of the subjects were not asked for their consent or given accurate information about the nature of these experiments. Some didn't learn they or their loved ones had been used as guinea pigs until 1994 or 1995 . Some still don't know, and never will.

. Many of the doctors and scientists who performed these experiments routinely violated their patient's trust and engaged in deception. They ignored the Hippocratic Oath, the 1946 American Medical Association guidelines, the Nuremberg Code, as well as policies adopted by the Atomic Energy Commission in 1947 and by the DEfense Department in 1953. Civil and criminal laws may also have been broken. Beyond everything else, the experimenters violated a fundamental right that belongs to all competent adults: the right to control one's body.

. Although the majority of the experiments were the so-called tracer studies, which involved administering radioactive materials in quantities so small that they probably caused no harm, most scientists agree that no dose can absolutely be called safe.

. Some studies are known to have had very serious consequences. The total-body irradiation experiments caused intense suffering and premature death in some patients. The radium rod treatments and some of the radioactive iodine experiments increased the risk of head, neck and thyroid cancers and other secondary disorders."

. . .

"The culture bred by the Manhattan Project caused a blanket of secrecy to be thrown over everything related to atomic weapons. The secrecy was essential during the Manhattan Project, but it hardened into a protective and impenetrable shell after the war. The secrecy cut researchers off from the healthy sunlight of inquiry that would surely have put a stop to some of the experiments and perhaps reduced the number of atmospheric tests. Many of the scientists, such as Carl Heller and C. Alvin Paulsen were instructed to avoid publicity and several studies such as Eugene Seanger's, were halted only after they received public attention."

. . .

"It's difficult to describe how pervasive, how all-encompassing this

propaganda campaign was. In the films of the atmospheric testing program now being declassified by the Department of Energy, military officials continually emphasize how safe the bomb tests are, how vital they are to the security of the free world, how glorious the future of mankind will be when the full potential of the atom has been realized. "It's a huge fraternity, this order of the mushroom, and it's growing all the time," one narrator crowed."

. . .

For five decades the public remained largely ignorant of the systematic nature of human radiation experiments. Secrecy, compounded by the insular, inbred nature of the atomic establishment, helped keep the experiments from becoming known. But the fact is, the Manhattan Project veterans and their proteges controlled virtually all the information. They sat on the boards that set radiation standards, consulted at meetings where further human experimentation was discussed, investigated nuclear accidents, and served as expert witnesses in radiation injury cases. The Manhattan Project researchers also worked in a professional world that remained remarkably stable. Once the project itself had been disbanded, the scientists got jobs in the weapons laboratories and at universities, many of which had contracts with the Atomic Energy Commission, and they remained in these jobs for the rest of their lives.

The experiments conducted after the war generally were not secret. But the results were published in obscure journals or laboratory health reports that were inaccessible to the public. Furthermore, many of the policy discussions surrounding the purpose of the experiments were kept secret."

. . .

"Although many of the experimental subjects and their relatives were disappointed by the government's response, the American people nevertheless gained a vast amount of knowledge from the documents about the Cold War. It's as if a submerged continent has risen to the surface. There are peaks and valleys and still lost of shadows, but the contours are better understood.

Much of the information is disturbing, shocking, and will serve as a cautionary tale about the corrupting power of secrecy, the danger of special interest groups, the excesses of science and medicine, and the need to monitor closely the activities of civilian and military weapons makers. The breathtaking advances in science and technology demand we always keep our ethical watch light burning. No matter how rapid the pace of change, it can never outrun our core conviction that have stood us so well as a nation for more than two hundred years now, through many different scientific revolutions, " President Clinton observed when he accepted the Advisory Committee's report." (IBID).

---

## **Police CAN Do It**

**by Eleanor White**

**February 15, 2005**

**POLICE OFFICERS: Some of your colleagues are beginning to honestly say they know about these group stalking/electronic harassment crimes. [Click here](#) to read about their statements. Please consider adding your voice to the fight to expose and stop these decades-old crimes.**

This is to suggest that, contrary to the excuse that the police can't act to help [organized stalking](#) victims, there is one way they CAN, but so far the police don't seem to have considered the method I'm about to describe.

The reason the police haven't used this approach is I am sure it is not considered "proper police procedure." But in fact, the police do use this method, on their COLD CASES.

I suggest that busy detectives could simply start a file on organized stalking complaints. That requires no more time than opening any other case. From that point forward, as complaints and follow up information roll in, one specific detective ("one specific" is KEY to making this work) would BRIEFLY scan each submission and file it.

One type of complaint which might be especially useful is where targets report licence plate numbers of people they suspect of being perpetrators. Since the file would be confidential, targets would also be allowed to submit photographs of possible perps.

From that point forward, I suggest, the detective's thought process is fully automatic. Anyone qualified to be a police detective and open to the project will automatically, and practically effortlessly, ponder the submissions, once in a while. No need to set aside a lot of time for that.

From the pondering stage, the detective will occasionally get an idea, a lead, he can check out when he/she has time. To this point, there has been no intrusion into the time needed for regularly assigned cases.

Since organized stalking involves human beings, at least some of whom live or operate in the detective's jurisdiction, my claim is that without much effort, a detective honestly open to the reality of organized stalking will nab his first perp. From that point on, police management can allocate more resources to eventually stop the local stalking group.

This laid back, part time approach, which does not demand a large amount of the assigned detective's time, I suggest will work and will be the beginning of exposing and stopping today's stalking groups.

**\*\* IMPORTANT:** This initiative would require the street savvy of an experienced detective to work, because the perpetrators would field a number of fake targets, to take up the cognizant

detective's time, making him or her want to throw up his or her hands in disgust. The fake targets would act crazy, moan, cry, and demand action, and generate a pile of questionable reports.

This requires that the cognizant detective be briefed ahead of time about the certainty of perp tactics. As long as the cognizant detective has a good grip on the sleazier side of human psychology (and most detectives must in order to do their job successfully) the detective will develop a sense which will allow him or her to filter out the genuine complaints from the fakes in most cases.

The police should also be told they may not be able to distinguish real reports from fakes in all cases, but that it is very important that they move ahead and take the reports anyway, and that they don't have to spend lots of time trying to decide about the fakes. TIME will help a great deal in distinguishing real reports from fakes. (Time is what we targets use to distinguish fakes.)

The detective can significantly reduce his or her time by requiring all initial reports be made IN WRITING, out in the front lobby, attended by front desk staff, not detectives. When the cognizant detective has time, he or she can do interviews by telephone, further reducing the time spent.

A second file, for probable fakes, will keep the probable fake reports available, but separated from the probable genuine reports. The sheer importance of handling this huge crime, affecting something like one person in a hundred, is too important not to try because of probable perp fake reports.

And one interesting side effect of perp faked reports is, they risk showing themselves to police by making faked reports.

Eleanor White

## **Protest Poster Concept Samples**

**September 27, 2009**

The protest poster concept samples below are to illustrate some suggested ways to quickly get the attention of, and hopefully earn some interest of, the general public who are not aware of the organized stalking and electronic harassment (OS/EH) crimes. These are the work of Eleanor White, and represent her ideas.

Eleanor's approach is to try first to use images and phrases which are as close to things the public is familiar with as possible, so as to earn enough attention span so the activist can pass along more detail, in the form of face to face conversation, flyers, and web sites. The idea is to keep the visual materials as simple as possible, and avoid words and phrases (like "mind control," "CIA/FBI/NSA") which have caused attention disconnect in people who have never heard of OS/EH before. Phrasing like "We are being tracked/attacked by satellite," or "We are being tortured," (we show no marks,) or "We have been implanted," (we only have medical evidence of a couple of instances,) has been known to trigger disconnect in conversations with the public.

Even if you, the activist, don't think these concept samples are readily understandable, keep in mind that the idea is to get people looking at the images to ask you questions. There is no way a simple poster on a subject as complex and hidden from public view as OS/EH can present the entire story by itself.

A more detailed explanation of Eleanor's methods is presented in this "e-handbook":

<http://www.multistalkervictims.org/osih.pdf>

Here below are the protest poster concept samples:

1 - ORGANIZED STALKING:

2 - MICROWAVE OVEN ASSAULT:

3 - THRU-WALL RADAR INVASION OF PRIVACY:

4 - LIDA MACHINE SLEEP INDUCTION/DISRUPTION:

5 - VOICE TO SKULL ASSAULT:

6 - DEAD ANIMAL ASSAULT:

7 - GROUP STALKING STATISTICS:

\*\* These images can be customized to suit activists who actually plan to use them for picketing or printed material.

## **Speculation: Possible Perp Recruiting Pep Talk**

**by Eleanor White**

Below is an entirely speculative "pep talk" as might be given to new mind control perpetrator recruits at their first meeting. (Street/ neighbourhood level perps have been observed to meet often, in houses near victim houses. Personally, I feel that the practice of meeting in view of a victim is to increase the victim's feeling of hopelessness and being very alone and outnumbered.)

The purpose of writing this "pep talk" is to provide the interested reader, including members of the public and journalists, with one victim's impression of the overall motive for this programme of in-home torture. While MKULTRA's motive was to find better espionage methods, the current programme seems to have a very different purpose: The total control of the world's population.

Although this is speculation, it is speculation based on 21 years of my own experience, and many more years of experiences reported by the several hundred victims world wide who take the trouble to correspond. Being backed up by a huge amount of first-hand observations and literature research, this "pep talk" is far more than a simple "conspiracy theory".

---

### **Perp recruiter to group of new recruits:**

Good morning. As we all know, our world has been in a constant state of turmoil, war, famine and crime throughout recorded history. Mankind has lacked the will and the means to break out of this vicious, endless cycle of misery and destruction.

Well, I have wonderful news. A group of dedicated men of vision and means have been working quietly to solve these problems once and for all over the past half century. The means are now in place. The general public does not know this yet.

This group of dedicated men have formed what is to be called "The New World Order". The NWO is now in the process of implementing the most radical change to the way we human beings govern ourselves in all of history. The New World Order will succeed not only by use of advanced and still secret technology, but by the dedication and hard work of people who are willing to help rid the world of age-old problems.

This may surprise you, but the New World Order, a one world secret government, has held the real power for the past half century. The U.S., Canadian, and all other governments are simply figureheads which deal with the least important details of their respective citizens. No bill of law passes in any country unless it has New World Order approval. The next and final step is to train those people in every country who will bring the New World Order into public view.

Millions of people have been quietly evaluated for years, to find those with proper motivation and values to make the New World Order a workable and publicly known reality. YOU, in

this room, have been selected because the NWO leaders and staff know you are capable. You are to be congratulated for earning this opportunity of a lifetime.

A major barrier to the final, public ascent to full power are those people who cannot understand the need for certain changes to make the New World Order work to the greater good. These people are all around you. They include:

- Intellectuals who argue and fight against beneficial changes
- People who have committed or are likely to commit crimes
- People who call themselves "Patriots"
- People who write letters to the editor, or picket, or hand out flyers, or who in any way disturb the peace
- Other undesirables

The New World Order has also been monitoring these people for years, and we know who they are, where they live, and about their often criminal past. In order to clear the way for the New World Order to come into full and public power, these undesirables require "neutralization" so that as the NWO becomes more public, the undesirables will not be able to interfere with the process.

The New World Order is a humane government, and we do not simply murder undesirables. New technology and methods mean that is no longer necessary. Instead we apply pressure to them, both through technology, and through the work of our agents, so the targetted people don't have the strength or the means to cause trouble.

Here are some of the ways we humanely neutralize people who threaten the New World Order:

- Make their crimes and criminal tendencies known to their neighbours, employers, and co-workers
- Disrupt their lives by preventing sleep wherever possible
- Frequently and physically crowding and blocking them
- Use NWO friendly tradespeople to see that their homes, vehicles and workplaces constantly give the target problems
- See that their favourite items are removed or hidden when they shop
- Creating minor damage in the targetted person's home and workplace, backed by a warrant from New World Order friendly judges
- Prevent family and friends from helping them or even wanting to help them, by way of sharing the target's criminal past with them, or placing the target under investigation so that friends and family can be required to avoid contact

This may sound harsh, but the targetted people are not actually harmed, just prevented from causing trouble as the New World Order ascends to power.

Now, it is YOU FOLKS who will be carrying on this neutralization work. This is a great privilege. If you carry on this work faithfully and well, we can promise you that when the New World Order's presence is made public, the leaders which will replace the elected officials will be chosen from your ranks. You have every right to be PROUD of serving the one world government, and we are proud to have you aboard!

Now, if you will come into my office next door when I call your name, I will introduce you to your on-site supervisors and we will give you your first assignment, and schedule of payment for your services.

GOD BLESS THE NEW WORLD ORDER!

# Preparedness

March 21, 2007

This page is to acknowledge that the onrushing one world government, also called the New World Order, has planned and executed, and will be executing more, artificially created disasters. War, population decimating disease, and seemingly natural geological disasters. These disasters will place a premium on preparing to cope with them, and this page is to collect some of the information about coping.

Disaster preparedness is frequently the topic of the Patriot movement radio shows, listening details for which can be found by [clicking here](#).

## **\*\* DISCLAIMER \*\***

**I, Eleanor White, have not personally tested most of the products offered by vendors mentioned here. Therefore, I am unable to endorse these products. Visitors to the purchase sources listed below need to do their own evaluation of the claims before making a decision to purchase.**

TELL-IT-LIKE-IT-IS FORUM:

Nitty-gritty hands on tips, in spades!

<http://www.whenshtf.com>

AIR PURIFICATION:

<http://www.aranair.us>, source for the Aran Air purifier. Unlike many ozonating units, this device does not use a fan and filter. Instead, it electrically bonds clusters of oxygen atoms together, in higher numbers than ozone (O3). These O4, O5, ... oxygen atom clusters are extremely effective in destroying airborne pathogens, and smells. Even if atmospheric oxygen should drop to dangerous levels (one report from Australia reported a level of only 8 percent on one given day) the Aranizer can concentrate the oxygen level and provide the user with the benefits of an oxygen rich environment, so say the makers. I, Eleanor White, have heard many satisfied users praise these units on the air. I have also heard some claims that an oxygen rich environment can significantly help fight cancer, but IMPORTANTLY, these are claims made by others and I cannot personally endorse them. I am not a qualified medical practitioner.

ARTIFICIAL DISEASES:

<http://www.nutrimedical.com>, the web site of Dr. William Deagle, MD, who offers advice and products relating to artificially created diseases which are likely to decimate world population. Of interest in 2005 will be the anti-viral first line of defence kit for the avian flu now spreading in the orient.

<http://www.eaglesup.com>, web site of broadcaster Robby Noel, and purchase source of important immune system builder and healthy soil component fulvic acid, under the brand name Immunité (immuni-TAY).

IMPORTANT: Pure WATER is essential for disease control. [See pure WATER below](#).

#### BOOKS:

<http://www.rbnlive.com>, the Republic Broadcasting Network sells books, survival products, and shortwave radios

<http://www.standeyo.com>, site of Stan and Holly Deyo, who have a range of books (and CDs) on a very wide spectrum of disaster preparedness. One book, "Prudent Places" (applies to the United States) evaluates every county in the U.S. for its survival potential.

<http://www.thepowerhour.com> is the radio show [The Power Hour's](#) marketing site, where books on many subject, particularly health, are sold.

#### FINANCIAL DISASTERS:

<http://www.republictradinggroup.com/>, Republic Trading's site for consultation and sale of precious metal coins (gold, silver) which are the only hedge against runaway inflation. Site owner is Robby Noel, who broadcasts on <http://www.rbnlive.com>.

#### FOOD AND NON-GENETICALLY MODIFIED SEED:

<http://www.austinwheatgrass.com>, the Austin (Texas) Wheat Grass grow-it-yourself web site. By growing wheat grass and juicing it, you get one of the most complete nutritional drinks available. Can save your life when the stores are empty, or a 24-hour curfew is imposed. Complete kit including stainless steel juicer.

<http://www.arkinstitute.com/>, the Ark Institute, a major supplier of non-GMO "heritage" seed.

<http://www.ki4u.com/mre.htm>, KI4U's military MRE page (meals, ready to eat.)

<http://www.rbnlive.com/food.html>, Republic Broadcasting Network's food and seed page.

The "freeze dry guy", Rick, at 530-265-8333, for freeze dried food. Freeze dried food is the maximum nutrition in the smallest, lightest packaging, and is used in spacecraft. Rick is recommended by preparedness specialist and broadcaster Steve Quayle.

#### GEOLOGICAL DISASTERS:

<http://www.standeyo.com>, site of Stan and Holly Deyo, who have a range of books (and CDs) on a very wide spectrum of disaster preparedness. One book, "Prudent Places" (applies to the United States) evaluates every county in the U.S. for its survival potential.

#### NUCLEAR DISASTER:

<http://www.ki4u.com>, a site selling anti radiation sickness medicine (potassium iodATE or iodIDE), and ionizing (radioactivity) radiation detection and monitoring instruments.

[radchart.gif](http://radchart.gif), a radiation chart on the back of the "NukAlert" key chain radiation monitor and alarm, which is sold by ki4u.com, above.

#### NUTRITIONAL SUPPLEMENT BAN/CODEX ALIMENTARIUS:

<http://www.healthfreedomusa.org>, Dr. Rima Laibow's site dealing with the fight to stop Codex Alimentarius, the United Nations program which has ALREADY deprived the people of Germany and Australia of access to nutritional supplements. These supplements are being lied about by governments as "toxic" and needing extremely strict limits on amount used, and Codex Alimentarius seeks to force the public to get a prescription only from a medical doctor to get the tiny doses, which are something like ten times the pre-Codex price.

<http://www.thepowermall.com> is the radio show [The Power Hour's](#) marketing site, where nutritional supplements and electronic health devices are sold. The product line is extensive, and listeners to the radio show weekday mornings are frequently offered special pricing. Of particular interest may be the electronic healing device, the Health Point acupuncture point detector and electrical current healing device, built into a single unit.

<http://www.HeavenscentOils.net>, a source of "essential oils", extracted from plants, with some beneficial properties which can be "Heaven Sent" should Codex Alimentarius become the law of the land. These oils are for aromatherapy and topical use, so they might survive Codex Alimentarius.

<http://www.All4Wellness.com>, another source if information and essential oils, recommended by the proprietress of HeavenscentOils.net, above.

**RIFE** machines, electronic healing devices which operate by applying different frequencies to the body, frequencies which Royal Raymond Rife discovered destroy specific pathogens, may be purchased via this number: 1-866-885-6625

#### PREPAREDNESS-ORIENTED RADIO SHOWS:

<http://www.stevequayle.com>

#### POLITICAL DISASTERS/WAR/TERRORISM:

<http://www.standeyo.com>, site of Stan and Holly Deyo, who have a range of books (and CDs) on a very wide spectrum of disaster preparedness. One book, "Prudent Places" (applies to the United States) evaluates every county in the U.S. for its survival potential.

#### SHORTWAVE RADIOS:

<http://www.sangean.com>, the Sangean radio company, who manufacture shortwave receivers under their own name and other "house brands."

<http://www.rbnlive.com/radios.html>, Republic Broadcasting Network's line of shortwave radios.

## WATER PURIFICATION:

<http://www.berkeywater.com>

Berkey Water: 1-888-803-4438, Mon-Thu only

<http://jackblood-net/id26.htm>

<http://www.rbnlive.com/survival.html>

Big Berkey and Berkey Light water purifiers - these can filter river and pond water and make it drinkable. Also search the web for "Big Berkey."

Berkey filter units also have a post filter available to remove fluoride, a poison which has the ability to make people lethargic. Fluoride has no dental benefits, contrary to the propaganda.

# Protections For Human Subjects of Classified Experiments Still Lacking

---

[C.A.H.R.A. Home Page](#)

---

An article by Cheryl Welsh, "**Protections for human subjects of classified experiments still lacking**" was published in the December issue of a small San Francisco newspaper, North Bay Progressive,

[www.northbayprogressive.org](http://www.northbayprogressive.org) and will be considered for a Project Censored Story in 2004, see below. [North Bay Progressive, December 22, 2003-January 23, 2004, Volume 2, Issue 9, Page 11.]

---

## Project Censored

[www.projectcensored.org](http://www.projectcensored.org)

The Mission of Project Censored is to educate people about the role of independent journalism in a democratic society and to tell The News That Didn't Make the News and why.

Project Censored is a media research group out of Sonoma State University which tracks the news published in independent journals and newsletters. From these, Project Censored compiles an annual list of 25 news stories of social significance that have been overlooked, under-reported or self-censored by the country's major national news media.

Between 700 and 1000 stories are submitted to Project Censored each year from journalists, scholars, librarians, and concerned citizens around the world. With the help of more than 200 Sonoma State University faculty, students, and community members, Project Censored reviews the story submissions for coverage, content, reliability of sources and national significance. The university community selects 25 stories to submit to the Project Censored panel of judges who then rank them in order of importance. Current or previous national judges include: Noam Chomsky, Susan Faludi, George Gerbner, Sut Jhally, Frances Moore Lappe, Norman Solomon, Michael Parenti, Herbert I. Schiller, Barbara Seaman, Erna Smith, Mike Wallace and Howard Zinn. All 25 stories are featured in the yearbook, Censored: The News That Didn't Make the News.

In 1996 and 1997, the yearbook won the Firecracker Alternative Book Award, celebrating the best in alternative publishing. The release of Project Censored's yearbook has developed into a national alternative press event. In 2003, along with several independent national magazines, over 40 alternative newsweeklies carried the Top 10 Censored stories in metropolitan areas throughout the country, and Project Censored was featured on more than 125 independent talk radio and television shows. Throughout the next year and into the next decade, Project Censored will continue to inform the public, advocate for independent journalism, and strive to spark debate on current issues involving media monopoly.

Project Censored is a national research effort launched in 1976 by Dr. Carl Jensen, professor emeritus of Communications Studies at Sonoma State University. Upon Jensen's retirement in 1996, leadership of the project was passed to associate professor of sociology and media research specialist, Dr. Peter Phillips.

## **Protections for human subjects of classified experiments still lacking**

**By Cheryl Welsh**

(11-10-03) Ten years have passed since unethical radiation experiments were publicly revealed in 1990s front page news and the Office for Human Subject Research, OHRP, recently confirmed that there have been no changes in federal regulations on human subjects of classified research since then. In 1995 the Advisory Committee on Human Radiation Experiments, (ACHRE) reported that the federal government was "blameworthy for not having had policies and practices in place to protect the rights and interests of human subjects" in several thousand experiments. President Clinton adopted one of the ACHRE recommendations in a 1997 presidential memorandum requesting that federal agencies modify their policy governing classified research. A 1998 Department of Health and Human Services (DHHS) proposed rule on the Clinton memorandum has stalled and secret unethical experimentation could happen again.

This is the second time a major scandal involving human experiments for national security purposes has occurred. Past military and CIA experiments with toxic chemicals and for behavior modification were headline news in the 1970s. Congressional hearings uncovered illegal and extensive government programs including the CIA's now infamous MKULTRA mind control experiments. As a result, a series of presidential executive orders were implemented.

President Reagan's 1981 executive order, E.O. 12333, is the only current law governing classified experiments by intelligence agencies. Legal experts say it is unenforceable for several reasons, one being that a provision of the executive order states, "Nothing contained herein or in any procedures

promulgated hereunder is intended to confer any substantive or procedural right or privilege on any person or organization."

### **Federal regulations are ineffective**

Adopted by 17 federal agencies, the current regulations on experiments are called "The Common Rule". The rules cover both classified and unclassified experiments and include the cornerstone of human experimentation law, informed consent of the research subject. But experts agree the regulations lack any mechanisms for how classified research can be reviewed and conducted with informed consent.

Efforts to adopt a regulation on classified research have failed. A new draft regulation has been circulated but its current status could not be confirmed. Some experts say US national security policy on weapons development is the main reason for the lack of effective protections for human subjects of classified experiments.

### **9-11 secrecy law increases risk of unethical experiments**

"It borders on the scandalous that we still don't have rules in place that would at least begin to protect the people who are in those trials," warned Jonathan D. Moreno in a 2002 news account. Dr. Moreno, a University of Virginia ethicist reported that President Bush had given the Secretary of Health and Human Services [HHS] the authority to classify information as secret. Moreno said "that could allow the Defense Department or CIA to undertake secret human experiments with the HHS."

Dr. Andrew Goliszek, author of the 2003 book, *History of Secret Programs, Medical Research, and Human Experimentation* warned, "While there is much debate, there are no clear guidelines or legislation that would prevent the government from conducting secret research in order to stay one step ahead of terrorists who would use bio weapons against us."

### **Proposed legislation fails**

Fred Allingham is executive director of the National Association of Radiation Survivors, NARS, a network of 11,000 radiation survivors. Allingham recently described NARS legislative work. "Five to eight years ago, our members brought a proposed Nuclear Ethics Law to their local congresspeople (over 200) asking them to sponsor such a piece of legislation in order to make it not only a civil wrong but a criminal wrong, to expose people to radiation deliberately for experimental purposes... Not one congressman touched it. We ... decided we are going to try again."

Former Senator Glenn of Ohio described his 1997 bill as "the nation's first criminal sanctions for medical researchers who fail to obtain consent from people participating in experiments." The bill did not pass. Congressman Diane Degette of Colorado will reintroduce her 2002 bill on experimentation very soon, her office reported last week.

No national statute on protections for human subjects of classified experimentation that would help to prevent national security experiments like the radiation or mind control experiments has passed.

### **Lack of justice in the courts**

Lawyers of radiation and mind control experiments litigation describe a nightmare of legal hurdles. Courts give great deference to national security and the government is immune to many types of lawsuits. While the government admitted to wrongdoing, not one government official or researcher involved in mind control or radiation experiments has been punished.

A 1994 US News account reported few victims of the drug and behavior control experiments were told what was done to them and most were never compensated. Radiation victims report a similar tragedy. A huge number are not eligible for the available legislative compensation because of extremely demanding requirements.

### **No change in sight**

Commenting on the total lack of legal protections, law professor Alan Schefflin stated, "The message to scientists and governments around the world is that you can get away with unlawful experiments on unwitting victims with impunity." New classified weapons comparable to the atomic bomb have actually been in development for a long time and classified, unethical human experiments are inevitable, without major changes.

*Coping with the Weapons of Tomorrow*, a 2003 International Committee of the Red Cross (ICRC) conference featured a discussion of concerns about new nonlethal weapons using electromagnetic energy. A disarmament expert read from the 1975 Geneva protocol treaty debates about the then-future weapons including, "...geophysical, ecological, electronic and radiological warfare as well as devices generating radiation, microwaves, infrasonic waves, light flashes and laser beams".

According to Dr. Colin Ross, author of *Project Bluebird*, on CIA experiments, new nonlethal weapons "are beamed at individuals in order to control them." Dr. Ross predicted, "It is implausible that there hasn't been some clandestine experiments of nonlethal weapons on individuals today."

## Proven & Available Electronic Harassment Technologies:

There are older technologies capable of extreme destruction of the ability to earn a living, and the quality of life of a target, listed below. None of these technologies require implants, and all can be transmitted silently, through non-conducting walls, and leave no trace evidence. They have been available for one to five decades .

Since few targets will own the correct (and expensive) detection equipment, destruction of a target's life even using these older technologies is a perfect crime under today's justice system. Today's justice system denies that any effective through wall harassment technologies exist.

Here is the list:

**WEAPONIZED MICROWAVE OVEN:** A simple microwave oven, door removed, with the door interlock switch bypassed, and held against the bedroom wall of a target in an apartment building or semi-detached house. This device can cause a variety of disabling medical symptoms. (Google "Dr. Reinhard Munzert".)

Image showing weaponized microwave oven weapon,

for improved focus of the microwave radiation.

Some symptoms of microwave radiation:

Asthma, cataracts, headaches, memory loss, early Alzheimer's, bad dreams, depression, fatigue, concentration loss, appetite loss, heart and blood pressure problems, and cancer.

**VOICE TO SKULL:** Joseph Sharp's voice to skull success, performed with Dr. James C. Lin's pulsed microwave transmitter, and publicly announced in 1974 at the University of Utah:

AUDIBLE sound transmitted directly into a target's skull, through a target's wall, of course, can drive the through-the-wall target crazy, and if the target complains, the target will be immediately diagnosed as mentally ill. The perfect crime.

U.S. patent 6,587,729 was issued based on Dr. Joseph Sharp's voice to skull success.

**Recent news story showing that voice to skull technology is admitted publicly as being of interest to military and law enforcement:**

**Original link:**

**<http://abcnews.go.com/print?id=5305386>**

## **Microwave Ray Gun Controls Crowds with Noise**

**By DAVID HAMBLING**

**July 4, 2008**

A US company claims it is ready to build a microwave ray gun able to beam sounds directly into people's heads.

The device dubbed MEDUSA (Mob Excess Deterrent Using Silent Audio) exploits the microwave audio effect, in which short microwave pulses rapidly heat tissue, causing a shockwave inside the skull that can be detected by the ears. A series of pulses can be transmitted to produce recognisable sounds.

The device is aimed for military or crowd-control applications, but may have other uses.

Lev Sadovnik of the Sierra Nevada Corporation in the US is working on the system, having started work on a US navy research contract. The navy's report states that the effect was shown to be effective.

### **Scarecrow Beam?**

MEDUSA involves a microwave auditory effect "loud" enough to cause discomfort or even incapacitation. Sadovnik says that normal audio safety limits do not apply since the sound does not enter through the eardrums.

"The repel effect is a combination of loudness and the irritation factor," he says. "You can't block it out."

Sadovnik says the device will work thanks to a new reconfigurable antenna developed by colleague Vladimir Manasson. It steers the beam electronically, making it possible to flip from a broad to a narrow beam, or aim at multiple targets simultaneously.

Sadovnik says the technology could have non-military applications. Birds seem to be highly sensitive to microwave audio, he says, so it might be used to scare away unwanted flocks.

Sadovnik has also experimented with transmitting microwave audio to people with outer ear problems that impair their normal hearing.

### **Brain Damage Risk**

James Lin of the Electrical and Computer Engineering Department at the University of Illinois in Chicago says that MEDUSA is feasible in principle.

He has carried out his own work on the technique, and was even approached by the music industry about using microwave audio to enhance sound systems, he told New Scientist.

"But is it going to be possible at the power levels necessary?" he asks. Previous microwave audio tests involved very "quiet" sounds that were hard to hear, a

high-power system would mean much more powerful and potentially hazardous shockwaves.

"I would worry about what other health effects it is having," says Lin. "You might see neural damage."

Sierra Nevada says that a demonstration version could be built in a year, with a transportable system following within 18 months. They are currently seeking funding for the work from the US Department of Defence.

**SILENT SOUND:** Lowery's "Silent Sound," patent 5,159,703, has been used for self-help subliminal hypnosis tapes and CDs and by the U.S. Army in Gulf War One (1991). Currently used for shoplifting prevention in some countries.

Together with Sharp's voice to skull, Silent Sound projected through a bedroom wall can hypnotize a target in their bed with the target being unaware. Unaware hypnosis is clearly electronic harassment in the extreme. A target's personality can be severely interfered with, and the target will not know why this is happening.

Concept diagram, combined voice to skull and Silent Sound

"Slope detection" or "slope tuning", showing how a constant volume

frequency modulated acoustic signal can be changed into a normal

variable amplitude audio signal by the ear's sloping response curve

**THE LIDA MACHINE:** A half-century-old medical device, the Russian-built Lida machine, a pulsed 40 watt, 40 MHz radio transmitter which can be used to make a target exhausted on the job when pulsing at the rate consistent with sleep, and with a pulse rate increase, deprive the target of sleep too! Certain ham radio transmitters can be configured so as to duplicate the Lida signal.

The Lida uses the repetitive stimulus principle, and it's pulsing radio signal is what makes this a through wall capable weapon. Very slow stimulus induces drowsiness, rapid stimulus induces wakefulness, all done silently.

U.S. Patent 3,773,049 describes the Lida operating principle.

Associated Press photo. Dr. Ross Adey, now deceased, was a researcher at the

Loma Linda, California veterans hospital. Dr. Adey, together with Dr. Eldon Byrd,

acquired a Lida machine for testing, with an eye towards weapons potential.

Neither Dr. Adey nor Dr. Byrd are known to have been associated with any unethical activities nor weapons derived from the Lida machine.

**THROUGH WALL RADAR:** Through clothing (and through non-conductive wall) radar, widely used at airports and by police to look through clothing for hidden weapons. The harassment potential of this technology in the hands of organized stalking gangs is obvious.

Through wall/clothing radar images .

**EPIC BALANCE DISRUPTOR:** Code name EPIC through wall coordination/balance disruptor weapon may become another through wall capable harassment technology, once it has been announced as having been successfully demonstrated.

Electronic harassment targets have reported suddenly having their balance and coordination disrupted.

Here's a quote from a May 21, 2007 article about the EPIC weapon on <http://www.myfoxboston.com> :

### Local Company Developing 'Less than Lethal' Weapon

'EPIC' by Invocon is being developed as a 'Less than Lethal' Weapon.

How do you disable bad guys in a crowd without killing them or causing permanent damage? It's a problem faced by troops in urban combat and by local law enforcement.

Now, a local company called Invocon may have the answer, and the solution may be a weapon code named "Epic." The company is developing a weapon they hope someday will be able to shoot through a wall and stun people on the other side of the wall. ...

Note that all of these silent, through-wall harassment devices can be had by anyone with an upper middle-class income. The public and public officials are urged to take complaints of electronic harassment very seriously, as there is no doubt that far more invasive classified (secret) technologies have been developed since these older technologies were developed, one to five decades ago.

The classified equipment, coming into wider use in the 1980s, can penetrate all shielding and is virtually unstoppable according to current experiences of targets. Our group as yet does not have documented information as to how these classified devices work.

<http://www.raven1.net/psradar.htm> revived by [www.hearingvoices-is-voicetoskull.com](http://www.hearingvoices-is-voicetoskull.com)

Patriot Scientific Corporation has developed radar technologies with a wide range of possible applications. This description below will highlight possibilities for use in:

- Ground Penetrating Radar (GPR)
- Communications
- Surveillance
- Ordinance Detection
- Stealth Radar

## **The Demonstration System**

This is a diagram of the demonstration system. A pulse generator is used to drive the transmit antenna. The pulse is a positive spike going up to 100V then falling back to ground in one and a half nanoseconds corresponding to a pulse transmit frequency of 750 MHz.

The return signal is read by the receive antenna. At this point some simple analog processing is done and the signal is digitized at a resolution of 6 GHz, and sent to a PC.

The PC correlates the data into a conventional waveform, does some processing, then transmits the data over an ethernet cable to a Pentium workstation (not shown).

The Pentium workstation is used to apply different digital filters, combine waveforms, and display the results. This system can be used to demonstrate detection of small targets buried in sand, people behind walls, and other targets.

Patriot has used its antenna system to demonstrate detection of objects as small as a coke can buried in sand, through a wall. Even small targets disturb the wavefront of the pulse, producing reflections and modifying the field in measurable ways.

Patriot will be testing this technology for suitability for mine detection. We will be acquiring sample casings and running further tests.

## **Advantages of Patriot's Impulse Radar System**

The key to Patriot's Radar system is its ability to transmit and receive pulses barely longer than single cycles at the transmit frequency. The first waveform shown here is a pulse generated by an earlier Patriot Design, based on "off the shelf" antenna technology. The waveform on the bottom was produced and received by Patriot's current Design.

The current Patriot antenna system produces a pulse at the desired frequency with little leading or trailing noise. The Patriot antenna system provides many advantages over pulse-based systems.

Patriot originally developed the impulse radar system to allow time domain processing in Patriot's GPR systems. Because the impulse is extremely short (3 nanoseconds), the time to return can be used to gauge the distance traveled by the pulse. Furthermore, the transmit and receive antenna's are very directional, eliminating much of the multipath components of the return signal. The short pulse combined with the directional transmit and receive to provide us with a number of important advantages:

- Very low average power during transmission
- Low interference from other transmitters
- Transmission invisible to conventional receivers
- High bandwidth digital data transmission possible
- Difficult detection by other impulse receivers

Interference with other sources and receivers is further reduced by using directional antennas. The antenna design shown is highly directional. When penetrating the ground, we wish to eliminate as much of the multipath signal as possible. The directional antennas reduce the multipath signals detected to those that are relatively inline with the wave path, and eliminate much of the multipath signal that returns at odd angles.

Impulse radar uses low power inherently because the transmissions occur in pulses separated by periods of no transmission. The power of the pulses is offset by the dead time between the pulses. The average output of the current system is about 300 microWatts. The low average power of an impulse system effectively hides the transmissions from conventional receivers.

Interference can be further reduced in an impulse system by using random interval spacing. As long as the transmit and receive antennas are in sync, the period between pulses can be varied to prevent aliasing with other continuous- or pulse-transmission systems that might be operating in the same locale. Furthermore, if an impulse system is being used to transmit data, varying the intervals between pulses prevents other impulse systems from locking onto the signal. Patriot Scientific's current GPR system does not use random interval spacing.

# **Be a Patriot Scientific Development Partner**

Patriot is actively looking for partners to develop the radar technology into a set of products. Patriot is looking at various approaches to improve the imaging, including technologies commonly associated with seismic imaging, such as adaptive filters.

Patriot also owns all rights to the PSC1000 microprocessor. We intend to deploy innovative technologies, such as the 100 MHz PSC1000, to develop more responsive and intuitive systems.

<http://www.raven1.net/psychotr.htm> revived by [www.hearingvoices-is-voicetoskull.com](http://www.hearingvoices-is-voicetoskull.com)

### **Psychotronic Weapons Letter To Senate Committee**

(The following letter is alarming and vital to the understanding of how far the issue of psychotronic weapons and projects aimed at controlling American citizens and people everywhere has progressed. This letter is dated February 9, 1994. The organization involved is no longer available at this address below. Ms. McKinney is said to be occupying a much lower profile these days. Nevertheless, this is an important document to consider)

---

Association of National Security Alumni Electronic  
Surveillance Project P. O. Box 13625  
Silver Spring, MD 20911-3625

February 9, 1994

Chairman John Glenn  
Senate Committee on Governmental Affairs  
340 Dirksen Senate Office Building  
Washington, D.C. 20510

Attention: Mr. Chris Kline

Subject: Involuntary Human Experimentation with Non-Ionizing Radiation

Dear Mr. Kline:

Senator Glenn's publicly-expressed outrage that this government has (once again) been found to be engaging in brutal forms of involuntary human experimentation, and his demand, in effect, that any and all forms of this type of experimentation be exposed was heartening.

A large and growing number of people in this country hope that the Senator's expressed outrage was sincere, and that your Committee's investigations are not simply a means of diverting attention from complaints centering on this government's long-term role in involuntary human experiments with non-ionizing forms of radiation.

Now that the Departments of Defense, Energy and Justice have openly admitted that directed-energy weapons systems do indeed exist, complaints of experimentation with these systems can no longer be ignored.

As stated to you during our telephone conversation last week, this Project is focused on complaints concerning experiments with non-ionizing, so-called "non-lethal," directed-energy weapons, surveillance and psychotronics systems. In bringing this to your attention, I am representing the interests, currently, of some 100 U.S. citizens, who are the subjects of both vicious forms of overt harassment and concurrent directed-energy harassment.

The enclosed copy of Microwave Harassment and Mind-Control Experimentation is a preliminary investigative finding, only. The accompanying Supplement furnishes an update on the current status of this Project.

I am also enclosing copies of letters exchanged with, and directed to the Department of Defense, the Department of Justice, and the Food & Drug Administration, which are self-explanatory. I am also enclosing copies of two articles concerning John Alexander, of the Los Alamos National Laboratory's Nonlethal Weapons Division, which I will address below. Also enclosed is a letter to a woman in contact with this Project which addresses some of the effects of long-term exposure to these so-called "non-lethal" systems. Just as a matter of interest--DoD-sponsored "hy'e" in the media to the contrary notwithstanding--non-lethal weapons systems can be incredibly lethal.

They are not gentle systems, as this government would like for the public to believe. Questions which need to be asked by the Committee on Government Affairs, as a preliminary, are as follows:

1. By what formal means are U.S. Government agencies, to include the

Department of Defense, prevented from testing "non-lethal", directed-energy weapons, surveillance and psychotronics systems on U.S. citizens under involuntary circumstances?

2. By what formal means are U.S. Government contractors and sub-contractors prevented from testing "non-lethal", directed-energy weapons, surveillance and psychotronics systems on U.S. citizens under involuntary circumstances?

3. Why does the Energy Policy Act of 1992 fail to prohibit involuntary human experimentation with non-ionizing forms of radiation?

4. How many members of Congress and of the Administration have investments in firms which are engaged in the development and testing of directed-energy systems?

5. Why is Los Alamos National Laboratory, a Department of Energy agency, engaged in the development of "non-lethal", directed-energy systems?

6. Why is John Alexander--a 30-year US Army Special Forces veteran with a long-term interest in the "psychotronics" (mind-control) aspects of directed-energy systems--regarded as being particularly qualified to direct the Non-Lethal Systems Division of Los Alamos National Laboratory?
7. Why is the Department of Energy (and John Alexander in particular) in the business of promoting "non-lethal" systems as tools for law enforcement, and as weapons systems for the military?
8. Why are these "non-lethal" systems being kept classified?
9. Where is the test data on the efficacy of these directed-energy weapons, surveillance and psychotronics systems being obtained, and who in Congress, specifically, is overseeing those experiments?
10. Why is the Department of Defense pushing for an increase in the numbers of Ground Wave Emergency Network (GWEN) towers in this country?
11. How many satellites launched under the auspices of DoD, the National Reconnaissance Office, and the Central Intelligence Agency are engaged in the surveillance of U.S. citizens? And how many of those satellites qualify as directed-energy emitters; i.e., as "amplified communications" satellites?
12. What federal constraints have been placed on the construction of microwave towers and other antennae arrays in this country; and what assurances do U.S. citizens have that emissions from those towers and antennae arrays are not being used for involuntary human experimental purposes?
14. Who in Congress is overseeing the construction and use of microwave towers and antennae arrays in this country?
15. Why is it that complaints by U.S. citizens concerning directed-energy harassment and experimentation are being ignored?
16. Since Ms. Susan Patrick Ford, of the Department of Defense, appears to be unable to answer the questions posed in my letter to her dated November 18, 1993, can you answer these questions?

In sum, Mr. Kline, this is a problem which Congress can ill afford to ignore. There are many angry people in this country who are fed up with these experiments. (Not all experimentees are kept effectively isolated.) A number of experimentees recognize the rapidly burgeoning numbers of microwave towers and antennae arrays in this country are a part of the problem--a level of recognition which, indeed, may have prompted the destruction of two major "communications towers" in Chiapas, Mexico, shortly prior to that government's decision to close the borders to that state.

A lawless government spawns a lawlessness, generally. It is apparent to me that this country is merely "testing its wings", so to speak, where lawlessness and chaos, at this stage, is concerned. Creating more prisons and hiring more police is not the solution.

The U.S. Congress--and Senator Glenn's Committee, in particular,--is in a position to ensure that no government agency, surrogate or otherwise, has a license to run rampant over the human and civil rights of citizens of this country, and that this government, once again, learns to adhere to the principles which were the basis for this country's creation.

Please do let me hear from you concerning the foregoing.

Sincerely,

JULIANNE MCKINNEY

Director, Electronic Surveillance Project

## **Book Review:** **Psychic Discoveries**

**by Sheila Ostrander and Lynn Schroeder,  
reviewer Eleanor White  
This page updated August 25, 2003**

**Copyright 1970 and 1997  
Published by Marlowe and Company  
632 Broadway, Seventh Floor  
New York, NY, 10012 USA  
ISBN 1-56924-750-1  
Library of Congress number 78-106347  
428 pages, indexed**

This is an "Eleanor White Book Review". Such reviews are not like what you see in the print media. My emphasis is to provide enough information that a mind control victim or supporter can make an intelligent decision as to whether to buy the book (or borrow it). This means most of the reviews are excerpted text, with comments inserted. This type of review is biased in favor of information relevant to mind control technology, and possible countermeasure experiments. Those who are interested in psychic phenomena outside of a mind control context should obtain this book for detailed information.

This book is a COMBINED PRINTING of two books by these authors:

- Psychic Discoveries Behind the Iron Curtain, 1970
- Psychic Discoveries: The Iron Curtain Lifted, 1997

Note: In the excerpted text from the book, emphasis by way of ALL UPPER CASE LETTERS is mine. The reason for such emphasis is to point up information particularly relevant to mind control.

### **About the Authors**

[From the inside back page of the book] Internationally acclaimed authors, Sheila Ostrander & Lynn Schroeder travelled extensively in Russia and East Europe to document Psychic Discoveries and have continued their psi investigations East and West right up to today. Their work introduced Kirlian photography, pyramid power and Superlearning to the Western world. They have co-written ten books, published in 25 languages, including the best selling Psychic Discoveries Behind the Iron Curtain, Executive ESP, Superlearning and Superlearning 2000.

The team has appeared on over 2,000 TV and radio shows including Today and Good Morning America, discussing human possibilities. They have lectured widely here and abroad and created dozens of audio tapes. Sheila Ostrander is Canadian and lives in Toronto. Lynn Schroeder is a native of New Jersey and lives in New York City.

Also check out [The Secret Life of Plants](#) for ideas which may permit advanced, ESP-class mind/body attack signals to be detected.

## Chapter 9: The Telepathic Knockout

(1970 material)

[p 89-90]

Dr. Platonov had found more than an exotic way to cure insomnia with his telepathic whammy. The ability to put people to sleep and wake them up telepathically from a distance of a few yards to over a thousand miles became the most thoroughly tested and perfected

contribution of the Soviets to international parapsychology. It is the Soviet experiment. The ability to control a person's consciousness with telepathy is being mined...

[...SNIP...]

[Back to Table of Contents](#)

[EW: Mind control victims note the paragraph below!]

Professor A. V. Dzelichovsky often invited her to the laboratory during the long wait. He acted almost like a private tutor, never too busy to see her or to talk - to talk about everything except the experiments she was supposed to star in. Finally the curious girl found herself dropping in at the lab at any odd hour. "Is there any particular reason you've come?" Dzelichovsky would ask. All she could do was flush and stammer, "No ... no, I just felt like it."

[...SNIP...]

Dr. Kotkov tried to telepathically obliterate the girl's consciousness thirty times. He never failed.

[...SNIP...]

The scientists telepathically put the women to sleep countless times in a three year period, from room to room, from building to building. They even wired the balloon apparatus to Ivanova's radio at home, so they could catch the signal in their labs. [??] While she lay in her own bed they knocked

[...SNIP...]

[p 92-93]

[Back to Table of Contents](#)

[EW: The following paragraph is very important for mind control targets who are considering shielding experiments to read.]

Still, there were plenty of other waves. Vasiliev shut Ivanova into an iron Faraday cage that barred electromagnetic waves. Telepathy went on as usual. The scientists were beginning to worry. If telepathy didn't prove to have a physical basis, it would have to join other emigres from the Soviet Union. Vasiliev built a lead capsule, a barrier even to [ionizing, like xray] radiation. Tomashevsky, the sender, climbed a stepladder and slid into what looked like an oversize antique refrigerator. He lowered the heavy domed lid. It settled into a gully filled with mercury until the capsule was perfectly sealed. No waves could move in or out. Surely telepathy would not happen. Tomashevsky pictured Fedorova asleep inside the Faraday cage. She lost consciousness. This knockout telepathy actually seemed to work somewhat better inside all the leaden shields.

[...SNIP...]

Standing alone on the boardwalk, Tomashevsky concentrated. A thousand miles away, Ivanova lost consciousness on schedule as she talked to Dr. Doubrovsky.

[...SNIP...]

[Back to Table of Contents](#)

Ironically, the tireless Vasiliev had built what is still the world's best proof that (known) electromagnetic waves do NOT carry telepathy.

[...SNIP...]

[Back to Table of Contents](#)

Not only does this kind of telepathy throw a person into a trance, but it also seems to open up a good channel of communication. Asked about this weird connection, the woman said it was LIKE A TELEPHONE ...

[...SNIP...]

[Back to Table of Contents](#)

[EW: An important paragraph for mind control targets]

If any current [1970s material] Soviet scientists have lived through such woolly moments summoning a person across Moscow, they don't talk about it. But they have occasionally mentioned efforts to guide someone's movements with telepathy inside their labs. On a closed circuit TV, the Popov parapsychologists watched watched an entranced subject in an isolated room. CAN ESP NOT ONLY KNOCK HIM OUT BUT ALSO KNOCK HIM DOWN? Can they telepathically guide the direction - front, back, this side or that - of his fall?

"In one test series," Edward Naumov recorded, "the subject was made to fall TEN OUT OF TEN TIMES.

[...SNIP...]

[Back to Table of Contents](#)

[EW: An important paragraph for mind control targets]

This is the facile fantasy of supersonic thrillers. But wouldn't it be naive to assume no researcher has ever thought of such potential uses for telepathy? The famous Soviet, Wolf Messing, with his widely attested ability to influence the minds of others, commented in his autobiography on the time he managed to walk out of a building, past guards ordered to stop him. "This and similar cases should make us reconsider the often-advanced opinion that nobody would perform under hypnosis an act opposed to his convictions. I am sure the guards would have not let me pass as myself, but, using my mental power, I made them see me as the high official whom they would let out without a pass. Similarly, a man under hypnosis can be told to shoot a rabbit when in fact he would be shooting at a man."

[...SNIP...]

[p 97-98]

Czech biochemist Dr. Milan Ryzl stated in Psychic, "The bulk of recent telepathy research in the U.S.S.R. is concerned with the transmission of behavior impulses - or research to SUBLIMINALLY CONTROL AN INDIVIDUAL'S CONDUCT."

Visiting Soviet psi labs, Dr. Ryzl says he was told by a Russian, "When suitable means of propaganda are cleverly used, it is possible to mold any man's so that in the end he may misuse his abilities while remaining convinced that he is serving an honest purpose." [EW: JUST LIKE OUR STREET LEVEL PERPS!]

[Back to Table of Contents](#)

## Chapter 26: Psychotronic Generators - Psychic Machines?

(1970 material)

[...SNIP...]

What are they all about? There isn't an easy answer. The Czechs start out explaining them this way: "Human beings and all living things are filled with with a kind of energy that until recently hasn't been known to Western science. This bioenergy, which we call psychotronic energy, seems to be behind PK (psychokinesis); it may be the basis of dowsing. It may prove to be involved in all psychic happenings. The psychotronic generators draw this bioenergy from a person, accumulate it, and use it. Once charged with your energy, the generators can do some of the things a psychic can do."

[...SNIP...]

[Back to Table of Contents](#)

The scientists set up experiments with a device designed by Pavlita. Inside a tightly sealed metal box a spike revolved, run by an electric motor beneath. On top of the turning spike the scientist had balanced a copper strip. It looked like the letter T. The only other thing inside the box was a small metallic object in one corner, not connected to anything. The revolutions of the copper strip were recorded photoelectrically.

Pavlita, as the scientists watched, stood about six feet away from the contraption. He concentrated, stared hard at it. Suddenly the copper strip stood still, as though some force were holding it, counteracting the turning rod. The entire device was even magnetically screened.

[...SNIP...]

"PK! A fraud proof demonstration of PK", wrote British journalist Theo Lang who'd heard of Pavlita and flown in to witness a demonstration. The scientists agree that it was a fraud proof

demonstration of SOMETHING, but what? They couldn't find any known force that could cause the strip to stop and reverse as Pavlita stared. It sounds like PK but it isn't - not exactly.

[...SNIP...]

[Back to Table of Contents](#)

[p 288-89]

Other researchers into this now-and-then rediscovered human energy reported that it could even MOVE objects at a distance - in other words, PK. According to the British medical magazine Lancet for July 30, 1921, Dr. Charles Russ, M.R.C.S., showed the Ophthalmic Congress at Oxford in 1921 that with a proper apparatus a person could cause a solenoid to move by gazing at it.

[...SNIP...]

"The force of attraction depends on the amount of energy accumulated in the generator," the Czechs state. It looks like electrostatic energy - the force you get when you rub a comb on wool, turning it into a "magnet" that picks up paper and other light things. Static electricity doesn't work under water. The Pavlita generator is placed in water; still it attracts and lifts bits and pieces of nonmagnetic material.

[...SNIP...]

It is reported that commissions of experts from the Czechoslovakian Academy of Science and the University of Hradec Kralove - physicists, electronics experts, radio technicians, electrophysiologists, and mathematicians - all investigated the psychotronic generators. We're shown a generator whose force turns a small blade. They've tested to eliminate static electricity, air currents, temperature changes. The blade turns. The blade doesn't react to a strong magnet. The experts test with magnetic fields. They make no difference. The "vital energy" that supposedly philosophical concept, continues to turn the blade. We see them cover the entire device with a glass cylinder. Nevertheless, it moves. We're told they've suspended it in water. Still it revolves.

[Back to Table of Contents](#)

Dr. Julius Krmessky, an outstanding Czech mathematician and physicist, tackled this unexplained energy radiating from humans and published an important scientific paper for the Chair of Physics of the Pedagogical Institute of Trnava. Krmessky calculated the force required to make the blade turn at  $1.2 \times 10^{-3}$  dynes. "It can't be heat or air," he reports. THE RADIATION GOES RIGHT THROUGH GLASS, WATER, WOOD, CARDBOARD, ANY TYPE OF METAL - EVEN IRON - AND ITS STRENGTH DOESN'T DIMINISH AT ALL. Furthermore, the mind seems to control this energy."

[...SNIP...]

"Analysis found that whatever the energy was, it had caused a change in the actual molecular structure of the water itself! The two hydrogen atoms spread farther apart."

This rang a bell too. We'd been told by a reputable scientific source in the United States that a well known American chemical lab studied water that had been held in a sealed flask by a healer. Word had it that there seemed to be a molecular change in this water, a spreading of the bonds between the hydrogen and oxygen.

[...SNIP...]

"This is only an infinitesimal part of the Pavlita experiments conducted by the inventor and many other scientists in Czechoslovakia. The psychotronic generators have obtained results in telekinesis, telepathy, clairvoyance tests." TELEPATHY? But that was the end of the movie [viewed in Czechoslovakia by the authors in company with scientists].

[...SNIP...]

Dr. Genady Sergeyev, the Leningrad neurophysiologist, commented at the conference, "The Pavlita work shows it is possible TO TRANSFER ENERGY FROM LIVING BODIES TO NONLIVING MATTER.

[...SNIP...]

[Back to Table of Contents](#)

### The Secret's in the Form (1970 material)

[p 293]

[...SNIP...]

"Pavlita got the idea from studying many very old texts." Which ones? The Czechs smiled and shook their heads. "We're sorry, we can't tell you that yet."

[...SNIP...]

"The secret of the generators is their FORM. [EW: Like 'sacred geometry'?] That's the key thing Pavlita gleaned in his studies. It's the shape that lets you accumulate this energy and turn it to whatever purposes you want." Now we understood why they were so hooked on the lighthearted pyramid razor blade sharpener. There, too, the "secret" is supposedly the form.

[...SNIP...]

Pavlita uses copper, iron, gold, steel, brass, various kinds of metals, and sometimes even wood. Most generators are a carefully formulated COMBINATION OF METALS.

[...SNIP...]

"The energy doesn't come from a particular organ in your body. It comes from your entire force field, so to speak. Many of the generators have a certain staring pattern carved into them to help concentration and conduction of the energy."

Here's another old idea, the staring pattern that is now tacked up in rooms across America as a result of the influx of Eastern philosophy, the staring pattern that is said to boost concentration and release psychic or spiritual power. The Czechs maintain that this power, handled correctly, can amp up a geranium plant or run a small motor.

[Back to Table of Contents](#)

Do you have to keep a specific thought in your mind while trying to charge a generator? "No. You don't have to think anything in particular or will your energy into the generator. Staring in pattern is enough to direct the force, if the generator is properly made. Now we've developed automatic generators that work WITHOUT staring. WE believe they can collect biological energy from anything living - human, animal, plant. Tests are scheduled to see if they can accumulate energy from something as basic as a fertilized egg.

[...SNIP...]

How long does a charge stay in a generator?

"The generator that speeds plant growth, once charged, works steadily for three days. [EW: Kind of like the 3 day's anomalous effects in genuine crop circles.] That's about the longest at the moment. We have one designed to turn a small electric motor. The first day it requires a charge of half an hour. Then, a few minutes every day and the generator will turn the motor about fifty hours."

[...SNIP...]

The Czech scientists, who seem eminently sane and responsible people, said yes. They showed us small segments of film to back up this "yes". One generator, they said, could do that most classic of all ESP tests, the card test.

This "telepathic" generator has a rotating pointer on top. ESP cards are arranged in a circle beneath. The generator is the "receiver". In another room sits a person who will send. He holds the pack of twenty five cards shuffled and randomized. The sender turns one card at a time face up and concentrates on its pattern. In the first room, the pointer of the generator slowly turns and stops, directed at the card with the same symbol the sender is looking at. As the sender goes through the deck, the generator continues to swing from card to card as an observer notes its "choices" in order.

[Back to Table of Contents](#)

What kind of ESP scores does the generator get?

"It is always 100 percent correct. The generator never makes a mistake."

[...SNIP...]

"Instead of cards being placed under the pointer, we can put a potato, an apple, various vegetables and fruits. Another set is placed in front of a person in a separate room. As the person selects each, the revolving pointer on the generator also turns to indicate the matching

vegetable." Their generators, the Czechs added, could also distinguish between blood samples and match a child with his parents.

[p 297-98]

In the United States, Cleve Backster, head of the Backster School of Lie Detection in New York [1970 material], has found that organic matter - plants, fruits, vegetables, blood samples - seems to have a form of 'primary' perception." They communicate, sometimes across vast distances. And they "recognize"; even cell scrapings from a person's mouth "recognized" their owner according to the polygraph tracings.

[...SNIP...]

If psychotronic energy is real, what happens if you aim it at people?

"That depends on the kind of generator. Some, we believe, could speed healing of wounds and recovery from illnesses. Others have a harmful effect. We tested the force of one type of generator, for example, on the brain. Pavlita's daughter Jana offered to be the guinea pig. At a distance of several hundred yards, we beamed this energy from a generator towards her head. Jana became dizzy - her spatial orientation was affected and she began to swirl around.

[...SNIP...]

[Back to Table of Contents](#)

### A Visit to the Czech Merlin (1970 material)

[...SNIP...]

[Back to Table of Contents](#)

As he chain smoked, Pavlita explained some of the things the generators could do. "EVERY MOTION A PERSON MAKES IN A ROOM LEAVES A PATTERN, A TRACE. The generator is able to pick up this trace over a distance of several rooms. Even moving one's hand in a circle over a table creates enough of a trace for the machine to pick up and identify."

[...SNIP...]

Even the Czechs don't claim to know all there is to know about their new energy. The cardinal point in their minds is that Pavlita's generators demonstrate that AN UNKNOWN ENERGY DOES EXIST, SUBTLY INTERTWINED WITH HUMAN BEINGS.

[...SNIP...]

[p 304-05]

The very few - two or three - Western scientists who have seen Pavlita's generators are wary of them. No one likes to wear a historical dunce cap like the members of the French Academy who bodily threw Mr. Edison's agent and his talking machine out of their chambers. They

knew, after all, that wax can't talk, that the whole thing was a cheap ventriloquist's trick. Yet no one, particularly scientists, likes to be fingered as gullible, either.

[...SNIP...]

[Back to Table of Contents](#)

## Chapter 28: All Kinds of New Energy

(1997 material)

[...SNIP...]

What was going on in those buried installations that one after another of our contacts alluded to with comments like "There are secret laboratories ... military labs ... closed labs ... there are brilliant scientists you will never know of working in this field." Hints of darkness were almost invariably followed by a plea to take word to the West, "PSI IS REAL; IT MUST NOT BE USED IN ANTI HUMAN WAYS."

[...SNIP...]

Fear of the dark side of Soviet psi seemed to be what drove some Russians to take chances that even we knew enough to warn against. It brought us papers to be copied in a few hours in the middle of the night so they could be smuggled back to their files before dawn. It pushed one man to keep connecting though he risked being beaten up again by government goons. It also brought us a bathtub full of bright, bushy bouquets. Snuggled inside lay tightly wrapped manuscripts from scientists who thought us too dangerous to meet.

[...SNIP...]

Scientists at the Popov Society too "sensitive" about the welfare of psi subjects were fired.

[...SNIP...]

"You'll never be able to come back after you write about us," we were told in every country we visited. Any lingering desire to try was snuffed when the foremost Soviet ideological publication, the Marxist Journal of Philosophy fingered us by name as - "dangerous, anti-Soviet warmongers." Maybe we should have passed on the "anti-Soviet" part to the AGENCIES SNUFFLING AROUND US AT HOME. The FBI interviewed Lynn's parents to uncover that their daughter had trouble finding fresh food in Moscow, while in Canada the RCMP busily interviewed Sheila's family and friends. Dr. Ivan Sanderson, who like 007 spent years in British MI5, insisted our phones were tapped. And we "accidentally" ran into men from various shadowy agencies in the most unlikely places.

[...SNIP...]

[Back to Table of Contents](#)

## Chapter 29: Psychic Warfare and Mind Control

(1997 material)

[p 329]

"Russian scientists have been very successful in developing psychic warfare DEVICES," says former KGB Major General Oleg Kalugin, the man in charge of foreign counterintelligence for the Soviet Union in the 1970s.

[...SNIP...]

According to Major General Kalugin, the Soviet Union wanted to investigate and harness psychic energy in order to produce new and deadly weapons - exotic weapons with which the West was unfamiliar - stunning weapons that could tip the balance of power during the Cold War.

[Back to Table of Contents](#)

Says Kalugin, "They started to explore the mysterious powers of certain people and to SIMULATE GENERATORS of this same nature in order to produce a similar effect." Russian scientists succeeded in developing GENERATORS OF PSYCHIC FORCE, he said in a 1992 ABC documentary. Kalugin revealed in 1990 that it was Yuri Andropov, head of the KGB from 1967 to 1982, (and later, Premier of the U.S.S.R.) who issued personal orders to push full speed ahead with psychic warfare. Andropov's directive also urged scientists to forget being squeamish about injuring or killing research subjects in the race to achieve their goal.

[...SNIP...]

Kalugin reveals that Soviet scientists had developed instruments designed to capture and accumulate psychic energy and then release it on command. They had transformed human psychic power into a practical, controllable resource. Once accumulated and concentrated by a psychotronic generator, psi energy can be released and used for a multitude of purposes.

[...SNIP...]

[Back to Table of Contents](#)

Edward Naumov warns, "A psychotronic generator can influence an individual or a whole crowd of people. It can affect a person's psyche mentally and emotionally. It can affect memory and attention span. A psychotronic device can cause PHYSICAL FATIGUE, DISORIENTATION, AND ALTER A PERSON'S BEHAVIOR. Certain generators can arouse FEAR, ANXIETY, ANGER, INSOMNIA, DEPRESSION, AND SUICIDAL THOUGHTS and even lead to cerebral thrombosis [stroke].

[Back to Table of Contents](#)

[p 330-31]

Dr. Nikolai Khokhlov, a former KGB agent who defected to the West, was hired by the CIA in 1976 to investigate secret psychic research in the Soviet Union. He uncovered REAMS OF

NEGATIVE PSYCHIC EXPERIMENTATION at over twenty well funded, heavily guarded clandestine labs, staffed by hundreds of top scientists. Hearts of lab animals were stopped telepathically; newborn rabbits separated from their mothers were electrocuted and the mother rabbits' telepathic biological responses charted; psychotronic generators were developed and tested for numerous applications; death row prisoners were handy subjects for various lethal tests such as using PK to paralyze sections of their spinal cords. Khokhlov identified certain government labs in Moscow THAT MANUFACTURED PSYCHOTRONIC GENERATORS ON A BIG SCALE.

[...SNIP...]

"The KGB and other organizations did build psychotronic generators," Edward Naumov told ABC. "I know that over half a billion rubles were spent on developing psychotronic equipment. Which brings up the question - where are all those devices now?" [EW - Targetting US!]

[...SNIP...]

[Back to Table of Contents](#)

Psychotronic weapons aren't part of ANY arms accord, and with the current explosion of the Russian "Mafia" internationally, psychotronic arms could be sold or smuggled anywhere to ratchet up the terrorists' arsenal. On the other hand, could such arms be used to counteract terrorists by changing their mindset? Russian journalist Emil Bachurin revealed in 1991 that in addition to state-produced devices, EVEN HOMEMADE PSI GENERATORS ARE HITTING THE MARKET!

[...SNIP...]

[Back to Table of Contents](#)

### Sick Waves? (1997 material)

[...SNIP...]

[Back to Table of Contents](#)

"SICKNESS CAN BE TRANSMITTED BY RAYS," they reported. "Viruses can be Transmitted by Rays at a Distance."

Decades earlier, the famous Russian scientist Dr. Alexander Gurtvich paved the way. "All living cells produce an invisible radiation," he said. He called it "mitogenetic radiation." Humans, plants, bacteria - all emitted it. Now, with photomultipliers (like "sniper scopes" that can see in the dark), Soviet scientists had captured the luminescent signal and decoded it. Dr. Vlail Kaznacheyev and a team of scientists in Novosibirsk showed in thousands of experiments that if cells infected with a virus were placed in totally sealed quartz containers and placed near healthy cells, the healthy cells fell sick and died of the same disease, even though they had no virus.

[...SNIP...]

By "jamming" the sick-cell broadcast - healing could take place and viruses could be stamped out. How to do it? Counteract the flow of photons carrying deadly "infection information" with interfering wave patterns. Some chemicals, such as aspirin, are natural "jammers" of the disease broadcasts.

[...SNIP...]

Toth was arrested and accused of stealing "state secrets" about parapsychology. He spent days in jail being interrogated about his psi espionage by both police and KGB. "There are fields of science within parapsychology that are secret," his chief interrogator told him. Petukhov's manuscript dealt with these secrets. The case made waves in U.S.-Soviet relations. U.S. newspapers featured baffled accounts: - "Arrested for Parapsychology?" [1997 material] President Carter protested. Finally, the bewildered Toth was let go and flew home immediately. Petukhov was interrogated for four days and released. Like his dissident friends, he may have been trying to get word out through a Westerner.

[...SNIP...]

Soviets have succeeded in transmitting disease at a distance to creatures such as flies and frogs." Lieutenant Colonel John Alexander revealed more about the Soviet discovery in the U.S. Army's Military Review (December 1980). They infected chick embryos with toxic viruses - the ultraviolet radiations given off by the diseased tissue passed right through quartz glass and transmitted the sick pattern into non-infected chick embryos. They began to degenerate within thirty six hours. However, Russians had also discovered one antidote to disease radiation at a distance. Regular glass can act as a barrier because ultraviolet rays carrying the disease code cannot pass through glass.

[Back to Table of Contents](#)

### Psi Generators (1997 material)

[...SNIP...]

They worked on every type of material - jewels, crystals, rocks, pebbles, copper, silver, wood. How did these charged objects affect plants and animals? They moved on to charging up Soviet souvenirs like Russian dolls, spoons, or Sputnik pins and giving them to unsuspecting visitors as gifts. Experiments showed recipients started to feel depressed, indifferent and even to suffer emotional breakdown. Some developed health problems and felt weak and indecisive.

In the U.S., Dr. Wilhelm Reich had labelled this energy "orgone energy" and found he could accumulate it in materials by layering organic and nonorganic materials alternately. His "orgone blanket" made of layers of wool and steel wool was said to greatly improve health.

[...SNIP...]

[Back to Table of Contents](#)

At Kharkov University's Neurology Institute, repellently fascinating research verged on Haitian voodoo. Rats were killed by drugs and their brains placed in solution. Psychics were brought in to communicate with the dead rat brains which were monitored by electrodes. Emotions and thoughts were transmitted to the dead brains and THEY REACTED. Psychics did mental arithmetic and the dead rat brains REACTED. Dead rat brains responded to emotions such as laughter for about three minutes. In voodoo, a chicken or other animal is sacrificed and the voodoo priest communicates with the biofield of the dead creature to enlist its help in bringing about the desired goal.

[...SNIP...]

[Back to Table of Contents](#)

The Soviet Union was speeding toward disintegration itself when more of the secret work spilled out via Soviet journalist Emil Bachurin from Perm in Young Guard magazine. KGB General Kalugin told him that KGB head, Yuri Andropov had been especially upset about several psi weapons centers he maintained were in CANADA. "Canadian research must be surpassed," he'd ordered. Bachurin's sources also revealed that after the war, Soviets had scooped up masses of Nazi occult research including some by the notorious Dr. Mengele at the Dachau concentration camp. Building on these horrible experiments had sped Soviet success in developing psi weapons, they told him. In 1993, Yaroslavl journalist V. Scheglov's sources told him psi weapons had been developed AND USED MANY TIMES AGAINST CIVILIAN POPULATIONS IN THE U.S.S.R. AND \*\*ELSEWHERE\*\*[!]

[...SNIP...]

[Back to Table of Contents](#)

[p 338-39]

The Soviets had also perfected "memory weapons" - memory erasure and memory implants as a means of mind control over citizens.

[...SNIP...]

[Back to Table of Contents](#)

### Sergeyev Sensors (1997 material)

[p 340]

When (Nina) Kulagina moved objects with PK in the Utomski military lab, Dr. Genady Sergeyev's detectors charted the fluctuating fields around her. Sergeyev has come up with a number of remote sensing devices used to check psychics and folk healers and for medical diagnosis. These in turn spawned still more inventions like the "phase aurometer" now used for diagnosis in many hospitals.

[Back to Table of Contents](#)

[p 340-41]

"I believe I'm on the way to capturing a portion of the memory of the world," announced Sergeyev. He's talking about DEVICES that are at least on the way to mimicking the psychic talent of psychometry or "object reading." A sensitive [psychic] holds a knife from a murder, or a ring from a missing person and "tunes in" to the object and comes up with information.

Objects around us, Sergeyev believe, absorb energies we radiate and are charged by them - especially by volatile emotional events. Objects become natural magnetic recorders, he says. His sensors work best on "mute witnesses" - objects or vegetation in the vicinity of violence. Blasts of violent emotions like rage or fear are easiest to decode, Sergeyev finds. His scanners that play back the memory of objects could lead to interesting developments in crime detection, archaeology, and maybe espionage.

[Back to Table of Contents](#)

Where some of the products of his genius may have already gone is more interesting. Supposedly, it settled into the cockpits of U.S. and British jet fighters. Highly reliable sources tell us the Western military saw possibilities in Sergeyev's remote sensors and did some inventing of their own. They created a special helmet to help pilots handle the split second moment of maximum danger when an enemy plane carrying a rocket approaches. The unconscious perceives an event an instant before it becomes conscious to us. The sensors in the helmet pick up a shift in the brain's fields in advance and automatically trigger firing a missile before the pilot could do it consciously. If he were to wait till the rocket was in his field of vision, it would be too late.

[...SNIP...]

[Back to Table of Contents](#)

### Consciousness Zapping (1997 material)

[p 343]

Early on, Soviets had gone high-tech with hypnosis. They viewed it as an energy effect, influencing the body's fields - bioelectric, bioplasmic, or "chi" energy. The devised detectors to monitor field changes and the depth of trance. BY CONTROLLING THE BODY'S ENERGY FIELDS WITH ELECTRONIC MACHINES, THEY COULD AFFECT CONSCIOUSNESS, MEMORY, AND BEHAVIOR. Instead of a flashing strobe to induce a trance, they used a pulsing ELF field. They used electronic interrogation devices on POWs to induce trance and capture information from their memories. [EW: This is the LIDA machine.]

[...SNIP...]

[Back to Table of Contents](#)

### ESPionage (1997 material)

[p 345]

[Back to Table of Contents](#)

The Soviets wasted no time putting their practical, reliable forms of telepathy and clairvoyance to work immediately in covert agencies for espionage, surveillance, and industrial spying. It was a spy's dream scenario. He could track secret installations (even read documents), get information about distant people, places, and things, invisibly and without risking his life. Agents in the field could be MONITORED BY CLAIRVOYANCE and also developed ways to PSYCHICALLY SHIELD SECRET CENTERS from Western clairvoyant spying.

[...SNIP...]

[p 346-47]

Over the decades, "mind wars" expanded. In their quest to get ahead, some U.S. intelligence agencies slid down the same horrendous track as Soviet researchers. Memory control and amnesia WERE BIG GOALS OF THE CIA, says John Marks, former CIA agent and co-author of The CIA and the Cult of Intelligence. Under the code name MKULTRA the CIA funded and/or conducted innumerable bizarre experiments on countless unwitting human guinea pigs across the country in 180 mental hospitals, prisons, and other institutions. They used LSD and other drugs, sensory deprivation, depatterning, brainwashing, radiation, and hordes of instrumented mind control methods. For instance, nine people who'd checked into Montreal's Allen Memorial Institute for treatment of depression emerged with their entire memories erased. "Our lives were destroyed," they claimed in a massive class action suit against the CIA. The CIA paid [a pittance - EW] about a million dollars in reparation. The U.S. Advisory Committee on Human Radiation Experiments recommends that victims be financially compensated.

What memory weapons did they uncover? Most CIA sources will agree, they discovered how to do "Radio Hypnotic Intra Cerebral Control" and "Electronic Dissolution of Memory" - in plain English, they found out how to erase memories and install a multiple personality in a person and control their activities through SPECIFIC SOUND TONES. These people were to become superspies. One of the most stunning revelations was that Candy Jones, a famous New York broadcaster, with contacts in top echelons of government and society, had actually been an artificially developed multiple personality master spy. (For her incredible life story, see our book Supermemory.) A Senate investigation in 1976 brought SOME of these programs to a halt.

[EW: Read carefully the portion of this paragraph which says "...stumble to make him stumble." I have had numerous remote influencing to make me fall as I walked outdoors - sometimes the falls were quite painful and potentially dangerous - from the perps. Although no one was "walking with me" in person, no doubt this effect described below was behind that particular perpetrator stunt.]

Odd corners of psi research impinge on healing. Soviet physiologists put two live frog hearts at the focal point of hemispherical mirrors reflecting each other. The stronger heart quickly entrained, or took control of, the weaker. Influence at a distance by muscle MOTION has a long history in Soviet psi. Subjects trained in BIORAPPORT - to walk in sync with someone, then STUMBLE TO MAKE HIM STUMBLE[!] Mirrors, it was thought, might heighten the influence. These tests brought odd prescriptions. Doctors ordered physiotherapists to to exercises with patients - not to teach, but to stimulate muscles through biorapport. After hand surgery, for instance, when you exercise to regain mobility, it might help to have someone with a strong hand exercise in sync.

ELEANOR WHITE TALKING:

This book promises potentially important clues about today's advanced mind/body weapons, clues that may spark important ideas in mind control victims who take the trouble to acquire or borrow the book. There are further sections on a range of topics in the psychic arena. It may take me some time to complete the book and post a publicly accessible review of it, because of competing needs for time.

**\*\* AS ALWAYS, BE VERY CAUTIOUS BEFORE SPENDING MONEY ON COUNTERMEASURE EXPERIMENTS.**

This is an "Eleanor White Book Review". Such reviews are not like what you see in the print media. My emphasis is to provide enough information that a mind control victim or supporter can make an intelligent decision as to whether to buy the book (or borrow it). This means most of the reviews are excerpted text, with comments inserted. This type of review is biased in favor of information relevant to mind control technology, and possible countermeasure experiments. Those who are interested in psychic phenomena outside of a mind control context should obtain this book for detailed information.

This book is a COMBINED PRINTING of two books by these authors:

- Psychic Discoveries Behind the Iron Curtain, 1970
- Psychic Discoveries: The Iron Curtain Lifted, 1997

Note: In the excerpted text from the book, emphasis by way of ALL UPPER CASE LETTERS is mine. The reason for such emphasis is to point up information particularly relevant to mind control.

**About the Authors**

[From the inside back page of the book] Internationally acclaimed authors, Sheila Ostrander & Lynn Schroeder travelled extensively in Russia and East Europe to document Psychic Discoveries and have continued their psi investigations East and West right up to today. Their work introduced Kirlian photography, pyramid power and Superlearning to the Western world. They have co-written ten books, published in 25 languages, including the best selling

Psychic Discoveries Behind the Iron Curtain, Executive ESP, Superlearning and Superlearning 2000.

The team has appeared on over 2,000 TV and radio shows including Today and Good Morning America, discussing human possibilities. They have lectured widely here and abroad and created dozens of audio tapes. Sheila Ostrander is Canadian and lives in Toronto. Lynn Schroeder is a native of New Jersey and lives in New York City.

## Chapter 9: The Telepathic Knockout

(1970 material)

[p 89]

The piano player swung into a waltz. A young woman leaned back in the arms of her partner and began to swirl around the polished dance floor of a Black Sea resort. In an anteroom, Dr. K. I. Platonov, a psychologist, put his hand to his eyes and concentrated. Suddenly in mid-step, the dancing woman fell into a deep hypnotic trance. Platonov telepathically cut in on the waltzing woman, Miss M.

At the 1924 All-Russian Congress of Psychoneurologists, Platonov again knocked out Miss M. telepathically, before a hall full of scientists. The vivacious young woman sat onstage, chatting so she thought, with a panel of doctors as they waited for a hypnotic demonstration to get under way. Platonov stood out of sight behind a large blackboard. He put his hand to his brow as a signal to the audience and Miss M. suddenly slumped asleep. Then he woke her up, then he put her under again.

[p 89-90]

Platonov had found more than an exotic way to cure insomnia with his telepathic whammy. The ability to put people to sleep and wake them up telepathically from a distance of a few yards to over a thousand miles became the most thoroughly tested and perfected contribution of the Soviets to international parapsychology. It is the Soviet experiment. The ability to control a person's consciousness with telepathy is being mined today [1970 material] in Leningrad and Moscow labs. The sleep-wake test, however, gained a long and intriguing scientific pedigree before it was finally revealed in the 1960s.

Shortly after the 1924 convention, something unusual happened to a nineteen year old Kharkov coed. "When are the experiments going to begin, Professor Dzelichovsky?" the young university student asked her physics teacher. She was exasperated with curiosity. Over a month ago, he'd asked her to be the subject in some very important tests. It was a flattering request. Yet when she once again asked him about it, he simply said the equipment was delayed and went on talking about the solution he was pouring into a test tube.

[Back to Table of Contents](#)

[EW: Mind control victims note the paragraph below!]

Professor A. V. Dzelichovsky often invited her to the laboratory during the long wait. He acted almost like a private tutor, never too busy to see her or to talk - to talk about everything except the experiments she was supposed to star in. Finally the curious girl found herself dropping in at the lab at any odd hour. "Is there any particular reason you've come?" Dzelichovsky would ask. All she could do was flush and stammer, "No ... no, I just felt like it."

[Back to Table of Contents](#)

Unknown to herself, the coed had already starred in some very special experiments. As Professor Dzelichovsky made what he hoped was diverting small talk about the test tube he handed his student, he suddenly saw her eyelids flutter, then close. Her breathing slowed, becoming deep, regular. She'd fallen sound asleep.

Down the hall, K. D. Kotkov, a psychologist, also had his eyes shut. He was far from asleep, although he mentally repeated, "sleep, sleep," over and over. At the same time Kotkov vividly imagined the girl's face. The most important ingredient in this bid for secret telepathic control, Kotkov found, was WISHING. He wished the girl asleep until he felt a "sort of ecstasy of triumph. Then I knew she was asleep." He noted the time and got set to awaken her.

The young student blinked awake, the test tube still in her hand, and resumed talking with the elated but somewhat stunned Dzelichovsky. The experiment worked! And the girl DID NOT REALIZE ANYTHING HAD HAPPENED.

[p 90-91]

During the two month test run Kotkov was able to telepathically knock the girl out from the opposite side of town. Telepathy had also lay behind her compulsion to drip in on Professor Dzelichovsky. Home in his apartment, Dr. Kotkov mentally directed her to the laboratory. To avoid the possibility that she might drop in spontaneously or, however unlikely, simply snooze off in the middle of a sentence, the professors timed the tests with military precision.

Kotkov tried to telepathically obliterate the girl's consciousness thirty times. He never failed.

The girl, asleep, frozen upright, clutching a test tube, looked as if she were in a trance. The Russians later found that one can, to some extent, talk to and question a person in telepathic sleep, just as if he were under hypnosis. Is telepathy actually hypnosis a few paces removed? Not exactly, say the Soviets. [1970 material] The mechanisms that turn off your will and turn on trance are different. Hypnosis, according to the Soviets, springs generally from language, suggestive words and commands. The telepathic force that knocks you out is generally operated like Kotkov holding strong visual IMAGES of you.

Telepathic hypnosis sparkles at the heart of the abundant experiments Dr. Vasiliev painstakingly carried out, but couldn't reveal, under Stalin's regime. The reality of telepathic sleep-wake, backed by columns of data, was to many the most astonishing part of Vasiliev's Experiments in Mental Suggestion, finally published in 1962.

A very bright physiologist, the young Leonid Vasiliev with his full dark hair, strong featured and good looking, possessed a character to match his leonine appearance. He was tenacious and bold in his research. His mind roamed easily through the realms of many disciplines. And as it turned out, he showed a kind of personal nobility in not skewing the truth at a time when it could have been, and perhaps was, so much to his detriment to hold on to his chunk of it.

[Back to Table of Contents](#)

Theories about the material waves that piggyback telepathic communication from one brain to another buzzed in Vasiliev's head when, in 1932, he was given a task he relished. Stalin was already in tight fist control. Word came down to the famous Bekhterev Brain Institute, where Vasiliev worked, to get to the bottom of telepathy. Again, no one has ever clarified where word came from except that it was from the very top. Soviet scientists were to unmask a mystery of the ages. They would show the world that telepathy trundles along well known physical waves. [EW: This is a sarcastic statement.]

[p 92]

First of all, Vasiliev needed telepathy, telepathy that would click on and off in a lab like a light beam to be probed and pulled apart into wavelengths. Gifted mediums were scarce. Besides, Vasiliev needed an unquestionable demonstration of telepathy, on that could be turned readily into a statistic. Vasiliev's answer was, of course, the exquisitely simple telepathic trance.

Vasiliev and his colleagues, I. F. Tomashevsky, a physiologist, and Dr. A. V. Doubrovsky, a psychiatrist, came up with two good female subjects: Ivanova and Fedorova, both twenty five year old neurotic patients of Doubrovsky's. Unlike the Kharkov girl, when the experiments began, Ivanova knew something was happening. She lay on a cot. Electrodes on her right hand traced electric skin currents not under conscious control. In her left hand she held a balloon like apparatus. "Keep squeezing it steadily," they told her. In another room impulses from both devices registered on a graph. If she fell asleep the spiking lines would level out.

The scientists telepathically put the women to sleep countless times in a three year period, from room to room, from building to building. They even wired the balloon apparatus to Ivanova's radio at home, so they could catch the signal in their labs. [??] While she lay in her own bed they knocked her out telepathically. As consciousness flicked off and on again in Ivanova and Fedorova, Vasiliev set up traps for the telepathic waves. He tried to catch "Cazzamalli waves," named for the Italian neurologist who claimed to have detected radio waves crackling out of people when they imagined themselves in violent scenes, such as charging out of a trench with a bayonet. Vasiliev, tuning up and down the specified wavelengths, heard not a crackle.

[p 92-93]

[Back to Table of Contents](#)

[EW: The following paragraph is very important for mind control targets who are considering shielding experiments to read.]

Still, there were plenty of other waves. Vasiliev shut Ivanova into an iron Faraday cage that barred electromagnetic waves. Telepathy went on as usual. The scientists were beginning to worry. If telepathy didn't prove to have a physical basis, it would have to join other emigres from the Soviet Union. Vasiliev built a lead capsule, a barrier even to [ionizing, like xray] radiation. Tomashevsky, the sender, climbed a stepladder and slid into what looked like an oversize antique refrigerator. He lowered the heavy domed lid. It settled into a gully filled with mercury until the capsule was perfectly sealed. No waves could move in or out. Surely telepathy would not happen. Tomashevsky pictured Fedorova asleep inside the Faraday cage. She lost consciousness. This knockout telepathy actually seemed to work somewhat better inside all the leaden shields.

"We were dumbfounded!" Vasiliev wrote. "We were ourselves as if hypnotized by these unexpected results!" With the single mindedness of men trying to isolate a new element in an unwieldy chunk of ore, the dedicated parapsychologists set out to discredit their own work. They tried to prove that conditioned response knocked the subjects out, not telepathy. This attempt failed and they tried their telepathy on new subjects - a teacher, a laborer, a student, an interpreter. Still they found consciousness could be blanked telepathically.

[Back to Table of Contents](#)

[Back to Table of Contents](#)

Vasiliev knew electromagnetic waves diminish with mileage. He dispatched Tomashevsky to Sevastopol, a Crimean seaside resort more than a thousand miles due south. For once, Ivanova didn't know she was in an experiment. She appeared at the psychotherapeutic clinic for her usual session with Dr. Doubrovsky. They talked through the hour and nothing happened. Not the curve of the Earth but a more common obstacle to travellers blocked telepathy. Tomashevsky felt too sick to keep his date. He had recovered by Ivanova's next appointment. Standing alone on the boardwalk, Tomashevsky concentrated. A thousand miles away, Ivanova lost consciousness on schedule as she talked to Dr. Doubrovsky.

Ironically, the tireless Vasiliev had built what is still the world's best proof that (known) electromagnetic waves do NOT carry telepathy. "We fully appreciate," Vasiliev wrote in 1937, "the responsibility involved in reaching such a conclusion." The news didn't hit the world until toward the end of his life, Vasiliev was able to publish his Experiments in Mental Suggestion. "I did the best I could, let those who can do better," read the inscription of Vasiliev's long delayed, explosive book.

[p 93-94]

Now parapsychologists in Leningrad and Moscow are once more into the telepathic manipulation of consciousness, this time recording successes with the EEG. In Radio Techniks, Dr. Ippolit Kogan told other scientists about a girl, Olya, hypnotized normally, then attached to the EEG. In a separate room the telepathic sender, Dr. Vladimir L. Raikov, was also hooked to an EEG. At random moments he was signalled to awake Olya with ESP. Raikov managed to think Olya awake six out of eleven times. Edward Naumov reported a similar series. Telepathy work up the subject six out of eight times. Naumov remarked that as soon as the telepathic "wake up" is sent, trance becomes less and less deep, full consciousness returning in twenty to thirty seconds. In the Leningrad laboratory of Dr. Pavel Gulyaiev, friends of subjects have been trained to put them to sleep telepathically.

Telepathic sleep - or is it trance? Are you simply out, or do you dream your private dreams? Or does something else hold sway? The Soviets [1970 material] have skimmed on divulging psychological details about their telepathic manipulation of consciousness. But Vasiliev made some revelations worth noting. Fedorova and Ivanova could be questioned while under telepathic trance. They often knew who was psychically blanking them out. For the first time in two years, Vasiliev mentally forced Fedorova to sleep. Asked in a trance what happened, she said, "Vasiliev is creeping into my head..." Rooms away, Vasiliev decided to think of a bird, a vulture. "Vasiliev," Fedorova went on, "his eyes bulge like a rooster. He's sitting at a circular table. [That was correct.] He did it. He took everything from me." When Vasiliev started to bring her around telepathically, the still entranced Fedorova said, "Stop it, Professor Vasiliev. I'll have to wake up - I don't want to."

[Back to Table of Contents](#)

Not only does this kind of telepathy throw a person into a trance, but it also seems to open up a good channel of communication. Asked about this weird connection, the woman said it was LIKE A TELEPHONE, or like being at the end of a ball of yarn, attached to a string that could ravel them up or play them out.

Current Russian researchers don't discuss who can be entranced telepathically. According to the older scientists, if you can be lulled into deep hypnosis (about 20 percent of us can) you might be put to sleep from afar telepathically. Nevertheless, Dr. Platonov estimated that only four out of a hundred can regularly be blanked out with telepathy.

The Soviets perfected and carried and certified the reality of telepathic trance, but they never claimed to have discovered it. The French did that. Some of the earliest records of this sort of psychic hanky-panky, featured Leonie B., A fifty year old French peasant from Brittany who was a variously talented medium.

[p 94-95]

One particular experiment with Leonie has all the unhinging allure of a Marx Brothers movie, circa 1886. It happened one night after dinner in Le Havre. Around the table sat much of the cream of European psychical research: Pierre Janet, psychologist and one of the fathers of French parapsychology; his collaborator, Dr. M. Gibert; Julius Ochorowicz, still remembered as Poland's most famous psychic researcher; England's Frederic Myers, cofounder of the British Society for Psychical Research; and two scholars of almost equal repute.

The six decided to see if Gibert could put Leonie into a trance at a distance, a feat he'd done on other occasions, and if he could summon the entranced woman to him. They synchronized their pocket watches. Then Gibert retired to his study; the others made for Leonie's cottage two thirds of a mile across town. Keeping to the shadows, they surrounded the house. "At that time," Ochorowicz wrote, "there was no one but Leonie and a cook who was not expecting any activity on our part. Right on schedule, Leonie stepped outside and walked to the garden gate. Ochorowicz, skulking behind the corner of the cottage, was happy to see her eyes were shut tight. But Leonie turned around and re-entered the house. Ochorowicz noted later that the sender, Gibert, "as a result of the strain of thinking, fainted - or dozed off."

Soon Leonie reappeared walking fast - so fast she almost tangles with Professor Janet, who'd popped out of his hiding spot. "Fortunately she didn't notice her surroundings, or at least she didn't recognize us."

For ten minutes Leonie, eyes shut, hurried along, successfully "avoiding street lamps and traffic." None of the other pedestrians seemed to notice anything unusual about Leonie, according to Myers. Perhaps they were too busy gawking at the gaggle of high collared note takers trailing behind.

Suddenly, Leonie faltered; she looked confused. (Why? Because Gibert had decided the whole experiment was useless and started to play billiards.) Then Leonie picked up speed again. (He'd changed his mind and resumed sending.)

The pack jotting at her heels, Leonie arrived at her destination just as Gibert, wondering what had become of everybody, rushed out the door. They collided head on.

[p 95-96]

Leonie climbed over the confused Gibert and pressed on into the house. She ran from room to room saying sorrowfully, "Where is he? Where is he?" She searched upstairs and down,

surrounded by six nimble footed scholars, each trying not to be tagged. Finally Gibert sank into a chair and mentally called her.

"She takes him by the arm," Ochorovicz recorded. "She is seized with great joy!" So was Ochorovicz, who was at last convinced you surely could influence people at a distance.

[Back to Table of Contents](#)

[EW: An important paragraph for mind control targets]

If any current [1970s material] Soviet scientists have lived through such woolly moments summoning a person across Moscow, they don't talk about it. But they have occasionally mentioned efforts to guide someone's movements with telepathy inside their labs. On a closed circuit TV, the Popov parapsychologists watched watched an entranced subject in an isolated room. CAN ESP NOT ONLY KNOCK HIM OUT BUT ALSO KNOCK HIM DOWN? Can they telepathically guide the direction - front, back, this side or that - of his fall?

"In one test series," Edward Naumov recorded, "the subject was made to fall TEN OUT OF TEN TIMES. And he fell in the direction commanded telepathically eight out of ten times." Naumov mentioned casually that over a thousand people have been tested in the last few years in these knockout and knock down experiments.

Guiding a person psychically, the way you guide a missile electronically, was taken a step further with Karl Nikolaiev, according to a report given by the respected Dr. Kogan, in Radio Technology and at a conference on "Scientific Problems of Bio-Information" at the Soviet Academy Moscow House of Scientists attended by over seven hundred scientists. Naumov, who apparently has some psi talent of his own, sent. Nikolaiev, fully conscious, attempted to let Naumov guide him around the room containing ten targets. "We had feedback in this test," Kogan said, meaning that Naumov, in another room, listened as Karl reported over a one way microphone the direction he was walking. This hookup allowed Naumov to try to mentally correct any errors in Karl's aim while he was in motion. In twenty six different attempts, Naumov guided Karl to the target thirteen times. The probabilities of doing this by chance are, according to Kogan, infinitely small.

[p 96-97]

Vasiliev and his colleagues were like prospectors sifting electromagnetic waves. The gold they hunted was the "mechanism" of telepathy. Instead of "gold" they ended up with "copper" in the form of the handy, all purpose sleep-wake test. Vasiliev used it as a specimen of telepathy to dissect, as he would explore a frog in physiology experiments. But the test he perfected may have the makings of a far more lively, interesting future within it. Manipulating someone else's consciousness with telepathy, guiding him in a trance ... colorful uses are too easy to conjure. Try espionage. You force a mental whammy on the general's aide-de-camp. You give him posthypnotic suggestions to pull this lever, steal these papers. He wakes up, unaware that like the Kharkov coed, that anything has happened. Miss M. fell into a trance while waltzing, but what if Miss M. had been driving a car, piloting a plane, standing sentry duty?

[Back to Table of Contents](#)

[EW: An important paragraph for mind control targets]

This is the facile fantasy of supersonic thrillers. But wouldn't it be naive to assume no researcher has ever thought of such potential uses for telepathy? The famous Soviet, Wolf Messing, with his widely attested ability to influence the minds of others, commented in his autobiography on the time he managed to walk out of a building, past guards ordered to stop him. "This and similar cases should make us reconsider the often-advanced opinion that nobody would perform under hypnosis an act opposed to his convictions. I am sure the guards would have not let me pass as myself, but, using my mental power, I made them see me as the high official whom they would let out without a pass. Similarly, a man under hypnosis can be told to shoot a rabbit when in fact he would be shooting at a man."

In the main, what the Soviets are probably seeking in their exploration of ESP's effect on consciousness is CONTROL in a more generalized, everyday, pervasive sense. You hear the word CONTROL often in the U.S.S.R., [1970 material] not as a political concept but in its comparatively upbeat, scientific meaning. As a Moscow scientist told us, "Science has learned to control outer nature to the great benefit of mankind. Now we are trying to learn the laws governing inner nature. Just as an understanding of outer nature allowed us, for example, to generate electricity to light huge cities, so the ability to control the untapped resources of man should bring equally amazing benefits."

Control of schizophrenia is a good thing. Control of a person's attitudes to another person, race, or nation is not.

[p 97-98]

Czech biochemist Dr. Milan Ryzl stated in Psychic, "The bulk of recent telepathy research in the U.S.S.R. is concerned with the transmission of behavior impulses - or research to SUBLIMINALLY CONTROL AN INDIVIDUAL'S CONDUCT."

Visiting Soviet psi labs, Dr. Ryzl says he was told by a Russian, "When suitable means of propaganda are cleverly used, it is possible to mold any man's so that in the end he may misuse his abilities while remaining convinced that he is serving an honest purpose." [EW: JUST LIKE OUR STREET LEVEL PERPS!]

## **Chapter 26: Psychotronic Generators - Psychic Machines?**

**(1970 material)**

[p 285]

The next thing we saw, the climax of our stay in Czechoslovakia, sounds fantastic and is fantastic - but it may be genuine. We were confronted with a gallery of objects - burnished and gleaming, rough and pebbled, steel, bronze, copper, iron, gold - "PSYCHOTRONIC GENERATORS" that do the impossible. We saw them demonstrated in a film shown by Czech scientists at the International Parapsychology Conference in Moscow. We held these psychotronic generators, heavy in our hands. We worked one of them ourselves.

What are they all about? There isn't an easy answer. The Czechs start out explaining them this way: "Human beings and all living things are filled with with a kind of energy that until recently hasn't been known to Western science. This bioenergy, which we call psychotronic energy, seems to be behind PK (psychokinesis); it may be the basis of dowsing. It may prove to be involved in all psychic happenings. The psychotronic generators draw this bioenergy from a person, accumulate it, and use it. Once charged with your energy, the generators can do some of the things a psychic can do." That was the first door they opened for us into the mystery. There were corridors to come.

[p 285-86]

The psychotronic generator, or Pavlita generator as it is sometimes called after its inventor, sprang in part from antique manuscripts and forgotten discoveries, old learning combined with the knowledge of modern science. The idea of a bioenergy is an old one.

The ancient Chinese said that you are not a machinelike collection of parts, but a powerhouse of unusual energy. They called it "chi" or "ki" - a Life Force or Vital Energy. The universe, too, they said, is suffused with Vital Energy, and thus you are linked with the Cosmos.

Next door in India, the Ancient Hindus spoke of this vital force in you which they named Prana. Modern Yoga is based on the idea of Prana. But if this vital or "X" energy is more than a philosophical concept, how come no one in the West ever stumbled across it?

"They did," the Czechs said. Many "discoverers" caused a momentary flurry with their new energy, then were forgotten or, at best, remembered as cranks as Western science hurried on to its great technological flowering. The chard shows only the most famous discoverers. There have been many others. They all came to their finding by different paths, and they all gave "it" a different name, but surprisingly, they very often agree on the characteristic of this supposed energy in you:

[Back to Top of Table of Contents](#)

| DISCOVERER                        | NAME OF "X" FORCE       |
|-----------------------------------|-------------------------|
| Ancient Chinese/Japanese          | Vital Energy, Chi or Ki |
| Ancient Hindu                     | Prana                   |

[p 287]

In the Soviet Union groups of pure scientists were looking into a "new discovery" - a vital, previously unknown energy connected with living beings. "Bioplasmic Energy" is their name for it. But the Russians have a big plus going for them. Thanks to the Kirlian discovery (detailed in chapters 16, 17, and 18), bioplasmic energy can be seen by anyone, in photographs and electron microscopes. It can be scientifically observed and studied as it swirls in sparkling flares of color. Twentieth century scientists, with their tracking and charting devices, lifted the atom of the ancient Greeks out of the realm of philosophy and into the realm of the actual, making it a practical energy. Perhaps the Soviets starting with the Kirlian apparatus will do the same for the Vital Energy of ancient cultures. Or perhaps the Czechs will, with their psychotronic generators. They, too, have made a rediscovery.

Robert Pavlita, gray haired in his mid fifties [this was in 1970], was an inventor and design director for a large Czech textile plant. In person, very much the no nonsense, efficient business man, Pavlita has for thirty years worked privately on psychotronic generators. He believes they run on this newly discovered energy.

Pavlita's name reached the West amid a mishmash of confusion. "Czech businessman is fine PK medium." Then, "Pavlita has no PK ability." Is he or isn't he? Sitting in parapsychology offices in America, there was no way to tell. The story behind the reports shows how the confusion got started. After thirty years of experimenting, Pavlita went to Hradec Kralove University, east of Prague. An electrophysiologist, a physicist, and eventually the entire physics department tested him.

[Back to Table of Contents](#)

The scientists set up experiments with a device designed by Pavlita. Inside a tightly sealed metal box a spike revolved, run by an electric motor beneath. On top of the turning spike the scientist had balanced a copper strip. It looked like the letter T. The only other thing inside the box was a small metallic object in one corner, not connected to anything. The revolutions of the copper strip were recorded photoelectrically.

Pavlita, as the scientists watched, stood about six feet away from the contraption. He concentrated, stared hard at it. Suddenly the copper strip stood still, as though some force were holding it, counteracting the turning rod. The entire device was even magnetically screened.

[p 288]

Pavlita continued to stare. The witnesses watched intently. Slowly the copper strip began turning - this time in the opposite direction. It looked as if some invisible force inside the sealed case were pushing it, spinning it in the opposite direction to the revolving rod that held it. For two years the scientists tested Pavlita.

"PK! A fraud proof demonstration of PK", wrote British journalist Theo Lang who'd heard of Pavlita and flown in to witness a demonstration. The scientists agree that it was a fraud proof

demonstration of SOMETHING, but what? They couldn't find any known force that could cause the strip to stop and reverse as Pavlita stared. It sounds like PK but it isn't - not exactly.

Pavlita maintains he is a technologist operating a form of energy, clicking it on and off, directing it, as any technologist would direct an energy like electricity. The small unconnected device inside the sealed box is a psychotronic generator. Supposedly, as Pavlita stares, his bioenergy is drawn into the generator, which accumulates and directs it. The Czechs believe many people could have PK ability this way, with the generator functioning as go between.

[Back to Table of Contents](#)

Pavlita's early PK test was a demonstration that this so called vital, psychotronic energy could be harnessed and directed at will. But all its discoverers claim this is a vast universal energy. The Czechs told us, tried to show us, that even at this stage of discovery they can do much more than just duplicate PK.

The prime question for all the Westerners who've come up against this vital or psychotronic energy for the past five hundred years is, what does it do?

Paracelsus, the Reanaissance alchemist and physician, reported this energy radiated from one person to another and could act at a distance. He believed it could purify the body and restore health, or could poison the body and cause disease. Dr. van Helmont, the seventeenth century Flemish chemist and physician, believed the energy could enable one person to affect another at a distance. The famous German chemist, Baron von Reichenbach, said the energy could be stored and that substances could be charged with it. Unknown to Reichenbach, the Polynesian practitioners of Huna agreed that the Vital Energy could be transferred from humans to objects.

[Back to Table of Contents](#)

[p 288-89]

Other researchers into this now-and-then rediscovered human energy reported that it could even MOVE objects at a distance - in other words, PK. According to the British medical magazine Lancet for July 30, 1921, Dr. Charles Russ, M.R.C.S., showed the Ophthalmic Congress at Oxford in 1921 that with a proper apparatus a person could cause a solenoid to move by gazing at it.

Through the years, varied researchers came up with "facts" about this supposedly nonexistent energy. It could be reflected, refracted, polarized and combined with other energies. It could, many reported, create effects similar to magnetism, electricity, heat, and luminous radiations, but was in itself none of these. It conducts slower than electricity, but can build up something similar to an electrostatic charge. It was said this odd energy from humans could be conducted by paper, wood, wool, silk, and many substances that are electrical insulators. And this fabled energy that flowed from people seemed somehow involved with psychic things.

It really does sound like the creaking plot of an old mystic horror movie - the secrets of the ancients revived. The flickering occult shadows that seem to automatically attach themselves to such an idea may be one reason our scientists have never given the matter a serious look.

But the Czechs are willing to examine FACTS. After hearing experimental reports on the psychotronic generators, the Central Committee of the Czech Communist Party approved research. It was also backed by the Czech Academy of Science.

In Moscow, at the session of the Parapsychology Conference held in the Czech embassy, we were introduced to the world of the psychotronic generator. The leader of the Czech delegation, Dr. Zdenek Rejdak, who works [1970 material] for the military, explained, "Everybody has psychic abilities, but most of the time we are unaware of them. The psychic force lies dormant or is blocked, making telepathy or PK a rarity. To cause psychic powers to work, we need something to evoke them or reinforce them. If we assume human or other living things give off a certain energy, then we might be able to accumulate it. If so, we can have work carried out by the energy. ESP needn't be a rarity then. It could work all the time under any conditions." Later he told us, "I've heard that the UNITED STATES IS ALSO THINKING ABOUT MAKING MACHINES TO DO THIS."

[p 290]

The Czechs showed a very memorable documentary film created by one of their major movie studios. Like the tour de force Czech films that have dazzled crowds across America, this science film was artistically executed, right down to the electronic music. The content, for a science film, was even more dazzling. One after another, the camera lit up what seemed to be modern sculptures - gleaming forms that could have been created by Brancusi, or more intricate ones perhaps by Dali. Other objects looked like precision cut components for machines that hadn't been invented yet, spare parts from 2001 [1970 material]. Still other small metal and wood sculptures were reminiscent of these "ritual objects" set out by museums of the world, from the British Museum in London to the little, dusty museums of Asian Turkey and southern Egypt. But these are not sculptures; the objects aren't in a museum. This is an ordinary apartment in a small town in Czechoslovakia. The devices sitting on the table supposedly collect psychotronic energy given off by living things. The human beings donating their "energy" to the generators in the film are the designer Robert Pavlita and his daughter Jana.

[Back to Table of Contents](#)

"The generators accumulate human energy," we were told during the film. "Then they carry out work. There are different types of generators for different types of work." We're shown a rotor being turned by an electric motor. Robert Pavlita and his daughter Jana place a needle on the revolving rotor. A psychotronic generator is aimed at the needle. The supposedly nonexistent energy makes the needle stop turning.

Next we cut to an apparatus that looks like a fat screwdriver. Just as Nelya Mikhailova apparently builds up some sort of energy that attracts matches, glass, bread, this Pavlita generator draws small bits of substance to itself. "The force of attraction depends on the amount of energy accumulated in the generator," the Czechs state. It looks like electrostatic energy - the force you get when you rub a comb on wool, turning it into a "magnet" that picks up paper and other light things. Static electricity doesn't work under water. The Pavlita generator is placed in water; still it attracts and lifts bits and pieces of nonmagnetic material.

[p 290-91]

As if to confirm our feeling that these generators are reminiscent of something seen before, the film shifts to scenes from ancient Egyptian texts. The eye of the camera focusses and stays on the Egyptian ankh, the sacred symbol of life.

It is reported that commissions of experts from the Czechoslovakian Academy of Science and the University of Hradec Kralove - physicists, electronics experts, radio technicians, electrophysiologists, and mathematicians - all investigated the psychotronic generators. We're shown a generator whose force turns a small blade. They've tested to eliminate static electricity, air currents, temperature changes. The blade turns. The blade doesn't react to a strong magnet. The experts test with magnetic fields. They make no difference. The "vital energy" that supposedly philosophical concept, continues to turn the blade. We see them cover the entire device with a glass cylinder. Nevertheless, it moves. We're told they've suspended it in water. Still it revolves.

[Back to Table of Contents](#)

Dr. Julius Krmessky, an outstanding Czech mathematician and physicist, tackled this unexplained energy radiating from humans and published an important scientific paper for the Chair of Physics of the Pedagogical Institute of Trnava. Krmessky calculated the force required to make the blade turn at  $1.2 \times 10^{-3}$  dynes. "It can't be heat or air," he reports. THE RADIATION GOES RIGHT THROUGH GLASS, WATER, WOOD, CARDBOARD, ANY TYPE OF METAL - EVEN IRON - AND ITS STRENGTH DOESN'T DIMINISH AT ALL. Furthermore, the mind seems to control this energy."

[p 291-92]

Returning to the film, the camera shifts to pans of bean seeds divided into experimental and control groups. Another psychotronic generator, a studded metal square supporting a coiled, bore like neck, is directed at one of the pans of seeds. Days later, the plants developing from the "radiated" seeds are easily seen to be almost double the size of those from the "untreated" seeds. This is something we have seen before, notably at McGill University in Montreal. In an excruciatingly well controlled series of tests, Dr. Bernard Grad showed that seedlings watered with a flask of saline solution previously held in the hands of a well known healer grew fuller and higher plants than seeds watered with unheld saline solution. The Czechs had said that psychotronic energy was the "X" force behind many psychic mysteries.

[Back to Table of Contents](#)

The film gave close ups on other tests, pointing to practical uses for psychotronic generators. Sealed bottles of dye-filled polluted water from a textile factory are irradiated with psychotronic energy from the Pavlita generators. In twelve hours the water is clear. The pollutant seems to have crystallized and fallen to the bottom of the flasks. A signed, official chemical analysis of the water by an independent laboratory flashes on the screen. "This purification of polluted water could not have been done by a chemical purifier," it concludes. What was not said in the film, but told to us later by one of the scientists involved, is something more extraordinary. "Analysis found that whatever the energy was, it had caused a change in the actual molecular structure of the water itself! The two hydrogen atoms spread farther apart."

This rang a bell too. We'd been told by a reputable scientific source in the United States that a well known American chemical lab studied water that had been held in a sealed flask by a healer. Word had it that there seemed to be a molecular change in this water, a spreading of the bonds between the hydrogen and oxygen.

"This is only an infinitesimal part of the Pavlita experiments conducted by the inventor and many other scientists in Czechoslovakia. The psychotronic generators have obtained results in telekinesis, telepathy, clairvoyance tests." TELEPATHY? But that was the end of the movie.

None of the westerners (ourselves very much included) seemed to know what to make of this Merlin like Czech with his artful device, that seemed to have few if any moving parts, yet drew a wondrous, invisible energy from human beings.

Dr. Genady Sergeyev, the Leningrad neurophysiologist, commented at the conference, "The Pavlita work shows it is possible TO TRANSFER ENERGY FROM LIVING BODIES TO NONLIVING MATTER. The most important influence of this energy is on water. In fact, we use this very principle in the development of the detectors that examine the fields around Mrs. Mikhailova during PK."

[p 292-293]

Later we learned a Russian scientist, after seeing the Pavlita film, had tried to build a generator on his own. "He made it out of the wrong material," said Dr. Rejdak. "It was very crude, but I'm told it did work. He wanted us to tell him a lot more about the generators after that."

We wanted to be told a lot more too. When we got to Prague, we inundated the scientists with questions about Pavlita and psychotronics.

[Back to Table of Contents](#)

### **The Secret's in the Form (1970 material)**

[p 293]

"I first met Robert Pavlita about four years ago," Dr. Rejdak told us. "Word of his generators had somehow reached England. A British journalist came over, saw a generator in action, and wrote quite a story. Of course, our press got wind of it and rushed into print with a rash of controversial articles. It caused a tremendous sensation. You see, the government didn't know anything about the generators. They were as surprised as the public. The whole subject of Pavlita and biological radiation WAS HUSHED UP, and a number of scientists, including myself, were asked to investigate. Following our reports, Pavlita has been rehabilitated."

Rejdak is nicely qualified to investigate. Apart from being a psychologist, he has also specialized in physiology and worked in parapsychology for years with the famous Czech sculptor and psychic researcher Bretislav Kafka. His judgement seemed well respected by other scientists in Czechoslovakia and the other Communist countries. What had he uncovered in his investigations of Pavlita that convinced him it was not a fraud?

Before we could even get to that question, we wanted to start at the beginning. "Where did Pavlita get the inspiration for his generators?" We wondered if the Egyptian scenes in the movie could possibly have been meant as more than an artistic touch.

"Pavlita got the idea from studying many very old texts." Which ones? The Czechs smiled and shook their heads. "We're sorry, we can't tell you that yet." This didn't give us much to go on. Czechoslovakia is awash with forgotten treatises and antique books. Manuscripts that haven't been thumbed for centuries wait in the state libraries and in the collections of the medieval castles and even still turn up in second hand bookstores.

[p 294]

"One of our main problems with the psychotronic generators right now," the Czechs went on, "is that they are not fully patented yet. Naturally, Pavlita doesn't want to let the plans get out."

Robert Pavlita realizes the value of patents. Years ago he invented a new process for the textile industry. Royalties rolled in from the Socialist bloc and Western Europe, particularly West Germany. "Fortunately Pavlita was able to use these rather considerable royalties for his research into psychotronic energy. No one else would finance the work at the beginning."

The Czechs weren't about to give us a do it yourself generator kit. But they were willing to open doors trying to give us a sensible view of psychotronics. The next door they opened is the most mind teasing.

"The secret of the generators is their FORM. [EW: Like 'sacred geometry'?] That's the key thing Pavlita gleaned in his studies. It's the shape that lets you accumulate this energy and turn it to whatever purposes you want." Now we understood why they were so hooked on the lighthearted pyramid razor blade sharpener. There, too, the "secret" is supposedly the form.

[Back to Table of Contents](#)

"In some ways the principle of the generators is like art. You make generators out of one sort of material to do one thing and out of a different sort to do another. It's the juxtaposition of materials within a specific form that makes it work. Pavlita uses copper, iron, gold, steel, brass, various kinds of metals, and sometimes even wood. Most generators are a carefully formulated COMBINATION OF METALS.

"When we first saw these generators," said Rejdak, "some of the other scientists were baffled. But I happen to be familiar with the research done by Reichenbach, and I realized that Pavlita's work was along the same lines. It's an extension of Reichenbach's idea of an odoscope, but modernized and far, far more sophisticated." (Reichenbach invented an odoscope apparatus which supposedly could collect what he called "odic force," "an all pervasive energy.")

[p294-95]

"Aside from generators that accumulate energy from living things, we also have generators that accumulate 'cosmic energy' or energy from the environment. The pyramid's an example of a generator that works on cosmic energy."

Apparently the Czech psychotronic energy (like the old Chinese Vital Energy) springs from living things and from the cosmos, as do in the environment "cosmic electricity" and bioelectricity from the human body.

If you had a generator, how would you charge it with your own energy?

"The energy doesn't come from a particular organ in your body. It comes from your entire force field, so to speak. Many of the generators have a certain staring pattern carved into them to help concentration and conduction of the energy."

Here's another old idea, the staring pattern that is now tacked up in rooms across America as a result of the influx of Eastern philosophy, the staring pattern that is said to boost concentration and release psychic or spiritual power. The Czechs maintain that this power, handled correctly, can amp up a geranium plant or run a small motor.

[Back to Table of Contents](#)

Do you have to keep a specific thought in your mind while trying to charge a generator? "No. You don't have to think anything in particular or will your energy into the generator. Staring in pattern is enough to direct the force, if the generator is properly made. Now we've developed automatic generators that work WITHOUT staring. WE believe they can collect biological energy from anything living - human, animal, plant. Tests are scheduled to see if they can accumulate energy from something as basic as a fertilized egg.

If energy is really being drawn from you, don't you get tired?

"There's only a very slight aftereffect, but it's stronger if emotion is involved. There are changes while you're charging it." The Czechs did EEG tests on Pavlita's daughter while she charged a generator. They found an "unusual pattern". Soviet scientist Dr. Genady Sergeyev, who flew in and tested Robert and Jana Pavlita with EEGs and other monitoring devices while they charged generators, said there was a change in the structure of the biological fields around their bodies. He reports, "There was unstable, cold electronic plasma in the brain. During certain phases of brain activity, magnetic, electric, and other types of waves were given off."

[p 295-96]

"Look," said the Czechs, "you can try a simple test for yourself before we leave for Pavlita's." Dr. Rejdak dug a box out of a drawer in his desk. Inside the box was a small round stick of wood about four inches long that looked like a cuticle stick, pointed at both ends.

[Back to Table of Contents](#)

"This was made two years ago, under pressure, by a special process. It was charged by a generator so that it is able to channel the biological energy of a person."

He handed the stick to one of us and scattered, on the coffee table, small fragments: aluminum, salt, tin, stone, iron, crystal, et cetera, about the size of one's little fingernail. Some were magnetic, some weren't. We looked over the stick - no trace of adhesive or anything else

on it. No friction was applied. Neither Rejdak nor either of us rubbed it on anything. We touched a fragment of crystal, prodded it.

The crystal clung. With the crystal still attached, we moved the stick over a circle of metal. It stuck to the crystal. Moving the stick over the table, one item after another eventually clung to it, until they hung from the stick in a small daisy chain. It was like playing Nelya Mikhailova, PK medium. Or was it some obscure workings of static electricity?

"Everybody thinks of static electricity," the Czechs agreed, "which is why we've done so many tests to prove it isn't. Psychotronic energy, the energy you're using in a small way right now, has many similarities with electromagnetic energy, which is natural. But psychotronic energy itself is much more subtle," Dr. Rejdak told us. "This stick, by the way, doesn't work as well when you're tired."

How long does a charge stay in a generator?

"The generator that speeds plant growth, once charged, works steadily for three days. [EW: Kind of like the 3 day's anomalous effects in genuine crop circles.] That's about the longest at the moment. We have one designed to turn a small electric motor. The first day it requires a charge of half an hour. Then, a few minutes every day and the generator will turn the motor about fifty hours."

If you owned a psychotronic generator, what else could you do with it? Would it actually be what Marshall McLuhan calls "an extension of man" - in this case an extension of your psychic faculties? If they operate on the energy that is supposedly behind supernormal happenings, would a generator be "psychic"?

[p 296-97]

The Czech scientists, who seem eminently sane and responsible people, said yes. They showed us small segments of film to back up this "yes". One generator, they said, could do that most classic of all ESP tests, the card test.

This "telepathic" generator has a rotating pointer on top. ESP cards are arranged in a circle beneath. The generator is the "receiver". In another room sits a person who will send. He holds the pack of twenty five cards shuffled and randomized. The sender turns one card at a time face up and concentrates on its pattern. In the first room, the pointer of the generator slowly turns and stops, directed at the card with the same symbol the sender is looking at. As the sender goes through the deck, the generator continues to swing from card to card as an observer notes its "choices" in order.

[Back to Table of Contents](#)

What kind of ESP scores does the generator get?

"It is always 100 percent correct. The generator never makes a mistake."

It was a funny looking creature to be the ESP subject of the century! But it isn't a subject, it's a machine, though rather unlike the kind of machines we're used to. Even familiar machines like computers can be programmed to identify a specific symbol when it's encountered. The

"only" difference is that the psychotronic generator, because it works on another kind of energy, recognizes symbols across space, through walls, when a person stares at them.

Engineer Drbal, the specialist in electronics, tried to clarify. "All forms, whether sculptures, designs, rooftops of buildings like the pyramid - all forms have wave fronts. So do the patterns on the ESP cards." Supposedly, when a person thinks about this pattern on the card, it seems to intensify the wave front. The generator is designed to pick up this pattern. That's the hypothesis, anyway.

"Instead of cards being placed under the pointer, we can put a potato, an apple, various vegetables and fruits. Another set is placed in front of a person in a separate room. As the person selects each, the revolving pointer on the generator also turns to indicate the matching vegetable." Their generators, the Czechs added, could also distinguish between blood samples and match a child with his parents.

[p 297-98]

In the United States, Cleve Backster, head of the Backster School of Lie Detection in New York [1970 material], has found that organic matter - plants, fruits, vegetables, blood samples - seems to have a form of 'primary' perception." They communicate, sometimes across vast distances. And they "recognize"; even cell scrapings from a person's mouth "recognized" their owner according to the polygraph tracings.

Have the Czechs with their generators succeeded in isolating whatever basic factor is in living things that's capable of "perceiving" and "recognizing" at a distance?

If psychotronic energy is real, what happens if you aim it at people?

"That depends on the kind of generator. Some, we believe, could speed healing of wounds and recovery from illnesses. Others have a harmful effect. We tested the force of one type of generator, for example, on the brain. Pavlita's daughter Jana offered to be the guinea pig. At a distance of several hundred yards, we beamed this energy from a generator towards her head. Jana became dizzy - her spatial orientation was affected and she began to swirl around.

"There have been various experiments on lower forms of life. Snails, for one, were subjected to psychotronic force. It caused them to withdraw into their shells and go into a state similar to hibernation. We've also tested insects." They showed us photos of the generator used. It looked like a chunky metal doughnut with a slice through it on one side. The metal circle was held up on a rod and base, like a mirror. "We placed flies in this generator. They died instantly."

If psychotronic energy could kill flies, could it kill bacteria or diseased cells in the body? Could it alter genetic material - DNA and RNA? Before we could go further into this death ray for flies, several more people arrived to join our group.

### **A Visit to the Czech Merlin (1970 material)**

Our convoy of cars drove through the suburbs of Prague, out into the Bohemian countryside and headed east toward the small town where Pavlita, our modern day Merlin, lived.

The man driving our car had been introduced as a composer. "I'm a specialist in criminology," he told us. "I've worked quite a bit with the police in the past, before I took up composing full time." He was the heir to a very distinguished family name, known far beyond Czechoslovakia. His father was one of the country's famous composers, his grandfather was renowned as the architect of some of the grand buildings of the Austro-Hungarian empire. This moderately well known son wrote show tunes, "songs with plenty of melody."

What did he know about Pavlita? Not very much, but he'd come up against enough frauds and clever swindles in his police work. If there was something funny going on, he assured us he'd spot it.

"I have heard that Pavlita is a medium who does PK, moves objects. That's something I'd like to see."

It seemed Pavlita caused confusion on his home turf, too.

We tried to explain to our companion that we'd heard Pavlita wasn't exactly a PK medium, but he'd built generators that supposedly worked on the human energy that caused PK. "That's even harder to swallow!" That much we all agreed on. "I always try to keep an open but skeptical attitude toward everything in ESP," he went on. "I can't say it's impossible, still..." He reached into his raincoat pocket. "I hope I don't spoil anybody's afternoon." He produced two "supermagnets". "Maybe we can find out a little more about the ways of the generators with these. I intend to try them on the Pavlita machines."

We'd been speeding over hill and dale for hours, past neat villages of red roofed stone houses built close to the road, through spas, heavy with dark green leaves, baroque fountains, and statues in the town squares. Occasionally our friend pointed to turrets and dragon teeth walls on the summit of a distant hill and gave us a short history of some of the medieval castles Czechoslovakia is famous for.

Finally, we reached a small town and pulled to a stop on a street lined with tall old shade trees and four story buildings standing wall to wall. As in many Czech towns, classical sculpture and colorful painted frescoes wound around the building. A carved stone figure, like a miniature Atlas, supported the rooftop at the corner and surveyed the crossroad with wary eyes. The street was deserted, misty with a fine rain. A tall, athletic looking man, with dark eyes and even features, came out of a building entrance to greet us. Robert Pavlita was casually dressed in slacks and a plaid sport shirt. He could have been an American executive relaxing on a day off.

[p 300]

Upstairs in the apartment, Pavlita's nineteen year old daughter Jana led us into the bright, spacious living room furnished with blond, industriously polished Scandinavian style furniture, a grand piano, and many paintings. She left us around the dinner table and almost instantly reappeared with coffee and cake. Jana was a pretty girl, delicate and chic in a white flowered miniskirt, her reddish hair styled in a short high fashion cut. A Czech friend had described her as "very docile" and observed that she worked a heavy schedule on generator

research without, it seemed, a murmur of complaint and without much time for anything else. That afternoon she seemed slightly unnerved at finding herself the hostess of our polyglot group.

We picked up the first generator. It looked like a small abstract figure of an ancient fertility goddess - a rectangle of metal for the head and a trapezoid of iron for the body, with bosomlike projections on it. Although it stood only six or seven inches high, it was enormously heavy. Etched on the "head" was a staring pattern, a vertical zigzag design. For different functions, the "head" segment could be removed and other components substituted. How do you change it? Pavlita showed us how he held it, his thumb on one of the conical projections on the front and one of his fingers on a similar projection on the back. As you moved your eyes along the zigzag pattern in a sort of figure eight, the device supposedly picked up and accumulated your bioenergy.

Circular shaped generators, like small suns, sat on the table: a circle of black iron dappled with speckles of gold or brass, others with diamond shaped designs cut into them. Some were ice smooth, some rough like a wrought iron gate.

"What got you into this?" we asked Pavlita.

[p 300-01]

"I've always been interested in the idea of another form of energy," he said. "Even when I was just a boy at school." He'd been educated in a technical school and after graduating, his genius for invention quickly led to new processes and machines for industry.

[Back to Table of Contents](#)

As he chain smoked, Pavlita explained some of the things the generators could do. "EVERY MOTION A PERSON MAKES IN A ROOM LEAVES A PATTERN, A TRACE. The generator is able to pick up this trace over a distance of several rooms. Even moving one's hand in a circle over a table creates enough of a trace for the machine to pick up and identify."

One of the Czechs tried to explain to us in slow, careful English. "This trace he is speaking of is a form. It is not an energy, as we know it. They think what occurs is that a sort of indentation is made into the surroundings. This is the trace."

The composer-criminologist didn't buy this idea at all, or much else that was being said. Pavlita showed him privately a huge book of pictures and reports in one corner of the room.

"This energy is a real energy," Pavlita said, "a genuine force of nature." When Jana was a small child, he and his wife discovered she'd gotten into the room where they kept the generators. Thinking the bright objects must be toys, Jana began to play with them. "We caught her, but not before the little finger of each of her hands became paralyzed," Pavlita said. "Fortunately it was only temporary."

While the groups wrangled over various theories of how the generators worked, Pavlita set up an experiment in the kitchen for just the two of us to see. It was a well lit, ordinary kitchen. He put a circular collar of copper about ten inches in diameter and five inches high on a table. There was an inch wide gap between the two ends of the collar. A small tubular generator,

which simply seemed to be a hollow piece of metal, with no moving parts, no wires, was attached vertically to the collar beside the gap. He put a small metal ball on top of the tube. Inside the collar, a tin wheel resembling the spokes of an umbrella was poised on a needlelike stand.

[p 301-302]

Pavlita set up a glass shield between himself and the device. He took off his watch. He reached around the glass and adjusted the metal ball. Then he drew his hands back behind the barrier and began the charging process by gazing at a pattern on the generator, moving his head slightly up and down. He called Jana to join him. She stood behind him, directed her gaze to the generator, and moved her head gently from side to side. They did not seem to be straining.

In less than a minute the generator was charged; slowly the tin wheel began to turn. It turned as if pulses were being directed at it, then faster and more smoothly. We didn't detect any draft of air, any heat wave that could have caused the motion. There were no magnets in sight, no wires, nothing attached under the table. No scientist would accept this as a test, but it was a very much out in the open, sharply illuminated demonstration. The Department of Physics of the University of Hradec Kralove, which had examined some of the Pavlita devices, as well as experts from the Czech Academy of Science, and agreed that normal physical causes had been fairly well ruled out in controlled tests. Then, how did it work?

Dr. Rejdak explained that copper seems to attract this psychotronic energy and that the copper circular collar seemed to polarize, one side positive and one side negative. Presumably, the interplay of force from the two poles caused the wheel to be attracted, then repulsed, forcing it to move.

Pavlita cleared the table and came back with another type of generator. This one was a long hollow rectangle of steel about seven inches long and an inch or two in width. He attached a conical aluminum tip to the bottom end. "The tip can be of wood, plastic, anything nonmagnetic," he said. When he was done, the generator looked like a pudgy ballpoint pen.

The other guests joined us. Pavlita scattered fragments of non-magnetic substance onto a sheet of glass. Various people tested them with a magnet. When they were satisfied that magnetism had no effect on the fragments, Pavlita picked up the generator, placing his fingers on two metal circles on the back. He moved his thumb back and forth over a scalloped opening in the front, as if he were playing a clarinet. He touched the tip to a piece of copper. It picked it up. He carried the copper to pieces of crystal, silver, aluminum. They all clung together in a stack from the generator. "The energy is going into these nonmagnetic substances," he said. "Now that we've put a charge on them, anything will pick them up." He asked us for a match.

We produced some wooden ones we'd bought in Romania. He put a match near a piece of aluminum, near other little chips. Our match attracted them and, with prodding, picked them up and stacked them. He asked us to hold a magnet over the pieces. It had no effect. It did not attract them. These little chips of non magnetic metal and crystal, once charged with psychotronic energy from the generators, would attract or repel the pole of a suspended magnetic needle.

Pavlita put a sheet of glass on a stand and held a formidable horseshoe magnet, about five inches long, underneath it. This time he scattered magnetic fragments on top of the glass and moved the chips about with the magnet. Then he pointed his generator at them. The generator easily picked them up despite the force of the magnet attracting them beneath. His generator also drew the pieces away directly from the magnet.

Next, Pavlita dumped all the nonmagnetic substances into a glass dish of water. (Electrostatic energy doesn't work underwater.) The generator not only picked up each substance, it also appeared to make the water itself cling to the tip of the generator in a narrow column. The composer brought his supermagnets into play. The little fragments didn't budge. He tried it on the tip of the generator; no attraction. Pavlita said his device would even attract cloth and jokingly used it to draw out the edge of the composer's handkerchief from his pocket.

And that was enough experimenting, our host decided. By this time, Mrs. Pavlita had arrived home. A small, warm, bustling woman, she shook hands warmly and insisted we stay for supper.

On the long black drive back to Prague through pelting gusts of rain, great sprays of lightning lit the sky like heraldry against a backdrop of frowning fortresses and ancient castles. It brought to mind some of those late night movie scenes of Dr. Frankenstein's laboratory as he tries to infuse life into an inanimate creature. Could this strange psychotronic energy succeed as Frankenstein's "lightning" did? Could it endow the inanimate with motion?

Have the Czechs isolated the energy that allows Nelya Mikhailova to cause nonmagnetic objects to move at a distance? Have they captured in a generator the "X" force from the healer's hands that causes wounds to heal, plants to speed their growth?

[p303-304]

Does man have powers he never dreamed of, energies that can be isolated and used? Maybe this psychotronic energy is a key to ghosts and even to the supposed ectoplasmic substances emitted by mediums. The Czechs have only reported on the uses for psychotronic energy they feel they've confirmed. To their mind, this is just the beginning of a discovery - an awesome discovery. We heard much speculation. And we talked finally about the future which the Czechs looked to so hopefully and about philosophy and history.

"In Czechoslovakia, history certainly repeats itself," one of the businessmen said. "For centuries about every fifty years somebody invades us. Do you really think that's about to change?" he asked with a cynical laugh.

But Czechs we met elsewhere, in restaurants, in shops, on buses, everywhere told us again and again, "The Soviets will never invade." Many of them kidded us about being worried. "What are we guilty of? We are not leaving socialism. All we're trying to create is socialism with a human face. We're trying to guarantee freedom of the individual, freedom of speech, freedom of inquiry. The goals of the Czech experiment are the goals of the whole of human society." [1970 material]

In another kind of experiment during that brief Czech springtime, we had seen the psychotronic generators. What are they all about? Even the Czechs don't claim to know all there is to know about their new energy. The cardinal point in their minds is that Pavlita's

generators demonstrate that AN UNKNOWN ENERGY DOES EXIST, SUBTLY INTERTWINED WITH HUMAN BEINGS.

If it is real, if it continues to check out, one day this account will read like the report of two primitives trying to describe a television or a phonograph. If before the patents were secured, we chanced in on a private demonstration of Mr. Edison's talking machine ninety five years ago, we'd probably have written about a bizarre, almost unbelievable machine. It could, as Caruso sang in the room, somehow capture his voice in hairlike grooves on a circle of wax. A week later this circle could be put on a rotor, a sort of metal arm would trace the grooves, and, as if time didn't exist, we would hear Caruso sing out his aria like a conjured ghost. What's more, it was reported that the wax would stay charged with his voice for a very long time, perhaps even for years.

[p 304-05]

The very few - two or three - Western scientists who have seen Pavlita's generators are wary of them. No one likes to wear a historical dunce cap like the members of the French Academy who bodily threw Mr. Edison's agent and his talking machine out of their chambers. They knew, after all, that wax can't talk, that the whole thing was a cheap ventriloquist's trick. Yet no one, particularly scientists, likes to be fingered as gullible, either.

Just days after we left Prague, the Soviet Union invaded. The brought in more heavy war equipment than even Nazi Germany used to occupy the country. Helmetted Soviet soldiers were squatters on the castle heights overlooking the city where we'd seen long haired hippies painting art nouveau designs on the sidewalks. Soviet tanks turned the street sullen where we'd talked over the plans the Czechs had for psychotronics.

Will the new energy disappear under a new iron curtain? The Czechs told us THERE WERE ISOLATED PEOPLE IN EUROPE AND AMERICA WORKING QUIETLY ON THIS "VITAL ENERGY". [EW: No kidding!!] Perhaps someone here will come up with a psychotronic generator that passes all the tests Pavlita's did. Or perhaps, hard line or soft line, the Czechs will decide they have a good thing going and let the rest of us know more about it.

It's our [Sheila Ostrander's and Lynn Schroeder's] opinion that the Czech scientists believe they're onto something. They're secure enough in this belief to announce their discovery to outside scientific conferences. It is also our opinion that that the generators work. The question is why, on what energy? Is it Prana, the Vital Energy of the Chinese, the bioplasmic energy of the Kirlian effect?

The discovery of a new-old form of energy, a vital energy, a more intimate energy than electricity or xray, is a scintillating idea. It asks for a leap of the imagination. It implies a landing place outside the rings of current scientific knowledge, a landing place where mind and energy are no longer irrevocably split apart, but instead interact to work their wonders.

Is psychotronic energy the subtle, vital energy that mystics, mediums, and philosophers have posited and that scientists recently have looked for behind psychic happenings? Pavlita's generators reverberate in the mind like gleaming question marked against the now muted Czech countryside.

## Chapter 28: All Kinds of New Energy

(1997 material)

[p 313]

The world's news anchors, for once, looked surprised themselves that day in August 1991. The Gorbachevs were under house arrest. Russian tanks, like the tanks that long ago rolled into Prague, now thudded through the streets of Moscow. Their long cannons slowly swivelled to lob shells at the Parliament Building. Up on the barricades, Boris Yeltsin - the hope of Russia, many said - was rallying the people. Then - in a blink, the mighty Soviet Union was gone. And as if someone had hit the delete button, Communism itself disappeared from one end of Europe to the other.

[p 313-14]

"I can't believe it!" "I never thought I'd live to see it." We were as stunned as the rest of the world that had lived in the Cold War. As we watched the TV pan the familiar Moscow streets we'd walked with Edward Naumov, Karl Nikolaev, Victor Adamenko, we wondered what this extraordinary collapse would mean to them. And we began to wonder if now, at last, the rest of the Soviet psi story could come out. What was going on in those buried installations that one after another of our contacts alluded to with comments like "There are secret laboratories ... military labs ... closed labs ... there are brilliant scientists you will never know of working in this field." Hints of darkness were almost invariably followed by a plea to take word to the West, "PSI IS REAL; IT MUST NOT BE USED IN ANTI HUMAN WAYS."

Fear of the dark side of Soviet psi seemed to be what drove some Russians to take chances that even we knew enough to warn against. It brought us papers to be copied in a few hours in the middle of the night so they could be smuggled back to their files before dawn. It pushed one man to keep connecting though he risked being beaten up again by government goons. It also brought us a bathtub full of bright, bushy bouquets. Snuggled inside lay tightly wrapped manuscripts from scientists who thought us too dangerous to meet. It led a reluctant Lynn Schroeder, lugging a huge wheel of film, to be put on a Moscow trolley headed for the American Embassy. Maybe the PK film labs could fly out in the diplomatic pouch. They didn't, so we had to wing it with what footage we could. It even led British scientists with sub-rosa Russian connections to phone us frantically in London. "Do not go home on that Soviet ship. Your luggage with all your data will disappear." By then we'd seen enough to tear up our tickets.

It was probably a good move. The revelations now [1997 material] spilling out from KGB generals and high level officials of all sorts are beginning to fill in the dark shape of a plunge into psi even more Faustian than we - and perhaps even our contacts - suspected. Mind control, memory erasure, Dr. Mengele type experiments that killed the subjects. All things considered, it's surprising the "good guys" survived as well as they did.

News of the Soviet approach to psi was like a bomb through the window to Western parapsychologist. Fresh air roared in; people were galvanized. For a few years before the shutters came down again on the USSR, dozens and dozens of top flight researchers took off for Moscow and beyond. Along with a rash of psychic groupies. "After you wrote me up," Dr.

Zdenek Rejdak told us recently with a broad grin, "foreign women kept calling at night asking me to meet in their hotel rooms!" The information pipeline began to be squeezed shut again when the nefarious Yuri Andropov consolidated power, first as head of the KGB, then as Premier of the USSR.

[p 314-15]

Scientists at the Popov Society too "sensitive" about the welfare of psi subjects were fired. Naumov was arrested on trumped up charges of misusing funds. Protests poured in from Western scientists - which had been his hope when he repeatedly said, "use my name, make me famous." Perhaps the protests helped get his sentence cut from two years to one doing manual labor in exile in Vologda. Others were cast into professional limbo. Some like parapsychologist and healer, Dr. Barbara Ivanova were refused employment. For years she had to live off the kindness of friends - as she carried on teaching in her "university of the park."

"You'll never be able to come back after you write about us," we were told in every country we visited. Any lingering desire to try was snuffed when the foremost Soviet ideological publication, the Marxist Journal of Philosophy fingered us by name as - "dangerous, anti-Soviet warmongers." Maybe we should have passed on the "anti-Soviet" part to the AGENCIES SNUFFLING AROUND US AT HOME. The FBI interviewed Lynn's parents to uncover that their daughter had trouble finding fresh food in Moscow, while in Canada the RCMP busily interviewed Sheila's family and friends. Dr. Ivan Sanderson, who like 007 spent years in British MI5, insisted our phones were tapped. And we "accidentally" ran into men from various shadowy agencies in the most unlikely places.

With the Freedom of Information Act, Lynn got a mostly blacked-out copy of her CIA file. Among the readable items were neat copies of letters she'd mailed at suburban New Jersey post offices asking Soviet scientists about their work. (Your taxpayer dollars at work.) The high humor point was a note written by a CIA director in New York to his counterpart in Virginia. He declared Ms. Schroeder might be a bit paranoid. "She seems to think somebody is watching her."

[p 315-16]

Overseas eyes seemed to be on us as well, friendly ones. For years and years, articles, film clips, manuscripts - often from scientists we'd never met - were smuggled out by travellers and kept showing up on the doorstep. They told of new discoveries - telepathy with plants, biocosmology to conceive the perfect child, UFO and alien visitation, and most startling, careful mathematical analysis of "artificial structures" space probes photographed on the moon. (See chapter 33) One morning, a bulky package even arrived bearing the Czech version of a full blown Kirlian machine. Behind the reinforced curtain, the bright side of Communist psi research grew quietly. And its seeds began to blossom in the West. The prize for accelerated blossoming has to go to Dr. Georgi Lozanov's seemingly unbelievable fast learning system.

[EW: Snipping the rest of chapter 28 - it deals with interesting psychic phenomena, but like much of this excellent book, doesn't really add much to the mind weapons information already transcribed here.]

[Back to Table of Contents](#)

## Chapter 29: Psychic Warfare and Mind Control

(1997 material)

[p 329]

"Russian scientists have been very successful in developing psychic warfare DEVICES", says former KGB Major General Oleg Kalugin, the man in charge of foreign counterintelligence for the Soviet Union in the 1970s. He was the youngest general in the history of the KGB as well as a former minister in the Soviet Parliament.

According to Major General Kalugin, the Soviet Union wanted to investigate and harness psychic energy in order to produce new and deadly weapons - exotic weapons with which the West was unfamiliar - stunning weapons that could tip the balance of power during the Cold War.

[Back to Table of Contents](#)

Says Kalugin, "They started to explore the mysterious powers of certain people and to SIMULATE GENERATORS of this same nature in order to produce a similar effect." Russian scientists succeeded in developing GENERATORS OF PSYCHIC FORCE, he said in a 1992 ABC documentary. Kalugin revealed in 1990 that it was Yuri Andropov, head of the KGB from 1967 to 1982, (and later, Premier of the U.S.S.R.) who issued personal orders to push full speed ahead with psychic warfare. Andropov's directive also urged scientists to forget being squeamish about injuring or killing research subjects in the race to achieve their goal. Funding from the Military- Industrial Commission and KGB was estimated at 500 million rubles.

[p 330]

Kalugin reveals that Soviet scientists had developed instruments designed to capture and accumulate psychic energy and then release it on command. They had transformed human psychic power into a practical, controllable resource. Once accumulated and concentrated by a psychotronic generator, psi energy can be released and used for a multitude of purposes. These advanced, sophisticated devices have the power to hear or harm. Like third generation versions of Jan Merta's "Wish Switch", they can use UNDETECTABLE means to trigger anything - like terrorist bombs, by remote control over vast distances.

As psi research grew more successful and soared beyond the leading edges of accepted scientific concepts, the KGB imposed more and more secrecy. One ultra-clandestine lab literally went to ground, concealing itself in the sub-sub-basement beneath the old botanical gardens at Odessa State University. Only secret couriers knew how to access this real life version of mad scientists at the bottom of the garden. To conceal their secret research not only from outsiders but from their own hostile scientists as well, disinformation was as thick as the leaves of the tropical gardens up above.

[Back to Table of Contents](#)

Edward Naumov warns, "A psychotronic generator can influence an individual or a whole crowd of people. It can affect a person's psyche mentally and emotionally. It can affect memory and attention span. A psychotronic device can cause PHYSICAL FATIGUE, DISORIENTATION, AND ALTER A PERSON'S BEHAVIOR. Certain generators can arouse FEAR, ANXIETY, ANGER, INSOMNIA, DEPRESSION, AND SUICIDAL THOUGHTS and even lead to cerebral thrombosis [stroke].

[Back to Table of Contents](#)

[p 330-31]

Dr. Nikolai Khokhlov, a former KGB agent who defected to the West, was hired by the CIA in 1976 to investigate secret psychic research in the Soviet Union. He uncovered REAMS OF NEGATIVE PSYCHIC EXPERIMENTATION at over twenty well funded, heavily guarded clandestine labs, staffed by hundreds of top scientists. Hearts of lab animals were stopped telepathically; newborn rabbits separated from their mothers were electrocuted and the mother rabbits' telepathic biological responses charted; psychotronic generators were developed and tested for numerous applications; death row prisoners were handy subjects for various lethal tests such as using PK to paralyze sections of their spinal cords. Khokhlov identified certain government labs in Moscow THAT MANUFACTURED PSYCHOTRONIC GENERATORS ON A BIG SCALE.

From this avalanche of ultra-secret work, Russian researchers developed the idea that the human brain is a receiving and transmitting device. They mapped out the frequencies that provoked the changes they wanted. They were then ready to program anything into the brains of experimental subjects. Reluctant army draftees were among the first treated with the devices, to overcome fear, and to increase morale and bravery. In a fierce battle in the Afghanistan war, one of that group won the highest Soviet military honor - posthumously.

"The KGB and other organizations did build psychotronic generators," Edward Naumov told ABC. "I know that over half a billion rubles were spent on developing psychotronic equipment. Which brings up the question - where are all those devices now?" [EW - Targetting US!] Naumov had always felt it his patriotic duty to speak out against Russia's inhumane mind control experiments and their devious uses, no matter what the risk. Despite his arrest on phony charges and a year in a labor camp, he continued afterward to give lectures about psi in cities throughout the U.S.S.R. With the collapse of communism (which his psychics had predicted), he travelled to the U.S. and Canada, speaking at conferences on the latest Russian psi developments.

[Back to Table of Contents](#)

Psychotronic weapons aren't part of ANY arms accord, and with the current explosion of the Russian "Mafia" internationally, psychotronic arms could be sold or smuggled anywhere to ratchet up the terrorists' arsenal. On the other hand, could such arms be used to counteract terrorists by changing their mindset? Russian journalist Emil Bachurin revealed in 1991 that in addition to state-produced devices, EVEN HOMEMADE PSI GENERATORS ARE HITTING THE MARKET!

As in the days of old, a psychic current once again seems to be knitting itself into Russian politics. KGB General Kalugin reported to ABC that around the time of the coup that brought

down the U.S.S.R., he got a call from someone in a Ukrainian military lab advising him that psi generators were being used against Boris Yeltsin to undermine his health, affect his heart and attempt to kill him. "For the first time in my life, I took it seriously," says Kalugin.

[p 332]

Shortly after the coup, Yeltsin did suffer a heart attack. Coincidence? After all, Yeltsin already had heart trouble and other ills. Since then, for protection and healing, President Yeltsin has been treated by some of Russia's top healers, including the famous Djuna Davitashvili. He has also used psychic scanners to protect his presidential offices from bugging and sinister psi influences.

Opposition politicians are supposedly attempting to use the psychic airwaves to sway voters their way. Insiders report that now there's free enterprise, it's encouraged many Russian people with psychic powers or psi generators to openly market their service or wares for "political abuse".

A self proclaimed star of Russian Psi/Politik is Anatoly Kashpirovsky, a well known psychic/healer/hypnotist who claims to have healed hundreds of thousands of Russians of scores of diseases via TV broadcasts and personal appearances in stadiums. In 1991 he sent us material asserting he was "Number One in popularity in Russian Public Opinion Polls." He said, a single TV show he'd done generated a million and a quarter letters.

Kashpirovsky won a seat in the Russian Parliament, rumor had it through using psi to manipulate voters. If so, not all were so susceptible. When he rushed into Lithuania planning to quell unrest by telpathic projection over TV, a group was waiting for him at the railway station and put him on a train which rushed him right back to Moscow.

Politically, Kashpirovsky is an ultranationalist. A short time ago, he even ran for President of Russia. In 1996, he lost his seat in parliament and his government apartment that went with it. The unseated Magus threatened to turn his powers on anyone who came to evict him - and make them impotent!

More seriously, despite the end of the Cold War, many Russian spies trained in psi-spy methods did not "come in from the cold". Security experts report that Canada is still awash with Russian spies living under identities called "legends" taken from the graves of babies. What's happening with spy use of psi generators and techniques is unknown. What is known is that KGB spy operations have now gone corporate and are focussing on economic espionage and stealing business secrets.

[p 332-33]

[snipping out several paragraphs on psychic messing with sports and the Branch Davidian proposed-but-not-done use of psychotronics there.]

**Sick Waves?  
(1997 material)**

[p 334]

"A new form of biological communication - one of the very foundations of life!" That was the momentous discovery of the U.S.S.R. Council of Ministers placed in their State Register of Discoveries in the early 1970s. Soviet scientists in the Science City at Novosibirsk had uncovered a stunning finding - they had decoded ultra-faint bioluminescence coming from living systems - humans, plants, bacteria - and they'd found startling applications for it, both military and medical.

[Back to Table of Contents](#)

"SICKNESS CAN BE TRANSMITTED BY RAYS," they reported. "Viruses can be Transmitted by Rays at a Distance."

Decades earlier, the famous Russian scientist Dr. Alexander Gurtvich paved the way. "All living cells produce an invisible radiation," he said. He called it "mitogenetic radiation." Humans, plants, bacteria - all emitted it. Now, with photomultipliers (like "sniper scopes" that can see in the dark), Soviet scientists had captured the luminescent signal and decoded it. Dr. Vlail Kaznacheyev and a team of scientists in Novosibirsk showed in thousands of experiments that if cells infected with a virus were placed in totally sealed quartz containers and placed near healthy cells, the healthy cells fell sick and died of the same disease, even though they had no virus.

They'd discovered that the luminescent radiations from living cells broadcast information from one group of cells to another at a distance. Sick cells send a sick message and healthy cells at a distance reproduce it like a fax machine. Could viruses like AIDS be broadcast this way?

By "jamming" the sick-cell broadcast - healing could take place and viruses could be stamped out. How to do it? Counteract the flow of photons carrying deadly "infection information" with interfering wave patterns. Some chemicals, such as aspirin, are natural "jammers" of the disease broadcasts.

[p 335]

The KGB immediately grabbed this discovery and set up classified labs to exploit it. Los Angeles Times correspondent Robert Toth was on his way to a Moscow grocery store one day in the late 1970s when he bumped into an acquaintance, Dr. Valery Petukhov, lab chief at the State Control Institute of Biological Research. They chatted a few minutes and Petukhov handed him a manuscript and photos from his briefcase. Toth barely glanced at them - something about cells emitting radiation that could carry information. Suddenly a small car pulled up beside Toth and five plainclothesmen pushed him into it. A black Volga care scooped up Dr. Petukhov. Toth was arrested and accused of stealing "state secrets" about parapsychology. He spent days in jail being interrogated about his psi espionage by both police and KGB. "There are fields of science within parapsychology that are secret," his chief interrogator told him. Petukhov's manuscript dealt with these secrets. The case made waves in U.S.-Soviet relations. U.S. newspapers featured baffled accounts: - "Arrested for Parapsychology?" [1997 material] President Carter protested. Finally, the bewildered Toth was let go and flew home immediately. Petukhov was interrogated for four days and released. Like his dissident friends, he may have been trying to get word out through a Westerner.

That same year, Dr. August Stern, who'd worked in some of the multimillion ruble secret psi labs in Science City, Novosibirsk, emigrated to France. He said psi research had been gathered into secret KGB labs and that they'd discovered "something important and very dangerous".

Soviets have succeeded in transmitting disease at a distance to creatures such as flies and frogs." Lieutenant Colonel John Alexander revealed more about the Soviet discovery in the U.S. Army's Military Review (December 1980). They infected chick embryos with toxic viruses - the ultraviolet radiations given off by the diseased tissue passed right through quartz glass and transmitted the sick pattern into non-infected chick embryos. They began to degenerate within thirty six hours. However, Russians had also discovered one antidote to disease radiation at a distance. Regular glass can act as a barrier because ultraviolet rays carrying the disease code cannot pass through glass.

[Back to Table of Contents](#)

### **Psi Generators (1997 material)**

[p 336]

Yet another emigre who reached the West, settling in Israel, brought startling information. Dr. Abraham Shifrin had worked in a psi institute in Kazakhstan, headed by Dr. Solomon Gellerstein. He'd studied parapsychology for years, written books on it and edited a journal. The institute's project was to develop psi generators like [Robert Pavlita's](#) in Czechoslovakia. Find out how to accumulate psi energies into devices and release them later from these "psi batteries".

They worked on every type of material - jewels, crystals, rocks, pebbles, copper, silver, wood. How did these charged objects affect plants and animals? They moved on to charging up Soviet souvenirs like Russian dolls, spoons, or Sputnik pins and giving them to unsuspecting visitors as gifts. Experiments showed recipients started to feel depressed, indifferent and even to suffer emotional breakdown. Some developed health problems and felt weak and indecisive.

In the U.S., Dr. Wilhelm Reich had labelled this energy "orgone energy" and found he could accumulate it in materials by layering organic and nonorganic materials alternately. His "orgone blanket" made of layers of wool and steel wool was said to greatly improve health.

[p 336-37]

At the Popov lab, Dr. Boris Ivanov worked on "charging" water with "bio energy" similar to the work of Dr. Bernard Grad at McGill University in Montreal. Dr. Douglas Dean found that a healer's hands could cause molecular changes in the water. Grad showed that hand charged water could either enhance or damp down living things, like plants. Ivanov's goal may have been to charge water negatively to shrivel plant growth or cause human illness. Human test subjects, not plants, may have gotten a dose of Ivanov's negatively charged water which some believe was sent out for "field testing" at receptions for unsuspecting visitors to manipulate their health. When his former professor, Dr. Barbara Ivanova, objected to the negative focus

of his work, he denounced her as being "tainted with idealism" and she ended up with no employment. Soon there were more unemployed.

Dr. Larissa Vilenskaya, a prominent Russian parapsychologist who has emigrated to the U.S., reports Soviet scientists had developed electromagnetic field radiators to arouse aggressive states in animals or slow down their reactions to danger. The goal - to apply these techniques to humans.

In Leningrad, Dr. Pavel Gulyaiev, who took over Dr. Vasiliev's lab, developed a way to monitor electromagnetic fields of people at a distance and a way to impose other patterns on a person's own field to change their behavior. He believed it could be used to heal the sick at a distance.

[Back to Table of Contents](#)

At Kharkov University's Neurology Institute, repellently fascinating research verged on Haitian voodoo. Rats were killed by drugs and their brains placed in solution. Psychics were brought in to communicate with the dead rat brains which were monitored by electrodes. Emotions and thoughts were transmitted to the dead brains and THEY REACTED. Psychics did mental arithmetic and the dead rat brains REACTED. Dead rat brains responded to emotions such as laughter for about three minutes. In voodoo, a chicken or other animal is sacrificed and the voodoo priest communicates with the biofield of the dead creature to enlist its help in bringing about the desired goal.

[p 337-38]

In 1991, Dr. A. V. Kalinets-Bryukhanov, president of the All-Union Scientific Research Association, revealed in Ukrainian Ufolog, that he'd been part of some of the most ultraclandestine KGB projects for developing psychic weapons. Concealed in a secret lab inside the Filatov Eye Institute at Odessa, he bombarded animal brains with specific pulsed magnetic fields. He claims the animals developed clairvoyance and could literally see through walls. But their paranormal powers were brief. Soon their brains disintegrated and they all died. Death row prisoners went through similar tests with the same outcome, brain disintegration and death. (This eye institute had started out pioneering eyeless sight programs for the blind.)

[Back to Table of Contents](#)

The Soviet Union was speeding toward disintegration itself when more of the secret work spilled out via Soviet journalist Emil Bachurin from Perm in Young Guard magazine. KGB General Kalugin told him that KGB head, Yuri Andropov had been especially upset about several psi weapons centers he maintained were in CANADA. "Canadian research must be surpassed," he'd ordered. Bachurin's sources also revealed that after the war, Soviets had scooped up masses of Nazi occult research including some by the notorious Dr. Mengele at the Dachau concentration camp. Building on these horrible experiments had sped Soviet success in developing psi weapons, they told him. In 1993, Yaroslavl journalist V. Scheglov's sources told him psi weapons had been developed AND USED MANY TIMES AGAINST CIVILIAN POPULATIONS IN THE U.S.S.R. AND \*\*ELSEWHERE\*\*[!]

What are some of these psi weapons and how do they work? One type is a straightforward brain programmer. As early as the 1960s, the Soviets had discovered that electrical stimulation of the brain at specific frequencies could cause the brain to generate and secrete substances that control its functioning. They had broken the code of the brain's "frequency language." For instance a 10 Hertz signal sent to the brain through electrodes boosts production and turnover rate of serotonin - an antidepressant. (Serotonin is in the drug Prozac.) Endorphins - the brain's "feel good" chemicals - are stimulated at a rate between 90 to 111 Hertz. Neurotransmitters - the brain's couriers that boost intelligence and memory power are produced at other frequencies. Specific frequencies can cure pain and produce rejuvenating growth hormones. Beaming these frequencies into the brain can make people super smart, cure addictions, or heal a myriad of illnesses. Conversely, certain frequencies can induce hate, anger, anxiety, depression, and suicidal thoughts. They can cause insomnia and drastic memory loss.

[Back to Table of Contents](#)

[p 338-39]

The Soviets had also perfected "memory weapons" - memory erasure and memory implants as a means of mind control over citizens. For covert activities, the process could be used to develop spies with artificial multiple personalities - like the Manchurian Candidate - each with its own implanted memory bank. (For more details, and one of the most fascinating spy cases ever, see our book Supermemory). Soviets had also discovered the specific frequencies and wave forms that could induce hallucinations in subjects so voices and images controlled them. Now, the KGB wanted to do all this BY DISTANT REMOTE CONTROL.

For years, the U.S. protested that the U.S.S.R. was beaming microwave radiation at its U.S. Embassy in Moscow. During 1975 and 1976, radiation reached peak levels. U.S. Embassy staff reported unusual physical and mental effects. Dr. Robert Becker reports in his book The Body Electric that many developed cancer. U.S. Ambassador Walter Stoessel was rushed home from Moscow suffering continual headaches, bleeding eyes, and poor concentration. Tests confirmed a rare blood disease similar to leukemia. The two previous ambassadors also came home sick and died of cancer. Embassy staff suffered headaches, blurred vision, and memory loss. The Embassy tried to screen out the waves. For a while, the bombardment stopped, then started up again in July 1979. Insiders believe the Soviets were using microwaves as carriers of certain negative frequencies that would induce depression and illness. They hoped to manipulate the minds of high level visitors and heads of state.

CIA director of mind control experiments, Dr. Sidney Gottlieb, testified before a Senate subcommittee that during a state visit by President Nixon to the U.S.S.R., Nixon's doctor and associates said, they'd "experienced unusual feelings of depression, even bursting into tears at numerous inappropriate moments for no reason."

[p 339-40]

In the U.S. Dr. Ross Adey discovered that animals bombarded with microwave radiation lost brain chemicals essential to memory and developed symptoms of Alzheimer's. Dr. Allen Frey found that pulsed microwaves of a specific rate are hearable. They sound like buzzes, hisses, clicks. By taking a word's sound vibes and creating a microwave audiogram, words, codes, instructions, could be beamed directly into someone's brain at a distance. Dr. J. C. Sharp of

the Walter Reed Army Institute of Research became a test subject himself and clearly heard and understood words delivered by microwave. Spies could deliver instructions and secret codes directly by "beam to brain." They could also drive a target crazy with "voices" in their heads telling them what to do.

As a by product of other military research, the Soviets found yet another carrier of brain frequencies that evoke mental disturbance - ELF waves (extremely low frequency), radio waves, and very low frequency waves (VLF). From a number of major installations, Soviets began beaming ELF waves around the globe to communicate with submarines. As a side experiment, Soviets embedded these ELF waves with various brain affecting frequencies.

Lieutenant Colonel John Alexander, in a declassified U.S. Army report, suggests these ELF waves carrying negative brain frequencies could act as "mind jammers" on the armed forces. He urged the U.S. to prepare defense techniques for it. "Whoever makes the first major breakthrough will have a quantum leap over his opponent, similar to sole possession of nuclear weapons."

Dr. Jose Delgado, director of the foremost Spanish neurophysiology lab, used low strength ELF magnetic fields to make monkeys fall asleep on command or induce bizarre, manic behavior. Observers said the monkeys resembled battery operated toys, endlessly repeating the same action.

Soviet Yuri Udintsev found yet another biological war weapon in magnetic fields. A field of 200 gauss, 50 Hertz, made bacteria 20 percent stronger. Magnetic fields could be used in germ warfare to potentize viruses and bacteria. Similar fields beamed at people undermined their immune systems.

[Back to Table of Contents](#)

### **Sergeyev Sensors (1997 material)**

[p 340]

When (Nina) Kulagina moved objects with PK in the Utomski military lab, Dr. Genady Sergeyev's detectors charted the fluctuating fields around her. Sergeyev has come up with a number of remote sensing devices used to check psychics and folk healers and for medical diagnosis. These in turn spawned still more inventions like the "phase aurometer" now used for diagnosis in many hospitals.

[Back to Table of Contents](#)

[p 340-41]

"I believe I'm on the way to capturing a portion of the memory of the world," announced Sergeyev. He's talking about DEVICES that are at least on the way to mimicking the psychic talent of psychometry or "object reading." A sensitive [psychic] holds a knife from a murder, or a ring from a missing person and "tunes in" to the object and comes up with information.

Objects around us, Sergeyev believe, absorb energies we radiate and are charged by them - especially by volatile emotional events. Objects become natural magnetic recorders, he says. His sensors work best on "mute witnesses" - objects or vegetation in the vicinity of violence. Blasts of violent emotions like rage or fear are easiest to decode, Sergeyev finds. His scanners that play back the memory of objects could lead to interesting developments in crime detection, archaeology, and maybe espionage.

[Back to Table of Contents](#)

Where some of the products of his genius may have already gone is more interesting. Supposedly, it settled into the cockpits of U.S. and British jet fighters. Highly reliable sources tell us the Western military saw possibilities in Sergeyev's remote sensors and did some inventing of their own. They created a special helmet to help pilots handle the split second moment of maximum danger when an enemy plane carrying a rocket approaches. The unconscious perceives an event an instant before it becomes conscious to us. The sensors in the helmet pick up a shift in the brain's fields in advance and automatically trigger firing a missile before the pilot could do it consciously. If he were to wait till the rocket was in his field of vision, it would be too late.

Several years ago this precognitive helmet caused an international incident in Britain. The helmet was put on display in England and strictly guarded. Agents from Czech intelligence broke in and stole it. In retaliation, Britain expelled many employees of the Czech embassy.

Sergeyev's precognitive sensor is being developed by the Czechs to use in cars to prevent accidents. The sensor lets the driver know in advance that a car is coming in the opposite direction around a bend in the road ahead. They've also pioneered using sensors in the ocean on buoys to automatically signal if anyone is drowning.

.....

[Back to Table of Contents](#)

### **Consciousness Zapping (1997 material)**

[p 343]

Early on, Soviets had gone high-tech with hypnosis. They viewed it as an energy effect, influencing the body's fields - bioelectric, bioplasmic, or "chi" energy. The devised detectors to monitor field changes and the depth of trance. BY CONTROLLING THE BODY'S ENERGY FIELDS WITH ELECTRONIC MACHINES, THEY COULD AFFECT CONSCIOUSNESS, MEMORY, AND BEHAVIOR. Instead of a flashing strobe to induce a trance, they used a pulsing ELF field. They used electronic interrogation devices on POWs to induce trance and capture information from their memories. [EW: This is the LIDA machine.]

Mapping the body's bioelectric fields, Soviets found that waking consciousness itself is a function of direct currents that run from negative to positive poles in the brain - a central front to back flow from the front of the brain to the back. By passing a low voltage current through the front of the brain to the back, you CANCEL WAKING CONSCIOUSNESS - YOU KNOCK A PERSON OUT. Soviets developed a "sleep gun" to use for anesthesia or as a

sleep aid. The "electrosleep machine" or "consciousness zapper" could certainly make a handy accessory for the trendy spy. It was a high tech version of a psychic power displayed by ninjas or aikido masters or even a [Mr.] Wolf Messing. Knocking out consciousness psychically is a phenomenon often associated with spiritual healing services, too, where groups of "catchers" cope with people "going down under the power".

Dr. Robert Becker of the Syracuse VA Hospital confirmed that the Soviets were right about an energy component in hypnosis and suggestion. He found that a person under anesthesia or in a deep hypnotic trance gives the same reading - the negative electrical potential at the front of the head drops to zero. The electro-zap is the high tech version of the Soviets' classic telepathic hypnosis experiment - the long distance telepathic knockout which can happen room to room or hundreds of miles away.

"The ultimate weapon is manipulation of our electromagnetic environment," warns Dr. Robert Becker. "We're dealing here with the most important scientific discovery ever - the nature of life." Like the Soviets, the U.S. has developed electromagnetic weapons systems too: the Electromagnetic Pulse, the GWEN (Ground Wave Emergency Network) and the High-Power Pulse Microwave system. Becker's book Cross Currents reveals more about these silent, imperceptible mind/memory weapons. "An informed public is the only defense," he cautions.

[Back to Table of Contents](#)

## **ESPionage (1997 material)**

[p 345]

[Back to Table of Contents](#)

The Soviets wasted no time putting their practical, reliable forms of telepathy and clairvoyance to work immediately in covert agencies for espionage, surveillance, and industrial spying. It was a spy's dream scenario. He could track secret installations (even read documents), get information about distant people, places, and things, invisibly and without risking his life. Agents in the field could be MONITORED BY CLAIRVOYANCE and also developed ways to PSYCHICALLY SHIELD SECRET CENTERS from Western clairvoyant spying.

Soviet psi researcher Dr. Abraham Shifrin managed to reach Israel in the mid-1980s. Since 1963, he had worked in a classified center in Kazakhstan for the Moscow Institute for Information Transmission, headed by Dr. Solomon Gellerstein. He described secret Soviet experiments with powerful Central Asian psychics who were able to describe clairvoyantly minute details of Soviet missile sites hundreds of miles away. He revealed that some Soviet army specialists were trained in telepathy and clairvoyance and used it to anticipate troop movements. Skilled psychics from his institute worked with troops both in war games and actual combat to advise clairvoyantly when and where attacks would occur.

The revelation in this book that the Soviets had perfected practical forms of psi for espionage and war shook up some people. We and our Soviet films went on over two thousand TV and radio shows. American reporters rushed to the Soviet bloc to find out more. Latvian born Henry Gris, and Bill Dick, after a lengthy and well funded expedition to the U.S.S.R. psi labs,

confirmed our reports in their book New Soviet Psychic Discoveries. Martin Ebon tracked emigre Russian psi researchers in his fascinating book Psychic Warfare.

[p 345-46]

More U.S. military and intelligence groups began monitoring Soviet research and started secret explorations of the paranormal. Some had been at it before. This may be the place to finally answer the endlessly asked question: "How did you know the Soviets were spending so much on psi? Who gave you the figures?" Eileen Garrett, who was not only a master psychic but also a quiet worldwide force behind much psi research, gave us that other data. She didn't get it in a trance. She got it from a close friend, a woman who had originally staked her in business, Frances Bolton. A phenomenon in her day as a female in Congress, Bolton served for years as a chair of the House Foreign Affairs Committee and was privy to much going on beyond public view.

[Back to Table of Contents](#)

Others in Congress were interested. Parts of our book were read into the Congressional Record. In 1976, Congressman Charlie Rose of North Carolina set up the Congressional Clearinghouse on the Future to inform government aides and leaders about psi through lectures and seminars. When we were invited to speak to the committee, we were introduced by Congressman Al Gore who later became the enthusiastic chair of the committee.

Victor Marchetti, a fourteen year CIA official, revealed in his book that for years the CIA used psychics and mediums to try to contact dead agents to obtain vital information. First target was the famous KGB Colonel Oleg Penkovsky, who'd defected to the West. The Soviets caught him and executed him. The CIA used mediums to contact him as well as their own dead agents, says Marchetti, in Inside the CIA. He believes the closely guarded program WAS HIGHLY SUCCESSFUL. Other sources have told us that inside very secure desert labs, covert agencies have also tried the latest "electronic voice phenomena" technology to try to contact dead agents. (See our book Supermemory for more on EVP.)

[p 346-47]

Over the decades, "mind wars" expanded. In their quest to get ahead, some U.S. intelligence agencies slid down the same horrendous track as Soviet researchers. Memory control and amnesia WERE BIG GOALS OF THE CIA, says John Marks, former CIA agent and co-author of The CIA and the Cult of Intelligence. Under the code name MKULTRA the CIA funded and/or conducted innumerable bizarre experiments on countless unwitting human guinea pigs across the country in 180 mental hospitals, prisons, and other institutions. They used LSD and other drugs, sensory deprivation, depatterning, brainwashing, radiation, and hordes of instrumented mind control methods. For instance, nine people who'd checked into Montreal's Allen Memorial Institute for treatment of depression emerged with their entire memories erased. "Our lives were destroyed," they claimed in a massive class action suit against the CIA. The CIA paid [a pittance - EW] about a million dollars in reparation. The U.S. Advisory Committee on Human Radiation Experiments recommends that victims be financially compensated.

What memory weapons did they uncover? Most CIA sources will agree, they discovered how to do "Radio Hypnotic Intra Cerebral Control" and "Electronic Dissolution of Memory" - in

plain English, they found out how to erase memories and install a multiple personality in a person and control their activities through SPECIFIC SOUND TONES. These people were to become superspies. One of the most stunning revelations was that Candy Jones, a famous New York broadcaster, with contacts in top echelons of government and society, had actually been an artificially developed multiple personality master spy. (For her incredible life story, see our book Supermemory.) A Senate investigation in 1976 brought SOME of these programs to a halt.

Uri Geller's PK abilities, which were tested extensively at Stanford Research Institute, in the early 1970s, began to attract top level scientific interest in psi. Renowned scientists like Werner von Braun pronounced his powers genuine and astronaut Ed Mitchell promoted him. He was responsible for a renaissance of interest in psi.

Geller met President Jimmy Carter at the 1976 inauguration of Mexican President Portillo. After bending Rosslyn Carter's fork at dinner, he had a long talk with Carter, repeating his urgent message, "The U.S. must match Soviet strides in psychic warfare, or forfeit the world." He warned that he had psychically detected a massive buildup on the Soviet psi front and told Carter they were even screening children for psychic abilities to amass a group of psychic supermen. Later, Geller was to meet with both Gorbachev and Bush [Senior] to discuss psychic matters.

[Back to Table of Contents](#)

## **Chapter 30: Healers, Shamans and Time Waves**

**(1997 material)**

[p 354]

[...SNIP...]

[Back to Table of Contents](#)

[EW: Read carefully the portion of this paragraph which says "...stumble to make him stumble." I have had numerous remote influencing to make me fall as I walked outdoors - sometimes the falls were quite painful and potentially dangerous - from the perps. Although no one was "walking with me" in person, no doubt this effect described below was behind that particular perpetrator stunt.]

Odd corners of psi research impinge on healing. Soviet physiologists put two live frog hearts at the focal point of hemispherical mirrors reflecting each other. The stronger heart quickly entrained, or took control of, the weaker. Influence at a distance by muscle MOTION has a long history in Soviet psi. Subjects trained in BIORAPPORT - to walk in sync with someone, then STUMBLE TO MAKE HIM STUMBLE[!] Mirrors, it was thought, might heighten the influence. These tests brought odd prescriptions. Doctors ordered physiotherapists to do exercises with patients - not to teach, but to stimulate muscles through biorapport. After hand surgery, for instance, when you exercise to regain mobility, it might help to have someone with a strong hand exercise in sync.

## END OF TRANSCRIBED MATERIAL

### ELEANOR WHITE TALKING:

This book promises potentially important clues about today's advanced mind/body weapons, clues that may spark important ideas in mind control victims who take the trouble to acquire or borrow the book. There are further sections on a range of topics in the psychic arena. It may take me some time to complete the book and post a publicly accessible review of it, because of competing needs for time.

**\*\* AS ALWAYS, BE VERY CAUTIOUS BEFORE SPENDING MONEY ON COUNTERMEASURE EXPERIMENTS.**

## **The Psychology of Stalking Book Review**

Here's a review of a book on stalking, titled The Psychology of Stalking, and the reviewer, Sheryll Thompson, really has the problem of multiple stalking CLEARLY understood and in focus. Having a psychotherapist ACCEPT that multi-stalking really is happening really makes the heart of this veteran multi stalking target leap for joy!

Here's the review excerpt as I received it, and the book details from amazon.com follow at the end:

---

Have you seen a book review on the subject by a Los Angeles psychotherapist, Sheryll Thomson?

She complains that the book doesn't cover multiple stalkers and that police don't enforce anti-stalking law. I can't find her in phone directories or the California State physicians directory.

Here is part of her book review:

"Meloy doesn't mention multiple stalkers in his book, in fact, denigrates such stories by default and by being too vague in describing the differences between false and real cases (investigators 'had the feeling' the case was false), doing nothing to prevent law enforcement, with little more in the way of studies to go on, from concluding that more often than not a given case is 'self-harm' or simply a lie.

Psychotherapists: Many or most psychotherapists also have no choice, not hearing or knowing about the increasing multiple stalking cases (and being themselves too shocked at such stories and in denial -- as the society was about child abuse, wife-beating and one-person stalking for decades before acknowledging the seriousness and actuality of these crimes; and as we all were about the reality of terrorist threats to our nation though there was plenty of evidence for years apparently that these threats were real) they leap to the conclusion that their client is delusional. In fact, to be fair, most multiple-stalking cases are burgeoning exponentially, at the same rate as the internet, and all of this is new. (As Meloy, to his credit, attests, and he gives sound reasons why a person, who might not have been a criminal before the advent of the internet, might resort to deadly and terrorizing tactics when he thinks the internet will allow him impunity. p. 12)

There are now two cyberstalking laws in California (written after the book was written); one convicted a man (named Delapenta) who had set up a website in the name of a woman he had been turned down by for a date. He had published her name, address, phone, and ways to bypass her security system on this site; he said (as if he was she) 'she' wanted to be raped and to ignore any calls for help she might make -- that this was just part of 'her' game. The young woman was terrified at the calls and visits by strange men and remained so for at least a year after the perpetrator was caught (by her father spending weeks searching on line at first and then pretending to be a website visitor, and by two men who came to her door admitting what was going on; not by

any police investigation).

There are many such stories which have been published, which make use of personal identity information on the internet, including photographs (in one known case, brazenly taken head-on of the victim by strangers with long-distance lenses in food stores, concerts, in an empty hotel lobby after a conference, across a children's playground of herself and her grandchild -- the stunned victim found that the photographers drove away in cars which had no license plates), to recruit and evoke stranger-stalkers to target one individual. Some sites might be 'dead pool' sites, which include gambling on the person's death date --this is an effective come-on as, unlike 'hate sites', 'players' have the impetus of winning money or earning it through individual assaults or 'attacks'. These may be like a computer game, but in which a real person has been chosen (likely by a known perpetrator, maybe a family member -- like the father who was afraid without cause that he, himself, would become incarcerated or abandoned if his abuse of his daughter came to light) to be the target in real life. Some of the sites may require illicitly shared software in order to 'play' and the website may not be findable by ordinary search techniques. A person playing this 'game' might get points for making one or more assaults of some kind on the victim, terrorizing her/him and possibly hastening his/her death by suicide or homicide. There was one such report (1997) of a Dungeons and Dragons game, originating on the internet but played out on the street, which resulted in the suicides of three terrified teenagers.

Clearly a new book needs to be written, and soon, incorporating all the now-known cases of multiple (stranger) stalkers elicited on the internet targeting a single individual as well as the continued gap in law enforcement between what needs to be known about how to investigate these cases (sophisticated cyber-training and sections in police departments devoted to such crimes) and how victims are being treated today. Likely legislatures need to vote money toward these sections and not just make new cybercrime laws."

I [Sheryll Thompson] am a licensed psychotherapist with a personal and professional interest in 'multiple stalking' cases, in which a perpetrator organizes other individuals, likely strangers to the victim, to stalk and harass a feared or hated target individual, often over the internet.

This is a basic, beginning book, written in 1998 and way behind in filling the need, considering the proliferation of actual crimes originating on the internet especially those in which a single website recruits or incites multiple individuals, usually strangers, as stalkers against one individual. In addition, unfortunately, this well-meaning but limited book has likely set back law enforcement help for victims of multiple-stalker, internet-originating crimes by years:

In particular, the chapter on 'false victimization' is unnecessary and could well have been left out as it gives inexperienced, overburdened or uncaring law enforcement personnel, as they read the chapter about a variety of cases which at first sound like legitimate stalking cases but turn out to be false alarms, rationale to superimpose them upon all pleas to law enforcement for help, and justification to dismiss out of hand legitimate cases as illegitimate -- without investigation.

Other examples of little or no cyberstalking training (in the LAPD; there is no cyberstalking section though the law now mandates it): A lone law enforcement individual manning the phone at LAPD's 'cyberstalking' section has said, 'cyberstalking is threatening e-mails -- period!' (2001) (This misapprehension is not discredited in

Meloy's book.) Another LAPD detective, a woman, said, 'Just don't go on line' and when she heard about skin-burning chemicals inserted in the victim's newspapers, 'Just stop taking the newspaper'. Another detective, when hearing about a rationally-described but complicated case of internet-originated stalking and harassment insisted that the victim go into a psychiatric facility for a three-day hold in order to 'determine what is going on' -- this is without the first attempt at interview or investigation. Other detectives, more restrained, have explained that they need 'proof' before even beginning an investigation and gathering proof, leaving the victim in a helpless, catch-22 situation (and, being put off by the multiple-stalker nature of the crime as described refused to look at the evidence at hand).

Publisher: Academic Press; (May 26, 1998)  
ISBN: 0124905609

#### Book Description

The Psychology of Stalking is the first scholarly book on stalking ever published. Virtually every serious writer and researcher in this area of criminal psychopathology has contributed a chapter. These chapters explore stalking from social, psychiatric, psychological and behavioral perspectives. New thinking and data are presented on threats, pursuit characteristics, psychiatric diagnoses, offender-victim typologies, cyberstalking, false victimization syndrome, erotomania, stalking and domestic violence, the stalking of public figures, and many other aspects of stalking, as well as legal issues.

This landmark text is of interest to both professionals and other thoughtful individuals who recognize the serious nature of this ominous social behavior.

#### Key Features:

- \* First scholarly book on stalking ever published
- \* Contributions from virtually all major researchers in field
- \* Discussion of what to do when being stalked
- \* Uses examples from recent publicized cases

## How You, The Public, Can Help

Members of the public are not necessarily expected to believe our claims of being harassed by community stalking groups, and targeted with electronic harassment devices, immediately. This is largely very clever use of seemingly "life's normal breaks" used by the stalking groups and the extreme difficulty in detecting the classified device signals, and the high level of secrecy regarding this invasive equipment.

However, here are some blocks of rock-solid evidence, as yet not all known about widely, thanks to media and government silence. The public can help greatly by just learning more about these items:

- The existence of networked stalking groups, at least across the U.S. and Canada, who believe they are doing great community service by harassing people they have been told (lied to) are "undesirables". The book review below reports on what investigative author David Lawson discovered when he "rode with" these groups:

### [Terrorist Stalking in America](#)

Here is a book about organized stalking in the workplace, which has been given the name "mobbing":

### [Mobbing: Emotional Abuse in the American Workplace](#)

Organized stalking with electronic harassment and mobbing have had small scale surveys done which indicate that possibly one person in a hundred is being targeted.

- Dr. Joseph Sharp's voice to skull success, performed with Dr. James C. Lin's transmitter, and announced in 1974, further information here:

<http://www.raven1.net/v2succes.htm>

<http://www.raven1.net/hypno2s.gif>

Note that NO implants are required.

- Lowery's silent sound, patent [5,159,703](#) and used for self-help subliminal hypnosis tapes and CDs and by the U.S. Army in Gulf War One (1991):

<http://www.raven1.net/silsoun2.htm>

Together with Sharp's voice to skull, Silent Sound can hypnotize a target in their bed with the target being unaware. Unaware hypnosis can destroy a target's life and the target will never be able to prove that this technology is responsible:

[Diagram](#) showing this setup.

- The old (Korean War vintage) medical device, the LIDA machine, a pulsed radio transmitter which can be used to make a target exhausted on the job, and with a pulse rate increase, deprive a target of sleep

<http://www.raven1.net/lida.htm>

- Through clothing (and through non-conductive wall) radar, widely used at airports and by police to look through clothing for hidden weapons

<http://www.raven1.net/seethru.jpg>

If the public will simply learn about these factual items and discuss them with family, friends, co-workers and public officials, this will help the cause of exposing and stopping these crimes GREATLY.

## Advice Points

---

This advice carries with it no guarantee of successful results.

### How can I stop this harassment?

As of the date of this page, I (Eleanor White) do not know of any way to stop the harassment. Furthermore, all indications so far are that the harassment will continue for life.

Because of this, it is important for targets to accept that there may be no solutions for the moment, and like the rest of us, will have to endure the harassment while we work on finding solutions.

The reasons why we are not now able to prove our case in court are:

- Public officials and doctors have not yet recognized organized stalking (harassment by groups as opposed to single stalkers) as a 'real' crime ... OFFICIALLY. A few have confided in our members that they know the crime is happening but that they are under orders to ignore complaints about organized stalking and electronic harassment: [policewhoknow.txt](#)
- The technology used for the bodily attacks is too [advanced](#) to be conclusively proven using conventional test equipment
- The bodily symptoms have multiple possible causes, making it impossible to blame them solely on external attacks
- We have no government admissions (any government) that mind control projects are currently happening
- The [street theater](#) harassment is perfectly engineered to look like the "normal breaks" of life
- The break ins and [sabotage](#) at home and work are perfectly engineered to look like "normal wear", or, something the target could forget he/she actually did (like excessive consumption of supplies)
- Outside observers, including police, doctors, judges and juries are biased by the ingrained human tendency to ignore the frequency factor in the harassment. The frequency factor, of course, is the difference between the "normal breaks" and what is happening to us
- Outside observers, even under normal circumstances, would REALLY rather not be involved with fighting crime, especially when even the authorities recognize that they can't go up against classified (secret) government black operations. This goes double

for average citizens. Human beings simply will not accept claims that nasty things are happening every day, usually night and day.

Having said all that, it's worthwhile to keep in mind that we DO have evidence, and if some naysayer says you have none, you can rebut that. Here are the types of evidence we do have:

- Testimonials from the MCF site which, regardless of what anyone else may think, are just as good as any other eye witness testimony.

<http://www.mindcontrolforums.com>

Refusal to even acknowledge first person evidence indicates strong bias.

- UNclassified mind/body attack technology undeniably exists.

<http://www.raven1.net/uncom.htm>

...for example.

- A HUGE, DOCUMENTED history of the U.S., other governments, and protected corporations committing major crimes, both electronic and others equally atrocious, not the least of which were the MK series, COINTELPRO, and the radiation experiments (goes to motive). COINTELPRO can be read about in the Washington DC FBI public reading room, so says lawyer and author Brian Glick, author of "War at Home", link below.

<http://mindjustice-org>

<http://www.raven1.net/othcrime.htm>

COINTELPRO crimes are outlined in this book review:

<http://www.raven1.net/warathom.htm>

- CONSTANT covert entry to targets' homes, cars, and workplaces with constant SABOTAGE, which is PHYSICAL evidence ([sabotage.htm](#) on my site for example). Each individual sabotage or theft item is small, but that's the whole plan, the essential design of the harassment program.
- Various burns and other anomalies on targets' bodies (fairly rare, but they do exist)
- Some of us have been through psychiatric exams and found not mentally ill. More than that, psychiatrists have ZERO qualifications for judging whether covert criminal harassment or covert government program is underway or not. A good mental health defence lawyer could smash such questionable diagnoses easily.

Personally, I, Eleanor White, believe that the shortest route to stopping the harassment may be in the exposure of some of the other major government crimes which are being covered up. The best source for news about those other crimes are the 'Patriot' news broadcasts, which can be heard on the WEB, shortwave, and on some AM and FM stations. See this page for details:

<http://www.raven1.net/patriotradio.htm>

For a book providing good background information on how and why major government crimes happen and continue decade after decade, see [Rule by Secrecy](#), by Jim Marrs. This book and other sources show that often, world leaders get their positions of power by way of membership in secret societies. Testimony by government and corporate whistleblowers on Patriot radio shows that positions of power in every level - federal, state, provincial, county and local - are often filled by people with allegiances other than their oath of office. In fact, investigators have turned up judges who have skipped placing an oath of office on file, and are in actual fact not legally exercising their functions. This type of covert corruption provides an environment in which organized stalking and electronic harassment can take place without fear of prosecution.

Toward this end, as much as my limited resources allow, I follow news about the efforts to expose such [other crimes](#), and even participate in such exposure efforts where possible.

There is ONE possible method, somewhat expensive, time consuming, which might begin to show the public that the electronic attacks are real. That would be to acquire a single channel, PC-based, recording EEG (electro-encephalogram) unit and use it while in bed. The EEG indications would be recorded, along with voice notes from the target describing the effects being experienced and the time, on an audio or video recorder.

When dealing with hostile authorities, family, friends and the general public, it is definitely worth mentioning EEG readings as a possible way to produce the necessary evidence.

See ["Well, what CAN we do then?"](#) below, for a list of some things we CAN do in spite of our disadvantages.

**This won't stop the harassment, but because of George W. Bush's (and his [New World Order](#) masters') insane plan to attack other countries, making major upheavals in the world situation and even nuclear war a good possibility, I would strongly urge 'making one's self right with God' through repentance and prayer. It wouldn't cost anything for those who feel they are 'not religious' to hedge their bets in this manner too. I've been doing just that, along with lots of reflective time [outdoors](#) enjoying what's left of Nature for some time now. (Might also be worth while stocking up on storable food, acquiring some water containers, some potassium iodate or iodide, perhaps a top quality water filter, having materials on hand for a solar still.)**

This advice carries with it no guarantee of successful results.

## **What do the perpetrators want from me?**

The full answer is guesswork. In the beginning (decades ago), it appeared this was sick psychological warfare "research". However, with an April 2002 survey of 12,000 North Americans, it now appears one percent of the population may be organized stalking and electronic harassment targets. It is my (Eleanor White's) guess that what used to be "mind control" has moved from "research" into a program to suppress dissent and "neutralize" people considered as "undesirables", probably part of the predicted takeover by the [New](#)

[World Order](#). Naturally, the targets on whom "research" was performed must be kept on the NWO list, to keep them from being heard.

Evidence from targets indicates that training more perpetrators is proceeding quickly so as to expand this program. Since it takes a while for new targets to realize they are being deliberately targetted, this expansion hasn't showed yet in a major surge in new targets writing in. There has been, however a steady increase.

One thing the perpetrators want, a top priority item, is to confuse, discourage, and divide our group. One way to do this is to SIMULATE older technology, which will cause some of us to spend our last bit of time, last iota of strength, last dime, and last ounce of fighting spirit trying to buy cures for obsolete. Both audible sound and radio signals can be injected so as to appear at any point in space. This ability of the advanced technology fools many into thinking we are up against basic, conventional electromagnetic or acoustic signals. ([conventional](#)) technology. Keep in mind that if the perp technology was simple (like microwave), we would have found a solid countermeasure long ago.

One way to confuse, discourage and divide is to use different mind/body effects on different targets, spawning endless debates. (See [Disinformation Agents](#) and [Facts, Fact Sources, and the "Poison Pill" Disinfo Tactic](#))

The fractionalizing tactic has been standard for government agencies and is clearly laid out in the book [War at Home](#). Deception is the standard stock-in-trade of all government intelligence agencies. (This tactic began as FBI [COINTELPRO](#))

[Decoying](#) and [disinfo agents](#) are ways the perps accomplish fractionalizing and keep the organized stalking and electronic harassment issue from being recognized by the general public.

Read this plea and view an illustration urging targets to never overlook the possibility of decoying in their lives: [Click here](#).

In order to inoculate yourself against these tactics, I recommend that everyone remind themselves frequently that the perpetrators goals include deception and fractionalizing of our group. I plead with everyone to never forget those goals.

\* One recurring report from targets is that their perps' voice to skull transmissions indicate the target is being used as the "ball" in a sick "betting game". The game, according to some reports, involves the application of some form of torture or skit, and the perp players bet on how the target will react. Thinking about illegal amusement like cock fights, this does sound plausible.

[Back to Menu](#)

This advice carries with it no guarantee of successful results.

## **Are there any successful countermeasures?**

This is a balancing act to try to answer. On the one hand, it is very important that targets understand that conventional signals (microwave, acoustics, ELF, lasers, etc.) are obsolete,

and any experiments attempting to block or jam or detect conventional harassment signals will probably fail, and, targets can easily throw away their life savings, time, strength and hope and come up with nothing, as I (Eleanor White) did in the late 1990s.

On the other hand, experimentation, as long as the target is fully aware that any experiment may prove useless, and can afford to lose the money and time invested, may turn something up in spite of the very advanced nature of today's electronic harassment weapons.

There are some indirect areas where experimentation using conventional equipment might turn up some useful results:

- There is ONE possible method, somewhat expensive, time consuming, which might begin to show the public that the electronic attacks are real. That would be to acquire a single channel, PC-based, recording EEG (electro-encephalogram) unit and use it while in bed. The EEG indications would be recorded, along with voice notes from the target describing the effects being experienced and the time, on an audio or video recorder.
- Entraining the brain and/or nervous system using "soothing" rhythms (e.g. "sleep" frequency EEG waves, or similar audio signals or biofeedback). Personally, I recommend using magnetic fields rather than skin contact electrodes. This is because skin contact electrodes can cause severe irritation, rashes and blisters.
- Attempts to record the voice to skull or other strange audio effects
- Attempting to learn more about the Robert Pavlita (Czech) "psychotronic generators", which are psychically charged inert objects which cause "strange behaviour" in their vicinity. One source is the book Psychic Discoveries Behind the Iron Curtain by Lynn Schroeder and Sheila Ostrander.
- One could try experiments using conventional technology which has proven it can inhibit psychic abilities, and by inference, possibly useful against the advanced electronic attack signals. Natural lightning storms have been said to inhibit psychic ability by one psychic researcher. A military remote viewer stated the Russians may have a device which can block remote viewing. Tesla coils (HV-AC) and Van de Graff generators (HV-DC) may be devices worth trying. If you have the funds to experiment with these, remember they may deliver lethal electric shocks so put a great deal of effort into SAFETY when using them.

This type of experiment would require looking for statements by psychics or scientific psychic researchers on what they have found interferes with psychic abilities, (nicknamed "psi".)

[This book review](#) may give the reader some clues about equipment which has been successful in serious ghost and paranormal investigations.

This page of the Stop Covert War web site, <http://www.stopcovertwar.com/detect.html> has been set up to track experiments which have been or currently are being done to find genuine countermeasures.

[apackrat@gbonline.com](mailto:apackrat@gbonline.com), [packrat@650dialup.com](mailto:packrat@650dialup.com), [packrat@softhome.net](mailto:packrat@softhome.net) to reach the webmaster of that site, if you have additional information to report.

What is key to understanding the question of obsolete vs. today's advanced technologies is to know that advanced technologies can and do DELIVER conventional electromagnetic and acoustic manifestations into targets' homes and bodies. But these conventional manifestations DO NOT TRAVEL in conventional form, and the manifestations canNOT cause all the effects we experience.

The advanced technology delivers the the conventional manifestations with the precision of a hypodermic syringe. This is cause for considerable confusion, as when targets use, perhaps, a [Tri-Field Meter](#) or similar device which registers electromagnetic or other conventional fields at the site of a perp attack. They may find unusual conventional fields, but that doesn't mean those fields travelled into the target's home or body in that form, or that the particular signal detected is causing the attack effects.

To actually USE a meter or other test equipment reading as proof is very difficult. Unless this reading ALWAYS shows in perfect synchronization with bodily or attacks on other objects, and such reading type can be CONSISTENTLY REPEATED by other targets, such a reading is almost certainly not usable as proof of attack.

It is worth noting that conventional electromagnetic manifestations routinely occur during ghost appearances and activity, and this is another example of conventional EM fields which are not delivered by way of their conventional form. (In fact, I Eleanor White recommend considering a request to local ghost investigators to scan the homes of targets. Possibly targets with basic items like tape recorders and camcorders might try to trap perp activity using [electronic voice and image phenomena](#) techniques.)

Here are a few successful partial relief countermeasures, such as:

- If you are targeted with electronic voice to skull harassment, one target has found that having two or more radios on with different stations can create such a jumble of talk that the voice to skull harassment is effectively masked (though this doesn't eliminate the V2S)
- Running a box fan at bed level over your bare legs can make being tortured while being kept awake a little less miserable
- Foam cylinder ear plugs can help a little when the perps make noise to keep you awake
- Coarse abrasive paint removal scrubbing pads, or garlic graters, or Dr. Scholls metallic corn removal tools, or stiff hair brushes with fibers cut to half of normal length, or 'Scalpicin' scalp itch formula, kept on or near the bed, carried with you, can relieve some of the small electric shocks and artificial itching used to keep the target awake. Depending on the intensity of the attacks, you may have to abrade your skin until it literally hangs off in flakes.
- The wearing of coarse paint removal scrubbing pads inside clothing, either singly or glued together with silicone rubber, so that in public places you have a means to soothe either the electric shocks or intense itches.
- Melatonin taken at bed time can make it easier to get a little relaxation in between perp attacks in bed. Amitriptylene (requires a prescription) in small doses may help too.
- Playing loud music or a favourite radio/TV station can help a bit during voice to skull attacks

- Labelling supplies containers with the date opened, and successive levels each day can reduce the amount of dumping of supplies. Containers which clearly show dumping of supplies can be kept as evidence.
- I find that spending as much time [outdoors](#) as possible, and walking to maintain physical health, provides a degree of relief.
- I find that engaging in simple, low cost hobbies, such as the perps will allow you to engage in, is very uplifting. (Personally, I find hanging out with and feeding squirrels serves me well as a low cost diversion. [Click here](#) if you think feeding squirrels might suit you.)
- I find that listening to [Patriot news](#) is very uplifting. (These broadcasters broadcast from their WEB sites, shortwave, and some AM and FM stations.)

The perps can render these and any other countermeasures useless if they are really determined to do so. I recommend these criteria for deciding if a given countermeasure you try actually works, or is a [decoy](#):

- Provides TOTAL relief for at least one major effect with no gaps
- Works for EVERYONE who tries it
- Works the SAME WAY for everyone who tries it
- Works the same way for everyone who tries it for SEVERAL MONTHS

Personally, I (Eleanor White) would use 6 months as the minimum before I would call a countermeasure successful, using the criteria above, and that should include success reports from targets I know well, other than the originator of the cure.

One target tried different metallic head shielding types. She reported that the perps would "tap" (an example of remote physical action) on the shield several times before they finally "got through" and zapped her. Other experiments have shown that conventional shielding does not stop the harassment for many, meaning, the perps can get by metallic shields whenever they want to. Therefore, one has to ask: Was the tapping-then-zapping decoying? The target who reported it does not think so, however, to me it certainly seems like decoying. The purpose being to encourage ever more extensive and expensive shielding experiments, which give the perps more chances to show the target has no way to escape, while at the same time, causing the target to spend lots of time, hope and money for nothing.

If you are interested, here are some books describing scientific experiments which are aggressively ignored by 'mainstream' scientists, and which demonstrate clearly the performance level of current-day electronic harassment technology:

- [Psychic Discoveries](#), by Sheila Ostrander and Lynn Schroeder
- [Remote Viewing](#), by Tim Rifat
- [Secret Life of Plants](#), by Tompkins and Bird
- [The Secret Life of Cells](#) by Robert Stone

If someone tells you these books "have been discredited", they are possibly a disinformation agent. ALL books pointing to technology ignored by so-called 'mainstream' scientists are allegedly 'discredited', however, if you investigate, you will find that the experiments have been repeated by others. For example, I have verified using a single channel consumer type EEG machine that plants do indeed have a type of EEG electrical activity that clearly varies.

New organized stalking and electronic harassment targets need to learn just how forcefully any new technologies are suppressed, and those three books above contain prime examples. People trying to publicize or commercially develop advanced technology are usually harassed just as we are.

[Back to Menu](#)

---

This advice carries with it no guarantee of successful results.

## **What if I'm forced to see a doctor?**

There may be times when perpetrator attacks produce symptoms so severe that visits to a medical doctor become necessary. It is important to understand that the OVERWHELMING majority of MDs will instantly diagnose you as delusional if you try to tell them your symptoms are attacks from hidden electronic equipment, government agencies, or that you are being gassed or poisoned, or even experience 'strange smells'.

For one thing, ALL medical symptoms can be applied electronically, but if you have severe symptoms, just on the chance it may be a real medical condition and not an electronic attack, it's smart to get it checked by a doctor.

When you see a medical doctor, I, Eleanor White, recommend you do NOT say the symptoms came from electronic or any form of deliberate harassment. Instead, I recommend describing the symptoms and leaving it up to the doctor to speculate about the cause.

If you are already seeing a psychiatrist, or are afraid you might be, this web site is MUST READING:

<http://www.breggin.com>

[Here](#) is the May 2004 cover page in case the link above doesn't work. May give you some clues for further web searching.

[Back to Menu](#)

---

This advice carries with it no guarantee of successful results.

## **How can I convince authorities, family, friends and co-workers that I'm not crazy?**

First, I recommend that targets stay away from psychiatrists. These doctors have no inside information about stalking groups or training in government black operations and are not "in the loop" i.e. updated on government black operations. Thus when they offer the opinion that organized stalking and electronic harassment is not happening and you are delusional, they are exceeding their professional qualifications (and may be technically guilty of malpractice.)

Organized stalking and electronic harassment programs are harassment and torture, not mental illness. The only exception to staying away from psychiatrists should be the rare instance in which a local lawyer with a mental health defence sub-specialty recommends an

honest psychiatrist who will not label you "in need of help" with a hair trigger diagnosis. Such psychiatrists are rare. I strongly urge all targets to take advantage of lawyers' "free 30 minutes" to window shop for a lawyer who takes legal aid cases and who has a mental health defence sub specialty. And if the lawyer can recommend an honest psychiatrist who will not assume that government harassment is impossible, it might be prudent to quietly have yourself assessed before some crisis occurs in your life. Listen to your instincts and do not rush to have a mental health assessment, however.

IMPORTANT: You must control your natural hope and expectations so that you do not expect either a sympathetic lawyer or honest psychiatrist to become an activist on your behalf. Don't overstay your welcome, don't send them lots of correspondence, don't pester them in any way. Your purpose is to have some contacts handy should the perps put you into a crisis situation.

Secondly, (and this is hard for people who have recently realized that they are being harassed illegally,) I recommend that you avoid complaining to anyone about anything that you cannot prove with courtroom quality physical evidence. Ripped clothing, broken furniture, slashed tires, for example. Complaining about any of the bodily effects puts you in danger of being forced under the "care" of a psychiatrist, which will discredit you for years to come.

If you are already seeing a psychiatrist, or are afraid you might be, this web site is MUST READING:

<http://www.breggin.com>

[Here](#) is the May 2004 cover page in case the link above doesn't work. May give you some clues for further web searching.

One special point should be noted. Electronic harassment targets are targets of CRIME, and NOT ANY KIND OF MEDICAL CONDITION. Disinformation agents will often try to derail serious talk about electronic harassment using medical conditions, "electrosensitivity" being very popular. If someone is shot dead, the fact that they may have been allergic to lead in NO WAY reduces the CRIME of murder. When "electrosensitivity" pops into the conversation, I plainly and emphatically state that has nothing to do with the CRIME of electronic harassment, will not debate that issue further. I recommend this tactic to others.

[Required reading](#). This is a statement by a doctor who worked for the U.S. National Institutes of Health who describes in his own words what psycho-electronic attack is all about, and who has had personal experiences with it. Along with that letter, [Dr. Eldon Byrd's corroborating statement](#), is a must. \*\* Consider printing out both of these letters, and possibly making copies for any doctors you have dealt with on the subject of electronic harassment. The "Required reading" letter is the most powerful and corroborated statement about mind control we have to date.

Electronic harassment is virtually always accompanied by organized stalking (in-community harassment by groups of people) and mobbing (on the job harassment). Convincing others that this non-electronic phase of the problem is really going on and affects many people is, I

feel, the more important half of the job of convincing others. Here are some statistics which have helped convince people that at least organized stalking is reality:

**\*\* A survey like the one on this site was posted on a high volume news site in 2002. 12,000 people visited that survey in 24 hours. About 120 sent in responses saying they had most or all of the signs of organized stalking. That is 1 person in a hundred, primarily in North America. (Probably better to estimate one person per 1,000.)**

<http://www.raven1.net/emresul2.htm>

**\*\* Statistics from the book "Mobbing: Emotional Abuse in the American Workplace show that in Sweden, about 3.5% of the working population is subject to mobbing, which is organized stalking in the workplace. 3.5% of working people is roughly 1 person in a hundred total, and is in line with the organized stalking survey above.**

<http://www.raven1.net/mobbook.htm>

**\*\* Statistics from the British (government) Home Office state that 990,000 people in the United Kingdom are targets of stalking or harassment at any one time as of the year 2000. That is about 1.4 people per hundred. Here again, the organized stalking survey's 1 person in a hundred is not out of line. This information was posted on the cover page of a British international detective and security agency at this link in January 2005.**

[Click here](#) for the (long) URL of that web site, as of early 2005.

[Click here](#) for information on disinformation agents, who are always around, in the print media, in email forums on organized stalking, electronic harassment, mind control, or on the talk radio circuit.

**Here is something VERY worthwhile for new targets to do before making any kind of report or complaint to the authorities, and that includes all doctors: Visit a large general, or possibly better, medical school library, and locate the current "DSM" or "Diagnostic and Statistical Manual of Mental Disorders". At time of writing, the current version is IV, and it's commonly referred to as the "DSM IV", which is spoken as "DSM Four".**

**This is a roughly 500 page book. Along with the DSM IV you will find accessory books like "annotations" or "case studies", but you want the actual DSM IV, not the accessories.**

**Go into the table of contents, and look for chapters with these key words: "schizophrenia", "paranoid", and "delusional".**

**Scan the related topics and sub-topics, watching for CRITERIA used by psychiatrists to diagnose (i.e. label) you with these particular conditions. You will be AMAZED at how the behaviour of any organized stalking and electronic harassment target fits PERFECTLY with the criteria listed. The lesson to be learned here - see for yourself, don't take my word on it - is that in our particular situation, ANY contact with doctors and particularly psychiatrists is almost a guarantee of a false diagnosis of "schizoid",**

**"paranoid" or "delusional" mental disorder.**

**This short experience - shouldn't take more than an hour - will equip you for dealing with, should you be forced, or avoiding, contact on the subject of organized stalking and electronic harassment with the medical profession.**

**\*\* And by the way, SOME doctors have admitted to our members that they know for certain organized stalking and electronic harassment are actually happening. See this log for more information:**

[docswhoknow.txt](#)

Some of the worst things to complain about to others are:

- "I have implants in my teeth" without xrays to confirm
- "I have implants in my head" without xrays to confirm
- "My TV set is giving me commands"
- "My stereo is giving me commands"
- "My dog is giving me commands"
- "I'm being followed by airplanes/helicopters"
- "I have to wear a foil beanie"

Especially important is to avoid complaining about the motives of local perpetrators. That is one of the main traps the perps set for us. Someone else's motive is nearly impossible to prove, even if you know that the motive is participation in the gang stalking and electronic program.

Having said that, the odds are that by the time a new target reads this advice, they have already been suckered into complaining about the bodily effects (which are nearly impossible to support with physical evidence) and may have already been in contact with the psychiatric system, and may have already been labelled by family, friends, and co-workers as crazy.

The way out of this type of discreditation is long and hard, but it can be done by spending your time and resources doing all you can to learn about [FACTS ON PUBLIC RECORD](#) (which does not include our own torment, as it hasn't been proven anywhere, sad to say) which point to the availability and use of [psycho-electronic](#) weapons and their use on involuntary experimentees:

- Brief yourself on the evidence we DO have, which though not enough to prove our case in court yet, is far more than the "none" used against us by authorities and other naysayers
- Brief yourself on three government recognitions that at least electronic anti-personnel technology exists, as these bulletins can assist when dealing with hostile authorities including psychiatrists who want you to take medications you do not need:
  - [govptron.htm](#)
  - [russtran.htm](#)
  - [europar.htm](#)

- [michiganpa0256.htm](http://michiganpa0256.htm)
- [michiganpa0256.htm](http://michiganpa0256.htm)
- ⌚ One professional scientific journal also states that voice to skull technology exists - this is the single most important document in support of electronic mind weapon technology to date and which, being unclassified is acceptable to members of the public:

[v2succes.htm](http://v2succes.htm)

- ⌚ A conference of government and non-government scientists at the prestigious Pasteur Institute in Paris stated in Nature magazine (January 22, 1998) that the day when unclassified thought reading will be possible is rapidly approaching as a result of improvements in brain scan technology:

[nature1.htm](http://nature1.htm)

- ⌚ UNclassified and commerical technology available to anyone these days:

[uncom.htm](http://uncom.htm)

...and the fact that there are no controls on owning or using these devices.

- ⌚ MKULTRA, the REAL story which is FAR MORE than a few hits of LSD and some drugging of patients for hypnosis in Montreal:
  - [manchcan.htm](http://manchcan.htm)
  - [nabetray.htm](http://nabetray.htm)
  - [anat-1.htm](http://anat-1.htm)
  - [othsites.htm](http://othsites.htm)

- ⌚ The FBI's COINTELPRO atrocities, started during the days of Viet Nam war resistance, and including protesters of racism, and continuing to the present, and which are exactly the type of things happening to us except for the exotic electronic weapons:

[warathom.htm](http://warathom.htm)

- ⌚ The U.S. government's HUMAN RADIATION EXPERIMENTS, which, like our situation, the government labelled as "a bunch of crazies" until President Clinton finally admitted publicly that hundreds of innocent targets were fed or injected with radioactive substances:

[hradexco.htm](http://hradexco.htm)

- ⌚ A list of [researcher LEADS](#) of probable government human experimentation crimes - these require verification before becoming usable as factual evidence. However, if theses are genuine finds, they portray a long history of such crimes.
- ⌚ It would be helpful to learn something about:

[other government crimes](#) too.

As you read and learn the history of on-public-record proven gang stalking and electronic harassment instances and equipment, I strongly recommend keeping a personal list of questions you have encountered or might encounter, and well thought out and researched comebacks to those questions. Rehearse those questions and comebacks frequently, and keep adding to the list.

One way to test your comebacks is to join one of the email forums on which targets discuss their situation, and ask for their opinions.

One common challenge you may have already heard is for the authorities, family, friends, or members of the public to say: "You are paranoid."

You can answer like this, (if the situation seems appropriate): "The fact that YOU are UNWILLING to learn about the full history of gang stalking and electronic harassment in no way makes ME PARANOID!"

(Courtesy Dr. Stanley Monteith, [Patriot radio](#) broadcaster. His show title is "Radio Liberty", weekday evenings.)

Some other questions and comebacks I've encountered while picketing are listed on this page: [spiel.htm](#) Those deal mainly with electronic harassment, which is a main topic of this site.

Always keep in mind these potential considerations and pitfalls:

## **What kind of technology do the perps use?**

I (Eleanor White) do not know how the genuine, current-day, classified (secret) technology works. I know, from personal experience and the effects reported by other targets that we are not being targetted by simple [conventional technology](#). (Or at least, the perps have very advanced technology to use if they feel they need it, so conventional countermeasures are to me a waste of time and money.)

Here are some of the observed effects of the advanced electronic technology which show conventional technology is not in use:

- Can penetrate excellent electromagnetic and acoustic shielding as if the shielding were not there
- Can "inject" conventional sound or radio signals so they appear to emanate from any point in space. Often, this is used to make appliances appear to "talk" or wall outlets appear to be "sending radio frequency signals". This is decoying, as the perpetrators have demonstrated this "injection" can also be done from any point in thin air, or a windowless side of a building.

- can move objects, from tiny gas bubbles in the target's respiratory tract, through yanking legs out from under the target, all the way up to shoving a moving car sideways
- Can make objects disappear then reappear in another location, and the reappearance location can be a moving vehicle
- Can strike heavy blows to any object, or set any object including the body into strong vibration, while nearby objects are not vibrating at all
- Can wrench house/building structure causing loud snapping or crackling noises, often done at precisely the point where a target is starting to doze off to sleep
- Can "inject air from nowhere" inside the upper lip when the lips are firmly closed, and the tongue and cheeks are blocking air from the lungs - this injection is used to keep the target awake as it results in a loud noise like flatulence (Appears to be done via other dimensions, aka "hyperspace")
- Can apply thousands of pounds tension to metal stock or welds in excellent condition, causing breakage, yet no tool marks are left on the finish
- Inexplicable (from conventional technology standpoint) "lights" on and close to targets, especially from the MKULTRA era. Some are seen by nearby witnesses (like two cases of brightly glowing hands) or show on photos. Burns on the target sometimes show afterwards.
- Small number of total levitation cases, at least one witnessed

One recommendation is: Avoid tying any complaints you might make down to any single type of technology. If you complain to the authorities that you are being targeted by "satellites" or "implants" or "microwave" or any other SPECIFIC type of technology, you have just made it much easier for the authorities to discredit you.

The authorities can xray you for implants and find none, or sweep your home for microwave and find none, or point a signal analyzer at the sky and find nothing out of the ordinary, and you are then discredited, and to some extent so are the rest of us.

The honest position is that we do NOT know how the genuine, current-day technology works. We DO know that today's technology operates at an extremely sophisticated performance level. For example:

- About 40% of targets report strong vibrations of body parts or objects, where there is no surrounding vibration to account for this effect. Conventional signals canNOT do this.
- Perhaps twice that many targets report regular "wrenching" of house/building structure, to produce cap-gun like "snapping" or "crackling", usually applied at the very moment the target tries to drop off to sleep. This cannot be performed by conventional signals either.

I did try a 4-layer shielded cylinder surrounding my bed, for a period of two years. The 4 layers, outside first, were:

- Solid sheet steel
- Aluminum foil
- Galvanized steel mesh
- Radio signal absorbtive foam

Air was provided by way of an intake duct and exhaust duct, solid sheet steel, lined with radio signal absorptive foam, and stuffed with copper scrubbing pads.

Battery operated AM, FM, and shortwave radios, and a battery operated TV set, and a cell phone, did not work inside this enclosure at all. In fact, they didn't work even when the enclosure door was open, probably due to the effects of the inner radio absorption layer.

All effects, including some of the above list of advanced effects, continued without the slightest reduction within this enclosure.

Never forget that technology more advanced than that taught in universities CAN IMITATE older, conventional technology. Common sense tells you that the perpetrators WILL at times imitate obsolete technology to confuse and divide those fighting electronic harassment.

The lesson, as I (Eleanor White) see it is refer only to "unknown technology" rather than trying to explain to authorities technology details you do not have absolute proof of. Do see this letter from former USAF physicist Dr. Tom Bearden who has experienced some advanced electronic attacks: [tb2margo.htm](http://tb2margo.htm)

To read some historical information leading up to such advanced electronic harassment technology, I recommend these books:

- [Psychic Discoveries](#), by Sheila Ostrander and Lynn Schroeder
- [Remote Viewing](#), by Tim Rifat
- [Secret Life of Plants](#), by Tompkins and Bird
- [The Secret Life of Cells](#) by Robert Stone

---

This advice carries with it no guarantee of successful results.

## **When to use CONVENTIONAL vs. ADVANCED technology:**

I advise that the actual uses a target makes of what they know about CONVENTIONAL technology, and what they know about ADVANCED technology, are VERY DISTINCT AND DIFFERENT:

- CONVENTIONAL technology can do SOME EFFECTS.

CONVENTIONAL technology has one PRIME USE for which it is IDEAL: Engaging public interest and non-abusive interest of the authorities.

If one CALMLY can list a few of the well-proven UNclassified technologies and their known effects to the authorities or the public, (probably in the context of urging controls on them,) one can likely make headway. Some of my favourites among the UNclassified weapons are:

- <http://www.raven1.net/v2succes.htm> (Joseph Sharp V2S)
- <http://www.raven1.net/lida.htm> (Russian LEE-da machine)
- <http://www.raven1.net/5159703.htm> (Lowery Silent Sound)

- <http://www.raven1.net/silsoun2.htm> (Silent Sound in Iraq)
- <http://www.raven1.net/seethru.jpg> (Through wall radar)

So a big **\*\*\*YES\*\*\***, CONVENTIONAL technology has a place and that place is engaging and educating the public and authorities, but NOT planning countermeasures against the attacks.

- ADVANCED technology can do ALL the effects, even those which seem like "science fiction", and do them with ease, not requiring cars following you, or equipment in a neighbour's house.

ADVANCED technology's place is to aid us in DECISION MAKING.

By that I mean, if a target knows the full extent of the current-day equipment capabilities, that target is going to be far more cautious and circumspect in spending money, time, strength and hope on various countermeasure candidates.

By keeping in mind the abilities of the ADVANCED technology, a target can avoid the crushing HOPLESSNESS that happens when an expensive radio frequency shielding suit he/she just bought doesn't work. Or when a target moves to Surtsey Island in the far north Atlantic and still gets harassed, at least that target will have known all along that failure was a possibility and it won't be a big a shock or discouragement.

By keeping the abilities of ADVANCED technology clearly in mind, targets will automatically make GUARDED, conservative statements to the public which do NOT TIE THEM DOWN to one particular technology, which can lead to being shot down by perp experts at exactly the wrong time (like a court hearing). The target will keep the technology an OPEN-ENDED question and by so doing, exhibit HONESTY. Appearing honest and not claiming more knowledge than is available is very important in building credibility of both the individual and group as a whole.

[Back to Menu](#)

---

This advice carries with it no guarantee of successful results.

### **The perps are really harassing me. Can I do anything to get them to back off?**

There is no way to appease the perps that I (Eleanor White) am aware of. Hiding and not going public does not cause the harassment to back off, based on what I've heard and read.

There is also no way you can "give them what they want" so as to cause them to reduce or stop harassing you. "What they want" is to harass and torture you.

[Back to Menu](#)

---

This advice carries with it no guarantee of successful results.

### **Is there any way to keep secrets from the perps?**

In my (Eleanor White's) opinion, there is no type of communications which is secure from the perps. Encryption, secure servers, avoidance of the Internet do not prevent the perps from knowing what you are thinking. There is a faint possibility that if you have an idea which is not ever "said silently to yourself", the perps may not be able to monitor such non- vocalized thoughts. This is not assured as of the date of this document, however.

[Back to Menu](#)

---

This advice carries with it no guarantee of successful results.

## **I have an implant. How can I get it taken out?**

Many targets assume that because they are tracked, their thoughts read, and are targetted in other ways, they must have implants. Newly aware targets need to realize that many targets have never had surgery, unexplained wounds, or lost time, and therefore are confident they do NOT have implants.

Furthermore, the technology is highly exotic, can penetrate electromagnetic shielding and can evade conventional electronic detection equipment. This sophistication, and reports by many targets make it wise to NOT assume you are implanted unless you have unmistakeable x-ray proof.

The proposed airport "criminal intent scanners" do not require implants. ESP and remote viewing do not require implants. UFO abductees report powerful control over their actions even before they have been implanted. In other words, very advanced effects can be accomplished without having implants.

Here above is x-ray proof, provided by target John Gregory Lambros.

It is highly probable that the brain's natural electric currents and corresponding magnetic fields serve today's advanced equipment as the tracking and thought reading/writing "implant". After all, "brain fingerprinting" is being developed in the unclassified world.

(It is possible to have a non-metallic implant which may not show on an x-ray too.)

If you make claims that you are implanted, and later on, the authorities have you x-rayed and find nothing, you have discredited yourself and in some degree the rest of us too. Yes, a few targets do have implants, but they are far from the majority. Most of the implant photos available are on the Mind Control Forum at this link:

<http://www.mindcontrolforums.com>

The only source I am aware of for implant removal is a podiatrist who has arranged for some implant removal from UFO abductees. He does not do the surgery, rather, he has surgical associates who do the actual work. No electronic harassment target I'm aware of has successfully approached Dr. Leir and arranged for a mind control implant's removal.

Dr. Leir has a web site at:

<http://www.AlienScalpel.com>

[Here](#) is a writeup by someone familiar with Dr. Leir's work, describing what's been happening with some of the UFO implants he's removed to date.

<http://www.nidsci.org/articles/metal/metal.html> ... for limited analysis of SOME of the known UFO implants.

I don't know if implantee David Larson is receiving the full harassment we are, but he has an impressive report on some involuntary implants he had removed here:

<http://www.us-government-torture.com/Larson%20Report%20Edit.pdf>

**\*\* IMPORTANT:** I do NOT have contact information for Mr. Larson.

[Back to Menu](#)

---

This advice carries with it no guarantee of successful results.

## **Well, what CAN we do, then?"**

Over the past few years, I've been in the unhappy position of explaining to new target correspondents what we CAN'T do, and why. Here are some things I feel we canNOT do, and of course, this is just one person's opinion:

- Sue in civil court (yet)
- Press charges in criminal court (yet)
- Shield against current-day advanced harassment signals
- Directly detect the advanced signals
- Jam the advanced signals
- "Give the perps what they want" so as to stop the harassment
- Hide, don't go public, in hopes the perps will harass less
- Fully convince family, friends, the authorities, the public
- Have implants detected, removed, and analyzed

I think it's probably time to set up a list of what we CAN do for those same new correspondents. Again, this is only one person's opinion here, but I think there are some positive things we can do, while the media and the "war on terrorism" keeps the public's attention tied up:

- Network with and assist other targets
- Do what you can to FIND other targets in your area, some of whom do not know yet they are targets
- Learn all we can about gang stalking, electronic harassment, and government crimes including MKULTRA and COINTELPRO
- Once we have learned and tested our knowledge, with other targets, picket, publicly speak, hand out flyers, call into talk shows
- Keep a personal record of questions and answers, including the best responses you can come up with based on the factual material, and REHEARSE those responses
- Use the information about other government crimes to add to your personal list of questions and answers
- Learn about and support activism which tries to expose [OTHER major government crimes](#); [patriotradio.htm](#) ...is a good place to start. Anti-globalism protests are a good place to make contacts, as are U.S. Patriot movement conferences. (Listed shows also broadcast on the WEB and on some AM and FM stations.) \*\* Remember: Activists are more likely than the general population to be targeted, so handing out flyers at any activism event is potentially useful
- Increase your knowledge about how and why major government crimes happen and keep happening by reading [Rule by Secrecy](#), by Jim Marrs
- Check out [mind control patents](#), as the U.S. patent law does require an invention to both work and do something useful in order for a patent to be issued
- Get libraries to acquire (or donate to libraries yourself) books on gang stalking, mobbing, electronic harassment and mind control
- As much exercise as possible, walking being one of the best types
- If you want to become an activist in public view, TAKE YOUR TIME and carefully learn and REHEARSE a solid base of FACTUAL information. Talk as little as possible about your personal story, which can be used by the authorities to discredit you and maybe lock you up and force you into the additional torture of psychoactive drugs!

This list is enough to keep us all productively busy in spite of what the perps have done to keep the public distracted.

This advice carries with it no guarantee of successful results.

## **Quarantining dissent**

### **How the Secret Service protects Bush from free speech**

[James Bovard](#)

Sunday, January 4, 2004

[©2004 San Francisco Chronicle](#) | [Feedback](#) | [FAQ](#)

URL: [sfgate.com/article.cgi?file=/chronicle/archive/2004/01/04/INGPQ40MB81.DTL](http://www.sfgate.com/article.cgi?file=/chronicle/archive/2004/01/04/INGPQ40MB81.DTL)

When President Bush travels around the United States, the Secret Service visits the location ahead of time and orders local police to set up "free speech zones" or "protest zones," where people opposed to Bush policies (and sometimes sign-carrying supporters) are quarantined. These zones routinely succeed in keeping protesters out of presidential sight and outside the view of media covering the event.

When Bush went to the Pittsburgh area on Labor Day 2002, 65-year-old retired steel worker Bill Neel was there to greet him with a sign proclaiming, "The Bush family must surely love the poor, they made so many of us."

The local police, at the Secret Service's behest, set up a "designated free-speech zone" on a baseball field surrounded by a chain-link fence a third of a mile from the location of Bush's speech.

The police cleared the path of the motorcade of all critical signs, but folks with pro-Bush signs were permitted to line the president's path. Neel refused to go to the designated area and was arrested for disorderly conduct; the police also confiscated his sign.

Neel later commented, "As far as I'm concerned, the whole country is a free-speech zone. If the Bush administration has its way, anyone who criticizes them will be out of sight and out of mind."

At Neel's trial, police Detective John Ianachione testified that the Secret Service told local police to confine "people that were there making a statement pretty much against the president and his views" in a so-called free-speech area.

Paul Wolf, one of the top officials in the Allegheny County Police Department, told Salon that the Secret Service "come in and do a site survey, and say, 'Here's a place where the people can be, and we'd like to have any protesters put in a place that is able to be secured.' "

Pennsylvania District Judge Shirley Rowe Trkula threw out the disorderly conduct charge against Neel, declaring, "I believe this is America. Whatever happened to 'I don't agree with you, but I'll defend to the death your right to say it'?"

Similar suppressions have occurred during Bush visits to Florida. A recent St. Petersburg Times editorial noted, "At a Bush rally at Legends Field in 2001, three demonstrators -- two of whom were grandmothers -- were arrested for holding up small handwritten protest signs outside the designated zone. And last year, seven protesters were arrested when Bush came to a rally at the USF Sun Dome. They had refused to be cordoned off into a protest zone hundreds of yards from the entrance to the Dome."

One of the arrested protesters was a 62-year-old man holding up a sign, "War is good business. Invest your sons." The seven were charged with trespassing, "obstructing without violence and disorderly conduct."

Police have repressed protesters during several Bush visits to the St. Louis area as well. When Bush visited on Jan. 22, 150 people carrying signs were shunted far away from the main action and effectively quarantined.

Denise Lieberman of the American Civil Liberties Union of Eastern Missouri commented, "No one could see them from the street. In addition, the media were not allowed to talk to them. The police would not allow any media inside the protest area and wouldn't allow any of the protesters out of the protest zone to talk to the media."

When Bush stopped by a Boeing plant to talk to workers, Christine Mains and her 5-year-old daughter disobeyed orders to move to a small protest area far from the action. Police arrested Mains and took her and her crying daughter away in separate squad cars.

The Justice Department is now prosecuting Brett Bursey, who was arrested for holding a "No War for Oil" sign at a Bush visit to Columbia, S.C. Local police, acting under Secret Service orders, established a "free-speech zone" half a mile from where Bush would speak. Bursey was standing amid hundreds of people carrying signs praising the president. Police told Bursey to remove himself to the "free-speech zone."

Bursey refused and was arrested. Bursey said that he asked the police officer if "it was the content of my sign, and he said, 'Yes, sir, it's the content of your sign that's the problem.' " Bursey stated that he had already moved 200 yards from where Bush was supposed to speak. Bursey later complained, "The problem was, the restricted area kept moving. It was wherever I happened to be standing."

Bursey was charged with trespassing. Five months later, the charge was dropped because South Carolina law prohibits arresting people for trespassing on public property. But the Justice Department -- in the person of U.S. Attorney Strom Thurmond Jr. -- quickly jumped in, charging Bursey with

violating a rarely enforced federal law regarding "entering a restricted area around the president of the United States."

If convicted, Bursey faces a six-month trip up the river and a \$5,000 fine. Federal Magistrate Bristow Marchant denied Bursey's request for a jury trial because his violation is categorized as a petty offense. Some observers believe that the feds are seeking to set a precedent in a conservative state such as South Carolina that could then be used against protesters nationwide.

Bursey's trial took place on Nov. 12 and 13. His lawyers sought the Secret Service documents they believed would lay out the official policies on restricting critical speech at presidential visits. The Bush administration sought to block all access to the documents, but Marchant ruled that the lawyers could have limited access.

Bursey sought to subpoena Attorney General John Ashcroft and presidential adviser Karl Rove to testify. Bursey lawyer Lewis Pitts declared, "We intend to find out from Mr. Ashcroft why and how the decision to prosecute Mr. Bursey was reached." The magistrate refused, however, to enforce the subpoenas. Secret Service agent Holly Abel testified at the trial that Bursey was told to move to the "free-speech zone" but refused to cooperate.

The feds have offered some bizarre rationales for hog-tying protesters. Secret Service agent Brian Marr explained to National Public Radio, "These individuals may be so involved with trying to shout their support or nonsupport that inadvertently they may walk out into the motorcade route and be injured. And that is really the reason why we set these places up, so we can make sure that they have the right of free speech, but, two, we want to be sure that they are able to go home at the end of the evening and not be injured in any way." Except for having their constitutional rights shredded.

The ACLU, along with several other organizations, is suing the Secret Service for what it charges is a pattern and practice of suppressing protesters at Bush events in Arizona, California, Connecticut, Michigan, New Jersey, New Mexico, Texas and elsewhere. The ACLU's Witold Walczak said of the protesters, "The individuals we are talking about didn't pose a security threat; they posed a political threat."

The Secret Service is duty-bound to protect the president. But it is ludicrous to presume that would-be terrorists are lunkheaded enough to carry anti-Bush signs when carrying pro-Bush signs would give them much closer access. And even a policy of removing all people carrying signs -- as has happened in some demonstrations -- is pointless because potential attackers would simply avoid carrying signs. Assuming that terrorists are as unimaginative and predictable as the average federal bureaucrat is not a recipe for presidential longevity.

The Bush administration's anti-protester bias proved embarrassing for two American allies with long traditions of raucous free speech, resulting in some of the most repressive restrictions in memory in free countries.

When Bush visited Australia in October, Sydney Morning Herald columnist Mark Riley observed, "The basic right of freedom of speech will adopt a new interpretation during the Canberra visits this week by George Bush and his Chinese counterpart, Hu Jintao. Protesters will be free to speak as much as they like just as long as they can't be heard."

Demonstrators were shunted to an area away from the Federal Parliament building and prohibited from using any public address system in the area.

For Bush's recent visit to London, the White House demanded that British police ban all protest marches, close down the center of the city and impose a "virtual three-day shutdown of central London in a bid to foil disruption of the visit by anti-war protesters," according to Britain's Evening Standard. But instead of a "free-speech zone," the Bush administration demanded an "exclusion zone" to protect Bush from protesters' messages.

Such unprecedented restrictions did not inhibit Bush from portraying himself as a champion of freedom during his visit. In a speech at Whitehall on Nov. 19, Bush hyped the "forward strategy of freedom" and declared, "We seek the advance of freedom and the peace that freedom brings."

Attempts to suppress protesters become more disturbing in light of the Homeland Security Department's recommendation that local police departments view critics of the war on terrorism as potential terrorists. In a May terrorist advisory, the Homeland Security Department warned local law enforcement agencies to keep an eye on anyone who "expressed dislike of attitudes and decisions of the U.S. government." If police vigorously followed this advice, millions of Americans could be added to the official lists of suspected terrorists.

Protesters have claimed that police have assaulted them during demonstrations in New York, Washington and elsewhere.

One of the most violent government responses to an antiwar protest occurred when local police and the federally funded California Anti-Terrorism Task Force fired rubber bullets and tear gas at peaceful protesters and innocent bystanders at the Port of Oakland, injuring a number of people.

When the police attack sparked a geyser of media criticism, Mike van Winkle, the spokesman for the California Anti-Terrorism Information Center told the Oakland Tribune, "You can make an easy kind of a link that, if you have a protest group protesting a war where the cause that's being fought against is international terrorism, you might have terrorism at that protest. You can almost argue that a protest against that is a terrorist act."

Van Winkle justified classifying protesters as terrorists: "I've heard terrorism described as anything that is violent or has an economic impact, and shutting down a port certainly would have some economic impact. Terrorism isn't just bombs going off and killing people."

Such aggressive tactics become more ominous in the light of the Bush administration's advocacy, in its Patriot II draft legislation, of nullifying all judicial consent decrees restricting state and local police from spying on those groups who may oppose government policies.

On May 30, 2002, Ashcroft effectively abolished restrictions on FBI surveillance of Americans' everyday lives first imposed in 1976. One FBI internal newsletter encouraged FBI agents to conduct more interviews with antiwar activists "for plenty of reasons, chief of which it will enhance the paranoia endemic in such circles and will further service to get the point across that there is an FBI agent behind every mailbox."

The FBI took a shotgun approach toward protesters partly because of the FBI's "belief that dissident speech and association should be prevented because they were incipient steps toward the possible ultimate commission of act which might be criminal," according to a Senate report.

On Nov. 23 news broke that the FBI is actively conducting surveillance of antiwar demonstrators, supposedly to "blunt potential violence by extremist elements," according to a Reuters interview with a federal law enforcement official.

Given the FBI's expansive definition of "potential violence" in the past, this is a net that could catch almost any group or individual who falls into official disfavor.

*James Bovard is the author of "Terrorism & Tyranny: Trampling Freedom, Justice, and Peace to Rid the World of Evil." This article is adapted from one that appeared in the Dec. 15 issue of the American Conservative.*

Judge makes \$1 million award

Summary:

in porn lawsuit A federal judge in Lincoln, Neb., has awarded \$1 million to an Omaha man who claimed the former manager of a defunct Omaha credit union forced him into child pornography years ago. Senior U.S. District Judge Warren Urbom said the judgment for Paul Bonacci, 31, was a "fair amount" for mental and physical injuries Bonacci attributed to Lawrence King.

Mind Control Victim Awarded \$1 Million  
<http://208.138.42.193/forum/a37ef8e1f479f.htm>

U.S. government mind control programs, like MK-Ultra and Monarch,

directed against helpless victims--human guinea pigs--have been virtually ignored by the Big Media Cartel. On Feb. 27, 1999, however, U.S. District Court Judge Warren Urbom found former Franklin S&L manager Lawrence E. King guilty of numerous crimes committed against mind control victim Paul A. Bonacci.

King, serving a 15-year sentence for his role in the theft of \$40 million from Franklin, an Omaha, Neb., credit union, was ordered by Judge Urbom to pay Bonacci \$800,000 in compensatory damages and an additional \$200,000 in punitive damages.

This legal judgement against a notorious perpetrator of satanic-ritual child abuse is unprecedented. In the Memorandum of Decision, Judge Urbom wrote, "King continually subjected the plaintiff [Bonacci] to repeated sexual assaults, false imprisonment, infliction of extreme emotional distress, organized and directed satanic rituals, forced the plaintiff to 'scavenge' for children to be a part of the defendant King's sexual abuse and pornography ring, forced the plaintiff to engage in numerous sexual contacts with the defendant King and others and participate in deviate sexual games and masochistic orgies with other minor children.

"He [Bonacci] has suffered burns, broken fingers, beatings of the head and face and other indignities by the wrongful actions of the defendant King," the judge declared. "In addition to the misery of going through the experiences just related over a period of eight years [1980-1988], the plaintiff has suffered the lingering results to the present time. "He [Bonacci] is a victim of multiple personality disorder, involving as many as 14 distinct personalities aside from his primary personality," wrote the judge.

"He has given up a desired military career and received threats on his life. He suffers from sleeplessness, has bad dreams, has difficulty holding a job, is fearful that others are following him, fears getting killed, has depressing flashbacks, and is verbally violent on occasion, all in connection with the multiple personality disorder and caused by the wrongful activities of the defendant King."

#### Franklin Coverup

Bonacci's lawyer, John DeCamp, has waged a long, lonely and expensive legal campaign in exposing crimes involving an international pedophile-pornography ring.

In 1991, DeCamp filed a 12-count suit in federal court, charging 16 prominent individuals and institutions, including Lawrence E. King, Omaha World Herald Publisher Harold Andersen and the Omaha Police Department with conspiracy to deprive Paul Bonacci of his civil rights. DeCamp's suit detailed slander, false imprisonment, child abuse, assault, battery and infliction of emotional distress suffered by Bonacci.

The complex case also involved high-level politicians, business leaders, judges and police officials with connections to the drug distribution/money laundering operations known as "Iran"-Contra which goes back to then Vice-President George Bush. DeCamp, a former Nebraska State Senator, even wrote a groundbreaking book about the sordid history of the case called The Franklin Cover-Up: Child Abuse, Satanism and Murder in Nebraska.

## Monarch Project

The horrendous Monarch Project "refers to young people in America who were victims of mind control experiments run either by U.S. government agencies such as the Central Intelligence Agency or military intelligence agencies," writes DeCamp. "The story told by Monarch victims--one of whom was Paul Bonacci--is that they were tortured for the purpose of creating 'multiple personalities' within them," DeCamp continues from his book. "These multiple personalities could then be programmed--as spies, 'drug mules,' prostitutes or assassins."

An article by Anton Chaitkin, quoted in the book, states that "professionals probing the child victims of 'Monarch' say there are clearly two responsible elements at work: the government/military, and cooperating satanic (or more exactly pagan) cults. These are multi-generation groups, whose parents donate their own children--who are proudly called 'bloodline' or simply 'blood' cultists--to be smashed with drugs and electric shock and shaped. Other children are kidnapped and sold into this hell, or are brought in gradually through day care situations.

"Paul Bonacci and other child victims have given evidence in great depth on the central role of Lt. Col. Michael Aquino in this depravity," continues Chaitkin. "Aquino, alleged to have recently retired from an active military role, was long the leader of an Army psychological warfare section which drew on his 'expertise' and personal practices in brainwashing, Satanism, Nazism, homosexual pedophilia and murder." DeCamp's victory in court and the million dollar judgement is a vindication of mind control survivors Paul Bonacci, Alisha Owens and others who were falsely imprisoned to keep them from testifying against their abusers.

## Police and FBI Cover-Up

According to the sworn testimony of Noreen Gosch, an activist on behalf of "Missing Children," whose own 12-year-old son Johnny, a West Des Moines, Iowa paperboy kidnapped in 1991, was drugged and sold into prostitution and pornography. "There was no law on the books in Iowa or most any other state in the country specifying that the police would have to act sooner than 72 hours--even though we had five witnesses that could describe the car, the man and various details of the kidnapping. So I wrote the first piece of legislation which became the Johnny Gosch Bill.

Gosch also alleges that the FBI were active in quashing a TV expose. "Just prior to the 'America's Most Wanted' story going on the air...within a week or two of airtime, the FBI in Quantico, Virg. contacted 'America's Most Wanted' and told them to kill the story," Gosch continued. They did not want the Johnny Gosch story broadcast," she says. The only reason the story went on is because John Walsh is a personal friend, and he stood up to them, and he said this story goes. This woman does not lie. I've known her for years. We're going with the story. You can fire me afterwards. We're doing the story.

And they did the story. But the FBI tried to kill this story."

When DeCamp, the attorney, asked her if she knew why, she replied, "Well, of course. It would have opened up the biggest scandal in

the United States, bigger than the Iran-Contra story. Bigger than President Clinton's infidelities." The Satanic-Military MK-Ultra Mind Control Connection Continuing her sworn testimony, Noreen Gosch spoke about "the MK-Ultra program developed in the 1950s by the CIA. It was used to help spy on other countries during the Cold War because they felt that the other countries were spying on us. It was very successful.

"...Then there was a man by the name of Michael Aquino. He was in the military. He had top Pentagon clearance. He was a Satanist. He's founded the Temple of Set. And he was also a very close friend of Anton LaVey [the late founder of the Church of Satan].

The two of them were very active in ritualistic sexual abuse. And they deferred funding from this government program to use this experimentation upon children where they deliberately split off the personalities of these children into multiples, so that when they're questioned, or put under oath, or questioned under lie detector, that unless the operator knows how to question a multiple personality disorder they turn up with no evidence.

"They use these kids to sexually compromise politicians or anyone else they wish to have control of," Gosch continued. "This sounds so far out and so bizarre. I had trouble accepting it in the beginning myself, until I was presented with the data. We have the proof. In black and white."

DeCamp asked her, "You know that Colonel Aquino was drummed out of the military?" "He was," replied Gosch. "But then there were no charges filed against him that stuck [the San Francisco Presidio child abuse allegations]...I know that Michael Aquino has been in Iowa. I know that Michael Aquino has been to Offutt Air Force Base [described by numerous victims as a center of mind control-ritual abuse]. I know that he had contact with many of these children."

#### Bonacci's Story

One of the most heart-rendering parts of the court transcript is the testimony of Paul A. Bonacci, the mind control victim survivor, on whose behalf DeCamp sued Lawrence E. King. Bonacci testified that King took him on many trips to Washington, D.C., Kansas City, Chicago, Minnesota and Los Angeles, where he prostituted the kidnapped and drugged youngster to the rich and famous--and depraved.

Bonacci said that "one person I'm not afraid to talk about because Larry King always said him and this guy were on opposite ends of the field because this guy was a Democrat and Larry King was a Republican...And this guy--every time I see him on TV, my wife knows my hatred for him...His name is Barney Frank."

When asked if he "relationships" with him, Bonacci replied, "In Washington, D.C. And also I was sent to a house, I believe it was in Massachusetts in Boston where I believe it was his house because there's pictures on the wall with him and different people and stuff, that he had met I guess, but it was in his basement.

Suffering from Multiple Personality Disorder, currently called Dissociative Identity Disorder (DID), Bonacci testified that as one of his alters called Wesley, he lured Johnny Gosch into the van when he was kidnapped.

"I went up to him, asked him [Gosch] a question," said Bonacci. "At that point he was close enough to the car where Tony [another kidnapper] had pulled up in the van and they pushed him in the car and they had a rag with chloroform in the bag that they had us stick over his face. And then put it back in the bag after he was out...We drove several miles...we met up with a station wagon and a van several times."

After switching vehicles and changing direction, the kidnapping of Johnny Gosch was over.

#### More Chilling Memories

When the judge asked Paul Bonacci if Lawrence E. King ever sexually abused him, he answered, "Yes, he did on numerous occasions." How many times would you estimate, the judge then asked. "Probably a couple of hundred. Within all of the different personalities. Beginning at the time I was approximately 12 or 13 years old. Up until I was about 17 or 18."

And what was his primary duty, according to directions he received from Mr. King, asked the judge. "It depended on what was needed," replied Bonacci. "Most of the time it was to compromise politicians so he could get whatever he wanted from them...If they wanted to get something passed, through the legislature or whatever, he would put some people that were against it in a compromising position, by using us boys and girls." And how often was he used at these "parties" in Washington? the judge asked.

"Kind of hard to say," replied Bonacci. "Because there were times when there would be four or five in a night. And I hardly knew, I didn't know most of them. But probably a couple of thousand times." New Ramifications Since the judgement in favor of Paul Bonacci contradicts the previous findings of the U.S. Attorney, Nebraska Attorney General, and the entire judicial system regarding the "Franklin Cover-Up,"

DeCamp has issued an open letter challenging the verdicts of the last ten years of court battles regarding this case and its principals. DeCamp wrote, "I believe that the U.S. Attorney has no choice but to either charge the witnesses with perjury having testified under oath in a federal court...or the U.S. Attorney has an obligation to investigate further into the Franklin saga and reopen matters.

"This time there are pictures [tens of thousands of pornographic photos taken by Rusty Nelson], continues DeCamp. "This time Rusty Nelson [King's former porno photographer] exists and testified completely contrary to Chief Wadman's testimony under oath to the legislature. This time Noreen Gosch validated the credibility and story of Paul Bonacci...At a minimum some Federal or State authority has an obligation to reopen the Alisha Owen case."

Alisha Owen, another mind control victim, was sent to prison for 15 years for refusing to recant her testimony against her abusers, namely former Omaha Police Chief Wadman. Despite this victory, the mind control cover-up continues-as long as Alisha Owen and others remain in prison.

And the Monarch Program? As more and more survivors appear and give

Two counts are alleged against the defendant: King in the complaint. Count V alleges a conspiracy with public officers to deprive the plaintiff of his civil rights, designed to continue to subject the plaintiff to emotional abuse and to prevent him from informing authorities of criminal conduct. Count VIII charges battery, false imprisonment, infliction of emotional distress, negligence and conspiracy to deprive the plaintiff of civil rights. Between December 1980 and 1988, the complaint alleges, the defendant King continually subjected the plaintiff to repeated sexual assaults, false imprisonments, infliction of extreme emotional distress, organized and directed satanic rituals, forced the plaintiff to "scavenge" for children to be a part of the defendant King's sexual abuse and pornography ring, forced the plaintiff to engage in numerous masochistic orgies with other minor

children. The defendant King's default has made those allegations true against him. The issue now is the relief to be granted monetarily.

The now uncontradicted evidence is that the plaintiff has suffered much. He has suffered burns, broken fingers, beating of the head and face and other indignities by the wrongful actions of the defendant King. In addition to the misery of going through the experiences just related over a period of eight years, the plaintiff has suffered the lingering results to the present time. He is a victim of multiple personality disorder, involving as many as fourteen distinct personalities aside from his primary personality. He has given up a desired military career and received threats on his life. He suffers from sleeplessness, has bad dreams, has difficulty in holding a job, is fearful that others are following him, fears getting killed, has depressing flashbacks, and is verbally violent on occasion, all in connection with the multiple personality disorder and caused by the wrongful activities of the defendant King.

Almost certainly the defendant King has little remaining financial resources, but a fair judgment to compensate the plaintiff is necessary. For the sixteen years since the abuse of the plaintiff began I conclude that a fair compensation for the damages he has suffered is \$800,000. A punitive damage award also is justified, but the amount needs to be limited because of the small effect that such a judgment would have on the defendant King, given his financial condition and presence in prison. I deem the punitive damage award of \$200,000 to be adequate. Dated February 19, 1999. By the Court /s/Warren Urborn United States Senior District Judge

## **Abstract:**

Prior to the 1996 Olympics held in Atlanta, Georgia, several versions of a radar vital signs monitor (RVSM) were developed by Georgia Tech Research Institute researchers. The most recent version RVSM was developed to measure the heart rate of Olympic rifle and bow and arrow competitors to determine if their training allowed them to detect their heartbeats and if so, whether they were capable of using that training to avoid an approximate 5 milliradian movement of the bow or rifle that occurs each time the heart beats. The RVSM that was developed was tested to detect the shooter's heartbeat at a distance of 10 meters without the requirement of a physical connection to the subject. It was found that a second channel could be added to the RVSM to detect the shooter's respiration rate from a distance of 20 meters without physical connection between the RVSM and the shooter.

The RADAR Flashlight, a spin-off of these predecessor systems developed at GTRI, is the topic of this paper. The RADAR Flashlight was designed to detect the respiration of a human subject behind a wall, door or an enclosed space with non-conductive walls. The use of the system as a foliage penetration radar has also been explored. It has been determined that the RADAR Flashlight is capable of detecting a human hiding within a tree line behind light foliage. This paper describes the current status of the RADAR Flashlight and presents typical test data produced when the system is operated in the laboratory environment.

## **1. History of System Development:**

The RADAR Flashlight results from technology developed during several research projects conducted at GTRI over the past 10 years to detect respiration and heartbeat signatures from individuals at a distance and without connections. The first GTRI RVSM system was developed in the mid-1980s under sponsorship of the United States Department of Defense (DOD). A patent on the system was issued in 1992. This frequency modulated (FM) radar was used as a battlefield vital signs monitor. It was designed to be used during live fire situations to determine if a wounded soldier was alive before risking a corpsman's life to treat him. The design goal of that system was a capability to detect heartbeat and respiration at distances of 100 meters. The system was also tested on soldiers wearing a chemical or biological warfare suit to allow vital signs to be monitored without opening the suit and risking contamination of the subject. The latest RVSM, to be briefly discussed in this paper, was developed by the author for use in the 1996 Olympics held in Atlanta, Georgia. A variant called the RADAR Flashlight, which is the primary subject of this paper, was developed for use by law enforcement personnel to detect individuals concealed behind a wall or within an enclosed space.

## **2. The RVSM Developed for Olympic Application:**

The operation of the Olympic model RVSM was addressed in a paper that was presented at [AeroSense 97](#).<sup>1</sup> Specifically, the RVSM was developed because it had been proposed that some Olympic archers and rifle competitors shoot between their heartbeats to avoid an approximate 5 milliradian movement of the arms and body. If this was true, their shooting between heartbeats would provide better accuracy. A system to detect a heartbeat at a distance was proposed and a prototype RVSM was built to demonstrate the finely honed skills of the Olympic competitors. It was envisioned that the demonstration RVSM would be of interest to the television networks covering these competitions. Next, several system requirements were developed. The operation of the system could not distract the competitors. To meet this challenge, the radar was designed to be located at least 10 meters from the competitors, under a radome, and mounted on a pan-tilt positioner. A charged coupled low light level television camera was boresighted with the antenna for aiming the system at the thorax of the shooters under study. The system also required low sidelobes to avoid detection motion artifacts from the event judges who would observe the shooters during competition.

## **3. Radar Vital Signs Heartbeat Signature:**

Figure 1 shows the a typical heartbeat signature that has been sensed by the RVSM built for the Olympics. Referring to Figure 1, the subject was seated in

the laboratory approximately 3 meters from the RVSM. The RVSM antenna was boresighted on the thorax region of the subject's chest.

***Figure 1. RVSM heartbeat signatures.***

It is thought that the signature that is detected by the RVSM is the shock wave propagating from the beating heart as it spreads across the thorax region of the chest wall rather than the detection of the movement of the beating heart. Studies have shown that there is little penetration of the chest wall by radio frequency (RF) energy at 24.1 GHz at the low power densities of 0.1 milliwatt/CM<sup>2</sup>, which is typical of those produced by the RVSM at a range of 3 meters. It is thought that this shock wave is the same phenomenon that is heard by a health care provider using a stethoscope. The heartbeat signature shown in Figure 1 is relatively complex, indicating that there are numerous frequencies in the signature. When the digital recording from which the Figure 1 plot was taken is fed into a digital to analog converter and the subsequent output is fed to the input of an audio amplifier with good bass response, the sound that is heard in the speaker is very similar to the heartbeat sounds that are heard with a stethoscope.

The capability of the RVSM to provide heart and respiration rate in addition to heart sounds suggests some interesting applications for the technology. These possible applications include a monitor for telemedicine that does not require the connection of electrodes to the patient. Physically or mentally challenged patients would only be required to sit in front of a table top monitor to have their heart and respiration rates taken. Burn wards could use the system to take vital signs of patients without skin for electrode attachment.

Other applications that have been investigated for the RVSM include using it to detect persons hiding in light foliage several feet behind a chain link fence. The use of the RVSM as a stress measurement system has also been investigated. It was found that a change in the heartbeat rate of a human as small as 3 heartbeats per minute is measurable. This capability has law enforcement applications. It was during the evaluation of law enforcement applications that the concept of the RADAR Flashlight was developed.

The RADAR Flashlight was developed to be a law enforcement tool. It can detect the respiration signature of an individual standing up to 5 meters behind an 20 centimeter hollow core concrete block wall and wooden doors typical of those found on most homes and which are almost transparent to the system. Dry plywood, particle board and wall board do not attenuate the signal significantly.

Most system applications for the RADAR Flashlight involve inspection of spaces beyond a door or wall. For example, the system could be used to determine if a subject is standing behind a door without a requirement that the door be opened. This technique could be used to detect a subject behind a front door who fails to answer a knock. It can also be used to inspect a closed space

such as an interior closet. Normally, the closet would have to be opened to determine if someone was hiding inside.

#### **4. Operational Theory and Design:**

Figure 2 is a photograph of the current version of the laboratory prototype RADAR Flashlight. Referring to Figure 2, the system is housed in a flashlight shaped enclosure. The radar is mounted in the front of the housing, and the system's microwave lens, used to "shape" the antenna beam, is installed in the position of the optical lens normally found on a standard flashlight. The battery compartment is longer than those found on a normal flashlight. It is currently planned that the system's signal processor and rechargeable batteries will be housed in the extended battery compartment once the current laboratory prototype is reduced to a field testable prototype.

#### ***Figure 2. Laboratory model of Radar Flashlight with signal processor board.***

The current external signal processor used with the laboratory prototype is shown in Figure 2 as the printed circuit board to the left of the RADAR Flashlight. No attempt has been made to miniaturize this signal processor which is currently used to filter the respiration signature from other signals caused by radar self motion, fluorescent lights and other clutter effects. The laboratory prototype unit shown in Figure 2 operates on a frequency near 10.525 GHz, although an earlier version of the system was operated at 24.1 GHz and demonstrated less sensitivity to motion through a 20 centimeter hollow brick block wall. The current laboratory prototype is a homodyne radar configuration, although a frequency modulated continuous wave (FM-CW) system could be used for applications where information is required to determine the range to the target. The current laboratory prototype operates in the near field region of the antenna for most through the wall detection scenarios.

The current laboratory system signal processor (shown in Figure 2) processes the respiration signal and the associated signal in the time domain so that the time domain record is preserved. The processor essentially acts as a low pass filter with the cut off frequency shoulder just above the highest respiration frequencies that are expected. This first filter rejects most of the ambient clutter sources such as fluorescent lights. The analog time domain signal is fed into an analog to digital converter hosted by a laboratory computer where the input signal is converted into a 12 bit analog word and displayed on a computer generated strip chart recording. Once in digital format, the signal can be subjected to more rigorous processing to retrieve the respiration signal under heavy clutter conditions including those due to body motion and other artifacts.

Figure 3 is a recording of a respiration signature that was taken by the RADAR Flashlight located 24 centimeters from a hollow core 20 centimeter thick

concrete building block wall. The subject was instructed to stand 1.8 meters beyond the brick wall and not to move once in position but to breathe normally. The RADAR Flashlight's beam projected through the wall and was approximately centered on the thorax region of the subject's chest.

***Figure 3. Respiration signature taken by  
RADAR Flashlight through 8 inch hollow core  
concrete wall.***

Referring to Figure 3, time moves from left to right. The ambient signal level without a subject in the beam is shown as point A. The point at which the subject enters the beam is shown as point B. Upon the subject's entry into the beam, there is a large downward shift in signal level. The shift occurs because the detector is D.C. coupled to the first stage of the signal preamplifier. As a result, there is a shift in the level of the signal due to a change in phase along the signal path caused by the placement of the subject's body into the beam. Points C, D, E, F and G are negative excursions caused by the movement of the chest wall toward the radar during respiration. The subject was told to breathe once approximately every five seconds and the record shows that this instruction was followed. The subject steps out of the beam at approximately 52 seconds. The signal level returns to the ambient level at point H. There was a D.C. level drift of approximately 230 millivolts over the 60 second period during which the test was conducted. This signal drift would not normally appear because the output of the detector would be A.C. coupled through a D.C. blocking capacitor between the detector diode and the preamplifier input.

## **5. Design Philosophy:**

The RADAR Flashlight will detect the body movement of a subject at longer ranges than those at which the respiration signature can be detected when the subject is stationary. Total body motion presents a much larger Doppler modulated radar cross section than the small respiration induced movement of the chest wall. Unfortunately, when the RADAR Flashlight is used for law enforcement applications, the subject can not be depended upon to voluntarily move during the search process. Thus, the detection of the involuntary respiration signature is necessary to ensure that the motionless subject can be detected.

Several system utilization scenarios have been developed for the RADAR Flashlight. When a fugitive warrant is being executed, interior closets are often the hiding places of choice for individuals who are sometimes armed and dangerous. It is the duty of those serving the warrant to open each closet door and inspect the interior space. This requirement puts the law enforcement personnel at a disadvantage. The RADAR Flashlight can detect fugitives or others hiding in a closet without requiring that the closet door be opened to complete the inspection.

During a hostage situation it may be possible to determine where in a room the hostages are located and it may also be possible to determine where the hostage takers are located at any given time, assuming that the usual hostage scenarios are followed. Hostages are usually closely controlled and may be physically restrained or under duress to prevent their escape. Thus, a hostage is generally not moving but will be breathing. The hostage taker may be highly mobile and may move from room to room to inspect his or her defenses, communicate with police, and continually assess the environment. There are exceptions, however, but if this scenario is the case even 50 percent of the time, the RADAR Flashlight may be able to help determine the location of the hostage taker(s) and determine the location of the hostages. It is envisioned that a member of the Special Weapons and Tactics Team (SWATT) would take a position against the outside wall of the room of interest. The SWATT member would attempt to first detect motion and later detect respiration in a more careful search. The RADAR Flashlight would be scanned slowly across the room.

Warrant servers are required to go to a home or business to serve warrants on persons who in many cases do not want to accept the warrant or even let the server know that they are present. This is especially true when the individual will go to jail if they are discovered. The RADAR Flashlight could help determine if there is an individual behind the door but not answering the door.

## **6. Real World Requirements for System Acceptance:**

The system must be inexpensive to produce in large quantities and in the same price range as a top end weapon carried by a law enforcement officer. Thus, a target price for the RADAR Flashlight product was set at between \$300 and \$500. It is thought that the most expensive part of the system would be the RF section followed by the digital signal processor. If future marketing studies should determine that high sales volumes can be achieved, the parts count in the system can be reduced significantly by implementing the system in a chip set. The cost of converting the system to a chip set would be amortized over the high number of systems sold.

There is a requirement that the system should be capable of being operated by a relatively unskilled operator. This requirement suggested that the packaging of the system was important and that the associated signal processor should be "smart" and make many of the decisions regarding target identification for the operator. Given this requirement, a flashlight configuration was adopted as a housing. The final form of the target display has not yet been determined, although a simple display would appear to be an acceptable option.

## **7. Steps Toward Commercialization:**

The RADAR Flashlight is currently a laboratory instrument and, as such, is not designed to be used while in motion. When the RADAR Flashlight is in motion it receives Doppler shifted signals that are generated from its own motion referenced to fixed objects in front of the sensor. Depending on the radar cross section of the "radar clutter," the clutter return can be very large

compared to the small return from the chest motion generated by respiration. GTRI has developed two approaches to achieve cancellation of the self motion of the RADAR Flashlight. Research must still be conducted to determine which self motion technique is most effective and to develop the self motion cancellation algorithms.

GTRI has developed a research plan to take the RADAR Flashlight from the laboratory prototype to a field testable prototype. After field testing, it is anticipated that deficiencies will be found that must be corrected. After deficiency corrections are undertaken the system will be licensed to a manufacturer to produce as a product. The next challenge is to find the manufacturer capable of producing a quality product and also capable of funding the research that remains to transition the RADAR Flashlight from a laboratory prototype to a pre-production prototype.

Statement of Suzanne Starr  
Chimayo, New Mexico

MS. STARR: This is my husband, and he's sitting here  
in case I pass out.

DR. FADEN: Well, we hope that doesn't happen.

MS. STARR: I'm not going to. You know, I just want to  
say thank you. Thank you very much for listening to me, for  
being here, for sitting in your seats this past hour. Thank you.

A whole part of my life just came together. This is  
phenomenal. Here I am, living in a remote area of New Mexico,  
and I start remembering this really bizarre stuff. Then I go  
back and I find the place where it happened, a place I never  
thought I had been in my life, and by gosh, it looks just like my  
recall of it, and now I sit here today, and I hear from people I  
have never met, never seen. They have been through the same  
thing I'm experiencing.

I don't have the names, but you know one thing that  
just shocks me is through all of my work, I keep coming up with  
this darned Delta code, Delta 5133867. Until today, I didn't  
know what that was. It's an experimentation code. I kept  
wondering, why do I write Delta 5133867. What's an alpha code?  
What's a beta code? Those are things that this nation needs to  
find out for the sake of our future, and really and truly,  
without mistake, for the sake of the salvation of our planet.

I'm just shocked. I'm surprised. I am a survivor of

secret experimentation conducted by our government on healthy children. I recalled and began to recall these incidences two years ago. I have been working for weeks to overcome the terror program so that I could be here and speak to you with dignity today.

I know I survived my childhood for this moment. These horrid secrets undermine the core of our society. They exist only out of the power of evil. As long as atrocity to human beings, particularly children, go unbelieved, they can continue.

I have come to realize from my awakening that reality is a dimension beyond human beings' ability to conceive the truth. When the truth comes to the light and is believed, there is an incredible healing for ourselves and our nation. That is my hope.

I was born in 1949. We were very poor. I lived in the mountains of Colorado. Both of my parents have died of cancer. All but two of my aunts and uncles have either died of cancer or have cancer.

As a child, my parents were victims of a mind control organization that permitted me to be inducted into experimentation. I have early recollections of people coming to my house. My father was picked up on a false arrest for a ticket, parking ticket, and put in jail. They came to my house, and they tortured me, and they held my mother until she signed a paper.

I believe and I know that if she had not signed that paper, I would not be here today. I believe that her signing this paper is related to me being brought into these experiments. Either she signed or I died.

I believe our family physician, who was retired from the military, got children from the mountains of Colorado for the experiments. He was the only doctor I have ever saw until I was 20 years old. The first memory I have of environmental deprivation was in the basement of this doctor's office.

His office adjoined a meeting hall that was used for satanic rites. I was astounded when I returned to this city not that long ago, two years ago, and discovered that his office and the adjoining chambers and the sub-chambers in that city were exactly as I had remembered it.

Of course, I would remember my doctor's office, but I had no knowledge prior to my return and my investigation of the sub-chambers and of the secret things about his office.

The incidences I have recalled happened to me between ages of three and 12 years old. I was taken to a college campus in the summer. We were kept in a locked dorm and taken to the experiment by way of underground tunnels. I provided the name of that institution in my narrative. I believe you have my narrative.

I don't want to say that here in public. One day, there was a lot of confusion, and a door was left open, and I slipped out. I went across the campus and entered into another

dorm. I heard some people yelling. I wondered down the hall. I was a very type of inquisitive kind of a slip-out child, and when I went into the room and looked around the corner where the people were yelling, there was a high official from the United States military. There was the man that the people in the program called the Nazi doctor. They called him a Nazi. I don't know who this man is. I believe I could recognize a picture if I was given the opportunity, and there was one of the technicians at the head of the program.

I was caught and taken into electro-shock sessions, something was put up my nose, and I passed out. In recovering this incident, I had convulsions, which I have. I'm not a seizure person, but when I am recalling these incidences, frequently I go into a convulsive type of episode. It's not grand mal. It's just extreme shaking.

A year and a half ago, on an investigative trip, my husband and I returned to that campus. I was amazed to find it exactly as I had recalled it. The two buildings where we were used for the experiments had been torn down in 1968, but the dorm that I wondered into was exactly as I remembered it.

I recall being in a classroom with other children. We were all in institution pajamas. We were told that we were chosen to help serve our country. A careful record of the procedures were kept. The technicians were highly-trained professionals. They were just doing their job.

We were not to be angry at them. An American flag hung in the room. The experiments are discussed in more detail in my narrative. One of the doctors, who supervised the experiments, was called the Nazi when he was out of the room. The experiments involved environmental deprivation, to the point of forced psychotic states, and you know why I remember about the forced psychotic states that had a great impact on me because I realized something. After they put me in that little cell and treated me like a dog and kept me there until I went into psychotic states, they gave me electro-shock and told me we returned you to sanity, so we can take your sanity away, if you ever speak, and I'm speaking today, and I'm not going to lose my sanity. I'm going to stay nice and sound.

The experiments also included extreme sensation on the brain, spin programming, breeding of children and injections. I was given frequent electro-shock and mind control sessions with the threat of death or insanity if I ever spoke, and through my recollection and these years that I have struggled for my freedom and the phrase that says thank God I'm free at least means a lot to me, through these times, I have fought self-destructive programmed messages to kill myself, and I know what a program message is, and I don't act on them. I know the difference.

Obviously they mis-judged my spirit and my desire to be free. The experiment I wish to speak about involved radiation. I was strapped face down, straddled on a device like a chair that curved my spine in a haunch. Needles were put in three places in my spine, my coccyx, my mid-spine and the base of my skull.

To the right, there was a device with five orifices, five IV tubes came out and joined into one, with controls for the

amount of fluid and frequency. This tube was connected to the needles at the base of my skull.

I was given a timed injection at my coccyx. The technician had a monitor, I believe it was a Geiger counter. They checked my head with it. There would be timed releases -- released injections through the IV into the needle at the base of my skull -- could you get me some water -- repeatedly, which was monitored.

When the injections went into my brain, it felt like ice spreading throughout my skull. It was agonizing. I had cuffs on my upper arms and things on my fingers. I believe for vital signs. Wires were connected to my head simulator to an EEG. Often, they would say get some fluid. They did something to the needles in my middle spine. I believe they were testing my spinal fluid.

Sometimes something happened to the cuffs on my arms that caused horrible pain. Readings were taken again. The procedure was being taught to someone. I believe -- I believe that's what was happening. They talked as if I was unconscious and not even human. I recall it was explained that the injections were referred to as "trace" but enough to make this kid's head light up like a Christmas tree.

They thought this was funny. They kept making jokes about my head glowing. They sat me up and put a tube in my nose. I could feel something horrible in the front of my brain, and I blacked out.

In another experiment, when I -- they thought I was dead, they took me out of the chair, and the technician looked at me, and he said, "It looks like we lost this one. Well, there's plenty more where she came from. If she's brain dead, we can institutionalize her and use her for further experiments. If she's dead, we will arrange an accident as is procedure with her family."

Another experiment involved inserting air into my uterus and expanding the abdominal cavity with air. This experiment was torturous. Measurements were taken periodically. X-rays of my uterus and fallopian tubes were taken by injecting radioactive dye. I know that this is a salpinghystiogram. I had to have this done during fertility testing when my husband and I were trying to conceive a child.

Fertility testing was so traumatic that I had to stop trying. I have never had a normal pregnancy or been able to conceive a child. Howsomesoever, I do remember at the age of 12 having an induced pregnancy. My baby boy was taken for the experiments. That is the only child I have ever had, unless there are other abortions that I'm not aware of.

I am willing to experience my -- to discuss my experiences in more detail, if any of you wish to. I have suffered all my life because of this. My life has completely changed now because of my recovery.

Five years ago, I began my quest for truth. I didn't perceive how much I was suffering until finally my symptoms

diminished. I have recovered these incidences with the help of a caring professional. He has been careful to maintain a neutral position and does not hypnotise or lead me or influence me in any way, and he said he will attest to that.

Once early in my healing, I spoke to a man who helps people deprogram from mind control groups. He told me freedom is in the struggle. The good Lord knows, I have struggled to be free. I am thankful that I started working on my healing of my body in my thirties. The past five years, I have healed my mind and spirit. Now, I am strong enough to speak the truth, the truth will set us free.

There's one more thing I didn't mention. During the many times, there were forced rapes. I wanted to say one thing. When I was early -- a memory I've had all my life. I always knew about, I always wondered what it was.

When I was four or five years old, I used to lie in the bedroom when my sisters went to school in the morning, and I played Nazi concentration camp, and I would be the Jewish princess, and they would be experimenting on me and military people would come and rape me, and I held up to it all because I was such a brave girl. I think I was a very brave girl. I really do.

I always wondered why did a four-year old fantasize that she was being experimented on. Why did she think that people were raping her? Now I know why. Because it was truth.

I wish to thank the people at the task force for helping me trust enough to testify. I would never have trusted a government project without their support. I also wish to thank President Clinton for appointing this commission, and each of you especially for having the courage and the integrity to listen to us, the survivors of America's most horrid secret.

I am deeply committed to exposing this most horrid secret. Of course, I am terrified of repercussions, but if one of you hears us today, if one of you takes action, if someone in this room takes action, even if it's 10 years from now, this can change.

I am terrified of repercussions, but I will not purchase peace at the price of my silence. If life's so dear or peace so sweet as to be purchased at the price of chains of slavery, forbid it, almighty God. I know not what course others may take, but as for me, give me liberty or give me death, and I imagine you all know who said that. My hero when I was a little girl, Patrick Henry.

I do not choose death, I choose freedom, freedom to speak the truth. Thank you.

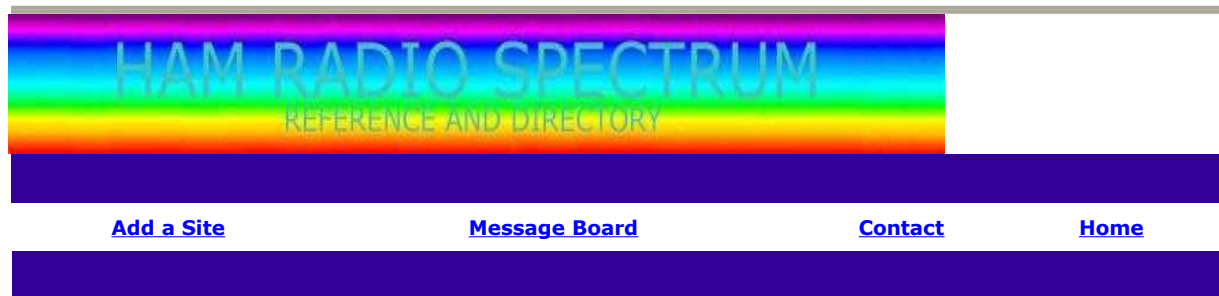

DR. FADEN: Thank you, Ms. Starr.

(Applause)

DR. FADEN: We appreciate your comments. Thank you for leaving us information.

This article shows clearly that the reading of minds is almost accomplished in the UNclassified world. Since CLASSIFIED technology is always a decade or two ahead of the unclassified world, imagine what exists now in the black areas of defense contractors and government labs!

Rats Control Robot by Thought Alone

By Maggie Fox  
Reuters

WASHINGTON (June 23) - It sounds like something out of science fiction -- a rat with a small electrode sticking out of its head decides it wants a drink and, without touching anything at all, gets a robotic arm to bring it some water.

Still, a team of neurobiologists say their rats can control a machine with brainpower alone, and they think their technology may someday help paralyzed people.

'The people in the lab started calling the experiment the 'thinking about drinking experiment,' John Chapin of Hahnemann Medical College in Philadelphia, who led the research, said in a telephone interview. 'But we don't know whether rats think.'

Whatever the rats are doing, they are controlling the robotic arm without touching anything, said Chapin, who worked with colleagues at Duke University in North Carolina.

Reporting in the July issue of the journal Nature Neuroscience, they said they implanted tiny electrodes, no thicker than a hair, into the brains of six rats.

'It doesn't hurt the animal,' Chapin said. 'All there is is a little plug coming out of the animal's head. He runs around the cage and everything.'

The electrode is recording the activity of neurons -- on average 46 -- which Chapin found was important to making the experiment work. Earlier studies that recorded the activity of just one or a few brain cells did not work.

'We trained the rat initially to put his paw on a lever and to press the lever down. When the lever got pressed down there was a robot arm that moved over to a water dropper and then brought the water back to the animal's mouth,' Chapin said.

The rats had to carefully control the lever -- if they only pushed the lever halfway, it would only bring the arm halfway to them.

Chapin's team then recorded the brain activity associated with the movement of pressing the lever.

'We have an electronic device that converted those patterns of activity in the brain of the animal into a single electronic signal that could move the robot arm,' Chapin said.

Soon they disconnected the lever from the robot arm and hooked it up to the converting device alone.

They found, as other researchers have, that the brain activity controlling the movement came before the actual movement.

'When control of the robot arm was switched to the brain, the robot arm went over and brought water to the animal's mouth before the animal even started to move,' Chapin said.

'After a couple of days, the animals began to recognize that and they stopped actually pressing the lever.'

Chapin said if the technique can be proven safe and reliable in animals such as monkeys, which have bigger and more complex brains than rats, it might eventually be tested in people with severe paralysis.

'If this really becomes a workable thing, I think there are a lot of people that could use it,' he said.

It is important to record the signals from many neurons and not just a few, Chapin said. Of the six rats tested, he added, just four could get the arm to work. 'Two rats would do it a few times and then they would stop,' he said.

'The reason was we were not recording enough neurons in those animals. The robot arm would jerk around a lot and it wasn't smooth. When the animal tried to get his mouth around it, it would kind of bop him on the nose. They didn't like it.'

For complex movements, such as those made by an artificial limb, even more neurons will be required, he said.

'In principle, it should be possible to tap this information and control a prosthetic limb,' Dr. Eberhard Fetz of the University of Washington in Seattle wrote in a commentary on the findings.

## IMPORTANT NOTE TO VISITORS

One reason that the general public, media, and uninformed government officials scoff at the truth of our story is that people tend to focus on the personal testimonial aspect, and ignore the crucially important [organized stalking](#) crime wave, and the [UNclassified and commercial devices](#) which can duplicate, right now, some of the effects we report.

For a concise report collecting the best information on unclassified and commercial equipment with invasive electronic harassment capabilities see:

[Summary: http://www.raven1.net/proventechs.pdf](http://www.raven1.net/proventechs.pdf)

[In one big file: http://www.raven1.net/uncom.htm](http://www.raven1.net/uncom.htm)

[As separate pages: http://www.raven1.net/p00.htm](http://www.raven1.net/p00.htm)

[Credibility reviews](#) on selected information pieces relating to organized stalking and electronic harassment. Of possible interest to journalists.

[E-booklet](#), free, not copyrighted, telling the organized stalking and electronic harassment story in a simple format suitable for people who know nothing about the subject.

[E-booklet](#), free, not copyrighted, giving information handling tips to targets. Written for targets, not the public.

The articles and images on this site are simple enough that most "non-technical" people can see quickly the principles which are involved. We organized stalking and electronic

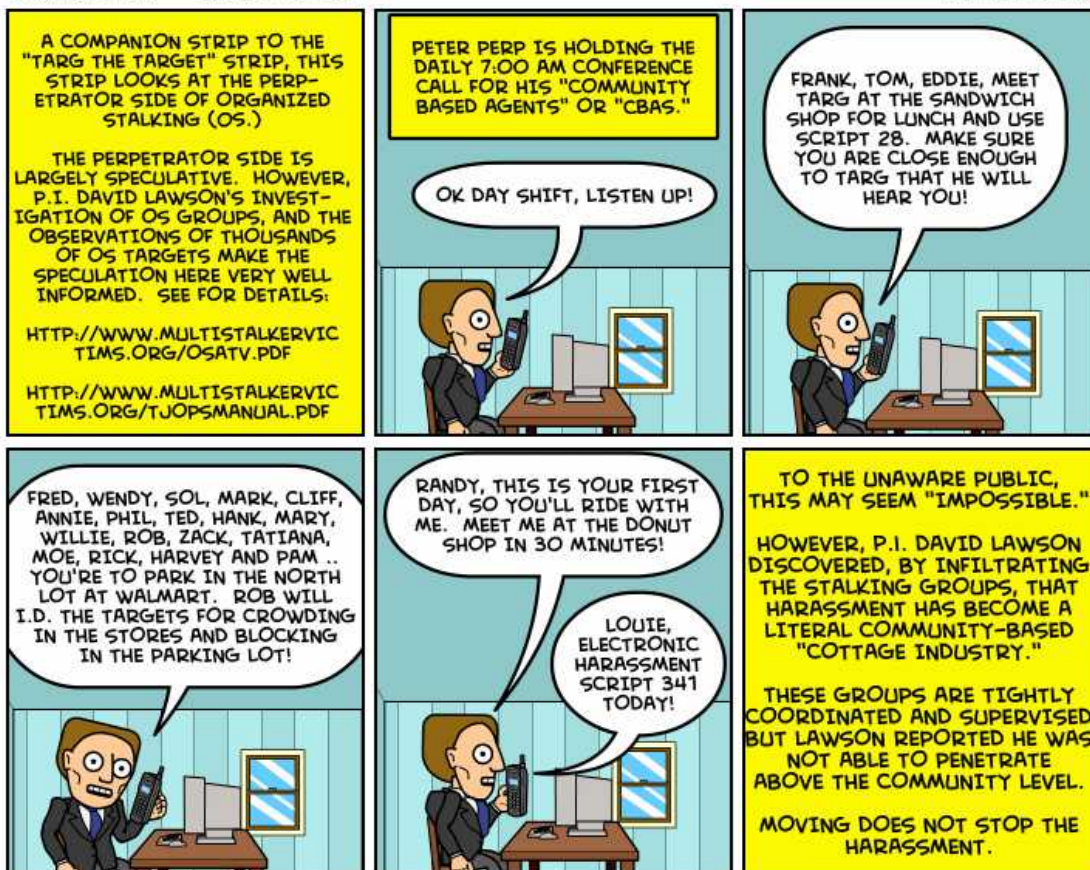

harassment targets beg you to spend a portion of your time looking at the book reviews and hard evidence technology side, in addition to our testimonial reports.

If the alphabetized index below is not sufficient, consider using your browser's Search function to find the key word you want.

#### PETER PERP - EPISODE 12

BY ELEANOR

WWW.BITSTRIPS.COM

[More comic strips](#)

[Click here for GLOSSARY](#)

## Alphabetical Index

### A

[About "Street Theater"](#), a page for both the public and known targets about this unique aspect of the organized stalking with electronic harassment problem

[Abusive Witchcraft page](#), by Ellen Lacter, PhD, who is a therapist and activist on behalf of all targets of abuse. Dr. Lacter's photos here show that people really exist who are not "all sweetness and light". Stories from people abused to the point of split personality report that

human and animal sacrifice has indeed happened and continues to happen. Only because they are extremely clever in covering up their activities are these atrocious crimes able to continue. Ponder this when you, visitor, read about the organized stalking and electronic harassment crimes described on this site. [Click here](#) if the above link is broken.

[ACHES-MC video letter to Pres. Clinton and Canadian Prime Minister Jean Chretien](#). This video includes individual testimonials by targets, both MKULTRA-era and current day organized stalking and electronic harassment targets, and professionals who have provided help to them. To keep the bandwidth down so all PCs can view this video, quality has been sacrificed. But the information carried in the sound track is clear.

[ACHES-MC web site](#) Advocacy Committee for Human Experimentation Survivors - Mind Control...you can order a video there on involuntary human experimentation

[A Closer Look](#), radio show, hosted by Michael Corbin, March 5, 2004 hours 2 and 3, Eleanor White as guest:

[Segment 1](#)

[Segment 2](#)

[Segment 3](#)

[Segment 4](#)

[Acoustic heterodyne principle](#), a diagram illustrating the principle behind American Technologies Corp. San Diego "electronic ventriloquism" speaker system.

[Acoustic heterodyning as a weapon](#), an article about American Technologies Corp. San Diego's weaponized version

[Acoustic heterodyning US Navy contract](#) for American Technologies Corp., San Diego

["Acoustic spotlight"](#), very similar to the American Technologies acoustic heterodyne, under development at MIT

[Acoustic manipulation of the nervous system, subliminal](#), U.S. patent #6,017,302

[Activism History](#), an e-booklet outlining significant activism initiatives in the fight to expose and stop organized stalking and electronic harassment

[Activism & Networking site](#), Freedom From Covert Harassment and Surveillance

[Activism Tips](#), free, not copyrighted e-booklet, giving activism tips to targets. Written for targets, not the public.

<http://www.stress.org/adey.htm>, an article on the life and work of neuro-electromagnetic researcher, Dr. Ross Adey

[Advanced Electromagnetic Weapons Technology](#)-Yet Another Classified Experiment Program In Addition To Radiation Experiments, by Cheryl Welsh

[Advanced nature](#) of current-day electronic weaponry affirmed by former USAF scientist Dr. Tom Bearden; targets are advised to consider Dr. Bearden's words carefully before spending money on conventional detection/jamming/shielding experiments

[Aerial Mind Control - The Threat to Civil Liberties](#), Judy Wall, Nexus magazine October-November 1999

[Air Force \(US\): Hacking the nervous system](#), an article showing the intent of the U.S. armed forces to do so, and a good description of what we targets experience (it hurts!)

**Alex Constantine on The Power Hour**, April 1, 2004. Alex is an author who has researched and written extensively on mind control. This particular show covered the topic of government surveillance and harassment of rock music stars. These performers wield great influence over many of their fans, and it is this influence that gets them into trouble at times with the security agencies. This harassment clearly demonstrates that current-day government does engage in criminal behaviour, as did their [COINTELPRO](#) activity:

[Segment 1](#)

[Segment 2](#)

[Segment 3](#)

[Segment 4](#)

[Segment 5](#)

[Altered States Ltd](#), a New Zealand supplier of "learning" tapes that are obviously "silent sound hypnosis" tapes, using the ["voice-FM"](#) technology

[American Reporter 'zine](#), publishes article by Eleanor White. [Special thanks](#) to Joe Shea, Editor. Joe has experienced some harassment as a result.

[American Technologies Corp.](#) of San Diego CA announces the successful patenting of their "acoustic heterodyne" aka "HSS" or "Hypersonic Sound" technology, clearing the way for commercial release of one form of voice-to-skull technology.

[American Technologies Corp.](#) of San Diego CA announces the U.S. military is interested in their acoustic heterodyne or "Hypersonic Sound" technology

[Anecdotes](#), a place for the visitor to get a QUICK idea of what it's like to be a organized stalking and electronic harassment target

[Another Arms Race](#) Electromagnetic Frequency Weapons, What the Public Should Know, by Cheryl Welsh

[Anti mind control reference](#), in U.S. House Bill HR 2977, recognizes psychotronic mind control as a problem

**ANTI-V2S (voice to skull) MP3 audio tracks.** RIGHT click one or the other links below to download. Then load from your PC to your MP3 player to take anti-V2S multi-radio show masking with you in the community or at work:

[6 radios, 64 kbps, stereo](#)

[6 radios, 32 kbps, mono](#)

[Multiple voices, not radio](#)

\*\* Please save a COPY to your hard drive for [repeated](#) playing.

[Apparatus and Method for Remotely Monitoring and Altering Brain Waves](#), U.S. Patent 3,951,134 (1974); this description matches targetted individual experience closely

[Arlene Tyner: Part 1](#), of a series of 4 articles on mind control

[Arlene Tyner: Part 4](#), of a series of articles on mind control by this investigative reporter

[Army \(US\) Voice to Skull \("V2K"\)](#) reference, direct address:

[http://call.army.mil/products/thesaur\\_e/00016275.asp](http://call.army.mil/products/thesaur_e/00016275.asp) ... [Click here](#) if above link is broken

[Army \(US\) War College article](#), excerpted, demonstrating the military's clear interest in e-weapons. The reader should remember that writing an unclassified article like this one available to the military public is tantamount to admitting they possess such weapons at the classified level.

[Artificial vision for the blind](#), using brain implants, signals to which generate primitive images in the blind. Early form of the technology used to force visions on involuntary experimentees.

[Atrocities - why won't the media expose them?](#)

[Attempts to recruit targets as perps](#)

[Audio-sensing add-on](#) for [Tri] Field Meters

[Audio file tips](#), for those wishing to play audio (or video) clips from this and other web sites

[Audio types](#), used by the perpetrators

## B

["Banging" noises](#) recorded in darkness by harassment target Norma Cross. Such noises have no visible source and are transmitted by very advanced technology, and are used to keep targets from falling asleep. The noises were also heard by Norma's son in an adjacent bedroom. [Alternate video file](#) for high speed connections

[Bearden, Dr. Tom](#), affirms the truly advanced nature of current-day mind electronic weaponry affirmed by this former USAF scientist; targets are advised to consider Dr. Bearden's words carefully before spending money on conventional detection/jamming/shielding experiments

[Begich, Dr. Nick, Controlling the Human Mind](#), book review by Eleanor White

<http://www.vxm.com/bib.doc.html>, Bibliography, Psychoactivity of Electromagnetic Fields, about 90K (long)

[Bill Clinton Apologizes](#) for MKULTRA-era involuntary human torture by the U.S. government

[Biological amplification](#), a biological response to radio signals which makes pulsed microwave "voice to skull" work, an excerpt from a book edited by Dr. James C. Lin, University of Illinois

[Biological warfare testing](#) clearly shows the utter lack of care on part of government for experiment subjects

[bird.rm](#) or [bird.wma](#), FAKED bird calls, obviously electronic when heard live, which "follow" about one target in three as they go about their daily business

[Blanche Chavoustie's](#) anomalous weapon effects, stemming from MKULTRA institutional kidnap research

[Blanche Chavoustie's](#) involuntary implants

**Blanche Chavoustie**, Dr. Rauni Kilde, and anti mind control activist attorney Helen McGonigle on [The Power Hour](#), May 5, 2004:

[Segment 1](#)

[Segment 2](#)

[Segment 3](#)

[Segment 4](#)

[Segment 5](#)

[Bonacci case](#), mind control (Judge's term) victim awarded \$1 million (ritual abuse case - same mentality as neuro-electromagnetic)

[Book review, 1996](#), by Gloria Naylor

[Book review, A Nation Betrayed](#), by MKULTRA survivor Carol Rutz. Fact-packed, recommended as a pocket/handbag reference for electronic harassment targets. Together with [Unshackled](#), by MKULTRA-era survivor Kathleen Sullivan, these books by those who survived the Nazi death camp level of brutality AS CHILDREN, IN THE UNITED STATES, will ABSOLUTELY SILENCE objections by naysayers who tell you "Oh, government would never do that." These books are my WEAPONS OF CHOICE. Eleanor White

[Book page](#) for "mind control" related books

[Book review, Bluebird](#), by Dr. Colin Ross, reviewed by Norma Cross

[Book review, Controlling the Human Mind](#), by Dr. Nick Begich

[Book review, Electronic Projects from the Next Dimension](#), a practical book of experiments which might be useful in detecting some of the more advanced electronic harassment attacks

[Book review, Excalibur Briefing](#), by Lt. Col. Thomas E. Bearden, USAF (Ret), copyright 1978, revised and expanded 1988

[Book review, Gaslighting](#), by Victor Santoro. Reads like a how-to manual for organized stalking perpetrators

[Book Review, Mobbing: Emotional Abuse in the American Workplace](#), a review of this book by Eleanor White

[Book review, "My Life Changed Forever"](#), by Elizabeth Sullivan. An excellent personal testimonial on organized stalking. Available on [amazon.com](http://amazon.com).

[Book review, None Dare Call It Conspiracy](#), a journalist's look at the covert mechanisms back in the 1970s at work to convert the United States of America into a Socialist nation, then dictatorship, through extremely subtle moves controlled by the wealthy elite. Makes it clear

that today's organized stalking and electronic harassment fits right in with those plans which continue today.

[Book review, Plutonium Files](#), an informal review by correspondent Lynn Weed, with excerpts

[Book review, Psychic Discoveries](#), by Sheila Ostrander and Lynn Schroeder, a compilation of Russian psychic discoveries and devices which can perform psychic and advanced physical effects, very likely the forerunners of current day advanced electronic harassment weapons

[Book review, Psychology of Stalking](#), by Sheryll Thompson, a psychotherapist with a real grasp of multi stalking, which is a substantial part of what we call organized stalking.

[Book review, Remote Viewing](#), by Tim Rifat. This book gives the history of Russian remote viewing and psychic manipulation, and contains points of interest to organized stalking and electronic harassment targets who wish to experiment with shielding, jamming, and detection of today's advanced electronic harassment signals

[Book review, Remote Control](#), by Steve Lynch. A well documented testimonial of what it's like to be an electronic harassment/organized stalking target while serving time in prison

[Book review, Remote Viewing Secrets](#), by Joseph McMoneagle, former remote viewer for the U.S. Army STARGATE programme

[Book review, Rule by Secrecy](#), by Jim Marrs, a valuable reference showing how the mindset and impetus behind current day organized stalking and electronic harassment has come about

[Book review, Search for the Manchurian Candidate](#), by John Marks, an excellent (but limited by CIA's burning of records) easy to read history of MKULTRA, the program which gave birth to the present psycho-electronic involuntary experimentation program

[Book review, Secret Life of Plants](#), by Peter Tomkins and Christopher Bird. Confirms the existence of biological signals which are NOT conventional electromagnetic, but operate at a performance level beyond that of as-taught-in-school signals, and which are like the current day mind/body weapon signals used on electronic harassment targets. Also describes possible countermeasure experiments.

[Book review, Suburban Spies](#) by Anthony Brina. Shows powerfully that even highly placed corporate executives are not immune from the crime syndrome of organized stalking and electronic harassment!

[Book review, Terrorist Stalking in America](#), by David Lawson. A stunning expose of the growing problem of criminal stalking groups, which he calls "extremist groups" and "cause stalkers". This book reveals what happens behind the scenes when organized stalking targets report "street theater". The author reports confirming this problem exists with police. See also [this review](#) of one of the books the author uses as his reference for assigning blame for the existence of the criminal stalking groups.

[Book review, Unshackled](#), A Survivor's Story of Mind Control, by MKULTRA-era Kathleen Sullivan. Together with [A Nation Betrayed](#), by MKULTRA-era survivor Carol Rutz, these books by those who survived the Nazi death camp level of brutality AS CHILDREN, IN THE UNITED STATES, will ABSOLUTELY SILENCE objections by naysayers who tell you "Oh, government would never do that." These books are my WEAPONS OF CHOICE. Eleanor White

[Book review, War at Home](#), Brian Glick, lawyer and former activist. A great debate-ender!

[Book review, When Medicine Failed](#), Janet Leih, the story of fighting organized stalking and electronic harassment and medical malpractice at the same time

[Booklet](#), free, not copyrighted, telling the organized stalking and electronic harassment story in a simple format suitable for people who know nothing about the subject

[Brain chip](#) lets stroke victim 'talk' again, article from Toronto Star, Oct. 21, 1998

[Brain \(eel\) controls robot](#), original link <http://www.washingtonpost.com/wp-dyn/articles/A24800-2001Apr16.html>

[Brain reading from a distance](#), BBC news article. No implants, not even any contacts. Used in new "brain scanners" at airports to check for "criminal intent"

[Brain wave remote sensor](#), U.S. Army, can sense criminal intent in street situations ... at a distance, a *distance*

[Brain Wave Fingerprinting](#), a writeup of a 60 Minutes show on this topic. If link broken, [click here](#) for the text (only) of that article

[Breggin, Dr. Peter R.'s](#) psychiatric crime site - must reading if you are under psychiatric treatment or are thinking about consulting psychiatry, the most powerful arm of law enforcement, used routinely to discredit whistle blowers and protesters. The Soviet use of psychiatry to suppress dissent is in full blown use here in North America. [Here](#) is the May 2004 cover page in case the above link above doesn't work. May give you some clues for further web searching.

[British Medical Journal](#) article appealing for medicine to guard against it's knowledge being used for weapons development

[British Parliament Member](#) Dr. Caroline Lucas firmly acknowledges the reality of electronic antipersonnel weapons

[The Burzynski Breakthrough](#), a book by Thomas Elias demonstrating how an exceptionally efficient cancer cure has been covered up by the U.S. Government for more than a decade. Shows that government is, contrary to popular opinion, capable of covering up very important news and brutally harassing American citizens.

[Byrd, Dr. Eldon](#), 2002 report of experiment to check for mechanical sound in the vicinity of the ears of voice to skull targets. Microphones used as sound pickups. This version lacks some of the equipment photos but does have the diagrams needed for understanding of the setup. The full report is on the Mind Justice web site: <http://mindjustice-org>

## C

[Canadian prisoner's experience](#) making it brutally plain that torture is not just a third world phenomenon

[Carpet out of place harassment](#), a variant of furniture out of place harassment done repeatedly each time a target leaves home. Sometimes similar things are done at the workplace and in the target's vehicle.

[Cat's eye, image displays on screen](#), with photos, supports targets' claims that perpetrators can see through their eyes too

[CATCH web site](#), Citizens Against Technological and Community-based Harassment, web site of the now inactive local targets' activism group based in Toronto, Ontario, Canada. Founded by Norma Cross.

["Cause stalking"](#), as revealed in the book Terrorist Stalking in America, by David Lawson. A stunning expose of the growing problem of criminal stalking groups, which he calls "extremist groups" and "cause stalkers". This book explains what happens behind the scenes when organized stalking targets report "street theater". The author reports a problem exists with police. See also [this review](#) of one of the books the author uses as his reference for assigning blame for the existence of the criminal stalking groups. I feel he is probably mistaken.

[Changing memories](#), New York Times article, September 2000 - describes memory changing technology which DELIGHTS MKULTRA, organized stalking, electronic harassment, and all child sex abuse perpetrators!

Cheryl Welsh article: [2003 Survey of Evidence Regarding Mind Control Experiments](#), an excellent overview of evidence relating to mind control programs world wide, by Cheryl, who is a very competent researcher

[Cheryl Welsh's Mind Justice web site](#) a very well researched site focussing on mind control and involuntary human experimentation

[Cheryl Welsh - UNIDIR Endorsement July 2002 Update](#), an excellent article about the state of the fight to expose and stop mind control

[Cheryl Welsh's list of best videos](#), per Cheryl Welsh, founder of Mind Justice. If above link doesn't work, [click here](#). (Local copy as of July 2003.)

[Cheryl Welsh's endorsement](#) by one of her professors at California State University urging public investigation of electromagnetic weapons

[Cheryl Welsh on mind control symptoms](#), with matching documentation on each

[Center for Neural Communication Technology](#), U.S. National Institutes of Health, lays to rest any doubts about the existence and intent of human electronic implantation

[Cherkova \(Emilia\) book](#), excerpts translated from Russian, courtesy Cheryl Welsh of Mind Justice

[Cherkova \(Emilia\) letter](#), from a member of a Russian anti-mind control group, courtesy Cheryl Welsh, Mind Justice

[Cheryl Welsh](#), Mind Justice President, listed as an expert in non-lethal weapons (May 2001) in the U.N. media guide publication

[Cheryl Welsh](#) on classified human experimentation, protection for subjects still lacking at end of 2003

[Child crying](#) under electronic attack. Clip from [The Power Hour](#) from the March 3, 2004 show featuring electronic attack target [Mr. Jesus Mendoza](#), of Mission Texas

[CHILDREN, Mind Control on](#), an article by distinguished investigative reporter Jon Rappoport. This is where the hidden "inner circle brutality" of government leaders in Western countries finally comes to light

[Church Committee's Final Report](#), Book II, on intelligence activities and their effects on personal freedom, 1976

[CIA harassment](#), or, how the current psycho-electronic harassment regimen was born

[CIA, infiltration of the media](#), article with request for backup information - not yet presented as fact

[CIA tortures involuntary test subjects](#), successful Canadian court case PROVES BEYOND DOUBT

[Classified human experimentation](#), protection for subjects still lacking at end of 2003, article by Cheryl Welsh

[Classified human experimentation](#), protection for subjects still lacking, MKzine article by Cheryl Welsh

[Classified weapons](#): Blanche Chavoustie's anomalous weapon effects, stemming from MKULTRA institutional kidnap research

[Classified weapons: Scalars](#), an article describing the probable characteristics of [scalar](#) weapons

[CNN circa 1985](#), video clips about electromagnetic weapons, scientists affirm viability

[COINTELPRO](#), the non-electronic half of the harassment type experienced by today's organized stalking and electronic harassment targets. See [War at Home](#) for an inexpensive paperback back pocket reference for COINTELPRO.

**COINTELPRO on [The Power Hour](#) radio show:**

[COINTELPRO segment 1](#)

[COINTELPRO segment 2](#)

[COINTELPRO segment 3](#)

[COINTELPRO segment 4](#)

[COINTELPRO segment 5](#)

<http://www.cointel.org> for COINTELPRO documents

**COINTELPRO on [The Power Hour](#) radio show, with attorney, COINTELPRO researcher and author Brian Glick, December 16, 2003:**

[Brian Glick segment 1](#)

[Brian Glick segment 2](#)

[Brian Glick segment 3](#)

<http://www.cointel.org> for COINTELPRO documents

[Original COINTELPRO documents](#)

[Comic strip](#), showing what it's like trying to make a complaint to police about organized stalking

[Comic strips](#), "Targ," a comic strip series about a target of organized stalking, intended for public education purposes, and "Peter Perp," a companion strip from the perpetrator viewpoint.

[Commando Solo](#), the introductory topic in the article by Judy wall titled [Aerial Mind Control - The Threat to Civil Liberties](#), Nexus magazine October-November 1999

[Congress Asleep at the Switch](#), an article from The Phoenix Letter, Vol. 14, No. 8

[Commercial and unclassified technologies](#) which are capable of generating some of the observed electronic harassment effects (long)

**Commercial harassment devices**, as sold by Shomer-Tec, discussed with great interest on [The Power Hour](#), during the May 20, 2004 update on the Jesus Mendoza electronic harassment case:

[Segment 1](#)

[Segment 2](#)

[Common effects](#) observed by neuro-electromagnetic device targetted people

[Coping blog](#), a source of suggestions for coping in addition to the "Coping" booklet below

["Coping" booklet](#), written for targets of organized stalking and electronic harassment, with some tips on how to cope until we can get the justice system to do its sworn and (well) paid job

[Countermeasure and Detection Experiments](#), an e-booklet listing experiments performed to date attempting to reduce, stop, and show the existence of electronic assaults

[Court in Florida helps expose electronic harassment](#), by ruling that an expert witness who didn't agree with "conventional wisdom" COULD testify

[Court recognizes electronic harassment](#), the case of James Walbert, Sedgwick County, Kansas, U.S.A. Scans of court documents

[Credibility reviews](#) on selected information pieces relating to organized stalking and electronic harassment. Of possible interest to journalists.

## D

[Delgado](#), Dr. Jose, brain implant scientist. Article translated from Spanish - broad coverage

[Delgado](#), Dr. Jose, brain implant scientist. Monkeys in restraint with electric shocks being administered to electrodes in their brains. Illustrates MKULTRA's utter disregard for life, pain, and suffering

[Delgado](#), Dr. Jose, October 2005 [Scientific American](#) article

[Doctors who know](#), a log sheet of cases where doctors have admitted to targets that they know organized stalking and electronic harassment crimes are entirely real

[Book review, Electronic Projects from the Next Dimension](#), a practical book of experiments which might be useful in detecting some of the more advanced electronic harassment attacks

[Detection and Countermeasure Experiments](#), an e-booklet listing experiments performed to date attempting to reduce, stop, and show the existence of electronic assaults

[Detention Camps, Civilian](#) in the United States

["Directed Energy Weapon attack", video](#), analyzed by Harry Sweeney. The clip shows interference with a camcorder taping in the home of an electronic harassment target.

[Disinfo tactics](#), one example, Eleanor White's interview on Voice of America, June 2002

[DOJ \(U.S. Dept of Justice\) special report](#) titled "Stalking Victimization in the United States." Dated January 2009, publication #NCJ 224527. This landmark report makes it undeniably clear that stalking by multiple stalkers, unknown to the target, happens to roughly half a million Americans as of 2006. Prior to this report, targets could not challenge the denials by police and doctors that multiple perpetrator stalking happens. Targets and activists are urged to save this report to their hard drives. [Click here](#) if the above link is broken.

[DOJ \(U.S. Dept of Justice\) reports e-harassment complaints](#) to Congress. Significance is in the NUMBER of complaints.

["Dr." Ewen Cameron, MKULTRA psychiatrist-torturer](#) as described on CBC's Fifth Estate, January 6, 1998

[Dr. Rebecca Carley show "What's Ailing America," hour 1](#), January 17, 2009

[Dr. Rebecca Carley show "What's Ailing America," hour 2](#), January 17, 2009

In the above 2-hour show, Dr. Carley discusses organized stalking and electronic harassment with Eleanor White and Debbie Newhook

["Dream Machine"](#), utilizing hypnotic methods to produce desired dreams. Manipulation of dreams is very common among targets of advanced electronic attacks.

## E

["Earthworm Rescue"](#), a feel good activity for organized stalking and electronic harassment targets; ([squirrelling](#) is another one!)

[E-booklet](#), free, not copyrighted, telling the organized stalking and electronic harassment story in a simple format suitable for people who know nothing about the subject

[ECHELON](#), a network of countries whose security agencies scan virtually all electronic communications looking for key words to eavesdrop on people and groups "under suspicion". Helps to establish a pattern of **motive** for the neuro- electromagnetic harassment problem.

[EEG-GSR](#) experiments, with plants, aim is to create a detector which is independent of signal types (classified signals are undetectable so far)

[Effects](#) observed by neuro-influence device targetted people

[Eleanor White, 08-26-03](#), on The Power Hour radio show, the two hour segment on the topic of mind control. **To my colleagues: I \*NEVER\* have claimed to anyone, the show hosts included, that I am an "expert" in mind control. I am far from that, and most of what I know comes from other people who have helped me assemble this web site!** For information on The Power Hour show itself, either go to [the show's web site](#), or [Eleanor White, 09-16-03](#), on The Power Hour radio show, two hour segment on the topic of mind control, with guests Dr. Rauni Kilde and investigative writer, Judy Wall. For information on The Power Hour show itself, either go to [the show's web site](#), or [Eleanor White's interview](#) on Voice of America, June 2002

[Eleanor White on "A Closer Look"](#), radio show, hosted by Michael Corbin, March 5, 2004 hours 2 and 3:

[Segment 1](#)

[Segment 2](#)

[Segment 3](#)

[Segment 4](#)

[Eleanor White](#) on [Linda Kennedy's](#) show "Precious Time", May 28, 2004. Linda wanted to discuss mind control in general with emphasis on the [organized stalking](#) aspect. If the audio link above doesn't work, try these:

[Segment 1](#)

[Segment 2](#)

[Eleanor White's organized stalking story](#), which may indicate city government complicity in organized stalking

[Eleanor White](#) walking home after picketing, article in the Hamilton (Ontario) Spectator (mainstream) newspaper

[Electromagnetic Weapons, Anti-Personnel, Some Aspects of](#), a synopsis prepared for a 1996 symposium of the International Red Cross. If the above link is broken, [click here](#)

[Electromagnetic weapons video clips](#), CNN, circa 1985, scientists affirm viability

[Electromagnetic weapons usage result form](#)

[Electromagnetic Weapons](#): As Powerful As The Atomic Bomb, by Cheryl Welsh

[Electromagnetics and the Mind](#), by Greg Harrison

**Electronic attacks** on [Mr. Jesus Mendoza](#), of Mission, Texas, AND HIS SMALL CHILDREN, who is pursuing a civil suit against the U.S. Attorney General to cease and desist, as broadcast on <http://www.thepowerhour.com>, March 3, 2004:

[Segment 1](#)

[Segment 2](#)

[Segment 3](#)

[Segment 4](#)

[Segment 5](#)

[Hear Mendoza's daughter cry under attack](#)

**Jesus Mendoza update**, on [The Power Hour](#), May 20, 2004:

[Segment 1](#)

**Jesus Mendoza update**, on [The Power Hour](#), August 27, 2004:

[Segment 1](#)

[Segment 2](#)

[Segment 3](#)

**Jesus Mendoza update**, on [The Power Hour](#), March 14, 2005:

[Segment \(36 min\)](#)

[Electronic mind control](#), "Timmy McVeigh Was Right", an article by researcher Kathy Kasten

[Book review, Electronic Projects from the Next Dimension](#), a practical book of experiments which might be useful in detecting some of the more advanced electronic harassment attacks

["Electronics and Brain Control"](#), Popular Electronics, July 1973, Vol. 4, Number 1

[Electromagnetic signal detector](#), mentioned on [The Power Hour](#) by in-home microwave attack target Jesus Mendoza as the best indicator of the attack signals. (PLEASE read the caution note at the bottom of this page.)

["U.S. Electromagnetic Weapons and Human Rights"](#), a Project Censored report by (professor) Peter Phillips, Lew Brown, and Bridget Thornton, Sonoma State University, December 2006

[ELF URL](#), describing how ELF electromagnetic fields can entrain the brain/nervous system, causing debilitating effects

[Ellen Lacter recommends: MKULTRA and historical mind weapons](#), a ten page well cited article by the www.wanttoknow.info team, based on three books on the topic. [Click here](#) if the above link is broken.

[European Parliament resolutions](#) as passed. Not spectacularly great, but hopeful for the 21st century.

[European Parliament Political Control Weapons position paper, text part only](#); or go to <http://jya-com/stoa-atpc.htm> for the original with images.

[EVP receiver](#), (Electronic Voice Phenomena), a schematic diagram from [Handbook of Psychic Discoveries](#) by Sheila Ostrander and Lynn Schroeder. A possible detector for perpetrator voice to skull transmissions.

[Excalibur Briefing, book review](#), by Lt. Col. Thomas E. Bearden, USAF (Ret), copyright 1978, revised and expanded 1988

["Excuses"](#), an essay by electronic harassment researcher and target, [Dr. Allen L. Barker](#) giving a long list of classic human excuses for not stopping, or even participating in, lifelong torture of other human beings

[Experiments, human, secret, history of](#) ... If link doesn't work, [Click here](#)

[Ex-Con Plans Class Action Suit](#), Claims Prisoners Brainwashed Former Prisoner Raises Question of Mind Control, by Cheryl Welsh

[Executive Orders](#), one method for quietly implementing a dictatorship without the people becoming aware until it's too late

[Extreme Abuse Survey](#), 2008 results of, a survey of [current-day](#) extreme abuse victims and therapists helping them recover from the torture. Generally the victims and their therapists are dealing with MKULTRA-style physical/drug/electronic captive torture based mind control, and/or, ritual abuse/Satanic ritual abuse. Such abuse can happen under government auspices, or can happen when government provides cover for certain criminal groups by denying the groups exist. Visitors who feel that what organized stalking and electronic harassment targets report is just too horrible to happen in this "modern, civilized" world should scan the results of this survey.

[Eye's visions](#) read and displayed electronically

## F

[Fact Sheet](#), Allegations match electromagnetic weapons technology. Further investigation is needed, by Cheryl Welsh

[Faking visuals now a breeze](#), says Washington Post reporter William M. Arkin

[FBI ex-agent Geral Sosbee](#) runs a campaign to expose FBI corruption, and includes on the page linked here mind-control relevant involuntary experimentation info

[Feel-good activity](#), "Earthworm Rescue", for organized stalking and electronic harassment targets; ([squirrelling](#) is another one!)

[Florida court helps expose electronic harassment](#), by ruling that an expert witness who didn't agree with "conventional wisdom" COULD testify

[Forced psychiatric drugging in New York State](#), Nazi style "list" of people deemed as only PROBABLE forced drugging candidates, being quietly compiled without the media reporting what is happening. First in the Soviet Union, now in the West, psychiatry has become the most powerful branch of law enforcement. Once "convicted" by psychiatrists, you have no trial, no defence. You will be forced by visiting medication enforcement teams in your own home to take brain damaging drugs. [Click here](#) if the above link is broken.

[FFCHS web site](#), "Freedom From Covert Harassment and Surveillance" organization's web site. FFCHS is a group of activism-oriented targets, based in the U.S., which has been working to persuade the U.S. Congress to adjust legislation so that electronic weaponry is explicitly named. Public awareness work is also being undertaken.

[French Government recognizes](#) the reality of neuro- electromagnetic weapons technology, an article from NATURE magazine

[Frey, Allen, paper showing early e-weapons principle](#)

**Florida radio talk show**, February 13, 2004, airing an interview with Eleanor White:

[First hour](#)

[Click here](#) if the above link is broken

[Second hour](#)

[Click here](#) if the above link is broken

**Florida radio talk show**, April 9, 2004, airing an interview with Eleanor White:

[First hour](#)

[Click here](#) if the above link is broken

[Second hour](#)

[Click here](#) if the above link is broken

## G

[Glossary of terms](#)

**Goliszek, Dr. Andrew**, on [The Power Hour](#), February 13, 2004. Dr. Goliszek is a mainstream bioscientist and in this appearance he speaks about the revelations in his well-researched book [In The Name of Science](#) about highly unethical and outright criminal human experimentation by the United States government throughout the Cold War Era. Dr. Goliszek's research clearly sets the stage for the organized stalking and electronic harassment crimes listed on this web site and others:

[Segment 1](#)

[Segment 2](#)

[Segment 3](#)

[Government involvement in e-weapons](#)

[Greenbaum speech](#), the inside story of mind control from the psychiatrist's perspective

["Group Stalking, Just Like"](#), a news video from KIRO TV, Snohomish County, Washington State, posted February 2010. The tactics used by the stalker fit very well with the experiences of group stalking targets. The stalker refused to discuss WHY she committed the crimes. In another similar case a few years earlier, another stalker fitting the M.O. of group stalking refused to discuss the reasons for his crimes. One can guess what might happen if a group stalking perpetrator made a public statement about the operations of their group.

[Gulf War Microwave Weapons](#), images showing use against Iraqi troops in 1991

## H

[HAARP project](#) related article from May 1998 Media Bypass magazine

[HAARP project](#), excerpts from **Angels Don't Play This HAARP**, courtesy Patricia Mougey

[Hacking the nervous system](#), an article showing the intent of the U.S. armed forces to do so, and a good description of what we targets experience (it hurts!)

**Harassment devices**, as sold by Shomer-Tec, discussed with great interest on [The Power Hour](#), during the May 20, 2004 update on the Jesus Mendoza electronic harassment case:

[Segment 1](#)

[Segment 2](#)

[Harlan Girard contributed](#) to an October 1998 report by the World Organization Against Torture (OMCT)

[Heartbeat detector](#), LADS, or Life Assessment Detector System, a product of [VSE Corporation](#), which can detect the human heartbeat through non- or partially-conductive substances like snow or rock, at distances up to 135 feet.

[Hemi-Sync](#), a company selling specially prepared music recordings which use sound to entrain the brain in to relaxation. (Force-awake rhythms also possible.) See also [US Patent #5,356,368](#)

[High power microwave used on people in Europe](#), article by Dr. Reinhard Munzert. [Click here](#) if above link is broken

[HF signal detector](#), mentioned on [The Power Hour](#) by in-home microwave attack target Jesus Mendoza as the best indicator of the attack signals. (PLEASE read the caution note at the bottom of this page.)

[Hiding Multiple Stalker Harassment](#), aka "street theater", an essay by Deborah Spilko showing how easy it is

[House, U.S., anti mind control reference](#), in Bill HR 2977, recognizes psychotronic mind control as a problem

[Human experimentation, classified](#), protection for subjects still lacking at end of 2003, article by Cheryl Welsh

[Human experiments, secret, history of](#) ... If link doesn't work, [Click here](#)

[Human radiation experiments](#), by government on involuntary citizen experimentees, involving feeding and injecting of radioactive substances

[Human radiation hearings testimony](#), showing tie in between these radiation experiments and mind control experimentation

[Human radiation hearings](#), excerpt, for those who doubt mind control is a persistent and very real problem

## I

[IEEE](#) - Institute of Electrical and Electronic Engineers takes serious notice in 1996 of Finnish researcher's anti-gravity effect

[Images, seen by the eye](#), read and displayed electronically

[Images, seen through cat's eyes](#), with photos, displays on screen and supports targets' claims that perpetrators can see through their eyes too

[Improbable incident, typical, with good data cable](#)

[Implants](#), at the Center for Neural Communication Technology, U.S. National Institutes of Health, lays to rest any doubts about the existence and intent of human electronic implantation

[Implants, Brian Wronge case](#), demonstrating how even physicians who SAY they favour protecting human rights utterly cave in and refuse to help people with actual illegal implants

[Implants, Brian Wronge case](#), update on this case of shameful refusal by doctors to uphold basic human rights

[Implants](#), involuntary, Blanche Chavoustie

[Implants](#), nanotechnology, proves the current level of even UNclassified implant technology - visitor, ponder the classified implants!

[If above link is broken, copy of article is here](#)

[Implants](#), New Mexico prison style, a 1999 proposal by NM Governor Gary Johnson, **which explicitly uses the phrase "we can insert microchips into people's brains and control their behavior"**

[Implants, Professor Warwick's](#) unclassified experiment demonstrates that on a first try, human implants work, and are predicted as likely to improve to the point of direct brain/nerve interaction

[Implantation backup article](#)

[Implants, human](#), for use with satellite tracking system, means and motive!

[Implants, "Telectrode"](#), for wireless monitoring of both physical and psychological parameters, AF contract

[Implants, U. of Albany](#), Albany Times-Union article about implant research in the late 1990s

[Infiltration of the media by CIA](#), article with request for backup information - not yet presented as fact

[Information handling](#) or sharing, tips for all targets whether or not they are interested in activism. Targets, your choice of words is very important until this crime becomes widespread public knowledge.

[Infrasound weapon](#) sufficient to shake up a section of the city of Marseille, France. [Click here](#) if above link is broken.

[Intelligence activities](#), Church Committee's Final Report on, Book II, about effects on personal freedom, 1976

[International Documents](#) in Support of Claims of the Existence of Electromagnetic Anti-Personnel Weapons, from the site of [Cheryl Welsh](#)

[Involuntary "voice"](#), forced upon Eleanor White as Eleanor tries to lie as still as possible but is fully awake (SOUND)

[Italian Doctor](#) discovers in-body implants in people who have not knowingly been research subjects

## J

[Jackson, Pat](#), testimonial, former sheriff's officer has endured some brutal harassment, including murder of pets

[Jeff Rense \(Sightings Radio Show\) Mind Control Patent Page](#). WOW!

[Jesus Mendoza's video](#) describing his electronic harassment situation which led to his suing (unsuccessfully - what else is new?) the U.S. federal government and Attorney General John Ashcroft in particular

[Joan K. Christensen's](#) letter to Eleanor White in which the New York State Assemblywoman claims to have classified knowledge about the neuro-influence weapons currently being illegally tested.

[Journal of Psycho-Social Studies](#), an Internet journal, an article titled "On the Need for New Criteria of Diagnosis of Psychosis in the Light of Mind Invasive Technology" by Carole Smith. This article references work by Cheryl Welsh, founder of Mind Justice and is VERY welcome to those who have been targetted by such technology for decades! [Click here](#) if above link is broken.

[Judy Wall's letter to 180 editors](#), summer 1999

[Judy Wall's timeline](#), covering the development of neuro-electromagnetic weapons

[Justesen says VOICE TO SKULL WORKED IN 1974!](#)

["Just Like Group Stalking"](#), a news video from KIRO TV, Snohomish County, Washington State, posted February 2010. The tactics used by the stalker fit very well with the experiences of group stalking targets. The stalker refused to discuss WHY she committed the crimes. In another similar case a few years earlier, another stalker fitting the M.O. of group stalking refused to discuss the reasons for his crimes. One can guess what might happen if a group stalking perpetrator made a public statement about the operations of their group.

[Julianne McKinney's report and letters](#), from one of the most knowledgeable e-weapons targets, who is an ex-US Army career intelligence officer

[Justice, Getting, in an Unjust System](#), a transcript of a speech by Jeanette Westbrook at the 1999 Ritual Abuse/Mind Control conference of the SMARTNEWS group. Original link: <http://members.aol.com/smartnews/jw99.html>

## K

**Kathleen Sullivan**, MKULTRA-era torture survivor, interviewed on [The Power Hour](#) on January 20, 2004:

[Segment 1](#)

[Segment 2](#)

[Segment 3](#)

[Segment 4](#)

[Segment 5](#)

[Kilde, Dr. Rauni Leena](#), the brave former chief medical officer of Finland, tells it like it is on global mind control

[http://dailynews.yahoo.com/hx/wews/20010510/lo/396942\\_1.html](http://dailynews.yahoo.com/hx/wews/20010510/lo/396942_1.html), Kill as a Child, Woman Learns How To, a Yahoo News item from May 2001. Direct evidence of MKULTRA atrocities.

## L

[LADS](#), Life Assessment Detector System, a product of [VSE Corporation](#), which can detect the human heartbeat through non- or partially-conductive substances like snow or rock, at distances up to 135 feet.

[Laws relating to e-weapons](#)

[Leuren Moret](#), former geoscientist at Livermore [U.S. government] Labs (California), a whistleblower about the plague of "depleted" uranium dust left at places where the U.S. has waged war in the last quarter of the 20th century until the present. Leuren Moret is also being targeted with electronic harassment and organized stalking as a result of her whistleblowing, and this PDF document, a chapter from her book, describes her situation and the "depleted" uranium issue very graphically.

[Leuren Moret](#), June 15, 2006 memo to Berkeley (California) City Council, outlining her intense harassment related to her whistleblowing and asking for the return of her illegally confiscated automobile

[Levitation](#), using diamagnetism of living things, as demonstrated on the CBS Evening News and CNN in April 1997, as reported in Science News Dec. 6, 1997 issue, vol. 152

[LIDA machine](#), a Soviet device which demonstrates the potentially good uses for the technology used to torment us involuntary experimentees over the past couple of decades

[Lin, Dr. James C., on biological amplification](#), a biological response to radio signals which makes pulsed microwave "voice to skull" work at low signal levels, an excerpt from his book [Electromagnetic Interactions With Biological Systems](#)

[Linda](#), a target of advanced electronic attacks on the body and nervous system, shows in this video clip some of the types of attack she experiences

[Local group presentations booklet](#). How to get a demonstratedly effective form of activism going in your city

[Local Perp Groups](#), including revelations and successful stoppage by a target who is also an accomplished remote viewer

## M

[Map](#) showing MKULTRA and mind-weapon incident sites

[McKinney, Julianne](#), report and letters, from one of the most knowledgeable e-weapons targets, who is an ex-US Army career intelligence officer

[Media, infiltration by CIA](#), article with request for backup information - not yet presented as fact

[Medical Technology Updates](#), a page for collecting excerpts from articles showing that UNclassified medical technology is approaching the advanced capabilities of the equipment used by today's organized stalking/electronic harassment perpetrators

[MEDUSA](#), "Mob Excess Deterrent Using Silent Audio", microwave voice to skull (V2S/V2K) proposed for commercial development for military and police use, ABC news. If that ABC link is down, [click here](#) for a backup copy. July 2008.

[Changing memories](#), New York Times article, September 2000 - describes memory changing technology which DELIGHTS MKULTRA, organized stalking, electronic harassment, and all child sex abuse perpetrators!

[Dr. Michael Persinger's findings](#) when a target, Qijia Cheng requested Dr. Persinger to look for electronic causes of effects reported by electronic assault targets

**Michigan finally gets it right!** Michigan State Legislature incorporates ANY harmful electronic or electromagnetic device into their definitions of criminal acts:

[Public Act 0256 of 2003](#)

[Public Act 0257 of 2003](#)

[Microwave auditory response references](#), which have been studied for use as bird clearing radar signals

[Microwave bioeffect references](#), a researcher's smorgasbord

["Microwave cannon" plans](#), advertised for years by [Information Unlimited](#). Demonstrates the ease with which microwave weapons can be had by the public.

[Microwave signal detector](#), mentioned on [The Power Hour](#) by in-home microwave attack target Jesus Mendoza as the best indicator of the attack signals. (PLEASE read the caution note at the bottom of this page.)

["Microwave Harassment and Mind Control"](#) by Julianne McKinney

[Microwave hearing threshold](#) for human beings

[Microwave, high power, used on people in Europe](#), article by Dr. Reinhard Munzert. [Click here](#) if above link is broken

[Microwave News article excerpts](#)

[Microwave "Ray Gun"](#), USMC, at long last the U.S. government has stopped denying microwave weapons exist!

[Microwave Technology And Its Use Against Humanity](#), a collection of articles from Orvotron, The Bimonthly Newsletter

[Microwave Weapons, Gulf War](#), images showing use against Iraqi troops in 1991

[Milgram's experiments](#), graduated electric shocks, which showed the organized stalking and electronic harassment perps how easy it would be to hire perpetrators to torture the targets;

[Alternate link](#) to Milgram article if above link is broken

[Military inspections of a target's web site](#), a screen shot by Brent from his firewall program, probably a result of the USA PATRIOT Act and similar laws which are being used to destroy the U.S. Constitution

[M.I.N.D.](#), or Magnetic Integrated Neuron Duplicator, a device used on involuntary experiment subject John Ginter while an inmate in a California prison

["Mind Control's" Portion](#) of the full crime of organized stalking and electronic harassment (OS/EH)

["Mind Control" article](#) Napa Sentinel, Harry V. Martin and David Caul, 28 pages

[Mind control, "Excuses" for](#), an essay by mind control researcher and target, [Dr. Allen L. Barker](#) giving a long list of classic human excuses for not stopping, or even participating in, lifelong torture of other human beings

[Mind Control on CHILDREN](#), an article by distinguished investigative reporter Jon Rappoport. This is where the hidden "inner circle brutality" of government leaders in Western countries finally comes to light

[Mind control recognized as a problem](#) in U.S. House Bill 2977

[Mind Control and the Secret State](#), article by Daniel Brandt

[Mind control seminar](#), April 2005. Print this out if you are or intend to see a doctor or public official who is likely to deny mind control exists. Note: All lecturers and writers in the field of mind control are to some extent controversial, so don't depend on this bulletin to totally vindicate your claims. Instead, read (and print) material on MKULTRA, COINTELPRO, and [organized stalking](#) as well.

[Mind control, U.S. Navy's](#), officially admitted in SECNAVINST 3900.39D (standing instructions issued by the Secretary of the Navy), of 6 November 2006. Here is a quote from page 9:

(2) The Under Secretary of the Navy (UNSECNAV) is the Approval Authority for research involving:

(a) Severe or unusual intrusions, either physical or psychological, on human subjects (such as consciousness-altering drugs or mind-control techniques).

If the above document is not available, [click here](#).

[Mind control victim awarded \\$1 million](#), (ritual abuse case - same mentality as neuro-electromagnetic)

[Mind Control Forum](#) - Probably the largest collection of mind control/organized stalking/electronic harassment target testimonials

**Mind Control, Sirhan Sirhan**, [The Power Hour](#)'s February 5th, 2004 interview with Sirhan's attorney Lawrence Teeter. Mr. Teeter is trying to get the word out that his client Sirhan Sirhan is an innocent, mind controlled victim and the centerpiece of a massive government plot:

[Segment 1](#)

[Segment 2](#)

[Segment 3](#)

[Segment 4](#)

[Segment 5](#)

[Mind Control Within the United States](#) - A 1998 book by author Kai Bashir (reviews)

[Mind Drive](#), an example of a set of computer games in which control of the game is picked up from the mind of the player

[MKULTRA documentation page - EXCELLENT!](#)

[Mind switch](#), one more device pointing towards the fact that classified science has already accomplished sub-vocal thought reading

[MKULTRA and historical mind weapons](#), a ten page well cited article by the www.wanttoknow.info group, based on three books on the topic. [Click here](#) if the above link is broken.

[MKULTRA cover page](#), U.S. Senate hearings in 1977

[MKULTRA CKLN radio series](#), by Wayne Morris, 8 months of weekly one-hour interviews with MKULTRA survivors and supporters

[MKULTRA-era experiments](#), Bill Clinton apologizes for MKULTRA-era involuntary human torture by the U.S. government

[MKULTRA research site](#) full of articles on covert government misbehaviour in general, with reference material on MKULTRA and related secret programmes.

[http://dailynews.yahoo.com/hx/wews/20010510/lo/396942\\_1.html](http://dailynews.yahoo.com/hx/wews/20010510/lo/396942_1.html), MKULTRA: Kill as a Child, Woman Learns How To, a Yahoo News item from May 2001. Direct evidence of MKULTRA atrocities.

[http://www.pufori.org/articles/mk\\_ultra.htm](http://www.pufori.org/articles/mk_ultra.htm) Richard G. **Gall's** excellent article on MKULTRA; supports the success of voice-to-skull for hypnotic purposes

[MKULTRA: Search for the Manchurian Candidate](#), by John Marks, an excellent (but limited by CIA's burning of records) easy to read history of MKULTRA, the program which gave birth to the present psycho-electronic involuntary experimentation program

[MKULTRA survivors](#), a site by an MKULTRA child abuse victim dedicated to helping other MKULTRA victims with their healing process

[MKULTRA U.S. Senate hearing excerpts](#)

[MKULTRA electronic projects](#) with summaries of the specific purposes.

[MKULTRA-like involuntary experimentation](#) leads to the deaths of 5 mental patients at Camp Mabry TX in 2001

[Mobbing: Emotional Abuse in the American Workplace](#), a review of this book by Eleanor White

<http://www.mobbing-usa.com>, web site of the authors of the book "Mobbing: Emotional Abuse in the American Workplace". VERY encouraging that mobbing is beginning to get legislative attention, as the web site declares. Our job now is to try to get those involved in exposing and stopping mobbing to understand that it happens everywhere, not just in the workplace.

[Mojimir Babacek: Article](#), "International Movement for the Ban of Manipulation of Human Nervous System by Technical Means", an overview of the world-wide effort to expose and stop mind control

[Monkey victims](#) of Dr. Jose Delgado, brain implant scientist. Monkeys in restraint with electric shocks being administered to electrodes in their brains. Illustrates MKULTRA's utter disregard for life, pain, and suffering

[Monument](#), a list of victims' names

[Moret, Leuren](#), former geoscientist at Livermore [U.S. government] Labs (California), a whistleblower about the plague of "depleted" uranium dust left at places where the U.S. has waged war in the last quarter of the 20th century until the present. Leuren Moret is also being targeted with electronic harassment and organized stalking as a result of her whistleblowing, and this PDF document, a chapter from her book, describes her situation and the "depleted" uranium issue very graphically.

[Leuren Moret](#), June 15, 2006 memo to Berkeley (California) City Council, outlining her intense harassment related to her whistleblowing and asking for the return of her illegally confiscated automobile

["My Life Changed Forever"](#), book review, author Elizabeth Sullivan. An excellent personal testimonial on organized stalking. Available on [amazon.com](#).

## N

[Nancy's EMW "Attack Article List"](#)

[Nancy's EMW "Belligerent Booklist"](#) (Use it to fight back!)

[NASA SAYS VOICE TO SKULL WORKS!](#)

[NASA's thought reading](#), electronic, for said silently to self thoughts, how it can be done. If that original link is broken, [click here](#).

[Nation Betrayed, A, book review](#), by MKULTRA survivor Carol Rutz. Fact-packed, recommended as a pocket/handbag reference for electronic harassment targets

[Navy, U.S., Directed Energy Weapons Database](#), shows UNclassified directed energy weapons references. NOT including current-day advanced mind weapons

[NCVC call report](#), by an attorney who pressed the U.S. National Center for Victims of Crime for their estimate of call volume and percentage relating to organized (or "gang" or "group") stalking

["Nessie", the writings of](#), as posted on the web site of the San Francisco Bay Guardian newspaper

[Neuro-electromagnetic effects](#) observed by neuro-electromagnetic device targetted people  
[Neuromarketing](#), a line of research aimed at using functional MRI technology to find ways to influence people to make purchase decisions. [Click here](#) if above link is broken.

[Neuron's tiny current requirements for triggering](#)

[New World Order](#), (aka One World Government), openly admitted to as ongoing conspiracy by U.S. Congressional Rep Ron Paul. [TEXT of what is on the video](#).

[Book review, None Dare Call It Conspiracy](#), a journalist's look at the covert mechanisms back in the 1970s at work to convert the United States of America into a Socialist nation, then dictatorship, through extremely subtle moves controlled by the wealthy elite. Makes it clear that today's organized stalking and electronic harassment fits right in with those plans which continue today.

[NIH \(US National Insititutes of Health\) Physician](#), anonymous but corroborated by Dr. Eldon Byrd, reveals that seniour government medical personnel are not only aware of electronic harassment, but have experienced targetting as well, some fatally

[NLPA \(National Legal Professional Associates\)](#) a lawyers' organization which has worked on the Gregory Lambros implantation case, affirms the reality of covert mind control

[Nonconsensual Brainwave and Personality Studies](#) by the U.S. Government, by Cheryl Welsh  
[Non-Lethal Weapons](#) paper by neuro- electromagnetic weapons target Cheryl Welsh

[Non-Lethal Weapons Policy](#), military vs. law enforcement

[NSA \(US National Security Agency\)](#) confirms mind control is "for real", by confirming classification of a document about it. A KEY document for researchers. Original in possession of Cheryl Welsh.

[NSA surveillance laws](#), worth a good belly laugh for those of us who have been under surveillance for years and decades!

## O

[Official organized stalking](#) in the United Kingdom, Daily Mail Online article of June 26, 2009. ([Click here](#) if the above link doesn't work - this is a type MHT file, may require Internet Explorer to open.)

[Open letter to human rights organizations](#), written by Mojimir Babacek, Czech mind control researcher and activist

[Organized stalker personality type](#), as described well by psychiatrist Debra A. Pinals, MD, in her book on single stalking. Clearly, this personality type exists in both the single and organized stalking arenas.

[Organized stalking FAQ](#) (frequently asked questions) about organized stalking groups

[Organized Stalking: A Target's View](#), a free, not copyrighted e-booklet, telling the organized stalking and electronic harassment story in a simple format suitable for people who know nothing about the subect

[Organized stalking videos](#)

[Organized stalking video #2](#)

[Organized stalking](#), comic strip showing what it's like trying to make a complaint to police about organized stalking

[Org@sm, electronic, forced](#), one of the effects experienced by psycho-electronic targets

[Oscilloscope trace, one type of harassment signal](#)

[Other web sites](#) relating to organized stalking and electronic harassment

[Outrage page](#), to collect highlights of the more serious outrages which happen to targets. See the ["gaslighting" harassment style](#) opposite on the [Petty Page](#).

## P

[Pat Jackson](#), testimonial, former sheriff's officer has endured some brutal harassment, including murder of pets

[Patents related to e-weapon technology](#)

[Pedophilia, world epidemic](#), a mainstream article showing how major crimes are covered up by way of infiltration of criminals leading double lives. Demonstrates how organized stalking and electronic harassment (and similar crimes) can be rampant yet not talked about in the media, and not be prosecutable.

[Penny and Mitzi](#), a fantasy essay by Eleanor White, one method of lessening the impact of being a target

[Perpetrator attempts to recruit targets](#)

[Perpetrator Recruiting Pep Talk](#), by Eleanor White

[Kathleen Sullivan](#)

[Perp Groups, Local](#), including revelations and successful stoppage by a target who is also an accomplished remote viewer

[Perps Who Talk](#), a log of the rare cases where perpetrators make statements to targets acknowledging the harassment

[Persinger, Dr. Michael's findings](#) when a target, Qijia Cheng requested Dr. Persinger to look for electronic causes of effects reported by electronic assault targets

[Petty Page](#), some of the pettiest of the ["gaslighting" style harassment](#) to which targets are subjected. See also the more serious [Outrages](#).

[Physician from NIH \(US National Institutes of Health\)](#), anonymous but corroborated by Dr. Eldon Byrd, reveals that senior government medical personnel are not only aware of mind control, but have experienced targetting as well, some fatally

[Plant/EEG-GSR](#) experiments, aim is to create a detector which is independent of signal types which have been undetectable so far

[Plutonium Files, book review](#), an informal review by correspondent Lynn Weed, with excerpts

[Police officers](#): You CAN solve these crimes, and do so with very little of your time and resources!

[Police who know](#), a log sheet of cases where brave police officers have admitted to targets that they know organized stalking and electronic harassment crimes are entirely real

[Power Hour, The, radio show](#), 08-26-03, the two hour segment with Eleanor White on the topic of mind control. **To my colleagues: I \*NEVER\* have claimed to anyone, the show hosts included, that I am an "expert" in mind control. I am far from that, and most of what I know comes from other people who have helped me assemble this web site!** For information on The Power Hour show itself, either go to [the show's web site](#), or [Power Hour, The, radio show](#), 09-16-03, a two hour segment on the topic of mind control, with guests Dr. Rauni Kilde and investigative writer, Judy Wall. For information on The Power Hour show itself, either go to [the show's web site](#), or [PREPAREDNESS](#), without which, we won't survive to win this fight against organized stalking and electronic harassment, as the New World Order continues to stage artificial disasters

[PROOF: CIA tortures involuntary test subjects](#), successful Canadian court case PROVES BEYOND DOUBT

[PROOF: Hemi-Sync's](#) specially prepared music recordings prove that simple sound can entrain the brain into relaxing biorhythms. (Force-awake rhythms also possible.) See also [US Patent #5,356,368](#)

[PROOF: The LIDA machine](#), a Soviet device which PROVES the existence of radio signal mind altering technology has been in existence since the 1960s.

[Protest poster concept samples](#) for activists.

[Psychiatric crime web site](#) of Dr. Peter R. Breggin - must reading if you are under psychiatric treatment or are thinking about consulting psychiatry, the most powerful arm of law enforcement, used routinely to discredit whistle blowers and protesters. The Soviet use of psychiatry to suppress dissent is in full blown use here in North America. [Here](#) is the May 2004 cover page in case the above link above doesn't work. May give you some clues for further web searching.

[Psychiatric drugging, forced, in New York State](#), Nazi style "list" of people deemed as only PROBABLE forced drugging candidates, being quietly compiled without the media reporting what is happening. First in the Soviet Union, now in the West, psychiatry has become the most powerful branch of law enforcement. Once "convicted" by psychiatrists, you have no trial, no defence. You will be forced by visiting medication enforcement teams in your own home to take brain damaging drugs. [Click here](#) if the above link is broken.

[Psychiatrist's perspective](#), the Greenbaum speech, the inside story of mind control

[Book review, Psychic Discoveries](#), by Sheila Ostrander and Lynn Schroeder, a compilation of Russian psychic discoveries and devices which can perform psychic and advanced physical effects, very likely the forerunners of current day advanced electronic harassment weapons

[Psychology of Stalking](#), book review by Sheryll Thompson, a psychotherapist with a real grasp of multi stalking, which is a substantial part of what we call organized stalking and electronic harassment.

[Psychotechnology Research Institute](#) web site, a site about the work of Russian "Psychotechnologist" Dr. Igor Smirnov, who was asked by the U.S. Government to be a consultant at the Waco, Texas Branch Davidian massacre. This site advises psychocorrection "can be carried out with or without the person's agreement."

["Psychotronic Golgotha"](#), a Russian book, partially translated, by N. I. Anisimov, 1999, courtesy Cheryl Welsh of [Mind Justice](#)

[Psychotronic, U.S. Association](#), a group studying consciousness and advanced technologies - which is to say the type of studies which **in the hands of other, unethical researchers** have produced the electronic mind weapons from which we now suffer. Dr. Eldon Byrd, an **\*\* ethical \*\*** psychotronic researcher, is a member

[Psychotronic War and the Security of Russia](#), by V.N Lopatin and V.D. Tsygankov Moscow, 1999, selected translations courtesy <http://mindjustice-org>, Cheryl Welsh

[Psychotronics Weapons Letter to Senate Committee](#), Julianne McKinney's letter to chairman John Glenn

## Q

## R

[Radar Flashlight](#), the actual device as displayed at <http://www.nlectc.org>

[Radar Flashlight](#) for through-the-wall detection of humans, Georgia Tech, developers

[Radiation hearings, human](#), testimony showing tie in between these radiation experiments and mind control experimentation

[Radiation hearings, human](#), excerpt, for those who doubt mind control is a persistent and very real problem

[Radio Signals vs. Nerve Cells](#), an explanation of how pulsed radio signals reach into our nervous systems

[Radio frequency control of DNA](#), an MIT Tech Talk article

[Range of weapons?](#) Advanced nature of current-day electronic harassment weaponry affirmed by former USAF scientist Dr. Tom Bearden; targets are advised to consider Dr. Bearden's words carefully before spending money on conventional detection/jamming/shielding experiments

[Rats Control Robots](#), an article that pretty well shatters arguments that electronic thought reading isn't possible

[Rauni Leena Kilde, MD](#), the brave former chief medical officer of Finland, tells it like it is on global mind control

["Ray Gun"](#), USMC, at long last the U.S. government has stopped denying microwave weapons exist!

[Reading your brain at a distance](#), BBC news article. No implants, not even any contacts. Used in new "brain scanners" at airports to check for "criminal intent"

[Reading Thoughts Now Possible](#), article from the San Francisco Chronicle, November 10, 2003, based on a New Orleans conference of neuroscientists

[Researcher's smorgasbord](#) of microwave bioeffects

[Record](#) your 24-hour voice-to-skull harassment, suggested ways to try this. One report of success.

[Recruiting targets as perps, attempts to](#)

[Red Cross, International, 1996 Symposium paper](#), on Some Aspects of Electromagnetic Anti-Personnel Weapons. If the above link is broken, [click here](#)

[Remote Control, book review](#), author Steve Lynch. A well documented testimonial of what it's like to be an electronic harassment/organized stalking target while serving time in prison

[Remote Viewing, book review](#), by Tim Rifat. This book gives the history of Russian remote viewing and psychic manipulation, and contains points of interest to electronic harassment targets who wish to experiment with shielding, jamming, and detection of today's advanced electronic harassment signals

[Remote Viewing of Local Perp Groups](#), revelations and successful stoppage by a target who is also an accomplished remote viewer

[Remote Viewing Secrets, book review](#), by Joseph McMoneagle, former remote viewer for the U.S. Army STARGATE programme

[RF signal detector](#), mentioned on [The Power Hour](#) by in-home microwave attack target Jesus Mendoza as the best indicator of the attack signals. (PLEASE read the caution note at the bottom of this page.)

[Road to Freedom](#), a webcast show on the issues of organized stalking and electronic harassment

[Ross Adey and LIDA machine](#), a Soviet device which demonstrates the potentially good uses for the technology which is used to torment us involuntary experimentees over the past couple of decades

[Ross, Colin, Dr., psychiatrist](#), who has carefully investigated alleged CIA-MKULTRA atrocities and is now satisfied they did happen

[Roy Bercaw](#) Cambridge, MA publishes ENOUGH ROOM to raise awareness of marginalized subjects in the media. He is the founder of the Anti Censorship and Deception Union.

[Roy Bercaw's research subject protection bill](#) submitted to the Massachusetts legislature

[Roy Bercaw's speech](#) to Cambridge, Mass. city council

[Roy Bercaw's TV show](#) on Cambridge MA cable

[Rule by Secrecy](#), by Jim Marrs, book review of, a valuable reference showing how the mindset and impetus behind current day organized stalking and electronic harassment has come about

[Russian article: Brain Breakers](#)

[Russian article: Buy Equipment to Spy on Your Neighbors](#)

[Russian article: Secret Superweapon in Action?](#)

[Russian article: Versions of the Murder of General Rokhlin](#)

[Russian book "Psychotronic Golgotha"](#), partially translated, by N. I. Anisimov, 1999, courtesy Cheryl Welsh of [Mind Justice](#)

[Russia, Security of, Psychotronic War and the](#), by V.N Lopatin and V.D. Tsygankov Moscow, 1999, selected translations courtesy <http://mindjustice-org>, Cheryl Welsh

[Russian human rights group](#) appeals for controls on psychotronic weapons

[Russian law "About Weapons"](#), Article 6 of which refers to some of the technologies capable of use as "mind weapons" or "psychotronic weapons"

[Russian magazine article](#), courtesy Cheryl Welsh, with testimonial on the lives of Russian mind control victims

[Russian Psychotechnology Research Institute](#) web site, a site about the work of Russian "Psychotechnologist" Dr. Igor Smirnov, who was asked by the U.S. Government to be a consultant at the Waco, Texas Branch Davidian massacre. This site advises psychocorrection "can be carried out with or without the person's agreement."

[Russian psychotronics video](#), shown in 1998 on the German ZDF network, dialogue translated here. Includes descriptions by Dr. Igor Smirnov, who was invited by the U.S. to intervene at the Waco Branch Davidian standoff.

[Russian translations](#), fragmentary, about Russian activity in the arena of psychotronic weapons and the fight to have them disclosed and illegal use banned

[Russian/U.S. International Coalition](#) formed

## S

[Sabotage](#), real physical evidence

[Satanic connections](#) to electronic harassment and stalking groups

[Satanic Ritual Abuse](#), news articles, a wake up call to the complacent public to demand genuine investigations into both SRA and mind control crimes

[Satellite tracking system](#), for use with HUMAN implants, means and motive!

[Satellite tracking system](#), for parolees, USA Today

[Scalar weapons](#), an article describing the probable characteristics of [scalar](#) weapons

[Schefflin, Alan W.](#), California lawyer with a track record of working to expose the mind control conspiracy

[Secret human experiments, history of](#) ... If link doesn't work, [Click here](#)

[Book review, Secret Life of Plants](#), by Peter Tomkins and Christopher Bird. Confirms the existence of biological signals which are NOT conventional electromagnetic, but operate at a performance level beyond that of as-taught-in-school signals, and which are like the current day mind/body weapon signals used on electronic harassment targets. Also describes possible countermeasure experiments.

[Seeing through a cat's eye](#), with photos, image displays on screen, supports targets' claims that perpetrators can see through their eyes too

[Shielding?](#) Advanced nature of current-day electronic weapons affirmed by former USAF scientist Dr. Tom Bearden; targets are advised to consider Dr. Bearden's words carefully before spending money on conventional detection/jamming/shielding experiments about New World Order developments. NWO likeliest org as organized stalking and electronic harassment perp.

[Signal details for Frey-type voice-to-skull transmitter](#)

["Silent Sound", Altered States Ltd version](#), a New Zealand supplier of "learning" tapes that are obviously "silent sound hypnosis" tapes, using the "voice-FM" technology

[Silent Sound demo device](#), construction drawings, Corel 3

[Silent Sound demo device](#), COMMERCIAL version, from Future Horizons, available as of January 2004. [Click here](#) if the Future Horizons link above is broken. Do a Control-F text find for silent sound to scroll down to the device listing.

["Silent Sound"](#), how hypnosis (and other effects) may be transmitted without the target being aware using voice-FM, with or without microwave to carry the signals over distance

["Silent Sound"](#), one of the US military's UNclassified thought-influencing technologies, used in the Persian Gulf War

["Silent Sound"](#) or "Silent Sound Spread Spectrum" or "SSSS" or "SQUAD" - one of the US military's classified thought-influencing technologies, used in the Persian Gulf War

["Silent Sound"](#), the LOWERY patent, #5,159,703

[Smirnov, Dr. Igor](#), a documentary sound track transcript, as shown in 1998 on the German ZDF network. Dr. Smirnov was invited by the U.S. to intervene at the Waco Branch Davidian standoff.

[Smirnov, Dr. Igor's Psychotechnology Research Institute](#) web site, a site about the work of Dr. Smirnov, who was asked by the U.S. Government to be a consultant at the Waco, Texas Branch Davidian massacre. This site advises psychocorrection "can be carried out with or without the person's agreement."

[Songs, scroll down for "T.I." and "Bang, Bang, Bang Bang"](#), "T.I." for "targeted individual", songs composed and sung by target and artist Kuango - her protest of the crushing of freedom in the United States by organized stalking groups using electronic harassment, approved of and covered up by government.

[Speaking and writing tactics](#), for education and persuasion about organized stalking and electronic harassment, yahoo group, for all targets. Should be scanned by new targets to avoid inadvertent false labelling as mentally ill.

[Sharks' use of neuro-magnetic fields of prey](#) proves that the surveillance we experience is not only possible but has been done for millions of years by sharks

[Stalking \(organized\) site](#) by Eleanor White

[Standler, Dr. Ronald B.](#), a clear, concise listing of serious medical ethics violations, for doubters

[Sounds, smells, images sent to your brain](#) by way of ultrasound signals, says Sony Corporation

[Soviets' microwave research](#) into mind-altering use of microwave equipment released by US DIA in 1976

[Spectrum analyzers](#), and why we targets are wise to avoid spending large sums to have one

[Stalking laws by state](#), (under construction,) a digest of stalking laws maintained by dedicated activist [Vicky Kindhart](#). THANKS, Vicky!

**Squirrels**, one way to cope:

[Making friends with squirrels](#)

["Love that squirrel"](#), squirrel baby photos

[Stocklin patent #4,858,612](#), multi-channel microwave voice to skull device

[Stolen property](#), typical, of the possessions of [Organized stalking](#) targets

[About "Street Theater"](#), a page for both the public and known targets about this unique aspect of the organized stalking with electronic harassment problem

[Subliminal acoustic manipulation of the nervous system](#), U.S. patent #6,017,302

[Suburban Spies](#) by Anthony Brina, book review. Shows powerfully that even highly placed corporate executives are not immune from the crime syndrome of organized stalking and electronic harassment!

[Subvocal thought reading demonstrated](#), at Texas Instruments seminar, March 12, 2008 article from New Scientist. Silent nerve pulses from vocal cords converted to speech by commercial device developed by Ambient Corporation. This is "sub vocal" thought reading, where the device user says words silently to self.

[Symptom list, body image format](#)

<http://www.geocities.com/nwbotanicals1/oak/synthtele.html> ...Synthetic Telepathy, by Dr. Richard Alan Miller; Dr. Miller's article is an excellent 39-page overview of the technology covered on this site as well. A good place for a new visitor to start when the interest is in the technology.

## T

[Tactical through wall radar](#), Xaver 800 sales video, January 2010.

[Tactical through wall radar](#), BACKUP COPY, Xaver 800 sales video, January 2010.

[Tactics, verbal, for use with skeptics](#)

["Targ" Comic strips](#) - "Targ," a comic strip series about a target of organized stalking, intended for public education purposes, and "Peter Perp," a companion strip from the perpetrator viewpoint.

["Targeting Neighbourhood Troublemakers", or "TNT"](#), an Indiana initiative that is ALSO being applied to citizens who commit NO offensive crimes or behaviour

[Technology, mind control](#), Mind Justice's position on

[Tech Talk](#), a booklet for targets about technology jargon, and technology concepts as relating to electronic harassment

["Telectrode" implants](#), for wireless monitoring of both physical and psychological parameters, AF contract

[Telemetry is Coming of Age](#), article showing that implant-based radio telemetry is routinely do-able

[TEMPEST technology](#), or, how someone can read your PC screen from some distance from your home

[Terrorist Stalking in America](#), book review, by David Lawson. A stunning expose of the growing problem of criminal stalking groups, which he calls "extremist groups" and "cause stalkers". This book reveals what happens behind the scenes when organized stalking and electronic harassment targets report "street theater". The author reports confirming this problem exists with police. See also [this review](#) of one of the books the author uses as his reference for assigning blame for the existence of the criminal stalking groups.

[The Power Hour radio show](#), 08-26-03, the two hour segment with Eleanor White on the topic of mind control. **To my colleagues: I \*NEVER\* have claimed to anyone, the show hosts included, that I am an "expert" in mind control or organized stalking or electronic harassment. I am far from that, and most of what I know comes from other people who have helped me assemble this web site!** For information on The Power Hour show itself, either go to [the show's web site](#), or **The Power Hour**, segment with Susan Clark, researcher into bio-electromagnetic effects. **NOTE: Available evidence points to the likelihood that signal types OTHER THAN conventional electromagnetic (or acoustic) are in use on people being targetted with mind control. However, this segment on conventional EM signals has relevance when discussing the older, now obsolete, conventional EM weapons.**

[Segment 1](#)

[Segment 2](#)

[Segment 3](#)

[Segment 4](#)

[Thefts](#), typical, of the possessions of [Organized stalking](#) targets

[Thermal imaging](#) versus the law, a discussion of the use of "sense enhancing" technology against a home based on the June 11, 2001 Kyllo U.S. Supreme Court decision. May apply to thru-wall radar. Not conclusive, but an interesting read.

[Thought controlled robot video](#), unclassified (not secret,) strongly hinting that classified (secret) thought reading is probably already available. [High speed version](#), better viewing quality, for those so equipped.

[Thought reading demonstrated](#), at Texas Instruments seminar, March 12, 2008 article from New Scientist. Silent nerve pulses from vocal cords converted to speech by commercial device developed by Ambient Corporation. This is "sub vocal" thought reading, where the device user says words silently to self.

[Thought reading](#), NASA's, electronic, for said silently to self thoughts, how it can be done. If that original link is broken, [click here](#).

[Thought reading for disabled](#), Sept. 2001 article

[Thought reading, beginnings of](#), BBC news article. No implants, not even any contacts. Used in new "brain scanners" at airports to check for "criminal intent"

[Thought Reading Now Possible](#), article from the San Francisco Chronicle, November 10, 2003, based on a New Orleans conference of neuroscientists

[Thought reading unclassified equipment](#)

<http://www.usnews.com/usnews/issue/000103/norseen.htm>, **Thought reading**, it's being worked on by "neuroengineers"

[Thought read/write http://www.us.net/signal/Archive/Oct01/decoding-oct.html](http://www.us.net/signal/Archive/Oct01/decoding-oct.html), article asserts it's doable

**Thought reading**, report from Stanford Research Institute shows process similar to "you-talk-it-types" computer speech recognition but based on brain electrical activity instead of voice:

[SRI as HTML](#)

(The HTML version loads fast but has scanning errors)

[SRI as PDF](#)

(The PDF version is 2.9 megs but is as the original)

["T.I." and "Bang, Bang, Bang Bang", songs](#), "T.I." for "targeted individual", songs composed and sung by target and artist Kuango - her protest of the crushing of freedom in the United States by organized stalking groups using electronic harassment, approved of and covered up by government.

[Time line](#), Cheryl Welsh's, of events in the history of neuro- electromagnetic weapons development

[Time Line](#), Judy Wall's from RESONANCE Newsletter, covering the development of neuro-electromagnetic weapons

["Timmy McVeigh Was Right!"](#), an article on electronic mind control by researcher Kathy Kasten

[Through-clothing radar](#), which can also penetrate non-conductive wall materials, a demo photo from [Safe-View](#)'s millimeter wave radar system for airports and law enforcement

[Through-the-wall radar](#) article from 1995 Popular Mechanics, confirms this equipment has existed for some time

[Through-the-wall radar](#), Millivision Corp., Northampton MA, manufacturer of passive millimeter wave radar **Jan 04 note: Site is inoperative, message promises new site**

[Through-the-wall radar](#), National Law Enforcement and Corrections Technology Center (National Institute of Justice, NIJ), a through the wall tracking/locating device for law enforcement

[Threats received](#) by people being targetted by stalking groups (and often assisted by advanced electronic weapons). ... see also this page about [Satanic threats](#).

[Through-the-wall radar](#), Patriot Scientific Corp., manufacturer of ground penetration radar, shows how penetration of even steel studded walls can be done using single cycle pulses  
[Through-the-wall radar](#), site of the Safe-View company which appears to continue the work started by Millivision Corp.

[Tone trigger programming](#), Eleanor White's

[Torture, "Excuses" for](#), an essay by electronic harassment researcher and target, [Dr. Allen L. Barker](#) giving a long list of classic human excuses for not stopping, or even participating in, lifelong torture of other human beings

["TortureWare"](#), simulated image of an electronic harassment perpetrator computer console screen

["True Justice" Field Operations Manual](#), a spoof on perpetrator tactics and apparent motives, written something like a military field manual

["True Justice" Electronic Operations Manual](#), a spoof on perpetrator electronic tactics in "military field manual" style

[RIGHT CLICK](#) for a Microsoft Word version of the "True Justice Field Operations Manual", viewable above

[RIGHT CLICK](#) for a Microsoft Word version of the "True Justice Electronic Operations Manual", viewable above

[Tyner, Arlene: Part 1](#), of a series of 4 articles on mind control

[Tyner, Arlene: Part 4](#), of a series of articles on mind control by this investigative reporter

## U

[Unclassified and commercial technologies](#) which are capable of generating some of the observed electronic harassment effects (long)

[As separate pages: http://www.raven1.net/p00.htm](#)

[Unclassified technologies used in e-weapons, quick summary](#)

[Undesirables: "Targeting Neighbourhood Troublemakers", or "TNT"](#), an Indiana initiative that is ALSO being applied to citizens who commit NO offensive crimes or behaviour

[U.S. Army brain wave remote sensor](#), can sense criminal intent in street situations ... at a distance, a *distance*

["U.S. Electromagnetic Weapons and Human Rights"](#), a Project Censored report by (professor) Peter Phillips, Lew Brown, and Bridget Thornton, Sonoma State University, December 2006

[U.N. media document](#) lists Mind Justice President Cheryl Welsh as an expert in non-lethal weapons (May 2001)

[U.S. Human Rights Abuse Report:](#), A Classified Arms Race Between the Superpowers to Control the Human Mind and Body with Electromagnetic Technologies, by Cheryl Welsh

[U.S. House of Representatives Bill 2977](#) recognizes psychotronic mind control as a problem

[U.S. Navy Directed Energy Weapons Database](#), shows UNclassified directed energy weapons references. NOT including current-day advanced mind weapons

[U.S. Navy mind control](#), officially admitted in SECNAVINST 3900.39D (standing instructions issued by the Secretary of the Navy), of 6 November 2006. Here is a quote from page 9:

(2) The Under Secretary of the Navy (UNSECNAV) is the Approval Authority for research involving:

(a) Severe or unusual intrusions, either physical or psychological, on human subjects (such as consciousness-altering drugs or mind-control techniques).

If the above document is not available, [click here](#).

[U.S. Psychotronic Association](#), a group studying consciousness and advanced technologies - which is to say the type of studies which **in the hands of other, unethical researchers** have

produced the electronic mind weapons from which we now suffer. Dr. Eldon Byrd, an **\*\* ethical \*\*** psychotronic researcher, is a member

## V

[Vehicle Stopper](#), electromagnetic, calls for design submissions by US National Institute of Justice (Why bother? They already exist in classified circles.)

[Verbal tactics for use with skeptics](#)

[Videos, Best](#), per Cheryl Welsh, founder of Mind Justice. If above link doesn't work, [click here](#). (Local copy as of July 2003.)

[Video, "Directed Energy Weapon attack"](#), analyzed by Harry Sweeney. The clip shows interference with a camcorder taping in the home of an electronic harassment target.

[Vibrations](#), one of the most difficult to explain (in mainstream scientific terms) of the attack types experienced by targets of electronic harassment and organized stalking

[Videos](#), for sale by Citizens Against Human Experimentation (CAHE)

[Vision for the blind](#), using brain implants, signals to which generate primitive images in the blind. Early form of the technology used to force visions on involuntary experimentees.

[Voice of America interview](#), Eleanor White, June 2002

["Voice", "God's"](#), article of Feb. 5, 2000, Sydney Morning Herald, speaking about USAF's use of "pulses" to create a voice within the skull of a target

["Voice", involuntary](#), forced upon Eleanor White's vocal cords as Eleanor tries to lie as still as possible but is fully awake (SOUND)

<http://www.geocities.com/nwbotanicals1/oak/synthtele.html> ...Voice to skull, aka Synthetic Telepathy, by Dr. Richard Alan Miller; Dr. Miller's article is an excellent 39-page overview of the technology covered on this site as well. A good place for a new visitor to start when the interest is in the technology.

**V2S (voice to skull) MP3 audio tracks.** RIGHT click one or the other links below to download. Then load from your PC to your MP3 player to take anti-V2S multi-radio show masking with you in the community or at work:

[6 radios, 64 kbps, stereo](#)

[6 radios, 32 kbps, mono](#)

[Multiple voices, not radio](#)

**\*\*** Please save a COPY to your hard drive for repeated playing.

[Voice to skull article](#), "American Psychologist" journal, March 1975, demonstrating that voice to skull (V2S) works, and how it works.

[Voice to skull article](#) by Richard Gall, reports successful transmission of WORDS

[Voice to skull \(V2S/V2k\)](#), a commercial version dubbed MEDUSA - "Mob Excess Deterrent Using Silent Audio", proposed for commercial development for military and police use, ABC news. If that ABC link is down, [click here](#) for a backup copy. July 2008.

[Voice to Skull reference by U.S. Army \(V2K\)](#), direct address:

[http://call.army.mil/products/thesaur\\_e/00016275.asp](http://call.army.mil/products/thesaur_e/00016275.asp)

[Click here](#) if above link is broken

**[VOICE TO SKULL WORKED IN 1974!](#)**

**[VOICE TO SKULL WORKS, SAYS NASA!](#)**

[Voice to skull hearing threshold](#) for human beings

[Voice to skull patent](#), Stocklin,#4,858,612, multi-channel microwave voice to skull device

[Voice to skull principle](#), showing how pulsed radio signals work and why normal radio signals don't

[Voice to skull project](#) for the US Department of Defence, by the US Environmental Research and Quality Assurance agency

[Voice to skull receiver?](#), Try this EVP (Electronic Voice Phenomena), a schematic diagram from [Handbook of Psychic Discoveries](#) by Sheila Ostrander and Lynn Schroeder. A possible detector for perpetrator voice to skull transmissions.

[Voice to skull SPEECH PROCESSOR](#), browser viewable version

[Voice to skull SPEECH PROCESSOR](#), EDITable Corel Draw (3.0) version, RIGHT CLICK to DOWNLOAD

[Victims](#), Allegations match electromagnetic weapons technology. Further investigation is needed, by Cheryl Welsh

[Video file tips](#), for those wishing to play video (or audio) clips from this and other web sites

[Visual images](#) read and displayed electronically

## W

[War at Home, book review](#), Brian Glick, lawyer and former activist. A great debate-ender!

[When Medicine Failed, book review](#), Janet Leih, the story of fighting both organized stalking/electronic harassment and medical malpractice at the same time

[Warwick, Professor Kevin's](#) unclassified experiment demonstrates that on a first try, human implants work, and are predicted as likely to improve to the point of direct brain/nerve interaction

[Why are people chosen to be targeted?](#)

[Wonder Weapons](#), an article in the July 7, 1997 issue of US News and World Report, by Douglas Pasternak, very revealing

[World Organization Against Torture \(OMCT\)](#) report, October 1998, on which microwave weapons activist Harlan Girard collaborated

[Writing and speaking tactics](#), for education and persuasion about organized stalking and electronic harassment, yahoo group, for all targets. Should be scanned by new targets to avoid inadvertent false labelling as mentally ill.

[QUICK READ](#) for those tight on time

[COMIC STRIP version](#) for those with even less time

---

## IMPORTANT NOTE TO VISITORS

One reason that the general public, media, and uninformed government officials scoff at the truth of our story is that people tend to focus on the personal testimonial aspect, and ignore the crucially important [organized stalking](#) crime wave, and the UNclassified and commercial devices which can duplicate, right now, some of the effects we report.

For a concise report collecting the best information on unclassified and commercial equipment with invasive electronic harassment capabilities see:

[Summary:](#) <http://www.raven1.net/proventechs.pdf>

[In one big file:](#) <http://www.raven1.net/uncom.htm>

[Credibility reviews](#) on selected information pieces relating to organized stalking and electronic harassment. Of possible interest to journalists.

The articles and images on this site are simple enough that most "non-technical" people can see quickly the principles which are involved. We organized stalking and electronic harassment targets beg you to spend a portion of your time looking at the book reviews and hard evidence technology side, in addition to our testimonial reports.

[Organized Stalking: A Target's View](#), a free, not copyrighted e-booklet, telling the organized stalking and electronic harassment story in a simple format suitable for people who know nothing about the subject.

[Information Handling Tips](#), free, not copyrighted e-booklet, giving information handling tips to targets. Written for targets, not the public.

[Local group presentations booklet](#). How to get a demonstratedly effective form of activism going in your city.

["Coping" booklet](#), written for targets of organized stalking and electronic harassment, with some tips on how to cope until we can get the justice system to do its sworn and (well) paid job

[Tech Talk](#), a booklet for targets about technology jargon, and technology concepts as relating to electronic harassment

If the alphabetized index below is not sufficient, consider using your browser's Search function to find the key word you want.

[GLOSSARY](#)

[OTHER SITES](#)

---

[Back to Menu](#)

## **Acoustic weapons and weapons-capable devices:**

[Acoustic heterodyning as a weapon](#), an article about American Technologies Corp. San Diego's weaponized version

[Acoustic heterodyning US Navy contract](#) for American Technologies Corp., San Diego

[Acoustic heterodyne principle](#), a diagram illustrating the principle behind American Technologies Corp. San Diego "electronic ventriloquism" speaker system.

[Acoustic manipulation of the nervous system, subliminal](#), U.S. patent #6,017,302

["Acoustic spotlight"](#), very similar to the American Technologies acoustic heterodyne, under development at MIT

[American Technologies Corp.](#) of San Diego CA announces the successful patenting of their "acoustic heterodyne" aka "HSS" or "Hypersonic Sound" technology, clearing the way for commercial release of one form of voice-to-skull technology.

[American Technologies Corp.](#) of San Diego CA announces the U.S. military is interested in their acoustic heterodyne or "Hypersonic Sound" technology

[Audio file tips](#), for those wishing to play audio (or video) clips from this and other web sites

[Audio types](#), used by the perpetrators

[bird.rm](#) or [bird.wma](#), FAKED bird calls, obviously electronic when heard live, which "follow" about one target in three as they go about their daily business

[Book review, Controlling the Human Mind](#), by Dr. Nick Begich

[Byrd, Dr. Eldon](#), 2002 report of experiment to check for mechanical sound in the vicinity of the ears of voice to skull targets. Microphones used as sound pickups. This version lacks some of the equipment photos but does have the diagrams needed for understanding of the setup. The full report is on the Mind Justice web site: <http://www.dcn.davis.ca.us/~welsh>

[Commercial and unclassified technologies](#) which are capable of generating some of the observed electronic harassment effects (long)

[As separate pages: http://www.raven1.net/p00.htm "Dream Machine"](#), utilizing hypnotic methods to produce desired dreams. Manipulation of dreams is very common among targets of advanced electronic attacks.

[Infrasound weapon](#) sufficient to shake up a section of the city of Marseille, France. [Click here](#) if above link is broken.

[Psychotechnology Research Institute](#) web site, a site about the work of Russian "Psychotechnologist" Dr. Igor Smirnov, who was asked by the U.S. Government to be a consultant at the Waco, Texas Branch Davidian massacre. This site advises psychocorrection "can be carried out with or without the person's agreement." Acoustics is a major component of Dr. Smirnov's psychocorrection system.

[Silent Sound demo device](#), COMMERCIAL version, from Future Horizons, available as of January 2004. [Click here](#) if the Future Horizons link above is broken. Do a Control-F text find for silent sound to scroll down to the device listing.

[Sounds, smells, images sent to your brain](#) by way of ultrasound signals, says Sony Corporation

[Back to Menu](#)

## **Biotelemetry:**

[Brain Wave Fingerprinting](#), a writeup of a 60 Minutes show on this topic. If link broken, [click here](#) for the text (only) of that article

[Book review, Controlling the Human Mind](#), by Dr. Nick Begich

[Book review, Secret Life of Plants](#), by Peter Tomkins and Christopher Bird. Confirms the existence of biological signals which are NOT conventional electromagnetic, but operate at a performance level beyond that of as-taught-in-school signals, and which are like the current day mind/body weapon signals used on electronic harassment targets. Also describes possible countermeasure experiments.

[Brain wave remote sensor](#), U.S. Army, can sense criminal intent in street situations ... at a distance, a *distance*

[Center for Neural Communication Technology](#), U.S. National Institutes of Health, lays to rest any doubts about the existence and intent of human electronic implantation

[Hacking the nervous system](#), an article showing the intent of the U.S. armed forces to do so, and a good description of what we targets experience (it hurts!)

[Images, seen through cat's eyes](#), with photos, displays on screen and supports targets' claims that perpetrators can see through their eyes too

[Implants](#), involuntary, Blanche Chavoustie

[Implants](#), nanotechnology, proves the current level of even UNclassified implant technology - visitor, ponder the classified implants!

[If above link is broken, copy of article is here](#)

[Implants](#), New Mexico prison style, a 1999 proposal by NM Governor Gary Johnson, **which explicitly uses the phrase "we can insert microchips into people's brains and control their behavior"**

[Implants, Professor Warwick's](#) unclassified experiment demonstrates that on a first try, human implants work, and are predicted as likely to improve to the point of direct brain/nerve interaction

[Heartbeat detector](#), LADS, or Life Assessment Detector System, a product of [VSE Corporation](#), which can detect the human heartbeat through non- or partially-conductive substances like snow or rock, at distances up to 135 feet.

[Medical Technology Updates](#), a page for collecting excerpts from articles showing that UNclassified medical technology is approaching the advanced capabilities of the equipment used by today's organized stalking/electronic harassment perpetrators

[Dr. Michael Persinger's findings](#) when a target, Qijia Cheng requested Dr. Persinger to look for electronic causes of effects reported by electronic assault targets

[M.I.N.D.](#), or Magnetic Integrated Neuron Duplicator, a device used on involuntary experiment subject John Ginter while an inmate in a California prison

[Mind Drive](#), an example of a set of computer games in which control of the game is picked up from the mind of the player

[Neuromarketing](#), a line of research aimed at using functional MRI technology to find ways to influence people to make purchase decisions. [Click here](#) if above link is broken.

[Sharks' use of neuro-magnetic fields of prey](#) proves that the surveillance we experience is not only possible but has been done for millions of years by sharks

[Telemetry is Coming of Age](#), article showing that implant-based radio telemetry is routinely do-able

[Thought reading](#), NASA'S, electronic, for said silently to self thoughts, how it can be done. If that original link is broken, [click here](#).

[Thought Reading Now Possible](#), article from the San Francisco Chronicle, November 10, 2003, based on a New Orleans conference of neuroscientists

[Thought read/write](#) <http://www.us.net/signal/Archive/Oct01/decoding-oct.html>, article asserts it's doable

[Back to Menu](#)

## Brain entrainment:

[Book review, Controlling the Human Mind](#), by Dr. Nick Begich

[Book review, Psychic Discoveries](#), by Sheila Ostrander and Lynn Schroeder, a compilation of Russian psychic discoveries and devices which can perform psychic and advanced physical effects, very likely the forerunners of current day advanced electronic harassment weapons ["Dream Machine"](#), utilizing hypnotic methods to produce desired dreams. Manipulation of dreams is very common among targets of advanced electronic attacks.

[Electromagnetic weapons video clips](#), CNN, circa 1985, scientists affirm viability

["Electronics and Brain Control"](#), Popular Electronics, July 1973, Vol. 4, Number 1

[ELF magnetic coil "sleeping" cap for targets](#)

[ELF sleeping cap schematic](#)

[ELF URL](#), describing how ELF electromagnetic fields can entrain the brain/nervous system, causing debilitating effects

**From the Grassy Knoll**, a Tampa area Florida radio talk show, February 13, 2004, airing an interview with Eleanor White:

[First hour](#)

[Click here](#) if the above link is broken

[Second hour](#)

[Click here](#) if the above link is broken

**From the Grassy Knoll**, a Tampa area Florida radio talk show, April 9, 2004, airing an interview with Sueann Campbell and Eleanor White:

[First hour](#)

[Click here](#) if the above link is broken

[Second hour](#)

[Click here](#) if the above link is broken

[Hacking the nervous system](#), an article showing the intent of the U.S. armed forces to do so, and a good description of what we targets experience (it hurts!)

[Hemi-Sync](#), a company selling specially prepared music recordings which use sound to entrain the brain in to relaxation. (Force-awake rhythms also possible.) See also [US Patent #5,356,368](#)

[LIDA machine](#), a Soviet device which demonstrates the potentially good uses for the technology used to torment us involuntary experimentees over the past couple of decades

[Medical Technology Updates](#), a page for collecting excerpts from articles showing that UNclassified medical technology is approaching the mind-weapon capabilities of the equipment used by today's organized stalking/electronic harassment perpetrators

[Changing memories](#), New York Times article, September 2000 - describes memory changing technology which DELIGHTS MKULTRA, organized stalking, electronic harassment, and all child sex abuse perpetrators!

[Dr. Michael Persinger's findings](#) when a target, Qijia Cheng requested Dr. Persinger to look for electronic causes of effects reported by electronic assault targets

[Microwave, high power, used on people in Europe](#), article by Dr. Reinhard Munzert. [Click here](#) if above link is broken

[Oscilloscope trace, brain entrainment signal](#)

[Sounds, smells, images sent to your brain](#) by way of ultrasound signals, says Sony Corporation

[Thought reading](#), NASA's, electronic, for said silently to self thoughts, how it can be done. If that original link is broken, [click here](#).

[Thought Reading Now Possible](#), article from the San Francisco Chronicle, November 10, 2003, based on a New Orleans conference of neuroscientists

Thought read/write <http://www.us.net/signal/Archive/Oct01/decoding-oct.html>, article asserts it's doable

[Back to Menu](#)

## Classified Weapons

[Audio types](#), used by the perpetrators

["Banging" noises](#) recorded in darkness by harassment target Norma Cross. Such noises have no visible source and are transmitted by very advanced technology, and are used to keep targets from falling asleep. The noises were also heard by Norma's son in an adjacent bedroom. [Alternate video file](#) for high speed connections

[Book review, Psychic Discoveries](#), by Sheila Ostrander and Lynn Schroeder, a compilation of Russian psychic discoveries and devices which can perform psychic and advanced physical effects, very likely the forerunners of current day advanced electronic harassment weapons

[Book review, Secret Life of Plants](#), by Peter Tomkins and Christopher Bird. Confirms the existence of biological signals which are NOT conventional electromagnetic, but operate at a performance level beyond that of as-taught-in-school signals, and which are like the current day mind/body weapon signals used on electronic harassment targets. Also describes possible countermeasure experiments.

[Electromagnetic weapons video clips](#), CNN, circa 1985, scientists affirm viability

[Hacking the nervous system](#), an article showing the intent of the U.S. armed forces to do so, and a good description of what we targets experience (it hurts!)

[M.I.N.D.](#), or Magnetic Integrated Neuron Duplicator, a device used on involuntary experiment subject John Ginter while an inmate in a California prison

[Perp Groups, Local](#), including revelations and successful stoppage by a target who is also an accomplished remote viewer

[Scalar weapons](#), an article describing the probable characteristics of [scalar](#) weapons

[Vibrations](#), one of the most difficult to explain (in mainstream scientific terms) of the attack types experienced by targets of electronic harassment and organized stalking

[Back to Menu](#)

## Countermeasures:

[Advanced nature](#) of current-day electronic harassment weaponry affirmed by former USAF scientist Dr. Tom Bearden; targets are advised to consider Dr. Bearden's words carefully before spending money on conventional detection/jamming/shielding experiments

**ANTI-V2S (voice to skull) MP3 audio tracks.** RIGHT click one or the other links below to download. Then load from your PC to your MP3 player to take anti-V2S multi-radio show masking with you in the community or at work:

[6 radios, 64 kbps, stereo](#)

[6 radios, 32 kbps, mono](#)

[Multiple voices, not radio](#)

\*\* Please save a COPY to your hard drive for repeated playing.

[Book review, Remote Viewing](#), by Tim Rifat. This book gives the history of Russian remote viewing and psychic manipulation, and contains points of interest to electronic harassment targets who wish to experiment with shielding, jamming, and detection of today's advanced electronic harassment signals

[Book review, Secret Life of Plants](#), by Peter Tomkins and Christopher Bird. Confirms the existence of biological signals which are NOT conventional electromagnetic, but operate at a performance level beyond that of as-taught-in-school signals, and which are like the current day mind/body weapon signals used on electronic harassment targets. Also describes possible countermeasure experiments.

[Book review, Electronic Projects from the Next Dimension](#), a practical book of experiments which might be useful in detecting some of the more advanced electronic harassment attacks

[Countermeasure and Detection Experiments](#), an e-booklet listing experiments performed to date attempting to reduce, stop, and show the existence of electronic assaults

[EEG-GSR](#) experiments, with plants, aim is to create a detector which is independent of signal types (classified undetectable so far)

[Electromagnetic signal detector](#), mentioned on [The Power Hour](#) by in-home microwave attack target Jesus Mendoza as the best indicator of the attack signals. (PLEASE read the caution note at the bottom of this page.)

[Perp Groups, Local](#), including revelations and successful stoppage by a target who is also an accomplished remote viewer

[PREPAREDNESS](#), without which, we won't survive to win this fight against organized stalking and electronic harassment, as the New World Order continues to stage artificial disasters

[Back to Menu](#)

## **Detection of neuro-electromagnetic harassment:**

[Advanced nature](#) of current-day electronic harassment weaponry affirmed by former USAF scientist Dr. Tom Bearden; targets are advised to consider Dr. Bearden's words carefully before spending money on conventional detection/jamming/shielding experiments

[Audio sensing](#) add-on unit to extend the usefulness of [Tri] Field meters so they can be used without the need to watch them. Can also be connected to coils with many turns (say, 100) directly, without the need of a meter

["Banging" noises](#) recorded in darkness by harassment target Norma Cross. Such noises have no visible source and are transmitted by very advanced technology, and are used to keep targets from falling asleep. The noises were also heard by Norma's son in an adjacent bedroom. [Alternate video file](#) for high speed connections

[Book review, Remote Viewing](#), by Tim Rifat. This book gives the history of Russian remote viewing and psychic manipulation, and contains points of interest to electronic harassment targets who wish to experiment with shielding, jamming, and detection of today's advanced electronic harassment signals

[Book review, Secret Life of Plants](#), by Peter Tomkins and Christopher Bird. Confirms the existence of biological signals which are NOT conventional electromagnetic, but operate at a performance level beyond that of as-taught-in-school signals, and which are like the current day mind/body weapon signals used on electronic harassment targets. Also describes possible countermeasure experiments.

[Byrd, Dr. Eldon](#), 2002 report of experiment to check for mechanical sound in the vicinity of the ears of voice to skull targets. Microphones used as sound pickups. This version lacks some of the equipment photos but does have the diagrams needed for understanding of the setup. The full report is on the Mind Justice web site: <http://www.dcn.davis.ca.us/~welsh>

[Book review, Electronic Projects from the Next Dimension](#), a practical book of experiments which might be useful in detecting some of the more advanced electronic harassment attacks

[Detection and Countermeasure Experiments](#), an e-booklet listing experiments performed to date attempting to reduce, stop, and show the existence of electronic assaults

"Directed Energy Weapon attack", video, analyzed by Harry Sweeney. The clip shows interference with a camcorder taping in the home of a electronic harassment target.

[EEG-GSR](#) experiments, with plants, aim is to create a detector which is independent of signal types (classified undetectable so far)

[Electromagnetic signal detector](#), mentioned on [The Power Hour](#) by in-home microwave attack target Jesus Mendoza as the best indicator of the attack signals. (PLEASE read the caution note at the bottom of this page.)

[Dr. Michael Persinger's findings](#) when a target, Qijia Cheng requested Dr. Persinger to look for electronic causes of effects reported by electronic assault targets

[Record](#) your 24-hour voice-to-skull harassment, suggested ways to try this

[Spectrum analyzers](#), and why we targets are wise to avoid spending large sums to have one

[U.S. Psychotronic Association](#), a group studying consciousness and advanced technologies - which is to say the type of studies which **in the hands of other, unethical researchers** have produced the electronic mind weapons from which we now suffer. Dr. Eldon Byrd, an **\*\* ethical \*\*** psychotronic researcher, is a member

[Voice to skull receiver?](#), Try this EVP (Electronic Voice Phenomena), a schematic diagram from [Handbook of Psychic Discoveries](#) by Sheila Ostrander and Lynn Schroeder. A possible detector for perpetrator voice to skull transmissions.

[Back to Menu](#)

## Disinformation

[Activism Tips](#), free, not copyrighted e-booklet, giving activism tips to targets. Includes warnings about disinformation. Written for targets, not the public.

[Information handling](#) or sharing, tips for all targets whether or not they are interested in activism. Targets, your choice of words is very important until this crime becomes widespread public knowledge.

[Rule by Secrecy](#), by Jim Marrs, book review of, a valuable reference showing how the mindset and impetus behind current day organized stalking and electronic harassment has come about

[Voice of America interview](#), Eleanor White, June 2002, an example of one style of disinformation by a communications professional

[Back to Menu](#)

## Effects of neuro-electromagnetic technology:

[A Closer Look](#), radio show, hosted by Michael Corbin, March 5, 2004 hours 2 and 3, Eleanor White as guest:

[Segment 1](#)

[Segment 2](#)

[Segment 3](#)

[Segment 4](#)

[Audio types](#), used by the perpetrators

["Banging" noises](#) recorded in darkness by harassment target Norma Cross. Such noises have no visible source and are transmitted by very advanced technology, and are used to keep

targets from falling asleep. The noises were also heard by Norma's son in an adjacent bedroom. [Alternate video file](#) for high speed connections

[Book review, Controlling the Human Mind](#), by Dr. Nick Begich

[Book review, Excalibur Briefing](#), by Lt. Col. Thomas E. Bearden, USAF (Ret), copyright 1978, revised and expanded 1988

[Book review, Psychic Discoveries](#), by Sheila Ostrander and Lynn Schroeder, a compilation of Russian psychic discoveries and devices which can perform psychic and advanced physical effects, very likely the forerunners of current day advanced electronic harassment weapons

[Book review, Remote Viewing](#), by Tim Rifat. This book gives the history of Russian remote viewing and psychic manipulation, and contains points of interest to electronic harassment targets who wish to experiment with shielding, jamming, and detection of today's advanced electronic harassment signals

[Cheryl Welsh on mind control symptoms](#), with matching documentation on each

[Book review, Secret Life of Plants](#), by Peter Tomkins and Christopher Bird. Confirms the existence of biological signals which are NOT conventional electromagnetic, but operate at a performance level beyond that of as-taught-in-school signals, and which are like the current day mind/body weapon signals used on electronic harassment targets. Also describes possible countermeasure experiments.

[Child crying](#) under electronic attack. Clip from [The Power Hour](#) from the March 3, 2004 show featuring electronic attack target [Mr. Jesus Mendoza](#), of Mission Texas

[Common effects](#) observed by neuro-electromagnetic device targetted people

["Directed Energy Weapon attack", video](#), analyzed by Harry Sweeney. The clip shows interference with a camcorder taping in the home of an electronic harassment target.

["Dream Machine"](#), utilizing hypnotic methods to produce desired dreams. Manipulation of dreams is very common among targets of advanced electronic attacks.

[Electromagnetic weapons video clips](#), CNN, circa 1985, scientists affirm viability

**Electronic attacks** on [Mr. Jesus Mendoza](#), of Mission, Texas, AND HIS SMALL CHILDREN, who is pursuing a civil suit against the U.S. Attorney General to cease and desist, as broadcast on <http://www.thepowerhour.com>, March 3, 2004:

[Segment 1](#)

[Segment 2](#)

[Segment 3](#)

[Segment 4](#)

[Segment 5](#)

[Hear Mendoza's daughter cry under attack](#)

[Hacking the nervous system](#), an article showing the intent of the U.S. armed forces to do so, and a good description of what we targets experience (it hurts!)

**Jesus Mendoza update**, on [The Power Hour](#), May 20, 2004:

[Segment 1](#)

**Jesus Mendoza update**, on [The Power Hour](#), August 27, 2004:

[Segment 1](#)

[Segment 2](#)

[Segment 3](#)

**Jesus Mendoza update**, on [The Power Hour](#), March 14, 2005:

[Segment \(36 min\)](#)

[Linda](#), a target of advanced electronic attacks on the body and nervous system, shows in this video clip some of the types of attack she experiences

[Dr. Michael Persinger's findings](#) when a target, Qijia Cheng requested Dr. Persinger to look for electronic causes of effects reported by electronic assault targets

[Microwave, high power, used on people in Europe](#), article by Dr. Reinhard Munzert. [Click here](#) if above link is broken

[Org@sm, electronic, forced](#), one of the effects experienced by psycho-electronic targets  
[Psychotechnology Research Institute](#) web site, a site about the work of Russian "Psychotechnologist" Dr. Igor Smirnov, who was asked by the U.S. Government to be a consultant at the Waco, Texas Branch Davidian massacre. This site advises psychocorrection "can be carried out with or without the person's agreement."

[Microwave Weapons, Gulf War](#), images showing use against Iraqi troops in 1991

[Sounds, smells, images sent to your brain](#) by way of ultrasound signals, says Sony Corporation

["TortureWare"](#), simulated image of electronic harassment perpetrator computer console screen

[Vibrations](#), one of the most difficult to explain (in mainstream scientific terms) of the attack types experienced by targets of electronic harassment and organized stalking

[Back to Menu](#)

## **Fakery and deception:**

[Audio types](#), used by the perpetrators

[bird.rm](#) or [bird.wma](#), FAKED bird calls, obviously electronic when heard live, which "follow" about one target in three as they go about their daily business

[Book review, Gaslighting](#), by Victor Santoro. Reads like a how-to manual for organized stalking perpetrators

[Changing memories](#), New York Times article, September 2000 - describes memory changing technology which DELIGHTS MKULTRA, organized stalking, electronic harassment, and all child sex abuse perpetrators!

[Credibility reviews](#) on selected information pieces relating to organized stalking and electronic harassment. Of possible interest to journalists.

[Disinformation, Voice of America interview](#), Eleanor White, June 2002, an example of one style of disinformation by a communications professional

[Faking visuals now a breeze](#), says Washington Post reporter William M. Arkin

[Hacking the nervous system](#), an article showing the intent of the U.S. armed forces to do so, and a good description of what we targets experience (it hurts!)

[Microwave, high power, used on people in Europe](#), article by Dr. Reinhard Munzert. [Click here](#) if above link is broken

[Rule by Secrecy](#), by Jim Marrs, book review of, a valuable reference showing how the mindset and impetus behind current day organized stalking and electronic harassment has come about

[Sounds, smells, images sent to your brain](#) by way of ultrasound signals, says Sony Corporation

[Thought reading](#), NASA's, electronic, for said silently to self thoughts, how it can be done. If that original link is broken, [click here](#).

[Thought Reading Now Possible](#), article from the San Francisco Chronicle, November 10, 2003, based on a New Orleans conference of neuroscientists

[Thought read/write](#) <http://www.us.net/signal/Archive/Oct01/decoding-oct.html>, article asserts it's doable

[Back to Menu](#)

## **Government, INDISPUTABLE crimes against citizens:**

[Book review, Bluebird](#), by Dr. Colin Ross, reviewed by Norma Cross

[Book review, Controlling the Human Mind](#), by Dr. Nick Begich

[Book review, Remote Viewing](#), by Tim Rifat. This book gives the history of Russian remote viewing and psychic manipulation, and contains points of interest to electronic harassment targets who wish to experiment with shielding, jamming, and detection of today's advanced electronic harassment signals

[Book review, Search for the Manchurian Candidate](#), by John Marks, an excellent (but limited by CIA's burning of records) easy to read history of MKULTRA, the program which gave birth to the present psycho-electronic involuntary experimentation program

[Book review, A Nation Betrayed](#), by MKULTRA survivor Carol Rutz. Fact-packed, recommended as a pocket/handbag reference for electronic harassment targets

[Book review, War at Home](#), Brian Glick, lawyer and former activist. A great debate-ender!

[CIA harassment](#), or, how the current psycho-electronic harassment regimen was born

**Electronic attacks** on [Mr. Jesus Mendoza](#), of Mission, Texas, AND HIS SMALL CHILDREN, who is pursuing a civil suit against the U.S. Attorney General to cease and desist, as broadcast on <http://www.thepowerhour.com>, March 3, 2004:

[Segment 1](#)

[Segment 2](#)

[Segment 3](#)

[Segment 4](#)

[Segment 5](#)

[Hear Mendoza's daughter cry under attack](#)

**Jesus Mendoza update**, on [The Power Hour](#), May 20, 2004:

[Segment 1](#)

**Jesus Mendoza update**, on [The Power Hour](#), August 27, 2004:

[Segment 1](#)

[Segment 2](#)

[Segment 3](#)

**Jesus Mendoza update**, on [The Power Hour](#), March 14, 2005:

[Segment \(36 min\)](#)

[FBI ex-agent Geral Sosbee](#) runs a campaign to expose FBI corruption, and includes on the page linked here electronic harassment relevant involuntary experimentation info

[Greenbaum speech](#), the inside story of mind control from the psychiatrist's perspective

[Implants, Brian Wronge case](#), demonstrating how even physicians who SAY they favour protecting human rights utterly cave in and refuse to help people with actual illegal implants

[Implants, Brian Wronge case](#), update on this case of shameful refusal by doctors to uphold basic human rights

[Intelligence activities](#), Church Committee's Final Report on, Book II, about effects on personal freedom, 1976

[Military inspections of a target's web site](#), a screen shot by Brent from his firewall program, probably a result of the USA PATRIOT Act and similar laws which are being used to destroy the U.S. Constitution

[M.I.N.D.](#), or Magnetic Integrated Neuron Duplicator, a device used on involuntary experiment subject John Ginter while an inmate in a California prison

[MKULTRA-era experiments](#), Bill Clinton apologizes for MKULTRA-era involuntary human torture by the U.S. government

[MKULTRA-like involuntary experimentation](#) leads to the deaths of 5 mental patients at Camp Mabry TX in 2001

[Back to Menu](#)

## **Government monitoring and control of communications:**

[Aerial Mind Control - The Threat to Civil Liberties](#), Judy Wall, Nexus magazine October-November 1999

[Book review, Remote Viewing](#), by Tim Rifat. This book gives the history of Russian remote viewing and psychic manipulation, and contains points of interest to electronic harassment targets who wish to experiment with shielding, jamming, and detection of today's advanced electronic harassment signals

[Brain Wave Fingerprinting](#), a writeup of a 60 Minutes show on this topic. If link broken, [click here](#) for the text (only) of that article

[ECHELON](#), a network of countries whose security agencies scan virtually all electronic communications looking for key words to eavesdrop on people and groups "under suspicion". Helps to establish a pattern of **motive** for the neuro- electromagnetic harassment problem.

[Military inspections of a target's web site](#), a screen shot by Brent from his firewall program, probably a result of the USA PATRIOT Act and similar laws which are being used to destroy the U.S. Constitution

[TEMPEST technology](#), or, how someone can read your PC screen from some distance from your home

[Back to Menu](#)

## **Government secret human experimentation:**

[Arlene Tyner: Part 1](#), of a series of 4 articles on mind control

[Arlene Tyner: Part 4](#), an investigative reporter's unbiased look at mind control and other government crimes

[Biological warfare testing](#) clearly shows the utter lack of care on part of government for experiment subjects

[Book review, Bluebird](#), by Dr. Colin Ross, reviewed by Norma Cross

[Book review, Controlling the Human Mind](#), by Dr. Nick Begich

[Book review, Excalibur Briefing](#), by Lt. Col. Thomas E. Bearden, USAF (Ret), copyright 1978, revised and expanded 1988

[Book review, A Nation Betrayed](#), by MKULTRA survivor Carol Rutz. Fact-packed, recommended as a pocket/handbag reference for electronic harassment targets

[Book review, Psychic Discoveries](#), by Sheila Ostrander and Lynn Schroeder, a compilation of Russian psychic discoveries and devices which can perform psychic and advanced physical effects, very likely the forerunners of current day advanced electronic harassment weapons

[Book review, Remote Viewing](#), by Tim Rifat. This book gives the history of Russian remote viewing and psychic manipulation, and contains points of interest to electronic harassment targets who wish to experiment with shielding, jamming, and detection of today's advanced electronic harassment signals

[Book review, Search for the Manchurian Candidate](#), by John Marks, an excellent (but limited by CIA's burning of records) easy to read history of MKULTRA, the program which gave birth to the present psycho-electronic involuntary experimentation program

[Mind Justice - UNIDIR Endorsement July 2002 Update](#), an excellent article about the state of the fight to expose and stop mind control (and electronic harassment)

[CIA harassment](#), or, how the current psycho-electronic harassment regimen was born

[Classified human experimentation](#), protection for subjects still lacking, MKzine article by Cheryl Welsh

[Classified weapons](#): Blanche Chavoustie's anomalous weapon effects, stemming from MKULTRA institutional kidnap research

[FBI ex-agent Geral Sosbee](#) runs a campaign to expose FBI corruption, and includes on the page linked here electronic harassment relevant involuntary experimentation info

[Greenbaum speech](#), the inside story of mind control from the psychiatrist's perspective

[Human experimentation, classified](#), protection for subjects still lacking at end of 2003, article by Cheryl Welsh

[M.I.N.D.](#), or Magnetic Integrated Neuron Duplicator, a device used on involuntary experiment subject John Ginter while an inmate in a California prison

[MKULTRA and historical mind weapons](#), a ten page well cited article by the www.wanttoknow.info group, based on three books on the topic. [Click here](#) if the above link is broken.

[MKULTRA-era experiments](#), Bill Clinton apologizes for MKULTRA-era involuntary human torture by the U.S. government

[MKULTRA-like involuntary experimentation](#) leads to the deaths of 5 mental patients at Camp Mabry TX in 2001

["Nessie", the writings of](#), as posted on the web site of the San Francisco Bay Guardian newspaper

[Physician from NIH \(US National Institutes of Health\)](#), anonymous but corroborated by Dr. Eldon Byrd, reveals that senior government medical personnel are not only aware of mind control and electronic harassment, but have experienced targetting as well, some fatally

["Psychotronic Golgotha"](#), a Russian book, partially translated, by N. I. Anisimov, 1999, courtesy Cheryl Welsh of [Mind Justice](#)

[Psychotronic War and the Security of Russia](#), by V.N Lopatin and V.D. Tsygankov Moscow, 1999, selected translations courtesy <http://www.dcn.davis.ca.us/~welsh>, Cheryl Welsh

[Secret human experiments, history of](#) ... If link doesn't work, [Click here](#)

[Back to Menu](#)

## **Implants (obsolete but still used by some):**

[Artificial vision for the blind](#), using brain implants, signals to which generate primitive images in the blind. Early form of the technology used to force visions on involuntary experimentees.

[Book review, Controlling the Human Mind](#), by Dr. Nick Begich

[Brain chip](#) lets stroke target 'talk' again, article from Toronto Star, Oct. 21, 1998

[Implants, Brian Wronge case](#), demonstrating how even physicians who SAY they favour protecting human rights utterly cave in and refuse to help people with actual illegal implants

[Implants, Brian Wronge case](#), update on this case of shameful refusal by doctors to uphold basic human rights

[Center for Neural Communication Technology](#), U.S. National Institutes of Health, lays to rest any doubts about the existence and intent of human electronic implantation

[Electromagnetic weapons video clips](#), CNN, circa 1985, scientists affirm viability

[Images, seen through cat's eyes](#), with photos, displays on screen and supports targets' claims that perpetrators can see through their eyes too

[Implants, human](#), for use with satellite tracking system, means and motive!

[Implants](#), New Mexico prison style, a 1999 proposal by NM Governor Gary Johnson, **which explicitly uses the phrase "we can insert microchips into people's brains and control their behavior"**

[Implants, Professor Warwick's](#) unclassified experiment demonstrates that on a first try, human implants work, and are predicted as likely to improve to the point of direct brain/nerve interaction

[Implantation backup article](#)

[Implants, "Telectrode"](#), for wireless monitoring of both physical and psychological parameters, AF contract

[Implants, U. of Albany](#), Albany Times-Union article about implant research in the late 1990s

[Monkey victims](#) of Dr. Jose Delgado, brain implant scientist. Monkeys in restraint with electric shocks being administered to electrodes in their brains. Demonstrates MKULTRA's utter disregard for life, pain, and suffering

[Delgado](#), Dr. Jose, October 2005 [Scientific American](#) article

[Satellite tracking system](#), for parolees, USA Today

[Back to Menu](#)

## **Mind reading/thought reading:**

[Artificial vision for the blind](#), using brain implants, signals to which generate primitive images in the blind. Early form of the technology used to force visions on involuntary experimentees.

[Brain \(eel\) controls robot](#),

original link <http://www.washingtonpost.com/wp-dyn/articles/A24800-2001Apr16.html>

[Brain reading from a distance](#), BBC news article. No implants, not even any contacts. Used in new "brain scanners" at airports to check for "criminal intent"

[Brain Wave Fingerprinting](#), a writeup of a 60 Minutes show on this topic. If link broken, [click here](#) for the text (only) of that article

[Book review, Remote Viewing](#), by Tim Rifat. This book gives the history of Russian remote viewing and psychic manipulation, and contains points of interest to electronic harassment targets who wish to experiment with shielding, jamming, and detection of today's advanced electronic harassment signals

[Book review, Remote Viewing Secrets](#), by Joseph McMoneagle, former remote viewer for the U.S. Army STARGATE programme

[Eye's visions](#) read and displayed electronically

[Images, seen through cat's eyes](#), with photos, displays on screen and supports targets' claims that perpetrators can see through their eyes too

[Medical Technology Updates](#), a page for collecting excerpts from articles showing that UNclassified medical technology is approaching the mind-weapon capabilities of the equipment used by today's mind control/electronic harassment perpetrators

[M.I.N.D.](#), or Magnetic Integrated Neuron Duplicator, a device used on involuntary experiment subject John Ginter while an inmate in a California prison

[Book review, Secret Life of Plants](#), by Peter Tomkins and Christopher Bird. Confirms the existence of biological signals which are NOT conventional electromagnetic, but operate at a performance level beyond that of as-taught-in-school signals, and which are like the current day mind/body weapon signals used on electronic harassment targets. Also describes possible countermeasure experiments.

[Mind Drive](#), an example of a set of computer games in which control of the game is picked up from the mind of the player

[Mind switch](#), one more device pointing towards the fact that classified science has already accomplished sub-vocal thought reading

[Neuromarketing](#), a line of research aimed at using functional MRI technology to find ways to influence people to make purchase decisions. [Click here](#) if above link is broken.

[Rats Control Robots](#), an article that pretty well shatters arguments that electronic thought reading isn't possible

[Thought controlled robot video](#), unclassified (not secret,) strongly hinting that classified (secret) thought reading is probably already available. [High speed version](#), better viewing quality, for those so equipped.

[Thought reading for disabled](#), Sept. 2001 article

[Thought reading](#), NASA's, electronic, for said silently to self thoughts, how it can be done. If that original link is broken, [click here](#).

[Thought Reading Now Possible](#), article from the San Francisco Chronicle, November 10, 2003, based on a New Orleans conference of neuroscientists

**Thought reading**, report from Stanford Research Institute shows process similar to "you-talk-it-types" computer speech recognition but based on brain electrical activity instead of voice:

[SRI as HTML](#)

(The HTML version loads fast but has scanning errors)

[SRI as PDF](#)

(The PDF version is 2.9 megs but is as the original)

[Thought reading demonstrated](#), at Texas Instruments seminar, March 12, 2008 article from New Scientist. Silent nerve pulses from vocal cords converted to speech by commercial device developed by Ambient Corporation. This is "sub vocal" thought reading, where the device user says words silently to self.

[Thought reading unclassified equipment](#)

<http://www.usnews.com/usnews/issue/000103/norseen.htm>, **Thought reading**, it's being worked on by "neuroengineers"

[Thought read/write](#) <http://www.us.net/signal/Archive/Oct01/decoding-oct.html>, article asserts it's doable

[Back to Menu](#)

## **Patents:**

[Apparatus and Method for Remotely Monitoring and Altering Brain Waves](#), U.S. Patent 3,951,134 (1974); this description matches targetted individual experience closely

[Book review, Controlling the Human Mind](#), by Dr. Nick Begich

[Hemi-Sync](#), a company selling specially prepared music recordings which use sound to entrain the brain in to relaxation. (Force-awake rhythms also possible.) [Jeff Rense \(Sightings\)](#)

[Mind Control Patent Page](#). WOW!

See also [US Patent #5,356,368](#)

[Patents related to e-weapon technology](#)

[Sounds, smells, images sent to your brain](#) by way of ultrasound signals, says Sony Corporation

[Stocklin patent #4,858,612](#), multi-channel microwave voice to skull device

[Back to Menu](#)

## **Psychotronic weapons and programmes, existence of:**

[Aerial Mind Control - The Threat to Civil Liberties](#), Judy Wall, Nexus magazine October-November 1999

[Arlene Tyner: Part 1](#), of a series of 4 articles on mind control

[Arlene Tyner: Part 4](#), an investigative reporter's unbiased look at mind control and other government crimes

[Army \(US\) War College article](#), excerpted, demonstrating the military's clear interest in e-weapons. The reader should remember that writing an unclassified article like this one available to the military public is tantamount to admitting they possess such weapons at the classified level.

[Book review, Controlling the Human Mind](#), by Dr. Nick Begich

[Book review, Psychic Discoveries](#), by Sheila Ostrander and Lynn Schroeder, a compilation of Russian psychic discoveries and devices which can perform psychic and advanced physical effects, very likely the forerunners of current day advanced electronic harassment weapons

[Book review, Remote Viewing](#), by Tim Rifat. This book gives the history of Russian remote viewing and psychic manipulation, and contains points of interest to electronic harassment targets who wish to experiment with shielding, jamming, and detection of today's advanced electronic harassment signals

[British Parliament Member](#) Dr. Caroline Lucas firmly acknowledges the reality of electronic antipersonnel weapons

Cheryl Welsh article: [2003 Survey of Evidence Regarding Mind Control Experiments](#), an excellent overview of evidence relating to mind control programs world wide, by Cheryl, who is a very competent researcher

[Commercial and unclassified technologies](#) which are capable of generating some of the observed electronic harassment effects (long)

[As separate pages: http://www.raven1.net/p00.htm](#)

[Congress Asleep at the Switch](#), an article from The Phoenix Letter, Vol. 14, No. 8

[Doctors who know](#), a log sheet of cases where doctors have admitted to targets that they know organized stalking and electronic harassment crimes are entirely real

[Electromagnetic Weapons, Anti-Personnel, Some Aspects of](#), a synopsis prepared for a 1996 symposium of the International Red Cross. If the above link is broken, [click here](#)

[Electromagnetics and the Mind](#), by Greg Harrison

[FBI ex-agent Geral Sosbee](#) runs a campaign to expose FBI corruption, and includes on the page linked here electronic harassment relevant involuntary experimentation info

[Government involvement in e-weapons](#)

[Greenbaum speech](#), the inside story of mind control from the psychiatrist's perspective

[Journal of Psycho-Social Studies](#), an Internet journal, an article titled "On the Need for New Criteria of Diagnosis of Psychosis in the Light of Mind Invasive Technology" by Carole Smith. This article references work by Cheryl Welsh, founder of Mind Justice and is VERY welcome to those who have been targetted by such technology for decades! [Click here](#) if above link is broken.

[Changing memories](#), New York Times article, September 2000 - describes memory changing technology which DELIGHTS MKULTRA, organized stalking, electronic harassment, and all child sex abuse perpetrators!

[Microwave, high power, used on people in Europe](#), article by Dr. Reinhard Munzert. [Click here](#) if above link is broken

[Microwave Technology And Its Use Against Humanity](#), a collection of articles from Orvotron, The Bimonthly Newsletter

[M.I.N.D.](#), or Magnetic Integrated Neuron Duplicator, a device used on involuntary experiment subject John Ginter while an inmate in a California prison

[Mind Control and the Secret State](#), article by Daniel Brandt

[MKULTRA-era experiments](#), Bill Clinton apologizes for MKULTRA-era involuntary human torture by the U.S. government

[Mojimir Babacek: Article](#), "International Movement for the Ban of Manipulation of Human Nervous System by Technical Means", an overview of the world-wide effort to expose and stop electronic harassment and mind control

[Monkey victims](#) of Dr. Jose Delgado, brain implant scientist. Monkeys in restraint with electric shocks being administered to electrodes in their brains. Illustrates MKULTRA's utter disregard for life, pain, and suffering

[Non-Lethal Weapons Policy](#), military vs. law enforcement

[Physician from NIH \(US National Institutes of Health\)](#), anonymous but corroborated by Dr. Eldon Byrd, reveals that senior government medical personnel are not only aware of mind control, but have experienced targeting as well, some fatally

[Police who know](#), a log sheet of cases where (brave) police officers have admitted to targets that they know organized stalking and electronic harassment crimes are entirely real

[Psychotechnology Research Institute](#) web site, a site about the work of Russian "Psychotechnologist" Dr. Igor Smirnov, who was asked by the U.S. Government to be a consultant at the Waco, Texas Branch Davidian massacre. This site advises psychocorrection "can be carried out with or without the person's agreement."

["Psychotronic Golgotha"](#), Russian book, partially translated, by N. I. Anisimov, 1999, courtesy Cheryl Welsh of [Mind Justice](#)

[Psychotronic War and the Security of Russia](#), by V.N Lopatin and V.D. Tsygankov Moscow, 1999, selected translations courtesy <http://www.dcn.davis.ca.us/~welsh>, Cheryl Welsh

[Psychotronics Weapons Letter to Senate Committee](#), Julianne McKinney's letter to chairman John Glenn

[Scalar weapons](#), an article describing the probable characteristics of [scalar](#) weapons

[Sounds, smells, images sent to your brain](#) by way of ultrasound signals, says Sony Corporation

[Thought reading](#), NASA's, electronic, for said silently to self thoughts, how it can be done. If that original link is broken, [click here](#).

[Thought Reading Now Possible](#), article from the San Francisco Chronicle, November 10, 2003, based on a New Orleans conference of neuroscientists

[Thought read/write](#) <http://www.us.net/signal/Archive/Oct01/decoding-oct.html>, article asserts it's doable

["U.S. Electromagnetic Weapons and Human Rights"](#), a Project Censored report by (professor) Peter Phillips, Lew Brown, and Bridget Thornton, Sonoma State University, December 2006

[U.S. House of Representatives Bill 2977](#) recognizes psychotronic mind control as a problem

[U.S. Psychotronic Association](#), a group studying consciousness and advanced technologies - which is to say the type of studies which **in the hands of other, unethical researchers** have produced the electronic mind weapons from which we now suffer. Dr. Eldon Byrd, an **\*\* ethical \*\*** psychotronic researcher, is a member

[Vibrations](#), one of the most difficult to explain (in mainstream scientific terms) of the attack types experienced by targets of electronic harassment and organized stalking

[Back to Menu](#)

## Radio frequency (microwave and voice-to-skull) weapons and how they work

**ANTI-V2S (voice to skull) MP3 audio tracks.** RIGHT click one or the other links below to download. Then load from your PC to your MP3 player to take anti-V2S multi-radio show masking with you in the community or at work:

[6 radios, 64 kbps, stereo](#)

[6 radios, 32 kbps, mono](#)

[Multiple voices, not radio](#)

\*\* Please save a COPY to your hard drive for repeated playing.

[Biological amplification](#), a biological response to radio signals which makes pulsed microwave "voice to skull" work, an excerpt from a book edited by Dr. James C. Lin, University of Illinois

[Book review, Controlling the Human Mind](#), by Dr. Nick Begich

[Book review, Excalibur Briefing](#), by Lt. Col. Thomas E. Bearden, USAF (Ret), copyright 1978, revised and expanded 1988

[Brain reading from a distance](#), BBC news article. No implants, not even any contacts. Used in new "brain scanners" at airports to check for "criminal intent"

[Commercial and unclassified technologies](#) which are capable of generating some of the observed electronic harassment effects (long)

[As separate pages: http://www.raven1.net/p00.htm](#)

[Electromagnetic signal detector](#), mentioned on [The Power Hour](#) by in-home microwave attack target Jesus Mendoza as the best indicator of the attack signals. (PLEASE read the caution note at the bottom of this page.)

[Frey, Allen, paper showing early e-weapons principle](#)

[Microwave auditory response references](#), which have been studied for use as bird clearing radar signals

[Microwave bioeffect references](#), a researcher's smorgasbord

["Microwave cannon" plans](#), advertised for years by [Information Unlimited](#). Demonstrates the ease with which microwave weapons can be had by the public.

[Microwave hearing threshold](#) for human beings

[Microwave, high power, used on people in Europe](#), article by Dr. Reinhard Munzert. [Click here](#) if above link is broken

[Microwave News article excerpts](#)

[Microwave Oven](#) modification to use as a voice to skull transmitter (preliminary)

[Microwave "Ray Gun"](#), USMC, at long last the U.S. government has stopped denying microwave weapons exist!

[Microwave Weapons, Gulf War](#), images showing use against Iraqi troops in 1991

**[NASA SAYS VOICE TO SKULL WORKS!](#)**

[Neuron's tiny current requirements for triggering](#)

[Organized Stalking: A Target's View](#), a free, not copyrighted e-booklet, telling the organized stalking and electronic harassment story in a simple format suitable for people who know nothing about the subject

[Proven Technologies](#), a simple summary of the proven beyond all doubt and readily available through wall electronic harassment weapons, in simple language suitable for non-targets

[Radio frequency control of DNA](#), an MIT Tech Talk article

[Radio Signals vs. Nerve Cells](#), an explanation of how pulsed radio signals reach into our nervous systems

[Scalar weapons](#), an article describing the probable characteristics of [scalar](#) weapons

[Signal details for Frey-type voice-to-skull transmitter](#)

[Sharks' use of neuro-magnetic fields of prey](#) proves that the surveillance we experience is not only possible but has been done for millions of years by sharks

[Tech Talk](#), a booklet for targets about technology jargon, and technology concepts as relating to electronic harassment

[Vehicle Stopper](#), electromagnetic, calls for design submissions by US National Institute of Justice (Why bother? They already exist in classified circles.)

["Voice", "God's"](#), article of Feb. 5, 2000, Sydney Morning Herald, speaking about USAF's use of "pulses" to create a voice within the skull of a target  
<http://www.geocities.com/nwbotanicals1/oak/synthtele.html> ...Voice to skull, aka Synthetic Telepathy, by Dr. Richard Alan Miller; Dr. Miller's article is an excellent 39-page overview of the technology covered on this site as well. A good place for a new visitor to start when the interest is in the technology.

[Voice to skull article](#) by Richard Gall, reports successful transmission of WORDS

[Voice to skull \(V2S/V2k\)](#), a commercial version dubbed MEDUSA - "Mob Excess Deterrent Using Silent Audio", proposed for commercial development for military and police use, ABC news. If that ABC link is down, [click here](#) for a backup copy. July 2008.

[Voice to skull article](#), "American Psychologist" journal, March 1975, demonstrating that voice to skull (V2S) works, and how it works.

[Voice to skull project](#) for the US Department of Defence, by the US Environmental Research and Quality Assurance agency

[Voice to skull SPEECH PROCESSOR](#), browser viewable version

[Voice to skull SPEECH PROCESSOR](#), EDITable Corel Draw (3.0) version, RIGHT CLICK to DOWNLOAD

[Voice to Skull \("V2K"\)](#) reference, U.S. Army, direct address:

## **Remote physical manipulation (selected targets):**

[Acoustic levitation](#) starting point for our "power researcher" members

["Banging" noises](#) recorded in darkness by harassment target Norma Cross. Such noises have no visible source and are transmitted by very advanced technology, and are used to keep targets from falling asleep. The noises were also heard by Norma's son in an adjacent bedroom. [Alternate video file](#) for high speed connections

[Book review, Psychic Discoveries](#), by Sheila Ostrander and Lynn Schroeder, a compilation of Russian psychic discoveries and devices which can perform psychic and advanced physical effects, very likely the forerunners of current day advanced electronic harassment weapons

[IEEE](#) - Institute of Electrical and Electronic Engineers takes serious notice in 1996 of Finnish researcher's anti-gravity effect

[Levitation](#), using diamagnetism of living things, as demonstrated on the CBS Evening News and CNN in April 1997, as reported in Science News Dec. 6, 1997 issue, vol. 152

[Vibrations](#), one of the most difficult to explain (in mainstream scientific terms) of the attack types experienced by targets of electronic harassment and organized stalking

[Back to Menu](#)

## **Russian mind control:**

Cheryl Welsh article: [2003 Survey of Evidence Regarding Mind Control Experiments](#), an excellent overview of evidence relating to mind control programs world wide, by Cheryl, who is a very competent researcher

[Book review, Psychic Discoveries](#), by Sheila Ostrander and Lynn Schroeder, a compilation of Russian psychic discoveries and devices which can perform psychic and advanced physical effects, very likely the forerunners of current day advanced electronic harassment weapons

[Psychotechnology Research Institute](#) web site, a site about the work of Russian "Psychotechnologist" Dr. Igor Smirnov, who was asked by the U.S. Government to be a consultant at the Waco, Texas Branch Davidian massacre. This site advises psychocorrection "can be carried out with or without the person's agreement."

["Psychotronic Golgotha"](#), Russian book, partially translated, by N. I. Anisimov, 1999, courtesy Cheryl Welsh of [Mind Justice](#)

[Psychotronic War and the Security of Russia](#), by V.N Lopatin and V.D. Tsygankov Moscow, 1999, selected translations courtesy <http://www.dcn.davis.ca.us/~welsh>, Cheryl Welsh

[Book review, Remote Viewing](#), by Tim Rifat. This book gives the history of Russian remote viewing and psychic manipulation, and contains points of interest to electronic harassment targets who wish to experiment with shielding, jamming, and detection of today's advanced electronic harassment signals

[Russian human rights group](#) appeals for controls on psychotronic weapons

[Russian law "About Weapons"](#), Article 6 of which refers to some of the technologies capable of use as "mind weapons" or "psychotronic weapons"

[Russian magazine article](#), courtesy Cheryl Welsh, with testimonial on the lives of Russian mind control targets

[Soviets' microwave research](#) into mind-altering use of microwave equipment released by US DIA in 1976

[Russian psychotronics video](#), shown in 1998 on the German ZDF network, dialogue translated here. Includes descriptions by Dr. Igor Smirnov, who was invited by the U.S. to intervene at the Waco Branch Davidian standoff.

[Russian translations](#), fragments as they are circulated, initiated by Cheryl Welsh and Mojimir Babacek

[Back to Menu](#)

## **"Silent sound", used with success in Gulf War, VERY likely the prime hypnotic technique carried via other voice to skull transmission methods:**

[Book review, Controlling the Human Mind](#), by Dr. Nick Begich

[Psychotechnology Research Institute](#) web site, a site about the work of Russian "Psychotechnologist" Dr. Igor Smirnov, who was asked by the U.S. Government to be a consultant at the Waco, Texas Branch Davidian massacre. This site advises psychocorrection "can be carried out with or without the person's agreement."

[Silent infrasound weapon](#) sufficient to shake up a section of the city of Marseille, France. [Click here](#) if above link is broken.

["Silent Sound", Altered States Ltd version](#), a New Zealand supplier of "learning" tapes that are obviously "silent sound hypnosis" tapes, using the "voice-FM" technology

[Silent Sound demo device](#), COMMERCIAL version, from Future Horizons, available as of January 2004. [Click here](#) if the Future Horizons link above is broken. Do a Control-F text find for silent sound to scroll down to the device listing.

["Silent Sound"](#), how hypnosis (and other effects) may be transmitted without the target being aware using voice-FM, with or without microwave to carry the signals over distance

["Silent Sound"](#), one of the US military's UNclassified thought-influencing technologies, used in the Persian Gulf War

["Silent Sound"](#) or "Silent Sound Spread Spectrum" or "SSSS" or "SQUAD" - one of the US military's classified thought-influencing technologies, used in the Persian Gulf War

["Silent Sound"](#), the LOWERY patent, #5,159,703

[Sounds, smells, images sent to your brain](#) by way of ultrasound signals, says Sony Corporation

[Back to Menu](#)

[Through-clothing radar](#), which can also penetrate non-conductive wall materials, a demo photo from [Safe-View](#)'s millimeter wave radar system for airports and law enforcement

### **Through-wall devices, adaptable for stalking and covert observation:**

[Book review, Psychic Discoveries](#), by Sheila Ostrander and Lynn Schroeder, a compilation of Russian psychic discoveries and devices which can perform psychic and advanced physical effects, very likely the forerunners of current day advanced electronic harassment weapons

[Book review, Remote Viewing](#), by Tim Rifat. This book gives the history of Russian remote viewing and psychic manipulation, and contains points of interest to electronic harassment targets who wish to experiment with shielding, jamming, and detection of today's advanced electronic harassment signals

[Book review, Secret Life of Plants](#), by Peter Tomkins and Christopher Bird. Confirms the existence of biological signals which are NOT conventional electromagnetic, but operate at a performance level beyond that of as-taught-in-school signals, and which are like the current day mind/body weapon signals used on electronic harassment targets. Also describes possible countermeasure experiments.

[Brain reading from a distance](#), BBC news article. No implants, not even any contacts. Used in new "brain scanners" at airports to check for "criminal intent"

[Heartbeat detector](#), LADS, or Life Assessment Detector System, a product of [VSE Corporation](#), which can detect the human heartbeat through non- or partially-conductive substances like snow or rock, at distances up to 135 feet.

[Microwave, high power, used on people in Europe](#), article by Dr. Reinhard Munzert. [Click here](#) if above link is broken

[Organized Stalking: A Target's View](#), a free, not copyrighted e-booklet, telling the organized stalking and electronic harassment story in a simple format suitable for people who know nothing about the subject

[Radar Flashlight](#), the actual device as displayed at <http://www.nlectc.org>

[Radar Flashlight](#) for through-the-wall detection of humans, Georgia Tech, developers

[Tactical through wall radar](#), Xaver 800 sales video, January 2010.

[Tactical through wall radar](#), BACKUP COPY, Xaver 800 sales video, January 2010.

[TEMPEST technology](#), or, how someone can read your PC screen from some distance from your home

[Through-the-wall radar](#) article from 1995 Popular Mechanics, confirms this equipment has existed for some time

[Through-the-wall radar](#), Millivision Corp., Northampton MA, current manufacturer of passive millimeter wave radar

[Through-the-wall radar](#), National Law Enforcement and Corrections Technology Center (National Institute of Justice, NIJ), a through the wall tracking/locating device for law enforcement

[Through-the-wall radar](#), Patriot Scientific Corp., manufacturer of ground penetration radar, shows how penetration of even steel studded walls can be done using single cycle pulses

[Through-the-wall radar](#), site of the Safe-View company which appears to continue the work started by Millivision Corp.

[Back to Menu](#)

### **Unclassified and commercially available MC-capable devices:**

[American Reporter 'zine](#), publishes article by Eleanor White. [Special thanks](#) to Joe Shea, Editor. Joe has experienced some harassment as a result.

[Book review, Controlling the Human Mind](#), by Dr. Nick Begich

[Brain \(eel\) controls robot](#), original link <http://www.washingtonpost.com/wp-dyn/articles/A24800-2001Apr16.html>

[Brain reading from a distance](#), BBC news article. No implants, not even any contacts. Used in new "brain scanners" at airports to check for "criminal intent"

[Commercial and unclassified technologies](#) which are capable of generating some of the observed electronic harassment effects (long)

[As separate pages: http://www.raven1.net/p00.htm](#)

[Electromagnetic Weapons, Anti-Personnel, Some Aspects of](#), a synopsis prepared for a 1996 symposium of the International Red Cross. If the above link is broken, [click here](#)

[Infrasound weapon](#) sufficient to shake up a section of the city of Marseille, France. [Click here](#) if above link is broken.

[LIDA machine](#), a Soviet device which demonstrates the potentially good uses for the technology which is used to torment us involuntary experimentees over the past couple of decades

[Medical Technology Updates](#), a page for collecting excerpts from articles showing that UNclassified medical technology is approaching the mind-weapon capabilities of the equipment used by today's mind control/electronic harassment perpetrators

[MEDUSA](#), "Mob Excess Deterrent Using Silent Audio", microwave voice to skull (V2S/V2K) proposed for commercial development for military and police use, ABC news. If that ABC link is down, [click here](#) for a backup copy. July 2008.

[Changing memories](#), New York Times article, September 2000 - describes memory changing technology which DELIGHTS MKULTRA, organized stalking, electronic harassment, and all child sex abuse perpetrators!

[Microwave, high power, used on people in Europe](#), article by Dr. Reinhard Munzert. [Click here](#) if above link is broken

[Microwave News article excerpts](#)

[Microwave Oven](#) modification to use as a voice to skull transmitter (preliminary)

[Mind Drive](#), an example of a set of computer games in which control of the game is picked up from the mind of the player

[Neuromarketing](#), a line of research aimed at using functional MRI technology to find ways to influence people to make purchase decisions. [Click here](#) if above link is broken.

[Radio frequency control of DNA](#), an MIT Tech Talk article

[Sounds, smells, images sent to your brain](#) by way of ultrasound signals, says Sony Corporation

[Tactical through wall radar](#), Xaver 800 sales video, January 2010.

[Tactical through wall radar](#), BACKUP COPY, Xaver 800 sales video, January 2010.

[Thought reading demonstrated](#), at Texas Instruments seminar, March 12, 2008 article from New Scientist. Silent nerve pulses from vocal cords converted to speech by commercial device developed by Ambient Corporation. This is "sub vocal" thought reading, where the device user says words silently to self.

[Unclassified technologies used in e-weapons](#)

**[VOICE TO SKULL WORKED IN 1974!](#)**

[Voice to skull \(V2S/V2k\)](#), a commercial version dubbed MEDUSA - "Mob Excess Deterrent Using Silent Audio", proposed for commercial development for military and police use, ABC news. If that ABC link is down, [click here](#) for a backup copy. July 2008.

[Back to MenuCoping for OS/EH Targets:](#)

[Coping blog](#), a source of suggestions for coping in addition to the "Coping" booklet below

["Coping"](#), an e-booklet about coping with organized stalking and electronic harassment

["Earthworm Rescue"](#), a feel good activity for organized stalking and electronic harassment targets

["Information Handling"](#), an e-booklet to help OS/EH targets handle the flood of information about this crime

["Local Group Presentations"](#), an e-booklet about forming local OS/EH target groups for purposes of making presentations to local agencies about this crime

["Making Friends With Squirrels"](#), a feel good activity for OS/EH targets

["Organized Stalking"](#), an e-booklet specifically designed for the public about the crime of OS/EH

["Organized Stalking"](#), an e-booklet specifically designed for the public about the crime of OS \*\*ONLY\*\*, this may be useful in special circumstances

["Tech Talk"](#), an e-booklet to assist targets with technology terms and concepts related to through-wall electronic weaponry

[Back to Menu](#)

## **Court Cases:**

[Bonacci case:](#), mind control victim awarded \$1 million (ritual abuse case - same mentality as neuro-electromagnetic)

[The Burzynski Breakthrough](#), a book by Thomas Elias demonstrating how an exceptionally efficient cancer cure has been covered up by the U.S. Government for more than a decade. Shows that government is, contrary to popular opinion, capable of covering up very important news and brutally harassing American citizens.

[CIA tortures involuntary test subjects](#), successful Canadian court case PROVES BEYOND DOUBT

[Court recognizes electronic harassment](#), the case of James Walbert, Sedgwick County, Kansas, U.S.A. Scans of court documents

**Electronic attacks** on [Mr. Jesus Mendoza](#), of Mission, Texas, AND HIS SMALL CHILDREN, who is pursuing a civil suit against the U.S. Attorney General to cease and desist, as broadcast on <http://www.thepowerhour.com>, March 3, 2004:

[Segment 1](#)

[Segment 2](#)

[Segment 3](#)

[Segment 4](#)

[Segment 5](#)

[Hear Mendoza's daughter cry under attack](#)

**Jesus Mendoza update**, on [The Power Hour](#), May 20, 2004:

[Segment 1](#)

**Jesus Mendoza update**, on [The Power Hour](#), August 27, 2004:

[Segment 1](#)

[Segment 2](#)

[Segment 3](#)

**Jesus Mendoza update**, on [The Power Hour](#), March 14, 2005:

[Segment \(36 min\)](#)

[FBI ex-agent Geral Sosbee](#) runs a campaign to expose FBI corruption, and includes information about his attempts to take his case to court

[Justice, Getting, in an Unjust System](#), a transcript of a speech by Jeanette Westbrook at the 1999 Ritual Abuse/Mind Control conference of the SMARTNEWS group. Original link: <http://members.aol.com/smartnews/jw99.html>

["Group Stalking, Just Like"](#), a news video from KIRO TV, Snohomish County, Washington State, posted February 2010. The tactics used by the stalker fit very well with the experiences of group stalking targets. The stalker refused to discuss WHY she committed the crimes. In another similar case a few years earlier, another stalker fitting the M.O. of group stalking refused to discuss the reasons for his crimes. One can guess what might happen if a group stalking perpetrator made a public statement about the operations of their group.

[Pedophilia, world epidemic](#), a mainstream article showing how major crimes are covered up by way of infiltration of criminals leading double lives. Demonstrates how organized stalking and electronic harassment can be rampant yet not talked about in the media, and not be prosecutable.

[Psychiatric drugging, forced, in New York State](#), Nazi style "list" of people deemed as only PROBABLE forced drugging candidates, being quietly compiled without the media reporting what is happening. First in the Soviet Union, now in the West, psychiatry has become the most powerful branch of law enforcement. Once "convicted" by psychiatrists, you have no trial, no defence. You will be forced by visiting medication enforcement teams in your own home to take brain damaging drugs. [Click here](#) if the above link is broken.

[Back to Menu](#)

## **Doctors (and other professionals) NEM-target-friendly:**

[ACHES-MC video letter to Pres. Clinton and Canadian Prime Minister Jean Chretien](#). This video includes individual testimonials by mind control victims, both MKULTRA-era and current day organized stalking and electronic harassment targets, and professionals who have provided help to them. To keep the bandwidth down so all PCs can view this video, quality has been sacrificed. But the information carried in the sound track is clear.

[Arlene Tyner: Part 1](#), of a series of 4 articles on mind control

[Arlene Tyner: Part 4](#), an investigative reporter's unbiased look at mind control and other government crimes

[Book review, Bluebird](#), by Dr. Colin Ross, reviewed by Norma Cross

[Book review, Controlling the Human Mind](#), by Dr. Nick Begich

[Book review, Psychology of Stalking](#), by Sheryll Thompson, a psychotherapist with a real grasp of multi (organized) stalking.

[Breggin, Dr. Peter R.'s](#) psychiatric crime site - must reading if you are under psychiatric treatment or are thinking about consulting psychiatry, the most powerful arm of law enforcement, used routinely to discredit whistle blowers and protesters. The Soviet use of psychiatry to suppress dissent is in full blown use here in North America. [Here](#) is the May 2004 cover page in case the above link above doesn't work. May give you some clues for further web searching.

[British Parliament Member](#) Dr. Caroline Lucas firmly acknowledges the reality of electronic antipersonnel weapons

[Doctors who know](#), a log sheet of cases where doctors have admitted to targets that they know organized stalking and electronic harassment crimes are entirely real

[Greenbaum speech](#), the inside story of mind control from the psychiatrist's perspective

**Goliszek, Dr. Andrew**, on [The Power Hour](#), February 13, 2004. Dr. Goliszek is a mainstream bioscientist and in this appearance he speaks about the revelations in his well-researched book [In The Name of Science](#) about highly unethical and outright criminal human experimentation by the United States government throughout the Cold War Era. Dr. Goliszek's research clearly sets the stage for the organized stalking and electronic harassment crimes listed on this web site and others:

[Segment 1](#)

[Segment 2](#)

[Segment 3](#)

[Physician from NIH \(US National Institutes of Health\)](#), anonymous but corroborated by Dr. Eldon Byrd, reveals that senior government medical personnel are not only aware of mind control, but have experienced targetting as well, some fatally

[Rauni Leena Kilde, MD](#), the brave former chief medical officer of Finland, tells it like it is on global mind control, organized stalking, and electronic harassment

[Dr. Michael Persinger's findings](#) when a target, Qijia Cheng requested Dr. Persinger to look for electronic causes of effects reported by electronic assault targets

[Mind control seminar](#), April 2005. Print this out if you are or intend to see a doctor or public official who is likely to deny mind control exists. Note: All lecturers and writers in the field of mind control are to some extent controversial, so don't depend on this bulletin to totally vindicate your claims. Instead, read (and print) material on MKULTRA, COINTELPRO, and [organized stalking](#) as well.

[Organized stalker personality type](#), as described well by psychiatrist Debra A. Pinals, MD, in her book on single stalking. Clearly, this personality type exists in both the single and organized stalking arenas.

[Ross, Colin, Dr., psychiatrist](#), who has carefully investigated alleged CIA-MKULTRA atrocities and is now satisfied they did happen

[Back to Menu](#)

## **Government actions, pro and con:**

[Aerial Mind Control - The Threat to Civil Liberties](#), Judy Wall, Nexus magazine October-November 1999

**Alex Constantine on The Power Hour**, April 1, 2004. Alex is an author who has researched and written extensively on mind control. This particular show covered the topic of government surveillance and harassment of rock music stars. These performers wield great influence over many of their fans, and it is this influence that gets them into trouble at times with the security agencies. This harassment clearly demonstrates that current-day government does engage in criminal behaviour, as did their [COINTELPRO](#) activity:

[Segment 1](#)

[Segment 2](#)

[Segment 3](#)

[Segment 4](#)

[Segment 5](#)

[Biological warfare testing](#) clearly shows the utter lack of care on part of government for experiment subjects

[Book review, Bluebird](#), by Dr. Colin Ross, reviewed by Norma Cross

[Book review, Controlling the Human Mind](#), by Dr. Nick Begich

[Book review, Psychic Discoveries](#), by Sheila Ostrander and Lynn Schroeder, a compilation of Russian psychic discoveries and devices which can perform psychic and advanced physical effects, very likely the forerunners of current day advanced electronic harassment weapons

[Book review, Psychology of Stalking](#), by Sheryll Thompson, a psychotherapist with a real grasp of multi (organized) stalking.

[Book review, Terrorist Stalking in America](#), by David Lawson. A stunning expose of the growing problem of criminal stalking groups, which he calls "extremist groups" and "cause stalkers". This book reveals what happens behind the scenes when organized stalking targets report "street theater". The author reports confirming this problem exists with police. See also [this review](#) of one of the books the author uses as his reference for assigning blame for the existence of the criminal stalking groups.

Cheryl Welsh article: [2003 Survey of Evidence Regarding Mind Control Experiments](#), an excellent overview of evidence relating to mind control programs world wide, by Cheryl, who is a very competent researcher

[Child crying](#) under electronic attack. Clip from [The Power Hour](#) from the March 3, 2004 show featuring electronic attack target [Mr. Jesus Mendoza](#), of Mission Texas

[CHILDREN, Mind Control on](#), an article by distinguished investigative reporter Jon Rappoport. This is where the hidden "inner circle brutality" of government leaders in Western countries finally comes to light

[CIA harassment](#), or, how the current psycho-electronic harassment regimen was born

[Classified human experimentation](#), protection for subjects still lacking, MKzine article by Cheryl Welsh

**COINTELPRO on [The Power Hour](#) radio show:**

[Government involvement in e-weapons](#)

[Greenbaum speech](#), the inside story of mind control from the psychiatrist's perspective  
["Group Stalking, Just Like"](#), a news video from KIRO TV, Snohomish County, Washington State, posted February 2010. The tactics used by the stalker fit very well with the experiences of group stalking targets. The stalker refused to discuss WHY she committed the crimes. In another similar case a few years earlier, another stalker fitting the M.O. of group stalking refused to discuss the reasons for his crimes. One can guess what might happen if a group stalking perpetrator made a public statement about the operations of their group.

[Human experimentation, classified](#), protection for subjects still lacking at end of 2003, article by Cheryl Welsh

[Implants](#), New Mexico prison style, a 1999 proposal by NM Governor Gary Johnson, **which explicitly uses the phrase "we can insert microchips into people's brains and control their behavior"**

[Intelligence activities](#), Church Committee's Final Report on, Book II, about effects on personal freedom, 1976

[Joan K. Christensen's](#) letter to Eleanor White in which the New York State Assemblywoman claims to have classified knowledge about the neuro-influence weapons currently being illegally tested.

**Kathleen Sullivan**, MKULTRA-era torture survivor, interviewed on [The Power Hour](#) on January 20, 2004:

[EM weapon survey results, year 2002](#)

[Extreme Abuse Survey](#), 2008 results of, a survey of current-day extreme abuse victims and therapists helping them recover from the torture. Generally the victims and their therapists are dealing with MKULTRA-style physical/drug/electronic captive torture based mind control, and/or, ritual abuse/Satanic ritual abuse. Such abuse can happen under government auspices, or can happen when government provides cover for certain criminal groups by denying the groups exist. Visitors who feel that what organized stalking and electronic harassment targets report is just too horrible to happen in this "modern, civilized" world should scan the results of this survey.

[Why are people chosen to be targetted?](#)

[Back to Menu](#)

## **Tactics and ready answers:**

[Activism Tips](#), free, not copyrighted e-booklet, giving activism tips to targets. Written for targets, not the public.

[Book review, Gaslighting](#), by Victor Santoro. Reads like a how-to manual for organized stalking perpetrators

[Book review, Terrorist Stalking in America](#), by David Lawson. A stunning expose of the growing problem of criminal stalking groups, which he calls "extremist groups" and "cause stalkers". This book reveals what happens behind the scenes when organized stalking and electronic harassment targets report "street theater". The author reports confirming this problem exists with police. GREAT AMMO FOR DEBATES. See also [this review](#) of one of the books the author uses as his reference for assigning blame for the existence of the criminal stalking groups.

[British Parliament Member](#) Dr. Caroline Lucas firmly acknowledges the reality of electronic antipersonnel weapons

[The Burzynski Breakthrough](#), a book by Thomas Elias demonstrating how an exceptionally efficient cancer cure has been covered up by the U.S. Government for more than a decade.

Shows that government is, contrary to popular opinion, capable of covering up very important news and brutally harassing American citizens.

[CATCH web site](#), Citizens Against Technological and Community-based Harassment, web site of the now inactive local targets' activism group based in Toronto, Ontario, Canada. Founded by Norma Cross.

[Russian magazine article](#), courtesy Cheryl Welsh, with testimonial on the lives of Russian mind control victims

[Russian translations](#), fragments as they are circulated, initiated by Cheryl Welsh and Mojimir Babacek

[Russian/U.S. International Coalition](#) formed

[Sabotage](#), real physical evidence

[Satanic connections](#) to mind control and harassment by stalking groups

[Songs, scroll down for "T.I." and "Bang, Bang, Bang Bang"](#), or "targeted individual", a song composed and sung by target and artist Kuango - her protest of the crushing of freedom in the United States by organized stalking groups using electronic harassment, approved of and covered up by government.

[Thefts](#), typical, of the possessions of [Threats received](#) by people being targetted by stalking groups (and often assisted by advanced electronic weapons). ... see also this page about [Satanic threats](#).

[Tone trigger programming](#), Eleanor White's

["Voice", involuntary](#), forced upon Eleanor White as Eleanor tries to lie as still as possible but is fully awake (SOUND)

[Why are people chosen to be targetted?](#)

[Back to Menu](#)

## **Time lines, historical:**

[Activism History](#), an e-booklet outlining significant activism initiatives in the fight to expose and stop organized stalking and electronic harassment

[Time line](#), Cheryl Welsh's, of events in the history of neuro- electromagnetic weapons development

[Time line](#), Eleanor White's based on the trufax.org time line of MKULTRA electronic experiments (unverified); see [trufax1.htm](#)

[Back to Menu](#)

## **Torture and brutality, showing it is happening NOW:**

[Abusive Witchcraft page](#), by Ellen Lacter, PhD, who is a therapist and activist on behalf of all targets of abuse. Dr. Lacter's photos here show that people really exist who are not "all sweetness and light". Stories from people abused to the point of split personality report that human and animal sacrifice has indeed happened and continues to happen. Only because they are extremely clever in covering up their activities are these atrocious crimes able to continue. Ponder this when you, visitor, read about the 'mind control', organized stalking and electronic harassment crimes described on this site. [Click here](#) if the above link is broken.

[Book review, Terrorist Stalking in America](#), by David Lawson. A stunning expose of the growing problem of criminal stalking groups, which he calls "extremist groups" and "cause

stalkers". This book reveals what happens behind the scenes when organized stalking with electronic harassment targets report "street theater". The author reports confirming this problem exists with police. See also [this review](#) of one of the books the author uses as his reference for assigning blame for the existence of the criminal stalking groups.

[Canadian prisoner's experience](#) making it brutally plain that torture is not just a third world phenomenon

[Child crying](#) under electronic attack. Clip from [The Power Hour](#) from the March 3, 2004 show featuring electronic attack target [Mr. Jesus Mendoza](#), of Mission Texas

[Doctors who know](#), a log sheet of cases where doctors have admitted to targets that they know organized stalking and electronic harassment crimes are entirely real

[Freemasons and torture?](#) One of the 1998 CKLN radio interviews discusses the connection "[Group Stalking, Just Like](#)", a news video from KIRO TV, Snohomish County, Washington State, posted February 2010. The tactics used by the stalker fit very well with the experiences of group stalking targets. The stalker refused to discuss WHY she committed the crimes. In another similar case a few years earlier, another stalker fitting the M.O. of group stalking refused to discuss the reasons for his crimes. One can guess what might happen if a group stalking perpetrator made a public statement about the operations of their group.

[Organized Stalking site](#) by Eleanor White

[Mind control, U.S. Navy's](#), officially admitted in SECNAVINST 3900.39D (standing instructions issued by the Secretary of the Navy), of 6 November 2006. Here is a quote from page 9:

(2) The Under Secretary of the Navy (UNSECNAV) is the Approval Authority for research involving:

(a) Severe or unusual intrusions, either physical or psychological, on human subjects (such as consciousness-altering drugs or mind-control techniques).

## USMC Ray Gun

---

By Frank Morales

"The Marine Corps is on the verge of unveiling perhaps the biggest breakthrough in weapons technology since the atomic bomb: a nonlethal weapon that fires directed energy at human targets."

"I have nothing to hide. This is a good news story. Our American public needs to understand that we have done our homework." - Col. George Fenton, Director, Joint Non-Lethal Weapons Directorate, Department of Defense

Marine Corps Times, March 5, 2001 (1)

In a neatly calculated "unveiling" of weapons designed for social control, for use against civilians and the suppression of dissent, the Pentagon has gone "transparent" with the latest in electronic weapons technology which targets people. At a selective press briefing for congressional and military leaders this past March 1st, Pentagon officials stated they were "developing a new non-lethal weapon which uses electromagnetic energy to cause a burning sensation on the skin..." (Reuters, 3/1/01) The "biggest breakthrough in weapons technology since the atomic bomb" is none other than the so-called "Vehicle-Mounted Active Denial System" or VMADS. According to the March 5th issue of the Marine Corps Times, (cited above) in an article entitled, "The People Zapper: This new secret weapon doesn't kill, but it sure does burn", the "VMADS system is the first non-lethal, directed energy weapon designed specifically for use against humans." The weapon "focuses energy into a beam of micromillimeter waves designed to stop an individual in his tracks." Powered by electricity, it would ultimately "be powered by the modified Humvee on which it would be mounted."

According to the Marine Corps Times report, the projected energy "which falls near microwaves on the electromagnetic spectrum, causes the moisture in a person's skin to heat up rapidly, creating a burning sensation, similar to a hot light bulb pressed against one's flesh." The microwaves, "whose exact length, frequency and amplitude are classified, cause water molecules in the skin cells to vibrate." Presumably, "when used as directed - that is, briefly - the weapon causes no long-term problems". Meanwhile, "the amount of time the weapon must be trained on an individual to cause permanent damage or death is classified." Studies of long-term effects of "the VMADS system" have been completed, according to the report, but "the findings have not been released publicly." It should be noted that the Joint Chiefs of Staff major policy directive in the area of non-lethal weapons, DoD Directive 3000.3, which is currently under revision, calls for these weapons to have a built-in "rheostatic" (ie. "tunable") capability.

The Marine report states that, "the need for a nonlethal means for stopping an aggressor is a direct response to today's world of unknown enemies...where small numbers of troops find themselves facing off against large crowds of civilians." And while "weapons that fire lasers, electricity and sound waves have been in

development for years", "not since the advent of gun-powder and the splitting of the atom have armies seen such a leap in technology." The range of the electromagnetic weapon "remains classified" but project officials "expect it will exceed 750 meters" (2250') allowing the Marines to "engage a crowd from afar, directing two-second bursts of energy without risk of being overcome by the mob." The "mob", the target of the directed beam, cooking in 130 degree heat, "would immediately experience intense pain, causing confusion and driving the crowd to disperse." And while "the intention is not to burn the skin", "those hit by the beam begin to feel intense heat" during "potential applications" which include "urban operations." And finally, while "the Defense Department has spent nearly \$40 million over ten years to develop the technology...budget predictions from last year...show another \$26 million could be needed for development over the next five years." The primary contractor for the current VMADS \$16 million project is Raytheon Missile Systems.

Deeper Unveiling Turns out that while the Marines expect to be microwaving people, it was the Air Force that developed the "technology" in the first place. On February 22, 2001 the United States Air Force Research Laboratory, located at Kirtland Air Force Base, New Mexico, issued its own news release announcing that "a breakthrough technology designed to project an energy beam that drives away adversaries without injuring them, is now undergoing advanced testing." (2) According to the Air Force, the projected energy "beam" travels "at the speed of light" and penetrates "1/64 of an inch into the skin", rapidly heating up the skin's surface, causing the "subject", within seconds, to "feel pain that stops when the transmitter is shut off or when the subject moves out of the beam." According to the news release, the weapon was developed by two Air Force Research Laboratory teams: one from its Directed Energy Directorate at Kirtland, the other from its Human Effectiveness Directorate, located at Brooks Air Force Base, Texas. The learned team leaders, Lt. Col. Chuck Beason and Dr. Kirk Hackett noted, in reference to the new EM weapon, that "the effect exploits a natural defense mechanism - pain - that has evolved to protect the human body from damage." The Air Force Research Laboratory - Directed Energy Directorate, in addition to developing "high powered electromagnetic weapons and countermeasures" also develops "moderate and high power laser devices". (3) In fact, recently (2/21/01), the public affairs office of the Airborne Laser System Program Office, located at Kirtland, AFB, announced that "Lockheed Martin Space Systems will open an \$8 million, 16,000 square-foot optical test center...designed to analyze the beam guidance system for the U.S. Air Force's Airborne Laser, the world's first combat aircraft armed with a directed energy weapon." (4) Meanwhile, the Space Vehicles Directorate - Air Force Research Laboratory, "develops technologies to support evolving warfighter requirements to control and exploit space." (5) This past November, Kirtland AFB was the site of the 3rd Annual Directed Energy Symposium entitled, Directed Energy for the 21st Century, presented by the Directed Energy Professional Association, in cooperation with the Office of the Secretary of Defense. (6)

The VMADS system is currently being tested in field conditions by the Air Force at Kirtland, AFB. At the New Mexico site, "they are using a transmitter that sends a narrow beam of energy to a test subject hundreds of yards away." It is reassuring to note that "all testing is being conducted with strict observance of the procedures, laws and regulations governing animal and human

experimentation". In addition, "the tests have been reviewed and approved by the Air Force Surgeon General's Office and are conducted by the Air Force Research Laboratory's Human Effectiveness Directorate." Finally, "although testing is expected to continue in this summer (2001), officials have begun examining the technology for use on a vehicle-mounted version. Future versions might also be used onboard planes and ships." (7)

Col. George Fenton, director of the US Marine operated NLW program firmly believes in the safety of this "revolutionary force protection technology." He recently stated that "humans have been exposed more than 6,000 times in testing, all inside the laboratory (and that) no long term effects have been detected." Given that track record, Fenton believes that "the technology could move into the acquisition phase of making a prototype as soon as this summer (2001), when the project would be taken over by the Air Force's Electronic Systems Center at Hanscom Air Force Base, Mass., near Boston." (8)

Finally, on-cue the New York Times joined in on the "unveiling", heralding "what some military officials hope will become the rubber bullet of the 21st century: a weapon that uses electromagnetic waves to disperse crowds without killing, maiming or, military officials say, even injuring anyone slightly." (9) Not even slightly! After all, notes the Times, they are only "intended to influence motivational behavior." According to free lance writer/researcher David Guyatt, "less than lethal anti-personnel weapons, especially some classes of EM weapons that are viewed as having a capability to remotely modify behavior or attack higher functions, are seen in some influential quarters as being the ideal remedy for future domestic disturbances...", wherein, the forces of repression will target the opposition, "armed with innovative technological weapons that do not necessarily kill but which render disenfranchised segments of society physically inactive, emotionally stupefied and incapable of meaningful thought..." (10)

Sound farfetched? Back in 1986, Marine Corps Captain Paul E. Tyler, author of an influential study entitled, "The Electromagnetic Spectrum in Low-Intensity Conflict" (11) was already making the point that "the potential applications of artificial electromagnetic fields are wide ranging and can be used in many military or quasi - military situations" including "crowd control". At that time he pointed out that although scientists hadn't identified electromagnetism for what it really was until the eighteenth century, "the results of many studies that have been published in the last few years indicate that specific biological effects can be achieved by controlling the various parameters of the electromagnetic (EM) field." And further, "many of the clinical effects of electromagnetic radiation (have) been reported in the literature to induce or enhance the following effects (including)...electroanesthesia...behavior modification in animals, altered electroencephalograms in animals and humans, altered brain morphology in animals, altered firing of neuronal cells."

According to Capt. Tyler, "a 1982 Air Force review of biotechnology had this to say: Currently available data allow the projection that specially generated radio frequency radiation (RFR) fields may pose powerful and revolutionary antipersonnel military threats. Electroshock therapy indicates the ability of induced electric current to completely interrupt mental functioning for short periods of time, to obtain cognition for longer periods and to

restructure emotional response over prolonged intervals." Further, "experience with electroshock therapy, RFR experiments and the increasing understanding of the brain as an electrically mediated organ suggested the serious probability that impressed electromagnetic fields can be disruptive to purposeful behavior and may be capable of directing and or interrogating such behavior", while "the passage of approximately 100 milliamperes through the myocardium can lead to cardiac standstill and death, again pointing to a speed-of-light weapons effect."

## Roy Bercaw's Citizen's Bill - Massachusetts

Cambridge, MA writer and researcher, Roy Bercaw, wrote this bill, which was filed with the Massachusetts state legislature. It addresses the need for protection from criminal medical experimentation. Hearings are scheduled for May 13, 1999 before the Health Care Committee.

### 1 Citation of Chapter

This chapter shall be known and may be cited as the Protection of Human Subjects in Experimentation Act.

### 2 Findings and Declarations

Medical experimentation benefits mankind, however such experimentation on human subjects shall be undertaken with due respect to the preciousness of human life and the right of individuals to determine what is done to their own bodies.

(a) The Nuremberg Code of Ethics in Medical Research was issued in 1943 after the Doctor's Trial of Nazi doctors for unethical use of human beings in medical experiments; subsequently, the Declaration of Helsinki established recommendations guiding doctors in experimentation involving human subjects. 55 years after the Nuremberg Code was written there are still no penalties for non compliance with federal laws on human experimentation.

(b) Neither the Nuremberg Code nor the Declaration of Helsinki are codified under law and are, therefore, unenforceable. Persons are being irreparably harmed and the researchers are not being held accountable for their actions.

(c) Medical experiments must be done in such a way as to protect the rights of the human subjects involved.

(d) There is, and will continue to be a growing need for protection for citizens of the Commonwealth from unauthorized, needless, hazardous, or negligently performed medical experiments on human beings.

This chapter provides minimum statutory protections for the citizens of the Commonwealth with regard to human experimentation and provides penalties for those who violate such provisions.

### 3 Experimental subject's bill of rights; contents

As used in the chapter, "experimental subject's bill of rights," means a list of the rights of a subject in a medical experiment, written in a language in which the subject is fluent. Except as otherwise provided in 7, this list shall include, but not be limited to the subject's right to:

(a) Be informed of the nature and purpose of the experiment.

(b) Be given an explanation of the procedures to be followed in the medical experiment, and any drug or device to be utilized.

(c) Be given a description of any attendant discomforts and risks reasonably to be expected from the experiment.

(d) Be given an explanation of any benefits to the subject reasonably to be expected from the experiment, if applicable.

(e) Be given a disclosure of any appropriate alternative procedures, drugs or devices that might be advantageous to the subject, and their relative risks and benefits.

(f) Be informed of the avenues of medical treatment, if any, available to the subject after the experiment if complications should arise.

(g) Be given an opportunity to ask any questions concerning the experiment or the procedures involved.

(h) Be instructed that consent to participate in the medical experiment may be withdrawn at any time and the subject may discontinue participation in the medical experiment without prejudice.

(i) Be given a copy of the signed and dated written consent form as provided for by 4 or 9.

#### 4 Informed consent

As used in this chapter, "informed consent" means the authorization given pursuant to 6 to have a medical experiment performed after each of the following conditions have been satisfied:

(a) The subject is provided with a copy of the experimental subject's bill of rights, prior to consenting to participate in any medical experiment, containing all the information required by 3 and such copy is signed and dated by the subject as specified in 6.

(b) No person who suffers from any mental disability shall be allowed to be used for any medical experiment under any conditions. Any violation of this section by any professional licensed by the Commonwealth will result in an automatic suspension of that license for life.

(c) Any person who participates in a human experiment on a person with a mental disability shall be subject to criminal penalties consistent with the severity of harm done to the person with a mental disability as stated in other codes and statutes in effect at the time of the experiment.

(d) A written consent form is signed and dated by the subject as specified in 6.

(e) The subject as specified in 6, is informed both verbally and within the written consent form, in nontechnical terms and in a language in which the subject as specified in 6, is fluent, of the following facts of the proposed medical experiment which might influence the decision to undergo the experiment, including but not limited to:

(1) An explanation of the procedures to be followed in the medical experiment and any drug or device to be utilized, including the purposes of such procedures, drugs or device. If a placebo is to be administered or dispensed to a portion of the subjects involved in a medical experiment, all subjects of such experiment which shall be informed of such fact, however, they need not be informed as to whether they will actually be administered or dispensed a placebo.

(2) A description of any attendant discomfort and risks to the subject reasonably to be expected.

(3) An explanation of any benefits to the subject reasonably to be expected, if applicable.

(4) A disclosure of any appropriate alternative procedures, drugs or devices that might be advantageous to the subject, and their relative risks and benefits.

(5) An estimate of the expected recovery time of the subject after the experiment.

(6) An offer to answer any inquiries concerning the experiment or the procedures involved.

(7) An instruction to the subject that he or she is free to withdraw his prior consent to the medical experiment and to discontinue participation in the medical experiment at any time,

without prejudice to the subject.

(8) The name, institutional affiliation, if any, and address of the person or persons actually performing and primarily responsible for the conduct of the experiment.

(9) The name of the sponsor or the funding source, if any, or manufacturer if the experiment involves a drug or device, and the organization, if any, under whose general aegis the experiment is conducted.

(10) The name, address, and phone number of an impartial third party, not associated with the experiment, to whom the subject may address complaints about the experiment.

(f) Consent is voluntary and freely given by the human subject as specified by 6, without the intervention of any element of force, fraud, deceit, duress, coercion, or undue influence.

#### 5 Medical experiment

As used in this chapter, "medical experiment" means:

(a) The severance or penetration or damaging of tissues of a human subject or the use of a drug or device, as defined in 11 or 10, electromagnetic radiation, pulsed microwaves, lasers, ultra sound, radar, thermal imaging, heat or cold, radio waves, sound or a biological substance or organism, in or upon a human subject in the practice or research of medicine in a manner not reasonably related to maintaining or improving the health of such subject or otherwise directly benefiting such subject.

(b) This prohibition includes psychologists exercising extra legal control over human subjects using above-mentioned devices drugs and technology for non-invasive psychological conditioning and/or legal experimentation.

(c) The investigational use of a drug or device.

(d) Withholding medical treatment from a human subject for any purpose other than maintenance or improvement of the health of the subject.

#### 6 Informed consent

(a) Except as otherwise provided in this section, no person shall be subjected to any medical experiment unless the informed consent of such person is obtained.

(b) If a person is under a conservatorship as provided by any provision of any probate codes or statutes, or if he suffers from any mental disability or has ever suffered from a mental disability, or if he is developmentally disabled, he may not under any conditions or circumstances be used for any medical experiments.

(d) Informed consent given by a person other than the human subject shall not be valid to fulfill the requirements of this chapter.

#### 7 Violations; damages; penalties; waiver of rights

(a) Any person who is primarily responsible for conduct of a medical experiment and who negligently allows such experiment to be conducted without a subject's consent, as provided in this chapter, shall be liable to such subject in an unlimited amount of money damages as determined by a court.

(b) Any person who is primarily responsible for the conduct of a medical experiment and who willfully fails to obtain the subject's informed consent, or obtains consent under deceptive acts as provided in this chapter, shall be liable to such subject in an unlimited amount of money damages and imprisonment as determined by a court.

(c) In keeping with the tradition of the survivors of the Nazi Holocaust, there shall be no statute of limitations for bringing tort and criminal actions against violators of this chapter.

(d) Any person who is primarily responsible for the conduct of

a medical experiment and who willfully fails to obtain the subject's informed consent, or obtains consent under deceptive acts as provided in this chapter, and thereby exposes a subject to a known substantial risk of serious injury, either bodily harm or psychological harm shall be guilty of a felony punishable by imprisonment in state prison for a period not to exceed life imprisonment without parole, or a fine of one hundred million dollars (\$100,000,000) or both.

(e) Any representative or employee of a pharmaceutical company, who is directly responsible for contracting with another person for the conduct of a medical experiment, and who has knowledge of risks or hazards with respect to such experiment, and who willfully withholds information of such risks and hazards from such person contracting for the conduct of the medical experiment, and thereby exposes a subject to substantial risk of serious injury, either bodily harm or psychological harm, shall be guilty of a felony punishable by imprisonment in state prison for a period not to exceed life imprisonment without parole or a fine of one hundred million dollars (\$100,000,000) or both.

(f) Each and every medical experiment performed in violation of any provision of this chapter, is a separate and actionable offense.

(g) Any attempted or purported waiver of the rights guaranteed, or requirements prescribed by this chapter, whether by a subject or any other person, as specified in 6, is void.

(h) Nothing in this section shall be construed to limit the right of an injured subject to recover damages under any other applicable law.

#### 8 Law governing

The provisions of this chapter shall not supersede, but shall be in addition to any criminal statutes, constitutional provisions, and laws governing medical abuses in experimentation elsewhere in the Massachusetts General Laws and laws of the United States.

9 Investigators within institutions holding a federal assurance; application of chapter.

This chapter shall apply to any person who is conducting a medical experiment within the Commonwealth. That includes investigators within an institution which holds an assurance with the Department of Health and Human Services pursuant to Part 46 of Title 45 of the Code of Federal Regulations. Informed consent in the method and manner required by state or federal regulations is required, whichever is more strict. Failure to comply with federal laws will expose the investigators to state criminal and tort liability as provided in this chapter. All provisions of this chapter apply to institutional research.

#### 10 Device

"Device" means any instrument, apparatus, machine, contrivance, implant, in vitro reagent, or other similar or related article, including any component, part or accessory, that is any of the following:

(a) Recognized in the official National Formulary or the United States Pharmacopoeia, or any supplement to them.

(b) Intended for use in the diagnosis of disease or other condition, or in the cure, mitigation, treatment or prevention of disease in humans or any other animal.

(c) Intended to affect the structure or any function of the body of humans or any other animal and that does not achieve any of its principal intended purposes through any chemical action within or on the body of humans or other animals and that is not dependent upon being metabolized for the achievement of any of its principal intended purposes.

(d) Any beam or wave generated by a mechanical or electrical machine capable of inflicting pain, causing death, affecting the thought processes moods or emotions of a human being, or capable of disturbing the sleep of a human being or other animal. Firearms described in M.G.L. Chapter 140, 131 J, are included in this definition.

11 Drug

"Drug" means any of the following:

(a) Any article recognized in an official compendium.

(b) Any article used or intended for use in the diagnosis, cure, mitigation, treatment or prevention of disease in human beings or any other animal.

(c) Any article other than food, that is used or intended to affect the structure or any function of the body of human beings or any other animal.

(d) Any article used or intended for use as a component of any article designated in subdivision (a), (b), (c) of this section.

The term "drug" does not include any device.

Any food for which a claim, (as described in Sections 403(r)(1)(B) (21 U.S.C. Sec. 343(r)(1)(B)) and 403(r)(3) (21 U.S.C. Sec. 343(r)(3) or Sections 403(r)(1)(B) (21 U.S.C. Sec. 343(r)(1)(B)) and 403(r)(1)(B)) and 403(r)(5)(D) (21 U.S.C. Sec. 343(r)(5)(D)) of the federal act), is made in accordance with the requirements set forth in Section 403(r) (21 U.S.C. Sec. 343(r)) of the federal act, is not a drug under subdivision (b) solely because the label or labeling contains such a claim.

- END -

## Roy Bercaw's TV show

\*\*\*\*\*

Roy Bercaw is an ingenious, and indefatigable activist, writer and researcher. He lives in Cambridge, MA in the shadow of Harvard University and MIT where much clandestine medical research on humans is conducted on unsuspecting citizens. Here's his latest idea for getting out the story of contemporary experiments of the US government, and other Frankensteinian researchers.

In April, 1999 he was a guest host on a cable TV show where he spoke about non consenting human experimentation. He described the bill he wrote for the Massachusetts General Court (legislature), H2334, "Protection of Human Subjects in Experimentation Act." It is available online at

[www.nas.net/~raven1/rb-bill.htm](http://www.nas.net/~raven1/rb-bill.htm)

The February 1999 issue of his newsletter, ENOUGH ROOM, has nine pages on human experimentation. It is online at

[www.nas.net/~raven1/er-feb99.htm](http://www.nas.net/~raven1/er-feb99.htm)

Bercaw joined the local Cambridge, MA cable television station. As a member he is eligible for a 30 minute weekly show which he can say whatever is legal to be said. Complaining and explaining about non lethal weapons testing and use on civilians who are considered "domestic adversaries" is a legal use of that time.

Most local cable TV stations have an agreement with the city where they are providers to allow citizen access to the cable station. In many cases you may not have to join, just need to be a resident or work in the city or county, whichever. Maybe only have an address there.

Call your local station and ask what it takes to get a show on the air.

Insure that you are not misled. Ask other persons who are familiar with the rules.

You can also address your local government at their weekly meetings, which are often broadcast live. You may have to write a letter first. But try it. It works.

Inquire if you can write a bill to be considered by your state legislature. If not try to get one of your elected representatives to write one and have it filed. This will not happen by itself.

#### REVIEW:

Let me state first that when I read a book on the subject of electronic torture/mind control/organized stalking (which usually accompanies electronic harassment) that I am mainly interested in HOW WELL THIS BOOK CAN SUPPORT ACTIVISM TO EXPOSE AND STOP THESE CRIMES.

I'm a retired engineer, not a literary person. For me, and for those readers who are targeted by electronic harassment, which includes "mind control", we need usable information. I don't comment on the usual literary abilities of the writer, and this book is definitely intended to convey information, not be a "literary work."

Overall, with some exceptions, I feel the author, Steve Lynch, has accomplished conveying useful information quite well.

Particularly useful is Lynch's ability to SHORTEN each subject, making sections of this book handy to show to naysayers - hostile family members, doctors, law enforcement, politicians. He has done us a real service by putting this information into one handy place.

#### Foreword:

In Cheryl Welsh's foreword, she makes this statement:

"Most people do not believe the U.S. and Russian governments have weapons that can remotely target a person anywhere in the world, read their thoughts, beam messages to their brain, control every nerve in their body and cause great pain."

Bravo to Cheryl for mentioning a very large part of what today's electronic remote torture weapons can do and do do.

Cheryl praises the book's thorough research and ample footnotes, and non-technical writing style, and she laments that still, this book isn't as "mainstream" as she might like. Cheryl acknowledges that life doesn't always go the way we might like, however, and allows that maybe the "shot of reality" portrayed in this book can sometimes be a jolt that shatters preconceived notions.

#### 1. Of Mice, Men and Big Brother

In this chapter, the author describes Tempest, the remote

PC screen reading technology, the article by Timothy L. Thomas titled "The Mind Has No Firewall" which appeared in the U.S. Army War College Quarterly, issue of Spring, 1998. He mentions the Malech patent, proposing a method for remotely monitoring and altering brainwaves.

(Remotely monitoring, without implants, has yet to be demonstrated publicly. However, remotely altering EEG activity has been doable for half a century, by pulsing radio signals, first done by an old medical device named the Lida machine.)

Author Steve Lynch reports on an article from an online newsletter, Physics News Update, claiming remote reading of a person's brainwaves without the usual EEG in-scalp electrodes. I couldn't get that 2002 link to display, however, other researchers online have found articles about detecting EEG signals without contact electrodes.

Since EEG signals are only a few MICROvolts, and since the environment is full of even stronger competing signals, non-contact EEG reading, as far as I've seen from articles discussed on line, is strictly a very short range affair. As a retired professional engineer, I need definitive proof before I would endorse the reading of microvolt signals at the distances experienced by targets of electronic harassment.

It's great Steve Lynch mentions microwave "voice to skull" technology, by way of U.S. patent 4,858,612, however it's unfortunate he didn't mention the successful demonstration of this by Dr. Joseph Sharp, published at a joint meeting of faculties of psychology and engineering at the University of Utah in August, 1974.

Patents don't mean the invention was actually demonstrated, instead, they mean the Patent Office considers that the invention has potential for benefitting society. So reports of actual demonstrations are the most valuable items to be published, with the patents as supporting information. Patents DO demonstrate intent, and demonstrating intent is also very important.

## 2. Behavioral Modification

Chapter 2 outlines the MKULTRA era, the known programs taking place during the Cold War years of the 50s through the early 70s.

It must impress readers who are not aware of electronic harassment and "mind control" that Delgado's remote "stimoceiver" (skull-mounted radio receiver with implants in the subject's brain) was successfully demonstrated; glad to see that included in the book.

Steve Lynch does an excellent job of condensing into a clear, easily read section of chapter 2 on brainwashing, and milestones in the CIA brainwashing research done in the MKULTRA era.

## 3. Science Gone Mad

Chapter 3 does an excellent job of reporting on the MKULTRA sub-project 68 crimes, the involuntary personality erasure experiments by "Dr." Ewen Cameron at the Allan Memorial (psychiatric) Institute at Montreal, Canada. This is a very important crime report, as the victims eventually won a significant victory by suing the CIA, and although it was an out of court settlement, the CIA had to pay.

Cameron's crimes prove beyond doubt that government DOES commit horrific crimes. It can not be denied.

And, Steve Lynch's talent for getting the important points displayed in brief, easy reading chapters is evident.

- 4. Exposure
- 5. CIA Legal Strategy

Chapters 4 and 5 expand on the law suit by Cameron's Montreal victims, titled "Orlikow vs. The United States."

Chances are if Cameron had not chosen the wife of Canadian Member of Parliament David Orlikow, the outcome might not have been successful. It's great when the perpetrators of these crimes mess up!

- 6. Psychotronics

In this book, author Lynch uses "psychotronics" as the Russian name for electromagnetic mind control weapons. Readers should keep in mind, if they should look up the term psychotronics on the web, that there is another, older meaning, which refers to practitioners which use NON-energized electronic components, in conjunction with psychic ability of the operator, to heal.

Personally, I prefer "electronic harassment" as that has a specific rather than a dual meaning. None the less, for conversations with the general public, psychotronics will do.

Steve Lynch uses quotes from Cheryl Welsh and Lt. Col. Timothy L. Thomas (article, "The Mind Has No Firewall") to declare that "psychotronic" attack is very possible.

- 7. Political Psychiatry

Chapter 7 presents references showing the Soviet abuse of psychiatry to control people and suppress dissent. While many of today's adults are aware of that, having this chapter available gives references which an activist can use to counter statements that psychiatry can't be wrong or can't be abused.

Electronic harassment and organized stalking targets are often accused of mental illness.

This chapter also reminds us of the power, potential criminal power, of neuroleptic or psychotropic drugs. Again, very handy to have. Lots of good footnotes to back up the information.

## Introduction to Part 2

Part 2 switches to, according to the Introduction, "... an account of an aggressive covert governmental operation and of that operation's initial target, a man who wound up on the receiving end of their high-tech electronic barrage."

This story starts in 1992 in the state of Illinois.

The author mentions a prisoner with "anti-Zionist opinions" as a possible motive for targeting the prisoner. (More than simply an "anti-Zionist", the prisoner, quote, "had been a believer in National Socialism", from which the term Nazi had sprung.)

I, Eleanor White, listen to many of the shortwave based programs of a loosely organized educate-the-public activist group which are referred to as the U.S. Patriot Movement, or Truth Movement. I've been a listener for four years now, and being retired, I've heard many of their broadcasts.

They have guests from many professions - doctors, politicians, military officers, journalists, researchers, and activists against government and corporate crimes.

I bring this up to explain to the reader that there are two groups which get fairly consistent blame for government and corporate crime. One is Zionists, who are people working to promote the interests of the Israeli government and should NOT be confused with people of the Jewish faith. The claim is that Zionists infiltrate governments everywhere and their loyalty is the government of Israel, and not the government where they are actually employed.

(The other group, for background information, is the Roman Catholic hierarchy, and in particular the Society of Jesus, also known as the Jesuits. The Jesuits have been accused of infiltrating all levels of government everywhere, and fostering or directly committing serious crimes.)

When reading this book, "Remote Control", this background might explain why someone could get chosen as a target, especially if the allegations against the Zionists prove to be true. I, Eleanor White, am not a political researcher and can make no authoritative statements as to the culpability of the Zionists.

Author Steve Lynch alleges that government now (1992) would like to "take out" activists they consider a threat, but now have no need to, as new technology allows them to destroy people from the inside.

And at the end of chapter 7, Lynch claims there is a "paper trail of damning documentation" which shows the existence of a program, which he gives his own name to, "Brainscan."

## 8. Targeted

This chapter, and those following, report on the corruption in the legal system of Illinois, the setting of this story of "the prisoner" who is the central character.

## 9. Nightmare

Though "the prisoner's" story takes place in a prison, as it unfolds, it is a mirror image of the types of harassment many people are now reporting as "organized stalking" and "electronic harassment."

The fundamental weapon used against an organized stalking target is the LIE. Lies are continuously spread among those who associate with the target, isolating and humiliating the target, depriving the target of all fundamental rights, and destroying the target's quality of life.

Steve Lynch's story of organized stalking inside an Illinois prison illustrates organized stalking, along with electronic harassment perfectly.

My regret is that the unaware public really don't care if prisoners are lied about, group stalked, or electronically harassed, and unfortunately, this may reduce the effectiveness of this book as an activism aid. But that is a generalization, and the book is very well written and may well, as Cheryl Welsh suggests in her foreword, compel the attention of an open-minded reader.

The title of chapter 9 is very appropriate: The Nightmare.

The prisoner received forced drugging of psychotropic drugs. That is indeed a nightmare, one which a number of targets of organized stalking and electronic harassment have been forced to endure.

The prisoner had made the "mistake" of asserting that "the government" was torturing him, reading his mind, mining it for information about his "Nazi" associates. That brought psychotropic drugs. When you are an organized stalking and electronic harassment target, you DO NOT mention the harassment, nor do you mention whom you think is responsible, if you want even a shred of freedom left.

10. The Special Treatment Center
11. State Terror
12. Against All Odds
13. Triumph of the Will
14. Bouncing Back
15. Damage Control and Hook-up City
16. Back on Track
17. Changes
18. Transfer
19. Research
20. Government Operatives Miscalculate and Drop The Ball
21. And Then It Was Gone
22. Wind Chill Factor
23. Orange Crush
24. Sovietization of the Legal System

This short chapter describes a very noteworthy U.S. Supreme Court decision, *Kansas v. Hendricks*, which, as described by the author:

"That decision gave prosecutors, nation-wide, the green light to use PREVENTATIVE DETENTION laws against people who are not mentally ill."

Not mentally ill, but who have demonstrated a pre-disposition to "dangerousness." And who decides "dangerousness?" The psychiatric system, naturally. In short, Soviet-style psychiatry.

25. The Best Defense
26. Move/Countermove
27. The Ultimate "Manchurian Candidate"
28. Release
29. "Conquering the Human Mind"
30. Big Brother Is Watching You
31. What Are You Going To Do When They Come For You?

All the above chapters which don't have specific comments largely relate the story of what it is like to be an electronic harassment/organized stalking target, in the special situation of being a prisoner. Being institutionalized AND a target is NOT a happy situation, and the author describes what it is like to face both, over a period of years.

A reader who visits web sites related to electronic harassment, organized stalking, and/or "mind control" which is part of electronic harassment, will see that there are many people who are heavily harassed and tortured with the same types of methods.

#### Appendix 1 - Documents

These documents are mainly photocopies of prison administrative documents relating to the prisoner's years of incarceration. Kind of amazing he was able to produce such a collection of documents.

#### Appendix 2 - A Short List of Actual Patents Worth Taking a Quick Look At

Patents are indeed helpful with activism - they show clearly the intent to produce devices capable of highly invasive manipulation of the brain and nervous system, involuntarily, at a distance, wirelessly.

#### OVERALL:

Overall, I would call this an interesting book, which provides quite a bit of well-referenced information in a single paperback volume. Maybe a story book format has more persuasive value for some people, and the bulk of this book is a story.

There is some chance it may help persuade, say, a semi-open-minded family member that what a target has to say should at the very least not be dismissed. That is a very important first step.

Eleanor White

## Book Review:

# Remote Viewing Secrets

Joseph McMoneagle

Reviewed: March 28, 2001

---

REMOTE VIEWING SECRETS: A HANDBOOK  
Joseph McMoneagle  
ISBN: 1-57174-159-3  
Hampton Roads Publishing Company Inc.  
Copyright 2000  
Paper back, 296 pages, suggested price \$14.95 US

=====  
The whole idea, Eleanor White's paraphrasing:

The whole idea behind remote viewing is that all people are getting continuous input from their 5 senses constantly, and their mind is constantly interpreting this input. The theory is that they are ALSO getting continuous psychic impressions too, but that since so much of our mind's interpretive work is automatic, we aren't consciously aware of what came in as psychic impressions and what came in from 5 senses.

From the back cover:

"Remote Viewing" is not simply using psychic ability to obtain information. It is using scientific PROTOCOL to *develop and extend* that ability, so that ordinary people can learn to do what "psychics" do.

This book teaches *you* how to teach *yourself*.

Joseph McMoneagle learned remote viewing in the U.S. Army - he was Remote Viewer #001 in the Army's STARGATE program - and was awarded the Legion of Merit for his contribution to various intelligence operations. In *Remote Viewing Secrets*, the author of *Mind Trek* and *The Ultimate Time Machine* uses examples, exercises, and anecdotes to share what he learned and how he learned it, and gives you everything you need to begin developing your own abilities.

=====  
Well, this reader isn't so sure it's quite that easy to follow this dense text, fixated on PROTOCOL, and it is NOT cookbook-simple. However, there is no question that if you read it diligently from cover to cover you will know what needs to be done to start into remote viewing.

What I've done in this review is to extract small tidbits which seem to point the way to what RV is and what it can and cannot do.

Right up front, the author makes it painfully plain that RV is a PSYCHIC

ability, and although everyone probably has some, the biggest mistake anyone who undertakes RV can make is to expect you will get a television quality picture of some remote place on demand. Remote viewers get a series of "impressions" which are different features of a place but they don't usually come together as a single picture at the same instant.

The end result is that the remote viewer assembles these flashes into a sketch (often), or a verbal description. Mistakes are plentiful and even the best don't hit it right all the time. McMoneagle makes it clear that anyone claiming more than part time success is a fraud.

He also states that researchers generally find that people who totally and uncritically accept remote viewing, and those who are absolute non-believers, both have little chance of developing much if any RV skill.

Here's a quote from page 205 about the occurrence of top notch RV ability in the population:

"...the number of world-class remote viewers (world-class in this case means viewers who can systematically and consistently defy chance results in controlled studies in a lab) probably comes in at around one half of one percent of any randomly tested group of people, or about one person in two hundred."

Don't be discouraged by that - he's talking WORLD CLASS, meaning, RV talent is much like other skills, and he also says on page 206:

"...just about everyone who's ever walked into a lab and been tested shows some degree of remote viewing ability."

Notice I've put the word PROTOCOL into upper case. At least half of the book hammers on the necessity of strict PROTOCOL for remote viewing success. Personally I think the book could be much shorter, since the need for PROTOCOL could be explained on a couple of pages.

What PROTOCOL means to the remote viewer is that unless you go to truly religious lengths to eliminate clues from other sources, which he calls "leakage paths", any successes you have cannot be called remote viewing.

Even body language from someone who knows what the target looks like disqualifies an RV attempt from being a genuine remote viewing attempt. Both in research settings or "application" settings (like a remote viewer working for pay) strict measures are taken to avoid "front loading" the viewer with clues.

Some general idea of a target of interest may be given, but even the composition of the words used to convey the general idea takes lots of practice to avoid "violating protocol".

The whole idea behind remote viewing is that all people are getting continuous input from their 5 senses constantly, and their mind is constantly interpreting this input. The theory is that they are ALSO getting continuous psychic impressions too, but that since so much of our mind's interpretive work is automatic, we aren't consciously aware of what came in as psychic impressions and what came in from 5 senses.

So to learn to do remote viewing, two things are a must:

1. Some effort must be made to choose a target the learner does NOT know beforehand. In a learning situation, this is best done by having someone ELSE choose a target, often a photo, perhaps

seal it in an opaque envelope, and hand it to the viewer with a non-specific request like "Tell me about this."

2. Since the problem is that the 5 senses plus the psychic impression stream give us TOO MUCH information, a quiet, undisturbed setting is essential. McMoneagle points out this does not mean a pristine laboratory acoustic anechoic chamber, but a comfortable setting away from disturbances. (This is my guess but a light dose of white noise, fan noise, or softer air conditioner noise which is constant would seem to be OK given what I've read in this book.)

Then in a relaxed unhurried manner, the viewer jots down what are likely disjointed "flashes" of what are hopefully the psychic impressions. At the viewer's decision, the impressions are sketched or words written, and are then handed back to the person helping the viewer. McMoneagle makes the point that the slightest "Oh, I forgot ..." information after the decision to hand in the sketch and words invalidates the information. Like writing an exam for a very strict and fussy instructor.

After the papers are handed in, the person who originally chose the target will make the comparison and share it with the viewer.

So the technique is akin to "tuning" your perception to that "weak station", your psychic sense, that everyone apparently has.

The above example is much oversimplified compared with what the research and application guys do professionally - they have more people involved so that the person who hands the viewer the envelope has no knowledge of what is inside.

Also, in training, it is necessary to have some way to verify what the actual target looks like.

That is a nutshell account of how remote viewing works.

Here are some clips from the text which point out some interesting things about this field:

Page 27:

"Remote viewing always operates best when it is used for producing information on something that is known to exist. In other words, one should be assured the target is real." (Kind of puts a damper on the 'fishing expeditions' victims would like to run for getting info on the perps.)

Page 29:

"Therefore, I would say that remote viewing is very good for:

1. Describing people, events, things, concepts, places, etc. which are real.
2. Producing new leads. No one should be expected to trust remote viewing as a stand-alone source of information.
3. Reconstructing events. (Filling in the details.)
4. Making decisions. (Especially true for yes-no or "binary"

problems.)

5. Making projections. (...remote viewing can produce some amazing detail about things that have not yet happened.)"

Page 32:

"Contrary to general opinion, using remote viewing to produce a location is also not a good idea. This is probably one of the least accurate ways of using this capability."

Page 84:

"The viewer's likes and dislikes, preferences for outcome, and even a reluctance to deliver bad news alters the way [the viewer] responds."

Page 98:

["CRV" stands for "coordinate remote viewing" which is the practice of supplying the viewer with geographical coordinates.]

"The premise behind CRV is that all human beings receive and deal with psychic information on a day-by-day basis. The problem is, in order to recognize psychic information, it has to bubble up to cognition, where we can attempt to control it."

Page 116:

"When a viewer 'tastes' the target, it is only for a few nanoseconds and then contact is broken. The rest of the exercise is internalized processing ... It is definitely not a full-scale model or pictogram laid out in total wonderment before our mind's eye."

"You will have perceptions about the target that are as vague as a movement you caught with the corner of your eye, the faint hint of an aroma, or a feeling that puts goose bumps on the backs of your arms. It is almost never direct but needs to be interpreted in some way."

Page 123:

"Give up on the idea that you will ever have the perfect answer or the total answer delivered to you on a platter. Lose your need for a conclusion, and automatically trash your assumptions. Bits and pieces - these are the skills of a psychic."

Page 134:

[CONDENSED, not a quote]

Possible "irritations" that can interfere with remote viewing:

Hunger, thirst, discomfort, need for bathroom, irritating or repetitive noise, anxiety, upset, anger, worry, pets, people present, telephones, expected guests soon, incomplete writing/drawing materials present, too much ambient light.

Pages 135 - 137:

[Suggested training photos]

- cave
- church steeple
- cliff near water
- domed building
- hillside house
- cliff dwelling ruins
- mountain top
- Mount Rushmore
- pier
- rocky shoreline
- roller coaster
- statue
- strip mine
- tall building
- unique building
- waterfall

Page 152 - 153:

"What if I told you that, in my experience, most remote viewers who target something in the present usually provide some information that is pertinent to the target in the past and future? Well, that's exactly what happens in MOST cases. The first target I ever did worked that way, and I'm sure it won't be the last. I saw a red bicycle in a bicycle rack outside the front door of the target building. The [person at that location to provide verification] didn't see one, because there was no bicycle there when it was being targetted. But when the remote viewing was completed and we all went back to the target for my feedback, someone rode in on a red bicycle and parked it in the rack, sort of fulfilling the prophecy."

Page 153:

"I once did a whole series of targets at SRI-International for which no specific time of interest was mentioned. Every single one failed. It was years later that buildings I had described in those remote-viewing sessions were actually built at those specific target sites."

# The Extra-Judicial Corrections System?

Last updated: May 24, 2010

TARG - EPISODE 23

BY ELEANOR

WWW.BITSTRIPS.COM

[More comic strips](#)

Does "an extra-judicial corrections system", in which the system doesn't have to deal with messy things like "evidence" and "trials" or even "truth," but can get straight to the "good stuff": punishment, exist?

This site provides evidence that it does, and has for some time.

While targets of this "extra-judicial corrections system" do not have all the answers, we have enough information to show it is very likely. We can also show that programs of covert brutality have existed and have been exposed in the United States, at least, since World War II.

This near-perfect crime is called "organized stalking and electronic harassment", or OS/EH for short.

(Because part of the electronic harassment includes equipment which is capable of influencing and attacking the brain and nervous system, some call the electronic portion "mind control". Some call the entire OS/EH crime "mind control", but there is much more to the crime than the "mind control" sub-category. Some feel that "electronic assault" is a better name for the electronic phase, with good reason.

Other names for the NON-electronic side of the crime are group stalking, vigilante stalking, or cause stalking.)

[Click here](#) to download or view a free, NOT copyrighted booklet about organized stalking (and electronic harassment.)

[Click here](#) to view a small pilot project, a system to rate various informative materials on credibility. Of particular interest to journalists and public officials trying to judge the validity of reports of the crime of organized stalking and electronic harassment.

What you are going to read on this site may not seem real to members of the unaware public. There are several statistics, most from official professional sources, which support what we are asserting here about the organized (group) stalking side of the crime we call OS/EH:

- A U.S. Department of Justice special report, January 2009, NCJ 224527, titled Stalking Victimization in the United States, which is available at this link (as of January 2009):

<http://www.ojp.usdoj.gov/bjs/pub/pdf/svus.pdf>

[Click here](#) if the above link is broken

... reported the following statistics showing the occurrence of multiple stalking cases within the total of all U.S. recorded stalking cases in the 2005-2006 time range:

"During a 12-month period an estimated 14 in every 1,000 persons age 18 or older were victims of stalking - About half (46%) of stalking victims experienced ...

\* 11% of victims said they had been stalked for 5 years or more.

[Eleanor White commenting: "5 years or more" is very characteristic of organized stalking, which usually never stops because the justice systems refuse to acknowledge this crime.]

\* An average of 10.6 percent of some 4.6 million stalking and harassment victims don't know the stalkers, since they're complete strangers.

[Eleanor White commenting: Almost all organized stalking is carried out by strangers, or people the target may know by sight but has never interacted with. The "4.6 million" figure above includes both stalking and harassment victims.]

\* Appendix table 3. Number of stalking offenders perceived by victim:

One 62.1%

Two 18.2%

Three or more 13.1%

Number unknown 6.5%

Total Number of victims 3,398,630

[Eleanor White comment: Adding three or more to number unknown, gives 19.6%. That suggests ~666,000 U.S. stalking victims may be organized stalking targets.]

- See also [an affidavit](#) from an attorney who pressed NCVC (U.S. National Center for Victims of Crime) for a statement of the size of their call volume relating to "gang" or "organized" or "group" stalking. The NCVC estimated thousands of such calls per year, and a volume of about 10% of all their calls.
- The following statistic covers all reports to police relating to infractions of Canada's "Criminal Harassment" law, which covers stalking. The statement is from Statistics Canada, the federal agency which maintains statistics for all areas of Canadian life, including policing. The following statement was in response to Eleanor White's request for a checkoff item on Canada's Uniform Crime Reporting (UCR) system denoting harassment reports involving simultaneous multiple harassers (Chief, Policing Services Program responding):

*"Thank you for e-mail of Jan. 17. There is no need to add a new field to the national Uniform Crime Reporting (UCR) survey to collect information on multiple harassers, as a field already exists for the identification of multiple accused persons for all criminal incidents reported to police. As an example, of the 10,756 incidents of criminal harassment reported to police in 2006, 1,429 of these (or 13%) involved more than one accused."*

That is one criminal harassment report in eight, a very significant percentage. While not all of these would strictly fall under the organized stalking category, this rate of simultaneous multiple harassment reports at least hints that organized stalking may not be as rare as the general public seems to think.

- A report on stalking posted by the American Journal of Psychiatry on their web site, journal reference 158:795-798, May 2001, states ... 6 out of 201 (3%) respondents reported multiple stalkers... Compare that with the 13% in criminal harassment cases

above, reported by Statistics Canada, and clearly, stalking by multiple stalkers is a very real crime, acknowledged by mainstream professionals.

Note carefully: There is such a thing as PROXY stalking, in which a single stalker, motivated by intense amorous or mental illness based focus on the target, enlists helpers. Organized stalking is not proxy stalking, but rather is stalking by a group totally independent of whomever originally submitted the target's name to the stalking group. The stalking group typically has no knowledge of why the target's name was submitted, and instead is given a lie, often that the target is a pedophile, to motivate the group stalking effort. The lie is repeated endlessly.

Link to the AJP article: <http://tinyurl-com/3fa3yw>

[Alternate link](#) if above link is broken.

- Article: "The Course and Nature of Stalking: A Victim Perspective"  
Authors: Sheridan, Davies, Boon  
Source: Howard Journal of Criminal Justice, Volume 40, Number 3, August 2001 , pp. 215-234(20)

In 5% of the cases (5/95), there was more than one stalker. pp.219

"In 5 cases perpetrators were part of a group..", pp.219

"... [40%] of victims (38) said that friends and or family of their stalker had also been involved in their harassment... This is a surprising find as the popular view of a stalker is of a lone and secretive individual." pp.222 [COMMENT: This suggests that the above "5%" cases may have been groups other than family or friends, which is suggestive of organized stalking as opposed to simple proxy stalking. Organized stalking involves groups which are networked everywhere, while proxy stalking has a single stalker who has a very personal focus on the target. Organized stalking groups also work on more than one target, unlike proxy stalking.]

Typical of organized stalking: "In 15% of cases, the victim could provide no possible reason for their harassment" pp.226

- Statistics from the book [Mobbing: Emotional Abuse in the American Workplace](#) show that in Sweden, about 3.5% of the working population is subject to mobbing, which is organized stalking in the workplace. 3.5% of working people is roughly 1 person in a hundred total, and is in line with the organized stalking survey above.
- Statistics from the U.S. Centers for Disease Control concerning harassment and stalking cases give an overall figure for the U.S. of 4.5 people per 100 as having been harassed or stalked at one time. Our informal survey's result of about one person per 100 being targeted by organized stalking fits well within that 4.5 per 100 figure. (Source, ABC News)
- Statistics from the British (government) Home Office state that 1,900,000 people in the United Kingdom were victims of stalking or harassment at any one time as of the year 2001. That is about 3 people per hundred. Here again, the organized stalking survey's 1 person in a hundred is not out of line. Most interesting is that roughly 45% of the stalking victims are MEN! That suggests a very different picture from the

conventional view of stalking victims being mostly women, and may well point toward the type of stalking described here, on this web site. [Click here](#) for documentation. (Graph below shows all harassment offences, not specifically stalking.)

\* Oh, and here's another British stalking statistic:

Home Office Research Study 210 (1998 data):

#### THE OFFENDERS

The majority (79%) of incidents involved only one perpetrator.

[...]

Strangers were responsible in 34 per cent of incidents.

Those statistics are strongly suggestive of organized stalking, 79% involved one perpetrator means 21% involved more than one perpetrator. And stalking by strangers is the usual situation with organized stalkers. Even if only 5% of stalking cases are organized, 5% of a million cases could mean 50,000 organized stalking cases in the United Kingdom alone.

- For people who have trouble believing that stalkers can be as cunning and nasty as reports from organized stalking targets indicate, a psychiatrist, below, refers to one statistic indicating that as many as one stalker in just eight fits the observed personality of organized group stalkers:

Excerpt from book STALKING, by Debra A. Pinals, MD, Group for the Advancement of Psychiatry, page 42:

#### CLINICAL ASPECTS OF STALKING

"Finally the fourth type of stalking in the Sheridan and Boon (2002) taxonomy, sadistic stalking, comprised 12.9% of their sample. This construct looked at the victim in particular, identifying the victim as someone worth "spoiling" (Sheridan & Boon, 2002), and as someone who would not understand why they were targeted.

"The target and stalker began as low-level acquaintances, but eventually the stalker's motive is to frighten or demoralize the victim. For example, the stalker might reorder or remove private papers, or leave notes inside the victim's car, leaving the victim with some evidence that the stalker has had contact with their personal property.

"As the behavior progresses, the stalkers attempt to take full control of the victims' lives. Their behavior may include implied threats (e.g. pictures of tombstones) and sexual communications that intimidate or humiliate but would avoid directly pointing to the perpetrator.

"There may be reprieves from the behavior, which may later resume after a hiatus. These types of stalkers may work hard to defy police."

[Screen shot](#) of the page from the original book.

- A survey like [this one on this site](#) was posted on a high volume news site in 2002. 12,000 people visited that survey in 24 hours. About 120 sent in responses saying they had most or all of the symptoms of organized stalking. That is 1 person in a hundred, primarily in North America. (To be on the safe side, a rate of one organized stalking target per 1,000 people is probably better.)

One question which deserves to be asked of government and the media repeatedly is: Why are organized stalking and electronic harassment (OS/EH) not being acted or reported upon?

A partial answer to that is that police make every effort to prevent reports of organized stalking and electronic harassment (OS/EH) from being officially recorded and manifesting in crime statistics. They consistently use the "you are mentally ill" method, with its implied threat of being forced into the mental health system, as their main blocking tactic.

---

Some of us know why we were "turned in" for this harassment, but we don't really know why such a large, expensive network of citizen harassers came about. We do know that as

dictatorships are in the forming stage, local neighbourhood surveillance and harassment groups are set up. That is amply recorded in history.

Once the dictatorship takes over, these local surveillance and harassment groups ensure that the dictator stays in power. This political motive seems to be the only likely answer to the question of why so many resources are expended to keep these harassment groups in operation and expanding.

Organized stalking and electronic harassment targets experience daily, harassment. Break-ins at home, work, and car. Thefts and [sabotage](#) just below a cost where police will act. Vicious, well organized rumour campaigns. Destruction of reputation, career, and relationships. Harassment of children, terrorizing of pets (while the target is out), injury and literal butchering of pets. Unusual medical symptoms for which doctors find no cause.

Well organized, very cleverly engineered 24/7 harassment by [organized stalking groups](#), activities of which are ignored and denied by all levels of government. These organized citizen stalkers are [networked](#), and moving to a different city does not stop the harassment.

Electronically induced sleep deprivation, and outright pain.

These crimes may have drawn from historical criminal operations such as [MKULTRA](#), and [COINTELPRO](#). The organized stalking side of these crimes seems to have taken advantage of the "law and order" and "community watch" mindset, morphing into the extreme criminal activity we see today.

The crimes documented here are a literal [covert war](#) on citizens. This covert war operates like a cross between citizen vigilante style "[criminal rehabilitation groups](#)" and "contract revenge services" for the well connected, particularly those who have connections to crime groups, such as the international organized pedophile rings.

"Prophetically, an acquaintance coolly said to me, a year after I left the lab,  
'You are in a police net you will never get out of ... for the rest of your life.' "

-- Leuren Moret, geoscientist, whistleblower, anti uranium munitions  
poisoning activist, target, formerly of Lawrence Livermore Lab

See more about Leuren Moret:

<http://www.raven1.net/moret.pdf>  
<http://www.raven1.net/moret2citycouncil.htm>

On very rare occasions, one of our members will find a revealing piece of information. One such revelation comes from a member who has a senior police officer as a personal friend. This police officer (on condition of anonymity) revealed that many police departments tacitly encourage the activity of these organized citizen groups because they help to "keep criminals in line."

The anonymous police officer said police recognize that innocent people will sometimes be targeted too, but some police departments consider that an acceptable price to pay for "crime control." One police officer admitted to a target that she had been targeted due to illnesses

suggesting she was a methamphetamine addict. In fact, she was not, but had unknowingly moved into a house which had been used as a meth manufacturing lab.

See also the ["police who know" log](#).

Important: Not all police officers participate in this harassment. In fact, it has been reported that some police officers are themselves targets. We in the organized stalking/electronic harassment target community do NOT disparage the majority of honest police officers!

You do not need to be "somebody special" to be targeted. Once vicious lies are spread in the target's community, the target becomes a high profile criminal in the minds of community members.

The citizen stalking group members often have no criminal records. This makes it difficult to prove their participation, as they appear to be "pillars of the community." And the fact that the harassment is split up among a large group of stalkers makes evidence gathering difficult.

Police usually deny that stalking by more than one stalker happens, and the medical establishment usually repeats this misconception. It is interesting that womens' assault centers, for example, do understand that organized group stalking happens, but police and doctors don't.

Clip from video of organized stalkers

[More clips from the above organized stalker video](#). Have a look at the [original video](#) itself, (and more) too.

[Second organized stalking video, Florida](#)

<http://www.youtube.com/watch?v=ftWkB66rEuA&feature=related> (As of January 9, 2009)

[Click here](#) if above youtube link is broken.

Here in the 21st Century, these crimes are happening in the jurisdictions of all industrialized nations, and are world wide in scope. The evidence we have gathered to date is here for all who are willing to look at it.

A unique tactic used by the organized stalking perpetrators is that they carefully hide their operations by starting off with "minor annoyances" experienced by everyone. The difference is that these "minor annoyances" happen daily, often several times a day, as opposed to the normal rate of maybe one every few months. Many targets take a long time to come to realize this is deliberate harassment, instead of being the world's unluckiest people.

Eventually, the home break-ins where moving things around, stealing objects of small value and returning them later, leaving cigarette butts and pennies scattered here and there, sabotage at home, in the car, and on the job, and vicious rumour campaigns deliver the message that this is much more than "bad luck."

**\*\* Heard from the harassers themselves \*\***

Observations, and even a few face to face conversations with some members of the organized harassment groups, reveals a pitiful picture where some of them started out being harassed themselves, and particularly, they had every job opportunity trashed. This left the target with seemingly no choice but to join the perpetrators to receive minimal sustenance. This method of recruitment is being enhanced by shipping many jobs overseas as a result of moves to "globalize" the economy.

**\*\* About References to "Government" \*\***

I, Eleanor White, am NOT anti-government. Instead, I am opposed to CORRUPTION IN government. When government, the agency responsible for public protection and safety, IGNORES criminal activity, PROVIDES COVER FOR criminal activity, or actually carries out criminal activity, I oppose such actions. I am certain that the majority of honest government employees welcome efforts to expose and stop government corruption.

[1996/Gloria Naylor](#) | [Activism History](#) | [Activism & Networking](#) | [Activism Tips](#) | [Alpha Index](#) | [Anti Pedophile Page](#) | [Arlene Tyner: Part 4](#) | [Articles](#) | ["Brainchip" booklet](#) | [CATCH](#) | [Child Being Tortured](#) | [Comic strip](#) | [Contact](#) | ["Coping" booklet](#) | [Countermeasures](#) | [Credibility Rating System](#) | [Doctors who know](#) | [Effects-Image](#) | [Effects-Others'](#) | [Effects-Survey](#) | [Effects-Tabulated](#) | [Eleanor White's Hall of Heroes](#) | [E-weps/Iraq](#) | [Experiments](#) | [FECHS](#) | [Footnote for Fellow Christians](#) | [Glossary](#) | [Group Presentations](#) | [Organized Stalking booklet](#) | [How Police Can Help](#) | [How Public Can Help](#) | [Info Handling Tips](#) | [Message to the Perpetrators](#) | ["Mind Control's" Portion](#) | [MKULTRA: FOIA History](#) | ["Mobbing", the book](#) | [NIH Doc Says MC is REAL](#) | [On Line Victims' Memorial](#) | [Organized stalking](#) | [Organized stalkers?](#) | [OS Investigation Report](#) | [OS Videos](#) | [Other Sites](#) | [Outdoors Helps!](#) | [Perpetrator Groups](#) | [Perps Who Talk](#) | [Police CAN help](#) | [Police Who Know](#) | [Preparedness](#) | [Protest Posters](#) | [Road to Freedom \(show\)](#) | [Russian Research](#) | [Sabotage Photos](#) | [Satanic Connection?](#) | [Stop Covert War](#) | [Stalking Groups](#) | [Subject Index](#) | [Tech Talk Booklet](#) | [Thefts](#) | [Threats Received](#) | [Victims' Photo Album](#) | [Voice-to-Skull Success, 1975](#) | [Weapons List](#) | [Top](#)

To remember this site address: "Raven, ONE, caught in a net"

Here are some quotes regarding the electronic harassment weapons' ability to disrupt a target's brain and nervous system:

From the United States Air Force Scientific Advisory Board (SAB) report, "New World Vistas - 21st Century," commissioned by the Secretary of the Air Force and co-signed by the Chief of Staff (94), concluded in 1996, on pages 50 and 51 of the Executive Summary that:

"...Novel enhancements in Human-Machine Interaction...be aggressively pursued. The ultimate interaction is Thought Control."

Here are some techniques used by these criminals who oversee the organized stalking and electronic harassment:

- Official "investigations" which don't ever seem to end, and with no defined purpose, and where the harassment target is unaware of the investigation
- Rumours of illegal and immoral behavior spread about the harassment target among neighbours, co-workers, and even some family members, pedophilia being a favourite
- ["Street theater" and neighbor "skits"](#) designed (very cleverly) to keep the harassment target uncomfortable and isolated for years; often, whenever target moves, new neighbors are moved in soon after (confirmed by investigator [David Lawson](#)).
- [Sabotage](#) of personal possessions and work at the target's home, place of employment, and locked automobile

An anonymous letter from someone claiming to be a perpetrator in this covert program stated that he was recruited by being told he was participating in "criminal rehabilitation", in spite of the fact that overwhelmingly, targets of this program do not have criminal records. (And a few cases of those who have, but have paid their debt and are no longer active as criminals.)

Once designated as a target, control is exercised, or at least attempted with some success, over these facets of the harassment target's life:

- who your friends are, and in many cases whether you will have any friends at all
- how your relations with family will go
- how your relationships with business associates go
- what sort of jobs you will be allowed to hold, regardless of your qualifications, and for how long, and what the quality of your work will be
- how your health will fare, and in many cases if you will even be allowed good health
- whether or not you will be able to enjoy any of life's pleasures
- whether or not you will have any privacy at all
- how well you will be treated in stores and other places of public service
- how well your possessions will work and how long they will work without breakdowns
- how much sleep you will be allowed
- how long you, your children, and your pets will have between occurrences of bodily pain, fatigue, sleep deprivation

## Some Books Relevant to Organized Stalking and Electronic Harassment

[War at Home](#), Brian Glick, about COINTELPRO

[Original COINTELPRO documents site](#)

[Search for the Manchurian Candidate](#), John Marks, \$10 US, MKULTRA history!

[Mobbing: Emotional Abuse in the American Workplace](#), backs us up!

[Quotes from two books by David Lawson](#), about what he calls "cause stalking"

[1996](#), autobiographical novel by writer Gloria Naylor, a target

[A Nation Betrayed](#), Carol Rutz, a first-person MKULTRA testimonial + FOIA information

[Earth Rising](#), by Dr. Nick Begich, *tells it like it is!* Definitely worth the price!

[Controlling the Human Mind](#), by Dr. Nick Begich

## A quick list of some landmark documentation:

[Lida](#), the first electronic harassment-capable device dates from the Korean War

[Dr. Joseph Sharp](#), Walter Reed Army Institute of Research, performs microwave voice to skull back in 1974

["Silent Sound"](#) used by U.S. Army in Gulf War to produce mass surrenders

[MKULTRA](#), [Orlikow court case](#), and [Bonacci court case](#) clearly show abundance of motive and means for grievous atrocities, ..and the MKULTRA perpetrators NEVER faced a SINGLE criminal charge for their atrocities.)

[Human radiation experiments](#), 1944 - 1960s, show brutal involuntary experimentation has gone on in secret on citizens, who were muzzled by government allegations the victims were 'crazy', now admitted to by President Clinton.

[Hearings testimony](#) about these atrocities show that citizens can be severely assaulted and the crimes covered up.

---

## Proven and Available Through-the-Wall Harassment Technologies:

[Click here](#) for a separate page of the technologies listed below. Not good for printing, choose one of the following for printable version:

[RIGHT click here](#) for a Microsoft WORD tailored-for-printing version of this page.

[RIGHT click here](#) for an Adobe Acrobat (PDF) tailored-for-printing version of this page.

These are older, not secret technologies capable of extreme destruction of the ability to earn a living, and the quality of life of a target, listed below. None of these technologies require implants, and all can be transmitted silently, through walls, and leave no trace evidence.

Since few targets will acquire the correct detection equipment, destruction of a target's life even using these older technologies is a perfect crime under today's justice system. Today's justice system denies that any effective through wall harassment technologies exist, probably because they tacitly approve of the activities of the "anti crime" organized stalking groups.

Here is the list:

- A simple microwave oven, door removed, with the door interlock switch bypassed, and held against the bedroom wall of a target in an apartment building or semi-detached house. This device can cause a variety of disabling medical symptoms.

[Article](#)

MODIFIED microwave oven weapon, for improved focus of the microwave radiation,  
from the article above

Some of the symptoms of microwave exposure are:

Asthma, cataracts, headaches, memory loss, early Alzheimer's, bad dreams, depression, fatigue, concentration loss, appetite loss, heart and blood pressure problems, and cancer.

[Vendor](#) offering plans for building a weaponized microwave oven (June 2008.) [Click here](#) if the above link is broken.

- Joseph Sharp's voice to skull success, performed with Dr. James C. Lin's pulsed microwave transmitter, and publicly announced in 1974 at the University of Utah:

[March 1975 "American Psychologist"](#) journal article excerpts and other references.

AUDIBLE sound transmitted directly into a target's skull, through a target's wall, of course, can drive the through-the-wall target crazy, and if the target complains, the target will be immediately diagnosed as mentally ill. The perfect crime.

[U.S. patent 6,587,729](#), issued based on Dr. Joseph Sharp's voice to skull success.

[Voice to skull \(V2S/V2K\)](#), a commercial version dubbed MEDUSA - "Mob Excess Deterrent Using Silent Audio", proposed for commercial development for military and police use, ABC news. If that ABC link is down, [click here](#) for a backup copy. July 2008.

[Don Friedman's 2007 Freedom of Information Act \(FOIA\) request](#) showing government involvement in the development of voice to skull for weapons potential

- Lowery's silent sound, [patent 5,159,703](#) and used for self-help subliminal hypnosis tapes and CDs and by the U.S. Army in Gulf War One (1991).

Together with Sharp's voice to skull, Silent Sound projected through a bedroom wall can hypnotize a target in their bed with the target being unaware. Unaware hypnosis is CLEARLY electronic harassment in the EXTREME!

[Silent Sound in Gulf War One](#)

Concept diagram, combined voice to skull and Silent Sound

- An old medical device, the Russian LIDA machine, a pulsed 40 watt, 40 MHz radio transmitter which can be used to make a target exhausted on the job when pulsing at the rate consistent with sleep, and with a pulse rate increase, DEPRIVE a target of sleep too! [U.S. Patent 3,773,049](#) describes the operation of the LIDA machine.

#### [Notes on the LIDA machine](#)

Dr. Ross Adey is not a known participant in the human rights atrocities described on this site.

- Through clothing (and through non-conductive wall) RADAR, widely used at airports and by police to look through clothing for hidden weapons. The harassment potential of this technology in the hands of organized stalking groups is obvious.

Through wall/clothing radar image

- Code name EPIC through wall coordination/balance disruptor weapon may become technology #6, once it has been announced as having been successfully demonstrated. ([Article](#), dated May 21, 2007)

Electronic harassment targets have reported suddenly having their balance and coordination disrupted.

Classified (secret) equipment, coming into wider use in the 1980s, operates at a much more invasive performance level. Our group, as yet, does not have solid information as to how these classified devices work.

To remember this site address: "Raven, ONE, caught in a net"

"We need a program of psychosurgery and [political control](#) of our society. The purpose is physical control of the mind. Everyone who deviates from the given norm can be surgically mutilated.

"The individual may think that the most important reality is his own existence, but this is only his personal point of view. This lacks historical perspective.

"Man does not have the right to develop his own mind. This kind of liberal orientation has great appeal. We must electrically control the brain. Some day armies and generals will be controlled by electrical stimulation of the brain."

Dr. Jose Delgado (MKULTRA experimenter who demonstrated a radio-controlled bull on CNN in 1985)

Director of Neuropsychiatry  
Yale University Medical School  
Congressional Record February 24, 1972:

[October 2005 Scientific American article](#) on Delgado's work

## To Our Harassers

We are aware that many of you are carrying out these crimes based on lies that we targets are pedophiles or other serious criminals. That you operate from such motives is confirmed by private investigator David Lawson's 12-year investigation, quotes from which can be found [here](#).

You should know that if you are one who is participating in such activity for reasons of "criminal rehabilitation", you have been lied to by the higher echelons of a group that also uses extremely debilitating electronic mind/body weapons against us, around the clock.

These upper echelons are using you to commit very serious crimes against people who are innocent of any crime. You should give this some careful thought, particularly if you are religiously inclined. If not, you may still be setting yourselves up for some major prison time for carrying out the wishes of the covert criminal element who got you started into this criminal activity.

And, please, ask yourself this:

Do you really expect to escape death? Do you really expect that choosing a career of torturing innocent people will have no consequences for you in the next life? Do you really think, after hearing reports from millions of people who have "died" and come back, that there is no "next life"? Do you really believe that those people who reported ending up in Hell during their near death experiences were all lunatics?

[Questionnaire for the Harassers...](#)

---

## **Meet Some Organized Stalking/Electronic Harassment Targets**

Site visitor, please remember the targets, living and dead, of this silent, unending, brutal electronic assault, accompanied by endless vicious lies told in our communities which destroy our reputations, our employment and employment opportunities, personal and business relationships, and sometimes puts us into the street. For most, this living nightmare will only stop at our hour of death.

Appropriate music for viewing the victims' memorial below:

[honor.rm](#) or [honor.wma](#)

This list uses the following abbreviations to show the harassment effects reported by each of the targets listed:

(\* Asterisk) = Pseudonym or Internet handle used at victim's request  
(OS/EH) = Organized stalking including painful, debilitating electronic harassment using silent, no trace evidence electronic weapons  
(DC) = Drug or chemical attacks or poisonings  
(MK) = Large scale drug, electronic and psychiatric/institutional torture programs which evolved from the 1950's and were exposed in 1977. Some MKULTRA victims are also OS/EH targets.  
(FLCh) = Forced loss of child(ren) by bogus determination

of lack of parental fitness

(+) = Deceased or (+Mu) = Deceased, known to have been murdered

(+SU) = Suicide

(EI) = Electronic implant (nearly always involuntary)

(DII) = Deliberately inflicted illness

(Ca) = Cancer

(HA) = Heart Attack

(Bl) = Blinded

(HE) = Heart enlargement, possibly from repeated electronically-induced heart stress

(ION) = Ionizing radiation experiments (xrays, radioactive substances)

(LA) = Local atrophy of body part

(Bu) = Burns, probably microwave

(PMH) = Permanent (bogus) mental hospitalization

(BE) = Brain embolism

(Neu) = Significant neurological damage

(RA) = Ritual abuse, often applied as child

(SxA) = Sexual abuse, not ritual

---

## First Person Name Submissions

[Theresa Schindler Memorial Web Site](#)  
[Terri's fight continues](#) for others

Theresa "Terri" Schindler tortured to death March 31, 2005, by judicial crime, by denial of water for 14 days, while "police" (Nazi thugs) arrested 47 heroes who tried to get Terri WATER in her hospice prison. This was a federal and state felony because Terri was NEVER in a coma, never vegetative, never had a terminal condition, and many doctors filed affidavits stating she was an eminently good candidate for rehabilitation, at age 41. The police enforcing this order KNEW that, and also knew they were enforcing an illegal order. (Other police officers repeatedly advised them of that.)

Politicians such as Florida governor Jeb Bush postured mightily, bemoaning Terri's torture but, while having the authority and DUTY to stop the crime, never did more than tinker with legislation as Terri lay cracking and bleeding from lack of water.

Even dying cancer patients get ice chips in their mouth to ease their suffering during dehydration, while Terri was denied ALL liquid. The criminals who tortured Terri to death only allowed her last rites Holy Communion ONE DROP OF WINE to make sure Terri dehydrated faster! God PUNISH the criminals in government who ordered Terri's torture!

SPECIAL thanks to Gordon Watts of Lakeland, Florida who came very close, losing an appeal vote by only one, 4-3, to saving Terri by his private citizen's petition to the Florida courts!

(This list is only a FEW PERCENT of the known victims world-wide and contains only those who have volunteered to have their suffering recognized here)

---

A footnote for my fellow Christians...

Our group has asked many Christian churches and groups for help in publicizing and exposing the continuing in-home and in-community plight of the targets of organized stalking and electronic harassment. Our group has been consistently ignored, and in some instances severely rebuffed by both clergy and laity, and in one case, we were threatened with legal action for a simple appeal for prayer.

MKULTRA-era history, COINTELPRO history (current-day electronic harassment's progenitors) and unclassified and commercial devices which can carry out this torture are firmly established facts. We are not asking for anything close to a "leap of faith", as we have ample factual material to convince most people of average open-mindedness who will take the time to learn the facts.

It is my prayer that there are a few true Christians out there who will at least PRAY for, if not publicly support, this cause, which can only be dear to the Heart of God.

(Pleasing God, also, would be prayers that Satan's grip on the perpetrators might be shaken loose.)

Eleanor White

(Please pray for the perpetrators)

The article below shows it is possible in the laboratory to control the operation of DNA with radio signals, by way of tiny "nano-antennas" attached to cell components and literally switch genes on and off.

While this is only short-range laboratory technology and not directly related to mind control as described on this site and others, it is more evidence that radio signals can affect body functioning in ways unknown to most of the general public. Discoveries like this underscore the need for governments to stop denying and start disclosing all such technology, and start seriously investigating reported abuses.

Scientists control biological materials with radio waves

by Deborah Halber  
News Office

It's not exactly "ET, phone home," but MIT researchers reported in the Jan. 10 issue of *Nature* that they can "speak" to DNA biomolecules with radio waves.

The goal is to instruct biological materials how to act for a variety of purposes. Biological machines may one day be used to perform computation, assemble computer components or become part of computer hardware or circuitry. Radio-controlled biology may lead to single-atom or single-molecule machines, or the ability to hook tiny antennae into living systems to turn genes on and off.

"Recent studies have provided new insights into the complexity, precision and efficiency of biomolecular machines at the molecular scale, inspiring the development of physical and chemical manipulation of biological systems," said Joseph M. Jacobson, associate professor at the Media Lab and one of the paper's authors. "Manipulation of DNA is interesting because it has been shown recently that it has potential as an actuator (a hard drive component) and can be used to perform computational operations."

The researchers predict that radio frequency (RF) biology will have a broad range of applications. Because virtually all biological molecules can be linked with gold or other semiconducting nanoparticles, these molecules can be controlled electronically, remotely, reversibly and precisely, said Shuguang Zhang, associate director of the Center for Biomedical Engineering and another author of the study. Such systems will have profound implications for finely dissecting detailed molecular interactions and formations, he said.

## SINGLE-ATOM MACHINES

Jacobson, head of the Media Lab's Molecular Machine group, has a background in quantum physics. He became interested in using biology as a tool to create nanometer-length machines.

The ultimate goal, he said, is a single-atom or single-molecule machine. It's hard to manufacture computer chips much smaller than 30 nanometers, but biology has an excellent track record at creating tiny workable systems. The cell itself is a phenomenal little machine with its own power supply and memory. "If we're interested in molecular-scale machines, biology is a wonderful place to start," Jacobson said. He worked with researchers from the Center for Biomedical Engineering (CBE) to attach tiny radio-frequency antennae—a metal nanocluster of less than 100 atoms—to DNA. When a radio-frequency magnetic field is transmitted into the little antennae, the molecule is zapped with energy and responds.

Hybridization is the process of joining two complementary strands of DNA, or one each of DNA and RNA, to form a double-stranded molecule. In dehybridization, the strands unwind. Using this technique, the researchers dehybridized double-stranded DNA in a matter of seconds. The switching, which is reversible, did not affect neighboring molecules. Nanocrystals can be attached to proteins as well as to nucleic acids.

This opens the possibility of switching more complex processes such as enzymatic activity, biomolecular assembly, gene expression and protein folding. The function of cells' components and the cell life cycle itself may be electronically regulated with radio frequency, Jacobson said. The goal is build molecules into systems that turn on and off depending on the electronic commands they receive.

It may one day be possible to hook the antennae into living systems and turn genes on and off. "There are already numerous examples of nanocrystals attached to biological systems for the purpose of sensing," said co-author Kimberly Hamad-Schifferli, a postdoctoral associate in the MIT Media Lab. "However, we hadn't come across any examples where they are used as a means of controlling the biology."

"The development of molecular biology has witnessed many examples of ways to design new tools that accelerated uncovering nature's secrets," Zhang said. "Regulation of biomolecules using electronic RF control represents a new dimension in biology."

The exquisitely fine electronic controls of biological regulation will likely become more and more important in understanding complex molecular interactions in great detail, he said, because there is currently no other way to achieve fine local control without disturbing neighboring molecules. He likened the level of communication to using a mobile phone to convey a message to a single person in a crowd.

"Radio-frequency biology provides us with some extraordinary tools and with unprecedented precision controls to study biomolecules and their interactions. These new tools and technologies will undoubtedly advance our knowledge in finest detail. It not only opens new avenues for us to ask big and deep questions but also to

attain the ultimate answers in biology," Zhang said.

In addition to Jacobson, Hamad and Zhang, the study's authors are John J. Schwartz, a former postdoctoral associate in the CBE who now works for engeneOS in Waltham, and Aaron Santos (S.B. 2001). Jacobson and Zhang also are affiliated with engeneOS, which designs and builds programmable biomolecular devices consisting of natural and non-natural materials for commercial applications.

This work is funded by the Defense Advanced Research Projects Agency (DARPA) and the Media Lab's Things That Think consortium.

## **Book Review: Remote Viewing**

**by Tim Rifat, reviewer Eleanor White**  
**This page date August 25, 2003**

**Copyright 2001 by Tim Rifat (United Kingdom)**

**Published by Vision Paperbacks, 101 Southwark Street,  
London SE1 0JF, UK**

**<http://www.visionpaperbacks.co.uk>**

**ISBN 1-901250-96-2**

**278 pages, indexed**

**\*\* PROBABLY NOT IN PRINT, BUT YOU CAN TRY**

**<http://www.amazon.com>**

**... I have heard they still have the book available  
and possibly used copies.**

This is an "Eleanor White Book Review". Such reviews are not like what you see in the print media. My emphasis is to provide enough information that a mind control victim or supporter can make an intelligent decision as to whether to buy the book (or borrow it). This means most of the reviews are excerpted text, with comments inserted. This type of review is biased in favor of information relevant to mind control technology, and possible countermeasure experiments. In this book review, the material on remote viewing itself, and how to do it, is not emphasized. Those who are interested should obtain this book or one like it for detailed information.

An excellent companion book is [Psychic Discoveries](#), by Sheila Ostrander and Lynn Schroeder, 1997. (This book may be easier to acquire or borrow than the Rifat Remote Viewing book. Their earlier book, [Psychic Discoveries Behind the Iron Curtain](#), 1970, is also excellent and a real milestone in the fight to expose and stop mind control.)

In this book, "psychotronic" includes electronic amplification of psychic abilities, but more than that, it is used to mean ALL offensive uses of psi energy. Psi means the manipulation of the biophysical field connection between man and the unified field of his surroundings.

Note: In the excerpted text from the book, emphasis by way of ALL UPPER CASE LETTERS is mine. The reason for such emphasis is to point up information particularly relevant to mind control.

Also check out [The Secret Life of Plants](#) for ideas which may permit advanced, ESP-class mind/body attack signals to be detected.

---

## **Concepts Table (Relevant Points)**

## **(Scroll down for the book's table of contents)**

Note: This "Concepts Table" is to speed up access to those points of special relevance to mind control victims who are trying to develop detection, jamming, and shielding countermeasures. This table doesn't appear in the book itself.

## **Congressman Ron Paul Admits Conspiracy to Create World Government**

[911Exposed.com](http://911Exposed.com)

Eric Rainbolt - audience member asking question of Congressman Paul at event near Austin, Texas on August 30th, 2003: "Congressman Paul, I have a question..."

Moderator: "Over here." (pointing to Eric Rainbolt.)

Eric Rainbolt: "Great! If we can take a look at the big picture, could you tell us, the people in this room, any information that you may have of an international and deceptive conspiracy to overthrow the American Republic and its Constitution & Bill Of Rights in order to set up and usher in a totalitarian World Government likely espoused under the UN also..?"

Congressman Paul: " He asked if there was an international conspiracy to overthrow our government. The answer is **"Yes"**. I think there are 25,000 individuals that have used offices of powers, and they are in our Universities and they are in our Congresses, and they believe in One World Government. And if you believe in One World Government, then you are talking about undermining National Sovereignty and you are talking about setting up something that you could well call a Dictatorship - and those plans are there!..."

## So you think things like electronic harassment can't happen?

Monday November 09, 1998

CBC Radio (National) THIS MORNING

Introduction/Interviewer: Avril Benoit

Interviewer: Rosie Rowbotham

Interview with: Dorothy Proctor, Allen Hornblum, and  
Dr. George Scott

### SECRET EXPERIMENTS ON CANADA'S CONVICTS

AVRIL BENOIT: It is known that the U.S. government used prisoners as guinea pigs for often horrific experiments conducted in the name of commerce and science. Now there is growing concern over experiments on Canadian prisoners, experiments in sensory deprivation in which prisoners were placed in solitary confinement for weeks at a time. Experiments in pain tolerance using electric shocks and other experiments in which prisoners were given massive doses of LSD and other drugs without their knowledge nor their consent. Corrections Canada has investigated the matter and now a Federal Report calls the experiments "unethical, even by the standards of the day". One former inmate has launched a multi-million dollar lawsuit against the doctors who used her as a human guinea pig and against Corrections Canada for allowing it to occur. The woman and one of the doctors she is suing spoke with our Contributing Editor, Rosie Rowbotham, who joins me now:

AVRIL BENOIT: When did these experiments occur?

ROSIE ROWBOTHAM: Well they started in the 1960's here in Canada and went as far as the mid-1970's. It depends on which offender you are talking to.

AVRIL BENOIT: Which prisons did they occur in?

ROSIE ROWBOTHAM: They happened in Prison for Women [P4W], East Cell Block [ECB] inside Kingston Penitentiary and Millhaven.

AVRIL BENOIT: How many prisoners were involved as guinea pigs?

ROSIE ROWBOTHAM: We're not sure of the exact number, but it is safe to say several dozens alone here in the Kingston area.

AVRIL BENOIT: You spoke with several of them. What do they say about their experiences?

ROSIE ROWBOTHAM: I talked with both Canadian and American prisoners Avril, and some were ex-cons and some were still serving time. A few of the Canadians, one in particular, had served time in Raway (sp) Prison in New Jersey. His tale is of psychotropic drugs and

eventually he has cirrhosis of the liver now, and is back doing time in Canada, and he is terminal, he is dying. Another Canadian who is doing time today talks about Millhaven ECB and he talks about sensory deprivation, shock therapy and many many types of drug experimentation.

We talked about LSD experimentation. We are going to hear from one of the prisoners, a woman named Dorothy Proctor, in a few minutes. But I wanted to talk a little about America first.

AVRIL BENOIT: Which is where the controversy started? How would you compare then what happened here, to what happened in the States?

ROSIE ROWBOTHAM: In the USA there was a lot of experimentation with the pharmaceutical companies. They were using dioxins as a skin cream on many of the prisoners. Starting in the twenties, thirties and forties. Cancer cell injections, many things. In Canada the emphasis was more on drugs, especially LSD, shock therapy and isolation. But the important thing is that we came along and borrowed a lot of the idea from the USA because it is a perfect control group a prison population, for several reasons. Instead of an old folks' home or mental institution, they could report on what happens to these drugs, and so the experimentation gives them some results, some results they can follow.

AVRIL BENOIT: You mean because they are lucid enough to tell you what they are experiencing.

ROSIE ROWBOTHAM: And the area is controlled where they are going, what they are eating.

AVRIL BENOIT: And they can't leave.

ROSIE ROWBOTHAM: We have a completely controlled group.

AVRIL BENOIT: Was it also the fact that many people of the time were absolutely unsympathetic with prisoners, as many are still today?

ROSIE ROWBOTHAM: Well, I would say it was back in the times, in the thirties and forties, I don't think anybody even gave a second thought about prisons or what was happening to them. Nobody was talking about it. I talked to an American author, Allen Hornblum. He has written a book about experiments on American prisoners called, ACRES OF SKIN. He went to Holmesburg Prison in Philadelphia in the early 1970's as a literacy teacher, and this is what he saw there.

ALLEN HORNBLUM: One of the things that immediately shocked me was the great number of inmates who had bandages and adhesive tape on their backs, on their chests, on their arms. I thought to myself, "is this from a prison riot, was there a fight on a cell block - I had no idea what it was." And the next day a guard told me, he said, "oh that's no big deal, that's just the experiments for the University of Pennsylvania. They are doing a perfume study." It turned out it was part of a very large research program by a famous doctor at the University of Pennsylvania.

ROSIE ROWBOTHAM: I understand the famous doctor you are talking about is Dr. Albert Kligman. How did he start off at Holmesburg? I understood this thing started off innocently enough.

ALLEN HORNBLUM: That's right. Periodically there would be outbreaks of athlete's foot which you can imagine, in a large, unhealthy environment. Well, either a doctor or technician or pharmacist at the prison called Dr. Kligman and said we have this problem, take a look at it. He did come up, and when he walked through the front gates of Holmesburg I believe he was amazed by what he saw. As he said, what he saw before him were "acres of skin". He no longer, in my estimation, saw them as people or prisoners - he saw them as acres of skin which would be perfect for dermatologic study. He did in fact say, "He felt like a farmer seeing a fertile field for the first time" and that these men represented an anthropoid colony perfect for dermatologic testing. He basically set up shop there. It ran from the very early fifties to the mid-seventies.

ROSIE ROWBOTHAM: What is the worst thing that happened there, in your memories?

ALLEN HORNBLUM: There are a number of them. One of things that makes the Holmesburg story unique is that so much was done there - it was really like a K-Mart of investigatory operations. Holmesburg was like a university of research. They ran experiments on a cross-section of things on thousands of inmates for nearly twenty-five years. A lot of it was very innocuous stuff, product testing. Hair dyes, lotions, detergents, athlete's foot medication, eye drops, toothpaste, things of that nature.

They also did some more serious Phase One Testing - new drugs that were coming on the market. But worse and far more dangerous was the fact that Dr. Kligman was applying dioxin to the faces and backs of prisoners; injecting prisoners with radioactive isotopes; and for many years injecting prisoners with various chemical warfare agents for the Army and the CIA.

ROSIE ROWBOTHAM: Now that wasn't just happening in Holmesburg. From reading your book, you talk about this expanding to other parts of the country.

ALLEN HORNBLUM: That's right. Just about every state in America had at least one prison that was acting as a source for medical experimentation. We tend to see one prison focusing on one particular malady or problem over a short period of time. Pennsylvania, the state I am calling from, unfortunately had, in my estimation, the worst reputation. We had double to five times as many prisons involved and that is probably because the area of Philadelphia and South Jersey is such a hotbed for pharmaceutical companies and medical schools.

ROSIE ROWBOTHAM: But some of these are horror stories. Taking cancer cells and injecting them in patients in Ohio State; having their testicles stuck in radioactive water as a test for sterilization. RJ Reynolds Tobacco Company testing for bladder cancer. It seemed to be out of control.

ALLEN HORNBLUM: I think that's a good way to characterize it. And that's one of the things I find so frustrating and outrageous. At the end of the War it was the United States (not Russia, not England, not France) that put the Nazi doctors on trial for what they did at Bergen Belsen, Auschwitz, Ravensbrück. We harangued those Nazi doctors, we lectured them, we found them guilty, we ultimately hung seven of them but at the same time we were doing

that, in our own country we were injecting plutonium and uranium into unwitting hospital patients.

ROSIE ROWBOTHAM: Didn't the Nazis say that at the trials at Nuremberg?

ALLEN HORNBLUM: They did bring up the fact that the United States had used prisoners as test material. It surprised a lot of folks on the American side because they were not aware of it, but the Nazi doctors and their legal counsel became aware of it early in the trial, and they used it as exculpatory material. I am not sure it did them any good but what's worse in my estimation is after the trial we ended up doing up more of it rather than less of it.

AVRIL BENOIT: American author, Allen Hornblum, talking with Rosie Rowbotham about his book, ACRES OF SKIN: the human experiments at Holmesburg Prison, published by Rutledge.

Rosie, when Canadians started their own research on prisoners, did anyone raise any ethical objections?

ROSIE ROWBOTHAM: No, and at the time if they did, who would care if they did speak out? These prisoners, again, were a perfect group to do experimentation on, especially when it comes to psychiatry.

AVRIL BENOIT: You interviewed one woman, Dorothy Proctor, who has launched a five million dollar lawsuit against the doctors, and Corrections Canada. Tell me about her.

ROSIE ROWBOTHAM: Well, she was born in Cape Breton, Nova Scotia. She had a fairly tough upbringing. For her first adult crime she was sentenced to three years for robbery at the age of seventeen. She was sent to the Kingston Prison for Women in 1961. This is what happened to her.

DOROTHY PROCTOR: Being a young girl and being labelled as a juvenile delinquent I behaved as such. The authorities used my behaviour as an excuse to label me as a sociopath or a psychopath and that was just a label, that was just language they could put on paper so they could legitimately receive funding for the experiment. Now I know that I was being primed with sensory deprivation to prepare me for the other experiments. At that time I didn't know. I was told it was for disciplinary reasons.

I was put in the Hole [solitary segregation] for all sorts of violations. When I was in the Hole it was for twenty days or twenty-some days - but actually I used to go the Hole for fifty two days with just bread and water.

ROSIE ROWBOTHAM: Tell us what that was like, being in the Hole for 52 days.

DOROTHY PROCTOR: That was - what was it like? Well, at my age - actually Rosie, I am glad I was the age that I was because I was young and ignorant, probably didn't have enough sense to realize what was going on. All I know is that it was frightening. I thought I was going to die. I thought "I can't live 52 days bread and water". Every third day I would get a bowl of porridge and a boiled potato and I wouldn't be let out. So what I would do to occupy myself was exercise, I would sing, I would dance. I had visitors - spiders, insects.

ROSIE ROWBOTHAM: These are real insects - this was before the LSD?

DOROTHY PROCTOR: (laughs) Oh yes. Real insects. Before the LSD. Little things that you find in these places. Because you have to amuse yourself. I never thought of a future because right then and there, there was no future to think about.

ROSIE ROWBOTHAM: Okay now, what about the actual LSD? When did this come about? They started the sensory deprivation.

DOROTHY PROCTOR: Also electric shock - I had electric shock often - I would say when they began - maybe two, three times a week. That was within my first year and that was combined with going to the Hole. I would come out of the Hole and of course I would react. I mean look what they were doing to me. Sometimes I would physically engage with another inmate and so any infraction - I would be put in the Hole. But it seems strange to me Rosie, the other inmates I would engage with would never be put in the Hole. It was just me

I believe I was targeted from the very beginning. I don't want to play the race card but I really can't help but think that perhaps I was targeted because first of all I was very, very young. I think I was the youngest inmate there. I didn't have any family support. I didn't come from a background of influence or power and plus I am Native and Black Canadian.

ROSIE ROWBOTHAM: After these electroconvulsive therapy, what was done with the LSD?

DOROTHY PROCTOR: After the electric shocks and the sensory deprivation I believe they were preparing me. Mr. Eveson, the prison psychologist, used to come down - now this is where I am connecting the dots. I believe brainwashing was the issue here. He would come down, he was a soft-spoken man, non-threatening in his body language and behaviour. He would come down to the Hole and he would speak to me like "Dorothy I am making arrangements to have you released. Please try to cooperate with me and I will try to help you." Almost a Stockholm Syndrome started to set in with me. He would be the person to come and release me, rescue me so to speak. He would be very soft spoken with me and kind. So now he's my friend.

Before Mr. Eveson, I was also seeing Dr. Scott, the psychiatrist. Now Mr. Eveson comes down to the Hole, and he has a student with him, a lady psych student from Queen's University and she's to take notes. He pulls up a chair for her and him, and they are outside in the hallway section of the cell - this is through the bars. I am on the floor, no mattress just a blanket, then I am taken out of the cell that has a commode. I am now in cell with a hole in the floor for my toilet. That had backed up so I am also in my own waste and stench -- you can imagine.

ROSIE ROWBOTHAM: You set the ambience.

DOROTHY PROCTOR: Yes. So he comes out and presents me with this oh, you know, we want to help you so much, we want you to correct yourself, and we want you to be able to rehabilitate yourself. And I am your friend, and you are worth saving, so just cooperate with me scenario. And I have here a pill or something like that just might help you. I am going to rescue you. That was the LSD.

I don't think it was fifteen or twenty minutes before Dante's Inferno. It was obvious. I am locked in. I can't get away. And the walls start the walls start to move in on me, and they melt. The bars turn to snakes, there was an awful physical vibration in my body. It was just awful, just awful, and of course, any mind that I had to think in reality, I just thought I had gone mad, that's it.

ROSIE ROWBOTHAM: How long did these LSD experiments go on?

DOROTHY PROCTOR: I clearly remember over ten sessions but we could only find documents that support I think, three. That's fine with me, I am not going to play a numbers game here because one time, ten times, fifty times. It should have never have happened.

ROSIE ROWBOTHAM: Did Dr. Scott or any of the other doctors or medical staff at the Prison for Women at any time tell you why they were doing this? Did they have any justification for doing these experiments? What did they tell you?

DOROTHY PROCTOR: They have no reason to tell me anything. I was a nothing, I was just something to experiment on. They probably discussed it among themselves but it was never discussed with me. I was not worthy of that respect.

ROSIE ROWBOTHAM: Was there informed consent? Did they ask you to sign any forms saying that you were aware what they were doing and you had given permission for them to do these things?

DOROTHY PROCTOR: No, absolutely nothing. They took permission, they took charge of me and my life and my brain.

ROSIE ROWBOTHAM: Tell us more about Dr. George Scott, he was man who actually ran these experiments. What was he like?

DOROTHY PROCTOR: I don't have a clear memory - I have a clear memory the existence of a Dr. George Scott. I don't have a clear memory of interacting with him. The only evidence I have to support that are his own letters, documents referring to sessions with me, they gave me psychological tests, and I was "highly intelligent" according to Dr. Scott. "Above average in intelligence" in his words, and "fairly gifted". Now Rosie, why would take a child who was "fairly gifted" and experiment on them and take a risk of making them "mad", causing them to be insane?

Not only that, they created a drug addict, I had never done drugs. I walked out of Kingston Prison for Women with \$47.00 in my pocket, a one-way ticket to Montreal, and a full blown drug habit. I remained a drug addict for twenty-four years, and all that means.

ROSIE ROWBOTHAM: Did you do drugs in prison, contraband drugs that were in prison as well, like heroin, while they were doing these experiments?

DOROTHY PROCTOR: I didn't have to do contraband drugs. I had my own little drugstore with Dr. Scott and Mr. Eveson. They were giving me drugs. I had LSD and I had pharmaceutical drugs. I couldn't even pronounce the names. We have lists of them in our documents.

ROSIE ROWBOTHAM: Do you have any lasting physical effects?

DOROTHY PROCTOR: I have flashbacks. I have to live alert 24 hours a day. Most people can take their days, their movements, their actions, for granted. I can't. I am always making sure that I am stepping the right way but it's not noticeable to anyone who is watching me. It's something I have learned to live with and I handle. I don't go into deep sleeps. I have been drug free for eleven years and it took me about the first five years before I had some clarity and understand what was wrong with me. These are things that will live with me forever, plus my life has been drastically altered. My own government created a drug addict. I just can't get my mind around that.

ROSIE ROWBOTHAM: Have you learned to forgive? Have you found some spiritual centre through all this?

DOROTHY PROCTOR: I don't have a problem with forgiving. If I forgive them, I forgive everybody because I want to be forgiven so I have to forgive. I understand that with forgiveness comes accountability. They still have to be accountable to me whether I forgive them or not.

AVRIL BENOIT: It really sounds like she went through chemical torture through all that time. It's a wonder she pulled out of it at all. How is Dorothy Proctor doing now, Rosie?

ROSIE ROWBOTHAM: She's fine. She leads a very careful and limited life, Avril. She has claustrophobia. Incidentally when I was doing the interview with her, she felt that the interview room at the studio was closing in on her, so I was sensitive to that and tried to get the interview over as quickly as possible. But she is determined to get justice, and she wants to bring this to a close.

AVRIL BENOIT: You met with Dr. Scott?

ROSIE ROWBOTHAM: Yes I did. I met him north of Kingston, around Sealeys Bay, he has an old farmhouse. He was standing outside there, to meet us. He is 82 years old, he is getting rather old now.

He took us in his back room - where he has his old psychiatric books, and a Carl Sandberg book on the wall. He had an old space heater going. You can maybe hear it in the background. We had a good chat for an hour and a half or so. He's been stripped of his license to practice medicine by the College of Physicians and Surgeons for an unrelated matter - sexual impropriety with two female patients.

AVRIL BENOIT: Who were prisoners?

ROSIE ROWBOTHAM: No. This is from his practice on the street, because the man had his own private psychiatric hospital. He was successfully sued for \$400,000 in connection to one of those lawsuits.

He refused to discuss the Dorothy Proctor case specifically with me although he did agree to talk in general terms about what went on at P4W and other prisons.

DR. GEORGE SCOTT: To start off with, I would like you to know that my interest in psychiatry has been from when I was the age of

probably fifteen. When WWII ended, clinical psychiatry was just about beginning to become a thing. It was gradually going uphill through difficulties, ideas. In 1960 it was LSD, diethylamide. It's a psychoactive one. We are being sued for it by a prison inmate.

ROSIE ROWBOTHAM: Can you talk in a general way about the LSD? I don't mean in specifics, but what was that about?

DR. GEORGE SCOTT: In 1960 a researcher found that the alcoholics - when they were deeply involved in alcohol - they would come out with no memory at all. They wouldn't remember what the hell happened. So they found that after the treatment periods in an alcoholic, that they had some type of awareness of something. It's like a pea being in your pocket. You eventually begin to say "Jesus Christ. I've got a sore seat and I don't know what's going on."

Well, there was something in their mind that was burning them. Then they were more vulnerable to say "I remember when I was a little kid". [tries to sound like a child] You know? The doors are open.

ROSIE ROWBOTHAM: So LSD opened their doors inside?

DR. GEORGE SCOTT: Yeah. The set of doors. No psychiatrist was muttering at them. That other life came out. And it was proven that 30-40% of the real serious alcoholics in the large metropolitan centres - New York, Pittsburgh, and the other places - they would be improved by LSD. And all the experiments in LSD finished off about 1982 or 1983. 1960-1961, everybody's ears were going up about LSD, and the dangers of it, and all the other stuff was it become a problem. So LSD ran its gamut. LSD is now just a drug.

ROSIE ROWBOTHAM: Let's talk about sensory deprivation, you did those studies. What did sensory deprivation with inmates teach mankind or psychiatry?

DR. GEORGE SCOTT: Well, that actually started in Montreal. Where a research psychiatrist isolated people in big, like, balloons. A balloon that you could walk into. They lived in isolation for a period of time. The one research we did, and I had the overt privilege of being told that I was Boss of the whole thing - but Paul Gendreau was the real able guy.

ROSIE ROWBOTHAM: This is in Correctional Services you are talking about?

DR. GEORGE SCOTT: Yeah. Paul and I and several other people did the paper and the results of the paper were that more than a week or two weeks of isolation on people who were already vulnerable. You see, the inmate, "He Ain't Normal" because he lives in a pathological environment. You live with rattlesnakes, you are either going to get rattlesnake venom, or be able to bite the rattlesnake or whatever. What happened was that the people, I think we had twelve people, and they found that the longer they were there, the more they wanted to stay and sleep.

ROSIE ROWBOTHAM: You say you had twelve. How did you select those twelve people?

DR. GEORGE SCOTT: Purely by deciding what would be the standards - anybody who get's involved in the research project, it has to be explained, and they have to sign that they are doing this of their own free will, and their own free control. That's the way it is. There was no forcing ever. I mean, it's not my line. You see, with my kind of personality, if I can't talk them into it, I might as well give up. If they need it I will go all the way.

ROSIE ROWBOTHAM: Were they told?

DR. GEORGE SCOTT: Oh sure, they would know the whole show.

ROSIE ROWBOTHAM: Did they sign?

DR. GEORGE SCOTT: Yeah, oh yes, absolutely. And there was no discomfort really.

ROSIE ROWBOTHAM: And for other studies, did everybody know what they were -

DR. GEORGE SCOTT: Nothing could be done - now the one that's up in the air now, I can't talk about that.

ROSIE ROWBOTHAM: Is that the LSD study you were talking about?

DR. GEORGE SCOTT: Yeah.

ROSIE ROWBOTHAM: Can you tell us this about that? How were they selected?

DR. GEORGE SCOTT: I had nothing to do with selection. Nothing. See, I was the Boss Man. So I get shit on. So I get shoved around (laughs) as the Father of all this.

ROSIE ROWBOTHAM: Somebody has to be responsible.

DR. GEORGE SCOTT: All I had to do was work the money and make sure that the limits of research were all looked after.

ROSIE ROWBOTHAM: What did you, as a psychiatrist, learn from the experience with any of these studies?

DR. GEORGE SCOTT: LSD is not used in the medical context, anywhere in the world, at this point. Not at all.

ROSIE ROWBOTHAM: So you would say certain drugs you would still use, and psychiatry still uses, but LSD you say ran its gamut, and can't be used today because there is nothing from it? Did you learn anything from it?

DR. GEORGE SCOTT: Well, you see, I was not actually involved. I was sitting at the head of the class but - we worked with the Department of Psychology at Queen's University. That was their part. The psychologists were involved greatly in that. Their work that they did was exceptionally fine. There's nothing about them that could really be questioned. I was more for the physical side of the psychiatric part.

ROSIE ROWBOTHAM: This is the LSD stuff.

DR. GEORGE SCOTT: That was done through a very capable guy who had the research background that he could allow LSD to be given for therapeutic purposes.

ROSIE ROWBOTHAM: This is in Canada.

DR. GEORGE SCOTT: Yeah, in this area.

ROSIE ROWBOTHAM: Do we know who that is?

DR. GEORGE SCOTT: Oh you could find out.

ROSIE ROWBOTHAM: Did you ever work in Prison for Women?

DR. GEORGE SCOTT: I have worked in every prison.

ROSIE ROWBOTHAM: When you hear about the LSD and Prison for Women, what is your perspective, what do you think of that, what do you feel about what people -

DR. GEORGE SCOTT: One troublemaker out of twelve is one troublemaker out of ten.(?) That's an 8% casualty rate. That's not bad. That girl, or any person who goes through a system and thirty years later feels they have been poorly done by, it's what they say. I've got nothing to do with it.

ROSIE ROWBOTHAM: The other people who did the LSD, you're saying they had no problems?

DR. GEORGE SCOTT: Well, you'd hear from them if they were. Yup.

ROSIE ROWBOTHAM: I just want to clarify a few things. You said you were not involved with any LSD stud

---

Without this book, or an equally informed source, today's organized stalking and electronic harassment target will not be able to understand how such brutal, hidden-in-the-open atrocities can possibly happen and be so well covered up in so-called democratic countries.

Other sources which provide the listener with the type of information in this book are the U.S. Patriot movement's [shortwave AND WEB broadcasts](#). Either one or the other is, in my opinion, a must for organized stalking targets wanting to be fully informed.

Government crime talk show host Richard Syrett recommends this book as an excellent all round reference to explain how many serious and covered up government crimes get perpetrated and perpetuated. He keeps a copy as a bedside reference.

I'm only about halfway through at time of writing, but the first half alone is sufficient to see how the "behind the scenes international elite" orchestrate the activities of all governments, up to and including world wars and economic depressions. You will learn from a source like Rule by Secrecy that in fact most of what you see and hear about government actions have causes which never even come close to being revealed by mainstream media.

I find it most disturbing that so many brave members of the military have given their lives believing in a cause, when the true cause of those wars has been the behind the scenes machinations of moneyed elites who never came close to a battlefield.

According to this book, and informed broadcasters and researchers, world decisions are made in varying degrees of secret by the world's ultra rich, who use various organizations to formalize their work. Some of these organs are seemingly public, and produce periodical literature. Their literature in turn is used by the shortwave broadcasters to educate the public about the fact that elected officials are puppets of the "shadow government" when push comes to shove.

Rule by Secrecy lists some identifiable organs of the international shadow government, and explains their makeup and history. I will summarize some of these shadow government identifiable organs below, largely using excerpts from the book itself:

- New World Order

The GOAL of the shadow government which has existed for centuries, and requires the destruction of national sovereignty to achieve. Sovereignty can be accomplished by creating crises so severe that long term help from other nations is required. Massive influx of illegal immigrants can help with destruction of sovereignty. Artificially created long term drought can bring sovereignty to its knees, and that appears to be in progress in North America by way of the chemtrails.

George Bush Senior spoke repeatedly about the New World Order, but did not explain what this concept meant. The New World Order means a single world government. Reading this book paints a picture of the single world government as overwhelmingly likely, as brutal and totalitarian as is humanly possible.

- The Council on Foreign Relations (CFR)

"...the granddaddy of the modern American secret societies..."

The council began as an outgrowth of a series of meetings conducted during World War I. In 1917, Colonel Edward Mandell House, President Woodrow Wilson's confidential adviser, had gathered about one hundred prominent men to discuss the postwar world. Dubbing themselves "the Inquiry", they made plans for a peace settlement...

The CFR's [current-day] invitation-only membership, originally limited to 1,600 participants, today numbers more than 3,300 representing the most influential leaders in finance, commerce, communications [media!], and academia. Admission is a very discriminating and painful process: candidates have to be proposed by a member, seconded by another member, approved by a membership committee, screened by the professional staff, and finally approved by the board of directors.

Once the ruling members of the CFR have decided that the U.S. Government should adopt a particular policy, the very substantial research facilities are put to work to develop arguments, intellectual and emotional, to support the new policy, and to confound and discredit, intellectually and politically, ANY opposition...

John Kenneth Galbraith ... called off-the-record talks by the Treasury Secretary or CIA Director a "scandal". "Why should businessmen be briefed by government officials on information not available to the public...?" he asked.

- The Trilateral Commission

"By the early 1970s, ... many Americans were becoming more aware of secretive organizations such as the Council on Foreign Relations. Former CFR chairman David Rockefeller, apparently in an effort to deflect public attention from CFR activities, instigated the creation of a more public offshoot organization: the Trilateral Commission.

"Trilateral" means "Europe, North America, and Asia".

The concept of the Trilateral Commission was originally brought to Rockefeller by Zbigniew Brzezinski, then head of the Russian Studies Department at Columbia

University. Brzezinski declared that "National Sovereignty is no longer a viable concept".

Brzezinski's hope for a global society did not exclude nations under the rule of Marxism, which he described as "a further vital and creative stage in the maturing of man's universal vision... a victory of reason over belief." Brzezinski was named North American Director, when the Trilateral Commission was founded on July 1, 1973.

Trilateral Commission led to the 1979 creation of the Federal Emergency Management Agency (FEMA), a civilian organization with the power to take TOTALITARIAN CONTROL of government functions in the event of a national "emergency".

Trilateral Commission has acquired a reputation for being the "Shadow Government of the West".

Trilateral Commission has been described by some as a cabal of powerful men out to control the world by creating a supernational community dominated by the multinational corporations.

- The Bilderbergers

...are a group of powerful men and women - many of them European royalty - who meet in secret each year to discuss the issues of the day. Despite the fact that many highly regarded American media members meet with the Bilderbergers, LITTLE OR NOTHING gets reported on the group or its activities, leading writers to claim censorship and news management.

"Bilderbergers" derives from Bilderberg Hotel in Oosterbeek, Holland, where the group was first discovered by the public in 1954.

Bilderbergers have included CIA Director Allen Dulles, CIA official Thomas Braden, OSS Director William Donovan, and CIA-connected C. D. Jackson, Life Magazine publisher and President Eisenhower's "special consultant for psychological warfare".

Primary impetus for meetings came from Dutch Prince Bernhard, a former member of the Nazi SS, who later married Princess Juliana and became a major shareholder and officer in Dutch Shell Oil.

Americans who have attended Bilderberger meetings include CFR members George Ball, Dean Acheson, Dean Rusk, McGeorge Bundy, Christian Herter, Douglas Dillon, J. Robert Oppenheimer, Walter Reuther, Jacob Javits, Robert McNamara, Walter Bedell Smith, General Lyman Lemnitzer, J. William Fulbright, Henry Ford II.

An obvious connecting link between the CFR, Trilateral Commission, and the Bilderbergers is the Rockefeller family, particularly the youngest son, David.

Senator Barry Goldwater: "David Rockefeller's newest international cabal [The Trilateral Commission] ...is intended to be the vehicle for consolidation of the commercial and banking interests by SEIZING CONTROL OF THE POLITICAL GOVERNMENT OF THE UNITED STATES."

- The Illuminati

An evolved 1700s order, of German origin, which had as a founding principle that "the end justifies the means" and that bad deeds were only "bad" because of moral rules the Illuminated ones deemed "arbitrary". (Obviously, Hitler embraced this idea.) Merged itself into European Freemasonry, and settled into "Hidden Grades", that is the degrees (ranks) in Freemasonry above 33, unknown to the general public and most lower ranking Freemasons. Unknown if it exists today explicitly, though the groups outlined above certainly appear to embrace the concepts of the early philosophy.

- Freemasonry

The ongoing "connective tissue" between modern and ancient secret societies, which existed long before the 18th century Illuminati. Derived from actual ancient masons, who had meeting halls or "lodges" in every major city of the Old World and did carry secret construction related knowledge.

Prominent nineteenth-century Freemason Albert Pike admitted that Freemasonry has "two doctrines, one concealed and reserved for the Masters, ...the other public...". The vast majority of Masons never pass from the public to the concealed doctrine.

Deception of the public as to the concealed doctrines has been accomplished by providing both Masonic initiates and the inquiring public with such a mass of contradictory and confusing information, traditions, and history that even Masonic scholars cannot agree on many issues. Author Albert Mackey acknowledges that Masonic records are "replete with historical inaccuracies, with anachronisms, and even with absurdities."

[Eleanor White speaking here:] With secrecy, and a scale of loyalty oaths leading towards a shifting of allegiance from God and Country to Freemasonry, one can see that the upper, not-known-to-the-public-or-most-Masons "Illuminated" levels of Freemasonry would at least provide fertile soil for the nurture and practice of covert electronic harassment and organized stalking.

It is kind of amazing how many historical figures were or are high level Masons. Here's a sampling from page 255:

U.S. Presidents: Washington, Monroe, Polk, Buchanan, Andrew Johnson, Garfield, Taft, Harding, Truman, Ford and both Theodore and Franklin Roosevelt.

Also: John Hancock, Benjamin Franklin, Paul Revere, Sam Houston, Davy Crockett, Jim Bowie, Douglas MacArthur, J. Edgar Hoover, Hubert Humphrey, Winston Churchill, Cecil Rhodes, Horatio Nelson, Duke Arthur Wellington, Simon Bolivar, Franz Josef Haydn, Wolfgang Amadeus Mozart, Goethe, and Voltaire.

Here are some other notable tidbits excerpted from the book:

- [Page 7] A French publisher once was quoted as saying, "It would not be possible to trace ownership of corporations and the power structure in the United States. 'They' would not permit it. 'They' would find a way to hound and torture anyone who tried.

'They' seem to be a fairly small group of people who know each other, but many are not at all known to the public. 'They' move in and out of government jobs, but public service apparently serves to win private promotion, rather than the other way around. The Government 'control' that practically everyone mentions cannot be traced through stock holdings, regulatory agencies, public decisions. It seems to function through a maze of personal contacts and tacit understandings." To this one might add THEIR MEMBERSHIP IN SECRET SOCIETIES.

- [Page 7] Many conspiracy authors have written about dark plots to impose a "New World Order" from within modern secret societies such as the Trilateral Commission, the Council on Foreign Relations, the Illuminati, the Committee of 300, and others. Objective researchers point to the absence of libel suits against such writers as lending some credence to their views. Yet the mainstream news media rarely sees fit to discuss - much less investigate - such views.
- [Page 8] When it comes to this nation's deepest, darkest secrets, it appears there are powers even higher than the President of the United States and the Director of the Central Intelligence Agency.
- [Page 11] "They" also maintain monopolies over energy, medicine, armaments, and manufacturing by SUPPRESSING NEW TECHNOLOGIES.
- [Page 13] U.S. Supreme Court Justice Felix Frankfurter once revealed, "The real rulers in Washington are invisible, and exercise power from behind the scenes".
- [Page 13] ...newly elected President Franklin Roosevelt wrote... "The real truth of the matter is, as you and I know, that a financial element in the large centers has owned the government ever since the days of Andrew Jackson."
- [Page 14] Colonel L. Fletcher Prouty (retired) served as a Focal Point liaison officer between the Pentagon and the CIA from 1955 to 1963. From his vantage point, Prouty was able to witness the control mechanisms over both intelligence and the military.

Writing in 1973, Prouty said the United States is run by a "Secret Team", an "inner sanctum of a new religious order" answerable only to themselves. "The power of the Team derives from its vast intra-governmental undercover infrastructure and its direct relationship with the great private industries, mutual funds, and investment houses, universities, and the news media, including foreign and domestic publishing houses.

"...All true members of the Team remain in the power center whether in office with the incumbent administration or out of office with the hardcore set. They simply rotate to and from official jobs and the business world or the pleasant haven of academe."

"Prouty wrote, 'This great machine has been constructed by such able men as Wild Bill Donovan, Clark Clifford, Walter Bedell Smith, Allen Dulles, Maxwell Taylor, McGeorge Bundy and many others, who have guided and molded it into the runaway giant that it is today. It is big business, big government, big money, big pressure... all operating in self-centered, utterly self-serving security and secrecy.'"

[EW: Smells just like the organized stalking perps, doesn't it?]

- [Page 163-164, section titled "Hitler's Support Group] "It was, in fact, wealthy businessmen in Western industrial and banking circles who guaranteed Hitler's success...

"The deal bringing Hitler into the [German] government was cut at the home of banker Baron Kurt von Schroeder on January 4, 1933. According to Eustace Mullins, also attending this meeting were John Foster Dulles and Allen Dulles of the New York law firm Sullivan and Cromwell, which represented the Schroeder bank. The next year, when Rosenberg represented Hitler in England, he met with Schroeder Bank of London managing director T. C. Tiarks, who also was a director of the Bank of England. Throughout World War II, the Schroeder bank acted as financial agents for Germany in both Britain and the United States."

- [Page 166-167] "Another American supporter of Hitler was Joseph P. Kennedy, father of the future president. On May 3, 1941, President Roosevelt was advised by FBI director J. Edgar Hoover that 'Joseph P. Kennedy, the former ambassador to England, and Ben Smith, the Wall Street operator, some time in the past had a meeting with [Nazi Luftwaffe chief Hermann] Goering in Vichy, France, and thereafter Kennedy and Smith had donated a considerable amount of money to the German cause. They are both described as being very anti-British and pro-German.'

"And support for Hitler continued to grow in Britain. According to Howard S. Katz, 'In spring of 1934, a select group of city financiers gathered around Montagu Norman ... [head of] the Bank of England ... Hitler had disappointed his critics. His regime was no temporary nightmare, but a system with a very good future, and Mr. Norman advised his directors to include Hitler in their plans. There was no opposition and it was decided that Hitler would get covert help from London's financial section...'

"Considerable financial aid also came from Sir Henri Deterding, the powerful head of Royal Dutch-Shell Oil, who lived in London. His motives stemmed from his hope that Hitler, who had made it clear in *Mein Kampf* that he intended to subjugate Russia, might regain Deterding's assets in the Baku, Grozny, and Maikop oil fields."

The long following quotation is from a document which evolved from 1864 through 1897, and has been reported as FAKED as a document allegedly written by Jewish New World Order planners. FAKED. Intended to bring the wrath of the world against the Jews. But this document is very important as an illustration of the TACTICS of those who seek to again enslave humanity. It is very important, reader, to be able to recognize these tactics as they unfold as current events.

The title was The Protocols of the Learned Elders of Zion, published in 1897 by Russian religious writer Sergei Nilus.

Criminals seeking to enslave and oppress ordinary human beings exist in ALL ethnic groups, and absolutely NO slur against the Jewish community should be inferred by the reader. Given today's rapid destruction of freedom, particularly in the United States, I think this quote must be included here, fake or not, to illustrate the mindset of all New World Order criminals. After all, someone thought this up, and many influential people like Germany's Kaiser Wilhelm II, Russia's Czar Nicholas II, and American industrialist Henry Ford, were influenced by or used this publication, states author Jim Marrs:

[Pages 146-147] A prerequisite for grasping the background for the rise of the Nazi cult is understanding The Protocols of the Learned Elders of Zion. This is a list of procedures for

world domination. This document may have wreaked more havoc than almost any other piece of literature in recent history.

The Protocols still chills readers with its prophetic description of the methodology for tyranny by the few. Its message fits quite well with the elitist outlooks of men like Cecil Rhodes and the Rothschilds. "We are the chosen, we are the only true men. Our minds give off the true power of the spirit; the intelligence of the rest of the world is merely instinctive and animal. They can see, but they cannot foresee; their inventions are merely corporeal. Does it not follow that nature herself has predestined us to dominate the whole world?" stated the Protocols.

"Outwardly, however, in our 'official' utterances, we shall adopt an opposite procedure, and always do our best to appear honorable and cooperative. A statesman's words do not have to agree with his acts. If we pursue these principles, the governments and peoples which we have thus prepared will take our IOUs for cash. [EW: Like the privately owned Federal Reserve Banks, who back their printed money with NOTHING.] One day they will accept us as benefactors and saviors of the human race. If any state dared to resist us, if its neighbors make common cause with it, we will unleash a world war."

The Protocols go on to explain that the goal of world domination will be accomplished BY CONTROLLING HOW THE PUBLIC THINKS by controlling what they hear, by creating new conflicts, or restoring old orders, by spreading hunger, destitution and plague, by seducing and distracting the youth. "By all these methods we shall so wear down the nations that they will be forced to offer us world domination."

Here are some excerpts from the specific points listed in The Protocols, from the book, pages 148-149:

- The Protocol plan "will remain invisible until the moment it has gained such strength that no cunning can any longer undermine it." (Protocol 1)
- "We shall create an intensified centralization of government," (Protocol 5) "...we must develop a Super-Government by representing it as the Protector and Benefactor or all those who voluntarily submit. ... We shall soon begin to establish huge monopolies..." (Protocol 6)
- "The intensification of armaments, the increase of police forces ... [so that] in all the States of the world, besides ourselves, [there will be] only the only the masses of the proletariat, a few millionaires devoted to our interests, police, and soldiers." (Protocol 7)
- "... We shall saddle and bridle [the press] with a tight curb ... Not a single announcement will reach the public without our control." (Protocol 12)
- "In our program one third of [the masses] will keep the rest under observation from a sense of duty, on the principle of volunteer service to the State. It will be no disgrace to be a spy and informer, but a merit ... how else [are] we to ... increase ... disorders?" (Protocol 17)

Let me finish by typing the Table of Contents:

## INTRODUCTION

- A Question of Conspiracy
- Rule by the Few
- A View from the Few

## PART I: MODERN SECRET SOCIETIES

- The Trilateral Commission
- Council on Foreign Relations
- Bilderbergers
- Rockefellers
- Morgans
- Rothschilds
- Secrets of Money and the Federal Reserve System
- Empire Building
- The Royal Institute of International Affairs -- Round Tables
- Rhodes and Ruskin
- Skull and Bones
- Tax-Exempt Foundations and Alphabet Agencies
- It's News to Us
- Commentary

## PART II: THE FINGERPRINTS OF CONSPIRACY

- Report from Iron Mountain
- Persian Gulf
- Who Pays the Tab?
- Vietnam
- JFK Opposed Globalists
- All the Way with LBJ
- Trading with the Enemy
- Korea
- Rise of the Nazi Cult
- Theosophists, Thulists, and Other Cultists
- The Leader Arrives
- Hitler's Support Group
- Hitler's Fortune Turns
- Japan Against the Wall
- World War II
- Business as Usual
- World War I
- A Stimulus for War
- The Russian Revolution
- The Rise of Communism
- Commentary

## PART III: REBELLION AND REVOLUTION

- War Between the States

- Secret Society Agitation
- Pre-emptive Strikes
- The Anti-Masonic Movement
- The French Revolution
- Jacobins and Jacobites
- Sir Francis Bacon and the New Atlantis
- The American Revolution
- The Illuminati
- Freemasonry
- Count Saint-Germain and Other Magicians
- Masonic Plots
- Freemasonry vs. Christianity
- Rosicrucians
- Commentary

## PART IV: ELDER SECRET SOCIETIES

- Knights Templar
- Assassins
- Templar Bankers and Builders
- Cathars
- The Albigensian Crusade
- The Templars' Demise
- The Priory of Sion
- Merovingians
- A Far-Reaching Web
- Commentary

## PART V: ANCIENT MYSTERIES

- The Road to Rome
- The Cabala
- Ancient Secrets and Mysteries
- Was There More to Moses?
- All Roads Lead to Sumer
- The Annunaki
- Floods and Wars
- Commentary

TEXT:

(((FBIS EDITORIAL REPORT)) MOSCOW RUSSIAN PUBLIC TELEVISION FIRST CHANNEL NETWORK IN RUSSIAN AT 1610 GMT ON 6 OCTOBER DURING THE "MAN AND LAW" PROGRAM CARRIES A FIVE-MINUTE FEATURE ON MIND-CONTROL TECHNOLOGY.

ANNOUNCER YURIY VOROBYEVSKIY BEGINS BY SAYING THE FBI HAS ALREADY USED A "PSYCHOTRONIC" DEVICE DEVELOPED BY A MOSCOW SCIENTIST, IGOR SMIRNOV. VOROBYEVSKIY THEN SHOWS VIDEO FOOTAGE FILMED AT SMIRNOV'S LABORATORY. A MAN IN A SPECIALLY FITTED HELMET WITH ELECTRIC CABLES ATTACHED IS SITTING IN FRONT OF A SPECIAL SCREEN ON WHICH VARIOUS ENCODED MESSAGES FLASH. VOROBYEVSKIY SAYS: "THE CODED SIGNAL IS BEING PICKED UP THROUGH EARPHONES AS A LIGHT RUSTLE. HOWEVER, THIS IMPERCEPTIBLE COMMAND REACHES THE BOTTOM LAYERS OF CONSCIOUSNESS. THIS METHOD IS USED FOR TREATING NERVOUS, PSYCHIATRIC, AND OTHER DISORDERS. BUT THE QUESTION IS: COULD THIS BE USED AS THE NOTORIOUS PSYCHOTRONIC WEAPON?"

NEXT, VOROBYEVSKIY INTRODUCES VIDEO FOOTAGE WHICH HE SAYS WAS FILMED THREE YEARS AGO AT A RESEARCH INSTITUTE OF THE RUSSIAN MINISTRY OF INTERNAL AFFAIRS. IT SHOWS A CLASS OF OMON SPECIAL-PURPOSE TROOP RECRUITS APPARENTLY IN A HYPNOTIC TRANCE LOOKING AT A TELEVISION SCREEN. THIS SHOWS A MAN DRESSED IN BLACK WHO IS ENCOURAGING FEELINGS OF CONFIDENCE IN HIS AUDIENCE. AN IMAGE OF A FEMALE NUDE IS USED TO REINFORCE THE DESIRE FOR SUPERIORITY AND MALE DOMINANCE.

UNCLASSIFIED

UNCLASSIFIED

PAGE:0051

IGOR SMIRNOV, CAPTIONED AS MEMBER OF THE COMPUTER PSYCHOTECHNOLOGY INSTITUTE, PROPOSES THE USE OF "INDIRECT METHODS" TO FIGHT DRUG ADDICTION. HE SAYS: "THIS COULD BE DONE STRAIGHT FROM THE TELEVISION SCREEN, IN A SPECIAL PROGRAM, AT AN APPOINTED TIME OF THE WEEK. THE TIME SHOULD BE ANNOUNCED IN ADVANCE, WITH A WARNING THAT SPECIAL SUBLIMINAL COMMANDS WILL BE BROADCAST, SO THAT THOSE WHO ARE AFRAID SOMETHING COULD HAPPEN TO THEM CAN SWITCH OFF AT THAT TIME."

ANOTHER SCIENTIST, VALERIY KANYUKA, HEAD OF A PSYCHOTRONIC RESEARCH CENTER NEAR MOSCOW, DISAGREES WITH SUCH METHOD, STATING: "UNTIL ALL THE COUNTRIES OF THE WORLD AGREE ON THIS, UNTIL INTERNATIONAL LEGISLATION BANNING PSYCHO-PHYSICAL MANIPULATION OF THE HUMAN MIND AND INFLUENCE ON HUMAN BEHAVIOR HAS BEEN DEVELOPED, THERE SHOULD BE A MORATORIUM ON SUCH RESEARCH." VOROBYEVSKIY SAYS KANYUKA APPEARED WITHOUT SUCCESS TO THE FORMER RUSSIAN SUPREME SOVIET IN A LETTER MENTIONING "CLASSIFIED DECISIONS OF THE CPSU CENTRAL COMMITTEE ON THE SUBJECT OF REMOTE INFLUENCING OF THE MIND." VIDEO SHOWS KANYUKA AND A TYPED LETTER.

VOROBYEVSKIY THEN INTRODUCES ALEKSANDR KACHUROV, CAPTIONED AS MEMBER OF MOSCOW PSYCHOTRONIC INSTITUTE. KACHUROV OPENS A BRIEFCASE WITH SOME DEVICE INSIDE AND SAYS: "ANYONE WHO WANTS TO POSSESS SOMEONE'S SECRETS IS WELCOME TO ORDER A SPECIAL DEVICE FOR THEMSELVES, AS LONG AS THEY ARE PREPARED TO PAY FOR IT. ANYTHING CAN BE MADE. WHAT ABOUT THE MORAL ASPECT, PEOPLE MIGHT ASK. SOME SAY: IT IS WRONG, YOU ARE MAKING PSYCHOTRONIC WEAPONS." VOROBYEVSKIY INTERJECTS: "LET'S SAY, THE MILITARY ORDERS YOU TO DESIGN A CERTAIN TYPE OF EQUIPMENT?" KACHUROV SAYS: "YES, BUT, EXCUSE ME, THE MILITARY-INDUSTRIAL COMPLEX IS THE MOST POWERFUL INDUSTRIAL GROUP THERE IS. WHAT ARE WE TALKING ABOUT? WE ARE ALL DEVELOPING WEAPONS OF THIS KIND. ARE NUCLEAR WEAPONS ANY WORSE?"

VOROBYEVSKIY SAYS LAWS ARE BADLY NEEDED TO PROTECT THE INDIVIDUAL FROM ALL TYPES OF MIND CONTROL.

A STATE DUMA EXPERT, YURIY LOPATIN SAYS: "PSYCHOTRONIC TECHNOLOGY IS SPREADING ILLEGALLY. A LAW BANNING THE ILLEGAL DEVELOPMENT, PRODUCTION, RETAILING, AND SPREADING OF PSYCHOTRONIC DEVICES WHICH INFLUENCE THE MINDS AND BEHAVIOR OF CITIZENS IS BADLY NEEDED." HE GOES ON TO SAY: "THE USE OF THE MASS MEDIA FOR PSYCHOLOGICAL EXPERIMENTS SHOULD BE BANNED AND ALL THE STATE-ORDERED RESEARCH IN HUMAN GENETIC EXPERIMENTS SHOULD BE STRICTLY REGISTERED. THIS WAS APPROVED BY GEORGIY GEORGIYEVICH ROGOZIN, FIRST DEPUTY HEAD OF THE PRESIDENTIAL SECURITY SERVICE."

VOROBYEVSKIY QUESTIONS WHAT MIGHT HAPPEN WERE SUCH TECHNOLOGY TO FALL INTO THE HANDS OF UNSCRUPULOUS PEOPLE. HE SAYS NO ONE CAN FEEL SECURE UNTIL SPECIAL LAWS ARE PASSED.

NO FURTHER PROCESSING PLANNED. [REDACTED] 07/1631Z OCT WC 638

## **Russian Weapons Law Applying to Psychotronic Weapons**

**January 16, 2002**

This page is to display excerpts and notes concerning Russian law(s) applying to "psychotronic weapons". At the above date, it appears there is a Russian law titled "About Weapons" which has passed into law.

Although the law avoids naming the specific intent of the Article 6 technologies as being "mind control", it is at least clear that the Russian Duma (Parliament) intends to address the problem of uncontrolled development, use, and possession of devices capable of attacking the human mind.

Thanks to the efforts of Cheryl Welsh, Mojimir Babacek and their contacts for supplying this important information.

Background information:

Emilia Cherkova was featured in an article mentioning Lopatin also. The article is The Moscow Times, July 11, 1995 by Owen Matthews. Here is the relevant excerpt:

"...'Ecology and Living Environment' an environmental and civil liberties group which claims a membership of 500 people in Moscow... Emilia Cherkova, an ex-member of Zelenograd's local council... Lopatin calls for legislation, which would "bring Russia into line with Bulgaria, the only other country to outlaw such equipment specifically."

Another article, Delovoi mir, "Business News", 2 15 92, "...Emilia Chirkova, a Deputy of the Zelenograd Sviet and member of the Human Rights Commission."

Another article from "Zelenogradskaya Gazeta", 1991, ".... is E. C. Chirkova, the national deputy of the city council of the city of Zelenograd, the member of the Commission on Human Rights."

Emilia Cherkova was also mentioned in the second book being translated by Cahra, "Psychotronic War from Myth to Facts" by Igor Vinokurov and Gorgij Gurtovoj, Moscow, 1993.

Here is the December 2001 letter of Appeal from Emilia Cherkova and her Russian human rights group. Translation by Ramon Ruelas.

On the activity of the public organization "Moscow Committee for the Ecology of Dwellings": against psycho-physical (psychotronic) violence against the population

## MOSCOW COMMITTEE FOR ECOLOGICAL DWELLING

---

### AN APPEAL TO THE WORLD COMMUNITY

The Moscow Committee for Ecological Dwellings: against psychotronic violence (Russian Federation) appeals to the World Community with a request for the conducting of an international investigation into the genocide of the people of Russia, into the facts about the large-scale application of psychotronic (psycho-physical) weapons against citizens of the Russian Federation. Our organization was created in the year 1990 for the purpose of attracting the attention of the general public and that of the government toward the problem of psychotronic terrorism and for assisting citizens in protecting their legitimate rights and freedoms -in particular, the right to reside in safety in ones own dwelling. The Committee is registered with the Management of the Justice of Moscow 15.08.1994. registration No. 3383. From the data cited in scientific publications, from the mass media and from the numerous complaints by citizens in various instances, it is known that psychotronic weapons are used for the conducting of bio-medical cybernetic experiments, for the control and management, and for the zombification of citizens of the Russian Federation, as well as for military and for repressive purposes. For the improvement of these types of weapons, any category of the population could be secretly chosen as victims, including younger people, children and pregnant women, and there are eliminated by these types of weapons also: scientists, writers, artists, composers, progressive figures --the very color of the nation. The socially active citizens who are exposing the application of psychotronic weapons as a new type of weapon of mass [destruction], are being subjected to particularly severe terrorism. The complete absence of any control of the development and the illegal distribution of these weapons, allow for the structures owning them to apply the entire arsenal of psycho-technological devices, methods and apparatuses for the psycho-physical manipulation of humans, their behavior, their consciousness, their gene-pools --on any person from the President on down to the ordinary citizen. Psychotronic terrorism has transformed the apartments of Russians into torture chambers. For the amplification (strengthening) of the effects of psychotronic influences, with the application of electromagnetic (in these cases, laser, CVCh., MICROWAVE, x-ray), torsional, leptonic, gravitational, as well as acoustic, infra-sonic and ultra-sonic effects, psychotropic and narcotic preparations, gases and various chemical substances and others, are also used. At the same time, methods of retaliatory psychiatry are used against persons who are trying to stop the violence and who turn, therefore, to law enforcement agencies In connection with the lack of protection in Russia of citizens on the part of the state, on a given command victims are exposed not only to physical terrorism, but also to moral, economic and genetic terrorism, since the effects of psychotronic method destroy the gene-pool of the people and leads to a total degradation [of it]. Numerous appeals during the course of the last 9 years by the Moscow Committee for Ecological Dwelling to all governmental levels, to the President, to the Administration, to the Governmental Duma, with the demand for an investigation into the available facts on mass experiments -including international -on the citizens of Russia, a genocide of people, and also for the demand to a stop the psychotronic terrorism and to forbid the further development and manufacturing of psychotronic weapons through the establishment of rigid controls on the part of the public and the government regarding scientific activites in this area, -- did not produce any results. Therefore, we are compelled to address the World Community regarding the above stated

problem, as similar crimes (mass terrorism, the genocide of a nation) are subject to the jurisdiction of an International Tribunal.

Chairman, MKEZh  
Chirkov E.S.  
Vice-chairman, MKEZh  
Petukhov A.JA.

Moscow committee of ecology of dwelling (MKEZh.): Against psychotronic violence asks for the rendering of financial help for the purchase of office equipment and for the publication of documentary and informational-analytical materials. Last Hero

Those are the excerpts from the first chapter of the book of the Russian politician, V.N. Lopatin, head of the parliamentary commission on information, who, last year, presented to the Russian State Duma the draft of the law on informational and psychological security of Russia. The draft calculated with possible mind control attack at the population of Russia by the potential enemy. It is not yet clear whether the law has been discussed or voted on in the Russian State Duma. The co- author of the book is the scientist, V.D. Tsygankov, specialized in the construction of neurocomputers.

"Theoretical works appeared, confirming the reality of PSI-phenomena, the existence of so called torsion component in the right part of the gravitational equation by A. Einstein (19), and the construction of technical models of the torsion fields radiation generators is reported in some works (20, 2). All such publications and communications talk about the possibility to use the presented PSI-phenomena with the intent to attack as well as with the intent of the perfection of the defense of the government and its means of armament. . The following PSI phenomena of human being and animals are the object of the study:

- x prediction of future
- x secret reading of the present and past time
- x hypnotical effects and zombieng
- x search and finding of indicated lost objects

The basic problems of the construction and areas of the use of psychotronic weapon result from those:

- x construction and use of military PSI generators
- x collecting of intelligence (PSI-detectors)
- x construction and use of battlefield PSI generators
- x construction and use of TSULIPs - centers for control of people and apparatus - basic system of communication:  
networks of telephone, radio and television broadcasting; system of

torsion communication and radiation, i.e. networks of PSI effects.  
x construction of bioautomats-robots

Building of models and analogs of PSI-abilities and phenomena - the task which is nowadays in the order of the day.

PSI weapon this is the "ray weapon" (powerfull generators, radiating pencils of rays, serving as a striking factor) and ENERGO-INFORMATIONAL CURRENTS OF RADIATION ORGANIZED IN A SPECIAL WAY (coherently), of known as well as unknown physical nature.

.  
To make the reader understand everything what will follow we will give some definitions and a short survey of the PSW problem.

The first level - this is the psychological problem. I would call it a MACRO-problem. This is the problem of the control of the state of the consciousness of human being and society and, consequently, depending from the consciousness - of the psychology of the behavior of human being as a person, group, socium. This is the problem of the use of internal biological mechanisms and laws controlling such or other psychological condition or behavior.

With respect to numerous manifestations of anomalous, unusual (for the classical psychology) or parapsychological phenomena as is the case of clairvoyance, extrasensory perception, telekinesis, phenomenal memory and out of the ordinary calculating abilities (the experiments by Messing, Kuna, Gorin) and other mysterious qualities of the psyche, the new direction of scientific research and technical design (construction of technical means of registration, measurement and influencing of the brain) came into being called PARAPSYCHOLOGY. ..

The second level - MICRO-problem. The designation of this problem as a PSI problem is derived from the use of mathematical apparatus, methods and means of measurement of the QUANTUM MECHANICS (QM) for the research on AP (anomalous phenomena) of the psyche.

The fundamental wave equation of QM, the equation by Schrodinger, contains the mathematical symbol of the greek letter PSI defining the wave function which describes the undulatory behavior of quantum mechanical object (ensemble). It is believed that the processes and the mechanisms of consciousness (thinking), the processes of subconsciousness (under the threshold processes), i.e. all psychic processes in the brain, are governed by quantum-mechanical laws. Aside from that a much more sophisticated scientific discipline came into being - scientific and technical PSI-quantum mechanical discipline of the research and control of the mechanisms and laws of thinking and psyche at the MICRO-level - the level of elementary particles and physical vacuum (19).

So the two apparently opposed worlds or levels, MACRO world and MICRO world, enter the worlds of thinking, consciousness and psyche.

The ways and methods of their research and the control of their intimate mechanisms merged into a single, more sophisticated problem, the problem of identification and control of the condition of consciousness and psyche. . . . The theory of physical vacuum by G.I. Shipov (19) unites the general theory of relativity by A. Einstein and quantum mechanics by Heisenberg, Schrodinger, Dirac and offers to the designers and researchers the key to the construction of the power means which could act upon the topology and structure of the

space-time. The possibility emerges to build unusually powerfull and effective means of coherent radiation and destruction of targets and as well of high-manoevrable and economic flying apparatus (FA) and aero-cosmic complexes (of the type of flying saucers . (23), see appendix 1 as well). .. As a result of the solution of the PSI problem numerous means usable with mercenary objectives as means of violence, attack, subjugation and blackmail have been produced and their production continues intensively.

## 1.2 Psychotronic Weapon and Psychotronic War

Definition 1. Psychotronic weapon (PSW) - any means of intensive effect upon the brain of a single human being or mass of people, upon the flora and fauna, upon plants, animals, upon the environment (liquid and gaseous)..with the objective of the disturbance of their normal condition and functioning

Definition 2. Psychotronic war - the mass use of PSW against the state or its part. .. We will begin by presenting one of the possible classification of PSW:

1. According to their use: strategic, tactical, individual (personal)
2. According to the strategy and tactics of the use:  
offensive, defensive
3. According to the scale of the destructive effect:  
mass destruction, highly targeted local effect
4. According to energetical factor:
  - subliminal, extrasensory, subliminal (unenergetical)
  - weak electromagnetic biofields and other radiations ...
  - superstrong coherent power-energy fields and radiations, producing catastrophical perturbations of ecological scale
  - topological means, deforming structure and characteristics of the space-time
5. According to the target in the living object:
  - sensory, extrasensory influences at the system of perception (inputs)
  - psychokinestetical
  - motorinfluences at motions and displacemnent (output)
  - extrasensory effects at the processes of decision making, at the personal "I" (central)
6. According to the duration of the effect:
  - short time, reversible
  - longtime effects
  - irreversible, pathological effects, defeating the psyche
7. According to the outcome of the effect
  - non lethal
  - lethal (with lethal outcome)
8. According to the controlability
  - controllable by an inductor or generator with the use of commands
  - uncontrollable, of a single effect
9. According to the distance of the effect

- local, near effect (radius up to 1 km)
- medium distance (until 10.000 km)
- superdistance, global, all-earth scale

#### 10. According to the speed of propagation

- slow, lowspeed (of the type of epidemics, panics)  
fast of the speed of electromagnetic
- immediate effects

#### The Research Abroad

Government structures, organizations and companies preoccupied with the PSI problem in the USA (28):

- x The Department of Defense of the USA
- x Office of Intelligence at the Department of Defense of the USA
- x DARPA agency at the Department of Defense of the USA
- x Airforce, Navy and land forces of the army of the USA
- x The Center of Military Research (Redstone)
- x Research and Science Institute of behavioral and social sciences of land forces of the USA
- x American Association for the Development of Science
- x The company RAND
- x The company Westinghouse
- x The company General Electric
- x The company Bell Telephone Company
- x Stanford Science Research Institute and many tens of other institutions

The following countries carry out research in this area: USA, Great Brittain, France, Germany, Japan, China, Vietnam, Izrael, Italy, Hungary, Roumania, Bulgaria, Russia, Ukraine (more than 30 countries in the world).

Five basic directions of military research in the area of bioenergoinformatics and PSI phenomena can be defined:

- 1) Works on methods of premeditated influence at psychical activity of human being (29)
- 2) Fundamental theoretical and experimental research studying the clairvoyance and telekinesis in military applications (gathering of intelligence and sabotage activity) (29)
- 3) Study of the influence of bioradiation on military and commercial control and communication systems, on military electronic apparatus, work on bioenergetic generators capable to influence the staff of armies. (30)
- 4) Work on systems capable to detect and control (systems of monitoring) artificial and factual dangerous bioradiations and methods of active and passive defense against them. (103,104).

Work on measuring devices and metrological services and methods of evaluation of such phenomena and effects. Modeling of PSI effects and biocommunication. (28) Construction, on the line of aerospace agencies and NASA in the USA, of power systems destined for military defense of the type of newer effective lethal apparatus (LA), making use of the possibility of the transformation of topology of the

space-time and the control of gravitation. (23)

Aside of that the evaluations of the strategic potential of the probable enemy possessing the PSW are taking place. The higher effectivity of the PSW, in comparison with the thermonuclear weapon has been proved already. The evaluation of the probability of the "psychic invasion" from the part of states - potential enemies is taking place. ... Let us tak, a look at a small part of the numerous works carried out abroad in the area of psychotronics: ... x Expansion of the bulk of the works in the area of parapsychology and bioenergetics in the USA.

Today more than 150 organizations work on this subject. After the succesfull experiments with deciphering of photographs by extrasensors (28), the U.S. Congres evaluated them as serious for the security of the country and the research was placed under the National Information Security law. The military experts analyzing the potential of the research in parapsychology in the USA admitted still in the 80's, that the PSI phenomenon - this is a reality and it can be used for the construction of principally new methods of warfare, not inferior to thermonuclear warfare, i.e. for the development of strategic forms of armament. In the USA the devices and methods were created capable to introduce into the subconsciousness of a man the information needed to make the man execute the orders which were introduced there. Those are new man-and-computer complexes and their objective is the control of the intellect. The concentration of great doses of psychic energy of the determined spectrum acts destructively on the brain. (28) x

Construction of special biofield generators, headed by professor V. Peschke and research of their influence at the change of character of the personality of a human being (Stuttgart, Germany) x The use of quantum mechanics laws for the explanation of the experimental work in psychotronics (dr. Puharich, collaborator of NASA) x Research on bioenergetics and telepathical transmission of information, with the budget of 6 million dollars (Pentagon, D.o.D., USA). The work was placed under the National Security Information law. ... On the Works in Russia and the Union of Independent States .. Targets for the PSW means To understand more profoundly the PSW problem we will select FOUR essential "TARGETS" - the locations or areas of application and influence of PSW means:

1. GENETICAL APPARATUS of cells (chromosomes, mitochondria, mollecules of DNA and RNA)
2. LIQUID CRYSTAL MEDIUM of the cell, intercellular liquids, liquids of organism surrounding environment (aquaducts, liquid food products)
3. BRAIN (centers regulating the state of consciousness and functions of "subconscious") and by its mediation other organs, cells and functions
4. Biological and psychical fields surrounding living organisms and plants Every "target" has got its specific affectable parts with their qualitative and quantitative indices and markings on the part of the means of PSW and as well there is general, universal (unspecific) location of ifluence of the PSW for any type of "target".

If I find a publisher for the translation of the whole book, I will translate it and send it to whoever of you who asks for it for free.

Mojmir Babacek

From: Mojmir Babacek  
Subject: This may be a real breakthrough!!!  
Date: Sat, 1 Dec 2001 18:45:05 +0100

On September 9, 2000 the Russian State Duma passed the law "The Doctrine of Informational Security of the Russian Federation"

The title of the Lopatin's draft of the law was "On Information-PSYCHOLOGICAL Security of the Russian Federation"  
Unfortunately I can not pay for Internet services and the laws are not for free. Could anyone find, by means of Search: state duma. When I use this search, at about the third place appears the access to the Russian legislation, you click on that and then appears the Russian webpage in Russian, in the right upper corner there is written "eng" if you click on that the English search appears. If you are lucky, please e-mail me a copy of the law. Bellow you will find the translation of the part of the book, by the author of the draft of the law concerning the declassification of mind control technology.

Mojmir Babacek

PSYCHOTRONIC WEAPON AND THE SECURITY OF RUSSIA  
(By V. Lopatin and V. Cygankov)

#### CHAPTER 6

##### STATE DEFENSE INITIATIVE AND THE CONCEPTION OF ARMAMENT

Page 96 and 97

Any party is obliged to oppose adequate means of power to the means of power  
pressure illustrated above.

Such a power for our country, in the area of PSW (psychotronic weapon), in my opinion, will be STATE  
DEFENSE INITIATIVE which should translate

- into GLASNOST, OPENNESS, disclosing of full INFORMATION and KNOWLEDGE to each interested citizen of our country.
- Into formation of POWERFULL PUBLIC OPINION concerning INTOLERABILITY OF SECRET WORKS in the area of PSW, ban of such works and DESTRUCTION of the SAMPLES and . of PSW
- Into an open work on the CONSTRUCTION of the MEANS of DEFENSE against the effects of PSW under the full and most strict INTERNATIONAL CONTROL
- Into an immediate signature of an international agreement on the organization of collective work of INSPECTION of research establishments and state territories where the PSI research is carried out.
- Into establishment of collective interstat, international SCIENCE CENTERS . for coordination of projects and programs for the solution of complications of the global formate of PSI-problem.

Based on the ideas presented above we will formulate proposals on the conception of PSI-armament:

### 6.3 The Conception of PSI Armament

...

#### Fundamental principles

- 1) To admit THE EXISTENCE OF PSI PHENOMENA AS A  
REAL FACT as well as their not only at place, local influence  
and importance, but as well the global noospherical influence  
on all the mankind.
- 2) To admit the REAL FEASIBILITY of informational,  
PSYCHOTRONIC war (as a matter of fact it is already  
taking place without declaration of war, secretly) and the  
FEASIBILITY of the use of violence by  
means of THE USE of PSW.
- 7) DECLASSIFICATION of all the works on PSI problem.  
The arms race is speeding up as a consequence of classification.  
Secrecy - this is in the first place the way to secure cruel control  
over the people. the way how to curtail their creativity, turn  
them into biorobots.

V. Lopatin , V. Cygankov: Psychotronic Weapon and the Security of Russia  
Publishing house : SINTEG, Moscow, Russian Federation, 1999  
Chapter 7 - Legislative Problems and the

Psychotronical Weapon  
Page 106 - 126

We believe that ... an appropriate federal legislative act is necessary.  
In response to numerous addresses by Moscow Committee on Ecology of  
Housing to the organs of the prosecutor's office on the matter of  
experiments of psychotronic type with the population, the Moscow  
prosecutor's office, in it's response No. 32-7-15-97 from April  
7th, 1997, divides dealing with this problem

- directs "corresponding information" to the office of Prosecutor  
General of Russian Federation, but while doing this it is obliged  
to state: "The presented documents testify that basic need comes  
for the establishment of legal control over the research in this  
area."

However there is no legislation concerning the above mentioned  
question. With respect to this the prosecutor's office is not in  
power to secure in whichever way the defense of the rights of  
citizens who are subject to the effects of psychotronic  
technology."

Since the seventies the research projects are under development in  
the best laboratories of the whole world: in USA, Germany, Austria,  
France, Italy, Japan, Izrael, China etc. In the report on the  
research by the committee of authority of Lamerican Society for  
Physics, published in the USA, the conclusion is prsented that

similar systems of weapons (Psychophysical Weapons Systems) may be effectively used for the solution of large number of military missions. They can be used for the construction of principally new military means and methods, including the construction of the strategical weapon of the new type (informational weapon in informational war).

/note 3: on this subject see: Materials of Parliamentary Hearings "Threats and Challenges in the Area of Informational Security", Moscow, July 1996, Informational Weapon as a Threat to National Security of Russia (Analytical Report of SVR of the Russian Federation, Moscow 1996), To Whom will Belong the Consciencious Weapon in the 21st century?, Moscow, 1997, V.N. Tsygichko, G.L. Smolian, D. Ts. Chereshekin - "Informational weapon as a geopolitical factor and instrument of the politics of power", Moscow, 1997./

Those facts prove the necessity to work out the national as well as international legislation designed for the defense of human psyche against subliminal, destructive informational effects.

## 7.2 The Concept of Information-Psychological Security and Particularities of the Ways of its Guaranteeing

Information-psychological security we understand as a condition where the human psyche is protected against destructive informational effects (the instillation of destructive information into the consciousness or subconsciousness of human being, having for effect inadequate perception of reality).

Note 3 - Lopatin, V.N. Legislative problems of guaranteeing information-psychological security of personality (verbatim record of the round table in the Council of the Federation FS of the Russian Federation on information-psychological security of personality, 27th of January, 1995.

Information-psychological security appears to be the fundamental portion of informational security and must occupy a special place in the state politics towards its guaranteeing.

This special place is defined by the specificity of threats and their sources in the area of information-psychological security, special character of principles and tasks in the realization of state policy in this area..

Note 5 - on this subject see as well: project of the Conception of Information-psychological Security, Institute of Psychology of the Russian Academy of Sciences, Moscow, 1995

Potential sources of threats in the area of information-psychological security appear to be

- sources of information
- programs for EVM
- generators of physical fields and radiations (stressed by the translator)

The fundamental threats to information-psychological security appear to be

- blocking, on subliminal level, of the freedom of will of human

being, artificial introduction of the syndrom of dependence

- research, construction and use of special technical and programming means for destructive effects on the human psyche
- manipulation of societal consciousness with the use of special means of effects
- .....
- destruction of indivisible informational and spiritual space of Russia, traditional foundations of the society and societal morality

The activity, in the area of information-psychological security must be construed on the following principles:

- priority of human rights in the informational area and ensuring of the state guarantees of the realization of those rights
- state and citizens control over the construction and use of special means of effects at the human psyche
- state monopoly for the development of the means and methods of subliminal informational effects
- obligatory licensing.. of the activity, connected with the use of means and methods of subliminal influence upon the human psyche and as well their certification
- availability of psychological expertise

As a standard of psychological expertise we understand parameters of informational environment showing no destructive effects on the human psyche.

Guaranteeing of information-psychological security appears to be the most important task of the state, therefore state guarantees of the defense of human being against destructive informational effects must be established.

The state must guarantee:

- subliminal informational influence (including hypnotical influence) at human psyche can not be performed without the person's consent except for cases defined by the law...
- ....
- the means of mass communication may not be used as instruments for realization... of destructive informational influence at human psyche
- the government of the Russian Federation will make sure that the citizens, organizations, agencies of power and local self-government will be informed on the possibility of the use, against people, of subliminal (subconscious) informational influence...
- The plenipotentiary organs and organizations organize education in methods of defense of people from subconscious destructive

informational influence....

### 7.3 The State System of Guaranteeing of Information-psychological Security

Psychological expertize must be a state expertize and realized only by the agencies of the state system, empowered to this task by the government of the Russian Federation. Psychological expertize may be performed at the orders of the State System of guaranteeing of information- psychological security or as well in the sequence of requests of citizens or persons without citizenship.

If, as a result of psychoecological expertize, the destructive informational influence at human psyche is determined, having for consequence inadequate perception of reality by the person subjected to such an influence, the medical help must be rendered with respect to the existing legislation. Compensation of damages and losses connected with social rehabilitation of persons suffering from destructive informational influence must be realized in legal trial

page 113

According to the data by FAPSI, in the past 15 years the expenses at the acquisition of the means of informational war in the USA were increased 4 times and occupy the first place among all of the armament programs.

Page 126

In the past year the author presented an initiative which was supported by the parliamentary commissions of the State Duma, and in December 1997 was turned into a political initiative of nine states of the Union of Independent States. MPA of the Union of Independent States approved the address to the Organization of United Nations, OBSE, to the countries of Interparliamentary Union, with the proposal to include on the agenda of General Assembly the question of preparation and conclusion of an international convention "On Averting of Informational Wars and Limitation of Circulation of Informational Weapon".

Note of the translator:

This initiative of the Russian Federation was confirmed in the article by the Russian newspaper Segodnya of February 11, 2000, the article by Andrei Soldatov "The Riders of the Psychotronic Apocalypse", the article announces the presenting of the draft of the law by V. Lopatin to the Russian State Duma stating that this is the third draft of such a law presented to the Russian State Duma and that this one has a good chance to be passed. At the end of the article it is stated that the position of the Russian secret services on the passage of the law is not clear, though their representative took part in its preparation.

On September 9, 2000 the Russian president Putin approved the Doctrine of Informational Security of the Russian Federation. There is practically no mention of possible mind control operations carried out by whichever state:

### I. INFORMATIONAL SECURITY OF THE RUSSIAN FEDERATION

## Paragraph 2 "Types of Threats to the Informational Security of Russia"

- threats to constitutional rights and freedoms of human being and citizen in the area of spiritual life and informational activity, individual, group and societal consciousness, spiritual renaissance of Russia

- .....

- illegal use of special means of effects on individual, group and societal consciousness.

## Paragraph 4 Status of Informational Security of the Russian Federation and Fundamental Principles of its Ensuring

Fixation in the Constitution of the Russian Federation of the rights of citizens to inviolability of their personal life, personal and family secrecy, secrecy of correspondence, practically do not have legal, organizational and technical guarantees.

## II. METHODS OF GUARANTEEING OF INFORMATIONAL SECURITY OF THE RUSSIAN FEDERATION

In the sphere of internal politics

- work on special legal and organizational mechanisms of non-admissibility of illegal information-psychological effects on the mass consciousness of the society...

In the Sphere of Defense

To the objects of guaranteeing of informational security of the Russian Federation in the sphere of defense relate:

diversional-undermining activity of secret services of foreign governments realized by methods of information-psychological effects

Perfection of methods and ways of strategical and operative camouflage, espionage and radioelectric war, methods and means of active countermeasures against information- propagandistic and psychological operations of the possible enemy. ....

International Cooperation of Russian Federation in the Area of Guaranteeing of Informational Security

The basic direction of the international cooperation of Russian Federation in the area of guaranteeing of informational security appears to be ban on the works, dissemination and use of "informational weapon" .....

Note of the translator

This my work is not intended to blame Russia, who, at least in the person of V. Lopatin, made an effort to declassify their work on mind control weapons. This my work is meant to blame all the governments who are hiding their mind control research from their citizens and, obliged by the international competition, carry out experiments on them..

Here are few more quotations from the book by V. Lopatin and V.

Cygankov (the Russian scientist, who is for more than thirty years developing neurocomputers):

Page 97

### 6.3 The Conception of mind-control armament

7. DECLASSIFICATION - of all the works on mind control problem... The arms race is speeding up as a consequence of classification. Secrecy - this is in the first place the way to secure cruel control over the people... the way how to curtail their creativity, turn them into biorobots...

Conclusions for chapter 6

3. Only if the work on mind control problem is no more covered by the screen of secrecy, extraordinariness, mysteriousness, if complex, open scientific research with international participation, is carried out, the psychotronic war including the use of psychotronic weapon can be prevented.

Chapter 1

Page 23

"In the USA the devices and methods were created capable to introduce into the subconsciousness of a human being the information needed to make him execute the orders which were introduced there. Those are new man-and-computer complexes and their objective is the control of the intellect..."

And the last important information : Vladimir Lopatin is no more the deputy of the Russian State Duma (the reason is not known to me so far).

Few notes, from the press, of his political life:

Interfax News Agency  
Interfax Russian News  
August 16, 1999, Monday

Headline: Duma to debate PM's Confirmation , Dagestan on Monday

The Communist party of Russia... group's coordinator Sergei Reshulsky suggested that the Dagestan issue be included in the agenda. Defense committee Chairman Roman Popkovich, our home is Russia, and Vladimir Lopatin, Russia's regions, support him. Lopatin went so far as to suggest skipping speeches by party group leaders in debating Putin's confirmation so as to allow time for debating a resolution on Dagestan."

The Xinhua General Overseas News Service  
Xinhua News Agency  
October 11, 1990, Thursday

Williams also disclosed today that yesterday, Cheney, met with a young soviet military "reformer", major Vladimir Lopatin, and had a "private conversation" with him. He declined to reveal the contents of the conversation. Lopatin, who addressed a press conference at the national press club here today, is in the United States on a visit hosted by "Global Outlook", a research institute. Lopatin,

currently chairman of the military reform subcommittee of the USSR Supreme Soviet Committee for Issues of Defense and State Security is the "leader of a new breed of Soviet dissidents", according to the organizer's introduction.

Text of the document from the NTC System

N 3829-II GD

Moscow, April 2, 1999

State Duma of the Federal Assembly of the Russian Federation  
Resolution

"In connection with the rejection by the President of the Russian Federation... of the federal law "On Commercial Secrecy"... the State Duma decides

1. To agree with the proposal of the Committee of the State Duma on Informational Politics and Communications to create a special comission...

2. To chose as members of that commission the Deputies of the State Duma Nesterov Jurij Mikhailovitsch., Kolomeiec Nikolai Vasilievitsch, Lopatin Vladimir Nikolaevitsch ...

# **Russian Scientist Igor Smirnov Describes Russian Psychotronic Technology**

## **ZDF German TV Documentary**

**December 22, 1998**

### **INTRODUCTION BY ELEANOR WHITE**

The translated sound track from this documentary is largely a presentation by Russian psychotronic experimenter Dr. Igor Smirnov. Dr. Smirnov was invited to apply his methods to the Branch Davidian standoff at Waco TX by U.S. law enforcement officials, but as the text below shows, the American officials ultimately did not use his technology.

As you read this documentary, please keep in mind that when the combined experiences of the approximately 300 non-Russian victims are taken into account, this video does not refer to all of the involuntary experimental atrocities experienced world wide. One difference is that we non-Russian experimentees are not regularly injected using the "programator" mentioned in the sound track. Our effects come entirely from transmitted signals.

There are lessons for us who are non-Russian experimentees in the text.

One major difference between Russia and the west appears to be that the Russians are regularly using psychotronics for beneficial purposes, while non-Russian governments steadfastly maintain that psychotronics "doesn't work". This deserves to be pointed out to western government representatives at every possible opportunity.

Another difference is that conveyance of Russian psychotronic signals seems to be by way of utilities: power, phone, cable TV. In the west we experience effects highly localized to a single individual. It may be that years of hypnotic pre-conditioning is needed to be sensitive to widely broadcast signals so I plan to keep an open mind about utility- conveyance of such signals. (Western victims are affected even when away from any utility outlets.)

I truly wish there were some way to contact some of the Russian victims so we could compare notes, and that there were some way to obtain Dr. Smirnov's voice encoding details. If Dr. Smirnov is genuinely out to do good with his technology, let's hope that happens.

See also [U.S. government corroboration of Dr. Smirnov's existence, expertise, and the Russian psychotronics program in general at:](#)

## Supporting documents on Russian psychotronic research

---

SECRET RUSSIA PART 2 OF 3 (1 & 3 are irrelevant):

MOSCOW:

THE "ZOMBIES" OF THE RED CZARS

CREDITS:

Second part of a three-part German documentary, titled: "Geheimes  
Ruland. Moskau -- Die Zombies der roten Zaren"

[translation: "Secret Russia. Moscow -- The zombies of the red  
czars"] Part (1) and part (3) of this documentary do NOT deal with  
Mind Control or Psychotronic Weapons & techniques.

CREDITS for part (2) of the documentary translated here: A  
documentary by Jerzy Sladkowski, edited by Agnieszka Bojanowska,  
camera by Nikolaj Sidortschenko, producer Horst Kalbus, a  
production by Besta Film, Warschau, Stanislaw Krzeminski.  
Financed by (the German TV channel) ZDF and (the ??? TV channel)  
TVP, in close cooperation with (the French/German TV channel) Arte.  
The documentary aired on the German ZDF Tuesday evening, December  
22, 1998, from 10:15pm until 11:00pm.

A VHS copy of the documentary is available from the German  
TV-station ZDF for the equivalent of 80 DM (approximately 40  
Euros) plus shipping & mailing charges. To order, be sure to  
mention the title and the precise date the documentary was shown  
on German TV (see above).

The address is:

ZDF Programmverwertung Postfach 4040 55100 Mainz West-Germany

-----  
NOTE CONCERNING THE ENGLISH TRANSLATION OF THIS DOCUMENT: The  
spelling of all Russian names, places, locales and words is to be  
regarded as "experimental" and possibly incorrect. The translator.  
SECRET RUSSIA: MOSCOW -- THE ZOMBIES OF THE RED CZARS  
-----

NARRATOR:

The Kremlin. Until shortly the symbol of absolute power. The dream  
of the red czars was a disciplined society they could completely  
control. This dream once inspired George Orwell to write his  
darkly futuristic novel, "1984".

Autumn 1998, and [now] there is a new crisis in Russia. Years  
after the collapse of communism the citizens are crushed as much  
by the economic collapse as they are crushed by the aftermaths of  
the more than seven decades lasting old system. It was like a net  
of blunt force and secret control which constrained the citizens.

Some of these methods, like the Stalinistic camps, were reported  
all over the world. Others even its victims only report very

rarely. In this country, many see themselves as victims: Victims of armed conflicts or political repression. Victims of secret psychiatric experiments or the constant fear of the "big brother".

[A young man is shown. He is in a wheelchair and has bandages all over his head. An old lady, presumably an assistant to Dr. Smirnov, attaches electrodes to various parts on his head and body.]

NARRATOR:

This young man is a victim of the war in Tschetschenia. A soldier who could escape from the surrounded Grosnie.

MAN IN WHEELCHAIR:

"Mama has cried. She thanks you for everything you have done for us."

NARRATOR:

Only a year ago, due to his war trauma, Sasha could neither talk nor move on his own. He had eye and hearing disturbances. Traditional psychiatry had given him up as a hopeless case and condemned him to vegetate in a closed asylum.

OLD WOMAN [asks Man In Wheelchair]:

"Is it conformable for you like this ? You can sit calmly this way and rest your head." [The man in the wheelchair is seated in front of a computer screen].

NARRATOR:

Soon yet another session of a treatment will start which eventually will completely heal the young man. The instrument of this treatment is a computer program which has been individually tailored to each patient. Over a system of impulses it directly acts on his subconscious.

Its inventor refers to this treatment as "Psycho-Correction".

With this therapy the ruins of the psyches of a human are patched up again, a human who has experienced more than he can handle. The numbers on the screen are meant to engage the conscious (part of the mind) to divert attention from the real communication between computer and subconscious.

CLOSE-UP OF MAN IN THE WHEELCHAIR AS HE STARES AT THE NUMBERS FLASHING ON A COMPUTER SCREEN. (His eyes flicker)

CLOSE-UP OF A COMPUTER SCREEN UPON WHICH A SERIES OF NUMBER SEQUENCES FLASH BY.

NARRATOR:

This technique, which is healing Sasha, has been developed by Dr. Igor Viktorovitsch Smirnov, (spelling ???) member of the Academy of Sciences, grandson of a famous [representative] KGB chief, born in a Stalinistic prison. Today, he is one of the most important Russian psychiatrists and famous not only in Russia. His services

were even employed by the FBI, which Russian television proudly reported in spring 1993.

REPORTER (Different Speaker):

Waco, Texas: Law enforcement authorities have surrounded the compounds of a fanatic cult of David Koresh who did not want to surrender. The negotiations have reached a stalemate. The FBI turns to Moscow scientist Igor Smirnov.

This respectable bureaucracy took his ability to directly influence the subconscious of the cult members very seriously. At the location Dr. Smirnov introduced a plan by which the cult members were to be "softened up" before the final confrontation.

DR. SMIRNOV:

I wanted to use an appeal by close relatives, from (the cult member's) children and parents. Such as, "Mama come out. We love you very much and are waiting for you." In this fashion I wanted to directly reach [target] every known member of the cult individually in this building. With the help of computer programs these appeals were to be turned into a sound-like signal.

While the conscious mind will not recognize these signals the unconscious will react to it. This was to minimize the danger of preventing extreme situations from developing, including a tragic outcome.

NARRATOR:

Via radio, television and telephone lines, the cult of David Koresh was to be subjected to subliminal psychological pressures. But the FBI was also under pressure. Smirnov was not able to carry out the plan.

DR. SMIRNOV:

Three days after our agreement with the chief of the technical services of the FBI, the Americans suddenly changed their decision to wait for one week, which I had asked for so everything could be installed. And they used only one of the agreed upon components, that is, the appeals of close relatives. But in a completely open manner.

They installed loudspeakers and began to broadcast everything openly [i.e., in the normal audio mode]. And then the tragedy happened. [The burning of the David Koresh's compound in Waco, Texas, is shown.]

NARRATOR:

This is when the public found out for the first time what the mysterious professor occupies himself with. In addition to hundreds of new patients from all over Russia, clients with completely different needs also started to contact him.

INTERVIEWER (asks Dr. Smirnov):

Are you or have you ever been contacted by politicians to help them get elected ?

DR. SMIRNOV:

But of course. Just now a new wave of approaches has began. There are going to be presidential elections soon. Our Russian politicians are uneducated and uncivilized. That's why they are such a ruthless and manipulative pack.

They don't recoil from attempting to exploit the entire population with technical means, such as ours, only to reach the desired office. I do not advocate supporting this pack. I will never do that under any circumstances.

INTERVIEWER (asks Dr. Smirnov):

Is this even possible technically ?

DR. SMIRNOV:

Yes. We have conducted experiments with groups of young volunteers. In situations where an immediate decision has to be reached, the group behavior can be changed with a high degree of probability.

[CUT TO: Two men, outside: One in a jeans jacket, another in a suit. Both are nervously smoking a cigarette.]

NARRATOR:

The man wearing the jeans jacket views himself as an unwitting victim of considerably less harmless experiments: Nicolai Ivanitsch Anisinov (spelling ???), a former dissident and prisoner of the KGB.

Today he is the representative of the "Moscow Zombies". These people have the habit of constantly watching over their back. They often change their address. They do not trust anyone, whether with or without reason. On their shoulders rests the shadow of the Soviet past.

NARRATOR (continued):

There are thousands of such people in Moscow. This includes victims of "secret experiments", as they say, and victims of the fear of the allmight of an Orwellian "thought police". These victims are represented by Nicolai Ivanitsch (spelling ???). This is the site where the office of this organisation used to be. One year ago, the Soviet authorities withdrew their permit.

[Close-up of the man in suit smoking a cigarette]

NARRATOR (continued):

The man with the cigarette watches to make sure they no longer enter the building. This organisation has over a thousand members and receives letters from all over Russia. A few dozens every week. Nicolai Ivanitsch now holds his meetings every Wednesday on this street corner. But only a few show up at these meetings.

Many are still afraid. And many simply do not have the strength. The authorities ignore the problem of the Zombies. Comments

[information ; details] were refused. For the majority of the population it remains a somehow uncomfortable [undefinable] secret.

[Cut to a science laboratory]

NARRATOR:

Secrecy also surrounds this Moscow research laboratory of which it is not known who finances it. This film was recorded three years ago for a Russian documentary which the Russian television station was suddenly ordered to withdraw without being given a reason. The scientists here do not exactly push themselves in front of the camera. The laboratorist introduces herself as Vera".

[A man lying on his back is being rolled into a huge sphere. Vera, a female laboratorist, speaks to the camera:]

VERA:

So, our machine corrects the human biofield. It not only corrects it but heals it as well. For every patient we put together an individual therapy program.

NARRATOR:

In every case Vera refers to the experimental volunteer as a "patient", even though the laboratory is not a scientifically [recognized] establishment.

VERA:

Currently with this device, AL-015-T, we can transfer every known medication to the patient.

RUSSIAN INTERVIEWER (asks Vera ):

The walls of this room are so shielded. What physical processes occur here ?

VERA:

Yes, we shield every human which does not have anything to do with our therapy or our illnesses from the effects of this machine. Because everything has its own radiation. We protect both the humans as well as ourselves.

RUSSIAN INTERVIEWER (asks Vera ):

You refer to this cassette as a program. But there's some type of a fluid inside it ?

VERA:

This is the programator.

RUSSIAN INTERVIEWER (asks Vera ):

What is that ?

VERA:

Hmm, we will reveal this once it has been patented.

RUSSIAN INTERVIEWER (asks Vera ):

In other words, a type of fluid which contains some kind of information ?

VERA:

Correct. This is an information programator.

RUSSIAN INTERVIEWER (asks Vera ):

And this will then be transferred [(?) inserted electronically  
(?) ] into the body of the patient ?

VERA:

Yes.

INTERVIEWER (asks Vera ):

Could you explain this again ?

VERA:

With your permission, I will not do that. [i.e, explain it again]

[CUT to man lying under a huge hemispherical device.]

NARRATOR:

This type of research was once controlled by the communists. Today the same scientists operate in a lawless environment for the free (unregulated) market.

CUT TO DR. SMIRNOV [wearing a black suit and tie]

DR. SMIRNOV:

What we do here and have implemented for some time, could from a certain point of view, appear as a weapon. In most countries this is heavily regulated and prohibited. In Russia, until now you can do everything you want. The only barrier is the ethic of those who possess this technology.

CUT TO AN APARTMENT

NARRATOR:

In Russia, the methods by which the human soul and body can be manipulated by electronic means, even from a distance, are called "Psychotronic treatment". [A cheaply constructed headgear is shown.]

NARRATOR:

This is a self-fabricated headgear against low electromagnetic frequencies. Tenants of these apartments have voiced complaints which are said to be symptomatic of victims of psychotronic

experiments. One of them is Yirena Koslova (spelling ???). We visit her together with the electronic engineer Andre Slepucha (spelling)

....end 1

He alleges that the KGB already experimented on him during the 1950's. Fact is, at that time Andre was a prisoner of the Stalinistic camps and the KGB. Yirena Koslova sleeps in this cage to protect herself against the exterior effects of psychotronic influences.

When she notices our expressions of disbelief she shows us an attestation from the International Center of Psychiatry which certifies that she is psychologically perfectly healthy. Yirena used to work for the Moscow district attorney. She was fired after she protested against the suppression of politically sensitive evidence.

YIRENA:

Without this technology, I would already be lying in the cemetery. When they start to pound your brain, you feel as if you are weightless, for a few days thereafter. If you move your head too fast and abruptly, you become dizzy.

ANDRE SLEPUCHA:

In the first two, three years, you don't particularly notice the effects of a psychotronic treatment. But only then the organism gets shaken up and a strong reaction of all organs begins. (to YIRENA:) What is wrong in your case ? Is it the kidneys, the heart ? Do you have heart problems ?

YIRENA:

Well, they do it so that everything is swinging. It starts to hammer and flutter.

ANDRE SLEPUCHA:

An arrhythmia. This is typical.

YIRENA:

Either they cause a sharp pain or it starts to flutter.

ANDRE SLEPUCHA:

This is a reaction to a radiation of approximately 3 MHZ. This affects the centers which control the heart functions.

YIRENA:

It causes a state in which the heart becomes [feels] very heavy and you can't do anything anymore. Everything falls out of your hands. Suddenly it hurts here and there. But when you go see a doctor he doesn't find anything. Strange things.

ANDRE SLEPUCHA:

Anything possible can happen.

YIRENA:

You are completely incapacitated and completely unable to do anything. But then you go see a doctor and there is nothing.

CUT TO THE OUTSIDE OF THE APARTMENT BUILDING(S)

NARRATOR:

As we leave Yirena's home we are apprehended with the question whether it is even possible to cause such considerable strong reactions of the body by manipulating the psyches from a distance. We ask Professor Smirnov whether he ever encountered such a case during his long years of clinical practice.

[CUT TO DR. SMIRNOV, SITTING BEHIND A DESK] DR. SMIRNOV:

I once watched a 52 year old (female) patient, who was a very well known doctor with academic degrees and titles. Within one week she suddenly lost her hair, nails, eyelashes, eyebrows and teeth. She completely lost her ability to move, except for her right hand.

She started making unarticulated sounds which remotely sounded like language. Using her [partially unaffected right] hand to communicate by making small notes onto a paper she was able to explain to us that this was the result of a violation [attack] of a psychotronic weapon.

Officially she was diagnosed as suffering from a destruction of the vessels in the cerebrum [frontal lobe] of the brain. But [such vessels] did [do] not exist there. And by which means did their destruction occur so suddenly ?

Here we seriously have to consider the possibility whether there might not be someone evil who is secretly radiating, perhaps the neighbors next door, with radioactive Cobalt.

CUT BACK TO ANDRE SLEPUCHA'S APARTMENT

NARRATOR

Andre Slepucha demonstrates the means by which he tries to protect himself against unwanted outside influences. The authors of the documentary hired by the Russian television [station] referred him to us as a credible victim of psychotronic abuse. He is also the author of several publications on this subject.

ANDRE SLEPUCHA

These are so-called elements [parts] for the personal protection against psychotronic treatments [ psychotronic weapons]. Here on the arms I have certain sensors. Also, on this hand, and also, here at knee level. They are all connected together to an electrical system. This box is the size of a transistor receiver.

The thing is, the psychotronic treatment of the brain is being carried out with radiowaves of a specific frequency and a very wide bandwidth. A psychotronic generator is often directly connected to the [consumer] supply outlets, especially onto the

telephone network, the radio network, and similar networks. In this case you must, to simplify this, connect certain filters for these arriving messages. I can show them to you.

NARRATOR:

Andre shows us his home which he has transformed into a fortress to defeat psychotronic signals. With the means available to him he has constructed filters for all entrances of the supply networks, for the telephone [networks], radio [networks] and electricity [networks].

Experts have confirmed that one can indeed protect oneself with such means [devices / instruments] against extreme, low-frequency electromagnetic waves [ELF's], which may have possible negative effects on the organism.

The question remains: Who could be interested in harassing this old man ? Is he today really the victim of secret [psychiatric] experiments or [rather] the victim of an exaggerated paranoia which has its roots in his persecution during the days of Stalin ?

ANDRE SLEPUCHA:

This here is my laboratory, or more specifically, my workshop. Here I try to construct the devices I told you about to help those people who have grievances [complaints] due to psychotronic treatments [psychotronic weapons].

NARRATOR:

Andre Slepucha explains to us which changes have to be made on a simple transistor so it can be used as a measuring instrument for extremely low frequency electromagnetic waves [ELFs]. He connects it to a metal band on his wrist so that it forms a closed circuit and turns it on to discover if a source of a so-called psychotronic treatment is nearby.

[A nondistinctive rushing sound it heard in the device]

ANDRE SLEPUCHA

There is a psychotronic generator at work !

NARRATOR:

Let us assume this is really so. Who is then behind it ?

CUT BACK TO INTERVIEW WITH DR. SMIRNOV

DR: SMIRNOV:

Russia holds the first place with regards to the annually produced [created] computer viruses. This implies that we have colossal numbers of scarily active and very inventive brains for whom there is no demand and who find their self-fulfilment in producing evil.

The unrestrained development of the psychotronic technology can today be compared to the condition of, lets say, the nuclear research [when it was still] in its very infancy.

CUT TO A GROUP OF TRAINEES WATCHING A FILM

NARRATOR:

We are searching for explanations in secret film material made available to us. They are information and teaching films which were produced under orders from the Russian Interior Ministry. [CUT to close-up of the film] These films confirm the existence of psychotronic generators as well as their dangers.

1st RUSSIAN NARRATOR FROM RUSSIAN INTERIOR MINISTRY FILM:

Time and again, the development [construction] of different psychotronic generators has proved fatal for their inventors. Not in every case, but certainly often enough to be relevant statistically.

2nd RUSSIAN NARRATOR FROM RUSSIAN INTERIOR MINISTRY FILM:

There are four main stages [in the symptoms suffered as a result to the exposure to a psychotronic generator [device] ]: The first is a general feeling of unwellness, a weakening of the functions [of the organs/of the brain (?)]. The second is the loss of logic. The third is the loss of spacial orientation. The fourth is the loss of consciousness.

CUT TO A DIFFERENT FILM

NARRATOR:

Another archive film shows a deserted laboratory for psychotronic experiments in the town of Selenoga (spelling ???). The commentator explains that in this case, it was not the crazy experimenters who became victims of their own work but a family with four children who [had] lived in a neighboring [adjourning] home.

All of them [suddenly] got ill and died. The only lead which remains of the scientists who are now wanted by the police are a Buddha figure and photos from a study excursion [trip] to Tibet. The identity of those who financed their research is also unknown.

CUT BACK TO ANDRE SLEPUCHA'S APARTMENT. CLOSE-UP OF A PANORAMA PHOTO SHOWING THE COAL MINES OF VORKUTA (spelling ???):

NARRATOR:

The coal mines of Vorkuta (spelling ???) from the days of the Stalinistic persecution. This panorama reminds millions of Russians of the worst moments in the history of their country. André Slepucha owns yet another souvenir from his days in the [Stalinistic concentration] camps.

ANDRE SLEPUCHA:

In November 1954 I came into contact with what today is referred to as [a] "Psychotronic Treatment" for the first time. Back then they took me out of the concentration camp where, under Stalin, I had been imprisoned as a political prisoner, and brought me into an isolation cell in the KGB prison which was located in the Lubyanka.

After an approximately two week long continuous occupation of the cell I suddenly experienced in the morning strong sounds in the head, very strong acoustic and visual hallucinations.

NARRATOR:

Since the 1970's it is no longer a secret that the Soviet Intelligence Services experimented with the psyches of its imprisoned dissidents. But Slepucha also points out a more recent example of a possible psychotronic manipulation which involved top [Russian] government officials.

ANDRE SLEPUCHA:

The former chief of [Boris] Yeltsin's bodyguards, Alexander Vasilivitch Korjakov (spelling ???), said in February 1991 on the radio, [that] they were outraged, because next to Yeltsin's office they had discovered a room with a great number of electronic devices.

When they moved the panels, they also discovered in Yeltsin's office certain specific antennas [related to psychotronic generators and weapons].

CUT TO PUSHKIN MEMORIAL, OUTSIDE, IN MOSCOW:

NARRATOR:

At the Pushkin memorial, in the center of Moscow, some who believe themselves to be victims of psychotronic treatments try to arouse the attention of the passerbys. But hardly anyone pays attention to the posters with the dramatic displays which purport to document the plight of alleged fatal victims of psychotronic experiments.

....end 2

In light of the severity of the existential problems prevailing in Russia today, such questions do not appear as important. Psycho-Fascism is the charge made on the poster[s]. The photos show Nikolai Ivanitsch (spelling ???) during several stages of psychotronic treatments which he alleges also left [him with] physical traces. Sometimes one of the older people want to know the details.

For the younger [generation] this is a totally strange subject. Basically, only the perpetrators, and perhaps also their victims know more details concerning questionable experiments with/on the human psyches [brain].

[CUT TO DR. SMIRNOV'S LABORATORY: Closeup of a computer monitor upon which a harmless appearing film of a Buddhist ceremony is shown]

NARRATOR:

This film was produced for demonstration purposes by Russian scientists for top government officials of North Korea. One of those [Russian] scientists was Dr. Smirnov. Today he unveils in our presence the secret of the manipulation. To make it visible in

this innocent picture, you have to know the correct [computer] code [of the computer software which encrypted the unseen subliminal message/picture and hid it in the visible picture of the Buddhist temple.]

DR. SMIRNOV:

This film was produced in order to demonstrate how to insert a thought, a picture, a suggestion, into a totally different context. Someone who looks at such material will consciously only notice the disguising picture, such as, for example, any given TV show or commercial.

In fact, however [at the same time the viewer] also receives a secret information [which is] not accessible to the conscious. Let me [now] show you the picture which has been inserted by code into this video.

[Smirnov punches a code into his computer which makes the picture visible]

DR. SMIRNOV:

There it is. [Now we see a photo of U.S. President Bill Clinton with the message: "YANKEE GO HOME !" ]

NARRATOR:

We are no longer dealing with a briefly inserted, unencrypted film picture, a technique which had been tested and prohibited years ago in [for] American commercials. The difference [between the older subliminal technique of briefly inserting an unencrypted picture into a commercial and Dr. Smirnov's new technique] is that the [subliminally] encrypted technique demonstrated here is almost impossible to prove.

DR. SMIRNOV:

Try to comprehend the danger if this were to be produced by a government-controlled television [station] so that millions of people would be repeatedly exposed to the [subliminal] message for, let's say, each day for at least a month. Slowly but ever so gradually it [the subliminal message] would penetrate the brains.

[WE CUT TO RUSSIAN PEOPLE, OUTSIDE]

NARRATOR:

The first Russian generation which has come of age without Communism is now confronted with this danger. [This generation] competes for the once forbidden fruits, and in the intoxication of the newly won freedoms doesn't care for any prohibitions or restraints. [A CLOSE-UP of a Russian Nazi insignia is shown] This is naturally a fertile ground for modern gurus of different origins.

One of them is this man: The militia leader Vijatscheslav Mikhailovitsch Soniko (spelling ???). During the war in Afghanistan he helped pilots to overcome their battle stress. Today he heads a center for psychophysiology in which members of the Special Forces are being instructed. Here too, they treat the

human subconscious.

But rather than healing [psychological] illnesses, as Dr. Smirnov [does], this treatment instead seeks to reduce the patients' susceptibility to stress and improve their will to execute orders obediently and consistently, in other words, ruthlessly. The patient in this top-secret instruction film of the Interior Ministry is a perfectly healthy officer of the Special Forces [shown] here during [his] psychological preparation for Special Missions. This could be regarded as a genuine Zombie Factory.

[CLOSE-UP of a computer monitor displaying various rhythms (heart, breathing & perspiration rates, etcetera) as well as of the face of the man undergoing the treatment, hooked up to a variety of electronic devices, and the face of the man now speaking]

...end 3

[THE FACE OF THE MAN NOW SPEAKING]

NARRATOR OF BRAINWASHING OPERATION:

There is a feeling of calmness in every conceivable circumstance. In every conceivable situation. In every conceivable circumstance. You will keep your self-control. Your organism will function reliably and solidly. In every circumstance, even in the most difficult.

In every muscle, in every cell of your organism you will feel, now and forever, a pleasant clam energy in every single cell. [A video of a drug bust is shown while the treatment continues] This condition will remain with you in every conceivable, difficult situation. Calm self-assurance. Calm self-assurance in even the most difficult situation.

ANOTHER SPEAKER OF THE LABORATORY ADDRESSES THE TV AUDIENCE:

I believe if this is done only for good, then even the forces of the Almighty, to the extent that they exist, will not be angry at us with regards to the experiments we conduct, and the methods we are developing which help the human to keep his sanity.

[A Member of the laboratory responds to the questions of the interviewer]:

MEMBER OF THE LABORATORY:

Up until today we have collected enormous statistical data on more than ten thousand humans, and we never noticed [came across] any cases of negative side-effects.

NARRATOR:

In the same archive film, we discover even more evidence dealing with the concern for the psychological health of the human being.

MEMBER OF THE LABORATORY:

[The laboratory member explains a drawing of a building complex on a wall] This fantastic experimental-technical development was [conducted/carried out upon] the orders of the [Soviet/Russian]

Defense Ministry. This movable complex is a container which is made up of a bioresonance room, a machine room, a hospital room, and a [very] special bio-manual treatment room. With a length of 12 meters, a height of 3 meters, and a width of 3 meters it satisfies the general European standards.

This is a transporter which can be put up anywhere, with automatic aircondition. It can be placed on the Northpole or at the equator, wherever you want.

INTERVIEWER:

And why was especially the military so interested in this ?

MEMBER OF THE LABORATORY:

Why the military ? They are investigating the possibilities of rehabilitation of troops under combat conditions [in the field].

CUT TO:

[A diagram of numbers and figures flashing on a computer screen is shown]

NARRATOR:

What remains of the Russian soul once it has gone through such a container in which a computer programmed for the cleaning of the subconscious changes feelings and human excitements into numbers and [mathematical] diagrams, which can then be "corrected". [A diagram of wavy lines is shown]

This is one of Professor Smirnov's recorded computer displays of a human subconscious, a graphic illustration of the [human] soul. Every one who has access to the computer and knows the [software] program has access to this soul. To rule the [human] souls, one only has to put them into the area of effective vicinity of the apparatus. Or, there is already a method to transmit hidden information over long distances. According to Smirnov [such a method] does exist:

DR. SMIRNOV:

You can input a suggestive "equation", a "consciously not noticeable fable", as we like to call it, into every conceivable low-frequency sound, for example, into the background sound you can hear in the telephone, even into the sound of a sledge hammer, not to mention the fact that this can be even more easily done with the radio or pieces of music. It works like this:

[Dr. Smirnov speaks into a microphone which is hooked up to his computer]

DR. SMIRNOV:

[Into the microphone:] "Attention. Attention. This is Germany. In five minutes, Hitler will be finished."

[To the TV audience:] We now have recorded an audio database which can then be played back from the computer.

[Dr. Smirnov plays his own voice back: "Attention. Attention. This is Germany. In five minutes, Hitler will be finished."] There is nothing special about this. But now we change this [audio] database into an undecipherable format. We receive a database which produces a sound. [Dr. Smirnov plays the changed database of his voice back which now sounds only like background noise rushings].

Only the rhythm is the same as that of the originally recorded database, but my words are no longer recognizable, right ?! Still, the brain will not rest until it has decoded [the message]. We too can decode [the message] if we change it back [to its original form]. I have recorded this changed-back database. Now we'll open it.

[Dr. Smirnov does this on the computer]. There it is. Let us listen to it again. [The same rustle-rushing sound is heard]. Yes, there is that sound [again]. And now we'll decode it. Even if my voice will [now] be a little distorted, I hope that it can [still] be recognized.

[The recording of Dr. Smirnov's voice is played once more: "Attention. Attention. This is Germany. In five minutes, Hitler will be finished." ]

DR. SMIRNOV (continued):

If a great number of people would be exposed to all of this, for example through the TV, or the movie theatres, or radios, then, I believe, that there exists a certain danger for our security.

WE CUT BACK TO THE APARTMENT OF A LITTLE OLD LADY

MAN:

Again the telephone doesn't work as it is supposed to. It dials all by itself.

NARRATOR:

The leader of the "Moscow Zombies" believes [that] the malfunctions of [the problems with] the telephone are due to the effect of a psychotronic generator. MAN:

Veronika was [is located in] the "Middlevar" (spelling ???). Again it is dialling a different number. I wanted to call the "T-kovar" (spelling ???).

OLD WOMAN:

And it doesn't dial the number ?

MAN:

No, it dials the time announcement, which you called the last time, as if [the numbers] had been stored.

OLD WOMAN

And I call the security services of my apartment, but [instead I] receive the time announcement. I try it again and nothing gets

dialled.

MAN When I called the T-rkovar yesterday, I got connected to the cemetery.

OLD WOMAN

At the cemetery ? So they sent you to [connected you with] the cemetery.

NARRATOR

Nikolai Ivanovitsch (spelling ???) pays no rent. He also has no money for food. The old woman, a retired biologist, supports [both] him and herself from her meagre social security proceeds.

She does that out of solidarity with the "Zombie"-movement because she has spent many years in the [Stalinistic concentration] camp herself and has basically been persecuted politically for her entire life.

MAN:

I just [simply] wanted to tell you that the contact with me can bear various conflicts. Therefore, I always tell you: Talk less.

OLD WOMAN

You know this better than I do.

MAN

It doesn't necessarily have to come down to a conflict. But it may give [result in] provocations [enmities] and such. It is better not to talk.

NARRATOR:

Nobody knows in how many homes in Moscow, or [even] in all of Russia, there are people who up until today are afraid to talk freely. People who are afraid of their own shadow. And nobody knows how many of them are really the victims of dubious [psychological] experiments with [on] the human psyches. And how many are victims of the fear of such manipulations.

WE CUT BACK TO DR. SMIRNOV WHO IS SEATED BEHIND A DESK:

DR. SMIRNOV:

What, in my opinion correctly, is feared the most in the entire world, is an invasion into the soul. This couldn't be any other way. After all, it is better to lose the body than [to lose] the immortal soul. It is easily conceivable that some Russian "Satan", or, let's say an Iranian or any other [Satan], as long as he owns the appropriate means and finances, can [could] inject himself [intrude] into every conceivable computer network, into every conceivable radio or tv broadcast with relative technological ease, even without disconnecting [any] cables.

You can intercept the [radio]waves in the ether and then [subliminally] modulate every conceivable suggestion into it. If

this transpires over a long enough time period, it accumulates in the heads of the people. And eventually, they can be artificially manipulated with other additional measurements to do [exactly] that which this perpetrator wants [them to do]. This is why [such technology] is rightfully [correctly] feared.

CUT BACK TO ANDRE SLEPUCHA'S APARTMENT

ANDRE SLEPUCHA:

Many who view these pictures might think, this man alleges to have been [psychotronically] treated for fifteen years, yet at the same time his arguments are sufficiently logical and analytical. And for his almost seventy years, he doesn't look so bad. But [the fact is] I have been clinically dead three times, due to the effects of special electronic vibrations, which led to very strong internal bleedings and a great loss of blood. ANDRE SLEPUCHA (continued):

I was simply lucky with the ambulance so that I, as they say, could be saved. And [the] second [reason is] that for at least seven years I have successfully employed these protective measurements which I have demonstrated to you.

WE CUT TO OUTSIDE, RUSSIA, EVENING

NARRATOR:

We are driving to the Bolsheia Pirogovka, Russia's oldest psychiatry, the Korsakov clinic. Here is also the Institute for Psycho Technology which Dr. Smirnov founded ten years ago. Since then, more than ten thousand people have contacted him to volunteer for the technique he developed, an operation on the "open subconscious". One of them was also Olga.

OLGA:

I took drugs for approximately three years, and tried in the past one and a half years exceedingly to stop. I've been in all kinds of [drug abuse] hospitals for rehabilitation [purposes]. But none of the therapies [I tried out] were successful.

This [Dr. Smirnov's] treatment applies a medication which does not directly produce hallucinations, but you somehow "see" your subconscious, your own life from beginning to the end. [After completing Dr. Smirnov's treatment (and taking the medication)] I had a genuine feeling that I could not possibly return, as if, although I'm not dying, but nevertheless am removing myself to someplace.

The procedure takes only approximately one minute. But it feels like three to four hours. I subjected myself to this treatment about a month and a half ago. And since then, I feel good. I can say that today I feel like a free person, because I can [now] say "no" to the drugs.

[WE NOW CUT TO THE CLINIC OF DR. SMIRNOV: A YOUNG MAN IS BEING PREPARED FOR AN OPERATION ON HIS SUBCONSCIOUS]

NARRATOR:

In the clinic of Dr. Smirnov: This narcotized young man also has been a drug addict for four years. Soon he will begin a unique, unbloody operation after which he will wake up cured of his fateful drug addiction. [CLOSE-UP of the patient as he watches a sequence of numbers flashing on a computer screen]. From the computer loudspeakers, coded instructions are intruding into the subconscious of the patient which force him to confront the worst experiences of his life.

Therein lies the hidden cause of his drug addiction. The sensations [emotions ?] [the patient experiences] during [this procedure] are so strong that sometimes the heart stops beating. This is the reason for the narcosis and the [presence of] a specialized team of doctors which is able to revive the patient in case of [an] emergency. The [subliminal] instructions are being encrypted into the sound of the [patient's] heartbeat. The operation lasts only a few minutes.

Usually the patient continues to repeat one word which for him has a [personal] key meaning.

PATIENT:

Mama. Mama. Mama.

NARRATOR:

The subconscious, the soul of the young man, now lies exposed to the surgeon. Only Smirnov practices such procedures on the subconscious today. Sergei's [the patient's] pulse increases to two hundred beats per minute. In this moment, the drug addiction is literally being surgically removed. [A noise of an increasing pulse beat is heard]

NARRATOR

Brainwashing per computer !

[The sound of the pulse becomes louder and faster]

PATIENT

Mama. Mama. Mama. Mama. Mama. Mama. Mama. Mama.

DR. SMIRNOV:

Finished ?

NARRATOR:

Now the pulse frequency decreases again. The "cavity" [hole] created in his subconscious is now being replaced ["filled"] with positive motivation. It [the positive motivation] will help him to live without the [drug] addiction. [The patient sighs and breathes deeply.]

One could feel enthusiastic. Would there not be a [rather] disturbing thought: If it is possible to remove "evil" from the soul of a human being, and have it replaced with "good", is this also possible the other way around ? Can anyone in Russia today guarantee that this is never going to happen ?

DR. SMIRNOV:

There is a famous bible verse which is [usually] interpreted incorrectly: "I am the Lord." [ alternative translation: "I am the Master."] Everyone assumes automatically that this is a word of God, right ? He is the Lord [Master]. In fact, "I am the Lord [Master]", means "I am God", "She is God", or "They are God". "God", this is the Holy Spirit, this is us.

The general population does not realize this second meaning. And although we psychiatrists operate with relative material objects, computers, programs, semantic structures and such, which can be measured, weighted, and be understood and expressed in numbers, we treat this [Holy] Spirit in a pretty mediocre way. Because this is not something so metaphysical, immaterial and irrational as [was] once thought.

## **Brainwash killers 'still in use'**

---

Bonn, Thursday

A TOP-SECRET project in the former Soviet Union in the 1970s turned soldiers and security agents into programmable "human weapons" and is now being exploited by mobsters and private firms, it was claimed today.

The psychological weapon project relied on hypnosis and high-frequency radio waves to turn members of the Soviet security forces and military into fearless, conscienceless fighting machines, said a programme on German television.

The Psychotronic Influence System relied on passwords and numbered codes to activate its subjects.

After the KGB project's existence was made public hundreds of former Soviet soldiers, police, and KGB members have sought health damages.

However the programme said some special Russian police units still use the system today and it has found its way on to the free market, where mobsters and private security firms are using it, the programme reported.--AP.

## Clothing Sabotage Photos

See review of "[Gaslighting](#)" for an explanation of why this is done.

Jeans are shown in good condition - no rips or tears anywhere. They are less than 1 year old. They came exactly as they appear, with the faded parts on the thighs.

Zipper shows 1 tooth missing. This made the zipper inoperable. If you test out a metal zipper, you will see that the teeth are in very securely. They don't just "fall" out.

Coat is in perfect condition.

Inside seams were torn shortly after coat was purchased. Coat zipper had to

be replaced as well.

Upper sock is larger than original (below).  
Logo's are different sizes.  
Upper sock is much more worn out on the sole.

This is the 3rd pair of socks that has been "replaced" with a larger, older set of socks of the same brand. I threw two pairs away, but took a picture of these, since it was still happening.

[Quick read](#) for those with limited time

## Sabotage Photos and List

March 13, 2010

[Camera tips](#) for photographing sabotage

**Main Site Page and Menu:** <http://www.raven1.net>

This page is for photos of sabotage perpetrated on current-day [organized stalking](#) targets. Sabotage is constant, and occurs both at home and at work. It is used in conjunction with [street theater](#) and electronic mind/body attacks to totally crush the victim's quality of life, and do it in a way that the victim will not be believed by the authorities, family, friends or co-workers.

[Click here](#) to read about "Gaslighting", a book which describes the motives and purposes of this type of harassment perfectly.

[Click here](#) to read about "Terrorist Stalking in America", by David Lawson, who reveals nation (and now world) wide networks of stalking groups responsible for such things.

Most sabotage is of a type where naysayers can allude to alternate explanations, and individual sabotage incidents are of too small a value to involve action by police. The collective impact of years and decades of sabotage adds up to serious financial repercussions. Sabotage at work, along with electronic sleep deprivation and "mind messing", and other workplace harassment most often leads to loss of job and possibly career. So the sabotage the visitor sees here should not be taken as anything like the whole story.

A victim of two decades of electronic harassment will have experienced literally thousands of individual sabotage incidents. Not all sabotage can be meaningfully photographed. So what you see here are only the tiniest possible thumbnail sketches.

[An interesting sabotage page](#) from an Italian site reporting unusual breakages from some sort of external advanced "influence". Some sabotage involving [breakage of strong, stable materials](#) has yet to be scientifically explained. In these cases, the force is applied at a distance and leaves no scratches or other marks which would have to be left if any conventional type of destructive force was applied. In some cases the surfaces have soft, easily damaged finishes like shiny aluminum or soft paint. It should be noted that these cases do NOT include manifestations typical of the poltergeist type - this is a distinctly different phenomenon and occurs in an environment where many small crimes and much harassment occur for long periods of time, at home, at work, and throughout the targeted person's community.

#### **Steel Folding Chair (Eleanor White)**

The silvery coloured material is duct tape. The grey slotted steel channels clamped to the legs are stiffeners. The original back of the chair is lying on top of the seat cushion. Within a month of purchase, the duct taped support bar had both its welds snapped and they were good welds. (I have welding experience.) The welds securing the sheet steel padded web on the back were snapped, even though I never lean on the web as I sit at my table. The perps then started incrementally bending over a large radius the legs, making the grey stiffening channel necessary. The design of this chair with steel tubing would not bend in a large radius if loading beyond the weight of a person were used to break the chair. The bends would be sharp and local to where the legs are pinned together. There was no misuse, such as standing on the chair. About three years after purchase, I returned home to find the back seemingly sawed off, though the clean break pattern is not exactly like a conventional saw. All damage occurred while I was away from home, usually at work.

#### **Velcro strap destroyed**

Above is a closeup photo of the loop ends (as opposed to the hook ends) of a pair of elastic velcro straps used to secure a poncho in a roll, for carrying in my (Eleanor White's) backpack. The organized stalkers sometimes destroy velcro on various goods, particularly clothing, often rendering the item useless. This is done by using a sharp blade pushed horizontally into the loops then upwards, cutting the loops open.

In the foreground is one of the two poncho securing straps which has perfect gripping power. Its mate, exactly the same age and having been used for this light duty application for the same time (about a year) in the background shows the cut open loops ripped upwards.

On the day before, both velcro straps had full, normal gripping power. One day later, the

strap in the background had absolutely zero gripping power. The perpetrators have ruined velcro-closed shoes in the same way.

#### **Balcony roof used as garbage dump**

Organized stalkers frequently use garbage as a way to deniably assault OS targets. In the photo above (March 13, 2010) an apartment above mine (Eleanor White's) has recently begun to dispose of fairly large hunks of bone on the small flat roof which extends beyond my balcony.

In other instances, each time I find a place frequented by wildlife, and where I leave very small treats which are fully consumed daily and leave no residue, the stalkers will start tossing substantial amounts of garbage on that spot until I give up trying to leave wildlife treats there.

#### **Aluminum Frame Cot Leg (Eleanor White)**

Within two weeks of purchase, I discovered that the center leg, which is a wide "U" shape, had been pulled apart in a classic tension fracture. Tension. This leg is under compression while in use, and the fracture was tensile. This damage occurred while I was at work.

#### **Long John Underwear (Eleanor White)**

During the first winter, these long johns, which were generously sized (I always buy very loose sizes) suddenly developed a pattern of many small holes at the crotch, each hole about the size of a dime, after I washed and put them in the closet intact. A second incident suddenly "grew" the small holes together into two large holes with a bit of material dividing them. Typically, worn out crotches form a single hole, and the pattern of small holes made this clearly an occurrence of sabotage, not normal wear. This has happened to several pair of long john underwear over my two plus decades of being harassed.

#### **Panties (Eleanor White)**

At the time of this photo, I owned 8 pair of

identical panties, all of top notch quality, all less than one year old. Several months after most of these panties were bought, I came home from work and discovered all seven pair had the crotches ripped out in the classic curious "two hole" pattern, so often used by the perps. Another classic perp attack on underwear is to cut or tease open the elastic waistband at the seam.

#### **Kitchen Electrical Outlet (Eleanor White)**

The stain below the outlet shows one perp harassment event when I got home very tired and sick with a cold. I entered the apartment to find water pouring out of the outlet. I removed the cover and receptacle so I could see the inside of the box clearly, and the water was coming from inside the conduit. This conduit does not pass into any other apartments, but goes directly to the breaker panel within the apartment. There was no evidence of water in the breaker panel. There was no water coming down outside the conduit. The water may have been injected by way of a hole drilled from the apartment above. The building was in excellent shape and about two years old when this happened.

#### **Robe (Eleanor White)**

Within a month of purchase, this robe had both its armpits ripped open. The armpits and crotches of my clothing are frequent targets of perp saboteurs. They also like to rip holes in pockets.

#### **Dr. Scholl's Leather Shoe (Eleanor White)**

These comfortable velcro-tie shoes are popular among us security guards. This style has the toe leather stitched across the toes. With no rough service, and after being at work using my skidoo boots for heavy snow conditions, the perpetrators had ripped several stitches out of this seam, necessitating my own amateur repair in the form of heavy embroidery floss (a very thick type of thread) repair. Gradual picking of seams is a favourite of my perpetrators, and their picking sessions always occur while I am away from home, and to clothing that is nearly new and which has not been abused. On one top, the shoulder was ripped open before I even wore it. And, the embroidery floss stitch to hold the toe closed was later cut while I was out.

The velcro tie pile was teased to the point where it no longer held the strap in place, and this includes the lower strap which often isn't even opened and closed in normal use. This happened on two pairs of these shoes. On one pair, I installed repair velcro pile sections, and these only lasted three months, and the occurrence was SUDDEN, not gradual.

#### **Satin Finish Heating Pad Cover (Eleanor White)**

This heating pad cover is the common, gold coloured satin (smooth, glossy) quilted finish cover. The cover deteriorated with the damage being inflicted while I was away at work, and reached the severely ripped open condition in the photo within about a month of purchase. I do not sleep on top of heating pads, and even if that were done it would not cause the destruction shown, even over a very long time. Over my two decades plus, this had happened to every heating pad I owned, and after the cover was thoroughly shredded, the perps would, while I am out, yank apart the wiring internally rendering the pad unusable. I was slow in realizing that these pads typically have long warranties, and the reason the covers were being attacked so viciously was to make sure I could not exchange the pads for new ones under warranty.

### **Vacuum Cleaner Hose Lock Ring (Eleanor White)**

The accessory attachment end of my vacuum cleaner hose is shown in the photo. When the medium priced vacuum cleaner was purchased new, one day within its first three months of light duty use (small apartment) I picked up the hose and noticed that the accessory pin locking ring section had been largely broken away for about half of the circumference of the hose end. Note carefully: The plastic fragments were NOT found anywhere, meaning they had been carefully discarded. This did not happen at any time while I was using the cleaner. This type of damage is one more example of the constant sabotage that is "too small to involve action by police". However, the visitor can see that over time, such "small" sabotage adds up in the same way "Chinese Water Torture" does.

### **Dumping of Consumable Supplies (Eleanor White)**

A regular perp harassment stunt is to enter the victim's apartment, and dump consumable supplies. On the photo at left, you can see two of these dumping occurrences marked "DUMP". Dating containers and daily marking of levels does help but does not stop this practice. Without the dates and level marks, the dumping is worse. An at-work equivalent is to remove supplies from the victim's work area, such as pens, Post-It pads and printer paper. When these supplies are plentiful and easily accessed, such nightly thefts are harassment and not normal.

**Screws Removed from Apt Door Hinge  
(anonymous)**

The wood in this apartment doorway is in good condition and the screws used on the hinges are quite long. This was done while the victim was out. Other common screw removal sabotage is done repeatedly with chairs and table legs.

**Ironing-Over of Button Hole and Button Side Flaps, All Button-Style Shirts/Tops  
(Eleanor White)**

Since becoming a target in 1980, every one of my button-style shirts/tops have had the inside of the flaps carrying both buttons and button holes deliberately ironed over, making it very difficult to put the shirt/top on. When examining the fold-over closely, it is always an IRONED OVER crease, and not any accidental creasing. The only exceptions have been button-style tops where the flap is actually sewn in place preventing this.

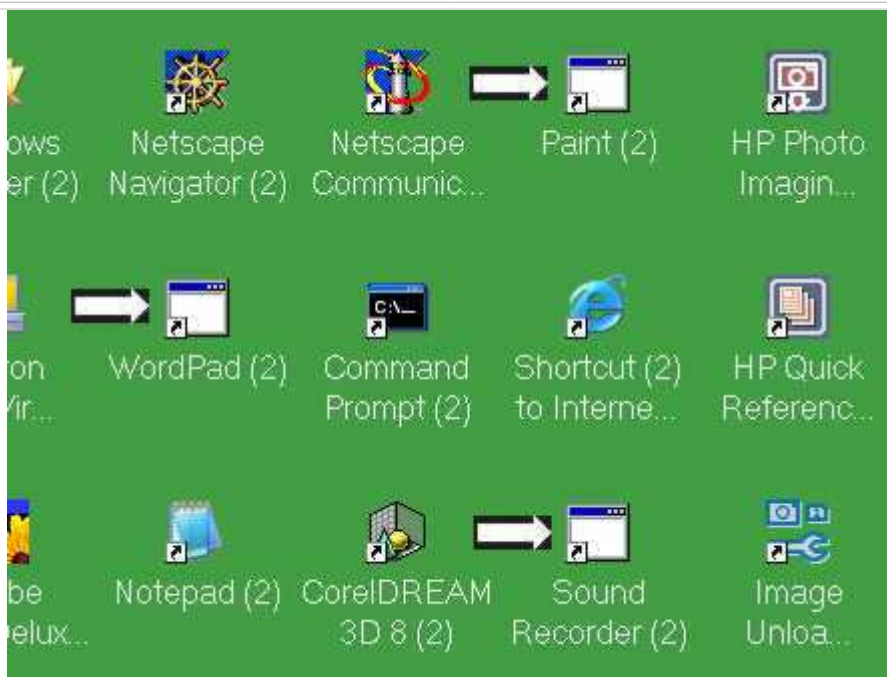

**Brand new metal hydride battery twisted and rendered useless (Cairo DAlmeida)**

Metal hydride batteries are expensive, top of the line. This one had not even been used once before perpetrators twisted/crushed it and rendered it useless. Attacks on batteries are frequently reported, particularly camcorder batteries, as these can significantly aid in gathering evidence of the harassment crimes. Most batteries are not physically crushed, just discharged.

**Stain on sheer curtains while Brenda was out**

Can't say much more about this one ... typical of the stalking group members who enter the homes of their chosen targets.

**ABOVE: Disabled Windows Programs (Eleanor White)**

The above PC screen section was captured December 4, 2002, and shows Eleanor White's desktop screen. The machine is a Compaq, purchased new on October 8, 2002, with the Windows XP operating system. In the two months since the machine was new, three often-used programs have been disabled by way of perp sabotage. I use an emailer which does not run programs as does Microsoft Outlook. If viruses are responsible, they had to arrive other than by way of email. However, computer sabotage, including real time (i.e. sabotage taking place while the user is doing things on the PC) is widespread and common among organized stalking targets. This sabotage is done by way of some other method than through the modem, as it happens even when the machine is not connected to a phone line. An attempt to restore one of the bad icons resulted in other features being deleted, indicating a type of real time sabotage has been in use on this PC.

**ABOVE: Acid spots on bedspread (Eleanor White)**

The above photo is a section of my bedspread. After returning from a 2 hour daytime hike, I discovered two white spots, the larger being about two inches across. At first I wondered if some type of white powder had been spilled, so I took a damp dishcloth and tried to pick up some of the powder. The center of the spots fell apart, as if acid or possibly very concentrated bleach (which I do NOT use) had been spilled.

A classic goal of the criminals that enter our homes to do these things is to attack all of our possessions so we appear shabby. Often, we are unable to afford to replace everything the criminals make shabby. Our guess is that making us appear shabby makes us appear less credible. This gets expensive, as this has been going on since 1980 in my case.

**ABOVE: Destroyed Heating Pad Cover #2 (Eleanor White)**

The foreground in the photo above shows the cloth cover of a Sunbeam heating pad, 5 year guarantee, which at the time of the photograph had been in use for only ONE year before it failed. My health isn't the world's greatest, and I find that a heating pad helps reduce the impact of both natural colds and flu, as well as the frequent perp - induced artificial illnesses. I do not abuse my heating pads, and do not sleep on top of them. I live alone and have no pets.

Having learned that the perps viciously attack the cloth covers so as to make the unit appear to have been abused when attempting to get a warranty exchange, on this heating pad I never used the cover, and left it neatly rolled in the original box. (I used an old cover from another of the many perp-destroyed heating pads instead.)

As you can see from the photo above, when I went to get the cover for warranty exchange, it had been roughed up and abused some time during it's one year in the box. The only way to avoid this, I guess, is to keep the unused original covers open in plain view, wrapped in a transparent bag.

Visitors should understand that the perpetrators freely enter the homes, cars, and workplaces of their targets with impunity.

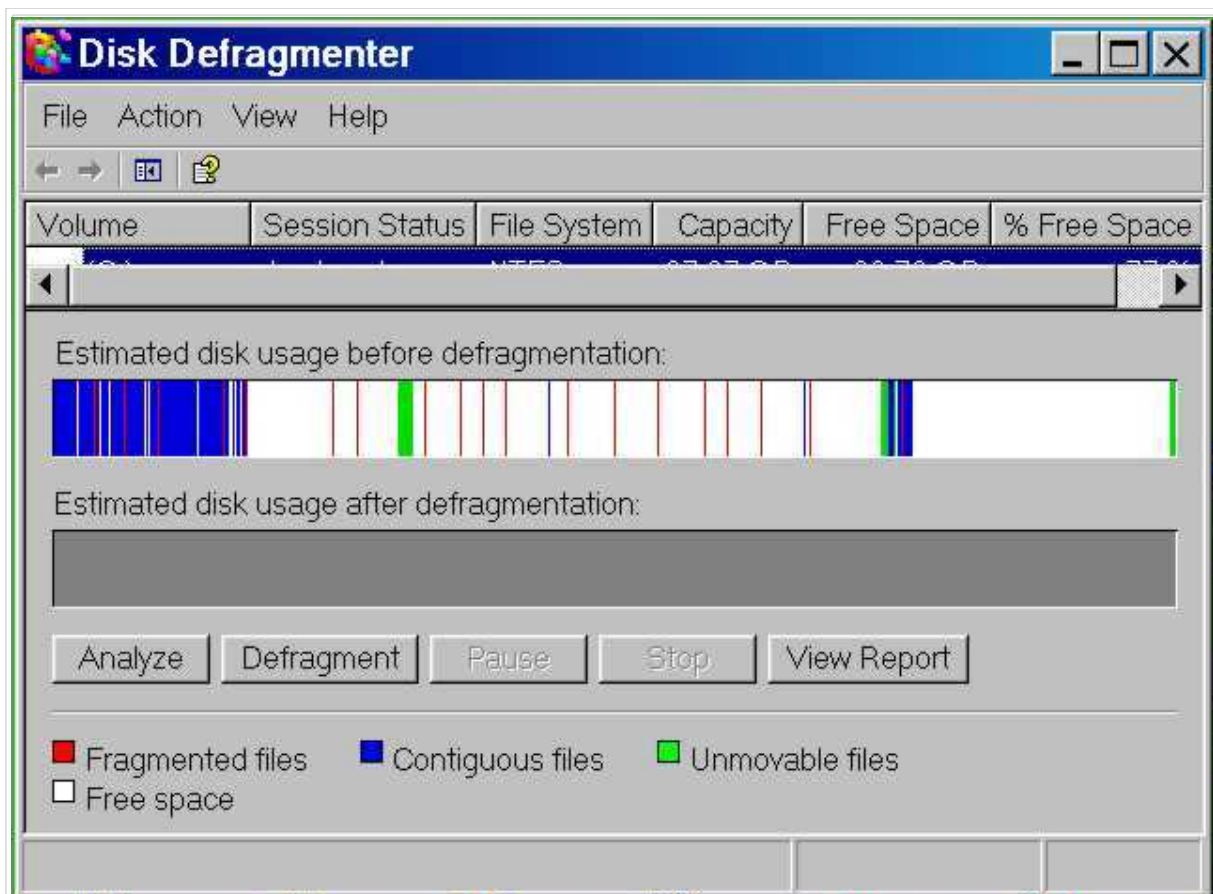

ABOVE, highly unusual broken weld in mountain bike above pedal bearing housing. Bike shop reports they haven't seen this type of failure. The owner had this happen in city riding and he had never abused the bike. The substantial weld material broke cleanly all around, and there is no sign of bad manufacture. Because the break was in the weld bead itself, and not a separation from the structural tubing, this is not a case of "bad penetration".

Another very unusual failure in a tempered glass coffee cup can be seen for comparison at the [links above](#).

The owner, a victim of multi stalking harassment reports people outside his house said the bike would break shortly before he rode it. Another multiple stalking victim reported a voice to skull transmission in which he was told "It's going to break", and very shortly, the turn signal indicator snapped and became useless.

ABOVE: ANOTHER extremely unlikely break in a NEW bicycle owned by the same person who had a never-before-seen break in the tubing holding the pedal bearing housing, shown just above this photo. New bike. The ability to cause heavy metal items to fail is a "signature" of the advanced equipment used on people being targetted as described on this web site.

**ABOVE: A sample of the unmovable files  
from Eleanor White's defragmenter screen  
(the unmovable files are shown in green)**

PC sabotaged: After 6 months of use and with NO new software installed, the perpetrators began taking files needed to operate often used software, like browsers and emailer, and made these often accessed files (a) unmovable and (b) placed at widely spaced points on the huge hard drive. This caused a 1.44 MHz machine to operate as slowly as an Intel 386 machine running windows (i.e. VERY slowly). User has no way to know which files are the ones so placed, but they clearly show up (a) by the extremely slow speed compared with the first 6 months and (b) these groups of files suddenly showed up on the disk defragmentation bar graph screen, and defragmentation doesn't move unmoveable files.

**ABOVE: A "modem minder" device, needed to cope with perp disruption of modems at Eleanor White's last place of technical employment**

Eleanor White set up a bank of 24 modems at her last place of technical employment for a program system which allowed customers to dial in and place orders directly on the company mainframe. The perps would constantly cause the modems to fail to hang up, and by doing so, all calls after the modem locked were blocked from other modems in the bank. The only cure was to stand beside the modem bank and switch modem power off then on again. There were no commercial products available to monitor this modem locked condition, because it does not happen without this specialized type of harassment.

Eleanor designed and built these devices, at a cost to the company of \$500 each, for a total and UNNECESSARY cost of \$12,000, and while they did solve the problem, this cost was 100% the result of criminal activity.

**ABOVE: Dirt artificially placed by local stalkers,  
Eleanor White's kitchen floor**

One of the common harassment methods of organized stalking perpetrators is to artificially place dirt or stains in the living quarters of targets. In my case, the perpetrators are exceptionally cautious about leaving viable evidence so they use materials present in my apartment to create this dirt. The dirt always shows up when the target is out. In my case, I live alone, and there is no activity which could possibly have accumulated as much dirt in the space of time (often just one trip away from home) happening in my apartment.

As with many harassment methods, the perps make "normal breaks of life" or "normal wear and tear" happen so frequently that the TARGET is aware it is harassment, but the general public, who do not want to be bothered with someone else's headaches, consistently refuse to appreciate the FREQUENCY of "breaks" that are happening to targets. So far, this carefully crafted harassment is the perfect crime.

**ABOVE: A butane lighter, one of three owned  
by Margo Tilton**

These three butane lighters have suffered anomalous meltings from the INSIDE, as well as a small hole through ONE wall, not both, which appears to have drilled by a laser. Technology to do this so precisely is very advanced indeed.

### **List of Sabotaged Items Where Photos Unavailable**

- 13 uninterruptible PC power units in one year

- 4-way flasher button broken off, company car
- Air cleaner filter in car removed
- Air cushion on car shock absorber slashed
- Attempt to fit new taps to bath and sink: house stopcock handle snaps off in my hand! Return to car to find it across from where I parked- although handbrake was fully on, car has roll reversed into lamppost, back light smashed, damage to bodywork (cost around \$500). Fix house stopcock, all ok. Go to stopcock situated in road to turn on main supply - stopcock turns and turns, and turns and turns, but no water coming through - another stopcock broken - call water company - \$100 callout charge + labour + any part costs
- Baby pigeons placed on grille above major computer equipment, done at start of long weekend, fecal mess
- Backup diskettes completely erased at work
- Boot sector erased from victim's PC while out
- Brand-new, never used underpants found with classic perp "two hole" sabotage pattern
- Car radio programming changed, especially during service
- Car radio put into permanent seek mode
- Cat killed while victim out
- Chipped paint on car (deliberate pattern, not accidental)
- Chips knocked out of turquoise jewelry
- Computer hard disks (all 5 of them) fail - machine will not start
- Countless temporary "self fixing" PC failures, home and work
- Countless PC system board deaths at work
- Countless failure of home appliances, home and work
- Craft replica of thunderbird totem with feathers, found with individual feathers scraped to destroy
- Cutting open of many glove fingers well before worn out
- Cutting surface of freshly painted furniture
- Dashboard screws removed except one
- Delayed turning on of TV
- Deliberate ironed fold-over of button and button hole edges of shirts, making putting the shirts on very annoying and difficult
- Destruction of custom-made printer and terminal stands
- Destruction of velcro pile on velcro shoes; happens between two wearings and does not happen gradually
- Dirt put in car engine oil
- Dog fatally stabbed while victim was out
- Draining of car radiator
- Draining of master brake cylinder
- Drilling into car water pump bearing causing premature failure
- Food containers in fridge disturbed, food taste "off"
- Fridge re-wired to heat up daytime, cool at night
- Front and rear windshield wipers, company station wagon
- Garage light re-wired to position 2 feet from original
- Gas cap securing chain, personal pickup truck
- Headphones, ten new sets of, in succession over 20 years of being a target, had one of the two earpieces fail shortly after purchase
- Heating pads, 11 over 23 years, had one or more settings (L-M-H) fail after one year of gentle, non-abused service

- Heavy duty (hunting/fishing) knit gloves with rubber protection had third finger tips pop open within two weeks of purchase with light duty use. Furthermore, repairs using multi-strand embroidery floss are discovered ripped open within days
- Hems pulled out of barely-used clothing
- Holes punched in new food wrappers while out
- Holes ripped in brand new T-shirts
- Ice picked holes in car radiator hoses
- Important computer diskettes corrupted or erased overnight
- Indian rug hanging on wall had corners tied in knots and threads pulled out and left all over floor
- Industrial vacuum cleanerS - major damage to new units
- Industrial vacuum cleanerS - frequent wiring motors to run backwards
- Jello in transmission
- Leaks in roof over major computer equipment, deliberate
- Little 15-pound dog tortured and abused while victim out
- Mail removed from box and placed on table on front porch
- Many socks develop large holes, fairly new, places not subject to wear
- Needle on record player smashed while out
- New bathing suit had elastic pulled out to the point of being unwearable
- New spark plug wires destroyed within a month
- PC sabotaged: I got broken into, I got hacked, my firewall passwords were changed, my Merrill Lynch password was changed, my Windows manual was stolen, my Norton Systemworks CD was stolen, and I had to do a system restore to get back on the net. The bastards are getting vicious. They uninstalled a registry cleaner. Someone broke into my apartment, installed Snapshot on my computer, downloaded a bunch of files, and uninstalled the program
- Premature blowing of light bulbs, especially hard to replace like radio dial lights
- Putting bitter-tasting substance in drinking water being chilled for drinking later whenever I am out for an extended period (same water taste-tested before leaving home and OK at that time)
- Rain coat found with oil smeared on it
- Rear window spray system, company station wagon rear window
- Rear window heater, company station wagon rear window
- Remote control for TV, time delay and autorepeat functions intermittently disabled or operate improperly
- Replace Javex (Clorox) with water, new container
- Ripping of new duct insulation to keep computer room cool
- Ripping of lining and stitching inside zippers, to jam the zipper
- Re-routing of food service exhaust into victim's home or work area
- Seams on new clothing cut
- Sentimental value (grandfather's) glasses lens chipped
- Several new sweaters had yarns pulled out
- Slashed tires
- Steering wheel found smeared with rare toxic chemical (tri-phenyl phosphene)
- "Swapping" of a later version of software CD for an earlier one; victim forced to discard later version as it could have been (and probably was) tampered with
- Telephone line cut, setting off alarm
- Tiled items: "Whenever I get anything with inlays in it, it suffers physical damage. A trivet with an inlaid tile my sister brought me from England was perfect when I opened it and set it on the table. The next time I saw it, a corner had broken off and

was missing. A trivet of a tropical wood with ivory inlays my aunt gave me before she died was perfect when she gave it to me (it was surely many years old then, as it is illegal to import ivory objects into the US now) suddenly, without any trauma at all, lost some of its inlays. For Christmas, my daughter gave me a small ring box of stone with different colored stone inlays in the cover which was perfect when I opened it, but within a month or so, I noticed that all of the inlays in the cover were missing.

- Time display on VCR destroyed
- Twisting of various cords when victim is away from home or office
- Unknown liquid, turned out to be gasoline, ADDED to car's gas tank
- Victim's name written in lipstick in elevator on return home
- Wires cut under dashboard to radio/cassette player
- Four utility "luggage straps" stolen in a 2-month period
- Two large spring loaded utility clamps stolen
- One nickel-cadmium battery pack charger stolen

### **Reports from Dr. Rauni Kilde, Organized Stalking Target and Former District Chief Medical Officer for Northern Finland**

#### **Sabotage at Home:**

- Literal electrical burning inside clothes washer, dishwasher, stove, fax, freezer and other appliances while abroad lecturing on electronic harassment and mind control
- Garden lamp fixtures filled with clay and water
- Theft or false reading on electric meter of 10,000 kWh while abroad lecturing on electronic harassment and mind control
- Half of house loses power then "fixes itself" several times; (having power stopped even though the power outlet is working and power cord is in good condition also happens to others)
- House wiring changed to produce powerful shock when turning on a light
- Constant hum heard in house (accompanied by fatigue)
- Microwave detector disabled and glue applied all over circuit
- Intense heat from unknown source suddenly causes doors and painted surfaces to crack
- Rugs made of natural skins (tiger, wolf, wolverine) cut up
- To-do lists cut while out
- Door paint stabbed with sharp pointed instrument repeatedly
- Furniture ripped
- Oriental carpet fringes cut
- Flower baskets cut with knife
- Frames of paintings cut or paint spots applied
- Kitchen furniture spotted with paint, ripped, scraped
- Destruction of 4 TVs, 5 radios, 1 loudspeaker tape recorder; a brand new TV lasted only 3 days
- Sabotage of telephone answering machine
- Garbage strewn on property when expecting guests
- Garbage bin packed tightly with snow
- Finest porcelain dishes and glasses chipped and broken
- Bed linen, table cloths, and lamp shades stained or paint spotted
- Bathroom marble floor destroyed with acid and glue

- Living room stone floor marred with acid
- Apple trees somehow attacked to produce blighted apples
- Chimney painted with yellow and orange streaks
- One meter diameter circle painted under bed
- Large spiders and cockroaches planted in house while away
- Mailbox smashed 11 times
- Mail dumped in snow instead of being put in box, sometimes in the neighbours' yard
- "Mistakes" appear in utility bills
- Trees and shrubs skinned and destroyed
- Valuable books (some dating back to the 1600s-1700s) have pages torn and other damage
- Noxious substances in air ducts and water system
- Noxious substances sprayed on pillows, sheets, and underwear
- Noxious substances in clothes cupboards
- Telephone and power line drops go to neighbour's house before attaching to my house

## Satanic Subversion of the U.S. Military

by Jeffrey Steinberg  
Executive Intelligence Review

On February 5, 1999, in U.S. District Court in Lincoln, Nebraska, an extraordinary hearing occurred in Paul A. Bonacci v. Lawrence E. King, a civil action in which the plaintiff charged that he had been ritualistically abused by the defendant, as part of a nationwide pedophile ring linked to powerful political figures in Washington and to elements of the U.S. military and intelligence establishment. Three weeks later, on February 27, Judge Warren K. Urbom ordered King, who is currently in Federal prison, to pay \$1 million in damages to Bonacci, in what Bonacci's attorney John DeCamp said was a clear signal that "the evidence presented was credible."

During the February 5 hearing, Noreen Gosch stunned the court with sworn testimony linking U.S. Army Lt. Col. Michael Aquino (ret.) to the nationwide pedophile ring. Her son, Johnny, then 12 years old, was kidnapped off the streets of West Des Moines, Iowa on September 5, 1982, while he was doing his early-morning newspaper deliveries. Since his kidnapping, she has devoted all of her time and resources to finding her son, and to exposing the dangers that millions of children in American face from this hideous, literally Satanic underground of ritualistic deviants.

"We have investigated, we have talked to so far 35 victims of this said organization that took my son and is responsible for what happened to Paul, and they can verify everything that has happened," she told the court.

"What this story involves is an elaborate function, I will say, that was an offshoot of a government program. The MK-Ultra program was developed in the 1950s by the CIA. It was used to help spy on other countries during the Cold War because they felt that the other countries were spying on us.

"It was very successful. They could do it very well." [1]

Then, the Aquino bombshell: "Well, then there was a man by the name of Michael Aquino. He was in the military. He had top Pentagon clearances. He was a pedophile. He was a Satanist. He's founded the Temple of Set. And he was a close friend of Anton LaVey. The two of them were very active in ritualistic sexual abuse. And they deferred funding from this government program to use [in] this experimentation on children.

"Where they deliberately split off the personalities of these children into multiples, so that when they're questioned or put under oath or questioned under lie detector, that unless the operator knows how to question a multiple-personality disorder, they turn up with no evidence." [2]

She continued: "They used these kids to sexually compromise politicians or anyone else they wish to have control of. This sounds so far out and so bizarre I had trouble accepting it in the beginning myself until I was presented with the data. We have the

proof. In black and white."

Under questioning from DeCamp, Gosch reported: "I know that Michael Aquino has been in Iowa. I know that Michael Aquino has been to Offutt Air Force Base [a Strategic Air Command base, near Omaha, which was linked to King's activities]. I know that he has had contact with many of these children."

Paul Bonacci, who was simultaneously a victim and a member of the nationwide pedophile crime syndicate, has subsequently identified Aquino as the man who ordered the kidnapping of Johnny Gosch. In his February 5 testimony, Bonacci referred to the mastermind of the Gosch abduction as "the Colonel." [3]

A second witness who testified at the February 5 hearing, Rusty Nelson, was King's personal photographer. He later described to EIR another incident which linked King to Aquino, while the Army special forces officer was still on active reserve duty. Some time in the late 1980s, Nelson was with King at a posh hotel in downtown Minneapolis, when he personally saw King turn over a suitcase full of cash and bearer-bonds to "the Colonel," who he later positively identified as Aquino. According to Nelson, King told him that the suitcase of cash and bonds was earmarked for the Nicaraguan Contras, and that "the Colonel" was part of the covert Contra support apparatus, otherwise associated with Lt. Col. Oliver North, Vice President George Bush, and the "secret parallel government" that they ran from the White House.

Just who is Lt. Col. Michael Aquino (ret.), and what does the evidence revealed in a Nebraska court hearing say about the current state of affairs inside the U.S. military? Is the Aquino case some kind of weird aberration that slipped off the Pentagon radar screen? Not in the least.

Aquino, Satan and the U.S. military

Throughout much of the 1980s, Aquino was at the center of a controversy involving the Pentagon's acquiescence to outright Satanic practices inside the military services. Aquino was also a prime suspect in a series of pedophile scandals involving the sexual abuse of hundreds of children, including the children of military personnel serving at the Presidio U.S. Army station in the San Francisco Bay Area. Furthermore, even as Aquino was being investigated by Army Criminal Investigation Division officers for involvement in the pedophile cases, he was retaining highest-level security clearances, and was involved in pioneering work in military psychological operations ("psy-ops").

On August 14, 1987, San Francisco police raided Aquino's Russian Hill home, which he shared with his wife Lilith. The raid was in response to allegations that the house had been the scene of a brutal rape of a four-year-old girl. The principal suspect in the rape, a Baptist minister named Gary Hambright, was indicted in September 1987 on charges that he committed "lewd and lascivious acts" with six boys and four girls, ranging in age from three to seven years, during September-October 1986. At the time of the alleged sex crimes, Hambright was employed at a child care center on the U.S. Army base at Presidio. At the time of Hambright's indictment, the San Francisco police charged that he was involved in at least 58 separate incidents of child sexual abuse.

According to an article in the October 30, 1987 San Francisco Examiner, one of the victims had identified Aquino and his wife as participants in the child rape. According to the victim, the Aquinos had filmed scenes of the child being fondled by Hambright in a bathtub. The child's description of the house, which was also the headquarters of Aquino's Satanic Temple of Set, was so detailed, that police were able to obtain a search warrant. During the raid, they confiscated 38 videotapes, photo negatives, and other evidence that the home had been the hub of a pedophile ring, operating in and around U.S. military bases.

Aquino and his wife were never indicted in the incident. Aquino claimed that he had been in Washington at the time, enrolled in a year-long reserve officers course at the National Defense University, although he did admit that he made frequent visits back to the Bay Area and to his church/home. The public flap over the Hambright indictment did prompt the U.S. Army to transfer Aquino from the Presidio, where he was the deputy director of reserve training, to the U.S. Army Reserve Personnel Center in St. Louis.

On April 19, 1988, the ten-count indictment against Hambright was dropped by U.S. Attorney Joseph Russoniello, on the grounds that, while there was clear evidence of child abuse (six of the children contracted the venereal disease, chlamydia), there was insufficient evidence to link Hambright (or the Aquinos) to the crimes. Parents of several of the victims charged that Russoniello's actions proved that "the Federal system has broken down in not being able to protect the rights of citizens age three to eight."

Russoniello would later be implicated in efforts to cover up the links between the Nicaraguan Contras and South American cocaine-trafficking organizations, raising deeper questions about whether the decision not to prosecute Hambright and Aquino had "national security implications."

Indeed, on April 22, 1989, the U.S. Army sent letters to the parents of at least 56 of the children believed to have been molested by Hambright, urging them to have their children tested for the human immunodeficiency virus (HIV), because Hambright, a former daycare center worker, was reported to be a carrier.

On May 13, 1989, the San Jose Mercury reported that Aquino and his wife had been recently questioned by Army investigators about charges of child molestation by the couple in two northern California counties, Sonoma and Mendocino. A 9-year-old girl in Santa Rosa, California, and an 11-year-old boy in Fort Bragg, also in California, separately identified Aquino as the rapist in a series of 1985 incidents, after they had seen him on television.

Softies on Satan

When the San Francisco Chronicle contacted Army officials at the Presidio to find out if Aquino's security clearances had been lifted as the result of the pedophile investigations, the reporters were referred to the Pentagon, where Army spokesman Maj. Greg Rixon told them, "The question is whether he is trustworthy or can do the job. There is nothing that would indicate in this case that there is any problem we should be concerned about."

Indeed, the Pentagon had already given its de facto blessings to

Aquino's long-standing public association with the Church of Satan and his own successor "church," the Temple of Set. This, despite the fact that Aquino's Satanic activities involved overt support for neo-Nazi movements in the United States and Europe. On October 10, 1983, while traveling in West Germany on "official NATO business," Aquino had staged a Satanic "working" at the Wewelsburg Castle in Bavaria. Aquino wrote a lengthy account of the ritual, in which he invoked Nazi SS chief Heinrich Himmler: "As the Wewelsburg was conceived by Heinrich Himmler to be the 'Mittelpunkt der Welt' ('Middle of the World'), and as the focus of the Hall of the Dead was to be the Gate of that Center, to summon the Powers of Darkness at their most powerful locus."

As early as April 1978, the U.S. Army had circulated A Handbook for Chaplains "to facilitate the provision of religious activities." Both the Church of Satan and the Temple of Set were listed among the "other" religions to be tolerated inside the U.S. military. A section of the handbook dealing with Satanism stated, "Often confused with witchcraft, Satanism is the worship of Satan (also known as Baphomet or Lucifer). Classical Satanism, often involving 'black masses,' human sacrifices, and other sacrilegious or illegal acts, is now rare. Modern Satanism is based on both the knowledge of ritual magick and the 'anti-establishment' mood of the 1960s. It is related to classical Satanism more in image than substance, and generally focuses on 'rational self-interest with ritualistic trappings.' [4]

No so fast! In 1982, the Temple of Set fissured over the issue of Aquino's emphasis on Nazism. One leader, Ronald K. Barrett, shortly after his expulsion, wrote that Aquino had "taken the Temple of Set in an explicitly Satanic direction, with strong overtones of German National Socialist Nazi occultism ... One fatality has occurred within the Temple membership during the period covered May 1982-July 1983."

The handbook quoted "Nine Satanic Statements" from the Church of Satan, without comment. "Statement Seven," as quoted in the handbook, read, "Satan represents man as just another animal, sometimes better, more often worse than those that walk on all fours, who, because of his 'divine and intellectual development' has become the most vicious animal of all."

>From 'psy-ops' to 'mindwars' [5]

Aquino's steady rise up the hierarchy of the Satanic world closely paralleled his career advances inside the U.S. military. According to an official biography circulated by the Temple of Set, "Dr. Aquino is High Priest and chief executive officer of the Temple of Set, the nation's principal Satanic church, in which he holds the degree of Ipissimus VI. He joined the original Church of Satan in 1969, becoming one of its chief officials by 1975 when the Temple of Set was founded. In his secular profession he is a Lieutenant Colonel, Military Intelligence, U.S. Army, and is qualified as a Special-Forces officer, Civil Affairs officer, and Defense Attaché. He is a graduate of the Command and General Staff College, the National Defense University and the Defense Intelligence College, and the State Departments' Foreign Service Institute."

Indeed, a more detailed curriculum vitae that Aquino provided to EIR, dated March 1989, claimed that he had gotten his doctorate

at the University of California at Santa Barbara in 1980, with his dissertation on "The Neutron Bomb." He listed 16 separate military schools that he attended during 1968-87, including advanced courses in "Psychological Operations" at the JFK Special Warfare Center at Fort Bragg, North Carolina, and "Strategic Intelligence" at the Defense Intelligence College, at Bolling Air Force Base in Washington, D.C.

Aquino was deeply involved in what has been called the "revolution in military affairs" ("RMA"), the introduction of the most kooky "Third Wave," "New Age" ideas into military long-range planning, which introduced such notions as "information warfare" and "cyber-warfare" into the Pentagon's lexicon.

In the early 1980s, at the same time that Heidi and Alvin Toffler were spinning their Tavistock "Third Wave" utopian claptrap to some top Air Force brass, Aquino and another U.S. Army colonel, Paul Vallely, were co-authoring an article for Military Review. Although the article was never published in the journal, the piece was widely circulated among military planners, and was distributed by Aquino's Temple of Set. The article, titled "From PSYOP to Mindwar: The Psychology of Victory," endorsed some of the ideas published in a 1980 Military Review article by Lt. Col. John Alexander, an affiliate of the Stanford Research Institute, a hotbed of Tavistock Institute and Frankfurt School "New Age" social engineering.

Aquino and Vallely called for an explicitly Nietzschean form of warfare, which they dubbed "mindwar." [6] "Like the sword Excalibur," they wrote, "we have but to reach out and seize this tool; and it can transform the world for us if we have but the courage and the integrity to guide civilization with it. If we do not accept Excalibur, then we relinquish our ability to inspire foreign cultures with our morality. If they then devise moralities unsatisfactory to us, we have no choice but to fight them on a more brutish level."

And what is "mindwar?" "The term is harsh and fear-inspiring," Aquino wrote. "And it should be: It is a term of attack and victory-not one of rationalization and coaxing and conciliation. The enemy may be offended by it; that is quite all right as long as he is defeated by it. A definition is offered: Mindwar is the deliberate, aggressive convincing of all participants in a war that we will win that war."

For Aquino, "mindwar" is a permanent state of strategic psychological warfare against the populations of friend and foe nations alike. "In its strategic context, mindwar must reach out to friends, enemies and neutrals alike across the globe ... through the media possessed by the United States which have the capabilities to reach virtually all people on the face of the Earth. These media are, of course, the electronic media-television and radio. State of the art developments in satellite communication, video recording techniques, and laser and optical transmission of broadcasts make possible a penetration of the minds of the world such as would have been inconceivable just a few years ago." Above all else, Aquino argues, mindwar must target the population of the United States, "by denying enemy propaganda access to our people, and by explaining and emphasizing to our people the rationale for our national interest. ... Rather it states a whole truth that, if it does not now exist, will be

The now uncontradicted evidence is that the plaintiff has suffered much. He has suffered burns, broken fingers, beating of the head and face and other indignities by the wrongful actions of the defendant King. In addition to the misery of going through the experiences just related over a period of eight years, the plaintiff has suffered the lingering results to the present time. He is a victim of multiple personality disorder, involving as many as fourteen distinct personalities aside from his primary personality. He has given up a desired military career and received threats on his life. He suffers from sleeplessness, has bad dreams, has difficulty in holding a job, is fearful that others are following him, fears getting killed, has depressing flashbacks, and is verbally violent on occasion, all in connection with the multiple personality disorder and caused by the wrongful activities

of the defendant King.

Almost certainly the defendant King has little remaining financial resources, but a fair judgment to compensate the plaintiff is necessary. For the sixteen years since the abuse of the plaintiff began I conclude that a fair compensation for the damages he has suffered is \$800,000. A punitive damage award also is justified, but the amount needs to be limited because of the small effect that such a judgment would have on the defendant King, given his financial condition and presence in prison. I deem the punitive damage award of \$200,000 to be adequate. Dated February 19, 1999.  
By the Court /s/Warren Urborn United States Senior District Judge

## The Satanic Connection

April 21, 2004

A friend who is familiar with witchcraft wrote me:

"I read with interest the piece about Satanism. I ask that you make it very clear Satanism it is NOT Witchcraft. They are NOT the same. Satanism requires an intrinsic belief in Christianity and a God. Witchcraft has no such belief. In principle it is a Earth based religion, and that is in itself is a very broad statement."

This page is to collect reports from targets of stalking groups which are obviously from members of Satanic and other evil-worshipping cults. There is a separate page for threats which are NOT obviously from Satanic and evil-worshipping groups [here](#).

If you read the book [Terrorist Stalking in America](#) by David Lawson, you will learn that harassment group perpetrators are "in it" for a range of different motives. Strong among the motives are a sense of belonging and approval by the group, as with cults. Such motives are given a substantial boost by group leaders who convince the members that the target is a "bad person" and "richly deserves" to be harassed and if possible, turfed out of town, based on lies about the target.

One motive, which many targets of stalking groups believe is prevalent in the upper echelons of the harassment organizations, is Satanism. Serious researchers of secret societies tell me that such societies tend to have large, unaware memberships which do good deeds for the community, but devil worship tends to cluster in memberships at the highest levels, who are generally never seen by the large unaware memberships.

Tangible proof is VERY hard to come by, and this page is to collect samples of evidence of Satanic involvement among the stalkers who harass us day and night. We suspect Satanism has lots of support in high places. Senior members of the justice system routinely provide cover for [pedophilia](#), for example, and without some sort of religious connection where evil is worshipped, it is very difficult to imagine that the almost perfect cover for such brutal crimes could succeed without such a connection.

Although information about the Church of Satan, for example, is publicly available, even on the Internet:

<http://www.churchofsatan.com/home.html>

... members of the justice system, and the justice system's most powerful enforcement arm, psychiatry, ALWAYS deny that Satanic rituals (and ritual abuse) occur WHEN VICTIMS OF SATANISM ASK FOR HELP.

Here, as of April 2004, are some of the people and their positions listed on the Church of Satan web site:

Magus Anton Szandor LaVey (1930-1997), Founder

Magus Peter H. Gilmore, High Priest

Magistra Peggy Nadramia, High Priestess

Magistra Blanche Barton, Magistra Templi Rex

Central Administrative Office:  
Church of Satan  
P.O. Box 499  
Radio City Station  
New York, NY 10101-0499 USA

The Cloven Hoof:  
Magistra Blanche Barton  
P.O. Box 210666  
Chula Vista  
CA 91921-0666 USA

Another Satanic web site states they "don't believe in Satan", another cover up tactic for public consumption:

<http://www.satanism101.com>

"You've seen us on the streets. I rode the bike right next to you in the gym today. I'm that guy you cut in front of in traffic. I held the door open for your wife and kids going into the market too. Who are we? We're Satanists.

"Black cloaks and pentacles, that's us too. Hollywood fears us and right wing fundamentalists hate us. Legend has us murdering and having sadistic and depraved ceremonies all in the name of Satan. When you speak the word Satanist, do you believe these sources? Fear and hate us if you will, but read the truth, The Street Satanist. Articles by avowed Satanists.

"Hollywood will titillate. Christian Fundies will tell shocking and vicious lies. The Street Satanist is brought to you by Reason and Intellect. More Satanic virtues you will find inside.

"Pssst - Here is the funny part - We don't even believe in Satan!"

---

So ... the propaganda above is why it's important to begin to collect evidence of Satanic (and other cults which glorify evil) involvement in organized stalking cases. Here below are the items to date:

**Julie's Satanic threat letter #1 (found at her home):**

**Julie's Satanic threat letter #2 (found at her home):**

**Julie's murdered cat, subject of letters:**

**Dr. Ellen Lacter's exposé of abusive witchcraft sites:**

(Abusive witchcraft is another cult type which worships evil)

<http://truthbeknown2000.tripod.com/Truthbeknown2000/id26.html>

## World's First Satellite-Tracked Human Implant Device

### Applied Digital Solutions, Inc.

12-17-99

Eleanor White's comments: This article clearly shows intent to produce satellite-based human tracking implants. However, no actual demonstration of such technology has happened, to my knowledge.

I recommend organized stalking/electronic harassment targets not claim this technology proposal as demonstrated fact.

---

PALM BEACH, FLORIDA - Applied Digital Solutions, Inc. today announced that it has acquired the patent rights to a miniature digital transceiver - which it has named "Digital Angel" -- that can be used for a variety of purposes, such as providing a tamper-proof means of identification for enhanced e-business security, locating lost or missing individuals, tracking the location of valuable property and monitoring the medical conditions of at-risk patients.

In the agreement signed last week, ADS acquired the right to develop this unique product itself for all of its applications or to sublicense the development of specific applications to other entities. A special technology group has been formed within ADS to supervise the development of the device.

The implantable transceiver sends and receives data and can be continuously tracked by GPS (Global Positioning Satellite) technology. The transceiver's power supply and actuation system are unlike anything ever created. When implanted within a body, the device is powered electromechanically through the movement of muscles, and it can be activated either by the "wearer" or by the monitoring facility. A novel sensation feedback feature will even allow the wearer to control the device to some degree. The "smart" device is also small enough to be hidden inconspicuously on or within valuable personal belongings and priceless works of art.

Commenting on Digital Angel's many potential applications, Richard J. Sullivan, Chairman and CEO of Applied Digital Solutions, Inc. (ADS), said: "We believe its potential for improving individual and e-business security and enhancing the quality of life for millions of people is virtually limitless. Although we're in the early developmental phase, we expect to come forward with applications in many different areas, from medical monitoring to law enforcement. However, in keeping with

our core strengths in the e-business to business arena, we plan to focus our initial development efforts on the growing field of e-commerce security and user ID verification."

Sullivan added that the multi-purpose technology would enable ADS to tap into a vast global market, through licensing and other commercial arrangements, with an estimated total value in excess of \$100 billion. "The e-business to business security market alone could reach as high as \$10 to \$12 billion in the near future," Sullivan added.

ADS is actively seeking joint venture partners to help develop and market the unique technology. The company expects to create a working prototype by the end of next year.

Applied Digital Solutions, Inc. is an e-business to business solutions provider offering Internet, telecom, LAN and software services to a wide variety of businesses throughout North America. For more information, visit the Company's web site at:

## **Law Professor Is Working On It**

**Scan courtesy of Cheryl Welsh**

OBVIOUS QUESTION: If there's no such thing as electronic harassment, (sometimes referred to as "mind control,") why is an experienced law professor so actively working on it?

A letter from professor Alan Schefflin backing us up:

March 9, 1995

To Whom It May Concern:

My name is Alan W. Schefflin. I am a Professor of Law at Santa Clara University Law School, and a judicially recognized expert in mind and behavior control. I co-authored a nonfiction book about government mind control programs entitled "The Mind Manipulators," which was published in a dozen countries.

I am writing in support of the testimony of Claudia S. Mullen and for the purpose of encouraging the opening of secret government files on radiation and on mind control. I have been studying these secret programs since 1975 and it is my conclusion that there are at minimum hundreds, and most likely thousands, of American citizens who could benefit from learning that they were used as experimental guinea pigs in government research projects.

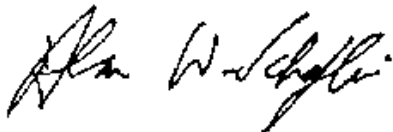

Claudia's therapist has been kind enough to send me, with her patient's informed consent, some of the pertinent records reflecting Claudia's memories of her experiences as an unwitting subject in these experiments. I have been able to confirm that some of the information Claudia has provided is absolutely true and could not have been derived from any published source. I am persuaded that Claudia is proof that secret government mind control experimentation is on-going and vastly more expansive than government authorities are willing to admit.

I know that many of the stories that will be told by witnesses will sound unbelievable. Please do not dismiss them out of hand. I learned the hard way that, although there is much disinformation about mind control experiments, there is also much truth in the least likely stories.

Release of remaining documents on secret government experiments is in the public interest and would not threaten national security. It is time for citizens to again trust their government. Public disclosure would be the act of good faith to encourage that trust. Furthermore, and most important, there remain victims of these programs who deserve to have that victimization come to an end. Let the truth set them free.

It would be my pleasure to supply any additional information requested.

Sincerely,

A handwritten signature in dark ink, appearing to read "Alan W. Schefflin". The signature is fluid and cursive, with the first name "Alan" being more prominent.

Alan W. Schefflin  
Professor of Law

Just one page from the full 12-page curriculum vitae of the career of Alan W. Schefflin:

Research Editor, Law Review, 1965-1966.

University of Virginia: B.A. with High Honors in Philosophy, 1963.

Honors Program, 1962-1963.

Dean's List, 1961-1962.

## **BAR MEMBERSHIPS**

United States Supreme Court, 1970.

District of Columbia, 1967.

## **PUBLICATIONS**

### Books:

Schefflin and Shapiro, Trance on Trial (Guilford Publications, 1989). (Discussion and analysis of forensic hypnosis; pretrial, trial and post-trial advice on the legal and ethical questions raised by investigative hypnosis and the practice of hypnotherapy). Recipient of The American Psychiatric Association's 1991 Manfred S. Guttmacher Award as the finest publication on forensic psychiatry of the year.

Schefflin and Opton, Jr., The Mind Manipulators (Paddington Press, 1978). (Discusses techniques of coercive mind control, lobotomy, psychosurgery, electrical stimulation of the brain, brainwashing, hypnosis, and the C.I.A. and U.S. Army mind and behavior control experiments).

Schefflin, Casebook on Civil Obligations: Contracts, Torts and Restitution (Lerner Law Book Company, 1968) (two volumes).

### Reports:

American Society of Clinical Hypnosis, Clinical Hypnosis and Memory: Guidelines for Clinicians and for Forensic Hypnosis (1995)(I was one of the eleven Member Task Force who drafted this Report).

## Home

The image below represents a type of ELF (extremely low frequency) persistent waveform which has been present in two different apartment buildings during the time raven1 has lived with the electronic harassment problem. This signal has been present non-stop for months at a time.

The extremely sharp sawtooth waveform is not natural to normal household appliances, and raven1 has no unusual equipment at home, not even a PC.

The detectors used were two very large (24" x 24" and 24" x 72") air core coils, about 75 and 260 turns respectively. It is raven1's experience that large flat coils detect very little of the 60 Hz AC power fields which are always present in a home with electricity. (The randomly oriented fields probably cancel when the coil size gets large.)

This field is usually highest in the vicinity of the bed, and makes tape recording nearly impossible.

When this unusual and strong waveform is NOT present, another type of sawtooth signal has been observed, in the form of a normal 60 Hz AC sine wave with a small sawtooth component impressed on it. The sawtooth component's amplitude is about 5 percent of the 60 Hz amplitude, and perhaps 100 times the 60 Hz fundamental frequency.

These signals are EASY to detect and display, and raven1 would like to hear from other victims who might make such observations in their homes.

OSCILLOSCOPE WAVEFORM OF 24-HR,  
7-DAY ELF SIGNALS LOCAL ONLY TO  
ELEANOR'S APT., AND NOT DETECTED  
IN ANY OTHER PART OF THE BLDG. OR  
THE NEARBY NEIGHBOURHOOD. AUDIBLE  
IN TAPE RECORDINGS. STRONGEST NEAR  
BED. THREE SUCCESSIVE APTS.

402 pages, indexed**

### **Why "Plant Emotions" in a discussion about Electronic Harassment?**

**Answer: Because the signal type responsible for "plant emotions" behaves like other "ESP-class" signals. The existence of these un- shieldable, un- detectable, un- jammable, self- aiming, not distance- limited signals is confirmed in this book. This in turn supports the idea that countermeasures will likely come (eventually) from the psychic arena, rather than the conventional electromagnetic or acoustic arena. Understanding the nature of the enemy's signals is important for targets as they search for successful countermeasures. Using plants to \*verify\* our harassment is a promising path to try.**

This is an "Eleanor White Book Review". Such reviews are not like what you see in the print media. My emphasis is to provide enough information that an *electronic harassment target or supporter* can make an intelligent decision as to whether to buy the book (or borrow it). This means most of the reviews are excerpted text, with comments inserted. This type of review is biased in favor of information relevant to electronic harassment technology, and possible countermeasure experiments. Those who are interested in psychic phenomena outside of an electronic harassment context should obtain this book for detailed information.

Note: In the excerpted text from the book, emphasis by way of ALL UPPER CASE LETTERS is mine. The reason for such emphasis is to point up information particularly relevant to mind control.

## About the Authors

## Chapter 1: Plants and ESP

The adventure started in 1966. Backster had been up all night in his school for polygraph examiners, where he teaches the art of lie detection to policemen and security agents from around the world. On impulse he decided to attach the electrodes of one of his lie detectors to the leaf of his dracaena. [...SNIP...] Backster was curious to see if the leaf would be affected by water poured on its roots, and if so, how soon.

As the plant thirstily sucked water up its stem, the galvanometer, to Backster's surprise, did not indicate less resistance, as might have been expected by the greater electrical conductivity

of the moister plant. The pen on the graph paper, instead of trending upward, was trending downward, with a lot of sawtooth motion on the tracing.

[...SNIP...]

[Back to Table of Contents](#)

Backster ... then conceived a worse threat: he would burn the actual leaf to which the electrodes were attached. The INSTANT he got the PICTURE OF A FLAME IN HIS MIND, and BEFORE he could move for a match, there was a dramatic change in the tracing pattern on the graph in the form of a prolonged upward sweep of the recording pen.

[...SNIP...]

When he and his collaborators, using other plants and other instruments in other locations all over the country, were able to make similar observations, the matter warranted further study. More than twenty five different varieties of plants and fruits were tested, including lettuce, onions, oranges, and bananas. The observations, each similar to the others, required a new view of life, with some explosive connotations for science.

[...SNIP...]

[p 7]

[Back to Table of Contents](#)

During the next few months, chart after chart was obtained from all sorts of plants. The phenomenon appeared to persist even if the plant leaf was detached from the plant, or if it was trimmed to the size of the electrodes; amazingly, even if a leaf was SHREDDED and redistributed between the electrode surfaces there was still a reaction on the chart.

[Back to Table of Contents](#)

The plants reacted not only to threats from human beings, but to unformulated threats, such as the sudden appearance of a dog in the room, or of a person who did not wish them well.

[Back to Table of Contents](#)

Backster was able to demonstrate to a group at Yale that the movement of a spider in the same room with a plant wired to his equipment could cause dramatic changes in the recorded pattern by the plant just BEFORE the spider started to scamper away from a human attempting to restrict its movement. "It seems," said Backster, "as if each of the spider's decisions to escape was being picked up by the plant, causing a reaction in the leaf."

[...SNIP...]

Under normal circumstances, plants may be attuned to each other, said Backster, though when encountering animal life they tend to pay less attention to what another plant is up to. "The last thing a plant expects is another plant to give it trouble. So long as there is animal life around, they seemed to be attuned to animal life.

[...SNIP...]

[Back to Table of Contents](#)

The phenomenon was dramatically demonstrated one day when a physiologist from Canada came to Backster's lab to witness the reaction of his plants. The first plant gave no response whatsoever. Nor did the second; nor the third. Backster checked his polygraph instruments, and tried a fourth and a fifth plant; still no success. Finally, on the sixth, there was enough reaction to demonstrate the phenomenon.

Curious to discover what could have influenced the other plants, Backster asked: "Does any part of your work involve harming plants?"

"Yes," the physiologist replied. "I terminate the plants I work with. I put them in an oven and roast them to obtain their dry weight for my analysis.

[p 8]

Forty five minutes after the physiologist was safely on the way to the airport, each of Backster's plants once more responded fluidly on the graph.

[...SNIP...]

[Back to Table of Contents](#)

On one occasion, to show that plants and single cells were picking up signals through some unexplained medium of communication, Backster provided a demonstration for the author of an article appearing in the *Baltimore Sun*, subsequently condensed in the *Reader's Digest*. Backster hooked a galvanometer to his philodendron, then addressed the writer as if it were *he* who was on the meter, and interrogated the writer about his year of birth.

Backster named each of seven years between 1925 and 1931 to which the reporter was instructed to answer with a uniform "No." Backster then selected from the chart the correct date, which had been indicated by the plant with an extra high flourish.

The same experiment was duplicated by a professional psychiatrist, the medical director of the research ward at Rockland State Hospital in Orangeburg, New York, Dr. Aristide H. Esser.

[...SNIP...]

To see if a plant could display memory, a scheme was devised whereby Backster was to try to identify the secret killer of one of two plants. Six of Backster's polygraph students volunteered for the experiment, some of them veteran policemen. Blindfolded, the students drew from a hat folded slips of paper, on one of which were instructions to root up, stamp on, and thoroughly destroy one of two plants in a room. The criminal was to commit the crime in secret; neither Backster nor any other of the students was to know his identity; only the second plant would be a witness.

By attaching the the surviving plant to a polygraph and parading the students one by one before it, Backster was able to establish the culprit.

[...SNIP...]

[Back to Table of Contents](#)

In another series of observations, Backster noted that a special communion or bond of affinity appeared to be created between a plant and its keeper, UNAFFECTED BY DISTANCE. With the use of synchronized stopwatches, Backster was able to note that his plants continued to react to his thought and attention from the next room, from down the hall, even from several buildings away. Back from a fifteen mile trip to New Jersey, Backster was able to establish that his plants had perked up and shown definite and positive signs of response - whether it was relief or welcome he could not tell - at the VERY MOMENT he had decided to return to New York.

[p 9-10]

[Back to Table of Contents](#)

When Backster was away on a lecture tour and talked about his initial 1966 observation, showing a slide of the original dracnaea, the plant, back in his office, would show a reaction on the chart at the VERY TIME he projected the slide.

[Back to Table of Contents](#)

Once attuned to a particular person, plants appeared to be able to maintain a link with that person no matter where he went, even among thousands of people. On New Year's Eve in New York City, Backster went out into the bedlam of Times Square armed with a notebook and stopwatch. Mingling with the crowd, he noticed his various actions, such as walking, running, going underground by way of subway stairs, nearly getting run over, and having a mild fracas with a news vendor. Back at the lab, he found that each of his three plants, monitored independently, showed similar reactions to his slight emotional adventures.

[Back to Table of Contents](#)

To see if he could get a reaction from plants at a much greater distance, Backster experimented with a female friend to establish whether her plants remained attuned to her on a seven hundred mile plane ride across the United States. From synchronized clocks they found a definite reaction from the plants to the friend's emotional stress each time the plane touched down for a landing.

[...SNIP...]

[Back to Table of Contents](#)

[p 11]

Backster has no idea what kind of energy wave may carry man's thoughts or internal feelings to a plant. He has TRIED TO SCREEN A PLANT BY PLACING IT IN A FARADAY

CAGE AS WELL AS IN A LEAD CONTAINER. Neither shield appeared IN ANY WAY to block or jam the communication channel linking the plant to the human being. The carrier wave equivalent, whatever it might be, Backster concluded, must somehow operate BEYOND the electromagnetic spectrum. It also appeared to operate from the macrocosm down to the microcosm.

[Back to Table of Contents](#)

One day when Backster happened to cut his finger and dabbed it with iodine, the plant that was being monitored on the polygraph immediately reacted, apparently to the death of some cells in Backster's finger. Though it might have been reacting to his emotional state at the sight of his own blood, or to the stinging of the iodine, Backster soon found a recognizeable pattern in the graph whenever a plant was witnessing the death of some living tissue.

[...SNIP...]

To begin with, Backster found that plants can quickly become so attuned to human beings that it is not always possible to obtain exactly the same reactions with different experimenters. Incidents such as the "fainting" [EW: Flatlining - no visible EEG activity] which occurred with the Canadian physiologist sometimes made it look as if there was no such thing as the Backster Effect. Personal involvement with an experiment, and even prior knowledge of the exact time an event was scheduled, was often enough to "tip off" a plant into noncooperation.

[...SNIP...]

[Back to Table of Contents](#)

The device for "terminating" these playboy creatures consisted of a small dish which would automatically tip them into a pot of boiling water. A mechanical programmer actuated the device on a randomly selected occasion so that it was impossible for Backster or his assistants to know when the event would occur. As a control precaution against the actual mechanism of dumping registering on the charts, dishes were programmed at other times to dump plain water containing no brine shrimp.

[...SNIP...]

Plants selected for the experiment were of the *Philodendron cordatum* species because of its nice large leaves, firm enough to withstand comfortably the pressure of the electrodes. Different plants of the same species would be used on successive test runs.

[...SNIP...]

The experimental results showed that the plants did react strongly and synchronously to the death of the shrimp in boiling water. The automated monitoring system, checked by the visiting scientists, showed that the plants reacted consistently to the death of the shrimp in a ratio that was five to one against the possibility of chance.

[...SNIP...]

A fortuitous occurrence led Backster into another whole realm of research. One evening, as he was about to feed a raw egg into his Doberman pinscher, Backster noticed that as he cracked the egg one of his plants attached to a polygraph reacted strenuously. The next evening he watched again as the same thing happened. Curious to see what the egg might be feeling, Backster attached it to a galvanometer, and was once more up to his ears in research.

For nine hours Backster got an active chart recording from an egg, corresponding to the rhythm of the heartbeats of the chicken embryo, the frequency being between 160 and 170 beats per minute, appropriate for an embryo three or four days along in incubation. Only the egg was store bought, acquired at the local delicatessen, and was UNfertilized. Later, breaking the egg and dissecting it, Backster was astonished to find that it contained no physical circulatory structure of any sort to account for the [electrical] pulsation. He appeared to have tapped into some sort of force field not conventionally understood within the present body of scientific knowledge.

[...SNIP...]

[Back to Top of Table of Contents](#)

---

## Chapter 2: Plants Can Read Your Mind

[...SNIP...]

That same evening, one student called Vogel to announce that the latest issue of *Popular Electronics* referred to Backster's work, and included a wiring diagram for an instrument called a "psychanalyzer", which would pick up and amplify reactions from plants and could be built for less than twenty five dollars.

[...SNIP...]

Vogel divided his class into three groups and challenged them to repeat some of Backster's accomplishments. By the end of the seminar, not one of three teams had achieved any success. Vogel, on the other hand, was able to report that he had duplicated certain of Backster's results, and proceeded to demonstrate how plants anticipate the act of having their leaves torn, react with even greater alarm to the threat of being burnt or uprooted - MORE SO EVEN THAN IF THEY ARE ACTUALLY TORN, BURNT, OR OTHERWISE BRUTALIZED.

[...SNIP...]

... Back in her garden, Vivian Wiley picked two leaves from a saxifrage, one of which she placed on her bedside table, the other in the living room. "Each day when I get up," she told Vogel, "I will look at the leaf by my bed and *will* that it continue to live; but I will pay no attention to the other. We will see what happens.

[Back to Table of Contents](#)

[p 19-20]

A month later she asked Vogel to come to her house and bring a camera to photograph the leaves. Vogel could hardly believe what he saw. The leaf to which his friend had paid no attention was flaccid, turning brown and beginning to decay. The leaf on which she had focussed daily attention was RADIANTLY VITAL AND GREEN [after a MONTH!], just as if it had been freshly plucked from the garden.

[...SNIP...]

Vivian Wiley continued her experiments and later showed Vogel the saxifrage leaf which she had kept green and alive for two long months while the control leaf was completely dehydrated and brown.

[...SNIP...]

[Back to Table of Contents](#)

While making the slides, Vogel realized that by "relaxing his mind" [a prerequisite for remote viewing too] he could sense activity not visually revealed in the microscopic field.

"I began to pick up things at the microscope which eluded others, not with ocular vision but with my mind's eye. After becoming aware of them," says Vogel, "I was led by some form of higher sensory awareness to adjust the lighting conditions to allow these phenomena to be optically recordable to the human eye or to a camera." [Shades of Ted Serios?]

[Back to Table of Contents](#)

The conclusion at which Vogel arrived is that crystals are brought into a solid, or physical state of existence by *pre-forms*, or GHOST IMAGES of pure energy which *anticipate* the solids. Since plants could pick up intentions from a human, that of burning them, for example, there was no doubt in Vogel's mind that INTENT PRODUCED SOME KIND OF ENERGY FIELD.

[...SNIP...]

[Back to Table of Contents](#)

Vogel also found that some of the philodendrons he worked with responded faster, others more slowly, some very distinctly, others less distinctly, and that not only plants but their individual leaves had their own unique personality and individuality. Leaves with a large electrical resistance were especially difficult to work with; fleshy leaves with a high water content were the best. Plants appeared to go through phases of activity and inactivity, full of response at certain times of the day or days of the month, "sluggish" or "morose" at other times. [Surprised? May have implications for plant-based experiments.]

[Back to Table of Contents](#)

To make sure that none of these recording effects was the result of faulty electroding, Vogel developed a mucilaginous substance composed of a solution of agar, with a thickener of karri gum, and salt. This paste he brushed on to the leaves before gently applying carefully polished 1-1/2 inch stainless steel electrodes. When the agar jelly hardened around the edges of the

electronic pickups, it sealed their faces into a moist interior, virtually eliminating all variability in signal output caused by pressure on the leaves when clamped between ordinary electrodes. This system produced for Vogel a base line chart that was PERFECTLY STRAIGHT, without oscillations.

[...SNIP...]

[Back to Table of Contents](#)

In another experiment, Vogel wired two plants to the same recording machine and snipped a leaf from the first plant. The second plant responded to the hurt being inflicted on its neighbour but *only when Vogel was paying attention to it!* If Vogel cut off a leaf while ignoring the second plant, the response was lacking. It was as if Vogel and the plant were lovers on a park bench, oblivious of passers by until the attention of one lover became distracted from the other.

[...SNIP...]

[Back to Table of Contents](#)

Asked to describe the process in detail, Vogel said that first he quiets the sensory responses of his body organs, then he becomes aware of an energetic relationship between the plant and himself. When a state of balance between the bioelectrical potential of both the plant and himself is achieved, the plant is no longer sensitive to noise, temperature, the normal electrical fields surrounding it, or other plants. It responds only to Vogel, who has effectively tuned himself to it - or perhaps simply hypnotizes it.

[...SNIP...]

For the producer of ABC's television program *You Asked For It*, Vogel also demonstrated the plant's response to another person's thoughts, including a sudden release of strong emotion on command, followed by the act of his quieting the plant to normal reactions to the environment.

[p 23-24]

Invited to lecture to audiences who had heard of his experimentation, Vogel said unequivocally: "It is fact: man can and does communicate with plant life. Plants are living objects, sensitive, rooted in space. They may be blind, deaf, and dumb in the human sense, but there is no doubt in my mind that they are extremely sensitive instruments for measuring man's emotions.

[...SNIP...]

They radiate energy forces that are beneficial to man. One can feel those forces! They feed into one's own force field, which in turn feeds energy back to the plant." The American Indians, says Vogel, were keenly aware of these faculties. When in need, they would go into the woods. With their arms extended, they would place their backs to a pine tree in order to replenish themselves with its power.

[...SNIP...]

[Back to Table of Contents](#)

"The feeling of hostility, of negativity, in an audience," says Vogel, "is one of the main barriers to effective communication. To counteract this force is one of the most difficult tasks in public demonstration of these plant experiments. If one cannot do this, the plant and therefore the equipment will 'go dead' and there is no response until a positive tie can be reestablished.

[...SNIP...]

[Back to Table of Contents](#)

Vogel has since tried the same experiment with dozens of other people, having them go to a single leaf and look at the individual cells within it. All gave CONSISTENT DESCRIPTIONS of various parts of the cellular body DOWN TO THE DETAILED ORGANIZATION OF THE DNA MOLECULES. From the experiment, Vogel came to the conclusion: "We can move into individual cells in our own bodies and, depending on our state of mind, affect them in various ways.

[...SNIP...]

[Back to Table of Contents](#)

Vogel noticed that those children who felt the strongest sensations were wholly engrossed in what they were doing. Once they felt the tingling he would say: "Now completely relax and feel the give and take of the energy. When you feel it pulsing, gently move your hand up and down over the leaf." Following his directions, the young experimenters could easily see that, when they brought their hands down, the leaves fell away. By continued repetition of this motion, the leaves would begin to oscillate. With the use of both hands, the experimenters could actually get a plant to sway. As they gained confidence, Vogel urged them to move further and further away from the plant.

"This is basic training," says Vogel, "to develop an expanded awareness of a force which is not visible. The awareness established, then see they can operate with this force."

[Back to Table of Contents](#)

Adults, according to Vogel, are much less successful than children, which leads him to surmise that many scientists are not going to be able to repeat his or Backster's experiments in their laboratories. "If they approach the experimentation in a mechanistic way," says Vogel, "and don't enter into mutual communication with their plants and treat them as friends, they will fail. It is essential to have an open mind that eliminates all preconceptions before beginning experiments."

[...SNIP...]

"Hundreds of laboratory workers around the world," says Vogel, "are going to be just as frustrated and disappointed as these men until they appreciate that the empathy between plant

and human is the *key*, and learn how to establish it. No amount of checking in laboratories is going to prove a thing until the experiments are done by properly trained observers. SPIRITUAL DEVELOPMENT IS INDISPENSABLE. But this runs counter to the philosophy of many scientists, who do not realize that creative experimentation means that the *experimenters must become part of their experiments*. [EW: That is true in order to make any scientific progress past 1950s style science.]

[...SNIP...]

[Back to Table of Contents](#)

Vogel says that even when a person *can* affect a plant, the result is not always a happy one. He asked one of his friends, a clinical psychologist, who had come to see for himself if there was any truth to the plant research, to project a strong emotion to a philodendron fifteen feet away. The plant surged into an instantaneous and intense reaction and then suddenly "went dead." When Vogel asked the psychologist what had gone through his mind, the man answered that he had mentally compared Vogel's plant with his own philodendron at home, and thought how inferior Vogel's was to his. The "feelings" of Vogel's plant were evidently so badly hurt that it refused to respond for the rest of the day; in fact, it sulked for almost two weeks[!]

[...SNIP...]

[Back to Table of Contents](#)

This being true, Vogel considered it possible, one day, to read a person's thoughts through a plant. Something of this sort had already taken place. Vogel had asked a nuclear physicist to mentally "work" on a technical problem. As the man was cogitating, Vogel's plant registered a series of tracings on the recorder for 118 seconds. When the tracing fell back to base line, Vogel informed his scientist friend that he had stopped his train of thought. The friend corroborated.

Vogel wondered if he had actually captured a process on a chart via a plant. After a few minutes, he asked the physicist to think of his wife. When the physicist did so, the plant again recorded a tracing, this time for 105 seconds. It seemed to Vogel that, right before him in his living room, a plant was picking up and passing on a man's mental impressions of his wife. If one could interpret such tracings, could one not now what the man was thinking?

After a break for a cup of coffee, Vogel almost casually asked his friend to think once more of his wife in the same way he had thought of her before. The plant registered another 105 second long tracing very similar to the first. To Vogel, this was the first time a plant seemed to have recorded a similar thought spectrogram AND DUPLICATED IT.

[...SNIP...]

Dr. Hal Puthoff [One of the original Star Gate remote viewing experimenters] a physicist at the Stanford Research Institute in Palo Alto, invited Vogel and five other scientists to witness the effects he was getting by hooking up a chicken egg to the electro psychometer, or "E-meter" developed by L. Ron Hubbard [EW: Don't panic - it's just a GSR meter.] the founder of Scientology. The E-meter's function is almost identical to that of the psychoanalyzer which

Vogel had first used with his seminar students. Puthoff attempted to demonstrate that the egg wired to the E-meter would respond when another egg was broken. He broke three separate eggs, but nothing happened.

[Back to Table of Contents](#)

After asking Puthoff if he could try, Vogel put his hand over an egg and related to it exactly as he had learned to relate to his plants. In one minute, the needle on the E-meter's galvanometer dial began to move and finally "pinned". Vogel backed ten feet away and got gyrations from the needle by opening and closing his hands. Though Puthoff and several others tried to do the same, all failed.

[...SNIP...]

[Back to Table of Contents](#)

With nothing but his will power, Swann has been able to affect a mechanism in the university's most thoroughly shielded "quark" chamber, buried deep underground in a vault of liquid helium, IMPENETRABLE TO ANY KNOWN WAVELENGTHS OF THE ELECTROMAGNETIC SPECTRUM, astonishing the academic physicists who watched him perform what they considered to be an impossible feat.

[...SNIP...]

Two young Californian students of humanistic psychology and Hindu philosophy, Randall Fontes and Robert Swanson, have now pursued Vogel's quarry into unbeaten ground. Using sophisticated equipment lent them by the IBM researcher, they have made a series of discoveries so surprising that despite their youth they have been granted funds and equipment by established universities to further probe the mysteries of plant communication.

Fontes' and Swanson's first discovery came virtually by accident when one noticed the other's yawning was being picked up by a plant in the form of energy surges. Instead of ignoring the phenomenon as improbable, the two students followed up the clue remembering that in ancient Hindu texts an exaggerated yawn was considered a means by which a tired person could be recharged with vivifying *shakhti*, a postulated energy filling the universe.

[...SNIP...]

## Chapter 3: Plants That Open Doors

[...SNIP...]

[Back to Table of Contents](#)

[Electronics engineer Sauvin] also found in the course of his various experiments that the simplest signal he could transmit to his plants, extrasensorily, to which they would respond

with a sharp enough reaction, was to give himself a light electric shock, the very simplest method being to swivel his desk chair and then ground the accumulated static charge by touching his finger to his metal desk. His plants several miles away would react with an instant surge.

[...SNIP...]

[Back to Table of Contents](#)

As his plants reacted most strongly to any damage done to himself or to any part of his own energy field, he experimented with *remotely* killing a few cells of his body in the presence of the plants. The system worked admirably.

[...SNIP...]

[Back to Table of Contents](#)

Sauvin soon found that his plants DID react to joy and pleasure, but with wave patterns that were not sharp enough to trigger a switch reliably.

[...SNIP...]

By a slight adaptation to his transmitter equipment Sauvin is able to start, stop, or affect the speed of a model plane in flight by transmitting a thought to the plant.

[...SNIP...]

Already [1970s material] the U.S. Army has taken an interest in the project. At Fort Belvoir, Virginia, funds have been provided for research on plants. The Army is interested in devising ways of measuring the emotional responses of people via plants, without having to sensitize the plants to a special person beforehand.

[Back to Table of Contents](#)

The Navy is also showing interest. Eldon Byrd, an operations analyst with the Advanced Planning and Analysis Staff of the Naval Ordnance Laboratory in Silver Spring, Maryland, has been duplicating Backster's experiments with some success. A member of the American Society for Cybernetics and senior member of the Institute for Electrical and Electronic Engineers, Byrd attached the electrodes of a polygraph to the leaves of a plant, and has been observing definite fluctuations of the polygraph needle as the plant responds to various stimuli. Like Backster, Byrd found that MERELY BY THINKING OF HARMING A PLANT'S LEAF IT WAS POSSIBLE TO MAKE A POLYGRAPH NEEDLE JUMP. Byrd's experiments involved monitoring a plant's reaction to stimuli from water, infrared and ultraviolet light, fire, physical stress, and dismemberment.

[p 40-41]

Byrd believes the galvanometrical effect produced by a plant is not caused by electrical resistance in the leaf, but by a change of bio-potential in the cells from outside to the inside membrane, as defined by the Swedish Dr. L. Karlson, who has shown that a cluster of cells

can change polarity, though the energy which causes cells to become polarized is not known. Byrd believes that a voltage change in the cells is what is being measured, and that it is the mechanism of consciousness which causes the change in potential.

[Back to Table of Contents](#)

Byrd's research supports Backster's observations that plants exhibit a quality of awareness and an empathy to other organisms that are stimulated in their presence. Like Backster, Byrd also found a major problem in his experiments to be the plants' tendency to "faint" under excess stress, suddenly ceasing to respond even to the most basic stimuli, including his *intent* to burn the plant. On camera Byrd got a plant to respond to his shaking a spider in a pill box. The plant responded with about a second's delay, the response continuing as long as a minute. He also got a strong reaction when cutting the leaf from another plant.

Byrd, who has a master's degree in medical engineering from George Washington University and is a member of Mensa, a worldwide organization whose primary requirement is an extremely high intelligence quotient, has no ready solution to explain the apparent response of plants to human thoughts, and is open to widely disparate explanations, including alterations of the Earth's magnetic field, supernatural and spiritual phenomena, and the mysterious mechanics of bioplasma. In a paper presented in 1972, to the American Society of Cybernetics, Byrd reviewed numerous Russian experiments with thought transmission via "bioplasma," which certain Soviet scientists claim to be a previously undiscovered form of energy. [See also [Rifat: Remote Viewing](#) and [Ostrander/Schroeder: Psychic Discoveries](#) for more information on bioplasma.]

[p 41-42]

In May 1973, Byrd began to set up an experiment to instrument the tiny leaves of *Mimosa pudica*, which are so sensitive that they collapse when touched. Byrd believes that, by using a thin wire barely touching a mimosa leaf, he can pick up through a special amplifier minute changes in voltage or resistance. Also available to Byrd is one of the world's finest chart recorders, made in West Germany by Siemens, which shoots out more than three feet of recording paper per second with the patterns recorded by a jet of ink only a few microns wide. With these devices Byrd hopes to be able to pick up plant reactions which have hitherto gone unnoticed.

Byrd is also planning to work with a primitive marine alga, *Acetabularia cremulata*, which, though two inches long, is made up of only a single cell. If this monocellular plant exhibits the "Backster Effect," Byrd will then surgically remove its nucleus. If it then fails to respond, Byrd hopes this will offer proof that the genetic material in the nuclei of plant cells is chiefly responsible for plant response.

A revolutionary new lie detector device known as a Psychological Stress Evaluator has also been made available to Byrd, along with lab space and facilities, by Allan Bell, inventor of the device, who is president of Dektor Counter Intelligence Systems, a firm he recently [1970s material] formed with two other ex-intelligence officers. The device, tested by monitoring twenty five segments of the television program *To Tell The Truth*, is said to have picked the persons who were telling the truth with 94.7 percent accuracy. The theory behind the device is that the human voice normally operates both in audible and inaudible frequency modulations except when a person is under stress. According to the inventors of the device, when the

inaudible FM vibrations disappear from the voice under stress, the ear does not note the difference, but the machine can trace the fluctuations on a chart. Byrd is now working on a means of adapting the device for employment in conjunction with plants. [1970s material]

[...SNIP...]

Transformed and amplified by Dr. Hashimoto's electronic equipment, the sound produced by the plant was like the high pitched hum of very high voltage wires heard from a distance, except that it was more like a song, the rhythm and tone being varied and pleasant, at times even warm and almost jolly.

[Back to Table of Contents](#)

John Francis Dougherty, a young American from Marina Del Rey, California who witnessed one of these conversations, says it sounded as if Mrs. Hashimoto, speaking in modulated Japanese, was being answered by the plant in modulated "cactese". Dougherty further reports that the Hashimotos became so intimate with the plant that they were soon able to teach it to count and add up to twenty. In answer to a query as to how much two and two make, the plant responds with sounds which, when transcribed back into inked tracings, produced FOUR distinct and conjoined peaks.

[...SNIP...]

## Chapter 4: Visitors From Space

[...SNIP...]

[Back to Table of Contents](#)

An important difference between Lawrence's apparatus for capturing plant signals and that of Backster, Vogel and Sauvin is that it incorporates, in a temperature controlled bath, LIVING VEGETAL TISSUE shielded behind a Faraday tube that screens out even the slightest electromagnetic interference. Lawrence found that living vegetal tissue is able to perceive signals far more delicately than electronic sensors. It is his belief that *biological* radiations transmitted by living things are best received by a *biological* medium.

[...SNIP...]

As Lawrence checked his instrumentation, the audio signal, to his amazement, continued to produce a distinct chain of pulses for over half an hour before even the whistle returned, indicating that nothing more was being received. The signals had to be coming from somewhere, and since his device had been continuously pointed up toward the heavens, Lawrence was faced with the fantastic thought that *something or someone was transmitting from outer space*.

[...SNIP...]

Aligning his telescope - coupled with the Faraday tube, a camera, an electromagnetic interference monitor, and the tissue chamber - to celestial coordinates 10 hours 40 minutes plus 56 degrees, which gave him the general direction for Ursa Major, Lawrence switched on his audio signal. After a ninety minute interval, his equipment again picked up a recognizable, though briefer, pattern of signals. According to Lawrence, the periods between rapid series of pulses ranged from approximately three to ten minutes over a stretch of several hours as he monitored a single spot in the heavens.

[...SNIP...]

Deciding that his findings may be of crucial significance and could herald a new and as yet unimagined system of communication, Lawrence has sent a copy of his October, 1971, tape, together with a seven page report, to the Smithsonian Institution in Washington DC, where it is preserved as a potentially historical scientific document. The report concludes:

"An apparent train of interstellar communication signals of unknown origin and destination has been observed. Since interception was made by biological sensors, a biological type signal transmission must be assumed. Test experiments were conducted in an electromagnetic deep fringe area, the equipment itself being impervious to electromagnetic radiation. Follow up tests revealed no equipment defects. Because [BIOLOGICAL DETECTOR] interstellar listening experiments are not conducted on a routine basis, the suggestion is advanced that verification tests should be conducted elsewhere, possibly on a global scale. The phenomenon is too important to be ignored."

[...SNIP...]

[Back to Table of Contents](#)

Lawrence's most important conclusion, that biological type sensors are needed in order to intercept biological signals, applies particularly to communications from outer space. As he puts it: "Standard electronics are next to worthless here, since 'bio-signals' apparently RESIDE OUTSIDE OF THE KNOWN ELECTROMAGNETIC SPECTRUM."

[...SNIP...]

[Back to Table of Contents](#)

When he began to study the problem in 1963, Lawrence found that he could get no help from plant specialists and biologists because none of them knew enough physics, and especially electronics, to visualize what he was driving at. In his search for a biological system for radiating and receiving signals, Lawrence began by going over the experiments made in the 1920s by the Russian histologist Alexander Gurwitsch and his wife, who proclaimed that all living cells produce an invisible radiation. Gurwitsch had noticed that the cells in the tips of onion roots seemed to be dividing at a definite rhythm. Believing this is due to an extra unexplained source of physical energy, Gurwitsch wondered whether it might not come from nearby cells.

To test out his theory he mounted one root tip in a horizontally oriented thin glass tube to act as a ray gun. This he pointed at a similar onion root tip, also protected in a tube, but with a small area on one side exposed naked to serve as a target. After three hours of exposure,

Gurwitsch examined sections from the target root under his microscope. When he compared the number of cell divisions, he found 25 percent more in the exposed, irradiated area. The receiver root had seemingly picked up a vital energy from its neighbour.

To try to block the emission, Gurwitsch repeated the experiment with a thin shield of quartz between the roots, but obtained essentially the same results. However, when the quartz was coated with gelatin, or a simple sheet of glass was substituted, no enhanced cell division could be observed. Since glass and gelatin were known to block various ultraviolet frequencies on the electromagnetic spectrum, Gurwitsch concluded that the rays emitted by the cells of an onion root tip must be as short or shorter than ultraviolet. Because they apparently increased cell division, or "mitosis," he called them "mitogenic rays."

[...SNIP...]

Continuing to probe further with a sensitive high impedance device of his own design, Lawrence sought to discover whether individual cells in a quarter inch slice of onion, attached to a Wheatstone bridge and electrometer [sensitive voltmeter, basically], would react to various stimuli. He found that they seemed to respond to irritations such as a puff of smoke, or even to his MENTAL IMAGE of their destruction, in about one hundred milliseconds, or one tenth of a second.

What seemed most odd to Lawrence was that the reaction of the onion tissue seemed to change depending on whether he, or someone else, was directing THOUGHT at it. People with "psychic gifts" seemed to elicit much stronger responses than the practical minded Lawrence. As he commented: "If one can cause, or get something to cause, harm to a cell - assuming that the cell has a cellular consciousness - the reaction pattern in it will change from experimenter to experimenter."

[...SNIP...]

[Back to Table of Contents](#)

Lawrence warned his readers that work with plant was not just a matter of electronic expertise and that working with the Backster Effect involved much more than the mere ability to construct top quality electronic equipment. "There are certain qualities here," he wrote, "which do not enter into normal experimental situations. According to those experimenting in this area, it is necessary to have a 'green thumb' and, most important, a genuine love for plants.

[...SNIP...]

[Back to Table of Contents](#)

Warning that constant repetition was an important factor in such testing, Lawrence stated that if a plant specimen is stimulated continuously, badly injured, or infrequently watered, it would tire quickly, or even lapse into shock and die. Researchers were therefore cautioned to be gentle with their plants and allow them to recuperate after experimentation. The area in which plants live must be quiet, added Lawrence, "so that the stimuli can be effectively applied with a minimum of power line noise or disturbances from radio frequency transmission to cause faulty indications."

[EW: Luckily, the less sensitive and less affected by RF signals GSR units are adequate, per the first two chapters.]

[...SNIP...]

[Back to Table of Contents](#)

Freshly settled in Canada, Merta supported himself for two months by working as a troubleshooter for a large Montreal grower and importer of tropical plants. When clients in office and residential buildings complained that their plants were getting sick, Merta was sent to ascertain the trouble. Because he also took care of thousands of plants in the firm's extensive greenhouses, Merta noticed that the effects of LONELINESS produced when a plant is taken away from its friends often caused it such shock that it would pine, even die; however, when returned to the greenhouse, it immediately perked up and regained its normal green health. On June 5, 1973, the research division of Anchor College of Truth in San

[...SNIP...]

Bernardino announced that it was inaugurating the world's first biological type interstellar communications observatory under the direction of L. George Lawrence, now also a vice president of Anchor. For the new research program Lawrence has designed what he calls a Stellartron, which combines in one three ton instrument the features of a radio telescope and the biological signal receiving system of the biodynamic field station. [EW: Refers to Lawrence's early living tissue detectors.]

[...SNIP...]

[p 61-62]

Lawrence's research, suggesting as it does that intelligences are communicating INSTANTLY across distances requiring millions of light years to reach, indicates that what is needed is not space ships but the proper "telephone numbers" to contact them.

[Back to Top of Table of Contents](#)

## **Chapter 5: Latest Soviet Discoveries (1970s)**

[...SNIP...]

[Back to Table of Contents](#)

In addition to a plant's ability to recognize friend and foe, Soviet researchers also noted that one plant supplied with water CAN SOMEHOW SHARE IT WITH A DEPRIVED NEIGHBOR. In one institute of research a cornstalk planted in a glass container was denied water for several weeks. Yet it did not die; it remained as healthy as other cornstalks planted in normal conditions nearby. In some way, say Soviet botanists, water was transferred from healthy plants to the "prisoner" in the jar. Yet they have no idea how this was accomplished.

As fantastic as this may seem, a kind of plant to plant transfer has been taking place in England in experiments begun in 1972 by Dr. A. R. Bailey. Two plants in an artificially lit greenhouse in which temperature, humidity and light were carefully controlled were suffering from lack of water. Bailey and his collaborator measured the voltages generated between two parts of both plants. When one plant was watered from the outside through plastic tubes, the other plant reacted. As Bailey told the British Society of Dowsers: "There was no electrical connection between them, no physical connection whatsoever, but somehow, one plant picked up what was going on with the other."

## Chapter 12: Force Fields, Humans and Plants

[...SNIP...]

[Back to Table of Contents](#)

[p 187-88]

... Meanwhile, the research of the Russian Alexander Gurwitsch, which inspired L. George Lawrence to begin his study of the potentialities of biocommunication, despite its rejection by the U.S. Academy of Sciences, began to get a new lease on life. The distinguished bacteriologist at Cornell University, Professor Otto Rahn, was amazed to find that whenever any of his laboratory workers fell ill THEY APPEARED TO CAUSE THE DEATH OF YEAST CELLS WITH WHICH THEY WERE EXPERIMENTING. A few minutes' exposure to their fingertips EVEN AT A DISTANCE would kill vigorous cells of this carbohydrate fermenting fungus. Further investigation showed that a chemical compound excreted from the hands and faces of the sick technicians was responsible; but how it ACTED AT A DISTANCE was a mystery. Rahn went on to prove that the continually renewed tissue of the cornea of the eye, as well as most wounds and cancer tumors, EMIT RADIATION; he set these and other findings down in a book, *Invisible Radiation of Organisms*, which on the whole was ignored by his colleagues. [EW: But NOT THE PERPS!]

[...SNIP...]

[Back to Top of Table of Contents](#)

---

## Chapter 13: The Mystery of Plant and Human Auras

[...SNIP...]

[Back to Table of Contents](#)

[p 207]

Henry C. Monteith, an electrical engineer in Albuquerque, New Mexico, working at home, put together an apparatus consisting of two 6-volt batteries, a vibrator used to power automobile

radios, and an ignition coil sold at all auto supply stores. Like the Russians, Monteith found that a LIVE leaf gave beautiful and varied self-emissions that cannot be adequately explained by any conventional theory. He was further mystified when he discovered that a DEAD leaf gave, at most, only a uniform glow. Exposed to only 30,000 volts, the dead leaf did not reveal anything at all on film, EVEN WHEN BATHED IN WATER, but the live leaf shimmered in a radiance of self-emissions.

[EW: The reason this information is so important is that at least one scientist made a claim on a popular nighttime radio talk show that live leaves and dead leaves showed identical discharge patterns. Those who have been active in the anti-electronic harassment movement for some time have heard many disinformational claims designed to keep every small bit of advanced scientific discovery discredited in the mind of the public. Since the electronic harassment crimes depend on the public being ignorant of the advanced "ESP-class" technology being used, the visitor should realize that such discreditation statements are disinformation. We who are targetted know this first hand.]

[Back to Top of Table of Contents](#)

---

## Chapter 20: Mind Over Matter

[...SNIP...]

[Back to Table of Contents](#)

[p 359]

[Dr. Andrea] Puharich has now discovered a truly remarkable psychic in the body of a young [1970s material] Israeli, Uri Geller, whose abilities have startled hundreds of audiences and left most open minded scientists [EW: You mean there are some?] aghast at their implications.

Under rigorous test conditions, Geller has been able to UNFAILINGLY locate an iron ball or water hidden in one of ten identical sealed metal cans without touching the cans, to move solid objects at a distance WITHOUT THE USE OF ANY ENERGY KNOWN TO PHYSICS, to bend AT A DISTANCE dense metal objects, such as a solid silver Mexican coin, as if they were plastic in his hands, to repair broken watches and get them running without having ever opened their cases, to shatter a set of watchmaker's screwdrivers made of a special alloy steel, and EVEN TO CAUSE OBJECTS TO VANISH FROM THEIR LOCATIONS AND REAPPEAR SOMEWHERE ELSE. Geller can also affect at will the material recorded on a magnetic tape, such as that used in television.

[EW: I have personally witnessed two "objects disappear then reappear at some other location" (one in a moving vehicle) events. Some have said Uri Geller was a hoax, but this attestation by Dr. Puharich counters that. Furthermore, my father was an acquaintance of Uri Geller and in spite of trying hard to find any trickery in Geller's demonstrations at my Dad's home, found no evidence of any hoax.]

**END OF TRANSCRIBED MATERIAL**

[Back to Table of Contents](#)

---

ELEANOR WHITE TALKING:

This book promises potentially important clues about today's advanced mind/body weapons, clues that may spark important ideas in electronic harassment targets who take the trouble to acquire or borrow the book. There are further sections on a range of topics in the psychic arena. It may take me some time to complete the book and post a publicly accessible review of it, because of competing needs for time.

<http://www.raven1.net/shark.htm> revived by [www.hearingvoices-is-voicetoskull.com](http://www.hearingvoices-is-voicetoskull.com)

Just wanted to share an item from science TV which is not a cure for our ills, but is very much an item which backs up the mind reading part of the spooks' tools. It may be useful as a comeback if anyone pickets or has media contact.

Apparently, only recently it has been learned that sharks, especially hammerhead sharks in the Hawaii vicinity, use the magnetic fields of their prey's brain and nervous system to locate them.

There is one species of fish which, in order to sleep safely, burrows into the sandy sea bottom.

This video segment showed the burrowing, followed by a visit by a hammerhead shark, who circled the spot where the sleeping fish had burrowed then lowered his lower jaw and scooped the prey out of the sand. There were absolutely no visual clues.

Apparently sharks have little black "pits" on their upper lip, which look like large whisker stubble. These pits lead a short way into a cluster of nerve cells whose function is specifically the detection of magnetic fields given off by prey fish.

What makes this even more startling is that the sandy sea bed and the surrounding salt water are highly conductive, which means any magnetic field oscillations would be dampened by currents through the salt water tending to oppose the changing fields.

Again - it doesn't exactly "prove" our case, but it is indisputable backup, which no doubt could be had by contacting a major marine research activity.

The following are signal details suggested to those interested in experimenting in voice-to-skull radio transmission or with bioeffects of microwaves in general. The owner of this web page has not yet succeeded in any of these areas, but the information here has been suggested by both rigorous and non-rigorous articles on the subject.

FOLLOWING ARE BRIEF EXCERPTS FROM OR SUMMATIONS  
FROM ARTICLES SPECIFIC TO VOICE-TO-SKULL TECHNOLOGY  
AS IT RELATES TO THE WRIGHT-PATTERSON SCARE-BIRDS-  
AWAY-FROM-RUNWAYS TECHNOLOGY:

Updated July 21, 1997

Science, vol. 181, 27 July 73, Allan H. Frey and  
Rodman Messenger, Jr.:

p. 356: Perception occurred when the subject  
was illuminated with energy from approximately  
that portion of the EM spectrum defined as the  
UHF band, that is, from 0.3 to 3 GHz.

p. 357: An approximate threshold for perception,  
when the subject was in a noisy environment,  
occured at a peak power density of 267 milliwatts  
per square centimeter...

p. 358: There are also RF modulation parameters  
that cause subjects to report hearing "sounds"  
with definite pitch and timbre characteristics.

Nature, vol. 210, May 7 1966, J.A. Tanner, NRC,  
Ottawa, Canada AND,  
Nature, vol. 216, DEC 16 1967, page 1139:

\*\* These excerpts deals with microwave-induced  
muscle-jerks, rather than voice-to-skull:

p. 636: With the antenna mounted vertically  
above the cage, it was observed, a few seconds  
after the onset of radiation [16 GHz, 8,000  
pulses per second, 10 to 30 milliwatts per cm<sup>2</sup>]  
that sustained extensor activity of a wing and  
leg occurred - a reaction possibly due to the  
penetration of induced electrical activity  
to the spinal cord. Shielding first the head  
of the chicken, and then the body leaving the  
head exposed, produced no significant change  
in the manifested extensor activity.

[JIBES WITH MY EXPERIENCE PERFECTLY-E.W.]

Journal Acoustical Society of America, June 1982,  
Chung-Kwang Chou, Arthur W. Guy, and Robert Galambos:

[This article is a detailed "proof" that the "microwave hearing" phenomenon is thermal in nature. The calculated temperature rise due to the pulses studied is a surprisingly small 1/100,000th to 1/1,000,000th of a degree centigrade. - E. W.]

p. 1321: ...the absorption [of microwave energy] can be appreciable at the resonant frequency near 70-80 MHz (where the long dimension of the [human] body is approximately 0.4 wavelengths. For a human head, the resonant frequency is near 600 MHz.

p. 1324: [Describes audio frequencies applied as pulse repetition rates - roughly speaking, rep rates from 1,000 to 12,000 per second were tested and produced various sounds. The suggested pulse durations were in the range of 5 microseconds to 150 microseconds - E.W.]

pp 1324-1325: In summary, there is uniform agreement that human beings with normal high-frequency hearing can perceive an auditory sensation when exposed to microwave pulses of sufficient energy content. The [UN-modulated] RF sound may be perceived as clicks, buzzes, or hisses depending on the [pulse repetition rate and duration]. This received sound, at least for pulses less than or equal to 50 microseconds seems to originate at the central, posterior aspect [i.e. back] of the head.

Bioelectromagnetics conference, 1992, 13:323-328:

[This article deals with modification of the ability for a sudden sound to startle rats, and does not deal with microwave hearing. - E. W.]

## Unmodulated Signal Details

## Two Modulation Methods

Note: Because the Frey article found a clear-cut minimum power threshold, pulse width modulation above the threshold may be the more successful method

## Or, try an ELF-microwave combo!

#### **Military Use of Mind Control Weapons**

Judy Wall 1998

PSY-OPS WEAPONRY USED IN THE PERSIAN GULF WAR

[See also another article on this site.](#)

For years, rumours have persisted that the United States Department of Defense has been engaged in research and development of ultra-sophisticated mind- altering technology. Confirmation of this came to me recently in the form of two ITV News Bureau Ltd (London) wire service bulletins.[1]

The March 23, 1991 newsbrief, "High-Tech Psychological Warfare Arrives in the Middle East", describes a US Psychological Operations (PsyOps) tactic directed against Iraqi troops in Kuwait during Operation Desert Storm. The manoeuvre consisted of a system in which subliminal mind-altering technology was carried on standard radiofrequency broadcasts. The March 26, 1991 newsbrief states that among the standard military planning groups in the centre of US war planning operations at Riyadh was "an unbelievable and highly classified PsyOps program utilising 'silent sound' techniques".

The opportunity to use this method occurred when Saddam Hussein's military command-and-control system was destroyed. The Iraqi troops were then forced to use commercial FM radio stations to carry encoded commands, which were broadcast on the 100 MHz frequency. The US PsyOps team set up its own portable FM transmitter, utilising the same frequency, in the deserted city of Al Khafji. This US transmitter overpowered the local Iraqi station. Along with patriotic and religious music, PsyOps transmitted "vague, confusing and contradictory military orders and information".

Subliminally, a much more powerful technology was at work: a sophisticated electronic system to 'speak' directly to the mind of the listener, to alter and entrain his brainwaves, to manipulate his brain's electroencephalographic (EEG) patterns and

artificially implant negative emotional states-feelings of fear, anxiety, despair and hopelessness. This subliminal system doesn't just tell a person to feel an emotion, it makes them feel it; it implants that emotion in their minds.[2]

I noticed that the ITV wire service was from outside the United States. Readers of Resonance may recall that in the Electromagnetic Weapons Timeline in issue no. 29, reference is made to the documentary video, Waco: The Big Lie Continues, which contained video footage of three EM weapons. This segment of the film was from the British Broadcasting Corporation (BBC). I wondered if there was any significance to this.

At the library I pulled up back issues of my local newspaper for the same time-period of the Gulf War to see what the American wire services had said, if anything, about the use of this special PsyOps weapon. There was nothing said about it directly, but three news articles seemed related. In a news release from Associated Press during the same timeframe of the Gulf War truce, I read:

"The American pilot who shot down the second Iraqi warplane in 48 hours said Friday that continued Iraqi flights suggested that US warnings were not filtering down to Iraqi pilots... He said he hopes Saddam gets the message now. 'It's really too bad that these people have to die for their unwillingness to heed our warnings... What I really think is, they don't communicate down to the people,' he said. 'If they have a communications problem, I suggest they fix it.'"[3]

That may have been coincidence but two earlier news articles, dated March 1, 1991, apparently have a common origin with the ITV news bulletin. The first article[4] tells us that approximately 100 members of the US 101st Airborne Division, fluent in Arabic, talked the enemy into surrendering. These soldiers rode in the Apache helicopter gunships that were involved in the longest helicopter-borne assault in history. They told the Iraqi troops that they would be slaughtered if they didn't give up.

"They got the point," one soldier is quoted as saying.

This all sounds very unremarkable, except when you read the editor's note: "The following dispatch was subject to US military censorship." Now why would they want to censor such a mundane tactic, except out of embarrassment that the US Army fighting forces had fallen to the level of a cheer-leading squad? ... in which case they would have nixed the thing entirely.

But upon re-reading the article, we may pick out certain key phrases (emphasised in italics):

"He [the soldier interviewed] was one of dozens of Arabic speakers that played a key role in the allied ground attack against Iraq, and part of an attempt by the US Army to use finesse, intelligence work and tactics to complement brute strength."

If we fill in the missing blanks with such descriptions as "the megaphone was used to direct psychoacoustic frequencies that engaged the neural networks of the enemy's brain, causing him to think any thought and feel any emotion that the Americans chose to lay on him", then it starts to make sense. And it would no longer seem so surprising that one soldier could talk 450 enemy soldiers

into surrendering. The possibilities are there, and, as the next article[5] documents, that is exactly what happened. Iraqi troops gave up en masse.

We quote: "They were surrendering in droves, almost too fast for us to keep up with..."; "...two Iraqi majors, both brigade commanders, who gave up their entire units..."; and "...one of them gave up to an RPV [remotely piloted vehicle]. Here's this guy with his hands up, turning in a circle to give himself up to a model airplane with a camera in it."

Irrational? Not if there was also a voice being beamed into his head from that little flying toy, saying, "Give up, give up!" Otherwise, how do we account for the editor's note at the beginning of the article: "The following is based on pool dispatches that were subject to military censorship." Without that note, we could smugly think that the Iraqi soldiers were cowards or crazy, but why censor that idea?

#### MIND CONTROL WITH SILENT SOUNDS

The mind-altering mechanism is based on a subliminal carrier technology: the Silent Sound Spread Spectrum (SSSS), sometimes called "S-squad" or "Squad". It was developed by Dr Oliver Lowery of Norcross, Georgia, and is described in US Patent #5,159,703, "Silent Subliminal Presentation System", dated October 27, 1992. The abstract for the patent reads:

"A silent communications system in which nonaural carriers, in the very low or very high audio-frequency range or in the adjacent ultrasonic frequency spectrum are amplitude- or frequency-modulated with the desired intelligence and propagated acoustically or vibrationally, for inducement into the brain, typically through the use of loudspeakers, earphones, or piezoelectric transducers. The modulated carriers may be transmitted directly in real time or may be conveniently recorded and stored on mechanical, magnetic, or optical media for delayed or repeated transmission to the listener."

According to literature by Silent Sounds, Inc., it is now possible, using supercomputers, to analyse human emotional EEG patterns and replicate them, then store these "emotion signature clusters" on another computer and, at will, "silently induce and change the emotional state in a human being".

Silent Sounds, Inc. states that it is interested only in positive emotions, but the military is not so limited. That this is a US Department of Defense project is obvious.

Edward Tilton, President of Silent Sounds, Inc., says this about S-squad in a letter dated December 13, 1996:

"All schematics, however, have been classified by the US Government and we are not allowed to reveal the exact details... ... we make tapes and CDs for the German Government, even the former Soviet Union countries! All with the permission of the US State Department, of course... The system was used throughout Operation Desert Storm (Iraq) quite successfully."

The graphic illustration, "Induced Alpha to Theta Biofeedback Cluster Movement", which accompanies the literature, is labelled

#AB 116-394-95 UNCLASSIFIED" and is an output from "the world's most versatile and most sensitive electroencephalograph (EEG) machine". It has a gain capability of 200,000, as compared to other EEG machines in use which have gain capability of approximately 50,000. It is software-driven by the "fastest of computers" using a noisenulling technology similar to that used by nuclear submarines for detecting small objects underwater at extreme range.[6]

The purpose of all this high technology is to plot and display a moving cluster of periodic brainwave signals. The illustration shows an EEG display from a single individual, taken of left and right hemispheres simultaneously. The readout from the two sides of the brain appear to be quite different, but in fact are the same (discounting normal left/right brain variations).

#### CLONING THE EMOTIONS

By using these computer-enhanced EEGs, scientists can identify and isolate the brain's low-amplitude "emotion signature clusters", synthesise them and store them on another computer. In other words, by studying the subtle characteristic brainwave patterns that occur when a subject experiences a particular emotion, scientists have been able to identify the concomitant brainwave pattern and can now duplicate it. "These clusters are then placed on the Silent Sound[TM] carrier frequencies and will silently trigger the occurrence of the same basic emotion in another human being!"

#### SYSTEM DELIVERY AND APPLICATIONS

There is a lot more involved here than a simple subliminal sound system. There are numerous patented technologies which can be piggybacked individually or collectively onto a carrier frequency to elicit all kinds of effects.

There appear to be two methods of delivery with the system. One is direct microwave induction into the brain of the subject, limited to short-range operations. The other, as described above, utilises ordinary radio and television carrier frequencies.

Far from necessarily being used as a weapon against a person, the system does have limitless positive applications. However, the fact that the sounds are subliminal makes them virtually undetectable and possibly dangerous to the general public.

In more conventional use, the Silent Sounds Subliminal System might utilise voice commands, e.g., as an adjunct to security systems. Beneath the musical broadcast that you hear in stores and shopping malls may be a hidden message which exhorts against shoplifting. And while voice commands alone are powerful, when the subliminal presentation system carries cloned emotional signatures, the result is overwhelming.

Free-market uses for this technology are the common self-help tapes; positive affirmation, relaxation and meditation tapes; as well as methods to increase learning capabilities.

In a medical context, these systems can be used to great advantage to treat psychiatric and psychosomatic problems. As a system for remediating the profoundly deaf, it is unequalled. (Promises, promises. This is the most common positive use touted for this technology over the past 30 years. But the deaf are still deaf, and

the military now has a weapon to use on unsuspecting people with perfectly normal hearing.)

#### OFFICIAL DENIALS

In fact, the US Government has denied or refused to comment on mindaltering weapons for years. Only last year, US News & World Report ran an article titled "Wonder Weapons" basically a review of the new so-called 'non-lethal' or 'less-than -lethal' weapons.' Not one word about S-quad, although the technology had been used six years earlier!

Excerpts from the article read:

"Says Charles Bernard, a former Navy weapons-research director: 'I have yet to see one of these ray-gun things that actually works...'; and

DARPA (Defense Advanced Research Projects Agency) has come to us every few years to see if there are ways to incapacitate the central nervous system remotely,' Dr F. Terry Hambrecht, head of the Neural Prostheses Program at NIH, told US News, 'but nothing has ever come of it,' he said. 'That is too science-fiction and far-fetched.'"

It may sound "science fiction and far-fetched" but it is not. However, that is just what the powers-that-be want you to believe, so as to leave them alone in their relentless pursuit of...what?

The idea behind non-lethal weapons is to incapacitate the enemy without actually killing them, or, in the case of riot control or hostage situations, to disable the participants without permanent injury, preferably without their knowing it. The electromagnetic mind-altering technologies would all fall into this class of weapons, but since they are all officially non-existent, who is to decide when and where they will be used?

And why should selected companies in the entertainment industry reportedly be allowed access to this technology when the very fact of its existence is denied to the general public?

As recently as last month [February], this stonewall approach of total denial or silence on the subject still held fast, even toward committees of the US Congress!

- The Joint Economics Committee, chaired by Jim Saxton (R-NJ), convened on February 25, 1998 for the "Hearing on Radio Frequency Weapons and Proliferation: Potential Impact on the Economy". Invited testimony included statements by several authorities from the military:

- Dr Alan Kehs, of the US Army Laboratories, discussed the overall RF threat.

- Mr James O'Bryon, Deputy Director of Operational Testing and Director of live fire testing for the Office of Secretary of Defense at the Pentagon, discussed the role of Live Fire Testing and how it plays a role in testing military equipment with RF weapons.

- Mr David Schriener, Principal Engineer of Directed Energy Studies

with Electronic Warfare Associates and recently retired as an engineer with a naval weapons testing facility, talked about the difficulty in building an RF weapon and about the terrorist threat.

- Dr Ira Merritt, Chief of Concepts Identification and Applications Analysis Division, Advanced Technology Directorate, Missile Defense and Space Technology Center, Huntsville, Alabama, discussed the proliferation of RF weapons primarily from the former Soviet Union.

Although these statements gave information of technical interest, they are perhaps more important for the information they did not give: information on the existence of radiofrequency weapons that directly affect the human brain and nervous system.

#### KGB PSYCHOTRONICS

This technology did not spring up overnight. It has a long history of development and denials of development-by the US Government and probably half of the other governments of the world as well.

We know that the former Soviet Union was actively engaged in this type of research. In a previous article we reported that during the 1970s the Soviet KGB developed a Psychotronic Influence System (PIS) that was used to turn soldiers into programmable 'human weapons'. The system employed a combination of highfrequency radiowaves and hypnosis. The PIS project was begun in response to a similar training scheme launched in the US by President Carter, according to Yuri Malin, former security adviser to USSR President Gorbachev.[8]

In my Electromagnetic Weapons Timeline[9] I covered a period of 60 years of interest and development in EM weapons-information gathered from the many articles and news clippings sent in by readers of Resonance. In my article on synthetic telepathy[10] I traced the development of the 'voice in your head' technology dating back to 1961, all my references coming from the open scientific literature.

#### POWER OF THE MILITARY-INDUSTRIAL COMPLEX

Jan Wieseemann has written an apt description of the situation which now exists in the United States, about the 'forces that be' and how the situation came about:

"During the Cold War the United States not only engaged in a relatively open nuclear arms race with the Soviet Union, but also engaged in a secret race developing unconventional weapons. As the intelligence agencies (which prior to the Second World War had merely played a supporting role within the government) continued to increase their power, so did the funds spent on developing techniques designed to outsmart each other.

"And as the US intelligence community began to grow, a secret culture sprang about which enabled the intelligence players to implement the various developed techniques to cleverly circumvent the democratic processes and institutions...

"Like many other democracies, the US Government is made up of two basic parts the elected constituency, i.e., the various governors, judges, congressmen and the President; and the unelected bureaucracies, as represented by the numerous federal agencies.

"In a well-balanced and correctly functioning democracy, the elected part of the government is in charge of its unelected bureaucratic part, giving the people a real voice in the agenda set by their government.

"While a significant part of the US Government no doubt follows this democratic principle, a considerable portion of the US Government operates in complete secrecy and follows its own unaccountable agenda which, unacknowledged, very often is quite different from the public agenda. "[11]

Jan goes on to quote one of the United States' most popular war heroes: Dwight D. Eisenhower, who served as Supreme Commander of Allied Forces during World War II and was later elected 34th President of the United States. In his farewell address to the nation in 1961, President Eisenhower said:

"...we have been compelled to create a permanent armaments industry of vast proportions. Added to this, three and a half million men and women are directly engaged in the defence establishment. We annually spend on military security more than the net income of all United States corporations.

"This conjunction of an immense military establishment and a large arms industry is new in the American experience. The total influence-economic, political, even spiritual-is felt in every city, every state house, every office of the federal government. We recognise the imperative need for this development. Yet we must not fail to comprehend its grave implications. Our toil, resources and livelihood are all involved; so is the very structure of our society.

"In the councils of government, we must guard against the acquisition of unwarranted influence, whether sought or unsought, by the military -industrial complex. The potential for the disastrous rise of misplaced power exists and will persist. We must never let the weight of this combination endanger our liberties or our democratic processes."

#### INTERNATIONAL CONCERNS OVER NEW WEAPONS

The United Nations was established in 1945 with the aim of "saving succeeding generations from the scourge of war". In 1975 the General Assembly considered a draft first proposed by the Soviet Union: "Prohibition of the Development and Manufacture of New Types of Weapons of Mass Destruction and New Systems of Such Weapons".

In 1979 the Soviet Union added a list of some types of potential weapons of mass destruction:

- 1) Radiological weapons (using radioactive materials) which could produce harmful effects similar to those of a nuclear explosion;
- 2) Particle beam weapons, based on charged or neutral particles, to affect biological targets;
- 3) Infrasonic acoustic radiation weapons;
- 4) Electromagnetic weapons operating at certain radio-frequency radiations which could have injurious effects on human organs.[12]

In response, the US and other Western nations stalled. They gave a long, convoluted reason, but the result was the same.

In an article entitled "Non-Lethal Weapons May Violate Treaties", [13] the author notes that the Certain Conventional Weapons Convention [14] covers many of the non-conventional weapons—"those that utilize infrasound or electromagnetic energy (including lasers, microwave or radiofrequency radiation, or visible light pulsed at brainwave frequency) for their effects".

Harlan Girard, Managing Director of the International Committee Against Offensive Microwave Weapons, told me he believes the strategy behind the government's recent push for less-than-lethal weapons is a subterfuge. The ones that are now getting all the publicity are put up for scrutiny to get the public's approval. The electromagnetic mind-altering technologies are not mentioned, but would be brought in later under the umbrella of less-than-lethal weapons.

These weapons were recently transferred from the Department of Defense over to the Department of Justice. Why? Because there are several international treaties that specifically limit or exclude weapons of this nature from being used in international warfare.

In other words, weapons that are barred from use against our country's worst enemies (notwithstanding the fact that the US did use this weapon against Iraqi troops!) can now be used against our own citizens by the local police departments against such groups as peaceful protestors of US nuclear policies.

#### TOWARDS GLOBAL MIND CONTROL

The secrecy involved in the development of the electromagnetic mind-altering technology reflects the tremendous power that is inherent in it. To put it bluntly, whoever controls this technology can control the minds of men—all men.

There is evidence that the US Government has plans to extend the range of this technology to envelop all peoples, all countries. This can be accomplished, is being accomplished, by utilising the nearly completed HAARP project [15,16] for overseas areas and the GWEN network now in place in the US. The US Government denies all this.

Dr Michael Persinger is a Professor of Psychology and Neuroscience at Laurentian University, Ontario, Canada. You have met him before in the pages of Resonance where we reported on his findings that strong electromagnetic fields can affect a person's brain.

"Temporal lobe stimulation," he said, "can evoke the feeling of a presence, disorientation, and perceptual irregularities. It can activate images stored in the subject's memory, including nightmares and monsters that are normally suppressed." [17]

Dr Persinger wrote an article a few years ago, titled "On the Possibility of Directly Accessing Every Human Brain by Electromagnetic Induction of Fundamental Algorithms". [18] The abstract reads:

"Contemporary neuroscience suggests the existence of fundamental

algorithms by which all sensory transduction is translated into an intrinsic, brain-specific code. Direct stimulation of these codes within the human temporal or limbic cortices by applied electromagnetic patterns may require energy levels which are within the range of both geomagnetic activity and contemporary communication networks. A process which is coupled to the narrow band of brain temperature could allow all normal human brains to be affected by a subharmonic whose frequency range at about 10 Hz would only vary by 0.1 Hz."

He concludes the article with this:

"Within the last two decades a potential has emerged which was improbable, but which is now marginally feasible. This potential is the technical capability to influence directly the major portion of the approximately six billion brains of the human species, without mediation through classical sensory modalities, by generating neural information within a physical medium within which all members of the species are immersed.

"The historical emergence of such possibilities, which have ranged from gunpowder to atomic fission, have resulted in major changes in the social evolution that occurred inordinately quickly after the implementation. Reduction of the risk of the inappropriate application of these technologies requires the continued and open discussion of their realistic feasibility and implications within the scientific and public domain."

It doesn't get any plainer than that. And we do not have open discussion because the US Government has totally denied the existence of this technology.

#### Acknowledgements

I would like to give special thanks to: Jan Wiesemann for sending the Silent Sounds[TM] statement and patents which were the keystone of this article; Mike Coyle, whose computer search turned up many more related patents; Harlan Girard, who has provided numerous official government documents; and to the many who have provided newsclippings and articles, moral and financial support to Resonance, without which we'd have ceased publication long ago.

### **Military Use of Ultrasonic Brainwave Clusters**

Copyright 1991 ITV News Bureau, Ltd. (Reprinted With Permission)

HIGH TECH PSYCHOLOGICAL WARFARE ARRIVES IN THE MIDDLE EAST  
DHAHRAN, SAUDI ARABIA

(March 23)--Sources in Dhahran today revealed what might have been the true reason for the seemingly illogical and apparently suicidal attack by Iraqi troops on the deserted city of Al-Khafji, located just 12 miles south of the Kuwaiti border. The report indicates that the top priority objective of the Iraqi strike across the border was a successful attempt to destroy a small, portable FM radio station that had been installed on the roof of the tallest building in the town of Al-Khafji by the U. S. Defense Department's PsyOps Branch.

With the destruction of Saddam Hussein's military command and control system, communications with Iraqi troops in Kuwait are now largely carried out in a very primitive manner by utilizing Iraq's commercial FM radio stations located in the small Iraqi towns adjacent to Kuwait's western border. Military orders are encoded and then transmitted by Baghdad's military FM radio station YIHS. These signals are received and re-broadcast, in turn, by designated FM stations located between Baghdad and the Kuwaiti border until the programming arrives at the designated "control" station of the day which then broadcasts directly to the troops in Kuwait on exactly 100.00 MHz (megahertz), which is continuously monitored by all.

In order to nullify this Iraqi military line of communications (LOC), the U. S. PsyOps organization attached to the U. S. Central Command in Dhahran installed a portable FM broadcast transmitter, a gasoline-electric generator and a continuous tape recording system on top of the tallest building in the deserted city of Al-Khafji. The station transmitted on 100.00 MHz and its power output was adjusted to cover up the transmission of the Iraqi station operating on exactly the same frequency.

The clandestine station programming consisted of patriotic and religious music and intentionally vague, confusing and contradictory military orders and information to the Iraqi

soldiers in the Kuwait i Theater of Command (KTO). The size and power of enemy forces was always intentionally exaggerated. Surrender was encouraged.

ACCORDING TO STATEMENTS MADE BY CAPTURED AND DESERTING IRAQI SOLDIERS, HOWEVER, THE MOST DEVASTATING AND DEMORALIZING PROGRAMMING WAS THE FIRST KNOWN MILITARY USE OF THE NEW, HIGH TECH, TYPE OF SUBLIMINAL MESSAGES REFERRED TO AS ULTRA-HIGH-FREQUENCY "SILENT SOUNDS" OR "SILENT SUBLIMINALS". (See Newsweek, July 30, 1990, Page 61.)

ALTHOUGH COMPLETELY SILENT TO THE HUMAN EAR, THE NEGATIVE VOICE MESSAGES PLACED ON THE TAPES ALONGSIDE THE AUDIBLE PROGRAMMING BY pSYoPS PSYCHOLOGISTS WERE CLEARLY PERCEIVED BY THE SUBCONSCIOUS MINDS OF THE iRAQI SOLDIERS AND THE SILENT MESSAGES COMPLETELY DEMORALIZED THEM AND INSTILLED A PERPETUAL FEELING OF FEAR AND HOPELESSNESS IN THEIR MINDS. it WAS NECESSARY FOR THE iRAQI TANK COMMANDERS OR ANOTHER CREW MEMBER TO LISTEN TO THE FM STATION 24 HOURS EACH DAY FOR QUICKLY CHANGING DEPLOYMENT ORDERS. tHEY WERE BEING EXPOSED TO THE "SILENT sOUNDS" DURING THE SAME LISTENING PERIODS.

The same Dhahran source indicates that the Al-Khafji station has now been repaired and is now back in full operation.

-----  
RIYADH, SAUDI ARABIA

(March 26)--Around Riyadh, the uninitiated called it the "Black Hole." A large but dingy basement storage room at the headquarters of the Royal Saudi Air Force has been turned over to the American Air Force, and it was so secret that even officers with top security clearance couldn't get inside. Within the space allotted him, Brig. Gen. Buster C. Glosson built a maze of small offices in order to plot the air war against Iraq.

In one set of cubicles, officers pondered how to eliminate Saddam Hussein's nuclear weapons, his chemical and biological plants, his missile-production factories. In a second, they concentrated on the Republican Guard, its artillery and tanks dug in along Iraq's border with Kuwait. In the third, they planned and implemented an unbelievable and highly classified PsyOps program utilizing "silent sound" techniques. In a fourth, they studied targets of opportunity in Kuwait itself.

From throughout the American military, Glosson recruited intelligence officers to scout the enemy, logistics people to match weapons to objectives, "fraggers" to pick the final targets. Everyone was sworn to secrecy; they worked with laptop computers on a special system that could not be tapped into by anyone else, however high ranking, in the allied Central Command. Glosson ordered a large sign hung on one wall, lettered by computer printout. It read: The Way Home Is Through Baghdad.

In places like Black Hole, the secret history of the war

was played out during the seven anxious months that began last August. The final victory sprang out of the details--and only now, in the afterglow of success, are the details beginning to emerge. President Bush, his top military brass and his field commanders kept the war planning so closely guarded that almost no one, even senior military officers, knows the full scope of what they accomplished.

With much the same skill that they displayed in establishing air superiority over the battlefield, they established a different sort of supremacy over the media, hiding the risks they took, the mistakes they made and the successful steps they took to overcome them.

In retrospect, the steady beat of coalition successes made the victory over Saddam Hussein look almost easy. The untold history of the war, however, is a chronicle of tight spots and alarming surprises, of stratagems devised to outwit a foe who was consistently given more credit for more strength and more determination than he ultimately displayed. "Special operations" spies sneak into Iraq and Kuwait, darting around the desert in dune buggies at night, helping to locate Scud batteries and other targets, even filching electronics from Iraqi antiaircraft sites for study by coalition experts in Riyadh. The allied air command.

## Simple Explanation of "Hyperspace"

Hi -

This is a tiny bit of lay person info from this book (read past the biblio):

```
=====
Title:  HYPERSPACE
Subti:  A Scientific Odyssey Through Parallel
        Universes, Time Warps, and the 10th
        Dimension
Auth:   Dr. Michio Kaku

Publ:   Anchor Books, ISBN 0-385-47705-8
        Paperback, $14.95 US, 1994
```

About the Author (1994):

Michio Kaku is professor of theoretical physics at City College, City University of New York. He graduated from Harvard and received his PhD from the University of California, Berkeley. He is author of "Beyond Einstein", "Quantum Field Theory: A Modern Introduction" and "Introduction to Superstrings".

He has also hosted a weekly hour-long science program on radio for the past ten years.

=====
```

This book, as I emailed you a short while ago, is written for LAY PEOPLE.

There is one explanation of "higher dimensions" aka "hyperspace" that rings a bell with me, and I wanted to share it with you in case you ever get cornered by someone who uses the terms "scalars" or "hyperspace" or "higher dimensions". This explanation is easy for anyone to comprehend.

Dr. Michio Kaku repeatedly uses an easy analogy to our 3-dimensional world vs. hyperspace, by looking at a make believe world of TWO dimensions. This means, everybody is flat and being born on to, say, a very large sheet of paper, or even a globe, nobody can see the third "height" dimension or even conceive it exists.

Suppose a 3D person, like us, comes across this flat 2D world. We can see all the activity but they are not able to see us looking down on their flat world, because we inhabit 3D space.

Now suppose we put our hand "into" their world, meaning, our thumb and fingers pass through their flat world.

The people in the flat world would see five kind of shivering flesh coloured circles, which would be changing size every time "we" moved our hand.

If we pushed our forearm through their world, they would see one large flesh coloured oval, our wrist.

So they would think that this "strange creature" or creatures that appeared out of nowhere were strange indeed.

If we withdrew all except two fingers, now the flatlanders see two small flesh coloured circles.

They would see our hand as a magic creature with the ability to appear and disappear at will, and morph into all sorts of strange shapes.

If we reached down and pulled a flatlander up off their flat world, his comrades would see him vanish into thin air. And reappear when we put him back.

This simple explanation, for me at least, makes the delivery of harassment effects, normally a very spooky event for us, seem more like a fairly simple operation of reaching into our three dimensions from hyperspace.

This explanation also makes it clear why the classified weapons have such power - they have an entire dimension (or two, or three) to move about in which we can't see/feel/detect.

This is only my opinion but I believe hyperspace is where the psychic events come from.

I hope this begins to wipe some of the mystery away from "hyperspace" and classified weapons.

It is not a new idea, originating in Germany in 1854.

Eleanor

## **Microwave Mind Control Potential Admitted to by US Defense Intelligence Agency as Far Back as 1976**

[Return to Site Index](#)

Subject: 1976 Article mentions microwave hearing

The Associated Press: "Mind-Altering Microwaves: Soviets Studying Invisible Ray" LOS ANGELES HERALD EXAMINER, Sec. A. Pg. ?, 22 November 1976.

A newly declassified US Defense Intelligence Agency report says extensive Soviet research into microwaves might lead to methods of causing disoriented human behavior, nerve disorders, or even heart attacks.

"Soviet scientists are fully aware of the biological effects of low-level microwave radiation which might have offensive weapons application," says the report, based on an analysis of experiments conducted in the Soviet Union and Eastern Europe.

According to the study, this research work suggests "the potential for the development of a number of antipersonnel applications."

Microwave beams are the electronic basis of radar and are widely used for relaying long-distance telephone calls. Other common sources of microwaves include television transmitters.

A copy of the study was provided by the agency to The Associated Press in response to a request under the Freedom of Information Act. The Pentagon agency refused to release some portions of the study, saying they remain classified on national security grounds.

The report made no direct mention of the Soviet microwave bombardment of the US Embassy in Moscow, where despite strong American protests, the radiation continues, though at reduced levels.

Up to now, the view most widely accepted among State Department officials in Washington has been that the Soviets appear to be using the microwave beams to foil sophisticated US electronic intelligence-gathering equipment at the embassy.

The State Department issued an administrative notice on Nov. 12 declaring Moscow "an unhealthful post", but no link was officially drawn between this move and the radiation situation. Department spokesmen insist that medical tests have found no adverse health effects

attributable to the microwaves.

The Soviets have denied beaming any radiation at the embassy, contending that the microwaves are simply part of the normal background radiation found in any major city.

The Pentagon agency's report, distributed within the government last March, said that one biological effect which could offer antipersonnel uses is the phenomenon known as "microwave hearing".

"SOUNDS AND POSSIBLE EVEN WORDS WHICH APPEAR TO BE ORIGINATING INTRACRANIALY (WITHIN THE HEAD) CAN BE INDUCED BY SIGNAL MODULATION AT VERY LOW AVERAGE POWER DENSITIES", THE STUDY SAID. IT ADDED THAT "COMBINATIONS OF FREQUENCIES AND OTHER SIGNAL CHARACTERISTICS TO PRODUCE OTHER NEUROLOGICAL EFFECTS MAY BE FEASIBLE IN SEVERAL YEARS."

The report concluded that Soviet research in this area "has great potential for development into a system for disorienting or disrupting the behavior patterns of military or diplomatic personnel. It could be used equally as well as an interrogation tool."

The report said that along with microwave hearing, the Soviets have also studied various changes in body chemistry and functioning of the brain resulting from exposure to microwaves and other frequencies of electromagnetic radiation.

"One physiological effect which has been demonstrated in heart seizure," the report said.

It said that this has been accomplished experimentally in frogs by synchronizing the pulses of a microwave signal with the animal's heartbeat and the beaming the radiation at the chest area.

The document added that "a frequency probably could be found which would provide sufficient penetration of the chest wall of humans to accomplish the same effect" -- heart attacks.

The report said that another potential antipersonnel use of microwaves could be based on their effect on the blood brain barrier, which regulates the exchange of vital substances between brain cells and the circulatory system.

## About Spectrum Analyzers

Saturday, March 13, 1999

Sent to all neuro-influence victims:

Most who see this message got another one yesterday in which Pat Mougey states that a non-victim who represents himself as "our helper" is touting an HP spectrum analyzer as our magic bullet.

I get emotional when this happens, because my training and experience allow me to see the folly in thinking a spec analyzer will do anything more than deplete our resources.

Here is a less emotional list of the reasons:

1. Spectrum analyzers are useful only for conventional radio signals with one "carrier" or "center" frequency.

If the perps were to use spread spectrum, you would require extensive computer power to even catch a hint of a spread spectrum harassment signal.

2. Harassment signals, if conventional radio signals, have a good chance of being applied in short bursts, which would require the user to either monitor with an LP camcorder then review, or watch the screen constantly.
3. Radio signal effects, according to all I've read, REPEAT, up and down the radio spectrum. This is like the fact that, say, the "C" key on a piano has a similar sound as you play successive C's up and down the keyboard.

A spectrum analyzer, at least an affordable one, could easily miss the band in use, assuming the signal had a single carrier frequency.

4. Spectrum analyzers can easily be fed FAKE signals. Fake everything is the stock in trade of perps - throughout history. Just ask the MKULTRA survivors, or EM victims who have attended their meetings.

5. Spectrum analyzers can easily be disabled, like every other kind of appliance, and we have all had that happen countless times.

I had an ELF spectrum analyzer set up, and the perps teased me with two 60 second pure 5.00000 Hz signals, about 5 minutes apart. After that, I never saw a single reading, even during the heaviest harassment.

6. Especially keep in mind that the perps know we are unlikely to afford our own spectrum analyzers, and can opt to shut down during visits by experts with spectrum analyzers.

Keep in mind these two notable instances of temporary perp shutdown:

- Emeryville, Ontario, where a government expert found no traces of unusual radio signals at the Tamia family home
- Cheryl Welsh's visit by an expert, who blandly reported on the CNN spot that he found no signals at her home.

7. Finally, keep in mind that even if you got a burst of signal that coincides with a harassment effect, you still need to convince a jury, who will likely be threatened or bribed.

Why am I being so negative? Because I honestly feel that unless a victim has money to spare, we must not elevate having a spectrum analyzer to some sort of Holy Grail status.

Sincerely,

Eleanor White

## **General Purpose Spiel**

### **February 20, 2005**

This page is to share advice based on what has worked reasonably well at educating the public as to what is actually going on in the field of gang stalking and electronic harassment. Overall, we must be honest, not state things we don't have solid backup for as facts, and admit there are things we don't know. Such don't-know items as: how the classified electronic weapons work, or the twisted motives behind feeding stalking gang members, our neighbours and the community vicious lies about us, and using electronic harassment weapons on us.

---

#### \*\*\* QUICK TIPS \*\*\*

This page is to gather nuggets of useful ideas which I've found work well when picketing, handing out flyers, or other discussions with the public. These comebacks can be useful when dealing with incredulous family, friends, police, doctors, or other authorities:

1. When a visitor to a picket site walks up and asks what this is all about, I find that a short description like: "It's about gang stalking and electronic weapons which can torture you through the walls of your house" gets the visitor's attention (as it should!)
2. When a skeptic says he/she "just doesn't believe any of this", I've had success saying: "Well, the U.S. Congress had a bill pending which proposed controls on electronic anti personnel weapon technology, and the Russian Parliament has passed a bill mentioning some of the technology into law. The U.S. Congress retracted the specific references to electronic anti personnel weapons, but they would not have been there at all unless the electronic anti personnel weapons were known about by the sponsor."

(It's the Russian Federal Weapons Law, Article 6.)

3. When a skeptic says "If these weapons exist, then why don't they use 'em on so-and-so [Osama bin Laden, Saddam Hussein, Slobodan Milosevic, or any other bad guy in the headlines]?"

Answer #1: "How do you know he's not doing what the powers that be actually want to happen?"

Just because he's at war with the U.S. doesn't mean he is necessarily not doing the U.S.'s bidding. It's impossible to know if a given conflict is or is not part of a hidden agenda of U.S. leadership. Leaders throughout history have started fights to gain power. Even happens on school playgrounds."

Answer #2: "Probably because so-and-so [the bad guy] is doing things that our government feels are useful. Not every goal of government is made public."

4. When someone tries to snare you into saying you are talking about

the dreaded C-word, "conspiracy", say in response: "No, actually I call it CRIME."

That has worked well and derails the skeptic's line of interrogation. If a naysayer refuses to accept that, remind him or her that every crime with two or more participants is a 'conspiracy.'

5. When challenged like this: "Well if gang stalking and electronic harassment is going on, how come I don't hear about it in the newspapers, on TV, or on the radio?"

Try this: "International shortwave broadcasters DO talk about gang stalking and electronic harassment."

<http://www.raven1.net/patriotradio.htm>

...for details.

6. When asked "So WHO exactly is doing this, and WHY?", I respond that first of all, we have no proof of EXACTLY who or why, but we do know that all levels of elected government provide air tight cover by way of denial and ridicule. If government had no connection with these crimes, different agencies and people would show a variety of responses. What we see are responses which are rigidly lock-stepped, a clear symptom of coordinated denial.

I then say "It is the guess of many members of our group, and political researchers, that the world's ultra rich are behind the gang stalking and electronic harassment programs. Since they 'own' visible governments, they are the only group who could force government to such extreme denial and ridicule for decades."

Congressman Ron Paul (Texas) spoke about such a covert coalition of the world's ultra rich and powerful here:

<http://www.raven1.net/ronpaulowg.htm>

"George Bush SENIOR used to refer to 'the New World Order' but was evasive about it's makeup and purpose. This may be the secret name for the 'ruling ultra rich'. My guess as to the purpose is the age-old purpose of slavery, but using the newest technology, slavery in which the slaves don't know they are slaves." Building a corps of high-tech equipped harassers, schooled in deception and cover, could be a way of preparing to neutralize resistance when the New World Order decides to go public. This is similar to the Nazi brownshirts.

"Another very likely purpose is large scale reduction of population by way of withholding cures to major diseases and deliberately administering poisoned medicines and vaccines which kill slowly so as not to arouse suspicion among the common people."

There are other government and government-backed crimes happening which also point to an iron-fisted world dictatorship in the works:

<http://www.raven1.net/othcrime.htm>

7. When a visitor asks "So how many of you are there?"

Answer: "In March of 2002, Cheryl Welsh, founder of CAHRA, had been in touch with about 1,600 people world wide who state they are being targetted.

Some statistics supporting a figure of around one person in a hundred are here:

<http://www.raven1.net/stats.htm>

8. When a skeptic says "You don't have any evidence", try this:

"Since when did personal testimony stop being evidence?"

"Either personal testimony IS evidence, or is NOT evidence.

"If it is NOT evidence, then we must immediately nullify every single court case in which conviction was based on testimony. Even PHYSICAL evidence does not get admitted into court unless someone's personal TESTIMONY confirms it.

"If it IS evidence, then the matching accounts of several hundred witnesses world wide IS SIGNIFICANT EVIDENCE.

"Since courts use testimony as evidence, testimony IS evidence, and it cannot be said we don't have evidence."

And do not forget the un-classified electronic weapon capable devices available to the public.

<http://www.raven1.net/uncom.htm>

9. When the public asks "how do you know that someone is being targetted":

- The QUICK answer is: "If they are forced suddenly awake at exactly the same time every night, and that time is often exactly 2:00 am, 3:00 am or 4:00 am."

- The MORE COMPLETE answer is: "See raven1.net and click on "Effects-Survey" and "Effects-Results" in the Main Menu on the cover page."

10. When asked "What can this stuff do to you?", try this:

"It can destroy both your mental and physical health, and make it impossible to hold a job."

11. This is a response to a skeptic who asked "If there really WERE electronic weapons, wouldn't they have been used on the World Trade Center/Pentagon terrorists by now?"

"The people who now possess electronic weapons were probably also in favour of the attacks. Those attacks almost certainly served some secret purpose."

"Electronic weapons can be used to control, and to distract, very efficiently, without the target having any awareness they are in use."

12. I sometimes try to speak in such a way as to paint MKULTRA and today's electronic weapon harassment as a long but SINGLE event. Although today, it appears that a very large number of groups have the electronic weapons, the MKULTRA-era (and COINTELPRO) crimes certainly appear to be a major source of what is happening today. Such programs were discussed by congressional committees, but no decisions were ever made which could stop such covert activity.

Since the 1977 Senate hearings did nothing to stop MKULTRA-era activity in the future, and in the late 1990s, the U.S. government backed out of the [Nuremburg Protocols](#), there was nothing stopping continuation of the activity using electronics and in the private sector.

13. When skeptics imply that there is no difference between mind control and subliminal advertising, I ask them how they would like to be put into excruciating pain that no one in their vicinity could feel. I ask them how in that situation they would enjoy being laughed at by their companions.

Then I ask them how they would like it if this kept up for the rest of their life.

14. "Good news" is always welcome. Tell the listener that the good news is that this entire mess can disappear like the early morning fog if the public were simply made fully aware of the full range of gang stalking crimes and the available electronic harassment technology. This sounds too easy, but it works very well on the picket site and in my opinion is also true.
15. "Electronic weapons" is a darn good, quick way to describe the technology because it DOES NOT RULE OUT the CLASSIFIED technology. (By contrast, "electromagnetic" DOES rule out the classified technology and is not the best choice, in my opinion anyway.)

16. "Radar-based" is a darn good, quick way to describe the electronic voice-to-skull technology if you only have someone's attention for a moment. It is backed up by the Joseph Sharp success, at [v2succes.htm](#) ...and is diagrammed on [hypno2s.gif](#)

- 16A. HOWEVER, it is wisest to NOT allow a visitor to walk away thinking that TODAY'S harassment equipment can be shielded against. Our observations show clearly that TODAY'S signals can penetrate excellent conventional electromagnetic shielding, and cannot be detected using ordinary equipment. Stray bits of microwave in the vicinity are not the same thing as signals which are locked in SYNCHRONIZATION with our effects. Only one case of perfect synchronism is known, and in that case, commercially made faraday cages did not stop the harassment.

The way I handle TODAY'S signals is to say to a visitor:

"Today's signals ARE NOT ESP. But today's signals BEHAVE MUCH LIKE ESP. Like ESP, the signals are not stopped by electromagnetic shielding. Like ESP research, today's signals have not been detectable using conventional detection equipment. It is likely today's signals use a type of physics not known to scientists without the highest security clearances."

That has not triggered any you-are-nuts responses because it disclaims that ESP is being used for the advanced electronic attacks.

17. "Nobody, especially politicians and reporters, really wants to be the bearer of bad news", is a good quick response when asked why nobody is doing anything. Undoubtedly true, too.
18. "To KINDLE public interest, in hopes they will press government for INVESTIGATION, DISCLOSURE and ENFORCEMENT" is a good quick way to say why you are out there with a picket sign.
19. Often you can tell that a visitor to your picket site is only looking for a really quick answer. When they ask "What is gang stalking?", I reply:  
  
"Gang stalking is bullying by a group of people at home, out in the community, on the road, and at the workplace. Electronics is sometimes used to make the harassment worse."
20. A colleague has observed that the victims of sexual abuse by Catholic clergy are now believed.  
  
BELIEVED, in spite of the fact that what backs up their allegations was initially just the number of complaints. Eye witnessing was seemingly rare or non-existent, and there were no visible marks as far as I know.  
  
Just like us?  
  
This seems to me like one more helpful comeback when dealing with a skeptical public, doctors, government agencies or police!
21. If the visitor appears to be SCHOOL AGE, I recommend you suggest that gang stalking and electronic harassment make a GREAT TERM PAPER TOPIC. A number of books on these topics are referenced on our web site which the students can quote.
22. A skeptic may ask "What makes YOU so important that the perps would choose you for all this harassment?"  
  
I respond that a survey of 12,000 people in 2002 came back with about one person in a hundred saying they had most or all of the symptoms. I'd say that one person in a hundred is also backed up by other statistics about workplace mobbing and stalking and harassment. That's a lot of people, and many simply don't have a reason why.  
  
That is what is unusual about gang stalking and electronic harassment in the twenty first century. We can't explain it.
23. Reminding your listener about this fact, from victim Roy Bercaw:  
  
"All too many people do not believe that something is real unless it is reported in the media."
24. If someone says you and/or other members of our group look/talk like nut cases, you can answer:

"What you are seeing is an ENTIRELY JUSTIFIABLE REACTION to years of 24 hours a day harassment. You would look the same if it were happening to you."

25. A good way to finish off your spiel, and this is entirely honest and no exaggeration, is to say "...and all we are really asking is that government do their jobs".

=====

## MAKING FRIENDS WITH SQUIRRELS

Eleanor White

*Y'll never see, in this old worl'  
As beautiful as, the common squirrel!*

The common squirrel is everywhere. Watching, hanging out with, and giving treats to them is one great, and not too expensive way to cope with the burden of endless organized stalking and electronic harassment. Their ways of communicating with you and with each other are endearing beyond words!

[This squirrel photo story](#) has got to be the ultimate!

Some endearing facts about squirrels:

- In sunlight, with a squirrel near your feet, you can see that they have light stripes, much like cats
- The reason these intelligent little animals will bite off the tip of a peanut shell when you toss one to them is to prevent the peanut from germinating (growing) when they bury it
- Squirrels fortunate enough to have a tree den (hole in a tree, as opposed to a nest made of twigs and leaves) allow only blood relatives to live there with the original owner. In bitter cold weather, they allow non-relatives to pack inside overnight, but they must leave the following morning.
- Baby squirrels purr loudly, like cats

- When you toss a treat to a squirrel, they will often pick it up, turn back towards you, and look right at you for a couple of seconds, which seems to be their saying "thank you"

Squirrels are very intelligent and curious. In a group of squirrels, a few can become almost as friendly as a cat or dog. They know very well that any sudden movement by a human could cause them to be injured, so they will always be slightly wary, even with people they have come to love. If you are trying to become friends with a squirrel, the most important thing is to understand their wariness, and do all you can to show them you will do them no harm.

The best way to befriend any wild animal is to feed them. Not all foods are healthy for these little friends. Here are some ideas on feeding squirrels:

Provide WATER in any way you can. Most parks do not have places where squirrels can get a drink easily. Bring a water dish with you and place it about ten feet from where you stand to feed them. They will REALLY appreciate it in dry times, and that includes winter when there is no snow on the ground. Remember how dry your mouth can get on cold winter days! Sometimes, in a park, you can find a hollow place you can fill with water to help the squirrels for a day or so.

When setting water out in winter for animals, don't worry about the water freezing. Animals, squirrels included, know how to scrape a dish of ice so they can drink the ice shavings. Squirrels scrape dishes or cups so well that they scoop out most of the ice. \*Avoid\* metal dishes to prevent their getting lips or tongues frozen to the metal.

\* If you are attempting to get a sick or injured squirrel to take water, which squirrels under stress don't always think to seek out, FLOAT each peanut on the surface of a small, flat cup of water, such as a lid for a plastic food storage cup. This will induce the squirrel to take water with each peanut, significantly improving their health no matter what their condition. In extremely dry weather, winter or summer, treat your squirrel colony to a bag of ice cubes. I have seen squirrels take ice cubes up into trees to enjoy them!

Heavy DEW, frost, or snow and ice provide water to squirrels. They really need extra water in dry years, such as 2002, when almost no dew was deposited for the entire warm weather season. If you notice that the grass isn't dripping wet in the early morning, think about leaving a water dish for squirrels.

Only feed wildlife UNSALTED food of any kind. Squirrels do not always have a source of drinking water close by.

Only feed BREAD when the squirrels have plenty of water (or snow) to drink. Bread on a hot summer day is a bad idea.

PEANUTS are the least expensive. It is very important that the peanuts be roasted. Raw peanuts can make squirrels sick. You can make sure peanuts are roasted by their colour. (Unroasted peanuts are white, and their shells are soft and hard to open.)

FILBERTS (Hazel nuts) and ALMONDS are more expensive, and the squirrels love them. Filberts and almonds are good to leave when you want to be sure the birds don't get them before the squirrels do.

Here are some things I've found to be helpful in making friends with these delightful, cute, furry friends:

Feed squirrels near trees or bushes, if possible. This gives the squirrel a quick way to escape if he/she should become frightened for some reason.

Always let the SQUIRREL decide how close to come. When you walk towards a squirrel, stop about ten to fifteen feet from the squirrel. You can click your mouth to encourage the squirrel to come closer, but when the squirrel stops, let that be his/her choice. Gently toss the food so it lands in front of the squirrel. Try to aim for a spot where there are no deep grass or leaves. That will make it easier for the squirrel to see the food.

Keep all body movements as quiet and slow as possible. Loud talking or laughing will scare squirrels. When you toss the food, try to keep loose clothing from flapping when your arm moves. Keeping your voice soft will make the squirrels feel comfortable.

Especially, keep your FEET in one spot. The squirrels know your feet carry a lot of weight, and can do them harm. When you look around, if possible, keep your feet in one place without lifting them. I recommend not moving your feet or walking until all squirrels are ten or fifteen feet from you. Keeping your feet perfectly STILL while a squirrel is on the ground near you and eating is a VERY good way to make the squirrel feel comfortable near you.

I recommend not trying to make the squirrel take food from your hand. If a squirrel does this, let it be the squirrel's choice. Many squirrels will take food from your hand, but you can see that most squirrels are nervous doing this. I have had squirrels accidentally put their mouths over my finger instead of taking a peanut from me. They did not bite. This was an accident, and the squirrels did not mean to take my finger.

DO NOT TRY TO GET SQUIRRELS TO TAKE FOOD FROM YOUR HAND IN COLD WEATHER, OR WITH OTHER SQUIRRELS NEARBY. I got one nasty bite because a squirrel wanted to be sure HE got the peanut one cold autumn evening, instead of the other squirrels nearby. He did not want to attack me, he was just nervous, cold, and hungry.

When sitting down or at a picnic table, squirrels may hop up on the bench, the table, or even your lap. You don't need to be afraid of squirrels. Their claws are sharp so they can quickly climb trees, but if the squirrel touches you or climbs on you, you can be sure it just wants food, and does not want to put you in any danger. If you are nervous having a squirrel touch you, just stand up, and the squirrel will move away.

When you finish feeding and want to leave, if a squirrel is on the ground eating near you, step backwards (CHECK that no squirrel is behind you) and walk way around the squirrel. This is very good courtesy and will help that squirrel feel comfortable coming near you when you feed it again.

Squirrels rarely carry diseases. They even build two or more nests so they can move around every few days to avoid fleas and other parasites. When I was bitten, the hospital emergency doctor told me I did not need rabies shots, and I did not even need an antibiotic. The bite healed quickly with no problems.

Most squirrels in southern Ontario are "Eastern Grey" type. Eastern Greys include the all black squirrels too - black or dark brown is just one colour they come in.

If you should find a baby squirrel on the ground, you can pick it up and keep it WARM. Stay at that place for half an hour, and see if a mother squirrel comes looking for the baby. Keep the baby WARM. After half an hour, and you see no other squirrels in the area, take it home, put it in a cardboard box with soft clothing like tee shirts. DO NOT USE TERRY CLOTH TOWELS, BECAUSE THESE CAN BREAK THE CLAWS ON BABY SQUIRRELS.

Lightly cover the baby's body with a fold of cloth, and be sure the baby can keep warm using its own body heat. Do not use a heating pad or heat lamp.

Wait a FULL HOUR, then you can try a medicine dropper with Gatorade. NEVER COW'S MILK. If the baby has a full coat of fur and its eyes are open, a peanut taken out of the shell can be offered. Small sections of fruit may be offered. BUT WAIT AT LEAST AN HOUR after bringing the baby home, say squirrel rehabilitators. If dropper feeding doesn't work, offer a shallow water dish, placed on a cookie sheet, as squirrels often tip dishes by stepping on the rim.

It is URGENT that you immediately call the Ontario Ministry of Natural Resources, or a nearby veterinarian, and ASK HOW TO CONTACT THE NEAREST LICENCED SQUIRREL REHABILITATOR. It is against the law in Ontario to rehabilitate an orphaned

baby squirrel yourself. In Hamilton, the SPCA has been unable to help me when I found an orphaned baby. It was local veterinarians who helped me find a licenced squirrel rehabilitator.

The most adorable thing I learned about squirrels when I found the baby was that they PURR, just like cats. I am so lucky to count squirrels among my friends in high places!

**Consider helping wildlife survive by using the image below as a flyer or poster, especially in dry and/or urban areas. RIGHT click to save the image to your PC:**

# REMEMBER ...

**AS YOU DRINK THAT WATER, OUR BEAUTIFUL WILDLIFE COMPANIONS NEED IT TOO! AND IN CITIES, IT IS VERY HARD FOR THEM TO FIND!**

**WEATHER HAS BECOME INCREASINGLY DRY SINCE THE LATE 1990s. \*\*DEW\*\* HAS ALMOST DISAPPEARED. PLEASE CONSIDER SETTING OUT WATER DISHES TO PREVENT THE SUFFERING AND DEATH OF OUR BEAUTIFUL WILDLIFE.**

**PLEASE CONSIDER DOING THIS IN COOL BUT DRY WEATHER AS WELL ... WINTER CAN BE MERCILESSLY DRY, AND THERE ARE NO LAWN SPRINKLERS! WILDLIFE WILL EAT ICE GLADLY!**

**THEY WILL APPRECIATE IT!**

And let's not forget the squirrel's dear little cousin:

## **Satanic Ritual Abuse Makes Gang Stalking Seem Likelier**

**May 2, 2004**

Members of the general public don't believe gang stalking can be happening. Below are some news clippings about the equally horrible Satanic Ritual Abuse (SRA) arena, which in fact practices the type of child torture that produces MKULTRA-style "Manchurian Candidates".

Hopefully, illustrating these SRA atrocities will help the open minded visitor to this site realize that there are terrible things happening all the time, and that complacency will allow such atrocities to continue. Time to start asking tough questions of public servants and get real investigation started into both gang stalking and SRA.

=====

Modesto Bee - January 15, 1994  
in the Family of Satan? Survivors Recall Terrors  
By Dennis Roberts, Bee staff writer

"Ann recalls going to playgrounds and beaches to lure youngsters. Sometimes they would explore poor neighborhoods, searching for homeless or neglected children. "They would assess the value of a child," Ann said, deciding whether to keep the child as a member of the cult, sacrifice the youngster, or use the child in pornography.

"They film children being abused or tortured," Ann said. The victimizers are so clever they are never caught. "You have to understand they have a lot of contacts," Ann said.

She recalled hearing that films were shipped out of the country, duplicated, then sent back in. That way, if the films were apprehended it would seem they were filmed outside the United States.

Like Belinda, Ann never confronted her adoptive parents. Only her mother is still living. Both Ann and Belinda said they witnessed numerous sacrifices, animal and human. Local therapists Pam Clare and Bob Robinson believe clients like Belinda and Ann actually experienced the events they describe. Robinson has been treating ritual abuse cases since 1984, and is dealing with about a dozen clients who say they were victims.

Clare has worked with about 50 victims of satanic ritual abuse since 1987.

Robinson said survivors are "usually female, multi-gifted and talented ... multiple personality ... with unusual strength." Outwardly, he said, victims may look normal, even perfect. They may attend private schools. Their parents are often professionals with plenty of money. They may even be influential church members."

Killer Says He 'Found God' after Arrest -  
By Paul B. Johnson

"In the taped confession played in court on the second and final day of his sentencing hearing, Wood remembers thunder in the sky as he methodically dismembered the body of the girl he had kidnapped from a Pocatello neighborhood June 29 and murdered the next morning on the banks of the Snake River in Idaho Falls. Wood said he paused before he threw Jeralee's body into the river. He remembered the rain beating on his face as he held part of her above his head. 'I felt like it was as an offer to Satan,' he said."

Satanic Cults Rumors of Darkness:  
No Proof of Cults Found in Kamiah,  
But Expert Warns Parents Not to  
Stand Back By Sandra L. Lee Kamiah

"The rumors of satanism devil worship began several months ago, centering around a small band of teen-agers. They had taken to wearing black. They were into heavy metal music, the kind with lyrics about death and violence. And they carved letters into the flesh of their own arms."

"\*Multigenerational satanic cults are the ones where abuse and sacrifice most often occur. These groups attract adults with promises of sex with children. It is here that children may be bred for sacrifice, or witness sacrifice of loved pets or even friends. Here, they may be buried alive by their parents and rescued by satanic priests to encourage bonding away from the family and with the group."

"Many of the documented instances involving blood and sacrificial rites and sexual and physical abuse were decided to be unsuitable for printing in the Lewiston Tribune." "Greg P. Hassakis of Boise, a therapist who works with survivors of ritual abuse."

November 29, 1992  
Tales of Satanism Divide Mansfield; City Agonizes Over Children's  
Claims  
by Michael A. Hobbs; Plain Dealer Reporter -  
Mansfield

"Months after two baby sitters were convicted of sexually assaulting more than 60 children at First Presbyterian Church in Mansfield, rumors persist that there is much, much more to the case. Like murder,

cannibalism, mutilation of corpses, forcing children to consume bodily fluids and waste and animal blood. All part of satanic rituals.

Children and their parents insist at least 18 more church members should be charged. Police and the Richland County prosecutor's office, which recently opened its thick files on the case to the public, have found no evidence to corroborate the wild accusations.

And a grand jury declined to indict anyone else after hearing testimony from 30 children."

Diocese Reviews Satanic Slay Allegations

<http://www.phillyburbs.com/pb-dyn/news/1-04292004-291600.html>

By JOHN SEEWER

The Associated Press

TOLEDO, Ohio - The Toledo Diocese is taking another look at a woman's previously dismissed claims of satanic sexual abuse by Roman Catholic priests now that one of the clergymen has been charged with the "ritualistic" slaying of a nun 24 years ago.

The Rev. Gerald Robinson was arrested last week on charges of strangling and stabbing Sister Margaret Ann Pahl, 71, about 30 times during Easter weekend 1980. Her body, covered by an altar cloth and surrounded by burning candles, was found in a hospital chapel.

Pahl's body was posed to look as if she had been sexually assaulted, but investigators said they found no evidence of sexual activity.

Bishop Leonard Blair announced Tuesday that a seven-member diocesan review board will re-examine allegations made by a woman who told the panel in June that when she was a child she was physically and sexually abused by several priests, including Robinson.

The panel had a regularly scheduled meeting on Wednesday, but what was discussed is confidential, said diocese spokeswoman Sally Oberski.

The woman described satanic ceremonies in which clergy members placed her in a coffin filled with cockroaches, forced her to swallow what she believed to be a human eyeball and penetrated her with a snake "to consecrate these orifices to Satan."

The diocese had decided not to forward the woman's claims to authorities because it could not substantiate them.

However, the allegations were brought to the attention of prosecutors in a letter received in December, assistant prosecutor Gary Cook said Monday. He would not say who sent the letter.

Three other people have said they also were abused by priests in rituals, said Catherine Hoolahan, an attorney who represents about a dozen people with abuse lawsuits against the Toledo Diocese. They all mentioned similar occurrences, she said, but she would not provide details.

Not all those who made the claims have filed lawsuits, and none of the allegations were against Robinson, she said.

Hoolahan said the victims, both men and women, could not recall how many priests abused them.

"Remember, they were children," she said. "They were scared to death, but they remember a bunch - a large number."

The diocese said it decided to re-examine the allegations because of findings by two of its own investigators. The bishop's announcement did not elaborate, and diocese officials did not return calls Wednesday.

Police Capt. Mike Murphy would not say if police were investigating the abuse allegations.

Louis Schlesinger, a forensic psychology professor at John Jay College of Criminal Justice in New York City, said people committing ritual crimes seek sexual gratification by posing their victims in certain ways or by making them say certain things or act in a certain way.

It is also common for a sexual offender to kill one of his victims but not the others, he said.

But Kenneth Lanning, a former FBI agent who studied hundreds of cases of alleged satanic abuse, said he found no documented examples of organized group ritual abuse.

"There were cases of bizarre crimes or people dabbling in the occult who performed bizarre crimes," he said. But he said there no evidence of a group or cult coordinating the abuse.

Robinson remained in jail Wednesday. Supporters said they had enough money and property to meet his \$200,000 bail but needed to complete the paperwork. The diocese is not paying the priest's legal bills.

The Toledo Diocese includes 323,000 Catholics in northwestern Ohio. It has 159 parishes and 287 priests.

=====  
Analysis: Springtime for Satanists 4/30/04 (UPI) By Uwe Siemon-Netto, UPI Religious Affairs Editor Washington "details surrounding the Rev. Robinson's arrest suggest ghoulish practices by clergymen, at least in this case...." "This pretty much corresponds to the type of abuse I have been told about when counseling survivors of Satanist rituals five or six years ago in Connecticut," the Rev. Bernard Bush, a Jesuit priest and psychotherapist who now runs a retreat house in Los Altos, Cal., told United Press International Friday. "I have learned about such rituals conducted by priests," he added. "However, they did not involve murders." But Bush confirmed that patients he counseled reported to him black masses in which "children and freshly aborted fetuses were sacrificed." "Not so long ago, a young man came to me asking for help. He had become part of a Satanist cult and participated in blood sacrifices (of animals), but was working himself up to participating in human sacrifices." The Rev. Mather, who has investigated incidents involving possible Satanist activities throughout the United States and acts as a consultant to police departments around the country, said so far he has not seen any evidence that priests had murdered humans in Satanist rites. However, both Bush and Mather said that liturgical churches -- Catholic, Episcopal and Lutheran -- are the preferred target of the most lethal group of devil worshipers, the so-called Traditionals, whom Mather described as highly secretive and usually very well educated....Satanists attack denominations according to their respective beliefs. For example, Mather saw black wax on the altar of

an Episcopal church in Plymouth, Mass., indicating that a black mass had been celebrated there. "Later police discovered the remains of animals sacrificed in this area." And in a Roman Catholic church in West Yarmouth, Mass., feces were found on the altar. In a Lutheran congregation, also in New England, the woman Catholic researcher found that the pastor celebrated the Eucharist in the sanctuary every Sunday morning, sticking faithfully to his liturgical manual, the Lutheran Book of Worship. But at night he would conduct black masses in the basement, again using the same book yet turning all their essential Eucharistic texts on their head....And the Rev. Bush told UPI of a discovery that the day care operation of a non-liturgical, Presbyterian congregation had been taken over by a Satanist cult. And that, he said, was also in Ohio, where the Catholic Church is now reeling from the Robinson case."

### SILENT SUBLIMINALS

Only your mind can hear. Your ears hear nothing but your mind  
hears and accepts the powerful suggestions.

You can safely play these tapes anywhere - in a car, while  
watching TV or listening to your favorite music, while working  
or even as silent sleep programming.

Warning: Everyone within listening range of the tape will be  
programmed by the suggestions. To assure yourself that strong  
suggestions are recorded on the tape, take it to any Radio  
Shack store, play it on their stereo and read the output with  
a Radio Shack Sound Level Meter (Item 33-2050)

How To Use The Tapes: Increase the volume until it is just  
below any tape noise. If your stereo deck has treble and bass  
controls, you can boost the subliminal output by increasing  
the treble and decreasing the bass. The player then emits a  
strong but inaudible frequency - modulated 60 - 90 decibel  
signal that is received and demodulated by the human ear.

Technical Information The Suggestions are delivered on a carrier frequency of 14,800 cps, via a low-distortion sinewave signal. This frequency is slightly above the audible hearing range but the frequency-modulated (FM) signal is still strongly impinging upon the diaphragm of the ear. The listener can expect his subconscious mind to accept the suggestions with repeated listening.

[EW: Note the similarity to Lowery patent, [US 5,159,703](#)]

How To Use The Tapes: Increase the volume until it is just below any tape noise. If your stereo deck has treble and bass controls, you can boost the subliminal output by increasing the treble and decreasing the bass. The player then emits a STRONG BUT INAUDIBLE frequency-modulated 60 to 90 decibel signal that is received and demodulated by the human ear.

The Silent Subliminals is a new brain / mind technology developed by an aerospace engineer. This new technique has been licensed to Valley of the Sun Audio /

Video for this incredible new tape series. Patent pending.  
Note: Because the frequency is beyond normal recording range, the tape cannot be duplicated:

Examples of Suggestions:

- "Every day you become thinner and thinner"
- "You now lose weight and full fill your goals"
- "You attain your weight goals and the body you desire"
- "You have the power and ability to attain the perfect weight and body you desire"
- "You have the self-discipline to lose all the weight you want"
- "You live a healthy lifestyle and eat a proper diet"
- "You now quit smoking because it serves you"
- "You lose all desire to smoke"
- "You accept that you now quit smoking"
- "You are a non-smoker"
- "Quit smoking. Quit smoking. Quit smoking"
- "You have the willpower to do anything you want to do"
- "You have great self- discipline and you use it to quit smoking"
- "Cigarettes disgust you"
- "You are very sure of yourself"

- "You accept that you have great inner courage"
- "You are self-reliant and self-confident"
- "You are full of independence and determination"
- "You have great inner courage"
- "Every day in every way, you become more and more self-confident"
- "You feel good about yourself"
- "You project a very positive self-image"
- "You are relaxed and at ease"
- "You detach from worldly pressures and experience an inner calm"
- "Negativity flows through you without affecting you"
- "You accept other people as they are"
- "You peacefully accept the things you cannot change, and change the things you can"
- "You are at peace with yourself, the world and everyone in it"
- "Your mind is like calm water"
- "You direct your time and energy to manifest your desires"
- "You have the self-discipline to accomplish your personal and professional goals"
- "Every day, you increase your self-discipline"
- "You do what you need to do and stop doing what doesn't work"
- "You freely choose to do what you need to do"
- "You are assertive and feel good about yourself"
- "You now focus your energy upon attaining success"
- "You know exactly what you want and you go for it"
- "You can accomplish whatever you set out to do"
- "Be ultra-successful. Be ultra-successful and become wealthy"
- "Every day in every way, you become more successful"
- "Your creative thinking opens the door to monetary abundance"
- "You easily achieve and maintain a penile erection"

- "Your body performs perfectly during sex without thinking about it"
- "A hard, firm erection is your natural response to sexual stimulation "
- "You can make love for a long before you ejaculate"
- "Every day you feel better about your sexual prowess and your ability to achieve and maintain a hard, firm erection"

## Organized Stalking Stats

October 30, 2009

---

The following statistics support the allegations made on this web site:

- A U.S. Department of Justice special report, January 2009, NCJ 224527, titled Stalking Victimization in the United States, which is available at this link (as of January 2009):

<http://www.ojp.usdoj.gov/bjs/pub/pdf/svus.pdf>

[Click here](#) if the above link is broken

... reported the following statistics showing the occurrence of multiple stalking cases within the total of all U.S. recorded stalking cases in the 2005-2006 time range:

"During a 12-month period an estimated 14 in every 1,000 persons age 18 or older were victims of stalking - About half (46%) of stalking victims experienced ...

\* 11% of victims said they had been stalked for 5 years or more.

[Eleanor White commenting: "5 years or more" is very characteristic of organized stalking, which usually never stops because the justice systems refuse to acknowledge this crime.]

\* An average of 10.6 percent of some 4.6 million stalking and harassment victims don't know the stalkers, since they're complete strangers.

[Eleanor White commenting: Almost all organized stalking is carried out by strangers, or people the target may know by sight but has never interacted with. The "4.6 million" figure above includes both stalking and harassment victims.]

\* Appendix table 3. Number of stalking offenders perceived by victim

One 62.1%

Two 18.2%

Three or more 13.1%

Number unknown 6.5%

Total Number of victims 3,398,630

[Eleanor White comment: Adding three or more to number unknown, gives 19.6%. That suggests ~666,000 U.S. stalking victims may be organized stalking targets.]

- See also [an affidavit](#) from an attorney who pressed NCVC (U.S. National Center for Victims of Crime) for a statement of the size of their call volume relating to "gang" or "organized" or "group" stalking. The NCVC estimated thousands of such calls per year, and a volume of about 10% of all their calls.
- The following statistic covers all reports to police relating to infractions of Canada's "Criminal Harassment" law, which covers stalking. The statement is from Statistics Canada, the federal agency which maintains statistics for all areas of Canadian life, including policing. The following statement was in response to Eleanor White's request for a checkoff item on Canada's Uniform Crime Reporting (UCR) system denoting harassment reports involving simultaneous multiple harassers (Chief, Policing Services Program responding):

*"Thank you for e-mail of Jan. 17. There is no need to add a new field to the national Uniform Crime Reporting (UCR) survey to collect information on multiple harassers, as a field already exists for the identification of multiple accused persons for all criminal incidents reported to police. As an example, of the 10,756 incidents of criminal harassment reported to police in 2006, 1,429 of these (or 13%) involved more than one accused."*

That is one criminal harassment report in eight, a very significant percentage. While not all of these would strictly fall under the organized stalking category, this rate of simultaneous multiple harassment reports at least hints that organized stalking may not be as rare as the general public seems to think.

- A report on stalking posted by the American Journal of Psychiatry on their web site, journal reference 158:795-798, May 2001, states ... 6 out of 201 (3%) respondents reported multiple stalkers... Compare that with the 13% in criminal harassment cases above, reported by Statistics Canada, and clearly, stalking by multiple stalkers is a very real crime, acknowledged by mainstream professionals.

Note carefully: There is such a thing as PROXY stalking, in which a single stalker, motivated by amorous interest or mental illness, enlists helpers. Organized stalking is NOT proxy stalking, but rather is stalking by a group totally independent of whomever originally submitted the target's name to the stalking group. The stalking group typically has no knowledge of why the target's name was submitted, and instead is given a lie, often that the target is a pedophile, to motivate the group stalking effort.

Link to the AJP article: <http://tinyurl-com/3fa3yw>

[Alternate link](#) if above link is broken.

- Article: "The Course and Nature of Stalking: A Victim Perspective"  
Authors: Sheridan, Davies, Boon  
Source: Howard Journal of Criminal Justice, Volume 40, Number 3, August 2001 , pp. 215-234(20)

In 5% of the cases (5/95), there was more than one stalker. pp.219

"In 5 cases perpetrators were part of a group..", pp.219

"... [40%] of victims (38) said that friends and or family of their stalker had also been involved in their harassment... This is a surprising find as the popular view of a stalker is of a lone and secretive individual." pp.222 [COMMENT: This suggests that the above "5%" cases may have been groups other than family or friends, which is suggestive of organized stalking as opposed to simple proxy stalking. Organized stalking involves groups which are networked everywhere, while proxy stalking has a single stalker who has a very personal focus on the target. Organized stalking groups also work on more than one target, unlike proxy stalking.]

Typical of organized stalking: "In 15% of cases, the victim could provide no possible reason for their harassment" pp.226

- Statistics from the book [Mobbing: Emotional Abuse in the American Workplace](#) show that in Sweden, about 3.5% of the working population is subject to mobbing, which is organized stalking in the workplace. 3.5% of working people is roughly 1 person in a hundred total, and is in line with the organized stalking survey above.
- Statistics from the U.S. Centers for Disease Control concerning harassment and stalking cases give an overall figure for the U.S. of 4.5 people per 100 as having been harassed or stalked at one time. Our informal survey's result of about one person per 100 being targeted by organized stalking fits well within that 4.5 per 100 figure. (Source, ABC News)
- Statistics from the British (government) Home Office state that 1,900,000 people in the United Kingdom were victims of stalking or harassment at any one time as of the year 2001. That is about 3 people per hundred. Here again, the organized stalking survey's 1 person in a hundred is not out of line. Most interesting is that roughly 45% of the stalking victims are MEN! That suggests a very different picture from the conventional view of stalking victims being mostly women, and may well point toward the type of stalking described here, on this web site. [Click here](#) for documentation. (Graph below shows all harassment offences, not specifically stalking.)

\* Oh, and here's another British stalking statistic:

Home Office Research Study 210 (1998 data):

### THE OFFENDERS

The majority (79%) of incidents involved only one perpetrator.  
[...]

Strangers were responsible in 34 per cent of incidents.

Those statistics are strongly suggestive of organized stalking, 79% involved one perpetrator means 21% involved more than one perpetrator. And stalking by strangers is the usual situation with organized stalkers. Even if only 5% of stalking cases are organized, 5% of a million cases could mean 50,000 organized stalking cases in the United Kingdom alone.

- For people who have trouble believing that stalkers can be as cunning and nasty as reports from organized stalking targets indicate, a psychiatrist, below, refers to one statistic indicating that as many as one stalker in just eight fits the observed personality of organized group stalkers:

Excerpt from book STALKING, by Debra A. Pinals, MD, Group for the Advancement of Psychiatry, page 42:

### CLINICAL ASPECTS OF STALKING

"Finally the fourth type of stalking in the Sheridan and Boon (2002) taxonomy, sadistic stalking, comprised 12.9% of their sample. This construct looked at the victim in particular, identifying the victim as someone worth "spoiling" (Sheridan & Boon, 2002), and as someone who would not understand why they were targeted.

"The target and stalker began as low-level acquaintances, but eventually the stalker's motive is to frighten or demoralize the victim. For example, the stalker might reorder or remove private papers, or leave notes inside the victim's car, leaving the victim with some evidence that the stalker has had contact with their personal property.

"As the behavior progresses, the stalkers attempt to take full control of the victims' lives. Their behavior may include implied threats (e.g. pictures of tombstones) and sexual communications that intimidate or humiliate but would avoid directly pointing to the perpetrator.

"There may be reprieves from the behavior, which may later resume after a hiatus. These types of stalkers may work hard to defy police."

[Screen shot](#) of the page from the original book.

- A survey like [this one on this site](#) was posted on a high volume news site in 2002. 12,000 people visited that survey in 24 hours. About 120 sent in responses saying they had most or all of the symptoms of organized stalking. That is 1 person in a hundred,

primarily in North America. (To be on the safe side, a rate of one organized stalking target per 1,000 people is probably better.)

This document is a working document. The current version is being circulated for consultation. It is not an official publication of STOA or of the European Parliament.

This document does not necessarily represent the views of the European Parliament.

---

## **AN APPRAISAL OF THE TECHNOLOGY OF POLITICAL CONTROL**

### **ABSTRACT**

The objectives of this report are fourfold: (i) to provide Members of the European Parliament with a guide to recent advances in the technology of political control; (ii) to identify, analyse and describe the current state of the art of the most salient developments; (iii) to present members with an account of current trends, both in Europe and Worldwide; and (iv) to develop policy recommendations covering regulatory strategies for their management and future control.

The report contains seven substantive sections which cover respectively:

- (i) The role and function of the technology of political control;
- (ii) Recent trends and innovations (including the implications of globalisation, militarisation of police equipment, convergence of control systems deployed worldwide and the implications of increasing technology and decision drift);
- (iii) Developments in surveillance technology (including the emergence of new forms of local, national and international communications interceptions networks and the creation of human recognition and tracking devices);
- (iv) Innovations in crowd control weapons (including the evolution of a 2nd. generation of so called 'less-lethal weapons' from nuclear labs in the USA).
- (v) The emergence of prisoner control as a privatised industry, whilst state prisons face increasing pressure to substitute technology for staff in cost cutting exercises and the social

and political implications of replacing policies of rehabilitation with strategies of human warehousing.

(v) The use of science and technology to devise new efficient mark-free interrogation and torture technologies and their proliferation from the US & Europe.

(vi) The implications of vertical and horizontal proliferation of this technology and the need for an adequate political response by the EU, to ensure it neither threatens civil liberties in Europe, nor reaches the hands of tyrants.

The report makes a series of policy recommendations including the need for appropriate codes of practice. It ends by proposing specific areas where further research is needed to make such regulatory controls effective. The report includes a comprehensive bibliographical survey of some of the most relevant literature.

---

## **AN APPRAISAL OF THE TECHNOLOGY OF POLITICAL CONTROL**

### **EXECUTIVE SUMMARY**

The objectives of this report are fourfold: (i) to provide Members of the European Parliament with a guide to recent advances in the technology of political control; (ii) to identify, analyze and describe the current state of the art of the most salient developments; (iii) to present members with an account of current trends, both in Europe and Worldwide; and (iv) to develop policy recommendations covering regulatory strategies for their management and future control. The report includes a large selection of illustrations to provide Members of Parliament with a good idea of the scope of current technology together with a representative flavour of what lies on the horizon. The report contains seven substantive sections, which can be summarised as follows:

#### **THE ROLE & FUNCTION OF POLITICAL CONTROL TECHNOLOGIES**

This section takes into account the multi-functionality of much of this technology and its role in yielding an extension of the scope, efficiency and growth of policing power. It identifies the continuum of control which stretches from modem law enforcement to advanced state suppression, the difference being the level of democratic accountability in the manner in which such technologies are applied.

#### **RECENT TRENDS & INNOVATIONS**

Taking into account the problems of regulation and control and the potential possessed by some of these technologies to undermine international human rights legislation, the section examines recent trends and innovations. This section covers the trend towards militarisation of the police technologies and the paramilitarisation of military technologies with an overall technological and decision drift towards worldwide convergence of nearly all the technologies of political control. Specific advances in area denial, identity recognition, surveillance systems based on neural networks, discreet order vehicles, new arrest and restraint methods

and the emergence of so called 'less lethal weapons' are presented. The section also looks at a darker side of technological development including the rise of more powerful restraint, torture, killing and execution technologies and the role of privatised enterprises in promoting it.

The EU is recommended to: (i) develop appropriate structures of accountability to prevent undesirable innovations emerging via processes of technological creep or decision drift; (ii) ensure that the process of adopting new systems for use in internal social and political control is transparent, open to appropriate political scrutiny and subject to democratic change should unwanted or unanticipated consequences emerge; (iii) prohibit, or subject to stringent and democratic controls, any class of technology which has been shown in the past to be excessively injurious, cruel, inhumane or indiscriminate in its effects.

## **DEVELOPMENTS IN SURVEILLANCE TECHNOLOGY**

This section addresses the rapid and virtually unchecked proliferation of surveillance devices and capacity amongst both the private and public sectors. It discusses recent innovations which allow bugging, telephone monitoring, visual surveillance during night or day over large distances and the emergence of new forms of local, national and international communications interceptions networks and the creation of human recognition and tracking devices.

The EU is recommended to subject all surveillance technologies, operations and practices to: (i) procedures ensuring democratic accountability; (ii) proper codes of practice consistent with Data protection legislation to prevent malpractice or abuse; (iii) agreed criteria on what constitutes legitimate surveillance targets, and what does not, and how such surveillance data is stored, processed and shared. These controls should be more effectively targeted at malpractice or illegal tapping by private companies and regulation further tightened to include additional safeguards against abuse as well as appropriate financial redress.

---

The report discusses a massive telecommunications interceptions network operating within Europe and targeting the telephone, fax and email messages of private citizens, politicians, trade unionists and companies alike. This global surveillance machinery (which is partially controlled by foreign intelligence agencies from outside of Europe) has never been subject to proper parliamentary discussion on its role and function, or the need for limits to be put on the scope and extent of its activities. This section suggests that that time has now arrived and proposes a series of measures to initiate this process of reclaiming democratic accountability over such systems. It is suggested that all telephone interceptions by Member States should be subject to consistent criteria and procedures of public accountability and codes of practice. These should equally apply to devices which automatically create profiles of telephone calls and pattern analysis and require similar legal requirements to those applied for telephone or fax interception.

It is suggested that the rapid proliferation of CCTV systems in many Member States should be subject to a common and consistent set of codes of practice to ensure that such systems are used for the purpose for which they were authorised, that there is an effective assessment and audit of their use annually and an adequate complaints system is in place to deal with any grievances by ordinary people. The report recommends that such codes of practice anticipate technical change including the digital revolution which is currently in process, and ensure that

each and every such advance is subject to a formal assessment of both the expected as well as the possible unforeseen implications.

## **INNOVATIONS IN CROWD CONTROL WEAPONS**

This section addresses the evolution of new crowd control weapons, their legitimization, biomedical and political effects. It examines the specific introduction of new chemical, kinetic and electrical weapons, the level of accountability in the decision making and the political use of such technologies to disguise the level of violence being deployed by state security forces. The research used to justify the introduction of such technologies as safe is reanalysed and found to be wanting. Areas covered in more depth include CS and OC gas sprays, rubber and plastic bullets, multi-purpose riot tanks, and the facility of such technologies to exact punishment, with the possibility that they may also bring about anti-state retaliatory aggression which can further destabilise political conflict.

This section briefly analyses recent innovations in crowd control weapons (including the evolution of a 2nd. generation of so called 'less-lethal weapons' from nuclear labs in the USA) and concludes that they are dubious weapons based on dubious and secret research. The Commission should be requested to report to Parliament on the existence of formal liaison arrangements between the EU and the USA to introduce such weapons for use in streets and prisons here. The EU is also recommended to (i) establish objective common criteria for assessing the biomedical effects of all so called less lethal weapons and ensure any future authorization is based on independent research; (ii) ensure that all research used to justify the deployment of any new crowd control weapon in the EU is published in the open scientific press and subject to independent scientific scrutiny, before any authorization is given to deploy. In the meantime the Parliament is asked to reaffirm its current ban on plastic bullets and that all deployment of devices using peppergas (OC) be halted until such a time as independent European research on its risks has been undertaken and published.

## **NEW PRISON CONTROL SYSTEMS**

This section reports on the emergence of prisoner control as a privatised industry, whilst state prisons face increasing pressure to substitute technology for staff in cost cutting exercises. It expresses concern about the social and political implications of replacing policies of rehabilitation with strategies of human warehousing and recommends common criteria for licensing all public and private prisons within the EU. At minimum this should cover operators responsibilities and prisoners rights in regard to rehabilitation requirements; UN Minimum Treatment of Prisoners rules banning the use of leg irons; the regulation and use of psychotropic drugs to control prisoners; the use of riot control, prisoner transport, restraint and extraction technologies. The report recommends a ban on (i) all automatic, mass. indiscriminate prisoner punishment technologies using less lethal instruments such as chemical

---

irritant or baton rounds; (ii) kill fencing and lethal area denial systems; and (iii) all use of electro-shock, stun and electric restraint technology until and unless independent medical evidence can prove that it safe and will not contribute to either deaths in custody or inhumane treatment, torture or other cruel and unusual punishments.

## **INTERROGATION, TORTURE TECHNIQUES AND TECHNOLOGIES**

This section discusses the use of science and technology to devise new efficient mark-free interrogation and torture technologies and their proliferation from the US & Europe. Of particular concern is the use and abuse of electroshock devices and their proliferation. It is recommended that the commercial sale of both training in counter terror operations and any equipment which might be used in torture and execution, should be controlled by the criteria and measures outlined in the next section.

## **REGULATION OF HORIZONTAL PROLIFERATION**

The implications for civil liberties and human rights of both the vertical and horizontal proliferation of this technology are literally awesome. There is a pressing need for an adequate political response by the EU, to ensure it neither threatens civil liberties in Europe, nor reaches the hands of tyrants. The European Council agreed in Luxembourg in 1991 and in Lisbon in 1992 a set of eight Common Criteria for Arms Exports which set out conditions which should govern all decisions relating to the issue of licences for the export of arms and ammunition, one condition of which was "the respect of human rights in the country of final destination." Other conditions also relate to the overall protection of human rights. However these eight criteria are not binding on member states and there is no common interpretation on how they should be most effectively implemented. However, a code of conduct to achieve such an agreement was drawn up and endorsed by over 1000 Non-Governmental Organizations based in the European Union.

Whilst it is recognised that it is not the role of existing EU institutions to implement such measures as vetting and issuing of export licences, which are undertaken by national agencies of the EU Member States, it has been suggested by Amnesty International that the joint action procedure which was used to establish EU regulations on Export of Dual use equipment could be used to take such a code of practice further.

Amnesty suggest that the EU Member States should use the Joint Action procedures to draw up common lists of (i) proscribed military, security and police equipment and technology, the sole or primary use of which is to contribute to human rights violations; (ii) sensitive types of military, security or police equipment and technology which has been shown in practice to be used for human rights violations; and (iii) military, security and police units and forces which have been sufficiently responsible for human rights violations and to whom sensitive goods and services should not be provided. The report makes recommendations to help facilitate this objective of denying repressive regimes access to advanced repression technologies made or supplied from Europe.

## **FURTHER RESEARCH**

The report concludes by proposing a series of areas where new research is required including: (i) advanced area denial and less-lethal weapon systems; (ii) human identity recognition and tracking technologies; (iii) the deployment of 'dum-dum' ammunition within the EU; (iv) the constitutional issues raised by the U.S. National Security Agency's access and facility to intercept all European telecommunications; (v) the social and political implications of further privatisation of the technologies of political control and (vi) the extent to which European based companies have been complicit in supplying equipment used for torture or other human rights violations and what new independent measures might be instituted to track such transfers.

## ACKNOWLEDGEMENTS

Whilst sole responsibility for the accuracy and contents of this study rest with the authors, the Omega Foundation would like to thank the following individuals and organisations for providing information and assistance to compile this report:

Professor Jonathan Rosenhead of the London School of Economics, London, U.K; Simon Davies and David Banisar of the London and Washington branches of Privacy International; Tony Bunyan & Trevor Hemmings of Statewatch, London; John Stevenson, House of

Commons, London; Julian Perry Robinson of Sussex University; Detlef Nogala of the University of Hamburg; Heiner Busch Of CILIP, Berlin; Hilary Kitchen of the Local Government Information Unit, London; The Committee For The Administration of Justice, Belfast; David Eisenberg, Center For Defense Information, Washington; Terry Allen of Covert Action Quarterly, Washington; Brian Wood of the International Secretariat of Amnesty International, London; Kate O'Malley of Amnesty International U.K. Section London; Human Rights Watch, Washington; Lora Lumpe and Steven Aftergood of the Federation of American Scientists, Washington; Brian Martin of the University of Wollongong, Australia; Cathy Rodgers of RDF Films, London; Martyn Gregory Films, London and Dr. Ray Downs, Program Manager of Technology Development, U.S. National Institute for Justice, Washington.

Thanks are due to the Press officers serving the Northern Ireland Office, the British Army and RUC Information Offices between 1976 - 1982, who provided the comprehensive statistical data required to perform the quantitative analysis outlined in section 5.

We would also like to thank David Hoffman for permission to use many of the black and white images used to illustrate the text.

# **AN APPRAISAL OF THE TECHNOLOGY OF POLITICAL CONTROL**

## **PROJECT No I/STOA/RSCH/LP/POLITCON.1**

### **1. INTRODUCTION**

The purpose of this report is to explore the most recent developments in the technology of political control and the major consequences associated with their integration into processes and strategies of policing and internal control. A brief look at the historical development of this concept is instructive.

Twenty five years ago, the British Society for Social Responsibility in Science warned that a new technology of repression was being spawned in an effort to contain the conflict in Northern Ireland. (B.S.S.R.S., 1972). In 1977, members of BSSRS took this concept further in a seminal work, the Technology of Political Control (Ackroyd et. al., 1977). BSSRS analysed the role and function of this technology in terms of a new apparatus largely created as a result of research and development undertaken as part of Britain's colonial wars, (most recently in the ongoing Northern Ireland conflict), and whose main purpose was quelling internal dissent. According to critical U.S. NGO research organisations of that period such as NARMIC & NACLA, work on this technology of political control was further enhanced by technical developments achieved by the United States' military industrial complex, largely as a result of the extended global military interests of the U.S., and its deployment of highly technocratic counter-insurgency doctrines, particularly during the Vietnam War.<sup>1</sup>

Up until that period, shrewd commentators on technology and society such as Haabermas Ellul (1964) recognised the potential risk of a specific loss of traditional freedoms and civil liberties associated with broad technological advances in the future, such as surveillance. However, BSSRS was the first group of scientists and technologists to identify and characterise a whole class of technology whose principal designated function was to achieve social and political control.

In Ackroyd et. al (1977), BSSRS. defined the technology of political control as "a new type of weaponry." "It is the product of the application of science and technology to the problem of neutralising the state's internal enemies. It is mainly directed at civilian populations, and is not intended to kill (and only rarely does). It is aimed as much at hearts and minds as at bodies." For BSSRS, "This new weaponry ranges from means of monitoring internal dissent to devices for controlling demonstrations; from new techniques of interrogation to methods of prisoner control. The intended and actual effects of these new technological aids are both broader and more complex than the more lethal weaponry they complement."

The concept of technology has many and varied interpretations. As emphasised in the interim report (Omega 1996), the definition adopted for the purposes of this work encompasses not just the 'hardware' - the tools, instruments, machines, appliances, weapons and gadgets (i.e. the apparatus of technical performance); but also the associated standard operating procedures, routines, skills, techniques (the software); and the related forms of rationalised human social organisations, arrangements, systems and networks (the liveware) of any programme of political control.<sup>2</sup> In other words, it is insufficient to describe developments in a purely technical sense, it is also necessary to consider these technologies as social and political factors.<sup>3</sup>

When first published in 1977, 'The Technology of Political Control' anticipated that the deployment of these technologies in Northern Ireland, which acted as a laboratory for their future development, would spread to mainland Britain. For BSSRS, governments would no longer reach for the machine gun when threatened at home. It will have plastic bullets which kill only occasionally, depth interrogation which tortures without leaving physical scars. It uses electronics for telephone tapping and night surveillance; computers to build files on actual or potential dissidents. NARMIC also warned that this technology was not just reserved for low intensity conflicts overseas but would return to be used to quell dissent on the homefront.(NARMIC, 1971) Little by little this has happened.

There have been quite awesome changes in the technologies available to states for internal control since the first BSSRS publication, a quarter of a century ago. So many new technologies have been created that specialist publications have emerged to service the burgeoning market.<sup>4</sup> In the limited space available here, it is not possible to describe all the many new technologies which have been developed. However, a broad selection of illustrations have been incorporated (at the end of the report), to give MEPs a good idea of the scope of the current technology and a representative flavour of what lies on the horizon. An extensive bibliography has been provided for those Members of the European Parliament wishing to explore specific areas and implications in more depth.<sup>5</sup>

For the purposes of this report and its focus on appraising subsequent developments in the technology of political control, it is worth focussing on the same areas of Technology covered by BSSRS, which have not already been the subject of recent STOA reports. Whilst the need to examine the critical role of Northern Ireland in the evolution of some of these technologies makes the overall assessment somewhat anglo-centric, every effort has been made to show evidence of the proliferation and impact of this technology in other European countries and

worldwide by naming the actual companies and corporations involved in both manufacture and supply.

Taking into account the multi-functionality of much of this technology, Section 2. of this report explores its role and function and the continuum of control which stretches from modern law enforcement to advanced state suppression. With specific reference to problems of regulation and control and the potential some of these technologies present for undermining international human rights legislation, Section 3. provides a analysis of recent trends and innovations. Section 4. explores current developments In surveillance technology, from bugs and wiretapping to new global systems of mass supervision and telecommunications surveillance already approved by the European Union. Section 5. discusses the political and biomedical implications of innovations in crowd control weapons including the prospect of a 2nd. generation of paralysing and disabling technologies currently being developed by former US nuclear weapons laboratories, together with the secret arrangements to incorporate such technologies into EU policing practices and export markets. Section 6. is devoted to the emergence of new prison control systems and the prospects of privatised multinational prison corporations transforming crime control into industry. Section 7. presents evidence of Research & Development devoted to the creation of new interrogation, torture techniques & technologies which leave few marks and the growing role of EU member states and their allies in creating export markets for supplying this equipment to tyrannical states.

The report ends with an examination of the whole question of future regulation of the vertical & horizontal proliferation of this dual use technology, in the face of relatively weak

---

democratic controls on its manufacture, deployment and export. Some of these technologies are highly sensitive politically and without proper regulation can threaten or undermine many of the human rights enshrined in international law, such as the rights of assembly, privacy, due process, freedom of political and cultural expression and protection from torture, arbitrary arrest, cruel and inhumane punishments and extra-judicial execution. Proper oversight of developments in political control technologies is further complicated by the phenomena of 'bureaucratic capture' where senior officials control their ministers rather than the other way round Politicians both at European and sovereign state level, whom citizens of the community have presumed will be monitoring any excesses or abuse of this technology on their behalf, are sometimes systematically denied the information they require to do that job. Therefore possible areas of policy change are presented at the end of each section, which could bring much of this technology back within the reach of democratic control and accountability, as well as suggesting some further areas of future research.

## **2. THE ROLE & FUNCTION OF POLITICAL CONTROL TECHNOLOGIES**

Throughout the Nineties, many governments have spent huge sums on the research, development, procurement and deployment of new technology for their police, para-military and internal security forces.<sup>6</sup> The objective of this development work has been to increase and enhance each agency's policing capacities. A dominant assumption behind this

technocratisation of the policing process, is the belief that it has created both a faster policing response time and a greater cost-effectiveness. The main aim of all this effort has been to save policing resources by either automating certain control, amplifying the rate of particular activities, or decreasing the number of officers required to perform them.<sup>7</sup>

The resultant innovations in the technology of political control have been functionally designed to yield an extension of the scope, efficiency and growth of policing power. The extent to which this process can be judged to be a legitimate one depends both on one's point of view and the level of secrecy and accountability built into the overall procurement and deployment procedures. There are essentially two opposing schools of thought.

The first school of thought identifies developments in policing technology with efficiency, cost-effectiveness and modernisation. This school believes that the police and internal security agencies require the most up to date forms of equipment to fight crime, mob-rule and terrorism. Sophisticated law enforcement is viewed as value free and state security agencies are considered to be in the best position to determine their operational requirements. (See Applegate 1969), New technologies aid the police by ensuring that messages are rapidly received and dealt with, personnel are freed for other duties and overall efficiency is enhanced. Only those with something to hide need fear the enlarged data gathering capacities of police computers. Modern riot technology is presented as a much preferred non-lethal alternative to the use of guns and the police should always be allowed to use 'minimum force' when dealing with actual or potential law breakers. Existing controls and regulations governing the use of this technology are considered by adherents of this school to have been adequately designed to ensure that no misuse takes place. Advanced police technology is therefore understood in this context as an invaluable aid to upholding the freedoms cherished as inalienable rights by citizens living in Western Liberal democracies. Its export to other countries sharing the same economic and ideological views, is viewed as an opportunity to help modernise law enforcement and buttress mutual stability, law and order.

---

### 3

The opposing school of thought on the other hand views police technology and the associated 'policing revolution' quite differently (See Manwaring-White, 1983). They believe that innovations in political control technology has put powerful new tools at the disposal of states in need of technical fixes for their most pressing and intractable social and political problems. It is at the point where authority fails that repression begins (Hoefnagels, 1977) and at that point an illegitimate government will use more force just to keep the lid on. (See Chart.1a.) As the crisis deepens, further force is required and the role of technology in such a situation is to act as a force amplifier. Once the shaded area is reached (Chart.1b), terror becomes the only government service.

New police technologies are perceived to be one of the most important factors in attempting sub-state conflict control. Such 'control' is viewed as more apparent than real, but serves the purpose of disguising the level of coercive repression being applied. This school of thought argues that once operationally deployed, these technologies exert a profound effect on the character of policing. Whether these changes are symptom or cause of the ensuing change in policing organisations, a major premise of this school of thought is that a range of unforeseen

impacts are associated with the process of integrating these technologies into a society's social, political and cultural control systems.

The full implications of such developments may take time to assess but they are often more important and far reaching than the first order intended effects. It is argued that one impact of this process is the militarisation of the police and the para-militarisation of the army as their roles, equipment and procedures begin to overlap. This phenomena is seen as having far reaching consequences on the way that future episodes of sub-state violence is handled, and influencing whether those involved are reconciled, managed, repressed, 'lost' or efficiently destroyed. Police telematics and their use of databanks (the subject of an earlier STOA report in this area) for example, facilitate prophylactic or pre-emptive policing as 'data-veillance' is harnessed to target certain strata or classes of people rather than resolve individual crimes. (E.g. the proposed introduction of the Eurodac system which will utilise biometric information to control and restrict the entry of all Asylum seekers into Europe, building in the process a new technopolitics of exclusion).<sup>8</sup> New surveillance technology can exert a powerful 'chill effect' on those who might wish to take a dissenting view and few will risk exercising their right to democratic protest if the cost is punitive riot policing with equipment which may lead to permanent injury or loss of life. As highlighted in the interim report, the human response to the deployment of such technologies may be counter-intuitive and render progressive, deployments of newer more powerful systems either obsolete or dysfunctional. This possibility is discussed in greater detail below.

Any evaluation of these opposing schools of thought needs to identify common ground since few would doubt that there are fundamental changes taking place in the types of tactics techniques and technologies available to internal security agencies for policing purposes. Yet many questions remain unanswered, unconsidered or under-researched. Why for example did such a transformation in the technology used for socio-political control dramatically change over the last twenty five years? Is there any significance in the fact that former communist regimes in the Warsaw Treaty Organisation and continuing centralised economic systems such as China, are beginning to adopt such technologies? What are the reasons behind a global convergence of the technology of political control deployed in the North and South, the East and West? What are the factors responsible for generating the adoption of such new policing technology - was it technology push or demand pull? What new tools for

### **Chart 1. Declining Legitimacy & Repressive State Violence**

policing lie on the horizon and what are the dynamics behind the process of innovation and the need for a vast arsenal of different kinds of technology rather than just a few? Are the many ways this technology affects the policing process fully understood? Who controls the patterns of police technology procurement and what are the corporate influences?

In deciding between these schools of thought, we need to determine the extent to which future innovation is about the maintenance of existing power relationships, rather than citizen protection. In other words, the extent to which their deployment ensures that only certain permitted ways of behaving are allowed to continue without interference. Since this technology provides a continuum of flexible responses or options, perhaps the overriding factor is the extent to which its development and deployment is subject to democratic control. Is the process of regulation democratically accountable or are there more hidden processes at work? Do these technologies proliferate, if so why and how and what are the most important mechanisms or processes involved?

Since all this technology represents an unequal distribution of coercive power, it is important for Members of the European Parliament to be satisfied that sufficient democratic control is exercised to ensure that such powers are not abused and that unwanted technological and decision drift is adequately checked. Whilst the Interim Report (Omega, 1996) provided a brief analysis of the role and function of specific classes of political control technology, what follows is an analysis of the state of the art in certain key areas of this technology which the authors believe warrant further scrutiny.

### 3. RECENT TRENDS & INNOVATIONS

Since the 'Technology of Political Control' was first written (Ackroyd et al., 1977) there has been a profusion of technological innovations for police, paramilitary, intelligence and internal security forces. Many of these are simple advances on the technologies available in the 1970's. Others such as automatic telephone tapping, voice recognition and electronic tagging were not envisaged by the original BSSRS authors since they did not think that the computing power needed for a national monitoring system was feasible. The overall drift of this technology is to increase the power and reliability of the policing process, either enhancing the individual power of police operatives, replacing personnel with less expensive machines to monitor activity or to automate certain police monitoring, detection and communication facilities completely. A massive Police Industrial Complex has been spawned to service the needs of police, paramilitary and security forces, evidenced by the number of companies now active in the market.<sup>9</sup> An overall trend is towards globalisation of these technologies and a drift to increasing proliferation, without much regard to local conditions.

One core trend has been towards a militarisation of the police and a paramilitarisation of military forces in Europe. Often this begins via special units involved in crisis policing, such as the Special Weapons and Tactics Squads such as the Grenz Schutz Gruppe in Germany; the Gendarmeries National in France; the Carabinieri in Italy; and the Special Patrol Group in the UK or the federal police paramilitary teams in the United States (FBI, DEA & BATF) that adopt the same weaponry as their military counterparts. Then a growing percentage of ordinary police are trained in public order duties and tactics which incorporate some element of firearms training. The tactical training is often a mirror image of the low intensity counter-revolutionary warfare tactics adopted by the military (See Chart 2). In Britain, where 10% of police on a revolving basis train according to a military style manual,

| Insurgent Phases | Sequence of Insurgent | Counter Action |
|------------------|-----------------------|----------------|
|------------------|-----------------------|----------------|

|                                                        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | British Interpretation | With Aim of Achieving |  |                      |                   |                                                                                                                                                                                                                                                                                                                                                                                                      |    |                                            |
|--|----------------------|-------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|--------------------------------------------|
|  |                      |                   | <p>bases are established in relatively safe areas. Increased activity in daylight. More ambitious operations by formed units with some perhaps from a neighbouring country.</p> <p>A whole series of operations ranging up to actions between formed units with a simultaneous situation of widespread guerrilla activity. Areas dominated by guerrillas may be enlarged and declared liberated.</p> |    |                                            |
|  |                      | Open<br>Offensive | <p>As above but having escalated to include regular land and perhaps sea and air forces of the opposing sides. The revolutionary movement now assumes the form of a peoples war against the government. Large areas dominated by the guerrillas.</p>                                                                                                                                                 | 4. | Almost using the techniques of Limited War |
|  | Counter<br>Offensive | Decision          | <p>Negotiations leading to a cessation of hostilities with the revolutionaries either in a position to achieve their aim without further fighting or with the legal government back in control.</p>                                                                                                                                                                                                  |    |                                            |

**Chart 2. The Pattern of Revolution**

---

'Public Order - Tactical Options' using batons, shields and colonial style military wedges (See Fig.1[*No figures provided with report*]) (Northam, 1988). In the US, one study uncovered a pattern of former and reserve soldiers being intimately involved in police operations with

almost 46% of trainees drawing expertise from "police officers with special operations in the military." (Krasker & Kapella, 1997).

In some European countries, that trend is reversed, e.g. Last year, the Swiss government (Federal Council and the Military Department) made plans to re-equip the Swiss Army Ordnungsdienst with 118 million Swiss Francs of less-lethal weapons for action within the country in times of crisis. (These include 12 tanks, armoured vehicles, tear gas, rubber shot and handcuffs). The decision was made by decree preventing any discussion or intervention. Their role will be to help police large scale demonstrations or riots and to police frontiers to 'prevent streams of refugees coming into Switzerland'.<sup>10</sup> A disturbing case of police deploying riot weapons against a peaceful festival occurred last year in Zurich on 1 May, using water cannon laced with CN irritant and rubber bullets below the advised 20 metres threshold, shows the process of convergence well.<sup>11</sup>

Convergence is the process whereby the technology used by police and the military for internal security operations converges towards being more or less indistinguishable. The term also describes the trend towards a universal adoption of similar types of technologies by most states for internal security and policing. Security companies now produce weapons and communications systems for both military and the police.(Fig.2). Such systems increasingly represent the muscle and the nervous system of public order squads. For example, according to BSSRS(1985), GCHQ's telephone interception network was used to track UK miners during the 1984-5 strike, so that when miner's cars were stopped, police knew who they were and punishment or dissuasion could be targeted appropriately.(See Fig.3)

**3.1 Area Denial** replaces personnel guarding either areas or perimeters. It has involved deploying technology which can either create punishment when its limits are infringed or systems with built in intelligence which can both locate the point of infringement and activate a corrective response.<sup>12</sup> Sophisticated varieties incorporate punishment mechanisms which vary from pain induced by electroshock to kill fences and fragmentation mines. Many European companies make electrified razor coil stun fences e.g. Bollore, Cogny & Santerne in France; Birmingham Barbed Tape, Gallagher and Armbell, in UK; Reinaet Electronics in the Netherlands. Many South African companies remain in the market from the 'snake of fire' days, e.g., Edair; Grinaker; Microfence.<sup>13</sup> Nowadays, the South African Government has introduced new regulations on the maximum voltage for stun fences and new criteria for not mixing barbed wire and stun capacities - if snagged a victim can't be repelled and continues receiving current. Europe needs to adopt best practice in this regard. It would also be useful if existing research justifying company claims for sub-lethality of stun fences should be made public. These systems are not cattle fences and the same criteria cannot be used.

Neural networks with semi-intelligence are being introduced to protect sensitive control zones. Systems produced by companies, such as Productivity Systems in France and Cambridge Neurodynamics in the UK, can allow pattern recognition and an ability to learn. Neural systems will play an increasing role in sentinel duties as robot technology improves. Already prototypes known as insectoids are being evolved to cheaply replace personnel on routine guard duties that require 24 hours cover and can be programmed to track the fence and carry either lethal or sub-lethal weapons (Knoth, 1994).

The Non-lethal Warfare programmes discussed in 5.6 below are also exploring area denial technology. For example, *Defense Week* reported (19/11/96) that Alliant Tech Systems (USA) is working on alternatives to anti-personnel land mines. One of these is a wire barrier system dispersed by the Volcano Mine System. The company received a 10 month contract in early August [1996] from the Army Armament, Research, Development and Engineering Center at Picatinny Arsenal, New Jersey. The company is still to decide what kind of wire to use for the canister-launched area-denial weapon system, but the general idea is that the Volcano system will shoot out thin wire with something like fish hooks along it in enough mass to cover a soccer-field sized area. "It's intended to snag. It's not going to kill you" said marketing manager Tom Bierman.

**3.2 Surveillance Technologies** are one of the fastest growing areas of the technology of political control and a key problem is how to deal with the torrent of information it yields. The term covers a vast range of products and devices but the overall trend is towards miniaturization, more precise resolution through the adoption of digital technology and increasing automation so that the technology can be more effectively targeted. The technology also parallels political shifts in targeting so that instead of investigating crime, a reactive activity, the fastest growing trend is towards tracking certain strata, social classes and races of people living in red-lined areas before any crime is committed. Such a form of proactive policing is based on military models of gathering huge amounts of low grade intelligence. With new systems such as Memex, it is possible to quickly build up a comprehensive picture of virtually anyone by gaining electronic access to all their records, cash transactions, cars held, etc. Such pre-emptive policing means the majority are ignored and policing resources are more tightly focused on certain groups. Such powerful forms of **artificial intelligence** need continuous assessment. They have an important role to play in tracking criminals. The danger is that their infrastructure is essentially a massive machinery of supervision that can be retargeted fairly quickly should the political context change.

**Automatic fingerprint** readers are now common place, and many European companies make them<sup>14</sup> (see Fig 5). But any unique attribute of anatomy or personal style can be used to create a **human identity recognition system**. For example Cellmark Diagnostics(UK) can **recognise genes**; Mastiff Security Systems(UK) can **recognise odour**, Hagen Cy-Com(UK) and Eyedentify Inc.(USA) can recognise the pattern of capillaries at the back of the retina; whilst AEA Technology (UK) are capable of **signature verification**. Over 109 companies in Europe are known to be supplying such **biometric systems**. **DNA fingerprinting** is now a reality and Britain has set up the first DNA databank, and is already carrying out mass dawn raids of over 1000 people at targeted suspects.<sup>15</sup> Plans are being drawn up by at least one political party to DNA profile the nation from birth.<sup>16</sup> The leading edge companies are racing towards developing **face recognition systems** which they see as being able to revolutionise crime customs and intruder detection as well as service access control. Whilst fully reliable systems are perhaps five years off, prototype systems have been developed in France<sup>17</sup>, Germany<sup>18</sup> the UK<sup>19</sup> and the USA<sup>20</sup>.

**Night vision technology** developed as a result of the Vietnam war has now been adapted for police usage (See Fig.6). Particularly successful are **heli-tele surveillance** versions which allow cameras to track human heat signatures in total darkness. The art of **bugging** has been made significantly easier by a rapidly advancing technology and there is a burgeoning European market.<sup>21</sup> Many systems described in Section 4 (below), do not even require physical entry into the home or office. For those who can secure access to their target room,

there is a plethora of devices, many pre-packaged to fit into phones, look like cigarette packets or light fittings and some, like the ever popular PK 805 and PK 250, that can be tuned into from a suitable radio. However, the next generation of covert audio bugs are remotely operated, for example the multi-room monitoring system of Lorraine Electronics called DIAL (Direct Intelligent Access Listening) allows an operator to monitor several rooms from anywhere in the world without effecting an illegal entry. Up to four concealed microphones are connected to the subscribers line and these can be remotely activated by simply making a coded telephone call to the target building. **Neural network bugs** go one step further. Built like a small cockroach, as soon as the lights go out they can crawl to the best location for surveillance.<sup>22</sup> In fact Japanese researchers have taken this idea one step further, controlling and manipulating real cockroaches by implanting microprocessors and electrodes in their bodies. The insects can be fitted with micro cameras and sensors to reach the places other bugs can't reach.<sup>23</sup> **Passive Millimeter Wave Imaging** developed by the US Millitech corporation can scan people from up to 12 feet away and see through clothing to detect concealed items such as weapons, packages and other contraband. Variations of this through-clothing human screening under development (by companies such as the US Raytheon Co.), include systems which illuminate an individual with a low-intensity electromagnetic pulse. A three side very-low X ray system for human useage, in fixed sites such as prisons, is being developed by Nicolet Imaging Systems of San Diego. **Electronic monitoring** of offenders or 'tagging', where the subject wears an electronic bracelet which can detect if they have relocated from their home after certain hours etc, has entered into use in the 1990's after being developed to regulate prison populations in the USA. (Schmidt, 1988). **Satellite tracking** of VIPs, vehicles, etc., is now facilitated by the once military Global-Positioning System(GPS) which is now available for commercial uses. **Vehicle recognition** technologies are discussed in Section 4 below.

**3.3 Data-veillance** - The use of telematics by the police has revolutionised policing in the last decade and created the shift towards pre-emptive policing. It is properly the focus of an earlier STOA report on the technology of political control. Some of the most recent trends are discussed in Section 4 below. A comprehensive analysis of how such equipment has led to widespread abuse of civil liberties and human rights has been published by Privacy International (1995) and includes 100 pages of all the companies involved in servicing the security requirements of the regimes mapped in Fig.38.

Using data profilers, torturing states have used these systems to compile death lists. For example, the Tadiran computer supplied to Guatemala and installed in the control center of the national palace. According to a senior Guatemalan military official, "the complex contains an archive and a computer file on journalists, students, leaders, people on the left, politicians and so on." Meetings were held in the annex to select assassination victims. A US priest who fled the country after appearing on such a death list said, "They had printout lists at the border crossings and at the airport. Once you got on that - then its like bounty hunters."<sup>24</sup> Within Europe, systems, such as that produced by Harlequin, allow the automatic production of maps of who phoned whom to show friendship networks. Other companies such as Memex described above, allow entire life profiles of virtually anyone in a state having an official existence. Photographs and video material can be included in the record and typically up to 700 other databases can be hoovered at any one time, to extend the data profile in real time.<sup>25</sup>

Significant changes in the capacity of new surveillance systems can be anticipated with the advent of new materials such as Buckminster Fullerene, which will lead to minaturisation of systems by several orders of magnitude.<sup>26</sup>

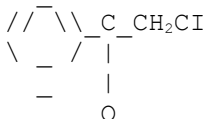

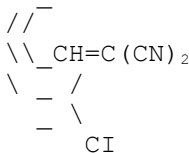

**3.4-Discrete Order Vehicles** - Hundreds of companies are now manufacturing police and internal security vehicles in Europe.<sup>27</sup> The newer companies entering the market for law enforcement vehicles tend to manufacture for both military and police purposes (e.g., armoured personnel carriers, patrol, riot control, mobile prison, perimeter patrol etc.) and configured to have a 'non-aggressive design'. In real terms this means that their external appearance rather than their operational characteristics are modified to give a non-threatening appearance. Such 'discreet order vehicles' look benign - like ambulances, whilst retaining a retaliatory capacity, capable of dispersing, containing or capturing dissident groups or individuals.(See Fig.7 Savage, 1985). Some models such as the Amac vehicle and more recently the Talon incorporate repellent electrified panels as well as a weapons capacity such as water cannon. Such vehicles are frequently used to seal people into a dispersal zone where the riot squads are at work, rather than chase them out.

**3.5 Less-lethal Weapons** - For reasons explained more fully in Section 5 (below), the essential role of new crowd control weapons and tactics is to amplify the level of aggression that can be unleashed by an individual officer. Thus the same rationale lies behind the use of the new US side handle batons, the use of horse, riot shield charges using riot wedges and snatch squads and the new martial arts style arrest techniques which entered European policing training in the mid 1980's.<sup>28</sup> (see Fig 8). The biggest growth area however, has been in what used to be called 'non-lethal weapons.' The fact that some of these weapons kill, blind, scalp and permanently maim led the authorities and manufacturers to act - they came up with a new name - "less-lethal weapons" - i.e. they only sometimes kill. Again a PR objective is catered for in the names which sound as if the security forces are using relative restraint. Whether it be in Belfast or Beijing, these technologies are converging around the same design types. (See Fig 8). One of the authors of the 'Technology of Political Control' (Ackroyd, 1977) Professor Jonathan Rosenhead, believed that the emergence of such technology in China vindicated their original thesis. That is, after the Tiananmen Square massacre, the Chinese authorities needed weapons options which would not excite international criticism, particularly when some much lucrative foreign investment was entering the Tiger economies of the Pacific Rim.<sup>29</sup>

As described in Section 5 below, this area has seen prodigious innovation including a second generation of new weapon types being produced in the former nuclear weapon laboratories of the US in conjunction with big business.<sup>30</sup> The Council for Science & Society explained the phenomenon in terms of technological and decision drift (CSS, 1978). BSSRS argued that such processes were integral to any attempt to apply technical fixes - an alternative explanation is that the riot control arsenal is never complete. Much of a weapon's effect lies in creating a sense of uncertainty.<sup>31</sup> Even the insectoid appearance of riot squad members is part of the threat impact despite its ostensible purpose of personal protection.(See Fig 10).

Individually these weapons are becoming more powerful, for example each new riot agent is more powerful than the one it replaces. Thus CS is nearly 20 times more powerful than the

CN it replaced; CR is more than 30 times more powerful than CN and the newest and most aggressively marketed agent OC, (See Fig.11), the most powerful of them all (Chart 3). Little notice has been taken of the professional hazard assessments of the most commonly used kinetic impact weapons deployed in Europe and USA which have consequences in the 'dangerous or severe damage region'. (See Chart 4).

| Chemical Name and Formula                                                                                              | Code | Form              | Melting Point C° | Effects                                                                                                                                                      | Relative Power | IC <sub>50</sub> (mg min/m <sup>3</sup> ) (1) |

| Impact Energy         | Severity of Injury   |
|-----------------------|----------------------|
| Under 20 Joules       | Safe/low             |
| Between 40-122 Joules | Dangerous            |
| Over 122 Joules       | Severe damage region |

Notes:

(1) Testing of kinetic energy projectiles was carried out at the Aberdeen Proving Grounds in the USA in 1975 to assess their safety and the likelihood, and type, of injuries that might result from their use (see Technical Report Number 24-75: Evaluation of the Physiological Effects of a Rubber Bullet, a Baseball and a Flying Baton, Wargovich, et al., US Army Land and Warfare Laboratory, September 1975.) The results showed that for kinetic energy projectiles at different energies the level of injury was as shown above. (J. Rosenhead, New Scientist, 16/12/76, pp. 672-74)

(2) Information taken from manufacturers product data, updated to modern measurement units where required.

#### **Chart 4. Comparative Impact Effects of Various Kinetic 'Less Lethal' Weapons**

**3.5 Lethal Weapons** - Police Forces in Europe have acquired many of the weapons normally associated with the military i.e. hand guns, rifles and submachine guns, e.g., the Heckler & Koch MP5. Shotguns are increasingly favoured by police forces because their wide spread of shot enables a blast to hit more than one target and in the US, shotguns are standard issue for a wide range of tasks including anti-terrorist and riot control. Indeed many shotguns and holsters specially adapted for police use have appeared on the market. E.g., those by Ithaca, Mossberg, Remington, Sage International and Wilson Arms. Many of these are literally sawn off shotguns and their wider spread increases the number of likely targets. For example, the Witness shotgun has a barrel of only 12.5 inches. Specialist shotgun ammunition enables some of these weapons to smash the cylinder block off a car or literally cut a human in half. The shotgun 'bolo round' advert e.g. claims "it slices - it dices". Shotgun ammunition leaves no evidence of what weapon was used to fire it. Similarly caseless cartridges do not leave "a spent cartridge signature" and this has significant implications for associating a particular weapon with a specific crime.

In theory, police weapons should have a different level of lethality and penetration compared with those used by the military. In urban settings there is always the risk of hitting passers-by and if a round has high velocity and penetration, it will easily pass through an intended target and continue penetrating walls and go on perhaps to kill innocents beyond the observed fire zone. To obviate this problem, manufacturers are increasingly producing hollow point, expanding, or 'dum-dum' ammunition for police and special forces use.(See Fig 12). Paradoxically, the Hague Declaration (IV,3) of 1989, which prohibited the use of hollow point or dum dum ammunition, does not apply to the policing of civil conflicts. Soft nosed ammunition which mushroom in the body, cause far more serious damage than ordinary ammunition. Dum-dums would take an arm or a leg off, whereas ordinary ammunition would sail through leaving a relatively clean hole.(See Fig.13). Some these weapons like Winchester's Black Talon or the high explosive filled pre-fragmented Frag 12 (see Fig.14) cause horrific injuries and raise serious questions about due process and the right to a fair trial since without immediate medical attention, a target would be effectively an extra-judicial execution. Many companies are now producing these bullets in Europe.

**3.6 Execution technologies** - The equipment illustrated in (Fig.16) are not just museum pieces. In the USA, companies such as Leutcher Associates Inc of Massachussetts supplies and services American gas chambers, as well as designing, supplying and installing electric chairs, auto-injection systems and gallows. The Leutcher lethal injection system costs approx. \$30,000 and is the cheapest system the company sells. Their electrocution systems cost £35,000 and a gallows would cost approximately \$85,000. More and more states are opting for Leutcher's \$100,000 "execution trailer" which comes complete with a lethal injection machine, a steel holding cell for an inmate, and separate areas for witnesses, chaplain, prison workers and medical personnel.<sup>34</sup> Some companies in Europe have in the past offered to supply such devices as gallows (Michael Huffey Ltd, UK) or tender designs for the construction of 'Libyan Rehabilitation centre' complete with stainless steel execution bays. (*Observer*, 5/84). A fuller picture is unavailable, but what is known is that European designers are tendering for Middle Eastern prison building work with all the attendant requirements to cater for Islamic shari'a laws and requisite punishments and amputations. Modern target acquisition aids such as laser sights, coupled with silenced weapons technology also make extra-judicial execution much easier (see fig. 16) or if the deed must be achieved in public, systems like 'syncrofire' (fig.16) take the guilt away from the execution squad by allowing the firemaster to achieve it by pushbutton. Special forces are of course taught how to achieve

such executions (See Fig.17 and this is one of the areas of expertise transfer that needs to be brought back within democratic control. (see Section 8 below)

### **3.1 RECOMMENDATIONS**

(1) Given the civil liberties implications associated with new technologies of political control, there is a pressing need to avoid the risks of such technologies developing faster than any regulating legislation. Therefore the EU should develop appropriate structures of accountability to prevent undesirable innovations emerging via processes of technological creep or decision drift.

(2) In principle, the process of innovation of new systems for use in internal social and political control should be transparent, open to appropriate public scrutiny and be subject to change should unwanted and unanticipated consequences emerge.

(3) Any class of technology which has been shown in the past to be excessively injurious, cruel, inhumane or indiscriminate in its effects, should be subject to stringent and democratic controls. Therefore within Europe:-

(a) No development or deployment of blinding laser weapons and ancillary devices for police and internal security purposes should be permitted;

(b) No deployment of 'sub-lethal' area denial mine systems such as the Volcano (discussed above), should be allowed for law enforcement or correctional purposes;

(c) Police personnel should not be routinely armed with 'dum-dum' bullets, use of which is banned in international armed conflicts. Further research should be commissioned by the European Parliament to clarify the legal situation particularly in relation to the suggestion that such ammunition can bypass the legal process and effect extra-judicial execution.

(d) Further measures should be developed to regulate electrified 'stun' & 'kill' fences. Dual function fences with a kill function should not be permissible as their use violates the right to life and the right to a fair trial.

## **4. DEVELOPMENTS IN SURVEILLANCE TECHNOLOGY**

Surveillance technology can be defined as devices or systems which can monitor, track and assess the movements of individuals, their property and other assets. Much of this technology is used to track the activities of dissidents, human rights activists, journalists, student leaders, minorities, trade union leaders and political opponents.

*"Subtler and more far reaching means of invading privacy have become available to the government. Discovery and invention have made it possible for the government, by means far more effective than stretching upon the rack, to obtain disclosure in court of what is whispered in the closet."*

So said US Supreme Court Justice Louis Brandeis, way back in 1928. Subsequent developments go far beyond anything which Brandeis could have dreamt of. New technologies which were originally conceived for the Defence and Intelligence sectors, have after the cold war, rapidly spread into the law enforcement and private sectors. It is one of the areas of technological advance, where outdated regulations have not kept pace with an accelerating pattern of abuses. Up until the 1960's, most surveillance was low-tech and expensive since it involved following suspects around from place to place and could use up to 6 people in teams of two working 3 eight hour shifts. All of the material and contacts gleaned had to be typed up and filed away with little prospect of rapidly cross checking. Even electronic surveillance was highly labour intensive. The East German police for example employed 500,000 secret informers, 10,000 of which were needed just to listen and transcribe citizen's phone calls.

By the 1980's, new forms of electronic surveillance were emerging many of these were directed towards automation of communications interception. This trend was fuelled in the U. S. in the 1990's by accelerated government funding at the end of the cold war, with defence and intelligence agencies being refocussed with new missions to justify their budgets, transferring their technologies to certain law enforcement applications such as anti-drug and anti-terror operations. In 1993, the US department of defence and the Justice department signed memoranda of understanding for "Operations Other Than War and Law Enforcement" to facilitate joint development and sharing of technology. According to David Banisar of Privacy International, "To counteract reductions in military contracts which began in the 1980's, computer and electronics companies are expanding into new markets - at home and abroad - with equipment originally developed for the military. Companies such as E Systems, Electronic Data Systems (founded by Ross Perot ) and Texas Instruments are selling advanced computer systems and surveillance equipment to state and local governments that use them for law enforcement, border control and Welfare administration."<sup>36</sup>

According to Banisar, the simple need for increased bureaucratic efficiency - necessitated by shrinking budgets has been a powerful imperative for improved identification and monitoring of individuals. "Fingerprints, ID cards, data matching and other privacy invasive schemes were originally tried on populations with little political power, such as welfare recipients, immigrants, criminals and members of the military, and then applied up the socioeconomic ladder. One in place, the policies are difficult to remove and inevitably expand into more general use."<sup>37</sup> These technologies fit roughly into three broad categories. namely surveillance, identification and networking, and are often used in conjunction as with video cameras and face recognition or biometrics and ID cards. For Banisar, "They facilitate mass and routine surveillance of large segments of the population without the need for warrants and formal investigations. What the East German secret police could only dream of is rapidly becoming a reality in the free world."<sup>38</sup>

#### **4.1 Vehicle Recognition Systems**

A huge range of surveillance technologies has evolved, including the night vision goggles discussed in 3 above; parabolic microphones to detect conversations over a kilometre

away(see Fig.18); laser versions marketed by the German company PK Electronic, can pick up any conversation from a closed window in line of sight; the Danish Jai stroboscopic camera (Fig.19) which can take hundreds of pictures in a matter of seconds and individually photograph all the participants in a demonstration or March; and the automatic vehicle recognition systems which can identify a car number plate then track the car around a city using a computerised geographic information system.(Fig.20) Such systems are now

---

commercially available, for example, the Talon system introduced in 1994 by UK company Racal at a price of £2000 per unit. The system is trained to recognise number plates based on neural network technology developed by Cambridge Neurodynamics, and can see both night and day. Initially it has been used for traffic monitoring but its function has been adapted in recent years to cover security surveillance and has been incorporated in the "ring of steel" around London. The system can then record all the vehicles that entered or left the cordon on a particular day.<sup>39</sup>

Such surveillance systems raise significant issues of accountability particularly when transferred to authoritarian regimes. The cameras in Fig 21 in Tiananmen Square were sold as advanced traffic control systems by Siemens Plessey. Yet after the 1989 massacre of students, there followed a witch hunt when the authorities tortured and interrogated thousands in an effort to ferret out the subversives. The Scoot surveillance system with USA made Pelco camera were used to faithfully record the protests. the images were repeatedly broadcast over Chinese television offering a reward for information, with the result that nearly all the transgressors were identified. Again democratic accountability is only the criterion which distinguishes a modern traffic control system from an advanced dissident capture technology. Foreign companies are exporting traffic control systems to Lhasa in Tibet, yet Lhasa does not as yet have any traffic control problems. The problem here may be a culpable lack of imagination.(Fig.22) Several European countries are manufacturing vehicle and people tracking technologies, including France<sup>40</sup>, Germany<sup>41</sup>, The Netherlands<sup>42</sup> and the UK<sup>43</sup>.

## 4.2 CCTV Surveillance Net Works

In fact the art of visual surveillance has dramatically changed over recent years. of course police and intelligence officers still photograph demonstrations and individuals of interest but increasingly such images can be stored and searched. (Fig. 23) The revolution in urban surveillance will reach the next generation of control once reliable face recognition comes in. It will initially be introduced at stationary locations, like turnstiles, customs points, security gateways, etc., to enable a standard full face recognition to take place. However, in the early part of the 21st. century, facial recognition on CCTV will be a reality and those countries with CCTV infrastructures will view such technology as a natural add-on.

It is important to set clear guidelines and codes of practice for such technological innovations, well in advance of the digital revolution making new and unforeseen opportunities to collate, analyze, recognise and store such visual images. Such regulation will need to be founded on sound data protection principles and take cognizance of article 15 of the 1995 European Directive on the protection of Individuals and Processing of Personal Data.<sup>44</sup> Essentially this says that:

"Member States shall grant the right of every person not to be subject to a decision which produces legal effects concerning him or significantly affects him and which is based solely on the automatic processing of data."

The attitude to CCTV camera networks varies greatly in the European Union, from the position in Denmark where such cameras are banned by law to the position in the UK, where many hundreds of CCTV networks exist. Nevertheless, a common position on the status of such systems where they exist in relation to data protection principles should apply in general. A specific consideration is the legal status of admissibility as evidence, of digital material such

as those taken by the more advanced CCTV systems. Much of this will fall within data protection legislation if the material gathered can be searched, e.g., by car number plate or by time. Given that material from such systems can be seamlessly edited, the European Data Protection Directive legislation needs to be implemented through primary legislation which clarifies the law as it applies to CCTV, to avoid confusion amongst both CCTV data controllers as well as citizens as data subjects. Primary legislation will make it possible to extend the impact of the Directive to areas of activity that do not fall within community law. Articles 3 and 13 of the Directive should not create a blanket covering the use of CCTV in every circumstance in a domestic context.

A proper code of practice should cover the use of all CCTV surveillance schemes operating in public spaces and especially in residential area. The Code of Practice should encompass:- a) a purpose statement covering the key objectives of the scheme; b) a consideration of the extent to which the scheme falls within the scope of Data Protection legislation; c) the responsibilities of the owner of the scheme and those of local partners; d) the way the scheme is to be effectively managed and installed; e) the principles of accountability; f) the availability of public information on the scheme and the principles of its operation in residential areas; g) the formal approaches to be used to assess, evaluate and audit the performance of both the scheme and the accompanying Code of Practice; h) mechanisms for dealing with complaints and any breaches of the Code including those of security; i) detailing the extent of any police contacts or use of the scheme; and j) the procedures for democratically dealing with proposals of technological change.

Given that the United Kingdom has one of the most advanced CCTV network coverage in Europe and that the issues of regulation and control have been perhaps more developed than elsewhere, it is suggested that the Civil Liberties Committee formally consider the model Code of Practice for CCTV produced by the Local Government Information Unit (LGIU, 1996) in London (A Watching Brief) at a future meeting of this committee, with a view to recommending it for adoption throughout the EU.

### **4.3 Bugging & Tapping Devices**

A wide range of bugging and tapping devices have been evolved to record conversations and to intercept telecommunications traffic. (See Fig. 24) In recent years the widespread practice of illegal and legal interception of communications and the planting of 'bugs' has been an

issue in many European states. For example, Italy, France, Sweden,<sup>45</sup> Belgium,<sup>46</sup> Germany,<sup>47</sup> Norway,<sup>48</sup> the Netherlands<sup>49</sup> and the U.K.<sup>50</sup> The level and scale of some of these illegal activities is astonishing. For example, a court meeting on 30 September 1996 was told that the Presidential Palace's anti-terrorist unit was tapping six former Mitterand administration officials, including ex-cabinet chief Giles Manage.<sup>51</sup> An official panel, the independent Commission for the Control of Security Interceptions, said that 100,000 telephone lines are illegally tapped each year in France and that state agencies may be behind much of the eavesdropping. They found that curbs imposed by official bodies may have tempted them to farm out their illegal bugging to private firms.<sup>52</sup>

However, planting illegal bugs like the one shown in (Fig 24) is yesterday's technology. Modern snoopers can by specially adapted lap top computers like that shown in (Fig.24), and simply tune in to all the mobile phones active in the area by cursoring down to their number. The machine will even search for numbers 'of interest' to see if they are active. However,

---

these bugs and taps pale into insignificance next to the national and international state run interceptions networks.

#### **4.4 National & International Communications Interceptions Networks**

Modern communications systems are virtually transparent to the advanced interceptions equipment which can be used to listen in. Some systems even lend themselves to a dual role as a national interceptions network. For example the message switching system used on digital exchanges like System X in the UK supports an Integrated Services Digital Network (ISDN) Protocol. This allows digital devices, e.g. fax to share the system with existing lines. The ISDN subset is defined in their documents as "Signalling CCITT1-series interface for ISDN access. What is not widely known is that built in to the international CCITT protocol is the ability to take phones 'off hook' and listen into conversations occurring near the phone, without the user being aware that it is happening. (*SGR Newsletter*, No.4, 1993) This effectively means that a national dial up telephone tapping capacity is built into these systems from the start. (System X has been exported to Russia & China) Similarly, the digital technology required to pinpoint mobile phone users for incoming calls, means that all mobile phone users in a country when activated, are mini-tracking devices, giving their owners whereabouts at any time and stored in the company's computer for up to two years. Coupled with System X technology, this is a custom built mobile track, tail and tap system par excellence. (*Sunday Telegraph*, 2.2.97).

Within Europe, all email, telephone and fax communications are routinely intercepted by the United States National Security Agency, transferring all target information from the European mainland via the strategic hub of London then by Satellite to Fort Meade in Maryland via the crucial hub at Menwith Hill in the North York Moors of the UK. The system was first uncovered in the 1970's by a group of researchers in the UK (Campbell, 1981). The researchers used open sources but were subsequently arrested under Britain's Official Secrets legislation. The 'ABC' trial that followed was a critical turning point in researcher's understanding both of the technology of political control and how it might be challenged by research on open sources. (See Aubrey, 1981 & Hooper 1987) Other work on what is now

known as Signals intelligence was undertaken by researchers such as James Bamford, which uncovered a billion dollar world wide interceptions network, which he nicknamed 'Puzzle Palace'. A recent work by Nicky Hager, *Secret Power*, (Hager,1996) provides the most comprehensive details to date of a project known as [ECHELON](#). Hager interviewed more than 50 people concerned with intelligence to document a global surveillance system that stretches around the world to form a targeting system on all of the key Intelsat satellites used to convey most of the world's satellite phone calls, internet, email, faxes and telexes. These sites are based at Sugar Grove and Yakima, in the USA, at Waihopai in New Zealand, at Geraldton in Australia, Hong Kong, and Morwenstow in the UK.

The ECHELON system forms part of the UKUSA system but unlike many of the electronic spy systems developed during the cold war, ECHELON is designed for primarily non-military targets: governments, organisations and businesses in virtually every country. The ECHELON system works by indiscriminately intercepting very large quantities of communications and then siphoning out what is valuable using artificial intelligence aids like Memex. to find key words. Five nations share the results with the US as the senior partner under the UKUSA agreement of 1948, Britain, Canada, New Zealand and Australia are very much acting as subordinate information servicers.

Each of the five centres supply "dictionaries" to the other four of keywords, phrases, people and places to "tag" and the tagged intercept is forwarded straight to the requesting country. Whilst there is much information gathered about potential terrorists, there is a lot of economic intelligence, notably intensive monitoring of all the countries participating in the GATT negotiations. But Hager found that by far the main priorities of this system continued to be military and political intelligence applicable to their wider interests. Hager quotes from a "highly placed intelligence operatives" who spoke to the *Observer* in London. "We feel we can no longer remain silent regarding that which we regard to be gross malpractice and negligence within the establishment in which we operate." They gave as examples. GCHQ interception of three charities, including Amnesty International and Christian Aid. "At any time GCHQ is able to home in on their communications for a routine target request," the GCHQ source said. In the case of phone taps the procedure is known as Mantis. With telexes its called Mayfly. By keying in a code relating to third world aid, the source was able to demonstrate telex "fixes" on the three organisations. With no system of accountability, it is difficult to discover what criteria determine who is not a target.

In February, The UK based research publication Statewatch reported that the EU had secretly agreed to set up an international telephone tapping network via a secret network of committees established under the "third pillar" of the Maastricht Treaty covering co-operation on law and order. Key points of the plan are outlined in a memorandum of understanding, signed by EU states in 1995.(ENFOPOL 112 10037/95 25.10.95) which remains classified. According to a *Guardian* report (25.2.97) it reflects concern among European Intelligence agencies that modern technology will prevent them from tapping private communications. "EU countries it says, should agree on "international interception standards set at a level that would ensure encoding or scrambled words can be broken down by government agencies." Official reports say that the EU governments agreed to co-operate closely with the FBI in Washington. Yet earlier minutes of these meetings suggest that the original initiative came

from Washington. According to Statewatch, network and service providers in the EU will be obliged to install "tappable" systems and to place under surveillance any person or group when served with an interception order. These plans have never been referred to any European government for scrutiny, nor one suspects to the Civil Liberties Committee of the European Parliament, despite the clear civil liberties issues raised by such an unaccountable system. We are told that the USA, Australia, Canada, Norway and Hong Kong are ready to sign up. All these bar Norway are parties to the ECHELON system and it is impossible to determine if there are not other agendas at work here. Nothing is said about finance of this system but a report produced by the German government estimates that the mobile phone part of the package alone will cost 4 billion D-marks.

Statewatch concludes that "It is the interface of the ECHELON system and its potential development on phone calls combined with the standardisation of "tappable communications centres and equipment being sponsored by the EU and the USA which presents a truly global threat over which there are no legal or democratic controls." (Press release 25.2.97)

Clearly, there needs to be a wide ranging debate on the significance of these proposals before further any further political or financial commitments are made. The following recommendations have that objective in mind.

#### **4. RECOMMENDATIONS**

(i) All surveillance technologies, operations and practices should be subject to procedures to ensure democratic accountability and there should be proper codes of practice to ensure redress if malpractice or abuse takes place. Explicit criteria should be agreed for deciding who should be targeted for surveillance and who should not, how such data is stored, processed and shared. Such criteria and associated codes of practice should be made publicly available.

(ii) All requisite codes of practice should ensure that new surveillance technologies are brought within the appropriate data protection legislation.

(iii) Given that data from most digital monitoring systems can be seamlessly edited, new guidance should be provided on what constitutes admissible evidence. This concern is particularly relevant to automatic identification systems which will need to take cognizance of the provisions of Article 15, of the 1995 European Directive on the Protection of Individuals and Processing of Personal Data.

(iv) Regulations should be developed covering the provision of electronic bugging and tapping devices to private citizens and companies, so that their sale is governed by legal permission rather than self regulation.

(v) Use of telephone interception by Member states should be subject to procedures of public accountability referred to in (i) above. Before any telephone interception takes place a warrant should be obtained in a manner prescribed by the relevant parliament. In most cases, law enforcement agencies will not be permitted to self-authorise interception except in the most

unusual of circumstances which should be reported back to the authorising authority at the earliest opportunity.

(vi) Annual statistics on interception should be reported to each member states' parliament. These statistics should provide comprehensive details of the actual number of communication devices intercepted and data should be not be aggregated. (This is to avoid the statistics only identifying the number of warrants, issued whereas organisations under surveillance may have many hundreds of members, all of whose phones may be subject to interception).

(vii) Technologies facilitating the automatic profiling and pattern analysis of telephone calls to establish friendship and contact networks should be subject to the same legal requirements as those for telephone interception and reported to the relevant member state parliament.

(viii) The European Parliament should reject proposals from the United States for making private messages via the global communications network (Internet) accessible to US Intelligence Agencies. Nor should the Parliament agree to new expensive encryption controls without a wide ranging debate within the EU on the implications of such measures. These encompass the civil and human rights of European citizens and the commercial rights of companies to operate within the law, without unwarranted surveillance by intelligence agencies operating in conjunction with multinational competitors.

(ix) The Committee should commission a more detailed report on the constitutional issues raised by the National Security Agency (NSA) facility to intercept all European telecommunications and the impact this supervisory capacity has on a) any existing

constitutional safeguards protecting individuals or organisations from invasion of privacy such as those extant for example in Germany, b) the political, cultural and economic autonomy of European member states. This report should also cover the social and political implications of the EU/FBI proposals made to operate a global telecommunications surveillance network as discussed above. This report should also analyze the financial and constitutional implications of the proposals and provide an update of the work undertaken so far and the status of political approval.

(x) Relevant committees of the European Parliament considering proposals for technologies which have civil liberties implications for example the Telecommunications Committee in regard to surveillance, should be required to forward all relevant policy proposals and reports to the Civil Liberties Committee for their observations in advance of any political or financial decisions on deployment being taken.

(xi) All CCTV surveillance schemes operating in public spaces and especially in residential areas should be governed by a comprehensive Code of Practice which encompasses:- a) a purpose statement covering the key objectives of the scheme; b) a consideration of the extent to which the scheme falls within the scope of Data Protection legislation; c) the responsibilities of the owner of the scheme and those of local partners; d) the way the scheme is to be effectively managed and installed; e) the principles of accountability; f) the availability of public information on the scheme and the principles of its operation in

residential areas; g) the formal approaches to be used to assess, evaluate and audit the performance of both the scheme and the accompanying Code of Practice; h) mechanisms for dealing with complaints and any breaches of the Code including those of security; i) detailing the extent of any police contacts or use of the scheme; and j) the procedures for democratically dealing with proposals of technological change. It is suggested that the Civil Liberties Committee formally consider adopting the model Code of Practice for CCTV, produced by the Local Government Information Unit (LGIU) in London (A Watching Brief, 1996).

## 5. INNOVATIONS IN CROWD CONTROL WEAPONS

The original development of riot weapons goes back to Paris before the first World War, where the police began chemical crowd control using bombs filled with ethyl bromoacetate, an early form of teargas. The British colonies proved to be the forcing ground for the wide range of chemical and kinetic impact weapons which followed. The irritant CS for example was first used in Cyprus in 1956, and between 1960 and 1965, CN and CS were used on 124 occasions in the colonies. (Ackroyd et al, 1977). The growing demands of counter-insurgency and urban warfare generated a first generation of new riot weapons serviced by a growing police industrial complex.

Thus plastic and rubber bullets were products of British colonial experience in Hong Kong where the flying wooden teak baton round became the template for future kinetic weapons. The concept was one of a flying truncheon which could disperse a crowd without using small arms. They were however regarded as too dangerous for use on white people, so in 1969, Porton Down came up with a 'safer' version for use in Northern Ireland in 1970. Just as plastic bullets were considered far too dangerous for use in mainland Britain until 1985 when they proliferated throughout the UK's police forces, so were wooden baton rounds regarded as too dangerous for the residents of Northern Ireland but not Hong Kong. Now plastic bullets have been deployed in virtually every continent from the USA to Argentina, from South Africa

---

to Israel and China. Obviously, the shift in whether or not a riot weapon was appropriate or safe had nothing to do with differences in physiology. Wooden and plastic baton rounds created injuries which did not take account of generation or race. A predominant concern appears to have been what can be portrayed as politically safe in a particular context.

The seductive notion of soft and gentle knockout weapons is recent but not new. It has its roots back in the 1970's when so called 'non-lethal' weapons formed the holy grail of riot weapon Research & Development. During that decade, then Congressman James Scheuer outlined a new philosophy of crowd control weapons. (see Fig.26). He saw such developments resulting from 'spinoffs from medical, military, aerospace and industrial research' and expressed the view that: 'We are now in the process of developing devices and products capable of controlling violent individuals and entire mobs without injury.'<sup>53</sup> The veracity of this assessment is briefly examined below, particularly the assertion that control is achieved without harm.

Some idea of the range and variety of riot control weapons under consideration at that time can be gleaned from the 1972 US National Science Foundation's Report on Non-lethal Weapons. (NSF, 1972). Altogether it listed 34 different weapons, including chemical and kinetic weapons; electrified water jets; combined stroboscopic light and pulsed sound weapons; infrasound weapons; dartguns which fire drug-filled flight stabilized syringes; stench parts which give off an obnoxious odour; the taser which fires two small electrical contacts discharging 50,000 volts into the target; and instant banana peel which makes roads so slippery, they are impassable.

Many of these weapons were then only partly developed or had problems of public acceptability: others have since achieved operational status. They include: incapacitation weapons such as the electronic riot shields and electro-shock batons (discussed in Sections 6, 7, & 8 below); Bulk chemical irritant distributor systems, (delivered by watercannon such as the UK made Tactica or the many back pack sprays like those made by the Israeli company Ispra (Fig.27 or the German Heckler & Koch (Fig. 28); New forms of irritant such as OC (or pepper gas); kinetic impact weapons like the German & UK plastic bullet guns (shown in Fig. 32) or the South African hydraulically fired, TFM Slingshot rubber bullet machine; biomedical weapons, such as the compressed air fired drug syringe now commercially available both in the US & China (shown in Fig. 33).

The range of weapons currently deployed for crowd control is vast indeed and defies any attempts to be comprehensive. In Britain, since the first use of CS gas, rubber bullets and water cannon at the beginning of the Northern Irish Conflict in 1969, there has been a globalisation of such public order technologies. To our knowledge some 856 companies across 47 countries have been or are currently active in the manufacture and supply of such weapons. This proliferation has been fuelled by private companies wishing to tap lucrative security markets, a process which has led to both vertical and horizontal proliferation of this technology. (See Appendix 1 *[not provided with report]*) For example, one company, Civil Defence Supply, who provide nearly all UK police forces with sidehandled batons, boast of an international riot training programme, having trained the entire Mexican Police Granaderos with armadillo linked riot shields, CS and baton firing guns like the Arwen and what they call the complete 'Early Resolution System', for its elite forces.

To understand why this arsenal of crowd control weapons has been developed, it is vital

---

to understand the thinking which underlies their construction. An important task in assessing new crowd control technologies is to examine the criteria used to evaluate just what is an 'acceptable' police weapon, and to whom. In the discussion below, an attempt is made to clarify why the theory of 'non-lethal' weapons used for 'minimum force' policing, does not match the reality of para-militarised riot squad approaches to 'peacekeeping'. Governments themselves have been using Technology Assessment to evaluate the relative effectiveness of such weapons. For example, since 1963, there has been an exchange of information on public order weapons between the US, Canada, Britain & Australia, allowing Porton Down to share technical evaluation of proposed non-lethal hardware, with US military scientists. Virtually all the most recent US government projects on this weaponry have been classified as "special access" (see 5.6 below) but the early work is quite revealing. Military scientists working at the

US Army Human Engineering Laboratory in the early 1970's elaborated a systematic set of procedures to evaluate the desirable and undesirable effects of particular weapons. (See Chart 5a), covering a comparative assessment of both the medical and physiological consequences of each weapon type, together with an evaluation of public acceptability. (See Chart 5b).<sup>54</sup>

## 5.1 Cost-Effective Crowd Control Weapons

The simplistic theory which underlies the use of riot weapons assumes that a 'minimum force' strategy of area denial or dispersal can actually contain deep seated conflicts. The problem with this approach is that real peace can never be simply defined as an absence of anyone remaining in the conflict zones. 'Minimum force' is an elastic concept, particularly when the force deploying it no longer enjoys widespread legitimacy.

A dominant assumption behind the acquisition of new police weapons, is the belief that they will create both a faster policing response time and a greater cost-effectiveness. Again, a key aim has been to save policing resources by either automating certain control functions, amplifying the rate of particular control activities, or decreasing the number of officers required to perform them. Consequently, nearly all the weapons discussed in this report, have been functionally designed to yield an extension of the scope, efficiency and growth of policing power. New riot weapons enable police, paramilitary and state security forces to distribute more coercion to a greater number of people. Therefore they allow a fewer number of officers to threaten a larger number of people in a crowd and over a distance. Hence, riot weapons allow fewer officers to break up a disturbance than when using unarmed personnel, or a larger gathering to be tackled than could otherwise be taken on. The basis of this cost-effectiveness criterion has been neatly summed up by the then Brigadier, Sir Frank Kitson:

*"For example, three or four times as many troops might be required, if they were only allowed persuasion, as would be needed if they were allowed to use batons and gas; and three or four times as many troops might be needed if they were restricted to using batons and gas, as would be required if they were allowed to use small arms." (Kitson, 1971,p. 90).*

However, although in the short term, it may seem that these weapons can contain overtly violent conflict, their use in the longer term may feed or exacerbate the processes responsible for its development. A study undertaken at the Richardson Institute at the University of Lancaster, described evidence of such processes at work in Northern Ireland. (Wright, 1987)<sup>55</sup> The study found that less-lethal weapons used in the context of a phased deployment of counter-insurgency strategies, could lead to more force being used. In the beginning this was

---

evidenced by the deployment of higher numbers of riot weapons, then the substitution of each new less-lethal weapon by a more severe type. The initial use of water canon thus gave way to the use of CS gas. This was augmented by rubber bullets which were then replaced by the harder hitting PVC variety, (See Chart 6) and in greater quantities. Further empirical work suggested that because these riot systems were being deployed in the context of a phased set of counter-insurgency tactics, the resistance they bred led to a successive deployment of each subsequent and more violent phase of the low intensity conflict programme. In effect they

bred the dissent they were designed to 'fix'. (Wright, 1981 ) Graphing the deployment of less-lethal weapons against the crude indicator of political killings in Northern Ireland revealed a pattern which appeared to corroborate this finding. As each new weapon deployment was associated with an upsurge in the death count (See Chart 7). Over longer time periods, another study detected predictable levels of weapon utilization. (Wright, 1981)

For example, fairly constant levels of munitions were used as if the supply itself was the greatest determinant of usage. (See Chart 8). A new form of multivariant time series analysis was evolved to describe the effect of deployments of these weapons and tactics. (Wright, 1987). What emerged was a complex set of causal influences which locked the participants into their own violent behaviour. During the period when this conflict broke down, variables indicating violent behaviour of the various participants, were most influenced by their own previous behaviour. (See Chart 9) Paradoxically, whilst these weapons were meant to provide a new series of flexible responses, their ultimate effect was to programme their targets into traditional anti-state activities and procedures. In other words, their most invidious characteristic may be to undermine non-violence as a means of public protest. (Wright, 1992) The real physical effects of these weapons described below, may go some way to explaining their dysfunctional impact on conflict behaviour.

## **5.2 Harmless Weapons? - The Scientific Evidence**

Statements made by military scientists and police chiefs about "non-lethal" weapons and "minimum force", have led the public to believe that crowd control weapons were designed for humanitarian reasons and are in fact harmless. Such sentiments have been echoed by many governments and reinforced by reports from laboratories and the manufacturers actually creating the technology of political control.

If safety was the prime consideration, we might expect the research on such weapons to be especially thorough prior to their authorization. Since most future developments are still essentially modifications of existing chemical or kinetic impact weapons, it is worth reexamining the historical research which has permitted and legitimised this research in respect to the European state which has used these weapons the most, i.e. the United Kingdom.

## **5.3 Harmless Kinetic Impact Weapons?**

In January 1977, the then Secretary of State For defence, was asked about the research on the likely death and injury rates from rubber and plastic bullets carried out prior to their introduction. The reply referred to a report produced by four surgeons working at the Victoria Hospital in Belfast in 1972, (two years **after** rubber bullets had been used in Northern Ireland), and said that comparable information for plastic bullets was not available.<sup>56</sup>

**Chart 6. Trends in Riot Weapon use in Northern Ireland from 1969 - 1986****Chart 7. Impact of introduction of new riot weapons on the level of political killings in Northern Ireland****Chart 8. Structure of riot weapon use****Chart 9. Multi variant time series analysis of Northern Irish conflict 1976 - 1981**

The Belfast surgeons report makes stark reading.(Millar et al, 1972). It informs us that of 90 patients who sought hospital treatment after being hit by rubber bullets, 41 needed in patient treatment. Their injuries included three fractured skulls, 32 fractures of the facial bones (nose,jaw, cheek etc.), eight ruptured eye globes (all resulting in blindness), three cases of severe brain damage, seven cases of lung injury, and one case of damage to liver, spleen and intestine. The overall role call included one death, two people blinded in both eyes, five with severe loss of vision in one eye and four with sever disfigurement of the face. The surgeons also found evidence of rubber bullets being fired at much closer ranges than those for which they were designed. Rubber bullets were not meant to be fired at distances of less than 25 metres but the surgeons found that half of those brought into hospital had been shot at less than 15 metres and one third at less than 5 metres. Part of the problem is that such area dispersal weapons are meant to create a dispersal zone. If anyone is unfortunate enough to be

in such a zone, there may not be much choice in avoiding being targeted by such weapons, since part of their threat is the fear of becoming a random victim.

In the 1970's, military researchers in the US undertook their own research on kinetic weapons. They concluded that rubber bullets had an extremely high probability of undesirable effects in any scenario for their possible operational use. The US Army research undertaken on live animals, found that impact weapons with energy levels of above 90 ft. lbs., caused injuries, "in the severe damage region." (Thein, et al, 1974; Wargovitch, et al, 1975). A member of BSSRS, Jonathan Rosenhead, was able to use the comparative kinetic energy/damage figures in the US literature, to establish that given their muzzle velocity (about 293 ft. lbs.), for most if not all of its range, the rubber bullet is in the severe damage region. (Rosenhead, 1976).

It is worth noting that for the purposes of this present study, sample kinetic riot weapons from the USA, the UK, Germany, and the Netherlands were assessed using the original US military criteria on impact effects. It was found that all these weapons were in either the dangerous or severe damage region categories. (See Chart 4)

Plastic bullets totally replaced rubber bullets in Northern Ireland by 1975. Although authoritative sources such as *Jane's Infantry Weapons* (1976), asserted that rubber bullets were withdrawn because the disability and serious injury rates 'were not considered acceptable', the official explanation was simply the plastic baton round's greater accuracy.<sup>57</sup> Rosenhead argued that given the even higher muzzle velocity of the plastic bullet, it was even more dangerous, especially at close range.

His analysis has been amply born out by the history of injuries and deaths caused by plastic bullets in Northern Ireland. A survey undertaken by Mr Laurance Rocke, (Senior Registrar at the Royal Victoria Hospital in Belfast), reported in the *Lancet* during 1983, that plastic bullets are even more deadly than the rubber bullets they replaced. (Rocke, 1983). They cause more severe injuries to the skull and brain and therefore more deaths. Despite the security forces rule that baton rounds must be aimed below the waist, 31 of the 99 plastic bullet victims covered in the Rocke survey suffered head injuries. He attributed the difference in the respective injuries and deaths for rubber and plastic bullets to their corresponding ballistic characteristics. Plastic bullets caused serious injuries less often than rubber bullets because the latter was less stable in flight and tended to hit a victim sideways. Plastic bullets resulted in more fractured skulls, lacerated scalps and deaths.

More worrying are the human faces behind these statistics. Between May 1973 and August

---

1984, 12 people were killed by plastic bullets. Inquests have found that six of the twelve fatalities were not involved in any civil disturbances when they were shot and seven of the twelve victims were children aged under 15.<sup>58</sup>

During August 1981, an international commission of enquiry, sponsored by the Association of Legal Justice, travelled to Belfast to investigate the use of plastic bullets. One of its members was senior British research scientist, Dr. Tim Shallice, who wrote in the *New Statesman*, "The conclusion seemed inescapable to members of the commission: the Northern Ireland

authorities were knowingly allowing widespread, indiscriminate and illegal use of a weapon whose lethal potential was well known" (Shallice, 1981).

Since then it has been very much business as usual. Just last summer in Northern Ireland, the RUC used the now British owned Heckler and Koch anti-riot weapon to fire thousands of plastic bullets. Whilst an immediate inquiry was called, few reports emerged of the way that innocent residents out for a night socialising were corralled by Landrovers and fired upon as all escape exits were sealed off.

Evidence Gathered by the Committee for the Administration of Justice in Northern Ireland (CAJ), suggests a serious flouting of official guidelines for the RUC use of plastic bullets, when over 6002 plastic bullets were fired in just one weekend (July, 1996). CAJ recorded instances of the RUC firing indiscriminately when no disturbances were going on (including people being injured by plastic bullets as they were coming out of a disco); young people being shot by plastic bullets as they left a fast food restaurant; CAJ observers and journalists shot at by plastic bullets; people who were clearly attempting to leave areas of disturbance were also targeted. Victims of the conflict seeking medical attention at Altnagelvin Hospital were subject to a baton charge by riot police who had entered the casualty area dressed in full riot gear with dogs. Witness statements were gathered which suggested that many people refused to seek treatment from injuries they sustained from baton rounds for fear of arrest. (CAJ, 1996)

In such circumstances, the indiscriminate deployment of plastic bullets removes people's rights of assembly and may remove their rights to freedom of movement and in some situations their right to life. The provisions of the UN Code of Conduct for Law Enforcement Officers in regard to the principle of proportionality appear to have been breached last summer by the RUC, (as well as their duty not to use excessive force if it is possible to use non-violent means before resorting to force and firearms). We can think of no reason to challenge the European Parliament's decision of May, 1982 which called for a ban on the use of plastic bullets within the EU, and recommend that the European Parliament reaffirm their call for a total ban on this weapon.

#### **5.4 Harmless Chemical Irritant Weapons?**

We know that over 300 companies are currently manufacturing and marketing chemical incapacitants to military, security, prison and police forces around the world and a vast range of equipment is available, including cartridges, grenades, backpack sprays and hand held aerosols. Yet the safety of the commonly used riot control agents is also questionable. In high doses they can kill, a reality harshly brought home by deaths of children in South Africa during the apartheid years. Even in lower doses, there are a range of very unpleasant side effects including bronchitis, asthma, lung and eye damage, contact dermatitis and prolonged diarrhoea. An examination of the actual research undertaken on CS prior to its authorization

---

for use in the Derry riots of 1969 reveal some gross omissions and assumptions. The claim that CS did not harm people with breathing ailments rested on a study of two bronchitic rabbits; possible effects on the unborn child were tested by the response on fertilised chicken

eggs when injected with CS.<sup>59</sup> Inadequate evidence had been gathered on its effects on those suffering from heart complaints and experiments to determine whether or not CS was carcinogenic, were not completed until two years after it had been intensively used in Northern Ireland.

After the 1969 Derry riots, a committee of inquiry was set up, (the Himsworth Committee) to look at the medical and toxicological effects of CS. Although it drew heavily on existing Porton studies, the Himsworth Committee accepted that under certain circumstances CS can kill and that it can also produce highly unpleasant but non-fatal injuries to the lungs. Himsworth made the sensible recommendation that in future, riot agents should be regarded more akin to drugs than weapons and the authorities should publish the results of safety tests, in the scientific press, in full, prior to any authorization. (HMSO, Cmnd 4775, 1971). This is such a clear and reasonable precautionary stance, that we recommend that the European Parliament adopt it as the baseline criterion for all the chemical irritants which might ever be deployed in the EU.

Alas, for the amount of attention the UK government paid to this recommendation, we have only to look at the circumstances surrounding the introduction for use throughout the UK in certain special circumstances, of CR in 1973. CR is an incapacitant which causes temporary blindness. According to one Porton report, it feels like being thrown blindfolded into a bed of stinging nettles. (See Fig. 28)<sup>60</sup> In 1977 the Secretary of State for Defence was challenged to withdraw authorization for CR until the Himsworth recommendations were complied with. The Minister refused, claiming this was already the case and went on to quote a string of articles all except one of which was published after 1973. None of these articles addressed the issue of carcinogenicity, an important consideration for chemicals that are intended for direct spraying on the skin. If research on these new weapons was not fully completed before they were used then the idea that they were deployed because of safety considerations must be rejected. Less-lethal weapons of this type are also presented as more acceptable alternatives to guns. But these weapons augment rather than replace the more lethal weapons in police arsenals. Euphemistic labels such as watercannon, teargas and rubber bullets are used to create the impression that these weapons represent soft and gentle forms of control, CS is never referred to by the authorities as vomit gas, in spite of its capacity to cause violent retching.

A further danger of stronger incapacitating chemicals sprayed directly on to crowds is the impact it can have on changing police practices. In the 1960's crowd dispersion was seen as the key requirement so that the a provision of escape routes was part of the training packages used. With the advent of new paralysing systems, crowd capture becomes a possibility as foam barriers to seal off all escape routes become a precursor for mass arrest. This tactic was deployed against German anti-nuclear protestors in Wackendorf, over ten years ago, when 7,000 police were used to ring a crowd of 1000 activists.<sup>61</sup> (See Fig 29). On this occasion chemical foam was used in area denial rather than capture so the example is illustrative. However, with the back pack sprayers now being produced, much fewer personnel could achieve the same tactic. This is part of the problem on the horizon.

---

## 5.5 Harmless Irritant Gas Sprays?

The introduction of hand held gas irritant sprays into Europe into countries such as Germany, France and most recently, the UK, has yielded an offensive as well as a defensive capacity. Again<sup>1</sup> in the UK we might have assumed they would be governed by existing UK policy on the introduction of new chemical weapons for domestic control.

Until the nineties, despite intensive research, only four chemical agents were primarily used for such purposes, namely CN, CS, CR and most recently (Peppergas) OC. This is because there are real difficulties in marrying an agent with low toxicity and high effectiveness. CN and CS (developed by Porton Down in the fifties) are in fact war gases and hundreds of deaths are attributed to their use in the Vietnam conflict where they were used to flush out Vietcong in tunnels.<sup>62</sup>

Porton scientists have always been quite realistic about the possible dangers of new chemical weapons for public order control. "As with other foreign chemicals to which man may be exposed, no matter how detailed, extensive and carefully effected are the pre-clinical toxicity investigations and observations in controlled human exposures, there can be no complete guarantee from such studies that there is absolute safety in use for a given chemical."<sup>63</sup> Such caution about weapons designed to be sprayed directly in the face is well founded. Their use in riot control is based on an assumption that the level of irritant will be dispersed because they will be deployed in wide open spaces. There are special dangers associated with using chemical aerosols in tight confines where dangerous concentrations can build up. As another scientist has commented, "Politician and scientist alike must accept the inescapable conclusion that any substance capable of producing an intolerable irritation at low concentrations must also produce a concomitantly high toxicity. In other words, the existence of ideal riot agents of sufficient safety not to impair the health of rioters or accidentally exposed innocents is merely notional."<sup>64</sup>

As we have seen, there is evidence that CS can cause permanent but non-lethal lung damage at comparatively low doses<sup>65</sup>, as well as second degree burns with blistering and severe dermatitis.<sup>66</sup> In situations where high exposure to CS has occurred, heart failure, hepatocellular damage and death have been reported (HMSO, 1971). Some evidence also exists that people subject to repeated doses of CS develop tolerance, further increasing their level of exposure.<sup>67</sup> One study has concluded that a single exposure to high level of respiratory irritants similar to CS have led to the development of 'reactive airways disease syndrome' in some individuals, characterised by prolonged cough and shortness of breath.<sup>68</sup> New restraint tactics used alongside gas sprays are a potential recipe for fatalities.

It is revealing that when tests on French made (SAE Alsetex) CS spray took place in the UK, a Metropolitan police inspector suffered burns to his eyes during tests in Northampton - thought to be due to the propellant.<sup>69</sup> It also emerged that Dr Jill Tan, the Home Office scientist who gave these devices the all clear, suffered blisters to her face when sprayed with the CS product during tests. Self-Defence expert Inspector Pete Boatman who was training the instructors when the accident happened has now been banned from training officers outside his region because his Chief Constable is worried about being sued by people injured by the incapacitant.<sup>70</sup> Throughout the CS trials in the UK, which began on March 1, 1996, the public were constantly reassured about the safety of this product based on French studies, studies undertaken in the USA and military research conducted at Porton Down. A UK Channel 4 Dispatches programme revealed serious flaws in these assumptions. (Liberty,

1996). The French gendarmerie keep no statistics or records of CS use to suggest it is safe. Indeed Professor Jean Claud Roujeau of the Hospital Henri Mondor in Paris can quote much evidence to the contrary. "I have to disagree because we have seen, in the last few years, several cases of patients suffering from severe skin reactions to these spray. These reactions look like acute burns, they are very spectacular and sometimes need hospitalisation for several days, and can reach 10-20 per cent of the body surface area of the patient. (See Fig. 30) It is generally agreed that above 20 per cent there is a risk of death, so I think it is impossible to consider these products as generally safe and harmless." (Liberty, opp cit)

The British Government also cited work by the US National Toxicology Programme (NTP) in Boston, but one of the world's leading toxicologists Professor Howard Hu said, "The NTP was purely designed to assess whether CS can cause cancer in laboratory animals. It was not designed to see whether CS could cause pulmonary (breathing) problems of a non carcinogenic nature, or skin problems and it really says nothing about the potential of CS to cause health problems in vulnerable people." Professor Hu also said that CS may actually cause asthma. "One of the conditions that CS may cause is commonly referred to as RADS, a variant of asthma caused by a very high, brief intense exposure to an irritant like CS". He also said that CS may be linked to chromosomal mutation - damage to the body's DNA itself.

In fact, the French made spray was given a specification in the UK which demanded that it be a 5% solution and release 5 centileters of fluid per burst which compares with U.S. versions which contain a 1% solution and release a 1% burst. In other words the French Sprays adopted by the UK were 25 times as strong as those used in the United States. It is perhaps somewhat revealing that the UK Government gave the go ahead for deployment of these sprays before the trials were complete and before all the relevant research was published in the scientific press.

In fact the safety concerns outlined above, are even more pressing in regard to this newly introduced disabling chemical, Oleoresin Capsicum (OC), or 'peppergas'. OC is a new irritant based on extracts from Chile pepper. As a plant toxin it is banned for use in war by the 1972 Biological Weapons convention but not for internal security use.

Porton Down began researching analogues of capsicum after it was used as a military harassing agent in World War I in the form of acylated vanillylamide and its more potent homologues such as VAN as a possible replacement for the riot agent CN. However, the agent was predominantly used in the seventies for Porton funded studies in the neurophysiology of pain such as those conducted in 1975 by Foster and Ramage at Manchester University's Medical School.<sup>71</sup> However, it was in the USA that companies transformed this irritant into a commercial product which is now widely used by both police, corrections departments and private citizens.

The effects of peppergas are far more severe, including temporary blindness which last from 15-30 minutes, a burning sensation of the skin which last from 45 to 60 minutes, upper body spasms which force a person to bend forward and uncontrollable coughing making it difficult to breathe or speak for between 3 to 15 minutes.

For those with asthma, taking other drugs, or subject to restraining techniques which restrict the breathing passages, there is a risk of death. The Los Angeles Times has reported at least 61 deaths associated with police use of pepper spray since 1990 in the USA,<sup>72</sup> and the American Civil Liberties Union (ACLU) documented 27 deaths in custody of people

sprayed with peppergas in California alone, since 1993.<sup>73</sup>

Whilst peppergas has been widely adopted in the US and Canada so far it has not seen widespread usage in Europe. Nevertheless, several European companies such as France,<sup>74</sup> Germany,<sup>75</sup> Spain<sup>76</sup> and the UK<sup>77</sup> are known to be either marketing their own brand or importing OC sprays and backpacks from the USA. However, the US Army concluded in a 1993 Aberdeen Proving Ground study that pepper spray could cause "Mutagenic effects, carcinogenic effects, sensitization, cardiovascular and pulmonary toxicity, neurotoxicity, as well as possible human fatalities .There is a risk in using this product on a large and varied population" (Salem, 1993) However, the pepper spray got the go ahead despite the reservations of the US military scientists after FBI tests gave it the all clear.

It has subsequently been revealed that the head of the FBI's Less-Than lethal Weapons Programme, Special Agent Thomas WW Ward, took a \$57,000 bribe from a peppergas manufacturer to give the Zarc product Capstun, the all clear. British researchers highlighted the conflict of scientific evidence to the South California branch of ACLU who then took vigorous action to have the agent withdrawn. Berkley's Police Commission voted for a 60 day moratorium on Peppergas.<sup>78</sup> ACLU is now looking at the legal implications and has asked the FBI to immediately retract and rescind all research documentation. Allan Parachini, Public Affairs Director of ACLU has said "The Ward Scandal in some ways exceeds the Rodney King beatings in terms of its potential impact on law enforcement, since FBI research helped convince police departments across the country that pepper spray was a safe and effective way to subdue suspects." In fact the breach of trust is much more serious since many other countries as disparate as Australia and India have subsequently adopted peppergas on the back of US research.

Not surprisingly, recent company marketing has focused on providing training and certification to insulate officers from lawsuits associated with deaths in custody cases. The effects of OC are so severe that companies such as Bioshield & Foxguard have started to market decontamination wipes to meet peppergas "post application requirements which in turn reduces the potential for litigation".

In the face of such findings, any European Member State who permits the deployment of the OC irritant, may well find themselves facing legal action in the future, if fatalities or other unusual impacts emerge. It is recommended that the European Parliament errs on the side of caution and calls for a moratorium on the acquisition, sale and deployment of Oleoresin Capsicum irritant sprays, until independent research is undertaken on its safety and published in full in the scientific press for peer review.

## **5.6 Second Generation Incapacitation Weapons**

In the Nineties, the revolution in so called 'non-lethal weapons' was given fresh impetus by new US programmes to fight internal conflicts - ostensibly without casualties. The US Government was driven towards finding a universal panacea because of a series of embarrassing and widely publicised debacles including the Rodney King beating, the Waco siege and their unfortunate experiences in Somalia, where they failed in crowd control operations with only lethal technology. The new policy was avidly pushed in the States by the likes of Col. John Alexander (who made his name as part of the Phoenix Assassination programmes during the Vietnam war) and science fiction writers such as Alvin Toffler (Toffler, 1994) and Janet and Chris Morris, (Morris & Morris, 1990, 1994) and picked up by the

DoD and Justice Department.

Thus a second generation of kinetic, chemical, optico-acoustic, microwave, disabling and paralysing technologies is on the horizon, to join the existing arsenal of weapons designed for public order control. Much of the initial new work has been undertaken in US nuclear laboratories such as Oak Ridge, Lawrence Livermore and Los Alamos. Many cynics see the work as a rice bowl initiative with scientists looking for new weapons projects to justify their future careers as the cold war made their old skill redundant. Already they have come up with a pandora's box of new technologies. These include:

- \* Ultra-sound generators, which cause disorientation, vomiting and involuntary defecation, disturbing the ear system which controls balance and inducing nausea. The system which uses two speakers can target individuals in a crowd.
- \* Visual stimulus and illusion techniques such as high intensity strobes which pulse in the critical epileptic fit-inducing flashing frequency and holograms used to project active camouflage.
- \* Reduced energy kinetic weapons. Variants on the bean bag philosophy which ostensibly will result in no damage ( similar claims were once made about plastic bullets). (See Fig. 32)
- \* New disabling, calmative, sleep inducing agents mixed with DMSO which enables the agent to quickly cross the skin barrier and an extensive range of pain causing, paralysing and foul-smelling area-denial chemicals. Some of these are chemically engineered variants of the heroin molecule. They work extremely rapidly, one touch and disablement follows. Yet one person's tranquillization may be another's lethal dose. (See Fig. 33)
- \* Microwave and acoustic disabling systems. (see Fig. 34)
- \* Human capture nets which can be laced with chemical irritant or electrified to pack an extra disabling punch. (See Fig. 34)

\* Lick 'em and stick 'em technology such as the Sandia National Laboratory's foam gun which expands to between 35-50 times its original volume. Its extremely sticky, gluing together any target's feet and hands to the pavement. (See Fig. 35)

\* Aqueous barrier foam which can be laced with pepper spray.

\* Blinding laser weapons and Isotropic radiator shells which use superheated gaseous plasma to produce a dazzling burst of laser like light. (See Fig. 36)

\* Thermal guns which incapacitate through a wall by raising body temperature to 107 degrees.

\* Magnetosphere gun which delivers what feels like a blow to the head.

We are no longer at a theoretical stage with these weapons. US companies are already piloting new systems, lobbying hard and where possible, laying down potentially lucrative patents. For example, last year *New Scientist* reported that the American Technology Corporation (ATC) of Poway California has used what it calls acoustical heterodyning technology to target individuals in a crowd with infra-sound to pinpoint an individual 200-300

---

metres away. The system can also project sonic holograms which can conjure audio messages out of thin air so just one person hears.<sup>79</sup> Meanwhile, *Jane's* reported that the US Army Research Laboratory has produced a variable velocity rifle for lethal or non lethal use a new twist to flexible response.<sup>80</sup> Other companies are promoting robots for use in riot and prison control.

The National Institute of Justice in the US is now actively soliciting new ideas for such weapons from corporate bodies,<sup>81</sup> and corporate US has responded with bodies like SPIE (The International Society For Optical Engineering), which have enthusiastically responded with a special conference on 'Enabling Technologies for Law Enforcement and Security' at the Hynes Convention centre in Boston, Nov 19-21, 1996. The panel on less than lethal technologies has experts talking on subjects such as: The non-lethal laser baton; design of a variable velocity gun system for law enforcement applications; sticky shocker; definition of lethality thresholds for KE less-lethal projectiles; violence reduction and assailant control with laser sighted police pistols; directed energy technologies: weaponisation and barrier applications; pepper spray projectile for countering hostage and barricade situations; aqueous foam as a less than lethal technology for prison applications etc. A formal Pentagon policy on the use of non-lethal weapons was prepared last year in response to Congressional instructions to initiate a joint acquisitions programme. Whilst there are practical problems regarding whether it is preferable to leave an enemy or a citizen dead rather than permanently maimed, and whether or not hallucinogenic or other psychotropic 'calmative' agents fall foul of the Chemical Weapons Convention, the spending call was for \$15 million annually over the next three years, to fund new and existing projects.<sup>82</sup>

Critics of such projects suggest that non-lethal war is a contradiction in terms. Many of the so called non-lethal weapons are in reality are far from non-lethal. They can and have killed, maimed, blinded and scalped innocent bystanders. There is a real danger that they will make conflicts more lethal by enraging crowds and by paralysing people making them more vulnerable to other operations by the military and security forces. In that sense these weapons could be considered pre-lethal and actually lead to higher casualty rates. (See above) In fact the US proponents of these weapons are under no illusions. Their focus is 'not to replace lethal munitions but to augment existing and future capabilities which will provide a spectrum of force response options.'<sup>83</sup> The area most commentators have not addressed is the extent that such weapons will help the military create new roles for themselves as part of internal policing operations.

Most of the debate has been about their role in war. We know from the proceedings of the Non Lethal Defence II conference, (organised by The American Defence Preparedness Association held in March last year), that the that the Joint Program Office of Special Technology Countermeasures (JPO-STC) have developed a multi-service co-ordination strategy that incorporates both the HQ Allied Forces of Southern Europe and the 'Doctrine & Training HQ' of the United Kingdom.<sup>84</sup> Other formal liaison links between the USA non-lethal research community and Member States are anticipated but little public information has emerged.

The work done so far has led to dubious weapons based on dubious research, strongly influenced by commercial rather than humanitarian considerations. There is a pressing need for a wide ranging debate in the European Parliament of the humanitarian and civil liberties implications of allowing these weapons on to European soil to become part of the technology of political control in the EU. Much of the work that has been undertaken in secret, but part of the bibliography of the present report covers a representative sample of the available literature. What is required is a much more detailed assessment of these weapons than space

---

permits here and it is recommended that a new study be commissioned to achieve this work. In the meantime, it would be useful to ask for the European Commission to report on existing liaison arrangements between Member States and the US on Non-lethal weapons and the nature and extent of any joint activities.

## **5.6 RECOMMENDATIONS**

(i). Informed by principle 3 of the United Nations Basic Principles on The Use of Force & Firearms (which states that: " the development and deployment of non-lethal incapacitating weapons should be carefully evaluated in order to minimise the risk of endangering uninvolved persons, and the use of such weapons should be carefully controlled.") and principle 4 (which require governments to take steps to ensure that arbitrary or abusive use of force is not used by law enforcement officers, and that force is used "only if other means remain ineffective"), the committee should consider asking the European Parliament to reaffirm its demand of May 1982, for a ban on the use of plastic bullets.

(ii). In the light of last summer's events at Drumcree in Northern Ireland, the Committee is advised to seek confirmation from the Commission that: Member States are fully aware of their responsibilities under Principles 3 and 4 of the United Nations Basic Principles on the Use of Force & Firearms by Law Enforcement Officials and to ask for clarification of exactly what steps individual Member States are taking to ensure that these are fully met as the power of "less-lethal weapons" changes and whether consistent standards apply.

(iii). The European Parliament should be asked to establish objective criteria for assessing the biomedical effects of so called non-lethal weapons that are independent from existing commercial or governmental research undertaken to-date. It is also recommended that further research is commissioned on the range and types of technologies which have been developed by the US non-lethal doctrine so far, together with an assessment of their anticipated and unforeseen social and political implications.

(iv). The Commission should be requested to report on the existing liaison arrangements for the second generation of non-lethal weapons to enter European Union from the USA and call for an independent report on their alleged safety as well as their intended and unforeseen social and political effects. During the interim period, deployment by the police, the military or paramilitary special forces, of US made or licensed chemical irritant, kinetic, acoustic, laser, electromagnetic frequency, capture, entanglement, injector or electrical disabling and paralysing weapons, should be prohibited within Europe.

(v). The European Parliament should: (a) Note the biased research on Peppergas (OC) undertaken by corrupt FBI officials and the continuing use of FBI safety assurances in other countries on the basis of this flawed research; (b) Call for a ban on Peppergas (OC) deployment or usage within EU Member States, until new independent research on OC is undertaken.

(vi). That all research on chemical irritants should be published in open scientific journals before authorization for any usage is permitted and that the safety criteria for such chemicals should be treated as if they were drugs rather than riot control agents.

(vii). Research on the alleged safety of existing crowd control weapons and of all future innovations in crowd control weapons should be placed in the public domain prior to any decision towards deployment.

---

## 6. NEW PRISON CONTROL SYSTEMS

Some of the equipment described above, such as the surveillance, area denial, surveillance and crowd control technologies, also finds a ready use inside permanent prisons and houses of correction. Other devices such as the area denial, perimeter fencing systems such as portable coils of razor wire, prison transport vehicles with mini cage cells, and tagging equipment are used to create temporary holding centres.

Permanent prisons are however, literally custom built control environments, where every act and thing, including the architecture, the behaviour of the prison officers and daily routines, are functionally organised with that purpose in mind. Therefore many of the technologies discussed above are built in to the prison structure and integral to policing systems used to contain their inmates. For example, area denial technology, intruder detection equipment and surveillance devices are instrumental in hermetically sealing high security prisons. Everything from electronically operated prison gates and cell doors, to razor wire and video surveillance on the perimeter walls, serve this end.

If disturbances develop within a prison, the riot technologies and tactics outlined above, are also available for use by prison officers. The trend has been to train specialized MUFTI (Minimum Force Tactical Intervention ) squads for this purpose. Outside Europe, irritant gas has been used not only to crush revolt but also to punish political detainees,<sup>85</sup> or to eject reticent prisoners from their cells before execution.<sup>86</sup> Anyone deemed to be a trouble maker may become the potential target for further containment, the type and variety of which, depend to a large extent on the prevailing norms and political climate. Thus physical restraint equipment covers a range from straitjackets and body-belts at one end of the spectrum to thumbcuffs and leg shackles at the other. Recently, the International Observatory on Prisons criticized Spain's so called Register of Special Treatment Prisoners held in solitary confinement for prolonged periods and said this could be infringing the European Convention against Torture.<sup>87</sup>

Other approaches include special stripped and padded cells, segregated units which have been used Inverness in Scotland to form a cage within a cage;<sup>88</sup> isolation units like the now abandoned system used at Wakefield Jail;<sup>89</sup> the Tote Trakt cells used to imprison the Bader Meinhof gang in Germany, which were designed to mimic sensory deprivation; or entire blocks of segregated isolation cells like the 750 Security Housing Units and 3,000 maximum security cells run by the California House of Corrections department at the punitive warehousing prison at Pelican Bay.<sup>90</sup> The Pelican Bay complex is a good example of where a lack of proper accountability can bring widespread systematic abuse, even if the prison is one of the most modern. In 1995, Judge Thelton E. Henderson said the prison was one of the most abusive and that prison officers not only ignored the abuses but "also followed a management strategy that permitted the use of excessive force for the purpose of management and deterrence." The Judge informed the Federal District Court of guards who assaulted prisoners in cells with batons, high voltage taser guns, chained them up for hours in "fetal restraints" with their wrists bound to their ankles for 22 hours a day.<sup>91</sup>

Apart from mechanical restraint, prison authorities also have access to pharmacological approaches for immobilising inmates, colloquially known as 'the liquid cosh.' These vary from psychotropic drugs such as anti-depressants, sedatives and tranquilliser to powerful hypnotics. Drugs like largactil or Serenace offer the chemical equivalent of a strait jacket and their usage is becoming increasingly controversial as prison populations rise and larger numbers on inmates are 'treated'. In the United States, the trend for punishment to become therapy reaches its apotheosis with 'behaviour modification' which uses Pavlovian reward and

punishment routines to recondition behaviour. Drugs like anectine, (a curare derivative), which produce either fear or pain, are used in aversion therapy. In prisons, the possibilities of testing new social control drugs are extensive, whilst actual controls are few. Houses of correction form the new laboratories for developing the next generation of drugs for social reprogramming, whilst the pharmacology laboratories of both the universities and the military provide scores of new psychoactive drugs each year.<sup>92</sup>

Way back in the 1970's, J.A. Meyer of the US Defence Department suggested a countrywide network of transceivers for monitoring all prisoners on parole, via an irremovable transponder.<sup>93</sup> The idea was that parolees movements could be continuously checked and the system would facilitate certain areas or hours to be out of bounds, whilst having the economic advantage of cutting down on the costs of clothing and feeding the prisoner. If prisoners go missing, the police can automatically home in on their last position. The system came into operation use in America in the mid 1980's when some private prisons started to operate a transponder based parole system.<sup>94</sup> The system has now spread into Canada and Europe where it is known as electronic tagging. Whilst the logic of tagging is difficult to resist, critics have argued that whilst tagging carries the promise of being an effective alternative to prison, a look at the criminological literature, this assertion is questionable.(MacMahon, 1996). The clientele appears not to be offenders who would have been imprisoned but rather low risk offenders who are most likely to be released into the community anyway. Because of this, the system is not cheaper since the authorities gain the added expense of supplying monitoring devices to offenders who would have been released anyway. Electronic tagging is however beneficial to the companies who sell such systems. Tagging also has a profitable role inside prisons in the U.S. and in some prisons, notably, DeKalb County Jail near Atlanta, all prisoners are bar coded. (Christie, 1993, p. 96)

Critics such as Lilly & Knepper (1992, 186-7) argue that in examining the international aspects of crime control as industry, more attention is needed to the changing activities of the companies which used to provide supplies to the military. At the end of the cold war, "with defence contractors reporting declines in sales, the search for new markets is pushing corporate decision making, it should be no surprise to see increased corporate activity in criminal justice." Where such companies previously profited from wars with foreign enemies, they are increasingly turning their energy to the new opportunities afforded by crime control as industry.(Christie, 1994). Increasingly in the U.S, we witness the trend toward private prisons and the critical issue here is can the privatisation of prison control create a rehabilitation process if its dominant raison d'etre is profit from control systems and hence cost cutting.

Many European countries are now experiencing a rapid process of privatisation of prisons by corporate conglomerations, predominantly from the USA. Many of the prisons run by these organisations in the US have cultures and control techniques which are alien to European traditions. Such a process of privatisation can lead to a bridgehead for importing U.S. corrections mentality, methods and technologies into Europe and there is a pressing need to ensure a consensus on what constitutes acceptable practice. There is a further danger that such privatisation will lead to cost cutting practices of human warehousing, rather than the more long term beneficial practice of prisoner rehabilitation.

In some European countries, particularly Britain, where changes in penal policy are leading to a rapid rise in prison population without additional resources being applied to the sector, the imperative is to cut costs either through using technology or by privatising prisons.<sup>95</sup> Already,

the UK Prison Service has compiled a shopping list of computer based options with existing CCTV surveillance systems being complemented by geophones, identity

recognition technology and forward looking infra-red systems which can spot weapons and drugs.<sup>96</sup> Alongside such proactive technologies, UK prisons will face increasing pressure to tool up for trouble. Much this weaponry including the contract for between £950,000 and £2,500,000 of side handled batons, kubotans, riot shields etc. made by the Prison Service in March 1995, are likely to be originally manufactured in the United States.<sup>97</sup>

The U.S.A adopts a far more militarised prison regime than anywhere in Europe outside of Northern Ireland. A massive prison industrial complex has mushroomed to maintain the strict control regimes that typify American Houses of Correction. The future prospect is of that alien technology coming here, with very little in the way of public or parliamentary debate. A few examples of US prison technologies and proliferation illustrate the dangers.

Many US prisons now use peppergas. The Department of Justice and every Federal Court that has looked at its use in correctional facilities has found abuses. For example at the privately run West Tennessee Detention Facility, prison guards pumped peppergas into two dormitories seized by inmates.<sup>98</sup> In late 1994, the Department of Justice Civil Rights Division, investigated a County Jail in Syracuse, New York, and reported "an unacceptably high and improper use of pepperspray . . . Nearly every inmate told of excessive and improper use . . . particularly when inmates are not resistant and after the inmate has been restrained and presents no danger." One suicidal inmate in Syracuse was restrained with three cans of pepperspray and died shortly afterwards of positional asphyxia.<sup>99</sup> In the US, Federal Laboratories are already marketing a remote control systems (TG Guard), which can automatically dispense peppergas through specific zones in a prison complex from a remote firing location.<sup>100</sup> (See Fig. 37).

Many prisons in the U.S, use Nova electronic 50,000 volt extraction shields, electronic stun prods and most recently the REACT remote controlled stunbelts. In 1994, the US Federal Bureau of Prisons decided to use remote-controlled stunbelts on prisoners considered dangerous to prevent them from escaping during transportation and court appearances. By May 1996, the Wisconsin Department of Corrections said that no longer will inmates be chained together "but will be restrained by the use of stunbelts and individual restraints." Stun Tech of Cleveland Ohio has said that it wants to see its stunbelts introduced into the chain gang programs of Alabama, Florida and Louisiana. In fact by 1996, it was reported that the US Marshals service and over 100 county agencies have obtained such belts as well as 16 state correctional agencies including Alaska, California, Colorado, Delaware, Florida, Georgia, Kansas, Ohio and Washington (Amnesty International, 1997).

Stun Tech literature claims that its high pulse stunbelt can be activated from 300 feet. After a warning noise, the Remote Electronically Activated Control Technology (REACT) belt inflicts a 50,000 volt shock for 8 seconds. This high pulsed current enters the prisoners left kidney region then enters the body of the victim along for example blood channels and nerve pathways. Each pulse results in a rapid body shock extending to the whole of the brain and central nervous system. The makers promote the belt "for total psychological supremacy . . .

of potentially troublesome prisoners." Stunned prisoners lose control of the bladders and bowels. "After all, if you were wearing the contraption around your waist that by the mere push of a button in someone's hand, could make you defecate or urinate yourself, what would you do from the psychological standpoint?"<sup>101</sup> Amnesty International wants Washington to ban the belts because they can be used to torture, and calls them, "cruel, inhuman and degrading." Some officials say the belts can save money because fewer guards would be needed. But human rights activists and some jailers oppose them as the most degrading new measure in an increasingly barbaric field." (Kilborn,1997) Already, some European countries are in the process of evaluating stunbelt systems for use here. (Marks, 1996)

The U.S. Federal Bureau of Prisons is responsible for a prison population of some 101,000 inmates experiencing according to their Chief of Security, Jim Mahan, a 25% overcrowding effect within the 81 feral prisons across the U.S.A. An additional 17 new facilities are under construction and 10 others will be privatised. As a result of rising tensions within US jails and the need to respond, the Federal Bureau of Prisons has become a formal part of the new research programme on less-lethal weapons. Disturbance control squads are specialised units used in US jails to quell riots and Mahan identified future needs in term of (a) aqueous foams; (b) containment nets; (c) anti-traction devices; (d) aesthetic darts/pellets; (e) chemical area dispensers; (f) noise weapons such as acoustic generators; (g) infra-ultrasound; (h) low energy lasers; (i) optical munitions in addition to the kinetic energy, chemical and electrical weapons they now deploy.<sup>102</sup>

Without proper licensing and a clear consensus on what is expected from private prisons in Europe, multinational private prison conglomerations could act as a bridgehead for similar sorts of technology to enter the European crime control industry. Proper limits need to be set when a licence is granted with a comprehensive account taken of that company's past track record in terms of civil liberties, rehabilitation and crisis management rather than just cost per prisoner held.

## **6. RECOMMENDATIONS**

The Committee should ask the Commission to:

- (i). Ensure that the UN Minimum treatment of prisoners rules banning the use of leg irons on prisoners are implemented in all EU correctional facilities.
- (ii). Implement a ban on the introduction of inbuilt gassing systems inside European gaols on the basis of the manufacturers warnings of the dangers of using chemical riot control agents in enclosed spaces. Restrictions should also be made on the use of chemical irritants from whatever source in correctional facilities wherever research has shown that a concentration of that irritant could either kill or be associated with permanent damage to health.
- (iii). Ensure that all private prison operations within the European Union should be subject to a common and consistent licensing regime by the host member. No licence should be granted where proven human rights violations by that contractor have been made elsewhere. Any failure to secure a licence in one European state should debar that private prison contractor

from bidding for other European contracts (pending evidence of adequate human rights training and appropriate improvements in standard operating procedures and controls by that corporation or company).

(iv). Seek agreement between all Member States to ensure that:

(a) All riot control, prisoner transport and extraction technology which is in use or proposed for use in all prisons, (whether state or privately run), should be subject to prior approval by the competent member authorities on the basis of independent research;

(b) Automated systems of indiscriminate punishment such as built in baton round firing mechanisms. should be prohibited.

(c). The use of electroshock restraining devices or other remote control punishment devices including shock- shields should be immediately suspended in any private or public prison in the European Union, until and unless independent medical evidence

can clearly demonstrate that their use will not contribute to deaths in custody, torture or other cruel, inhuman or degrading treatment or punishment.

(v) The European Parliament should be requested to establish a rigorous independent and impartial inquiry into the use of stun belts, stunguns and shields, and all other types and variants of electroshock weapons in Member States, to assess their medical and other effects in terms of international human rights standards regulating the treatment of prisoners and the use of force; the inquiry should examine all known cases of deaths or injury resulting from the use of these instruments, and the results of the inquiry should be published without delay

(vi). Prohibit the use of kill fencing and lethal area denial systems in any prison whether private or public, within the European Union.

## **7. INTERROGATION, TORTURE TECHNIQUES & TECHNOLOGIES**

Millennia of research and development have been expended in devising ever more cruel and inhumane means of extracting obedience and information from reluctant victims or achieving excruciatingly painful and long-drawn-out deaths for those who would question or challenge the prevalent status quo. What has changed in more recent times is (i) the increasing requirement for speed in breaking down prisoners' resistance; (ii) the adoption of sophisticated methods based on a scientific approach and (iii) a need for invisible torture which leaves no or few marks which might be used by organisations like Amnesty International to label a particular government, a torturing state.<sup>103</sup> According to Amnesty, there is also an increasing trend for torture and ill treatment to directed at common criminal suspects and social 'underdogs' such as immigrants and members of racial minorities (Forrest,

1996). Today, the phenomena of torture has grown to a worldwide epidemic. A report by the Redress Trust in 1995, found that 151 countries were involved in torture, inhuman or degrading treatment (Fig. 38), despite the fact that 106 states have ratified, acceded to or signed the Convention Against Torture.<sup>104</sup>

The advent of modern torture technique can be traced back to the Russian NKVD, which used sensory deprivation and multiple levels of brutality to induce stress before 'conveyor' style questioning by relays of interrogators for days on end, thereby industrialising state terror. These approaches had the dual requirement of extracting information and breaking down personality in order to elicit public confessions as the era of the 'show trial' opened up.<sup>105</sup> There is a continuum between such coerced confessions and torture.<sup>106</sup>

These techniques can themselves be regarded as part of an evolving technology which can be further researched and developed before being transferred elsewhere. Again, like all the technology of political control, torture technology has three components, hardware, software and liveware (the human elements), which are all woven together to form manipulative programmes of socio-political control. The hardware can include both modern and medieval prisoner restraining, disabling and repressive technologies, for example leg shackles, thumbcuffs, and suspension equipment, which despite being prohibited by Rule 33 of the United Nations Standard Minimum Rules For the Treatment of Prisoners (United Nations, 1955),<sup>107</sup> are still being manufactured (Fig. 39 & Fig. 40);<sup>108</sup> it also encompasses blunt trauma-inducing drugs (e.g. Aminazin, apomorphine, curare, suxamethonium, haloperidol, insulin, sulfazin, triflazin, tizertsin, sanapax, etaperazin, phrenolone, trisedil, mazjeptil, seduxin and motiden-depo (Plate and Darvi, 1981). After World War II, the USA, for example, undertook considerable research on the use of drugs for obtaining intelligence from interrogees independent from their volition, for example, project Chatter.<sup>109</sup> This research was expanded during the Korean War and included laboratory experiments on animals and

---

humans using Anabasis aphylla, scoplamin and mescaline in order to determine their speech inducing qualities. Overseas experiments were conducted as part of the project."<sup>110</sup> The CIA later expanded this work in what became known as Projects Bluebird and Artichoke. A whole series of projects were then initiated under Projects MKDELTA and MKULTRA which were concerned with "the research and development of chemical, biological and radiological materials capable for employment in clandestine operations to control human behaviour."<sup>111</sup> Much of the CIA work on behaviour modification was later adapted towards less-lethal disabling chemicals.<sup>112</sup> More recently, Spain has been accused of using vagrants to test the use of anaesthetic drugs to make it easier for the security forces to kidnap guerillas of the Basque separatist organisation ETA.<sup>113</sup>

## 7.1 Torture Hardware

Other torture hardware includes electroshock weapons, electrically heated hot tables, whips, iron-chain filled rubber hoses, cat-o'-nine-tails, clubs, canes, specially designed torture devices and interrogation rooms using white noise (Fig. 41) (Sweeney 1991a and 1991b) and stroboscopic UV light (*New Scientist*, 1973). Much of this equipment is home made but some of the newer technologies are purpose built and may be used by successive law enforcement

agencies after one torturing regime is replaced by another. For example, the 'Apollo machine' which was devised by SAVAK, the Shah's secret police in Iran (it delivered an electric shock to sensitive parts of the body, while a steel helmet covered prisoners' heads to amplify their screams), was also used by the succeeding regime's religious police. (Mather, 1982)

Helen Bamber, Director of the British Medical Foundation for the Treatment of the Victims of Torture, has described electroshock batons as 'the most universal modern tool of the torturers'. (Gregory, 1995) Recent surveys of torture victims have confirmed that after systematic beating, electroshock is one of the most common factors (London, 1993); (Rasmussen, 1990). If one looks at the country reports of Amnesty International, electroshock torture is the Esperanto of the most repressive states. Many examples of its use have been reported including Austria,<sup>114</sup> Greece (Council of Europe, 1994); China (Amnesty International 1992b), Ballantyne, 1992, 1995); and Saudi Arabia (Amnesty International, 1994). Amnesty International has just published a survey of fifty countries where electric shock torture and ill treatment has been recorded since 1990.<sup>115</sup>

According to the manufacturers, the new pulsed variants of electroshock weapon were developed in the 1980's on the basis of biomedical research. They come in several variants including hand held prods and batons, (Fig. 42) electrified riot shields (Fig. 43) and electrified dart systems like the Taser (Fig. 44.). Electroshock weapons work on the induction coil principle. They are battery powered devices which step up the voltage several thousand fold to produce a high voltage low amperage shock that affects the victim's muscle control. As well as severe pain and a temporary paralysis, such weapons also achieve a psychological effect because of the dancing display of crackling blue lightning which traverses the electrodes of both shields and prods.

An independent survey by the UK Forensic Science Service (FSS) (commissioned by the British Home Office), examined the possible hazardous effects of a range of different electroshock devices on the human body (Robinson, et al., 1990). The FSS study reported that receiving a typical discharge from an electroshock prod up to half a second startles and repels the victim; one to two seconds and the victim loses the ability to stand up; three to five seconds and loss of skeletal muscle control is total and immobilization occurs. The effect can last for between five and fifteen minutes. The FSS study also reported that modern pulsed electroshock weapons are more powerful than the old fashioned cattle prods by nearly two

---

orders of magnitude.

Portable electrified riot shields have been manufactured since the mid-1980's for prisoner capture and control. They comprise a transparent polycarbonate plate through which metal strips are interlaced. A button activated induction coil in the handle sends 40,000 - 100,000 volts arcing across the metal strips, accompanied by intermittent indigo flashing sparks and an intimidating crackle as the air between the electrodes is ionized. They work by charging up and then instantly discharging a capacitor, to produce a chain of high impulse shocks. A sales video shows how the victim can be instantaneously thrown to the ground on impact, completely incapacitated.

Manufacturers' claims that these products are "safe" are open to interpretation. Deaths have been reported from both Tasers<sup>116</sup> and from shock shields.<sup>117</sup> One of the key experts used by manufacturers of electroshock weapons to justify claims of the generic safety of these devices has refuted such an interpretation.<sup>118</sup> There is also the need to take into account the political context in which many of these weapons are used since push button torture may be just one methodology applied as part of an entire spectrum of abuse.

## 7.2 Torture Software

Apart from such hardware, there are also numerous standard operating procedures which form the 'software' component of torture. Examples of training supplied to authoritarian regimes include the low intensity conflict training used to capture, stress and 'soften up' dissidents (Watson 1980), advisory support and technical assistance, including teaching of scientific methods of 'deep interrogation' procedures and the more brutal forms of human destruction.

Research and development in modern torture techniques and technologies has focused upon methods which cause suffering and intimidation without leaving much in the way of embarrassing long-term visible evidence of brutality. However, researchers in torture rehabilitation are gradually evolving more sophisticated methods for detecting and verifying the use of torture (Karlsmark, et al., 1988; Rasmussen and Skylv, 1993).

A vast range of torture techniques have been evolved.<sup>119</sup> The names of these techniques signify how systematized this behaviour has become. Some torturing states evolve their own lexicon of systematized abuse. For example, in China there are dian ji (electrical assault), gui bian (down on knees whipping), jieju (chains and fetters), shouzhikao (finger cuffs), zhiliaio (rod fetters), menbanliao (shackleboard) (Figs. 39, 40, & 45.) and so on, (Human Rights Watch, 1992; Amnesty International, 1992b).<sup>120</sup> A similar set of routinized torture techniques emerged in Latin America in the 1970's. (Figs. 46, 47 & 48).

The flow of modern repressive 'technique' includes expertise in courses on low intensity conflict management in operations deemed to be 'counter terror' or operations other than war. Some of these approaches are formally coded.<sup>121</sup> In January 1997, for example, a CIA 'Human Resource Exploitation Training Manual' was released in response to a FOIA request and detailed torture methods against suspected subversives during the 1980's refuting claims by the agency that no such methods were taught there.<sup>122</sup>

Intense interrogation methodologies border on torture, particularly when they incorporate scientific approaches based on psycho-pharmacology or sensory deprivation, or involve levels of physical terror and softening-up processes of intimidation which sap the will of the prisoner to resist. What has evolved from this quest for ever more powerful techniques to break the

---

human spirit is a classical form of operant conditioning designed to teach the target psyche debilitation, dependence and dread (Biderman & Zimmer, 1965). (See Chart 10). Just occasionally, hard evidence of such research comes to light (Anon, 1993). In the case of Northern Ireland, BSSRS member Tim Shallice was probably the first to identify a scientific

methodology at work in the pre-interrogation treatments (See Chart 11) used on detainees in the first wave of internment introduced into Northern Ireland in 1971. Shallice identified the real nature of the special treatment dished out to a selected few - associating it with sensory deprivation techniques (Shallice, 1973) (See Chart 12), and an experiment where those targeted were "guinea pigs" according to McGuffin (1974).

In Northern Ireland, the findings of pioneer sensory isolation pioneers such as Hebb, 1958; Smith & Lensky, 1959, Lilly, 1955 and Zubek and Solomon, et al. 1959, were modified by the British Army to create a new process of coercive and debilitating torture which left no marks.<sup>123</sup> Hebb found that after leaving such experiments, volunteers were disorientated and very suggestible to propaganda. We can conclude that in the far more disturbing conditions of arrest, the anxiety created by these techniques would confuse the victims' thought processes so much that they would fall easy prey to the bad man-good man act. The works of Lilly, Smith and Lensky showed that among the after-effects of sensory deprivation experiences were loss of identification, feelings of unreality and disorientation. Fear and panic were found to be common in anyone remaining in an environment of perceptual deprivation for more than two hours. As was apparent from the psychological research, anything over 24 hours 'at the wall' would be sufficient to induce psychotic breakdown. It has now been established that the long term effects of such experiences are traumatic neuroses comparable to shell shock or in modern parlance, it rapidly induced post traumatic stress syndrome.<sup>124</sup>

We know that such approaches are designed to intimidate the wider population rather than just to extract specific information from any one individual; they are heuristic and can be taught to others (See McHardy, 1976 and the *Times*, 1980). The parallels of the British techniques with those of the CIA Human Resource Training Manual discussed above are striking. The CIA manual discusses using intense fear, deep exhaustion, solitary confinement, unbearable anxiety, standing to attention for long periods of time, sleep and food deprivation, stripping suspects naked and keeping them blindfolded in windowless, dark interrogation rooms with no toilet. Only in January of 1997, did the CIA formally renounce and prohibit its agents from using these torture manuals.<sup>125</sup> In the meantime, variants of this methodology have appeared elsewhere, e.g., by the Palestinian Authority which was set up in May 1994.<sup>126</sup>

Some interrogation techniques are intended to kill. For example the use of a heavy wooden roller to crush the limbs of detainees in Kashmir. This practice results in the release of myoglobin, heme and other related muscle proteins and toxins (Rhabdomyolysis) which leads to acute renal failure. In the absence of kidney dialysis, the results are fatal.<sup>127</sup> Other regimes have resorted to delayed poisoning of their dissidents who die after their release from incarceration, e.g. by the use of Thallium which was deployed against Kurds in Iraq and most recently (according to the ongoing Truth Commission), by South Africa's Apartheid regime.<sup>128</sup>

### **7.3 Torture Liveware**

In any bureaucracy of repression, there are personnel schooled in the ideological attitudes necessary to keep such systems in operation (Fig.49). In some cases this schooling takes place literally, for example at the infamous School of the Americas based at Fort Benning in

|                       |                           |                 |
|-----------------------|---------------------------|-----------------|
| <b>General Method</b> | <b>Effects (Purposes)</b> | <b>Variants</b> |
|-----------------------|---------------------------|-----------------|

|                                  |                                                                                                                                                                                        |                                                                                                                                                                      |
|----------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. Isolation.                    | Deprives victim of all social support of his ability to resist. Develops and intense concern with self. Makes victim dependent upon interrogator.                                      | Complete solitary confinement. Complete isolations. Semi isolation. Group isolation.                                                                                 |
| 2. Monopolisation of Perception. | Fixes attention upon immediate predicament. Fosters introspection. Eliminates stimuli competing with those controlled by captor. Frustrates all action not consistent with compliance. | Physical isolation. Darkness or bright light. Barren environment. Restricted movement. Monotonous food.                                                              |
| 3. Induced Debility Exhaustion   | Weakens mental and physical ability to resist.                                                                                                                                         | Semi-starvation. Exposure. Exploitation of wounds. Induced illness. Sleep deprivation. Prolonged constraint. Prolonged interrogation. Forced writing. Over-exertion. |
| 4. Threats.                      | Cultivates anxiety and despair.                                                                                                                                                        | Threats of death. Threats of non return. Threats of endless interrogation and isolation. Threats against family. Vague threats. mysterious changes of treatment.     |
| 5. Occasional indulgences.       | Provides positive motivation for compliance. Hinders adjustment to deprivation.                                                                                                        | Occasional favors. Fluctuations of interrogators's attitudes. Promises. Rewards for partial compliance. Tantalising.                                                 |
| 6. Demonstrating 'Omnipotence'.  | Suggests futility of resistance.                                                                                                                                                       | Confrontation. Pretending co-operation taken for granted. Demonstrating complete control over victim's fate.                                                         |
| 7. Degradation.                  | Makes cost of resistance more                                                                                                                                                          | Personal hygiene prevented. Filthy infested surrounds.                                                                                                               |

|                               |                                                                                         |                                                               |
|-------------------------------|-----------------------------------------------------------------------------------------|---------------------------------------------------------------|
|                               | damaging to self esteem than capitulation. Reduces prisoner to 'animal level' concerns. | Demeaning punishments. Insults and taunts. Denial of privacy. |
| 8. Enforcing Trivial Demands. | Develops habits of compliance.                                                          | Forced writing. Enforcement of minute rules.                  |

**Chart 10. Biderman's Chart of Coercion**

---

**CHART 11: PRE-INTERROGATION TREATMENTS USED ON DETAINEES**

1. General assault with truncheons and knuckledusters. Kicks to testicles and stomach. Faces slapped, ears drummed, arms twisted, chest hair pulled. Nose, chest, mouth and throat were held. During these attacks, detainees were alternatively threatened and bribed.
2. Men were forced to run barefoot over broken glass and stones whilst being beaten .
3. Some men were dropped blindfold from helicopters hovering near the ground.
4. Alsatian dogs were used to savage some of the men.
5. Torturous exercises were imposed - up to 48 hours for some men.
6. Men were forced to stand against a wall for many hours with their legs akimbo.
7. Detainees were repeatedly awakened as soon as they fell asleep.
8. Food and drink were withheld.
9. Bags were kept over the heads of some of the prisoners for up to six days.
10. On certain occasions an electric cattle prod was used.
11. Some victims had their testicles manually compressed.
12. Others were burned with matches and candles.
13. Detainees were urinated upon.

14. Injections of amphetamine drugs were given to some of the prisoners

15. Psychological tortures were used such as: Russian roulette; firing blanks, blindfolding; the use of stockings and surgical masks by the assailants; forcing men to stare at a white perforated wall in a small cubicle.

---

### **CHART 12: TECHNIQUES USED BY THE BRITISH ARMY IN NORTHERN IRELAND TO MIMIC SENSORY DEPRIVATION**

1. Prisoners were hooded before interrogation.

2. A sound machine was used to produce a constant hiss of 'white noise'.

3. Long periods of immobilization in the 'stoika' position, i.e., being forced to lean against a wall with legs wide apart standing on the toes, with only the fingertips touching the wall. Detainees who collapsed from exhaustion were beaten back into position.

4. Little or no food or drink.

5. Prisoners were forced to wear loose overalls several sizes too big.

6. In addition these men were deprived of sleep for days on end.

#### **EFFECTS OF THESE PROCEDURES**

Although these processes were not technically the same as sensory deprivation, the purpose guiding their use was the deliberate production of related effects.

Measures 1, 2, 3 and 5 cause visual, auditory, tactile and kinaesthetic deprivation and thus mimic sensory deprivation. Measures 1, 4, and 6, deprive the brain of the sugar and oxygen necessary for normal functioning. Measures 1, 4 and 6, may also disturb normal body metabolism. Applied together in conditions of high physical and psychological stress, they could effect rapid nervous breakdown.

Georgia, otherwise known as the 'School of the Assassins' or 'La escuela del golpe' (the coup school). It has been accused of training death squads in Guatemala and Honduras, e.g. Battalion 3-16 (Walker, 1994). In 1995, the *Baltimore Sun* obtained Freedom Of Information Act documents on Battalion 3-16, (which used electroshock and rubber suffocation devices on prisoners in Honduras), that confirmed that the Unit had been trained in interrogation techniques by the CIA (*Baltimore Sun*, 11 June 1995). Last year, further manuals were released under FOIA on Project X, part of the US Foreign Intelligence Assistance Programme which reveal that until the 1980's, the US military ran an intelligence training programme in Latin America and elsewhere, that taught foreign officers to offer bounties for captured or killed insurgents, spy on non-violent political opponents, kidnap rebels' family members, blackmail unwanted informants and the use of drugs to facilitate interrogation. Project X manuals were distributed by the US Army School of Americas but their use was stopped only in 1991 when the Defense Intelligence Agency raised ethical and legal questions.<sup>129</sup>

Thus the creation of a bureaucracy practising systematic human rights violation will often include external 'liveware', e.g., the various foreign technical advisers, counter-insurgency and low intensity conflict strategists, paramilitary, intelligence and internal security police as well as the 'white collar mercenaries' who act as key technical operators in any administrative policy of repression. This 'liveware' category includes all the people who are conditioned by fear or training to actually put into practice the software and hardware components of a particular policy of repression.<sup>130</sup> For the last decade, the export of such 'security' training has become a highly profitable commercial proposition (Gordon, 1987) and it is a characteristic of the trade in torture technology and expertise that it has become so intensely privatised (Klare and Arnson, 1981). Such technologies are now entering Europe from the USA.

## **7.4 International Controls On The Export Of electroshock & Stun Technology**

In theory, a substantial body of international human rights obligations should effectively prevent such transfers, including: the Universal Declaration of Human Rights; Article 7 of the International Covenant on Civil and Political Rights; Article 5 of the African Charter on Human and People's Rights; Article 5 of the American Convention on Human Rights; Article 3 of the European Convention for the Protection of Human Rights and Fundamental freedoms; UN Convention Against Torture; the UN Basic Principles on the Use of Force and Firearms by Law Enforcement Officials and the UN Standard Minimum Rules For the Treatment of Prisoners. Yet in January 1995, it was possible for a UK investigative reporter working for UK Channel 4 Dispatches, to obtain the enthusiastic willingness of several British companies to supply such devices, which are in fact banned under UK law (Gregory 1995).

## **7.5 The European Torture Trail**

Until the Channel 4 Programme, 'The Torture Trail' was shown, it was not widely realized that such an extensive European electroshock manufacturing and supply base existed. Undercover TV actors were given privileged access to a secret network of companies making electroshock weapons and to come away with orders worth over £3 million (consisting of 10,000 electroshock shields and 5000 shock batons from British Aerospace (BAe) and 15,000 electroshock units from ICL Technical Plastics). But perhaps the insights this programme gave into the procurement and proliferation of electro-control technology is even more astonishing. Philip Morris, the Sales Manager for Royal Ordnance, agreed to use the Royal Ordnance's worldwide procurement network to bring the electroshock deal together,

irrespective of the equipment's country of origin or its eventual destination; Ordnance would organise the whole package. Royal Ordnance's parent company, invited their clients to meet up at the secretive

Covert Operation & Procurement Exhibition (COPEX), held at Sandown Park racecourse In November 1994. A wide range of internal security was on display. Foreign invitees included delegations from China, Algeria, Bosnia-Herzegovina, Colombia, Iran, Saudi Arabia, Sri Lanka and Turkey.

The Dispatches team followed through that rendezvous with a meeting at the Royal Ordnance's own offices in Lancashire, where they were shown a 40,000-volt shock baton made in Eire, together with an electronic riot shield made in Tennessee, USA, by Nova Technologies, which could immobilise 120 people without a battery change. While the deal was struck, Royal Ordnance made an extraordinary confession, that they had sold 8000 German electroshock batons as part of the Al Yamamah deal to Saudi Arabia.<sup>131</sup>

A further insight into the complicity of companies involved in this business was afforded by the programme's interview with the manager of ICL Technical Plastics in Glasgow, Frank Stott.<sup>132</sup> He claimed that he used to sell shock batons to the apartheid regime in South Africa, and to Abu Dhabi for the Gulf States; and a year after the Tiananmen Square massacre, he sold electric-shock weapons to the Chinese authorities via Hong Kong, with the UK government's blessing, and said that the trip was supported by the Department of Trade & Industry. Mr. Stott claimed that the Chinese had an ulterior motive for buying his electroshock weapons: they wanted to copy them. (China has a prodigious electroshock weapon manufacturing industry (for example, the Tianjin Bohai Radio Works manufactures 80,000 shock instruments a year - all quality controlled (Fig. 50). It is instructive to note that one of the products photographed in China for this programme, an extending electroshock probe (See Fig. 51), has been awarded a British patent (no. GB214906A).<sup>133</sup>

## 7.6 RECOMMENDATIONS

- (i). New regulations on the nature of in-depth interrogation training should be agreed which prohibit export of such techniques to forces overseas known to be involved in gross human rights violation.
- (ii). All training of foreign military, police, security and intelligence forces in interrogation techniques, should be subject to licence, even if it is provided outside European territory .
- (iii). Restrictions on visits to European MSP related events by representatives of known torturing states should be effectively implemented.
- (iv) The Commission should be requested to achieve agreement between member States to:
  - (a) immediately prohibit the transfer of all electroshock stun weapons to any country where such weapons are likely to contribute to unlawful killings, or to torture or cruel, inhuman or degrading treatment, for example by refusing any

export licence where it is proposed that electroshock weapons will be transferred to a country where persistent torture or instances of instances of electric shock torture and ill treatment have been reported;

b) introduce and implement new regulations on the manufacture, sale and transfer of all electroshock weapons from and into Europe, with a full report to the European Parliament's Civil Liberties committee made each year. [Special consideration should be given to controlling the whole procurement process, covering even the making of contracts of sale, (to prevent a purchase deal made in a European country being met by a supplier or subsidiary outside of the EU, in an effort to obviate extant controls)].

(c). Ensure that the proposed regulations should cover patents and prohibit the patenting of any device whose sole use would be the violation of human rights, via torture or the creation of unnecessary suffering. The onus should be on the patent seeker to show that his patent would not lead to such outcomes.

(v) The European Parliament should look at commissioning new work to investigate how existing legislation within member states of the EU, can be brought to bear to prosecute companies who have been complicity in the supply of equipment used for torture as defined by the UN convention of torture. This new work should examine, in conjunction with the Directorate of Human Rights:

(a) The extent to which such technology produced by European companies is being transferred to human rights violators and the role played by international military, police and security forces organised both inside and outside European Borders;

(b) The possible measures that could be set in place to monitor and track any technology transfer within this category and any potential role in this endeavour that might be played by recognised Non-Governmental Organisations.

## **8. REGULATION OF HORIZONTAL PROLIFERATION**

The last Gulf War was in many ways an exception to the changing character of political conflict. With the end of the Cold War, the future lies increasingly in a bewildering array of separatist and counter-insurgency wars; border disputes; ethnic and religious violence; coups d'état; national security and counter-revolutionary operations - what the military once called "low intensity conflicts" and now call "operations other than war." Civil conflicts in Somalia, Kashmir, Cambodia, Sri Lanka, Rwanda, the former Soviet Union, the former Yugoslavia, South Korea and most recently, Albania, being cases in point.

### **8.1 The European Trade in Repression**

Many of the major arms companies also have a paramilitary/internal security operation and diversification into these markets, is increasingly taking place. Weapons specifically designed to quell dissent are incredibly cheap compared to their major warfare counterparts like ships, aircraft and tanks, and have the market advantage of being used almost continuously against the enemy within. The move into a post-Cold War world has been accompanied by a change in the nature of warfare. Military scientists are on the threshold of dramatic weapons and technologies destined to transform internal political control. The clients most enthusiastically seeking this technology are the torturing states outlined in Figure 38. In those contexts we can accurately describe the technology of political control, as technology of repression and identify exports of these commodities as a repression trade.<sup>134</sup>

NGO's like Amnesty International, have begun to catalogue the trade in specialised military, security and police technologies, to measure its impact on industrialising repression, globalising conflict, undermining democracy and strengthening the security forces of torturing states to create a new generation of political prisoners, extra-judicial killings and 'disappearances'. (Amnesty International, 1996). The key issue for Members of the European Parliament is how they will deal with the human and political fall out of what is a systemic process of exporting repression: either importing a tidal wave of dispossessed refugees, or keeping them in desperation at the borders of Europe. In the longer term, it is important to

examine the role and function of specific technologies in crushing dissent and to analyze the trade in repression and its correlates in terms of human displacement - huge numbers of nonpersons which some country must import. Such refugees will themselves become targets for further political control and exclusion in the newly moulded Fortress Europe, now well on the way to putting whole societies under surveillance, in an effort to deny them permanent residence. The export of the technology of political control and the flow of refugees must be understood as part of the same process. There is an urgent need for greater transparency and democratic control of such exports and a clearer recognition of their frequent linkage with gross human rights violations in their recipient states.

As discussed above, this arsenal of control includes area denial technologies such as razor wire to seal off selected zones, surveillance, telephone and fax tapping networks used to track dissidents; computerised communications, command and control systems linked to data banks and remote terminals(in security vehicles, border checkpoints etc.); automatic vehicle recognition and tracking equipment; riot technology including whips, sawn-off shotguns, incapacitating and less-lethal weapons, such as water cannon, stun grenades, multi-shot riot guns, plastic bullets, chemical irritants, injector weapons, sound, light and electromagnetic zapping technologies; pre-fragmented exploding ammunition, dum-dum bullets, stroboscopic cameras which can photograph every participant in a demonstration in seconds; helicopter mounted crowd monitoring equipment; public order vehicles; identity recognition systems; silenced sub-machine guns and assassination rifles; precision laser and night target acquisition aids; prison and restraining technologies as well as blunt trauma inducing drugs and specially designed implements of torture.

To many of the suppliers attending the specialised paramilitary, police and security fairs, the answer to the question would you sell your equipment to countries on the Redress Trust's map

of the torturing states (Fig. 38), would be a resounding yes please' In fact MSP technologies are aggressively marketed at a series of special fairs and exhibitions which take place all over the world (See Appendix 1.) Potential customers get an opportunity to sample the latest wares. (Fig. 52) Weapons are sometimes on display that are banned for use in many European states (Fig. 53) and some clue is afforded to the dynamics behind proliferation and conversion of these technologies as European Fairs organisers target other continents such as Latin America. (Fig. 54). Equipment on display at such fairs one month sometimes finds a ready application on the streets soon after. (Fig. 55) At Turkey's IDEF exhibition, European gas back packs were on display (Fig. 56) as well as a flypast by the UK flying team the Red Arrows, British licensed production internal security vehicles were exhibited alongside Russian helicopter attack gunships. (Fig. 57)

In the wake of growing evidence that MSP transfers from the European Union have contributed to the deliberate and indiscriminate killing of civilians, disappearances, torture, and ill treatment on a mass scale, there is widespread public disquiet at the apparent inaction of the governments of the European Union to address this concern.<sup>135</sup> A few examples examining the MSP transfers to just two human rights violating countries are sufficient to illustrate the nature of this trade, i.e., European companies based in:- Austria<sup>136</sup>; Belgium<sup>137</sup>; Denmark<sup>138</sup>; Finland<sup>139</sup>; France<sup>140</sup>; Germany<sup>141</sup>; Greece<sup>142</sup>; Italy<sup>143</sup>; Netherlands<sup>144</sup>; Sweden<sup>145</sup>; & the UK<sup>146</sup>; exporting MSP supplies to Indonesia; or European companies based in Belgium<sup>147</sup>; France<sup>148</sup>; Germany<sup>149</sup>; Italy<sup>150</sup>; Netherlands<sup>151</sup>; and the UK<sup>152</sup>; exporting MSP goods to Turkey.

Similarly, many companies in the UK; Belgium; Switzerland; Germany; Austria; Sweden and Finland are arranging licensed production through joint ventures with companies in third countries. For example: Land Rover<sup>153</sup>; GKN Defence<sup>154</sup>(UK); FN Nouvelle Herstal<sup>155</sup>(Belgium);

---

Heckler & Koch<sup>156</sup>(Germany); Steyr-Mannlicher<sup>157</sup>(Austria); FFV Ordnance<sup>158</sup>(Sweden); PT Pindad<sup>159</sup>(Indonesia) and Pilatus<sup>160</sup>(Switzerland). These arrangements have the effect of circumventing European or Member State strategic export controls.

## 8.2 European Electroshock Weapon Exports

Pierre Sane, Secretary General of Amnesty International, speaking on 'The Torture Trail' called for all governments to investigate and to put in place new mechanisms, such as public disclosure in advance, to halt the trade in electroshock equipment which use it to torture. In response to the disclosures on the programme the European Parliament made a resolution on the 19 January 1995, which called on the Commission to bring forward proposals to incorporate these technologies within the scope of the arms export controls and ensure greater transparency in the export of all military, security and police technologies to prevent the hypocrisy of governments who themselves breach their own export bans.(Doc EN\RE\264264474)<sup>161</sup>

The ineffectiveness of any action subsequently taken can be judged by the fact that the same team of TV researchers returned to the torture trail in 1996 and found it was very much

business as usual. Despite the furor created by the first Dispatches Torture Trail programme, on their second expedition 'Back On The Torture Trail' the undercover team found that of the eight British companies contacted only two were unwilling to quote for a new order of 300 electroshock batons. The most enthusiastic companies featured in this programme were not put off by the fact that the intended destination was Zaire. None of the companies featured bothered to check out the fake company's bona fides. In fact they were faxing their quotations to a public fax bureau machine at a railway station in Switzerland. Some of these companies said they could get around legal restrictions by transshipping them so that they would not enter the UK and seemed well rehearsed in getting around European restrictions. For example, SDMS's chairman said that they and their South African associates had previously sold electroshock products to Libya, Nigeria, Sierra Leone, Angola, Mexico, Peru, Burma & Indonesia. Another company offered to avoid export regulation by selling Dispatches undercover research team, 300 shock batons made by the Macoisa company of Mexico City at a cost of \$25,000. Macoisa's boss, Alfredo Aguilla, told the undercover team he could export the 40,000 volt batons on behalf of his British client anywhere they chose. Aguilla told the programme's producer that bad human rights record were no problem.<sup>162</sup>

'Back to the Torture Trail' marked a turning point in human rights organisations understanding of the implications of loopholes in existing strategic exports controls legislation. Speaking in the programme, the Secretary Of Amnesty International, Pierre Sane said: "It is not just good enough to prohibit the manufacture of this equipment in the UK, or the sale or possession of this equipment in the UK. Legislation should also prohibit companies from engaging in offshore sale of this equipment (Gregory, 1996).

### 8.3 Export Of Implements of Torture From The U.S.A.

Sadly, it no longer comes as a surprise to discover that other leading Western Liberal Democracies have been colluding with the torture trade. Yet during the 1980's some clues were afforded by reports that US companies such as Technipol were freely advertising thumbcuffs, leg irons and shackles (Klare & Amson, 1981). The Danish Medical Group of Amnesty found that electronic prods manufactured by the US Shok-Baton Company had been used in the violation of human rights,<sup>163</sup> and a repentant Uruguayan torturer confessed that he had used US-made electroshock batons.(Cooper, 1984).<sup>164</sup> In fact scores of US companies either manufacture or supply electroshock devices, thumbcuffs and leg irons.<sup>165</sup>

Back in 1984, it emerged that US export regulations even had special customs codes for such items as 'specially designed instruments of torture' (US Department of Commerce, 1984). There was even some suggestion (in para 376.14) that the US government could distance itself from human rights violations through 'judicious use of export controls'. (US Department of Commerce, 1983). Concerned by the possible scale of the trade in such technologies and the possibility they could be exported on via Europe which has much laxer arms export controls and transparency than the US, the UK human rights organisation, the Omega Foundation, sought comprehensive US export trade statistics. A Freedom of Information request was put down on Omega's behalf by the Federation of American Scientists (FAS).

What emerged was that the new category codes in the export administration regulations have if anything been extended to include, *inter alia*:

\* 'saps, thumbcuffs, thumbscrews, leg irons, shackles and handcuffs, specially designed implements of torture, straight jackets etc. (0A82C)' and

\* 'stun guns, shock batons, electric cattle prods and other immobilization guns (0A84C)' (United States Department of Commerce 1994).

The statistics of the export licences of such repressive equipment show that from September 1991 to December 1993, the US Commerce Department approved over 350 export licences under commodity category OA82C. The further category OA84C aggregates together data on electric shock batons with shotguns and shells. Over 2000 licences were granted from September 1991 to December 1993. (See Chart 13) As feared, the list names many EU Member States including Austria, Belgium, France, Germany; Iceland, Ireland, Italy, The Netherlands, Spain and the United Kingdom. While the licenses represent a snapshot of permissions for the sale to go forward, they do not indicate actual delivery, nor are they comprehensive since countries in NATO, such as Turkey, do not require a licence (*Arms Sales Monitor*, 1995). FAS has pointed out that aggregating data in this way, by lumping noncontroversial data on equipment such as those on helmets with controversial data on equipment often used for torture such as shock batons, effectively frustrates public oversight. Given the nature of some of the recipients - Saudi Arabia for example, where Amnesty has already recorded instances of Iraqis being tortured with electric shock batons (Amnesty International, 1994), many observers feared the worst.<sup>166</sup> Pressure to desegregate such categories in the US eventually proved successful but there remains a lack of effective checking and some items which should be in the amended category, are still slipping through.<sup>167</sup>

#### **8. 4 Controlling The Spread of Push-Button Torture**

Alarmed by new information emerging on the extent of the worldwide trade in torture technologies, the International Secretariat of Amnesty launched a worldwide campaign against 'Arming the Torturers, Electroshock Torture and the Spread of Stun Technology', as this report was being finalized in March 1997 (Amnesty International 1997). Amnesty's report identified over 100 companies willing to supply modem stun weapons since 1990<sup>168</sup>, in twenty countries, including members of the EU, (Belgium<sup>169</sup>, France<sup>170</sup>, Germany<sup>171</sup>, Luxembourg<sup>172</sup>, Netherlands<sup>173</sup>, Spain<sup>174</sup> and the United Kingdom<sup>175</sup>). The proposals made by Amnesty International to halt this trade in bush-button torture, have been incorporated into the policy recommendations below.

---

### **8. RECOMMENDATIONS**

The Commission should be requested to achieve agreement between Member States to undertake changes to their respective strategic export controls so that:

- (i) All proposed transfers of security or police equipment are publicly disclosed in advance, especially electroshock weapons, (including those arranged on European territory where the equipment concerned remains outside Member States' borders) so that the human rights situation in the intended receiving country can be taken into consideration before any such transfers are allowed.;
- (ii) Reports are issued on the human rights situation in receiving countries;

(iii) Member States Parliaments are notified of all information necessary to enable them to exercise proper control over the implementation of the law, including information on human rights from non-governmental organisations;

(iv) Member States monitor and regulate all exhibitions promoting the sale of security equipment and technology to ensure that any proposed transfers such as electroshock weapons, will not contribute to unlawful killings, or to torture or cruel, inhuman or degrading treatment or punishment;

(v) All military, police and security exhibitions are required to publish guest lists, names of exhibitors, products and services on display and no visas or invitations should be issued to governments or representatives of security forces, known to carry out human rights violations.

(vi) The sender should take legal responsibility for the stated use of military, security and police transfers in practice, for example making future contracts dependent on adherence to human rights criteria and that such criteria are central to the regulatory process.

(vii) The European Parliament should explore the possibilities of using the Joint Action procedures used to establish the EU regulations on the export of Dual Use equipment to draw up common lists of (a) proscribed military, security, police (MSP) technology and training, the sole or primary use of which is to contribute to human rights violations; (b) sensitive MSP technologies which have been shown in the past to be used to commit human rights violations; and (c) military, security and police units and forces which have been sufficiently responsible for human rights violations and to whom sensitive goods and services should not be supplied.

(viii) The European Parliament should commission new research into the extent to which European companies are complicity in supplying MSP equipment used to commit human rights violations and the prospects of instituting independent measures of monitoring the level and extent of such sales whilst tracking their subsequent human rights impacts and consequences.

---

## 9. CONCLUSIONS

With proper accountability and regulation, some of the technologies discussed above do have a legitimate law enforcement function; without such democratic controls they provide powerful tools of oppression. The unchecked vertical and horizontal proliferation of the technologies of political control described in this report, present a powerful threat to civil liberties in Europe in the *21st* century, particularly if the political context of freedoms of expression changes in the next century, as many times as it has in the last. Whilst there are sufficient real abuses of power by the police, internal security and intelligence agencies to keep the conspiracy theorists busy for the foreseeable future, technological and decision drift will have an equal if not more powerful role to play if current trends develop unchecked. The real threat to civil liberties and human rights in the future, is as likely to arise from an incremental erosion of civil liberties, than it is from some conscious plan. The rate of

such erosion is speeding up and is rapidly being fuelled by the pace of innovation in the technology of political control. An arsenal of new weapons and technologies of political control has already been developed or lies waiting on the horizon for a suitable opportunity to find useful work.

As the globalisation of political control technologies increases, Members of the European Parliament have a right and a responsibility to challenge the costs, as well as the alleged benefits of so called advances in law enforcement. This report has sought to highlight some of the areas which are leading to the most undesirable social and political consequences (such as advances in so called 'non-lethal weapons' or the emergence of a vast international machinery of communications supervision) and where a return to a fuller form of democratic control is seen as desirable. The social and political implications of other innovations mentioned above such as human recognition and tracking technologies, are under explored and further work should be undertaken. In the meantime, urgent action is required by other Directorates, to ensure European technology of political control does not get into the hands of tyrannical and repressive regimes, as it so often does today. Members of the Committee are requested to consider the policy recommendations provided in the report as just a first step to help bring the technology of political control, back under democratic control.

## NOTES & REFERENCES

*[JYA Note: A few of the citations lack the year; shown as written.]*

1. For a detailed analysis of NARMIC & NACLA's work in this area, see for example. Police on the Home Front (NARMIC, 1971). Also see Iron Fist & Velvet Glove: An Analysis of the US Police, 1976 Published by the Center for Research on Criminal Justice, Berkley.
2. Based on a definition from Winner, 1974.
3. For a discussion of the perspective in terms of the role technology plays in the future of policing, see (Nogala, D. 1995).
4. A general reader interested in the overall state of the art should consult annual publications such as Jane's Security & Co-In (Counter-Insurgency ) Catalog [provides a wide range of product information]; British Defence Equipment Catalogue [produced in association with UK MoD]; International Defence Equipment Catalogue [very detailed catalogue leaning towards the military and paramilitary end of the spectrum produced by Monch publications, Germany]; International Defence Directory [very useful index of companies and products, e.g., listing batons-electronic. Also provides some useful detail on companies representatives within other countries]; or periodicals which deal with certain market sectors such as Intersec, Jane's Defence Review, Jane's Defence Weekly; CCTV Today; Police & Government Security Technology; Cross Border Control - International, Military Technology; or for a more radical updating of news, the CILIP report of Berlin, the Statewatch publication from London or the Fortress Europe newsletter from Sweden. The Exhibition catalogues of the

fairs listed here as Appendix 1, also provide a revealing insight into what is being traded, by who to whom.

5. For a critical evaluation of the utility of the various commercial and public domain information sources on military, security and police technologies, see Abel, 1997.

6. Whilst it remains impossible to put an exact figure on the global worth of sales of the technology of political control, most commentators agree that it is rapidly growing . This trend accelerated at the end of the Cold War when many military companies diversified their product range into the civilian internal security market. For example, one estimate suggested that the US market for 'low intensity conflict merchandise' would increase from \$1 billion in fiscal 1991 to \$1.5 billion in fiscal 1996. This was contrasted sharply with a projected 25% decrease in US Department of Defense (DoD) expenditure on conventional weaponry during the same period.(Frost & Sullivan International, 1991)

7. A process which reached an apotheosis with the introduction of robot policemen patrols in the United States. (Davie, 1984). This work has continued into the Nineties with the evolution of 'insectoids' for guard duty functions. (see Section 3. on area-denial)

8. An explanation of the role and function of Eurodac is provided in the consultants final report to the Council of The European Union general Secretariat, 'The Eurodac System For Recording Asylum Seekers' Fingerprints', (O/Ref.:(EUD2/JPB/1&C) Paris, October 11, 1995. For a discussion of the implications of Eurodac, see Fortress Europe, circular letter No. 46, Sweden, August 1996. A more detailed explanation of the concept of a technopolitics of exclusion within the context of an evolving Fortress Europe, is presented in (Abel, et. al. 1991).

9. Klare garnered information on a few score companies (Klare & Arnson, 1981); Wright managed a few hundred (Wright, 1987); Whereas the Omega Foundation now has details on over 5,000 companies.

10. Statewatch, October, 1996, pp. 6-7.

24. Quoted from Jane Hunter, Israeli Foreign Policy, South African and Central America, South End Press. 1987.
25. See, The Surveillance Society, Sci-Files, BBC, broadcast, BBC2, 3 March 1997 .
26. This new form of carbon will enable current CRAY type super computers to be carried in the pocket, the implications of having such storage capacity for policing purposes are barely assessed since the trend is towards suppressed demand - i.e., police forces use up whatever capacity they are provided with. (Sci-Files, BBC, UK, 'The Last Nobel', 17,3,97.)
27. Typical examples include those made by Sicherheits Transport in Austria; Beherman Demoen & FN Nouvelle Herstal in Belgium; Timoney Technologies in Eire; Renault, Saviem and Panhard in France; Bonowi Mercedes Benz, Rheinstahl and Thyssen in Germany; Alma

in Greece; Fiat and Iveco in Italy; Alphasafety in Luxembourg; DAF Special Products Division in the Netherlands; Nauteknik Defence & Security in Norway; Bravia -- Sodedade Luso-Brasileira & ITB in Portugal; DEFEX and Santa Barbara SA in Spain; Hagglunds Vehicles in Sweden; Bucher Guyer and MOWAG in Switzerland; Aselan Military, FMC & Octobus in Turkey; Alvis, GKN, Glover Webb, Land Rover, Short Brothers, Transac and Trojan vehicles in the UK.

28. E.g., by the end of 1983 70 martial arts instructors were teaching London police officers Japanese martial arts techniques - the old techniques were viewed as too pedestrian. These new techniques go hand in hand with mini-truncheon usage. The techniques were evolved originally for use in Northern Ireland according to Brigadier Michael Harvey, the military trainer responsible for teaching them,

because of "the inadequacy of techniques used in Northern Ireland where six soldiers were often needed to make one arrest." (Sunday Telegraph, 7.7.85)

29. Interview with Professor Rosenhead, January 1997.

30. For example the Lawrence Livermore laboratory has developed a pulsed light weapon and a projectile launcher with impact velocity control; Delta Defence has created a pepper Spray Launcher; Foster Miller a Dabbling Net and Launcher system; Sandia Laboratories have produced the sticky foam gun. Some of these have already been approved for example, DEFTEC's semi-lethal shot gun rounds; Alliant's non-lethal launched ordnance and the Volcano fish-hook mine system, Olin's vehicle stopper.

31. "As soon as a new non-lethal weapon has been used, the shock effect will be reduced in future." (Deane-Drummond, 1975).

32. For an excellent discussion, see Sugarman S & Rand, K, Cease Fire, Rolling Stone, March 10, 1994, pp. 31-39.

33. E.g., Hirtberger, Austria; Cartridge Factory Lapua, Sako Ltd, Finland; Laboratoire Arcane, Societe Francaise de Munitions (SFM, France; Dynamit Nobel, Germany; Norma Projectilfabrik, Sweden; SM Swiss Munition Enterprise; Beechwood, Cobra, Conjay Arms Co., Edgar brothers, Parker Hale Ltd. in the UK. The development of these weapons has in fact gone hand in hand with their converse - guns like the Belgium FN Herstal's Five-seven pistol which can penetrate 48 layers of Kelvar. Such developments lead to a ratchet-like arms race between the police and their adversaries on who can out gun whom since it may be the opposition who acquire the hi-tech first.

44. Common Position EC No/95, Adopted by the Council on 20 February 1995, Directive 95/EC of the European Parliament and the Council, 'On the Protection of Individuals, With Regard to the Processing of Personal Data and on the Free Movement of Such Data'.

45. E.g., debate re use of bugging and other unconventional methods against motorcycle gangs. (Statewatch, September, October 1996).

46. E.g., the revelations in the De Morgen newspaper on 24 April 1996, that the Belgium Intelligence service "Abemene Dienst Inlichtingen en Veiligheid", had decided to create regional networks based in various Army barracks to spy on the activities of Belgian citizens.

---

47. An intense debate has gone on since 1995 about allowing bugging of personal homes which would need to amend article 13 of the constitution on the inviolability of residence. (Unverletzlichkeit der Wohnung).

48. Where a judicial inquiry into secret surveillance, by the Norwegian surveillance police, was appointed by the Norwegian Parliament on 1 February, 1996 (Statewatch, May-June. 1996, p. 5)

49. Dutch politicians called for an inquiry in January 1996, after reports that one of the country's largest banks was intercepting staff calls. Financial Times, 18.1.96.

50. Where new legislation for both MI5 and for ordinary police has created new powers to bug and burgle. (See Statewatch, February 1996 and the Guardian, 30 Nov 1996)

51. Reuters World Report, 30 September 1996.

52. For further information, see the annual reports of the Commission nationale de controle des interceptions de securite, Paris.

53. Quoted from NARMIC, 1971, p .17, (who refer to Scheurer's own book (undated), To Walk the Streets Safely, p. 81,

54. These tables are taken from the papers of Thein,1974; Egnar, 1976 and Wargovitch, 1975. Whilst immediate political consequences were factored into the equation, little systematic evaluation seems to have been devoted to the longer-term political consequences of deploying these weapons. The official view filtered out any consideration of hidden or dysfunctional impacts of these weapons.

55. These concepts were formally laid out as follows:

(i) The use of less-lethal weapons constitutes an aggressive act. If those who are targeted with these technologies make this interpretation, there is a possibility that further use will lead them to reply with retaliatory aggressive responses.

(ii) If (i) is so, then in certain circumstances, the use of less-lethal weapons may be considered as an overcorrective response. Overcorrective responses can bring about an opposite effect to the one intended, e.g., uncontrollable conflict and further polarization.

(iii) If powers of control were lost because of these dysfunctional processes, a resurgence of the phenomena under attempted control may develop as the fix loses its potency. If such processes were applicable to the case of less lethal weapons and the nature of the underlying dynamic was not recognised, reliance on ever even more powerful fixes would prove counterproductive. (Wright, 1978, 1987)

57. Hansard Written Answer, Friday 28 January, 1977, No. 54 .

58. An account of the circumstances surrounding these deaths is provided in 'A Report On the Misuse of the Baton Round in the North of Ireland, Submission to the Mitchell Commission, United Campaign Against Plastic Bullets, 1995 and Curtis, L, They Shoot Children, Information on Ireland, 1982.

59. Upshall, DG, 'The effects of CN & CS on the developing chicken embryo', quoted by Himmsworth, (HMSO, 1971).

60. CR, nicknamed firegas, was developed in the early seventies as a substitute for CS. It can be dissolved in water and thus fired from watercannon. The UK company Schermuly marketed a hand held CR SPAD spray at the British Army Equipment Exhibition in 1988. Although authorised throughout the UK since 1973, apart from a reported use in the Maze Prison which the authorities have always denied, CR is thought to remain a special forces weapon.

94. Used in New Mexico based home punishment schemes. See Guardian Nov 8, 1984 for details and the Adam Smith Institute, 'Justice Policy 1984', for a case arguing the need for such schemes in Europe.
95. For example last year the UK treasury announced enforced cutbacks of some 3,000 prison jobs. With the UK prison population expected to grow by 20,000 over the next 10 years due to the sentencing changes introduced by Home Secretary Michael Howard, staffing levels are sliding back to those prevailing at the time of the prison riots in the late 1980's. In these circumstances, the shortsighted prospect is one of expensive wardens being replaced with cheaper and more malleable technology, both passive and punitive.
96. Warren P, 'Prisons go shopping in face of staff cuts', *Computing*, 25 January 1996.

100. Law Enforcement Product News. 9.10.95, p. 42.
101. Quoted in Amnesty International, *United States of America - Use of electro-shock belts*. June 1996.
102. Presentation to the Non-lethal Defence II conference, held by the American Defense Preparedness Association March 1996.
103. Much of the information used in this section is extracted from Wright 1996 and Amnesty International, 1997(a), which is largely based on company documentation held by the Omega Foundation.
104. Fig. 1 is taken from the 1996 Annual Report of the Redress Trust. The mission of the Redress Trust (which is based at 6 Queen Square in London WC1 N 3AR, UK), is 'to promote the rehabilitation and protection of people who are or at any time have been victims of torture anywhere in the world, and to help them, and when appropriate, their families to gain redress for their suffering.'

105. Such were the successes of the coercive interrogations practiced in the former Soviet Union that the US Rand Corporation at that time explored the possibility that the 'Russians have developed and are now using some form of hypnosis possibly in conjunction with drugs and other treatments, as a technique for eliciting confessions from persons who, under ordinary forms of duress, would not be likely to comply with demands for a public recantation'. (See Janis, 1949)

106. See (Gudjonsson, G. 1996) for a discussion of this process. Gudjonsson quotes R.A. Leo's account of the changing nature of police interrogation in the USA from the 1930's onwards. Leo, for example, identified 6 interrogation methods which focussed on pain, discomfort and torture. These consisted of 'brute force'; 'physical torture'; 'deniable physical and psychological coercion'; (e.g. rubber hoses which left no marks); 'incommunicado interrogation', i.e., isolation from lawyers, family and friends); 'physical duress' (e.g. food /sleep deprivation); 'threats of harm'. (Leo 1992) found that these methods declined from the 1930's to be replaced by psychological methods of interrogation relying on trickery, manipulation and deception. (See Inbrau, et al. 1986)

107. See United Nations Standard Minimum Rules for the Treatment of Prisoners (United Nations, 1955) which apply to both leg irons and to stun belts, section 33 says: Instruments of restraint such as handcuffs, chains, irons and straitjackets should never be applied as punishment. Furthermore, chains and irons should not be used as restraints. Other instruments of restraint should not be used except in the following circumstances: (a) as a precaution against escape during a transfer, provided that they shall be removed when the prisoner appears before a judicial or administrative authority.

108. Leg irons, restraints, etc., are supplied in Canada by Shackles; in China by Chengdushi Mensuochang, Jing An Import & Export Co., Shandong Muping General Lockware Plant; in France by Equipol, GK Productions International, Rivolier; in Germany by Bonowi, Clemen & Jung Inh. V& K Pleithner, Dipl. Ing H. Wallfass, Electron - Import & Export Co., Helling Kommanditgesellschaft fur Industrieprodukte, Nowar Security Equipment; in Luxembourg by AlphaSafety; in Spain by Larranaga Y Elorza; in Taiwan by Pan Right; in the U.K. by Group 4 Total Security, Hiatt & Co., M.P. Supplies Co.; and in the USA by A.E Nelson Leather, AEDEC, AETCO, American Handcuff, Arms Tech Inc, Badge Co of New Jersey, Bianchi International, Hiatt Thompson Co., Law Enforcement Associates, Monadock Lifetime Products, Peerless Handcuffs, Smith & Wesson and Techopol International, to name but a few.

109. Project Chatter was begun by the US Navy in 1947 in coordination with the Army, the Air Force, the CIA and FBI and for security reasons, handled outside the usual committee machinery of the Research & Development Board. (Document submitted in evidence to the joint hearings of the Senate Labor and Public Welfare Committee on Health & the Senate Judiciary Sub-Committee on Administrative Practice & procedure, Biomedical and Behavioural Research, Nov. 1975, pp. 988-990.

110. U.S. Senate Select Committee to Study Governmental Operations with Respect to Intelligence Activities, Final Report: Foreign & Military Intelligence, 26 April 1976, report no. 94-755 book 1, pp. 385-422, 'Testing and use of chemical and biological agents by the intelligence community.'

111. There were 149 MKULTRA subprojects concerned with behaviour modification, drug acquisition. and testing and administering drugs surreptiously. (CIA Inspector General, memorandum for Director of Central Intelligence dated 26 July 1963, Report of Inspection of MKULTRA, submitted in evidence to the joint hearings of the Senate Labor and Public Welfare Subcommittee on Health and the Senate Judiciary Subcommittee on Administrative Practice and Procedure, Biomedical and Behavioural Research, 1975, 10,12 September and November 1975, pp. 879-905.

112. According to documentation made available to a Congressional Inquiry, a portion of the Research & Development Programme of the the TSS/Chemical Division was aimed towards the discovery of the following materials and methods: (i) Substances which will promote illogical thinking and impulsiveness to the point where the recipient would be discredited in public; (ii) materials which will render the induction of hypnosis easier; (iii) materials and physical methods which will produce amnesia for events preceding and during their use; (iv) physical methods of producing shock and confusion over extended periods of time and capable of surreptitious use; (v) substances which produce physical disablement such as paralysis of the legs, acute anaemia etc.; (vi) substances which alter personality structure in such a way that the recipient becomes dependent on another person; (vii) material which will cause mental confusion making it difficult for an individual to maintain a fabrication under questioning; (viii) substances which lower ambition and working efficacy when administered in undetectable amounts; (ix) substances which promote weakness or distortion of eyesight or hearing; (x) knockout pill which can be surreptiously administered; (xi) a material whose use in very small amounts makes it impossible to perform any physical activity whatsoever. (US Senate Committee on Intelligence and Human Resources Subcommrttee on Health and Scientific Research, joint hearing: Project MKULTRA, the CIA's Program of Research in Behaviour Modification, 3 August 1977, pp. 123-4).

113. The daily El Mundo quoting military intelligence files said the 1988 experiments in which a beggar died, had been dubbed "Operation Mengele" within the service after Nazi death-camp doctor Josef Mengele. (Reuter September 17, 1996) It should be noted that in 1980 Amnesty International reported the use of LSD and sensory deprivation methods against ETA suspects held in La Salve Police Station. (See New Statesman, 11 December 1981, pp. 12-13.)

114. In October 1996, the Austrian government approved the publication of a report from the ECPT which contained allegations that detainees of Austrian as well as foreign nationality were at risk of grave ill treatment particularly while detained at the Bureau of Security in Vienna. ECPT reported:

"From various sources the delegation received allegations according to which people detained by the Bureau of Security in Vienna during February and March 1994 had received electric shocks inflicted with batons equipped to administer an electric discharge. . . . These detainees all described a similar instrument which was a portable device the size of an electric razor one extremity of which had two electrodes, a device which a police official carried in a personal bag." (Amnesty International, 1997)

115. In its report *Arming the Torturers* (Amnesty International, 1997) named the fifty countries where electroshock torture and ill treatment had been carried out in prisons, police stations and detention centres. They are:

Afghanistan, Algeria, Argentina, Austria, Bangladesh, Bolivia, Brazil, Bulgaria, Chad, Chile, China, Cyprus, Colombia, Congo, Ecuador, Egypt, El Salvador, Ethiopia, Greece, Guatemala, Haiti, India Indonesia/East Timor, Iran, Iraq, Lebanon, Mexico, Morocco/Western Sahara, Nepal, Netherlands Antilles, Nigeria, Paraguay, Peru, Philippines, Russian federation, Saudi Arabia, Senegal, Somalia, South Africa, Sri Lanka, Sudan, Togo, Turkey, USA, Uruguay, Venezuela, Viet Nam, Yemen, Yugoslavia Kosovo province, Zaire.

Amnesty recognises that the real figure is probably higher, "as the use of these weapons in torture can be very difficult to detect."

116. See for example, Ordog. et. al. 1987; Law & Order, 'Reviewing Taser Usage 1992; Allen, T.B., 1991.

117. See Cusac, A.M, 1996, who quotes the engineer who examined the electric shield associated with the death of Harry Landis, a Texan Prison officer in December 1995. He said "The manufacturer puts in its literature that the shields will not hurt anyone, including people with heart conditions. But they have

---

not done studies on people at all They conducted their tests on animals - anesthetized animals. Do you see the danger here? In one word: adrenalin," That is the waking human response to electro-shock which results in an adrenalin rush needs to be taken into account in regard to any assertions of safety in devices of this type.

118. Prof Kaufman of Heinrich Heine University in Dusseldorf in a letter to a member of Germany Amnesty MSP Group dated 2 November 1995 cautions that an opinion he gave on a particular product ten years ago could not be used by others since his "expert opinion referred explicitly to the model of the apparatus which was presented to us in those days." In the light of "a great number of changing manufacturers and distributors of such apparatus . . . refer more or less directly to the above mentioned opinion." Prof Kaufman's view is that this is "basically inadmissible as from the point of view of the electrophysiology, assertions on risks can only be made on the exact knowledge of the respective operational data." He viewed a US advert which used his work as "completely devious". . . "since the models presented were examined only as far as safety technics were concerned - we never participated in any sort of 'optimization of the weapon' aimed at obtaining certain effects." Prof Kaufman being aware that "as far as it appears from the manufacturers prospectus - the apparatus offered on the market nowadays differ widely in their operational data from the apparatus then tested." In other words manufacturers are misusing scientific data on one specific device to justify the safety of many new electroshock weapons which is simply inadmissible.

119. See Forrest, 1996, Chap 5 & Chap 7 for a more detailed discussion.

120. The Tibetan monk featured in Fig. H, Palden Gyatso spent decades in prison and labour camps and was systematically tortured. At one desperate point he told a member of the Omega Foundation that he ate his boots to survive. On his release he managed to obtain the instruments used in torture by his Chinese captors and smuggle them out of his country. He said of the electroshock devices. "They use this on your body. If they press that button your whole body will be in shock. If they do it for too long you lose consciousness but you do not die. If they press this button, you can die."

121. Excellent discussions on the codification of counter-terror procedures and their proliferation in practice are provided by Chomsky and Herman (1979) and McClintock (1985a; 1985b; 1992).

122. Quoted from the Baltimore Sun, 'Torture was taught by CIA, 27 January 1997. The Human Resources Exploitation manual appears to have been based on a predecessor called KUBARK Counterintelligence Interrogation, (July 1963) used in the Vietnam period which was declassified at the same time.

123. The initial effects of the procedures in Fig. M are as follows:

Measures (1), (2), (3) and (5) cause visual, auditory, tactile and kinaesthetic deprivation. Measures (1), (4), & (6) deprive the brain of the sugar and oxygen necessary for normal functioning. Measures (1), (4), & (6) may disturb normal body metabolism.

124. For a further account of the sensory deprivation techniques used in Northern Ireland see the British Medical Association, 1986. Allegations of continued ill treatment of detainees in Northern Ireland have continued into the nineties, See for example, Committee on The Administration of Justice, 1991 & 1993).

125. International Herald Tribune 29 January 1997.

126. The Palestinian Authority and its many police forces have been accused by Amnesty of torturing detainees using, for example, position abuse and sleep deprivation or interrogation via assaults whilst a sack was placed over the victim's head. (Amnesty International, Palestinian Authority, Prolonged political detention, torture and unfair trials, London, 2 December 1996.

127. Personal communication to the authors from Dr. Siraj Shah of the Kashmir Council for human rights, in London, dated 5 October, 1993.

---

128. Amnesty International reported evidence of thallium, a commercial rat poison, being used by the Iraqi authorities to effect delayed execution of their political detainees. (See Amnesty International, Political Killings 1983.)

129. Quoted from Priest, D., 'Army's Project X Had Wider Audience', Washington Post, March 5, 1997.

130. An excellent analysis of the training of torturers has been achieved by TV producer Rex Bloomstein whose latest programme on this subject, 'The Roots of Evil' is due to be screened by the BBC during the autumn of 1997.

131. The Dispatches programme team concluded that given that the £500,000 cost of the electroshock deal was paid for in oil, and because BAe would have had to invoice the MoD for payment and the UK government would have had to issue an export licence, they must have known what was going on (Lashmar, 1995).

132. Stott sits on the board and is a founding member of the Association of Police and Public Security Suppliers, Britain's foremost commercial promoter of police technology and internal security equipment supplies.

133. Electroshock weapons are carried by all prison camp guards in China. According to Pierre Sane, the Secretary General of Amnesty International, the use of shock weapons in China today 'has become so endemic that it is almost impossible to document and follow the cases of the number of victims.'

134. The concept of a trade in the technology of political control was originally described by NARMIC and NACLA and formalised by Wright (1977, 1978) and Klare & Arnson, (1981).

135. European Union: human rights and military, security and police transfers - When will established criteria be implemented?", July 1994, p. 8.

136. Austria: Steyr Mannlicher supplied AUG 5.56mm assault rifles for service with the Indonesian Parachute and Counter-Terrorist police units (Military Powers 10/91).

137. Belgium: FN Herstal supplied M49 sub machine guns, FAL 7.62mm Assault Rifles, Minimi 5.56mm light machine guns for police and security force use (Military 10/91) and have a representative office in Jakarta (Defence Manufacturers Association ASEAN Report [DMA 8/90]).

138. Denmark: Dansk Industri Syndikat the Madsen sub-machine gun (made under licence by IMBEL, Brazil) used by Indonesian Police (DMA 8/90).

139. Finland: Sako supplied Valmet rifles to Security Forces (Jane's Security & Counter-Insurgency Equipment 1990 [COIN 90]).

140. France: Acmat supplied wheeled armoured vehicles to the Indonesian Police (Military Powers 10/91); Creusot Loire supplied 205 AMX-13 tracked armoured vehicles (Military Powers 10/91); GIAT supplied 20 105mm LGI MkII light guns plus a significant quantity of ammunition (Jane's Defence Weekly [JDWI 21/5/94]); Manurhin supplied SG540 SIG Assault Rifles (DMA 8/90); Morpho Systems supplied an Automated Fingerprint Recognition System (MiliPol 1993 Catalog); Panhard supplied 18 VBL Light Amphibious Scout Cars (JDW 18/12/96).

141. Germany: Heckler & Koch supplied MP5 Sub machine guns used by the Indonesian Special Forces and it was reported that the Indonesian Marines were to take delivery of MSG 90 Military Sniper Rifles (Asian Defence Journal 11/95) and police & security forces were already equipped with G3 Rifles (DMA 8/90).

142. Greece: Pyrkal exported ammunition (Hellenic Defence Industries Catalog 96/7).
143. Italy: Beretta Model 12 Sub machine guns and BM-59 rifles used by police & security forces (Military Powers 10/91).
144. Netherlands: NWM de Kruithoorn 20mm ammunition is largely supplied by NWM (DMA 8/90).
145. Sweden: Bofors Indonesia's 40mm Bofors ammunition is obtained either from Sweden of Chartered Industries of Singapore (DMA 8/90); FFV (Sweden) sub-machine guns [produced under licence in Egypt] supplied to Indonesia (COIN 90).

146. UK: GKN Defence 10 AT-10s Saxon GKN Wheeled armoured vehicles supplied to the Indonesian Police (Military Powers 10/91); Glover Webb Tactica Water Cannon. "Britain fuels Suharto repression" (Observer 21/7/96); Interarms Military and sporting armaments (FIS 93); Land Rover Indonesia purchased 1500 Land Rovers in 1979 which are popular and still in wide use, including 10 for anti-riot duties and 2 for the Presidential Guard (DMA 8/90); Amongst the British military and security equipment sold to Indonesia in the last decade. was a prototype of Siemens Plessey Defence Systems GENERICS - the NATO command information system. GENERICS can display complex information about events unfolding across a landscape. It would enable the user to concentrate forces efficiently in response to demonstrations and riots (Independent, 3/8/96, Technology that gives the edge to 'Big Brother').
147. Belgium: Cockerill Mechanical Industries \$100 million subcontract to build armoured infantry fighting vehicles (AIFVs) for Turkish Army (JDW 9/9/89); FN Herstal Minimi 5.56mm light machine gun used in Turkey (JDW 15/7/89).
148. France: Euro Vectuer (GIAT) has set up a subsidiary in Turkey [Savunna Sanayii] to oversee the firms contract for 515 Dragor turrets (JDW 4/2/95); Thomson-CSF the TRS 22XX long range mobile (NATO Class 1 ) radar has been adopted by Turkey. Local company Tefken is co-producing 14 examples (International Defense Review [IDR] 9/96).
149. Germany: Alcatel (Radio & Defense Systems) - Aselsan Electronics (Turkey) manufactures the Alcatel SEL RATAC-S Surveillance radar under licence (IDR 6/96); Heckler & Koch - Turkey manufactures H+K rifles and sub-machine guns under licence (American Academy of Arts & Science 2/94); Thyssen Henschel Fox NBC Reconnaissance vehicles supplied to Turkey (JDW2/11/91).
150. Italy: Agusta SpA \$19 million contract to supply Turkish Ministry of Defence with 20 AB-206B Jet Ranger Helicopters.
151. Netherlands: DAF has received a \$50 million subcontract to provide weapon station and vehicle integration. The first 20 AIFVs will be assembled by DAF after which assembly will begin in Turkey (JDW 9/9/89); Eurometaal - Eurometaal USA listed as exporting several shipments of grenades to Turkey (PIERS 12/95), Turkey will begin production of cluster

bombs as part of a joint venture between MCIA (Turkey) & Eurometaal. Under the ten year agreement 206,000 cluster bombs will be produced for Turkey and 103,000 for Holland (Arms Trade News 21/1/94).

152. UK: Burle Ltd listed as exporting CCTV equipment (FIS Turkey 94); Chemring Ltd 32,355 complete round flare bombs and IR Decoy and Chaff-S Ammunition (Turkey Contracts Bulletin 1/95); GEC Marconi Communication Systems resolved dispute with the Turkish Armed Forces regarding the contract for the Scimitar H (HF-SSB) radios as part of a £96 million contract started in 1990 (JDW4/2/95); GEC Marconi Secure Systems crypto devices and spare parts (Turkey Contracts Bulletin 2/95); Pilatus Britten Norman sold a Multi Sensor Surveillance Aircraft (MSSA) to Turkey for Border Surveillance for an undisclosed amount (Aerospace Daily 16/6/93); Racal Comsec Ud - CLASSIC [Covert Local Area Sensor System for Intruder Classification] was originally developed to detect illegal immigrants attempting to enter Hong Kong. A total of 1700 systems have been ordered by 31 countries, of which 10 are NATO members (including Canada, Portugal, Spain and Turkey) (IDR 6/96); Short Brothers - recent customers for the Shorts Shorland vehicles include 40 APCs (Armoured Personnel Carriers) to the Turkish Ministry of Interior to be used by the Gendarmerie; Transac supplied 'armoured vehicles' (FIS Turkey 94).

153. Land Rover (UK) have a licence production agreement with Otobus Karoseri (Otokar) of Turkey. Since 1987, Otokar has built Land Rover 4x4 vehicles under licence with production running at approx. 2500 vehicles a year. The Scorpion has an all welded steel hull with around 70% of the automobile components drawn from the well known Land Rover Defender 90/100 (4x4). Machine gun, night vision and day vision equipment are standard (JDW 6/8/94). Export licence control is not exercised as the UK Government classifies the Land Rover components as civilian spare parts. This is despite the end product being a highly maneuverable and lethal internal security vehicle. Additional reports have shown how this type of third country licenced production have allowed MSP transfers that would not be permitted direct from the UK. It was reported in 1995 that Otokar had obtained a \$200 million deal to supply 700 Scorpion vehicles to Algeria (Defense News 2616195). The UK currently has a military embargo on Algeria.

---

154. GKN Defence (UK): produce Mowag (Switzerland) armoured and internal security vehicles under licence. Also produced in Chile and Canada (Armada International 4-5/96). Oman has received the first batch of GKN Defence built MOWAG Piranha 8x8 vehicles. (JDW 16/9/95). GKN Defence have also established licenced production of its vehicles in the Philippines. The first 7 Simba 4x4 APCs have been delivered to the Philippines Armed Forces. 150 vehicles have been ordered fitted with a 12.7mm Browning MG armed turret. Eight Simbas will be supplied from the UK, several as kits and the rest assembled at the Subic Bay plant operated by the joint venture Asian Armoured Vehicle Technologies Corp. A number of variants will probably be developed. (JDW 30/4/94). It was reported in 1989 that the Philippines is therefore set to become the first ASEAN nation with an armoured vehicle manufacturing capability and could act as a base for regional export sales. (JDW 16/12/89).

155. FN Nouvelle Herstal SA (Belgium) is helping to build an ammunition producing factory in Eldoret, Kenya and is providing much of the machinery. It is estimated that the factory has

cost between £6-170 million, but the Kenyan Government refuses to discuss the financing arrangements. The factory will be capable of producing 20 million bullets a year. (Guardian 20/6/96).

156. Heckler and Koch (Germany). H+K small arms are produced under licence in many countries throughout the world. MKE MP5 A3 and MP5 K Sub machine guns for 9mm Parabellum ammunition are produced by MKE under licence from Heckler and Koch (Germany). Are very similar in almost all aspects to the original Heckler & Koch version. (Police & Security Equipment 96/7). In 1994, the American Academy of Arts & Science reported that H+K rifles were produced under licence in the following countries: France, Greece, Norway, Portugal, Sweden, Turkey, UK, Mexico, Burma, Iran, Pakistan, Saudi Arabia, Thailand. H+K Sub-machine guns were produced under licence in: Greece, Portugal, Turkey, UK, Iran, Saudi Arabia.(AAAS 2/94). Such licenced production can mean in practice that Heckler & Koch small arms are transferred to countries that the European Union may have export restrictions on. For example it was reported that in "late 1991, 50,000 Heckler & Koch G3 automatic rifles were also supplied to Sudan, probably via Iran." (JDW 9/5/92).

157. Steyr Mannlicher (Austria): First batch of 1000 STEYR 5.56mm AUG Assault rifles for Malaysian Armed forces completed by SME Tools in Malaysia (Total of 65,000 rifles are to be produced over 5 year period) (JDW 5/10/91).

158. FFV Ordnance (Sweden) 9mm Model 45 sub machine gun - generally known as the Carl Gustaf. Made under licence in Port Said, Egypt. A silenced version was used by US special forces in S.E. Asia. The weapon was also copied & produced in Indonesia - currently not in production. (COIN 90).

159. PT Pindad (Persero) (Indonesia): PT Pindad has signed a licence agreement with Chartered Industries of Singapore to produce the CIS 40-AGL 40mm automatic grenade launcher. (JDW 28/5/94). Also reported as producing the following small arms under licence production agreements: version of FNC rifle as SS1-V1 and SS1-V2, version of Browning High Power pistol - made under licence from FN, Belgium; version of Beretta 9mm Model SMG - made under licence from Beretta, USA; 60mm Mortar - made under licence from Tampella, Finland; 81 mm Mortar (Quantity 500) (Tampella, Finland); Model 38/49 SMG and Model 12 SMG - made under licence from Beretta, USA; Model 45 (Carl Gustav) SMG - made under licence from Sweden; FNC, FN FAL, FN MAG FN Mauser 98 carbine (used by police) - made under licence from FN, Belgium; FN Minimi SAW - made under licence from FN, Belgium. (Defence Manufacturers Association 8/90: Indonesia - Police & Security Equipment Holdings).

160. It was reported in 1994 that the Swiss company, Pilatus Flugzeugwerke opened a military trainer production line at its UK subsidiary on the Isle of Wight, called Pilatus Britten-Norman Ltd (UK), to side step tough new arms-export regulations.(Flight International 6/4/94). One reason suggested for the move was that the Swiss aircraft company wanted to take advantage of laxer British rules on arms exports. Pilatus Aircraft, a subsidiary of Oerlikon-Buhrle, currently manufactures the PC-7 and PC-9 in Stans, near Lucerne. The planes, originally developed for training, have been widely sold to countries such as Guatemala, Burma, Iraq, Iran and El Salvador. Swiss law prohibits military sales to 'areas of conflict'. Pilatus has long claimed that its planes are not military equipment and that, if armies buy them for training, that is not the same as buying them for killing. At least one company in Belgium openly offers gun ready conversion services. (Observer 27/3/94). The UK subsidiary

already has a licenced production agreement with the Philippines, the PADC (Philippines Aerospace Development Corporation) was reported to be building the Islander light transport and passenger aircraft. The Islander has A STOL capability and can be used for cargo, passenger, survey, aerial spraying and in its Maritime Defender version, maritime surveillance operations. The original agreement called for the transfer of 105 Islanders to the

PADC. The first 6 were built by Britten-Norman and sold by PADC. The next 14 were delivered unfinished, and the next 35 were assembled by PADC. After Britten-Norman was acquired by Swiss firm. Pilatus, in 1979. The assembling licence was suspended. But in March 1980 a new agreement was reached for the assembly of 12 more Islanders, including one turboprop BN-2T Turbine Islander. In 1981, PADC were no longer just assembling the Islander but building it from the ground up. PADC hoped to become the exclusive distributor of the Pilatus Products in the ASEAN region.(Arms Production 1984).

161.The full text of resolution Doc EM\RE\264264474 read:

- **aware** of the European Parliament's concerns regarding the export of repressive technologies to repressive regimes that violate human rights,
- **disturbed** at recent revelations that such technologies are being produced in at least three European Union (EU) countries, namely Germany, Ireland and the United Kingdom, companies such as Equipol, France Selection Neral et Cie (France) Tactical Arms International UK and British Aerospace are all known to have supplied electroshock units,
- **horrified at** the information that these technologies have been exported amongst others to Saudi Arabia, China, the Gulf States and South Africa under the Apartheid regime,
- **aware that** these technologies have been used in gross violation of human rights, aware of government complicity in these transactions that have been formally banned by the governments concerned, for example ICL Technical Plastics in Glasgow, which produces electroshock weapons ,

**1. Requests a statement from the governments concerned regarding the allegations;**

**2. Urges support for Amnesty International's call for a full investigation into the extent of the trade in the EU;**

**3. Calls on** the Commission to bring forward proposals to incorporate those technologies within the scope of arms export controls and ensure greater transparency in the export of all military security and police technologies to prevent the hypocrisy of governments who themselves breach their own export bans;

**4. Instructs** the President to forward this resolution to the Council, the Commission and the EU Member State Governments.

162. For further details, see Ballantyne, 1996.

163. Amnesty International Danish Medical Group, 1987.

164. The image used in Fig.46 was taken by this man and supplied to Amnesty International.

165. For example AB Electronics (electronic restraint devices); AFY Distributors (electroshock batons); Amazing Concepts (Intimidator electric shock weapons); Armas No Mortales (electroshock weapons); B. West Imports (paralyser Stun Batons); Custom Armouring Corp (Nova Electronic riot equipment); Federal Laboratories Division (Electronic batons); Hiatt Thompson (restraint devices); Nova Technologies (electronic restraint and stun devices); Paralyzer Protection (electric shock stun guns and batons); Ranger Joes (stun guns); Reliapon Police Products (Nova Electronic restraints and shields); S. & J. Products (electronic restraint devices); SAS R&D Services (electronic batons); Sherwood Communications Associates UD (Equaliser and Lightning stun guns); Stun Tech Inc (Electronic immobilisation weapons and the REACT belts); Taser Industries (electronic dart shock weapons); The Edge Company (Thunderbolt stun gun); American Handcuff Co., (leg irons); C&S Security (gang transport chains); Smith & Wesson (belly chains and other restraining equipment); Technipol International (leg irons and thumbcuffs); Tobin Tool and Die (shackles); WS Darley (leg irons and belly chains) - to name but a few companies who have advertised their wares. This information has been collected from company brochures, Police & Security News (various volumes) and Thomas Register (1992).

166. Confirmation of these fears was provided by a secret list of licenses issued by the Commerce Department over the last decade that was obtained by the US magazine 'Counterpunch', (October 1, 1995), that was not made available to FAS. It cited Air Parts International's export to Yemen of shock batons with high voltage, Creative Security's export of shock batons to Saudi Arabia; Jonas Aircraft and Arms export of saps - (lead bludgeons covered with leather) to Egypt and shock batons to Saudi Arabia in 1992; Nova Technologies export of electronic stun guns to the Philippines; Premier Crown Corporation's export of twenty six inch shock batons with hot centre to Saudi Arabia; Smith & Wesson's export of shock batons and mace batons to both Saudi Arabia & Yemen; Transtechnology Corporation's export of riot shields with Arabic inscription to Yemen; and Tri County Police Supplies export of shock batons to Thailand.

---

167. On November 13, 1995, The US Secretary of Commerce informed the speaker of the House, Newt Gingrich, that he had disaggregated these items to form a new ECCN. OA83D on the Commerce Control List. Commerce also added a new section to the Export Administration Regulations. Section 776.19, "Implements of Torture" to further segregate these items. (Brown, 1995). Yet even after this review took place, it was disclosed that the US government had approved the sale of thumbcuffs to Russia; blackjacks, stun guns and shock batons to Lithuania, Moldova, Panama and Tanzania; and electronic riot shields and batons to Mexico. (Lelyveld, 1996).

168. Amnesty is careful to point out in its reports that it is not making any accusation against any company of direct complicity in torture but that these companies have offered to supply

since 1990. It is not a definitive list because of the difficulty in obtaining data on the subject in many countries and because of the inevitable business and market changes.

169. The Belgium companies are thought to be Belgium Business International (BBI), Browning and Falcon Security & Telecommunications. In June 1996, De Morgen newspaper quoted a BBI salesman, 'We work via other countries like Spain or no . . . the easiest is Paris. But if you have your own transitaire [middleman] we just deliver to them..We have several models. The most useful is no bigger than two packs of cigarettes and gives shocks of 150,000 volts. The problem with this type of weapon is that you have to stretch your arm to come into contact with the enemy. That's why I advise the mattracks [truncheons] with two electrodes at the end - ideal for riot police or presidential guards. Even last year, the central African Presidential Guards were equipped with this. Yes, Belgium is rather strict, but Africa and Latin America permit us to just export it to a middle man and then we have it depart from there.'

170. The French companies are thought to be Auto F; Doursoux -Securitec s.a.r.l; Equipol; France Selection; GK Productions; Glam Securite; Le Protecteur; Nieral & Cie Sarl and SAE Alsetex (See Fig. 53).

171. The German companies are thought to be Bonowi; Electron-Import & Export; Enforcer (Pulz & Charbit) GmbH; M.S.C; M.T.S.; M.V.S.; NOWAR Security Equipment GmbH; Otto Boenicke; PK Electronic; Rennhak Nachtsichtsysteme; Sicherheitstechnik Schmid (STS); Sipe Electronic GmbH; Solid Company Sicherheitstechnik Import & Export; TEWI Textil Wighardt; Tradimex Vertriebs GmbH; Waffenhandel Uwe Ulriche; Wapo Electronic GmbH.

172.The company referred to is thought to be Alpha Safety which advertised such products in 1993 but is thought to be no longer trading.

173. The company referred to is thought to be Reinaert Electronics.

174. The company referred to is thought to be NitSpy Defensa Y Contraespionaje.

175. The companies referred to were largely uncovered by the Channel 4 Dispatches programmes, referred to in the text. (Gregory 1995,1996) They include British Aerospace Defence Ltd (Royal Ordnance Division); CCS Communication, Control Inc; Compass Safety International; ICL Technical Plastics UD; International Procurement Services; J & S Franklin UD; PK Electronic International UD; SDMS Security Products UD.

**Abstract**

A method and apparatus for simulation of hearing in mammals by introduction of a plurality of microwaves into the region of the auditory cortex is shown and described. A microphone is used to transform sound signals into electrical signals which are in turn analyzed and processed to provide controls for generating a plurality of microwave signals at different frequencies. The multifrequency microwaves are then applied to the brain in the region of the auditory cortex. By this method sounds are perceived by the mammal which are representative of the original sound received by the microphone.

### Electromagnetic Vehicle Stopper

Evaluation of Vehicle Stopping Electromagnetic Prototype Devices: Phase III - Engineering Field Testing Solicitation

To curtail high-speed chases, NIJ is requesting applications for prototype electromagnetic devices designed to stop motor vehicles that are in motion. Approved applicants will provide prototypes for field testing, with the hope of proceeding to operational testing by law enforcement agencies. The NIJ Solicitation, "Evaluation of Vehicle Stopping Electromagnetic Prototype Devices: Phase III - Engineering Field Testing," provides information on application requirements and deadlines.

"Evaluation of Vehicle Stopping Electromagnetic Prototype Devices: Phase III - Engineering Field Testing" (Solicitation) (SL000298) is available on the NCJRS World Wide Web site (<http://www.ncjrs.org/txtfiles/sl298.txt>) and by mail. See "Ordering Directions" and "NCJRS Online Access" at the end of JUSTINFO.

## Nerve-tapping neckband used in 'telepathic' chat

- 17:23 12 March 2008
- [NewScientist.com news service](#)
- Tom Simonite

SYNDICATE

The world's first "voiceless" phone call took place thanks to a neckband that converts nerve impulses into speech (footage courtesy Texas Instruments)

- [Texas Instruments](#)

A neckband that translates thought into speech by picking up nerve signals has been used to demonstrate a "voiceless" phone call for the first time.

With careful training a person can send nerve signals to their vocal cords without making a sound. These signals are picked up by the neckband and relayed wirelessly to a computer that converts them into words spoken by a computerised voice.

A video (right) shows the system being used to place the first public voiceless phone call on stage at a recent [conference held by microchip manufacturer Texas Instruments](#). Michael Callahan, co-founder of [Ambient Corporation](#), which developed the neckband, demonstrates the device, called the Audeo.

Users needn't worry about that the system voicing their inner thoughts though. Callahan says producing signals for the Audeo to decipher requires "a level above thinking". Users must think specifically about voicing words for them to be picked up by the equipment.

The Audeo has previously been used to let people control wheelchairs using their thoughts. [Watch a video demonstrating thought control of wheelchairs](#)

"I can still talk verbally at the same time," Callahan told **New Scientist**. "We can differentiate between when you want to talk silently, and when you want to talk out loud." That could be useful in certain situations, he says, for example when making a private call while out in public.

The system demonstrated at the TI conference can recognise only a limited set of about 150 words and phrases, says Callahan, who likens this to the early days of speech recognition software.

At the end of the year Ambient plans to release an improved version, without a vocabulary limit. Instead of recognising whole words or phrases, it should identify the individual [phonemes](#) that make up complete words.

This version will be slower, because users will need to build up what they want to say one phoneme at a time, but it will let them say whatever they want. The phoneme-based system will be aimed at people who have lost the ability to speak due to neurological diseases like ALS – also known as motor neurone disease.

**Brain Waves**

By [James](#)

Wed Mar 12 20:04:05 GMT 2008

A lot of people who have lost the control of their muscles through stroke or brain injuries may actually be able to communicate through these.

I wonder if this would have allowed Trery Schiavo to say what she thought about her husband?

ACLU: 'In the name of maintaining order, Chief Timoney suspended the constitutional rights of law-abiding people.'

By Lida Rodriguez-Taseff  
President of the Miami chapter of the American Civil Liberties Union

Innocent, law-abiding, red-blooded Americans had their rights violated during the FTAA summit: schoolteachers, steelworkers, union members, retirees, war veterans, students and journalists.

These are not the people Chief John Timoney promised to hunt down and arrest. Quite the contrary, over and over again, the chief promised that he would target the 'potentially violent 2 percent' while protecting the rights of the law abiding and peaceful 98 percent. He promised that his officers would help protect the vigorous exercise of free speech while protecting private property and ensuring the personal safety of police officers and participants alike.

However, as the dust settles and sensationalized media reports are replaced by eye-witness accounts of the citizens of this community, the inescapable truth that emerges is that in the name of maintaining order, Chief Timoney suspended the constitutional rights of law-abiding people.

At least four downtown business owners have confirmed that they were prohibited by police from having anti-FTAA literature in their stores and were ordered to give full descriptions of the persons who gave them the literature. The business owners were not the only ones who had their legal activities monitored. The police' own documents show that police officers tracked the educational and religious activities of local churches and even made written notes of clergy who took a position against the FTAA. These tactics are not the hallmark of our democracy. Rather, they are dark examples of a 'police state.'

Reports from police officers themselves make clear that officers were trained to stop, search and arrest first and ask questions later. Downtown business owners have reported that in case after case, they saw police stop people who were simply walking down the street, push them against the wall, search them and upon finding nothing, let them go. This is not only unconstitutional, it is also un-American.

What is more, the practice spread far and wide, up and down the chain of command. In fact, in at least one instance, the chief himself, entourage in tow, stopped a completely innocent middle-aged man who was leaving a restaurant on Brickell Avenue. The chief demanded to see the man's identification (which is illegal) and actually wrote down the man's driver's license number. A Herald embedded reporter told the chief that the man, who was wearing his full press credentials around his neck, was a reporter, at which point one of the chief's men looked closely at the credentials. The chief then made a brisk exit, leaving the man with an ominous, 'We'll be seeing you,' as he rode off on his bicycle.

MANY CASES DROPPED

Some people were not as fortunate to get off with a mere parting threat.

The police made 99 misdemeanor arrests on Nov. 20. However, an unprecedented 20 of those arrests were thrown out the next day when the State Attorney's Office announced that it refused to prosecute those cases. Many more cases are likely to be dropped in the coming weeks as the flaws of the practice of arresting now and asking questions later are exposed.

The chief also broke his promise to protect private property. In fact, the costliest acts of destruction of property were all at the hands of police. In two of the incidents, police destroyed two cars after receiving unreliable tips from other police officers. Assuming that Chief Timoney's officers were acting in good faith, taxpayers are likely to be stuck with the bill because two innocent people lost their cars.

There are also countless incidents of police dumping the property of arrestees, including wallets, cell phones, purses and backpacks, in streets and gutters, leaving it behind for the not-so-innocent to cause the criminal mayhem that the chief promised to prevent.

#### BIKE TAKEN

And, in at least one instance, a bicycle officer was caught on tape taking a bicycle from a local disabled veteran -- telling the vet that he would not be seeing his bicycle again because it "'was nicer'" than the cop's. The bicycle has not turned up anywhere. The disabled vet needs it to get around. But somehow, the men whom this community entrusted to protect the innocent have now themselves turned into criminals.

The Fourth Amendment was suspended during the week the FTAA talks were held. Most people are prepared to accept this because they have been led to believe that it was suspended only for the people whom the chief describes as the violent anarchists, the thugs and the hoodlums. "'They'" are not "'us,'" we are told.

They may or may not be. That debate is for another day. However, the inescapable truth is that in going after "'them,'" the police came after "'us'" -- the union members, the retirees, the veterans, the steelworkers, the teachers, the students and the journalists. Who among us is next? Should we leave it to Chief Timoney to decide?

[www.nwbotanicals.org](http://www.nwbotanicals.org)

## Introduction

I first became aware of Allan Frey's work at Willow Grove in 1972, just after completing [\*"The Holographic Concept of Reality."\*](#) I was working with Dr. Carl Scheicher (MRU) at the time, and was asked about the significance of this work. Realizing its possible use in mind control, my first reaction was to go on "red alert."

Full significance was not yet understood at this time. Basically, Frey had discovered another sensory motor input in the higher blue-band frequencies of 0.3-3.0 GHz. - at very low amplitudes of power. ; It was "as if" we had another type of "vision," but did not know how to "see" what was being received. It constituted the next generation of subliminal communications.

My work at the time was involved with an AI database for paranormal references (Project Parafile). A second paper was also presented at the Omniversal Symposium, California State College at Sonoma, (September 29, 1973). This was titled [\*"Embryonic Holography."\*](#) and was an application of the [\*"Holographic Concept of Reality"\*](#) model. It dealt with biogenesis and neurological regeneration, and included speculation on the origins of cancer, faith healing, psychic surgery and more technical aspects of mind-body energetics.

One week after the delivery of that paper, four men came into my place of business, two in suits and two in full Army dress. The two suits held me under close arrest, while the two Army personnel went through my files, pulling anything related to [\*"Embryonic Holography."\*](#) The paper was rewritten from old notes and memory, but it was not the same.

What got this paper classified **"top secret"** for almost 20 years was that it was critical for the use of Allan Frey's study, and its possible application to mind control. I never was able to draw what was so important in that initial paper until I began researching this paper, more than 24 years later. I will discuss those aspects further into this document.

In 1961, Allan Frey, a freelance biophysicist and engineering psychologist, reported that humans could hear microwaves. Most United States scientists dismissed this discovery as the result of outside noise.

James C. Linn offered a more technical description of the experiment.

*"Frey found that human subjects exposed to 1310 MHz and 2982 MHz microwaves at average power densities of 0.4 to 2 mW/cm<sup>2</sup> perceived auditory sensations described as buzzing or knocking sounds. The sensation occurred instantaneously at average incident power densities well below that necessary for known biological damage and appeared to originate from within or near the back of the head."*

## **Pulsed Microwave Technology**

Pulsed microwave voice-to-skull (or other-sound-to-skull) transmission was discovered during World War II by radar technicians who found they could hear the buzz of the train of pulses being transmitted by radar equipment they were working on. This phenomenon has been studied extensively by Dr. Allan Frey, (Willow Grove, 1965) whose work has been published in a number of reference books.

What Dr. Frey found was that single pulses of microwave could be heard by some people as "pops" or "clicks", while a train of uniform pulses could be heard as a buzz, without benefit of any type of receiver.

Dr. Frey also found that a wide range of frequencies, as low as 125 MHz (well below microwave) worked for some combination of pulse power and pulse width. Detailed unclassified studies mapped out those frequencies and pulse characteristics which are optimum for generation of "microwave hearing".

Very significantly, when discussing electronic mind control, is the fact that the peak pulse power required is modest - something like 0.3 watts per square centimeter of skull surface, and that this power level is only applied or needed for a very small percentage of each pulse's cycle time. 0.3-watts/sq cm is about what you get under a 250-watt heat lamp at a distance of one meter. It is not a lot of power.

When you take into account that the pulse train is off (no signal) for most of each cycle, the average power is so low as to be nearly undetectable. This is the concept of "spike" waves used in radar and other military forms of communication.

Frequencies that act as voice-to-skull carriers are not single frequencies, as, for example TV or cell phone channels. Each sensitive frequency is actually a range or "band" of frequencies. A technology used to reduce both interference and detection is called "spread spectrum". Spread spectrum signals usually have the carrier frequency "hop" around within a specified band.

Unless a receiver "knows" this hop schedule in advance, like other forms of encryption there is virtually no chance of receiving or detecting a coherent readable signal. Spectrum analyzers, used for detection, are receivers with a screen. A spread spectrum signal received on a spectrum analyzer appears as just more "static" or noise.

The actual method of the first successful unclassified voice to skull experiment was in 1974, by Dr. Joseph C. Sharp and Mark Grove, then at the Walter Reed Army

Institute of Research. A Frey-type audible pulse was transmitted every time the voice waveform passed down through the zero axes, a technique easily duplicated by ham radio operators who build their own equipment.

The sensation is reported as a buzzing, clicking, or hissing which seems to originate within or just behind the head. The phenomenon occurs with carrier densities as low as microwatts per square centimeter with carrier frequencies from 0.3-3.0 GHz. By proper choice of pulse characteristics, intelligent speech may be created.

Dr. James Lin of Wayne State University has written a book entitled: *Microwave Auditory Effects and Applications*. It explores the possible mechanisms for the phenomenon, and discusses possibilities for the deaf, as persons with certain types of hearing loss can still hear pulsed microwaves (as tones or clicks and buzzes, if words aren't modulated on). Lin mentions the Sharp and Grove experiment and comments: "The capability of communicating directly with humans by pulsed microwaves is obviously not limited to the field of therapeutic medicine."

### **"Synthetic Telepathy"**

In 1975, researcher A. W. Guy stated that "one of the most widely observed and accepted biologic effects of low average power electromagnetic energy is the auditory sensation evoked in man when exposed to pulsed microwaves."

He concluded that at frequencies where the auditory effect can be easily detected, microwaves penetrate deep into the tissues of the head, causing rapid thermal expansion (at the microscopic level only) that produces strains in the brain tissue.

An acoustic stress wave is then conducted through the skull to the cochlea, and from there, it proceeds in the same manner as in conventional hearing. It is obvious that receiver-less radio has not been adequately publicized or explained because of national security concerns.

Today, the ability to remotely transmit microwave voices inside a target's head is known inside the Pentagon as "Synthetic Telepathy." According to Dr. Robert Becker, "Synthetic Telepathy has applications in covert operations designed to drive a target crazy with voices or deliver undetected instructions to a programmed assassin."

This technology may have contributed to the deaths of 25 defense scientists variously employed by Marconi Underwater and Defense Systems, Easems and GEC. Most of the scientists worked on highly sensitive electronic warfare programs for NATO, including the Strategic Defense Initiative. It is claimed that directed energy weapons might have been used to literally drive these men to suicide and 291 accidents.

### **Biological Amplification** *Using Microwave Band Frequencies*

The next major development in ELF weaponry was the concept of a biological amplification of these signals at the cell level to perpetuate and set up resonance for more sophisticated information transfer. This was the beginning of using more than one technology in a stack to do something "more." While this was implied, it was never developed in "*The Holographic Concept of Reality*."

Electromagnetic fields or relatively weak power levels can affect intercellular communication. Bio-amplification is apparently why radio signals of very low average power (mw) can produce audio effects, and is difficult to detect. [*Electromagnetic Interaction with Biological Systems*, ed. Dr. James C. Lin, Univ. of Illinois, 1989, Plenum Press, NY]

Imposed weak low frequency fields (and radio frequency fields) that are many orders of magnitude weaker in the pericellular fluid (fluid between adjacent cells) than the membrane potential gradient (voltage across the membrane) can modulate the action of hormones, antibody neurotransmitters and cancer-promoting molecules at their cell surface receptor sites.

These ELF sensitivities appear to involve nonequilibrium and highly cooperative processes that mediate a major amplification of initial weak triggers associated with the binding of these molecules (specific cell surface receptor sites). Membrane amplification is inherent in this trans-membrane signaling sequence.

Initial stimuli associated with weak perpendicular EM fields and with binding of stimulating molecules at their membrane receptor sites elicit a highly cooperative modification of  $\text{Ca}^{++}$  binding to glycoproteins along the membrane.

A longitudinal spread is consistent with the direction of extracellular current flow associated with physiological activity and imposed EM fields. This cooperative modification of surface  $\text{Ca}^{++}$  binding is an amplifying stage. By imposing RF fields, there is a far greater increase in  $\text{Ca}^{++}$  efflux than is accounted for in the events of receptor-ligand binding. from imposing RF fields.

Enzymes are protein molecules that function as catalysts, initiating and enhancing chemical reactions that would not otherwise occur at tissue temperatures. This ability resides in the pattern of electrical charges on the molecular surface.

Activation of these enzymes and the reactions in which they participate involve energies millions of times greater than in the cell surface, triggering events initiated by the EM fields, emphasizing the membrane amplification inherent in this trans-membrane signaling sequence.

Frey and Messenger confirmed that a microwave pulse with a slow rise time was ineffectual in producing an auditory response. Only if the rise time is short, resulting in effect in a square wave with respect to the leading edge of the envelope of radiated radio-frequency energy, does the auditory response occur. This is why we don't "hear" ordinary radio and TV signals.

The significance of "*Embryonic Holography*" now becomes more understandable. For example, the specific frequency bands (0.3-3.0 Hz) are so flat as to appear

almost 2-dimensional to most biological processes on a semi-quantum mechanical level. This means that these frequencies can be seen as "scalar" in their possible interaction with specific brain processes.

What these frequencies really are, however, are actual holograms of specific thoughts. They have a third component of detail (much like the patented P300 wave). This means that a hybrid form of brain fingerprinting is now possible. And, once these "images" are stored (usually in a very sophisticated super-cooled computer), similar responses can be fed back to the person, inducing virtually any state desired (via entrainment protocols).

### **Silent Sound Technology - "S-quad"**

Silent (converted-to-voice FM) hypnosis can be transmitted using a voice frequency modulator to generate the "voice." It is a steady tone, near the high end of hearing range (15,000 Hz), plus a hypnotist's voice, varying from 300 - 4,000 Hz. These two signals are frequency modulated. The output now appears as a steady tone, like tinnitus, but with hypnosis embedded. The FM-voice controls the timing of the transmitter's pulse.

Each vertical line is one short pulse of microwave signal at a frequency to which the human brain is sensitive. Timing of each microwave pulse is controlled by each down-slope crossing of the voice wave (Sharp's method, 1974). Then the brain converts the train of microwave pulses back to inaudible voice. There is no ***conscious defense*** possible against this form of hypnosis.

Ordinary radio and TV signals use a smooth waveform called a 'sine' wave. This wave signal cannot normally penetrate the voltage gradient across the nerve cell walls. Radar signals consist of very short and powerful pulses of sine wave type signals, and can penetrate the steep voltage gradient across these nerve cell walls (Allan H. Frey, Cornell University, 1962).

Differences in osmosis of ions (dissolved salt components) cause a small voltage difference across cell walls. When a small voltage appears across a very tiny distance, the change in voltage is called very 'steep.' It is this steep gradient that keeps normal radio signals from throwing us into convulsions.

The mind-altering mechanism is based on a subliminal carrier technology: the Silent Sound Spread Spectrum (SSSS), sometimes called "S-quad" or "Squad". It was developed by Dr Oliver Lowery of Norcross, Georgia, and is described in US Patent #5,159,703, "Silent Subliminal Presentation System", dated October 27, 1992. The abstract for the patent reads:

*"A silent communications system in which nonaural carriers, in the very low or very high audio-frequency range or in the adjacent ultrasonic frequency spectrum are amplitude- or frequency-modulated with the desired intelligence and propagated acoustically or vibrationally, for inducement into the brain, typically through the use*

*of loudspeakers, earphones, or piezoelectric transducers. The modulated carriers may be transmitted directly in real time or may be conveniently recorded and stored on mechanical, magnetic, or optical media for delayed or repeated transmission to the listener."*

According to literature by Silent Sounds, Inc., it is now possible, using supercomputers, to analyze human emotional EEG patterns and replicate them, then store these "emotion signature clusters" on another computer and, at will, "silently induce and change the emotional state in a human being".

Edward Tilton, President of Silent Sounds, Inc., says this about S-squad in a letter dated December 13, 1996:

*"All schematics, however, have been classified by the US Government and we are not allowed to reveal the exact details... we make tapes and CDs for the German Government, even the former Soviet Union countries! All with the permission of the US State Department, of course... The system was used throughout Operation Desert Storm (Iraq) quite successfully."*

"Induced Alpha to Theta Biofeedback Cluster Movement" is an output from "the world's most versatile and most sensitive electroencephalograph (EEG) machine". This device has a gain capability of 200,000, as compared to most other EEG machines (with gain capability of 50,000). It is software-driven by the "fastest of computers" using a noise nulling technology similar to that used by nuclear submarines for detecting small objects underwater at extreme range.

The purpose of all this high technology is to plot and display a moving cluster of periodic brainwave signals. The illustration shows an EEG display from a single individual, taken of left and right hemispheres simultaneously. This technology is very similar to that used to generate P300 waves.

## **Cloning the Emotions**

By using these computer-enhanced EEGs, scientists can identify and isolate the brain's low-amplitude "emotion signature clusters," synthesize them and store them on another computer. In other words, by studying the subtle characteristic brainwave patterns that occur when a subject experiences a particular emotion, scientists have been able to identify the concomitant brainwave pattern and can now duplicate it.

*"These clusters are then placed on the Silent Sound[™] carrier frequencies and will silently trigger the occurrence of the same basic emotion in another human being!"*

Regarding system delivery and applications, there is a lot more involved here than a simple subliminal sound system. There are numerous patented technologies that can be piggybacked individually or collectively onto a carrier frequency to elicit all kinds of effects.

There appear to be two methods of delivery with the system. One is direct microwave induction into the brain of the subject, limited to short-range operations. The other, as described above, utilizes ordinary radio and television carrier frequencies.

Far from necessarily being used as a weapon against a person, the system does have limitless positive applications. However, the fact that the sounds are subliminal makes them virtually undetectable and possibly dangerous to the general public.

In more conventional use, the Silent Sounds Subliminal System might utilize voice commands, e.g., as an adjunct to security systems. Beneath the musical broadcast that you hear in stores and shopping malls may be a hidden message that exhorts against shoplifting. And while voice commands alone are powerful, when the subliminal presentation system carries cloned emotional signatures, the result is overwhelming.

Free-market uses for this technology are the common self-help tapes, positive affirmation, relaxation and meditation tapes, as well as methods to increase learning capabilities. But there is strong evidence that this technology is being developed toward global mind control.

The secrecy involved in the development of the electromagnetic mind-altering technology reflects the tremendous power that is inherent in it. *To put it bluntly, whoever controls this technology can control the minds of men - all men.*

There is evidence that the U.S. Government has plans to extend the range of this technology to envelop all peoples, all countries. This can be accomplished, and is being accomplished, by utilizing the nearly completed HAARP project for overseas areas and the GWEN network now in place in the U.S. The U.S. Government denies all this.

Dr Michael Persinger is a Professor of Psychology and Neuroscience at Laurentian University, Ontario, Canada. His work and findings indicate that strong electromagnetic fields can and will affect a person's brain.

*"Temporal lobe stimulation can evoke the feeling of a presence, disorientation, and perceptual irregularities. It can activate images stored in the subject's memory, including nightmares and monsters that are normally suppressed."*

## **Mind Reading Devices**

Alan Yu, a former lieutenant colonel in the Taiwan National Defense Department, says that the United States has not only developed an operational mind control machine, but has also distributed models for use by allied countries. Yu states that such machines pose a great threat to human rights and the American way of life. He calls the device the "Mind Reading Machine" (Mind Machine).

Yu writes that there are two sources of information detailing the existence of the Mind Reading Machine. The first evidence: In the 1970s, The South China Morning Post reported that the University of Maryland had invented a Thought Reading Machine. The original purpose of this invention was to help authorities investigate severe car accidents. It was to be used on people who were severely injured to get their accounts of how the accidents occurred.

In the spring of 1984, Yu was a lieutenant colonel serving in the National Defense Department of Taiwan. At that time, Yu read a classified document from the department that he serviced under. The document said the Military Police Department of Taiwan had purchased several of the Mind Reading Machines from the United States (In Taiwan, it was called Psychological Language Machine).

The document was a request to the United States for parts to repair several malfunctioning machines. The machine allegedly uses microwaves to deliver spoken messages directly to the human brain, as well as using radio waves to hypnotize people or change their thoughts. Yu reports that before he left, this machine had become the most effective weapon for the security departments of Taiwan.

In 1993, Defense News announced that the Russian government was discussing with American counterparts the transfer of technical information and equipment known as "Acoustic Psycho-correction." The Russians claimed that this device involves the transmission of specific commands via static or white noise bands into the human subconscious without upsetting other intellectual functions.

Demonstrations of this equipment have shown encouraging results after exposure of less than one minute and have produced the ability to alter behavior on unwilling subjects. A US Department of Defense medical engineer claimed in 1989 that the U.S. and Israel had regularly used microwaves to condition and control the minds of Palestinians.

## **Unclassified ELF-Type Weapons**

**Remote physical manipulation:** Not covered in this document. At time of writing, that technology appears to be classified.

**Transmission methods for neuro-effective signals:** This includes pulsed microwave (i.e., like radar signals) and ultrasound and voice-FM (transmitted through the air). Also known as "Synthetic Telepathy."

While transmission of speech, dating from the early 1970s, was the first use of pulsed microwave, neuro-effective signals can now cause many other nerve groups to become remotely actuated. That specific technology is classified.

**Pavlovian hypnotic triggers:** A [Pavlovian] hypnotic trigger is a phrase or any sensory cue that the subject is programmed to involuntarily act in a certain way. MKULTRA survivors can still be triggered from programming done decades ago.

One of the main goals of the institutional/drug/child abuse phases of the CIA MKULTRA atrocities (1950's through 1970's) was to implant triggers using a "twilight state" (half-conscious) medication and tape-recorded hypnosis. The ultimate goal was to have the acting out of Pavlovian triggers erased from the victim's memory.

These triggers are now planted using either of the above two transmission methods, but with the words moved up just above (or near the top of) the audible frequency range. The result is that hypnotic triggers are planted without the subject being aware. This technology was used in the Gulf War as "Silent Sound."

**Through-wall surveillance methods:** This includes top end of microwave (near infrared), and the so-called "millimeter wave" scanning. This method uses the very top end of the microwave radio signal spectrum just below infrared. To view small objects or people clearly, the highest frequency that will penetrate non-conductive or poorly-conductive walls is used.

**Millimeter wave scanning radar can be used in two modes:** The first is passive (no radiated signal) and uses background radiation already in the area to be scanned. It is totally undetectable. The active system uses a (low power millimeter wave) "flashlight" attached to the scanner.

**Thought reading:** Thought reading can be classed as a form of "through wall surveillance" technology. In the unclassified and commercial realms, it is called thru-skull microwave reading, and magnetic skull-proximity reading.

**Brain entrainment:** This involves moods and sleep states, the reverse of biofeedback. The low frequency electrical brain rhythms are characteristics of various moods and states of sleep. Not only can they now be read out using biofeedback equipment or EEG machines, but also radio, sound, contact electrodes, or flashing lights. These moods and sleep states can be generated or at least encouraged using brain entrainment devices.

Brain entrainment signals cannot carry voice, which is a much higher frequency range. Brain entrainment can, however, be used to "set up" a target to make him/her more susceptible to hypnosis.

**Implantation:**(no longer required)

## **Specific ELF Weapons**

**Ultrasound and Voice-FM:** Main advantage in mind control work is that it can carry verbal hypnosis, more potent than simple biorhythm entrainment. An example is Chicago's Airport Terminal connection tunnels and their "Keep Walking."

Steady tone, near the high end of hearing range (15,000 Hz). Hypnotist's voice, varying from 300 to 4,000 Hz, fed into a frequency modulator, where the voice controls the frequency. Output is now a steady tone, sounding like tinnitus, but with hypnosis embedded. While the brain can hear and understand, the ear only hears a "tone" or a "rush."

**Through-Wall Radar:** Millimeter wave through clothing, through-luggage is currently in use at airports. Millimeter wave scanners can be purchased from:

Millivision Corp.  
Northampton, MA  
[www.millivision.com](http://www.millivision.com)

**Thought Readings:** Thought reading is an enhanced version of computer speech recognition, with EEG waves being substituted for sound waves. The easiest "thought" reading is actually remote picking up of the electro-magnetic activity of the speech-control muscles.

When we say words to ourselves, silently, or, read a book, we can actually feel the slight sensations of those words in our vocal muscles - all that is absent is the passage of air. Coordinated speech signals are relatively strong and relatively consistent.

We are "fed" hypnotic signals to force consistent "neutral" content (but of different character than prior to becoming test subjects) in dreams. These forced, neutral content ("bland" content) dreams occur every single night and may represent the experimenters' efforts to have our experiences portray themselves in such dreams, in effect, mining our experiences.

[www.raven1.net/elecvisn.htm](http://www.raven1.net/elecvisn.htm) confirms the ability of current unclassified technology to actually see what a living animal sees, electronically. It is therefore extremely likely that these forced dreams can be displayed on the experimenters' screens in an adjacent apartment or adjacent house, (which are made obvious to the involuntary experimentee).

**Implants:** Implants can either receive instructions via radio signals, passing them to the brain. Or, can be interrogated via external radio signals to read brain activity at a distance. Since implants for beneficial purposes are actively being promoted by NIH, it is obvious they will not disappear any time soon.

**Thermal Gun, Seizure Gun, and Magnetophosphene Gun:** Evokes a visual response and is thought to be centered in the retina (as seen in the movies Goldeneye, Broken Arrow, Escape From LA, and Eraser). The popular video "Waco: The Big Lie Continues" shows video footage of three EM weapons being used during the confrontation.

[www.altered-states.co.nz/cgi-bin/reload.cgi?^/sub/silent.htm](http://www.altered-states.co.nz/cgi-bin/reload.cgi?^/sub/silent.htm)

**From their brochure:**

*"Only your mind can hear. Your ears hear nothing but your mind hears and accepts the powerful suggestions.*

*You can safely play these tapes anywhere - in a car, while watching TV or listening to your favorite music, while working or even as silent sleep programming.*

**Warning:** *Everyone within listening range of the tape will be programmed by the suggestions. To assure yourself that strong suggestions are recorded on the tape, take it to any Radio Shack store, play it on their stereo and read the output with a Radio Shack Sound Level Meter (Item 33-2050)*

**How To Use The Tapes:** *Increase the volume until it is just below any tape noise. If your stereo deck has treble and bass controls, you can boost the subliminal output by increasing the treble and decreasing the bass. The player then emits a strong but inaudible frequency - modulated 60 - 90 decibel signal that is received and demodulated by the human ear.*

**Technical Information:** *The Suggestions are delivered on a carrier frequency of 14,800 cps, via a low-distortion sine wave signal. This frequency is slightly above the audible hearing range but the frequency-modulated (FM) signal is still strongly impinging upon the diaphragm of the ear. The listener can expect his subconscious mind to accept the suggestions with repeated listening.*

**How To Use The Tapes:** *Increase the volume until it is just below any tape noise. If your stereo deck has treble and bass controls, you can boost the subliminal output by increasing the treble and decreasing the bass. The player then emits a STRONG BUT INAUDIBLE frequency-modulated 60 to 90 decibel signal that is received and demodulated by the human ear.*

*The silent subliminals is a new brain/mind technology developed by an aerospace engineer. This new technique has been licensed to Valley of the Sun Audio/Video for this incredible new tape series. Patent pending. Note: Because the frequency is beyond normal recording range, the tape cannot be duplicated:*

*Examples of Suggestions:*

- "Every day you become thinner and thinner"
- "You now lose weight and full fill your goals"
- "You attain your weight goals and the body you desire"
- "You have the power and ability to attain the perfect weight and body you desire"
- "You have the self-discipline to lose all the weight you want"
- "You live a healthy lifestyle and eat a proper diet"
- "You now quit smoking because it serves you"
- "You lose all desire to smoke"
- "You accept that you now quit smoking"
- "You are a non-smoker"
- "Quit smoking. Quit smoking. Quit smoking"
- "You have the willpower to do anything you want to do"
- "You have great self- discipline and you use it to quit smoking"
- "Cigarettes disgust you"
- "You are very sure of yourself"
- "You accept that you have great inner courage"
- "You are self-reliant and self-confident"
- "You are full of independence and determination"
- "You have great inner courage"
- "Every day in every way, you become more and more self-confident"
- "You feel good about yourself"
- "You project a very positive self-image"
- "You are relaxed and at ease"
- "You detach from worldly pressures and experience an inner calm"
- "Negativity flows through you without affecting you"
- "You accept other people as they are"
- "You peacefully accept the things you cannot change, and change the things you can"
- "You are at peace with yourself, the world and everyone in it"
- "Your mind is like calm water"
- "You direct your time and energy to manifest your desires"
- "You have the self-discipline to accomplish your personal and professional goals"
- "Every day, you increase your self-discipline"

- "You do what you need to do and stop doing what doesn't work"
- "You freely choose to do what you need to do"
- "You are assertive and feel good about yourself"
- "You now focus your energy upon attaining success"
- "You know exactly what you want and you go for it"
- "You can accomplish whatever you set out to do"
- "Be ultra-successful. Be ultra-successful and become wealthy"
- "Every day in every way, you become more successful"
- "Your creative thinking opens the door to monetary abundance"
- "You easily achieve and maintain a penile erection"
- "Your body performs perfectly during sex without thinking about it"
- "A hard, firm erection is your natural response to sexual stimulation "
- "You can make love for a long before you ejaculate"
- "Every day you feel better about your sexual prowess and your ability to achieve and maintain a hard, firm erection"

### **"Acoustic Spotlight (Can Target One person in Crowd)"**

Posted by F. Joseph Pompeii, MIT Media Lab

**Usage:** The [Audio Spotlight](#) can be used in two major ways: As directed audio, sound is directed at a specific listener or area, to provide a private or area specific listening space. As projected audio, sound is projected against a distant object, creating an audio image. This audio image is literally a projected loudspeaker - sound appears to come directly from the projection, just like light.

The [Audio Spotlight](#) consists of a thin, circular transducer array and a specially designed signal processor and amplifier. The transducer is about half an inch thick, nonmagnetic, and lightweight. The signal processor and amplifier are integrated into a unit about the same size as a traditional audio amplifier, and have similar power requirements.

**Technology:** Because it is impossible to generate extremely narrow beams of audible sound without extremely large loudspeaker arrays, we instead generate the sound indirectly, using the nonlinearity of the air to convert a narrow beam of ultrasound into a highly directive, audible beam of sound.

The device transmits a narrow beam of ultrasound (blue), which, due to the inherent nonlinearity of the air itself, distorts (changes shape) very slightly as it travels. This distortion creates, along with new

ultrasonic frequencies, audible artifacts (green) that can be mathematically predicted, and therefore controlled.

By constructing the proper ultrasonic beam, this nonlinearity can be used to create, within the beam itself, an audible sound beam containing any sound desired. This is presently done in real-time using low cost circuitry, a specially designed amplifier, and transducers developed at MIT specifically for this project.

**Hyperdirectivity:** The directivity, or narrowness, of an acoustic wave generated by a circular transducer is proportional to the ratio of the diameter of the transducer to the wavelength of the sound. So a transducer much larger than the wavelength of the sound creates a very narrow beam.

Audible sound contains wavelengths reaching lengths of several feet, so a reasonably sized loudspeaker will always produce a very wide, non-directional source at lower frequencies. The [Audio Spotlight](#), in contrast, outputs short, millimeter sized ultrasonic waves, which form a very narrow beam even in a small transducer, which in turn generates audible sound.

The nature of the nonlinear transformation also essentially eliminates side lobes in the resulting beam, and maintains relatively uniform directivity across the entire audible frequency range.

The figure above (from American Technologies Corp.) compares the directivity of the [Audio Spotlight](#) (yellow) to that of an ordinary loudspeaker (purple) at 400 Hz. Note that the directivity of the Audio Spotlight is only three degrees, compared to the essentially omnidirectional directivity of the loudspeaker.

In order to obtain such narrow directivity from a traditional loudspeaker system, one would need a loudspeaker array fifty meters across! A loudspeaker is like a light bulb, but the [Audio Spotlight](#) is like a laser.

**History:** The use of nonlinear interaction of high frequency sound to generate directive low frequency sound sources has been a well-researched subject in the field of underwater acoustics since the early 1960's. Often misattributed to so-called "Tartini Tones," the effect is more accurately described as a parametric array, a term introduced by Westervelt.

In the past several decades, many underwater sonar researchers have used the effect to generate directive low frequency sonar beams, detect underwater sound (parametric receiving array), and extend the bandwidth of underwater transducers.

The first published demonstration of an airborne parametric array was in 1975 by Bennett and Blackstock. Rather than using inaudible ultrasound, they instead used very intense, high frequency audible sound to produce simple difference tones. While their goal was not a practical audio reproduction device, they nonetheless effectively demonstrated that the parametric array would work in air in addition to underwater.

**Life Assessment Detector System (LADS):** The Life Assessment Detector System (LADS), a microwave Doppler movement measuring device, can detect human body surface motion, including heartbeat and respiration, at ranges up to 135 feet (41.15 meters).

The primary function of the LADS is to provide a reliable method by which medical and emergency personnel can locate personnel buried in building collapses or injured on the military battlefield. LADS can detect such signs of life as movement, heartbeat, or respiration.

Originally designed to detect heartbeat and respiration of military personnel wearing chemical-biological warfare protective overgarments, the LADS has been restructured, greatly increasing its operational range and providing a means for eliminating "nuisance alarms" which could mimic human life signs, such as fans, wind drafts, or swaying trees.

This is accomplished through neural network technology, which "trains" the system to recognize human motion and heartbeat/respiration functions. If these functions are not detected, the reasonable assumption is that there are no survivors. Operating under such an assumption, the rescue team can now proceed without fear of further loss of life, i.e., rescue and medical personnel and equipment can be deployed more effectively and efficiently.

The LADS consists of a sensor module, a neural network module, and a control/monitor module. The sensor module is an x-band (10 GHz) microwave transceiver with a nominal output power of 15 milliwatts, operating in the continuous wave (CW) mode. The neural network module device can store many complex patterns such as visual waveforms and speech templates, and can easily compare input patterns to previously "trained" or stored patterns.

The control/monitor module provides the LADS' instrument controls, such as on-off switches, circuit breakers, and battery condition, as well as motion, heartbeat waveform, pulse strength, and pulse rate displays.

LADS provides life assessment capabilities for people who are:

- Trapped in building rubble;
- Battlefield casualties in a chemical/biological warfare environment;
- Victims of airline, train, or automobile crashes;
- Trapped in an avalanche or mudslide;

- Trapped on a mountain ledge;
- Trapped under a collapsed tent structure; or
- Hostages being held in a nonmetallic room.

For more information about the LADS, send E-mail to: [info@vsecorp.com](mailto:info@vsecorp.com)

**Radar Flashlight:** The National Institute of Justice (NIJ), through the Joint (Justice-Defense) Program Steering Group (JPSG), is sponsoring Georgia Tech Research Institute (GTRI) in developing inexpensive, handheld, low-power radar that will enable law officers to detect individuals through interior building walls. It works by sensing the motion of an individual's chest when they breathe.

GTRI is currently designing and refining the first prototype unit. A laboratory test area has been constructed consisting of a section of home siding and drywall, a wooden front door, and a section of brick and mortar.

It also demonstrated the ability to detect an individual through the laboratory's cinder block walls. GTRI is working to combine the two parts of this device into a single unit. NIJ plans on demonstrating the Radar Flashlight with law enforcement agencies through its National Law Enforcement and Corrections Technology Center (NLECTC) (Southeast Regional Center) before the end of 1999.

**Millivision Radar Millimeter-Wave Camera** picks up both metallic and plastic concealed handguns. Between microwave and infrared lies the millimeter wave band. This little-heralded portion of the electromagnetic spectrum turns out to be perfect for "remote frisking." Millitech Corp. has designed a camera to accomplish just that.

The idea calls for measuring the time delay and intensity of millimeter wave energy that radiates naturally. At millimeter wavelengths, people are good emitters, while metals are very poor. Dielectric objects, such as plastics, ceramics and powdered drugs, are somewhere in between. *Clothing and building materials, such as wallboard, are virtually transparent.*

<http://www.millivision.com/>

**Ground (or Home/Apt. Wall) Penetrating Radar:** [Patriot Scientific Corporation](#) has developed radar technologies with a wide range of possible applications.

A pulse generator is used to drive the transmit antenna. The pulse is a positive spike going up to 100V then falling back to ground in one and a half nanoseconds corresponding to a pulse transmit frequency of 750 MHz.

The return signal is read by the receive antenna. At this point some simple analog processing is done and the signal is digitized at a resolution of 6 GHz, and sent to a

PC. The PC correlates the data into a conventional waveform, does some processing, and then transmits the data over an Ethernet cable to a Pentium workstation (not shown).

The Pentium workstation is used to apply different digital filters, combine waveforms, and display the results. This system can be used to demonstrate detection of small targets buried in sand, people behind walls, and other targets.

Patriot has used its antenna system to demonstrate detection of objects as small as a coke buried in sand, through a wall. Even small targets disturb the wavefront of the pulse, producing reflections and modifying the field in measurable ways.

The key to Patriot's Radar system is its ability to transmit and receive pulses barely longer than single cycles at the transmit frequency. The first waveform shown here is a pulse generated by an earlier Patriot Design, based on "off the shelf" antenna technology. The waveform on the bottom was produced and received by Patriot's current Design.

The current Patriot antenna system produces a pulse at the desired frequency with little leading or trailing noise. The Patriot antenna system provides many advantages over pulse-based systems.

Patriot originally developed the impulse radar system to allow time domain processing in Patriot's GPR systems. Because the impulse is extremely short (3 nanoseconds), the time to return can be used to gauge the distance traveled by the pulse.

Furthermore, the transmitter and receiver antennas are very directional, eliminating much of the multipath components of the return signal. The short pulses combined with the directional transmit and receive to provide us with a number of important advantages:

- Very low average power during transmission
- Low interference from other transmitters
- Transmission invisible to conventional receivers
- High bandwidth digital data transmission possible
- Difficult detection by other impulse receivers

Interference with other sources and receivers is further reduced by using directional antennas. The antenna design shown is highly directional.

When penetrating the ground, we wish to eliminate as much of the multipath signal as possible. The directional antennas reduce the multipath signals detected to those that are relatively inline with the wave path, and eliminate much of the multipath signal that returns at odd angles.

Impulse radar uses low power inherently because the transmissions occur in pulses separated by periods of no transmission. The power of the pulses is offset by the dead time between the pulses. The average output of the current system is about

300 microwatts. The low average power of an impulse system effectively hides the transmissions from conventional receivers.

Interference can be further reduced in an impulse system by using random interval spacing. As long as the transmit and receive antennas are in sync, the period between pulses can be varied to prevent aliening with other continuous- or pulse-transmission systems that might be operating in the same locale.

Furthermore, if an impulse system is being used to transmit data, varying the intervals between pulses prevents other impulse systems from locking onto the signal. Patriot Scientifics' current GPR system does not use random interval spacing.

Patriot Scientific Corporation

**Commercial Thought Reading Devices:** [The Cyberlink Mind Mouse](#) is a revolutionary hands-free computer controller which allows you to move and click a mouse cursor, play video games, create music, and control external devices, all without using your hands.

A headband with three sensors detects electrical signals on the forehead resulting from subtle facial muscle, eye, and brain activity. This headband connects to an interface box that amplifies and digitizes the forehead signals and sends them to your computer.

The Cyberlink software decodes the forehead signals into ten Brain Fingers for continuous cursor control. It also decodes eye motion and facial gestures into mouse button clicks, keystrokes, and cursor resolution control. With a little practice, most or all of these commands can be mastered to operate virtually all computer functions.

By learning to change the energy levels of your Brain Fingers, you will be able to do just about anything on a computer, except turn it on! [The Cyberlink Mind Mouse](#) supports hands-free mouse, keyboard and joystick cursor control, switch closure, video game control, and music and art synthesis.

The Cyberlink Mind Mouse features a Windows 95 Mouse Driver for hands-free control of third party software like games, business software, Internet browsers, and a range of assistive technologies, such as the X-10 Home Controller and special needs word-processing and communication software, including WiVik2, Words Plus, and Clicker Plus.

The [Cyberlink Mind Mouse](#) is priced at \$1495.00 (U.S.\$) plus shipping. Free upgrades are included for one year.

<http://www.mindmouse.com>

**Hearing For the Deaf:** It was during these [Frey] studies that a profoundly important discovery was made: Deaf subjects often had the ability to hear radio frequency sound. The clinical criterion was that, if a given person could hear audio

above 5 kHz [higher range of a piano] by bone or air conduction, then radio frequency sound could be heard as well.

This and related work has resulted in the manufacture of radio frequency type hearing aids for the deaf, one of which is made by Listening, Inc., of Arlington, Mass., and is known as the Neurophone Model GPF-1. It operates at 100 kHz (about five times the normal maximum hearing frequency) and employs crystal control.

These observations tie in with the fact that some individuals can detect radio programs through fillings in their teeth. This phenomenon was technically verified by interposing shields between respective people who exhibited this effect and the modulated radio frequency sources.

When the lower half of the head was covered, including the maxillary dental area, the radio frequency sound was perceived. The sound ceased on covering the top half of the head. While the mechanism responsible for this phenomenon is only imperfectly understood, it can be assumed to be the result of DIRECT cortical stimulation.

In other words, even when the sound seems to be coming from the teeth, it is actually being directly received and interpreted in the brain, not the teeth.

## **Some Important Historical Developments**

**Brain-Wave Detection:** Some 40-odd years ago, university professor F. Cazzamalli started publishing papers on the subject of brain-wave detection [using radio signals] and implied that he had detected radiations from the mind.

He placed his subjects in a shielded room (or Faraday cage), emanated VHF radio waves through their heads, and claimed to have recorded "beat frequencies" obtained with an untuned receiver consisting of a galena crystal or diode tube, a fixed capacitor, an antenna, and a sensitive light beam galvanometer. A "galvanometer" is a voltmeter; light beam types show up in physics labs and are one of the most sensitive types of voltmeter.

The trouble is that Cazzamalli never mentioned transmitter power in his somewhat unprofessional papers. His oscillograms meant to show variations of the "beat" when his subjects were emotionally aroused or engaged in creative tasks when they were in the Faraday cage. "Beat" as used by Cazzamalli refers to EEG-frequency, i.e., ELF, traces.

Later he told an astounded world that his subjects would hallucinate when under the influence of his "oscillatori telegrafica," its frequency being around 300 MHz at the time. Aviation radios are in this range.

Tom Jaski, a noted science writer and engineer duplicated some of Cazzamalli's work with a modern low-power oscillator that was swept from 300 MHz to 600 MHz. Cell phones start at over 900 MHz.

His subjects could not see the dial. They were told to sound off as soon as they felt something unusual. At a certain frequency range - varying between 380 MHz and 500 MHz - the subjects repeatedly indicated points with exact accuracy in as many as 14 out of 15 trials. At these "individual" frequencies, the same subjects announced having experienced pulsing sensations in the brain, ringing in the ears, and an odd desire to bite the experimenters.

The oscillator's output power was only a few milliwatts, while the oscillator itself was located several feet away from the subjects. Any experimenters out there want to try this? Milliwatts are quite safe for short-term experiments. Kids' walkie-talkies are 50 to 100 milliwatts, for example.

**LIDA Machine:** 1960 Soviet device that bombards brains with low-frequency radio waves. Now with Dr. Ross Adey, Chief of Research, Veterans Hospital, Loma Linda, CA.

Low frequency square wave modulation of a radio frequency field. It was developed by L. Rabichev and his colleagues in Soviet Armenia, for "the treatment of neuropsychic and somatic disorders, such as neuroses, psychoses, insomnia, hypertension, stammering, bronchial asthma, and asthenic and reactive disturbances." (U.S. Patent # 3,773,049)

The radio frequency field has a nominal carrier frequency of 40 MHz and a maximum output of approximately 40 watts. The E-field is applied to the patient on the side of neck through two disc electrodes approximately 10 cm in diameter. The electrodes are located at a distance of 2 to 4 cm from the skin.

The radio signal appears to be the primary cause of the sleep/trance effect. Optimal repetition frequencies are said to lie in the range from 40 to 80 pulses per minute.

**Voice to Skull, 1974:** The demonstration of sonic transduction of microwave energy by materials lacking in water LESSENS the likelihood that a thermo hydraulic principle is operating in human perception of the energy. Nonetheless, some form of thermo acoustic transduction probably underlies perception. If so, it is clear that simple heating is NOT a sufficient basis for the Frey effect; the requirement for pulsing of radiations appears to implicate a thermodynamic principle.

Frey and Messenger (1973) and Guy, Chou, Lin, and Christensen (1975) confirmed that a microwave pulse with a slow rise time is ineffective in producing an auditory response; only if the rise time is SHORT, resulting in effect in a square wave with respect to the leading edge of the envelope of radiated radio-frequency energy, does the auditory response occur.

Thus the rate of change (the first derivative) of the waveform of the pulse is a CRITICAL factor in perception. Given a thermodynamic interpretation, it would follow that information can be encoded in the energy and "communicated" to the "listener".

Communication has in fact been demonstrated. A. Guy, a skilled telegrapher, arranged for his father, a retired railroad telegrapher, to operate a key, each closure

and opening of which resulted in a pulse of microwave energy. By directing the radiations at his own head, complex messages via the Continental Morse Code were readily received by Guy.

Sharp and Grove found that appropriate modulation of microwave energy can result in "wireless" and "receiverless" communication of SPEECH. They recorded by voice on tape each of the single-syllable words for digits between 1 and 10. The electrical sine-wave analogs of each word were then processed so that each time a sine wave crossed ZERO REFERENCE IN THE NEGATIVE DIRECTION, a brief pulse of microwave energy was triggered.

This is, in effect, is a form of what is called pulse-RATE modulation. By radiating themselves with these "voice modulated" microwaves, Sharp and Grove were READILY able to hear, identify, and distinguish among the 9 words. Persons with artificial larynxes not unlike those emitted the sounds heard.

Communication of more complex words and of sentences was not attempted because the averaged densities of energy required to transmit longer messages would approach the current 10 milliwatts per square centimeter limit of safe exposure.

The capability of communicating directly with a human being by "receiverless radio" has obvious potentialities both within and without the clinic. But the hotly debated and unresolved question of how much microwave radiation to which a human being can safely be exposed will probably forestall applications within the near future.

**EC-130E Commando Solo:** Primary function is "Psychological operations broadcasts." Air Force Mission statement: Commando Solo conducts psychological operations and civil affairs broadcasts missions in the standard AM, FM, HF, TV and military communications bands.

It was called EC-121, known at the time as the Coronet Solo, and was used in Operation Urgent Fury. Volant Solo was during Operation Just Cause.

The Commando Solo aircraft and earlier generations of this design have participated in the following missions:

- Operation Urgent Fury (Grenada, October-November 1983, January-June 1985)
- Operation Just Cause (Panama, late December 1989)
- Operation Desert Shield (Kuwait, Iraq, from August 1990)
- Operation Desert Storm (Saudi Arabia, Turkey, Iraq, 1991)
- Operation Uphold Democracy (Haiti, 1994-1995)
- Operation Joint Guard (Part of a U.N. operation in Bosnia-Herzegovina, 1995)
- Operation Desert Thunder (part of a U.N. operation in Iraq)
- Operation Desert Fox (Iraq, 2 to 3 days in December 1998)

**HAARP:** HAARP (High Frequency Active Auroral Research Project), by virtue of its far-reaching impact on the environment to be a global concern and calls for its legal, ecological and ethical implications to be examined by an international independent body before any further research and testing, regrets the repeated refusal of the United States Administration to send anyone in person to give evidence to the public hearing or any subsequent meeting to be held by its competent committee into the environmental and public risks connected with the HAARP programmed currently being funded in Alaska.

One of HAARP's potential uses is a communications system. The military officially acknowledges two communications-related applications:

- (1) to replace the existing Extremely Low Frequency (ELF) submarine communications system now operating in Michigan and Wisconsin;
- (2) to provide a way to wipe out communications over an extremely large area, while keeping the military's own communications system working.

As we have seen, the mind-control subliminal messages are carried on radio-frequency broadcasts. The HAARP facility could be used to broadcast global mind-control messages, or such messages could simply be inserted into existing systems.

Dr. Igor Smirnov, of the Institute of Psycho-correction in Moscow, says in regard to this technology: "It is easily conceivable that some Russian 'Satan', or let's say Iranian [or any other 'Satan'], as long as he owns the appropriate means and finances, can inject himself [intrude] into every conceivable computer network, into every conceivable radio or television broadcast, with relative technological ease, even without disconnecting cables.

#### Recent Media on HAARP

HAARP TRANSMITTER NOW RUNNING AT FULL POWER!!  
Can be Easily Heard Around the World on Short-wave Radio.  
Has Space War Begun?  
-BJNews by Marshall Smith

"As of this morning, Saturday Feb 17, 2001, HAARP began doing testing with greatly increased FULL power. The transmitter can now be heard all day long on 3.39 MHz. Very early this morning about 3 AM, HAARP could be heard at its "old" normal signal strength. About 4 AM the signal changed in both its pulse timing and inter-pulse spacing. At 4:30 AM the signal strength suddenly increased tremendously.

"Unlike previous mornings, there was no regular F-layer daytime fade out when the sun rose here in California about 6:45 AM. I continued to monitor during the daylight. I have never heard the HAARP signal during the daytime before. The sun now rises in Gakona Alaska about

10 AM PST. The received signal again increased from about S5 to S9 at 10:05 AM. With sunlight at both the transmitter and receiver there is no F-layer skip to bend the powerful signal around the planet. This means this is an extremely powerful direct ground wave signal. And I'm only receiving the leakage off the side lobes of the antenna array.

"The full HAARP design power is supposed to be about 350 Megawatts. But that is only the published spec, not necessarily what is done in practice (as in those CB's running illegal 1KWatt linear amplifiers). There is a planned Air Force "Star Wars" test with two vehicles, one from California and the other in the south Pacific, similar to last summer's failed test. The tentative published launch is set for late March or April. I will monitor HAARP to confirm it is running full power during the launch, as it was last summer.

"Last summer's "failure" is exactly what a HAARP device is supposed to do; destroy the electronic controls of a vehicle so the second stage cannot separate from the booster. A very cheap, simple way to knock down missiles launched from anywhere on the planet. It also can destroy military satellites in low orbit. Maybe that's why the Russians and Chinese have been complaining in the last several weeks about Bush's intention to "build" the star wars system. Maybe they've been losing some of their "secret hardware." But of course, they won't say that in public.

"Its now 11 AM PST, on Saturday the 17th, and the signal is blasting in with the powerful pre-pulse tone around S+20 and the main signal about S9. The signal varies 3 to 6 db over a series of several pulses. Since this is not due to F-layer skip fading, I must assume they are slewing the beam of the antenna in various directions, and thus changing the amount of the side lobes in this direction. This must be a test of a simulated space warfare game with multiple targets. Rapid slewing of the antenna in just a matter of a minute or two is not useful for submarine communication, nor for their stated purpose of doing "ionospheric research."

"To show the HAARP signal is abnormally large, at this time, the 80-meter band is silent and WWV at 5 MHz cannot be heard, as would be expected during the daytime. WWV at 10 MHz is barely heard but does not even register on the S meter. Tuning back to 3.39 MHz, the S meter jumps off the top of the scale. Even the extremely powerful Russian "woodpecker" transmitters during the cold war never did that, and they were aimed along the ground not out into space. I have no way to estimate how many Gigawatts that represents.

"It may be only coincidence but just several days ago, Russia announced it would be conducting a massive space war game, including the launch of numerous missiles, from both ground sites and submarines. Of course this is only a coincidence. You Think. For more information about HAARP, how the transmitter works and to hear what

the transmitter sounds like, go back to the Brother Jonathan Gazette front page article about the HAARP facility and how it is used in space warfare.

"I should point out in 1983 a number of Air Force ER-135 electronic warfare planes were shot down in the Sea of Japan. They were apparently making a covert entry into soviet airspace to test the latest Russian technology. What the Air Force did not know then was the Soviets had developed a stealth fighter so the 135's never saw the Russians coming and all 5 of the US e-warfare planes were shot down. To cover this "covert" event, the US shot down a 747, a plane similar to the 135's (or modified Boeing 707's whose parts are very similar to a 747) so if plane parts are found in the Sea of Japan they are claimed to be the 747. The 747 may, in fact, have played a part in the covert event. This is the supposed "Russian" shoot down of Korean Airlines Flight 007, on Sept 1, 1983. I remember the event well, since it is my son's b-day.

"The proof of a covert event with stealth Russian fighters shooting down 5 Air Force ER- 135's is documented in R.W. Johnson's book, SHOOTDOWN, published in 1986. The most convincing evidence is the strange fact that 27 US active duty electronic warfare officers somehow end up on the passenger list among the dead on the civilian KAL Flight 007 going to Korea. I only point this out to show how high tech secret warfare between Russia and the US may result in deaths and the destruction of hardware, and yet is never reported to the public.

"The US did not announce and demonstrate deployment of its own stealth fighters until the Gulf War in '90-91, seven years later. In 1991, three events occurred, (1) the US demonstrates stealth fighter-bombers which can travel anywhere in the world without detection, (2) the announcement of the construction of HAARP which would neutralize all soviet missiles coming over the pole, and (3) the collapse of the Soviet Union. To see these as unrelated events is to miss the point of history.

"At the present time, both the Russian's and Chinese have demonstrated their ability and inclination to engage in warfare, especially space warfare. It would thus seem clear the "coincidence" of the massive Russian war games and the sudden increase in the output of HAARP in a warfare mode, would indicate that on this Presidents Day Weekend 2001, warfare is actually occurring, not just games. Just as in 1985, when planes were destroyed and US airmen died, the story was completely covered up, but it nonetheless had great implications on the relations between the governments of the world.

"There are, of course, no airmen on the Russian missiles, nor the Chinese and Russian satellites in orbit. This is the new hi-tech robotic remote control warfare of outer space. But, the "war games" are real, nonetheless. The massive increase in the output of HAARP, under the control of the Air Force's Space Vehicles Command which operates

HAARP and has the mission of engaging in space warfare, would indicate of a lot of expensive space hardware is now biting the dust. The Russians will claim their exercise was a "success." The Chinese who have just lost their "eyes in orbit" will say nothing. And the US will claim, as usual, "What, who me? HAARP hasn't been in operation since October '99." But you can listen for yourself on any short-wave receiver by tuning to 3.390 MHz. Good Listening."

<http://www.anomalous-images.com>

### **Some Concluding Remarks**

The discovery of "Synthetic Telepathy," as an EM way to communicate information directly onto the brain has changed everything. And, with related discoveries on membrane responses to specific frequency bands, and their amplification, has led to some very serious questions. Where are these technologies really leading man?

Certainly not toward a better way of living.... We see little application in their uses in medicine. In fact, most aspects have remained classified, and are still being used (historically) for military applications and uses. When you consider our ability to clone emotions, and the possible uses of HAARP, there is NO QUESTION on the possibility of its use for the complete mind control of humanity.

We can do it now. We have the theory. We have the technology. Why would it not be done? And then, by whom? Dr. Robert O. Becker, twice-nominated for the Noble prize for his health work in bio-electromagnetism, was more explicit in his concern over illicit government activity. He wrote of "obvious application in covert operations designed to drive a target crazy with voices."

What is frightening is that words, transmitted via low-density microwaves or radio frequencies, or by other covert methods, might be used to create influence. For instance, according to a 1984 U.S. House of Representatives report, a large number of stores throughout the country use high frequency transmitted words (above the range of human hearing) to discourage shoplifting. Stealing is reduced by as much as 80 percent in some cases.

frequencies of electromagnetic radiation into tight beams, it is worth considering the possibility that low-orbiting satellites could transmit such signals directly to a chosen person. Such a capability would have obvious strategic value.

What if some group or organization wanted to conduct terrorist activities that would strike right into the heart of their intended victims? What better way than to create killers from the most ordinary of citizens? Worse yet would be to cause children to unexpectedly lash out and murder those around them.

It is apparent that the technology exists to elicit such behavior using waves of electromagnetic energy sent directly into the brain.

"ELF" frequencies, as we know now, are not the most invasive weapons-capable frequencies. Doses of ELF can act as either sedatives or stimulants, entraining the target's EEG as with the Russian LIDA machine. Weapons that can transmit hypnotic commands silently and untraceably, over distance and through walls, can cause a far wider spectrum of effects.

In other words, don't assume that "ELF" is the only form of electromagnetic signal which can do damage. And, if you might wonder what that "buzzing" sound you sense behind your ear might be? It is HAARP. You can actually hear it when they have it "on."

The obvious next important discussion should be around the changing Shuman Resonance, and its affects and importance to biological functions and activities. There is no question that the Shuman Resonance is changing toward the higher frequencies associated with our "conscious states" of mind... Why is that?

---

FOIA article circulated among U.S. agencies describing the Russian TV program "Man and Law", which gives a glimpse into the Russian mind control efforts. (Dr. Igor Smirnov, a major player, was used as a consultant to the FBI at the Waco Branch Davidian standoff.)

<http://www.raven1.net/armyparw.htm>

SBIR (small business initiative contract) which clearly shows intent to use ultrasound as an anti-personnel weapon, including one-man portability and with power to kill.

<http://www.raven1.net/acouspot.htm>

A page originally from the MIT Media Lab's acoustic engineer, Joseph Pompeii. Describes a similar technique under commercial and military development (American Technologies Corp., San Diego) under the trade name "Hypersonic Sound". Shows that sound can be focused to the extent of targeting just one person in a crowd, acoustically, using ultrasound.

---

## APPENDIX A

### Electromagnetic Weapons Timeline:

Electromagnetic (EM) weapons are of recent invention. They utilize the various frequencies of the electromagnetic spectrum to disable or kill the target. Psychotronic weapons are those EM weapons that interact with the nervous system of the target. These weapons usually operate in the very low (100 to 1,000 Hz) or extremely low (greater than zero but less than 100 Hz) frequency ranges.

**1934** "A method for Remote Control of Electrical Stimulation of the Nervous System", a monograph by Drs. E. L. Chaffee and R. U. Light.

**1934** Experiments in Distant Influence, book by Soviet Professor Leonid L. Vasiliev. Vasiliev also wrote an article, "Critical Evaluation of the Hypogenic Method" concerning the work of Dr. I. F. Tomashevsky on experiments in remote control of the brain.

**1945** After World War II, the Allies discovered the Japanese had been developing a "death ray" utilizing very short radio waves focused into a high power beam. Tests were done on animals.

**1950** The French conducted research on infrasonic weapons. (From "The Road From Armageddon", by Peter Lewis, Resonance #13, pp 9-14).

**1953** John C. Lilly, when asked by the director of the National Institute of Mental Health (NIMH) to brief the Central Intelligence Agency (CIA), Federal Bureau of Investigation (FBI), National Security Agency (NSA), and the various military intelligence services on his work using electrodes to stimulate directly the pleasure and pain centers in the brain, refused.

**1958, 1962** The U.S. conducts high-altitude Electromagnetic Pulse (EMP) bomb tests over the Pacific. (From "The Road From Armageddon" by Peter Lewis.)

**1960** Headlines read "Khrushchev Says Soviets Will Cut Forces a Third; Sees 'Fantastic Weapon' ". (From article of same title, by Max Frankel, New York Times, Jan. 15, 1960, p1 as cited in "Tesla's Electro-magnetics and Its Soviet Weaponization", paper by T. E. Bearden.)

**1965** A "Death Ray" weapon was developed by McFarlane Corporation, described as a modulated electron gun X-ray nuclear booster, could be adapted to communications, remote control and guidance systems, EM radiation telemetry and death ray.

Reported hearings before the House Subcommittee on Department of Defense Appropriations, chaired by Rep. George Mahon (Dem. - Texas). From "Hearing Voices" by Alex Constantine, Hustler, January 1994, pp 102-104, 113, 120, 134. Research by Harlan Girard.

**1965** Project Pandora was undertaken in which chimpanzees were exposed to microwave radiation. The man who was in charge of this project said, 'the potential for exerting a degree of control on human behavior by low level microwave radiation seems to exist' and he urged that the effects of microwaves be studied for 'possible weapons applications' - (From "Electromagnetic Pollution: A Little Known Health Hazard. A new means of control?" by Kim Besley, Great Britain, p14. Research from Woody Blue).

**1968** Dr. Gordon J. F. MacDonald, science advisor to President Lyndon Johnson, wrote, "Perturbation of the environment can produce changes in behavioral patterns." He was referring to low frequency EM waves in the ionosphere affecting human brain wave patterns. (From his book, Unless Peace Comes, a Scientific Forecast of New Weapons, cited in "New World Order ELF Psychotronic Tyranny", a paper by C. B. Baker.)

**1970** Zbigniew Brzezinski, President Jimmy Carter's National Security Director, said in his book, Between Two Ages, weather control was a new weapon that would be the key element of strategy. "Technology will make available to leaders of major nations a variety of techniques for conducting secret warfare..." He also wrote "Accurately timed, artificially excited electronic strokes could lead to a pattern of oscillations that produce relatively high power levels over certain regions of the Earth ... one could develop a system that would seriously impair the brain performance of a very large population in selected regions over an extended period." (Cited in Baker's "ELF Psychotronic Tyranny" paper.)

**1972** The Taser, first electrical shock device developed for use by law enforcement, delivers barbed, dart shaped electrodes to a subject's body, and 50,000 volt pulses at two millionths of an amp over 12-14 seconds time. (From "Report on the Attorney General's Conference on Less Than Lethal Weapons", by Sherry Sweetman, 1987, p4, which cites "Non-Lethal Weapons for Law Enforcement: Research Needs and Priorities. A Report to the National Science Foundation by the Security Planning Corporation, 1972. Research by Harlan Girard.)

**1972** "A U.S. Department of Defense document said that the Army has tested a microwave weapon. It was an extremely powerful 'electronic flamethrower'." (From "Electromagnetic Pollution.")

**1972** "A study published by the U.S. Army Mobility Equipment Research and Development Center, titled 'Analysis of Microwaves for Barrier Warfare' examines the plausibility of using radio frequency energy in barrier counter-barrier warfare ... The report concludes that:

- (a) it is possible to field a truck-portable microwave barrier system that will completely immobilize personnel in the open with present day technology;
- (b) there is a strong potential for a microwave system that would be capable of delaying or immobilizing personnel in vehicles;
- (c) with present technology, no method could be identified for a microwave system to destroy the type of armored material common to tanks."

(From "Electromagnetic Pollution" by Kim Besly, p15, quoting The Zapping of America by Paul Brodeur.) The report further documents the ability to create third-degree burns on human skin using 3 GHz at 20-watts/square centimeter in two seconds.

**1972** Dr. Gordon J. F. MacDonald testified before the House Subcommittee on Oceans and International Environment, concerning low frequency research: "The basic notion there was to create between the electrically charged ionosphere in the higher part of the atmosphere and conducting layers of the surface of the Earth this neutral cavity, to create waves, electrical waves that would be tuned to the brainwaves ... about ten cycles per second ... you can produce changes in behavioral patterns or in responses." (From Baker's "ELF Psychotronic Tyranny" paper.)

**1973** Sharp and Grove transmit audible words via microwaves.

**1975 - 1977** "Unpublished analyses of microwave bioeffects literature were disseminated to the U.S. Congress and to other officials arguing the case for remote control of human behavior by radar." (From the Journal of Microwave Power, 12(4), 1977, p320. Research by Harlan Girard.)

**1978** Hungarians presented a state-of-the-art paper on infrasonic weapons to the United Nations, "Working Paper on Infrasound Weapons", United Nations CD/575, 14 August 1978. (From "The Road From Armageddon" by Peter Lewis.)

**1981 - 1982** "Between 1981 and September 1982, the Navy commissioned me to investigate the potential of developing electromagnetic devices that could be used as non-lethal weapons by the Marine Corp for the purpose of 'riot control', hostage removal, clandestine operations, and so on." Eldon Byrd, Naval Surface Weapons Center, Silver Spring MD. (From "Electromagnetic Pollution" by Kim Besly, p12.)

**1982** Electromagnetic weapons for law enforcement use in Great Britain: Charles Bovill of the now defunct British firm, Allen International, developed a 10-30 Hz

strobe light that can produce seizures, giddiness, nausea, and fainting. Addition of sound pulses in the 4.0 - 7.5 Hz range increases effectiveness, as utilized in the Valkyrie, a "frequency" weapon advertised in British Defense Equipment Catalogue until 1983.

The squawk box or sound curdles uses two loudspeakers of 350-watt output to emit two slightly different frequencies that combine in the ear to produce a shrill shrieking noise. The U.S. National Science Foundation report says there is "severe risk of permanent impairment of hearing." (From "Electropollution" by Kim Besley, citing the Manchester City Council Police Monitoring Unit document.)

**1982** Air Force review of biotechnology: "Currently available data allow the projection that specially generated radio frequency radiation (RFR) fields may pose powerful and revolutionary antipersonnel military threats. Electroshock therapy indicates the ability of induced electric current to completely interrupt mental functioning for short periods of time, to obtain cognition for longer periods and to restructure emotional response over prolonged intervals.

*"... impressed electromagnetic fields can be disruptive to purposeful behavior and may be capable of directing and/or interrogating such behavior. Further, the passage of approximately 100 milliamperes through the myocardium can lead to cardiac standstill and death, again pointing to a speed-of-light weapons effect.*

*"A rapidly scanning RFR system could provide an effective stun or kill capability over a large area."* (From Final Report on Biotechnology Research Requirements for Aeronautical Systems Through the Year 2000. AFOSR-TR-82-0643, vol 1, and vol 2, 30 July 1982.)

**1986** "The Electromagnetic Spectrum in Low-Intensity Conflict" by Captain Paul Tyler, MC, USN quotes the above passage and further elaborates on the theme. (Published in Low Intensity Conflict and Modern Technology Lt. Col. David J. Dean, USAF, ed., Air University Press, Maxwell AFB, AL. Research by Harlan Girard.)

**1983** Nikolai Khokhlov, a Soviet KGB agent who defected to the West in 1976, interviews recently arrived scientists and reports: "The Soviet mind- control program is run by the KGB with unlimited funds." (From The Spectator, February 5, 1983, reported in "New World Order Psychotronic Tyranny" by C. B. Baker.)

**1984** "USSR: New Beam Energy Possible?" possibly associated with early Soviet weather engineering efforts over the U.S. (From "Tesla's Electromagnetics and Its Soviet Weaponization" by T. E. Bearden.)

**1985** Women in the peace camps at Greenham Common began showing various medical symptoms believed to be caused by EM surveillance weapons beamed at them. (See "Zapping: The New Weapon of the Patriarchy", Resonance #13, pp 22-24. Research by Woody Blue.)

**1986** Attorney General's Conference on Less Than Lethal Weapons reviews current weapons available. They include the Taser, the Nova XR-5000 Stun Gun (can

interrupt a pacemaker); the Talon, a glove with an electrical pulse generator; and the Source, a flashlight with electrodes at the base.

Photonic driving strobe lights tested by one conference delegate on 100 subjects, produced discomfort. Closed eyelids to not block the effect. Evidence that ELF produces nausea and disorientation. Suggestion to develop fast acting electro sleep inducing EM weapon.

Discusses problem of testing weapons on animals and human "volunteers". (From "Report on the Attorney General's Conference on Less Than Lethal Weapons", by Sherry Sweetman, March 1987, prepared for the National Institute of Justice. Research by Harlan Girard.)

**1988** The Pentagon is ordered by courts to cease EMP tests at several locations due to a lawsuit filed by an environmental group. (From The Washington Post, May 15, 1988, see "U.S. and Soviets Develop Death Ray", Resonance 11, p10. Research by Remy Chevalier.)

**1992 December.** "The U.S. Army's Armament Research, Development and Engineering Center is conducting a one-year study of ACOUSTIC BEAM TECHNOLOGY ... the command awarded the one year study to Scientific Applications and Research Associates of Huntington Beach CA. Related research is conducted at the Moscow based Andreev Institute." (From "U.S. Explores Russian Mind Control Technology", by Barbara Opal, Defense News, January 11-17, 1993. Research by Harlan Girard and others.)

**1993** The Russian government is offering to share with the United States in a bilateral Center for Psychotechnologies the Soviet mind-control technology developed during the 1970s. The work was funded by the Department of Psycho-Correction at the Moscow Medical Academy.

"Acoustic psycho-correction involves the transmission of specific commands via static or white noise bands into the human subconscious..." The Russian experts, among them former KGB General George Kotov, present in a paper a list of software and hardware available for \$80,000. (From Opal article, "U.S. Explores Russian Mind Control Technology".)

**1993 February 28**, beginning of 51 day siege on the Branch Davidians at Waco Texas, which ended in the death of more than 80 people.

Until this incident, the electromagnetic weapons had kept a very low profile. But in the documentary video, "Waco: The Big Lie Continues", footage from the British Broadcasting (BBC) shows at least three EM weapons used by U.S. government agents. First, the noise generators used against the Davidians. Second, a powerful strobe light, shown during a nighttime sequence.

And the third was the Russian psychoacoustics weapon, considered, but agents deny use of this weapon against the Waco people. FBI agents met with Dr. Igor Smirnov in Arlington VA to discuss the possibility of using the weapon against the

Davidians. (From "A Subliminal Dr. Strangelove", by Dorinda Elliot and John Barry, Newsweek, August 22, 1994)

---

## ***APPENDIX B***

### ***Most Common Known ELF Effects***

Here is a list of most of the common effects. It is intended to show how the various induced stress effects are broken down. Indent levels are used to show categories and sub-categories:

#### **Invasive At-a-Distance Body Effects (including mind):**

- **Sleep deprivation and fatigue:**
  - Silent but instantaneous application of "electronic caffeine" signal, forces awake and keeps awake
  - Loud noise from neighbors, usually synchronized to attempts to fall asleep
  - Precision-to-the-second "allowed sleep" and "forced awakening"; far too precise and repeated to be natural
  - Daytime "fatigue attacks", can force the victim to sleep and/or weaken the muscles to the point of collapse
- **Audible Voice to Skull (V2S):**
  - Delivered by apparent at a distance radio signal
  - Made to appear as emanating from thin air
  - Voices or sound effects only the victim can hear
- **Inaudible Voice to Skull (Silent Sound):**
  - Delivered by apparent at a distance radio signal; manifested by sudden urges to do something/go somewhere you would not otherwise want to; silent (ultrasonic) hypnosis presumed
  - Programming hypnotic "triggers" - i.e., specific phrases or other cues which cause specific involuntary actions
- **Violent muscle triggering (flailing of limbs):**
  - Leg or arm jerks to violently force awake and keep awake
  - Whole body jerks, as if body had been hit by large jolt of electricity

- Violent shaking of body; seemingly as if on a vibrating surface but where surface is in reality not vibrating
- **Precision manipulation of body parts (slow, specific purpose):**
  - Manipulation of hands, forced to synchronize with closed-eyes but FULLY AWAKE vision of previous day; very powerful and coercive, not a dream
  - Slow bending almost 90 degrees BACKWARDS of one toe at a time or one finger at a time
  - Direct at-a-distance control of breathing and vocal cords; including involuntary speech iv.
  - Spot blanking of memory, long and short term
- **Reading said-silently-to-self thoughts:**
  - Engineered skits where your thoughts are spoken to you by strangers on street or
  - Real time reading sub vocalized words, as while the victim reads a book,
  - and BROADCASTING those words to nearby people who form an amazed audience around the victim
- **Direct application of pain to body parts:**
  - Hot-needles-deep-in-flesh sensation
  - Electric shocks (no wires whatsoever applied)
  - Powerful and unquenchable itching, often applied precisely when victim attempts to do something to expose this "work"
  - "Artificial fever", sudden, no illness present v. sudden racing heartbeat, relaxed situation
- **Surveillance and tracking:**
  - Thru-wall radar and rapping under your feet as you move about your apartment, on ceiling of apartment below
  - Thru-wall radar used to monitor starting and stopping of your urination - water below turned on and off in sync with your urine stream
  - Loud, raucous artificial bird calls everywhere the victim goes, even into the wilderness

- **Invasive Physical Effects at a Distance (non-body):**
  - Stoppage of power to appliances (temporary, breaker ON)
  - Manipulation of appliance settings
  - Temporary failures that "fix themselves"
  - Flinging of objects, including non-metallic
  - Precision manipulation of switches and controls
  - Forced, obviously premature failure of appliance or parts
- **External Stress-Generating "Skits":**
  - Participation of strangers, neighbors, and in some cases close friends and family members in harassment:
  - Rudeness for no cause
  - Tradesmen always have "problems", block your car, etc.
  - Purchases delayed, spoiled, or lost at a high rate
  - Unusually loud music, noise, far beyond normal
- **Break-ins/sabotage at home:**
  - Shredding of clothing
  - Destruction of furniture
  - Petty theft
  - Engineered failures of utilities
- **Sabotage at work:**
  - Repetitive damage to furniture
  - Deletion/corruption of computer files
  - Planting viruses which could not have come from your computer usage pattern
  - Delivered goods delayed, spoiled, or lost at a high rate

- Spreading of rumors, sabotage to your working reputation
- Direct sabotage and theft of completed work; tradesmen often involved and showing obvious pleasure

**In summary, the effects include:**

**To the Brain:**

- Forced memory blanking and induced erroneous actions
- Induced changes to hearing. Both apparent direction and volume, and sometimes even content
- Reading and broadcasting thoughts. "How can that lady talk with her mouth closed?"
- Vivid controlled dreams.
- Forced waking visions: some synched with forced body motion
- Microwave hearing
- Sleep prevention each night, at exactly the same time (for weeks)

**To the Face:**

- Sudden violent itching inside eyelids
- Forced manipulation of airways, including externally controlled forced speech
- "Transparent eyelids"
- Artificial tinnitus (ringing in ears)
- Forced movement of jaw and clacking of teeth

**To the Body:**

- Wilding racing heart without cause
- Remotely induced violent no-rash itching
- Forced nudging of arm during delicate or messy work causing injury or spills
- Forced "muscle quaking" on large muscles on the back or other unexplainable vibrations
- Cases of repeated fresh watch batteries dying
- Forced precision manipulation of hands. Sometimes synched to the forced waking visions.
- Special attention to genital area: itching, forced orgasm, intense pain, "hot needles"
- Intense general pain in the legs, like stings.

[Remind you, that these are the unclassified effects only.]

## **Targ, the Organized Stalking Target**

**Last Update: March 2, 2010**

This page is the collection of comic strip series about a character named "Targ", who is an organized stalking target. (Note: Some use the term "gang stalking" to describe OS.) The purpose is to educate the public about this relatively new (started in the second half of the 1900s) crime, in hopes that public awareness may help get the world's justice systems to take this crime seriously.

The strips were created at: <http://www.bitstrips.com>. Visitors to this page must understand that the terms of use for bitstrips.com prohibit commercial use of these strips.

On this page below the "Targ" strips are some other experimental strips.

[VOLUME 1 - OS comics collection](#), the comic strips below, episodes 1-10, in a single PDF document.

[VOLUME 2 - OS comics collection](#), the comic strips below, episodes 11-20, in a single PDF document.

[VOLUME 3 - OS comics collection](#), the comic strips below, episodes 21-30, in a single PDF document.

[E-booklet](#) outlining the crime of organized stalking and electronic harassment.

**\*\* SPOOF \*\*** ["Operations Manual"](#), speculation, which is a companion document to the "Peter Perp" comic strips.

[Click here](#) to VISIT the Targ yahoo discussion group

---

### **TARG THE TARGET:**

[Targ - Episode 1](#) - October 28, 2009 - Sleep deprivation; sabotage at home and work; shunning by neighbours

[Targ - Episode 2](#) - October 29, 2009 - Lady spits at Targ; Targ tries to recall reason for harassment

[Targ - Episode 3](#) - October 30, 2009 - Forced awakening at exactly the same times every night; Lida machine used in forced awakening mode

[Targ - Episode 4](#) - October 31, 2009 - Targ arrives home to find cat's throat cut; policeman pretends Targ did the crime to get attention

[Targ - Episode 5](#) - October 31, 2009 - Co-workers delivering fragments of disparaging statement so that no one of them can be blamed

[Targ - Episode 6](#) - November 1, 2009 - Targ late to work due to hole drilled in his water pump and being boxed in by slow moving cars

[Targ - Episode 7](#) - November 1, 2009 - Targ being viewed on toilet using through-wall radar, and neighbours cheering each time Targ flushes

[Targ - Episode 8](#) - November 4, 2009 - Targ getting the common Bell Telephone technician harassment of re-routing hundreds of legitimate calls to Targ's number

[Targ - Episode 9](#) - November 5, 2009 - Targ is introduced to voice to skull technology by odd tones, and his alarm going off, then stopping without his pushing the button

[Targ - Episode 10](#) - November 5, 2009 - Targ recounting the high number of people "visiting" his neighbours at all hours, and the fact that he got new neighbours on either side when he moved into his home

[Targ - Episode 11](#) - November 19, 2009 - Targ finds that some dogs on his walking route bark and growl aggressively when he passes, but not when others pass; voice to skull technology used on the dogs is one possible cause

[Targ - Episode 12](#) - November 27, 2009 - Targ finds the January 2009 U.S. Department of Justice Stalking Victimization report which shows that one stalking complaint out of every eight is stalking by groups

[Targ - Episode 13](#) - November 27, 2009 - Two so-called "lite" harassment methods; synchronized leaving the home, and endless drilling into masonry when naps attempted for targets who live in apartments

[Targ - Episode 14](#) - December 12, 2009 - Targ reports sabotage of clothing and theft/sabotage of other personal items

[Targ - Episode 15](#) - January 9, 2010 - Targ displays actual photos of theft/sabotage of supplies and other personal items

[Targ - Episode 16](#) - January 25, 2010 - Targ answers some questions about organized stalking from a neighbour

[Targ - Episode 17](#) - January 26, 2010 - Targ finds a crisis support staff member who knows what organized stalking is, and offers to help him improve the quality of his presentation to members of the public

[Targ - Episode 18](#) - January 28, 2010 - Targ delivers his presentation about organized stalking to the Elmvale Crisis Line staff

[Targ - Episode 19](#) - January 29, 2010 - Targ answers a question from Elmvale Crisis Line staff after his presentation

[Targ - Episode 20](#) - January 29, 2010 - Targ discovers powerful evidence that the crime of organized stalking has solid, recent historical roots in the U.S. - the FBI's COINTELPRO crimes which were exposed in Congressional hearings

[Targ - Episode 21](#) - January 30, 2010 - Targ recounts some of the absolutely mind-boggling failures of computer software and hardware he has encountered in his first year of being a target

[Targ - Episode 22](#) - February 8, 2010 - This episode is about Mikki, another target dying of cancer in a hospice, where the usual perpetrator lies and arm-twisting has been performed on staff

[Targ - Episode 23](#) - February 13, 2010 - Mother Barclay learns the hard way what happens when parents complain to police about organized stalking

---

#### **PETER PERP:**

[Peter Perp - Episode 1](#) - November 16, 2009 - Peter Perp introduces the "True Justice" organization to Targ's co-workers; "True Justice" is a fictional name as targets do not have the actual name of the organized stalking organization at this point in time

[Peter Perp - Episode 2](#) - November 17, 2009 - Peter Perp asks Targ's co-workers to participate in the harassment program which is mis-named "service to the community"

[Peter Perp - Episode 3](#) - November 17, 2009 - Peter succeeds in getting pledges of participation, though Nikki isn't sure; the clincher is a (false) allegation that Targ has child molestation inclinations

[Peter Perp - Episode 4](#) - November 17, 2009 - Nikki fails to sabotage Targ's work; Peter Perp threatens her

[Peter Perp - Episode 5](#) - November 17, 2009 - Peter Perp and one of his thugs show Nikki what has happened to other organized stalking recruits who fail to carry out orders

[Peter Perp - Episode 6](#) - November 18, 2009 - "Mr. Big," the local organized stalking boss, assigns Peter to add a lady who exposed her husband as a pedophile to the harassment roster

[Peter Perp - Episode 7](#) - November 19, 2009 - Peter Perp uses the (false) allegation that Targ is a pedophile in an attempt to recruit Targ's parents

[Peter Perp - Episode 8](#) - November 19, 2009 - Using slick euphemisms for True Justice's purpose and methods, Peter succeeds in convincing Targ's parents that Targ "needs their services"

[Peter Perp - Episode 9](#) - November 19, 2009 - Local criminal Randy gets caught and is facing prison, but is given a chance to avoid the charges if he will join Peter Perp's group

[Peter Perp - Episode 10](#) - November 19, 2009 - Peter Perp strongarms a young woman living in the street as a result of True Justice preventing her from holding a job

[Peter Perp - Episode 11](#) - November 28, 2009 - Peter Perp and Fred ("Mr. Big") approach a neighbour who lives next door to a target and persuade the neighbour to move, and allow True Justice members to set up the usual surveillance and harassment base

[Peter Perp - Episode 12](#) - December 15, 2009 - Peter Perp announces daily assignments for True Justice members over a cell phone conference call

[Peter Perp - Episode 13](#) - January 16, 2010 - Eddie and Louie, members of the True Justice Electronic [harassment] Corps, view a video of the Xaver 800 tactical through wall radar

[Peter Perp - Episode 14](#) - January 18, 2010 - Eddie and Louie, members of the True Justice Electronic [harassment] Corps, discuss how the Lida machine, an old medical device, can be used to either force drowsiness or prevent sleep through walls

[Peter Perp - Episode 15](#) - January 19, 2010 - Eddie and Louie, members of the True Justice Electronic [harassment] Corps, discuss how pulsed microwave voice to skull technology works

[Peter Perp - Episode 16](#) - January 21, 2010 - Father Simmons confronts Peter about his visit to Targ's parents

[Peter Perp - Episode 17](#) - January 22, 2010 - Peter Perp persuades supermarket manager Wally to cooperate by altering stock when advised a target is about to visit the store

[Peter Perp - Episode 18](#) - January 24, 2010 - True Justice Electronic Corps members Eddie and Louie discuss "silent sound" and its uses against organized stalking targets

[Peter Perp - Episode 19](#) - January 24, 2010 - Peter catches True Justice member Zack wearing the organization's promotional patch, used to build esprit de corps, in public!

[Peter Perp - Episode 20](#) - January 31, 2010 - A study in contrasts

[Peter Perp - Cartoon 21](#) - February 2, 2010 - A study in similarities

[Peter Perp - Episode 22](#) - February 3, 2010 - Peter gets a "visit" from one of his "clients" whom, according to Peter, his organization was "there for" in the client's "time of need"

[Peter Perp - Cartoon 23](#) - February 9, 2010 - Peter with his family

[Peter Perp - Cartoon 24](#) - February 12, 2010 - Peter recruits organized stalkers from within a small church with the support of the pastor

---

## **SPECIAL STRIPS:**

["You Just Can't Win"](#), a strip showing what it's like to complain to police about OS/EH.

---

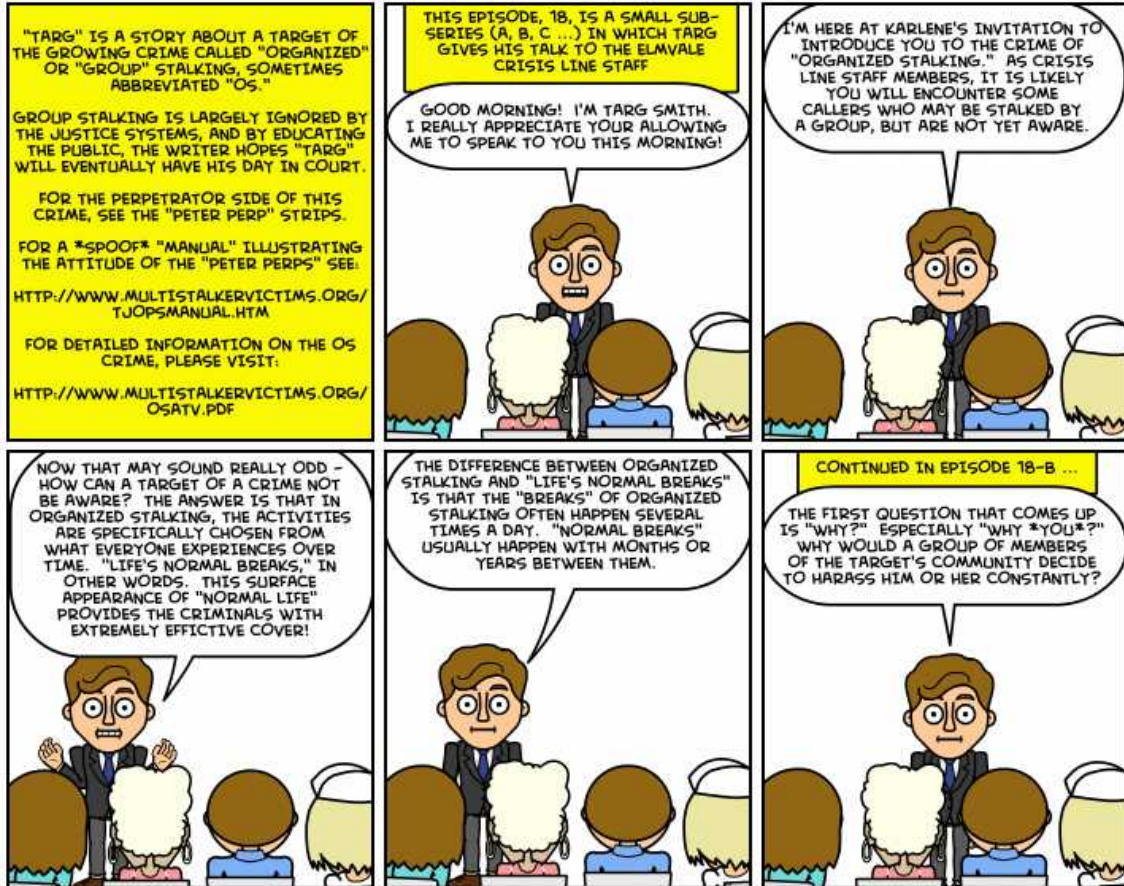

[Click here for stats details since November 9, 2009](#)

### **Targ Speaks to the Elmvale Crisis Line Staff**

<http://www.multistalkervictims.org/targ.htm> for the complete set of Targ and Peter Perp  
comics

"TARG" IS A STORY ABOUT A TARGET OF THE GROWING CRIME CALLED "ORGANIZED" OR "GROUP" STALKING, SOMETIMES ABBREVIATED "OS."

GROUP STALKING IS LARGELY IGNORED BY THE JUSTICE SYSTEMS, AND BY EDUCATING THE PUBLIC, THE WRITER HOPES "TARG" WILL EVENTUALLY HAVE HIS DAY IN COURT.

FOR THE PERPETRATOR SIDE OF THIS CRIME, SEE THE "PETER PERP" STRIPS.

FOR A \*SPOOF\* "MANUAL" ILLUSTRATING THE ATTITUDE OF THE "PETER PERPS" SEE:  
[HTTP://WWW.MULTISTALKERVICTIMS.ORG/TJOPSMANUAL.HTM](http://www.multistalkervictims.org/tjopsmanual.htm)

THIS EPISODE, 18, IS A SMALL SUB-SERIES (A, B, C ...) IN WHICH TARG GIVES HIS TALK TO THE ELMVALE CRISIS LINE STAFF

AND A MAJOR REASON WHY ORGANIZED STALKING DOESN'T REQUIRE "TOO MUCH TIME ON ONE'S HANDS" IS THAT EACH GROUP MEMBER ONLY DOES RELATIVELY SHORT "DUTY" IN ANY GIVEN DAY.

BUT WHEN ORGANIZED STALKING GROUPS INCLUDE A HUNDRED OR MORE PART-TIME HARASSERS, VERY LITTLE TIME SPENT BY EACH ONE CAN HAVE A DEVASTATING EFFECT ON THE TARGET. TARGETS "GET IT" MANY TIMES A DAY, AT WORK, IN THE COMMUNITY, AND AT HOME. IMAGINE THE WELL-KNOWN WORKPLACE HARASSMENT MOVING OUT INTO THE COMMUNITY!

AND DAVID LAWSON DID REPORT GROUPS OF A HUNDRED OR MORE WERE COMMON. HE ALSO REPORTED IN SOME COMMUNITIES, PEOPLE NOT DIRECTLY INVOLVED WOULD VIEW THE "ACTION" AS KIND OF A "LOCAL SPORT."

WHEN A TARGET HAS A PREDICTABLE ROUTINE, THE CHANCES OF A "SETUP" INCREASE. THERE IS SOME SURVEILLANCE OF A TARGET'S MOVEMENTS, INCLUDING PURCHASES AND NEEDS FOR SERVICES. HAVING A CAR SABOTAGED WHEN IT GOES IN FOR REPAIRS IS COMMON. BUT SABOTAGE IS ALWAYS MINOR - ANYTHING THAT WOULD ATTRACT POLICE ATTENTION IS CAREFULLY AVOIDED.

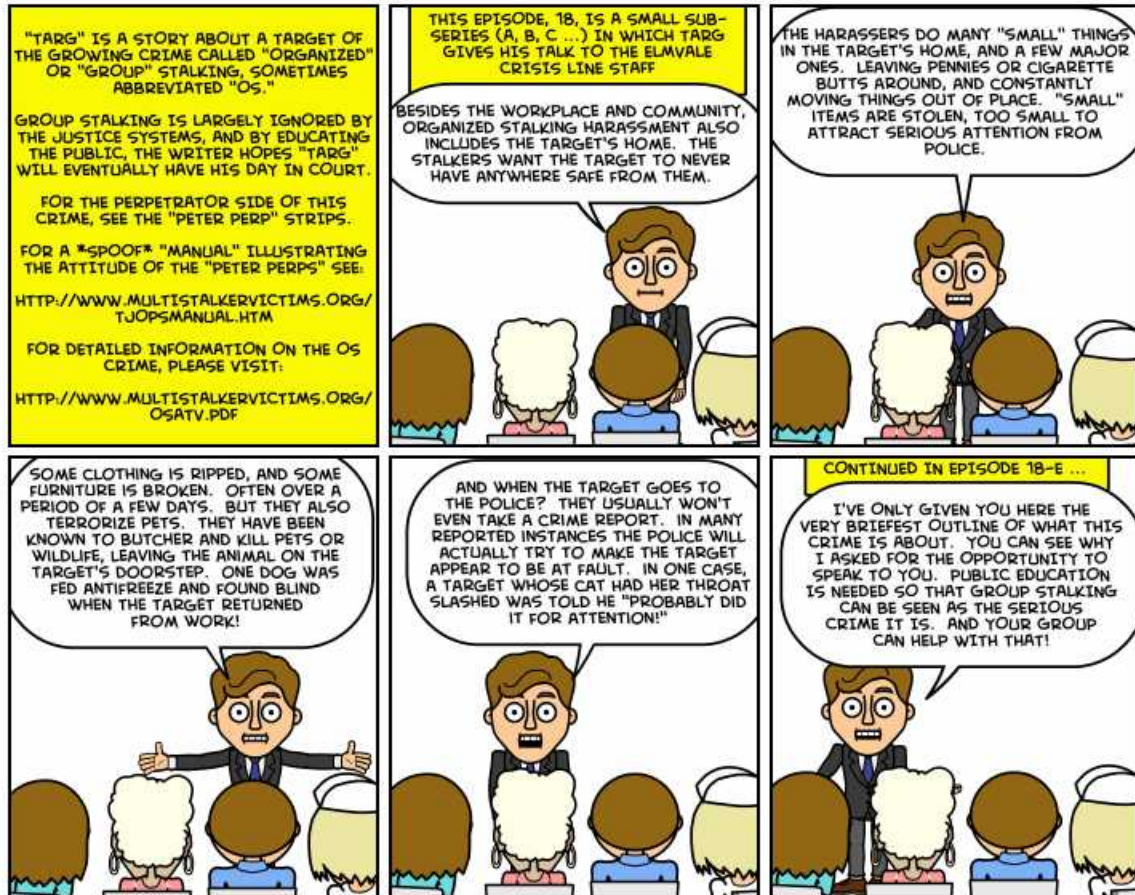

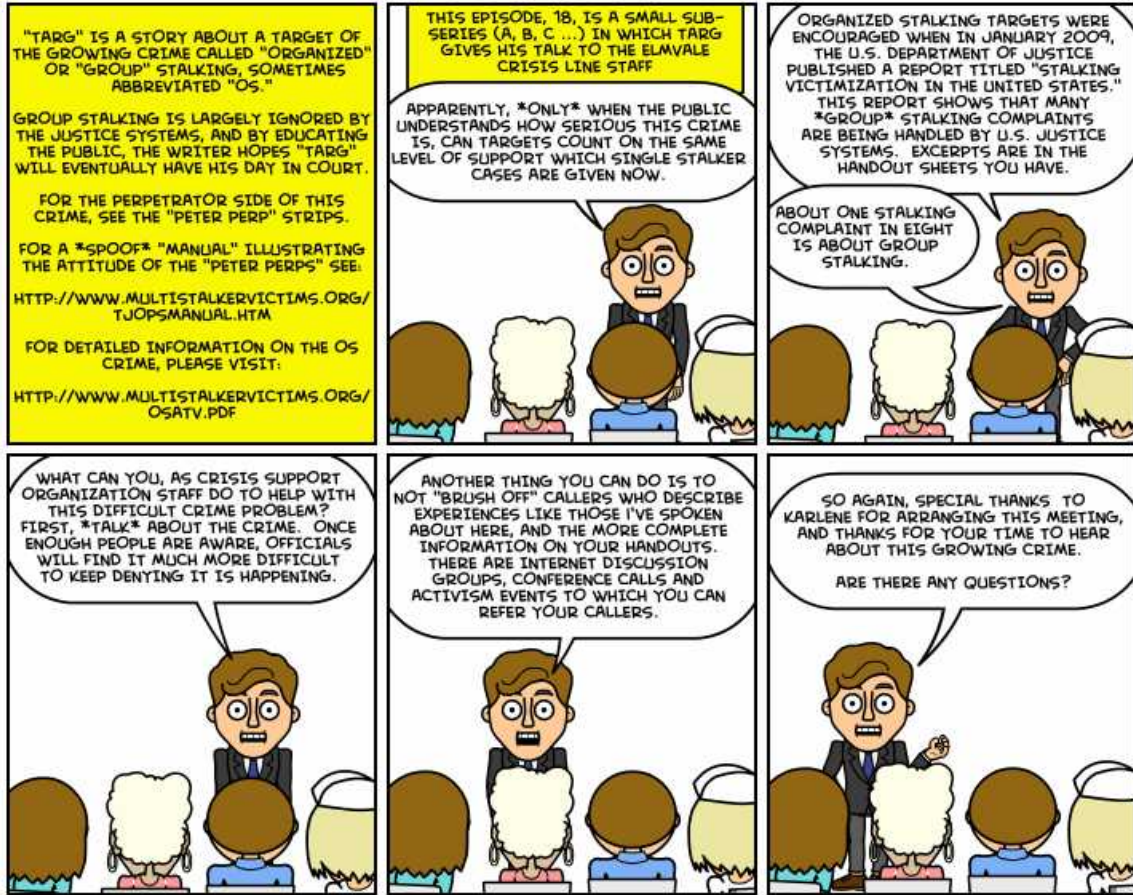

CONTINUED IN EPISODE 18-D ...

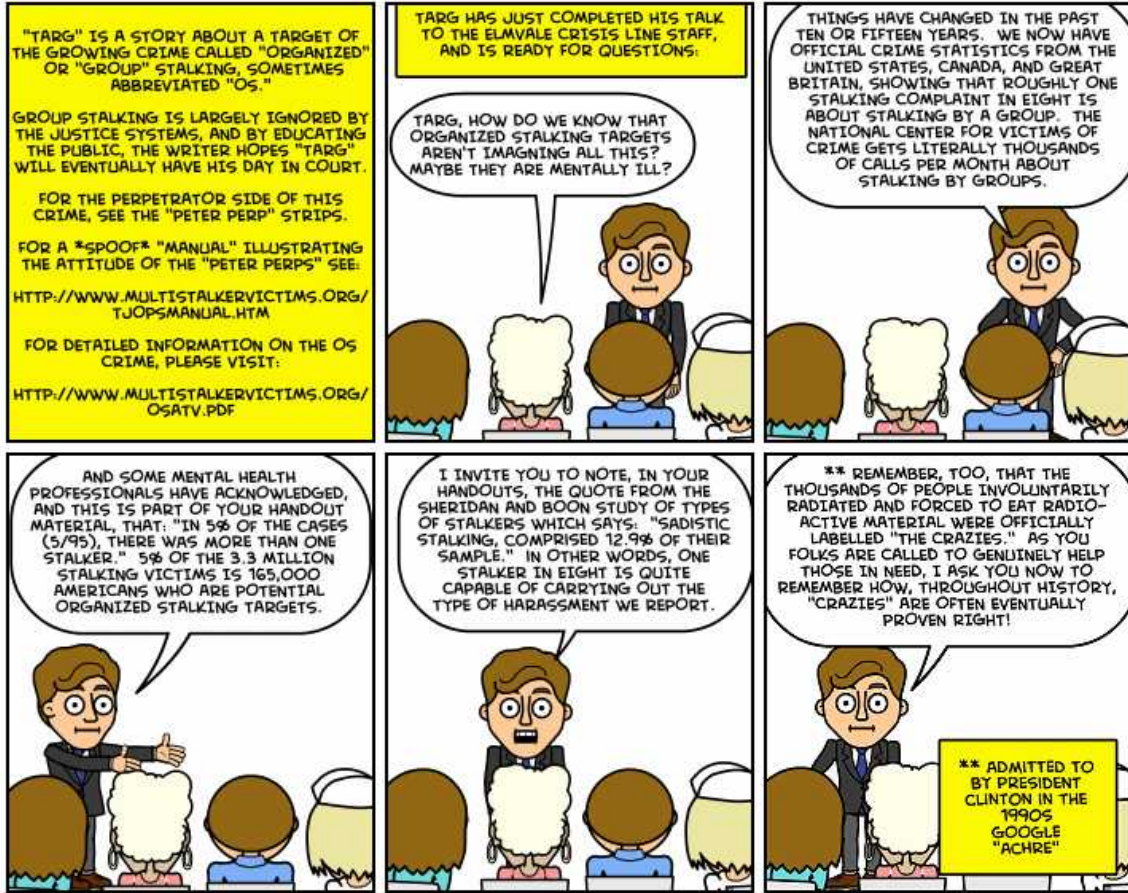

TRADESPEOPLE, HAVING BEEN FED LIES ABOUT THE TARGET, OFTEN MAKE LOTS OF "MISTAKES," MAKING OTHER WORK AND EXPENSE NECESSARY. THEY WILL OVERCHARGE, ARRIVE LATE, OR INCONVENIENTLY EARLY. EVERYTHING JUST SEEMS TO "ALWAYS GO WRONG" FOR THE TARGET.

Subject: RE: Scalar waves

Date: Fri, 21 Jun 2002 00:42:23 -0500

Dear Margo,

The kind of stuff being used now is totally unfamiliar to me. Also, I never found any way to shield from this type of weaponry. If it uses normal EM (which some of the older stuff does by brute force methods), then distance from the transmitter reduces it, as does a Faraday cage. But if it's longitudinal EM waves, distance and shielding are not barriers.

Sorry I don't have better information on this to help. There is some slightly better information, I've been told, that I've not seen, nor was I told the source of the information. Since the heart attack last year and continuing hypoxia, my schedule and work have been very much limited.

Hoping for your health and that whatever might be hitting you is withdrawn,

Tom Bearden

---

I really enjoy your website. I saw on your website a section devoted to "mind control" using scalar beams and EM weapons.

I just built the "ScalarBeamer" found at <http://hometown.aol.com/dmboss1021/NEWPH/Page1.html> and I also plan to build the Magnetic Beam Amplifier which is also listed on that site.

I was wondering if either of these might have an effect on the type of weapons used on me and a group of about 1,000 + other people in the U.S. and worldwide? I have been subjected to this type of harassment for many years. Please see <http://mindjustice-org/> for information on this. The founder and president of C.A.H.R.A. (Citizens Against Human Rights Abuse) was recently recognized by U.N.I.D.I.R. (United Nations Institute for Disarmament Research) as an expert in non-lethal weapons.

I also have a website at <http://www.angelfire.com/or/mctrl/> which is devoted to this topic.

Since you acknowledge the existence of such weapons, please tell me what I can do to shield myself from this technology? They are being used by evil and corrupt men with absolutely no morals.

I realize this is not the kind of e-mail you would usually expect. Any help would be greatly appreciated. Thank you for taking time to read this.

Sincerely,

Margo

## Unclassified Read-by-Radio Implant Development Project

---

Eleanor White's comments on this posting: This posting describes unclassified wireless telemetry of bodily functions, used for benign and beneficial purposes. This is about monitoring BY RADIO.

The reason it is of interest to involuntary neuro-electromagnetic experimentees (military and intelligence) is that development programmes like this one show that both the WILL and the MEANS to track someone's bodily functions by radio EXIST, and exist RIGHT NOW.

People seeking to discredit us will say that such technology could not possibly be in use now, or in some cases, even exist. Keeping in mind the typical 20-year spread between classified and unclassified technology, as demonstrated by the SR-71 reconnaissance aircraft, it is clear that classified military and intelligence programmes have highly advanced methods of tracking a target's body functions.

and some laboratory and clinic settings, by the sensor technology.

*[Eleanor White's comment: Take SPECIAL NOTE of that word "PSYCHO"... that has great significance for neuro-electromagnetic experimentees!]*

Conventional electrodes which tether the subject to the signal amplification and recording equipment, are cumbersome to apply, often interfere with normal movements, are easily dislodged, and induce electrical noise due to the movement of the electrode wires carrying low level signals.

This project seeks to design essentially wireless electrode recording systems that use radio frequency telemetry to transmit the biopotential signal from the recording site to a body-worn transceiver and then to a remotely located receiver.

*[Eleanor White's comment: That means, radio signals THROUGH THE FLESH to an externally worn transceiver. The only difference between this UNclassified project and the involuntary neuro-electromagnetic experimentees is distance, which can be overcome with time.]*

The present subcontractor has developed transceiver and receiver technology that will be reviewed and customized as needed for the present application. The focus here will be on developing a generic design for the sensor subsystem ("telectrodes") to include the transducer interface with the skin, miniaturized amplifier and filter circuitry, an optimal connection between the transducers providing differential inputs to the amplifier, a longlasting but compact battery, and transmitter.

Phase I will consist of a design specification, development of a bench-top engineering prototype, design trade-off studies using the prototype, and the delineation of a detail design.

# TELEMETRY IS COMING OF AGE

**Courtesy Kathy Kasten**

---

Eleanor White's comments: Among the roughly 300 known involuntary neuro-electromagnetic (NEM) experimentees, many have no known implants but receive electronic harassment effects targetted only at them, even though others are nearby. The consensus among these targetted individuals (TIs) is that implants are obsolete.

However, when all experiences are examined, we find that implants are still in wide use and that removed implants are confiscated, indicating that some covert experiments still use physical implants and the issue is sensitive.

This suggests multiple "tiers of privilege" and different levels of access to mind control technology. Since removed implants are of crucial importance in court cases, publicity, and persuasion, all TIs are interested in following the "implant track" of the larger mind control development problem.

The following article assists us in showing the general public, many of whom are not aware radio frequency in-body implants even exist, that at least the MEANS for human implantation are now readily available and unclassified.

---

## TELEMETRY IS COMING OF AGE

Extract from

"Engineering in Medicine and Biology Magazine" March 1983

by Dean C. Jutter, Ph.D., Assistant Professor in Biomedical Engineering,  
at Marquette University, Milwaukee, Wisconsin

Wen H. Ko, Ph.D. and Thomas M. Spear, B.S.

at Case Western Reserve University, Cleveland, Ohio  
and Dr. Stuart Mackay

Biomedical telemetry is a special area of biomedical instrumentation that permits transmission of physiologic information from an often inaccessible location to a remote monitoring site. The goal of biotelemetry include the capability for monitoring humans and animals with minimum restraint and to provide faithful reproduction of the transmitted data. Although some telemetry of physiologic information is done via telephone lines, the majority is carried via radio link. The encoding of physiologic data into some unique format is common to all biotelemetry systems. The transmitting unit can be carried outside the monitored subject as a backpack unit or can be implanted within the subject's body after appropriate miniaturization and sealing against body fluid. Animals reported to have been monitored with

biotelemetry include cockroaches, lizards, fish, snakes, seals, birds, elk, giraffes, dolphins, horses, and turtles in the wild and dogs, cats, rats, rabbits, monkeys, and baboons in the laboratory.

#### In This Special Section

Stuart Mackay was in biotelemetry from the very beginning and gives us a glimpse of the early developments and evolution of the field. Dr. Mackay's message is replete with examples and applications to an impressively wide variety of animal species. Miniature and micropower are two cornerstones of

modern biotelemetry design and construction. Improvements in these areas have closely paralleled the evolution of semiconductor and microcircuit technologies. He has been involved with reliable, stable integrated sensors

and biotelemeters on microcircuit designs and implementations in recent years. The works is truly state-of-the-art.

Eli Fromm has provided an example of a "poor man's" hybrid biotelemeter to illustrate that some rather sophisticated circuit operations can be done on a low budget and without extensive microcircuit capabilities. His comments focus on a design for a two channel, FM-FM formatted implanted biotelemeter for multiple channel monitoring using resistance type transducers. Biomedical telemetry like many other things began as a "laboratory curiosity" but has evolved to a useful, reliable tool for data gathering. It has become an important, often complex, part of physiologic monitoring, but it also can be exciting and a lot of fun.

The purpose of biomedical telemetry is to monitor or study animals and humans with minimal disturbance to their normal activity and to explore otherwise inaccessible parts of the body. It covers a variety of situations. Animal subjects range in size from bees to whales, useful transmission distances vary from a centimeter to a few thousand kilometers and transmission times from a few minutes to a few years to the life of the subject; frequencies range from 40 kHz to a few hundred megahertz; subjects range from trees to humans and include animals flying, burrowing in the ground now and swimming in fresh or salt water; transmitters can be implanted surgically, swallowed, inserted through other normal body openings, or carried externally; power can be induced inward for tissue stimulation to energize transmitters and to produce mechanical motions; transmitters monitor safety of workers in hazardous situations, carry signals from sterile regions, mark animals with darts, and enhance or reduce reproduction data; they have been used during a variety of situations including sleeping, loving, working, eating, lecturing, and diving. All this can be done with biomedical telemetry without subject's disturbance.

(Snips) In 1903 Einthoven transmitted electrocardiogram voltage over Leiden

Telephone System wires about a mile to a string galvanometer. In 1921 Winters transmitted heart sounds over a marine radio link as a demonstration

for ships without a physician. External transmitters of various signals evolved as electronic methods evolved to produce smaller transmitters. Later, several groups inserted small coils and electrodes into the skulls of

animals so alternating currents could be induced for a primitive form of telestimulation.

The idea of transmitting signals from within the body came to me in 1946 when uncertainty about the pressure in the human bladder during voiding led

to the suggestion of placing a radio transmitter there. This was done later when transistors were invented.

#### Transmitting Signals

The transmission of signals from within a subject was a technique that evolved slowly. On July 2, 1952 William Shockley and Bell Labs sent me four experimental point-contact transistors, which were difficult to power in a small package. (Junction transistors were only available for military use.)

Thus, another approach was developed to provide for the totally passive transmission of information. Figure 2 is taken from Markevitch's 1954 undergraduate research report. The tuned circuit could be placed in the mouth and its frequency monitored from outside the face by the grid-dip meter. Thus the circuits tested by Markevitch showed that signals could be transmitted through the tissues of the body from quite small coils placed within the body.

(Snips - history of biomedical transmitted throughout the medical world)

Surgical implants have been used in rather intricate ways; in some cases, animals are born with functioning transmitters already in them. The researcher just needs to collect data rather than monitor instantaneous information (such as for a diver or astronaut), telemetry can be replaced by recording. Researchers can record signals by variable electroplating by radioactive light variable darkening film, by magnetic tape, and most recently, by semiconductor memories. Recorders as well as telemetry transmitters can be self-detaching for later recovery.

(Snips)

Techniques and applications of these methods continue to expand, limited only by the imagination of researchers. The descriptions and examples above suggest that, although it is not absolutely clear when biomedical telemetry started the formative years are still in progress and are limited only by the imagination of the investigators using new technologies as they evolve.

The design of a telemeter (for either backpack or implanted use) is dictated by size, cost, circuit complexity, power requirements (and needed operational lifetime), transducers, the nature of the data to be transmitted, and performance. The endoradiosonde and radio pill telemeters were perfected and used extensively in the early days of biotelemetry by Stuart Mackay in a wide variety of animal species.

Radio transmission is a more common way to send composite SCO signals than telephone lines. Both amplitude-modulated and frequency-modulated carriers have been used in biotelemetry and are designated FM-AM and FM-FM. This shorthand biotelemetry indicates the type of encoding and the type of modulation of the radio carrier respectively. Although FM-AM has been used, FM-FM systems have been more popular because the overall performance expected of a FM radio link is better. Also, FM radio frequency oscillators are easy to implement with a single transistor, typically in a Copitts configuration. FM-FM biotelemeters have been popular in a variety of

restraint-free monitoring studies. For example, body temperature in the dog, core temperature in rats, diurnal temperature variations in rabbits, thermo regulation and drug response in humans, and ovulation detection in monkeys have been reported - all using inexpensive thermistor transducers with these telemeters. Gait studies in humans, ECG, EEG, ZPG, blood pressure, pH, and oviductal contractile forces in the monkey also have been telemetered with FM-FM systems.

Fortunately, there are a sufficient number of frequencies available in the U.S. for biotelemetry radio transmission, and there are two bands of frequencies specifically allocated to biomedical telemetry by the Federal Communications Commission. In this country, there are no restrictions placed on the modulation format or stability of transmitters as long as bandwidth and in-band requirements are met. Commercially made biotelemetry systems must be FCC type approved, but custom-made devices used in schools and universities need not be type approved, but they should comply with FCC rules and regulations - Part 15, 215,177(C). In either case, the qualities regulated are the field strength, carrier frequency, bandwidth, and spurious

emissions (emissions outside the assigned frequency band that might interfere with other services.) Radio emissions are regulated differently in other countries, and regulating organizations should be contacted appropriately. Biomedical data has been telemetered through virtually every

medium between two sites including air, space, water, and biologic tissue, using a variety of modulated energy forms like electromagnetic waves, light, and ultrasound. Radio frequency energy is the most commonly used to link between biotelemeter and receiver. It is now common use to send data between two sites via satellite.

Biomedical telemetry has been around for about 30 years and has become a useful tool for obtaining restraint-free physiological data from a broad spectrum of animal species and of monitoring settings. The described techniques for biotelemeter circuit design and construction are now all in place, and it seems likely that future development will be in the further miniaturization and integration of biotelemeters and transducers, improved power sources and improved packaging.

(Snips)

Implantable transducers. With this type of package, the biomaterial must meet two basic requirements. First, it must protect the device from the influx of body fluids; second, it should provide minimal interference with the transduction of the desired signal. In packaging most biomedical transducers, an insulating conformal layer is deposited onto the device - in

particular, over electrically conductive and potentially corrosive areas. The material (usually an adhesive rubber or resin) provides a thin, but tough, film capable of guarding against environmental effects. Also, foreign material or bacteria may remain on objects if the parts are not adequately cleaned beforehand.

A minimal weight is required for any implantable package. The pressure (amplitude, duration, etc), produced by the implant on the surrounding tissue may alter the blood circulation at the implant site, possibly affecting tissue reaction. One reason titanium is used commonly as an implantable metal is because it possesses a low specific gravity and an excellent strength-to-weight ratio compared to other metals such as tantalum, tungsten, and stainless steel. Blunt corners and sharp edges should be eliminated because they irritate tissues locally. A streamlined

contour is desirable. Implant location and implant technique also influences the local reaction at the site.

#### Biomedical frequency allocation in the United States for Research and Patient Monitoring

| Frequency MHz | Bandwidth kHz | Field Strength uV/m | Out of Band Transmitter |

## **Quick read for those tight on time**

### **Book Review:**

### **Title: Terrorist [Organized] Stalking in America by David Lawson**

reviewer Eleanor White

This page updated December 17, 2007

**\*\* See also my review of David Lawson's 2007 book  
on the same subject, containing quite a bit of the  
same material plus new, [Cause Stalking](#)**

**ISBN: 0-9703092-0-1**

**Published 2001**

**Purchase source, David Lawson's books:**

<http://www.causestalking.net>

#### **\*\* FOUR STARS \*\***

This book is an INCREDIBLE resource for victims of organized stalking. The author accomplished what multiple stalking victims only DREAM about - he penetrated street level stalking groups and rode with them as they carried out harassment assignments.

This book is likely to be very helpful for targets who are forced to deal with skeptical family, friends, co-workers, and local authorities. It is definitely a breakthrough in the cause of exposing and stopping these stalking groups who operate freely, while law enforcement only gives their lowest ranking street level members a slap on the wrist now and then (while police deny such crimes happen, to targets who complain.)

If a multiple stalking target can comfortably afford the book, I'd give it a definite "buy" recommendation. It will certainly open at least some of the minds of people we multiple stalking victims are forced to deal with.

An excellent web site for members of the public who are not yet aware of organized stalking is this one titled Citizens Against Technological and Community-based Harassment (CATCH):

<http://www.catchcanada.org>

# Concepts Table (Relevant Points)

## (Scroll down for book's table of contents)

Note: This "Concepts Table" is to speed up access to those points of special relevance to multiple stalking victims. This table doesn't appear in the book itself.

Note: "Perp" is short for perpetrator of the stalking crimes.

---

Eleanor White talking:

This book places the blame for much group stalking in the United States on what the author calls "extremist groups". We who are in the current day organized stalking target community see evidence that local "extremist groups" comprise a wide range of normal citizens, who appear to be normal, everyday people who probably do not have criminal records. All trades are represented. Anyone from street people to small children to housewives to tradesmen to technical and professional people form these stalking groups, who believe, based on lies, that they are performing valuable community service by harassing their targets.

"Watcher" perpetrators on station

[Click here](#) to see the 5-minute video from which the "watcher" image above was taken.

What we see appear to be "citizens on patrol" groups gone wild, targeting people who have no criminal records, based on vicious lies we targets never get the chance to correct.

This author describes local extremist groups who go to considerable lengths to actually masquerade as public officials. We organized stalking targets also report bizarre and sometimes unethical and illegal behaviour on the part of genuine public officials too, so this book should be viewed as excellent but not necessarily all available information on the topic of organized stalking.

Let me say here that this author, basing his opinion on a misleading document by the Southern Poverty Law Center, alleges "Patriots" are one of the extremist groups which participate in

stalking and harassment. The actual criminal groups frequently DO appeal to potential helpers' "patriotism" to obtain help in carrying out their harassment. But the SPLC report MISTAKENLY IMPLIES that EVERYONE who adopts the "Patriot" label is involved in these odious crimes.

I listen daily to broadcasts by the group calling themselves the U.S. Patriot Movement, and which you, visitor can access via the WEB, shortwave, and some AM-FM stations from these sites:

<http://www.gcnlive.com> (Mainly Mon-Fri, 8am-5pm)  
<http://www.republicbroadcasting.org>

The Patriot broadcasters who broadcast on those stations aggressively work to expose and stop all well covered up crimes. It is clear the Southern Policy Law Center people who refer to Patriot Movement shortwave broadcasters as terrorist stalkers has NEVER actually listened to these broadcasts!

[Back to Top of Table of Contents](#)

Before we get started, author David Lawson did interview perpetrators, ("perps"), targetted people ("targets"), and the POLICE. Here is what the author heard from the police he interviewed:

"I also spoke with police officers from across the country. They confirmed the existence of stalking groups across the country. In general, they said that 'cause stalking' is primarily a civil problem where the plaintiff has to prove financial loss. They also said that there are free speech and grass roots issues involved. In fact, the police themselves are targets of these groups. In small towns, the number of members in these groups can easily exceed the number of police officers. In general, the police will NOT talk about stalking groups. One officer did say there is a storm brewing as groups become larger and more numerous."

Author Lawson explains here how he got involved and began to interact with the 'cause stalking' perpetrators:

"One day, several years ago, I was sitting in my house, and checking out the activity on my scanner. I heard a woman say that she was following a certain vehicle. She gave the location, the make and model of the car and the license plate number. A few days later, I heard the same woman on the same frequency say that she needed a bit of help at a certain location and a few days after that I again heard her broadcasting the position and details about another vehicle she was following. I listened to other people talking on that frequency and they didn't give any indication that they were with any government agency but they were talking about ARRESTING PEOPLE.

"On another occasion, on the same business band frequency, I heard someone complain that an African American man was crossing the street. "All we could get him for is jaywalking" responded the leader.

[Back to Top of Table of Contents](#)

"People in the group would discuss where they would go for supper, after their shift was over, so I [the author] went too. I listened to a group of people openly discussing various activities as if they were the police.

"Real police officers were also sitting in the restaurant, listening to them. I later learned that their presence was not a coincidence.

"One man who had supper with the group drove a van marked with the call letters of a local AM radio station. I started listening to it. Most of the guests were people who said they had new revelations about Waco or Ruby Ridge, or had some inside story about government corruption. I also heard advertisements for the meetings of a local political group and I attended some.

"At the first meeting I attended, one young man flashed a phony police badge at me. No one paid any attention. Some of those in attendance were the people I had seen in the local restaurant. This was my introduction to the creepy world of extremists."

David Lawson goes on to explain that he has observed extremist groups for several years while living in New York State, Florida, and Canada.

[Back to Top of Table of Contents](#)

He monitored their public communications, attended meetings, rode with them. The author defines the basic reason for being for these citizen stalking groups as CAUSE STALKING. Cause stalking means the group is assembled, under a leader with a "shadowy past", for some specific cause. But what actually happens is that these groups seem to be:

"... groups of individuals who appear to be borderline retarded, mentally ill, or deluded into thinking that they are secret agents."

And ... "Cause stalking has been used by extremist groups since the early 1990s. The basic system is alleged to have been developed by the Ku Klux Klan and refined through years of use.

Easy to recruit, right? More than that,

"Group members are taught that THE TARGET IS THE REASON FOR THEIR PROBLEMS. He is the reason why their lives are a failure."

[Back to Top of Table of Contents](#)

More details about the typical cause stalking recruit:

"Recruits tend to be blue collar workers who are at the bottom end of the job scale. They are janitors in apartments, hotels, etc., who have keys to get in any locked doors. They are security guards, who can let fellow members into places where they would not normally be allowed to go. They are city workers, who can, in many cities, follow a target around all day in their vehicles or have a noisy project underway near his [target's] residence. They are taxi drivers,

who are always on the road. They are cable, telephone and electric company employees who can interfere with a target's service and spend time on patrol with the group, while they are on the job.

Those are the author's words. Here are a few quotes from the perpetrators themselves:

"We are like the police except we are ABOVE the police."

"We are a citizen's group that helps the police. We are trying to alert people in the area about this person [the target] before he gets to do what he did in the last place he lived." [Eleanor White talking: All the cause stalking targets I know did not commit ANY offenses. The stalkers are filled with LIES by their leaders.]

"When I get the call, I go to whatever the address is. It doesn't matter what they [targets] do, they can never get away from us."

"Who are we? We drive the ambulances that take you to the emergency room. When your house is burning, we put out the fire. We are security guards. We protect you at night. YOU ONLY HAVE ELECTRICITY, PHONE AND CABLE SERVICE BECAUSE OF US. We are janitors. We have the keys. We fix your cars. YOU DON'T WANT TO MESS WITH US."

[Back to Top of Table of Contents](#)

The author concludes, as explained at a number of places in the book, that the "cause" the typical group is "working toward" is mainly an excuse to get the groups together. The main motivation of members who stay with these groups is the sense of power and belonging the group members derive. Having a "cause" enhances the feelings of power and righteousness, but group members, according to the author, are most concerned with how their fellow group stalkers feel about their "work" and accept them.

These groups come into being and are run by leaders. Here is what the author says about them:

"Most of these leaders HAVE BACKGROUNDS WHICH ARE NOT KNOWN TO THEIR SUPPORTERS. They are from 'somewhere else' and there isn't much information available about them from independent sources. This provides a basis for the 'larger than life' stature they assume in these groups. Many claim to have connections to the C.I.A. or other intelligence agencies which do not reveal the identities of their employees or ex-employees."

How about financing these groups? Although the author states that the pay is low, there are still very large expenses to harass people as thoroughly as targets report. Here is an example of what I mean by "large expenses":

"Groups are WELL FINANCED. They can afford to RENT PROPERTY WHEREVER THE TARGET LIVES. If he drives across the country, he will be followed by supporters of similar groups in that area. If he travels by plane,

group members will meet him wherever he lands. They may even accompany him on a plane if they know his travel plan, and there is a good chance that they do."

[Back to Top of Table of Contents](#)

Here is what the author learned about their financing:

"The operations of many extremist groups are actually financed by CORPORATIONS which use them to stalk their enemies or potential enemies. The groups are used as the PRIVATE ARMIES of those corporations. Some countries kill dissidents and in others they are jailed. In the United States, someone who is threatening to corporations or industries, like a whistleblower or activist, is likely to become the target of an extremist group."

The author makes several statements that these criminal stalking groups not only harass targets specified by their leaders, but also are FOR HIRE - a kind of "revenge service" for those wealthy enough to hire them.

Next, let's look at some of the typical OPERATIONS these groups carry out:

- "The primary characteristic of cause stalking is that it is done by LARGE GROUPS OF PEOPLE. A target will always be followed, but he is unlikely to see the same stalkers very often." ...

"Many of these groups include hundreds of people."

[Back to Top of Table of Contents](#)

- "Some authors refer to cause stalking as terrorist stalking. Groups do not just stalk individuals. They employ organized programs of harassment which include BREAK-INS, PROPERTY DAMAGE, ASSAULT AND OCCASIONALLY, EVEN DEATH. The CHILDREN of a target are a favorite."
- "Firemen across the country, and even some police departments have a long history of supporting extremist groups. Fire trucks can sometimes be seen riding in extremist convoys, with their flashing lights turned on and their sirens screaming. They will also race to greet a convoy which is entering their town. The participation of firemen, city workers and utility company workers helps give group members an illusion of legitimacy and power."
- "City employees can be used to harass a target in many ways including tearing up the road in front of a target's home. Employees of pest control businesses who have access to the keys for apartments and those who work for alarm and locksmith companies are also of interest."

[Back to Top of Table of Contents](#)

- "Groups also attack targets of convenience. These people are selected because they are convenient targets, and not for any other reason. These include loners who tend to be more vulnerable to their harassment tactics than those with family and friends around them. Targets of convenience are used for practice."

- "Groups have contacts in the media which they use to disseminate information about their targets. IT IS NOT UNUSUAL TO SEE THE VEHICLES OF LOCAL TELEVISION STATIONS RIDING IN EXTREMIST CONVOYS."
- "In order to establish bases of operation, they will ENLIST THE ASSISTANCE OF NEIGHBORS. In many areas, they can do this by intimidation. Those who do not cooperate can be targetted, which includes harassment of their families and damage to their homes and vehicles.

"If they are dealing with individuals who do not know them, they can also appeal to their sense of patriotism and they can offer drugs, friendship, home repair, free taxi rides and what ever else they have to. In some cases they may even be able to get a key to the residence from a 'patriotic' landlord."

[Back to Top of Table of Contents](#)

- "Surveillance is conducted 24 hours a day, 7 days a week. When a target leaves his residence they will alert the group, either by cell phone or by business band radio. Other members, who are patrolling the perimeter to watch for police and other vehicles driving in the area, will race to the location to begin pursuit. In small towns, where business band radio is widely used, these activities are a local sport among a small group. Anyone with a scanner can join in. Some targets have reported hearing an announcement on their scanners AS SOON AS THEY TURN THEIR LIGHTS ON IN THE MORNING."
- "In a typical apartment setting, they will attempt to lease, sublet, or otherwise have access to apartments above, below, and on both sides of the target. They will also "guard" the vehicles of a target in the parking lot. If they have occupied apartments surrounding a target, typically normal noises like toilets flushing, doors closing, people talking, etc. will not be heard. The only noises that will be heard are in response to something the target does. If he flushes a toilet, he may hear a car horn honk, the sound of a power tool or hammering, for example. There will also be a large number of people coming and going, and accompanying rowdiness and noise."

[Back to Top of Table of Contents](#)

- "A common ruse used by these groups is that they are a 'citizens group' which assists the police and they are 'just keeping track of' a certain individual, for whatever reason. The illusion is reinforced by the case files they carry which are complete with photos of the target and look like those used by police."
- "Typically, harassment tactics are not used unless a target is alone. If he is with others, group members will still surround him, but they will not reveal their presence. Many targets never experience the kind of harassment described here, because they are not alone very often.
- Others do not recognize that they are being harassed by an organized group. They just think that there are a lot of rude people in the world. Targets who do not experience physical harassment are still targets for other types of attacks.

[Back to Top of Table of Contents](#)

- "Physical harassment is used when a target has no witnesses. An objective is to isolate the target from his family and friends. He can tell them about all the strange things

happening around him, but they will not understand and perhaps will think he is crazy. Sometimes other members of the family will receive the same treatment."

- "When a target is driving, standard practice is to surround his vehicle and attempt to control his speed. He will not be followed in close proximity by the same vehicles for a long distance. They do frequent trade-offs. Vehicles line up behind the target for a short distance and then move out of place so the next vehicle can take over. Frequently, vehicles in the convoy will have their high beam headlights on during the day, so a target frequently have a vehicle behind him which has its headlights on.

"In many parts of the country it is common to see groups of six to 30 or more vehicles driving around in convoys with their high beams on during the day. This is one of the ways a convoy can be identified."

[Back to Top of Table of Contents](#)

- "A target will be followed on foot wherever he goes. Anyone can go to the same public places he goes, and they will attempt to get into any other restricted places he goes, including hospitals, places of employment, etc. It has been said that it is possible to go nearly anywhere if you have a clipboard in your hand and it is almost true. They also like to wear name badges on a lanyard, and some carry phony police badges."
- "Common harassment tactics used by those on foot include PEN CLICKING, in which they repeatedly click a ball point pen, key rattling, and rattling change in their pockets while standing behind the target. Many tactics are tried and the result is observed. Those which evoke a response from the target are repeated. When a target sits anywhere in public, group members will attempt to sit behind him in order to create noise, by whatever means, including tapping their feet on the target's chair. The objective is to harass the target constantly."

[Back to Top of Table of Contents](#)

- "Groups attempt to interfere with any business and personal relationships which the target has. Typically, this interference involves character assassination from some anonymous individual and is not usually taken seriously by those who know the target. It can be effective with people who don't know the target."
- "At work, the target will also experience character assassination. If he works in any position where he has to deal with the public, there will be a steady stream of customers who complain about him. If he is a real estate agent, he will have a steady stream of prospects who OCCUPY HIS TIME but never make an offer."

Let me, Eleanor White, give you an example of how brutal and serious this "character assassination" can be.

One of our members, who prefers to remain anonymous, moved in with her husband and children to a house which, unknown to them, had been a methamphetamine lab. The chemicals used to brew meth apparently cause distinctive symptoms in the mouth. This family's dentist felt he was "helping law enforcement" by reporting them to local law enforcement as meth users. This was absolutely untrue, but the family didn't even know the report had been made and had no way to correct it. (In fact, in some places, dentists are REQUIRED to report suspected cases of meth use.)

Law enforcement in that area was apparently tied in to the stalking groups, and the family was harassed for many years. The husband died, apparently from exposure to these chemicals.

The lady, now a grandmother, steadfastly did detective work and eventually found out about her family's reputation, with some help from a policeman who was a personal friend, from a different jurisdiction. This policeman admitted off the record that "meth mouth" can result in people being submitted to citizen harassment groups for harassment.

Character assassination is complete and has life-destroying consequences!

- "A common tactic use by groups is noise campaigns. Group members will drive by the target's residence or work place, honking their horns, squealing tires, and making whatever other noise they can."

"They will also make noise from whatever NEARBY PROPERTIES they have access to. Typically, they will make noise WHEN THE TARGET GOES OUTSIDE. [Eleanor White talking: OR, when the target opens a window, and I mean timed to the millisecond! Open, close, perfect sync!] Group members will also frequently knock on his door for whatever peculiar reasons they can dream up."

[Back to Top of Table of Contents](#)

- "In an apartment setting, targets can expect to hear tapping on the walls in the middle of the night, taps running, hammering etc. from the upper and/or lower apartments, and possibly the apartments on both sides. They will continue to 'work' on these activities for as long as they can get away with them."
- "Other vehicle related tactics include blockade, so the target vehicle cannot leave a parking lot, for example, or he is surrounded by slow moving vehicles."

"Standard practice is to watch the target's vehicles and this subjects them to damage including slashed tires, scratched paint, stolen license plates, etc. Typically they would not cut the brake lines on vehicles or commit other similar acts of sabotage, but they WOULD drain the oil or antifreeze over a period of TIME. [Eleanor White: AMEN!]"

- "... It is not uncommon, in an apartment setting, for a target to hear someone moving from room to room as he does, from the upper or lower apartment. [Eleanor White talking: This requires commercial through wall radar or more advanced technology in many cases.]

[Back to Top of Table of Contents](#)

- Often they occupy a nearby apartment, part time, when the owner is not there and he receives some benefit. A target may notice someone leaving a nearby apartment when he leaves his, and arrive when he arrives. [Eleanor White talking: All the time, in my experience.] In addition, he will often be accompanied in elevators by a steady stream of different individuals who go to the apartments being used by the group.

[Back to Top of Table of Contents](#)

Now that is a HUGE "laundry list" of operations carried out against the targets of these criminal cause stalking groups. But reader, this particular book is ALL MEAT, and there is MUCH, MUCH more within its covers. If the general public is made aware of this book, these brutal crimes, which have resulted in suicides, just might have a chance of being exposed and stopped.

Currently, the typical justice system response is to label the victim as mentally ill and wash their hands of the problem. This is itself a criminal act, and a violation of all the job descriptions and oaths these public officials have accepted and made. They are NOT doing their jobs!

What about the future, then? Let me close this review with a chilling quote from the book reporting what the author learned from some of the leaders:

"The leaders ... are starting to balk at exposing their members to arrest for activities which amount to little gain for the movement. THEY SAY THAT ANYONE WHO IS A TARGET SHOULD BE KILLED, and not just harassed for years."

YOU, Joe and Jane Citizen, have the power to stop this by doing nothing more than asking your public officials how they plan to deal with this growing crime. Will you help us?

Eleanor White

\* See also Eleanor White's [REVIEW](#) of [Harvest of Rage](#)

Eleanor White talking: The above book, "Harvest of Rage", is an attempt to paint ALL members of the U.S. Patriot Movement as extremists, criminals, religious fanatics, and mentally ill. At the time of writing this review, I have listened to their shortwave, web, and AM/FM \*broadcasts\* for two years. If Mr. Dyer has ever listened to those broadcasts, then I

have to conclude he is deliberately trying to discredit this movement for motives unknown. My guess is Mr. Dyer has not listened to their broadcasts.

I have heard an endless stream of documented information, often from wire services before getting edited by retail media outlets, and government publications, which shows conclusively that the U.S. Patriot Movement broadcasters are on the right track and speak out often against anti government violence. The goal of the U.S. Patriot broadcasters is non-violent change, returning the United States to original Constitutional principles, brought about by PUBLIC EDUCATION. Anyone who takes the time to LISTEN to their broadcasts will find the same. It is easy to listen to them by way of the network links at the top of this document.

I'm afraid the author of Terrorist Stalking in America, David Lawson, has not taken the time to listen to these broadcasts either, and so does not have a fully informed opinion about the Patriots.

## **Examples of Thefts from Mind Control Victim Homes and Workplaces**

**November 7, 2008**

Listed below are a sampling of items which have been stolen (S) or stolen then returned (S+R) from the home and workplace of mind control victim Eleanor White and others. Theft is very common and involves items too small for police action. These small crimes add up to stressful conditions over time, however, and also significant financial cost.

---

### **Home/Car Thefts**

- Books (S)
- Computer diskettes (S)
- Consumable supplies such as powdered coffee creamer (S)
- Entry to house while out with inside locks undone
- Food, half-eaten, not from victim's kitchen, found on kitchen table
- Identification wallet (S)
- Insurance renewal notice stolen, some personal mail re-directed to Albuquerque NM school system
- Items from stores victim has never been to found in home
- Items stolen, then returned AFTER target has replaced them
- Large quantity of batteries (S)
- Large ring of keys (S+R)
- Multi-voltage wall plug power supply (S)
- OLFA razor knife (S+R)
- Phone card, stolen until no longer valid then returned (S+R)
- Potted plants taken from neighbours, placed at victim's door
- Personal records, such as birth certificates, tax records
- Reading eyeglasses (S+R)
- Screwdrivers (S+R)
- Tools (locked car)(S)
- Toothpaste stolen, returned with tube marked up in red, half emptied, smashed up
- Zip-on hood for security guard uniform jacket (S+R)
- Public service and ham radio scanner (S+R)
- Case of beans (S)
- Short wave receiver (S)
- Short wave antenna preamplifier (S)

**Report from Dr. Rauni Kilde, Mind Control Target  
and Former District Chief Medical Officer  
for Northern Finland**

**Thefts at Home:**

- Fax paper rolls from fax machine while out (S)
  - Several thefts of telephone books (S)
  - Personal address book (S+R)
  - House key (S)
  - Silverware (S)
  - "One of a pair" items like spoon, shoe, sock etc. (S)
  - Every apple from personal apple trees (S)
  - Incoming faxes (S)
  - Entire mailbox (S)
  - Personal papers, such as passport, insurance policies, medical journals, personal letters, especially of sentimental value, printed packages of personal letterhead,
  - Wedding pictures (S, R after 2 years)
  - Christmas ornaments (S)
  - Easter decorations (antique) (S)
  - Book manuscript from SAFE DEPOSIT BOX (S)
  - Expensive jewelry (S, sometimes R)
  - Both personal and library PCs, attachments removed (S)
  - First notice of parcel at post office always taken (S) and second notice delivered late, resulting in return of the parcel
  - Books from personal library (S)
- 

## **Workplace Thefts**

- Backup diskettes for telephone system (S)
  - Backup memory card for telephone system (S)
  - Deletion (or messing up of) important computer files (S)
  - Floppy diskette drives removed from PCs
  - Important books and manuals (usually S)
  - Important memos from desks (S)
  - Notebook out of desk (S)
  - Office supplies like pens, printer paper, Post-It pads (S) (In the computer room which rarely had visitor traffic)
-

## **Devices that read human thought now possible, study says** **Brain implants could help severely disabled**

[Carl T. Hall, Chronicle Science Writer](#)

Monday, November 10, 2003

[©2003 San Francisco Chronicle](#) | [Feedback](#)

URL: [sfgate.com/article.cgi?file=/c/a/2003/11/10/MNGK82U4MV1.DTL](http://sfgate.com/article.cgi?file=/c/a/2003/11/10/MNGK82U4MV1.DTL)

**New Orleans** -- Less than a month after a widely heralded experiment showed how thought-reading implants can work in monkeys, scientists presented new findings Sunday suggesting such machines could work in people, too.

Dr. Miguel A.L. Nicolelis of Duke University said previously unreported human experiments demonstrated success with one type of a so-called brain computer interface, or BCI.

He and others discussed their latest findings Sunday at the annual meeting in New Orleans of the Society for Neuroscience, the world's largest gathering of brain researchers. About 28,000 people are attending the weeklong event.

Much of the attention on Sunday was given to technology designed to overcome paralyzing injuries or illnesses afflicting the nervous system. About 11,000 new cases arise every year, adding to a total estimated at more than 200,000.

Nicolelis said the new study had been done in a few Parkinson's disease patients while they were undergoing open-skull neurosurgery for their disease.

Full results, he said, have been submitted for peer review to a scientific journal and were not a formal part of the program, in which he and colleagues reported new details from the monkey experiments already published.

Nicolelis said the important point was that the principle had been shown to work: People can control devices merely by thinking.

Ultimately, it may be possible to design high-tech implants that can read and direct the muscles using the patient's own intentions and natural sensory equipment.

For now, it's a much less grandiose business of just tuning the equipment to the human brain's frequency.

In the Duke experiments, patients were being fitted with standard electrical stimulator devices, which can help to control Parkinson's symptoms.

This procedure requires the patient to be awake while the surgeon identifies a safe route through brain tissue, taking care not to harm brain cells needed for essential functions. As part of that process, the surgeon periodically asks the patient to speak or move while recording localized brain activity.

Nicolelis and his colleagues took advantage of the opportunity and recorded the information the surgeon was obtaining. Then, for five-minute periods while the patient was being operated on, they conducted simple reaching-and-grasping experiments to determine whether the patient's intentions could accurately be read -- the first essential step in controlling a limb by computer implant.

That's a far cry from proving that a workable long-term implant would be safe and effective. Nicolelis said it was much too soon to "even think about" moving any particular device into full-blown clinical trials.

A competing group, however, led by founders and collaborators of a company called Cyberkinetics Inc., has announced plans to begin a small safety study next year of an implant designed to allow a paralyzed patient to control a desktop computer.

That device, called "BrainGate," is based on research at Brown University,

led by scientist John Donaghue. He and other company officials described the technology on Sunday as a "novel gateway" for people with no other options.

"These are the opening days of a new era in neurotechnology," Donaghue said.

The competition, however, has gotten somewhat testy of late amid an explosion of interest. Some scientists accuse Nicolelis of overreaching, noting that his latest monkey experiment actually wasn't the first to show a "thoughts-into-action" device could function in a primate; he was merely the first to show that a monkey's brain firings could be harnessed to direct complicated movement, involving both reaching and grasping.

Meanwhile, Nicolelis decried the entry of corporate interests into a field once thought to be purely science fiction, now being taken seriously as modern medicine at the cutting edge of technology.

"I am a university professor," Nicolelis said. "I have no interests in any business. I am Brazilian -- I want to have fun, I don't want to make money. What I am very afraid of is that people who really want to make a buck out of this will be rushing into the clinical thing. I don't believe in that. A lot of important science needs to be done, and we need to go step by step in a very careful way."

All the labs claim to be pursuing the technology responsibly.

Donaghue and his colleagues pointed out they were also university scientists who realized the only way to fully exploit the technology was to form a company capable of raising the money needed to carry out very expensive clinical studies. Cyberkinetics is proceeding with the guidance of the U.S. Food and Drug Administration.

In the latest studies on people, Nicolelis' Duke group had to use a simplified version of the animal study protocol to stay within the bounds of a five-minute surgical window. But that was still enough, Nicolelis said, to show animal and human brains can be read much in the same way.

"We are showing the same computational algorithms work, the same technology in general works, suggesting the principle would work in a patient that is severely handicapped," Nicolelis said. "We are able to predict the hand position, and the hand force, while they are doing the task during the surgery."

Before you can lift even a finger, nerves fire in the brain, along the spinal cord and nerve pathways of the arm, then back again in a tightly controlled feedback loop.

Douglas J. Weber, of the University of Alberta in Edmonton, reported new research Sunday suggesting that the motion of a limb can be accurately predicted by reading the firings of just a handful of brain cells -- only 10 or so in one case.

That means it may be simpler than once imagined to tap into the body's own sensory apparatus to keep some natural motion going with a brain implant merely as a detour around a damaged spinal cord or other problem in the brain's natural circuitry.

Dr. Jonathan Wolpaw of the New York State Department of Health's Wadsworth Center described new methods of reading signals that can be detected outside and just beneath the surface of the skull, suggesting the possibility that some devices may not even have to be implanted into the brain. Implants run some risk of infections and other problems.

But he and others emphasized it might be several years before the first such devices were ready for widespread use, and they noted that the technology worked only in individuals who might be utterly disabled and "locked in," with no ability to move even their eyes, and yet had enough healthy brain activity to drive the implants.

The revolution will start slowly, Wolpaw said, in a few people "who are the most disabled and who have no other options."

## Technologies approaching electronic thought reading

October 20, 1998

This page lists articles from publications which show how the unclassified "thought reading world" is gradually catching up with classified thought reading equipment:

[HOME](#)

-----  
<http://www.mindmouse.com/> The Cyberlink Mind Mouse:  
Hands-Free, Brain-Wave Control for your Computer

The Cyberlink Mind Mouse

What is it?

The Cyberlink Mind Mouse is a revolutionary hands-free computer controller which allows you to move and click a mouse cursor, play video games, create music, and control external devices, all without using your hands.

How does it work?

A headband with three sensors detects electrical signals on the forehead resulting from subtle facial muscle, eye, and brain activity. This headband connects to an interface box which amplifies and digitizes the forehead signals and sends them to your computer. The Cyberlink software decodes the forehead signals into ten BrainFingers for continuous cursor control. It also decodes eye motion and facial gestures into mouse button clicks, keystrokes, and cursor resolution control. With a little practice, most or all of these commands can be mastered to operate virtually all computer functions.

I can do what...?

By learning to change the energy levels of your BrainFingers, you will be able to do just about anything on a computer, except turn it on! The Cyberlink Mind Mouse supports hands-free mouse, keyboard and joystick cursor control, switch closure, video game control, and music and art synthesis.

...and it works with my software?

The Cyberlink Mind Mouse features a Windows 95 Mouse Driver for hands-free control of third party software like games, business software, Internet browsers, and a range of assistive technologies, such as the X-10 Home Controller and special needs word- processing and communication software, including WiVik2, Words Plus, and Clicker Plus.

What kind of computer does it take?

The Cyberlink Mind Mouse has the following PC requirements:

- Pentium Processor
- 16 MB RAM
- 20 MB Disk Space
- VGA or better Display
- Windows 95

What comes with the Mind Mouse?

The Cyberlink Mind Mouse consists of the following components:

- Cyberlink Interface Unit
- Cyberlink Headband/Sensor Harness with 3 Sensors
- Cybergel
- Cyber Trainer Software
- Windows 95 "Mouse" Driver
- Cables
- User manual

How much is it?

The Cyberlink Mind Mouse is priced at \$1495.00 (US\$) plus shipping. Free upgrades are included for one year.

The Times, Sept 2, 1996 p14 (1)  
Title:the power of thought (innovations for paraplegics)  
Author: anjana ahuja  
abstract:

Peter Gannicott, 36 yr old UK paraplegic who cannot speak , as a result of a motorcycle accident in 1982 , might be able to activate his computer and other devices by thinking if neurosurgery is successful. London university's Emeritus Professor of Physiology, giles Brindley, ad the Radcliffe's Hospital 's chief neurosurgeon, Peter Teddy, have conceived a way whereby signals produced by electrodes over the brain should be able to operate a computer.

SIGHTINGS

Implants Can Now Allow Humans To Control Computers  
By Nigel Hawkes  
Science Editor  
The Times (London)  
[www.the-times.co.uk](http://www.the-times.co.uk)

AN AMERICAN scientist has entered the world of science fiction by implanting electrodes in the brains of disabled people so that they can control a computer by the power of thought.

The implants have enabled two paralysed people to move the cursor on the screen simply by thinking about moving part of their body. They were able to convey messages such as "I'm

thirsty" or "please turn off the light" by pointing the cursor at different icons.

The hope is that eventually patients will be able to communicate complex ideas just by thinking about them. "If you can run a computer, you can talk to the world," Dr Ray Bakay of Emory University in Atlanta, whose team developed the implants, said.

A number of laboratories around the world are working on brain implants, but the only devices licensed for use so far are bionic ears for the profoundly deaf and chips which can control the tremor caused by Parkinson's disease.

The Emory implants go much further. They consist of two hollow glass cones, each the size of a ballpoint pen tip, placed into the brain's motor cortex, which controls body movements. The cones are covered in chemicals that encourage nerve growth, extracted from the patient's knees. Once installed, nerve cells grow into the cones and attach themselves to tiny electrodes inside.

The location of each cone is determined by monitoring the patient's brain using scanners and identifying the most active regions. Once the cones are in place and surrounded by nerve cells, the patient is asked to think about moving some part of the body, and signals from the electrodes are picked up by a small transmitter-receiver, amplified, and used to control a computer. Depending upon which nerves grow into the cones, each patient may have to think about moving a different part of the body to achieve the same effect.

They are trained by listening to a buzzer which becomes faster and louder when they are thinking along the right lines. Dr Bakay says that controlling the cursor soon becomes second nature.

The first two patients, New Scientist reports, were a woman with motor neuron disease, who was given the implants 18 months ago and has since died, and a 57-year-old man paralysed by a stroke.

They were taught very simple commands, with one cone being used to move the cursor up and down and the other from left to right. If they could give more complex commands, disabled people could use them to make the computer speak for them. Dr Bakay warns that this could still be years off. But he has secured funding from the US National Institutes of Health to continue the research with three more patients.

The British Telecom laboratories near Ipswich have also done research into implantable chips, including a possible memory chip which would take data from the eye and store it for a computer. "There is a raft of wonderful benefits to bringing chips and circuits inside human beings," said Dr Peter Cochrane, head of research.

-----  
Communicating with 'thought power'

"Bionic brain implants allowing a computer to be operated

by the power of thought, have been developed by American scientists," reports BBC News. Read all about it here:

[http://www.news.bbc.co.uk/hi/english/sci/tech/newsid\\_193000/193946.stm](http://www.news.bbc.co.uk/hi/english/sci/tech/newsid_193000/193946.stm)

The BBC report states that "the [brain] implant becomes naturally 'wired' into the patient's brain as neurones grow into the cones and attach themselves to the electrodes mounted inside," and that "An FM transmitter under the scalp transmits the signal without wires, and...no batteries," to operate the cursor on a computer... hard to believe!

## Threats Received

April 21, 2004

This page is to collect reports of threats received by targets of stalking groups, which are NOT obviously from members of Satanic and other evil-worshipping cults. There is a separate page for Satanic and evil-worshipping groups [here](#).

The visitor should understand that "mind games" are played by the stalking groups, so some of the threats may seem nonsensical. If you will scan the book review of [Terrorist Stalking in America](#), by David Lawson, you will soon see that when one is a target of these vicious, inescapable groups, even threats which a non-target might laugh at aren't the least bit funny to the target. One of the most outrageous aspects of threats by group stalking groups is that it is the target's PETS and sometimes CHILDREN who are most likely to have the threats CARRIED OUT against them.

-----

A threat left on an automobile belonging to a stalking group target in Sweden. The 3-letter word at the top of the marking is:

död

In English that means "dead". A meaning for the hand and stick figure symbols is not known to the target. Before dismissing this as "kids", keep in mind that kids of all ages are frequently used by parents who are members of stalking groups. This is apparently an attempt to make the target feel "everyone (of any age) is against me". It is also an excellent way to cover up the stalking crimes as the non-targetted public has difficulty believing kids could or would be used this way.

### Looking through cats' eyes

#### Looking through cats' eyes

By BBC News Online Science Editor Dr David Whitehouse

These are the first pictures from an extraordinary experiment which has probed what it is like to look through the eyes of another creature.

As reported on BBC News Online last week, a team of US scientists have wired a computer to a cat's brain and created videos of what the animal was seeing.

By recording the electrical activity of nerve cells in the thalamus, a region of the brain that receives signals from the eyes, researchers from the University of California at Berkeley were able to view these shapes.

The team used what they describe as a "linear decoding technique" to convert the signals from the stimulated cells into visual images.

Dr Yang Dan, Assistant Professor of Neurobiology at UC Berkeley, Fei Li and Garrett Stanley, now Assistant Professor of Biomedical Engineering at Harvard University conducted 11 experiments.

They recorded the output from 177 brain cells that responded to light and dark in the cat's field of view.

In total, the 177 cells were sensitive to a field of view of 6.4 by 6.4 degrees. As the brain cells were stimulated, an image of what the cat saw was reconstructed.

The first example is a face. Although the reconstructed image is rather fuzzy, it is clearly recognisable as a version of the original scene. It is possible that a clearer image could be obtained by sampling the electrical output of more cells.

In the cat's brain, as in ours, the signals from the thalamus cells undergo considerable signal processing in the higher regions of the brain that improve the quality of the image that is perceived.

Taking an image from a region of the brain before this image enhancement has taken place will result in a poorer image than the cat is able to see.

The other two examples show two woodland scenes, with tree trunks being the most prominent objects.

By being able to tap directly into the brain and extract a visual image the researchers have produced a "brain interface" that may one day allow the control of artificial organs and indeed machines by thought alone. It is also conceivable that, given time, it will be possible to record what one person sees and "play it back" to someone else either as it is happening or at a later date.

## **Timeline of Important Dates in the History of Electromagnetic Technology and Mind Control By Cheryl Welsh**

---

This timeline will demonstrate the US government and the military industrial complex involvement and the state of the technology from several independent unclassified reliable sources. This is a sample of the sources of information on this topic. These topics need further investigation.

1942-1947

From Cybernetics by Norbert Wiener, Wiener is the originator of cybernetics. New York Times wrote this comment about the book. "One of the most influential books of the twentieth century... Cybernetics was judged by twenty-seven historians, economists, educators, and philosophers to be one of those books published during the "past four decades," which "most significantly altered the direction of our society..."

A quote from this book, "This existence of sharp frequencies in brain waves and the theories which I gave to explain how they are originated, what they can do, and what medical use may be made of them represent in my mind an important and new breakthrough in physiology. Similar ideas can be used in many other places in physiology and can make a real contribution to the study of the fundamentals of life phenomena."

The book further states: "The nucleus of our meetings has been the group that had assembled in Princeton in 1944, but Drs. McCulloch and Fremont-Smith have rightly seen the psychological and sociological implications of the subject and have co-opted into the group a number of leading psychologists, sociologists, and anthropologists. The need of including psychologists had indeed been obvious from the beginning. He who studies the nervous system cannot forget the mind, and he who studies the mind cannot forget the nervous system.

Weiner also writes, "I had known for a considerable time that if a national emergency should come, my function in it would be determined largely by two things: my close contact with the program of computing machines developed by Dr. Vannevar Bush, and my own joint work with Dr. Yuk Wing Lee on the design of electric networks.

And finally, "Dr. Rosenblueth at a meeting held in New York in 1942, under the auspices of the Josiah Macy Foundation, and devoted to problems of central inhibition in the nervous system. Among those present at that meeting was Dr. Warren McCulloch of the Medical School of the University of Illinois, who had already been in touch with Dr. Rosenblueth and myself, and who was interested in the study of the organization of the cortex of the brain.

In Dr. Becker's book Crosscurrents, 1990, Jeremy P. Tarcher, Inc., p220 he writes about Dr. Wiener, "As a result of these comments (fluctuations of magnetic fields of the earth may cause undesirable behavioral changes), I was contacted by Dr. James Hamer of Northrop Space

Laboratories, who informed me that his group was already involved in this area. He also noted that Dr. Norbert Wiener of MIT, the originator of cybernetics, had been interested in the same subject. Wiener had been involved in a German experiment in which human volunteers were unknowingly exposed to a low-intensity, 10-Hz electrical field. The subjects reported feelings of unease and anxiety when the fields were turned on. Both Hamer and Wiener were working under the assumption the ELF internal rhythms in the brain were determinants of behavior, and that pulsing external fields could "drive" these internal rhythms, thereby altering behavior."

1947

Central Intelligence Agency is formed.

1950

From Time, "Lost Prisoners of War: 'Sold Down the River'?" September 30, 1996 p45, House National Security Subcommittee hear about newly declassified intelligence reports and other documents and testimony of U.S. Army Colonel Philip Corso and Major General in the Czech army, Jan Sejna. "There were few doubters"... about the fact that POWs were used as guinea pigs in experiments. "Sejna testified that the Czechs, on orders from Moscow, built a military hospital in North Korea during the war. The 'secret purpose of the hospital,' he said, 'was to experiment on American and South Korean POWs.' Prisoners were used to test the effects of 'chemical- and biological-warfare agents,' atomic radiation and 'various mind-control drugs.'"

1950

From International Defense Review, Vol 23; No.8, "Biological Weapons; How big a threat?" by Dr. T White and Dr. K. White, August 1,1990. p843. "The shock of seeing American prisoners of war denounce their country after they had been brain-washed by their North-Korean and Chinese captors prompted the CIA to launch its now infamous 'MK-Ultra' project. The aim of this research was to discover the techniques and 'mind-control' drugs being used by the Chinese to subvert their American prisoners. In the course of the ICA-funded investigation, American and Canadian citizens were used as guinea pigs in experiments that have been compared with the German medical experiments in the 'death camps'."

1952

From The Puzzle Palace, James Bamford, 1982, Penquin, p15. November 4, 1952. The NSA, a new federal agency came into existence. "No news coverage, no congressional debate, no press announcement, not even the whisper of a rumor. Nor could any mention of the new organization be found in the Government Organization Manuel or the Federal Register or the Congressional Record. Equally invisible were the new agency's director, its numerous buildings, and its ten thousand employees."

1953

From Electromagnetism and Life, Dr. R.O. Becker, p.227. "The possibility that the Soviet Union might be ahead of the USA in EM weapon systems has persisted at least since the discovery of the irradiation of the US Moscow Embassy in 1953." And in the Washington

Times, Nov 15, 1992, "The Russian Government is continuing to bombard the U.S. Embassy in Moscow with microwave radiation, according to U.S. officials." The pulsed "emanations originate from a residential building across the street that is believed to be staffed by Russian security officials." In 1976, the Globe reported that Ambassador Walter Stoessel "developed a rare blood disease similar to leukemia and was suffering headaches and was suffering bleeding from the eyes. Two of his irradiated predecessors, Ambassador Charles Bohlen and Ambassador Llewellyn Thompson, died of cancers."

And further, from *The Zapping of America*, by Paul Brodeur, W.W. Norton and Co., 1977. The investigation of this "moscow signal" was call Project Pandora and "information about it was parceled out on a strict "need to know" basis..." "In addition, the Advanced Research Projects Agency (ARPA)-a highly secret organization within the Department of Defense, which was engaged in developing a wide variety of electromagnetic weaponry, including electronic sensors and other devices that were designed to detect enemy movement on the Ho Chi Minh Trail and elsewhere in Vietnam-set up a special laboratory at the Walter Reed Army Institute of Research, in Washington, DC where, over a number of years, experiments were conducted in which rhesus monkeys were irradiated with microwaves at power densities and frequencies similar to those of the Moscow Signal." (Mr. Brodeur published part of his book in *The New Yorker*.)

1953

From Washington Post, Aug7 1977, "Psychic Spying? The article discussed Dr. Andrija Puharich. "His connections with the military/ intelligence communities go back to the early 1950s when he worked in the Army's Chemical and Biological Warfare Center at Ft. Detrick, Md., site of the CIA's now famous shellfish toxin repository. He presented a paper entitled "On the Possible usefulness of Extrasensory Perception in Psychological Warfare to a Pentagon conference in 1952 and later lectured the Army, Air Force and Navy on other possibilities for mind warfare. Expert in hypnotism as well as microelectronics, Puharich also invented a miniature tooth radio, reportedly for the CIA."

1970

From *The Mind Manipulators*, Alan W. Schefflin, 1978, Paddington Press, Ltd. p 348, On tracking humans such as prisoners, he writes, "During the Nixon administration, the United States government was sufficiently intrigued by the possibilities of tracking (both with and without ESB,(Electronic Stimulation of the Brain)) to commission a report on the state of the art and the pertinent law. It chose as its reviewer Ralph K Schwitzgebel, the leading experimenter on tracking, then a researcher at Harvard University. He reported that tracking was close to being practical and effective, and that is was legally acceptable."

1972

From *Psychic Warfare*, Martin Ebon, 1983, McGraw Hill, p12. A (1972) report by Defense Intelligence Agency stated, "the major impetus behind the Soviet drive to harness the possible capabilities of telepathic communications, telekinetics and bionics is said to come from the Soviet military and the KGB."

1974

From *The Body Electric*, Dr. R. O Becker, p321 The following research plan was released under the Freedom of Information Act. "The experimenter, J.F. Schapitz, stated: "In this investigation it will be shown that the spoken word of the hypnotist may also be conveyed by modulated electromagnetic energy directly into the subconscious parts of the human brain-i.e., without employing any technical devices for receiving or transcoding the messages and without the person exposed to such influence having a chance to control the information input consciously." As a preliminary test of the general concept, Schapitz proposed recording the brain waves induced by specific drugs, then modulating them onto a microwave beam and feeding them back into an undrugged person's brain to see if the same state of consciousness could be produced by the beam alone."

"...The second experiment was to be the implanting of hypnotic suggestions for simple acts, like leaving the lab to buy some particular item, which were to be triggered by a suggested time, spoken word, or sight. Subjects were to be interviewed later. "It may be expected," Schapitz wrote, "that they rationalize their behavior and consider it to be undertaken out of their own free will."

And in *Lobster Magazine* an article by Martin Cannon states: "Schapitz' work was funded by the Department of Defense. Despite FOIA requests, the results have never been revealed." Further, "His (Schapitz') instincts on this latter point (rationalizing their behavior) coalesce perfectly with findings of professional

hypnotists.<sup>66</sup> In the same article in footnote 66, "See Bowart p 218 (Operation Mind Control) for an interesting example. This rationalization process at work in the case of Sirhan Sirhan, who was convicted of the assassination of Robert F. Kennedy. In prison, Sirhan was hypnotized by Dr. Bernard Diamond, who instructed Sirhan to climb the bars of his cage like a monkey. He did so. After the trance was removed, Sirhan was shown tapes of his actions. He insisted that he 'acted like a monkey' of his own free will-he claimed he wanted the exercise!"

1975

From *Crosscurrents*, Dr. R.O. Becker, 1990,p224, "Since the mid-1970s, (Jose) Delgado has been director of the premier Spanish neurophysiological laboratory, Centro Ramon y Cajal. His interest has shifted from direct electrical stimulation of the brain to the broader area of the biological effects of electromagnetic fields. He has studied the influence of specific frequencies of magnetic fields on the behavior and emotions of monkeys, without using any implanted electrodes or radio receivers. While Delgado did not publish any of this work in the scientific journals, its existence leaked out."

1976

From *The Zapping of America*, Paul Brodeur, 1977, p 300-301. "A report published in the New York Times on October 30, 1976, revealed that in recent months a mysterious broadband, short-wave radio signal had been broadcast intermittently from the Soviet Union. The signal was so powerful that it disrupted radio and telecommunications throughout the world." "Dr. Zaret is concerned about the Russian signal, ..because of its potential hazard to human beings. ..it was very clear that such an encoding impressed onto carrier wavelengths could have a central-nervous- system effect."

From Body Electric, Becker 1985, p323. Complaints from the UN International Telecommunications Union have not stopped the signal. The signal now has holes and skips crucial, (emergency frequencies for aircraft, etc.) frequencies as it moves up and down the spectrum.

From NBC Magazine with David Brinkley, July 16, 1981, p3. David Brinkley states: "As I say I find it hard to believe, it is crazy and none of us here knows what to make of it: the Russian Government is known to be trying to change human behavior by external electronic influences. We do know that much. And we know that some kind of Russian transmitter is bombarding this country with extreme low frequency radiowaves."

From p13-14, the article further states. "This man's name is William Bise. ...for the past four years he has traveled the Pacific Northwest monitoring strange radio signals." Garreck Utley asks "To what extent can you disrupt the mental process, the brain through the use of electronic fields, microwaves? Bise replies, "Will I would think that the easiest way to do it would be microwaves." Garreck Utley stated, "Bise has limited equipment but other sources, some of them classified, have traced the signals to transmitters in the Soviet Union. Those sources will not discuss their work. Bise will."

1976

From Planetary Association for Clean Energy, July 1979, Newsletter by Dr. Andrew Michrowski, "USSR ELF (extremely low frequency) Emissions." "At least five USSR installations are operating simultaneously up to 24 hours daily since July 1976, with an intensity of up to 40 million watts. The installations appear to liase with the highly magnetic MHD apparatus located at Semipalatinsk" Non-Hertzian, resonant effects are produced. Because of this, their mathematical description is non-linear and based on the physics concepts of soliton—fields that demonstrate prolonged states of existence." There are psychophysical, and physical effects. The signals have the unique capacity to penetrate buildings and living tissues. Magnetic intensity (at 500 microgauss) for such frequencies have been monitored.

This and other evidence suggests that the Soviet Woodpecker signal "entrain and capture the brains of the biosystems by placing them in forced sympathetic resonance."

This also corresponds with research of Dr. Ross Adey, of University of California's Brain Research Institute who conducted research on emf and brainwaves and confirmed that brainwaves could be entrained to externally generated signals. His work was funded by the U.S. Navy.(The Zapping of America, Brodeur,p84 and Body electric, Becker, p319)

1976

From Mind Wars by Ron McRae,1984, St. Martin's Press. McRae worked with Jack Anderson. The book states, "In 1976, the CIA contracted for an exhaustive review of Soviet parapsychology research by outside experts," The report was titled, "Novel Biological Information Transfer Systems" by Dr. J.W. Eerkens, et al and Dr. Eerkens "now believes 'the Soviets are actually building prototype equipment for psychic warfare'.

1977

From Zapping of America, 1977, Paul Brodeur, p298. An article in the New York Times, July 20, 1977 stated, "CIA documents revealed that the agency had conducted a fourteen-year program to control human behavior with drugs, electric shock, radiation, and ultrasonics."

1977

From Psychic Warfare by Martin Ebon, 1983, McGraw-Hill, p116-117. "Public evidence for an attempt at influencing U.S. officials during a visit abroad was presented by Dr. Sidney Gottlieb on September 21, 1977, during testimony before a Senate sub-committee. Dr. Gottlieb, then retired, had been the CIA's director of mind-control experiments." "He told the committee that...several members of President Nixon's staff had shown 'inappropriate' behavior." Including "crying without provocation."

"In other parts of his testimony, Gottlieb did include the President himself among those who seemed to be affected by some type of unusual influence. Gottlieb stated, "Not too long ago, in connection with a presidential visit to a potentially hostile country, the President, when he came back, described some unusual feeling he and others had and asked if I would be able to give counsel." "(President Nixon visited a 'potentially hostile' country the Soviet Union in 1972.)"

1977

From audiotape by Dr. Andrija Puharich at an Electromagnetic Conference, September 1987. "We were able to develop a hearing device that fit under the cap of a tooth and we could hear very clearly from a small little relay and receiver and transmitter and unfortunately it was promptly classified by an agency of our government. But we did solve the problem in terms of hardware. "About ten years ago in 1976, no I'm sorry early 1977 I made the basic measurements which showed the elf nature of elf coming from Russia and that it was psychoactive, that was my finding and I deduced the chemicals that were released by the frequencies that were being used and I passed that information onto every intelligence agency we have in this country from the president on down and England and Canada and all I got was four years of harassment. My house was burned down, I was shot at, they tried to kill me, they tried to eliminate me, etc., etc., and finally they agreed I was right and in 1981, the U.S. government went into full scale elf warfare and set up all their big transmitters down under in Australia and Africa so on and so on and now their in business and everything's classified and you can't say a god damned thing about it, a tough situation. And you can't get any real information out of any government agency. And I know all of them that do the work. I know the people who head the projects etc. When they're in trouble, they usually come ask me. And they classify what I tell them. Insanity."

1978

From Planetary Association For Clean Energy, 1978, Dr. Andrew Michrowski. "Potentially, almost anything could be inserted into the target brain mind systems, and such insertions would be processed by the biosystems as internally-generated data/effects. Words, phrases, images, sensations, and emotions could be directly inserted and experienced in the biological targets as internal states, codes, emotions thoughts and ideas," This conclusion developed in part out of research by the Russian scientist, Litisitsyn's 1968 US Defense Documentation

Center paper. Retired Col Tom Bearden commented on the paper which reported the Soviets "worked out 23 EEG band-wave lengths, 11 of which were totally independent."

1979

From US Psychotronics Association. Conference 1979 Dr. Beck then read excerpts of a scientific research paper co-authored by Dr. MA Persinger of Laurentian University, Canada, an expert on elf radiation. "Human subjects exposed to certain ELF field patterns report sensations of uneasiness, depression, forboding..." Dr. Beck, a physicist who measured the Soviet Woodpecker signal stated, we found the Soviet signal coming in like gangbusters.. ...right in the window of human psychoactivity"

1980

From Military Review (official publication of the U.S. Army Command and General Staff College) article on "The New Mental Battlefield" Lt. Col. John B. Alexander, U.S. Army, Ph.D.. "(Soviet) mind-altering techniques, designed to impact on an opponent are well-advanced. The procedures employed include manipulation of human behavior through the use of psychological weapons effecting sight, sound, smell, temperature, electromagnetic energy, or sensory deprivation." He further stated, "Soviet researchers, studying controlled behavior, have also examined the effects of electromagnetic radiation on humans and have applied these techniques against the U.S. Embassy in Moscow."

Also, "Researchers suggest that certain low-frequency (ELF) emissions possess psychoactive characteristics. These transmissions can be used to induce depression or irritability in a target population. The application of large-scale ELF behavior modification could have horrendous impact."

1982

From The Weekend Guardian, "Field of Nightmares", Peter Kennard, Feb. 2-3 1991. "In 1982 a US Air Force Review of Biotechnology stated: Radiofrequency radiation (RFR) fields may pose powerful and revolutionary anti-personnel military threats...RFR experiments and the increasing understanding of the brain as an electrically-mediated organ suggests the serious probability that impressed electromagnetic fields can be disruptive to purposeful behavior and may be capable of directing and or interrogating such behaviour. Further, the passage of approximately 100 milliamperes through the myocardium can lead to cardiac standstill and death, again pointing to speed-of light weapons effect. A rapidly scanning RFR system could provide an effective stun or kill capability over a large area."

The article further states, "There is little doubt that crowd control devices using Radio Frequency Radiation do exist. The development of such devices would complement Sonic and infra-red weapons, which are well known, and were advertised in the British Defense Equipment Catalogue until 1983. These included the Vaikyrie, an infra-red device causing night blindness and the Squawk Box or Sound Curdler, developed by the US for use in Viet Nam. The Squawk Box was designed to induce feelings of giddiness and nausea in the victim, and is highly directional, so that as individuals are hit by the invisible effect, distress and confusion is spread amongst a crowd." "...In 1984 the Ministry of Defense ordered that all advertisements and references to 'frequency weapons', be cut from the Defense Catalogue."

1985

From *The Body Electric*, by R.O. Becker, 1985, p 323-4. The Russian Woodpecker signals are transmitted at frequencies "between 3.26 and 17.54 megahertz" and sounds like a woodpecker or buzz saw. It is pulse modulated at a rate of several times a second, "in the extreme low frequency (ELF) range." The Woodpecker acts as an over-the horizon radar. "The signal is maintained at enormous expense from a current total of seven stations—the seven most powerful radio transmitters in the world."

1986

From *The Boston Globe*, July 7, 1989. Larry Collins, author of a fiction book about mind control. "Collins research on the theories of the paranormal and brain and behavior modification is impressive. ...He began his writing career as a correspondent for UPI and Newsweek." He interviewed William Casey, CIA director and asked "Could we influence human emotions and behavior; are or were such experiments now going on?" "This is not a subject we're going to discuss with you or anyone else," he quoted Casey as saying. "Casey's pro forma response was enough for Collins. 'I knew I was on the right track.'"

1987

From *The Nation*, "Zapped? radiation at Greenham Common peace camp", editorial by Louis Slesin, p313. Nuclear protesters against the placement of cruise missiles at the USAF base in southern England claim that they were harassed with non-ionizing electromagnetic radiation in order to get them to stop protesting. In support of their claim, the author, editor of the publication *Microwave News*, stated, "In *The Search for the Manchurian Candidate*, published in 1979, John Marks relates that in response to a Freedom of Information Act request, the CIA told him that it had a roomful of files on electromagnetic and related techniques to alter behavior and stimulate the brain. The agency refused to release the papers, and they remain classified." The protesters described agonizing headaches and unexplained anxiety among other symptoms.

1988

From *U.S. News and World Report*, *U.S. News Investigative Report*, Jan 24, 1994, p 34. "The analogy to brainwashing was obvious to the CIA which provided a \$60,000 grant through the Human-Ecology Society. Nine of Cameron's former patients, who had sought treatment for depression, alcoholism and other problems at the Allen Memorial Institute at McGill University, (in Canada) where Cameron was director, filed lawsuit against the CIA in 1979. One patient, Rita Zimmerman, was 'depatterned' with 30 electroshock sessions followed by 56 days of drug-induced sleep. It left her incontinent; other suffered permanent brain damage, lost their jobs or otherwise deteriorated. The case, *Orlikow v U.S.* was settled in 1988 for \$750,000."

1990

From *The Washington Times*, "Mills mixes mind control matters," by Harvey Hagman, October 12, 1990, pE1 James Mills wrote *The Power*, a fictional account of psychic weapons. "The former UPI reporter and associate editor of *Life* magazine says he spent 3 ½ years researching and writing *The Power* including ferreting out Defense Intelligence Agency

documents and traveling to France and the Soviet Union. ...So does Mr. Mills really believe 'spiritual warfare' is being waged? "Absolutely," he says. and so do the Pentagon and the Kremlin. ...There are documented cases of suspected KGB paranormal attacks against Nixon and Carter."

Excerpt from Larry King Live September 12, 1990, Transcript 127.

James Mills, author of *The Power*. "It is based on a lot of research. I have three Defense Intelligence Agency studies that are in large measure an assessment of the Soviet threat in this area. They say that there is a possibility that Soviet advances in psychic weaponry would enable them to, and there are direct quotes, 'mold the thoughts at a distance of key military and civilian leaders, cause the death at a distance of key military and civilian leaders, know the contents of top secret documents, troop movements, locations of military installations.' This report was produced in 1975 so this is what they were worried about then and it makes you wonder where we have come since then."

Mr. Mills states further, "I know for a fact that the Soviet Union had a mind control device that they said had military applications. They said it was valuable for reducing what they call neural tension in combat troops and which could certainly be used to reduce the aggressiveness and energy of our troops. I know that, because I've seen the machine. ...The one I've seen is a very, very old one. ...It came over from the Soviet Union in the mid-1970s to an American government research lab on the west coast. ...It used heat, sound, and light radiation, and very high frequency electromagnetic radiation to affect the central nervous system and affect mental processes."

1990

From *The Atlantic*, "The Zap Gap", March 1987, Chuck de Caro, p 24-28. "Soviet Military Power, Department of Defense, "Recent Soviet developments in radio frequency generation devices could enable them to build weapons to degrade or destroy electronics or cause disorientation of personnel. They have generated single pulses with peak power exceeding one gigawatt and repetitive pulses over 100 megawatts." The article also states, "If, going further, an RF pulse could be propagated over a wide zone, in roughly the same way that radio signals can blanket a city, it might act as an electronic wall, disabling the silicon brains of any approaching airplane, tank, or missile."

1990

From *Crosscurrents*, 1990, Dr. Becker, p304. "I have made no attempt here to review in any detail the relationship between military considerations and the hazards of man-made electromagnetic fields. This complex and dangerous situation lies outside the scope of this book, except for an indication of how the political policies derived from it have effectively hampered the public recognition of the hazards. In my opinion, the military establishment still believes that the survival of the military organism is worth the sacrifice of the lives and health of large segments of the American population."

1990

From Time, July 30, 1990, Technology,p53, "Hidden Hazards of the Airwaves, An obscure newsletter uncovers the perils of the information age". "In the current issue of Microwave News, Slesin has printed what may be his greatest scoop: the key paragraph of a two-year Environmental Protection Agency Study recommending that so-called extremely low-frequency fields be classified as 'probable human carcinogens' alongside such notorious chemical toxins as PCBs, formaldehyde and dioxin.' The recommendation, which could have set off a costly chain of regulatory actions, was deleted from the final draft after review by the White House Office of Policy Development. "The EPA thing is a stunner," says Paul Brodeur, a writer for the New Yorker.

"It's a clear case of suppression and politicization of a major health issue by the White House."

The article states further, "Louis Slesin's stories have a tendency to shock. Like the one about the 23 workers of the Bath Iron Works in Bath, Me, who got 'sunburns' one rainy day when someone on a Navy frigate flicked on the ship's radar. Or the trash fires that start spontaneously from time to time near the radio and TV broadcast antennas in downtown Honolulu. Or the pristine suburb of Vernon, NJ., that has both one of the world's highest concentrations of satellite transmitting stations and a 'persistent' and unexplained-cluster of Down's syndrome cases."

1993

From The Sacramento Bee, "Energy Chief says U.S. owes radiation victims," Wed Dec. 29, 1993, pA1. "The U.S. government should compensate victims of radiation testing conducted as part of its Cold War nuclear program, Energy Secretary Hazel O'Leary said Tuesday as disclosures mounted about extensive experiments involving humans as often-unwitting subjects."

1993

From "Nonlethal Technology and Airpower: A winning Combination for Strategic Paralysis" by Maj. J. W. Klaaren, USAF and Maj. RS Mitchell, USAF, Air Command and Staff College, 1993, Air University Press, Center for Aerospace doctrine, Research and Education, Maxwell Air Force Base, Alabama. This article is an excerpt from a research project by the authors et al. It states, "Currently, the best method of accomplishing this is to have developers of nonlethal weapons (agencies such as the Advanced Research Projects Agency (ARPA), military laboratories, and national laboratories) visit the operational commands. We need to stress how these weapons will be force multipliers and ..."

The article further states, "In 1993, for example, ARPA provided grant money to regional business alliances. Comprised of civilian-sector businesses and government organizations, these alliances competed for grants to develop new technologies... The scope of this program could be expanded to include nonlethal technology..." And also, "Although the United States may choose not to pursue mind-altering drugs as a weapon, other states may hold a different view. For that reason, it is imperative that we understand this capability."

The article concludes "We maintain that future conflicts will demand the use of nonlethal warfare and that aerospace platforms can provide an effective method for the employment of nonlethal weapons. ...Our research for this article was an eye-opening experience for us." The

article lists in "Table 1 Selected Types, Examples, and Capabilities of Nonlethal Weaponry" and under "Electromagnetic Electrical interferors (power effects, pulses) degrade/destroy equipment and systems"

The article lists sources including, "Alan W. Debban, "Disabling Technologies and Applications," HQ USAF/XOXT background paper, 22 February 1993; Herbert H. Dobbs et al., "Assessment of Mission Kill Concept, Requirements and Technologies" Washington, DC: Defense Advanced Research Projects Agency, September 1990); And finally, in the Notes of the article is the following: "1. John B. Alexander, Los Alamos National Laboratory, NM, presentation on nonlethal weapons and limited-force options, Council on Foreign Relations, New York, 27 October 1993."

1993

From Defense Week DW Vol. 14, Nu 46 p1, "Non-lethal Weapons Group Set To Form In March", Andrew Weinschenk, "The Army plans to appoint a senior advisory group in March to guide development of 'non-lethal' weapons and draft a first-ever masterplan detailing future doctrine, training and materiel issues, according to service and industry sources." The article also states, "The Army Research Laboratory's Steve Taulbee, for example, said researchers there have experimented with a radio-frequency pulsing device. The weapon would disrupt an enemy's internal organs but it might also permanently destroy the liver."

1993

From Defense Electronics, July 1993, "DOD, Intel Agencies Look at Russian Mind Control Technology, Claims FBI Considered Testing on Koresh." by Mark Tapscott. "In a series of closed meetings beginning March 17 in suburban Northern Virginia with Dr. Igor Smirnov of the Moscow Medical Academy, FBI officials were briefed on the Russian's decade-long research on a computerized acoustic device allegedly capable of implanting thoughts in a person's mind without that person being aware of the source of the thought."

1993

From Defense News, Jan 11-17, 1993, "U.S. Explores Russian Mind-Control Technology" by Barbara Opall, p29. "The Russian authors note that "World opinion is not ready for dealing appropriately with the problems coming from the possibility of direct access to the human mind." And further, "The Russian experts, including George Kotov, a former KGB general now serving in a senior government ministry post, present in their report a list of software and hardware associated with their psycho-correction program that could be procured for as little as \$80,000."

1994

From The Bulletin of the Atomic Scientists, Sept, Oct 1994, "The Soft Kill Fallacy", Steve Aftergood with Barbara Hatch Rosenberg, p45. "Many of the non-lethal weapons under consideration utilize infrasound or electromagnetic energy (including lasers, microwave or radio-frequency radiation or visible light pulsed at brain-wave frequency) for their effects. These weapons are said to cause temporary or permanent blinding, interference with mental processes, modification of behavior and emotional response, seizures, severe pain, dizziness, nausea and diarrhea, or disruption of internal organ functions in various other ways."

The article further states, "In addition, under the Certain Conventional Weapons Convention, international discussions are now under way that may lead to the development of specific new protocols covering electromagnetic weapons; a report is expected sometime next year."

1995

From The Guardian "The Future Art of War", May 25, 1995. Nic Lewer, peace researcher at the University of Bradford, in the latest issue of Medicine and War, lists "more than 30 different lines of research into 'new age weapons'..." the article further states, "Some of the research sounds even less rational. There are, according to Lewer, plans for 'pulsed microwave beams' to destroy enemy electronics, and separate plans for very-low-frequency sound beams to induce vomiting, bowel spasm, epileptic seizures and also crumble masonry."

Further the article states, "There are plans for 'mind control' with the use of 'psycho-correction messages' transmitted by subliminal audio and visual stimuli. There is also a plan for 'psychotronic weapons' - apparently the projection of consciousness to other locations- and another to use holographic projection to disseminate propaganda and misinformation."

1995

From Free Thinking, Vol. 1. Number 4, March 1995, "President's Committee on Radiation Hears Mind Control Survivor's Testimony". "For the first time in history officials heard evidence of the atrocities of mind control which were committed along with the radiation "research". Ms. Wolf is among a number of independent researchers around the world who have come up with identical cases in which survivors of radiation treatment describe life-long mind control abuses at the hands of the U.S. government."

"While the radiation "research" was conducted under the direction of the Atomic Energy Commission, many of the same scientists who were involved in the CIA's MKULTRA program acted as overseers of the radiation experiments. Among these scientists were Dr. Martin T. Orne, Dr. Sidney Gottlieb, and Dr. L. Wilson Green." Also, "A licensed sociologist from New Orleans, Wolf offered her testimony and supporting evidence to the committee in a hearing on March 15th. Focusing on the 9,000 children who were targets of radiation experiments conducted by the Atomic Energy Commission and kept secret under the National Security Act, the precious ten minutes granted Ms. Wolf was a precedent setting digression from the investigators' agenda."

1996

From Nexus Magazine, "Soul Catcher Implants", Oct/Nov 1996. "British scientists are developing a concept for a computer chip which, when implanted into the skull behind the eye, will be able to record a person's every life time thought and sensation. "This is the end of death," said Dr. Chris Winter of British Telecom's artificial-life team. He predicts that within thirty years it will be possible to relive other people's lives by playing back their experiences on a computer."

The article further states, "By combining this information with a record of a person's genes, we could recreate a person physically, emotionally and spiritually." Dr. Winter and his team of scientists at BT's Martlesham Heath Laboratories, near Ipswich, call the chip "the Soul

Catcher." The author, David Guyatt states that, "British Telecom, Britain's giant telecommunications enterprise, has a long history of involvement with the intelligence services." This article quotes its sources as, "The Daily (London) Telegraph, July 18, 1996.

1996

From USAF Scientific Advisory Board, New World Vistas Air and Space Power for the 21st Century, Ancillary Volume, p89. "Prior to the mid-21st century, there will be a virtual explosion of knowledge in the field of neuroscience. We will have achieved a clear understanding of how the human brain works, how it really controls the various functions of the body, and how it can be manipulated (both positively and negatively). One can envision the development of electromagnetic energy sources, the output of which can be pulsed, shaped, and focused, that can couple with the human body in a fashion that will allow one to prevent voluntary muscular movements, control emotions (and thus actions), produce sleep, transmit suggestions, interfere with both short-term and long-term memory, produce an experience set, and delete an experience set. This will open the door for the development of some novel capabilities that can be used in armed conflict, in terrorist/hostage situation, and in training..."

It is interesting to note that two scientists with connections to CIA classified mind control and psychic research have contributed to this study. Dr. J West, MD Director Emeritus, Neuropsychiatric Institute, UCLA, School of Medicine, Behavioral biology and Dr. Edwin May, PhD, Science Applications International Corporation,(SAIC) Physics of Consciousness.

This timeline demonstrates how classified the electromagnetic and mind control technology is. Scientists have been killed for revealing this technology. They have lost government funding. They can be prosecuted and or lose their jobs if they reveal national security secrets. And some scientists have been targeted with the technology and have been unfairly labeled mentally ill.

A similar analogy would be the Manhattan Project, the U.S. government program to build the atomic bomb. The project used the highest of national security precautions, and few knew of its existence. Mind control technology is the currently classified weapons program and national security methods are even more entrenched and developed.

# TRUE JUSTICE ELECTRONIC OPERATIONS MANUAL

**IMPORTANT: This "spoof manual" describes targets of "true justice" activities having "criminal records." The actual current day target community members do NOT have criminal records. The references to targets having criminal records are SARCASM.**

Rev: June 19, 2008

## OVERVIEW

In earlier times, justice was accomplished in two ways: By way of the courts, and by way of community members for cases in which the courts were not available, or failed to deliver true justice.

During the 20th century, as law enforcement agencies grew and technology made their officers more efficient, community members who attempted to deal out "old fashioned" justice were prevented from doing so.

Unfortunately, there are many offenders who are not dealt true justice by the court system. These offenders are allowed full freedom, and can commit serious offences which the court system is either unable or unwilling to stop. Our communities deserve to have these offenders monitored and neutralized, to prevent them from endangering innocent citizens.

The True Justice organization fills that need, covertly, but powerfully, providing around the clock surveillance of targets, and punishment appropriate to their criminal acts.

In the latter half of the 20th century, with the quiet cooperation of law enforcement officials who have a keen sense of responsibility to the community, the True Justice system has been forming and is now nation wide. Offenders can no longer move to escape True Justice.

A powerful element of True Justice is the True Justice Electronic Corps. This manual is issued to operations personnel of the TJEC. The basic manual issued to all True Justice personnel is the True Justice Field Operations Manual and is a separate publication. The basic field operations manual outlines the broad spectrum of surveillance and punishment activities, while this manual focusses specifically on the electronic operations.

Members of the TJEC must demonstrate excellent performance as community-based agents (CBAs) before they can apply to become an electronic punishment operator.

## I. GENERAL

Electronic surveillance and punishment is a powerful component of the True Justice operations, the other component being community-based visual surveillance and punishment applied by community-based agents (CBAs.)

Electronic operations are carried out by the True Justice Electronic Corps (TJEC) personnel, who are trained in the use of electronic equipment. New electronic corps operators (ECOs) will become qualified to use equipment described in this manual. However, technology continues to advance, and ECOs will need to advance by way of demonstrated skill and loyalty to True Justice goals in order to access the most advanced equipment.

The electronic equipment used by new ECOs is community based. The most advanced equipment does not require proximity to targets, and is operated from regional bunkers which can cover areas of hundreds of square miles.

New ECOs, having privileged access to critical equipment and information, are monitored by way of the remote advanced equipment to prevent breaches of secrecy. "Free lance" use of the equipment in the custody of ECOs is STRICTLY FORBIDDEN.

The conveyance of ANY information about True Justice electronics to people outside the TJEC level, or "hacking" or "having fun with" the equipment outside of assigned use, will result in instant and severe punishment. The advanced level equipment monitoring ECOs is equipped to deal out electronic punishment.

The following sections describe equipment currently assigned to ECOs residing in the target's community.

## II. THROUGH WALL RADAR

Through wall radar (TWR,) sometimes called "millimeter wave" radar, is the electronic corps operator's (ECO's) basic surveillance technology. The units assigned to ECOs are improved over similar equipment used in airport and other security installations.

The True Justice TWR units operate in two modes, active and passive.

In active mode, the small dish antenna illuminates the target's home, through the wall, using a signal which causes the hydrogen atoms in water to resonate and give off a backwave signal. This is similar to night vision units where an infrared LED illuminates the scene.

The unit's rectangular lens then focusses the "millimeter wave" return signal on a charge-coupled device which is scanned to form the image seen by the operator. Because the unit excites hydrogen atoms, the target's body shows brightly, in contrast to non-living objects in the area. Here is a sample through-wall image recorded with a TWR unit. Note the highlighted chest and thorax area - that is the focal point of the illuminating dish antenna on the unit:

Some of the functions performed by through wall radar operators set up adjacent to the target's home are:

- Determining if the target is alone - some punishment operations require the target be alone so the target has no witnesses

- Reporting target's attempts to sleep to the True Justice Control Center (TJCC)

- Reporting target's preparations to leave to TJCC for relaying to community-based surveillance and intercept agents

Reporting target's sexual activity to the TJCC

Determining exact instant when target's urine stream starts and stops, to cue synchronized starting/stopping of the downstairs bathroom taps, a punishment type used to make the target feel totally violated and helpless

### III. WEAPONIZED MICROWAVE OVEN

The weaponized microwave oven is a simple, basic punishment tool which is used to maintain the target in a baseline state of vague health problems. True Justice punishments are designed to degrade the target's quality of life, deniably, over time, making it impossible for the target to point out one catastrophic event that could be construed by the public as a criminal attack.

The weaponized microwave oven can produce punishment effects like these:

Asthma

Cataracts

Headaches

Memory loss, early Alzheimer's, concentration loss

Bad dreams

Depression

Fatigue

Heart and blood pressure problems

## Cancer

IMPORTANT: Even though plans for weaponizing microwave ovens are commercially available, DO NOT attempt to modify an oven yourself. Doing so could be hazardous to the electronic corps operator (ECO) , and could result in poor focussing of the microwave beam, resulting in loss of punishment potential.

Your local True Justice Electronic Corps center will provide the modified oven. TJEC modified microwave ovens are disguised to look from the outside like perfectly normal microwave ovens, which is very important for deniability.

Weaponized microwave ovens are easily aimed through walls with the use of through wall radar (TWR). The microwave signal will show on the TWR screen as a brightened area.

Weaponized microwave ovens are most effective when aimed at the target's head and upper body while the target is in bed.

Avoid aiming the weaponized microwave oven (WMO) at a target when the target is seated at a computer. WMO signals are powerful and can disrupt the computer, giving the target a means of attracting unwanted attention from members of the public and officials.

## IV. LIDA MACHINE

The "Lida machine" dates back to the 1950s, and was developed as a drugless sedation device. It is basically a pulsing radio transmitter. The original is shown above. The "Lida machines" issued to True Justice Electronic Corps operators (ECOs) are more compact and are tripod mounted.

The Lida has two operating modes:

Forced sleepiness/fatigue, using a slow pulse rate

Forced waking, using a higher pulse rate

ECOs set up next door to targets will use forced waking at several points throughout the night, and in some cases, under direction from the TJEC regional command, all night long.

When forcing the target awake at different points throughout the night, ECOs will be assigned to do this at very specific points on the clock. For example, the target may be awakened at 12:30 am, 2:00 am, 4:00 am and 5:30 am for several months. The time duration of each period of forced waking will also be assigned. At the end of the several month period, the on site ECO will receive a new schedule.

When keeping the target awake all night, the waking signal is shut off one minute before the time the target sets his/her alarm clock for. The target instantly slumps and begins to fall into a deep refreshing sleep just before the alarm goes off. This is real justice.

In some target workplace situations, the Lida can be aimed so as to hit the target through walls, and at an angle so no other workers are affected. With cooperation from management, sometimes the Lida, the True Justice issued version looking much like a security camera, can even be in plain sight. When this is done, an optional surveillance camera is mounted with the Lida for optimum use.

Targets can be rendered so sleepy on the job that they can be forced out of their employment. This is true justice indeed!

The beam width of the True Justice Lida units can be widened. If a target gives a presentation to a group, the Lida can be used to make the audience sleepy, causing the target's presentation to flop.

The Lida can be used to put dogs to sleep through the wall in a target's home to facilitate entry for applying other forms of punishment.

The Lida is an excellent, deniable way to respond when someone in the community offers help to the target. The "helper" can be given a dose of a couple of months of no sleep. Most people undergoing this will not know how this is happening but will begin to realize it's a response to their friendly help offered to the target. When this is assigned, community-based agents (CBAs) will have the "helper" under surveillance and a vantage point next to the "helper's" home will be established.

# V. VOICE TO SKULL

Voice to skull (V2S) technology was first demonstrated in the early 1970s by Dr. Joseph Sharp, working for the Walter Reed Army Institute of Research (WRAIR.)

It is a means of transmitting sound directly into the skull of someone in line with the beam of microwave pulses. No implant is required. The V2S units provided by True Justice have been miniaturized, and look like a large camera with a battery pack attached by cable. These units penetrate most walls, and are easy to aim using through wall radar (TWR) because like weaponized microwave ovens and the Lida device, their signals will cause the impact area to brighten.

Like the other electronic weapons, V2S is particularly effective when aimed at the target in bed, however, an interface cable is provided so that the V2S unit can be connected to the TWR unit to literally track the target within the radar's scan area to maintain an audio stream into the target's hearing sense.

As an electronics corps operator (ECO) you will not be assigned to directly talk to the target. Special verbal punishment CDs will be furnished, having been custom recorded by staff psychologists for the target you have under surveillance. For the sake of speed, the audio files will be transmitted via the True Justice network to your local TJEC headquarters, where the actual CDs will be created.

Some of the punishment content forced into the target's hearing sense includes:

- Endless insults, customized for the target

- Endless statements that the target is of the opposite sexual orientation than the actually are

- Endless threats against the target, and the target's family

- Forecasts of punishment setups the target is actually scheduled for

- Urging the target that his/her situation is hopeless and that he/she needs to commit suicide

- Fake alarm clock, telephone or pager sounds to interrupt sleep

- Fake knocking on the target's door

- Hypnotic trigger phrases or tones

To assist staff psychologists in creating effective punishment, you will be asked to put the TWR on record mode and send the recorded video to your TJEC headquarters for some of the CDs. Look for a red label on the CD to notify you of this requirement.

## VI. SILENT SOUND

"Silent Sound" is the current form of subliminal sound. It is used in department store sound systems to transmit anti-shoplifting hypnotic messages. It is better than the older "time slice" subliminal sound because "Silent Sound" runs continuously.

The "Silent Sound" principle takes voice carrying hypnotic messages, and using a device similar to a telephone voice changer, moves the speaker's voice up near (but still below) the upper frequency limit of human hearing. To ensure the hearer doesn't become aware of silent sound, the audible sound the hearer is listening to along with the silent sound controls the SS volume level.

Silent sound can be conveyed directly through the air, or it can piggyback on to any radio or TV sound signal, it can be recorded on any conventional audio tape, CD or DVD, or, of particular use to electronic corps operators (ECOs), it can be transmitted by the True Justice voice to skull (V2S) unit by way of an interface cable.

Here is a concept diagram of a combined Silent Sound-V2S system:

While V2S by itself can inflict heavy punishment on a deserving target, when Silent Sound is added to V2S, the potential is there to apply hypnosis literally for years, with the target hearing nothing, or at most a faint ringing in the ears. When a target is not aware of incoming hypnotic suggestions, he or she is far easier to manipulate. When

a target is exhausted from sleep deprivation operations, they are easier yet to manipulate.

Since 4 out of 5 targets have some degree of susceptibility to hypnosis, many targets can, in fact, have fundamental changes programmed into their personality and they will have no idea why.

There is the possibility of actually forcing a sexual orientation change. There is the possibility of actually forcing a target to hate their once-loved family members. Quite often, hypnotic instructions are given to force a target to be hungry all the time and overeat, resulting in major health problems for the target.

In some cases, voice to skull (V2S) coupled to Silent Sound (SS) is used on family members, friends, co-workers and managers at the target's workplace to create true justice for targets!

Because of the fact that V2S coupled to SS can be used for years with the target not being aware, hypnotic TRIGGERS can be installed in the target's psyche. A trigger can be a phrase or a unique tone or series of tones. A trigger is a password.

The trigger is hypnotically installed, along with one or more hypnotic instructions, silently.

When the target hears the trigger phrase or unique tone or tone sequence, much of the time, the target will execute the instructions installed along with the trigger. These instructions can be anything from causing a target to do something embarrassing, right up to doing something highly dangerous, aggressive, or fatal. The target's susceptibility to hypnosis governs how well a trigger will work, but many targets have successfully received punishment this way.

For targets susceptible to hypnosis, any level of excruciating pain can be applied.

## VII. MOBILE INSTALLATIONS

True Justice has a number of darkened-window mobile units with miniaturized versions of all of the electronic weapons discussed above. This enables quick response and on the road following operations to be carried out with ease. The vehicles are various models of the sport utility type, with 4-wheel drive for best mobility. They are painted in a variety of colors so as to not raise targets' suspicion or attract much attention from the general public.

The mobile equipment has both daytime and infrared target acquisition equipment similar to that used in police helicopters, mounted in what appears to be a streamlined rooftop carrier. The carrier is fiberglass and the aiming ability is 360 degrees horizontal, and from 15 degrees below horizontal to 90 degrees vertical. This gear relieves the electronic corps operator (ECO) from having to continually aim the equipment, once the target has been identified and locked in.

## VIII. BALANCE DISRUPTOR

True Justice electronic corps operators (ECOs) have recently added the electronic balance/coordination disruptor called "EPIC", by Houston, Texas based Invocon, to the electronic punishment arsenal.

EPIC units transmit electromagnetic pulses at the target, silently, through walls and affect the inner ear. One way a target's employability can be destroyed, in cases where dexterity is required on the job, is to apply the EPIC signal just as the target is observed to be doing delicate or messy work.

These units will be integrated into future mobile units, but currently are only available for hand held or tripod use.

ECOs stationed adjacent to target's homes have been able to relieve the boredom of long shifts by electronically knocking the target off balance just as they attempt to do something messy, and watching the results on through wall radar.

Invocon has begun supplying improved EPIC units which can also generate "magnetophosphenes", meaning the signal makes the target "see stars." This can be used in many employment situations to break the target's concentration.

Work is underway to add nausea and other effects to the EPIC units' capabilities.

## IX. ACOUSTIC SPOTLIGHT

The "acoustic spotlight" is coming in to commercial use as precisely targeted audio advertising which can only be heard in one place. Some True Justice Electronic Corps (TJEC) centers use them. They are not silent, through wall punishment devices but instead, they are carried by some roving electronic corps operators (ECOs) to project sounds which emanate from odd places as the target moves about outdoors. The acoustic spotlight uses ultrasound, and is not usable indoors due to echoing.

One of the most common tactics for the acoustic spotlight is to play recordings of unusually loud bird calls emanating from places there are no birds. Such as blank masonry walls, or trees bare of leaves where it's clear no bird can be seen. Such instances can cause targets to question their sanity, which is one form of True Justice punishment.

As the acoustic spotlight, and it's competitor HyperSonic Sound, come into wider use, this device may lose its effectiveness as punishment, but for the moment, True Justice will continue using it.

# X. TACTICS

The True Justice Electronic Corps (TJEC) will assign two types of work to electronic corps operators (ECOs):

- Cueing the local TJCC regarding target activities

- Administering punishment to the target

There are TJCCs in every community with a population more than roughly 5,000 people. However, TJEC centers exist only in larger cities, roughly those with 500,000 people or more. Much of the supervision of local ECOs will therefore be by electronic means.

Local ECOs, those who are actually assigned to stay right with a target during their shifts, will perform various tactics, determined by staff psychologists, with the prescribed punishment orders being available on the True Justice network host computer for reference.

Making the target believe they are insane is a primary tactical goal.

Getting a target to talk about electronic punishment effects the general public don't believe are possible, especially voice to skull (V2S), is another primary tactical goal, as this will ensure the target is isolated and forced into the mental health system.

One very important tactic is the "guessing game" tactic. This tactic is basically monitoring the target's activities, and carefully noting the target's attempt to locate the source of their discomfort, and/or, use shielding against it. The guessing game tactic is assigned to ECOs, as it is highly interactive and cannot be effectively supervised at a distance.

One common assumption by targets is that they must have electronic implants. While electronic implants have been experimented with, they are not currently in operational use. The combination of True Justice around the clock surveillance, and the classified master computer tracking of every target at all times makes implants unnecessary. A few targets may have them but implants are not the rule.

However, because targets are not aware of the full extent of True Justice operations, they often assume they are implanted. This causes some of them to try aluminum foil beanies, and if they talk about such attempts publicly, or are seen trying a foil beanie, they have very effectively punished themselves by instantly presenting the appearance of serious mental illness.

The way ECOs can encourage targets to believe they are implanted is to immediately shut down electronic punishment when the target puts a foil beanie on, and on the first instance, stay shut down until the target takes it off.

In actual fact, for the beam weapons used by True Justice, a foil beanie is not very effective. So on each future attempt, the ECO can start using increasing power levels applied against the neck, face and spine and thus make it appear that True Justice is "having trouble" getting around the foil beanie to the supposed "implant."

This is effective even if the target is one of the few who do not believe they are implanted.

A few targets will try fully enclosing metal shielding. Those cases must be referred to your regional True Justice Electronic Corps (TJEC) center. There is classified equipment at higher levels in the organization which can penetrate the shielding. The operators at the classified level will also apply the guessing game, by allowing the first use of fully enclosing shielding to "succeed", then gradually turn up the classified equipment power level until the target, having spent considerable money, time and effort, is hit just as hard as before trying the shielding.

Mobile units are equipped with portable equipment as well as the vehicle-mounted units. They use their high flexibility and mobility to apply the guessing game to targets as well. Many targets suspect everything that even looks like a microwave dish. They particularly suspect the trunk link dishes or phased array trunk antennas on cell phone towers.

In some cases, mobile electronic corps operators (ECOs) have teamed up and positioned themselves along a route the target is known to be travelling, and hidden in cover at visible cell phone towers near the highway. They then apply the prescribed punishment from those points only, convincing the target that those towers are absolutely the source of their discomfort.

The goal of guessing games is to induce the target to complain to officials - law enforcement or perhaps cell phone providers - that those towers are harassing them. This can bring about the desired result of discrediting the target and getting them forced into the mental health system.

Satellites are not directly used. True Justice does use them for communications, but not for applying electronic punishment. However, most targets believe, because they are tracked everywhere, satellites just must be the source of their punishment. ECOs in the field are often stationed in the apartment above the target, and may be able to find ways to convince the target they are being hit from a satellite, but for the most part, field ECOs can't convincingly make a target believe he or she is being hit from above.

The classified equipment can create a variety of effects, such as beams of visible light extending well up into the sky that make it look as if they are originating from satellites. The classified equipment can also position a spot of light above the home of a target, also creating the impression the target is being hit from a satellite. Many targets do not realize that satellites cannot remain stationary and in view above their homes.

Specialists from your regional TJEC center can use their computers to modify cable TV broadcasts in real time, and cause the target to see a customized version of a

show they are watching, full of messages to or about them personally. ECOs may be asked to monitor the target's reaction via through wall radar. To get a target to complain publicly about a customized broadcast is an excellent way to force the target into the mental health system.

# TRUE JUSTICE FIELD OPERATIONS MANUAL

**IMPORTANT: This "SPOOF manual" describes targets of "True Justice" activities having "criminal records." The actual current day target community members do NOT have criminal records. The references to targets having criminal records are SARCASM.**

by Eleanor White

**\*\* NOT COPYRIGHTED \*\***

Anyone wishing to modify this "manual" is requested to remove my name, and replace it with their own.

# OVERVIEW

In earlier times, justice was accomplished in two ways: By way of the courts, and by way of community members for cases in which the courts were not available, or failed to deliver true justice.

During the 20th century, as law enforcement agencies grew and technology made their officers more efficient, community members who attempted to deal out "old fashioned" justice were prevented from doing so.

Unfortunately, there are many offenders who are not dealt true justice by the court system. These offenders are allowed full freedom, and can commit serious offences which the court system is either unable or unwilling to stop. Our communities deserve to have these offenders monitored and neutralized, to prevent them from endangering innocent citizens.

In the latter half of the 20th century, with the quiet cooperation of law enforcement officials who have a keen sense of responsibility to the community, the True Justice system has been forming and is now nation wide. Offenders can no longer move to escape True Justice.

True Justice must remain fully covert, as there are irresponsible members of every community who do not care about the well being of their community and would loudly object to True Justice operations. This need not concern True Justice agents - there are always people who like to spoil the best of any type of crime control activity.

If you are reading this manual, it means you have been observed by your local True Justice organization, and are deemed to have the proper character and strong motivation for serving your community required for this very important work. This is one of the highest compliments anyone can receive, and your community owes you immense gratitude for protecting the citizens.

# I. GENERAL

True Justice operations in general are of the "active surveillance" type. Passive surveillance is watching a target covertly, to obtain information about the target. Active surveillance can include information gathering, but it includes the agent making the target aware they are under surveillance.

Active surveillance is appropriate for True Justice operations, because with the target being aware they are under surveillance, they will realize their former criminal behavior can't be repeated without immediate consequences.

Beyond active surveillance, True Justice agents perform acts to keep the target uncomfortable, around the clock. A target turned over to True Justice has amply demonstrated that they are habitual criminals, but they have been able to avoid punishment by the court system. True Justice does deal out the punishment appropriate for the type of crime committed by the target.

Although True Justice operations are silently approved of, and covered for by the official justice system, punishment outside the official justice system is seen by citizens who do not have a strong sense of right and wrong as criminal in nature.

True Justice agents must take great care that each and every act of punishment is DENIABLE. This means that if the target should complain to police, any other officials, or friends, neighbours, family members, or doctors, the nature of the punishment must be seen as the target's "overactive imagination" or better yet, an indication the target is mentally ill. True Justice has worked for years to recruit the medical establishment in helping maintain deniability, and today, most targets are immediately labelled as mentally ill and often forced on to antipsychotic medication when they complain.

But True Justice agents must still do their part to skilfully perform acts of punishment so almost anyone the target complains to will deny a crime against the target has taken place. As a True Justice agent, you will be trained in how to do this.

True Justice has been blessed with advanced technology which enables heavy punishment at times the target is in their home, silently, through walls, and this is very deniable. True Justice agents must pass their initial training and demonstrate a high level of commitment to maintaining community safety, and the ability to operate deniably, before they will be considered for advanced electronic punishment training. Electronic punishment training is beyond the scope of this manual.

The True Justice organization is very fortunate in that we have been able to recruit top specialists to back up field operations people. Psychologists are key to finding ways to maximize feelings of stress and hopelessness in the target, and degrading the target's health, from many individually "minor" invasive punishment acts. Technicians in all fields - telecommunications, electric power, building electrical and alarm systems, and utility employees in all fields use their positions to inflict many absolutely "normal-looking" problems to targets on an ongoing basis. And of course,

the services of many skilled locksmiths are invaluable in this effort to restore true justice to this contemporary world.

As a True Justice community-based agent (CBA) you will have the privilege of working with a team capable of delivering better justice than the official system.

## II. SURVEILLANCE

Surveillance is the foundation of all True Justice operations. Both community based agent (CBA) visual surveillance and advanced electronic surveillance are used. This chapter will cover only local agent visual surveillance.

Your local lead agent will schedule surveillance watches for each target in that community. Every target will have at least one CBA watching them at all times, even while home and asleep. Each CBA surveillance team will be given a cell phone number for reporting target actions and movement to the local True Justice Control Center (TJCC.)

Actions to be reported include but are not limited to:

- Target turns lights on to start the day

- Target uses toilet or shower

- Target exits residence

- Target drives away

- Target arrives at work, or

- Target shops or visits any other establishment or location

- Target arrives home

- Target eats meal, home or restaurant

- Target engages in sexual activity

- Target turns lights off at end of day

- Target turns lights on in middle of night

- Target travels out of town

Some of these observations will be performed by the True Justice Electronic Corps (TJEC), but CBAs should attempt to make and report as many detailed observations of target activity as possible. The reason such detail is necessary is that the punishment phase of active surveillance requires that TJCC supervisors customize each punishment action to match the personality of the target, and the need to make each punishment action appear to be "life's normal breaks."

One important punishment function of surveillance is to sensitize the target. Targets are never told they are under surveillance or being punished. Instead, close, active surveillance and other activities, happening far too frequently to be written off as

"life's normal breaks," will eventually cause the target to realize they are under surveillance and punishment.

As a community-based agent, you will be given specific instructions on exactly when, where and how to carry out punishment actions. As long as you carry out punishment instructions exactly as given, there is no way the target will be believed if they complain, and you will not be exposed to risk of action by law enforcement.

How well the punishment actions work depends on how accurate and complete your reports are to TJCC.

In many situations, True Justice acquires access to properties or apartments immediately next to the targets' homes or apartments. Because TJEC has through wall surveillance and punishment equipment, they will be reporting target activity to TJCC along with community based agents. In a typical setup, CBAs may be posted in a parked car where the target's home or apartment can be observed overnight, for example.

In this setup, the CBA in the car may be instructed to call, using a walkie-talkie style cell phone, another CBA (or team) waiting or patrolling by car nearby to follow the target, or, you may be assigned to follow the target yourself. You will receive instructions from your local TJCC as to following a target.

Targets in transit may be either covertly or visibly followed. When in doubt, hang back a bit, and contact the TJCC for instructions, as targets in transit can present many unanticipated situations. The TJEC will always have the target's position monitored, so if a target gives the CBA the slip, the TJCC will assign other appropriate community based agents to pick up the target at the earliest opportunity. Be sure to notify TJCC immediately if you lose the target.

When applying the visible following of a target, making the target uncomfortable because of your presence, you will be given instructions as to when to break off the following. Another CBA or CBA team may pick up the visible following, but once you have broken away, advise TJCC that you are clear and ready for the next assignment.

### III. INTERCEPTS

Intercepts are where community-based agents (CBAs) will appear to "just coincidentally" cross paths, on foot, with a target. Once the target has been sensitized to the point of realizing they are under surveillance and punishment, they will recognize, and be made appropriately uncomfortable by, the simple act of multiple CBAs "just happening to" cross paths with them.

Your local True Justice Control Center (TJCC) will instruct you as to how you will be cued to perform an intercept. Often, you will have an on-site supervisor (OSS) position you, and give you hand signals as to when to start your movement to intercept the target. Because targets moving about aren't always totally predictable, the success of CBA intercepts depends heavily on the True Justice Electronics Corps (TJEC) who have means of monitoring the exact whereabouts of every target, and through computer programs, predict exactly when and where a target will be as they move about the community.

Your local OSS has a special means of receiving instant, silent instructions from the TJEC.

Intercepting CBAs may be asked to perform one of the following forms of intercept:

Simple path crossing, requiring the target to take evasive action to avoid collision; multiple CBAs sometimes perform this several times during a single outing by the target

On foot, walking for an extended period on the opposite side of a street from a walking target

Arrival at a place known to be a favourite of the target, and simply occupying that place just as the target is about to arrive (restaurants, parks, public facility seating, even bus seats are examples); sometimes just "hanging out" in such a location at times and places where people don't ordinarily do that

Smoking, coin-jingling, pen clicking, whistling, or toe tapping near the target at a location where the target is known to need to stand, as to wait for a bus, or standing right behind a target at a water fountain

A group, as many as a dozen CBAs, may be assigned to arrive at a store just ahead of a target, and form a queue ahead of the target, spending time buying lottery tickets, to delay the target. This is especially effective when it happens often, and when the target is very tired and eager to get home after work, for example.

Community-based agents may be assigned to leave a next door home or apartment at exactly the same time as the target, repeatedly. Alternatively, a CBA may intercept the target a short way before home and arrive at exactly the same time as the target.

While these may seem like trivial acts, keep in mind that the target will have these "trivial" things happen every single day, and repeated intercepts like these will force the target to always watch for such acts, essentially ensuring the target never "has a nice day." This is the goal of True Justice, to ensure targets deserving of punishment get what they deserve.

Similar intercept operations are performed with vehicles. The TJCC can schedule these every day the target commutes, and both to and from work. Vehicle intercepts are particularly effective when the target sees the same vehicle in an intercept convoy both in the morning and in the evening commute.

(Because vehicle intercepts can be dangerous, CBAs assigned to vehicle intercept duty must successfully complete a special training course prior to actual assignment.)

Here are some examples of vehicle intercepts a community-based agent (CBA) can expect to be assigned:

Parking so as to block a target's access to their vehicle, e.g. so close the door(s) can't be opened, and then "disappearing"

Parking so as to prevent a target's leaving a parking area, and then "disappearing"

Parking commercial vehicles often, near a target's home, with something unusual about these vehicles, such as there is no need for that trade, or, just unmarked white vans to make the target think the van is there to conduct surveillance

Simple following, or leading, a short distance, but every day. Doing this both during target commutes and then at other times makes the target very uncomfortable.

Passing a side street stop sign, then stopping an uncomfortable distance into oncoming traffic just as a target is about to arrive at the side street, causing the target to have to slam on the brakes (this requires True Justice Control Center (TJCC) assistance and prompting by walkie talkie style cell phone)

For a CBA vehicle convoy, boxing in the target during a commute, forcing the target to travel at a slower speed than the target wants to travel. In some locations, the TJCC will supply special licence plates to CBA vehicles with short words which have special meaning to the target

For a CBA vehicle convoy, and where the target is at a location (and time) where traffic is normally very sparse, cause heavy traffic, forcing the target to notice

The ultimate vehicle intercept is the staged accident. This can be dangerous and is only assigned to very senior agents. However, it is possible to stage an accident so only the target knows it was staged. This is an excellent means of punishment where

a target has committed a serious offence specifically against True Justice. Some targets have been financially ruined this way.

Generally, staged accidents are done in jurisdictions where police strongly support True Justice operations, so that the CBA driver is protected.

## IV. PHYSICAL SABOTAGE

Physical sabotage is an especially effective form of punishment when it is carefully limited to low value items, below the value where police will take the report seriously. For example, burning a target's house down, or even stealing an expensive appliance, would bring official investigators into the picture, so that is not done.

Sabotage producing extreme safety hazards is generally not suitable for True Justice operations, because of the potential for bringing official investigators to an accident scene. So while damaging the brake system of a target's vehicle is not allowed for community-based agents (CBAs), draining some of the oil, transmission fluid or radiator antifreeze are allowed. But not all of it. The goal is to make it look as if the target is negligent in maintaining fluid levels, and generally not causing a catastrophic failure that non-targets might see as sabotage.

It is very important to apply punishment by way of a large number of small value sabotage acts, because that makes it look like the target is forgetful, exaggerating, or in some cases even delusional, if they complain about many cases of small value damage. The target's associates will simply refuse to believe that anyone but the target is responsible.

Sabotage is very important in that it lets the target know they are totally helpless to stop it, and can't even complain about it effectively without appearing mentally ill. True Justice is very fortunate in that some people, hearing about sabotage from a target, will actually believe the target did the sabotage themselves, "to get attention."

Sabotage is applied at the target's home, workplace, and on their vehicle. This requires the assistance of locksmiths and alarm technicians. Your local True Justice Control Center (TJCC) will supply this help, and will bring specialists in from a distance in the case of rural areas.

Here are some examples of sabotage a community-based agent (CBA) may be assigned to carry out:

- Entering a vehicle and changing control and radio settings

- Replacing window washer fluid with water, possibly destroying the system if in winter

- Scratching the paint on a target's vehicle

- Tire sabotage, from removing some air right, up to slashing a sidewall if authorized by TJCC

- Simulating a break in electric window heater strips

- Cutting off the 4-way flasher button

Removing substantial amounts of oil, transmission fluid or antifreeze but not enough to cause catastrophic failure

Moving things around inside the vehicle to show the target someone got in

Unlocking the vehicle and leaving it unlocked, possibly even with door open

Small cuts to car's upholstery

Unlocking the target's front or back door and leaving it ajar while the target is away

Moving furniture or carpets fairly frequently to show the target someone was there

Stealing low value items, especially items like scissors which can be easily misplaced, keeping them until the target replaces the item, then returning the missing item, often in a place the target checked

Stealing important personal papers, especially those which will cost money to replace

Stealing irreplaceable photographs

While the target is at work, remove mail from their box and toss it around

Repeatedly making wall pictures crooked

Setting clocks to the wrong time

Repeatedly dumping consumable supplies (e.g., coffee) to make the target think they are no longer capable of managing their supplies well

Starting small rips in new clothing, which are widened on repeated visits

Rarely, ripping all the crotches out of the target's underwear

Replacing clothing with similar items which are too small for the target

Ironing inside button flaps over, making buttoning the shirt or top difficult

Carefully working the tip of a knife through seams in any air mattress or cushion the target may own, including replacements, on a daily basis

Breaking zippers, perhaps by pulling out a tooth or two

Shoving a knife through the soles of waterproof boots

At work, removing screws from the target's office chair

At work, damaging or destroying (if not extremely obvious) a target's work from a previous day; for example, if a target fixes a computer, the next day, the computer is broken again possibly worse

At work, replacing current copies of computer files with an older copy - particularly serious if a target is a computer programmer

At work, where some employees are or can be recruited to be community-based agents, set up "mistaken deliveries" of heavy goods which block the target's office

At work, if the target is responsible for parts of the operation which can be sabotaged, do so repeatedly just as the target starts eating lunch, or is about to leave for home

At work where the target is responsible for materials but the materials can't be locked up, sabotage or with special permission from the True Justice Control Center (TJCC) steal the material

Thefts have to be carefully considered and authorized by your local TJCC, and unless you have authorization, do not steal. One particularly effective type of theft is to remove small value but often used items from the target's premises. Once the target has been observed purchasing a replacement, the item is returned.

This not only causes the target to question their own sanity, it also forces the target to spend money uselessly, and imposes a feeling of total helplessness on the target.

# V. SABOTAGING THE TARGET'S REPUTATION

Sabotaging the target's reputation - and all that goes with it, such as ability to earn a living, business and personal relationships - is a very special operations category. Newer community-based agents will not be assigned to "engineer" the method, but will assist in passing on "rumors," which are the main means of destroying a target's public image.

"Rumors" consist mainly of the criminal record of the target. However, in order to secure cooperation of specific members of the community to participate in the punishment phase, additional information keyed to appeal to the patriotic or community service sense of such community members may be used as well.

As mentioned earlier, the True Justice organization has many top psychologists and psychiatrists on permanent staff at headquarters, and some in larger population centers. It is their responsibility to design the campaign to destroy the target's reputation.

These people listed below can be approached and given information which will cause them to make the target's association with them uncomfortable, or break off all contact with the target:

Business contacts

Supervisors

Co-workers

Casual social contacts, such as clubs a target may be a member of, or a group who frequent a bar where the target is a patron

Friends

Local fraternal organizations - they are motivated by public service, and are an excellent source of assistance in keeping the target under surveillance, and participating in the punishment phase as well

Store staffs at places the target shops

Target's landlord

Target's neighbors

Tradesmen who are likely to service the target's home, car, or business

Bus drivers on the target's route

Local children

City employees, including emergency medical technicians

Homeless shelter staff and residents where applicable

Family members (surprisingly, many are ready to believe negative information)

Especially, personnel at places the target applies for work

How intensely this is done is governed mainly by the need to prevent the target from learning that negative rumours are being spread. The goal is to keep negative information covertly flowing into the community, in such a way that those receiving the information aren't likely to tell the target. One might think that friends and family members would instantly notify the target and side with the target. Fortunately, experience shows that co-opting friends and family is surprisingly easy, once they are informed about the target's criminal record.

The True Justice Headquarters staff have developed techniques which by and large prevent that, but those techniques are beyond the scope of this manual. Suffice to say that it is possible to apply "incentives" which cause even people closest to the target to cooperate. These incentives are applied by specialists from our organization at higher than local level.

For the community level CBA, the work of sabotaging the reputation of the target takes the form of simply carrying out instructions from your True Justice Control Center (TJCC) as to what you say to whom, how, and when.

## VI. DISCREDITING TRUE JUSTICE TARGETS

While the powerful silent support of True Justice operations by the justice and psychiatric systems has been sufficient to prevent True Justice targets from informing the public, the area of discrediting targets is an ongoing activity. Like sabotaging the target's reputation, discrediting their public statements, web sites, media appearances, letters to the editor and the like are done under the supervision of psychologists and psychiatrists on True Justice staff.

If a community-based agent (CBA) has a good track record of intelligently carrying out assignments, and has access to a computer, the CBA may apply to the local True Justice Control Center (TJCC) for assignment to discreditation work. Excellent communications skills are required.

Some of the activities CBAs carry out under supervision are:

Monitoring message boards, blogs, and open media like Indymedia for target posts. This is normally done in special shifts and under scheduling and control at a higher level than your local TJCC. This monitoring is assisted by blog scanning software which will detect and instantly flag posts relating to True Justice activities. The CBA doing this work will immediately reply with comments like "Someone isn't taking their medication" or "<target name> has provided absolutely no evidence." The CBA will then report the post to higher level True Justice supervisors for possibly more detailed responses.

Monitoring newspapers in your area for letters to the editor regarding True Justice activities. Most editors and many reporters have been recruited and are willing to assist in keeping the important work of monitoring and neutralizing local criminals quiet, but once in a while, a letter to the editor will slip through. In this case, comments like "Someone isn't taking their medication" are not an appropriate response. Transcribe and forward such a letter to the editor to your supervisor, along with your proposed response. The supervisor may edit your response, and will assist in ensuring your response is printed.

Your supervisor will have staff monitoring upcoming talk show appearances by targets. While most talk show hosts, even those somewhat sympathetic to targets, have received discrediting information and often will not host targets, some targets do manage to get on the air. In this case, your supervisor will assign you to call into the show, and will instruct you as to appropriate things to say, such as rebutting the target's claims, pretending to be a target calling in and making "wacko" statements such as "UFOs are harassing me", or pulling the discussion away from True Justice activities and on to something like "media mind control."

True Justice agents who have excellent persuasive communications skills can be assigned, with careful coaching and preparation from supervisors, to pretend to be a target and get on talk shows known to air targets as the guest. These opportunities are great ways to discredit targets by talking about UFOs, things like black helicopters following you, foil beanies, satellites "parked" just above your home, and perhaps events normally considered "paranormal" like seeing people appear and disappear. These discrediting topics must be a total surprise to the host, only mentioned after the show is in progress.

CBAs can "casually" describe the "odd behavior" exhibited by the target as a result of around the clock True Justice activities to the target's neighbors. The idea is to focus the neighbors' attention to the target's behavior, hinting that maybe the target is mentally ill. This is easy once the target has developed suspicion that "everyone is out to get" him or her.

It is a special honor for CBAs to be chosen for target discreditation work.

## VII. TRADE-RELATED PUNISHMENT

This section will give some examples of ways community-based agents (CBAs) with specific trades or situations in the community can apply deniable punishment to targets:

Underground utility crews, where the management has been recruited, schedule messy, noisy maintenance at the target's home (or business if the target runs a business.) This can include having the street torn up for extended periods, or repeatedly. Funding for unneeded work is available from True Justice headquarters.

Taxi drivers can delay arriving when called by the target

Bus drivers have leeway, in nasty weather for example, to stop one stop away from a waiting target and wait there for perhaps 5 minutes, ostensibly to "get back on schedule." This can also cause a target to miss connections with the next bus or train. This is especially effective when the target, exposed to bad weather, can see the bus waiting up the street for no apparent reason.

Repair tradespeople can keep "getting it wrong" necessitating many recalls, be late, be messy, over-bill the target, and even damage things which were OK. This is especially effective in the automobile repair trade.

Medical lab technicians can substitute blood samples, or otherwise falsify results making the target appear to have absolutely no reason for their complaints

Police can frequently pull the target over for frivolous reasons

Telephone and cable TV technicians can cause the target to have constant service failures, and when other technicians check out the complaints, no cause will be found.

Telephone technicians can re-route legitimate calls to the target's number in large numbers, and this will cause the target to get very angry with these totally innocent callers

Store staff where the target shops frequently can be instructed to remove items the target is known to need when a target is known to be coming. Store management can stop ordering a target's favorite items.

Restaurants and food delivery services can tell the target they are out of an item known to be a favourite of a target

The key to successful punishment by tradespeople is that while the target is very likely to know they are being punished, these punishment acts must appear to the general public as "life's normal breaks."

## VIII. TARGET'S HOME

Punishing the target at the target's home is essential for effectiveness of True Justice operations. If the target were punished in the community but was allowed sanctuary in their home, the creation of a "prison without walls" would not be complete.

One of the very first things the True Justice Control Center (TJCC) will arrange is for homes or apartments adjacent to the target's home to be occupied by both community-based agents (CBAs) and members of the True Justice Electronic Corps (TJEC.) Operations of the TJEC members are covered in the True Justice Electronic Operations manual.

Because True Justice operations are carried out 24/7 in shifts, homes and apartments which are leased or owned by True Justice staff are not used as dwellings. The lease or deed will bear either an entirely false name, or the name of a senior True Justice staff member whose actual home will be at a different location.

Some adjacent homes or apartments are occupied by neighbors of the target who have offered to cooperate in punishment of the target. The initial contact of neighbors to determine their willingness to cooperate is done by senior staff, and incentives to cooperate are often tendered.

Here are some commonly used punishment activities which are carried out both by CBAs and cooperating neighbors of the target. Activities are rotated among the choices, but at least one of them is applied daily:

Noise. Noise must be of a type which the general public deems "normal." Remember that the goal is to have the target aware they are being punished, but not be able to convince anyone else that is the case. Observe local noise curfews, but plenty of punishment can occur outside noise curfew times. The target must not have easy cause to involve law enforcement. Examples:

Starting a leaf blower, timed precisely when the target attempts to enjoy their yard, or, when TJEC operators cue the CBA that the target is trying to nap.

Loud music from a neighboring home. This is an excellent action, as it is common. Time it so every time the target opens a window the music starts. The timing makes the point it is intentional punishment. TJEC operators can apply music in adjacent apartments with exceptionally powerful bass, directed at the target's unit.

Frequent squealing of tires near the target's home.

In apartments, frequent drilling into a scrap of wood or masonry held against the target's wall, floors or ceiling as if "working." Alternatively, hammering. Especially effective when cued by TJEC operators that the target is attempting to nap.

Tossing golf or tennis balls against the target's home when the target is known to be trying to fall asleep. Ideal for cooperating neighbor children.

Frequent use of sirens near target's home. Many emergency services employees have a strong sense of community service and willingly cooperate in this.

Knocking on the door for frivolous/nonsensical/wrong address reasons. Especially effective when the target is in bed or having a meal.

Trash. Leave trash in the target's yard. Frequently, but TJCC staff will assist in scheduling this so that the target can't quite have a case on which law enforcement will act.

Terrifying the target's pet. This requires entry while the target is away from home for an extended period and must be scheduled by TJCC. True Justice Electronic Corps (TJEC) operators can render a dog passive for safe entry of the community-based agents.

Wounding or killing the target's pet. Rarely used, scheduled when the target has acted in a way so as to deserve special punishment.

Killing domestic animals or wildlife and leaving them on the target's doorstep. Scheduled when the target has acted in a way so as to deserve special punishment.

Where the target owns substantial land, noxious activities can be arranged and built for next to the property. In one case, a dump, an auto race track, and a prison were built adjacent to a target who owned a large farm in an area of natural beauty. While this is rare, it does illustrate True Justice's commitment to delivering punishment to those deserving of it.

Cooperating police departments can visibly watch the target's home. Possibly being parked in front of the home when the target returns, repeatedly.

## IX. OTHER TACTICS

There are other tactics which are not strictly part of the categories discussed so far:

IMPORTANT: Community-based agents (CBAs) are strictly forbidden from adding anyone to the list of targets. Target selection is done by senior True Justice Control Center (TJCC) staff or higher levels.

Punishment of people who side with and help the target. Friends, family members, and citizens who do not place a high value on community safety sometimes help targets. In these very specific cases, TJCC-authorized punishment in the form of individual acts against them is appropriate. The official justice system can arrange for these target sympathizers to be found guilty of crimes, or liable for civil actions, for example. This is important for maintenance of the True Justice system.

Targets' bank accounts can be disrupted in ways which don't give the target a direct cause to involve law enforcement. Examples: A target's account can be changed to a "youth account", or, an overdraft protection feature can be disabled, without notifying the target, by cooperating bank employees.

## **I. EXECUTIVE SUMMARY**

### **A. Background -- Why This Report Was Prepared**

The International Convention Against Torture (**CAT**) was ratified by the United States Government in 1994, with the Government's initial report reviewing compliance with the Convention's provisions due to be submitted to the United Nations Committee Against Torture one year later. This report **is now more than three years overdue**.

In its absence, our Coalition, made up of more than 60 contributing non-governmental organizations dealing with a broad cross section of issues and concerns related to torture and other forms of cruel and inhuman treatment or punishment, has decided to release its own evaluation of U.S. compliance under CAT. Our goals are to:

- encourage the Government to fulfill its responsibilities on a more effective basis, both in terms of submitting the required compliance report, and eliminating the practices detailed below that violate internationally recognized human rights standards related to torture and,
- promote a better understanding among government officials, the general public, and the non-governmental organization community of how international human rights standards and enforcement mechanisms can be applied to domestic issues and needs.

...[snip]

## B. What Are The Major Areas of Non-Compliance?

Torture, which is identified by CAT as including all forms of government sponsored (by affirmative action **or by acquiescence**) cruel and inhuman treatment and punishment, or other forms of severe pain and suffering, both physical and psychological, currently is taking place in the United States in a number of important areas.

### 1. The Death Penalty

...[snip]

### 8. Abuse in Treatment of Those Considered Mentally Ill

...[snip]

### 9. Involuntary Human Scientific Experimentation

Considerable evidence recently has surfaced that the U.S. government, in past years, has conducted a number of what have been classified as "scientific" experiments on human subjects without their knowledge or consent. This includes large-scale exposures to radiation emissions, and purposeful denial of available medical treatment to African-American syphilis victims, allegedly for medical testing.

Recent media disclosures and admissions by government officials suggest that the scope of these "experiments" has been far wider than previously acknowledged. As was true for the human experimentation conducted by the Nazis in prison camps during World War II, the "so-called" scientific aspects of these tests do not eliminate the cruel and abusive elements that were involved.

Nor do they justify the severe pain and suffering imposed on individual test victims.

Although the tests that have been publicly acknowledged took place some years ago, sufficient action has not been taken to compensate victims, and to assure that similar forms of abusive experimentation would be prevented in the future, **especially in newly emerging areas of technology and weapons development.**

**REQUIRED ACTION - HUMAN SCIENTIFIC EXPERIMENTATION: Additional steps should be taken to ensure full disclosure and proper compensation for past involuntary scientific experimentation. Secret testing of technology and weapons on humans, especially without their fully informed knowledge and consent, should not be permitted, and adequate methods for assuring that such practices not take place should be developed.**

...[snip]

## 10. INVOLUNTARY HUMAN SCIENTIFIC EXPERIMENTATION

This section draws heavily on the 1995 submission to the Human Rights Committee by the Science and Human Rights program of the American Association for the Advancement of Science, included in "The Status of Human Rights in the United States"

## SUMMARY STATEMENT

In past years, the U.S. has conducted a number of scientific experiments on human subjects **without their consent or knowledge**. This includes exposure to of **at least 9,000 human subjects**, including children and newborns, to radiation testing by the Atomic Energy Commission, and the Tuskegee experiments in which African-American subjects were denied medical treatment for syphilis in order to document how this disease affected the human body.

Although these cruel and inhuman tests were conducted many years ago, there are two aspects that continue to be of concern. First is the fact that government kept information about the tests secret for a number of years, and continues to release data that suggests that testing of this type has been far more frequent, and with a greater impact, than initially acknowledged. Second is that appropriate action still has not been taken to compensate the victims, and to assure that similar activities will not take place in the future.

### I. RELEVANT CONVENTION PROVISIONS (CAT)

The prohibition against torture in Article 7 of the International Covenant on Civil and Political Rights stipulates that "no one shall be subject, without his free consent, to medical or scientific experimentation." This provision is not included in CAT, which focusses in Article 1 on pain inflicted for punishment or intimidation, or for any reason based on discrimination.

However, it was the overwhelming consensus of our working group that human scientific experimentation conducted by government without the knowledgeable consent of victims constitutes, by its very nature, a type of punishment that fits within the CAT definition as constituting "severe pain and suffering" as described by CAT.

There is no question that the human experiments conducted by the Nazis during World War II constituted torture, despite their alleged scientific purposes, because the dangers and inhumanity victims were subjected to evidenced an essential lack of concern for the well-being of the subjects that resulted in the unnecessary infliction of pain and suffering.

Similar experiments that constitute punishment under the meaning of the CAT definition are present whenever human beings are unknowingly subjected to scientific tests, especially when they involve potential severe or long-lasting health consequences, or the purposeful denial of appropriate medical care. This type of disdain for human subjects can not be viewed as anything other than the purposeful infliction of punishment, **even if legitimate scientific goals are involved, and the intent to do harm may not be present.**

It is the lack of due care for the severe (though unexpected) consequences that produces the pain and suffering of the type prohibited by CAT. This is the reason why the Covenant on Civil and Political Rights makes special mention of human scientific experimentation under its treatment of torture, and justifies its inclusion among the activities subject to review under Article 1 of CAT.

### II. NON-CONSENTUAL HUMAN TESTING BY THE U.S. GOVERNMENT

The 1995 "Initial Report of the United States" to the United Nations

Human Rights Committee acknowledges that a number of Cold War era experiments involving the exposure of humans to radiation were conducted that would be in violation of the International Covenant on Civil and Political Rights ("**Covenant**"). It does not, however, discuss in any detail:

- the nature of these experiments
- the manner in which they were conducted (particularly pertinent is how the issue of consent was treated)
- whether steps have been taken to remedy the results of inappropriate testing through appropriate compensation of victims, and,
- **whether any steps have been taken to ensure that such experimentation does not take place in the future**

In early 1994, in response to public pressure generated by reports appearing in "The Albuquerque Tribune", and a report issued by the U.S. General Accounting Office confirming that the U.S. government had sponsored Cold War experiments involving the exposure of human subjects to large doses of radiation, the Clinton Administration created an Advisory Committee on Human Radiation Experiments. The Advisory Committee was charged with investigating these experiments and determining how scientific and ethical standards were observed in these activities, and was given access to the records of all relevant federal agencies.

The Advisory Committee's research acknowledges that government sponsored experiments involving the exposure of human subjects to potentially dangerous levels of radiation were far more common than had been believed. Between 1948 and 1952, they included at least 13 deliberate releases of radiated materials into the atmosphere near populated areas to study fallout patterns and the rate of radioactive decay of atmospherically released particles. Initial reports also indicate that, while high level officials were aware of the dangers and the ethical considerations involved, there was a consistent lack of effective regulation governing administration of the tests.

Based on the Advisory Committee's research, six broad categories of experiments can be identified:

- Experiments aimed at determining the danger to workers assembling nuclear weapons from ingestion, inhalation, or injection of irradiated materials. These experiments involved total body irradiation and the injection of radioactive isotopes into human subjects.
- Experiments aimed at determining the effects of exposure to radiation on soldiers serving either as part of the crew of a proposed nuclear powered aircraft, or on a nuclear battlefield. These experiments involved total body radiation, injection of radioactive isotopes, ingestion of irradiated materials by human subjects and exposure of subjects to atomic clouds during and after bomb detonations.
- Development of nuclear weapons. These experiments involved atmospheric releases of radiation without the knowledge of exposed civilian population.
- Studies on the dispersal, fallout, biological intake and decay of radioactive materials following a nuclear explosion. These experiments involved atmospheric releases of radiation, ingestion of radioactive and exposure to atomic clouds.

etc. etc. ...[snip]

Similar concerns also are being raised about involuntary human experimentation involving new forms of classified research and testing of high technology military weaponry, including microwave and laser equipment. Groups working on these issues cite, among other evidence of the existence of these unauthorized testing procedures, a White House inter-governmental memorandum dated March 27, 1997, establishing stronger guidelines prohibiting non-consensual testing for classified research, but suggesting, by implication, that this type of human research may, in fact, be taking place. Because of the classified nature of these activities, it is very difficult to confirm or disprove that they are taking place.

Given the serious negative impacts on non-consensual human subjects that classified research of this type is capable of producing, and given the past history of secret experimentation by the government, these allegations of continuing improprieties involving secret government-sponsored human testing should not be dismissed without more thorough, impartial investigation.

## **Device Taps Thoughts of Disabled**

### **Headband with electrodes helps develop communication skills**

**By Camille Bains, The Canadian Press, Vancouver BC Canada**

Published in the Hamilton (Ontario) Spectator, Sept. 27, 2001

A mind-reading device being developed by a University of Victoria biologist and a team of 40 volunteers could allow severely disabled people to communicate more effectively.

"We have a sense deep down that this is going to work whereas six months ago it was a hope" said Nigel Livingston.

The device called a Cyberlink is being developed to pick up brain signals from disabled people who can't speak and must instead use tedious means to communicate with others.

The Cyberlink will look like a headband. People wearing it will have electrodes placed on their head to pick up brain signals.

Livingston said test subjects have already shown that people can control their brain signals depending on what they're thinking about.

To communicate a message, disabled people would generate varying brain frequencies for a certain letter of the alphabet to form words, much like Morse code.

Signals would be sent into a computer attached to the Cyberlink. the researchers hope that eventually a voice synthesizer will be used to translate the information into electronic speech.

The science-fiction-like work has been dubbed the Claire Project after Claire Inkley, an exceptionally bright Grade 12 student who has a genetic condition similar to cerebral palsy.

Claire, 17, currently communicates using her eyes--looking to the right or left--and pointing to groups of letters on a letter board.

The process requires help from her parents or an aide and is extremely tiring because it yields only about 20 words an hour, said John Minkley, Claire's father.

Communication is slowed down further because involuntary muscle spasms interfere with Claire's attempts to get her message across, he said.

Despite requiring a wheelchair and being unable to speak or write because she has poor muscle control, Claire is a straight-A student who wants to study physics and math in university.

## The Natural EM Meter

The TriField **Natural EM Meter** was designed to do field measurements for special research. It **detects changes in extremely weak static (DC or "natural") electric and magnetic fields**, and signals with both a tone and the movement of a needle-type gauge if either the electric or magnetic field changes from previous levels. **A radio and microwave detector is also included, which reads radio power directly.** Because man-made AC electric and magnetic fields are very common and could interfere with readings of static fields, the meter has been designed to ignore AC fields. Normal construction materials don't block magnetic fields, so **the meter can be placed indoors and will work equally**

**well**, and due to the built-in tone, it can be used in the dark, and will sound the tone at whatever level of field the user sets. Model 1 operates on a standard 9-volt battery, and Model 2 runs on a 9-volt battery or an AC adapter (both included). Model 2 has an input jack for an optional high-sensitivity magnetic coil. Both models are covered by a one-year warranty.

**Natural EM Meter: \$220 (US)**

**Natural EM Meter Model 2: \$240 (US)**

**(Includes AC adapter, jack for AC adapter & jack for external coil)**

**External Coil for Natural EM Model 2: \$45 (US) (Prices include delivery in North America)**

---

**MAGNETIC**

**The meter is sensitive to changes of as little as 0.5% of the strength of the Earth's magnetic field, and the tone will sound whether the field increases or decreases.** Model 2 is sensitive down to 0.05% of the Earth's magnetic field when the optional external coil is used. After the meter detects an event, when the magnetic field then becomes stable for more than about five seconds, the tone will stop and the needle will return to zero. The meter will remain at rest until the field changes again. The threshold level (squelch level) of the tone is adjustable. The user determines the amount of change in the magnetic field required to sound the tone. If the field changes by the threshold amount, the tone will come on at a low pitch. If the amount of change is larger, the tone's pitch will be higher. **This meter can also be used to determine if anything is magnetized.** For example, if a bed frame is magnetized, the meter can be held vertically and slowly be swept by hand over the bed. Any changes in the direction or strength of the magnetic field will register. A similar process can reveal the presence of magnetic rocks just below the ground.

**The Natural EM Meter can detect geomagnetic storms caused by unusual solar activity interacting with the ionosphere** (which results in rapid changes of up to 10% in the Earth's magnetic field), as well as the electrical activity of ordinary thunderstorms. It will signal the movement of any distant, strong magnetic sources in the sky, even if the sky is cloudy or the source dips behind a hill. Ball lightning should in theory be associated with a strong magnetic field, and magnetization of metal on the ground has been reported with some sightings of unusual lights in the sky.

## **ELECTRIC**

When the dial is set to ELECTRIC, **the meter is sensitive to electric fields as weak as 3 V/m (volts per meter).** Indoors, electric fields typically fluctuate 1 or 2 V/m. By setting the minimum sensitivity to change at 3 V/m, we have designed the meter to disregard this "background noise". A 3V/m field is so feeble that if a 10'x10'x10' room were filled with a field of this strength, it would contain the total amount of energy equivalent to that required to lift a single grain of table salt 1/50th of an inch.

**Human beings and animals usually emit an electric field which is easily detectable using the Natural EM Meter. In fact, the meter can be used as a motion-activated intruder alarm.** It is so sensitive that it can detect the presence of a person through a wall. Though it is not foolproof in this capacity, (sometimes a person will carry no electric charge and thus be "invisible" to the meter), its sensitivity is of interest to researchers in the field of parapsychology. Every type of detectable physical manifestation requires a certain amount of energy. For example, "moving air" requires the expenditure of a small amount of energy to get the air to move initially.

**Below is a table showing several types of effects or fields emitted by people and objects.** It also shows the minimum amount of energy required (per cubic foot of air) to set up that effect or field so that it is stronger than typical indoor "background noise" for that effect or field. Clearly the static electric field is the type that requires the least energy to be detectable.

**Type of Energy Effect or Field**

| Type of Effect or Field | Energy Needed (watts-seconds) | Emitted by people? | Are instruments needed to detect this? |
|-------------------------|-------------------------------|--------------------|----------------------------------------|
| Heat                    | 30                            | Yes                | Thermal Viewer                         |
| Moving Air              | 1/10,000                      | Yes                | No (can feel this)                     |
| Static Magnetic         | 1/20 million                  | No                 | Magnetic Meter                         |
| Sound                   | 1/100 million                 | Yes                | No                                     |
| Light                   | 1/1billion                    | No                 | No                                     |
| Static Electric         | 1/10 billion                  | Yes                | Electric Meter                         |

## **RADIO/MICROWAVE**

The radio/microwave detector is sensitive from 100,000 to 2.5 billion oscillations per second (100 KHz to 2.5 GHz) and can detect strong or unusual atmospheric electrical activity. It can also detect leaky microwave ovens, cellular or portable phones, walkie-talkies and concealed surveillance bugs. Its minimum and maximum detectable signal strengths are 0.01 milliwatt/cm<sup>2</sup> and 1 milliwatt/cm<sup>2</sup> respectively.

## **SUM**

The SUM setting in Model 1 adds together the electric and magnetic fields and detects if either field changes. Model 1 is used to find a disturbance in either type of field, but in the SUM setting it can generally detect if a person approaches to within five or ten feet, even on the other side of a wall. For this reason, Model 1 is preferred for parapsychological research, when, for example, a room to be measured is known to be vacant for an extended period (except for experimenters, who remain relatively still for that period). In Model 2, the SUM setting is magnetic plus radio/microwave (which requires somewhat more battery power to operate than the Model 1 SUM, but Model 2 also has an AC adapter). The SUM setting in Model 2 is for early warning of any unusual atmospheric electromagnetic activity, such as

geomagnetic storms or ball lightning. In this setting, it does not falsely trigger when people walk by.

## INDEX

Some MKULTRA sub-programs from URL:

<http://www.trufax.org/research/projects.html>

Project Moonstruck, 1952, CIA:

Electronic implants in brain and teeth  
Targeting: Long range  
Implanted during surgery or surreptitiously during abduction  
Frequency range: HF - ELF transceiver implants  
Purpose: Tracking, mind and behavior control, conditioning, programming, covert operations  
Functional Basis: Electronic Stimulation of the Brain, E.S.B.

Project MK-ULTRA, 1953, CIA:

Drugs, electronics and electroshock  
Targeting: Short range  
Frequencies: VHF HF UHF modulated at ELF  
Transmission and Reception: Local production  
Purpose: Programming behavior, creation of "cyborg" mentalities  
Effects: narcoleptic trance, programming by suggestion  
Subprojects: Many.  
Pseudonym: Project Artichoke  
Functional Basis: Electronic Dissolution of Memory, E.D.O.M.

Project Orion, 1958, U.S.A.F:

Drugs, hypnosis, and ESB  
Targeting: Short range, in person  
Frequencies: ELF Modulation  
Transmission and Reception: Radar, microwaves, modulated at ELF frequencies  
Purpose: Top security personnel debriefing, programming, insure security and loyalty  
Pseudonym: "Dreamland"

MK-DELTA, 1960, CIA:

Fine-tuned electromagnetic subliminal programming  
Targeting: Long Range  
Frequencies: VHF HF UHF Modulated at ELF  
Transmission and Reception: Television antennae, radio antennae, power lines, mattress spring coils, modulation on 60 Hz wiring.  
Purpose: programming behavior and attitudes in general population  
Effects: fatigue, mood swings, behavior dysfunction and social criminality, mood swings  
Pseudonym: "Deep Sleep", R.H.I.C.

PHOENIX II, 1983, U.S.A.F, NSA:

Location: Montauk, Long Island  
Electronic multi-directional targeting of select population groups  
Targeting: Medium range  
Frequencies: Radar, microwaves. EHF UHF modulated  
Power: Gigawatt through Terawatt  
Purpose: Loading of Earth Grids, planetary sonombulgence to stave off geological activity, specific-point earthquake creation, population programming for sensitized individuals  
Pseudonym: "Rainbow", ZAP

TRIDENT, 1989, ONR, NSA:

Electronic directed targeting of individuals or populations  
Targeting: Large population groups assembled  
Display: Black helicopters flying in triad formation of three  
Power: 100,000 watts  
Frequency: UHF  
Purpose: Large group management and behavior control, riot control  
Allied Agencies: FEMA  
Pseudonym: "Black Triad" A.E.M.C

RF MEDIA, 1990, CIA:

Electronic, multi-directional subliminal suggestion and programming  
Location: Boulder, Colorado (Location of main cell telephone node, national television synchronization node)  
Targeting: national population of the United States  
Frequencies: ULF VHF HF Phase modulation  
Power: Gigawatts  
Implementation: Television and radio communications, the "videodrome" signals  
Purpose: Programming and triggering behavioral desire, subversion of psychic abilities of population, preparatory processing for mass electromagnetic control  
Pseudonym: "Buzz Saw" E.E.M.C.

TOWER, 1990, CIA, NSA:

Electronic cross country subliminal programming and suggestion  
Targeting: Mass population, short-range intervals, long-range cumulative  
Frequencies: Microwave, EHF SHF  
Methodology: Cellular telephone system, ELF modulation  
Purpose: Programming through neural resonance and encoded information  
Effect: Neural degeneration, DNA resonance modification, psychic suppression  
Pseudonym: "Wedding Bells"

HAARP, 1995, CIA, NSA, ONR:

Electromagnetic resonant induction and mass population control

Location: Gakona, Alaska  
Frequencies: Atmospheric phase-locked resonant UHF  
VHF  
Potential: DNA code alteration in population and mass  
behavior modification  
Power: Giga-watt to Tera-watt range  
Step-Down reflective frequencies: Approx 1.1 GHz,  
Human DNA resonant frequency, cellular system  
phase-lock

## Attempts to Recruit Victims to be Perpetrators

February 21, 2004

Perpetrators DO sometimes attempt to recruit victims as perpetrators. This is usually done very slyly and cautiously, often never quite voicing outright that the victim is being asked to become a perp, but most cases do involve very strong hints. These attempts NEVER reveal the identity of the perpetrator group itself.

The perps sometimes speak to us face to face but more often one of the two "synthetic telepathy" modes are chosen: actual audible voice, or, strong but non-verbal synthetic telepathy.

For visitors who have difficulty believing synthetic telepathy is possible, you are invited to scan [this 1975 article](#) from the journal "American Psychologist", describing pulsed microwave "voice to skull" technology.

---

----- Email incident -----

I, Eleanor White, no longer have the email itself, but a fellow wrote me on two subjects:

1. He claimed to be a mind control victim and all he had to do was "change his politics" and support the George Bush (New World Order) regime and gosh, darn, his harassment just kind of stopped.
2. He said he would like to take over the high cost (\$90 per month) of my raven1.net web site, funded at the time by other victims.

I responded that I considered George Bush a puppet of the New World Order, and neither to stop my harassment nor get his financial support was I going to change my opinion. I further invited him to read my [Other Government Crimes](#) page.

---- Face to face incident ----

[Sueann Campbell](#) had a face to face incident in which she had a strong hint that if she would join the local perp group, her harassment might stop.

Sueann had a friend who became a perp. When Sueann asked her why, the ex-friend stated she turned because trying to fight the perps was "so hopeless".

Subject: [mcforums] Report of attempt to recruit victim

Hi -

I've been asked to keep the source confidential but I can report a recent

attempt was made to recruit a victim to become a perp. Makes one wonder if this is typical of the perps we see and have to deal with.

This fellow had been followed from job to job, and had had his attempts to find new jobs interfered with. Finally, the perps came right out and tried to badger him to join, "because you love your family".

Hard to imagine how human beings can become so evil. Much better to be a victim and make it to Heaven, IMO.

Eleanor

Subject: Re: [mcforums] Report of attempt to recruit victim

Yes...I think this is typical. They have kinda told me the same thing. The Perps also have said that they must put me through the test. I would never join and they also know this.

I also think that them saying I have a chance to be recruited is just a ploy a put-on. they tell me I need to believe in what they do (but what is that? ) and also tell me to get away from some people I care about or do things at their command. I am sure it's just a ploy the perps trying to turn the Victim in another direction.

If he/she does what they want things will just get worse. Also I have never had them tell me Face to Face. (in person)

Kelly

[Eleanor White commenting: Many of our members have dialogues with the perpetrators telepathically. Sometimes it is audible voice, other times it is more like natural, non-verbal telepathy, yet the messages received are unmistakably from outside sources. For readers of this page who do not believe synthetic telepathy is possible, please scan this 1975 [article from the journal "American Psychologist".](#)]

Hi

This is something my perps tell me everyday "Please help us!" to which I reply "Never". They also tell me to shut up everyday, and that's not going to happen either. I fight the remote viewing every day, because that's the reason they give me for being a target. I think they do it to give the victim false hope. Helping them won't save anything or anyone, IMO. I believe we were given awareness for a reason, I know I was, for public awareness. So it can be stopped, and prevented from happening again.

Vicki Miller

----- From 'Odyssey 4' -----

I was riding the subway in Toronto, and a man got on at one of the stops. He sat in the seat right in front of me (it was one of the seats that are turned sideways facing the center of the car - mine was facing front). He kept looking over at me and appeared to be very nervous. I was becoming concerned by his behavior, so I didn't acknowledge him at all. (I felt it was safer that way.)

He finally said, "I'm going to buy my wife an expensive present."

I thought, "Great, now get lost!"

He continued on, "I make a lot of money working for the people I do. You could make the same. Would you like that?"

I was shocked! I thought he was suggesting prostitution or something. What happened next swept that thought right out of my head.

I was hit by so much energy that it made me gasp and double over. (This was not the first time that I had been attacked in the subway system of Toronto - I could write horror stories on my experiences in that underground transit system - but it was the first time that I was approached by what I believe was a recruiter).

The dose of full-body pain was probably their way of saying if you don't take this offer, this is what you'll be receiving instead.

I was fighting with every bit of my ability just to stay conscious. I noticed that the man wasn't the least bit concerned about the sudden deterioration of my health (if I saw a woman bend over and gasp, I would have inquired about her condition). No one in my immediate vicinity seemed to notice either. It was strange and disturbing.

I mentally focused on the man which had a profound effect because he looked shocked, jumped up, and ran out at the next subway stop. The other people around me left at the following stop, and I felt myself return to normal.

## **Russian Magazine Article**

**Translated by an anonymous translator  
for Citizens Against Human Rights Abuse,  
Cheryl Welsh, Director**

---

From: Eleanor White  
Date sent: Wed, 31 Oct 2001 13:01:43 +0000  
Subject: Russian magazine article courtesy Cheryl Welsh

This bulletin refers to the English translation, which is below the biblio information here:

This article was generously translated for free by an anonymous victim. The article is from:

Hidden Powers, Vol 13, 1998,  
a Russian magazine.

Here is the article in Russian:

<http://www.privatelife.ru/tv/n13/5.htm>

The article was written by Ivan, or Igor Tsarev, a journalist for the Delovoi Mir, which means "Business World" in English. Tsarev is also the author of an article on Russian mind control and on:

Emilia Cherkova,  
Delovoi Mir, pp. 1,9 Feb. 15, 1992  
entitled, "Mind Control".

Donations to Cheryl Welsh, Director, Citizens Against Human Rights Abuse:

<http://mindjustice-org>  
[welsh@mindjustice.org](mailto:welsh@mindjustice.org)

... needed to continue the Russian translation project, another Russian book purchased by Mind Justice, plus, the anonymous translator has no money to speak of and deserves something for his generous work, it takes hours.

Send donations to:

CAHRA  
915 Zaragoza St.  
Davis CA  
USA 95616.

More articles to follow, especially with more donations. There are many footnotes and Russian leads to follow but this takes money. I personally have spent about about 400\$ purchasing the articles and books.

=====

## A Trap for Zombies

A wave of rumors is breaking across the country about mysterious bio-electronic weapons which easily make it possible to break down a person, to subordinate him to one's own will. The author of these lines was able to meet with not even a tenth of the people who claim that they became victims of such psycho-terrorism. Their stories are very similar and knowing one, it is not hard to imagine all the others.

In 1970 Nikolay Ivanovich Anisimov worked as a cab driver in Novosibirsk and did not even so much as contemplate politics. But a cunning devil once sat behind him in his taxi in the form of an educated passenger. When he got out, he left behind 35 typewritten copies of the "General Declaration of Human Rights." Anisimov took them and distributed the copies of the "Declaration" to students of the Novosibirsk high schools -- a serious offense at that time. And then everything began to happen to Nikolay Ivanovich: summonses to and enlightening discussions at the KGB, then -- forced treatment at a psychiatric clinic, and when that did not help... And here begins the most mysterious part of this story. And so that you will not dismiss it as the rantings of a delirious mind, let us make a small digression.

"MK-Ultra" -- that was what the top-secret American program for research on remote "zombification," was called. In the time of its duration, many people became its victims, including Martti Koski, a Finnish emigrant who had settled in the Canadian city of Edmonton. At first, he started hearing voices that seemed to be aimed directly at his head, putting thoughts into his mind, stifling with their strange commands. It seemed to Koski that these influences were originating from the apartment directly above him. Then Martti completely lost control over his own body and senses and wound up in a hospital. There he finally realized that he had become a victim of a monstrous experiment whose aim was the control of human reason.

In 1978 the Carter administration declared that the MK-Ultra program had been terminated. In the previous 25 years in the USA, experiments had been conducted on the manipulation of the brain with the aid of ultrasonic and microwave radiations, along with the use of computer technology. Whether this program was actually stopped or when it really began is even more secret, so that today it is impossible to answer this question.

Anisimov, naturally, did not have even an inkling about Martti Koski or about MK-Ultra.

In the meantime, totally mysterious things began to happen to him.

One day, when he was preparing to go to the labor department to arrange for a job which he had lost during the time of his ordeal, he received a mysterious phone call -- an unknown voice with a malicious warning: "Do not go! It won't pay off. They won't give you any work!"

Obstinate, Anisimov only smacked his lips -- how many times had he already listened to such threats! But when he was preparing to leave his home, his brand new shoes began to fall apart. They cracked and were torn at the seams. Directly behind him, he heard a ruckus -- chairs were overturned and toppled over. A glass of water which

was at the center of the table slid to the edge, hung for an instant and then crashed to the floor.

Not paying attention to the overturned furniture, Anisimov got another pair of shoes. But when he went to put them on he could not. His toes suddenly turned straight upward as if they were induced into spasms. And he could not straighten them, no matter how hard he tried. His toes would stiffen each time he tried to put the shoes on. The brand new kapron shoes were torn as if they had rotted. The lock on the door was jammed. An unknown force, interfering with his leaving the apartment, knocked him over with spring-like blows. And when he had grown weak and Anisimov laid down on the bed, in his head some loud bellow and an opposite squeaky voice kept repeating like robots: "Schizophrenic! Schizophrenic!"

Could it be in fact that he had developed a "tired brain?"

"Well, not yet," says Nikolay Ivanovich. "I realized perfectly that this was in no way any mental dysfunction and the doctors from the International Center of Psychiatry confirmed later that I am completely healthy. I have already figured out that they irradiated me with the aid of some sort of electronic devices. The consequences of having been "processed" began to have an effect after a few days: I have grown so thin that my clothes hang loosely on me. My sight has noticeably weakened; I have continuously induced muscle spasms -and cold sweats alternating with an intolerable fever. I'm tired from constant vomiting. I am losing my hair and some teeth. An ulcer has appeared in my breast. And blood flows from my ears and nose. And two voices are lodged in my head: a man's voice and a female's voice. They laughed: "Remember, we are watching your every move as if you were in the palm of our hand. Your eyes are a source of information -a movie camera! Do not get it into your head to do anything without permission!"

"When I felt myself completely bad and tried to call for help, the phone stopped working. When I tried to leave my apartment, something was constantly preventing me from doing so, was impairing my memory so that I could not find clothes; if already at the door, I'd suddenly start vomiting uncontrollably. And the unseen beings scoffed: "Psycho! Don't fuss. Think of the future. In the psychiatric ward and in the next world you'll always have time!"

"In a word, life has been transformed into a living hell. I have ceased being oriented to time, and have stopped distinguishing day from night.

My mother, upon seeing my condition, could not control herself and she called the doctors. So I again ended up in the psychiatric ward. After forty days, by the time they discharged me, I already could hardly even move. But the internal voices didn't stop: "That was not the last psychiatric ward [you'll be in]. Soon you will not be able to tell an elephant from a watermelon!"

As far as whether Nikolay Ivanovich's story corresponds to reality, that we cannot judge. But the fact of the matter is that Anisimov is not alone in his problems. Emilia Chirkova from Zelenograd has collected several thousand letters from the same type of victims of these unknown psy-weapons, and their stories are as alike as twins.

In the opinion of Chirkova, one problem is that these people cannot find protection anywhere. [The center for epidemiology] refused to

check their apartments for high levels of electro-magnetic, high-frequency fields. They say they do not have the appropriate devices for this. In that case, it is necessary to turn to other similar agencies, that and to look into other types of agencies. It is especially surprising, that when one well known and high-ranking Kremlin official had complained that it is not safe in his apartment with electro-magnetic fields, that no one has made him out to be a lunatic. Moreover, devices were also found that showed a level of intensity at 10-12 times above the normal background level. New apartments were also found...

Victims of these unknown bio-electronic weapons (and it may be that is simply a natural phenomenon) are now united -they have also found devices with the help of which it is possible to measure electro-fields in apartments. Inspections have revealed that the intensities of the fields in these apartments are indeed higher than the norm. Textbooks on advice as to methods of protection from such influences have been written. Here are several of excerpts:

Constant interference in radio-receivers and televisions confirm that somewhere close by sources of electro-magnetic radiation are operating.

[EW: THIS FOLLOWING INFORMATION IS FALSE - EXPERIMENTS SHOW SUCH SUCCESSES ARE DECOYS. Even if genuine electromagnetic signals are present, they are not the primary carrier. The primary carrier signals can penetrate shielding and behave in the same manner as ESP, though they come from equipment:]

If the intensity of a a high-frequency field is high, a neon bulb should flash --if you quickly take it out into the open air. Protection from the directed beams of high-frequency radiation can be afforded by any metal screen: a foil made up of several layers, a frying pan, a simple saucepan which has been placed over on ones head. Some victims insert a thin metal mesh into mattresses and blankets. And still these people suggest the creation of a commission which will unequivocally answer who or what is needed for these unknown influences. Letters were sent in the majority of the cases. But the answer at this time is not present. It is probably on the way...

Igor Tsarev
